	opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option does not impact where development is located so does not contribute towards this objective.	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option does not impact where development is located so does not contribute towards this objective but would maximise promotion of resilience to unavoidable impacts of the climate emergency in terms of reduced water availability.	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option does not impact where development is located so does not contribute towards this objective but would enhance resilience to unavoidable impacts of the climate emergency in terms of reduced water availability.	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option would further support resilient to water stress.	additional demands on water supply of new non-household properties adapting to increased likelihood of seasonal droughts and supporting habitats by making lower water demands on them. Option D, if applied in conjunction with Option B would reinforce these benefits.
	Support habitats in adjusting to the impacts of the climate emergency?	-	++	+	+	
		This would introduce a higher water allowance than the adopted Local Plan policy and place additional stress on water habitats and supplies.	This option would set the most ambitious target for reducing water usage minimising the additional stress on water habitats and supplies.	This option would set more ambitious targets for reducing water usage minimising the additional stress on water habitats and supplies than the current policy.	This option would further reduce demands on water that is released in an uncontrolled fashion reducing potential stress to habitats from unexpected water.	

Stage B - Develop options and appraise effects

Page 1697 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA3	Maintain and where possible improve the quality and availability of water resources?	--	++	+	++	Option B again would make the best contribution towards achieving this objective by making the least additional demands on the availability of water resources allowing the greatest potential for maintenance of water quality. Option D would reinforce the availability of water resources by avoiding wastage.
	Huntingdonshire is within an area of severe water stress; this option would enable new non-household properties to take a higher water allowance than the adopted Local Plan policy and place additional stress on quality and availability of water resources	Substantially reducing the additional water demands of new non-household properties would contribute towards maintaining and potentially improving the quality and availability of water resources in the longer term.	This option would build on the current approach to water consumption for non-household properties that would reduce additional demand contributing towards maintain of quality and availability of water resources.	This option would reduce wastage of water resources substantially contributing to this objective.		
SA3	Minimise the risk of flooding from all sources?	N	N	N	N	
	The amount of water allowed in new non-household properties would not impact on flood risk minimisation.	The amount of water allowed in new non-household properties would not impact on flood risk minimisation.	The amount of water allowed in new non-household properties would not impact on flood risk minimisation.	The amount of water allowed in new non-household properties would not impact on flood risk minimisation.		

## 4 Stage B - Develop options and appraise effects

### Housing Tenures and Housing Mix

4.28 We have explored several sets of options covering various housing types and tenures. The first relates to affordable housing proportion.

#### Option - Affordable Housing Proportion

##### **Should we...**

*(You may pick multiple options)*

**Option A - Try to maximise the proportion of affordable housing within each site of 10 or more new homes**

**Option B - Ask for the same proportion of affordable housing in all schemes for 10 or more new homes**

**Option C - Ask for a lower proportion of affordable housing in very large schemes which need to provide substantial infrastructure** such as a new bridge or major road improvements

**Option D - Ask for for a lower percentage than we do now in all schemes, accepting that this may mean we have to build more homes overall** to meet the level of need for affordable housing

**Option E - Consider an alternative option.** Please let us know.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	N	N	N	N	Housing tenure in itself has little impact on SA1 with minor potential benefits from options allowing for lower density or more growth through their potential for enhanced green infrastructure networks.
		Housing tenure will not impact on this objective although it may be impacted by the overall scale of growth.	Housing tenure will not impact on this objective although it may be impacted by the overall scale of growth.	Housing tenure will not impact on this objective although it may be impacted by the overall scale of growth.	Housing tenure will not impact on this objective although it may be impacted by the overall scale of growth.	
SA1	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	-	N	+	+	
		May minimise the amount of development land required and increase overall density limiting the potential for provision and enhancement of green infrastructure networks.	Tenure of housing would not give rise to variation in provision of green infrastructure between schemes.	May improve the viability of larger schemes increasing their potential to support and enhance green infrastructure networks.	May lead to additional development with increased prospects for provision and enhancement of green infrastructure networks,	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	+	N	N	-	Option A performs marginally better but this is only due to the potentially reduced scale of development and so the ability to concentrate this in more resilient locations.
		May minimise the amount of development land required and maximise opportunities to concentrate that in more resilient locations.	Tenure of housing would not give rise to variation in ability to maximise opportunities to focus in more resilient locations.	The impact will depend on whether or not larger schemes requiring infrastructure are in locations which have potential to adapt and be more resilient but this cannot be predetermined as it is	May lead to additional development which could reduce the opportunities for that to be concentrated in more resilient locations	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
				dependent on development sites selected.		
	Support habitats in adjusting to the impacts of the climate emergency?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	
		Housing tenure will not impact on this objective.	Housing tenure will not impact on this objective.	Housing tenure will not impact on this objective.	Housing tenure will not impact on this objective.	
SA3	Maintain and where possible improve the quality and availability of water resources?	<b>-</b>	<b>N</b>	<b>N</b>	<b>-</b>	Options C and D perform slightly better due to the potentially lower density of development although this is predicated on affordable homes typically being built to a higher density than market homes.
		The potentially increased density of homes in a limited range of locations may generate increased pressure on water infrastructure.	All development schemes would have the same proportion of affordable housing so there would be no impact on the demand for water.	The impact will depend on the location of the larger development schemes so their impact cannot be predetermined.	May lead to additional development increasing the level of demand for water and placing quality and availability at more risk.	
	Minimise the risk of flooding from all sources?	<b>-</b>	<b>N</b>	<b>+</b>	<b>+</b>	
		The potentially increased density of homes in a limited range of locations may generate increased pressure on surface water flooding through a higher proportion of impermeable surfaces.	All development schemes would have the same proportion of affordable housing so there would be no distinction in the level of flood risk created.	The potential for lower overall density of development could reduce surface water flood risk in development schemes and allow more scope for nature based solutions.	The potential for lower overall density of development could reduce surface water flood risk in development schemes and allow more scope for nature based solutions.	

Stage B - Develop options and appraise effects

		Option A	Option B	Option C	Option D	
		need reducing the risk of development in close proximity to sites of biodiversity or geodiversity value.	designated biodiversity or geodiversity significance.	or geodiversity value cannot be predetermined		from the option than the tenure of the homes once occupied. Sites with a lower proportion of affordable homes have the potential benefit of improved viability and hence more scope for supporting the recovery or enhancing the connectivity of designated sites.
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	-	N	++	++	
		Provision of potentially more dense development overall would reduce opportunities for recovery or additional provision of biodiversity sites to promote connectivity	Treating all schemes equally will give rise to no distinction in their ability to promote recovery or enhanced connectivity.	May improve the viability of larger schemes increasing their potential to support and enhance biodiversity and the connectivity of sites.	Lower density and potentially additional land provision for development could enhance opportunities for connectivity of sites of biodiversity value	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	--	N	++	+	Option C presents clear advantages for this objective as it would facilitate greater flexibility in the density of development layout.
		Maximising the proportion of affordable housing in all developments would generate higher density schemes more frequently that would be more challenging to protect and enhance local characteristics and distinctiveness.	Treating all schemes equally will give rise to no distinction in their ability to protect and enhance local characteristics and distinctiveness.	Large scale schemes with infrastructure demands will need to be carefully designed to protect valued characteristics and generate a sense of place within the scheme. Allowing for a lower proportion of affordable housing may	May lead to additional land requirements overall increasing the risk of development impacting on valued landscapes and local distinctiveness. However, the potential to allow a lower proportion of affordable housing may facilitate	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
				facilitate more flexibility in density and reduce the net developable area required to support a viable development scheme.	more flexibility in density and allow for site specific design reflecting local characteristics and reinforcing a sense of place.	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined	No option displays an advantage on this objective.
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	<b>-</b>  Maximising the proportion of affordable housing in each scheme will conversely reduce the proportion of housing available to the wider community and potentially limit growth in less sustainable locations detrimentally impacting	<b>+</b>  Treating all schemes equally will enable some to meet the community's needs in sustainable locations.	<b>++</b>  Large scale schemes requiring infrastructure provision may create sustainable locations in themselves and affordable housing would be a key element in creating a balanced sustainable community meeting the needs of all. The absolute level	<b>+</b>  May lead to overall increased housing provision creating additional housing supply to meet the community's needs. Although some may be less sustainably located this can still meet the needs of some sectors of the community.	Option C performs marginally better on this objective than B and D with all contributing to meeting the needs of the community in sustainable locations.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
		on people who need or choose to meet their housing requirements in such locations.		of affordable housing provided will influence the success of this.		
SA10	Support and enhance the more deprived areas of the district?	-	+	+	+	Option A has a complex relationship with this objective as affordable homes may contribute limited support to deprived areas in terms of long term spending power in the locality but being the most concentrated option for development offers the best opportunities for homes to have access to existing or proposed services and facilities. All other options would contribute somewhat to meeting the objective.
		May focus additional affordable housing within more deprived areas but may also provide less choice and lower spending power in areas of deprivation.	Treating all schemes equally will spread the benefits of balanced affordable housing and spending power across all development sites wherever they are located such that those in more deprived areas may provide some local economic enhancement.	The impact will depend on location and scale of development schemes and cannot be predetermined; schemes which are located in or near more deprived areas may provide some local economic enhancement through increased spending power and investment in a higher proportion of market homes.	May lead to overall increased housing growth although the impact will depend on the location and scale of development schemes relative to more deprived areas. Additional development may enhance employment and skills training opportunities for residents in all areas of the district included more deprived ones.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	++	+	+	+	
		Denser, more concentrated development may be delivered under this option allowing for	Treating all schemes equally will allow for consideration of access to existing community services and facilities	The impact will depend on the nature of the infrastructure provision to be supported by the scheme which could	The need for additional overall growth will impact on the accessibility and capacity of existing

Lower density schemes may allow for more open space to protect archaeological assets but this will depend on scheme design.	There is no distinct relationship between the tenure of housing and this objective.

## 4 Stage B - Develop options and appraise effects

4.29 The next set of options explores affordable housing location.

### Option - Affordable Housing Location

**Should we...**

*(Please pick one option)*

**Option A - Only allow affordable housing to be built in towns and villages with existing services**, such as a shop, primary school or village hall, as appropriate to the likely needs of expected occupiers

**Option B - Allow affordable housing to be built in all towns and villages** to support existing communities

**Option C - Consider an alternative option.** Please let us know.

Page 1710 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	++	-	Option A would support this objective more by concentrating affordable housing in more sustainable locations with good access to services which reduces the need to travel via less sustainable modes of transport. Additionally, there are greater opportunities for development to enhance green infrastructure network.
		Provision of affordable housing in locations with good accessibility to services and needs of expected occupiers reduces the need to travel by less sustainable modes. This reduces the carbon impact of development.	Provision of affordable housing in all towns and villages would result in some housing being located in areas that do not have good accessibility to key services. This would increase the need to travel via less sustainable modes of transport particularly in more rural areas where public transport	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
			is less frequent. This would not support objectives to reduce carbon emissions.	
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	++	+	
		Proposals within towns and villages have greater opportunities to enhance green infrastructure networks.	Has the potential to support green infrastructure networks, development within more rural locations may be less likely to achieve this by virtue of the potentially smaller scale of development and location in relation to existing green infrastructure networks.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	-	+	Option B performs slightly more positively as it has the potential to support habitats across the district rather than those in and around towns and villages with existing services.
	Support habitats in adjusting to the impacts of the climate emergency?	+	++	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		Provision of affordable housing in only towns and villages with existing services would only support habitats in certain parts of the district.	Provision of affordable housing in all towns and villages increases the potential to support habitats across the district.	
SA3	Maintain and where possible improve the quality and availability of water resources?	-	N	Option B performs slightly more positively than Option A as it looks to spread affordable housing development across the district rather than concentrating it in certain locations.
		New development in general may result in increased pressure on water infrastructure due to additional demand particularly if concentrated in certain parts of the district. Affordable housing tenure may impact this if built to a higher density.	New development in general may result in increased pressure on water infrastructure due to additional demand but this impact would be more spread across the district. Affordable housing tenure may impact this if built to a higher density.	
	Minimise the risk of flooding from all sources?	-	N	
		New development in certain locations could increase the risk of flooding, affordable housing being typically higher density than market housing may increase this risk further, particularly from surface water flooding.	New development spread across the district rather than being concentrated in certain locations may minimise risk from flooding in general. Affordable housing tenure may impact this if built to a higher density.	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	N	N	The impact will depend on location and scale of development schemes and cannot be predetermined.

Stage B - Develop options and appraise effects

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	potential or the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district rather than in specific locations.
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	+	++	
		Provision of affordable housing in only towns and villages with existing services reduces the potential for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district.	Provision of affordable housing in all towns and villages increases the potential or the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district.	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	-	N	Option B performs more positively for this objective as it has the potential to spread affordable housing provision across the district meaning that settlements are less likely to become overwhelmed by built development and that settlement character and a sense of place can be reinforced.
		Focusing affordable housing provision only in more sustainable towns and villages could have a greater impact on local landscape and townscape character of these settlements. Affordable housing tenure may impact this if built to a higher density that is less characteristic of surrounding development.	Focusing affordable housing provision across all towns and villages may result in lesser adverse impacts on landscape and townscape character as settlements may not be so overwhelmed by development and therefore enabling developing of a scale that could be integrated and reinforce local character. Affordable housing tenure may impact this if built to a higher density that is less characteristic of surrounding development.	

## Stage B - Develop options and appraise effects

4

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>N</b>	The impact will depend on location and scale of development schemes and cannot be predetermined.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	<b>++</b>	<b>+</b>	Option A would support this objective better by concentrating affordable housing in more sustainable locations.
		Provision of affordable housing in locations with services appropriate to the needs of the types of intended occupiers will promote sustainable access to services and support the housing needs of specific groups within the community.	Provision of affordable housing in all towns and villages would support the existing sustainability levels of those communities but would generate additional homes in locations with no services reducing opportunities for sustainable access to services for future residents.	
SA10	Support and enhance the more deprived areas of the district?	<b>+</b>	<b>++</b>	Both options have some advantages in contributing to this objective.
		Provision of affordable housing only in areas with existing services would help meet needs in areas of urban deprivation but would not support smaller rural communities with no services.	Provision of affordable housing in all communities would help address housing need in all locations, including those which are more deprived. Areas with no existing services may experience forms of deprivation.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	++	+	
		This option would maximise opportunities for access to existing social and community facilities for residents of new affordable homes.	Although many new affordable homes would be provided in locations with access to services and community facilities some could be in locations without any services.	
SA11	Contribute to regeneration activities?	+	+	Option A may make a marginally greater contribution towards meeting this objective due to the greater concentration of potential development.
		Contribution of affordable housing to regeneration may occur whenever it is located nearby	Contribution of affordable housing to regeneration may occur whenever it is located nearby	
	Enhance and diversify economic opportunities with the district?	++	+	
		Concentration of affordable housing in settlements with existing services and facilities could assist with supporting these businesses and the wider economy as most sizeable businesses are located within this group of settlements.	Dispersal of affordable housing across all settlements could boost opportunities across the rural economy too but may contribute slightly less to those in towns and villages with existing services.	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	++	+	Option A would meet this objective better due to the clear focus on locating affordable housing in towns and villages with existing services including public transport although
		Concentrating affordable housing in places with existing services and facilities includes those with public transport links and services	Dispersing affordable housing across all settlements means some will be in locations with active travel and public transport	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		directly contributing to this objective. Active travel such as public rights of way may be accessible from all types of settlement.	links and contribute to this objective but others may be in locations without any services. Active travel such as public rights of way may be accessible from all types of settlement.	there is less distinction over active travel for which opportunities may arise in all settlement types.
SA13	Attract new investment and provide opportunities to improve the resilience of the local economy?  Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?  Support retention and growth of indigenous companies?  Encourage sustainable tourism?	<b>N</b>	<b>N</b>	The location of affordable housing will not contribute significantly to this objective.
		The location of affordable housing will not contribute significantly to this objective.	The location of affordable housing will not contribute significantly to this objective.	
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<b>N</b>	<b>N</b>	The location of affordable housing will not contribute significantly to this objective.
		The location of affordable housing will not contribute significantly to this objective.	The location of affordable housing will not contribute significantly to this objective.	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	-	-	Both options have the potential to not contribute towards this objective subject to the density of affordable housing proposals.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		Affordable housing tenure may impact this if built to a higher density that is less characteristic of surrounding development.	Affordable housing tenure may impact this if built to a higher density that is less characteristic of surrounding development.	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>	<b>N</b>	The location of affordable housing will not contribute significantly to this objective.
		The concentration of affordable housing will not contribute significantly to this objective.	The dispersal of affordable housing will not contribute significantly to this objective.	

4.30 Next are options relating to the size and type of housing.

### Option - Size and Type of Housing

#### **Should we...**

*(Please pick one option)*

**Option A - Allow the market to entirely decide what size and type of housing to build** reflecting what there is most demand for at the time

**Option B - Allow a flexible approach as long as the site promoter can show how the mix of homes they want to build will contribute towards a mixed and inclusive local community**

**Option C - Specify percentage ranges for each number of bedrooms that a mix might comprise on any scheme to allow limited flexibility**, accepting the mix might date as new evidence comes forward

**Option D - Require all schemes of 10 or more homes to show how they will widen the range of housing types and sizes available** reflecting our latest evidence on housing need and demand supplemented by any local assessments of need and demand

**Option E - Consider an alternative option.** Please let us know.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	The size and type of housing will not impact on SA1 directly although it may be impacted by the overall scale of growth.
		The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	
		The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	The size and type of housing will not impact on this objective although it may be impacted by the overall scale of growth.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	The objective is not directly relevant to these options.
		Size and type of housing would not give rise to variation in ability to maximise opportunities to focus development in more resilient locations.	Size and type of housing would not give rise to variation in ability	Size and type of housing would not give rise to variation in ability	Size and type of housing would not give rise to variation in ability to maximise	

Stage B - Develop options and appraise effects

		Option A	Option B	Option C	Option D	
	the unavoidable impacts of the climate emergency?		to maximise opportunities to focus development in more resilient locations.	to maximise opportunities to focus development in more resilient locations.	opportunities to focus development in more resilient locations.	
	Support habitats in adjusting to the impacts of the climate emergency?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	
		The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	
SA3	Maintain and where possible improve the quality and availability of water resources?	-	<b>N</b>	<b>N</b>	<b>N</b>	The options performances against this objective is dependent on the need, location and scale of overall growth.
		The size and types of housing will impact the density of schemes. Leaving it to market demand may result in less dense schemes but also more larger homes which may have a greater water demand.	The size and types of housing will impact the density of schemes. Having a greater mix of housing types and sizes may impact water infrastructure but this would be dependent on the location and scale of overall growth.	The size and types of housing will impact the density of schemes. Having a greater mix of housing types and sizes may impact water infrastructure but this would be dependent on the location and scale of overall growth.	The size and types of housing will impact the density of schemes. Having a greater mix of housing types and sizes may impact water infrastructure but this would be dependent on the location and scale of overall growth.	
	Minimise the risk of flooding from all sources?	<b>+</b>	<b>N</b>	<b>N</b>	<b>N</b>	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
		Less dense schemes may have more land available within them to be used for sustainable drainage and less land covered in impermeable services.	The size and types of housing will impact the density of schemes, slightly more dense schemes to meet need may result in more impermeable surfaces and less land to mitigate flood risk if this is required. This would be dependent on the need, location and scale of overall growth.	The size and types of housing will impact the density of schemes, slightly more dense schemes to meet need may result in more impermeable surfaces and less land to mitigate flood risk if this is required. This would be dependent on the need, location and scale of overall growth.	The size and types of housing will impact the density of schemes, slightly more dense schemes to meet need may result in more impermeable surfaces and less land to mitigate flood risk if this is required. This would be dependent on the need, location and scale of overall growth.	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	-	N	N	N	Option A performs negatively against this objective, the others are neutral at this stage as their impact is dependent on the need, location and scale of growth.
		Letting the market decide may result in schemes with more larger homes which as a result may mean land being used less efficiently and more greenfield land being used.	The size and types of housing will impact the density of schemes and how much land they take up. This would be dependent on the need, location and scale of overall growth.	The size and types of housing will impact the density of schemes and how much land they take up. This would be dependent on the need, location and scale of overall growth.	The size and types of housing will impact the density of schemes and how much land they take up. This would be dependent on the need, location and scale of overall growth.	
	Promote development in locations that	-	N	N	N

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	+	++	+	+	Option B provides the greatest flexibility for housing sizes and mix to respond to the specific local needs of the community in which the homes are to be built.
		The mix of types and sizes of housing may meet part of the community's needs but will be market driven and so may not address the particular needs of some sections.	The mix of types and sizes of housing should have some flexibility to support the community's needs.	Limited flexibility would arise from this option but would not be responsive to the specific nature of individual locations.	The mix of sizes and types of housing would be specifically required to respond to evidence on the local needs of the community that would not be proportionate in preparation of a Local Plan and would rely on surveys prior to development or through Neighbourhood Plans.	
SA10	Support and enhance the more deprived areas of the district?	--	++	N	+	Option B provides the greatest flexibility for housing sizes and mix to respond to the specific local needs of any more deprived area in which the homes are to be built.
		An entirely market driven approach to housing mix would not focus on supporting and enhancing the more deprived areas of the district.	Requiring a mix that contributes to a mixed and inclusive local community would contribute to supporting more deprived areas by diversifying the housing stock.	The needs of more deprived areas will all vary so a specific mix applied to all would not be the best response to local circumstances.	The mix of sizes and types of housing would be specifically required to respond to evidence on the local needs of each of the more deprived areas of the district that would not be proportionate in preparation of a Local Plan and would rely on	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
					surveys prior to development or through Neighbourhood Plans.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	N	N	N	N	
		The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	
SA11	Contribute to regeneration activities?	N	+	N	N	The size and type of housing will rarely impact on this objective but has some potential to contribute to regeneration where this forms part of the consideration of supporting a mixed and inclusive local community.
		This option could support regeneration depending on the mix of homes provided on any site which cannot be predetermined.	This option could facilitate a direct response to regeneration activities supporting their delivery where they are located such that they form part of the local community to be considered.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	
	Enhance and diversify economic opportunities with the district?	N	N	N	N	
		The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	The size and type of housing will not impact on this objective.
		The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	
SA13	Attract new investment and provide opportunities to improve the resilience of the local economy?  Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?	<b>+</b>	<b>++</b>	<b>-</b>	<b>+</b>	Option B provides the greatest flexibility for the new housing supply to respond positively to this objective by supporting diversity of housing stock.
		Allowing the market to entirely determine the mix of new homes provided may support additional investment in the local economy.	Allowing a flexible mix to support the local community could contribute to resilience and assist indigenous companies in attracting and retaining labour.	This option could place limitations on the attractiveness of the district for growth.	This option could support new growth and investment to meet local needs.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
	Support retention and growth of indigenous companies?  Encourage sustainable tourism?					
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	The size and type of housing will not impact on this objective.
		The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	The size and type of housing will not impact on this objective.	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	<b>-</b>	<b>++</b>	<b>+</b>	<b>+</b>	Option B performs most positively by providing the most flexibility in the approach to housing size and type in responding to local context.
		Letting the market decide reflecting what there is most demand for at the time of the development may result in in the size and types of housing not reflecting local character.	This option allows most flexibility to respond to local context while also responding to local needs.	This approach would enable some flexibility to what types and sizes of homes are provided while also responding to local needs.	Major schemes will be required to meet the needs of the local community in terms of housing size and types which may result in some additional challenges in responding to local	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
					character. Minor schemes would have greater flexibility.

		Option A	Option B	Option C	
	(including urban and non-agricultural land) in preference to higher grades?	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	++	++	-	Options A and B perform positively as they could provide or be more likely to be located near to publicly accessible open and natural green space.
		Provision of supported and specialist housing in locations with good accessibility to services and needs of expected occupiers is more likely to focus development that are well served publicly accessible open space.	A larger scale integrated retirement community could provide publicly accessible open and natural green space within the development.	Provision of supported and specialist housing in all towns and village no matter what level of services they have may result in some housing not being well served by publicly accessible open space.	
	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	N	N	N	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA6	Protect sites of designated biodiversity or geodiversity significance?	N	N	N	All options perform positively, with Option C being the most positive as it would result in some development in all towns and villages.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	+	+	++	
		Provision of supported and specialist housing in only areas with existing services reduces the potential for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district.	A larger scale integrated retirement community could provide greater opportunities to establish new habitats and corridors to connect designated nature conservation sites in particular locations.	Provision of supported and specialist housing in all towns and villages increases the potential for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district.	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	-	+	-	Option B performs marginally better than the other options as by virtue of its scale could largely be self contained and masterplanned to integrate with existing settlement(s) and reinforce either its own character or local character depending on its proximity to other settlements.
		Focusing supported and specialist housing in more sustainable locations with good access to services could cumulatively have a greater impact on local landscape and townscape character of these settlements.	A larger scale integrated retirement community or communities could largely create their own character and sense of place particularly if delivered alongside a range of communal facilities and support services. This new community(ies) could also be integrated or closely related to a settlement which could also influence their design.	Allowing schemes for up to 20 self-contained retirement homes in any town and village could adversely impact the local landscape and townscape character of some settlements, this does allow some flexibility to provide fewer than 20 homes if this would be more appropriate.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	<b>++</b>	<b>N</b>	<b>+</b>	Option A would focus supported and specialist housing development in our existing sustainable locations and diversify their housing stock contributing to meeting the needs of residents.
		Focusing supported and specialist housing in towns and villages with existing services would directly assist with delivery of this objective and meet the needs of the intended residents.	This option would concentrate a lot of supported and specialist housing in limited locations; the sustainability would depend on the specific site(s) chosen and the level of on-site service provision.	Providing smaller scale supported and specialist housing provision within any town or village could boost social sustainability through enabling people to remain in their existing communities whilst living in housing that better needs their changing needs. However, it could encourage provision of such housing in villages with no wider service provision that future residents might need access to.	
SA10	Support and enhance the more deprived areas of the district?	<b>+</b>	<b>-</b>	<b>+</b>	The options would play a limited role in contributing to enhancing the more deprived

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		This option has potential to locate supported and specialist housing within or close to both urban and rural more deprived areas depending on the specific sites brought forward.	There is limited scope for this option to contribute to supporting or enhancing more deprived areas depending on the specific site(s) brought forward	This option has potential to locate supported and specialist housing within or close to both urban and rural more deprived areas depending on the specific sites brought forward but they are likely to be more dispersed.	areas of the district, either urban or rural. Option A would support accessibility of existing social and community facilities and services whilst Option B would require dedicated new provision although may also provide access to existing ones depending on location.
	Maximise opportunities for access to existing or proposed social and community facilities and services?	++	++	+	
		Focusing such growth only in towns and villages with existing services would maximise the scope for future residents to access existing social and community facilities and services	The scale of an integrated retirement community would facilitate provision of social and community facilities and services within the development even if existing ones were less accessible.	While some schemes would be built within towns and villages with existing services there would be scope for others to be located where there are none.	
SA11	Contribute to regeneration activities?	+	-	N	Supported and specialist housing would make a limited contribution towards these objectives.
		Concentrating developments within towns and typically larger villages offers some potential to support regeneration activities through re-use of previously developed land.	There is limited scope for this option to contribute to regeneration activities depending on the specific site(s) brought forward	Dispersing developments across a wider range of settlements reduces the likelihood of previously developed sites being available or other regeneration activities being located nearby that the development might support.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	Enhance and diversify economic opportunities with the district?	N	+	N	
		The location of general schemes for supported and specialist housing would not contribute to achieving this objective.	This option would concentrate a lot of supported and specialist housing in limited locations which could provide small clusters of economic opportunity in servicing and supporting the properties and their residents.	The location of general schemes for supported and specialist housing would not contribute to achieving this objective.	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	+	N	N	Option A would focus growth in locations with existing public transport services that might be supported by future residents.
		Concentrating developments within towns and villages with existing public transport services would contribute to their viability.	The impact will depend on location and scale of development schemes and cannot be predetermined.	Dispersing supported and specialist housing across all towns and villages would mean that while some would have access to active travel infrastructure and public transport opportunities others would not.	
SA13	Attract new investment and provide opportunities to improve the resilience of the local economy?	N	+	N	Option B could attract a level of investment in collective services and facilities.
		Provision of supported and specialist housing will not significantly contribute to this objective.	The concentration of such homes into limited locations could support additional investment in service provision for residents.	Provision of supported and specialist housing will not significantly contribute to this objective.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	<p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>				
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<b>N</b>	<b>N</b>	<b>N</b>	Provision of supported and specialist housing will not significantly contribute to this objective.
		Provision of supported and specialist housing will not significantly contribute to this objective.	Provision of supported and specialist housing will not significantly contribute to this objective.	Provision of supported and specialist housing will not significantly contribute to this objective.	
SA15	Strengthen a local sense of place?	<b>+</b>	<b>+</b>	<b>+</b>	Options A and C offer scope to strengthen local communities by diversifying the housing stock and enabling people to retain their social connections. Option B could largely be self contained and masterplanned to potentially integrate with existing settlement(s).
	Retain the character of existing settlements?	Supported and specialist housing may contribute to a sense of place through inclusion of the wider community. However, it could impact on character if built to a higher density that is less characteristic of surrounding development.	A larger scale integrated retirement community could largely create its own character and sense of place particularly if delivered alongside a range of communal facilities and support services. This new community could also be integrated or closely related to a settlement.	Up to 20 self-contained retirement homes provides flexibility to develop fewer if this would be a more appropriate scale to for the character of the settlement. For others, this scale could easily be accommodated.

		Option A	Option B	Option C	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

## 4 Stage B - Develop options and appraise effects

4.32 The next set of options relate to residential care and nursing homes.

### Option - Residential Care and Nursing Homes

**Should we...**

*(Please pick one option)*

**Option A- Expect that all residential care and nursing homes be built in towns and villages with regular public transport services** to provide access to the wider community for residents able to travel with or without support, and to make sure people working in the homes have a choice or means of transport

**Option B - Allow residential care and nursing homes to be built in all towns and villages, and in countryside locations where this would benefit the specific care needs of intended residents**

**Option C - Consider an alternative option.** Please let us know.

Page 1742 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	--	Overall, Option A performs more positively in responding to climate change as it expects that residential care and nursing homes to be built in locations with regular public transport and access to services rather than in potentially more remote locations.
		The type of housing will not significantly impact this, however, locating residential care and nursing homes in locations with good accessibility to services and public transport will reduce the	The type of housing will not significantly impact this, however, allowing residential care and nursing homes in all towns, villages and countryside locations may result in such development being poorly located in terms of	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		carbon impact of the development and support lowering greenhouse gas emissions.	access to services and public transport which would likely incentivise car usage and not contribute to meeting this objective.	
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	+	
		The type of housing will not significantly impact this, however, locating residential care and nursing homes within towns and villages have greater opportunities to enhance green infrastructure networks to support this objective.	The type of housing will not significantly impact this, however, locating residential care and nursing homes across Huntingdonshire may provide opportunities to enhance green infrastructure across the district.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	-	-	Both options perform similarly against this objective.
		Provision of residential care and nursing homes in areas with good accessibility to existing services may result in certain locations within the district becoming more pressurised for development and as a result less resilient to impacts of climate change.	Provision of residential care and nursing homes across the district would spread development across the district but it could still place development in more vulnerable locations.	
	Support habitats in adjusting to the impacts of the climate emergency?	+	+	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		Provision of residential care and nursing homes in areas with good accessibility to existing services would only support habitats in certain parts of the district.	Provision of residential care and nursing homes across the district could support habitats across the district.	
SA3	Maintain and where possible improve the quality and availability of water resources?	-	-	All options perform similarly against this objective.
		New development in certain locations could increase the demand on water infrastructure in certain locations.	New development across the district could spread the impact on water infrastructure across the district, however it could also result in development being placed in locations where there is limited existing capacity.	
	Minimise the risk of flooding from all sources?	-	-	
		New development in certain locations could increase the risk of flooding, this risk may be more likely to increase due to the cumulative impact of focusing development in locations with good access to services and public transport.	New development across the district could while not concentrating development within limited locations could still result in surface water flooding from impermeable surfaces.	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.

Stage B - Develop options and appraise effects

		Option A	Option B	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
	Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	<b>N</b>	<b>N</b>	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	<b>++</b>	<b>-</b>	Option A performs more positively as it is more likely to locate development near to publicly accessible open and natural green space.
		Provision of such housing in locations with good accessibility to services and public transport is more likely to focus development that are well served publicly accessible open space.	Provision of such housing across the district may result in some schemes not being well served by publicly accessible open space.	
		<b>N</b>	<b>N</b>	
	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	<b>N</b>	<b>N</b>	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA6	Protect sites of designated biodiversity or geodiversity significance?	<b>N</b>	<b>N</b>	Both options perform positively, with Option B being the most positive as it would result in some development in all towns and villages.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	+	++	
		Provision of such residential development in areas that are more sustainable reduces the potential for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district.	Provision of such residential development across the district increases the potential for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance across the district.	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	<b>N</b>	<b>--</b>	Option A performs more positively than option B as even though it would focus development in more sustainable locations which could cumulatively have a greater impact on local character, development would not be located within the countryside.
		Focusing residential care and nursing homes in more sustainable locations could cumulatively have a greater impact on local landscape and townscape character of these settlements, however these settlements may also be of a scale whereby they can accommodate such development without adverse impact.	Allowing development across the district even in small village and countryside locations could have a much greater adverse impact landscape character.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	<b>++</b>	<b>-</b>	Option A performs better as it focuses development in locations with access to sustainable transport choices.
		Focusing development in locations served by regular public transport will support accessibility for staff and those residents able to access transport services.	Allowing development to be dispersed to all settlements and countryside locations in limited circumstances would reduce accessibility by public transport for both staff and residents.	
SA10	Support and enhance the more deprived areas of the district?	<b>+</b>	<b>-</b>	Option a would be more likely to see developments in towns where social and community facilities and services are concentrated as are most of the more deprived areas of the district although it would not support areas of rural deprivation.
		This option would support more likelihood to development being focused in towns where most of the more deprived areas are focused but may limit contributions to more rural deprived area.	This option would disperse development more widely reducing the ability to focus on more deprived areas.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	<b>++</b>	<b>-</b>	
		Town and villages served by regular public transport typically have greater concentrations of social and community facilities	Dispersing developments to locations without regular public transport would increase developments in villages less	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		and services in to provide easier access and the public transport services would assist residents with reaching facilities and services elsewhere.	likely to offer social and community facilities and services and not enable easy access to them for residents.	
SA11	Contribute to regeneration activities?	+	-	Both options would make a limited contribution to economic opportunities through provision of some employment with Option A potentially allowing this to be aligned with larger regeneration activities.
		Focusing on towns and better served villages would align more with wider regeneration activities which are primarily town based and with the availability of previously developed land.	Dispensing developments more widely would be likely less to align with primarily town based wider regeneration activities.	
	Enhance and diversify economic opportunities with the district?	+	+	
		Provision of residential and care homes would provide some employment opportunities with a diversity of medical, care and facilities roles typically available.	Provision of residential and care homes would provide some employment opportunities with a diversity of medical, care and facilities roles typically available.	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	++	-	Option A is directly focused on achieving this objective and would minimise developments that did not contribute to it.
		This option is specifically intended to support provision of residential and care homes in locations with regular public transport services to promote accessibility for staff and residents.	Some development within this option would be in locations with public transport links but it would also facilitate provision of residential and care homes in locations without this.	

## Stage B - Develop options and appraise effects

4

		Option A	Option B	
		accommodate such development more sustainably whereby through sensitive design and masterplanning also be integrated with the existing place and community.	a much greater adverse impact on the character of existing settlements, development within the countryside s also much less likely to successfully develop its own sense of place.	less impact on towns and the larger villages that typically benefit from regular public transport.
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

4.33 Next are options for self and custom build housing.

### Option - Self and Custom Build Homes

#### **Should we...**

*(You may pick multiple options)*

**Option A - Allocate small sites for groups of less than 10 self and custom build homes within and on the edges of towns and villages**

**Option B - Expect all developments for 50 or more homes to include 5% of plots for self and custom build at a fair market price** with a mechanism included to allow any plots which no self or custom builder is interested in buying after at least one year of marketing to revert to being built by a housebuilder

**Option C - Treat proposals for self and custom build homes exactly the same as we would any other housing proposal in the same type of location**

**Option D - Support community led group self and custom build projects in locations where other housing might not be supported** provided that there is clear evidence of community support for the scheme

**Option E - Consider an alternative option.** Please let us know.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	<b>+</b>	<b>N</b>	<b>N</b>	<b>-</b>	Option A performs the most positively against this objective over Option D as it will direct development towards existing towns and villages. Options B and C do not directly relate to the objective.
		Allocating sites for self and custom build housing on the edge of towns and villages may help in meeting this objective depending on the sustainability of those settlements. For example more sustainable settlements are more likely to have more services and public transport options available reducing the need to travel via less sustainable modes and therefore reducing the carbon impact of development.	Whether a site is for self and custom build housing will not impact on this objective although it may be impacted by the overall scale and location of growth.	Whether a site is for self and custom build housing will not impact on this objective although it may be impacted by the overall scale and location of growth.	This may enable housing in more rural and countryside locations that are not as well served with services and public transport. As such it may incentivise car usage which does not align with this objective.	
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	<b>+</b>	<b>N</b>	<b>N</b>	<b>+</b>	
		The potential scale of these allocations will likely result in minor	Whether a site is for self and custom build housing will not	Whether a site is for self and custom build housing will not impact on this objective although it may be	The contribution of such proposals are less likely to provide significant enhancements to green infrastructure put they

The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The contribution of such proposals are less likely to provide significant enhancements to provide significant connectivity and recovery opportunities for designated nature conservation sites but may provide some benefit.	

## Stage B - Develop options and appraise effects

4

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	<b>++</b>	<b>+</b>	<b>N</b>	<b>+</b>	Option A performs the most positively while Options B and D also perform positively.
		Some self and custom build housing within and or on the edge of existing towns and villages are likely to be of a minor scale that could provide infill and rounding off opportunities that could be sensitively designed so that they reinforce local character and potentially enhance it.	A proportion of housing for self and custom build housing as part of a larger proposals will require masterplanning to ensure they harmonise with the proposal and the wider context in general. It would provide potentially more variation in design which could add to the character of the area.	Treating self and custom build housing the same as any other housing proposal would still require design and masterplanning to ensure effective integration and harmonisation with local character and creating a sense of place.	Supporting community led custom and self build housing where development may not normally be supported could give rise to additional challenges in reinforcing local landscape and townscape character and mitigating adverse impacts. Masterplanning and communitiy engagement could likely overcome these.	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	Providing homes as self and custom build housing rather than being constructed by housebuilders would not impact on this objective.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	<b>+</b>	<b>+</b>	<b>+</b>	<b>+</b>	All options could equally assist in making a contribution towards delivery of this objective.
		Provision of sites specifically for self and custom build housing in a variety of location types would help meet the needs of members of the community who are looking to achieve this type of housing.	This option would allow enhanced choice of housing types and other policies would support schemes of this scale to be in more sustainable locations.	The majority of housing would be expected to be in sustainable locations for the Local Plan's policies to align with national aspirations for sustainable development so providing a proportion of these as self and custom build housing would not change the approach to achieving this objective.	This option may support construction of some self and custom build housing in locations that are less	
SA10	Support and enhance the more deprived areas of the district?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	Whether homes are built as self and custom build housing or by housebuilders would not affect the achievement of this objective.
		Whether homes are built as self and custom build housing or by housebuilders would not affect the achievement of this objective.	Whether homes are built as self and custom build housing or by housebuilders would not affect the achievement of this objective.	Whether homes are built as self and custom build housing or by housebuilders would not affect the achievement of this objective.	Whether homes are built as self and custom build housing or by housebuilders would not affect the achievement of this objective.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	N	+	N	-	
		This option would support provision of self and custom build housing across a range of settlements with varied levels of social and community facilities and services.	Developments of 50 or more homes would be expected under other policies to be supported in more sustainable locations which would have an increased likelihood of having at least some social and community facilities and services.	This option would support provision of self and custom build housing across a range of settlements as with any other form of housing.	This option may support provision of self and custom build housing in less sustainable villages depending on demand where the provision of social and community facilities and services is typically lower.	
SA11	Contribute to regeneration activities?	+	+	+	-	Options A, B and C could all make a minor contribution towards achieving this objective depending on the location of development schemes.
		Small sites may make a minor contribution to this objective in towns through diversifying housing provision and may contribute towards reuse of previously developed sites in villages.	If schemes of this scale are located on previously developed sites introducing an element of self and custom build housing would assist in diversifying the housing stock.	Self and custom build homes have the same potential to contribute towards regeneration activities as other housing types and would contribute additional diversity to the housing stock in such areas if included.	Regeneration activities where housing would be permitted would not be assisted by this option.	
	Enhance and diversify economic opportunities with the district?	+	+	+	++	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
		Provision of self and custom build housing plots would assist with enhancing skills of some future occupiers who directly work on the construction and fitting out of their homes.	Provision of self and custom build housing plots would assist with enhancing skills of some future occupiers who directly work on the construction and fitting out of their homes.	Provision of self and custom build housing plots would assist with enhancing skills of some future occupiers who directly work on the construction and fitting out of their homes.	Community group led self and custom build schemes typically contain a high proportion of residents actually working on the construction and fitting out of their homes. These people could then bring enhanced skills to the local economy.	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	+	++	+	-	Option B is most likely to contribute to this objective as schemes of 50 or more homes are more likely to be located in towns and villages with good active travel and public transport.
		A good proportion of self and custom build housing plots would be allocated in towns and villages with active travel and public transport services.	Developments of 50 or more homes would be expected under other policies to be supported in more sustainable locations which would have an increased likelihood of having public transport services.	As with all housing development a proportion of self and custom build housing plots would be expected to be in towns and villages with active travel and public transport services.	By facilitating homes in locations where other housing might not be supported this option is more likely to encourage housing in places away from public transport and active travel infrastructure.	

## Stage B - Develop options and appraise effects

4

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA13	<p>Attract new investment and provide opportunities to improve the resilience of the local economy?</p> <p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	Self and custom build housing schemes would not contribute to employment land or attraction of investment.

SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	Self and custom build housing schemes would not contribute directly to this objective.
		Self and custom build housing schemes would not contribute directly to this objective.	Self and custom build housing schemes would not contribute directly to this objective.	Self and custom build housing schemes would not contribute directly to this objective.	Self and custom build housing schemes would not contribute directly to this objective.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	<b>++</b>	<b>+</b>	<b>N</b>	<b>+</b>	Option A performs the most positively while Options B and D also perform positively.
		Some self and custom build housing within and or on the edge of existing towns and villages are more likely to integrate successfully and designed so that they reinforce local character and potentially enhance it.	A proportion of housing for self and custom build housing as part of a larger proposals will require masterplanning to ensure they harmonise with the proposal and the wider context in general.	Treating self and custom build housing the same as any other housing proposal would still require design and masterplanning to ensure effective integration and harmonisation with local character and creating a sense of place.	Supporting community led custom and self build housing where development may not normally be supported could give rise to additional challenges mitigating adverse impacts. Masterplanning and communtiy engagement could likely overcome these.	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

- 4.34 Then we have options for meeting the need for gypsy and traveller accommodation.

### Option - Gypsy and Traveller Accommodation Needs

#### **Should we...**

*(You may pick multiple options)*

**Option A - Look for additional sites to allocate to meet needs** for private and/ or social rented pitches

**Option B - Allow for extensions to existing sites which already have permanent planning permission**

**Option C - Allow existing temporarily permitted sites to remain permanently** subject to adequate flood management

**Option D - Continue to rely on a criteria-based policy approach** specifying elements such as proximity to primary schools and GP surgeries to indicate what land may be suitable

**Option E - Consider an alternative option.** Please let us know.

- 4.35 Only the most directly relevant SA objectives have been included below, the remaining SA objectives have been removed as a result.

## 4 Stage B - Develop options and appraise effects

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	++	++	+	++	All options could contribute to achieving delivery of additional pitches in sustainable locations to meet the needs of the Gypsy and Traveller community although Option C may have environmental sustainability disadvantages over the others.
		Selecting appropriate sites to allocate would meet identified needs and provide certainty over provision in sustainable locations.	Sites which already have permanent planning permission are already likely to be connected into existing communities, service networks and at lower risk of flooding so extending these would help to meet the communities needs in known locations of choice that may particularly help with delivering sites for growing family groups in locations which offer family and community support networks.	Sites are often granted temporary planning permission when they are at flood risk but no clear alternative sites are available. Although this option may have social sustainability benefits for the residents it would leave people at ongoing potential flood risk which is not ideal in sustainability terms.	This option allows for continuation of criteria which direct new provision to sustainable locations particularly in terms of access to services and facilities to ensure that the basic needs of future residents such as access to healthcare and education are within easy physical reach.	
SA10	Support and enhance the more deprived areas of the district?	++	++	++	+	All options would significantly help in achieving this objective although Options A and B provide more certainty than the others.
		Although not as locationally specific as some of the more deprived areas of the district, overall the	Although not as locationally specific as some of the more deprived areas of the district, overall the	Although not as locationally specific as some of the more deprived areas of the district, overall the	Although not as locationally specific as some of the more deprived areas of the district, overall the

		Option A	Option B	Option C	Option D	
	area of archaeological value throughout the district?	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

4.36 Finally, we have options relating to boat dweller accommodation.

**Option - Boat Dwellers Accommodation**

**Should we...**

*(You may pick multiple options)*

**Option A - Look for sites to allocate for new permanent residential moorings with access to basic facilities** including water provision, waste disposal and electric hook-ups as well as being close to a safe walking or cycling route to local shops and services

**Option B - Allow a proportion of moorings within existing leisure marinas to be used as permanent residential moorings**

**Option C - Work with partners to ensure access to basic facilities for boat dwellers** who prefer to continuously cruise

**Option D - Consider an alternative option.** Please let us know.

4.37 Only the most directly relevant SA objectives have been included below, the remaining SA objectives have been removed as a result.

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA2	Concentrate new development in locations that	-	+	-	Option B performs more positively as it seeks a proportion of moorings within

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	Allocating additional sites across the district outside of established leisure marinas may result in some moorings being located in areas that are less resilient.	Allowing some moorings within existing leisure marinas to be used for permanent residential use may intensify their use all year round which may make them more vulnerable to the impacts of climate change particularly flooding without appropriate mitigation. However, by doing so means that moorings are not placed in other locations that are less resilient.	Facilities for boat dwellers may be located in areas at greater risk from the impacts of climate change by virtue of them more likely to be located in areas at greater risk form flooding. Appropriate design and mitigation will be required to ensure they are resilient.	established leisure marinas which will have existing facilities and mitigation in place to be used as permanent moorings.
	Support habitats in adjusting to the impacts of the climate emergency?	<b>N</b>	<b>N</b>	<b>N</b>	
		Individual moorings are unlikely to significantly impact on this objective unless a several are proposed in a certain location.	Individual moorings are unlikely to significantly impact on this objective unless a several are proposed in a certain location.	Individual moorings are unlikely to significantly impact on this objective unless a several are proposed in a certain location.	
SA3	Maintain and where possible improve the quality and availability of water resources?	<b>++</b>	<b>++</b>	<b>++</b>	All options performs similarly against this objective. Appropriate design and mitigation will be required to ensure they minimise the risk of flooding and impact on water quality.
		Ensuring sites for additional moorings have access to facilities would ensure	Potentially intensifying existing leisure marinas would provide additional residential moorings in locations where there should already be access to facilities	This option would support provision of facilities including waste water disposal and water supplies for continuous cruisers for whom access to such services can be challenging.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		adequate opportunities for discharge of waste water and access to safe water supplies.	for discharge of waste water and access to safe water supplies.		
	Minimise the risk of flooding from all sources?	-	N	-	
		Moorings are likely to be located in places at greater risk of flooding.	Existing marinas may already have appropriate flood protection for services and access reducing risk.	Establishing new servicing facilities would require consideration of flood risk in selection of the location.	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	N	N	N	Option C offers a slight advantage in delivering this objective through the potential to reduce pollution risk to the strategic green infrastructure network.
		Whether a site is for moorings will not impact on this objective although it may be impacted by the overall scale and location of growth.	Whether a site is for moorings will not impact on this objective although it may be impacted by the overall scale and location of growth.	Whether a site is for moorings will not impact on this objective although it may be impacted by the overall scale and location of growth.	
	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	N	N	+	
		Introduction of additional permanent moorings would need to be in carefully agreed locations to ensure that they do not impact on river flows within the blue infrastructure network.	Amending the use of moorings in existing marinas from leisure to residential would not impact on this objective.	Providing additional facilities for continuous cruisers could assist with enhancing the quality of the strategic blue infrastructure network through reduction of pollution risk.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	<b>+</b>	<b>+</b>	<b>+</b>	All options have the potential to perform positively against this objective depending on the scale and location of boats and associated infrastructure.
		Allocating additional moorings in countryside locations may have a greater impact on the local landscape and townscapes depending on how many are allocated or for what type of boats. Some allocations could also enhance the character of the area and appearance of some waterways.	Making some existing moorings within leisure marinas permanent residential moorings is unlikely to significantly impact the character of the marina, unless it shifts the emphasis from leisure uses.	Additional facilities to support boat dwellers could support opportunities to enhance the enjoyment of local landscapes and townscapes.	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>N</b>	<b>N</b>	The objective cannot be applied at this stage as it depends on the location and scale of development.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA9	Facilitate the delivery of the district's housing needs in	<b>+</b>	<b>+</b>	<b>+</b>	Provision of facilities within marinas or by areas of moorings would assist with meeting at

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	sustainable locations that meet the community's needs?	This option could deliver additional housing meeting the needs of specific sectors of the community with provision of services within the site promoting a level of sustainability.	This option could deliver additional housing meeting the needs of specific sectors of the community with provision of services within the site promoting sustainability depending on the location of the existing marina.	Adding basic facilities would assist in promoting a level of sustainability which may be beneficial for short term stays.	least basic sustainability but overall this would be determined by the location of the moorings relative to settlements with higher levels of service provision.
SA10	Support and enhance the more deprived areas of the district?	<b>+</b>	<b>+</b>	<b>+</b>	All options could contribute positively to this at a small scale.
		Boat dwellers and moorings are frequently found on the outskirts of settlements or in more isolated locations across Huntingdonshire which can contribute to reduced accessibility to services and facilities. Provision of additional moorings with facilities could provide benefits to residents.	Boat dwellers and moorings are frequently found on the outskirts of settlements or in more isolated locations across Huntingdonshire which can contribute to reduced accessibility to services and facilities. Increasing the proportion of permanent residential moorings within leisure locations may assist in increasing demand for services improving viability of provision.	Continuous cruising boats may have reduced accessibility to services and facilities depriving residents of easy access to basic facilities; additional provision would provide benefits to continuously cruising boat users.	
	Maximise opportunities for access to existing or	<b>N</b>	<b>N</b>	<b>N</b>	
		The ability of the option to achieve his objective will depend on the location of the individual scheme.	The ability of the option to achieve his objective will depend on the location of the individual scheme.	The ability of the option to achieve his objective will depend on the location of the individual scheme.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	proposed social and community facilities and services?				
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	<b>+</b>  Allocating sites potentially across the district for moorings could strengthen a sense of place and diversify housing types and retain the character of the existing area. This would be dependent on the scale and location of these moorings though.	<b>+</b>  Making existing moorings permanent resident ones within existing leisure marinas will compliment existing uses providing that this would not over densify the marina or significantly detract from the leisure offer within the marina.	<b>+</b>  Providing facilities will support boat dwellers, these may be located in the countryside or within or nearby to existing settlements. Providing facilities to support moorings could strengthen the sense of place and character of the area where these are commonly found.	All options perform similarly positively against this objective. Their impact will also depend on the location and scale of development.
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined.	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined.	<b>N</b>  The impact will depend on location and scale of development schemes and cannot be predetermined.	The objective cannot be applied at this stage as it depends on the location and scale of development.

Transport and Connectivity

4.38 For this issue we have two sets of options, the first relates to the approach to individual developments.

**Option - Approach to Individual Developments**

**Option A - Change transport provision within new developments to focus on high quality and plentiful infrastructure for active travel and public transport rather than prioritising road users.** To help deliver this, a high proportion of developer contributions to transport and travel issues would be spent on active travel and public transport infrastructure.

**Option B - Continue with the current approach of encouraging active travel and public transport through some provision of infrastructure within new developments but carry on trying to limit the impact of cars and lorries from them by building roads and upgrading junctions.** To help deliver this, a high proportion of developer contributions to transport and travel issues would be spent on road and junction upgrades.

**Option C - Consider an alternative option.** Please let us know

SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	-	Option A performs more positively in reducing carbon emissions and

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		Increasing the emphasis on public transport and active travel within developments will help to encourage a modal shift from private car usage within them. Connections between these sites and existing settlements will also be critical in maximising a reduction in carbon emissions.	Encouraging active travel and public transport provision as part of new developments will have some positive impact. However, retaining the current approach of focusing on building roads and upgrading junctions will continue existing travel patterns and not maximise opportunities to reduce carbon emissions.	working towards the district's carbon reduction targets.
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	N	
		These public transport and active travel corridors could also be wildlife corridors or linkages between areas of green infrastructure.	This option will have a limited impact in achieving this objective and will dependent on specific proposals.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	N	N	The impact will mainly depend on location and scale of development schemes and cannot be predetermined but Option A offers potential for some contribution towards achieving this objective.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
	Support habitats in adjusting to the impacts of the climate emergency?	+	N	

Stage B - Develop options and appraise effects

Page 1779 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		Focusing on provision of active travel and public transport routes will help to reduce greenhouse gas emissions slowing the anticipated impacts of climate change which will support habitats by providing more time for adaptation.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
SA3	Maintain and where possible improve the quality and availability of water resources?	<b>N</b>	<b>N</b>	Option A performs more positively in having some greater potential to incorporate travel corridors that are not constructed from impermeable services.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
	Minimise the risk of flooding from all sources?	<b>+</b>	<b>-</b>	
		Additional travel corridors may result in increased impermeable services which may result in increased surface water runoff. Active travel corridors which could be paved with more natural materials may allow for increased infiltration.	Retaining the current approach of focusing on building roads and upgrading junctions will result in more impermeable services within developments which may increase levels of surface water runoff.	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	<b>N</b>	<b>N</b>	The impact will depend on location and scale of development schemes and cannot be predetermined.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	
	Promote development in locations that are grade 3 agricultural land or lower (including urban and	<b>N</b>	<b>N</b>	
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
	of sites of biodiversity or geodiversity significance?	These public transport and active travel corridors could also be wildlife corridors or linkages between areas of green infrastructure.	This option will have a limited impact in achieving this objective and will dependent on specific proposals.	conservation sites through active travel routes.
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	++	-	Option A performs more positively due to the potential to create distinctive, high quality and sustainable places.
		More active travel and public transport routes within developments can be integrated to create high quality sustainable places that support active and healthy lifestyles and create distinctive places with a strong sense of identity.	Retaining a priority towards road usage may not maximise opportunities for high quality and innovative design. Roads and junctions can also be more challenging to screen from view and mitigate their noise impact within developments and have a potentially greater impact on landscape and townscape characteristics.	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	++	-	Option A performs much more positively against this objective as it provides greater opportunity to encourage a modal shift from private car usage and help to lower the potential level of pollutants arising from travel and transport within developments.
		More active travel and public transport routes within developments can assist in lowering levels of pollution within developments.	Retaining a priority towards road usage and only encouraging active and public transport within developments will not maximise opportunities to reduce pollution of travel within developments.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	++	-	Option A would make a greater contribution towards meeting this objective over the long term by enhancing the longer term access to sustainable travel choices making them more sustainable places in which to meet housing needs.
		More active travel and public transport routes within a location would help promote the sustainability of the place such that new housing being delivered there would support the community's needs and provide longer term access to sustainable travel choices.	Retaining a priority towards road usage will not enhance the sustainability of locations to support delivery of housing there that would meet people's needs and provide longer term access to sustainable travel choices.	
SA10	Support and enhance the more deprived areas of the district?	N	N	Option A provides the greatest opportunities for contributing to delivery of this objective through a sustainable manner.
		The option is not relevant to this objective.	The option is not relevant to this objective.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	++	+	
		This option would directly contribute towards provision of accessibility improvements that may aid people in reaching other social and community facilities and services.	Retaining a priority towards road usage while encouraging active travel and public transport infrastructure would provide some improved accessibility to social and community facilities and services but not necessarily by sustainable modes.	
SA11	Contribute to regeneration activities?	+	+	Both options may contribute to this by improved travel opportunities within or
		Travel enhancements could contribute to regeneration activities depending on the location of the development providing then; provision of additional support for public transport may impact	The impact will depend on the scale and nature of travel infrastructure improvements made but may assist in improving provision or easing congestion in areas in need of regeneration.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		on regeneration sites as some distance where the development helps to support public transport service delivery along a route.		along routes to areas where regeneration activities are promoted.
	Enhance and diversify economic opportunities with the district?	N	N	
		The option is not relevant to this objective.	The option is not relevant to this objective.	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	++	+	Option A is primarily intended to support delivery of this option.
		The core purpose of this option is to provide opportunities to improve active travel and public transport infrastructure through new developments.	The option would still facilitate some active travel and public transport infrastructure through new developments alongside road improvements.	
SA13	Attract new investment and provide opportunities to improve the resilience of the local economy?  Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?	++	+	Option A provides longer term resilience through diversification of travel modes to employment and tourism destinations.
		Supporting provision of active travel and public transport infrastructure may improve the resilience of the local economy by responding to changing travel needs and demands arising from climate	This option would provide some support for active travel and public transport infrastructure which may improve the resilience of the local economy by responding to changing travel needs and	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
	Support retention and growth of indigenous companies?  Encourage sustainable tourism?	change, aiding employees to travel by sustainable modes and enhance the sustainability of additional employment sites. Sustainable tourism could be enhanced through provision of public transport to destinations and encouragement of active travel leisure opportunities.	demands arising from climate change, aiding employees to travel by sustainable modes and enhance the sustainability of additional employment sites. Sustainable tourism could be enhanced through provision of public transport to destinations and encouragement of active travel leisure opportunities.	
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	++	+	Option A would be most likely to assist with facilitating modernisation of town centres by increasing demand which could stimulate the viability of investment.
		Supporting additional active travel and public transport infrastructure and routes could assist with increased demand for uses in town centre locations improving the viability and attractiveness of achieving modernisation schemes.	Some support would still be provided through this option for additional active travel and public transport infrastructure and routes which could assist with increased demand for uses in town centre locations improving the viability and attractiveness of achieving modernisation schemes.	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	++	-	Option A performs much more positively against this objective.
		More active travel and public transport routes within developments can be integrated to create high quality sustainable places that support active and healthy lifestyles and create distinctive places with a strong sense of identity.	Retaining a priority towards road usage may not maximise opportunities to create a sense of place within new developments. for high quality and innovative design.	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	N	The impact will depend on location and scale of development schemes and cannot be predetermined.
		The impact will depend on location and scale of development schemes and cannot be predetermined.	The impact will depend on location and scale of development schemes and cannot be predetermined.	

4.39 The next set of options relate to East West Rail.

#### Option - East West Rail

**Option A - Rely on the prospect of East West Rail coming forward** and plan for new growth nearby to be delivered in the late 2030s and 2040s that could connect well with this

**Option B - Wait until there is greater certainty about the timing of delivery for East West Rail** before planning for growth that might benefit from being nearby even if this means the growth is delivered some years after the railway

4.40 Planning for growth that could be serviced by East West Rail forms part of Option C of the Growth Strategies and is appraised in that section instead. The current level of uncertainty over whether the railway line will be delivered, and if so when, mean that its sustainability appraisal outcomes as a freestanding project are very uncertain insofar as they relate to this Local Plan Update.

## 4 Stage B - Develop options and appraise effects

### Sites

4.41 A [Call for Sites](#) ran from 29 March to 7 June 2023. It was an opportunity for people to send the council details of sites that might be suitable for allocation in the next Local Plan. A total of **354 sites** were submitted to us.

4.42 An Ongoing Call for Sites was also opened recognising that some people may still wish to put sites forward for consideration as allocations in the Local Plan Update. All sites submitted to our Ongoing Call for Sites before 1 August 2024 have been included in the following LAA and SA assessments. There were a total of **15 sites** bringing the total number of sites assessed to **369 sites**. Sites submitted after 1 August 2024 will be taken into account in preparation of the 'Preferred Options' Consultation scheduled for summer/autumn 2025.

4.43 The Call for Sites asked people to submit sites with potential for:

- residential use (such as housing, specialist homes, moorings, care homes)
- commercial use (such as retail, leisure, industrial, logistics)
- infrastructure (such as health uses, community facilities, renewable energy)
- open space use (such as sports and recreation, allotments, biodiversity net gain, flooding safeguarding)

4.44 All sites submitted during the Call for Sites and Ongoing Call for Sites can be found on our [interactive map](#) and also in this [spreadsheet](#), which is ordered by parish.

4.45 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards

2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

4.46 Each of these groupings have their own LAA document and also SA report. These SA reports have been split into separate appendices to the Sustainability Appraisal Report for ease of navigation. They are:

- Appendix 3 - Northern Huntingdonshire Site Appraisals
- Appendix 4 - North Eastern Huntingdonshire Site Appraisals
- Appendix 5 - Northern Central Huntingdonshire Site Appraisals
- Appendix 6 - Western Huntingdonshire Site Appraisals
- Appendix 7 - Central Huntingdonshire Site Appraisals
- Appendix 8 - Eastern Huntingdonshire Site Appraisals
- Appendix 9 - Southern Huntingdonshire Site Appraisals

4.47 The proportion of sites within each of the seven areas are shown in the following table and chart. A fairly even spread in terms of the number of sites in each area can be observed:

Area	Number of sites	Percentage of total
1. Northern Huntingdonshire	54	14.63%
2. North Eastern Huntingdonshire	65	17.62%

Area	Number of sites	Percentage of total
3. Northern Central Huntingdonshire	55	14.91%
4. Western Huntingdonshire	54	14.63%
5. Central Huntingdonshire	45	12.20%
6. Eastern Huntingdonshire	61	16.53%
7. Southern Huntingdonshire	35	9.49%
	<b>369</b>	<b>100%</b>

Map 4.1 Huntingdonshire site assessment groupings

4.48 The vast majority of sites submitted to us were for solely residential developments, we also received sites for commercial, mixed use, infrastructure, renewable energy and natural/ open space/ biodiversity net gain uses.

- 4.49 All the sites are assessed through a 2 stage approach:
1. Land Availability Assessment - which contains individual assessments of each sites
  2. Sustainability Appraisal - the appendices contain detailed assessment of each site against the sustainability objectives

4.50 The SA questions used to assess sites are can be found in the site column of the Table 21 'SA framework ' (see Table 20 of the SA Scoping Report). The same scoring system as the one to appraise the options in the Further Issues and Options.

## 4 Stage B - Develop options and appraise effects

### Development Management Policies

- 4.51 This section will be used to appraise the development management policies at preferred options stage which are subject to introduction of national development management policies.

### B6: Proposing measures to monitor the significant effects of implementing the plan

- 4.52 This section will be completed once policies have been drafted and appraised following our Further Issues and Option consultation.

## 5 Stage C - Prepare the SA Report

<b>C:</b>	Prepare the Sustainability Appraisal Report.	The purpose of this stage is to present the findings from Stage B in a form suitable for public consultation and use by decision makers.
-----------	--	--

- 5.1** The Sustainability Appraisal Report is a key output and a critical part the SA process. It is a specific requirement of the SEA requirements (see 2 'Sustainability Appraisal Methodology'), where it is known as the Environmental Report. As such, this stage consists of the following task:
- C1: Preparing the Sustainability Appraisal Report
- 5.2** In deciding the length and the level of detail to be provided in a Sustainability Appraisal Report, we need to bear in mind its purpose as a public consultation document. It is likely to be of interest to a wide variety of readers, including decision-makers, other plan/ programme-making authorities, statutory consultees, non-government organisations, and members of the public. As such it needs to be prepared with this range of users in mind. It is also required to include a 'Non-technical Summary'.
- 5.3** At the Further Issues and Option stage (Autumn 2024), we have started to prepare the SA report (this report) but it is an iterative process and later stages will be completed as the Local Plan Update progresses. This section has been retained here for completeness and to show the full SA process.

## 6 Stage D - Consultation and development of the Plan

### 6 Stage D - Consultation and development of the Plan

<b>D:</b>	Consultation and development of the plan.	The purpose of this stage is to consult on the report, to appraise significant changes to the plan objectives, options and preferred options/ policies appraised in Stage B and to explain how the SA process has shaped the plan.
-----------	---	--

**6.1** This stage gives the public and consultation bodies an opportunity to express their opinions on the findings of the environmental report and to use it as a reference point in commenting on the plan. It is also an opportunity to gather more information through the opinions and concerns of the public. Consultation and engagement ensures the environmental implications of any significant changes to the draft plan are assessed and taken into account. It is also provides information on how the Sustainability Appraisal Report and consultees' opinions were taken into account in deciding the final format of the plan to be adopted.

**6.2** This stage consist of the following tasks:

- D1: Public participation on the draft plan and the Sustainability Appraisal report
- D2: Appraising significant changes
- D3: Making decisions and providing information

**6.3** At the Further issues and Options stage (Autumn 2024), this stage is to be completed but has been retained here for completeness to show the full SA process.

## 7 Stage E - Monitoring and implementation of the Plan

<b>E:</b>	Monitoring the implementation of the plan.	The purpose of this stage is to establish ways of considering whether or not to review the plan and to enable sustainability appraisal processes for future plans.
-----------	--	--

- 7.1** Monitoring allows the actual significant environmental effects of implementing the Local Plan to be tested against those predicted and so helps to ensure that any problems which arise during implementation, whether or not they were foreseen, are identified and future predictions made more accurately.
- 7.2** Monitoring can help provide the baseline information for future plans and programmes, and in preparing information which will be needed for EIAs of projects. Monitoring and evaluation of progress towards objectives and targets can form a crucial part of the feedback mechanism. Feedback from the monitoring process helps to provide more relevant information that can be used to pinpoint specific performance issues and significant effects, and ultimately lead to more informed decision-making.
- 7.3** This stage consists of the following two tasks:
- E1: Developing aims and methods for monitoring
  - E2: Responding to adverse effects
- 7.4** At the Further issues and Options stage (Autumn 2024), this stage is to be completed but has been retained here for completeness to show the full SA process.

## Sustainability Appraisal Appendix 1 - A1 Plans and Programs

## Contents

The plans, programmes and strategies reviewed in stage A1	1
<b>International level</b>	<b>1</b>
<b>National level</b>	<b>4</b>
<b>Regional level</b>	<b>20</b>
<b>Sub-regional, County and Local level</b>	<b>24</b>

## The plans, programmes and strategies reviewed in stage A1

### The plans, programmes and strategies reviewed in stage A1

1.1 This appendix summarises the outcome of a review of international, national regional and sub-regional/county/local plans programmes and strategies. The following tables summarise the aims, objectives, targets and indicators of relevant plans, programmes and strategies which has informed the identification of the ways in which the Local Plan could help to fulfil them or be shaped by them.

1.2 While the review has been comprehensive, it is not an exhaustive list of all plan, programmes and strategies out there, but includes those that have the most direct bearing on the future planning of the district. The list does not provide a definitive account of their contents; however, it is considered that it provides a sufficient review of those relevant to the preparation of the Local Plan and identifies any environmental, economic and social implications that should be considered within the SA and plan-making process.

#### International level

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">United Nations: the 2030 Agenda for Sustainable Development (UN, 2015)</a>	<p>The Sustainable Development Goals (SDGs) or Global Goals are a collection of 17 interlinked global goals designed to be a "blueprint to achieve a better and more sustainable future for all". The SDGs were set up in 2015 by the United Nations General Assembly and are intended to be achieved by the year 2030. The 17 goals are:</p> <ol style="list-style-type: none"> <li>1. End poverty in all its forms everywhere</li> <li>2. End hunger, achieve food security and improved nutrition and promote sustainable agriculture</li> <li>3. Ensure healthy lives and promote well-being for all at all ages</li> <li>4. Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all</li> <li>5. Achieve gender equality and empower all women and girls</li> <li>6. Ensure availability and sustainable management of water and sanitation for all</li> <li>7. Ensure access to affordable, reliable, sustainable and modern energy for all</li> <li>8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all</li> <li>9. Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation</li> <li>10. Reduce inequality within and among countries</li> <li>11. Make cities and human settlements inclusive, safe, resilient and sustainable</li> <li>12. Ensure sustainable consumption and production patterns</li> <li>13. Take urgent action to combat climate change and its impacts</li> <li>14. Conserve and sustainably use the oceans, seas and marine resources for sustainable development</li> </ol>	<p>These goals are set at a high level. The National Planning Policy Framework now references these goals, as such the principles and essence of these goals and their contribution to sustainable development must be embedded into the new Local Plan.</p>	<p>All</p>

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
	15. Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss 16. Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels 17. Strengthen the means of implementation and revitalize the global partnership for sustainable development		
<a href="#">United Nations Climate Change Conference: Glasgow Climate Pact (UN, 2021)</a>	<p>The Glasgow Climate Pact is a legally binding international treaty on climate change. COP26 finalised the Paris 'rulebook', resolving the key outstanding political decisions needed for Parties to begin implementing the Paris Agreement. On 13 November 2021, COP26 concluded in Glasgow with all countries agreeing the Glasgow Climate Pact to keep 1.5C alive and finalise the outstanding elements of the Paris Agreement. Climate negotiators ended two weeks of talks with consensus on urgently accelerating climate action.</p> <ul style="list-style-type: none"> <li>• Mitigation - reducing emissions</li> <li>• Adaptation - helping those already impacted by climate change</li> <li>• Finance - enabling countries to deliver on their climate goals</li> <li>• Collaboration - working together to deliver even greater action</li> </ul>	<p>This is a high level agreement which the United Kingdom has signed up to in order to address the outstanding elements of the Paris Agreement. Huntingdonshire must play its part in reducing carbon emissions and the impacts of climate change on people and the environment. The new Local Plan will play an important part in implementing policies that provide carbon neutral, green and climate resilient development.</p>	<p>Climate Emissions and Targets</p>
<a href="#">United Nations: Paris Agreement (UN, 2015)</a>	<p>The Paris Agreement is a legally binding international treaty on climate change. It was adopted by 196 Parties at COP 21 in Paris, on 12 December 2015 and entered into force on 4 November 2016. Its goal is to limit global warming to well below 2, preferably to 1.5 degrees Celsius, compared to pre-industrial levels. To achieve this long-term temperature goal, countries aim to reach global peaking of greenhouse gas emissions as soon as possible to achieve a climate neutral world by mid-century reaching a level whereby greenhouse gas emissions from human activity are at the same levels that trees, soil and oceans can absorb naturally (net zero) between 2050 and 2100. Also, each country to set its own emission-reduction targets, reviewed every five years and rich countries are to help poorer nations by providing funding, known as climate finance, to adapt to climate change and switch to renewable energy.</p>	<p>Huntingdonshire must play its part in reducing carbon emissions and the impacts of climate change on people and the environment. The new Local Plan will play an important part in implementing policies that provide carbon neutral, green and climate resilient development.</p>	<p>Climate Emissions and Targets</p>
<a href="#">Aarhus Convention 1998</a> : The UN Economic Commission for Europe Convention on Access to Information, Public Participation in Decision-Making and	<p>Establishes the right of everyone to receive environmental information that is held by the public sector. The right to participate from an early stage in environmental decision making. The right to challenge public decisions that have been made without respecting these rights. This led to the Freedom of Information Act 2000 and Environmental Information Regulations 2004.</p>	<p>Evidence used to underpin the new Local Plan must be publicly available. Consultation throughout the development of the Local Plan will be undertaken in accordance with the legal framework.</p>	<p>Procedural</p>

## The plans, programmes and strategies reviewed in stage A1

Page 1796 of 3488

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
Access to Justice in Environmental Matters			
<a href="#">European Landscape Convention (Council of Europe, signed by UK in 2006 and introduced March 2007)</a>	Promotes landscape protection, management and planning and European co-operation on landscape issues. The Framework set out in the Convention is being implemented through Action Plans created by Natural England, English Heritage and DEFRA with input from other partners e.g. Forestry Commission and Local Authorities to review policies on Landscape.	Huntingdonshire's landscape is varied with urbanised towns and rural areas. There are several designated nature sites and the Fens important for wildlife and agricultural production.	Landscape Biodiversity, Habitats and the Natural Environment
<a href="#">Valletta Convention (European Convention on the protection of Archaeological Heritage) 1992</a>	Recognises importance of and clarifies definition of archaeological heritage. The emphasis is on protection of sites for future study, the reporting of chance finds the control of excavations and the use of metal detectors. Signatories (including the UK) promise to allow the input of expert archaeologists into the making of planning policies and planning decisions.	Huntingdonshire has a wealth of heritage including many scheduled monuments. There is potential that sites of archaeological significance are yet to be discovered, therefore the new Local Plan will reinforce a positive strategy towards heritage and archaeology building on existing knowledge and evidence bases.	Heritage
<a href="#">European Convention for the Protection of the Architectural Heritage of Europe (1985) (Granada Convention)</a>	The main purpose of the Convention is to reinforce and promote policies for the conservation and enhancement of Europe's heritage. It also affirms the need for European solidarity with regard to heritage conservation and is designed to foster practical co-operation among the Parties. It establishes the principles of "European co-ordination of conservation policies" including consultations regarding the thrust of the policies to be implemented.	Huntingdonshire has a wealth of heritage: many listed structures, conservation areas, scheduled monuments and registered parks and gardens. The new Local Plan will reinforce a positive strategy towards the conservation of landscapes, heritage and archaeology building on existing knowledge and evidence bases.	Heritage

### 1.3 European Directives that have been transposed into UK legislation:

- **European SEA Directive (2001/42/EEC)** > The Environmental Assessment of Plans and Programmes Regulations 2004 (as amended)
- **European Directive 97/11/EC (amending Directive 85/337/EEC on the assessment of the effects of certain public and private projects on the environment known as the Environmental Impact Assessment Directive)** > The Town and Country Planning (Environmental Impact Assessment) Regulations 2017
- **European Air Quality Framework Directive (2008/50/EEC)** > The Air Quality Standards Regulations 2010

## The plans, programmes and strategies reviewed in stage A1

- **European Directive Nitrates (91/676/EEC)** > The Nitrate Pollution Prevention (Amendment) Regulations 2009 (Nitrate Pollution Prevention Regulations 2008)
- **European Directive on the Energy Performance of Buildings 2002/91/EC** > Building Regulations 2010 (as amended); and The Energy Performance of Buildings (England and Wales) Regulations 2012
- **European Environmental Noise Directive (2002/49/EC)** > Environmental Noise (England) Regulations 2006 (as amended)
- **Landfill of Waste (Landfill Directive) (99/31/EC)** > Landfill (England and Wales) Regulations 2002 (as amended)
- **European Waste Framework Directive (2006/12/EC)** > Waste Minimisation Act 1998; and Household Waste Recycling Act 2003
- **Water Framework Directive (2000/60/EC)** > Water Act 2014; and Flood and Water Management Act 2010
- **European Floods Directive (2007/60/EC)** > The Flood Risk Regulations 2009
- **EC Council Directive on the Conservation of Habitats and of Wild Fauna and Flora 92/43/EEC (The Habitats Directive, 1992)** > The Conservation of Habitats and Species Regulations 2017 (as amended)
- **Convention on Wetlands of International Importance (Ramsar, Iran, 1971) (Ramsar Convention)** > The Conservation of Habitats and Species Regulations 2017 (as amended)
- **Council Directive on the Conservation of Wild Birds: Directive 2009/147/EC** > The Conservation of Habitats and Species Regulations 2017 (as amended)
- **European Convention on the Conservation of European Wildlife and Natural Habitats (Bern Convention) (1979)** > Wildlife and Countryside Act (1981 as amended)

#### Legislation

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Human Rights Act 1998</a>	Primary legislation covering human rights which sets out basic civil and political rights of individuals. It includes the right to peaceful enjoyment of a dwelling, to privacy and protection of privacy by law and freedom of opinion and expression.	Legal requirement that human rights of individuals are not compromised within the plan making process.	All
<a href="#">Freedom of Information Act 2000</a>	Establishes the right of everyone to receive environmental information that is held by the public sector. The right to participate from an early stage in environmental decision making. The right to challenge public decisions that have been made without respecting these rights	Evidence to support the new Local Plan will be made publicly available. Consultation throughout the development of the Local Plan will be undertaken in accordance with the legal framework.	Procedural

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Environmental Information Regulations 2004</a>	The Environmental Information Regulations 2004 is a UK Statutory Instrument that provides a statutory right of access to environmental information held by UK public authorities.	Evidence to support the new Local Plan will be made publicly available. Consultation throughout the development of the Local Plan will be undertaken in accordance with the legal framework.	Procedural
<a href="#">Equality Act 2010</a>	The Equality Act 2010 legally protects people from discrimination in the workplace and in wider society. The protected characteristics are: age; disability; gender reassignment; marriage and civil partnership; pregnancy and maternity; race; religion or belief; sex; sexual orientation.	Legal requirement that those with a protected characteristic are treated equally and are not compromised within the plan making process. An Equality Impact Assessment will be undertaken as part of the preparations for the new Local Plan.	Procedural
<a href="#">The Environmental Assessment of Plans and Programmes Regulations 2004 (as amended)</a>	Requires assessment of the effect of projects on the environment.	The impacts of the new Local Plan on the environment be assessed and compiled into a Sustainability Appraisal.	Procedural
<a href="#">The Town and Country Planning (Environmental Impact Assessment) Regulations 2017 (as amended)</a>	Requires assessment of the effect of projects on the environment (EIA). An Environmental Impact Assessment applies to development which is given planning permission under Part III of the Town and Country Planning Act 1990.	The Local Plan will undertake a sustainability appraisal to assess the impacts of policies and proposals on the environment.	Procedural
<a href="#">Town and Country Planning Act 1990 (as amended)</a>	It is a central part of English planning law in that it concerns town and country planning in the United Kingdom and is now also complemented by the Planning and Compulsory Purchase Act 2004.	Legal framework for the planning system.	Procedural
<a href="#">Planning and Compulsory Purchase Act 2004 (as amended)</a>	The Act updates elements of 1990 Town & Country Planning Act. In chapter 5, it introduces the system of development plan documents as part of the Local Development Framework. Introduces regional spatial strategies as replacements for structure plans and regional planning guidance. It also reforms to the development control and compulsory purchase and compensation systems and removes crown immunity from planning controls.	Legal framework for the planning system.	Procedural
<a href="#">Localism Act 2011</a>	There are four key aspects of the Localism Act, it provided new freedoms and flexibilities for local government; new rights and powers for communities and individuals (including the introduction of	The Local Plan will meet these requirements.	Procedural

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
	neighbourhood plans); reform to make the planning system more democratic and more effective; and reform to ensure that decisions about housing are taken locally		
<a href="#">The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended)</a>	Prescribe the general form and content of local plans and adopted policies maps and what additional matters local planning authorities must have regard to when drafting their local plans.	The Local Plan will meet these requirements.	Procedural
<a href="#">The Neighbourhood Planning (General) Regulations 2012</a>	The Regulations set out the procedure for the designation of neighbourhood areas and neighbourhood forums and for the preparation of neighbourhood development plans and neighbourhood development orders (including community right to build orders).	Huntingdonshire has several made neighbourhood plans and some in production. More may follow. They have to be in conformity with the strategic policies of the Local Plan.	All
<a href="#">Planning Act 2008 (as amended)</a>	Introduces the system for nationally significant infrastructure planning alongside further reforms to the Town and Country Planning System including the addition of a duty on councils to take action on climate change in their development plan documents and the introduction of a Community Infrastructure Levy. The Planning and Energy Act 2008 allows local planning authorities to set energy efficiency standards in their development plan policies that exceed the energy efficiency requirements of the building regulations.	Huntingdonshire has several major transport projects ongoing (A428, A141) and potentially others in East-West Rail. Huntingdonshire is a CIL charging authority. A transport study will be undertaken as part of the Local Plan's preparation. Additionally, the Local Plan will recognise and respond to the risks of climate change for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change.	Travel and Transport Carbon Emissions and Targets
<a href="#">Planning and Energy Act 2008</a>	Builds on policies and provisions in Climate Change Programme. Allows local authorities to include policies and proposals that will secure energy efficiency improvements in excess of Part L Building Regulations including: A proportion of energy used in development in their area to be energy from renewable sources; A proportion of energy used in development in their area to be low carbon; and Development in their area to comply with energy efficiency standards that exceed the energy requirements of building requirements.	The Local Plan will recognise and respond to the risks of climate change for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change.	Carbon Emissions and Targets

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Environment Act 2021</a>	This Act will set clear statutory targets for the recovery of the natural world in four priority areas: air quality, biodiversity, water and waste, and includes an important new target to reverse the decline in species abundance by the end of 2030. It sets in law new tools that Natural England and others can use to help meet those targets towards a Nature-positive 2030 such as biodiversity metrics and calculators to assess biodiversity net gain. DEFRA have released the Biodiversity Metric 3.0 (JP039) in 2021.	The Local Plan will be supported by appropriate assessments on the environment including a Habitats Regulation Assessment to assess the impact of policies and allocations on the environment, habitats and wildlife. Collaboration with partners on how biodiversity net gain can be achieved will also take place.	Biodiversity, Habitats and the Natural Environment
<a href="#">The Conservation of Habitats and Species Regulations 2017 (as amended)</a>	Sets targets for SSSIs and Regulation 48 requires screening of projects with respect to the need for Habitats Regulations Assessment (HRA).	The new Local Plan is required to undertake a Habitats Regulation Assessment to assess the impact of policies and allocations on internationally designated sites.	Biodiversity, Habitats and the Natural Environment
<a href="#">Wildlife and Countryside Act (1981 as amended)</a>	The Convention aims to ensure conservation of wild flora and fauna species and their habitats and prevent loss of flora and fauna by making it illegal to intentionally damage wild plants and animals or their habitats. Special attention is given to endangered and vulnerable species, including endangered and vulnerable migratory species.	The Local Plan will be supported by appropriate assessments on the environment including a Habitats Regulation Assessment to assess the impact of policies and allocations on the environment, habitats and wildlife.	Biodiversity, Habitats and the Natural Environment
<a href="#">Planning (Listed Buildings and Conservation Areas) Act 1990 (as amended)</a>	Provides specific protection for buildings and areas of special architectural or historic interest.	The Local Plan should include a positive strategy towards heritage assets.	Heritage
<a href="#">The Ancient Monuments and Archaeological Areas Act 1979 (as amended)</a>	Recognises importance of and clarifies definition of archaeological heritage. The emphasis is on protection of sites for future study, the reporting of chance finds the control of excavations and the use of metal detectors. Signatories (including the UK) promise to allow the input of expert archaeologists into the making of planning policies and planning decisions.	The Local should include a positive strategy towards heritage assets.	Heritage
<a href="#">Housing and Planning Act 2016</a>	The Act introduced a number of measures: <ul style="list-style-type: none"> <li>• Extending the Right to Buy discounts to housing association tenants.</li> <li>• Placing a duty on local planning authorities to promote the development of Starter Homes.</li> <li>• Requiring local authorities to prepare, maintain and publish local registers of land.</li> <li>• Supporting a doubling of the number of custom-built and self-built homes to 20,000 by 2020.</li> </ul>	The Local Plan will seek opportunities to integrate self and custom build products. The Local Plan will also include policies on affordable housing provision and recommended tenure splits to meet need.	Housing

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
	<ul style="list-style-type: none"> <li>• Ensuring every area has a local plan.</li> <li>• Reforming compulsory purchase.</li> <li>• Simplifying and speeding up neighbourhood planning.</li> <li>• Requiring social tenants on higher incomes to pay fairer rents.</li> <li>• Placing a duty on local authorities to consider selling higher-value housing assets when they become vacant.</li> <li>• Giving local authorities more powers to tackle rogue landlords.</li> <li>• Improving local information on the private rented sector.</li> <li>• Reducing regulatory controls for private registered providers of housing.</li> <li>• Enabling lead enforcement authority for estate agents.</li> </ul>		
<a href="#">Self-build and Custom Housebuilding Act 2015 (as amended by the Housing and Planning Act 2016)</a>	<p>Self-build and custom housebuilding covers a wide spectrum, from projects where individuals are involved in building or managing the construction of their home from beginning to end, to projects where individuals commission their home, making key design and layout decisions, but the home is built ready for occupation ('turnkey').</p> <p>The Self-build and Custom Housebuilding Act 2015 (as amended by the Housing and Planning Act 2016) provides a legal definition of self-build and custom housebuilding. The Act does not distinguish between self-build and custom housebuilding and provides that both are where an individual, an association of individuals, or persons working with or for individuals or associations of individuals, build or complete houses to be occupied as homes by those individuals.</p>	<p>The Council is required to keep a Self and Custom build register and permit enough plots to meet the identified need within 3 years of the base period. The Local Plan will seek opportunities to integrate self and custom build products.</p>	Housing
<a href="#">Homelessness Reduction Act 2017</a>	<p>It places duties on local authorities to intervene at earlier stages to prevent homelessness in their areas. It also requires housing authorities to provide homelessness services to all those affected, not just those who have 'priority need'. These include:</p> <p>(a) an enhanced prevention duty extending the period a household is threatened with homelessness from 28 days to 56 days, meaning that housing authorities are required to work with people to prevent homelessness at an earlier stage; and</p> <p>(b) a new duty for those who are already homeless so that housing authorities will support households for 56 days to relieve their homelessness by helping them to secure accommodation.</p>	<p>The proposed growth within the Local Plan must meet identified needs. These will be integrated into policies and allocations and supported by appropriate evidence.</p>	Housing
<a href="#">The Air Quality Standards Regulations 2010</a>	<p>Avoid, prevent or reduce concentrations of harmful air pollutants and limit values and/or alert thresholds set for ambient air pollution levels. Sets legally binding limits for concentrations in outdoor air of major air pollutants that impact public health such as particulate matter and nitrogen dioxide.</p>	<p>The Local Plan should ensure that through its policies and allocations that harmful effects on air quality are avoided.</p>	Pollution
<a href="#">Environmental Noise (England) Regulations 2006 (as amended)</a>	<p>Sets out a hierarchy for the avoidance, prevention and reduction in adverse effects associated with environmental noise, including noise generated by road and rail vehicles, infrastructure, aircraft and outdoor, industrial and mobile machinery. It focuses on three action areas: the determination of</p>	<p>The impact of noise on residential amenity, public health and the environment from proposals in the Local</p>	Pollution

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
	exposure to environmental noise; ensuring that information on environmental noise and its effects is made available to the public; and preventing and reducing environmental noise where necessary and preserving environmental noise quality where it is good.	Plan will be considered, particularly in respect of the location of development and the type of development proposed.	
<a href="#">The Environmental Permitting (England and Wales) Regulations 2007</a>	These Regulations introduce a new system of environmental permitting in England and Wales. They carry into effect in England and Wales Community legislation in the field of pollution prevention and control.	The Local Plan will undertake a sustainability appraisal to assess the impacts of policies and proposals on the environment.	Pollution
<a href="#">Nitrate Pollution Prevention (Amendment) Regulations 2016</a>	Puts in place measures to reduce water pollution caused by nitrates. The Environment Agency identifies Nitrate Vulnerable Zones (NVZs) and establishes and implements an action programme with this aim. NVZs are areas designated as being at risk from agricultural nitrate pollution. They include about 55% of land in England. Defra reviews NVZs every 4 years to account for changes in nitrate concentrations. The last review was in December 2020.	The sustainability appraisal for the Local Plan should consider impacts of development upon any identified nitrate sensitive areas. Environmentally sensitive agricultural practice could also be considered as part of policies in combination with work underway in the Great Fen .	Land, Soils and Agriculture
<a href="#">Climate Change Act 2008 (as amended)</a>	Long term binding framework to tackle climate change. Sets out a new approach to tackling climate change including: Setting ambitious, legally binding targets; Taking powers to help meet those targets; Strengthening the institutional framework; Enhancing the UK's ability to adapt to the impact of climate change; and Establishing clear and regular accountability to UK Parliament. Key aim of the Act is to improve carbon management helping the transition towards a low-carbon economy through the setting of carbon emission targets. In 2019 the Government amended the Climate Change Act to commit the UK to achieving net zero by 2050, compared to the previous target of an 80% reduction in emissions by 2050 from the 1990 baseline.	The Local Plan will recognise and respond to the risks of climate change for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change.	Carbon Emissions and Targets
<a href="#">Building Regulations 2010 (as amended)</a>	Building regulations are minimum standards for design, construction and alterations to virtually every building. The Building Regulations 2010 cover the construction and extension of buildings and these regulations are supported by Approved Documents. Baseline is set for the conservation of fuel and power in new and existing dwellings by Part L of Building Regulations with Part G addressing sanitation, hot water safety and water efficiency. An uplift to parts L (Conservation of fuel and power) and F (Ventilation) came into effect on 15 June 2022 to improve the energy efficiency of new builds. Part O addressing overheating and Part S addressing infrastructure for charging electric vehicles were also added to the approved documents on 15 June 2022.	The Local Plan will recognise and respond to the risks of climate change for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change. This may also include retrofitting of existing buildings.	Carbon Emissions and Targets Renewable Energy and Energy Efficiency
<a href="#">The Energy Performance of Buildings (England</a>	The 2012 regulations aim to implement the Energy Performance of Buildings Directive and in doing so improve the energy efficiency of buildings, thus reducing CO2 emissions and lessening the impact	The Local Plan will recognise and respond to the risks of climate change	Carbon Emissions and Targets

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">and Wales) Regulations 2012</a>	of climate change. It does this through a number of measures which introduced structured assessment and reporting of aspects the buildings which have a bearing on their use of energy such as the construction style, the fabric used, insulation measures, the predicted performance of fixed building services for lighting, heating and cooling. Additionally, the reports contain recommendations which provide owners with optional actions and investments that they may make to increase the energy efficiency of their building.	for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change. This may also include retrofitting of existing buildings.	Renewable Energy and Energy Efficiency
<a href="#">Landfill (England and Wales) Regulations 2002 (as amended)</a>	To provide for measures, procedures and guidance to prevent or reduce effects on the environment, in particular the pollution of surface water, ground water, soil and air, and on the global environment, including the greenhouse effect, as well as any resulting risk to human health, from landfilling of waste, during the whole life-cycle of the landfill.	The Local Plan should have a positive strategy towards waste minimisation for example through policies that support a circular economy.	Waste and Recycling
<a href="#">Waste Minimisation Act 1998</a>	The prevention or reduction of waste production and its harmfulness by; the development of technologies more sparing in their use of resources: the use of products designed so as to make no or the smallest possible contribution, by the nature of their manufacture, use or disposal, to increase the amount or harmfulness of waste and pollution hazards; the development of appropriate techniques for the final disposal of dangerous substances contained in waste destined for recovery; and the recovery of waste by means of recycling, reuse or reclamation with a view to extracting raw materials; or the use of waste as a source of energy.	The Local Plan should have a positive strategy towards waste minimisation for example through policies that support a circular economy.	Waste and Recycling
<a href="#">Household Waste Recycling Act 2003</a>	The prevention or reduction of waste production and its harmfulness by; the development of technologies more sparing in their use of resources: the use of products designed so as to make no or the smallest possible contribution, by the nature of their manufacture, use or disposal, to increase the amount or harmfulness of waste and pollution hazards; the development of appropriate techniques for the final disposal of dangerous substances contained in waste destined for recovery; and the recovery of waste by means of recycling, reuse or reclamation with a view to extracting raw materials; or the use of waste as a source of energy.	The Local Plan should have a positive strategy towards waste minimisation for example through policies that support a circular economy.	Waste and Recycling
<a href="#">Water Act 2014</a>	This Act brings about a reform of legislation concerning the water industry and management and conservation of water resources and related environmental matters in the United Kingdom. The purpose of the Act is to: reform the water industry to make it more innovative and responsive to customers and to increase the resilience of water supplies to natural hazards such as drought and floods to bring forward measures to address the availability and affordability of insurance for those households at high flood risk and ensure a smooth transition to the free market over the longer term.	The Local Plan will be supported by an updated Water Cycle Study and strategic flood risk assessment to shape policies and allocations.	Flooding and Water
<a href="#">Flood and Water Management Act 2010</a>	The purpose of the Directive is to establish a framework for the protection of inland surface waters, transitional waters, coastal waters and groundwater by preventing further deterioration and protects	The Local Plan will be supported by an updated Water Cycle Study and strategic	Flooding and Water

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
	and enhances the status of aquatic ecosystems; promoting sustainable water use; enhancing protection and improvement of the aquatic environment; progressively reducing pollution of groundwater and prevents its further pollution; and contributing towards mitigating the effects of floods and droughts.	flood risk assessment to shape policies and allocations.	
<a href="#">The Flood Risk Regulations 2009</a>	A framework for the assessment and management of flood risk, aiming at the reduction of the adverse consequences for human health, the environment, cultural heritage and economic activity. It requires an assessment of all water courses and coast lines are at risk from flooding, to map the flood extent and assets and humans at risk in these areas and to take adequate and coordinated measures to reduce this flood risk. The Directive also reinforces the rights of the public to access this information and to have a say in the planning process.	Three of Huntingdonshire's market towns are located within the Great Ouse valley (Huntingdon, St Neots and St Ives) and Ramsey within the low lying Fen, therefore flooding is a significant issue for the District, anticipated to worsen with climate change. The Local Plan will need to provide proactive policies to mitigate against flood risk from all its forms and be supported by a strategic flood risk assessment.	Flooding and Water
<a href="#">The Countryside and Rights of Way Act 2000</a>	Its aim is to improve public access to the countryside and registered common land while recognising the legitimate interests of the owners or managers of the land concerned. It implements the 'right to roam' in certain areas of cultivated land and upland in England and Wales. The Act lists restrictions on the public when on this land, including not damaging hedges, fences, walls.	Assess the impact of policies and allocations on public rights of way.	Travel and Transport
<a href="#">Natural Environment and Rural Communities Act 2006</a>	The act created Natural England and the Commission for Rural Communities and, amongst other measures, it extended the biodiversity duty set out in the Countryside and Rights of Way (CROW) Act to public bodies and statutory undertakers to ensure due regard to the conservation of biodiversity. Its principal aims are to ensure that all communities, people and businesses have better access to support, advice and services; and to better protect the countryside and open space through a more coherent approach to managing and conserving the natural environment	Assess the impact of policies and allocations on public rights of way. Huntingdonshire has a large rural area, the Local Plan should work with partners to improve transport in these areas and connections to more urban areas.	Travel and Transport
<a href="#">Children and Families Act 2014</a>	The Children and Families Act (2014) aims to ensure that all children, young people and their families are able to access the right support and provision to meet their needs. The Act outlines the Code of Practice for children and young people with Special Educational Needs and Disability (SEND).	This will be reflected in infrastructure studies and delivery plans.	Education
<a href="#">Childcare Act 2016</a>	The Childcare Act (2016) extends the entitlement in the Childcare Act (2006) to 30 hours free childcare over 38 weeks of the year for three- and four-year-olds in families where all parents are working. The Act places a duty on local authorities to secure sufficient and suitable quality early education and childcare places to enable parents to work or to undertake education or training which could lead to employment.	This will be reflected in infrastructure studies and delivery plans.	Education

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Education Act 1996</a> <a href="#">Education and Inspections Act 2006</a> <a href="#">Education and Skills Act 2008</a>	<p>Section 14 of The Education Act (1996) places LAs under a general duty to provide a school place for every child living in their area of responsibility who is of statutory school age and whose parents want their child educated in the state-funded sector.</p> <p>The Education and Inspections Act (2006) places additional duties on LAs to ensure fair access to educational opportunity, to promote choice for parents and to secure diversity in the provision of schools. In addition to this, the Act places an explicit duty on LAs for the first time to respond formally to parents seeking changes to the provision of schools in their area, including new schools.</p> <p>The Education and Skills Act (2008) increased the minimum age at which young people in England can leave learning.</p>	Proposed development within Huntingdonshire will create increased demand for school places, new settlement and urban extensions may be of a scale to provide their own primary and secondary schools. The requirement to provide schools places inline with growth will be reflected in infrastructure studies and delivery plans.	Education
<a href="#">Retained EU Law (Revocation and Reform) Bill (2022)</a>	The Bill will make it easier to amend or remove outdated 'retained EU law' - legacy EU law kept on the statute book after Brexit as a bridging measure – and will accompany a major cross-government drive to reform, repeal and replace outdated EU law.	The Local Plan and supporting evidence will meet all legal requirements and follow best practice in their production.	All
<a href="#">Levelling-up and Regeneration Bill and Policy Paper (2022)</a>	The Levelling-up and Regeneration Bill was published in May 2022. It proposes fundamental changes to the planning system including local plan timetables. The details of the Bills are complex and wide ranging and set out in a <a href="#">Government Policy Paper</a> with the <a href="#">Local Government Association</a> publishing a summary of key changes.	The timetable and methods of bringing the proposals in the Bill forward may impact impact the process by which the Local Plan is prepared and its scale and scope.	All

### National level policies and strategies

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">National Planning Policy Framework (2021) (NPPF) (MHCLG/ DLUHC, 2021)</a>	<p>The revised National Planning Policy Framework sets out government's planning policies for England and how these are expected to be applied. It includes the following topic areas:</p> <ul style="list-style-type: none"> <li>• Achieving sustainable development</li> <li>• Plan-making</li> <li>• Decision-making</li> <li>• Delivering a sufficient supply of homes</li> <li>• Building a strong, competitive economy</li> </ul>	The NPPF provides the national policies for planning and how these should be applied in the plan-making process. The Local Plan will need to be in conformity with the NPPF. Chapter 3 sets out the framework and criteria that the Local Plan must fulfil to be found sound.	All

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
	<ul style="list-style-type: none"> <li>• Ensuring the vitality of town centres</li> <li>• Promoting healthy and safe communities</li> <li>• Promoting sustainable transport</li> <li>• Supporting high quality communications</li> <li>• Making effective use of land</li> <li>• Achieving well-designed places</li> <li>• Protecting Green Belt land</li> <li>• Meeting the challenge of climate change, flooding and coastal change</li> <li>• Conserving and enhancing the natural environment</li> <li>• Conserving and enhancing the historic environment</li> <li>• Facilitating the sustainable use of minerals</li> </ul>		
<a href="#">National Planning Practice Guidance (NPPG) (MHCLG/DLUHC)</a>	To accompany the NPPF, a series of planning practice guidance have been produced to assist in the implementation and application of National policy. The guidance is updated fairly regularly.	The various topics covered within the NPPG provide additional detail on how national policy is to be applied including in plan-making which the Local Plan will reflect.	All
<a href="#">National Model Design Guide and Design Code (MHCLG/ DLUHC, 2021)</a>	The National Design Guide illustrates how well-designed places that are beautiful, enduring and successful can be achieved in practice. The National Model Design Code provides detailed guidance on the production of design codes, guides and policies to promote successful design.	Well designed places that create a sense of place is essential to sustainable and resilient communities and development. The Local Plan should set out policies towards design and placemaking so that future developments respond to their contexts using localised evidence such as Huntingdonshire's Design Guide and Landscape and Townscape SPD.	All
<a href="#">Manual for Streets (DCLG/DfT 2007)</a>	Sets out principles for good street design covering: streets in context; the design process - from policy to implementation; layout and connectivity; quality places; Street users needs; street geometry; Parking; traffic signs and markings; street furniture and street lighting; and materials, adoption and maintenance.	Well designed places are a key component to sustainable development. The Local Plan should set out policies towards design and placemaking so that future developments respond to their contexts using localised evidence such as Huntingdonshire's	All

		Design Guide and Landscape and Townscape SPD.	
<a href="#">Waste Management Plan for England 2021 (Defra, 2021)</a>	The Waste Management Plan for England is an analysis of the current waste management situation in England. The plan does not introduce new policies or change how waste is managed in England. Its aim is to bring current waste management policies together under one national plan.	Policies within the Minerals and Waste Local Plan apply to Huntingdonshire, any designations within the Minerals and Waste Local Plan will be taken into account when considering policies and locations for growth. The Local Plan should have a positive strategy towards waste minimisation for example through policies that support a circular economy.	Waste and Recycling
<a href="#">National Planning Policy for Waste (NPPW) (MHCLG/ DLUHC, 2014)</a>	This document sets out detailed waste planning policies. It should be read in conjunction with the National Planning Policy Framework, the National Waste Management Plan for England and national policy statements for waste water and hazardous waste, or any successor documents. All local planning authorities should have regard to its policies when discharging their responsibilities to the extent that they are appropriate to waste management.	The Local Plan should have a positive strategy towards waste minimisation for example through policies that support a circular economy.	Waste and Recycling
<a href="#">Planning for the Future White Paper (MHCLG/ DLUHC, 2020)</a>	On 6 August 2020 (then MHCLG) launched the Planning for the Future consultation which proposes for long-term fundamental structural changes to England's planning system. The Government's intention of such reforms is to streamline and modernise the planning process, bring a new focus to design and sustainability, improve the system of developer contributions to infrastructure, and ensure more land is available for development where it is needed.	May impact the process by which the Local Plan is prepared and its scale and scope.	All
<a href="#">Levelling up White Paper (DLUHC, February 2022)</a>	The Levelling Up White Paper sets out how the Government proposes to spread opportunity more equally across the UK. It sets out 12 missions to level up by 2030 across a variety of focus areas: living standards, research & development, transport infrastructure, digital connectivity, educations, skills, health, wellbeing, pride in place, housing, crime and local leadership.	Inequalities within Huntingdonshire will be reviewed and where possible will shape policies within the Local Plan to address them.	Income and Deprivation
<a href="#">Net Zero Strategy: Build Back Greener (Department for Business, Energy &amp; Industrial Strategy, October 2021)</a>	This strategy sets out policies and proposals for decarbonising all sectors of the UK economy to meet the country's net zero target by 2050. It includes policies like by 2035 the UK will be powered entirely by clean electricity; by 2035 no new gas boilers will be sold; further funding for the Social Housing Decarbonisation Scheme and Home Upgrade Grants; and a greener, faster and more efficient transport network.	The Local Plan will recognise and respond to the risks of climate change for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change. This may also include retrofitting of existing buildings.	Carbon Emissions and Targets  Renewable Energy and Energy Efficiency

	the Outcome Indicator Framework for this plan, which is also available as an interactive dashboard. The first annual progress report in May 2019. The Plan sits alongside two other government strategies: our Industrial Strategy and our Clean Growth strategy.	impact of policies and allocations on the environment, habitats and wildlife. Collaboration with partners on how biodiversity net gain can be achieved will also take place.	
<a href="#">Safeguarding our Soils – A Strategy for England (Defra, 2009)</a>	The Strategy's vision is that by 2030, all England's soils will be managed sustainably and degradation threats tackled successfully. This will improve the quality of England's soils and safeguard their ability to provide essential services for future generations. Soil is a fundamental and essentially non-renewable natural resource, providing the essential link between the components that make up our environment. Soils vary hugely from region to region and even from field to field. They all perform a number of valuable functions or ecosystem services for society including: nutrient cycling, water regulation, carbon storage, support for biodiversity and wildlife, and providing a platform for food and fibre production and infrastructure.	Agriculture and farming places an important role to the local and national economy and to the conservation of habitats and carbon capture. An appropriate strategy towards protecting high quality soils should be included in the Local Plan.	Land, Soils and Agriculture  Green Infrastructure
<a href="#">England Peat Action Plan (Defra, 2021)</a>	The England Peat Action Plan sets out the government's long-term vision for the management, protection and restoration of peatlands, so that they provide a wide range of benefits to wildlife, people and the planet. To implement this vision, the plan includes: the announcement of the Nature for Climate Peatland Grant Scheme through the Nature for Climate Fund a commitment to end the use of peat in the amateur horticulture sector a new spatial map of England's peatlands The Plan commitments to restore 35,000 hectares of peatland by 2025. The action plan is part of a series of announcements on nature and climate and sits alongside the England Trees Action Plan. It also supports the 25 Year Plan to Improve the Environment.	Agriculture and farming places an important role to the local and national economy and to the conservation of habitats and carbon capture. The Council is a partner in the Great Fen project. The ambitions of the project should be supported in the new Local Plan.	Land, Soils and Agriculture  Green Infrastructure
<a href="#">The UK Biodiversity Action Plan (1994 and updates) and UK Biodiversity Action Plan</a>	A detailed plan for the protection and enhancement of biodiversity resources. Seeks to increase public awareness of, and involvement in, conserving biodiversity and to contribute to the conservation of biodiversity on a European and global scale.	The Local Plan will be supported by appropriate assessments on the environment including a Habitats Regulation Assessment to assess the impact of policies and allocations on the environment, habitats and wildlife. Collaboration with partners on how biodiversity net gain can be achieved will also take place.	Biodiversity, Habitats and the Natural Environment
<a href="#">The Biodiversity Metric 3.0 (JP039) (Defra, 2021)</a>	Biodiversity Metric 3.0 is a biodiversity accounting tool that can be used for the purposes of calculating biodiversity net gain. It includes GIS support to apply the metric and also a test version of a Small Sites Metric – a simplified version of the Biodiversity Metric 3.0 for use on small development sites.	The Local Plan will be supported by appropriate assessments on the environment including a Habitats	Biodiversity, Habitats and the Natural Environment

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
		Regulation Assessment to assess the impact of policies and allocations on the environment, habitats and wildlife. Collaboration with partners on how biodiversity net gain can be achieved will also take place.	
<a href="#">Planning Policy for Traveller Sites (MHCLG, 2015)</a>	This document sets out the Government's planning policy for traveller sites. It should be read in conjunction with the National Planning Policy Framework. The Government's overarching aim is to ensure fair and equal treatment for travellers, in a way that facilitates the traditional and nomadic way of life of travellers while respecting the interests of the settled community. It identifies that Local authorities should make their own assessment of need for the purposes of planning.	The proposed growth within the Local Plan must meet the identified needs. These will be integrated into policies and allocations and supported by appropriate evidence.	Housing
<a href="#">Planning for Schools Development: Statement (2011)</a>	The Government wants to enable new schools to open, good schools to expand and all schools to adapt and improve their facilities. This will allow for more provision and greater diversity in the state-funded school sector to meet both demographic needs and the drive for increased choice and higher standards. It is the Government's view that the creation and development of state-funded schools is strongly in the national interest and that planning decision-makers can and should support that objective, in a manner consistent with their statutory obligations. We expect all parties to work together proactively from an early stage to help plan for state-school development and to shape strong planning applications.	Proposed development within Huntingdonshire will create increased demand for school places, new settlement and urban extensions may be of a scale to provide their own primary and secondary schools.	Education
<a href="#">Skills for jobs: lifelong learning for opportunity and growth (DfE, 2021)</a>	The White Paper sets out reforms to post-16 technical education and training to support people to develop the skills needed to get good jobs and improve national productivity.	Proposed development within Huntingdonshire will create increased demand for skills training and post-16 further education demand. A population with skills and technical training supports the local economy and improve employment prospects.	Education
<a href="#">Decarbonising transport: a better, greener Britain (2021)</a>	This plan sets out the government's commitments and the actions needed to decarbonise the entire transport system in the UK. It includes the: <ul style="list-style-type: none"> <li>• pathway to net zero transport in the UK</li> <li>• wider benefits net zero transport can deliver</li> <li>• principles that underpin our approach to delivering net zero transport</li> </ul>	Huntingdonshire has vast networks of strategic transport connections as well as local routes. The Local Plan should work with partners to help decarbonise the transport network, support a modal shift away from car usage, encourage	Travel and Transport  Carbon Emissions and Targets

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
		sustainable modes of transport and increase the infrastructure of electric vehicle charging points.	
<a href="#">Future of Mobility: Urban Strategy (DfT, 2019)</a>	The 'Future of mobility: urban strategy' outlines the government's approach to maximising the benefits from transport innovation in cities and towns. It sets out the principles that will guide government's response to emerging transport technologies and business models. The strategy also contains details of the next steps for the government's Future of mobility grand challenge. Alongside the strategy, the Department for Transport (DfT) has published the summary of responses to its Future of mobility call for evidence.	Huntingdonshire has a large rural area and some more urbanised areas, the Local Plan should work with partners to improve transport and mobility across the district.	Travel and Transport
<a href="#">Future of Transport: Rural Strategy – call for evidence responses (DfT, 2021)</a>	<p>This call for evidence seeks views and evidence from all those with an interest in rural transport. Following the Future of mobility: urban strategy published in March 2019, the Department for Transport (DfT), sought views and evidence on what could be incorporated into a Future of Transport: rural strategy. The consultation ran between 23 November 2020 and 16 February 2021) and includes:</p> <ul style="list-style-type: none"> <li>• the context of the Future of Transport: rural strategy assessment of the mobility trends in rural areas, and the emerging opportunities for rural environments that we are witnessing in transport innovation</li> <li>• consideration of the approach that the government could take to help shape these opportunities to benefit rural areas.</li> </ul> <p>The DfT anticipates a draft Rural Transport Strategy to be published by the end of 2022.</p>	Huntingdonshire has a large rural area, the Local Plan should work with partners to improve transport in these areas and connections to more urban areas.	Travel and Transport
<a href="#">The Heritage Statement (Department for Digital, Culture, Media &amp; Sport, 2017)</a>	The Government's vision and strategy for Heritage and the historic environment including how the government will support the heritage sector and help it to protect and care for our heritage and historic environment in the coming years, in order to maximise the economic and social impact of heritage and to ensure that everyone can enjoy and benefit from it.	The Local should include a positive strategy towards heritage assets.	Heritage
<a href="#">Industrial Strategy: Building a Britain fit for the future (HM Government, 2017)</a>	This sets out a long-term plan to boost the productivity and earning power of people throughout the UK. The strategy sets out how we are building a Britain fit for the future – how we will help businesses create better, higher-paying jobs with investment in the skills, industries and infrastructure of the future. It aims to boost productivity and earning power across the country by focusing on 5 foundations: ideas, people, infrastructure, business environment and places. In December 2018, progress made by the Industrial Strategy in Forging our Future: Industrial Strategy – the story so far was published.	A positive strategy towards economic activity and employment is essential in the Local Plan using appropriate evidence. Having a good understanding on the potential for a green economy and green jobs will need to be considered.	Employment and Business  Carbon Emissions and Targets
<a href="#">The Clean Growth Strategy: Leading the way to a low carbon</a>	This strategy sets out our proposals for decarbonising all sectors of the UK economy through the 2020s. It explains how the whole country can benefit from low carbon opportunities, while meeting national and international commitments to tackle climate change.	A positive strategy towards economic activity and employment is essential in	Employment and Business

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">future (HM Government, 2017)</a>		the Local Plan using appropriate evidence. Having a good understanding on the potential for a green economy and green jobs will need to be considered.	Carbon Emissions and Targets
<a href="#">The Environment Agency's approach to groundwater protection (EA, 2017)</a>	It contains position statements which provide information about the Environment Agency's approach to managing and protecting groundwater. They detail how the Environment Agency delivers government policy for groundwater and adopts a risk-based approach where legislation allows.	Policies that support the EA's goals and objectives on managing and protecting groundwater should be included in the Local Plan.	Flooding and Water
<a href="#">National Flood and Coastal Erosion Management Strategy for England (EA, 2021)</a>	The Flood and Water Management Act 2010 places a statutory duty on the Environment Agency to develop a National Flood and Coastal Erosion Risk Management Strategy for England. This strategy describes what needs to be done by all risk management authorities (RMAs) involved in flood and coastal erosion risk management for the benefit of people and places.	The Local Plan will need to provide proactive policies to mitigate against flood risk from all its forms and be supported by a strategic flood risk assessment.	Flooding and Water
<a href="#">Clean Air Strategy 2019 (HM Government)</a>	This strategy sets out the actions required across all parts of government and society to improve air quality. The strategy sets out how the Government will: protect the nation's health; protect the environment; secure clean growth and innovation; and reduce emissions from transport, homes, farming and industry monitor our progress. It complements three other UK government strategies: the Industrial Strategy, the Clean Growth Strategy and the 25 Year Environment Plan.	The Local Plan should ensure that through its policies and allocations that harmful effects on air quality are avoided.	Pollution
<a href="#">Air quality plan for nitrogen dioxide (NO2) in UK (Defra, 2017)</a>	Statutory air quality plan for nitrogen dioxide (NO2), setting out how the UK will be reducing roadside nitrogen dioxide concentrations. These documents and zone plans set out our comprehensive approach to meeting the statutory limits for nitrogen dioxide, and the policy background. The technical report details the modelling techniques and assumptions used when developing the plan.	The Local Plan should ensure that through its policies and allocations that harmful effects on air quality are avoided.	Pollution

		policies that provide carbon neutral, green and climate resilient development.	
<a href="#">Planning for sustainable growth in the Oxford-Cambridge Arc: spatial framework (MHCLG/DLUHC, 2021)</a> , <a href="#">Local Natural Capital Plan</a> and <a href="#">Ox-Cam Integrated Water Management Framework</a>	<p>The Government has renewed its support for the Oxford-Cambridge Arc, which Huntingdonshire is located within. In February 2021, a Spatial Framework for the Arc was published setting out the rationale and timelines to deliver the Spatial Framework. This is a long-term strategic plan to help coordinate the infrastructure, environment and new developments in the area. An indicative time for a draft Framework to be published is Autumn 2022. Once finalised, the Spatial Framework will sit alongside the NPPF as national policy. A consultation on creating a vision for the Oxford-Cambridge Arc was launched in July 2021 alongside a Sustainability Appraisal Scoping Report, the data used within it has been placed into an interactive map.</p> <p>The Local Natural Capital Plan for the Arc is a first step to ensure a natural capital baseline and framework is provided that helps to monitor environmental change and de-risk growth as part of the Ox-Cam Arc.</p> <p>The Ox-Cam Integrated Water Management Framework will explore how to draw together current and ongoing water, flood, natural capital, and land use planning work to create a shared understanding of issues and pressures and fully interconnected water and flood risk evidence base, and test and trial new approaches across the range of water functions. This will be used to consider water systems strategically and allow a holistic approach to decision making, solution planning for water management and wider spatial planning policy.</p>	<p>Huntingdonshire is located within the Oxford-Cambridge Arc. The Council has actively engaged with the Government on developing the Spatial Framework as stakeholders. To realise the potential of the Arc and if it is continued, the Local Plan should sustainably integrate infrastructure, growth and environmental priorities.</p>	All
<a href="#">East of England Route Strategy (Highways England, March 2017)</a>	<p>This Route Strategy provides a statement on the current performance of, and perceived pressures on, the East of England route to inform the planning of future investment. The SRN supports national and local economic prosperity by:</p> <ul style="list-style-type: none"> <li>• linking together major cities</li> <li>• connecting with extensive local road network</li> <li>• providing links to major ports, airports, and rail terminals</li> <li>• enabling good access to regions and cross-border routes between the nations of the United Kingdom</li> </ul> <p>The East of England route is formed of the A11, A12, A47 and A120</p>	<p>Huntingdonshire and many of its settlements are well placed in relation to the strategic road network. Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Cambridgeshire and Peterborough Minerals and Waste Local Plan (CCC, adopted July 2021)</a>	The Minerals and Waste Local Plan sets the framework for all minerals and waste developments until 2036. It sets out policies to guide mineral and waste management development and will: ensure a steady supply of minerals (construction materials e.g. sand and gravel) to supply the growth that is planned for the area; and enable CCC to have new modern waste management facilities, to manage our waste in a much better way than landfill. The Local Plan makes strategic allocations for long-term mineral and waste management development at Block Fen/Langwood Fen near Mepal. Designations such as Mineral Safeguarding Areas are also made within the Local Plan and shown on the Policies Map. This will ensure, for example, that consultation takes place between the County Council as Mineral Planning Authority and district/city councils when development is proposed on mineral bearing land. The aim is to avoid the county's finite mineral resource being unknowingly or unnecessarily sterilised.	Policies within the Minerals and Waste Local Plan apply to Huntingdonshire, any designations within the Minerals and Waste Local Plan will be taken into account when considering policies and locations for growth.	Waste and Recycling
<a href="#">Cambridgeshire and Peterborough Joint Health and Wellbeing Strategy 2020-2024 (CCC, 2020)</a>	The health and wellbeing strategy has four priorities: <ol style="list-style-type: none"> <li>1. places that support health and wellbeing;</li> <li>2. helping children achieve the best start in life;</li> <li>3. staying healthy throughout life; and</li> <li>4. quality health and social care.</li> </ol>	Health and wellbeing should be embedded in the Local Plan as part of sustainable development objectives and to create and support resilient communities.	Population and Health

This update summarises the progress made since the ROWIP was adopted in 2006 and sets out future challenges for rights of way and countryside access to 2031 in the form of updated Statements of Action.	By Cambridgeshire County Council which includes Huntingdonshire authority area	Travel and transport

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Cambridgeshire Flood Risk Management Strategy 2021-2027 (2022)</a>	<p>The strategy's main focus is on flooding from surface water, groundwater and ordinary watercourses, such as streams and ditches. Although the risk of flooding from rivers remains the responsibility of the Environment Agency, this strategy looks at the interaction between all forms of flood risk.</p>	<p>Three of Huntingdonshire's market towns are located within the Great Ouse valley (Huntingdon, St Neots and St Ives) and Ramsey within the low lying Fen, therefore flooding is a significant issue for the District, anticipated to worsen with climate change. The Local Plan will need to provide proactive policies to mitigate against flood risk from all its forms and be supported by a strategic flood risk assessment.</p>	<p>Flooding and Water</p>
<a href="#">Surface Water Management Plan for Cambridgeshire (CCC, 2014)</a>	<p>Tool to manage surface water flood risk on a local basis by improving and optimising coordination between relevant stakeholders. SWMPs build on 'Strategic Flood Risk Assessments' and provide the vehicle for local organisations to develop a shared understanding of local flood risk and establish an action plan, including setting out priorities for action, maintenance needs and links into development framework and emergency plans. Also to be used as evidence when formulating general planning policies relating to surface water flooding such as use of SuDS. Identifies St Neots, Huntingdon, St Ives, Sawtry and Godmanchester as wetspots and St Neots for additional modelling work. The objectives of the 2014 SWMP Countywide Update are to:</p> <ul style="list-style-type: none"> <li>• Collate and review additional flood incident records from 2011 to 2014 made available by the SWMP stakeholders to identify that the initial wetspot list remains appropriate;</li> <li>• Revise the MCA methodology to make use of the updated national surface water flood risk mapping available from the EA; and</li> <li>• Produce a revised list of wetspot prioritisation to assist CCC and partners in taking action and allocating resources for future investigation.</li> </ul>	<p>Three of Huntingdonshire's market towns are located within the Great Ouse valley (Huntingdon, St Neots and St Ives) and Ramsey within the low lying Fen, therefore flooding is a significant issue for the District, anticipated to worsen with climate change. The Local Plan will need to provide proactive policies to mitigate against flood risk from all its forms and be supported by a strategic flood risk assessment.</p>	<p>Flooding and Water</p>
<a href="#">Draft Preliminary Flood Risk Assessment for Cambridgeshire 2021-2027 (CCC, 2022)</a>	<p>The strategy has been developed together with the members of Cambridgeshire and Peterborough Flood and Water Partnership alongside the Environment Agency's National Flood and Coastal Erosion Risk Management Strategy. It encompasses the predicted and historical flooding issues in and around Cambridgeshire, focusing on how efficiencies and effectiveness of local solutions can be funded within communities to adapt and be more resilient to flood risk. Future adaptation will be key for the whole water environment as pressures are already being felt on water supply as well as flooding. Some work is already underway to provide greater support to communities as a part of the Community Flood Action Programme.</p>	<p>Three of Huntingdonshire's market towns are located within the Great Ouse valley (Huntingdon, St Neots and St Ives) and Ramsey within the low lying Fen, therefore flooding is a significant issue for the District, anticipated to worsen with climate change. The Local Plan will need to provide proactive policies to mitigate against flood risk from all its forms and</p>	<p>Flooding and Water</p>

<a href="#">Huntingdonshire Community Infrastructure Levy: Charging Schedule</a>	<p>The Community Infrastructure Levy (CIL) allows local planning authorities to raise funds from new development. HDC's charging schedule for CIL is based on the size and type of development. This should be read alongside the Council's Developer Contributions SPD (2011) and Developer Contributions: Updated Costs 2019/20.</p>	<p>The money raised is used to fund district-wide and local infrastructure projects that benefit local communities.</p>	<p>Community Services and Facilities</p>
<a href="#">Huntingdonshire Environment Principles (adopted December 2021)</a> and <a href="#">Huntingdonshire's Climate Change Strategy and Action Plan</a>	<p>The environmental principles proposed for the District Council and its activities:</p> <ul style="list-style-type: none"> <li>• To target net zero carbon at a district level by 2040</li> <li>• To protect, enhance and restore, existing nature areas (green space) and create new ones (where it is viable to do so).</li> <li>• To pursue the ambitions of 'A green Future: Our 25 year Plan to Improve the Environment' and that new development should be designed with a view to minimising and mitigating the effects of Climate Change.</li> <li>• Ensuring existing and new communities see real benefits in their well-being from living in Huntingdonshire.</li> <li>• Using natural resources wisely.</li> </ul> <p>The Climate Strategy sets out our priorities and actions which have been informed through comprehensive consultation in our Climate Conversation with our communities and businesses.</p>	<p>Huntingdonshire are preparing their own Environment and Climate Change Strategy. The Local Plan will recognise and respond to the risks of climate change for the district and develop planning policies that ensure that new development contributes to reductions in carbon emissions and is resilient to the impacts of climate change.</p>	<p>Carbon Emissions and Targets</p>

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Huntingdonshire Futures Place Strategy</a>	This is a strategy that will shape a vision for the future of the district by incorporating People, Place, the Economy and Environment. The strategy articulates Huntingdonshire's aspirations and ambitions, and maps out plans for place, people, economy, and the environment. It will also guide future strategy and policy developments as well as investment decisions made by the council and its partners to enable better outcomes for residents, communities, and businesses.	Aspirations of the strategy may be ones that can be reflected in the new Local Plan.	All
<a href="#">Great Fen Master Plan 2010 and Fens for the Future Strategic Plan (2012)</a>	The Master Plan contains detailed advice on preferred proposals within the area that balance tourism and nature conservation requirements. The primary aim of the Landscape and Visual Setting is to protect the tranquillity of the Great Fen itself, particularly from visual intrusion (including obtrusive light) and noise intrusion from major structures such as wind turbines, telecommunications masts and any other development located in the landscape and visual setting. Beyond this boundary major structures, although potentially visible from the Great Fen area, are less likely to impact on the setting of the Great Fen. The Great Fen is part of a wider Fens for the Future project; its vision is to promote connectivity in the Fens between sites, for example between the Great Fen and Wicken Fen along the Rothschild Way. The Fens for the Future Strategic Plan 2012 will help to deliver these aspirations.	This is a strategy green infrastructure project, the ambitions of the project should be supported in the new Local Plan.	Biodiversity, Habitats and the Natural Environment  Green Infrastructure and Open Space
<a href="#">Open Space Strategy for Huntingdonshire 2020-2030 and 10 year action plan (HDC, 2020)</a>	Provides an up to date overview of open space provision across Huntingdonshire. The Strategy aims to balance three key elements: the places (parks, open spaces, play areas), the people (those who use and enjoy these spaces), and management (how these parks are maintained and managed). The actions identified within the 10 year action plan include creating a network for different Friends groups across the district to interact with one another, identifying different infrastructure investment programs, all with the aim of helping local people utilise their parks and open spaces to live healthier lives, improve mental health and wellbeing, contribute to the fight against climate change and address social isolation.	The Local Plan will where possible support the aims of this strategy through its policies and allocations.	Green Infrastructure and Open Space
<a href="#">Huntingdonshire Housing Strategy 2020-2025 (HDC 2020)</a>	This Strategy has three overarching themes: 1. New homes to meet the needs of Huntingdonshire now and in the future 2. Homes to enable people in Huntingdonshire to live independent and healthy lives 3. Working in Partnership to achieve shared objectives	The Local Plan will where possible support the aims of this strategy through its policies and allocations.	Housing
<a href="#">Huntingdonshire Sports and Leisure Facilities Strategy 2016-2021 (HDC 2016)</a> (an updated strategy is underway)	The purpose of the Strategy is to provide an overview of sports facilities in the district, as well as establishing a clear framework for the prioritisation, provision and enhancement of sports facilities. The aims of strategy are to update audit of current formal sports and leisure facilities provision; provide a shared vision for the future of the district's sports facilities; promote the role of sports and leisure facilities in health improvement, active lifestyles and contribution to the local economy; make the case for funding opportunities; ensure sport is recognised within the planning context in particular in relation to new housing developments; seek to protect and improve locally important sports and leisure facilities; and increase public awareness of the district's sports and leisure facilities.	The Local Plan will where possible support the aims of this strategy through its policies and allocations.	Tourism and Leisure  Green Infrastructure and Open Space

<a href="#">Wind Energy Development in Huntingdonshire SPD (2014)</a>	<p>Part 1 of the guidance seeks to:</p> <ul style="list-style-type: none"> <li>• provide information on the relative sensitivity and capacity of the district's landscapes in relation to wind turbines;</li> <li>• indicate criteria that need to be taken into account when considering specific proposals of this type;</li> <li>• and provide guidance on potential mitigation measures where appropriate.</li> </ul> <p>Part 2 of the guidance seeks to:</p> <ul style="list-style-type: none"> <li>• evaluate the current cumulative landscape and visual impacts of wind turbine developments in the district</li> <li>• provide guidance on criteria for the assessment of cumulative landscape and visual impacts of wind turbine developments</li> </ul>	<p>The Local Plan should set out policies relating to renewable energy opportunities to contribute towards the reducing carbon emissions.</p>	<p>Landscape Renewable Energy and Energy Efficiency</p>

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Huntingdonshire Tree Strategy (2020-2030) and 10 year Action Plan</a>	The Huntingdonshire Tree Strategy 2020 – 2030 sets out our how HDC will manage and protect trees across the district to 2030. A 10-year Action Plan has been developed which sets out key projects and tasks to be completed between 2020 and 2030. These set out how we can meet the key aims of Tree Strategy and work towards its vision.	The Local Plan will where possible support the aims of this strategy through its policies.	Biodiversity, Habitats and the Natural Environment
<a href="#">Huntingdonshire Economic Growth Strategy and Economic Growth Plan 2020-2025</a> and <a href="#">Invest in Huntingdonshire</a> webpage	The Economic Growth Strategy sets out the council's economic priorities to 2025. The strategy document is accompanied by the Huntingdonshire Economic Growth Plan 2020-2025 which contains further context and detail. The key themes and priorities are focused on: inward investment; conditions for growth; fuelling our economy; maximising our skills; vibrant town centres; and supporting our business sectors.	The Local Plan will support the aims of this strategy and provide policies that support Huntingdonshire's economy and provide businesses with the opportunity to adapt to changing economic contexts.	Employment and Businesses  Retail and Town Centres  Tourism and Leisure
<a href="#">Employment Land Study and appendices 1-6</a> (AECOM for HDC 2014)	Supports the Local Plan to 2036. The study provides an economic and employment land study for the district of Huntingdonshire. It involves an overall assessment of the employment and economic environment within Huntingdonshire, as well as an analysis of employment land and premises demand, supply and need across the district to 2036. The Study is primarily concerned with employment land uses included within the Planning Use Class B: B1 (business, offices / light industrial); B2 (general industrial); B8 (storage and distribution) and appropriate sui generis uses including recycling and the environmental industry.	A new study will likely be required to support the policies and any employment allocations within the new Local Plan.	Employment and Businesses
<a href="#">Huntingdonshire Retail and Commercial Leisure Needs Assessment</a> (Nexus Planning for HDC, February 2017)	Supports the Local Plan to 2036. The assessment includes a review of the national planning policy position and an appraisal of economic, retail and leisure trends at a national and regional level; analysis of the four market towns (including their town centre, edge/ out of town retail and commercial leisure provision; calculation of anticipated residual expenditure availability for convenience retailing, comparison retailing and commercial leisure activities at 2026, 2031 and 2036, reflecting anticipated growth in the Draft Local Plan to 2036; and a quantitative assessment of the potential change in floorspace requirements with recommendations on the nature and timing of the delivery of any future convenience retail, comparison retail and commercial leisure floorspace requirements and the appropriate future mix of uses within each market town centre to increase resilience.	A new study will likely be required to support the policies within the new Local Plan.	Retail and Town Centres
<a href="#">Huntingdonshire Market Town's Economic prospectuses and programmes for growth</a> and <a href="#">draft masterplans for</a>	There are Prospectus for Growth documents for Huntingdon, St Ives and Ramsey. St Neots has pursued Future High Streets Funding for regenerating projects. These documents have been commissioned by HDC and funded by the CPCA. The 'Prospectus for Growth' documents establishes a vision, and will be instrumental in securing funding to deliver these initiatives, each of which are seen as crucial to the growth and prosperity of Huntingdon, St Ives and Ramsey as well its wider economy. Draft masterplans for these towns are now being consulted on and proposals being shaped.	The Local Plan will where possible support the aims of this work to support the continued vitality and vibrancy of Huntingdonshire's market towns.	Retail and Town Centres  Tourism and Leisure  Employment and Businesses

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Huntingdon, St Ives and Ramsey</a>			
<a href="#">St Neots Future High Streets Fund</a>	Funding has been secured for an ambitious £12.8 million investment in St Neots town centre. The investment will deliver six projects, transforming the market town for the benefit of local people, businesses, and visitors.	The Local Plan will where possible support the aims of this work to support the continued vitality and vibrancy of Huntingdonshire's market towns.	Retail and Town Centres Tourism and Leisure Employment and Businesses
<a href="#">Huntingdonshire Strategic Flood Risk Assessment (SFRA) and appendices A-G</a> (JBA Consulting for HDC, June 2017)	The SFRA provides up to date information and guidance on flood risk for Huntingdonshire, taking into account the latest flood risk information and the current state of national planning policy. It also determines the variations in risk from all sources of flooding in Huntingdonshire, identifies the requirements for site-specific flood risk assessments, determines the acceptability of flood risk in relation to emergency planning capability and considers the opportunities to reduce flood risk to existing communities and development.	A new study will be required to support the policies and site allocations in the new Local Plan.	Flooding and Water
<a href="#">Stage 2: Detailed Water Cycle Study Update</a> (URS for HDC, December 2014)	The evidence base document supports the Local Plan to 2036. Information has been used to determine how the water cycle constraints may relate to potential development sites within the settlements, if and how the constraints can be resolved and how they may impact on phasing of development over the plan period to 2036. It also provides a detailed suggested approach to the management and use of water which demonstrates ways to ensure that the sustainability of the water environment in the study area is not compromised by growth.	A new study will be required to support the policies within the new Local Plan.	Flooding and Water
<a href="#">Strategic Transport Study Baseline Report</a> (May 2017) and <a href="#">Huntingdonshire Strategic Transport Study - Development Scenario Comparative Assessment</a> (May 2017) <a href="#">Huntingdonshire Strategic Transport Study - Development Scenario</a>	Supports the Local Plan to 2036. The purpose of this Study is to provide an evidence base of the baseline transport conditions in the area which will: <ul style="list-style-type: none"> <li>• Identify and test the transport implications of committed development and four potential development scenarios</li> <li>• Recommend the most sustainable development scenario in transport terms for delivering the 21,000+ homes required</li> <li>• Highlight where there are opportunities for increasing the usage of sustainable transport modes</li> <li>• Identify and cost where amended or additional transport infrastructure is required to mitigate the predicted impacts of each potential development scenario</li> </ul>	A new study will be required to support the policies within the new Local Plan.	Travel and Transport

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Addendum</a> (December 2017)	<ul style="list-style-type: none"> <li>Form the basis of a district-wide transport strategy that mitigates the transport implications of the chosen development scenario</li> </ul>		
<a href="#">CPCA A141 and St Ives transport improvement projects</a>	A141 and St Ives transport infrastructure plans are ongoing with both projects now combined into one business case. Public consultation undertaken in 2021 on 6 options for each. January 2022 board progressed detailed assessment of several options.	These are key strategic transport projects within Huntingdonshire. The Local Plan will need to consider the timelines for their delivery and the impact this may have on potential allocations.	Travel and Transport
<a href="#">Infrastructure Delivery Plan</a> (June 2017) and <a href="#">Infrastructure Delivery Plan - Infrastructure Schedule</a> (June 2017) <a href="#">Infrastructure Delivery Plan - Addendum</a> (December 2017).	The supports the Local Plan to 2036. The purpose of the Infrastructure Delivery Plan is to assess the suitability of existing infrastructure provision and identify the infrastructure investment required to support growth.	An update infrastructure delivery plan will be required to support the policies and delivery of allocations within the new Local Plan.	Travel and Transport Community Services and Infrastructure Green Infrastructure and Open Space Education Flooding and Water Waste and Recycling
<a href="#">Air Quality Annual Status Report for the year 2021</a>	Monitors progress made on the objectives set to improve air quality particularly within Air Quality Management Areas. It concluded that there have been no recorded exceedances of objectives outside the AQMAs.	The Local Plan should ensure that through its policies and allocations that harmful effects on air quality are avoided.	Pollution
<a href="#">Joint Air Quality Action Plan for the Cambridgeshire Growth Area (HDC, SCDC &amp; Cambridge City Council, 2009)</a>	Reviewed all of the existing air quality information across the region, identified the key causes in each management area and assessed the necessary actions needed to improve pollutant levels in those areas	The Local Plan should ensure that through its policies and allocations that harmful effects on air quality are avoided.	Pollution
<a href="#">Huntingdonshire's Litter Minimisation Strategy 2021-2025 and Litter</a>	Develops the framework for minimising waste within Huntingdonshire and developing a more circular economy.	The Local Plan will where possible support the aims of this strategy through its policies.	Waste and Recycling

## The plans, programmes and strategies reviewed in stage A1

Plans, Programmes and Strategies	Key Aims, Objectives, and Targets/ Indicators	How this will shape the new Local Plan	Related baseline topics
<a href="#">Minimisation Action Plan</a> (HDC, 2020)			
<a href="#">Made Neighbourhood Plans within Huntingdonshire</a>	The made neighbourhood plans set a localised vision for sustainable development. They typically identify local green spaces, settlement boundaries and address localised issues such as design, heritage, local services and infrastructure. While setting a localised focus, they are in conformity with the strategic policies of the Huntingdonshire Local Plan to 2036.	By Parish and Town Councils. They become part of the development plan once made and have to be in conformity with the strategic policies of the local plan.	All

## Comments from Environmental bodies on draft Scoping Report - A5

### Comments from Environmental bodies on draft Scoping Report - A5

November 2022.

1.1 Consultation with environmental bodies ran between 20 October and 30

1.2 Comments on a draft of the scoping report were received from all three environmental bodies. Their comments have been compiled into the following table alongside the Council's response to them highlighting where amendments have been made to this report.

Comment by	Comment	HDC response and changes made
<p>Environment Agency</p>	<p><b>Water Resources and Waste Water</b></p> <p>We note that the report has combined 'Flooding and Water' into one scoping report topic. While we understand the need to limit the breadth of SA objectives, the challenges surrounding water resources and waste water have become a more significant issue for Huntingdonshire and should be addressed as a distinct sustainability issue.</p> <p>In the 'A3: Identifying sustainability issues and problems' section of the report, the 'How this could shape the SA framework' column for 'Flooding and Water' identifies spatial locational objectives for flood risk but not for water resources or waste water. Specifically, one flooding objective is to 'locate development in areas that are not in an area at risk of flooding', whereas the issue of water resources is simply addressed by an objective to 'ensure there is sufficient water supply to service growth' and 'use water sustainably'. We do not consider this a strong enough stance given the significance of the issue, as Anglian Water will not necessarily have a sustainable means of supplying water in the short-medium term without a risk of deterioration to Water Framework Directive waterbodies. We will know more once the draft Water Resources Management Plan 2024 has been published for consultation (December 2022) and our national response to it has been issued (by April 2023) Local Planning Authorities have a duty to have regard to River Basin Management Plans in their plan-making and decision taking. The SA therefore needs to recognise that it may be necessary to phase or delay development in line with the arrival of new water resource infrastructure.</p> <p>It can no longer be assumed that water companies will be able to provide adequate and sustainable water resources until we know the outcomes from the WRMP process. The SA must consider the broader picture of whether water can be supplied across the neighbouring authorities within the Anglian Water network and take into account the cumulative impact of growth on water bodies in the area. Water supply (and waste water) are strategic matters for Local Plans and also a strategic cross-boundary issue.</p> <p>Locating development in areas of sufficient capacity for waste water may be essential (taking into account climate change and limits to avoid Water Framework Directive (WFD) deterioration) for waste water recycling centres and the associated network.</p> <p>The risk of not assessing cross-boundary impacts or identifying and implementing suitable mitigation in the form of locational objectives for waste water and water resources is that we would find the plan unsound.</p>	<p>To address these comments, some additional information have been added to the 'Flooding and Water' topic covering waste water. Also, an additional reflection how the key sustainability issues and problems identified for flooding and water may shape the SA framework has been added, this is: 'Locate development where there is waste water capacity or where it can be made available'.</p> <p>The SA and next Local Plan will be informed by the evidence in in the upcoming Huntingdonshire Integrated Water Management Studies as it progresses to ensure it has captured the key characteristics of flooding for Huntingdonshire, including climate change and that there is infrastructure capable of supporting development needs.</p> <p>We will continue to discuss water issues as a strategic cross boundary matter with neighbouring authorities.</p>

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
Environment Agency	<p><b>Water quality and the Water Framework Directive</b></p> <p>We are pleased that the report identifies “Ensuring new development does not adversely impact on the ecological and biological status of water bodies” as a sustainability issue in A3. Paragraph 4.42 in the ‘A2: Collecting baseline information’ section also details the ecological and chemical status for surface and ground waters in the Anglian River Basin District. However, we would like to see this considered more widely across the SA.</p> <p>Many of the internationally and nationally designated sites listed in Tables 12 and 13 of the ‘Biodiversity, Habitats and the Natural Environment’ section of A2 are linked to waterbodies, meaning water quality is a key issue. It would therefore seem appropriate for rivers to also be included under the ‘Biodiversity, Habitats and the Natural Environment’ heading and for this section to consider the impact of water quality and the Water Framework Directive on local biodiversity and habitats. This should also include any chalk streams as these are internally recognised habitats.</p> <p>We also note that the ‘Green Infrastructure and Open Space’ section includes multiple references to blue infrastructure such as rivers and lakes, underlining the importance of water quality as a key issue.</p> <p>The ‘Biodiversity, Habitats and the Natural Environment’ section should also give some consideration to Biodiversity Net Gain (BNG), which is currently lacking. The SA may need to draw upon Local Nature Recovery Strategies, when these become available, even where in draft, for evidence towards BNG objectives.</p>	<p>Additional text has been added to the ‘Biodiversity, Habitats and the Natural Environment’ on rivers. There are no chalk streams within the district, there are several major rivers and tributaries, these are The River Great Ouse, Nene, Kym and Alconbury Brook.</p> <p>Biodiversity net gain has been mentioned in this section. The Council is aware of the Natural Capital mapping and is exploring with partners how biodiversity net gain and ecological enhancement can be brought forward.</p>
Environment Agency	<p><b>Surface Water</b></p> <p>Flooding While the SA 3 section of the SA framework (Table 20 in ‘A4: Developing the SA framework’) highlights the need to ‘reduce the risk of all potential sources of flooding’ as an SA objective, the table only asks whether site allocation will ‘use land in flood zone 1’. As Environment Agency flood zones only refer to flood risk from rivers and the sea, it should be specified that site allocation must also take surface water flooding into account.</p> <p>As stated in Paragraph 161 of the 2021 update of the National Planning Policy Framework, “All plans should apply a sequential, risk-based approach to the location of development – taking into account all sources of flood risk and the current and future impacts of climate change – so as to avoid, where possible, flood risk to people and property.” The interaction between surface water and fluvial flooding is an important consideration and will be addressed in the upcoming Huntingdonshire Integrated Water Management Studies. The SA will need to be informed by the evidence in this study as it progresses to ensure it has captured the key characteristics of flooding for Huntingdonshire, including climate change, and has robust SA objectives to test the plan.</p>	<p>To address the Environment Agency’s point about additional information on waste water, objective SA 3 has been amended to include surface water flooding into consideration so that the second decision aiding questions for sites now reads ‘Use land in flood zone 1 taking into account the impact from surface water flood risk and an allowance for climate change?’</p> <p>The SA and next Local Plan will be informed by the evidence in in the upcoming Huntingdonshire Integrated Water Management Studies as it progresses to ensure it has captured the key characteristics of flooding for Huntingdonshire, including climate change and that there is infrastructure capable of supporting development needs.</p>

Comments from Environmental bodies on draft Scoping Report - A5

Page 1838 of 3488

Comment by	Comment	HDC response and changes made
Environment Agency	<p><b>Groundwater</b></p> <p>We note that the 'Plans, Programmes and Strategies Reviewed' section highlights the Flood and Water Management Act 2010 as a relevant document that could shape the new Local Plan in the aim of "progressively reducing pollution of groundwater and prevents its further pollution". This will be achieved as "The Local Plan will be supported by an updated Water Cycle Study and strategic flood risk assessment to shape policies and allocations". However, the SA should also consider the risks of contamination to groundwater from polluting past land uses of development sites. This is particularly pertinent due to the plan's stated key aim to "Prioritise the reuse of previously developed land (brownfield land) over greenfield land." This could also draw upon guidance in the Environment Agency's <a href="#">Groundwater Protection Position Statements</a> .</p>	<p>Have added a reference to the Groundwater Protection Position Statements to the 'Flooding and Water' section.</p>
Environment Agency	<p><b>Plans, Programmes and Strategies Reviewed</b></p> <p>We acknowledge that the Local Plan will be supported by an updated Water Cycle Study and Strategic Flood Risk Assessment in the form of an Integrated Water Management Strategy.</p> <p>The SA will also need to consider draft outputs from the Environment Agency's Ox-Cam Arc Integrated Water Management Framework – a high level study looking at how water can be managed in an integrated way across the Arc.</p> <p>We note that the Future Fens Flood Risk Management Baseline Report 2020 is referenced in paragraph 4.33 but that the report is not listed in 'Appendix 1: Plans, Programmes and Strategies Reviewed'. We recommend adding this report to the list of relevant plans. We also recommend the Great Ouse Strategic Flood Risk Interventions Study as a resource for considering how strategic interventions could manage existing and future flood risk. Currently in phase 2, a high level screening phase, it's a partnership project between the Environment Agency as lead partner and Lead Local Flood Authorities, Local Planning Authorities, Internal Drainage Boards, Anglian Water Services, Mineral Products Association, Natural England, Nature After Minerals, National Farming Union, River Trusts, Wildlife Trusts, RSPB and Water Resources East.</p> <p>As previously mentioned, the upcoming Local Nature Recovery Strategy should also be considered as part of the Sustainability Appraisal.</p>	<p>The following document has been added to the list of plans and programmes in Appendix 1 and Table 4:</p> <ul style="list-style-type: none"> <li>● Future Fens Flood Risk Management Baseline Report 2020</li> </ul> <p>The other recommended inclusions are not yet published and will be reviewed upon their completion. At this time they have not been added to the list of plans and programmes in the scoping report:</p> <ul style="list-style-type: none"> <li>● Environment Agency's Ox-Cam Arc Integrated Water Management Framework</li> <li>● Local Nature Recovery Strategy</li> <li>● the Great Ouse Strategic Flood Risk Interventions Study</li> </ul>
Historic England	<p><b>Key Plans and Programmes</b></p>	<p>Noted with thanks.</p>

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
	<p><b>Para 3.17, page 24, Table 4 and Appendix 1</b></p> <p>We welcome the inclusion of many of the Plans and programmes that we would expect to see in the review. When considering key plans and programmes, we recommend that you also include the following:</p> <p><b>International/European</b></p> <ul style="list-style-type: none"> <li>• UNESCO World Heritage Convention</li> </ul> <p><b>Local</b></p> <ul style="list-style-type: none"> <li>• Historic Environment Record</li> <li>• Conservation Area Character Appraisals and Management Plans</li> <li>• Listed building Heritage Partnership Agreements</li> </ul>	<p>As there are no UNESCO World Heritage sites within the district or within 15km of the district boundary, this Convention has not been included within the relevant plans and programmes list as it will not directly relate to the objectives and policies of the Local Plan.</p> <p>The plans and programmes section includes Conservation Area Statements/Appraisals, alongside this entry reference to the Cambridgeshire Historic Environmental Record has been added to this entry in Appendix 1 and Table 4.</p> <p>The Council does not have any listed building heritage partnership agreements currently in place.</p>
Historic England	<p><b>Baseline</b></p> <p>All <b>designated heritage assets</b> (Conservation Areas, Listed Buildings, Scheduled Monuments, Registered Parks and Gardens) within the area should be identified.</p>	<p>The number of each designated heritage asset found across the district are provided within the scoping report, however they are not all individually named due to how many there are. A full list can be found on Historic England's website.</p>
Historic England	<p><b>Baseline</b></p> <p>We welcome paragraphs 4.209 – 4.217. We recommend that you also include mapping of these assets to provide a greater indication of their distribution and highlights sensitive areas.</p> <p>However, we would stress that assessing the potential impact of development on the significance of heritage assets requires more than a simple mapping of the location of those assets and identification of those assets on or in proximity to potential sites. Our Historic England Advice Note 3 sets out a sequential approach to assessing the impact on significance.</p>	<p>It is noted that a map would help to spatially show the distribution of heritage assets across the district, however it is difficult to produce a map at a good enough quality to properly show these. A map of listed buildings and conservation areas across the district is available on the District Council's website as well as on the Council's policies map. A link to these maps have been provided within the scoping report so that readers can cross refer to these visual aids.</p> <p>Reference to Historic England Advice Note 3 has been added to the heritage topic.</p>
Historic England	<p><b>Baseline</b></p> <p>We also would expect <b>non-designated heritage assets</b> to be identified. These include, but are not confined to, locally listed buildings. We welcome the reference to the HER and local listing project in paragraph 4.218.</p>	<p>Noted with thanks. The local listing project is underway, once the project outputs are more advanced it may be possible to include further information on the distribution of non-designated heritage assets.</p>

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
	In addition to the above, we would expect reference to currently <b>unknown heritage assets</b> , particularly sites of historic and archaeological interest. The unidentified heritage assets of the area should be acknowledged and outlined in this section.	Within the 'Key sustainability issues and problems' section, the potential for significant archaeology yet to be found has been highlighted.
Historic England	<p><b>Baseline</b></p> <p>We also suggest that you use the word <b>setting</b> in relation to heritage assets.</p>	Harm to heritage assets and to their setting are referenced within the 'Key Sustainability Issues' section.
Historic England	<p><b>Baseline</b></p> <p>We welcome the reference to Heritage at Risk. Identification and mapping of designated and non-designated <b>heritage assets at risk</b> can provide an indication of clusters and themes. For Heritage at Risk, Historic England's National Heritage at Risk Register includes Grade II listed places of worship provided that they are used six or more times a year for worship.</p>	A list is contained on Historic England's website alongside a map showing their location, a link is available within the scoping report to this resource.
Historic England	<p><b>Baseline</b></p> <p>Historic England's Good Practice Advice Note 1 contains advice on other relevant sources of evidence. These include Conservation Area Appraisals and Management Plans, Local Lists, Historic Characterisation assessments and any other in-house and local knowledge. We recommend that these other sources of evidence are considered as part of the SA process.</p>	Reference to Historic England's Good Practice Advice Note 1 has been added to the heritage topic.
Historic England	<p><b>Baseline</b></p> <p>We welcome the reference to <b>Landscape Character Assessment</b> on page 49.</p>	Noted with thanks.
Historic England	<p><b>Baseline</b></p> <p>We suggest that you also refer to <b>Historic Landscape Characterisation</b> data in your assessment. We refer you to our website which includes some helpful guidance in this regard and sets out some of the differences between this and Landscape Character Areas.</p> <p><a href="https://historicengland.org.uk/research/methods/characterisation/historic-landscape-characterisation/">https://historicengland.org.uk/research/methods/characterisation/historic-landscape-characterisation/</a></p>	Historic Landscape Characterisation is an interesting and potentially useful exercise. However, for this stage, it is a level of detail not necessary to undertake. As part of the Local Plan evidence base it may be worth exploring this idea further in consultation with the Council's Conservation Team. In the meantime Huntingdonshire's Landscape and Townscape SPD provides some historic landscape assessment.

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
	<p>It is our view that Historic Landscape Characterisation (HLC) provides exactly the sort of landscape-scale information which should assist an SEA; giving perspective on the relative character of the wider area into which alterations to the character of any particular part might be weighed.</p> <p>HLC is an inherently comprehensive and generalising approach, all about providing context to the understanding of the particular and about the management of change everywhere. We consider that the HLC approach is applicable and highly relevant to informing SEA. In fact, all of the commissioned County-level HLCs were designed to inform strategic level planning. (It should also be noted that HLC can be undertaken at any scale, including coarser or finer grained work - HLC is also a principled approach which can be, and is being, undertaken at a range of scales).</p>	
Historic England	<p><b>SEA Framework</b></p> <p><b>Key Sustainability Issues</b></p> <p>We note the key sustainability issues for landscape and the historic environment on page 52 and page 109, 112 and 117. We would suggest that the following Key Sustainability Issues for the Historic Environment should also be included:</p> <ul style="list-style-type: none"> <li>• Conserving and enhancing designated and non-designated heritage assets and the contribution made to their significance by their settings</li> <li>• Heritage assets at risk from neglect, decay, or development pressures;</li> <li>• Areas where there is likely to be further significant loss or erosion of landscape/seascape/townscape character or quality, or where development has had or is likely to have significant impact (direct and or indirect) upon the historic environment and/or people's enjoyment of it</li> <li>• Traffic congestion, air quality, noise pollution and other problems affecting the historic environment</li> </ul>	Thank you for providing additional suggestions for additional key sustainability issues for our consideration on the historic environment. Upon comparing these with those within the scoping report, it is considered that the additional issues are all in essence already reflected within the scoping report.
Historic England	<p><b>SEA Objectives</b></p> <p>The objectives and questions identified on page 121 (SA7) and 124 (SA16) provide a useful starting point for the historic environment. Whilst recognising that the number of objectives needs to be manageable, we recommend the objectives below:</p> <p>Environmental Objectives</p> <ul style="list-style-type: none"> <li>• Protect, enhance and manage the character and appearance of landscapes/seascapes/townscapes, maintaining and strengthening local distinctiveness and sense of place</li> <li>• Protect, manage and improve local environmental quality</li> <li>• Achieve high quality sustainable design for buildings, spaces and the public realm</li> </ul>	Noted with thanks. Thank you for providing additional objectives for our consideration. We have tried to keep the number of objectives manageable, to add nine on just the historic environment to the proposed sixteen would distort the balance of the objectives across the three strands of sustainability. Upon comparing these with those within the scoping report, it is considered that the additional objectives are all in essence already reflected within the proposed sustainability appraisal framework.

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
	<p>Social Objectives</p> <ul style="list-style-type: none"> <li>• Improve and broaden access to the local historic environment</li> <li>• Provide better opportunities for people to understand local heritage and participate in cultural and leisure activities</li> </ul> <p>Economic Objectives</p> <ul style="list-style-type: none"> <li>• Foster heritage-led regeneration and address heritage at risk</li> <li>• Optimise the use of previously developed land, buildings and existing infrastructure</li> <li>• Promote heritage-led sustainable tourism</li> <li>• Support the sustainable use of historic farmsteads</li> </ul>	
Historic England	<p><b>Decision making criteria/Questions</b></p> <p>Table 23 on page 126 sets out site decision aiding questions supporting criteria. However, there do not appear to be any questions for SA7 and SA16. Is there a particular reason for this?</p> <p>With regard to decision making criteria/questions, we would recommend the following examples of appropriate criteria:</p> <p>Environmental: will the policy or proposal</p> <ul style="list-style-type: none"> <li>• Conserve and/or enhance heritage assets, their setting and the wider historic environment?</li> <li>• Contribute to the better management of heritage assets and tackle heritage at risk?</li> <li>• Improve the quality and condition of the historic environment?</li> <li>• Respect, maintain and strengthen local character and distinctiveness?</li> <li>• Promote high quality design?</li> <li>• Integrate climate change mitigation and adaptation measures into the historic environment sensitively?</li> <li>• Alter the hydrological conditions of water-dependent heritage assets, including organic remains?</li> </ul> <p>Social: will the policy or proposal</p> <ul style="list-style-type: none"> <li>• Increase the social benefit (e.g. education, participation, citizenship, health and well-being) derived from the historic environment?</li> <li>• Improve the satisfaction of people with their neighbourhoods as places to live?</li> <li>• Engage communities in identifying culturally important features and areas?</li> <li>• Provide for increased access to and enjoyment of the historic environment?</li> <li>• Provide for increased understanding and interpretation of the historic environment?</li> </ul>	<p>Table 23 of the sustainability scoping report provides measurable criteria for several of the sustainability appraisal objectives. Objectives that are not covered within Table 23 do not have quantifiable criteria so are not included. It is intended that a qualitative assessment will be made for these objectives. Additional text to the scoring system/matrix section on page 125 has been provided to make this clearer.</p> <p>Thank you for providing additional decision-making criteria/questions for our consideration. Upon comparing these with those within the scoping report, it is considered that the additional criteria are very detailed and in essence already reflected within the proposed sustainability appraisal framework.</p>

	<ul style="list-style-type: none"> <li>• Provide new leisure, recreational, or cultural activities?</li> <li>• Support and widen community uses through shared facilities?</li> </ul> <p>Economic: will the policy or proposal</p> <ul style="list-style-type: none"> <li>• Increase the economic benefit derived from the historic environment?</li> <li>• Promote heritage-led regeneration?</li> <li>• Lead to the repair and adaptive re-use of a heritage asset and encourage high quality design?</li> <li>• Make the best use of existing buildings and physical infrastructure?</li> <li>• Promote heritage based sustainable tourism?</li> <li>• Ensure that repair and maintenance is sympathetic to local character?</li> <li>• Help to reduce the number of vacant buildings through adaptive re-use?</li> </ul>	
Historic England	<p><b>Assessment Criteria</b></p> <p>In developing assessment criteria, we would advise against a purely distance based approach. The impact of proposals on the significance of heritage assets should be taken into consideration at an early stage. In terms of projects, this should be based on more than just measuring the proximity of a potential allocation to heritage assets.</p> <p>Impacts on significance are not just based on distance or visual impacts, and assessment requires a careful judgment based on site visits and the available evidence base. This is preferred to the application of a standard proximity test (e.g. is the site within a set distance of a heritage asset) as it avoids misleading results (Our Historic England Advice Note 3 sets out a sequential approach to</p>	<p>The proposed scoring system/matrix consists of a mixture of qualitative and quantitative measures. The quantitative measures are shown in Table 23. The SA Objectives related to heritage and landscape consist of a qualitative measure reflecting the fact that the assessment of impacts on heritage assets and to their settings vary greatly depending on the assets themselves, their context and the proposal. This qualitative assessment will also include site visits where necessary as part of the assessment of site's promoted to the Council and specialist input from Conservation colleagues will be sought for sites with particular heritage constraints. For clarification a distance based approach is not proposed. We consider this is an appropriate response and in line with the sentiments of Historic England here.</p>
Historic England	<p><b>Consideration of Opportunities</b></p> <p>We would expect to see consideration of opportunities. It is considered that the historic environment can make a significant contribution to the success of development and there may be opportunities for the enhancement of the historic environment which comes from sustainable development proposals. It is considered that the IIA should highlight these opportunities. Example opportunities for the historic environment to include within the IIA can be found in our guidance notes in the links above.</p>	<p>The decision-making criteria/questions for SA7 and SA16 seek the conservation and where possible the enhancement of areas and heritage assets. Thus, recognising there may be opportunities relating to the historic environment. As part of the site identification and site assessment process, opportunities for particular heritage regeneration or opportunities may also be identified which could shape future planning policy.</p>

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
Historic England	<p><b>Method for Generation of Alternatives</b></p> <p>The historic environment should be a factor when considering a method for the generation of alternative proposals.</p>	<p>Heritage forms part of the SA framework and there are decision-making criteria/questions for assessing the strategy, sites and development management policy options and their alternatives.</p>
Historic England	<p><b>Archaeology</b></p> <p>Scoping and evaluation of archaeological and landscape impacts needs to be an iterative process where existing sources (HER's cartographic etc. and research frameworks e.g. <a href="https://archaeologydataservice.ac.uk/researchframeworks/eastmidlands/wiki/">https://archaeologydataservice.ac.uk/researchframeworks/eastmidlands/wiki/</a> ) are consulted, work is done to explore those questions and new questions asked (including lidar, aerial survey, geophysical survey, field walking, deposit modelling see our new guidance <a href="https://historicengland.org.uk/images-books/publications/deposit-modelling-and-archaeology/heag272-deposit-modelling-and-archaeology/">https://historicengland.org.uk/images-books/publications/deposit-modelling-and-archaeology/</a> , trial trenching). These techniques should be used to model risk and build a robust approach to understanding that through any project so the greater heritage and project delivery risks are targeted first so they can inform minimisation and timely mitigation)</p>	<p>As part of the site identification process and methodology for assessing sites for their suitability for potential development, constraints relating to heritage will be used. This will be used alongside a sustainability appraisal of the site using the SA objectives and decision-making criteria/questions provided within the scoping report.</p>
Historic England	<p><b>Other Assessment methodologies</b></p> <p>Finally, we would add that whilst this assessment process is a vital part of the assessment, more detailed assessment of particular aspects may be necessary going forward for particular sites/schemes.</p> <p>For example, Historic England would expect to see the completion of a <b>Heritage Impact Assessment</b> as part of the evidence base for certain sites/proposals likely to have an impact on the significance of heritage assets (including development within the setting of the heritage assets). We would be happy to provide further advice in this regard if and where this may be necessary as part of the evidence base for transport proposals.</p>	<p>See response above. Additional assessments and information may be required for particular sites where there are heritage constraints which can be overcome as part of a potential development. Specialists input from Conservation colleagues will be sought if this is the case.</p>
Historic England	<p><b>Conclusion</b></p> <p>We would remind you that the National Planning Policy Framework (para 32) is very clear that, in terms of sustainable development, harm to the historic environment should be avoided in the first instance and wherever possible alternative options which reduce or eliminate such impacts should be pursued.</p> <p><i>NPPF Para 32: Local plans and spatial development strategies should be informed throughout their preparation by a sustainability appraisal that meets the relevant legal requirements. This should demonstrate how the plan has addressed relevant economic, social and environmental objectives (including opportunities for net gains). <b>Significant adverse</b></i></p>	<p>Noted with thanks. Huntingdonshire's Conservation Team will be involved in the development of heritage and conservation policies and any supporting evidence relating to heritage for the next Local Plan.</p>

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
	<p><b>impacts on these objectives should be avoided and, wherever possible, alternative options which reduce or eliminate such impacts should be pursued. Where significant adverse impacts are unavoidable, suitable mitigation measures should be proposed (or, where this is not possible, compensatory measures should be considered).</b></p> <p>Historic England strongly advises that the local authority conservation teams and archaeological advisors are closely involved throughout the preparation of the assessment of this evidence. They are best placed to advise on; local historic environment issues and priorities, including access to data held in the Historic Environment Record (HER- formerly Sites and Monuments Record); how the proposal can be tailored to minimise potential adverse impacts on the historic environment; the nature and design of any required mitigation measures; and opportunities for securing wider benefits for the future conservation and management of heritage assets.</p>	
Natural England	<p>Natural England has undertaken a brief review of the Sustainability Appraisal (SA) Scoping Report 2022. We are satisfied that the SA, including sustainability objectives, framework and assessment methodology, is being progressed in general accordance with the requirements of the Planning and Compulsory Purchase Act 2004 and the Strategic Environmental Assessment (SEA) Regulations. The proposed approach to the SA is seeking to assess the effects of the Huntingdonshire Local Plan on key aspects of the natural environment including designated sites, biodiversity, landscape, green infrastructure, best and most versatile land, water and air quality and climate change. We welcome that a separate Habitats Regulations Assessment (HRA) is being prepared, the findings and recommendations of which should inform the SA.</p>	Noted with thanks.
Natural England	<p>Natural England has not reviewed the relevant plans, programmes and strategies listed; however, we advise that the following types of plans relating to the natural environment should be considered where applicable to your plan area:</p> <ul style="list-style-type: none"> <li>• Cambridgeshire Green infrastructure Strategy (Cambridge Horizons, 2011) - relevant objectives and projects</li> <li>• Biodiversity plans</li> <li>• Cambridgeshire Rights of Way Improvement Plan.</li> <li>• River basin management plans</li> <li>• Relevant landscape plans and strategies</li> <li>• Natural England's Impact Risk Zones (IRZs) available through Magic;</li> </ul>	<p>Several of these are already listed in the relevant plans and programmes, there are some that are not, ones that have been added to Appendix 1 and Table 4 are:</p> <ul style="list-style-type: none"> <li>• Cambridgeshire Rights of Way Improvement Plan</li> <li>• Combined Authority Doubling Nature Investment Plan</li> </ul> <p>The Cambridgeshire and Peterborough Non-Statutory Strategic Spatial Framework has only ever been published in draft form for a consultation, so this has not been added to the list of plans and programmes.</p> <p>Natural England's Impact Risk Zones (IRZs) is available through Magic Map, a link has been provided to this resource into the 'Biodiversity, Habitats and the Natural Environment' topic as it is not a plan or programme.</p>

Comment by	Comment	HDC response and changes made
	<ul style="list-style-type: none"> <li>• The Cambridgeshire Biodiversity Partnership's Mapping Natural Capital and Opportunities for Habitat Creation in Cambridgeshire <sup>(1)</sup>;</li> <li>• Combined Authority Doubling Nature Investment Plan;</li> <li>• Cambridgeshire and Peterborough Non-Statutory Strategic Spatial Framework;</li> <li>• Natural England's Cambridgeshire Analysis of Accessible Natural Greenspace 2010.</li> </ul>	
Natural England	Our advice is that the Local Plan should be underpinned by ecological network mapping, based on the Mapping Natural Capital and Opportunities for Habitat Creation in Cambridgeshire report, referenced above, to develop a framework of environmental enhancement opportunities, for delivery through Plan policies.	The Council is aware of the Natural Capital mapping and is exploring with partners how biodiversity net gain and ecological enhancement can be brought forward.
Natural England	<p>We support SA Objectives (Table 20) SA4, SA5, SA6 and SA7 and have no further comment to make. In terms of the Assessment indicators for these objectives (Table 23) we have the following suggestions:</p> <p>SA4 – 'Prioritise development of previously developed land <b>where this is not of high biodiversity value</b>'</p> <p>SA4 – 'Prioritise development on land of Grade <b>3b</b> or lower etc.' and split indicators into 'Predominantly grade <b>3a</b>' and 'Predominantly grade 2 <b>and 3b</b>' to be in line with BMV categorisations. (sic)</p> <p>SA5 – the indicators should align with green infrastructure standards set out in Natural England's emerging Green Infrastructure Framework: Standards and Principles, due for publication January 2023.</p> <p>SA6 – Natural England's Impact Risk Zones (IRZs), available to view at <a href="https://magic.defra.gov.uk/">https://magic.defra.gov.uk/</a>, should be used to determine potential effects on designated biodiversity / geodiversity sites, rather than a standard distance.</p> <p>SA7 – assessment indicators need to be provided.</p>	<p>Noted with thanks.</p> <p>SA 4 – have amended the objective as per suggestion as this complies with paragraph 119 and footnote 47 of the NPPF.</p> <p>SA 4 – detailed mapping of 3a and 3b suitable for use at a site specific level is not currently available. For larger scale sites, we will endeavour to explore agricultural land classification with the site promoters.</p> <p>SA 5 – we will review the emerging green infrastructure standards and principles prior to finalisation of SA 5.</p> <p>SA 6 – the assessment indicators for this objective require a site meets all of the described distances for a variety of designated sites. As part of the assessment of sites promoted to the Council assessment utilising qualitative and site visit information on the impact of proposed development to identified constraints such as nature designations will also be made. This will be in addition to the assessment contained within the sustainability appraisal.</p>

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
		SA 7 – quantitative scoring has not been provided for SA7, instead it is intended that a qualitative assessment will be undertaken to assess the strategy, sites and development management policy options and alternatives against this objective. HDC consider this to provide a more appropriate way to score this objective.
Natural England	<p><b>Annex A – Natural England further advice</b></p> <p><b>Designated Sites</b></p> <p>Natural England welcomes consideration of the hierarchy of internationally, nationally and locally designated sites within the report, and objectives to protect, recover and enhance Sites of Special Scientific Interest (SSSI) alongside non-designated sites and habitat of local nature conservation value.</p> <p>We welcome proposed consideration of potential issues for designated sites including development, recreational pressure and climate change. Natural England would welcome a more strategic approach to addressing the effects of recreational pressure on the many sensitive designated sites including SSSIs and local wildlife sites through the Local Plan. As a minimum we would expect robust policy requirements for relevant allocations to contribute to the delivery of suitable alternative natural greenspace (SANGS), identified through the Local Plan ecological opportunity mapping evidence.</p> <p>Consideration should be given to land that may be 'functionally linked' <sup>(2)</sup> to the internationally designated Ouse Washes and Nene Washes SPA and Ramsar sites. Suitable foraging habitat beyond the designated sites' boundaries may be important for maintaining the sites' qualifying bird populations, particularly swans. The potential for development to adversely affect the internationally designated sites, through loss of functionally linked land and/or disturbance and displacement of qualifying bird species, will need to be appropriately considered.</p> <p><b>Green Infrastructure and Open Space</b></p> <p>The NPPF defines Green Infrastructure as "a network of multi-functional green space, urban and rural, which is capable of delivering a wide range of environmental and quality of life benefits for local communities". A cohesive Sustainability Appraisal should outline the relevant environmental objectives of a Local Plan in line with the National Planning Policy Framework (2021) (NPPF) which specifically refers to the promotion, protection and creation of accessible open space and green infrastructure.</p>	<p>Thank you for providing this further advice and these resources. The Council is aware of the active biodiversity agenda at the moment and will continue to work with partners to establish baseline information and develop future ambitions. The HRA will be used to explore and inform policy and site proposals which may impact on internationally designated sites. We will review the emerging green infrastructure standards and principles prior to finalisation of the sustainability appraisal framework. Detailed mapping of 3a and 3b suitable for use at a site specific level is not currently available. For larger scale sites, we will endeavour to explore agricultural land classification with the site promoters.</p>

2 Natural England's Goose and Swan Functional Land Impact Risk Zone (IRZ) is available to view via <https://magic.defra.gov.uk/MagicMap.aspx>

Comment by	Comment	HDC response and changes made
	<p>We welcome that relevant guidance has been followed to ensure future environmental impact and monitoring has been identified to demonstrate the policies within the Local Plan are supported by the most up to date evidence at the time of publication, including reference to important frameworks as the Cambridgeshire Green Infrastructure Strategy (2011), the Huntingdonshire Landscape and Townscape SPD (2022) and Natural Cambridgeshire's 'Doubling Nature – A Vision for the Natural Future of Cambridgeshire and Peterborough in 2050'.</p> <p>Natural England is pleased that priority areas including the West Cambridgeshire Hundreds, Great Fen, Nene and the Great Ouse Valleys have been identified within the Plan as strategic Green Infrastructure areas. These areas are important habitat corridors for an array of species and have many multifunctional benefits, which would assist in the delivery of a range of SA topic areas, e.g. biodiversity, landscape, health and wellbeing and climate change.</p> <p>Consideration should be given to Natural England's Green Infrastructure Framework: Standards and Principles, due to be published in January 2023.</p> <p><b>Wider Biodiversity and Biodiversity Net Gain</b></p> <p>In addition to designated sites, discussed above, we welcome that consideration has been given to the conservation of existing tree cover and additional tree planting as outlined in the objectives of The Environment Act (2021) which aims to increase tree cover significantly by 2050.</p> <p>Biodiversity net gain is a key tool to help nature's recovery. Biodiversity is also fundamental to health and wellbeing as well as creating attractive and sustainable places to live and work in. The NPPF highlights the role of 'policies and decision making to minimise impacts and secure measurable net gains for biodiversity' (para 170). Natural England welcomes a proposed commitment for Local Plan policies and proposals to deliver a minimum 10% BNG. We suggest that this is listed as an objective in <b>A3: Identifying Sustainability Issues and Problems</b>. We feel it should be incorporated as it represents an important part of decision-making within the context of the Local Plan in accordance with NPPF paragraphs 174d, 179b and 180d.</p> <p><b>Nature Recovery</b></p> <p>The <a href="#">Nature Recovery Network</a> is a major commitment in the government's 25 Year Environment Plan. The NRN is an expanding, increasingly connected, network of wildlife-rich habitats supporting species recovery, alongside wider benefits such as carbon capture, water quality improvements, natural flood risk management and recreation. It includes the existing network of protected sites and other wildlife rich habitats as well as and landscape or catchment scale recovery areas where there is coordinated action for species and habitats.</p> <p>Local Nature Recovery Strategies (LNRS) will become a mandatory requirement under the Environment Act and will inform future Local Plans therefore consideration should be given during the development of the Local Plan as LNRS will most certainly shape local planning policy and Biodiversity Net Gain (BNG) delivery.</p>

Comment by	Comment	HDC response and changes made
	<p>Further reference can be made to the Natural Environment Planning Practice Guidance (PPG)  <a href="https://www.gov.uk/guidance/natural-environment">https://www.gov.uk/guidance/natural-environment</a></p> <p>The Sustainability Appraisal should aim to ensure that the Local Plan is underpinned by ecological opportunity mapping to help deliver mandatory 10% Biodiversity Net Gain and Nature Recovery Network requirements of the Environment Act (2021). National Habitats Network mapping is available to view at <a href="https://magic.defra.gov.uk/">https://magic.defra.gov.uk/</a>. Existing information is available to inform this including Mapping Natural Capital and Opportunities for Habitat Creation in Cambridgeshire (Natural Capital Solutions Ltd., May 2019) prepared for the Cambridgeshire Biodiversity Partnership.</p> <p><b>Landscape</b></p> <p>We welcome that the Local Plan identifies key landscape issues through its objectives to protect, enhance and maintain the various landscapes and their key characteristics, promote landscape protection, management and planning. It coherently identifies that landscapes are vulnerable to change through the impacts of climate change and that it will be paramount to the Local Plan's success that it is able to mitigate the impacts of climate change on the natural environment and minimise human impact.</p> <p><b>Soils</b></p> <p>The conservation and sustainable management of soils is reflected in the <a href="#">National Planning Policy Framework</a> (NPPF), particularly in paragraph 174. The Local Plan should give appropriate weight to the roles performed by the area's soils. These should be valued as a finite multi-functional resource which underpin our wellbeing and prosperity. Decisions about development should take full account of the impact on soils, their intrinsic character and the sustainability of the many ecosystem services they deliver.</p> <p>Particular care over planned changes to the most potentially productive soil is needed, for the ecosystem services it supports including its role in agriculture and food production.</p> <p>Plan policies should therefore take account of the impact on land and soil resources and the wide range of vital functions (ecosystem services) they provide in line with paragraph 174 of the NPPF.</p> <p>The objectives within the Soils section highlight important issues such as the need to conserve the Best and Most Versatile (BMV) agricultural land, support sustainable agricultural practices, prioritise the re-use of previously developed land (brownfield land) over greenfield land, and enhance biodiversity, natural habitats and wild fauna and flora. As part of the avoidance of BMV development as well as utilising brownfield sites, it would be useful to make clear that development is not appropriate if the brownfield land is of high environmental value. Some brownfield sites are important for wildlife, particularly invertebrate diversity. Reference can be made to Open Mosaic Habitat Inventory as starting point for assessing environmental value: Open Mosaic Habitat (Draft) - <a href="http://data.gov.uk">data.gov.uk</a>.</p>	

## Comments from Environmental bodies on draft Scoping Report - A5

Comment by	Comment	HDC response and changes made
	<p>We welcome that conservation and restoration of peatland has been identified as an objective. The SA and Local Plan policies should reflect the importance of the district's peat soils as a significant carbon store, in helping to improve air quality and mitigate against climate change. The policy should seek to protect this and ensure relevant development contributes towards enhancement of degraded peat to deliver a wide range of environmental services including biodiversity, open space, flood risk and drainage benefits, in addition to helping to mitigate climate change.</p> <p>To assist in understanding agricultural land quality within the plan area and to safeguard BMV agricultural land in line with the NPPF, strategic scale ALC Maps are available. Natural England also has an archive of more detailed ALC surveys for selected locations. Both these types of data can be supplied digitally free of charge by contacting Natural England. Some of this data is also available on the <a href="#">magic</a> website. The planning authority should ensure that sufficient site specific ALC survey data is available to inform decision making. For example, where no reliable or sufficiently detailed information is available, it would be reasonable to expect developers to commission a new ALC survey, for any sites they wish to put forward for consideration in the Local Plan.</p> <p>General mapped information on soil types is available as 'Soilscapes' on the <a href="#">magic</a> website. Additional information regarding obtaining soil data can be found on the LandIS.</p>	

## Sustainability Appraisal Appendix 3 - Northern Huntingdonshire Site Appraisals

## Document Information

**Title:** Sustainability Appraisal Appendix 3 - Northern Huntingdonshire Site Appraisals

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Sustainability Appraisal Appendix 3 - Northern Huntingdonshire Site Appraisals can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA1	<ul style="list-style-type: none"> <li>Promote low and zero carbon technologies?</li> </ul>	N	<p>No information has been provided suggesting development on the site will promote low or zero carbon technologies above Building Regulation requirements.</p> <p>The site is not impacted by an air quality management area.</p> <p>The site is greenfield land with no existing structures on site meaning that this will not reuse materials or buildings.</p>
	<ul style="list-style-type: none"> <li>Not contain, and be at least 200m from an air quality management area?</li> </ul>	+	
	<ul style="list-style-type: none"> <li>Support the circular economy through the reuse and recycling of existing land, buildings or materials?</li> </ul>	-	
SA2	<ul style="list-style-type: none"> <li>Is the site located in an area with lower resilience to the predicted impacts of climate change?</li> </ul>	++	The site is not at risk of fluvial flood risk with climate change taken into account at 1 in 100 (Design Flood).
SA3	<ul style="list-style-type: none"> <li>Be served by existing water and waste water infrastructure or will it require infrastructure upgrades to facilitate growth?</li> </ul>	+	<p>The site is located within the Peterborough (Flag Fen) WRC catchment area which has more than 10% of the flow permit remaining after existing committed growth allowing opportunity to accommodate new development.</p> <p>The site is wholly within flood zone 1 with some surface water flood risk within the site.</p>
	<ul style="list-style-type: none"> <li>Use land in flood zone 1 (unless the proposed use is water compatible) taking into account the impact from surface water flood risk?</li> </ul>	++	
SA4	<ul style="list-style-type: none"> <li>Prioritise development of previously developed land?</li> </ul>	--	The site is greenfield and is wholly classified as grade 3 agricultural land.
	<ul style="list-style-type: none"> <li>Prioritise development on land of agricultural land grade 3 or lower (including urban and non-agricultural land)?</li> </ul>	-	
SA5	<ul style="list-style-type: none"> <li>Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space?</li> <li>Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?</li> </ul>	-	<p>The site is remote from any natural greenspace.</p> <p>The site is located within the Nene Valley Green Infrastructure Priority Area so there is capacity for linkages to the strategic green infrastructure network.</p>

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	++	The site is sufficiently remote from designated nature sites so it is unlikely there will be an impact.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	+	The site is located within the Nene Valley Green Infrastructure Priority Area and has some potential to contribute towards improvements strategically in habitat connectivity.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	-	<p>The site is located on the western edge of Alwalton with the site's western edge adjacent to the A1 it is somewhat detached from the main built form by trees and large residential curtilages. The site on a whole relates to the settlement. The site is largely obscured from view due to established vegetation apart from a gap in vegetation along Oundle Road where there is an existing access into the site. The site is most open on its northern edge with views across the open countryside.</p> <p>The site has been submitted for 10 homes along the frontage of Oundle Road which accounts for about 0.8ha of the 4.8ha site. An access route is to be retained to enable access to the wider site. If the trees were removed along Oundle Road, this would erode the rural feel on the approach into Alwalton thus adversely impacting the character of the area.</p>
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The proposed development is unlikely to lead to increased levels of pollution, however its proximity to the A1 means the site is likely impacted by increased levels of air, light and noise pollution which will require mitigation.
SA9	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> </ul>	++	The site is proposing market and/or affordable housing on 0.8ha of the total 4.8ha site.

# 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Meet the needs of specific housing groups such as gypsies and travellers or older people?</li> <li>Contribute to diversification of the housing supply by being no more than 1 ha in size?</li> </ul>		
SA10	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access town centres and local convenience shops?</li> </ul>	+	The site is within 9km of Peterborough city centre and is within 300m of Alwalton Store and Post Office.
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access education facilities?</li> </ul>	--	The site is in the catchment of Nene Park Academy located along Oundle Road, this is located outside of Alwalton within Peterborough City Council some 3.5km from the site.
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access leisure and cultural facilities?</li> </ul>	+	The site is within 800m of multiple culture and leisure facilities: the Cuckoo Public House, St Andrew's Church, Colonel Dane Memorial Hall and playing fields.
SA11	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> </ul>	+	The site is within 1km of the Minerva Business Park.
	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	++	Ultrafast broadband is available in the vicinity.
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	The site is about 9km from Peterborough railway station. It is within 300m of two bus stops located along Oundle Road, these are rated as being C- on the Place Based Carbon Calculator meaning there is a frequent service. These stops are served by buses that run into Peterborough.
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	A footpath runs along the site's frontage.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> </ul>	N	The proposal is for residential development.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	Even though the site is located on the edge of Alwalton, the site is located such that it could not be effectively integrated with the existing place and community without adversely impacting the character of the area and the conservation area.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The conservation area partially falls within the south eastern corner of the site where there are established trees. It is noted from the submitted illustrative zoning plan that no built development proposed on land within the conservation area. The rest of the site adjoins the conservation area and the site is adjacent to Alwalton Hall which is a grade II listed building.

### Summary of SA

The site is greenfield consisting of grade 3 agricultural land. It is within flood zone 1 but there is some minimal surface water flood risk. The site is not constrained by nature conservation designations but is located partially within a conservation area and within the setting of a listed building. It is within the Nene Valley Green Infrastructure Priority Area. Established trees run along the site's frontage along Oundle Road which obscures it from view and provides a rural approach into Alwalton. The site is adjacent to the A1 so is at risk of increased levels of air, light and noise pollution. It has good accessibility to public transport including buses into Peterborough city centre, to employment opportunities and also to local community services and facilities. It is somewhat removed from primary education with the nearest primary school being 3.5km from the site.

SA10	<ul style="list-style-type: none"> <li>Support and enhance the more deprived areas of the district?</li> </ul>	++	<p>The site is very large but falls solely within the Stilton, Folksworth &amp; Washingley ward. Analysis of deprivation by Cambridgeshire County Council gives this a local index of deprivation score of 4 (where 1 is most deprived and 10 is least deprived).</p> <p>As the site is being promoted for a commercial scheme, social and community facilities would not necessarily be expected to be included on site as part of its development.</p>
	<ul style="list-style-type: none"> <li>Maximise opportunities for access to existing or proposed social and community facilities and services?</li> </ul>	N	
SA11	<ul style="list-style-type: none"> <li>Contribute to regeneration activities?</li> </ul>	--	<p>The site is largely greenfield land. The site is located in a strategically prominent location in terms of its potential to utilise connections to the strategic highways network and also its proximity to existing largescale warehousing and logistics centres within Peterborough. The site promoter has provided an illustrative concept plan for the site, which will be subject to further assessment and scoping with consultees. The site has the potential to deliver a commercial scheme consisting of logistics and distribution development utilising the site's location along the A1(M) and to similar nearby developments within Peterborough. Access is proposed from an additional access off the A605 roundabout off from junction 17. Indicative floorspace figures have been provided but the potential job creation that could be provided in terms of full-time jobs have not been detailed to date.</p>
	<ul style="list-style-type: none"> <li>Enhance and diversify economic opportunities with the district?</li> </ul>	++	
SA12	<ul style="list-style-type: none"> <li>Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?</li> </ul>	+	<p>The site is approximately 10km from Peterborough train station. There are bus stops along Oundle Road in Chesterton to the north of the site which are rated as being C- on the Place-based carbon calculator meaning there is a frequent service. These stops are served by buses that run into Peterborough. The scale of the potential development can provide opportunities to enhance the public transport network.</p>

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA13	<ul style="list-style-type: none"> <li>• Attract new investment and provide opportunities to improve the resilience of the local economy?</li> <li>• Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</li> <li>• Support retention and growth of indigenous companies?</li> <li>• Encourage sustainable tourism?</li> </ul>	<b>++</b>	<p>The site has potential to attract new investment and could become commercial and logistics centre located along the A1(M) corridor. It is a sustainable location for employment opportunities being in good proximity to potential employees across the North of Huntingdonshire and Peterborough. There is potential for active travel and public transport accessibility from these locations which could be enhanced through a development at this scale. These connections could also utilise the public right of way network and provide enhancements to it.</p> <p>There is the potential to support indigenous companies.</p> <p>Tourism is unlikely to be a focal part of development on the site.</p> <p>Also considering its wider context, the site is nearby the existing logistics and warehousing developments within Peterborough and is also in close proximity and competition with other largescale commercial sites located along the A1(M) corridor which are promoting logistics and distribution commercial development (see Folksworth &amp; Washingley 2, Haddon 3, Haddon 4, Haddon 5, Haddon 6 and Yaxley 2).</p>
SA14	<ul style="list-style-type: none"> <li>• Facilitate modernisation of existing town centres to meet current and anticipated needs?</li> </ul>	<b>N</b>	<p>The site is not expected to include local scale shopping facilities. It is close to very small settlements such as Chesterton and Haddon which have very limited services. It is close to Peterborough City Centre being about 10km from it. The additional demand generated from and expenditure capacity of the site's future occupants has potential to assist in facilitating some modernisation of retail provision in Peterborough particularly if there is a local workforce.</p>

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA15	<ul style="list-style-type: none"> <li>Strengthen a local sense of place?</li> </ul>	+	<p>The site is largely arable farmland which in itself does not have a distinct identity but the scale of the development enables opportunities for a new logistics/commercial hub which could be marketed to have an identity to incentivise investment and future occupiers to the site. There are several public rights of way within the site which could be enhanced and utilised to connect the site to nearby communities and therefore supporting sustainable modes of transport.</p> <p>This may also enable opportunities to connect the site to the nearby proposal submitted under Chesterton 2 for a residential led garden village at Chesterton to the north of the site.</p>
	<ul style="list-style-type: none"> <li>Retain the character of existing settlements?</li> </ul>		
SA16	<ul style="list-style-type: none"> <li>Conserve and where possible enhance sites, features and area of archaeological value throughout the district?</li> </ul>	++	There are no heritage designations on site and it is not nearby to the site which may be adversely impacted by development.

## Summary of SA

The site is greenfield and consists of land classified as being grade 3 agricultural land. It is not constraint heavily by flood risk with it being wholly within flood zone 1 but there being some surface water flood risk. Not constrained by nature conservation or heritage designation. It is largely contained by the road network to the south and east and by rising land levels to the west. The site has a closer relationship with the countryside rather than to a settlement so detailed masterplanning will be required to address landscape impact and ensure effective integration. The site currently has very limited accessibility to a local shop and local services and facilities. It has some potential to connect to existing public transport options and is of a scale to provide an enhanced provision as well as enhanced connections for footpath and cycle paths, potentially utilising exiting public rights of way. The site has connections to the road network could incentivise car usage if improvements were not made to the public transport and active transport network, as highlighted the scheme is of a scale whereby it could provide enhanced bus connections. The proposal could provide a substantial amount of employment development that could support job creation within the northern part of the district. While its location to the strategic road network enhances its connectivity and accessibility particularly for logistics development, it may also be subject to higher levels of air, light and noise pollution arising from its proximity to the A1(M) and be of a scale that could result in additional pollution. Viewing the site in relation to nearby developments, there is potential to integrate the development with the proposal at Chesterton 2 for a Garden Village Community.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			As such, it could provide some capacity for enhancements to the strategic green infrastructure network.
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	++	The site is sufficiently remote from designated nature sites so it is unlikely there will be an impact.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	+	The majority of the site is located outside any of Natural Cambridgeshire's Priority Landscapes apart from its north eastern corner which is within the Nene Valley Green Infrastructure Priority Area, therefore it could contribute towards improvements strategically in habitat connectivity.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	+	<p>The site consists of two parcels, the larger parcel is north of Oundle Road with a second smaller parcel south of this road. The northern parcel wraps around the northern and western edges of Chesterton. The southern parcel is located to the south of the village.</p> <p>The site comprises of several fields marked out by field boundary features such as hedgerows. The site promoter has used these to underpin a grid concept whereby the existing landform and features are used to shape the layout of the scheme. To the north, the wider landscape gently slopes downwards towards the River Nene and to the west it gently slopes downwards towards Chesterton village and the A1(M). To the east the landscape gently rises, it rises to the gently to the south as well up to Chesterton Hill where the landform elevates significantly. As such, the site is fairly well contained within the wider landscape to the south and east but is more visible to the north and west.</p>

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			Chesterton is a very small settlement with approximately 60 dwellings and very limited serves and facilities. As such, the proposal will fundamentally alter the character of Chesterton expanding it substantially and by extension the character of the surrounding landscape, successful integration will require detailed masterplanning. The proposal will however provide additional village services including a shop, sports facilities and a primary school which are currently lacking within the village and therefore reduce the reliance on travelling to nearby settlements such as Alwalton, Elton, Yaxley and into Peterborough.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The site is in close proximity to the A1(M) and is of a scale which could lead to an increase in light, noise an visual pollution.
SA9	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> <li>Meet the needs of specific housing groups such as gypsies and travellers or older people?</li> <li>Contribute to diversification of the housing supply by being no more than 1 ha in size?</li> </ul>	++	The site promoter is proposing to provide 1,000 new homes which could include a wide range of types, sizes and tenures.
SA10	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access town centres and local convenience shops?</li> </ul>	+	The site is about 8km of Peterborough city centre and is about 2.4km of a Tesco Express located along Wistow Way in Peterborough. The proposal seeks to provide a local shop.
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access education facilities?</li> </ul>	++	Chesterton does not have a primary school currently but the proposal is for approximately 1,000 homes and a primary school.
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access leisure and cultural facilities?</li> </ul>	-	The site is within 800m of St Michaels Church. The proposal seeks to provide sports facilities and a community building.

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA11	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> </ul>	+	<p>The site is about 1.5km from the Minerva Business Park in Alwalton, it is also within 5km of logistics development on the western edge of Peterborough along the A1(M). The site promoter does not seek to deliver employment development as part of the scheme.</p> <p>Ultrafast broadband is available in the vicinity.</p>
	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	++	
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	<p>The site is about 8km from Peterborough railway station. It is adjacent to two bus stops located along Oundle Road, these are rated as being C- on the Place Based Carbon Calculator meaning there is a frequent service. These stops are served by buses that run into Peterborough. The indicative masterplan seeks to include an mobility hub and additional bus stop to serve the new community.</p> <p>There is a footpath from Oundle Road which could be extended to connect to both parcels of the site. The site promoter also seeks to incorporate a network of footpaths and cycle ways within the development.</p>
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	+	<p>There is no employment floorspace proposed, however, the proposal seeks to deliver community, retail and educational facilities which will result in some job creation. There will likely be some modest job creation within the development arising from the non-residential uses, but no employment development is currently proposed by the site promoter - the proximity to the site to Chesterton 1 (which proposed a largescale employment development) offers an opportunity to integrate this development with Chesterton 1.</p>
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	++	<p>The proposal seeks to deliver a community building and supporting retail facilities such as a local shop.</p>

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	As identified, the scale of the proposed development will require detailed masterplanning but it is capable of providing new and enhanced village services and transport which will assist in linking it with the existing place and community therefore aiding integration.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations within the site, however to the east of the site there are several listed buildings within Chesterton whose setting will be impacted by proposals. These includes the grade I listed St Michael's Church.

#### Summary of SA

The site is largely within flood zone 1 apart from its eastern edge which is constrained by fluvial flood risk arising from Billing Brook. It is greenfield land wholly classified as grade 3 agricultural land. The site is not constrained by designated nature conservation designations but it is adjacent to several listed buildings within Chesterton including the grade 1 listed St Michaels Church. The scale of the proposed development will fundamentally alter the landscape and village setting of Chesterton as well as the surrounding landscape, however through masterplanning and engagement with local communities and infrastructure providers an integrated and sensitively designed village extension may be possible. The site currently has limited accessibility to employment opportunities, primary education and local services and facilities within the village itself relying on nearby settlements for these. There are bus stops which provide a public transport connection into Peterborough. However, the proposal is of a scale whereby development could deliver new facilities reducing the need to look outside of Chesterton for services, for example, the proposal includes a primary school, sports facilities and a local shop as well as enhanced footpath and cycleway connections and additional bus stops.

#### Updates after initial appraisal

# 1 North Huntingdonshire

## Conington

1.3 A total of 5 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Conington 1: Conington Airfield
- Conington 2: Land North of Conington Airfield
- Conington 3: Land West of Conington Airfield
- Conington 4: Land at Woolpack Farm, Conington
- Conington 5: Land at Middlemarsh Farm, Glatton Road, Sawtry (Conington) - this site crosses over into Sawtry parish but is assessed here as the majority of the site areas falls within Conington.

**Conington 1: Conington Airfield**

- 1.4** As identified in the LAA, there is a preference from national Government to retain airfields. Also the likely significant amount of infrastructure and transport improvements required to serve the development make the proposed development potentially unachievable. Additionally, there are very limited details from the site promoter to scope the potential for the site in depth at this time.
- 1.5** Therefore, a sustainability appraisal for the site has not been undertaken.

**Conington 2: Land North of Conington Airfield**

- 1.6** As identified in the LAA, the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity
- 1.7** Therefore, a sustainability appraisal for the site has not been undertaken.

**Conington 3: Land West of Conington Airfield**

- 1.8** As set out in the LAA, the site will be appraised for biodiversity net gain opportunities. The presence of the woodland makes the site unsuitable for built development.

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			The site is not served by a footpath and there are no nearby opportunities to connect the site to an existing footpath. There is track to access the site that runs between Glatton Lane and Church Road making it unsustainable as a location for open space or commercial leisure uses.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site is being appraised for biodiversity net gain opportunities.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site is being appraised for biodiversity net gain opportunities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located within the open countryside detached from a main settlement so it cannot integrate with an existing place or community. However, biodiversity net gain on the site will help to reinforce its current land use.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

**Summary of SA**

The site is not constrained by fluvial flood risk but there is some surface water flood risk. The site consists primarily of woodland categorised as Priority Habitat – Deciduous Woodland with a pond and several internal tracks within the site. Built development is not suitable but biodiversity net gain could be brought forward. The site is poorly served by public transport options but is accessible and is also not easily accessed via walking and cycling making it unsuitable for open space and commercial leisure uses.

SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located within the countryside adjacent to Woolpack Farm, as such integrating with the existing place and community is very challenging as the site relates much more closely with the open countryside.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations on site, however there are two grade II listed buildings to the west of the site that form part of Woolpack Farm.

## Summary of SA

The site is not constrained by fluvial flood risk but there is some risk from surface water flood risk. The site is not accessible to natural greenspace and is not constrained by nature conservation designations. The land is classified as being mostly grade 3 agricultural land but there is also some grade 2. It is nearby to several listed buildings associated with Woolpack Farm. The site is proposed for employment development (type and capacities unknown) so could provide some 2ha of employment land. It is not well served via public transport. It relates much more closely to the open countryside than to an existing place or community making integration and travelling via sustainable modes more challenging.

## Updates after initial appraisal

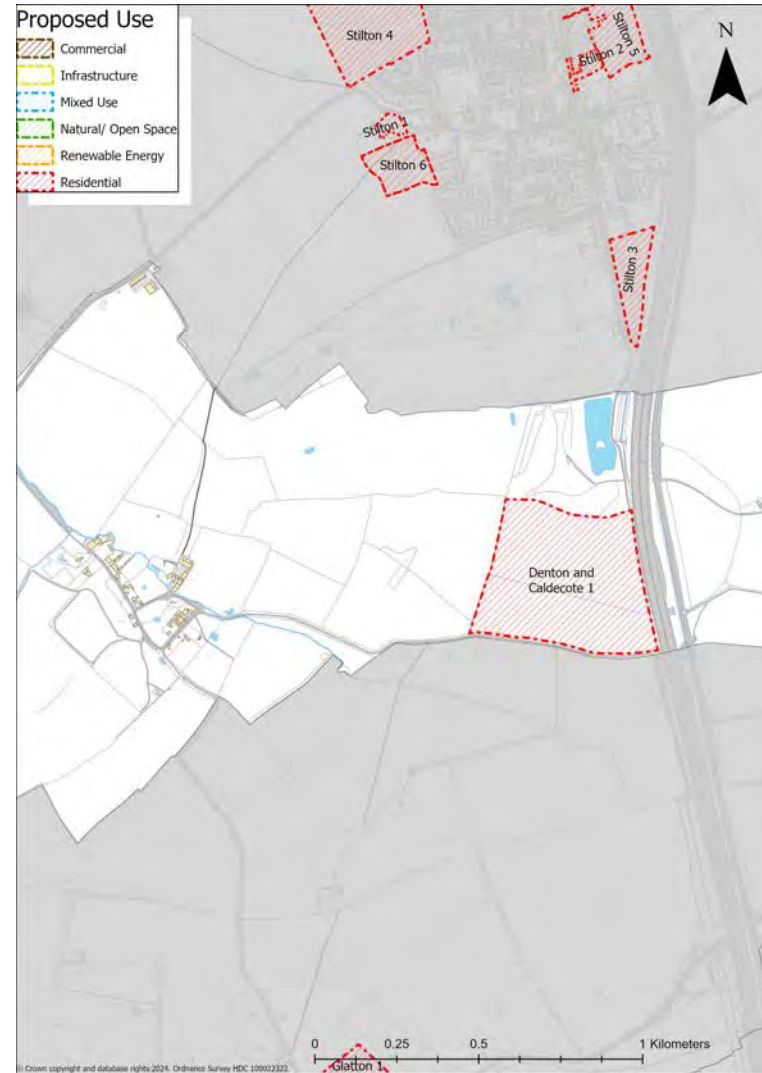

### Conington 5: Land at Middlemarsh Farm, Glatton Road, Sawtry (Conington)

- 1.9** As identified in the LAA, the likely significant amount of infrastructure and transport improvements required to serve the development make the proposed development potentially unachievable. Additionally, there are very limited details from the site promoter to scope the potential for the site in depth at this time.
- 1.10** Therefore, a sustainability appraisal for the site has not been undertaken.

### Denton and Caldecote

1.11 A total of 1 site has been identified/ put forward through the desktop review or Call for Sites process:

- Denton and Caldecote 1: Land South of Stilton Golf Course

# 1 North Huntingdonshire

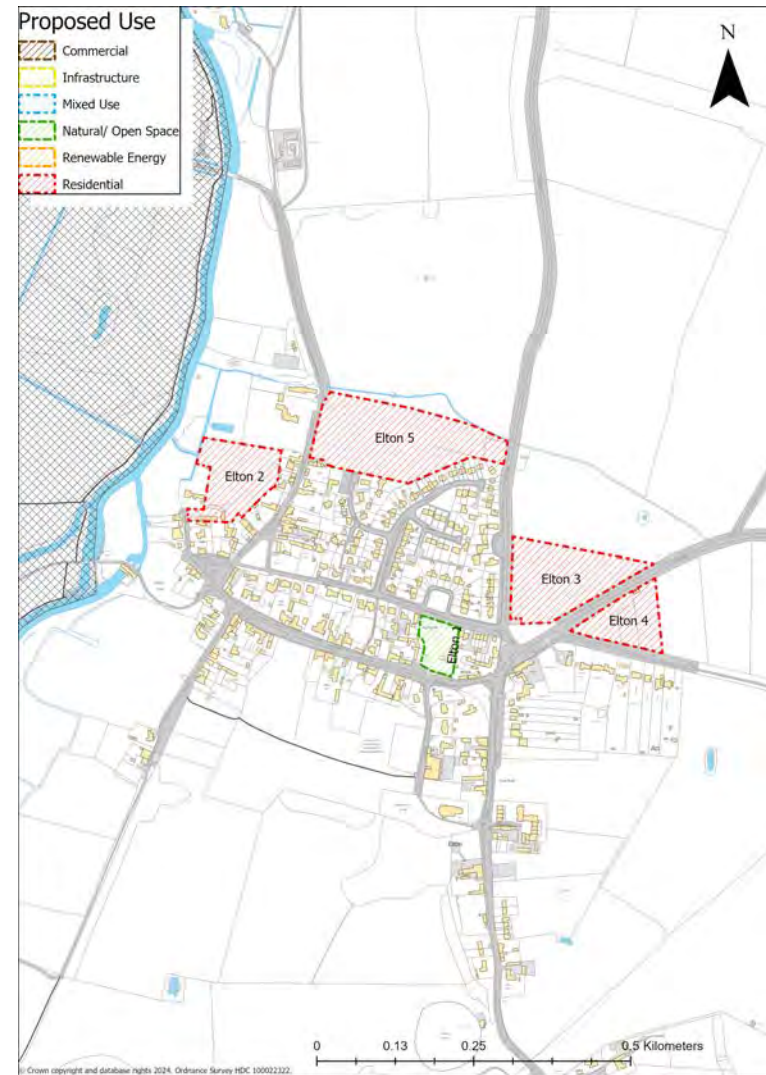

## Denton and Caldecote 1: Land South of Stilton Golf Course

- 1.12 As identified in the LAA, the existing access is unsuitable for the scale of development and is very unlikely capable of being upgraded sufficiently. Infrastructure requirements to enable a suitable access is likely to make the development unachievable.
- 1.13 Therefore, a sustainability appraisal for the site has not been undertaken.

## Elton

			from the public footpath on the west bank of the River Nene. The flood risk present means that it is only appropriate to consider building on half of the site which also impacts the capacity of the site and means development would be focused on the southern half of the site closest to the existing built form of the village. While this would assist in minimising the encroachment of built development into the Nene Valley, development in this location is not characteristic of the area as it would introduce back land development and still would erode the rural edge of the village. Additionally, the site's location near to a number of listed buildings and being within the conservation area means that impact on these form constraints on development.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	+	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.

However, this is subject to several constraints being overcome including the impact on the Nene Valley and on designated heritage assets.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site is within the conservation area and Number 19 Duck Street (The Old Bakehouse (Grade II listed)) is nearby to the east. Due to the 45 metre separation distance and existing built form between the site and Number 2 Stocks Green (Chestnuts Farmhouse (Grade II Listed)), development of the site would likely have a negligible impact upon the setting of this heritage asset.

#### Summary of SA

The site is heavily constrained by fluvial flood risk with almost half of the site at higher risk which constrains where built development can be placed. It is not constrained by nature conservation designations but it is located within the Nene Valley Green Infrastructure Priority. It is within the conservation area and nearby to several listed buildings so heritage is a development constraint. The site has reasonable accessibility to the services and facilities within Elton including a bus stop, shop and primary school. It is not accessible to employment opportunities though. It is located on the north western edge of Elton with residential properties bounding the southern edge of the site. Development would introduce back land development which is uncharacteristic of this part of the village, additionally, the design is heavily constrained by flooding, heritage and landscape constraints which make integrating a development that is in keeping with the character of the area more challenging.

The site has a closer relationship with the rural character of Farcet. The A605 to the north provides a clear physical separator as does Stanground Lode which forms a natural separator. Development would result in furthering the potential sense of coalescence between Farcet and Peterborough. However, development in this location will have very little landscape impact due to the surrounding built development and the road network but would result in some townscape impact due to the potential scale of development. This impact is somewhat minimised as in depth development has already been established through the development of Grazeley Gardens. The site promoter's proposed capacity includes 3.36ha of land for natural open space, biodiversity net gain and flood mitigation. The remaining land is for residential development which would result in a density that would make an efficient use of land.</p>

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

## Summary of SA

The site is somewhat constrained by flooding on its western edge. It is not constrained by nature conservation or heritage designations. It consists of grade 3 agricultural land and greenfield land. The site has very good accessibility to public transport options particularly by bus which provides a connection to Peterborough City Centre which is about 5km from the site. It is also very well served in terms of access to employment opportunities. It has good accessibility to village services, primary education

and natural green space within Farcet but also has the option to utilise those within Peterborough. The site is located on the western edge of Farcet and development could further erode the sense of separation between the village and Peterborough, therefore very careful masterplanning will be required to provide sufficient landscaping so that the site can reflect the character of Farcet.

SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	--	<p>The site is located on the northern edge of Farcet. The site area extends up to the A605 and partially crosses over into the Peterborough City Council area.</p> <p>Development at this scale will further erode the sense of separation between Farcet and Peterborough and mean that there will be built development up to the A605, landscaping and areas of open space could be incorporated to mitigate this however, the fundamental character of the landscape and the townscape will be adversely impacted and altered. A much smaller development area could be more suitable and provide a more modest scale extension to Farcet than across the whole site area. The site is visible in the landscape from the east including from the River Nene (Old course). 800 homes across the whole site would over double the size of the existing village in terms of housing numbers which would fundamentally alter its character and could overwhelm the village and the local road network. It is recognised that a new local centre is proposed as part of the proposal.</p>

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			Development could be considered appropriate on a much reduced site area in line with the previous outline application made on the site subject to appropriate access, landscaping and design. This would represent a more proportionate level of growth for the village and retain the sense of and physical separation from Peterborough.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The site's proximity to the road network (A605) and to the largescale Amazon warehousing facility to the west could result in increased levels of air, light and noise pollution on the development.

# 1 North Huntingdonshire

## Summary of SA

The site is previously developed located within the a prominent location within Farcet. It is not constrained by fluvial flooding but there is some surface water flood risk. It is not constrained by nature conservation or heritage designations. The site has very good accessibility to public transport options particularly by bus which provides a connection to Peterborough City Centre which is about 5km form the site. It is also very well served in terms of access to employment opportunities. It has good accessibility to village services, primary education and natural green space within Farcet but also has the option to utilise those within Peterborough. The site is located within the built form of Farcet and offers a modest scale regeneration opportunity which is masterplanned well could enhance the street scene and provide a development more in keeping with the character of the village.

## Updates after initial appraisal

### Farcet 5: Collmart Growers, Pondersbridge

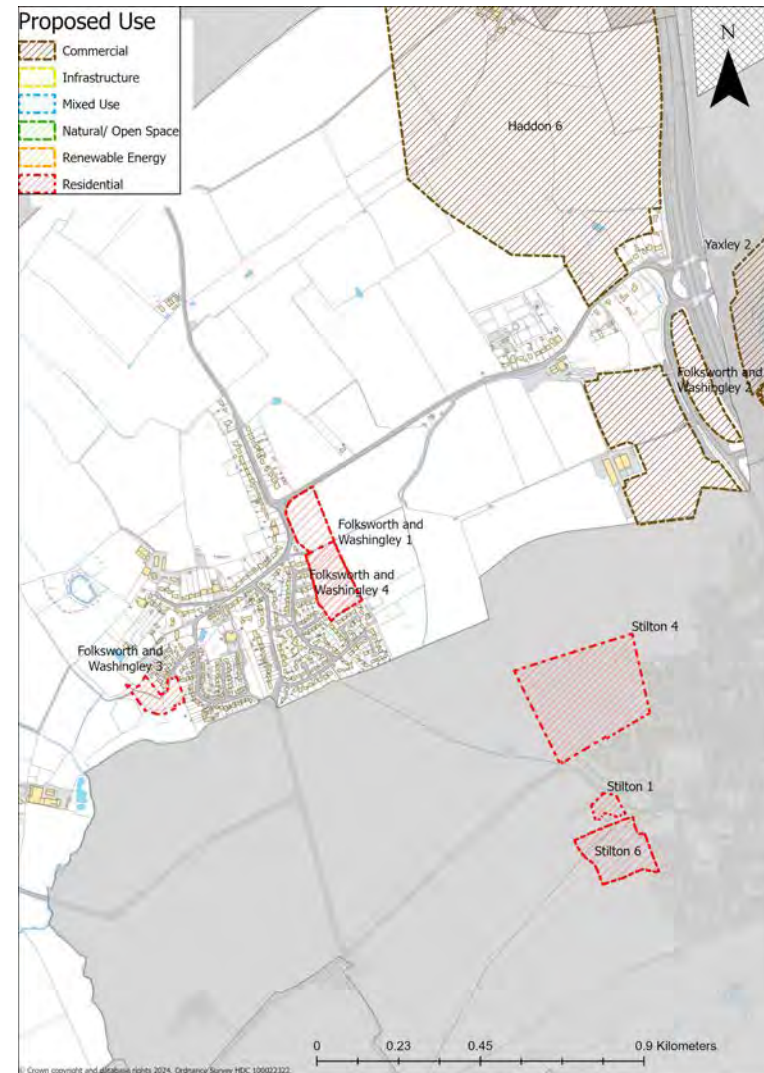

- 1.16** As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF.
- 1.17** Therefore, a sustainability appraisal for the site has not been undertaken.

## Folksworth and Washingley

**1.18** A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Folksworth and Washingley 1: Land off Hawthorn Road, Folksworth (smaller site)
- Folksworth and Washingley 2: Land adjacent A1 at Norman Cross, Folksworth
- Folksworth and Washingley 3: Land South of The Paddocks, Folksworth
- Folksworth and Washingley 4: Hawthorn/Manor Road, Folksworth (larger site)

**1.19** Please note that Haddon 6: Land West of A1(M) between junctions 16 and 17, and South of Haddon Road also partially falls within Folksworth & Washingley and Morborne parishes, but it has been included under Haddon as most of the site lies within that parish area.

# 1 North Huntingdonshire

## Folksworth and Washingley 1: Land off Hawthorn Road, Folksworth (smaller site)

SA5	<ul style="list-style-type: none"> <li>Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space?</li> <li>Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?</li> </ul>	+	The majority of the site is within 200m of 0.5ha of natural green space according to Natural England's 'Access to Green Space Standards'.
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	++	The site is sufficiently remote from all of the designated nature assets.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	The site is outside Natural Cambridgeshire's Green Infrastructure Priority Areas and has limited capacity for future improvements in strategic habitat connectivity.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	+	The site is located on the eastern edge of Folksworth relating closely to the settlement, bound by residential areas to the west and south and is potentially accessible via Manor Road or Hawthorn Road. It also relates to the countryside due to agricultural fields beyond the northern and eastern boundary. It forms part of a larger agricultural field meaning the eastern boundary is completely open but the landscape impact may be negligible due to the lack of public right of ways to the east and being well integrated into the built form. Whilst the density of the proposal is very low, the number of houses proposed is similar to the surrounding residential areas of a similar size. In addition, the eastern boundary aligns with the existing built line of the residential area to the south on Townsend Way offering an opportunity for growth in a village location. To this end, by not extending past the eastern edge of Folksworth the site has a closer relationship to the settlement than the countryside. However a portion of the site, in the south is within an oil pipeline buffer zone which may adjust the layout of the site and it's effective integration. Overall, the site would use land efficiently whilst conserving the character and form of Folksworth.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site proposal does not include retail or leisure uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it could be effectively masterplanned to become part of the existing place and community.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development.

#### Summary of SA

The site is not constrained by flood risk and is resilient to the predicted impacts of climate change on flooding. The site is wholly classified as grade 3 agricultural land with no opportunities for the reuse of recycling of previously used buildings. It has limited accessibility to shops and employment concentrations. In addition, there is low provision of culture and leisure facilities within Folksworth and the bus service is highly infrequent. Although, the site is in close proximity to Folksworth Primary School and there is a pavement along the site frontage encouraging active travel. It is sufficiently remote designated nature and heritage assets and the majority of the land is within 200m of 0.5ha of natural greenspace. The site relates closely to the settlement and the density aligns with surrounding residential areas, preserving the form of Folksworth whilst ensuring an efficient use of land. Adverse landscape impact due to the open eastern boundary will likely be small due to no public right of ways to the east and being well integrated to the built form.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby that would be adversely impacted by the proposal.

# 1 North Huntingdonshire

## Summary of SA

The site is not constrained by fluvial flood risk but there is some surface water flood risk across the larger parcel of the site. It is not constrained by heritage designations, a county wildlife site is about 100m from the site but the A1(M) separates them. The site is remote from natural greenspace, local services and facilities within Folksworth, Stilton or Yaxley but is served by a bus route with a good level of service. It is detached from a main settlement but is largely well constrained within the landscape arising from established vegetation and the strategic road network. Development could still lead to adverse impact if not effectively masterplanned. The site could provide employment development that could support employment opportunities for several settlements.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site proposal does not include retail or leisure uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it could not be effectively integrated with the existing place and community without adversely impacting the character of the settlement and the TPOA.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development.

### Summary of SA

The site is not constrained by flood risk and is resilient to the predicted impacts of climate change on flooding. The site is wholly classified as grade 3 agricultural land with no opportunities for the reuse and recycling of previously used buildings. It has limited accessibility to shops, employment concentrations and natural green space. Only a village hall is within 800m of the site and the bus service is highly infrequent. It is in close proximity to Folksworth primary school and there is a pavement

# 1 North Huntingdonshire

immediately outside the site frontage encouraging active travel. There are no designated heritage and nature assets nearby to the site that would be adversely impacted by the development. Due to the constraints of the site, it would be difficult to effectively integrate with the settlement without adversely impacting the form and character of the south western edge of Folksworth and achieve the promoter's stated capacity.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development.

#### Summary of SA

The site is not constrained by flood risk. The site is wholly classified as grade 3 agricultural land. It has limited accessibility to shops, public transport and employment opportunities. It is sufficiently remote designated nature and heritage assets and the majority of the land is within 200m of 0.5ha of natural greenspace. The site relates closely to the settlement and could provide an opportunity for some growth. The site consists of two agricultural fields separated by a line of trees. The site's frontage also has established vegetation providing a rural feel to this part of the village, the removal of some of these trees may be required to provide access which will have some impact on the character of the street scene. There is some potential for landscape impact to the east as the eastern boundary is more open.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site area adjoins to Glatton Conservation Area which could be adversely impacted by the development, particularly for potential highway access to the site.

Page 1944 of 3488

## Summary of SA

The site is not constrained by flood risk and is expected to be resilient to the predicted impacts of climate change on flooding. The site is wholly classified as grade 3 agricultural land. It has limited accessibility to natural green space and is not an area of strategic focus for green infrastructure. Successful integration of the site into Glatton village is challenging because of physical constraints. The location, nature and key constraints of the site could negatively impact the form and character of the settlement and also adjoining Glatton conservation area. It is sufficiently remote from all of the designated nature assets. The site is in close proximity to culture and leisure facilities within Glatton and access to them is facilitated by a active travel infrastructure. However, education facilities, town centres and local convenience scores are not available in the immediate area. Sawtry is within 5km of the site where there are employment opportunities.

			There is a pavement immediately opposite the site frontage on Main Street.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site is solely for residential use and therefore this objective is not relevant.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	+	The proposal incorporates the retention and enhancement of the village hall car park.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	At a certain scale, the site could be effectively integrated into the existing community if effectively masterplanned and designed to be sensitive to the settlement and conservation area.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site is wholly within Great Gidding Conservation which could be adversely impacted by the development and would need to be sensitive to the setting of several listed buildings within the village.

### Summary of SA

The site is not constrained by flood risk and is expected to be resilient to climate change on flooding. It is wholly classified as grade 3 agricultural land. The site has limited accessibility to natural green space and is not an area of strategic focus for green infrastructure. It is within 200m of a County Wildlife site but is sufficiently remote from other designated nature assets. The scale of the proposal would be out of context with the area and has potential to cause significant landscape impact due to its close relationship with the countryside. However, at a lower scale the proposal could be integrated into the existing place and community through effective masterplanning. The site has access to a local convenience store and multiple cultural and leisure facilities but is remote from education facilities and employment concentrations. It has access to active travel infrastructure and a bus stop but this service is very limited. The proposal intends to retain the car park for the village hall benefiting the wider community. The site is wholly within Great Gidding Conservation Area and located nearby to several listed buildings which may be adversely impacted by the development.

SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	++	The site is sufficiently remote from all of the designated nature assets.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	The site is outside Natural Cambridgeshire's green infrastructure priority area and has limited potential to contribute towards improvements in habitat connectivity.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	--	The site is located on the southern tip of Great Gidding, predominantly enclosed by surrounding roads, namely Chapel End, Back Lane and Winwick Road except an adjoining public park to the north west. Whilst the frontage on Chapel End is opposite residential properties the site is largely separate from the built form. The site has a closer relationship with the countryside and despite mature hedgerows and trees bordering the site, the topography of the land means the development would be highly visible when approaching the settlement from the south, eroding it's rural feel. In addition, it's scale and size would be out of context with the form of Great Gidding which is a linear settlement with a small population. As outlined in the LAA, there are substantial constraints to the development namely a Water Recycling Buffer Zone which would direct development to a relatively small area on the western edge of the site inhibiting the achievability of the proposed capacity.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	+	The site is distant from major sources of pollution and not of a scale likely to cause substantial pollution.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site but development will need to be sensitive to Great Gidding Conservation area to the north.

#### Summary of SA

The site is not constrained by flood risk and is expected to be resilient to climate change. It is wholly classified as grade 3 agricultural land. According to Natural England's mapping, most of the site is in close proximity to natural green space whilst being sufficiently remote from all of the designated nature assets. However, the location and scale of the site may not protect the character of Great Gidding and it would be difficult to effectively integrate the site with the existing community. The site has access to a local convenience store and is nearby to multiple cultural and leisure facilities. It is remote from education facilities and employment concentrations. The site has access to active travel infrastructure and a bus stop but the frequency of this service is very limited.

#### Updates after initial appraisal

---

#### Great Gidding 4: St Gidding School, Great Gidding

**1.24** As identified in the LAA, the site falls below the site size threshold so does not pass the fundamental constraints for assessment.

# 1 North Huntingdonshire

### Summary of SA

### Updates after initial appraisal

The site is not constrained by flood risk and is expected to be resilient to the impact of climate change on flooding. It is wholly greenfield and grade 3 agricultural land. The site is remote from natural green space and is sufficiently remote from all of the designated nature assets. The site is of a scale and location that may preserve the character of Great Gidding and be integrated into the existing place and community with effective masterplanning. The site has limited access to services, amenities and key infrastructure. It is not impacted by designated heritage assets.

# 1 North Huntingdonshire

## Haddon 3: Land West of A1 and South of Haddon House, Haddon

**1.30** As identified in the LAA, the cumulative constraints impacting site (landscape, trees, flood risk, public rights of way and telegraph poles) make the potential developable area of the site very small for the proposed development. Also access is very constrained from Haddon Road and connection onto the A1(M) to serve a logistics development with largescale vehicles is currently inadequate without substantial upgrades. Considering this and the cumulative constraints on the site, the site is not categorised as being either deliverable or developable at this time.

**1.31** Therefore, a sustainability appraisal for the site has not been undertaken.

The eastern part towards the A1(M) and Junction 17 is relatively flat with some</p>

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			parts gently sloping and the south western part rises towards the ridgeline and highest ground beyond the site to the west. The submitted concept plan shows that the western and northern edges of the site will have significant landscape buffers which will assist in mitigating longer range landscape impact as this is also where the land is highest. Development in this location is in a sensitive location within the Northern Wolds undulating landscape and particularly development of this scale will result in some impact. Development adjacent to the strategic highways network and in close proximity to similar employment development within Peterborough means that through careful masterplanning and engagement with infrastructure and utilities providers as well as other consultees development could be largely contained and form a hub for employment.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The A1(M) runs to the east of the site which increases the risk from air, light and noise pollution.

SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site could be masterplanned so that it becomes a hub for further employment and logistics development utilising connections to the strategic highways network and compliment similar nearby developments. This would be subject to a high quality landscaping scheme to mitigate adverse impact.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby that would be adversely impacted by the proposal.

## Summary of SA

The site is greenfield and classified as grade3 agricultural land. It is not constrained by fluvial flood risk but there is some risk from surface water flooding. The site is remote from natural greenspace and local services and facilities. The site is remote from public transport options which may incentivise car usage amongst future employees. It is strategically located off from junction 16 of the A1(M). The land levels rise to the west of the site but it is a large site which development at this scale could impact the landscape and alter the rural feel of this part of the district. It is of a scale whereby it could form a a new mini employment hub in a strategically good location taking advantage of its transport connections and complementing nearby uses in Peterborough. There is only standard broadband available in the immediate vicinity which may require upgrading to support future business activity.

	<ul style="list-style-type: none"> <li>Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?</li> </ul>	-	
SA5	<ul style="list-style-type: none"> <li>Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?</li> </ul>	-	The site is remote from Natural England's access to natural green space standards but has capacity for the inclusion of green space within the site. It also has, due to the scale of the proposal, scope for linkages to the blue or green infrastructure network.  The site is outside of the Nene Valley Green Infrastructure Priority Area but due to the scale of the site has some capacity to improve habitat connectivity.
	<ul style="list-style-type: none"> <li>Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?</li> </ul>	+	
SA6	<ul style="list-style-type: none"> <li>Protect sites of designated biodiversity or geodiversity significance?</li> </ul>	+	There are no nature conservation designations on site but there are several designations nearby to the site. The scale of the site would enable the inclusion of strategic green infrastructure and networks within the site connecting to priority habitats.
	<ul style="list-style-type: none"> <li>Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?</li> </ul>	+	
SA7	<ul style="list-style-type: none"> <li>Promote opportunities to protect and enhance valued landscape and townscape characteristics?</li> </ul>	+	The site is located within the countryside and not associated with a settlement. Peterborough Motorway Services are located to the north of the site.
	<ul style="list-style-type: none"> <li>Reinforce local distinctiveness and a sense of place?</li> </ul>		

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			<p>It is located within the Northern Wolds Landscape Character Area which is characterised by a pattern of ridges, valleys and regularly spaced settlements. It is very rural with very few large settlements containing predominately small historic rural villages.</p> <p>The site is relatively well defined and contained by a combination of the A1, Junction 17, A605 and a service area to the north, east and north east. To the south and west is further farmland, woodland and hedgerows, and a minor watercourse/ wet ditch. The site is not level with the western part of the site comprising rising ground, which continues to rise beyond the boundary to the west. The majority of the site is relatively lower lying sloping down towards in the central and eastern part of the site. Land levels reduce by some 20m or so development on the higher ground would result in a significant landscape impact. The site is much more open to the south and west where it adjoins open countryside so will require good levels of landscaping to mitigate impact. The site has a public right of way within its south eastern section so development will be visible from a public vantage point.</p> <p>The scale of the site provides an opportunity for a comprehensive development of the site of a scale that could provide landscape enhancements and enhanced connectivity as well as a hub for commercial development utilising its strategic location and existing connections to the highways network. It would complement similar developments within Peterborough.</p>
SA8	<ul style="list-style-type: none"> <li>● Promote actions to reduce contributions to air pollution?</li> <li>● Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment</li> </ul>	-	The site is being promoted for a commercial led scheme so will not provide any additional housing.

It is close to very small settlements such as Chesterton and Haddon which have very limited services. It is close to Peterborough City</p>

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			Centre being about 10km from it. The additional demand generated from and expenditure capacity of the site's future occupants has potential to assist in facilitating some modernisation of retail provision in Peterborough particularly if there is a local workforce.
SA15	<ul style="list-style-type: none"> <li>Strengthen a local sense of place?</li> </ul>	+	The site is largely arable farmland which in itself does not have a distinct identity but the scale of the development enables opportunities for a new logistics/commercial hub which could be marketed to have an identity to incentivise investment and future occupiers to the site. There is a public rights of way within the site which could be enhanced and utilised to connect the site to nearby communities and therefore supporting sustainable modes of transport.
	<ul style="list-style-type: none"> <li>Retain the character of existing settlements?</li> </ul>		
SA16	<ul style="list-style-type: none"> <li>Conserve and where possible enhance sites, features and area of archaeological value throughout the district?</li> </ul>	+	There are no heritage designations on site and it is not nearby to the site which may be adversely impacted by development. However, the site promoter has identified the north western corner of the site as having potentially significant archaeology which will require further investigation. The concept plan for the site shows that no built development is proposed on this part of the site.

**Summary of SA**

The site is greenfield land consisting of grade 3 agricultural land. The site is not constrained by fluvial flood risk but there is some risk from surface water flooding. It is not constrained by nature conservation designations or by heritage designations although there may be some archaeological potential within the site. Development may be subject to higher levels of air, light and noise pollution arising from its proximity to the A1(M) and be of a scale that could result in additional pollution. The site is adjacent to Peterborough Motorway Services and could provide employment development that could support job creation in a location strategically located along the strategic road network. Although the site has very limited accessibility to a local shop and local services and facilities and public transport. The scale of the proposal provides opportunities for connections to the road network and public transport enhancements, without which could incentivise car usage. The site has some potential to connect to existing public transport options and is of a scale to provide an enhanced provision as well as enhanced connections for footpath and cycle paths, potentially utilising existing public rights of way.

**Updates after initial appraisal**

--

**Haddon 6: Land West of A1(M) between junctions 16 and 17, and South of Haddon Road**

- 1.32** As identified in the LAA, the cumulative constraints relating to landscape, trees, flood risk, public rights of way and telegraph poles make developing the site very challenging. Additionally, the scale of the site is fundamentally unacceptable due to the urbanising impact it would have on the landscape. Also, access is very constrained from Haddon Road and connection onto the A1(M) to serve a logistics development with largescale vehicles is currently inadequate without substantial upgrades. Considering these factors and the cumulative constraints on the site, the site is not categorised as being either deliverable or developable at this time.
- 1.33** Therefore, a sustainability appraisal for the site has not been undertaken.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within the site. It is in close proximity to a listed building, Holmewood Hall, but there will unlikely be adverse impact due to dense vegetation screening the development.

## Summary of SA

The site is not constrained by flood risk and is resilient to the predicted impacts of climate change on flooding. It is wholly classified as grade 3 agricultural land and there are substantial built structures on site which could be reused or recycled. The site has good access to natural green space, meeting all of Natural England's standards but is in close proximity Holme Fen and Great Fen Project Area which are designated nature assets. The site could be integrated into the existing place and community and conserve the character of Holme with effective masterplanning. However, the proposal would need to mitigate the potential of significant landscape impact due to the eastern boundary being completely open and being wholly within The Great Fen Visual and Landscape Setting. It has limited access to shops and employment concentrations but is within 800m to a primary school and multiple culture and leisure facilities. The site is in close proximity to a bus stop but the service is very limited. There is a public footpath and right of way near to the site encouraging active travel.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA5	<ul style="list-style-type: none"> <li>Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space?</li> <li>Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?</li> </ul>	+	The site is within 1km of 10ha of natural green space according to Natural England's standards but has limited capacity for linkages to the green or blue infrastructure network.
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	+	The site is within 1km of Holme Fen SSSI National Nature Reserve and approximately 180m from the Great Fen Project Area, a Local Geological Site. It is sufficiently remote from the other designated nature assets.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	The site is outside Natural Cambridgeshire's green infrastructure priority areas and has limited potential to contribute towards future improvements in strategic habitat connectivity.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	--	The site is situated to the west of Yaxley Road and south of Short Drove on the eastern edge of Holme, separated from the main settlement by a large patch of greenfield/ garden land. The site does have some association with the built form due to a small cluster of houses adjoining the site. Countryside beyond the northern and eastern boundary is predominantly screened by well established trees and hedgerow but is open in some areas meaning the site could be visible from long distances due to the flat nature of surrounding land. This is particularly significant because the site is wholly within the Great Fen Visual Land Landscape Setting and the site promoter's intention to have the northern boundary completely open for flood mitigation. Therefore, without mitigation/ landscaping the development would fail to protect the landscape and townscape of Holme and the Great Fen. In addition, it would be highly visible from Yaxley Road eroding the rural feel to this edge of the village.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			Whilst low density development is typical of Holme, the size (3.5ha) relative to the intended capacity of the site (30 homes) would not make an efficient use of land.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no heritage assets within or in close proximity to the site that would be adversely impacted by the development.

## Summary of SA

The site is at some risk of flooding on the northern part of the site but this risk is below 20% incorporating the the impacts of climate change. The site is wholly greenfield and classified as grade 2 agricultural land. It does have access to 10 ha of natural green space but is in close proximity to Holme Fen and Great Fen Project Area which are designated nature assets. The site does not relate closely with the existing settlement and therefore would struggle to integrate effectively with the existing place

and community. Whilst the site has access to a primary school within Holme and an adjoining the pub, it has limited access to other culture and leisure facilities, employment concentrations and a frequent public transport. However, there is a public footpath close to the site and is sufficiently remote from designated heritage assets.

**Updates after initial appraisal**

**Holme 4: Land off Pingle Bank, Holme**

**1.35** As identified in the LAA, the site does not pass the fundamental constraints for assessment and therefore a sustainability appraisal has not been undertaken.

**Holme 5: Land to North of Station Road, Holme**

Sibson Flood Meadows and Water Newton Flood Meadows County Wildlife Sites is about 100m from the site but the A1(M) separates them. The potential scale of development and population of this potential new settlement could give rise to additional recreational pressure on nearby designated sites as well as other un-designated sites of nature conservation significance as well as the wider landscape.</p> <p>The scale of the site would enable the inclusion of strategic green infrastructure and networks within the site connecting to priority habitats.</p>
	<ul style="list-style-type: none"> <li>Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?</li> </ul>	+	
SA7	<ul style="list-style-type: none"> <li>Promote opportunities to protect and enhance valued landscape and townscape characteristics?</li> </ul>	+	<p>The site is located within the Northern Wolds Landscape Character Area which is characterised by a pattern of ridges, valleys and regularly spaced settlements. It is very rural with very few large settlements containing predominately small historic rural villages.</p> <p>The potential scale of the development is of a scale where it form its own distinct community and could provide substantial areas of landscaping providing a softer development edge that mitigates landscape harm and also retains separation from nearby settlements. The presence of Sibson Aerodrome forms a key placemaking opportunity whereby the site's aviation heritage can be celebrated as well as its relationship with the agricultural heritage of this part of the district. While there are opportunities, development at this scale would considerably alter the character of the locality and a large proportion of of the Northern Wolds Landscape Character Area and nearby landscape areas such as the Nene Valley.</p>
	<ul style="list-style-type: none"> <li>Reinforce local distinctiveness and a sense of place?</li> </ul>		

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA8	<ul style="list-style-type: none"> <li>• Promote actions to reduce contributions to air pollution?</li> <li>• Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment</li> </ul>	-	<p>Development at this scale would require upgrades and a new junction off the A1 and other local roads and enhanced public and active travel connections into the surrounding area. The site is located to the west of the A1 where connections to existing cycle paths and bus stops are more challenging and less frequent.</p> <p>The A1 could give rise to higher levels of air, noise and light pollution on future residents. The site is of a size that significant landscaping buffers and noise mitigation could be provided to mitigate this impact. Additionally, these can be designed to mitigate the impact the air, noise and light pollution that could potentially arise from such a development. This landscaping would also assist in enclosing the development reinforcing that it could be a free standing community and therefore retaining separation from existing settlements.</p>
SA9	<ul style="list-style-type: none"> <li>• Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?</li> </ul>	++	<p>This site is located in the north of Huntingdonshire district which is generally very rural with very few large villages. Peterborough is the closest urban area to the site but the A1 provides a connection to the market towns of Huntingdon and St Neots as well as larger villages such as Sawtry and Stilton. The A15 provides a connection to Yaxley which is one of Huntingdonshire's largest villages. It has some potential for public and active travel connections to each of these centres to provide sustainable access to services, employment and local facilities. The strategic scale of the site provides opportunities to deliver a wide range of types, sizes and tenures.</p> <p>In term of market demand and meeting community needs, the site is located within the Stilton, Folksworth &amp; Washingley ward of the district. Analysis of average house prices per square metre by ward using data from Hometrack for April to September 2023 shows the Stilton, Folksworth &amp; Washingley ward is the fourth</p>

## 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			least expensive of the 26 wards in the district. This indicates that there is generally a lower level of market demand and lower costs for people looking to purchase homes in the locality. Rental data for October 2022 to October 2023 indicates the Stilton, Folksworth & Washingley ward was the joint sixth least expensive for renting a 3-bedroom home. Together these help to indicate that delivering new homes on this site would facilitate delivery of homes in a location that would help to meet existing demand but also potentially diversify the location of demand putting less pressure on existing areas facing high demand and high house prices and rental values.
SA10	<ul style="list-style-type: none"> <li>Support and enhance the more deprived areas of the district?</li> </ul>	++	<p>The site is very large but falls solely within the Stilton, Folksworth &amp; Washingley ward. Analysis of deprivation by Cambridgeshire County Council gives this a local index of deprivation score of 4 (where 1 is most deprived and 10 is least deprived).</p> <p>Social and community facilities would be expected to be included on site as part of the development. However, the site is within 18kms of Peterborough City Centre and about 35km from Huntingdon town centre. There are no publicly accessible local scale leisure or cultural facilities within 800m of any part of the site boundary.</p>
	<ul style="list-style-type: none"> <li>Maximise opportunities for access to existing or proposed social and community facilities and services?</li> </ul>	++	
SA11	<ul style="list-style-type: none"> <li>Contribute to regeneration activities?</li> </ul>	-	<p>The site is largely greenfield land but includes Sibson Aerodrome which is previously developed land as such the development of the site would contribute somewhat towards the reuse of previously developed land or regeneration.</p> <p>While the site is subject to detailed masterplanning, the site promoter has stated in their submission that employment land will be provided within the development (some 20ha) in addition to a 'Sibson Garden Community' town centre (some 4.43ha). The promoter also seeks to</p>
	<ul style="list-style-type: none"> <li>Enhance and diversify economic opportunities with the district?</li> </ul>	+

			settlements to maximise connectivity to other services, facilities and employment opportunities and providing connections to the rail network.
SA13	<ul style="list-style-type: none"> <li>Attract new investment and provide opportunities to improve the resilience of the local economy?</li> <li>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</li> <li>Support retention and growth of indigenous companies?</li> <li>Encourage sustainable tourism?</li> </ul>	++	<p>The site has potential to attract new investment, the site promoter expects some 20ha of employment land to come forward across the site. In their submission, they state that some 87,500 to 100,000 sqm of commercial floorspace could be delivered within an 'EcoDynamo Sustainable Business Park'. For a site of this size, this is a very small amount of land for employment development.</p> <p>The site is located within the countryside with very limited existing direct connections via public transport and to the strategic road network. However, a these could be enhanced through a development at this scale. As highlighted above, the potential infrastructure costs to do could be very significant and impact the viability and deliverability of the scheme.</p> <p>The potential to support indigenous companies is unknown without further details of the scale and nature of employment land anticipated.</p> <p>Tourism is unlikely to be a focal part of development on the site but development here could increase the number of visitors to the Nene Valley and further support nearby tourism opportunities.</p>
SA14	<ul style="list-style-type: none"> <li>Facilitate modernisation of existing town centres to meet current and anticipated needs?</li> </ul>	+	<p>The site would be expected to include local scale shopping facilities to help future occupants meet day to day needs using active travel. The site promoter has stated that there could be some 4.43ha of the site used for the 'Sibson Garden Community' town centre which could comprise retail, leisure and community uses. The site is in relatively close proximity to Peterborough City Centre so future residents also</p>

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			<p>have the option to travel to this urban centre, however the additional demand generated from and expenditure capacity of the site's future occupants has limited potential to assist in facilitating some modernisation of town centres due to their distance from these areas.</p>
SA15	<ul style="list-style-type: none"> <li data-bbox="293 568 1126 619">• Strengthen a local sense of place?</li> <li data-bbox="293 619 1126 662">• Retain the character of existing settlements?</li> </ul>	+	<p>The site is largely arable farmland which in itself does not have a distinct identity but the Sibson Aerodrome part of the site has an established identity. The site is very large and it is proposed that as a whole the site could provide an opportunity for a new free standing community. The Aerodrome forms a key placemaking opportunity whereby the site's aviation heritage can be celebrated as well as its relationship with the agricultural heritage of this part of the district. The site promoter is pursuing the concept of a sustainable garden community for this new settlement.</p> <p>Its landscape character is shaped by it being wholly located within the Northern Wolds Landscape Character Area which is characterised by a pattern of ridges, valleys and regularly spaced settlements. It is very rural with very few large settlements containing predominately small historic rural villages. Land levels vary across the site with the highest part of the site being where the Aerodrome is located. This part of the site is some 30m higher than the northern edge of the site adjacent to the A1. These varying land levels means development would be visible from some distance from a number of different directions and very significantly alter the landscape character of the area. There are several public rights of way within the site. While the visibility of development could be significant, the scale of the site can accommodate such changes to land levels through careful masterplanning and landscaping.</p>

1 North Huntingdonshire

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA16	<ul style="list-style-type: none"> <li>Conserve and where possible enhance sites, features and area of archaeological value throughout the district?</li> </ul>	-	There are no heritage designations on the site, however, Wansford Railway Tunnel immediately north of the site is grade II listed. Sibson House Hotel and its associated Barns situated to the east of the site are also grade II listed. Other heritage assets that could be impacted by proposals include Sibson Manor House, Sibson Manor Cottage and The Granary south of Sibson Manor House but due to the presence of the A1 between the site and these, development is likely to have a negligible impact.

**Summary of SA**

The site includes Sibson Aerodrome, as such there is some previously developed that can be redeveloped but most of the site is greenfield. It is largely greenfield land consisting of grade 3 and grade 2 agricultural land. The site is largely unconstrained by flood risk with almost all of the site being within flood zone 1 apart from a very small amount of the site being within flood zones 2, 3a and 3b. There are designation conservation sites about 100m from the site but the A1(M) separates them so the impact of development on these sites is reduced. There are no heritage designations on site although there are several that could be impacted by proposals. Part of the site falls within the Nene Valley Green Infrastructure Priority Area and the scale of the site could contribute towards strategically to enhanced green infrastructure and habitat connectivity. Currently the site has very limited accessibility to employment opportunities, primary education and local services and facilities within the village itself relying on nearby settlements for these but the scale of the proposal will provide new education facilities, employment opportunities, sports facilities and a local 'town centre'. It is also of a scale that could provide a mix of housing types, sizes and tenures and a mix of housing in the north of Huntingdonshire and assist in balancing development away from the established towns within the central and southern parts of the district. There is no frequent bus service currently from the site to nearby settlements and very limited connectivity via sustainable modes of transport to a railway station - the scale of the development should seek to incorporate active and sustainable modes of transport and connectivity to surrounding areas. The scale of the proposed development will fundamentally alter the landscape of the Northern Wolds providing a new settlement in an area characteristic by undulating landscape and very small historic settlements. The scale and nature of the proposal means there are opportunities for detailed masterplanning and placemaking which can frame a new settlement and provide it with a sense of identity.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

#### Summary of SA

The site is not constrained by fluvial flood risk but there is some surface water flood risk. It consists of land classified as urban land which is currently used as grassland/paddock land. It is not constrained by heritage or nature conservation designations. The site has good accessibility to services, facilities and primary education but is remote from employment opportunities and natural greenspace. It does have good accessibility to public transport via bus to Peterborough and Huntingdon but is remote from a train station. The site as a whole relates well to the built form of Stilton and provides an opportunity for infill development, as such the site could be integrated into the existing place and community.

SA16	<ul style="list-style-type: none"> <li>• Impact on any heritage assets or their settings?</li> </ul>	-	The western half of the site is located within the conservation area and it adjoins the grade II listed 24 North Street (Stilton Cheese Inn). The site includes the curtilage of The Stilton Cheese Inn - a grade II listed building from the late 17th early 18th century. Within the site sits associated outbuildings associated with the former coaching inn use. Development on this site could impact the setting of the listed building. However, due to the significant hardstanding fronting North Street and the current state and setting of the listed building and associated buildings, there is opportunity to provide benefit by enhancing the setting of these buildings. Development would be required to mitigate the impact on the setting of the existing listed building, this would include the renovation of the associated outbuildings where necessary.

#### Summary of SA

The site is not constrained by fluvial flood risk but there is some surface water flood risk. It consists of land classified as urban land which is currently associated with the former Stilton Cheese Inn. It is not constrained by nature conservation designations. It is however partially within a conservation area and within the setting of the Cheese Inn which is listed. Within the site sits associated outbuildings associated with the former coaching inn use. Development on this site could impact the setting of the listed building. However, due to the significant hardstanding fronting North Street and the current state and setting of the listed building and associated buildings, there is opportunity to provide benefit by enhancing the setting of these buildings. Development would be required to mitigate the impact on the setting of the existing listed building, this would include the renovation of the associated outbuildings where necessary.

# 1 North Huntingdonshire

The site has good accessibility to services, facilities and primary education but is remote from employment opportunities and natural greenspace. It does have good accessibility to public transport via bus to Peterborough and Huntingdon but is remote from a train station. The site as a whole relates well to the built form of Stilton being centrally located and provides an opportunity for infill development and gentle densification, as such the site could be integrated into the existing place and community subject to appropriate mitigations to overcome heritage constraints in particular.

SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	+	The site is located on western edge of Stilton accessed from Caldecote Road. The site is situated to the north of Elm Close on the north-western edge of Stilton. To the south and along part of the eastern site boundary is residential development. Therefore the site does relate well to the existing built form of the village. To the north and west the site adjoins open countryside, although it is relatively well contained in the landscape as the land slopes south east towards Stilton village. Development at the north western edge of this site would be visible from Folksworth and also to the north east. Therefore, retaining development within the south and east of the site would be preferable as the natural land form will assist in screening the site from significant landscape impact. The site proposal is of a density similar to the surrounding residential area, but disproportionate in nature in comparison to the existing settlement. Reducing the developable area of the site will also shape the development so that the potential scale of development can more successfully integrate and reflect the character of the landscape and townscape.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	The site is not located within any of Natural Cambridgeshire's Priority Landscapes so has very limited potential to contribute towards improvements strategically in habitat connectivity.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	++	The site is located on the south western edge of Stilton. It consists of a residential property (61 Church Street) with the remaining land being garden land. There is a public right of way that cuts through the north western corner of the site which provides a connection from Church Street through to Denton via the open countryside. It is unclear from the submission if the property is to be retained within proposals or to be demolished and the site completely redeveloped. The site slopes from its western to eastern edge down by some 10m. The site's western and southern edges also have fairly thick vegetation running along them which screen the site from view and encloses it. The combination of this established screening and the land levels means that the site is not very visible in longer range views. This means that the eastern half of the site could be developed providing a rounding off opportunity that relates well to the exiting built form and could retain landscape and townscape character as the natural land form and vegetation help to form an established landscape buffer. These could be enhanced and incorporated into any future development proposals.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	+	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.
SA9	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> </ul>	+	The site is proposed for market and/or affordable housing. The site is over 1ha in size so would not contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			There is an existing access to the site from Church Street, there is no pavement along this street but there may be potential to add enhance footpath access. From Church Street, a public right of way runs through the site.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The proposal is for residential development.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it can be effectively masterplanned to become part of the existing place and community.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

## Summary of SA

The site is not constrained by fluvial flood risk but there is some surface water flood risk. It consists of land classified as mostly grade 3 agricultural land with some land classified as urban land. It is not constrained by heritage or nature conservation designations. The site has good accessibility to services, facilities and primary education but is remote from employment opportunities and natural greenspace. It does have good accessibility to public transport via bus to Peterborough and Huntingdon but is remote from a train station. The site as a whole relates well to the built form of Stilton and provides an opportunity for a modest scale extension to the south west of the village, as such the site could be integrated into the existing place and community.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

## Summary of SA

Half of the site is the highest quality agricultural land (grade 1). It is constrained by flood risk along its eastern and southern edges. It is not constrained by heritage or nature conservation designations but it is within the landscape and visual setting of the Great Fen. The site has good accessibility to public transport options and could provide an extension to an established employment area located within one of Huntingdonshire's larger villages. As such subject to masterplanning the site could be

integrated into the existing place and community. Noise pollution may be higher due to its proximity to the East Coast Mainline railway. The site is sensitively located and could give rise to significant landscape impact due to the flat and open nature of the fenland landscape. It would also further extend the built form of Yaxley into this landscape.

			demand generated from and expenditure capacity of the site's future occupants has potential to assist in facilitating some modernisation of retail provision in Yaxley particularly if there is a local workforce.
SA15	<ul style="list-style-type: none"> <li data-bbox="293 536 1126 584">• Strengthen a local sense of place?</li> <li data-bbox="293 584 1126 1238">• Retain the character of existing settlements?</li> </ul>	-	<p data-bbox="1296 536 2087 823">The site is located to the west of Yaxley but has a closer relationship with the countryside and has a rich heritage with its former mineral workings. The site is large and it is proposed that as a whole the site could provide an opportunity for a logistics and distribution hub to the east of the A1(M). The site adjoins the existing built form of Yaxley on its eastern edge and is not compatible with the proposed land uses in terms of integration. Additionally, its potential scale would considerably adversely impact the setting and character of the settlement and also the Great Fen.</p> <p data-bbox="1296 855 2087 1206">Its landscape character is largely shaped by it being wholly within the Fen Margin Landscape Character Area which is characterised by being low-lying with most of the area being on 0m contour line, the area slopes gently eastwards towards the Fens. Considering this, development would be highly visible in long range views across the Fens. There is a public right of way along the site's southern edge providing views into the site and making this likely impact more prominent from publicly viewable vantage points. The sensitivity of this is heightened as the site is located within the landscape and visual setting of the Great Fen. The scale of the potential development could undermine the priorities of the Great Fen project.</p>

			monument of the site of the Norman Cross Depot for Prisoners of War. Further to the east the site is within the setting of the grade I listed St Peter's Church in Yaxley and the conservation area.

**Summary of SA**

The site is partially greenfield and partially previously developed land consisting of land formerly used for mineral extraction. It is classified as grade 3 agricultural land in current agricultural use. The site is within flood zone 1 but is constrained by some surface water flood risk. The site is constrained by nature conservation designations with part of the site contains the Norman Cross Brickpits County Wildlife Site and within 2km of the Orton Pit SSSI and SAC. It is also constrained by designated heritage assets. The proposals has the potential to support job creation within Yaxley which is rated as being one of the most deprived wards in Huntingdonshire, however the number of potential full time jobs is unclear at this time. The proposed development of the site for big-box warehousing units used for logistics and distribution may result in a lower dense density across the site. It is strategically located in terms of accessibility to the strategic highways network and is of a scale that could provide enhancements to the local public transport network and is of a scale that could provide enhancements to the bus network. It is located to the west of Yaxley with the potential to significantly adversely impact the landscape and townscape character and setting of the settlement. This impact is furthered by the urbanising impact of the development at Great Haddon in Peterborough to the north which is will have an urbanising impact on Yaxley. Additionally, the site is within the landscape and visual setting of the Great Fen, development at this scale could have a fundamental adverse impact on the the Great Fen and wider fenland landscape.

#### Summary of SA

#### Updates after initial appraisal

Most of the site is classified as being urban land but there is a small amount of the site classified as being grade 1. About a third of the site is constrained by fluvial flood risk. The site is not constrained by nature conservation designations but it is within the landscape and visual setting of the Great Fen. The site is adjacent to a conservation area. The site is located along the southern edge of Yaxley with views out across the Fenland landscape, there is typically a more rural feel here. The site is located such that it could be effectively integrated with the existing place and community if built development were focused towards Main Street to focus development on land at a lower risk of flooding and where landscape impact is less and where there will be greater opportunities to reflect the character of the wider built environment. The site has good accessibility to leisure and cultural facilities within Yaxley as well as to primary education and shops. It also has good accessibility to employment opportunities within the settlement and within nearby Peterborough. It is served by a frequent bus route. The site is fairly remote from natural greenspace.

# 1 North Huntingdonshire

## Yaxley 4: Folly Farm, London Road, Yaxley

1.39 As set out in the LAA, the site will be appraised for biodiversity net gain opportunities. This is to support the proposed neighbouring land uses and to reduce coalescence between Yaxley and Great Haddon.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

#### Summary of SA

The site is not constrained by fluvial flood risk but there is some surface water flood risk. The site is grade 3 agricultural land and consists of an equestrian centre with some existing structures on site. Built development is not considered suitable as this would further urbanising effect and would likely result in furthering the potential for coalescence between Yaxley and the evolving new community at Great Haddon within Peterborough. However, the site could be developed for open space and biodiversity net gain as this would compliment the proposed surrounding land uses, this would also utilise the existing public right of way through the site which would link the communities while keeping this sense of separation. The site is not constrained by heritage assets but is within 1km of Orton Pits SSSI so there is potential to provide linkages between habitats.

Development is likely to be viewable from these designated heritage assets.

# 1 North Huntingdonshire

## Summary of SA

Most of the site is classified as being urban land with 40% being grade 3 agricultural land. The site is not constrained by fluvial flood risk but there is some risk from surface water flooding. The site is not constrained by nature conservation designations but it is within the landscape and visual setting of the Great Fen. The site is within the setting of St Peter's Church and also a conservation area which could be adversely impacted by development. The site is located on the western edge of Yaxley where it typically has a more rural feel. Introducing in depth development in this location is likely to have a much more prominent impact on the character of the settlement and be more challenging to mitigate and integrate. The site has good accessibility to leisure and cultural facilities within Yaxley as well as to primary education and shops. It also has good accessibility to employment opportunities within the settlement and within nearby Peterborough. It is served by a frequent bus route. The site is not accessible to natural greenspace.

# 1 North Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			<p>so its western and southern boundaries have a closer relationship to the countryside. The site is somewhat open affording views out across the Fenland landscape. It is also within the landscape and visual setting of the Great Fen.</p> <p>Considering the flood risk and the presence of grade 1 agricultural land within the southern half of the site and how it extends into the countryside, built development across the whole site would not be appropriate and would adversely impact the landscape character of the area. However some development towards the northern and eastern edges of the site where it adjoins existing development within Cookson Close may offer some opportunities for a small extension to the built form in keeping with the wider townscape character. This would significantly reduce the potential capacity for the site.</p>
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The site is near to the A15 so there be an increased risk form light, noise and visual pollution. The site is not of a scale to lead to increased levels of pollution.
SA9	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> <li>Meet the needs of specific housing groups such as gypsies and travellers or older people?</li> <li>Contribute to diversification of the housing supply by being no more than 1 ha in size?</li> </ul>	++	The site promoter is proposing to provide 100 new homes which could include a wide range of types, sizes and tenures.
SA10	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access town centres and local convenience shops?</li> </ul>	+	The site is just beyond 5km of Peterborough City Centre but it is within 2.5km of the Co-Op on Bentley Avenue.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it could be effectively integrated with the existing place and community if built development were focused on the northern and eastern edges of the site focusing development on land at a lower risk of flooding and where landscape impact is less.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations within the site or within its immediate vicinity but views from St Peter's Church may be impacted by proposals.

## Summary of SA

Most of the site is classified as being grade 3 agricultural land but there are parts of the site classified as being urban land and as grade 1. The site is constrained by fluvial and surface water flood risk. The site is not constrained by nature conservation designations but it is within the landscape and visual setting of the Great Fen. The site could impact the setting of St Peter's Church. The site is located on the south western edge of Yaxley where it typically has a more rural feel. The site is located such that it could be effectively integrated with the existing place and community if built development were focused on the northern and eastern edges of the site focusing development on land at a lower risk of flooding and where landscape impact is less. The site has good accessibility to leisure and cultural facilities within Yaxley as well as to primary education and shops. It also has good accessibility to employment opportunities within the settlement and within nearby Peterborough. It is served by a frequent bus route. The site is not accessible to natural greenspace.

It is within 300m of a bus stop on School Road which is rated F on the Place-based carbon calculator meaning there is an infrequent service.</p> <p>A pavement adjoins the site frontage along Causeway Road.</p>
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> </ul>	N	The proposal is for residential development.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it can be effectively masterplanned to become part of the existing place and community, however high quality design and careful masterplanning will be required in order to achieve this.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	It is wholly located within the conservation area and is adjacent to several listed buildings: Brooklands Cottage, Manor Farm and the Baptist Chapel, all of which are grade II designated.

#### Summary of SA

The site is somewhat constrained by flood risk, it is greenfield and classified as being grade 2 agricultural land. It is also not constrained by nature conservation designations. It is however sensitively located being within a conservation area and within the setting of several listed buildings which could be impacted by development. It has some accessibility to local leisure and cultural facilities but it does have limited accessibility to public transport options, employment options and the primary school is located in the nearby village of Abbots Ripton. It is not accessible to natural greenspace. Ultrafast broadband is available in the vicinity. There is a footpath on Causeway Road connecting the site. The site relates well to the settlement being located fairly centrally with built development on three sides. Landscaping and masterplanning of the site so that development mitigates any adverse impact on character and heritage assets is required.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it could be effectively integrated with the existing place and community.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site is located within a conservation area, the existing commercial buildings are currently largely obscured from view, however developing the greenfield part of the site closest to Old Station will impact the openness of the site and this part of Old Station Road. It therefore will have an impact on the street scene and conservation area. However, harm can be minimised and the conservation area even enhancements be made through masterplanning and high quality design.

Page 2074 of 3488

**Summary of SA**

The site is partially previously developed with existing commercial structures on half of the site. It is not constrained by fluvial flood risk but there is some risk from surface water flooding. It is not constrained by nature conservation designations but it is located within the conservation area. The site has good accessibility to public transport via bus, to local services and facilities, primary education and employment opportunities within Bury and Ramsey. There is ultrafast broadband available within the vicinity. The site is located on the northern edge of Bury and has a close association with neighbouring Ramsey. It is located such that it can be successfully integrated with the existing place and community subject to masterplanning and high quality design that is in keeping and where possible enhances the conservation area.

There is also a public right of way running along its western edge which further supports this.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

## Summary of SA

The site is heavily constrained by fluvial flood risk with 51% of the site being within flood zone 3b. Utilising the site for biodiversity net gain is therefore a more appropriate use of the site. The site is located on the south eastern edge of Bury and utilising the site for biodiversity net gain would enhance the rural edge of the village and could provide some linkages for habitat connectivity. There is a public right of way connecting the site to the main built form of Bury and into the countryside providing some opportunity for linkages.

## Updates after initial appraisal

### Bury 3: Land North of High Street and East of Bury Road, Bury

- 1.3** As identified in the LAA, the site forms the southern third of the protected settlement break designated in the Bury Neighbourhood Plan. The purpose of this is to prevent the spatial, physical and visual coalescence of Bury with Ramsey. The site while not extending beyond the existing building line on its western and southern sides would detrimentally start to erode the settlement break and would further the sense of coalescence between the two settlements and therefore be in direct conflict with the neighbourhood plan policy.
- 1.4** Therefore, a sustainability appraisal of the site has not been undertaken.

**Bury 4: Land East of Bury Road, Bury**

- 1.5 As identified in the LAA, the site forms the majority of the protected settlement break designated in the Bury Neighbourhood Plan. The purpose of this is to prevent the spatial, physical and visual coalescence of Bury with Ramsey. The scale of the site with its edges adjoining built development on three sites would further the sense of coalescence between the two settlements and therefore be in direct conflict with the neighbourhood plan policy.
- 1.6 Therefore, a sustainability appraisal of the site has not been undertaken.

**Bury 5: Land off Brookfield Way, Bury**

These could be adversely impacted by the development proposal.</p> <p>The highest point of the site also contains a historic feature called Mill Mound which could historically have been the location of a windmill. This is not designation as a heritage asset but is a feature of local interest and should be retained.</p>

### Summary of SA

The site is heavily constrained by fluvial flood risk. With climate change this is expected to worsen. Built development is unsuitable in such at risk zones. The site is greenfield and grade 3 agricultural land. It is not constrained by nature conservation designations. It is located within a conservation area and development could adversely impact the setting of several listed buildings as well as the general character of this part of Bury. It is accessible to natural greenspace. It has good accessibility to public transport by bus, to shops, leisure and cultural facilities, primary education and employment opportunities within Bury and Ramsey. The site is located to the east of the main built form of Bury separated by Ramsey golf course which further accentuates the more rural feel of this part of the village.

SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	++	<p>This site proposes a third phase to the current redevelopment of former RAF Upwood. It is located to the north of Phases One and Two. Its edges are defined by security fencing and some vegetation along its northern and western sides. It will require landscaping along its northern and western edges in particular to provide a soft development edge and retain a sense of visual separation between the site and Bury.</p>

## North East Huntingdonshire

1

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			<p>There are areas of existing hardstanding which once formed the runway of RAF Upwood stretches along the northern boundary of the site with spurs connecting to the existing hangers. The site's character therefore relates to its military heritage.</p> <p>While the site forms an extension to the former RAF Upwood redevelopment, the former RAF base as a whole while historically a separate entity from the settlements of Upwood, Bury and Ramsey, the closure of military activities and its redevelopment for a residential led mixed use development means that its character and its relationship with these settlements is evolving. Considering the wider redevelopment works going on within RAF Upwood, the site's immediate context to the south in particular is continuing to evolve and this site would further this evolution.</p> <p>The site promoter anticipates that almost 12ha of the almost 18ha site will be used for natural, green and open space leaving approximately 200 homes on around 6ha of the site. This will assist in providing a soft development edge to the site and the wider redevelopment as a whole and would make a good use of land. The additional pressure and demand on services will need to be assessed to determine if additional infrastructure including social and cultural facilities are required to serve this site and the wider redevelopment as a whole.</p>
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	+	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution
SA9	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> </ul>	+	The site is proposes market and/or affordable housing.

Masterplanning and engagement will be required to achieve this.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

#### Summary of SA

The site is not constrained by flood risk. It is previously developed with more military hardstanding on the site. It is classified as being non-agricultural land. It is not accessible to nature greenspace but the submitted vision document shows large amounts of natural and open spaces are being planned on the site. It is not constrained by nature conservation or by heritage designations. The site has good accessibility to public transport via bus, employment options within Bury and Ramsey and primary education. It is over 800m of the various leisure and cultural facilities within Bury and Ramsey but these are accessible via sustainable modes of transport. The potential scale of development could deliver a mix of housing sizes, tenures and types. The site forms an additional phase of development to the ongoing redevelopment of the former RAF Upwood and as such is located such that it can successfully be integrated with the evolving place and community that is being delivered on the wider site.

# 1 North East Huntingdonshire

## Pidley-cum-Fenton

1.7 A total of 6 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Pidley-cum-Fenton 1: Land South at Manor Farm, Fenton Road, Fenton
- Pidley-cum-Fenton 2: Land End Farm, Pidley
- Pidley-cum-Fenton 3: Old Football Field, Warboys Road, Pidley
- Pidley-cum-Fenton 4: Bittens Field, North of Warboys Road, Pidely
- Pidley-cum-Fenton 5: Land North of Oldhurst Road, Pidley
- Pidley-cum-Fenton 6: Gloucester Barn, Fen Road, Pidley

1.8 Please note that Warboys 12: Land off Fenton Road, Warboys also partially falls within Pidley-cum-Fenton parish, but it has been included under Warboys as most of the site lies within that parish area.

**Pidley-cum-Fenton 1: Land South at Manor Farm, Fenton Road, Fenton**

**1.9** As identified in the LAA, the site falls below the site size threshold so does not pass the fundamental constraints for assessment.

**1.10** Therefore, a sustainability appraisal for the site has not been undertaken.

**Pidley-cum-Fenton 2: Land End Farm, Pidley**

#### Summary of SA

The site is not constrained by fluvial flood risk, some surface water flood risk is present which would require mitigation. The site is wholly greenfield land with no existing structures. The site is classified as wholly grade 2 agricultural land.

The site proposes 10 homes which contribute to meeting the housing needs of the district. The site proposes zero carbon properties with communal ground source heating which would assist with meeting net zero carbon targets. The site has no immediate access to a convenience store primary school or employment opportunities. It is within 800m of a church, public park and a village hall. The site is beyond 5kms of a railway station, and is within 800m of a bus stop rated D which is just below average frequency. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. No heritage assets would be affected.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site is well located within the existing settlement. The site forms a break with existing residential properties to the east and west. A footpath runs along the opposite side of the site, consideration of safe crossing would be required. The site is located such that it could be effectively masterplanned to become part of the existing area. There is existing access to the site. Pidley park sits to the west and is relatively well screened, however assessment would be required to ensure integration and mitigation where necessary to ensure complimentary integration of the differing uses. It is relatively well screened and would have minimal landscape or townscape impact if trees and hedgerow were retained. A higher density development may need to be assessed and considered.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

## Summary of SA

The site is greenfield land classified as being non-agricultural land. It is not constrained by flood risk, nature conservation or heritage designations. The site 1.4km from Ramsey town centre and therefore has good accessibility to services, primary education, employment opportunities and shops within Ramsey. It is also accessible to the various leisure and cultural facilities within Ramsey albeit beyond 800m of these. It is accessible to public transport via bus. The site is proposed for some 175 market and affordable housing, this could include a wide range of types, sizes and tenures. It is located on the western side of Ramsey in an area where the town has expanded considerably. The site extends into the countryside making landscape impact greater and would continue to urbanise the western side of the town and countryside. Integration is also a challenge and accessibility from Biggin Lane will require upgrades to facilitate development.

Adjacent to the site to the north west are cemetery grounds, to the south are residential properties and Ramsey Rural Museum, to the north east is a farm complex where local historical events are held. To the east and south eastern is open countryside. Development would be visible in long distance views from the south and east. Considering the nearby uses surrounding the site and its location, the site has a close relationship not only to the town but also to the countryside. Development could have an urbanising impact on the this part of Ramsey which has a much more rural character as it extends into the countryside, however, the site promoter seeks a very modest number of homes on a site of this size meaning there is scope for much of the site to be used for landscaping and open space being let undeveloped and potentially concentrate built development within the south western corner of the site where it has the closest relationship with the existing built form.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	+	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.

Development across the whole site would unlikely be able to achieve successful integration without significant landscape and townscape impact.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site is wholly located within a conservation area and is located adjacent to two grade II listed buildings: Chapel And Mortuary within the cemetery and also 23 Wood Lane.

## Summary of SA

The site is greenfield land with the majority of the site being classified as being grade 2 agricultural land. It is not constrained by flood risk or by nature conservation designations. It is located within a conservation area and is within the setting of two grade II listed buildings. Its location on the north eastern edge of the built form of Ramsey accessed from Wood Lane means the site has a close relationship not only to the town but also to the countryside. Also, development could have an urbanising impact on the this part of Ramsey which has a much more rural character as it extends into the countryside, however, the site promoter seeks a very modest number of homes on a site of this size meaning there is scope for much of the site to be used for landscaping and open space being let undeveloped. The site 0.9km from Ramsey town centre and therefore has good accessibility to services, primary education, employment opportunities and shops within Ramsey. It is also accessible to the various leisure and cultural facilities within Ramsey. It is not immediately accessible to public transport via bus being beyond 800m of a bus stop. It is not accessible to natural greenspace.

The site can therefore be integrated into the existing place and community subject to detailed flood risk assessment and exploration of mitigation measures to ensure its safety and resilience for future occupiers.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within the site or in the immediate vicinity of the site.

**Summary of SA**

The site is a previously developed site within the built form of Ramsey. It is not constrained by heritage or nature conservation designations. It is however heavily constrained by fluvial flood risk with the whole of the site being at risk, 97% of it being within flood zone 3a. Climate change is likely to make this impact worse. The site is located in a sustainable location with good access to shops, services, leisure and cultural facilities, employment opportunities, primary education and public transport via bus. It is not within thresholds for accessible natural greenspace. The site can be successfully integrated into the existing place and community utilising pre-existing vegetation as established landscaping. Whether the site can successfully be redeveloped and made safe from flooding will require engagement with the Environment Agency and LLFA.

**Updates after initial appraisal**

--

**Ramsey 6: Land East of Stocking Fen Road, Ramsey**

As identified in the LAA, the majority of the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity. Also a third of the site is classified as grade 1 agricultural land and about two thirds of the site is within flood zone 3a.

Therefore, a sustainability appraisal for the site has not been undertaken.

**Ramsey 7: Ramsey Gateway, St Mary's Road, Ramsey**

As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF.

Therefore, a sustainability appraisal for the site has not been undertaken.

**Ramsey 8: Peppers yard, Stocking Fen, Ramsey**

As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF. Also the site is within 400m of a water recycling area and within 250m of a waste management area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity

Therefore, a sustainability appraisal for the site has not been undertaken.

**Ramsey 9: School Farm, Stocking Fen Road, Ramsey**

As identified in the LAA, the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity. Also the vast majority of the site is classified as grade 1 agricultural land.

Therefore, a sustainability appraisal for the site has not been undertaken.

**Ramsey 10: Land off Ugg Mere Court Road, Ramsey Heights**

As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF.

# 1 North East Huntingdonshire

Therefore, a sustainability appraisal for the site has not been undertaken.

### Ramsey 11: Land off Middlemoor Road, Ramsey St Mary

As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF.

Therefore, a sustainability appraisal for the site has not been undertaken.

### Ramsey 12: Chestnut Farm, Ramsey Mereside

As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF.

Therefore, a sustainability appraisal for the site has not been undertaken.

### Ramsey 13: Land on Oillmills Road, Ramsey Mereside

As identified in the LAA, the site is wholly classified as grade 1 agricultural land. Grade 1 agricultural land is the highest quality of agricultural land, its loss is heavily resisted in the NPPF.

Therefore, a sustainability appraisal for the site has not been undertaken.

	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	There is a footpath over the bridge (Ramsey Road) to the west of the site but no footpath along Hollow Road or Forty Foot Bank.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site is being appraised for open space opportunities.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site is being appraised for open space opportunities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it could be integrated with the existing place and community and provide additional leisure opportunities.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations on site but it is adjacent to Bridge House which is a grade II listed building.

#### Summary of SA

The site is heavily constrained by fluvial flood risk with 38% of the site being within flood zone 3b. Utilising the site for open space uses and a mooring is therefore an appropriate use of the site. The site is located on the northern edge of Ramsey Forty Foot, utilising the site for open space and leisure uses would enhance the rural edge of the settlement and provide additional leisure facilities for residents. There are no nature conservation designations impacting the site, but it is within the setting of Bridge House which is a grade II listed building which could be impacted by proposals. Enhancing the site with open space uses would help to reinforce the character of the area and could provide an additional community leisure facility utilising the local landscape.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations on site but some 50m from the site's western boundary is 15 Ramsey Road which is a grade II listed building whose setting could be impacted by the development of this site.

#### Summary of SA

The site is located on the eastern edge of Ramsey Forty Foot, it is in agricultural use with existing barns on the site. It is not constrained by flood risk or by nature conservation designations. There are no heritage designations on the site but it is within 50m of a listed building whose setting could be impacted by developing the site. It is accessible to natural greenspace. The site has good accessibility via sustainable modes to services and cultural facilities within Ramsey Forty Foot and while within 5km of Ramsey town centre and employment and educational facilities within Ramsey access to these will likely require journeys being made by private car as the bus service is limited. The site is located that development can be successfully integrated with the existing place and community.

#### Updates after initial appraisal

#### Ramsey 16: Forty Foot Field, North of Mill Lane, Ramsey Forty Foot

As identified in the LAA, the majority of the site being located within flood zones 1, 3a and 3b and the proposed residential uses being classed as a more vulnerable use.

# 1 North East Huntingdonshire

Therefore, a sustainability appraisal for the site has not been undertaken.

The site offers opportunities for the redevelopment of previously developed land.</p> <p>The site is somewhat removed from the main residential centre of Somersham, however has the opportunity to be integrated with the community once housing allocation 'SM5 North of the Bank, Somersham' has been completed or is underway. Pedestrian footpaths would be required to facilitate safe active travel routes into the centre of Somersham to access services and facilities.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no heritage within or in the nearby vicinity of the site.

## Summary of SA

The majority of the site is not constrained by fluvial flood risk (99.96%). Flood zone 2 is present on 0.038% of the site, with some surface water flood risk which would require mitigation. Approximately one third of the site previously developed land associated with a coach and bus depot with the remaining land categorised as greenfield. The site is wholly grade 2 agricultural land.

The site proposes 50 homes which would contribute to the housing needs of the district. The site has no immediate access to services, facilities, primary school or employment opportunities, although there is a primary school within the village. The site is beyond 5kms of a railway station, and is just beyond 800m (850m) of a bus service rated D meaning it has a slightly below average service. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. No heritage assets would be affected.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site is part previously developed land and is well screened from the surrounding countryside meaning landscape impact would be minimal. The site is somewhat removed from the main residential centre of Somersham, however has the opportunity to be integrated with the community once housing allocation 'SM5 North of the Bank, Somersham' has been completed or is underway. Pedestrian footpaths would be required to facilitate safe active travel routes into the centre of Somersham to access services and facilities. The proposed density of the development would be in keeping with the density approved for allocation SM5.

It is also within 800m of The Rose And Crown Public House. It is just beyond 800m of St John the Baptist Church and Somersham Library.
SA11	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> </ul>	-	The site is about 400m from the West Newlands Industrial Estate Established Employment Area, it is about 6km from the Marley Road Industrial Area and Somersham Road Industrial Area Established Employment Areas located on the edge of St Ives.
	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	++	Ultrafast broadband is available within the vicinity.
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	-	The site is beyond 5km of a train station but it is within 800m of a several bus stops along West End/ St Ives Road. The highest rated is E on the Place-based carbon calculator meaning there is an infrequent service.
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	A footpath runs along the site's frontage on West End/ St Ives Road.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> </ul>	N	The proposal is for a mixed use residential and leisure development.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	++	The proposal supports provision of a replacement football pitch and also an additional pitch alongside residential development.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it can be effectively masterplanned to become part of the existing place and community subject to overcoming heritage and landscaping constraints and provide additional leisure and cultural facilities within the village.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations on site, it is however in a very sensitive location in terms of heritage assets as it is adjacent to the conservation area to the east and also adjacent to a scheduled monument Pond Closes, the site of the former residence of the Bishop of Ely's Palace with fishponds and a later moated site. Therefore, impact on these heritage assets is a development constraint but the existing established vegetation provides some mitigation to potential impact already which should be utilised in a future masterplan for the site.

### Summary of SA

The site is technically classified as greenfield land but part of the site is in use football grounds. It is classified as being grade 3 agricultural land. It is constrained by significant risk from surface water flood risk. It is not constrained by nature conservation designations. It is adjacent to several designated heritage assets which could be impacted by the proposal without appropriate mitigation. The site has good accessibility to a local shop, primary education and leisure and cultural facilities within Somersham. The proposal includes relocating the existing football ground and providing an additional pitch. It is accessible to some local employment opportunities but remote from large concentrations of employment. It is accessible to public transport via bus but the service is infrequent. The site relates well to the built form of Somersham and its proposed uses are compatible with the neighbouring land uses and could be effectively integrated into the existing place and community.

Development on the site may require the separation of parcels with separate access. The western parcel presents less significant challenges.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	<p>The eastern parcel of the site is within the conservation area. To the north is the grade II listed Somersham House, development on any part of the site could have a significant impact on heritage assets by virtue of obstructing views through or physically detracting from the character of the conservation area. The site proposal has included part of the curtilage of the listed building to allow access to and from the eastern and western parcels. The removal of this could have substantial impact on the setting of the heritage asset altering its form and character. The eastern parcel is also within a conservation area meaning development would require careful design to assist with integration.</p>

**Summary of SA**

Development on the site would contribute to national objectives of diversifying supply of housing on sites of 1ha or less. The site is greenfield land and classified as being grade 2 agricultural land. It is constrained by some surface water flood risk. It is not constrained by nature conservation designations. The site has good accessibility to a local shop, primary education and leisure and cultural facilities within Somersham. It is just beyond the distance thresholds to natural greenspace. It is accessible

to some local employment opportunities but remote from large concentrations of employment. It is accessible to public transport via bus but the service is infrequent. The site relates well to the built form of Somersham and its proposed uses are compatible with the neighbouring land uses and could be effectively integrated into the existing place and community.

It is currently unclear whether the comprehensive development of the two parcels of land could be effectively masterplanned. Major impediments include heritage impact and impact on protected trees.

The site is well located adjacent to existing residential development and development of the southern parcel has been confirmed through the approval of an outline planning permission. The eastern parcel presents issues relating to access, especially from Rectory Lane which is very narrow with substantial parking impeding movement. This and would require significant consideration of the impact on transport movements, the conservation area, tree preservation areas and the setting of the grade II listed building. Additional parking for residents on Rectory lane within the western parcel has the opportunity to alleviate some pressure on the Lane.

Without further evidence it is unclear whether development within the eastern parcel could be developed as an interconnected development. Development on the site may require the separation of parcels with separate access. The western parcel presents less significant challenges.

#### Updates after initial appraisal

#### Somersham 4: Land East of Parkhall Road, Somersham

- 1.13** As identified in the LAA, the site adjoins a Mineral Development Area. No assessment has been submitted to justify this development and demonstrate that the potential impact from and on the MDA could be adequately mitigated to ensure acceptable levels of residential amenity.
- 1.14** Therefore, a sustainability appraisal for the site has not been undertaken.

# 1 North East Huntingdonshire

## Somersham 5: Land to West of College Farm, Somersham

- 1.15** As identified in the LAA the site is not suitable for development due to significant constraints such as lack of access and detached nature of the site. An alternative development proposal including this site is set out in Somersham 7: Land to the West of College Farm (larger site), Somersham. Therefore, a sustainability appraisal for the site has not been undertaken.

# 1 North East Huntingdonshire

## Summary of SA

The site is not constrained by fluvial flood risk, some surface water flood risk is present which would require mitigation. The site is wholly greenfield land with no existing structures. The site is grade 2 agricultural land.

The site proposes 42 homes which would contribute to the housing needs of the district. The site has limited access to services and facilities with a public house and football ground within 800m of the site. The site is beyond 800m of a primary school although there is a primary school within the village. The site is within 300m of West Newlands Industrial Estate, which could provide some limited employment opportunities. The site is beyond 5kms of a railway station, but within 800m of a bus service rated E- meaning it has a below average service. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. A scheduled monument is within 40m of the site which would require assessment.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site is wholly greenfield and offers no opportunity for the redevelopment of previously developed land. The location of the proposed site is somewhat remote and has no substantial community with which to integrate with. Housing allocation SM2, St Ives Road Somersham is 350m away, closer to the main residential area of Somersham. This site is currently under construction and will comprise housing and residential care home. However the proposed site's relationship to nearby development would still be fairly remote. The site does however link to the village of Somersham, providing active travel solutions to encourage access to services and facilities. Trees and hedgerow bound the north western boundary meaning that landscape impact would be minimal if they were to be retained. The proposed density is very low which would reflect the site's location.

The location of the proposed site is somewhat remote and has no substantial community with which to integrate with. The site does however link to the village of Somersham, providing active travel solutions to encourage access to services and facilities.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	A Scheduled Monument, Obelisk at - White Post, is situated approximately within 40 metres south-west of the site on the opposite side of St Ives Road, development is unlikely to impact this, however opportunities to enhance or minimise impact on this should be considered.

## Summary of SA

The site is not constrained by fluvial flood risk, some surface water flood risk is present which would require mitigation. The site is wholly greenfield land with no existing structures. The site is grade 2 agricultural land.

The site proposes 125 homes which could include a wide range of types, sizes and tenures. The site has limited access to services and facilities with a public house and football ground within 800m of the site. The site is beyond 800m of a primary school although there is a primary school within the village. The site is within 300m of West Newlands Industrial Estate, which could provide some limited employment opportunities. The site is beyond 5kms of a railway station, but within 800m of a bus service rated E- meaning it has a below average service. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. A scheduled monument is within 40m of the site which would require assessment.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site is wholly greenfield and offers no opportunity for the redevelopment of previously developed land. The location of the proposed site is somewhat remote and has no substantial community with which to integrate with. Housing allocation SM2, St Ives Road Somersham is 350m away, closer to the main residential area of Somersham. This site is currently under construction and will comprise housing and residential care home. However the proposed site's relationship to nearby development would still be fairly remote. The site does however link to the village of Somersham, providing active travel solutions to encourage access to services and facilities. The northern boundary of the site is exposed to the wider countryside and landscaping may be required to mitigate the impact on the landscape. The proposed density is very low which would reflect the site's location.

			There is a footpath adjacent to the site's frontage on Church Street.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The proposal is for residential development.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it can be effectively masterplanned to become part of the existing place and community subject to heritage and landscape constraints being successfully overcome.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The southern edge of the site is within a designated scheduled monument called Pond Closes (this forms land historically used as the home of the Bishop of Ely) and the whole of the site is within a conservation area. There are also several listed buildings to the north and south of the site. While heritage is a constraint, given the enclosed nature of the site, development of the land is less likely to have a significant impact on the setting of heritage assets, particularly if large amounts of the existing vegetation is retained. Additionally, the site promoter seeks about half of the site to be used for natural open space which could be masterplanned to include the land protected for its archaeological value.

# 1 North East Huntingdonshire

## Summary of SA

The site is greenfield land and classified as being grade 3 agricultural land. It is constrained by some surface water flood risk. It is not constrained by nature conservation designations. It is within the conservation area and there is a scheduled monument on the southern edge of the site. The site has good accessibility to a local shop, primary education and leisure and cultural facilities within Somersham. It is accessible to natural greenspace. It is accessible to some local employment opportunities but remote from large concentrations of employment. It is accessible to public transport via bus but the service is infrequent. The site relates well to the built form of Somersham and its proposed uses are compatible with the neighbouring land uses and could be effectively integrated into the existing place and community subject to appropriate masterplanning.

## Updates after initial appraisal

## Somersham 12: Land North of Chatteris Road, Somersham

As identified in the LAA the site is not suitable for development due to significant constraints such as access, impact on active travel routes, the Local Nature Reserve and ecology and biodiversity within the wider green network/corridor, lack of access to gas, mains water and electricity supply and digital telecommunications. Therefore, a sustainability appraisal for the site has not been undertaken.

## 1 North East Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			There is no footpath along Chapel Field Road and it is narrow making the likelihood of a footpath connection to the one on Rectory Lane unlikely. It is within 500m of public rights of way but these extend into the countryside and away from the village.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The proposal is for residential development.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it could not be effectively masterplanned to become part of the existing place and community.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no heritage designations on site but its southern boundary does however adjoin the conservation area and it is some 70m east of the grade II listed Somersham House. While heritage is a constraint, given the enclosed nature of the site, development of the land is less likely have a significant impact on the setting of heritage assets, particularly if large amounts of the existing vegetation is retained.

## Summary of SA

Development on the site would contribute to national objectives of diversifying supply of housing on sites of 1ha or less. The site is greenfield land and classified as being grade 2 agricultural land. It is constrained by some surface water flood risk. It is not constrained by nature conservation designations. It is adjacent to the conservation area and is also within the setting of a grade II listed building. The site has good accessibility to a local shop, primary education and leisure and cultural

facilities within Somersham. It is just beyond the distance thresholds to natural greenspace. It is accessible to some local employment opportunities but remote from large concentrations of employment. It is accessible to public transport via bus but the service is infrequent. The site is on the western edge of Somersham, its size makes designing a scheme in keeping of local character challenging and likely to adversely impact the village character and erode the rural edge of the settlement. It also makes successfully and effectively integrating development into the existing place and community more difficult.

#### Updates after initial appraisal

#### Somersham 14: Somersham Telephone Exchange

As identified in the LAA, the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.

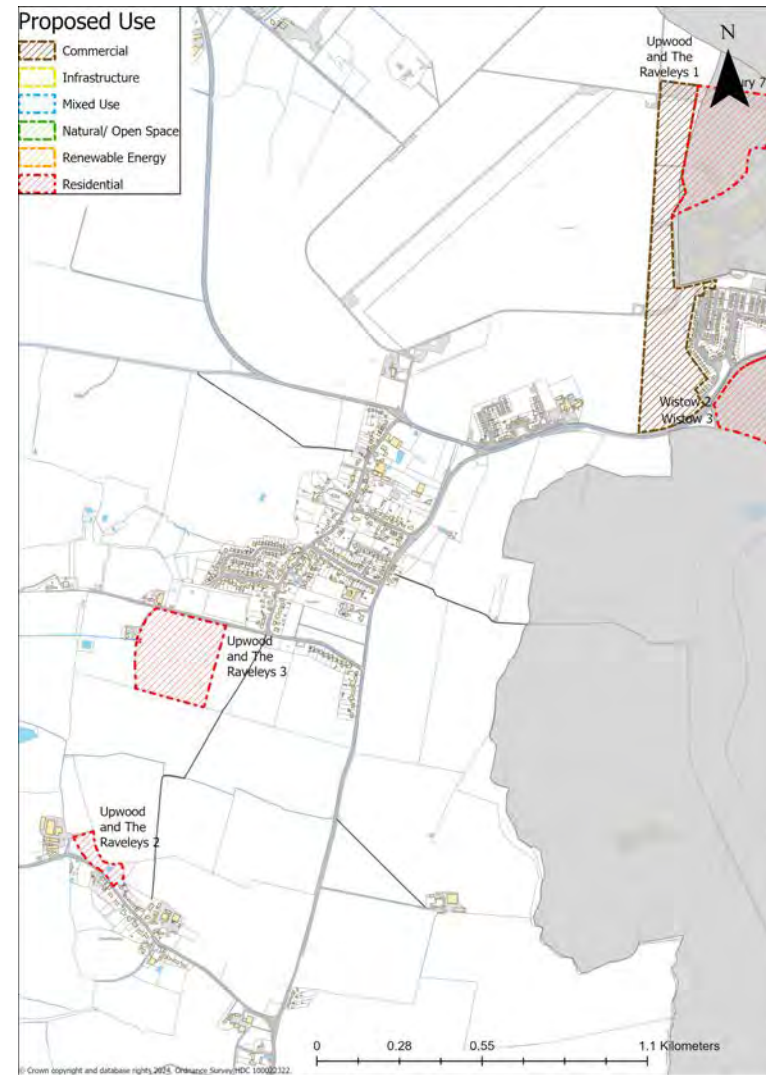

**1.16** Therefore, a sustainability appraisal for the site has not been undertaken.

The potential number of jobs that could be created is unknown at this stage.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site could be masterplanned so that it could provide additional employment opportunities for the growing residential led redevelopment of former RAF Upwood. It would also compliment the adjacent Upwood Air Park and could enhance and support businesses there too.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby that would be adversely impacted by the proposal.

**Summary of SA**

The site is not constrained by flood risk. It is greenfield and classified as non-agricultural land. It is not accessible to nature greenspace, it is about 200m from Rolts Wood County Wildlife site and about 1km from Upwood Meadows National Nature Reserve. There are no heritage designations impacting the site. The site has good accessibility to public transport via bus. It proposes employment development as an additional phase to the ongoing redevelopment of former RAF Upwood. There is little employment currently committed on this site so this proposal provides opportunities for a greater range of uses and supports local job opportunities. This is compatible with nearby uses being adjacent to the Upwood Air Park Established Employment Area. There is ultrafast broadband available too which can support employment development. The site is located such that successful integration with the evolving place and community that is being developed on the former RAF site can be achieved.

SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	+	The site is located in Great Raveley which is a very small cluster settlement within the parish of Upwood and the Raveleys. Development within the settlement is categorised by very low density linear development along Raveley Road. The site is located to the north of Raveley Road and is irregular in shape. It relates well to the settlement but it has a rural character and is fairly open with longer range landscape views. It extends and slightly curves away from the settlement, development in this corner (accounts for about 0.42ha) would be out of character and have greater landscape impact. It forms a substantial open area within the settlement accentuating its rural character. There is a pond within the site and electricity poles within the site which will impact the scale of development as well as its layout. The proposed capacity put forward of 5 to 7 homes on a site off about 1ha is very low and would not make the most efficient use of land. However considering the rural nature of the settlement, its existing form of development and the constraints within the site this enables some flexibility in reducing the net developable area.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	+	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.

#### Summary of SA

The site is not constrained by fluvial risk, there is some surface water flood risk. It is greenfield and classified as being grade 3 agricultural land. It is about 1km from Upwood Meadows National Nature Reserve and within the landscape and visual setting of the Great Fen but is not constrained by heritage designations. It has very limited accessibility to local leisure and cultural facilities, public transport options, employment options and the primary school is located in the nearby village of Upwood. It is however accessible to some natural greenspace. Ultrafast broadband is available in the vicinity. The site relates well to the settlement being located on its northern edge, it does have a rural feel and also relates to the countryside, landscaping and masterplanning the site so that development relates well to its context is required as well as accommodating electricity poles and the pond that is within the site.

#### Updates after initial appraisal

--

#### Upwood and The Raveleys 3: Upwood Field, Meadow Road, Upwood

As identified in the LAA, the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.

Therefore, a sustainability appraisal for the site has not been undertaken.

SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	-	The site is located in the north east of Warboys north of Heath Road (A141). There is a linear residential development immediately to the south west of the site, buildings for agricultural use and some residential properties to the south east and a large employment site approximately 400m to the east. This means the site does have a relationship with the built form. However, it is somewhat detached from the settlement and has a close relationship with the countryside due to being largely contained by greenfield land, to the north, east, west and also to the south east beyond Heath Road, and being located on the north eastern edge of the village with a junction for the A141 to the south. It's prominence within the countryside is lessened by built development immediately beyond the greenfield land to the west and east and a significant landscape buffer along the southern boundary which partially screens the development from the wider landscape, townscape and on approach to Warboys. However, the northern boundary is completely open and therefore significant landscape buffering will be required to conserve the character and form of the local area. In addition, the built form along Heath Road is linear in form and therefore development on the whole site could be out of line with the townscape character of this part of Warboys. The proposed capacity of the site of between 18-20 homes on a site of 1.5 ha is very low density but it is in keeping with the densities of surrounding residential development.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site does not include retail or social uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it may be difficult to integrate with the existing place and community due to being, as mentioned SA7, somewhat detached from the settlement, contributed to by a number of factors. Development on the site would need to be sensitive to the adjoining green wedge and pond to the south west to ensure the vegetated feel to this area of the village is not compromised. Screening along the northern boundary will mitigate adverse impact from public vantage points to the north. Safe highway access to the site is essential for successful integration with the settlement/ community. There is a pavement near to the site frontage allowing access to shops and services in Warboys.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development.

## Summary of SA

The site is greenfield, wholly classified as grade 3 agricultural land. It is in flood zone 1 with low risk of surface water flooding. The site has limited access to natural green space according to Natural England's mapping but is sufficiently remote from all of the designated nature assets. It is also remote from designated heritage assets. There is high prevalence of culture and leisure facilities in Warboys which could be accessed from the site by active travel infrastructure; a pavement will need to be created along the frontage to join up with a nearby pavement. The site also has access to a local convenience store, primary school, a regular bus service within 800m. There are employment opportunities within Warboys, immediately to the east and also a Established Employment Area within 5km. The site has a close relationship

with the countryside with greenfield land predominantly adjoining the site, there may be adverse landscape impact particularly from the north due to an open northern boundary. Non-linear development would be out of context of the built form in the immediate area, along Heath Road. It is somewhat detached from the settlement and therefore it may be difficult to integrate the site with the community.

SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site does not include employment, commercial or tourism uses
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site does not include retail or social uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	<p>The site is located such that it would be difficult to integrate the site with the place and community. As suggested within SA7, the site is out of context with the built form. In addition, it is likely the potential access points from Second and Third Avenue would require significant upgrading to accommodate increased traffic flow generated by the development.</p> <p>Successful integration of the site is dependent on land to the east (CfS: 148) coming forward.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development. It is approximately 350m north of Warboys Conservation Area with substantial residential development between the site and the conservation area.

## Summary of SA

The site is flood zone 1 with low recorded risk of surface water flooding. It is wholly greenfield, classified as grade 2 agricultural land. The site has limited access to natural green space and is not in an area of strategic focus for green infrastructure. It is within 1km of Warboys Wood SSSI but is sufficiently remote from all of the other designated nature assets. The site is in close proximity to a primary school, local convenience store, regular bus service, employment opportunities and numerous culture and leisure facilities. It has a capacity of 160 homes which could include a wider range of tenures, types and sizes. However, the proposal has a strong connection with the countryside and a weak relationship with the built form, with the potential to cause significant adverse landscape impact. Hence, it would difficult to integrate the site with the existing place and community. There are no designated heritage assets that would be negatively impacted by the development.

			There is superfast broadband in the vicinity.
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	There is a bus service rated D+ on the Place Based Carbon Calculator within 800m of the site meaning there is a regular service.
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	There is a non-paved footpath immediately opposite the site frontage on Church Road which turns into a paved footpath approximately 100m north approaching the Warboys village.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	+	The site proposes employment use including commercial leisure, logistics and distribution which would classify as low job density.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site proposal does not include retail or social uses
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	<p>For residential use, it would be difficult to effectively masterplan the site to integrate with the existing place and community. It is removed from the built form in Warboys and could potentially be incompatible with the distribution employment site to the south due to the negative impact upon residential amenity.</p> <p>The site would be better suited to employment use given the adjoining, relatively large, employment site to the south. However, to retain protected trees in the conservation area located within the site, development would be limited to a small area on the eastern side of the site. Even then, highway access would require the removal of trees. Hence, development on this location would not be sensitive to the character of the local environment.</p>

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site is wholly within Warboys Conservation Area meaning the development would likely have an adverse impact upon the character of a designated heritage asset.

#### Summary of SA

The site is in flood zone 1 with minimal risk of surface water flooding. It is classified as grade 2 agricultural land. There are modest opportunities for the reuse of previously used land to the south of the site. The site is remote from natural green space according to Natural England's standards but it is close proximity to a public park. It is sufficiently remote from the designated nature assets but it is wholly within Warboys Conservation Area meaning the proposal would likely lead to adverse impact upon a designated nature asset, particularly due to the potential for established trees on the site being removed. This would cause disruption to habitats and habitat connectivity. The site promoter has submitted a range of potential uses for the site. The site is removed from the residential built form within Warboys and it would be integrate into the existing place and community in for residential use. Whilst the proposal is more compatible for employment use, it may cause significant harm to the conservation area and would also be difficult to achieve without potentially harming the local environment. The site is located in close proximity to a range of culture and leisure facilities, a local convenience store, a primary school, a regular bus service and employment opportunities. There is a pavement immediately outside the site frontage. Employment opportunities could be provided on site or the proposal could help to meet the housing needs of the district if residential use is brought forward.

SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site does not include employment, commercial or tourism uses.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site does not include retail or social uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it would be difficult to integrate into the existing place and community. The existing track within the site for highway access is thin with little scope for upgrading given the presence of residential properties either side. In addition, as mentioned in SA7, the site would be out of context with the settlement given it's scale and location.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development.

#### Summary of SA

The site is greenfield, wholly classified as grade 3 agricultural land. It is in flood zone 1 with low risk of surface water flooding. The site has limited access to natural green space according to Natural England's mapping but is sufficiently remote from all of the designated nature assets except Warboys Wood SSSI to the north of the site. It is also remote from designated heritage assets. There is high prevalence of culture and leisure facilities in Warboys which could be accessed from the site by active travel infrastructure; there is a pavement opposite the site frontage and a public right of way along the northern boundary. The site also has access to a local convenience store, primary school, a regular bus service within 800m. There are employment opportunities within Warboys, immediately to the east and also a Established Employment Area within 5km. Given the scale and location of the proposal, it would be out of context with the townscape character and difficult to integrate with the existing place and community.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	+	The site is within 1km of Warboys Wood SSSI but is sufficiently remote from all of the designated nature assets.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	The site is outside Natural Cambridgeshire's green infrastructure priority area and has limited potential to improve the strategic habitat network.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	+	<p>The site is located in the north west of Warboys, north of Humberdale Way and is potentially accessible from Third Avenue. It adjoins residential areas to the south and partly the east with the existing built line situated further to the north east</p> <p>and south making up large residential areas in Warboys. This shows the site has a close relationship with the built form. However, it also has a close relationship with the countryside with two relatively long open boundaries adjoining agricultural land to the north and west. Appropriate landscape mitigation is essential to screen the site from long distance views and public right of ways. The site has a capacity of 500 homes on a site of 12 ha meaning the site would have a density of approximately 42 dwellings per hectare which is relatively high in a large village location. However, immediately to the north east is an allocated site in the existing Local Plan meaning the amount of development may be more in keeping with surrounding built up areas.</p>
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The site of a scale that would cause a significant increase in traffic flow which may lead to air and noise pollution in a village location.
SA9	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> </ul>	++	The site has a capacity of 500 homes which include a wide range of types, sizes and tenures.

	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access education facilities?</li> </ul>	++	The site fronts onto Second and Third Avenue which is opposite Warboys Community Primary School
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access leisure and cultural facilities?</li> </ul>	++	The site is within 800m of culture and leisure facilities within Warboys including a baptist and methodist church, Warboys Parish Centre, a library, The Royal Oak pub and Warboys Sports and Social Club which has playing fields.
SA11	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> </ul>	+	The site is within 5km of Warboys Airfield Industrial Estate which is an Established Employment Area. There are also modest employment opportunities within Warboys village.
	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	++	
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	There are multiple bus stops within 800m from the site including a service that is rated D+ on the Place Based Carbon Calculator meaning there is a regular service.
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> </ul>	N	The site does not include employment, commercial or tourism uses

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site does not include retail or social uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site located such that it could be masterplanned to integrate with the existing place and community. As mentioned in SA7, the site is adjacent to large residential areas to the east and south and is relatively central in Warboys meaning development in this location may limit the adverse impact upon the existing townscape. However, it is unclear whether Third Avenue would be able to accommodate the increase in traffic flow generated from the proposal. The site submitted to the west (CfS 104) has been submitted by the same site promoter, the two sites therefore may have potential to come forward as a cohesive scheme. There is a public right way running along the western boundary which would need to be integrated into the design process.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development. It is approximately 350m north of Warboys Conservation Area with substantial residential development between the site and the conservation area.

#### Summary of SA

The site is flood zone 1 with low recorded risk of surface water flooding. It is wholly greenfield, classified as grade 2 agricultural land. The site has limited access to natural green space and is outside an area of strategic focus for green infrastructure. It is within 1km of Warboys Wood SSSI but is sufficiently remote from all of the other designated nature assets. The site is in close proximity to a primary school, local convenience store, regular bus service, employment opportunities and numerous

1 North East Huntingdonshire

culture and leisure facilities. It has a capacity of 500 homes which could include a wider range of tenures, types and sizes. Pollution generated from increased traffic flow may be an issue. The site has a close relationship with the built form adjacent to large residential areas to the east and south and although the proposed capacity would be high in a large village location it is somewhat similar to the surrounding built form, particularly to the north east where there has been housing development in recent years. It could integrate with the place and community but would need to ensure sufficient landscaping on the north and eastern boundaries to conserve the character of the wider landscape. It is unlikely that any designated heritage assets would be adversely impacted by the development as the site is 350m north of Warboys Conservation Area.

**Updates after initial appraisal**

---

**Warboys 7: Land South of Warboys Sports Field, Warboys**

As identified in the LAA the site is available as the landowner has no intention at this time of selling the land. Therefore, a sustainability appraisal for the site has not been undertaken.

	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	++	
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	There are multiple bus stops within 800m from the site including a service rated D on the Place Based Carbon Calculator.  A pavement would need to be created along the frontage to meet and existing footpath to east moving into Warboys.
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	+	The proposal has scope for 5000 sqm of employment floor space including 1000sqm of retail.

# 1 North East Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	++	The site has scope for 1000 sqm of retail uses supporting the addition of facilities within Warboys village.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	. The site is located such that it would be difficult to integrate with the existing place and community.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within the site. However, given the scale of the site, it could adversely impact the setting of a listed building approximately 200m east of the western boundary and Warboys Conservation Area approximately 350m south east of the site.

## Summary of SA

The majority of the site is in flood zone 1 with no recorded risk of surface flooding. It is predominantly classified as grade 2 agricultural land. There is scope to provide 4.17 ha of open space uses on site but it does not meet Natural England's Standards for accessing green space. It is within 1km of Warboys Wood SSSI. The scale of development may increase traffic flow in Warboys village potentially causing increased levels of air and noise pollution. The proposed capacity of up to 500 homes could provide a wide range of tenures, types and sizes of housing. A local convenience store and the culture and leisure facilities in Warboys except a public park is beyond 800m from the site. It is approximately 800m from a primary school. There are employment opportunities in close proximity to the site and a modest amount of employment floorspace, including retail use, could be provided. The site has a very close relationship with the wider landscape and there is the potential for significant adverse impact that would likely be difficult to mitigate. It would also be difficult to integrate the site with the existing place and community given the site's scale and nature, forming a significant extension to the north west Warboys out of line with built development in the immediate area along Ramsey Road.

	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access leisure and cultural facilities?</li> </ul>	++	The site is within 800m of St Mary Magdalene church, Warboys Parish Centre and associated playing fields, The White Hart pub, a public park and a library.
SA11	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> </ul>	+	The site is approximately 1.7km from Warboys Airfield Industrial Estate, an Established Employment Area and is in close proximity to modest employment opportunities in Warboys village  The site benefits from ultrafast broadband in the vicinity.
	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	+	
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	There is a bus service rated D+ on the Place Based Carbon Calculator within 800m of the site meaning there is a regular service.  There is a pavement immediately outside the site frontage on Church Road (B1040)
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	++	
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site proposes residential use.

# 1 North East Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site proposal does not include retail or social uses
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it could be effectively masterplanned to integrate with the existing place and community. There is a pavement immediately opposite the frontage allowing access to the shops and services within Warboys. To minimise the adverse impact to the local area, the development should be sensitive to Warboys Conservation Area and several listed building in the immediate vicinity of the site.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The eastern portion of the site is within Warboys Conservation area and it is in the immediate vicinity to several listed buildings, the proposal needs to be sensitive to the setting and character of these designated heritage assets.

## Summary of SA

The site is flood zone 1 with no recorded risk of surface water flooding. It is greenfield, classified as grade 2 agricultural land. There are large agricultural buildings on site offering an opportunity to reuse and recycle materials. The site adjoins a public park to the north meaning open space is immediately accessible. It is sustainably located, in close proximity to employment opportunities, culture and leisure facilities, a local convenience store, a primary school and a regular bus service which can be accessed via public footpaths. The site is within or in the immediate setting of designated heritage assets, including Warboys Conservation Area and several listed buildings; sensitivity to the setting, form and character of these designated heritage assets is essential to ensure integration with the townscape. The site has a close relationship with the built form and the amount of development would help preserve the form and character of the immediate area.

SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site does not include employment, commercial or industrial uses.
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site does not include retail or social uses
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it would be difficult to integrate the site with the existing place and community.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development.

## Summary of SA

Part of the site is greenfield, predominantly classified as grade 3 agricultural land, the remaining being grade 2. The previously developed part of the site is for equestrian use, offering modest opportunities to reuse materials on previously developed land. It is in flood zone 1 with low risk of surface water flooding. The site has limited access to natural green space according to Natural England's mapping but is sufficiently remote from all of the designated nature assets except Warboys Wood SSSI to the north of the site. It is also remote from designated heritage assets. There is a high prevalence of culture and leisure facilities in Warboys which could be accessed from the site by active travel infrastructure; there is a pavement opposite the site frontage. The site also has access to a local convenience store, primary school, a regular bus service within 800m. There are employment opportunities within Warboys, to the east and north and also a Established Employment Area within 5km. Given the scale and location of the proposal, it would be out of context with the townscape character and will likely cause significant adverse landscape impact. It would also be difficult to integrate the site with the existing place and community.

## 1 North East Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	++	The site is sufficiently remote from all of the designated nature assets.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	The site is outside Natural Cambridgeshire's green infrastructure priority area and has limited potential to improve the strategic habitat network.
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	-	The site is located in the south eastern edge of Warboys, situated east of new Road (A141) and south of Fenton Road. It adjoins the curtilage of residential properties to the north which front onto Fenton Road and part of the western boundary is opposite a row of housing on New Road. Therefore, there is some connection with the built form to the north and north west. However, the site predominantly borders arable agricultural farmland, with the site itself forming part of a large agricultural field. The southern and eastern boundaries are completely open and the development would be highly visible for long distances, mitigation/ landscaping to screen the site would be a very important factor in determining the success of the scheme. In combination, the location and scale of the site may have the potential to cause significant landscape impact and would have a close relationship with the countryside. It would also alter the rural feel to on approach to Warboys from the east and south and development in this location would form a significant extension to Warboys. Development located to the north of the site would improve the site's relationship with the built form and provide scope to implement substantial landscape buffers to the south to mitigate landscape impact. Whilst the proposed capacity of 170-195 units on a site of 10.85 ha would be classified as low density it may be out of context of surrounding built development.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The site fronts onto the A141 where the national speed limit of 70 mph applies meaning the site may be exposed to noise and air pollution.

SA10	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access town centres and local convenience shops?</li> </ul>	+	The site is within 800m of a local convenience store.
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access education facilities?</li> </ul>	+	The site is in Warboys village where there is a primary school.
	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access leisure and cultural facilities?</li> </ul>	++	The site is within 800m of culture and leisure facilities within Warboys including a baptist and methodist church, Warboys Parish Centre, a library, The Royal Oak pub and Warboys Sports and Social Club which has playing fields.
SA11	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> </ul>	+	The site is approximately 2km from Warboys Airfield Industrial Estate. There are also modest employment opportunities within Warboys village.
	<ul style="list-style-type: none"> <li>Be in a location with high quality digital infrastructure?</li> </ul>	++	The site benefits from ultrafast broadband in the vicinity.
SA12	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> </ul>	+	There is a bus service rated D+ on the Place Based Carbon Calculator within 800m of the site meaning there is a regular service.
	<ul style="list-style-type: none"> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	+	

## 1 North East Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			Potential highway access to the site is approximately 100m south of a public footpath. A pavement would need to be created along the frontage to join the site up with this infrastructure. A transport assessment would help to understand whether a footpath along the A141 to link the site with the village is feasible.
SA13	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	N	The site does not include employment, commercial or tourism uses
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site does not include retail or social uses
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	Given the site's location and context, the development would require effective masterplanning to aid the integration with the existing place and community. A safe footpath understanding the potential impact on safety of the A141 would need to be created along the frontage to allow access to services within Warboys, promoting the use active travel infrastructure. Substantial landscaping and development towards the north of the site, as proposed in the vision document, would help mitigate potential adverse impact to the local landscape.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site. However, it is in close proximity to a listed building, The Laurels, situated approximately 80m north east from the site and Warboys Conservation Area to the north west and therefore the development would need to be sensitive to the setting of these designated heritage assets

**Summary of SA**

The site is in flood zone 1 with no recorded risk of surface water flooding. It wholly greenfield, classified as grade 2 agricultural land. The site has limited access to natural green space but it is sufficiently remote from all of the designated nature assets. There are multiple culture and leisure facilities, a primary school and local convenience store, employment opportunities and a regular bus service in close proximity to the site. A pavement would need to be created along the frontage to join the site with active travel infrastructure and improve the site's integration with the wider community. The location and scale of the site may cause significant adverse landscape impact although development to the north of the site and significant landscape buffers may help to mitigate this. Hence, it may be possible to be effectively masterplan the site to integrate with the existing place and community. The development would need to be sensitive the the setting of the listed building (The Laurels) to the north east of the site and Warboys Conservation area to the north west. The proposed capacity of 170-195 would be relatively high considering the nature of surrounding development along New Road and Fenton Road but it could contribute to the housing need of the district at a more significant level.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include new or result in the loss of retail or social facilities or the retention or modernisation of existing facilities.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it can be effectively masterplanned to become part of the existing place and community. Landscaping will be required to provide a soft development edge with the countryside.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no heritage designations on site or nearby to the site which could be impacted by proposals.

## Summary of SA

The site is not constrained by flood risk, it is greenfield and classified as being grade 2 agricultural land. It is also not constrained by nature conservation or heritage designations. It has some accessibility to local leisure and cultural facilities but it does have limited accessibility to public transport options, employment options and the primary school is located in the nearby village of Upwood. Accessible to some natural greenspace. Ultrafast broadband is available in the vicinity. There is no footpath on Harris Lane. The site relates well to the settlement being located on its western edge, it does have a rural feel and also relates to the countryside, landscaping and masterplanning the site so that development relates well to its context is required.

An agricultural field separates the site from Ramsey Road accentuating its detachment from the surrounding built form and the development towards the north east of the site in Valiant Square and Crabtree Way have no existing opportunities for connections into this site making integration with the existing place and community more challenging.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

# 1 North East Huntingdonshire

## Summary of SA

The site is not constrained by flood risk. It is greenfield and classified as grade 2 agricultural land. It is not accessible to nature greenspace, it is about 350m from Rolts Wood County Wildlife site. There are no heritage designations impacting the site. The site has good accessibility to public transport via bus, employment options within Bury and Ramsey and primary education. It is over 800m of the various leisure and cultural facilities within Bury and Ramsey but these are accessible via sustainable modes of transport. The potential scale of development could deliver a mix of housing sizes, tenures and types. The site is located such that successful integration with the existing place and community is challenging. The topography of the site also makes the potential impact of development on the landscape greater.

The site's location is such that it could be effectively masterplanned to integrate with the existing village.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	<p>There are designated heritage assets that could be adversely impacted by the development. Within the site, on the northern edge is Wennington Conservation Area and also, listed, Telephone Kiosk. In addition there are other listed buildings surrounding the site, Hill Farmhouse to the east and Oakwood House to the north. The conservation area also adjoins to the east.</p>

**Summary of SA**

The site is not constrained by fluvial flood risk and surface water flood risk is minimal. The site is grade 2 agricultural best and most versatile land and in use for arable farming. It is part greenfield and part garden land.

The site is of a size that could contribute to the housing needs of the district. The village where the site is located has no services or facilities, the site is within 2.5km of a supermarket and Abbots Ripton Primary school is within 1.5km. The site is approximately 4km from Alconbury Enterprise Zone where there are multiple concentrations of employment. Public transport via bus is limited at best. The site is not within proximity of natural green space according to Natural England's 'Access to Greenspace Standards', but is within 500m of public rights of way. The village of Wennington is extremely rural in nature

The site relates well to the existing settlement and is heavily screened from the open countryside on the western edge. The village of Wennington is sparsely populated with linear development along the main routes in and out of the village, it is dominated by cottages, many of which are thatched and/or listed creating a distinctive character to the area. The design and layout of any proposals would need to be sensitive to these key features including the conservation area which sits within the

# 1 Northern Central Huntingdonshire

northern edge of the site (and surrounds the site on the north, east and south) and a Grade II Listed building (telephone kiosk). Other key features of the site include a thick tree belt to the west and tree line to the north which would require retaining to avoid detrimentally impacting the townscape. Careful consideration would be required to ensure that the density of the site is not out of keeping with the current townscape and ensure that development is proportionate to the existing settlement. The village is also characterised by its lack of footpaths meaning that extensive development in this area could detrimentally impact the safety of residents.

SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	<p>The site is greenfield and garden land and offers no opportunity for redevelopment of previously developed land. Development in this area has the potential to detrimentally impact the setting of listed buildings and the conservation area. Removal of hedgerow dissecting the site would affect the setting of the listed building and have a possible ecological impact.</p> <p>Access is proposed via the narrow Rectory Lane which has no footpaths for existing residents meaning pedestrian safety could be a significant issue.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are designated heritage assets that could be adversely impacted by the development. Part of the north eastern corner of the site falls within a conservation area, which is also present immediately north of the site. It is also in close proximity to listed buildings at Home Farm and Rose Cottage.

## Summary of SA

Flood zone 2 and 3 are present on the site and there is some risk of medium surface water flood risk which would require mitigation. The site is greenfield and garden land with no existing structures with the the majority of the site grade 3 agricultural land with the north western quarter grade 2.

# 1 Northern Central Huntingdonshire

The site is of a size that could contribute to the housing needs of the district. The site is beyond 5km of a town centre, however it is within 800m of a local convenience store, a primary school, pub, church and public park meaning some local services and facilities would be accessible to future residents. The site is approximately 2.5km from Alconbury Enterprise Zone which could provide employment opportunities. Public transport options are limited at best. The site is remote from nature designations but is within 200m of 0.5 ha of natural green space. Landscape impact would be minimal if trees and hedgerow were retained.

Development in this area would fundamentally impact the setting of the listed buildings and thus the form and character of the surrounding townscape and could impact the conservation area. Removal of hedgerow dissecting the site would affect the setting of the listed building and have a possible ecological impact. Integration of the site with the village and nearby residential development due to access proposed via the narrow Rectory Lane which has no footpaths for existing residents meaning pedestrian safety could be a significant issue.

Some of the site is previously developed land including a single storey commercial building with car parking and a large agricultural building providing some opportunities for redevelopment and enhancement.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site. However, it does adjoin to Abbots Ripton Conservation area to the north and east which could be adversely impacted by the development.

## Summary of SA

Most of the site is not restricted by fluvial flood risk, however flood zone 2 and 3 is present and minimal surface water flood risk which would require mitigation. The site is part previously developed land and part greenfield land providing some opportunities for redevelopment of previously developed land and enhancement of employment opportunities within the village. Some of the site is used for grazing. The site is grade 3 agricultural land.

The site is of a size that could contribute to the housing needs of the district. The site is beyond 5km of a town centre, however it is within 800m of a local convenience store, a primary school, village hall, pub, church, public park and playing fields meaning local services and facilities would be accessible to future residents. The site is approximately 2.5km from Alconbury Enterprise Zone which could provide employment opportunities. Public transport options are limited at best. The site is remote from nature designations but is within 200m of 0.5 ha of natural green space. No heritage designations are affected, however landscaping and mitigation would be required to address the impact of the EastCoast Mainline and agricultural works. The site has the potential to be integrated with the existing village, but careful design and layout would be required to avoid detrimental impact on Tree Preservation Areas and Order. Due to its ecological and biodiversity value it would be recommended the parcel of land enclosed by trees, including a line of established Elm trees running through the middle should be retained due to its uniqueness which contributes to the character of the area.

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			<p>It is in a reasonably sustainable location for employment opportunities given its proximity to potential employees in Huntingdon.</p> <p>The potential to support indigenous companies is considered of benefit due to the proximity to existing industry in Huntingdon, allowing possibility for some to expand or relocate where land availability may be a constraint. Some tourism opportunities have been proposed including a variety of outdoor leisure activities, with potential for new walking trails and nature routes, opportunities for health and wellbeing, camping and glamping.</p>
SA14	<ul style="list-style-type: none"> <li>Facilitate modernisation of existing town centres to meet current and anticipated needs?</li> </ul>	+	<p>The southernmost extent of the site is within 3.2 km of the existing town centre of Huntingdon. The additional demand generated from and expenditure capacity of the site's future occupants has lead the site promoters to propose four local centres for immediate retail need. The increased population could also assist in facilitating some modernisation of the existing Huntingdon town centre, through potential increased footfall and usage.</p>
SA15	<ul style="list-style-type: none"> <li>Strengthen a local sense of place?</li> <li>Retain the character of existing settlements?</li> </ul>	-	<p>The land currently has a wholly agricultural character with its sense of place being that of the open countryside. A strong landscaping scheme would be required.</p> <p>Development would fundamentally alter the landscape setting and any scheme would need to create a wholly new sense of place. Four interconnected yet distinct settlements are proposed using garden city principles to create a sense of place.</p> <p>The development has the potential to significantly impact upon the character of the nearby existing settlements of Abbots Ripton (including Abbots Ripton Hall a Registered Park and Garden)</p>

# 1 Northern Central Huntingdonshire

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			<p>and Kings Ripton. The promoter proposes significant multifunctional landscape providing a substantial green separation from the development and the villages to avoid coalescence.</p> <p>The presence of major roads would require further measures to safely integrate the community from the proposed site with the existing residential area of Huntingdon - for example foot and cycle bridges - as there is no segregated footway or cycleway along the A141 to allow connectivity into Huntingdon. Integration of the western Parcel with <i>SEL 1.1 Former Alconbury Airfield and Grange Farm</i> would be difficult to achieve as layout of these sites may already be set meaning there is no opportunity for through routes into these developments. Additionally integration with these sites could not be achieved until build out on these are achieved.</p>
SA16	<ul style="list-style-type: none"> <li>Conserve and where possible enhance sites, features and area of archaeological value throughout the district?</li> </ul>	-	<p>Heritage and residential and agricultural buildings are present within and adjacent to the site, these include a Grade II listed building and Registered Park and Garden on north eastern edge (Abbots Ripton Hall) across the road (B1090) and a listed building Grade II Wild Goose Leys, a house with associated agricultural buildings, within the site itself which is situated towards the north western area. Just south of this is Bellamy's Grove a scheduled monument - a moated site. Towards the southern quarter of the site is another scheduled monument, The Moat, a motte and bailey castle. The site proposal would be required to assess, mitigation and integration of heritage assets.</p> <p>The scale of the site means that there may be archaeological value within the site, but further assessment would be required to confirm or deny this.</p>

## Summary of SA

Sapley Park Garden Village proposal is located on predominantly greenfield agricultural land, with some garden land included. The site stretches north to south from Huntingdon to Abbots Ripton and east to west from Kings Ripton to the East Coast Mainline with a smaller parcel of land located west of the railway line and adjoining Alconbury Weald. The site is open countryside and the reuse of previously developed land is negligible. The majority of the site is classified as grade 2 agricultural land with a negligible portion to the west (associated with the former Alconbury Airfield) non agricultural land. The majority of the site is flood zone 1 with areas of flood zone 2, 3a and 3b present. Risk from surface water flooding is present across the site. The proposal provides opportunities to address climate change including flood risk, buildings and energy storage.

Average house prices in the ward area indicate relative lower cost housing in comparison to most of the district. The site proposes 20ha of employment opportunities and is in proximity to diverse employment opportunities in Huntingdon with the potential to support indigenous companies. Some tourism opportunities have been proposed.

The location offers potential opportunity to improved public transport connectivity this would include an potential extension to the guided busway and proposed new railway station at Alconbury Weald, which could help to promote greener travel if these options were to come forward. Without this car travel would dominate. Opportunities are also present for enhancing active travel linkages both for day-to-day and leisure journeys. Substantial facilities would be required and are proposed on site such as education, local centres, community and leisure infrastructure to support sustainable lifestyles for any future residents.

The site would require consideration of the impacts on Great Stukeley Railway cutting SSSI scheduled monuments, tree preservation areas and orders and listed buildings or integration thereof. Strategic landscaping may be required to transition the site into the wider countryside to the north and impact on sites of ecology and biodiversity value would require assessment.

The site is situated within the Central Claylands characterised by gently undulating farmland. The proposal would create four new communities changing the landscape from what is predominantly what is currently open farmed countryside, Many landscape features are present within the site including small wooded areas, tree belts, farm drainage and a reservoir, which would require integration.

Abbots Ripton Abbots Ripton Hall and Kings Ripton including their conservation areas are in proximity. These small rural villages may be impacted by the the scale of development proposed which could substantially alter the character and form of the villages. The promoter proposes significant multifunctional landscape providing a substantial green separation from the development and the villages to avoid coalescence.

Presence of the East Coast Mainline means that noise air and light pollution (including vibrational) will impact the western edge of the site and require mitigation as would the presence of the crematorium to the east. Mitigation measures would be required. The size of the site has the potential to increase traffic on the local road network increasing air pollution as would the proposed rerouting of the A141 which would dissect the site with the potential to affect future residents. The proposal promotes a network of streets, paths and cycleways, that prioritise the movement of pedestrians and cyclists, providing routes to public transport. The site is currently open countryside and as such the presence of a mixed used development will increase light pollution in this area.

## 1 Northern Central Huntingdonshire

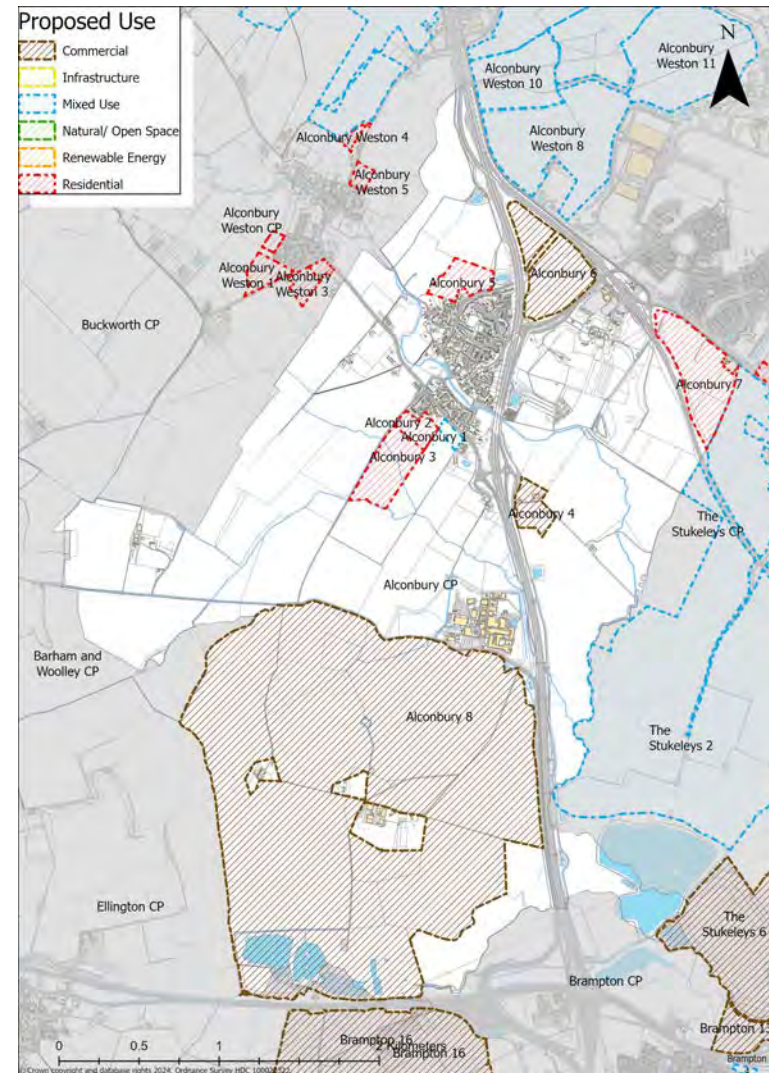

Integration of the western Parcel with *SEL 1.1 Former Alconbury Airfield and Grange Farm* would be difficult to achieve as layout of these sites may already be set meaning there is no opportunity for through routes into these developments. Additionally integration with these sites could not be achieved until build out on these are completed.

### Updates after initial appraisal

## Alconbury

1.3 A total of 8 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Alconbury 1: Land South of Great North Road, Alconbury
- Alconbury 2: Land to the East of Globe Lane (smaller site), Alconbury
- Alconbury 3: Land to the East of Globe Lane (larger site), Alconbury
- Alconbury 4: Brooklands Farm, land to the East of A1 junction 13, Alconbury
- Alconbury 5: Land to the North of School Lane, Alconbury
- Alconbury 6: Land North of B1043 and East of Alconbury, Alconbury
- Alconbury 7: Fifty Acres, Land adjacent to Ermine Street and A1304, Alconbury
- Alconbury 8: Land at Weybridge Farm (Brampton Cross) - this site also partially falls within Ellington parish. As the majority of the site falls within Alconbury parish, the site has been assessed here instead. A link to the site can also be found within the Ellington section of the Western Huntingdonshire LAA document.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	<p>The site is located as such that it could be effectively masterplanned to become part of the existing community. The site would need to address landscape impact to the south and potential impact on a Grade to listed building to the East and two Grade II properties to the north west.</p> <p>It is not considered that logistics/distribution would be a compatible use with a small scale residential due to impact of noise, light and vibrational impact, employment use would have a lesser impact.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	<p>There are no designated heritage assets within the site. However, there is a Grade II listed building immediately to the east of the site and two Grade II properties to the north west which could be adversely impacted by the development.</p>

## Summary of SA

The site is not constrained by fluvial flood risk and is at minimal risk of surface water flooding. The site is wholly greenfield land classified as 'urban'.

The site has the opportunity to meet the housing need of the district and also suggests the potential for a mixed use element to the scheme including employment and/or logistics and distribution uses (although floorspace potential has not been provided). The site is beyond 5km of a town centre, but within 800m of a local convenience store, a primary school, pub, church, public park and sports and social club meaning local services and facilities would be accessible to future residents. The site is within 3km of Alconbury Enterprise Zone and Crossways Distribution Centre providing the potential for employment opportunities for future occupiers, however the site has the opportunity to provide some employment land and therefore some additional employment opportunities. The site is within 800m of low frequency public transport meaning options are limited at best. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. Landscape impact would be minimal and focussed on the southern boundary, requiring mitigation.

# 1 Northern Central Huntingdonshire

The presence of the A1 has the potential to cause light, noise odour or visual pollution. The site is not of a scale likely to cause substantial pollution, although this may be dependent on the final use chosen.

The site is located as such that it could be effectively masterplanned to become part of the existing community. The site would need to address landscape impact to the south and potential impact on a Grade I listed building to the East and two Grade II properties to the north west. It is not considered that logistics/distribution would be a compatible use with a small scale residential due to impact of noise, light and vibrational impact, employment use would have a lesser impact.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include retail or social uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located as such that it could be effectively masterplanned to become part of the existing community. The site would need to address landscape impact to the south, east and west. Access from Globe Road would require confirmation, as a narrow lane, safety and transport impact would require assessment.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within the site. The nearby listed buildings to the north would be screened by the existing residential area and they therefore would unlikely be impacted by the development.

**Summary of SA**

The site is not constrained by fluvial or surface water flood risk. The site is wholly greenfield land presenting no opportunity for the reuse and recycling of existing land, materials or buildings. The site is predominantly classified as urban land with the remainder of the land on the western side being grade 2. It is in arable use.

The site is of a size that could contribute to the housing needs of the district. The site promoter proposes 74 homes. The site is beyond 5km of a town centre, but within 800m of a local convenience store, public park, church, pub, sports and social club meaning local services and facilities would be accessible to future residents. The site is approximately 1KM from Alconbury Church of England Primary School. The site is within 3km of Alconbury Enterprise Zone and Crossways Distribution Centre providing the potential for employment opportunities for future occupiers.

# 1 Northern Central Huntingdonshire

The site is within 800m of low frequency public transport meaning options are limited at best. The site is sufficiently remote from all of the designated nature sites and has limited capacity to enhance the existing blue or green infrastructure network. The site does not meet the criteria for Natural England's 'Access to Greenspace Standards' but does adjoin to the Doorstep Standard, meaning the site is close to 0.5ha of natural green space. The site does not impact upon heritage assets.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site relates well to the existing area, sitting south residential properties at Lark Way. The site is located as such that it could be effectively masterplanned to become part of the existing community. The site would need to address landscape impact to the south, east and west. Access from Globe Road would require confirmation, as a narrow lane, safety and transport impact would require assessment.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity of the site that would be impacted by the development

**Summary of SA**

The site is not constrained by fluvial flood risk but has some surface water flood risk is present. The site is wholly greenfield grade 3 agricultural land.

The site has been submitted for 95 homes which would contribute to the housing needs of the district. The site is beyond 5km of a town centre, but within 800m of a local convenience store. The site within 800m of a public park, church, public house, village hall and sports and social club meaning that future occupants have access to local services and facilities. The site is approximately 2km from Alconbury Weald Enterprise Zone and 3.5km from Crossways Distribution Centre providing access to multiple concentrations of employment. The site within 100m of a low frequency bus stop meaning access to public transport is limited best.

# 1 Northern Central Huntingdonshire

The site is sufficiently remote from all designated nature sites and has limited capacity to enhance the existing blue or green infrastructure network. The western corner of the site is within 200m from 0.5 ha of natural green space according to Natural England's 'Access to Greenspace Standards'. The site does not impact upon heritage assets.

The eastern edge of the site is within 200m of the A1 meaning future occupiers may be subjected to light, noise, odour or visual pollution which may require investigation. The site is not of a scale likely to cause substantial pollution. The site relates well to the existing area with residential development to the south of the site. The site slopes down towards the village from north to south meaning that proposed buildings have the potential to be clearly seen in the wider landscape depending on elevation and location. It is exposed to the open countryside on the northern and the western boundaries and forms a prominent landscape feature. Development on this site could have a significant impact on the landscape and setting of Alconbury. The site proposal is of a density similar to the surrounding residential area, but disproportionate in nature in comparison to the existing settlement.

Alconbury Enterprise zone is immediately east of the A1307 and industrial uses to the south (including lorry park). The site relates well to Alconbury Enterprise Zone and employment uses to the south. The site has access to the A1 north and south. These factors indicate that the site has the potential to be effectively masterplanned into the existing employment cluster and provide opportunities for expansion and/ or agglomeration of businesses. The topography of the site - which is elevated in the north and south sloping downwards towards the centre - would require assessment of the impact on building heights/elevations on the surrounding area. However the site is largely screened as a result of its location, sandwiched between the A1 and A1307, meaning impact on the countryside would be negligible. An extensive tree preservation area sits south of the site which would require assessment as to the potential affect on this. Retention of the tree belts surrounding and within the site would assist in the setting of the development and harm to ecology and biodiversity. The site may require enhanced road infrastructure to address increased transport movement.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	The Grade II listed building Alconbury House, is situated approximately 250 metres south of the site boundary, however this is significantly removed from the site and therefore the proposed site would likely have negligible impact upon the setting of this heritage asset. Further assessment would help to confirm this.

## Summary of SA

The site is not constrained by fluvial flood risk but has some surface water flood risk is present. The site is mostly classified as urban land; however, the majority of northern portion of the site is classified as grade 3 agricultural land.

The site promoter proposes employment and/or logistics and distribution uses on site to the amount of 60,000sqm providing substantial high or low density employment opportunities. The site is beyond 5km of a town centre, and beyond 800m of a local convenience store, primary school and culture and leisure facilities. The site proposes 20 hectares of employment land and is within 500m of Alconbury Enterprise Zone and industrial uses to the south (including lorry park). The site therefore could provide employment uses and opportunities for cluster development, business expansion and/ or agglomeration of businesses. The site within 800m of a low frequency bus stop meaning access to public transport is limited best. The site is sufficiently remote from all designated nature sites and has limited capacity to enhance the existing blue or green infrastructure network. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has no capacity for linkages to the existing blue or green infrastructure network. The site is approximately 250 from a grade II listed building does not impact upon heritage assets, however this is significantly removed from the site, further assessment would help to confirm this. Proximity to the A1 and A1307 means future occupiers may be subjected to light, noise, odour or visual pollution. The site is of a scale which has the potential to cause visual, light, noise and vibrational pollution as a result of the proposed use - employment and/or logistics and distribution and assessment of transport impact. This would require further assessment, especially in relation to the settlement of Alconbury.

The site is well related to existing employment uses and the A1 and A1307. The site has the potential to be effectively masterplanned into the existing employment cluster. The topography of the site - which is elevated in the north and south sloping downwards towards the centre - would require assessment of the impact on building heights/elevations on the surrounding area. However the site is largely screened as a result of its location, sandwiched between the A1 and A1307, meaning impact on the countryside would be negligible. An extensive tree preservation area sits south of the site which would require assessment as to the potential affect on this. Retention of the tree belts surrounding and within the site would assist in the setting of the development and harm to ecology and biodiversity.

1

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			<p>Mobility hubs are proposed to coordinate public transport with active travel. However if this is not implemented motorised vehicle movements would dominate.</p> <p>Documentation provided by the site promoters suggests that the site would be a centre for net zero enterprise, a net-zero carbon development, with proposals for carbon storage, reducing energy demand through a fabric first approach and potential for roof mounted solar panels. If implemented this approach would assist in the potential reduction in greenhouse gas emissions.</p> <p>The site is not within a landscape priority area. There are no nature conservation assets within the site. Brampton Wood SSSI and ancient and semi-natural woodland and Brampton Racecourse SSSI are within 1.5km to the south and east respectively, both of which are separated by major roads such as the A14 and A1. An increased population in this area could detrimentally impact the wear and usage of these areas potentially putting them at risk, yet due to the size of the site and the proposal for 147ha of open space there are also opportunities to create green corridors to facilitate increased absorption and dissipation of nitrogen and other pollutants. Including the retention of the gravel lakes.</p>
SA2	<ul style="list-style-type: none"> <li data-bbox="293 1166 1104 1262">Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?</li> <li data-bbox="293 1286 1104 1350">Support habitats in adjusting to the impacts of the climate emergency?</li> </ul>	<p data-bbox="1149 1166 1274 1262">++</p> <p data-bbox="1149 1286 1274 1350">+</p>	<p data-bbox="1296 1166 2089 1230">There is risk of fluvial flooding with climate change at 1 in 100 (Design Flood) on approximately 15% of the site (58.2ha).</p> <p data-bbox="1296 1254 2089 1414">The proposal sets aside approximately 147ha of open space and retention of the gravel lakes in the south. Natural flood risk management and water sensitive design is proposed. 			proposals could provide sustainable links to nearby Huntingdonshire. However if measures are unimplemented sustainable solutions to adapt and be more resilient to climate change would be negligible.
SA3	<ul style="list-style-type: none"> <li>Maintain and where possible improve the quality and availability of water resources?</li> </ul>	--	The site is a strategic employment proposal and may require a new water recycling centre to serve the development. The site promoter proposes two foul water pumping stations. The nature of employment uses may impact upon water supply and would require further investigation
	<ul style="list-style-type: none"> <li>Minimise the risk of flooding from all sources?</li> </ul>	-	<p>Approximately 85% of the site is within flood zone 1 (336.8ha), with 2% (10ha) in flood zone 2 and 12% (48ha) in flood zone 3, (11% of which is flood zone 3b). This is predominantly focussed within the southern extent of the site. Approximately 7% (13.2ha) is susceptible to medium surface water flood risk, 4% high and 22% low. These are predominantly linked to existing watercourses. Mitigation would be required.</p> <p>The site promoter proposes the implementation of water sensitive design including rainwater harvesting and natural flood management. They note that soakaways are not achievable due to the clay soil and propose discharge to an existing watercourse, and the use of on-site attenuation basins and wetlands. SUDS features will be located at low points of the site prior to discharging to existing watercourses at greenfield rates. Careful management of such discharge would be required and need assessment to demonstrate the achievability of the proposal and the potential impact on ecology and biodiversity.</p>

The scale of the site means that there may be archaeological value within the site, but further assessment would be required to confirm or deny this.

## Summary of SA

Land at Weybridge Farm (Brampton Cross) is greenfield agricultural land. The site contains no built structures, but surrounds a number of residential and agricultural buildings associated with Weybridge Farm, Weybridge Valley House and Weybridge Lodge. The site is wholly greenfield land with no opportunity to facilitate the use of previously developed land. Approximately 60% of the site is classified as grade 3 agricultural land; part of the central and northern portions of the site is classified as grade 2 agricultural land.

The site is a strategic employment proposal and may require a new water recycling centre to serve the development. The site promoter proposes two foul water pumping stations. Approximately 85% of the site is within flood zone 1 (336.8ha), with flood zones 2, 3a and 3b present, predominantly focussed within the southern extent of the site. Surface Water flood risk is also present. The site would require mitigation. Proposed measures include discharge into existing watercourses, attenuation basins, wetlands and SUDs which would require assessment to demonstrate the achievability of the proposal and the potential impact on ecology and biodiversity.

The site is a strategic scale employment site which would contribute to economic opportunities in the district through construction and associated trades for the duration of its delivery and its operation and could support significant high density economic opportunities in the district help to enhance and diversify economic opportunities in the district through it's proposal for net zero enterprise. Development has potential to improve employment opportunities for residents. however due to the distance to existing settlements opportunities to link to nearby areas to facilitate this would require assessment. Active travel and public transport opportunities have been proposed which would create sustainable links to communities if implemented. Proximity to the A1 and A14 means that the site will be susceptible to air, light and noise pollution. Mitigation measures may be required to minimise the impact on the future site occupiers. The scale of the site and proposed commercial uses has the potential to increase traffic on the strategic road network increasing air pollution. The scale of the site may impact on the wider landscape and the nearby village of Ellington in terms of air, light, noise and visual pollution. An assessment would be required to establish impact and mitigate where necessary. The site promoter proposes active travel and public transport links to Huntingdon and net zero enterprise and development which could contribute towards a net zero ambition if implemented.

The site promoter has identified protected species, rare species and flora and fauna associated with the site. The regional importance of the site for bats has been declared by the promoter which will require careful assessment to ensure no negative impact on the species. 147ha of open space is provided which could enhance biodiversity of the area.

The site would require consideration of the impacts on Brampton Wood SSSI and ancient and semi-natural woodland and Brampton Racecourse SSSI. No heritage assets are affected. The land currently has a wholly agricultural character with its sense of place being that of the open countryside. A strong landscaping scheme would be required. Development would fundamentally alter the landscape setting and any scheme would need to create a wholly new sense of place. Prominent topographical features if removed could impact on the sense of place. A landscape assessment would be required. Proximity to Ellington conservation area and any potential impacts may be required. An existing employment use sits to the north, which could provide opportunities for integration as part of the wider scheme. The site has strong connections to the strategic road network A1 and A14 which would assist in the daily operation of the site. Significant masterplanning would be required to demonstrate that the site could create a sense of place due to the standalone nature of the site and to demonstrate, accessibility and integration of properties that are surrounded by the site avoiding detrimental impacts.

The site promoter has stated a new footpath should be created to join the site with the existing public footpath network. In addition, the proposal is for residential care homes and the site promoter has provided suggestions on how the site could integrate into the existing community, including a 'community hub' with facilities that could also benefit the residents of Alconbury Weston.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within the site. Alconbury Western Conservation Area (CA) is situated approximately 130 metres east of the site but is predominantly shielded from the setting of the CA due to a patch of dense vegetation to the east and a relatively large residential area to the north.

## Summary of SA

The site is in flood zone 1 and is at low risk from surface water flooding. It is wholly greenfield and classified as grade 3 agricultural land. The site is remote from all of the designated nature assets but has limited access to natural green space according to Natural England's Standards. It also has limited access to shops and the nearest primary school is outside of the village. Alconbury Enterprise Zone and Crossways Distribution Centre are within 5km of the site offering employment opportunities and a modest amount of jobs could be provided on site to cater for the care home. A public right of way bordering the north west of the site could allow access to limited

## Northern Central Huntingdonshire

1

culture and leisure facilities in Alconbury Weston but a pavement will need to be created along the site frontage along Buckworth Road. There is a infrequent bus service nearby to the site. The intended care home/ specialist housing use, as stated by the promoter, could provide wider benefits to the settlement through public space/ communal uses. Whilst a conservation area is located in close proximity to the site, it's setting will unlikely be adversely impacted due to an existing residential area located to immediately to the east which screens the site. The site is located such that it could be masterplanned to effectively integrate with the existing place and community. The location and scale of the site could conserve the character and form of the village, particularly if development is located on the eastern side of the site adjoining the residential area to the north, reducing potential adverse landscape impact and enhancing relationship with the built form.

	<ul style="list-style-type: none"> <li>Prioritise development on land of agricultural land grade 3 or lower (including urban and non-agricultural land)?</li> </ul>	-	
SA5	<ul style="list-style-type: none"> <li>Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space?</li> <li>Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?</li> </ul>	-	The site does not meet the criteria for Natural England's standards for accessing natural green space but is approximately 500m from Alconbury Sports and Social Club where there are playing fields and is accessible via public footpath. It also has capacity to provide 1.5 ha of natural, green or open space on site. However, the site has limited potential for enhancing or improving linkages to the blue or green infrastructure network.
SA6	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> </ul>	++	The site is sufficiently remote from all of the designated nature assets.  The site is outside Natural Cambridgeshire's green infrastructure priority area and has limited potential to improve the strategic habitat network.
	<ul style="list-style-type: none"> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	-	
SA7	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	+	The proposal sits south of Buckworth Road, located on the southern edge of the settlement. Opposite the site to the north west are residential properties which form part of a larger residential area to the north. Hence the site has a close relationship with the built form, particularly if the capacity of 9 houses is located along the site frontage (Buckworth Road). There is extensive boundary screening which could be enhanced by the the potential of 1.5 ha of natural green space and minimise adverse landscape impact. However, the intended frontage development may involve the removal of established trees and hedgerow potentially having a negative impact on the rural/natural feel on approach to the village. This could be resolved via single access to the site as suggested by the site promoter.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site solely proposes residential use.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it could be effectively masterplanned to integrate with the existing place or community. Frontage development may be better suited to ensure integration with the surrounding residential area/ townscape. The established vegetation along the site frontage should be retained to ensure sensitivity with the local character of the area. Sustainable design is supported through flood mitigation measures and open space on site .
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within the site. Alconbury Western Conservation Area is situated approximately 130 metres east of the site but is predominantly shielded from the setting of the CA due to a patch of dense vegetation to the east and a relatively large residential area to the north.

## Summary of SA

The site is in flood zone 1 with minimal risk of surface water flooding. It is greenfield and wholly classified as grade 3 agricultural land. The proposal does not meet Natural England's Standards for accessing greenspace but has capacity to provide a small amount of natural, green or open space on site and is in close proximity to playing fields which is accessible by public footpath. It is sufficiently remote from all of the designated nature and heritage assets. There are limited culture and leisure facilities and there are no shops or a primary school within Alconbury Weston. Alconbury Weald Enterprise Zone and Crossways Distribution Centre are in 5km of the site providing employment opportunities. Whilst there is a bus service it has limited provision and is beyond 5km from a train station. The proposal could conserve the character of and be effectively integrated into the existing place and community in Alconbury Weston. Established vegetation along Buckworth Road should be retained and frontage development supported to minimise adverse landscape and character impact. The site may be subject to some forms of pollution due to being approximately 900 metres west of the A1(M)

It is situated opposite a residential area within Alconbury Weston and there is a pavement along North Road that could allow access to the limited services in Alconbury Weston and also within Alconbury. However, the potential for the removal of a substantial amount of trees to accommodate the development could cause adverse impact on the character of the local environment.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage located within the site but it is within the setting of Alconbury Western Conservation Area to the north which could be adversely impacted by the development.

## Summary of SA

The site has been submitted twice for differing uses, for market or affordable housing and residential care homes. Some structures on site may need to be cleared prior to development which could offer an opportunity to reuse materials. The site does not meet Natural England's standards for accessing green space but is in close proximity to playing fields on route to Alconbury which is accessible via public footpath. It is sufficiently remote from designated nature assets but is within the setting of Alconbury Weston Conservation Area, potentially causing adverse impact to a designated heritage asset. The A1(M) is situated approximately 900m east of the site and therefore could be subject to forms of pollution. There are limited culture and leisure facilities and there are no shops or a primary school within Alconbury Weston. Alconbury Weald Enterprise Zone and Crossways Distribution Centre are in 5km of the site providing employment opportunities. The residential care home use would provide modest employment on site. Whilst there is a bus service nearby to the site it has limited provision and is beyond 5km from a train station. The site could effectively integrate into the existing place and community, there is a pavement along the frontage allowing access to services in Alconbury Weston and also south to Alconbury. However, significant removal of trees on site could lead to adverse impact upon the local character of the area and upon the landscape. The capacity of the site is of a reasonable scale in relation to the surrounding built form. The site is 1ha and therefore could support national level government aspirations to promote site's suitability for SME builders.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site solely proposes residential use
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	-	The site is located such that it would be difficult to effectively integrate into the existing place and community. Whilst there is a pavement along the frontage, potential access along Vinegar Hill is removed from the built form. It would also be situated out of context of the build form behind the curtilage of residential properties which is a linear development on Vinegar Hill.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site. However, Alconbury Weston Conservation Area is situated 200m south of the site, and therefore the proposal may need to be sensitive to it's setting through effective masterplanning, landscaping and/or design.

## Summary of SA

The site is flood zone with low recorded risk of surface water flooding. It is greenfield wholly greenfield classified as grade 3 agricultural land. The site has limited accessibility to natural green space but is remote from all of the designated nature assets. It is 500m west of the A1(M) and therefore may be subject to forms of pollution. There are limited culture and leisure facilities and there are no shops nor education facilities within Alconbury Weston. Alconbury Weald Enterprise Zone and Crossways Distribution Centre are in 5km of the site providing employment opportunities. Whilst there is a bus service nearby to the site it has limited provision and it is beyond 5km from a train station. There could be adverse impact upon the Alconbury Weston Conservation located 200m south of the site. The development would be located behind a row of houses along Vinegar Hill and exposed to the open countryside which could negatively impact the landscape and townscape character of the area and is also somewhat separate from the main residential area within Alconbury Weston. It would also be difficult to integrate the site into the existing place and community.

The site relates closely to the settlement bordering residential properties to the south which is broadly level with the existing built line. There are also residential properties opposite the site frontage along Vinegar Hill. The site has a relationship with countryside adjoining arable farmland to the north and east. Even though the boundaries are densely vegetated the site will likely be highly visible from higher ground to the north and east. Therefore there may be significant landscape requiring mitigation. The capacity proposed is similar to the density of the residential area to the south potentially conserving townscape character.
SA8	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	-	The site is approximately 700m west of the A1, and therefore the site could be exposed to noise and air pollution.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The site solely proposes residential use
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it could be effectively masterplanned to integrate into the existing place and community. There are residential properties adjoining the site to the south, to the south east and opposite along Vinegar Hill. The limited facilities within Alconbury Weston can be accessed by a footpath along the frontage. The development could be visible for long distances and therefore significant landscape buffering will be required to ensure mitigation.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site. However, Alconbury Western Conservation Area is situated approximately 80m south west of the site, and therefore the proposal may need to be sensitive to it's setting through effective masterplanning, landscaping and/or design.

## Summary of SA

The site is in flood zone 1 with minimal risk of surface water flooding. It is predominantly greenfield land, classified as grade 3 agricultural land. There are built structures to clear prior to development which could be recycled. The site has limited accessibility to natural greenspace but is sufficiently remote from all of the designated nature assets. It could be subject to noise pollution due to the A1(M) being situated approximately 700m east of the site. There is limited provision of culture and leisure facilities, education facilities and shops in the immediate area of the site. Employment opportunities are present less than 5km from the site. A bus service is in close proximity to the site but this is infrequent and a train station is beyond 5km. The site is located such that it could effectively integrate into the existing place and community. The site relates closely to the settlement, opposite residential properties on Vinegar Hill and north of a residential area. However, the topography of the site and surrounding land could result in the development causing significant adverse landscape impacted which would need to be mitigated. It would also need to be sensitive to the character of Alconbury Weston Conservation Area located to the south west of the site.

# 1 Northern Central Huntingdonshire

## Summary of SA

The site is flood zone 1 with minimal recorded risk of surface water flooding. It is wholly greenfield land classified as grade 3 agricultural quality. The site adjoins to Monks Wood SSSI and National Nature Reserve and therefore meets all of Natural England's Standards for accessing greenspace which could be accessed via a public right of way to the south. However, the scale and nature of the development could cause negative impact upon Monks Wood through imposing noise, air and light pollution. Despite this, the site has a strong relationship between the built form and is strategically located, adjoining an Established Employment Area (EEA) to the south and the A1(M) to the west. Development limited to the western side may improve integration with adjoining uses/ the immediate area and could be achieved through effective masterplanning. The proposal has capacity for 250,000 sqm of employment use, is in close proximity to Alconbury Wealth Enterprise Zone and adjoins an EEA potentially providing substantial employment growth and business clustering opportunities. If the development is for logistics use this would support low density employment. There is a frequent bus service within 800m of a site but a pavement/ active travel infrastructure will be required to enable access. There are no designated heritage assets that would be adversely impacted by the development.

## Updates after initial appraisal

### Alconbury Weston 7: Land East of the B1043 and North of Wheatsheaf Cottages, Alconbury Weston

- 1.7** As identified in the LAA, the site is wholly within a waste management area which is specifically identified on the Cambridgeshire and Peterborough Minerals and Waste Local Plan as an operational/ committed site for the management of waste.
- 1.8** Therefore, a sustainability appraisal for the site has not been undertaken.

### Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield

			Monument. The scale of the site means that there may be archaeological value within the site, but further assessment would be required to confirm or deny this.

## Summary of SA

The Safefield Farm, North West of Alconbury Airfield proposal is located on predominantly greenfield agricultural land. The site is made up of four parcels of land two east of the A1M and 2 west of the A1M. The site promoter proposes around 3,000 homes and an undetermined amount of commercial floorspace including employment, retail and logistics/distribution on 267.55ha. The site is open countryside and the reuse of previously developed land is negligible. The site is predominantly grade 3 agricultural land with the exception of 0.60ha. The site is not constrained by fluvial flood risk some surface water flood risk is present, mitigation would be required.

The proposal presents little opportunity to reduce greenhouse gas emissions or to provide enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants. It is however of a size that could facilitate these aims including enhancing connectivity of sites. Average house prices in the ward area indicate opportunity to provide additional housing to influence affordability. However if developed the western parcels may not provide a sustainable location for development without significant intervention. Development would require substantial supporting community infrastructure and services to support the new community.

The site has potential to improve employment opportunities for residents. The eastern parcels of the site are close to Alconbury Weald and Alconbury Enterprise Zone and Crossways Distribution Centre which the site promoter proposes is more suitable for employment uses, this location would provide opportunities to link to nearby economic clusters. Integration could be achieved after the completion of the Enterprise Zone. The north western parcel relates well to existing employment use and could provide opportunity for local business expansion. The site promoter believes the site would support the delivery of a sustainable rapid transit/busway network which would link to Alconbury Weald, Huntingdon and beyond and link to a proposed guided busway extension and railway station however further confirmation would be required. These could provide sustainable links to other communities if implemented. Opportunities are also present for enhancing active travel linkages however these are also unconfirmed.

The land currently has a wholly agricultural character with its sense of place being that of the open countryside. A strong landscaping scheme would be required. Development would fundamentally alter the landscape setting and any scheme would need to create a wholly new sense of place. Disruption or disturbance to ancient woodlands, scheduled monument and the setting of the villages of Upton and Alconbury Weston (which has a conservation area) could impact on the sense of place. A landscape assessment would be required. It is unclear currently whether this could be achieved. The site proposal has the potential to impact on ecology

and biodiversity and scheduled monument an increase in footfall could detrimentally impact this and Bevill's Wood, Hill Wood and Long Coppice', Upton Wood and Hermitage Wood ancient & semi-natural woodlands and County Wildlife sites. The scale of the site means that there may be archaeological value within the site, but further assessment would be required to confirm or deny this.

The site is well related to the surrounding countryside. The eastern parcels, proposed for potential commercial uses relate well to Alconbury Enterprise Zone and Crossways Distribution Centre. However integration of the north and south eastern parcels of land may be unachievable do to the dissection of the sites by a public footpath. The eastern and western parcels do not relate well to each other (being separated by the A1) and integration of the two may require significant infrastructure. The site has strong connections to the strategic road network (A1) which would assist in the daily operation of the site.

Significant masterplanning would be required to demonstrate that the site could create a sense of place in relation to accessibility, townscape impacts of Upton and Alconbury Weston and the affect on ancient woodlands, alongside the integration of properties that are within the north eastern parcel

A1 runs through the centre of the proposed site which means some of the site will be susceptible to air, light and noise pollution. Mitigation measures may be required to minimise the impact on the future site occupiers.

The scale of the site and proposed commercial uses has the potential to increase traffic on the strategic road network increasing air pollution. The scale of the site may impact on the wider landscape, ancient woodlands setting and the nearby villages of Upton and Alconbury Weston in terms of air, light, noise and visual pollution. An assessment would be required to establish impact and mitigate where necessary.

## Summary of SA

The site is not constrained by fluvial flood risk but has some surface water flood risk is present. The site is wholly greenfield grade 3 agricultural land.

The site proposes 400 homes which has the potential to support a wide range of types, sizes and tenures. The site is beyond 5km of a town centre, and beyond 800m of a local convenience store, primary school and culture and leisure facilities. The site is adjacent to Crossways Distribution Centre and is approximately 500m from Alconbury Weald Enterprise Zone meaning nearby employment opportunities are accessible to future occupiers. The site within 800m of a slightly below average frequency bus stop meaning that there is some access to public transport. The site is sufficiently remote from all designated nature sites and has limited capacity to enhance the existing blue or green infrastructure network. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards'. The site proposes 400 homes and has capacity for natural, green and open spaces within the site. The site adjoins to Hermitage Wood to the east which is a County Wildlife Site an ancient woodland but is sufficiently remote from all of the other designated nature assets. Proximity to the site and the potential of increased footfall from nearby residents has the potential to adversely impact Hermitage Wood in terms of ecologically and biodiversity and nearby concentrations of ancient woodland.

The proximity of the site to the A1, B1043, Crossways Distribution Centre and Alconbury Enterprise Zone mean that future occupiers may be subjected to light, noise, odour or visual pollution which may require investigation.

The site proposal could also impact the woodlands in terms of light and noise, with the potential to detrimentally impact existing habitats and species.

The site has a greater relationship to the open countryside than the nearby uses. The proposed development has the potential to adversely impact the adjacent and nearby ancient woodlands, specifically . The site is south of Crossways Distribution Centre, which would require assessment as to the compatibility of these sites in terms of amenity. The site forms part of a green break between Crossways Distribution Centre and Alconbury Weald/ Alconbury Enterprise Zone. Due to its separation from Alconbury Weald it is currently unclear how the site could be masterplanned to become part of this community without further completion of the Alconbury Weald development and/or compilation of potential intervening land to create a more comprehensive development, additional information would be required.

Due to current lack of access from the B1043 and Alconbury Weald the site is isolated regarding means of access. it is currently unclear how the site could be masterplanned to become part of this community without further completion of the Alconbury

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			<p>Weald development, coordination of access arrangements which could present land ownership issues and/or compilation of potential intervening land to create a more comprehensive development</p> <p>Until development at Alconbury Weald / Alconbury Enterprise Zone development has made substantial progress and access is agreed it is unclear whether development could be achieved.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	Hermitage Wood lies to the west which includes a scheduled monument, the site has the potential to detrimentally impact this heritage asset as a result of increased footfall from new residents.

#### Summary of SA

The site is not constrained by fluvial flood risk but has some surface water flood risk is present. The site is predominantly classified as grade 3 agricultural land, part of the eastern portion of the site is classified as non agricultural land.

The site proposes 840 homes which has the potential to support a wide range of types, sizes and tenures. The site is beyond 800m of a local convenience store, 2.5km from a freestanding supermarket and 5km of a town centre and beyond 800m of culture and leisure facilities. The site is remote from primary school and has insufficient capacity to provide a school on site. Improved access to a primary school could be achieved upon successful integration into Alconbury Weald. The site within 1.5km of Crossways Distribution Centre and adjacent to Alconbury Weald Enterprise Zone meaning nearby employment opportunities are accessible to future occupiers. The site is remote from a bus service and train station.

The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards'. The site proposes 840 homes and has capacity for natural, green and open spaces within the site. It has limited capacity to enhance the existing blue or green infrastructure network. The site adjoins to Hermitage Wood to the east which is a County Wildlife Site an ancient woodland and includes a scheduled monument. Proximity to the site and the potential of increased footfall from nearby residents has the potential to adversely impact Hermitage Wood in terms of ecologically and biodiversity and heritage and nearby concentrations of ancient woodland.

The proximity Alconbury Enterprise Zone mean that future occupiers may be subjected to light, noise, odour or visual pollution which may require investigation. The site proposal could also impact the woodlands in terms of light and noise and visual pollution.

## 1 Northern Central Huntingdonshire

The site has a greater relationship to the open countryside than the nearby uses. The proposed development has the potential to adversely impact the adjacent and nearby ancient woodlands and scheduled monument. The site is north and west of Alconbury Enterprise Zone which would require assessment as to the compatibility of these sites in terms of amenity. The site forms part of the wider countryside. Due to current lack of access from the B1043 and Alconbury Weald the site is isolated regarding means of access. It is currently unclear how the site could be masterplanned to become part of this community without further completion of the Alconbury Weald development, coordination of access arrangements which could present land ownership issues and/or compilation of potential intervening land to create a more comprehensive development. Until development at Alconbury Weald / Alconbury Enterprise Zone development has made substantial progress and access is agreed it is unclear whether development could be achieved.

St Andrews Way crosses the A1 and is elevated above ground level north of the site which could exacerbate these issues and cause additional light pollution into the site.</p> <p>St Andrew's Way is a sweeping bend with fast moving traffic safety of access and exit to and from the site is a significant issue.</p> <p>Due to the presence of the A1 and St Andrew's Way flyover it is not considered that high quality development could be achieved.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage within or in close proximity to the site.

#### Summary of SA

The site is not constrained by fluvial or medium surface flood, some low risk surface water is present. The site is wholly greenfield and a mix of grade 3 agricultural land (approximately 1 third) and urban land (approximately 2 thirds). The site is of a size that could contribute to the housing needs of the district.

# 1 Northern Central Huntingdonshire

The site is within 800m of a local convenience store, several culture and leisure facilities including Sawtry Community Centre, CARESCO Centre, The Old School Hall, a Church, playing fields and Public House meaning local services and facilities would be accessible to future residents. The site is approximately 1.1km from a primary school. The site is approximately 800m from Old Great North Road Industrial Estate and 1km from Brookside Industrial Estate which could provide employment opportunities. The site is with 200m of a below average frequency bus stop. There are no designated heritage assets within or in close proximity to the site. The site is sufficiently remote from designated nature assets and green spaces (identified in Natural England's 'Access to Greenspace Standards').

The site has little relationship with the existing townscape and provides a countryside feel, contributing to the approach to the village which if lost would cause a detrimental impact. The site acts as a green barrier between St Andrews Road and the A1.

Noise disturbance, air quality and light pollution would be a significant issue to future residents as a result of the A1 and St Andrew's which is elevated above ground level north of the site. Safety of access and exit to the site would require mitigation as St Andrew's Way is a sweeping bend with fast moving traffic.

Due to the presence of the A1 and St Andrew's Way flyover it is not considered that high quality development could be achieved.

Access to the site is a significant constraint at present with no direct link to road infrastructure. This situation may change if development is completed to the east and access could be achieved from this site.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to the site.

# 1 Northern Central Huntingdonshire

## Summary of SA

The majority of the site is within flood zone 1, however 3b is also present alongside surface water flood risk which would require mitigation. The site is wholly greenfield grade 3 agricultural land. The site is of a size that could include a wide range of types, sizes and tenures.

The site is approximately 500m from a local convenience store, is within Sawtry Village where there is a primary school; an unimplemented site to the east plans for provision of a primary school, however the site to date remains undeveloped. The site is removed from other local services and facilities and beyond 800m of cultural and leisure facilities. The site is within 500m of Old Great North Road Industrial Estate and 2km from Brookside Industrial Estate which could provide employment opportunities. The site is within 800m of an average frequency bus stop. There are no designated heritage assets within or in close proximity to the site. The site is sufficiently remote from designated nature assets and green spaces (identified in Natural England's 'Access to Greenspace Standards').

The site has little relationship with the existing townscape and is more related to the countryside. It is isolated from the main residential area of Sawtry by open countryside and Sawtry Brook. Development on the site would have a significant landscape impact which would require strategic landscaping to transition to the open countryside. Access to the site is a significant constraint. An approved application for homes to the west of the site could change the sites potential in the future.

**\*Evidence submitted by the site promoter notes that the primary access route to the site for vehicles could be from the neighbouring site (which is yet to be built) which fronts onto Glatton Road and therefore the measurements for site's sustainability appraisal have been set from the site's eastern boundary.**

## Summary of SA

The site is for Biodiversity Net Gain opportunities. Biodiversity Net Gain sites are classified as water compatible development and can contribute to improved drainage and water storage. The site would therefore have a positive impact on flood risk. The proposed use of the site would have a positive impact on the surrounding landscape and ecology. It can contribute to increasing resilience to the impacts of climate change, through planting and habitat restoration. There is a public right of way that runs along the site frontage on Gidding Road and the proposal could provide opportunities to integrate active travel infrastructure for work and leisure purposes. There are no heritage assets within or in close proximity to the site.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			Masterplanning of the site would require careful consideration of the impact on the cemetery to the south, although development in this area provides some evidence that this could be achieved, however this may be dependent on the final use.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site but it does adjoin to a graveyard to the south where the Tombstones Grave Yard, a grade II listed building, is located which could be adversely impacted by the development.

#### Summary of SA

The majority of the site is within flood zone 1, however zones 2 and 3 is also present alongside surface water flood risk which would require mitigation. The site is wholly greenfield land and just over half of the site is grade 3 agricultural land and the remaining land is grade 2 meaning that there are no opportunities for redevelopment or reuse of previously developed land. The site has been put forward for a number of potential uses including employment, commercial leisure uses, transport and parking/lorry parking or renewable energy, dependent on the final use it has the potential to support high or low density employment within the district, proposals for parking/lorry parking would assist with the logistics industry.

The site is distant from a local convenience store, freestanding supermarket and a town centre. The site is reasonably removed from convenience stores with the closest local convenience store 1.2km away, the site is within 800m of a pavilion but is beyond 800m from other cultural and leisure facilities within Sawtry. A primary and secondary school are located in the village which is separated from the site by the A1. The site will provide 14.56ha of employment land is within 1.5km of Brookside Industrial Estate and Old Great North Road Industrial Estate which could provide additional employment opportunities to compliment current uses. The site is within 1.1km of an average frequency bus stop. The site is remote from nature designations and natural green space using Natural England's 'Access to Greenspace Standards'.

The prospect of causing widespread light, noise, odour or visual pollution will be dependent on the final use, renewable energy proposals would have a negligible impact, whereas lorry parking would increase light, noise, odour and visual pollution in the area. The site is near the A1 which could cause noise odour or visual pollution. The site is exposed in the wider landscape setting and would require landscape mitigation. Proposed uses could impact on the tranquillity and setting of the cemetery and nearby a listed building, however, heavy screening through planting to could minimise the impact of the conflicting uses. The site is well placed near to other employment and industrial uses and access to the A1 means that the site has the potential to be effectively masterplanned into and compliment the existing cluster.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
	<ul style="list-style-type: none"> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>		
SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	+	The proposal supports the provision of additional retail and commercial leisure uses (although floorspace is not confirmed), schools, community centre and health centre which could support the community.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located as such that it has the potential to be effectively masterplanned to be integrated with the existing community. Strategic landscaping would be required to ensure a transition from residential to countryside location. The site has access to the A1. Development close to St Judith's Lane (a rural country lane) would require sensitive design to minimise landscape and ensure transport movement does not conflict with its rural use and transition into the wider landscape.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development

## Summary of SA

The majority of the site is within flood zone 1, however zones 3 is also present alongside surface water flood risk which would require mitigation. The site is wholly greenfield land and predominantly grade 3 agricultural land with a very small portion of the south eastern corners of the site contained within grade 2 agricultural land (less than 0.1ha). The site proposes up to 500 dwellings which could include a wide range of types, sizes and tenures.

The site is within 800m of a local convenience store, pub, public park and allotments, meaning some local services and facilities would be accessible to future residents. Sawtry Junior Academy is within 1.4km. The site proposal identifies potential for retail, school, community centre uses however no capacity or certainty of delivery is provided. The site is approximately 2km from Brookside Industrial Estate and 1.8km from Old Great North Road Industrial Estate providing some access to employment opportunities. The site is within 800m of an average frequency bus stop. The site is outside Natural Cambridgeshire's Green infrastructure network but has proposed

18 ha of open space. which may contribute to improvements in habitat connectivity. It is just outside of Natural England's 'Access to Greenspace Standards of the '300m of 2ha of natural greenspace'. The site is approximately 300m from Aversley Wood SSSI meaning it could impact on the biodiversity and ecological significance of the site. There are no designated heritage assets within or in close proximity to the site.

The site would form a significant extension to the village of Sawtry, but is well related to the settlement and services and facilities. Due to the proximity to the A1 some of the site could be subject to noise, odour or visual pollution. The site's prominence within the wider landscape and in a sensitive location where the land transitions from flat to the beginning of High Holborn Hill ridge means strategic landscaping would be required. Development close to St Judith's Lane (a rural country lane) would require sensitive design to minimise landscape and ensure transport movement does not conflict with its rural use and transition into the wider landscape.

The potential scale and use of development is of a nature that may make it difficult to integrate with the existing community. However proximity to the A1 could assist with the operation of the site, transport movements would have to be via Toll Bar Way or the B1043, which may make roadside service use unpractical due to distance required to travel to access to the services. However it may be of assistance to employment uses dependent on the scale. To minimise impact employment uses could be reduced to reflect development density to the south of Coppingford Road.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development

### Summary of SA

#### 1.12 Update and amend yellow

The site is not constrained by fluvial flood risk, but would require surface water flood mitigation. The site is wholly greenfield land with the eastern third of the site grade 2 agricultural land and the remainder grade 3. The site proposes employment or roadside service uses. The site is approximately 750m from Aversely Wood SSSI meaning it could impact on the biodiversity and ecological significance of the site and be impacted by increased footfall.

1 Northern Central Huntingdonshire

Page 2458 of 3488

The site is beyond the required distance from a local convenience store, a freestanding supermarket and town centre. The site is nearby to the built up area within Sawtry where there is primary and secondary school. The site is beyond 800m from cultural and leisure facilities within Sawtry. The site proposes employment and/or roadside services on the site which could provide additional high or low density employment. The site does not meet the criteria for Natural England's 'Access to Green Space Standards' and has very limited capacity for linkages to the existing strategic green or blue infrastructure network.

There is a possibility that the site could be subject to light, noise and odour pollution due to proximity to the A1. The proposed uses have the potential to cause light, noise, odour and visual pollution especially in the case of roadside services which would include increase traffic movements. The uses could provide additional high or low density employment.

The site is in an isolated location removed from extensive built development and highly exposed within the wider landscape, the site is more related to the countryside. The site promoter proposes employment and roadside services, which whilst out of keeping with this rural hamlet does have a relationship to the A1, which could assist with the operation of the site. Transport movements would have to be via Toll Bar Way or the B1043, which may make roadside service use unpractical due to distance required to travel to access to the services. However it may be of assistance to employment uses dependent on the scale. To minimise impact on the hamlet and landscape, employment uses could be reduced to reflect development density to the south of Coppingford Road.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to the site that would be adversely impacted by the development

## Summary of SA

The majority of the site is within flood zone 1, flood zones 2, 3a are present as is surface water flood risk which would require mitigation. The site is wholly greenfield land grade 3 agricultural land. The site proposes employment uses.

The site is beyond the required distance from a local convenience store, a freestanding supermarket and town centre. The site is nearby to the built up area within Sawtry where there is primary and secondary school. The site is within 400m of a pavilion and playing fields but is beyond 800m from cultural and leisure facilities within Sawtry. The site is adjacent to Natural England's 'Doorstep Standard', defined as being an area within 200m from 0.5 ha of natural green space but has limited capacity for linkages to it.

Proximity to the A1 means there is a possibility that the site could be subject to light, noise and odour pollution.

The proposed uses could provide additional high density employment. The eastern parcel of land would require landscape mitigation due to exposure within the wider landscape. The shape of the western parcel makes it unclear if built development could be accommodated on the site and elevation of buildings would require careful consideration.

The site is well related to existing employment development and in a location that could be effectively masterplanned to become part of the cluster of employment uses in the area and provide opportunities for local business expansion. Access to the A1 would compliment the proposed use of the site.

**Summary of SA**

The site is not constrained by fluvial or surface water flood risk. The site is wholly greenfield land grade 3 agricultural land. The site is proposed for employment use or commercial leisure uses - hotel, cinema, gyms etc.

The site is beyond the required distance from a local convenience store, a freestanding supermarket and town centre. The site is nearby to the built up area within Sawtry where there is primary and secondary school. The site is within 400m of a pavilion and playing fields but is beyond 800m from cultural and leisure facilities within Sawtry. The site is adjacent to Natural England's 'Doorstep Standard', defined as being an area within 200m from 0.5 ha of natural green space but has limited capacity for linkages to it.

The site is bounded by the A1 to the east and the B1043 to the west meaning there is a possibility that the site could be subject to light, noise and odour pollution and the proposed uses have the potential to cause some light, noise, odour and visual pollution.

The site is well related to existing employment development and in a location that could be effectively masterplanned to become part of the cluster of employment uses in the area and provide opportunities for local business expansion. The site is well screened meaning that landscape impact would be minimal. The shape of the site makes it unclear if built development and associated parking could be accommodated on the site and elevation of buildings would require careful consideration. Access to the A1 would compliment the proposed use of the site.

A proposed capacity has not been provided to indicate whether land would be used efficiently.

The A1 sits to the west, the presence of which would compliment the proposed use of the site. Development of the site would have a significant landscape impact and would envelope isolated residential properties requiring mitigation to minimise impact.</p>

# 1 Northern Central Huntingdonshire

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to that site that would be adversely impacted by the development.

## Summary of SA

A significant proportion of the site is within flood zone 3 (11ha) and surface water is present, mitigation would be required to address flood risk. The site is wholly greenfield land with just under half of the eastern portion of the site is grade 3 agricultural land and the rest is grade 2. The site is proposed for employment use with no capacity provided, but could provide high density employment further south of Old Great North Industrial Estate and could provide opportunities for business expansion.

The site is beyond the required distance from a local convenience store, a freestanding supermarket and town centre and cultural and leisure facilities. The site is nearby to the built up area within Sawtry where there is primary and secondary school but is separated from the site by the A1. The site does not meet the criteria for Natural England's 'Access to Green Space Standards' and has very limited capacity for linkages to the existing strategic green or blue infrastructure network.

The sites proximity to the B1043, B1090 and A1 means that the site could be subject to light, noise and odour pollution. The proposal is for employment, which has the potential to cause light, noise, odour and visual pollution. An assessment would be required to identify and where possible mitigate these impacts

The site is more related to the countryside, would be isolated from existing employment related development and separated by a green wedge meaning integration with existing business development would be difficult to achieve. Development of the site would have a significant landscape impact and would envelope isolated residential properties requiring mitigation to minimise impact. Strategic landscaping to the east would be required to screen development. On the south east boundary sits a former oil depot and road haulage site, the compatibility of the proposed site with this development would require further assessment, a contamination risk assessment would be required.

Proximity to the B1043, B1090 and A1 would compliment the use of the site.

The site has been put forward for employment use with no estimated capacity provided it therefore cannot be established if the land would be used efficiently.

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no designated heritage assets within or in close proximity to the site.

### Summary of SA

The majority of the is within flood zone 1, however flood zone 3 present on approximately 7% located predominantly within the north and also through the centre in association with a drain and surface water flood risk which would require mitigation. The site is wholly greenfield land with the northern quarter grade two agricultural land with the remainder grade 3.

The site is proposed for 170,000sqm of logistics/distribution which could provide low density employment.

The site is beyond the required distance from a local convenience store, a freestanding supermarket and town centre and cultural and leisure facilities and schools. A relatively small area in the south of the site is within 1km from 10 ha of natural green space according to Natural England's 'Access to Green Space Standards'.

The sites proximity to the B1043, B1090 and A1 means that the site could be subject to light, noise and odour pollution as could the proposed use. Links to the A1 could compliment the proposed use of the site, however distance to A1 linkages would require a transport impact assessment to ascertain if substantial HGV movements could be accommodated on the B1043.

The site is more related to the countryside and significantly isolated from large scale existing employment, however a service station with complimentary facilities such as hotel and restaurant sit just outside the south western corner. This would extensively extend the employment uses within this area. The site would require significant strategic landscaping. Proximity to SSSI 'The Odd Quarter' means that landscape setting, ecological and biodiversity impact could be significant and not sensitive to the character of the local environment. The proposed use could exacerbate the impact on the SSSI. Development would envelope isolated residential properties requiring mitigation to minimise impact.

SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The site is located such that it can be effectively masterplanned to become part of the existing place and community. The site contains an existing employment use, the proposed development allow for local business expansion or small scale local business opportunities. Impact on heritage assets, conservation area and the County Wildlife Site would require assessment to ensure that the proposal could provide development sensitive to the character of the local environment.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	A grade II listed bridge sits just outside of the south western corner of the site. The proposed use has the potential to impact upon this heritage asset through increased transport movements in association with the proposed employment use. Further assessment would be required to understand the impact. A grade II listed residential property sits on the western boundary, which is already adjacent to the current employment use on the site, if this were to remain in is unlikely that the site would further impact upon this asset. Across the road is a conservation area and residential properties further development would need to demonstrate sensitivity to the setting.

**Summary of SA**

56% of the site is within flood zone 1 and flood zone 2 is present on the site as is surface water flood risk which would require mitigation. The site is part greenfield and part previously developed land meaning there is some opportunity for the reuse and recycling of existing land, materials or buildings. The site is wholly grade 3 agricultural land.

The site has the opportunity to provide at least 2 hectares of employment land. The site is beyond 5km of a town centre, but within 800m of a local convenience store, a primary school, pub, church and meeting halls meaning some local services and facilities would be accessible to future residents. The site is beyond 1.5 km of Bicton Industrial Estate but within 5km and beyond 5km from Kimbolton. However the site has the opportunity to provide at least 2 hectares of employment land and some additional employment opportunities. Public transport options are limited at best. The site is within 200 m of Ellington Brook Pollard Willows a County Wildlife site meaning impact on the site may be impacted by the proposed use of the site. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. Landscape impact would be minimal as the northern boundary abuts the A14 and if trees and hedgerow were retained.

The presence of the A14 has the potential to cause light, noise odour or visual pollution. The site is proposed for employment uses, the size of the site is not of a scale likely to cause substantial pollution.

The site is located such that it can be effectively masterplanned to become part of the existing place and community. The proposed development allow for local business expansion or small scale local business opportunities. Impact on heritage assets, conservation area and the County Wildlife Site would require assessment to ensure that the proposal could provide development sensitive to the character of the local environment. The proposed use has the potential to impact upon the grade II listed bridge through increased transport movements in association with the proposed employment use.

			provision of community services. However, further evidence would be required to justify the provision of car parking in association with increased church usage as the site promoter notes that it is their understanding that the church going to be partially repurposed to provide the functions of a community hall, in the absence of a village hall.
SA15	<ul style="list-style-type: none"> <li>• Provide high quality development sensitive to the character of the local environment?</li> <li>• Promote sustainable design solutions?</li> <li>• Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	The proposed development is located on Stow Road the site provides a clear setting establishing a clear view and context of Church of St James. The site is highly exposed forming an integral part of the village identity. Development in this area has the potential to impact on the setting of the church and character of the area. The site is wholly greenfield land and offers no opportunity for the redevelopment of previously developed land. The site has the potential to be integrated into the existing community however this may not outweigh the impact on the church and the character of the area. Proposed car parking for the Church has the potential to increase traffic along the narrow Church Lane and grade II residential property if access was proposed from this location.
SA16	<ul style="list-style-type: none"> <li>• Impact on any heritage assets or their settings?</li> </ul>	-	A grade I listed building abuts the north eastern corner of the site - The Church of St James and cemetery. The site provides a distinct setting, establishing a clear view of Church of St James from Stow Road. A heritage impact assessment would be required to establish the impact on the setting of the church and longevity of use in terms of potential cemetery expansion requirements and the conservation area which covers the site. Proposed car parking for the Church has the potential to increased traffic along the narrow Church Lane and grade II residential property if access was proposed from this location.

**Summary of SA**

The site is not constrained by fluvial flood risk with some surface water flood risk which would require mitigation. The site is wholly greenfield land presenting no opportunity for the reuse and recycling of existing land, materials or buildings. The site is wholly grade 3 agricultural land.

The site is of a size that could contribute to the housing needs of the district. The site is beyond 5km of a town centre, but within 800m of a local convenience store, a primary school, pub, church and meeting halls meaning some local services and facilities would be accessible to future residents. The site is beyond 1.5 km of Bicton Industrial Estate but within 5km and beyond 5km from Kimbolton meaning it is not immediately accessible to a range of employment opportunities. Public transport options are limited at best. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. The site is within 200 m of Ellington Brook Pollard Willows a County Wildlife site meaning impact on the site may be impacted by the proposed use of the site.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site relates well to the existing settlement with residential properties to the north south and west of the site.

The site provides a distinct setting, establishing a clear view of Church of St James (a grade I listed building). The site is highly exposed forming an integral part of the village identity. Development of the site may affect the setting of the church and longevity of use in terms of potential cemetery expansion requirements. The site promoter proposes very low density development of 10 to 15 homes, open space and car parking for the church. Elevation and layout of the buildings would be an important consideration in terms of views of the Church.

The proposal for car parking for the church could assist in reinforcing the provision of community services. However, further evidence would be required to justify the provision of car parking in association with increased church usage. Proposed car parking for the Church has the potential to increase traffic along the narrow Church Lane and grade II residential property if access was proposed from this location.

The site has the potential to be integrated into the existing community however this may not outweigh the impact on the church and the character of the area.

# 1 Northern Central Huntingdonshire

## Summary of SA

The site is not constrained by fluvial flood risk with some surface water flood risk which would require mitigation. The site is wholly greenfield land presenting no opportunity for the reuse and recycling of existing land, materials or buildings. The site is wholly grade 3 agricultural land.

The site is of a size that could contribute to the housing needs of the district. The site is beyond 5km of a town centre, but within 800m of a local convenience store, a primary school, pub, church and meeting halls meaning some local services and facilities would be accessible to future residents. The site is beyond 1.5 km of Bicton Industrial Estate but within 5km and beyond 5km from Kimbolton meaning it is not immediately accessible to a range of employment opportunities. Public transport options are limited at best. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. The site does not impact upon heritage assets.

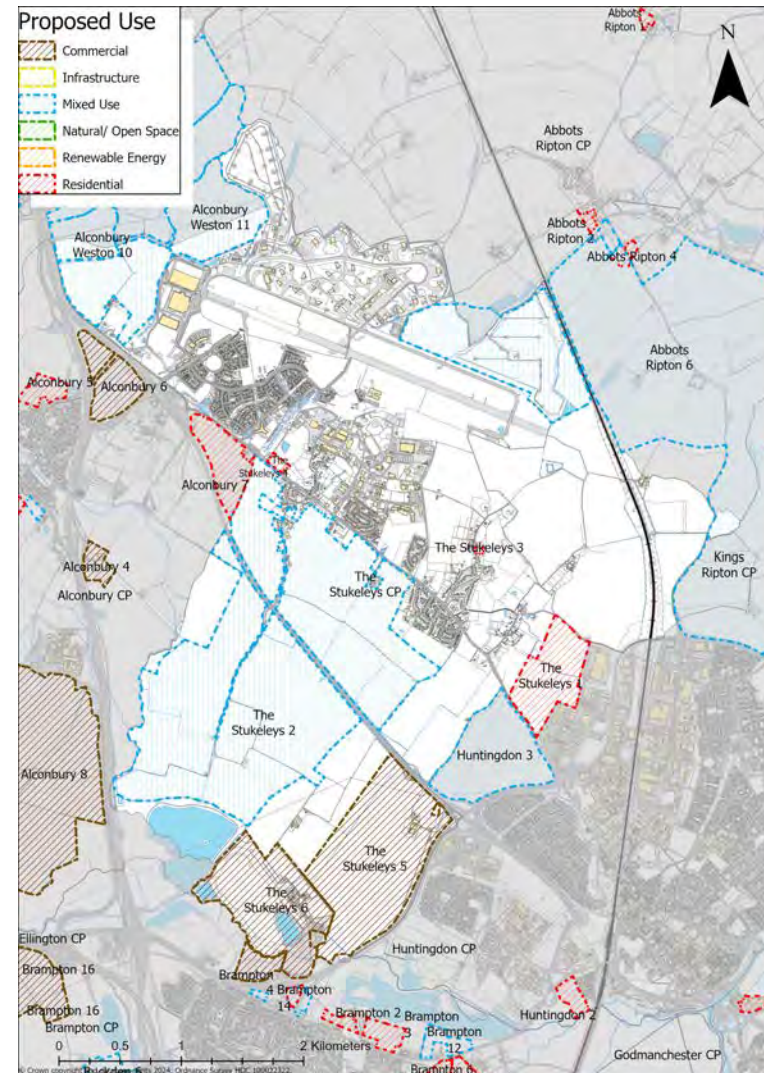

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site is well located on Stow Road with a school and residential properties bounding the northern edge with public rights of way linking to the village and nearby services and facilities. The western, southern and eastern boundaries are screened by trees and hedgerow meaning it would have negligible landscape impact from Stow Road and to residential properties to north if trees and hedgerow were retained. Development has the potential to impact the setting and access to Upton Green (a registered village green - H-VG15), which sits just outside the south eastern corner.

The site proposes 80 to 100 homes which would represent a significant extension representing over a third of the current number of homes within the village. Due to its scale this may provide challenges in effectively masterplanning a large disproportionate residential expansion to become part of the existing community. Consideration of a smaller number of residential would assist in integration of the proposed development, integration of public rights of way and setting of the village green.

## Updates after initial appraisal

## The Stukeleys

- 1.14** A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:
- The Stukeleys 1: Land North East of Ermine Street (adjoining Huntingdon)
  - The Stukeleys 2: Nook Farm, Little Stukeley
  - The Stukeleys 3: Land between 76 and 86 Owl End, Great Stukeley
  - The Stukeleys 4: Land North of Ermine Street, Little Stukeley
  - The Stukeleys 5: Land North of A141, between Huntingdon Racecourse and A1307
  - The Stukeleys 6: Huntingdon Racecourse - this site also partially falls within Brampton parish. As the majority of the site falls within The Stukeleys parish, the site has been assessed here instead. A link to the site can also be found within the Brampton section of the Central Huntingdonshire LAA document.
- 1.15** Please note that Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield also partially falls within The Stukeleys parish as well as Upton and Coppingford parish, but it has been included under Alconbury Weston as most of the site lies within that parish area.
- 1.16** Also, Abbots Ripton 6: Sapley Park Garden Village also partially falls within The Stukeleys parish as well as Huntingdon and Kings Ripton parishes, but it has been included under Abbots Ripton as most of the site lies within that parish area.

### Summary of SA

The site is not constrained by flood risk, some minimal surface water flood risk would require mitigation. The site is wholly greenfield land with the majority grade 2 agricultural land and a negligible portion the southern corner within grade 3.

The site proposes 648 residential units which means it is of a size that could include a wide range of types, sizes and tenures.

# 1 Northern Central Huntingdonshire

The site is approximately 2km from Huntingdon town centre. The site is approximately 1.2km from Stukeley Meadows Primary School and beyond 800m from any culture and leisure facilities. The southern corner of the site adjoins to the 'Neighbourhood Standard' which is defined as being within 1km from 10 ha of natural green space.

The eastern boundary of the site adjoins Ermine Business Park which could expose the site to light, noise, odour or visual pollution. The scale of the site (proposed for 648 homes) is such that it could adversely affect the surrounding countryside as a result of its visibility in the wider landscape and potentially increase light pollution especially on residential development further north.

The site is well related to Ermine Business Park to the south and strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm which sits on the northern boundary of the site. Development may adversely affect the surrounding countryside to the north east due to its elevated nature and long distance views into the site and would require effective masterplanning and strategic landscaping to address this and to transition to open countryside and the designated settlement break. Masterplanning should consider how the site would integrate with Huntingdon and allocation SEL1.1.

Land would be required to be safeguarded for the re-routing of the A141, which may affect the layout and capacity of the site. Integration of public rights of way would be required as would remediation to facilitate safe pedestrian movement across the the A141 to the market town of Huntingdon.

A conservation area and listed buildings within Great Stukeley and Little Stukeley are also nearby to the northern parcel of land.</p> <p>The site proposal would be required to assess, mitigation, integration and / or impact of nearby heritage assets.</p>

## Summary of SA

Nook Farm proposal is wholly greenfield agricultural land and grade 3 and 2 agricultural land; grade 2 is mostly located within southern parcel. The site is open countryside and the reuse of previously developed land is negligible. Approximately three quarters of the site is flood zone 1 with areas of flood zone 2 and 3a present. Risk from surface water flooding is present across the site.

Average house prices in the ward area indicate relative high cost housing in comparison to most of the district. Delivering new homes on this site would facilitate delivery in a sustainable location that would meet the community's needs. The site is of a size that would require services and facilities such as schools, community centres, employment, retail and leisure opportunities, the quantum of which has not been provided. It is in a reasonably sustainable location for employment opportunities other employment locations situated in the north of Huntingdon and is within 2.5km of Huntingdon Town Centre.

Development in this area has the potential to fundamentally impact the landscape and townscape character around and within Great Stukeley and Little Stukeley. Development would create harsh intrusive edges to the countryside setting and would be clearly seen from all around. Significant strategic landscaping would be required and the achievability of this is uncertain. The northern parcels form the setting for the villages of Great and Little Stukeley and provide the distinct countryside setting to these rural villages (also a feature of the Central Claylands. It is considered that development in these northern parcels should be avoided.

The site promoter states that public transport options such as the proposed rapid transit/busway network which would link to Alconbury Weald, Huntingdon and beyond could provide sustainable links to other communities however these schemes have not been confirmed. The site is of a size that could provide active travel routes and links to strategic green networks such as the Great Ouse valley Priority landscape area and Hinchingsbrooke Country Park.

The site is near to Brampton Racecourse SSSI, Brampton Meadow SSSI is located and Hinchingsbrooke Country Park County Wildlife an increase population near these areas could detrimentally impact the wear and usage of these areas potentially putting them at risk.

The site is situated within the Central Claylands characterised by gently undulating farmland. The proposal would create four new communities changing the landscape from what is predominantly what is currently open farmed countryside, Many landscape features are present within the site including small wooded areas, tree belts, farm drainage and a reservoir, which would require integration.

The size of the site has the potential to increase traffic on the local and strategic road network increasing air pollution with the potential to affect future residents.

Strategic infrastructure would be required to access the site. The site promoter notes that it is understood that a new direct access to the infrastructure of the wider Huntingdon region via A1(M) can be achieved which will help to manage traffic flows in and out of the development and minimise impact on the local highway network.

The site promoter also notes that it would also support the delivery of a sustainable rapid transit/busway network which would link to Alconbury Weald, Huntingdon and beyond. This could reduce travel by private transport, however if these options were to not come forward car travel would dominate.

The site is currently open countryside and as such the presence of a mixed used development will increase light pollution in this area. The site is surrounded by the A1, A1307 and A141 which has the potential to cause noise pollution to future residents.

SA14	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	N	The proposal does not include retail or social uses.
SA15	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	+	<p>The land is located on Owl End, one of three 'Ends', it is a distinctive contiguous extension to the village of Great Stukeley. Residential properties are located north and south of the site. The site has the potential to be effectively masterplanned to become part of the existing community taking into account the local vernacular. Density would be required to be low and frontage only in order to be in keeping with the surrounding character and form of the area.</p> <p>The retention of trees and hedgerow along the western boundary would help to minimise ecological and biodiversity impact. Consideration landscaping required to transition to the wider countryside to the east and limit impact of wooded area to the north.</p>

SA Objective	Decision aiding questions: Will allocation of the site....	Score	Commentary
			Appropriate access to the site over a drainage ditch would require establishing.
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage within or in close proximity to the site that would be impacted by the development.

#### Summary of SA

The site is not constrained by fluvial or surface water flood risk. The site is wholly greenfield land with the majority of the site igrade 3 agricultural land and the north western corner grade 2. The site is less than 1 hectare and contributes to the government's aspiration to promote sites suitable for SME builders. The site promoter proposes 2 to 3 market and/or affordable homes

The site is approximately 4km from Huntingdon town centre, 1.2km from Stukeley Meadows Primary School and within 800m of Great Stukeley Village Hall, two churches and playing fields. The site is within 5km of multiple concentrations of employment including Ermine and Hinchingsbrooke Business Park and Stukeley Meadows Industrial Estate which could provide employment opportunities. The site is within 800m of an average frequency bus stop. The site does not meet the criteria for Natural England's standards for access to green space and has limited capacity for linkages to the existing strategic green or blue infrastructure network.

The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. The site has the potential to be effectively masterplanned to become part of the existing community taking into account the local vernacular. Density would be required to be low and frontage only in order to be in keeping with the surrounding character and form of the area.

The retention of trees and hedgerow along the western boundary would help to minimise ecological and biodiversity impact. Consideration landscaping required to transition to the wider countryside to the east and limit impact of wooded area to the north. Appropriate access to the site over a drainage ditch would require establishing.

#### Updates after initial appraisal

#### The Stukeleys 4: Land North of Ermine Street, Little Stukeley

**1.17** As identified in the LAA the site is not suitable for development due to its status in The Stukeleys Neighbourhood Plan as a protected settlement break.

# 1 Northern Central Huntingdonshire

1.18 Therefore a sustainability appraisal of the site has not been undertaken.

## The Stukeleys 5: Land North of A141, between Huntingdon Racecourse and A1307

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA1	<ul style="list-style-type: none"> <li>Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?</li> </ul>	+	<p>The site is bounded by the A141 and A1307, the A1 lies to the west meaning that the site may be subject to greenhouse gas emissions. Traffic emissions and other emissions generated from the operation of the proposed development (predominantly logistics) may increase emissions in the area. The site promoter proposes low carbon, energy efficient spaces to reduce energy demand, with BREEAM excellent as a minimum target, with green technologies proposed. An assessment would have to be undertaken to understand the impact on greenhouse gas emissions as a result of the proposed use. The site's location and scale means that some bus route connections could be made to the site which would help to reduce carbon emissions from travel.</p> <p>A small part of the southern tip of the site is within the Great Ouse Valley landscape priority area. There are no nature conservation assets within the site and the site is open countryside. However, Huntingdon Racecourse SSSI sits on the southern boundary of the site with which is linked from the site by a public right of way, Brampton Meadow SSSI is located within 1.2km (separated by the A1) and Hinchingsbrooke Country Park County Wildlife Site is less than 50m away (with public right of way provided to access and cross the A141) . An increased population in this area could detrimentally impact the wear and usage of these areas potentially putting them at risk. The site promoter proposes green and blue infrastructure on 63.68% of site's overall area, which could provide green corridors to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants.</p>
	<ul style="list-style-type: none"> <li>Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?</li> </ul>	+

The proposed site has the potential to impact on the setting of the listed building. The site promoter also identifies the Hungry Hall/Brookfield Farm a non-designated heritage asset which sits within the site.</p> <p>Development has the potential to impact on the setting on Waterloo Farm. The site would need to consider and mitigate against the impact on the heritage asset and demonstrate the avoidance of harm. The site promoter proposes design measures at both outline and reserved matters stages, to reduce the impact of the proposed development on Waterloo Farm.</p> <p>The demolition of Hungry Hall/Brook Farm is proposed which would constitute a loss of a heritage asset and its significance.</p> <p>The site promoter outlines that the site lies within an area of archaeological potential. Further assessment would be required to understand whether conservation and enhancement would be required or if there would be an impact on areas of archaeological value.</p>

**Summary of SA**

The Land North of A141, between Huntingdon Racecourse and A1307 is greenfield agricultural land the majority of which is grade 3 agricultural land. The site is open countryside and the reuse of previously developed land is negligible. Approximately 94ha (91%) of the site is within flood zone 1 with areas, with a small proportion of flood zone 2 3a and 3b present in the south, risk of flooding from surface water is present meaning mitigation measures will be required.

Development has the potential to support and enhance the more deprived areas of the district through provision of additional employment, education, skills and training. The site is near to other business and industrial uses which cluster around the north of Huntingdon, meaning that the compatibility of this site and use could be beneficial to the existing sector and local economy. The site has the opportunity to support retention and growth of indigenous companies by providing land for expansion of existing businesses, provide supply chain benefits or could provide opportunities for new investment to enhance the local economy. The site is within 5km of Huntingdon town centre and within 3.5km of leisure uses such as those located at and around Huntingdon Retail Park and Towerfields meaning access to social facilities and some services are relatively nearby. The site is south of Local Plan allocation HU 1 Ermine Street which is for residential, some retail and school and community facilities. Access to these services would extend the social and community offer to the proposed site if HU1 were built out and safe crossing of the A1307 provided.

The site has the potential to impact upon the landscape from the north, heritage assets (Huntingdon Racecourse SSSI, Hinchingsbrooke Country Park, Great Ouse Valley Landscape Priority Area) and nature conservation assets (Old Farm House, Waterloo Farm and Hungry Hall/Brookfield Farm), assessment and mitigation of which would be required. Integration of public rights of way would be required and there is potential to provide enhanced connectivity to areas of biodiversity value. Strategic landscaping would be required and elevation of the proposed buildings in relation to the rising nature of the land could mean that the impact of development on the wider landscape and from adjacent Huntingdon Racecourse could be significant.

The impact of the site on the supply of water resources is unknown and would be dependant on the industries that occupy the site and their need for water to undertake their operations.

The site is bounded by the A141 and A1307, the A1 lies to the west meaning that the site may be subject to greenhouse gas emissions. Traffic emissions and other emissions generated from the operation of the proposed development (predominantly logistics) would increase emissions in the area and noise, air and light pollution which would require further investigation. The latter of which may impact The Stukeleys. The site could integrate with the existing community if effectively masterplanned and provide additional economic benefits to Huntingdon. Strategic landscaping and safe crossings would be required to minimise the impact on the surrounding area and to safely integrate with existing and proposed uses.

			<p>Racecourse as a racing venue in the long term and so that non-racing events, activities and functions can continue to operate and evolve alongside the Racecourse's operations.</p> <p>The racecourse makes a valuable economic and social contribution to the Huntingdon area and limited development or redevelopment of previously developed land would need to be related to the existing uses and operation of the site.</p>
SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	There are no designated heritage assets within the site but there is a listed building approximately 200m north of the site that could be adversely impacted by the development.

#### Summary of SA

The site is heavily constrained by fluvial flood risk, only 5 ha of the site is within flood zone 1 on the north eastern edge. 92% of the site is also impacted from risk of flooding with climate change at 1 in 100 (Design Flood) and surface water flood risk is also present. The site is part previously developed land, some of which is located within flood zones 2 and 3 and part greenfield land and is grade 3 agricultural land. There are existing structures on site meaning that there is opportunity to prioritise previously developed land, however the site promoter also proposes further development on greenfield land within flood zone 1. Redevelopment of previously developed land has the opportunity to reduce flood risk in the area with new development focussed within flood zone 1 and flood risk mitigated. The site proposal has been put forward for employment, commercial leisure uses and outdoor sports and leisure and facilities for leisure events to ensure that the commercial viability of the operation of the Racecourse as a racing venue in the long term and so that non-racing events, activities and functions can continue to operate and evolve alongside the Racecourse's operations. This would provide opportunity for high and low density employment and retention of the Racecourse as a unique visitor attraction in the district. The site is currently home to Huntingdon & District Rugby Football club which is exploring opportunities to relocate to within the Alconbury Weald development, if this does not come to fruition any proposal would need to ensure the retention of this facility.

The site is within 5km of Huntingdon town centre and proposes leisure uses. The site has capacity for leisure uses on site and there is an existing publicly accessible playing field within the site. It is beyond 800m from other culture and leisure activities.

# 1 Northern Central Huntingdonshire

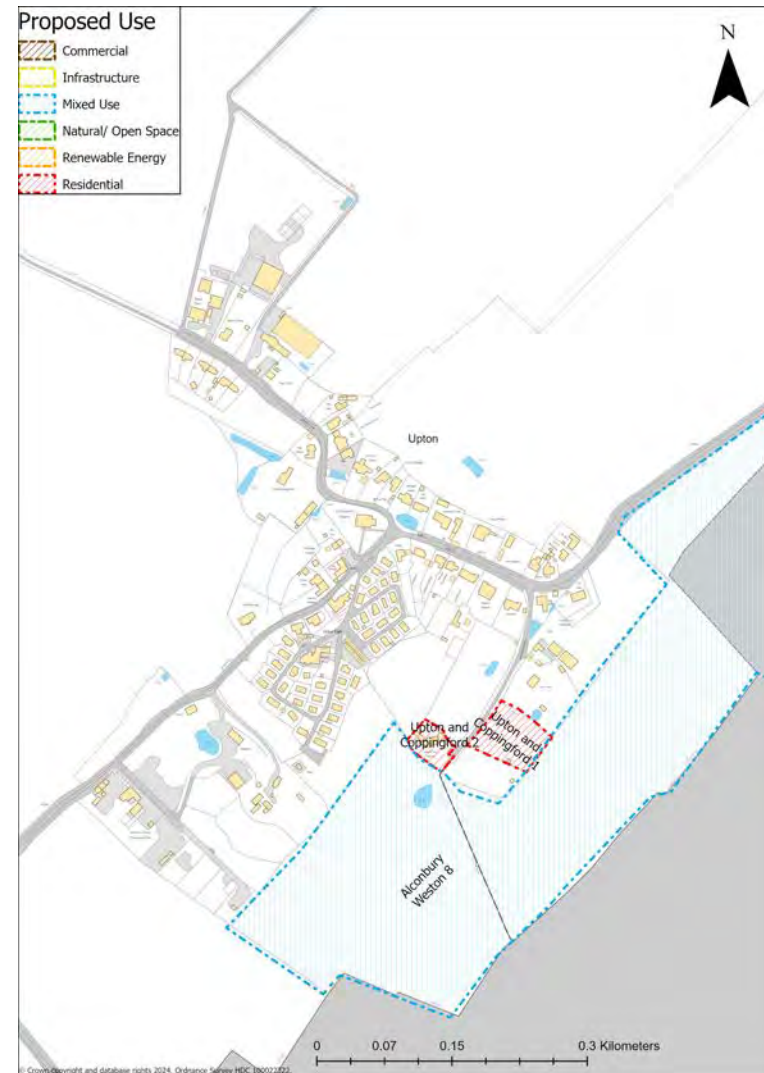

The proposed uses have the potential to adversely affect the surrounding countryside as a result of their visibility in the wider landscape and increases in light and noise pollution. Additional traffic generated could be mitigated by the existing dedicated junction from the A141. The proposal would not reinforce the role of the town or nearby villages, but could assist in the retention and commercial viability of the Racecourse. The site contributes to the strategic green infrastructure network as part of the Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley) and contains Brampton Racecourse SSSI, Brampton Meadow SSSI is located within 1km and Hinchingsbrooke Country Park County Wildlife Site is within 200m of the site. The majority of the site is within Natural Cambridgeshire's Great Ouse Valley Green Infrastructure Priority Area providing opportunities to link strategic networks.

Extensive development in this area could have a significant impact on the landscape, ecology and biodiversity of the area and wider countryside setting. It would require any development to be sensitive to the natural landscape and incorporate carefully designed and located development sensitive to the greenspace uses and value of the site. There is a listed building approximately 200m north of the site that could be adversely impacted by the development. Development should be focussed on existing previously developed land and within flood zone 1 in the north east of the site and relate to the existing uses and operation of the site to avoid negative impacts on Huntingdon town centre.

## Updates after initial appraisal

## Upton and Coppingford

- 1.20** A total of two sites have been identified/ put forward through the desktop review or Call for Sites process. These are:
- Upton and Coppingford 1: Land to South West of South Farm, Upton
  - Upton and Coppingford 2: Land to East/South East of Maple Tree House, off Pig Market End, Upton
- 1.21** Please note that Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield also partially falls within Upton and Coppingford parish as well as The Stukeleys, but it has been included under Alconbury Weston as most of the site lies within that parish area.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	+	There are no heritage assets within or in proximity to the site.

#### Summary of SA

The site is not constrained by fluvial flood risk with some surface water flood risk which would require mitigation. The site is wholly greenfield land presenting no opportunity for the reuse and recycling of existing land, materials or buildings. The site is wholly grade 3 agricultural land.

The site is less than 1ha and contributes to the government's aspiration to promote sites suitable for SME builders. The site has limited access to services, facilities and employment opportunities with a village hall and church within 800m. The site is sufficiently remote from all of the designated nature sites. The site is remote from any natural green space according to Natural England's 'Access to Greenspace Standards' and has limited capacity to enhance the existing blue or green infrastructure network. The site does not impact upon heritage assets.

The site is located near the end of Pig Market End where built development becomes more dispersed with only three residential properties attributed to the 'End' which has a greater relationship with the countryside than the residential area of the village. The proposed density of the site would be in keeping with the village and the site would require some landscaping to address the relationship to the open countryside and residential property to the north. The site is not of a size or scale that would impact the form or character of the local area.

## Brington and Molesworth

1.1 A total of 3 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Brington and Molesworth 1: Land West of Brookside, Molesworth
- Brington and Molesworth 2: Land opposite Jolly Hills Farm, Molesworth
- Brington and Molesworth 3: Land North and East of Hill Place, Brington

# 1 Western Huntingdonshire

## Brington and Molesworth 1: Land West of Brookside, Molesworth

1.2 As identified in the LAA, the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity

1.3 Therefore, a sustainability appraisal for the site has not been undertaken.

## Brington and Molesworth 2: Land opposite Jolly Hills Farm, Molesworth

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	-	The site lies within the conservation area and is about 100m from the grade II listed Mill House.

#### Summary of SA

Overall, the appraisal is mixed. The site scores very negatively in terms of the land being grade 2 agricultural land and being wholly greenfield land. The site does not relate well to the form of Molesworth and is detached from the existing built form meaning it could not be effectively integrated with the existing community. The site is not at risk from fluvial flood risk but there is some surface water flood risk. There are heritage constraints such as the conservation area and setting of a listed building to consider. It is located in close proximity to a public right of way and is unlikely to impact designated nature sites, it does not however provide opportunities to enhance strategic habitat connectivity. The site is not served by public transport. The site is within walking distance to some services and employment within Molesworth but the closest primary school is not within reasonable walking distance being over 800m and located in the next village of Brington.

SA16	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	++	There are no designated heritage assets on site or nearby.

## Summary of SA

The site is located to the north of the main built form of Brington but adjoins an orchard and a cluster of residential properties off Hill Place which form part of this settlement. There is a footpath opposite the site's frontage which connects the site through to main part of the village. The site is not constrained by heritage or nature conservation designations. The site is grade 3 agricultural greenfield land, there is risk of surface water flooding along its western edge. The site is not near to existing concentrations of employment and is not served by public transport. The site is within walking distance of a primary school and some cultural facilities.
