<b>Site reference</b>	Hail Weston 3
<b>Site name</b>	The Walnuts, 113 High Street, Hail Weston

Site address	Parish(es)	Site area (ha)
The Walnuts, 113 High Street, Hail Weston	Hail Weston	0.47

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/ or affordable housing; or Custom and self-build housing	Up to 12 homes	Available 2024 - 2028  Delivery over 1 year to 18 months

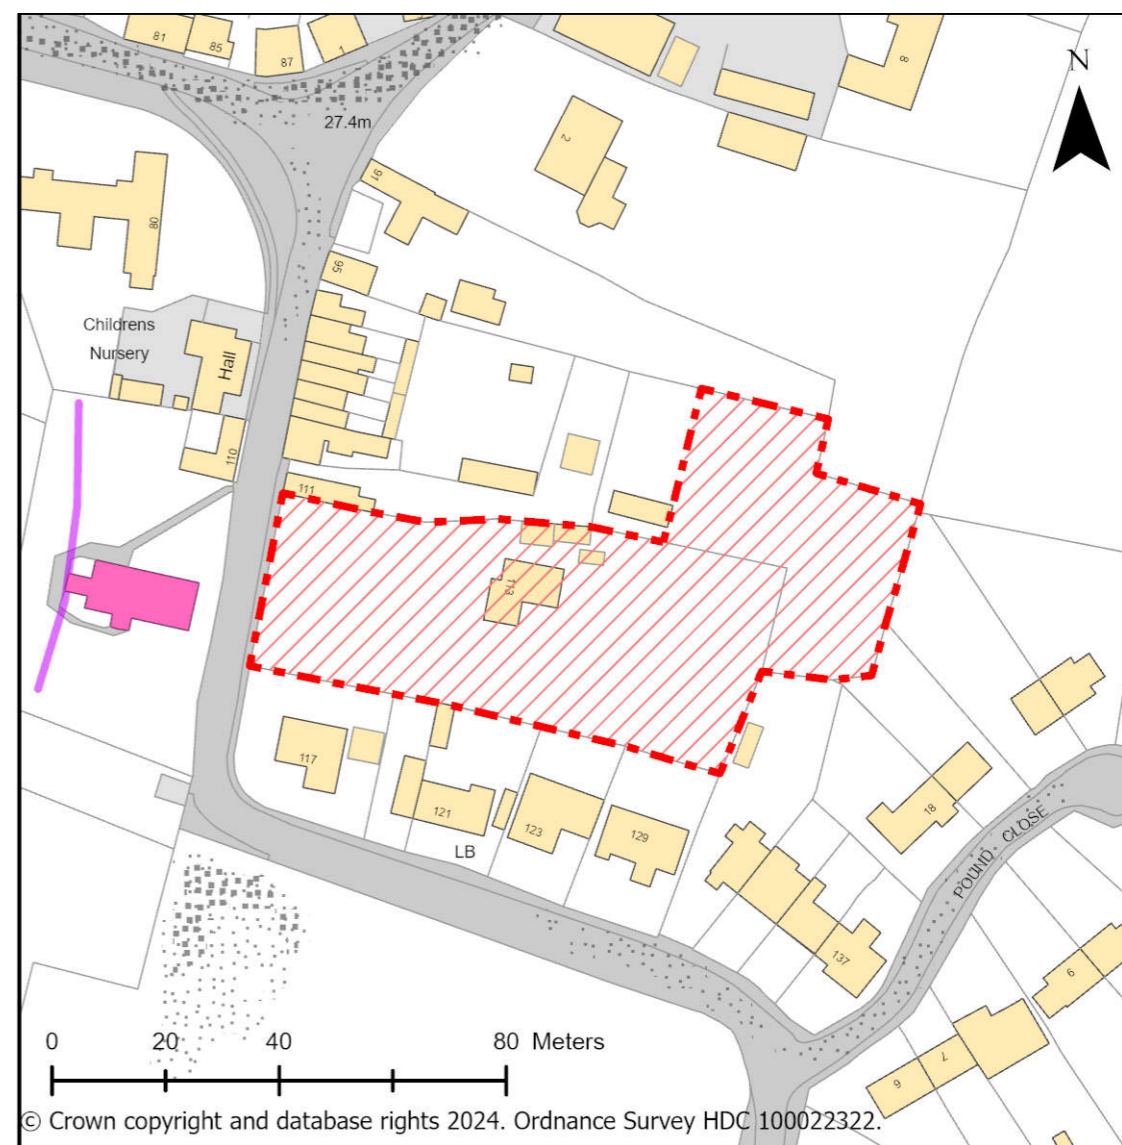

**Core information**

How was the site identified?	Call for sites submission: site reference - CfS:187
Relevant planning history	None
Land type	Part previously developed land and part greenfield land
Current use of the site	Residential and garden land
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 855 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is situated wholly within flood zone 1 and there is no recorded risk of surface water flooding. The land is wholly classified as agricultural grade 2 although currently in use for a house and garden with several mature trees. The site is entirely bounded by existing properties with residential uses on three sides mainly screened by trees. It faces St Nicholas' Church to the west although is completely screened from this view by tall hedging and a tree. The interior of the site is not visible from any public viewpoint although development may necessitate removal of some or all of the frontage hedging which would substantially increase the potential for impact on the grade II* listed church immediately opposite, this would influence the layout of the site and require replacement landscaping to mitigate it. The landscape impact of the site's development would otherwise be limited subject to retention of the boundary trees and hedging to minimise impact on the amenity of neighbouring properties. There is no known contamination or pollution within the site. No oil or gas pipeline infrastructure crosses the site. Local electricity cabling crosses the frontage of the site which may require relocation or replacement.</p> <p>There are no heritage or nature conservation assets directly within the site. An existing access serves the current property close to 111 High Street and use for additional development would need further investigation and potentially upgrading or an alternative access may be required. Development of the site would in part contribute to reuse of previously developed land subject to demolition of the existing house and outbuildings; otherwise the garden land is considered to be greenfield land. The land is wholly within a minerals safeguarding area for sand and gravel and confirmation would be required from Cambridgeshire County Council that it does not form a workable resource. The site is beyond any 400m buffer zone for a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The land is in the ownership of a single family who support exploration of its development potential. There are no known legal restrictions affecting the site. There is a single dwelling and outbuildings on the site which may require demolition to facilitate development. The landowners wish to explore the most effective way of releasing the land for development either as custom and self-build plots or for development by a housebuilder including considering the possibility of a replacement home for their own use.</p>	+
<p><b>Achievability</b></p> <p>All main services other than gas are accessible from the site boundary or are already within the site. The site has no significant physical challenges other than the boundary trees which could contribute to creation of an attractive scheme and potential impact on the adjacent listed church. Hail Weston is served by the B645 from the A1 providing good road</p>	+

<p>access. The site owners' intentions for development are not certain with consideration being given to custom and self-build housing, use of a housebuilder and potentially inclusion of a property for their own use.</p>	~
<p><b>Deliverability / developability</b></p> <p>Development of the site may necessitate clearance of the existing home and outbuildings although the owners' intentions regarding this are uncertain. If development were to take place it would need to be sensitive to the impact on the adjacent grade II* listed church and to the amenity of surrounding residential properties. The site lies within the existing built up area of Hail Weston so the principle of development in the location would be acceptable when judged against current adopted Local Plan policies so awaiting an allocation is not essential. Given the uncertainty of the owners' intentions and the need to address multiple development constraints the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly flood zone 1 with no recorded risk of surface water flooding</li> <li>• Partially previously developed land with small scale potential demolition required</li> <li>• Well related to the built form of the village</li> <li>• Tree cover on the site contributes to local amenity</li> <li>• Good access to town centre services but remote from education facilities</li> <li>• Limited public transport but has reasonable active travel linkages</li> <li>• Close proximity to heritage assets</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for residential development and has potential to accommodate development that will not harm the character of the area</li> <li>• Development would need to take account of the existing tree cover and its contribution to current local amenity and that of any potential homes</li> <li>• Would support development on sites of less than 1 ha</li> </ul>
---

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.47 ha  60% net developable area allowed due to extensive boundary trees  Net developable area of 0.47 ha x 60% = <b>0.28ha</b>	Residential - market and/or affordable homes or custom and self-build plots  Very low density of 25 dph anticipated due to nature of surrounding properties  Very low density of 25 dph = 0.28 ha x 25 = <b>7 homes</b>	From 2024  Delivery over 1 to 2 years if a housebuilder is involved or longer if sold as custom and self-build plots.

Updates after the Initial Assessment

Residential: Market and/ or affordable homes Custom and self-build plots Community use	25 market and/ or affordable homes and 5 custom and self-build plots  0.2 ha of land for unspecified community use	Available 2024 - 2028  Built out over 2 years

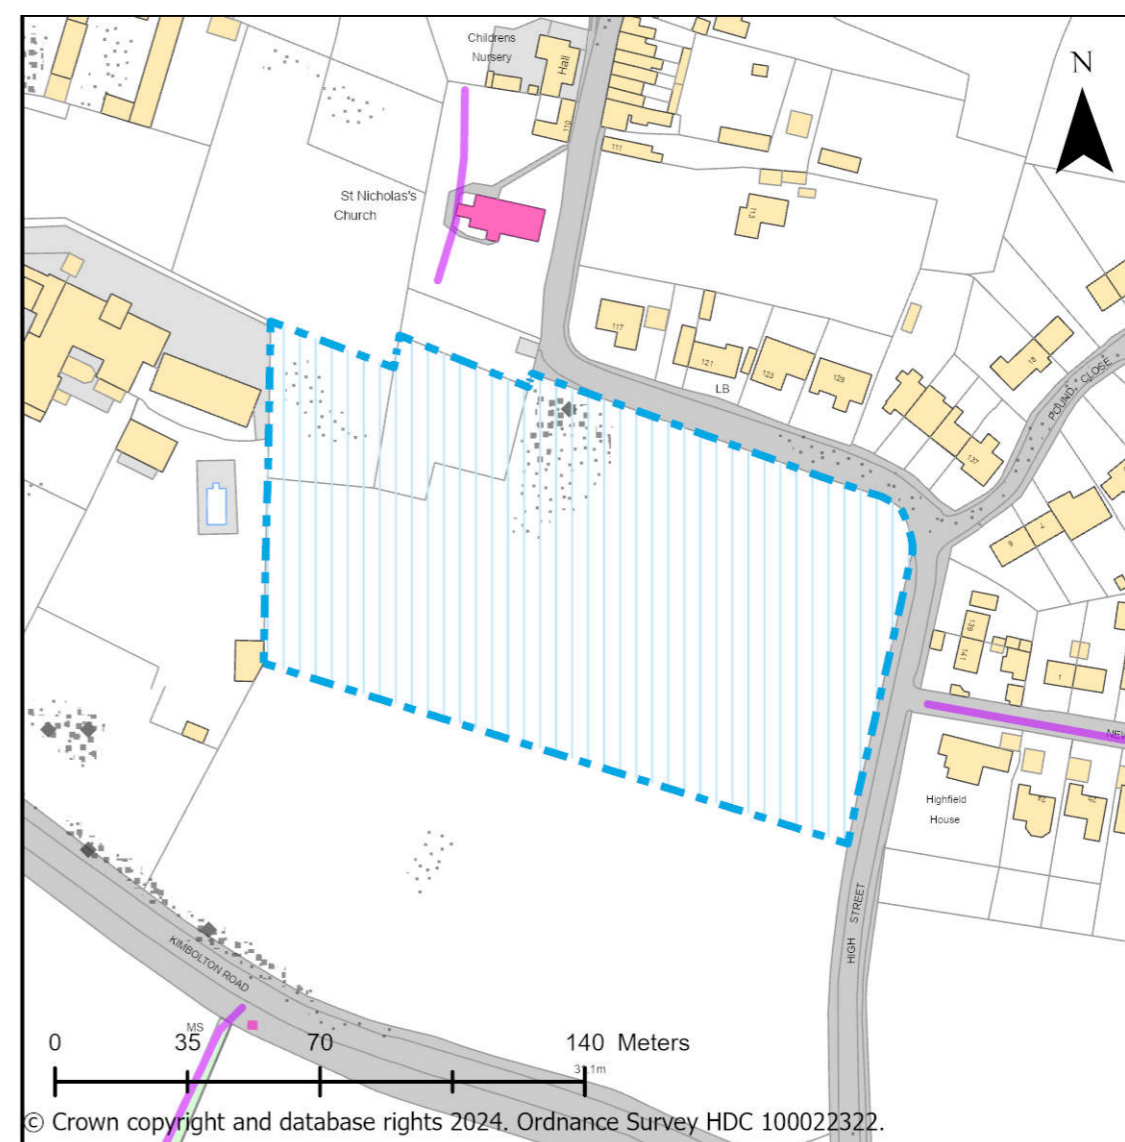

**Core information**

How was the site identified?	Call for Sites 2023 submission: site reference - CfS:182
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Paddock
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is situated wholly in flood zone 1 although there is a small area of surface water flood risk in the north western corner close to High Street. The land is used as a paddock and is entirely classified as grade 2 agricultural land. The site is relatively flat with views from the northern edge across the whole site and beyond to the trees and hedging on the southern side of Kimbolton Road. A group of mature trees is situated in the north western corner that contributes to the setting of the the adjacent grade II* listed St Nicholas' Church. These coincide with the area at risk of surface water flooding and would need to be retained in any development layout. The northern and eastern boundaries face onto homes on High Street with mixed height hedging and a cluster of trees facing the junction with Pound Close providing limited screening. The western boundary again comprises low hedging adjoining the grounds of Hail Weston House now used as business premises. The southern boundary of the site has no physical demarcation being contiguous with the remainder of the paddock with no buildings beyond this. The site is partially visible from Kimbolton Road. Substantial additional landscaping would be needed to reduce the impact of development on surrounding properties and the countryside.</p> <p>There is no known pollution or contamination affecting the site. No oil or gas pipeline infrastructure crosses the site. There are no heritage assets within the site although it adjoins St Nicholas' churchyard. No designated nature assets are recorded within the site either. The site currently has only a field access opposite the garden of Highfield House on Newtown and a new access would need to be created onto High Street.</p> <p>As the site is wholly greenfield development would not contribute to reuse of previously developed land. It is situated within an extensive minerals safeguarding area for sand and gravel and confirmation would be needed that this does not form a viable resource before development could be agreed.</p>	+
<p><b>Availability</b></p> <p>The land is in single family control with development supported by all members of the family. There are no known legal restrictions on the site. As paddock land there are no particular uses to be relocated. The landowners aspiration is to acquire allocation status for development and the sell the site to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>Water, electricity, digital and telecommunications infrastructure are all accessible from the site boundary; there is no local mains gas supply. Electricity cables parallel the northern side of High Street opposite the site. There are no particular physical challenges to developing this site which at its nearest point is 1 km from junction 17 with the A1 primarily along the B645. The landowners intentions are, however, not entirely clear as site reference</p>	~

Page 858 of 3488

<p>Hail Weston 7 is a smaller portion of this site also promoted for development. Although the housing aspirations are clear for this larger site there is no indication of the intended community use for the 0.2 ha put forward for this which would need to be explored with the local community.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no buildings on the site but the suitability and safety of any future access point will need to be assessed. The limited boundary screening means that any future development will need to be sensitive to its landscape impact and additional boundary planting will be necessary. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Relates well to the existing built form of Hail Weston with existing properties on three sides</li> <li>● Comprises grade 2 agricultural land</li> <li>● Easy access to local facilities</li> <li>● The north western wooded area is subject to surface water flooding</li> <li>● Active travel opportunities are available nearby</li> <li>● Good accessibility to local services and St Neots town centre and to employment within St Neots</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● May be appropriate for residential use as it relates well to the immediate surroundings and the scale would not overwhelm the established community</li> <li>● Would need to respect the setting of the adjacent listed church</li> <li>● Would need to retain the wooded area which has surface water flooding both to retain local character and minimise risk</li> <li>● Would need substantial landscaping on the southern boundary to minimise impact of development on longer distance views from the south</li> </ul>
---

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 1.52 ha</p> <p>80% net developable area allowed due to need to retain tree group and for boundary landscaping</p> <p>Net developable area of 1.52 ha x 80% = <b>1.22 ha</b></p>	<p>Residential - market and/or affordable homes and custom and self-build plots</p> <p>Very low density of 25 dph anticipated due to edge of village locations and nature of nearby properties</p> <p>0.2 ha for community use if required</p> <p>Very low density of 25 dph = 1.02 ha x 25 dph = <b>26 homes</b></p>	<p>Post 2028</p> <p>Built across 2 years for market and affordable homes with custom and self-build plots potentially taking longer</p> <p>Delivery of community use dependent on requirement.</p>

<b>Site reference</b>	Hail Weston 5
<b>Site name</b>	Land south of 143 High Street, Hail Weston

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land south of 143 High Street and Newtown Hail Weston	Hail Weston	18.72

**Promoter's Intentions**

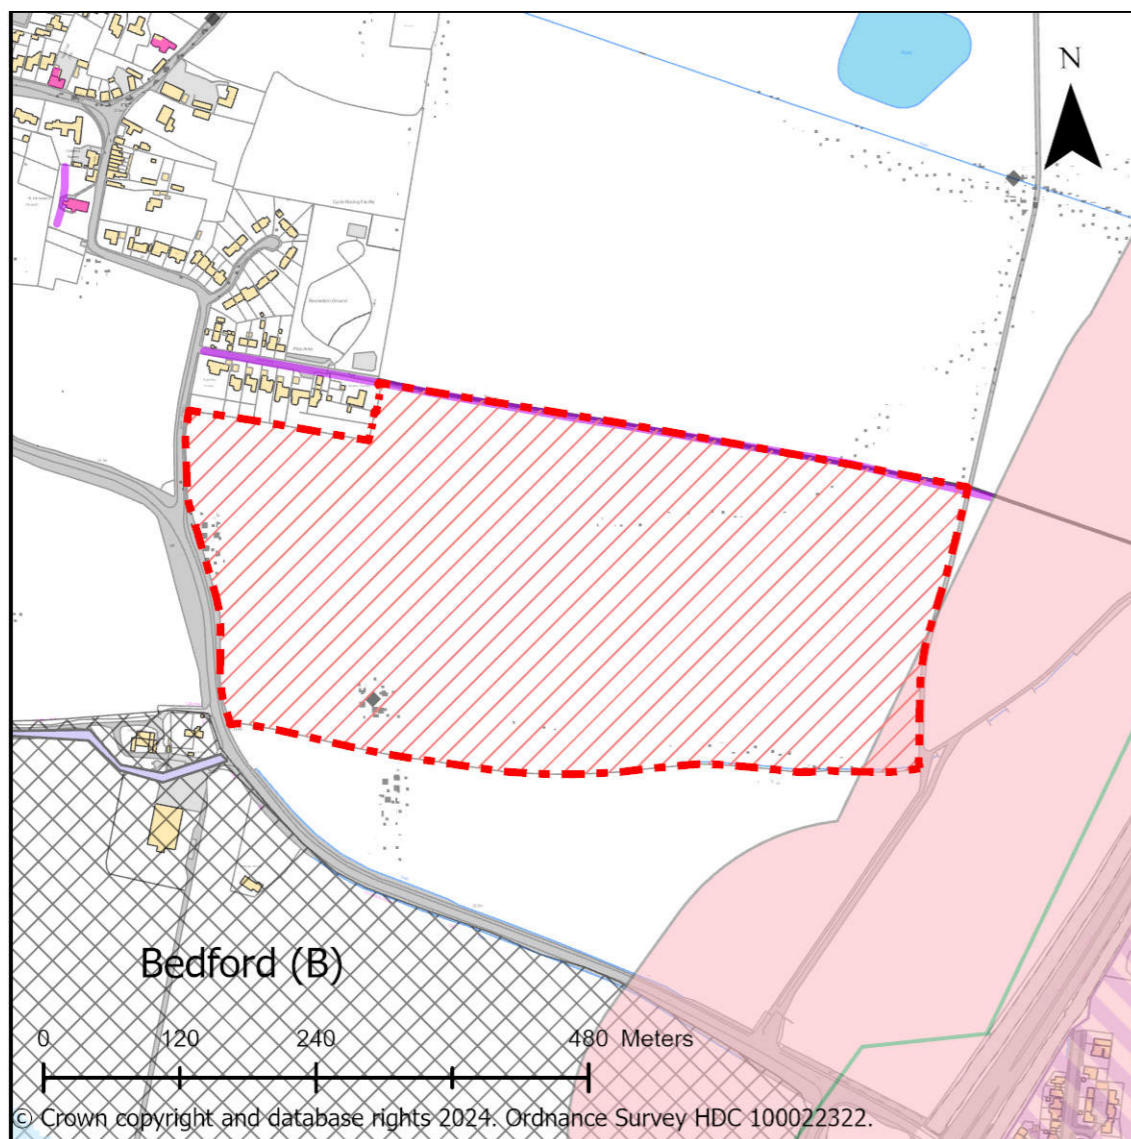

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and affordable housing Custom and self-build housing	205 market homes, 114 affordable homes and 11 custom and self build plots (330 new homes in total)  Natural, green or open space - 4.92 ha  Biodiversity net gain - 1.8 ha	Available 2029 - 2034  Delivery over 3 to 4 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:295
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 but has small strips susceptible to surface water flooding particularly along the northern boundary and opposite the junction of High Street and the B645. The land is wholly classified as grade 2 agricultural land. The western half of the site is relatively flat with the eastern portion falling towards the valley of the River Kym further east. The boundary with High Street and the southern edge of properties in Newtown comprises low hedging across which the site is highly visible. The remaining field boundaries are also either very low hedgerows or open field margins and the northern boundary comprises a public right of way connecting Newtown to 589 Great North Road. Only the north western corner of the site adjoins existing buildings at Newtown and 143 High Street</p>	~
--	---

<p>although the south eastern corner lies opposite a small group of buildings and the entrance to a burial ground. The site is highly visible from both the B645 and the public right of way and substantial landscaping would be necessary to mitigate the impact of any development.</p> <p>There is no known pollution or contamination affecting the site although the very south eastern corner lies within an oil pipeline buffer zone constraining the nature of development in this area. The site is also crossed by electricity wires. There are no known heritage or nature conservation assets within the site. However, given its proximity to the grade II* listed St Nicholas Church an appraisal of heritage assets and the potential impact of development on them would be required.</p> <p>As the land is wholly greenfield it will not contribute to reuse of previously developed land or regeneration. The whole site lies within a mineral safeguarding area for sand and gravel; advice from Cambridgeshire County Council will indicate the viability of working the site to extract these resources. It is beyond any buffer zone for a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in individual control with development supported by the landowner. There are no known legal constraints affecting the site and no current uses requiring relocation. The landowner anticipates securing allocation status and then selling the site to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>In terms of service provision electricity is available within the site with highway access and digital and telecommunications services accessible from the boundary. Access to water supplies is unknown and there is no mains gas in the local area. Proximity to the A1 may constrain the nature of development on the eastern portion of the site. A very small portion of the south eastern corner of the site falls within an oil pipeline buffer zone; this could be mitigated through the layout of any scheme allowing for open space uses in this portion. The site promoter's development aspirations for the site are clearly defined and broadly allow scope for mitigation of constraints.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site would have significant landscape impact and be challenging to integrate with Hail Weston village. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly comprises grade 2 agricultural land</li> <li>• Only adjoins the existing village along the rear gardens of eight properties making connectivity and integration extremely challenging</li> <li>• The proposed scale of development would harm the form and character of Hail Weston even with a third of the site proposed for open space uses</li> <li>• St Neots town centre is approximately 2.5 kms away providing access to town centre services</li> <li>• May suffer noise and air pollution as it is only 210m from the A1 at the nearest point</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development due to its impact on the local area and inability to be integrated into the existing village of Hail Weston</li> <li>• Is of an excessive scale which would overwhelm the village and even a substantially reduced proposal would still suffer integration challenges</li> </ul>
---

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:296
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1, there is some recorded surface water flood risk identified on the eastern edge and in the centre of the site. The land is classified wholly as grade 2 agricultural land with no existing structures on site. The site is broadly level but does gently slope upwards towards its southern boundary. A hedgerow provides a clear boundary to the northern edge of the site along Ford End, this is low so there are still views into and across the site. Along its remaining boundaries, there is vegetation and trees which largely enclose the site and provide some landscape buffer. There are residential properties to the south west and west of the site and a large barn at Brook End Farm opposite the north west corner of the site. It excludes a small allotment garden located to</p>	~
---	---

<p>the north east. On its remaining borders, the site adjoins open countryside. The open nature of the site would require additional landscaping to reduce the impact of any development on the surrounding area.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site but powerlines run across the site which may need to be diverted. The site is not located within a conservation area but there are two listed buildings opposite the site and any development would need to be sensitive to their setting. There are no nature conservation designations on site or within its immediate vicinity. Access to the site could potentially be achieved from Ford End although this is narrow and access would require the removal of some of the existing hedgerow.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is intended to acquire an allocation status and then sell the site to a third party for obtaining planning permission and development. The site promoter identifies that access can be taken from Ford End but this needs to be scoped. The promoter suggests the land would be available between 2024 and 2028 and could take one to two years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that only the public highway is accessible form the site boundary. All other infrastructure is unknown (gas supply, main water supply, electricity supply and digital and telecommunications infrastructure). Electricity powerlines run through the site. There are no buildings on site so no clearance work would be required.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its landscape impact. The potential point of access from Ford End also need to be assessed and scoped out. Allocation status is sought for the site for it then to be sold onto a third part for obtaining planning permission and development. Taking this into account, the site is therefore classified as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Consists of greenfield land classified as grade 2 agricultural land</li> <li>• Accessible to natural greenspace and located approximately 1km from the Little Paxton Wood SSSI</li> <li>• Limited access to public transport</li> <li>• Located so that development can be sustainably integrated with the existing place and community</li> <li>• Good accessibility to local shops, services, primary education and employment within Hail Weston and St Neots</li> <li>• Electricity powerlines cross the site</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for built development, focusing buildings towards the western half of the site as this relates better to the main built form and open spaces being to the east nearer to the adjoining allotment grounds</li> <li>• Will require landscaping and careful design to minimise adverse impacts on the landscape and on heritage assets</li> </ul>
--

Page 865 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 1.68 ha</p> <p>The site promoter in their Call for Sites submission has indicated that 0.58 ha of land will be used for open space uses as shown in the table above. This has been subtracted from the gross site area to leave a remainder of 1.1 ha of land to accommodate the residential element.</p> <p>90% net developable area allowed for landscaping and SuDs.</p>	<p>Residential - market and/or affordable homes, or custom and self-build plots</p> <p>Open space - nature, green and open spaces; and biodiversity net gain of 0.58 ha</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p>	<p>Available post 2028</p> <p>Build out over 2 - 3 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
1.1 ha x 90% = <b>0.99 ha</b>	Very low density of 25 dph = 0.99 ha x 25 dph = <b>25 homes</b>

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 867 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is situated wholly in flood zone one although there is a small area of surface water flood risk in the north western corner close to High Street. The land is used as a paddock and is entirely classified as grade 2 agricultural land. The site is relatively flat with views from the northern edge across the whole site and beyond to the trees and hedging on the southern side of Kimbolton Road. A group of mature trees is situated in the north western corner that contributes to the setting of the the adjacent grade II* listed St Nicholas' Church. These coincide with the area at risk of surface water flooding and would need to be retained in any development layout. The northern and eastern boundaries face onto homes on High Street with mixed height hedging and a cluster of trees facing the junction with Pound Close providing limited screening. This cluster of trees form the western boundary providing substantial screening from this aspect. The southern boundary of the site has no physical demarcation being contiguous with the remainder of the paddock with no buildings beyond this. The site is partially visible from Kimbolton Road although several mature trees within the remainder of the paddock reduce this impact. Additional landscaping would be needed to reduce the impact of development on surrounding properties and the countryside.</p> <p>There is no known pollution or contamination affecting the site. No oil or gas pipeline infrastructure crosses the site. There are no heritage assets within the site although it adjoins St Nicholas' churchyard. No designated nature assets are recorded within the site either. The site currently has only field access opposite the garden of Highfield House on Newtown and a new access would need to be created onto High Street.</p> <p>As the site is wholly greenfield development would not contribute to reuse of previously developed land. It is situated within an extensive minerals safeguarding area for sand and gravel and confirmation would be needed from Cambridgeshire County Council that this does not form a viable resource before development could be agreed.</p>	+
<p><b>Availability</b></p> <p>The land is in single family control with development supported by all members of the family. There are no known legal restrictions on the site. As paddock land there are no particular uses to be relocated. The landowners aspiration is to acquire allocation status for development and the sell the site to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>Water, electricity, digital and telecommunications infrastructure are all accessible from the site boundary; there is no local mains gas supply. Electricity cables parallel the northern side of High Street opposite the site. There are no particular physical challenges to developing this site which at its nearest point is 1 km from junction 17 with the A1 primarily</p>	+

<p>along the B645. Although the landowners intentions are not entirely clear as this site is a smaller portion of site Hail Weston 4 which is also promoted for development it forms the core of both proposals.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no buildings on the site but the suitability and safety of any future access point will need to be assessed. The limited boundary screening means that any future development will need to be sensitive to its landscape impact and additional boundary planting will be necessary. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Relates well to the existing built form of Hail Weston with existing properties on three sides</li> <li>• Comprises grade 2 agricultural land</li> <li>• Easy access to local facilities</li> <li>• The north western wooded area is subject to surface water flooding</li> <li>• Active travel opportunities are available nearby</li> <li>• Good accessibility to local services and St Neots town centre and to employment within St Neots</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for residential use as it relates well to the immediate surroundings and the scale would integrate well with the established community</li> <li>• Would need to respect the setting of the adjacent listed church</li> <li>• Would need to retain the wooded area which has surface water flooding both to retain local character and minimise risk</li> <li>• Would need substantial landscaping on the southern boundary to minimise impact of development on longer distance views from the south</li> <li>• Supports development on sites of less than 1 ha</li> </ul>
--

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.71 ha ha  80% net developable area allowed due to retention of tree group and boundary landscaping  <b>Net developable area of 0.57 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to edge of village locations and nature of nearby properties  Very low density of 25 dph = 0.57 ha x 25 dph = <b>14 homes</b>	Post 2028  Built out over 1 to 2 years

Updates after the Initial Assessment

--

### 8 Kimbolton

8.1 A total of 11 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Kimbolton 1: Brittens Farm, Station Road, Kimbolton
- Kimbolton 2: Land East of Stow Road, Kimbolton
- Kimbolton 3: Land South East of 73 Main Road, Stonely
- Kimbolton 4: Land North of Main Road, opposite Gimbers End, Stonely
- Kimbolton 5: Claylands Farm, Main Road, Stonely
- Kimbolton 6: Land North of Gimbers End, Stonely
- Kimbolton 7: Land North of Tilbrook Road, Kimbolton
- Kimbolton 8: Land North of Station Road/ Stow Road, Kimbolton
- Kimbolton 9: Land North of Easton Road, Stonely
- Kimbolton 10: Land South East of Bicton Industrial Estate, Kimbolton
- Kimbolton 11: Land at Hatchet Lane, Stonely

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 872 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site consists of two connected areas of land used for horse grazing and hay production as well as for agricultural storage. The majority of the site is within flood zone 1, however, approximately a third of the southernmost part is constrained by both fluvial and surface water flood risk. The majority of the land is classified as grade 3 agricultural land, however approximately half of the southern part is classified as grade 2. The site is broadly level but does slope gently downwards from north east to south west towards the River Kym. It is fairly well enclosed by hedging and trees along its boundaries. From the B660 vegetation largely obscures the site from view. The River Kym forms a natural boundary to the site's south western boundary. The site adjoins residential properties at Montague Gardens and Kym View Close to the east and south and to the north/ north west Brittens Farm and Wornditch Farm both of which include listed buildings. The Heritage Statement submitted as part of the Call for Sites submission identifies that there are non-designated heritage assets within the site being a well defined ridge and furrow area in the southern part of the site sloping down towards the River Kym.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations on site. Access to the site can be achieved from the B660. There is an existing track that leads to Brittens Farm and Wornditch Farm running along the north/north west boundary of the site but the proposed site plan submitted as part of the Call for Sites submission shows that a separate access will be provided to serve this development.</p> <p>The site is predominantly greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel as well as for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is the intention of the landowner to deliver the development directly. The promoter suggests the land is available now and could be built out over 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that water, electricity and digital telecommunications infrastructure are all accessible from the site's boundary which adjoins the public highway for access. There is no access to gas. There are no buildings on site to clear. The site gradually slopes downwards towards the River Kym. It is constrained by flood risk along</p>	~

<p>its south western boundary where it meets the River Kym as well as by heritage assets to the north and north west. The site can be accessed from the B660 and the proposed site plan shows that this access can be designed which fits in with the shape of the site to serve the southern part of the site as well.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development would need to be very sensitive to its setting and context particularly in relation to heritage assets, flood risk in the southern portion of the site and impact on the Kym Valley. The site promoter does not appear to seek an allocation status for the site. It is also indicated that the site will not be sold and development will be delivered via the landowner. While the site appears to be available now and several technical studies relating to heritage and ecology have been prepared as well as a proposed site plan, no formal planning application has yet been submitted. The site is located on the edge of the built up area of Kimbolton and as it does not appear to be the intention of the landowner to bring this site forward as a rural exceptions scheme, it is likely that the successful development of the site would require an allocation status. As such, the site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly greenfield land predominantly classified as grade 3</li> <li>• Majority of the site is in flood zone 1 but there is fluvial and surface water flood risk in proximity to the River Kym</li> <li>• Good accessibility to local services, shops and employment</li> <li>• Good accessibility to natural greenspace</li> <li>• Several heritage assets could be impacted by the development of the site</li> <li>• Potential to integrate built development into the existing community so could support sustainable place-making</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for built development subject to landscaping and adequate mitigation of any adverse impacts on heritage assets</li> <li>• Has potential to accommodate development that could be integrated well into the existing place and community</li> </ul>
---

- Would need to incorporate flood mitigation and open space to mitigate the risk of flooding in the southernmost part of the site and conserve the ridge and furrow on site, this part of the site could incorporate landscaping to provide a softer development edge
- Development should be located away from the southern extent of the site where flood risk is present.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.4 ha  65% net developable area allowed for additional landscaping, flood mitigation and to respond to heritage context.  1.4 ha x standard proportion of 65% = <b>0.91 ha</b>	Residential:  Market homes and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25dph = 0.91 ha x 25 dph = <b>23 homes</b>	Available post 2028 subject to successful allocation status  Build out over 1 - 2 years

Land north of Stow Road and Kimbolton Primary Academy, Stow Road, Kimbolton	Kimbolton	17.18

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential : <ul style="list-style-type: none"> <li>Market and affordable housing</li> </ul> Open Space uses: <ul style="list-style-type: none"> <li>Natural, green or open space:</li> <li>Biodiversity net gain</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Extension to Kimbolton Primary Academy site</li> </ul>	100 - 200 homes  Approximately 0.7 ha extension to Primary Academy site  Open space and biodiversity net gain areas of approximately 10.3 ha	Available 2024 - 2028  Build out over 2 to 4 years depending on number of homes  Two potential phases are identified in the Vision Statement

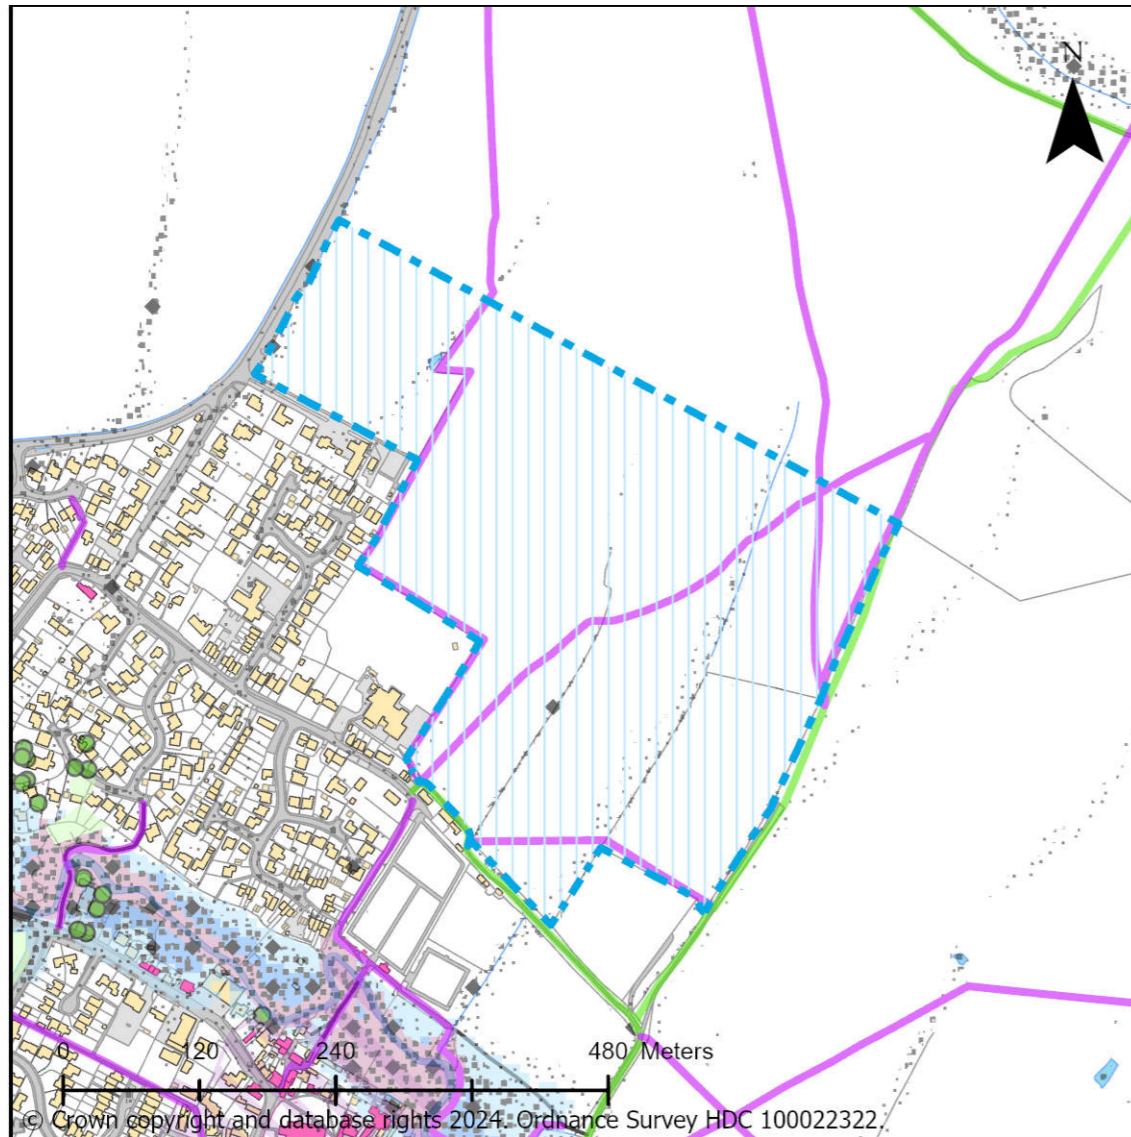

**Core information**

How was the site identified?	Call for sites submission 2023: site reference - CfS:31
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Vision Statement

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 but there is a risk of surface water flooding close to the Stow Road boundary and in several narrow channels parallel to this running down the site. The majority of the site is classified as grade 2 agricultural land with just the south eastern corner being grade 3. The site comprises open agricultural land with 3 narrow belts of trees and shrubs and several ditches running broadly north-south through the site and two small copses of trees. The land slopes up towards the north from where the site adjoins the village at an increasing gradient from the more level land close to the village boundary with an overall increase in elevation of up to 18m in the central section. The land forms part of the wider Kym Valley sloping up progressively through the village towards Over Hills situated</p>	~
---	---

to the north of the site. The south western edge of the site adjoins residential properties with the south eastern part adjoining Kimbolton Primary Academy, dispersed properties on Newtown and Rookery Lane Allotments. The north eastern corner of the site adjoins Warren Spinney which contains the grade II\* listed Warren House a folly associated with Kimbolton Castle.

The site boundaries generally comprise a mixture of hedging and trees providing limited screening from neighbouring uses. However, the northern boundary is undefined as it crosses a large field. Extensive views can be obtained across the site from Over Hills and public rights of way to the north of the site and from the northern part of the site across the village. To mitigate the impact of development on the landscape buildings would need to be limited to the lower ground close to the existing village with substantial landscaping on the rising land to the north to soften the edge to the surrounding countryside and to minimise the impact of built development on the setting of the historic part of the village.

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects it. The site is beyond the Kimbolton conservation area and it contains no listed buildings or other known heritage assets. However, given the proliferation of heritage assets in the vicinity and the potential for development to impact on them an assessment of heritage assets would be required. There are no designated nature conservation assets within the site. The site has a field access from the rear of 48 Newtown; highway access from Stow Road would necessitate crossing the existing drainage ditch. Options for achieving safe highway access would need to be explored with Cambridgeshire County Council. Two public rights of way connect through the site joining at the pedestrian route linking the Newtown area into Carnaby in Kimbolton's historic centre; these will need to be protected and provide active travel opportunities to reach the village centre.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. The south eastern section of the site lies within a minerals safeguarding area for brickclay and Cambridgeshire County Council will need to advise on whether this is a viable resource forming a constraint to development. It is beyond the 400m buffer around a water recycling site.

<p><b>Availability</b></p> <p>The site is in single ownership who support its development and are in partnership with a developer/ housebuilder through a promotion agreement to bring the site forward. There are no known legal constraints affecting the site. There are no current uses to be relocated. The promoter's delivery intentions are clearly set out in the supporting Vision document in terms of mix of uses, their distribution across the site and the phasing of delivery.</p>	+
<p><b>Achievability</b></p>	~

<p>Electricity, water and digital and telecommunications infrastructure are all available within the site although there is no local gas supply. An electricity distribution site borders the southern edge at Newtown and electricity cables cross the site potentially forming a constraint to the layout of development and a potential cost should they need to be undergrounded or rerouted. At its nearest point the site is just 300m from the B660 providing good connections to the highway network for materials deliveries. The site promoter acknowledges constraints arising from the landform and increased demand on Kimbolton Primary Academy. Their proposed scheme incorporates mitigation measurements for both of these by providing additional land for the school and restricting built development to the southern part of the site and incorporating substantial areas for open land and biodiversity net gain.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is constrained by its topography and the potential impact of development on the existing village and the wider setting of the Kym Valley. The location means that any future development will need to be sensitive to its impact on landscape and the setting of heritage assets. Whilst the site promoter is clear in their intentions, development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly in flood zone 1 but with channels of surface water flood risk</li> <li>• Primarily grade 2 agricultural land with some grade 3 nearest to the boundary with Kimbolton</li> <li>• Sits within the wider landscape setting of the Kym Valley</li> <li>• Remote from designated nature conservation sites</li> <li>• Of a scale to accommodate a range of housing sizes, types and tenures along with other community and open space uses</li> <li>• Good access to local shops, services, education and employment</li> <li>• Limited public transport access but good active travel opportunities</li> <li>• Opportunities exist for integration into the existing village through the Primary School and active travel routes</li> <li>• Very sensitive with regard to heritage assets both adjacent to the site and in longer term views</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- May be appropriate for a mixed use development of homes, open space, biodiversity net gain and community uses including an extension to the primary school
- Would need to limit built development to the lower ground in the southern part of the site to reduce its landscape impact and allow for more effective integration with the existing built form
- Would need to provide a substantial portion of the site as open space and biodiversity net gain
- Would need to retain the three surface water channels running through the site and incorporate them into the landscaping scheme
- Would need to ensure public rights of way continue to provide access through the site to the open countryside and connecting into the village

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 17.18 ha</p> <p>10.3 ha are promoted for open space and biodiversity net gain</p> <p>0.7 ha is promoted for additional school infrastructure</p> <p>6.18 ha are promoted for residential development</p> <p>80% net developable area for the residential portion allowed due to separate open space provision but the need to accommodate surface water drainage channels and heritage asset sensitivity</p> <p>Net developable area of 6.18 ha x 80% = <b>4.92 ha</b></p>	<p>Natural, green or open space and biodiversity net gain - 10.3 ha</p> <p>Primary school infrastructure - 0.7 ha</p> <p>Residential use - market and affordable housing</p> <p>Low density of 35 dph anticipated due to the ability to vary densities within the site allowing for very low density development in the most sensitive parts.</p> <p>4.92 ha x 35dph = <b>173 new homes</b></p>	<p>Subject to allocation</p> <p>Delivery over 4 years</p>

**Updates after the Initial Assessment**

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Custom and self-build housing	1 - 6 market/affordable homes or 3 custom and self-build plots	Available 2023 Build out over 1 to 2 years

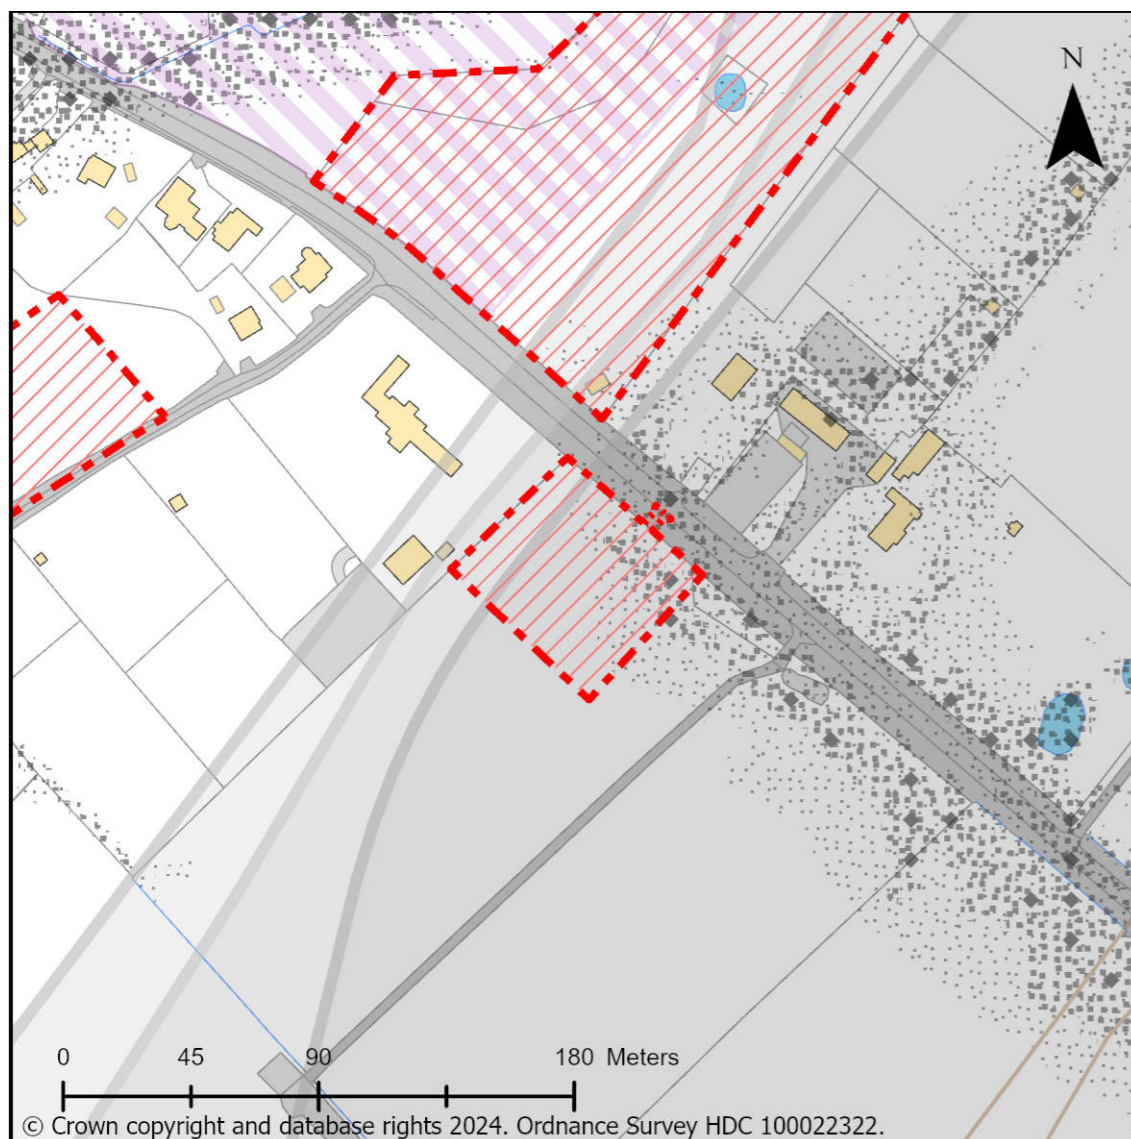

**Core information**

How was the site identified?	Call for sites submission 2023: site reference - CfS:144
Relevant planning history	<ul style="list-style-type: none"> <li>20/01125/OUT - outline planning application for the erection of up to 3no. self-build and custom build dwellinghouses and construction of a footpath. Refused in September 2021</li> <li>Planning appeal - 22/00019/REFUSL. Appeal dismissed on 5 January 2023</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Arboricultural Impact Assessment (June 2020)

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1 but half of the site is constrained by surface water flooding mostly along its frontage along Main Road. The land is classified wholly as grade 3 agricultural land with no existing structures on site. The site is broadly level and is in pastoral agricultural use. The site forms the northern section of a larger field with no features distinguishing the site area from the remainder of the field. The northern boundary is enclosed with thick trees and vegetation along Main Road. A line of trees and vegetation also obscures the site along its north western boundary where it adjoins 73 Main Road. The site itself is completely open to the south and south east although the boundaries of the larger field have substantial vegetation obscuring the site from longer distance</p>	~
--	---

<p>views. North east of the site is Stonely Hill Farm and to the north west is 73 Main Road, on its remaining sides the site is surrounded by open countryside. The location plan provided in the Call for Sites submission shows that the wider field in which this site sits is also in the ownership of their client.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site, however the site is wholly within a gas pipeline buffer zone which forms a significant constraint. Electricity powerlines run along the site's frontage along Main Road. There are no heritage assets or nature conservation designations on site. If some of the thick vegetation is removed then an access could be provided to the site from Main Road.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is the intention to acquire planning permission and then sell to a third party for development. The promoter suggests the land is available from 2023 and could be built out over 1 to 2 years. Indeed the site has already been subject to an outline planning application but was refused. The site promoter in their Call for Sites submission has also stated that the wider field shown in blue on the submitted site plan is 4 hectares and this would lend the option to use a further 0.4 of hectares to create hedgerows and a woodland to enclose the 0.29 hectares within the field.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that mains water supply and the public highway are accessible from the site boundary with all other services being identified as unknown. There is no gas supply in the local area. There are no buildings on site so no clearance work would be required and the site is flat so there are no topographical challenges to overcome but there is considerable surface water risk. Access to the site would require removal of some established hedgerow trees and considerable landscaping will be required. The site is not located within a conservation area so this may be possible to achieve without negatively impacting the character of the village in this part. It is suggested that some of the wider field in which the site is located could be used for additional landscaping, hedging and woodland. The site promoter has also put the site forward for several potential residential proposals, one for a potential First Homes scheme, a market housing scheme or for 3 custom and self-build plots which would fall below the minimum threshold of 5 homes to justify allocation. Clarity will be required on which option would be taken forward.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its setting and incorporate landscaping measures and SuDs. The site promoter states that it is intended to acquire planning permission and then sell to a third party for development. Therefore, it appears that it is intended not to wait for a potential allocation status to deliver the site. Of the potential residential options put forward by the site promoter, the only one that may in principle have support is a First Homes scheme, however this has not been the intention of the promoter previously based on the planning history for the site. If an affordable scheme is not pursued, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~	
---	---	--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site consists of greenfield land</li> <li>• Surface water flood risk constraints approximately half of the site, mostly along its frontage along Main Road</li> <li>• Is accessible to a shops, primary education and local leisure and community facilities within Kimbolton</li> <li>• Some limited public transport access and access to employment opportunities</li> <li>• Is remote from natural greenspace</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development due to its location as development would erode the rural approach into Stonley as well as the site being within an oil pipeline buffer zone and extensive surface water flood risk</li> <li>• Could only safely accommodate development at the southern end due to surface water flood risk resulting in a large set back which would not reflect the character of the area</li> </ul>	
--	--

**HDC's Delivery Calculations**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Between 5 and 15 homes	Available 2024 - 2028 Build out over 1 - 2 years

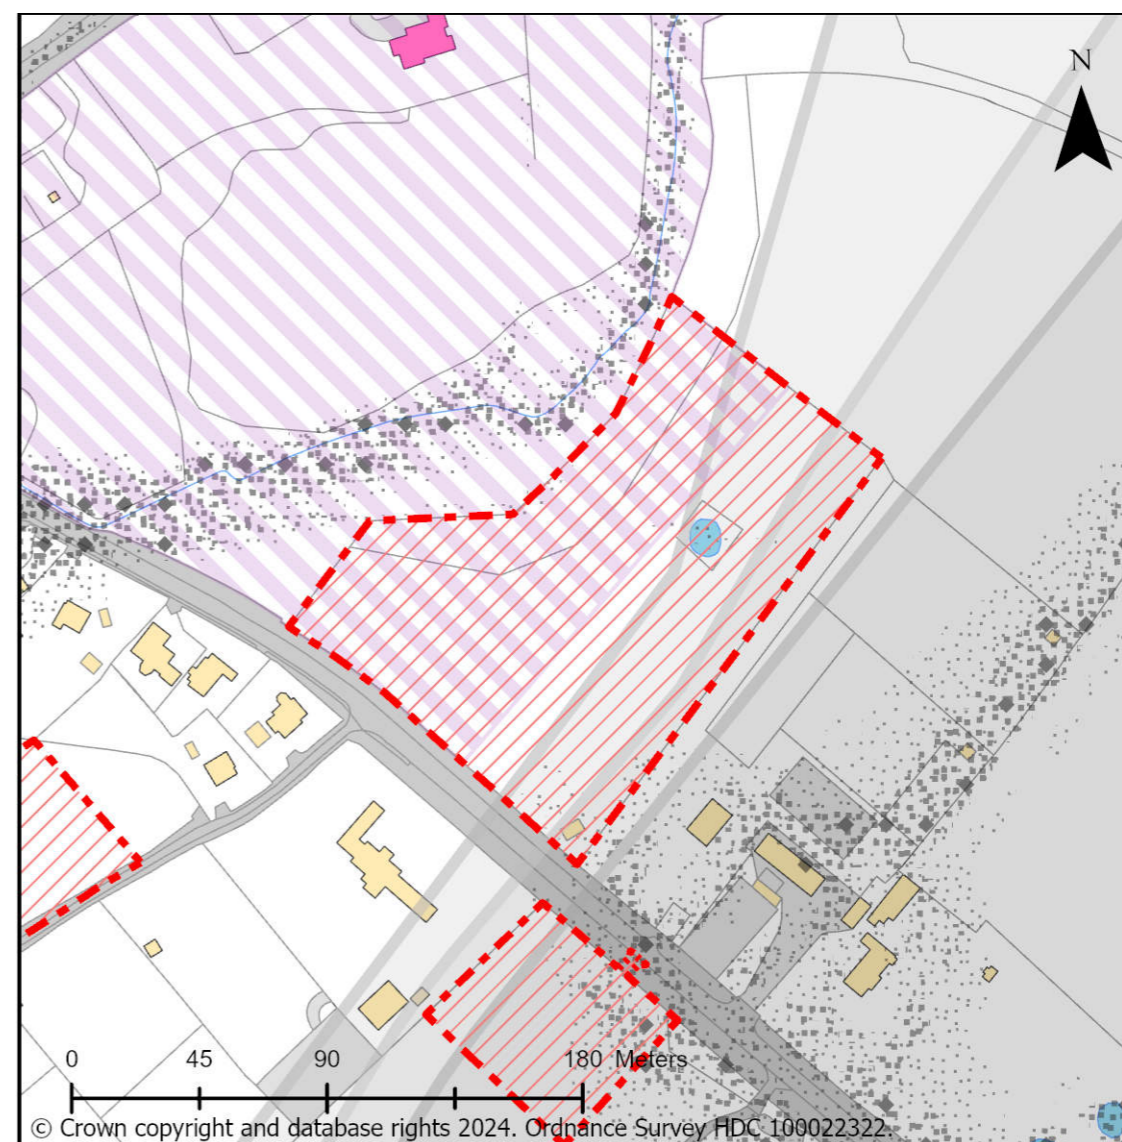

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:179
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Rough grazing land
Supporting information	Environment Agency flood map

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is located within flood zone 1, the southern corner of the site is constrained by some surface water flood risk and there is also a pond located just north of the centre of the site. The land is classified wholly as grade 3 agricultural land and is in use as grazing land with no existing structures on site. The site is broadly level but does rise slightly towards the north east. A series of trees have been planted across the site both towards the frontage and more centrally. The site is clearly outlined by low hedgerows along its boundaries, over which there are views into and across the site from Main Road. Vegetation and trees become thicker along the site's western and northern edges where there is a dense wooded area. Stonely Hill Farm lies to the south east of the site and 73 Main Road is to the south west across the B645. To the north and west of the site is open countryside in a mixture of pastoral and arable farming use.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site, however approximately half of the south eastern portion of the site is within a gas pipeline buffer zone. Electricity powerlines run along the site's frontage along Main Road. The north western part of the site is located within a conservation area; this coincides with the established dense trees and vegetation present on this part of the site which would need to be retained in any development scheme. This also serves to add to the rural setting of this part of the settlement and screens the grade II listed Stonely Grange from view. There are no nature conservation designations on site but as identified the existing trees on the north and north-western part of the site are important in shaping and framing the character of this part of the village. A field access exists from Main Road which would require improvement to accommodate additional traffic from development.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. Part of the western portion of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is the intention to acquire planning permission and then sell to a third party for development. The promoter suggests the land is available between 2024 and 2028 and could be built out over 1 to 2 years.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that all main utility services are accessible from the site boundary. There is no access to gas in the local area. There are no buildings on site so no clearance work would be required. The site is fairly flat but rises towards the east, there is some surface water risk and considerable heritage and tree constraints on part of the site.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its setting, heritage assets and incorporate landscaping measures and SuDs. The site promoter states that it is intended to acquire planning permission and then sell to a third party for development. Therefore, it appears that it is intended not to wait for a potential allocation status to deliver the site. As it appears that it is not the intention for the site to deliver a rural exceptions scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site consists of greenfield land</li> <li>• Is accessible to shops, primary education and local leisure and community facilities within Kimbolton</li> <li>• Some limited public transport access and access to employment opportunities</li> <li>• Fairly remote from natural greenspace</li> <li>• In depth development of the site is very likely to harm the open character of the area</li> <li>• Potential for adverse impacts on the conservation area and the naturally vegetated landscape forming an important setting into Stonely</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development due to its potential adverse impact on the character of Stonely</li> </ul>

**Kimbolton 5: Claylands Farm, Main Road, Stonely**

<b>Site reference</b>	Kimbolton 5
<b>Site name</b>	Claylands Farm

Site address	Parish(es)	Site area (ha)
Land at Claylands Farm, Main Road, Stonely, Cambs PE19 5ES	Kimbolton	1.74

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Custom and self-build housing	5 - 15 homes	Available 2024 - 2028 Build out over 1 - 2 years

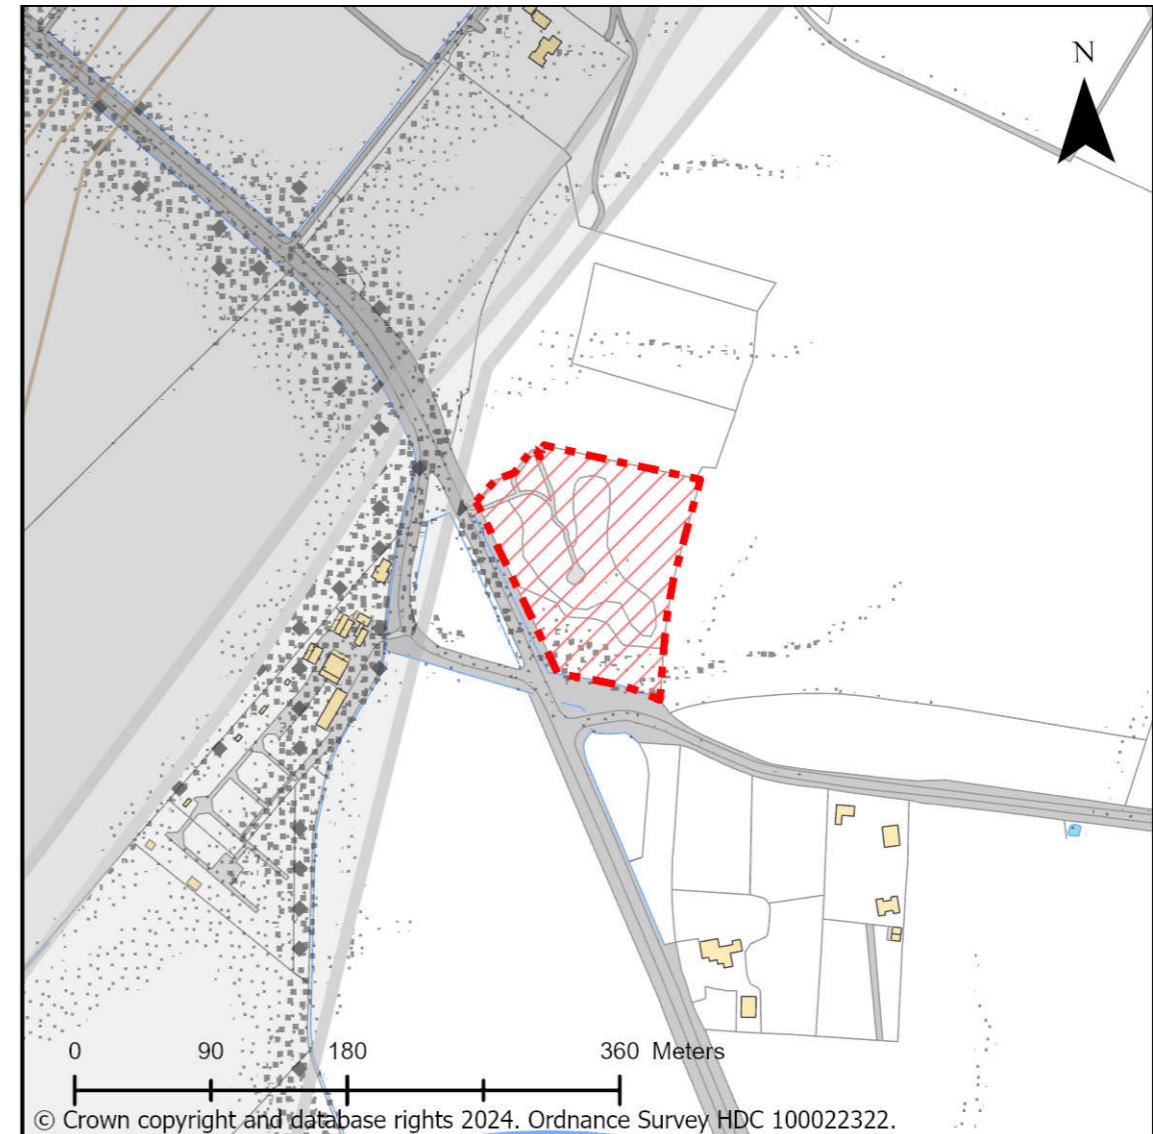

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:176
Relevant planning history	None
Land type	Wholly previously developed land (Fully naturally vegetated)
Current use of the site	The site promoter states this to be brownfield / storage but the site is fully revegetated and comprises rough grassland, trees and shrubs with remains of two small sheds
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 and is classified as grade 3 agricultural land. The site is relatively flat overall but includes rough mounds. It comprises a mixture of rough grassland, trees and shrubs with remains of several rough tracks and a couple of sheds. It is contiguous with a larger area of woodland which has been established for over 30 years. The site contains mature trees and hedging on all sides which provide screening from the adjoining agricultural farmland and the open countryside. This makes the proposed use incompatible with neighbouring uses. It has no nature designations on it or immediately adjoining it which will impact development.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. The site is remote from any conservation area and contains no listed buildings or other known heritage assets. There are no designated nature conservation assets within the site. The site can potentially be accessed from the B645 with a field gate being present on the western boundary.</p> <p>Although the site is considered wholly brownfield by the site promoter, it has been fully naturally vegetated and would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The promoter suggests the land would be available in 2024-2028 and seeks to obtain an allocation before selling it to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>The site promoter advises that electricity, water and digital and telecommunications infrastructure are all accessible from site boundary. There is no known access to gas supply in the local area. The site has no clear topographical challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can potentially be accessed from B654. There are no substantial built structures on the site. The site contains mature trees, shrubs and hedgerows and an Aboricultural Impact Assessment would be required to assess and mitigate the impact of the proposed development on the existing trees.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. There are no substantial structures on site to clear but there are significant constraints to mitigate. Impact on existing trees is a key development consideration within a future masterplanning of the site. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is considered wholly brownfield but has been fully naturally vegetated
- Fairly good connectivity to the strategic road network
- Fairly remote from existing settlement
- Could not be effectively integrated into the existing place and community
- Has very limited accessibility to local services and employment
- Potential for adverse impacts on existing trees
- Will not make an efficient use of land

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to its separation from the village, potential impact on surrounding countryside and revegetated nature of the previously developed land

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

Assessment of Site Potential

Page 886 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 and is classified as grade 3 agricultural land. It comprises part of an open agricultural land with no distinct boundary between the site and the remainder of the field. The site is flat and has a similar topography to its surrounding areas. It is bounded by mature trees and hedging on the south western and south eastern boundaries which provides limited screening from the adjoining agricultural land. To the north western side the site is completely open to the remainder of the field which contains a single agricultural barn; this boundary would require landscape screening. The north eastern edge of the site adjoins the rear gardens of homes along Main Road which are generally well screened by existing trees. The site is visible from a farm track at the southeast and would require landscaping buffers to mitigate impact of the development on the open countryside.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. The site is beyond the Kimbolton conservation area and contains no listed buildings or other known heritage assets. There are no designated nature conservation assets within the site. The site can potentially be accessed from a farm track to the south east which connects to the B645 to the north but would need upgrading to serve additional traffic.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The land promoter suggests the land would be available within 2024 - 2028 and would be delivered by a third party after planning permission is obtained.</p>	+
<p><b>Achievability</b></p> <p>Electricity, water and digital and telecommunications infrastructure are all accessible from site boundary. There is no known gas supply in the local area. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead powerlines are present. The site can potentially be accessed from a farm track which connects to the B654 north of the site. There are no built structures on the site that require clearance. The site promoter seeks residential uses of either 5 homes or 5 plots for custom and self build housing. Landscaping will be required to mitigate the impact of development on site on the countryside.</p>	+

<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear and there are no significant constraints on site to mitigate. Landscaping would be a key development consideration within any proposed layout for development of the site. It is the site promoter's intention to acquire an allocation status for the site with delivered by a third party after planning permission is obtained. As such, the site is categorised as developable</p>	~

<b>Site reference</b>	Kimbolton 7
<b>Site name</b>	Land North of Tilbrook Road, Kimbolton

Site address	Parish(es)	Site area (ha)
Open land located north of Tilbrook Road (B645), north of the Kimbolton Prep School, south of Brittens Farm and west of Kym View Close, Kimbolton	Kimbolton	1.46

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	23 homes (14 market and 9 affordable)	Available 2024 - 2028 Build out over 2 - 3 years

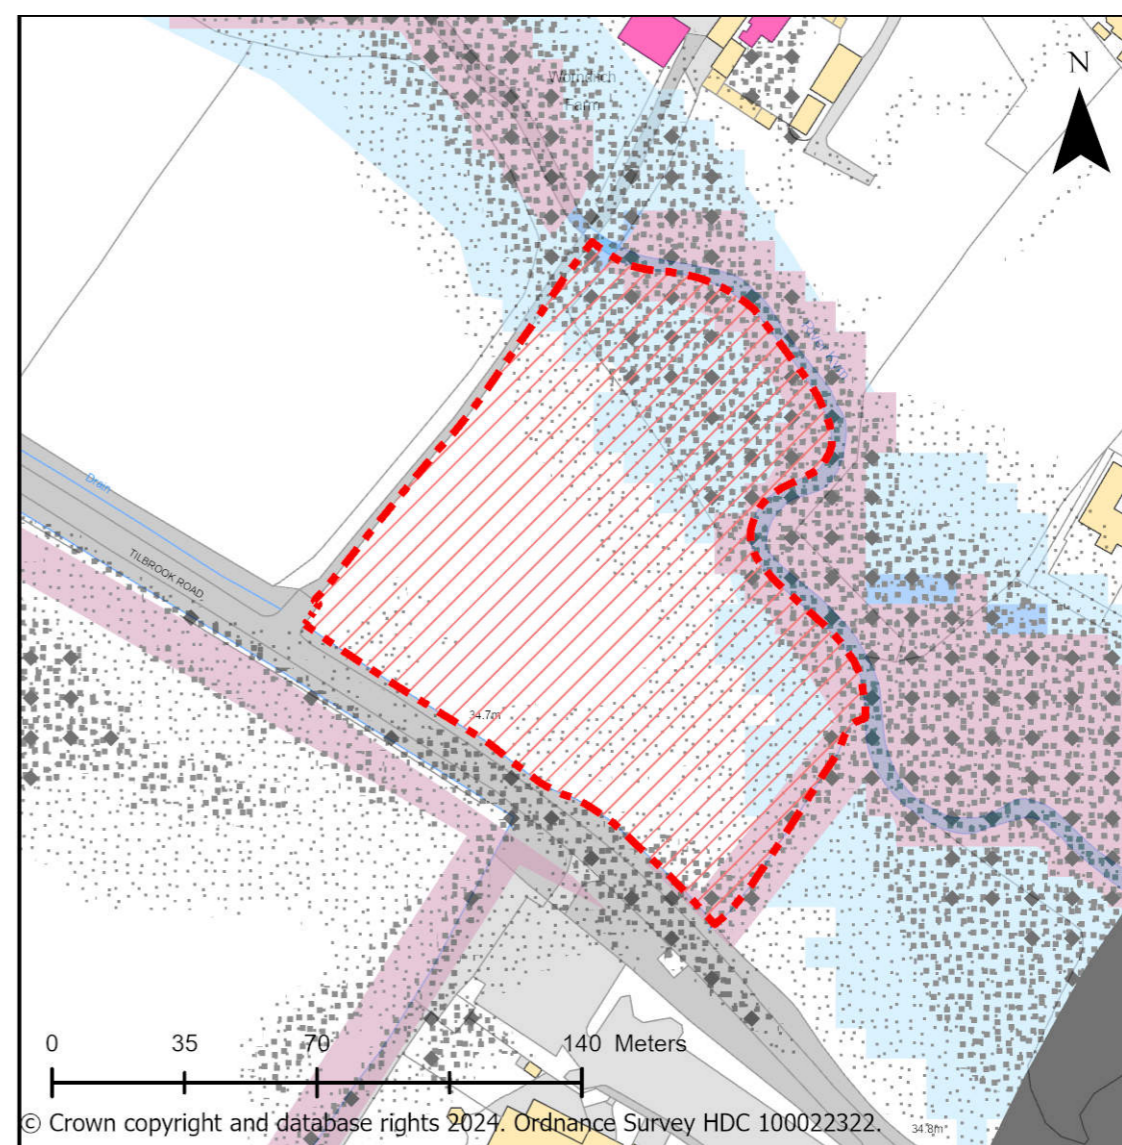

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:366
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Less than 50%	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is classified as grade 2 agricultural land. About 62% of the site is within flood zone 1, with 14% being within flood zone 3 and the rest being in flood zone 2. Significant flood mitigation measures would be required to mitigate the risk of flooding. The site is relatively flat and has a similar topography to its surrounding areas. The site comprises open grassland with a narrow belt of mature trees around all its boundaries providing screening from adjoining uses. There are some mature trees within the northern part of the site. The site is bounded to the north by the River Kym beyond which is Brittens Farm. Tilbrook Road parallels the southern boundary with the Kimbolton Preparatory School situated to the south east of the site. To the west is extensive grassland forming the setting to Wornditch Farm and to the east is again open grassland with trees and hedgerows. The context is one of open and agricultural land rather than of built development would not be compatible with neighbouring uses.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site can potentially be accessed from Tilbrook Road (B645) to the south which links the site to the existing settlement.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The land promoter suggests the land would be available within 2024-2028 and would be delivered by a third party after planning permission is obtained.</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary except for gas supply. The site is fairly flat but is constrained by flood risk along its northern and eastern boundary along the River Kym. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can potentially be accessed from Tilbrook Road (B645). There are no built structures on the site that require clearance. The site promoter seeks residential uses of 14 market homes and 9 affordable homes.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. There are no structures on site to clear and there are no significant constraints on site to mitigate. Flood risk is a key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by a third party after planning permission is obtained. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- It wholly consists of greenfield land
- Is accessible to a shops, primary education and local leisure and community facilities within Kimbolton
- Some limited public transport access and access to employment opportunities
- Majority of the is in flood zone 1 but part of the site is at risk of fluvial and surface water flood risk
- May be suited for ribbon development which does not reflect the character of the existing built form
- The amount of development would not contribute to protecting the form and character of the surrounding townscape and landscape

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development as the site would not respect the form and character of Kimbolton

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly in flood zone 1 and is classified as grade 3 agricultural land. The site is on the north-western edge of Kimbolton and comprises agricultural land with no trees or hedging on it or along its boundaries. It is bounded by agricultural land on north, south, east and west. The site adjoins the housing allocation site KB 2 (North of Station Road/Stowe Road, Kimbolton) in the Huntingdonshire's Local Plan 2036 to the south which is yet to be developed. The successful integration of the site is dependent on the allocated development to the south which has not yet come forward. The northern point also coincides with the entrance to Britdens Farm, on the opposite side of Station Road. The site is flat and has a similar topography to its surrounding areas. Development of the site would be visible from all sides and landscaping buffers would be required to mitigate the impact of development on the adjoining countryside.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site can potentially be accessed from Station Road adjoining the site to the south which connects to B660.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The land promoter suggests the land would be available within 2024-2028 and would be delivered by a third party after planning permission is obtained.</p>	+
<p><b>Achievability</b></p> <p>Electricity, water and digital and telecommunications infrastructure are all accessible from site boundary. There is no known gas supply in the local area. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be accessed from Station Road which connects to B660. There are no built structures on the site that require clearance. The site promoter seeks residential uses of 6 market homes and 5 affordable homes. The successful integration of the site is dependent on the allocated development to the south which has not yet come forward.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. There are no structures on site to clear and there are no significant constraints on site to mitigate. Landscaping is a key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by a third party after planning permission is obtained. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is accessible to shops, primary education and local leisure and community facilities within Kimbolton
- Some limited public transport access and access to employment opportunities
- Good connectivity to the strategic road network
- Small scale development could be integrated into the existing place and community after completion of current allocation KB 2 North of Station Road/ Stowe Road
- The site is highly exposed to the surrounding countryside.

In combination the outcomes of the LAA and SA indicate that the site:

- Would not be appropriate for built development until the current allocation is completed due to its isolated location within the open countryside

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Capacity calculation not undertaken as site is inappropriate for development due to low potential for integration with the village.	N/A	N/A

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly in flood zone 1 and is classified as grade 3 agricultural land. It comprises open agricultural land currently in arable use with a narrow belt of trees separating it from the residential development to the west and another narrow belt of trees at the eastern boundary. The site is relatively flat although is part of a larger field which rises gently to the north west. It is bounded by residential development to the west and south but is exposed to the open countryside on the northern edge as the site comprises a small portion of a larger arable field with no current boundary demarking the proposed northern edge. The site is visible from Easton Road with only a low hedge separating the site from the road which would not provide any screening of new development. The site is also visible from a footpath that connects the few properties at the edge of Stonely to Kimbolton. As such, the site would require some landscaping to provide screening from adjoining uses.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. Although the site is beyond the Kimbolton conservation area and contains no listed buildings or other known heritage assets, it is opposite the conservation area and the Stonely Grange listed buildings. There are no designated nature conservation assets within the site. The site can potentially be accessed from Easton Road which connects to B645.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The land promoter suggests the land would be available within 2024-2028 and would be delivered by a third party after planning permission is obtained.</p>	+
<p><b>Achievability</b></p> <p>Electricity, water and digital and telecommunications infrastructure are all accessible from site boundary. There is no known gas supply in the local area. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead powerlines are present. The site can potentially be accessed Easton Road which connects to B645. There are no built structures on the site that would require clearance. The site promoter seeks residential uses of 5 homes or 5 plots for custom and self-build housing</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity of the site to heritage assets within the conservation area and listed building (Stonely Grange) to the south means that any future development will need to be sensitive to its impact on their character and</p>	~

setting. Landscaping will be required to mitigate the impact of development of the the site on the adjoining countryside. It is intended to acquire an allocation status for the site and for it to be delivered by a third party after planning permission is obtained. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Has limited public transport access
- Has limited access to employment opportunities and local services
- Reasonable connectivity to the strategic road network
- Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha
- Small scale development could be integrated into the existing place and community
- The site is highly exposed to the surrounding countryside.
- There are designated heritage assets that could be adversely impacted by the development

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for built development but would require landscaping to mitigate impact on the open countryside and would need to be sensitive to its impact on the setting of conservation area and listed building.
- Would contribute to the housing needs of the district

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.98 ha  Given the linear form of development along Easton Road rather than calculate a net developable area the calculation is based on typical frontage widths of properties in the immediate area. Substantial landscaping would be	Residential use - market and/ or affordable housing  140m frontage x 20m width per plot  Capacity = 140/20 = <b>7 homes</b>	Available post 2028  Build out over 2 - 3 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>required on the northern boundary which could be contained within extensive gardens recognising the character of the immediate locality.</p> <p>Net developable area of 140m frontage x 20m width per plot.</p>

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:365
Relevant planning history	21/01827/FUL - construction of an access road to serve the Bicton Industrial Park extension (Local Plan allocation KB3) with associated new landscape planting. Approved in April 2022.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site forms a second and third phase to an existing site allocation in the Local Plan to 2036 (KB3). The site adjoins the Bicton Industrial Estate. The site is within flood zone 1 and does not have a recorded risk from surface water flooding. The land is wholly classified as grade 2 agricultural land and is currently in arable use. The site is located on elevated ground and is broadly level but does very gradually slope upwards on its eastern side. There are limited boundary features making the site very open and prominent in longer range views, landscaping would be required. There is a public right of way to the east of the site which provides views across the site. There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no heritage</p>	+
--	---

<p>or nature conservation designations on site but there is the Cambridgeshire Wildlife Site Meadow on Kimbolton Airfield adjacent to the site. Access to the site could be achieved from Stow Road via the allocated site KB3, which has planning approval under 21/01827/FUL. The location plan provided in the Call for Sites submission shows an indicative route through the allocation into the site. As no planning permission has yet been granted on KB3 this internal access has not yet been approved but it is understood via the Call for Sites form that an outline application for the allocated site is in preparation.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration but would provide an extension to an existing established employment location. The site is not situated in a mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is the intention to acquire planning permission and then sell to a third party for development. The promoter suggests the land is available between 2024 and 2028 and could be built out over 5 to 10 years. The site forms a second and third phase to an existing site allocation in the Local Plan to 2036 (KB3).</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all mains supply and access are accessible from the site boundary. There is no access to gas supply in the local area. There is no known gas supply in the local area. There are no buildings on site so no clearance work would be required. The site is very open and prominent in the landscape so extensive landscaping buffers would be required on its eastern and southern edges in particular. It will also need to be successfully integrated with the adjoining industrial area to form a sustainable extension to it. Access to the later phases of development are dependent on the provision of access from Stow Road to KB3 and then through KB3. Access to KB3 from Stow Road has been approved under 21/01827/FUL.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location of the site on elevated ground and having no pre-existing landscaping means that any future development will need to be sensitive to its location and provide adequate landscape buffers on its eastern and southern edges. The site forms a second and third phase to an existing site allocation in the Local Plan to 2036 (KB3), although KB3 has not yet had a planning application so the timeline for its delivery is uncertain. Also access to the later phases of development are dependent on the provision of access from Stow Road to KB3 and then through KB3 to link to phases 2 and 3. The access to KB3 has been established via the approval of</p>	~

21/01827/FUL and while the design of a scheme incorporating access within the site has not yet been made but it is understood via the Call for Sites form that an outline application for the allocated site is in preparation. Addition of the proposed phases 2 and 3 would assist with the deliverability of the access road in terms of its viability. Due to the uncertainty at this time, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- It consists of greenfield land classified as grade 2 agricultural land
- Opportunity to expand the Bicton and Harvard Estates and provide a second and third phase to an existing employment commitment
- Limited public transport access
- Within 200m of meadow on Kimbolton Airfield county wildlife site and the grassland strip on Kimbolton airfield (South) county wildlife site

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for employment development as it will form an extension to an already established employment location.
- Will require landscaping along its southern and eastern edges to minimise adverse landscape impacts

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 3.48 ha	Commercial - employment	Available post 2028
For solely employment developments, the gross site area is used as there is usually minimal differences between net and gross site areas in schemes providing purely employment uses due to the need for large amounts of	It is unclear from the Call for Sites information provided by the site promoter on the proposed use classes of any employment development, but considering the neighbouring industrial uses,	Delivery over 5 to 10 years (in line with site promoter's anticipated timelines)

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
hardstanding for parking, manoeuvring and deliveries and more incidental landscaping.	the industrial (0.40 plot ratio) has been used to calculate a capacity for the site:  0.40 plot ratio x 3.48 ha = 1.39 ha of land for industrial employment uses equating to <b>13,920 sqm.</b>	

**Updates after the Initial Assessment**

--

**Kimbolton 11: Land at Hatchet Lane, Stonely**

<b>Site reference</b>	Kimbolton 11
<b>Site name</b>	Land at Hatchet Lane, Stonely

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land at Hatchet Lane, Stonely	Kimbolton	3.67

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> <li>Custom and self-build housing</li> </ul> Open space: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain</li> <li>Land to safeguard against flooding</li> </ul>	27 market dwellings and 20 affordable dwellings 3 custom and self-build plots Total site capacity of 50 homes 0.5 ha for natural, green or open spaces 1 ha for biodiversity net gain 0.5 ha for land to safeguard against flooding Total capacity for open space uses = 2 ha	Available 2024 - 2028 Build out over 2 - 3 years

**Core information**

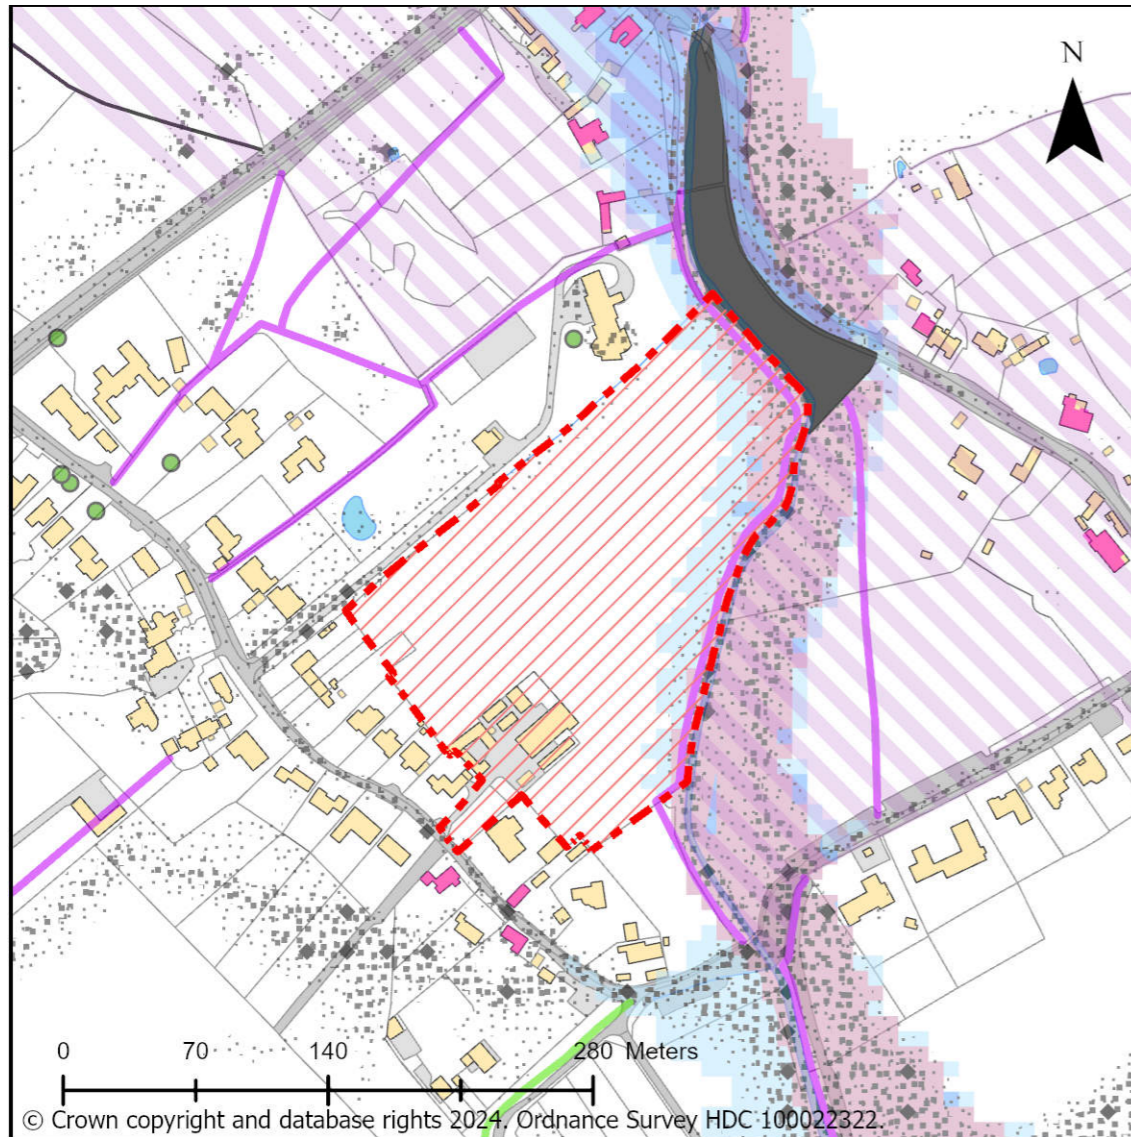

How was the site identified?	Call for sites 2023 submission: site reference – CfS:313
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land

Supporting information	None submitted
------------------------	----------------

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is largely within flood zone 1 but part of the eastern part of the site is located within flood zones 2, 3a and 3b. A proportion of its eastern edge is at risk of fluvial and surface water flooding arising from its proximity to the River Kym. The land is classified as grade 3 agricultural land. The site is wholly classified as greenfield, however it does include several agricultural buildings located to the rear of 37 Hatchet Lane which the site promoter has identified as being redundant and not in use. The site is broadly level and is clearly outlined by hedgerows along all boundaries other than the rear gardens of properties on Hatchet Lane which have a looser mixture of trees and hedges. Vegetation and trees become thicker along the site's western and northern edges where there is a dense wooded</p>	~
--	---

area. The River Kym forms a strong natural boundary to the site's eastern and northern boundaries. Within the site is a public right of way which runs along the riverside, this provides views across the site and also across the wider landscape and conservation area and would need to be retained.

There is no known contamination or pollution on site, further investigation of this would be beneficial to determine if there is some increased levels of pollution or contamination in and around where the current agricultural structures are located. There are no gas or oil pipelines running through the site. The eastern edge of the site adjoins a conservation area, this follows the boundary of the River Kym. The site promoter acknowledges the possibility of archaeological potential within the site which would require further investigation. There are no nature conservation designations on site. Access to the site can be achieved from Hatchet Lane, however this is a narrow road with no footpaths. Engagement with Cambridgeshire County Council will be required to ascertain if this can provide safe access.

The site is wholly greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel as well as for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is the intention to acquire an allocation status and then sell to a third party for obtaining planning permission and development. The promoter suggests the land is available between 2024 and 2028 and could be built out over 2 to 3 years.

--

+
---

**Achievability**

The site promoter has identified that only electricity supply and public highway are accessible from the site boundary with the remaining services (mains water supply and digital and telecommunications infrastructure) being unknown which would require resolution prior to any allocation. There is no gas supply in the local area. There are several buildings on site some clearance work would be required to facilitate development. The site is fairly flat but is constrained by flood risk along its eastern boundary along the River Kym as well as by heritage assets here. The site has an existing agricultural access from Hatchet Lane.

~
---

**Deliverability / developability**

~
---

There are several existing structures to clear but the location means that any future development would need to be sensitive to its setting and provide adequate flood mitigation, heritage consideration and incorporate landscaping measures and SuDs as well as retention of the existing public right of way. The site promoter states that it is intended to acquire an allocation status and then sell the site to a third party for obtaining planning permission and development. As such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Consists of greenfield land
- Risk of fluvial and surface water flooding as well as at an enhanced risk of flooding arising from climate change arising from its proximity to the River Kym
- Is reasonably accessible to shops, primary education and local leisure and community facilities within Kimbolton
- Some limited public transport access and access to employment opportunities
- Requires integration of the existing public right of way
- Development would not enhance or reflect the character of the area and would likely result in substantial adverse impacts on the character of the area and the River Kym landscape

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to the level of flood risk on site and the substantial adverse impact on the character of the area and on the River Kym landscape
- Will not support sustainable placemaking and would disrupt the character and form of the area

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul>	Around 20 homes	Available 2023  Build out over 1 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference: CfS:318
Relevant planning history	None relevant  The Site was included in the HELAA (2017) (198 - West of Sheep Street, Leighton Bromswold) but was not assessed in detail as the site was not categorised as being in a sustainable location.
Land type	Wholly greenfield
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site completely falls within 400m of a Water Recycling Area. The site promoter has not submitted an odour assessment and the proposed residential use is highly vulnerable to the impacts of this constraint. Therefore, the site is discounted from further assessment.	Fail
Site size threshold	Yes	Pass

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken, the site is inappropriate for development as it completely falls within 400m of a Water Recycling Area.	N/A	N/A

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No because the site is located within 400m of a Water Recycling Area, no odour assessment has been submitted. Residential uses are the most vulnerable to locate within this area so the site does not progress to Sustainability Appraisal.
--	--

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.
--

### 10 Old Weston

10.1 A total of 3 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

**Old Weston 1: Land South of Manor Farm, Old Weston**

<b>Site reference</b>	Old Weston 1
<b>Site name</b>	Land South of Manor Farm, Old Weston

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land south west of Manor Farm, North of the B660,  Old Weston	Old Weston	3.52

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:24
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

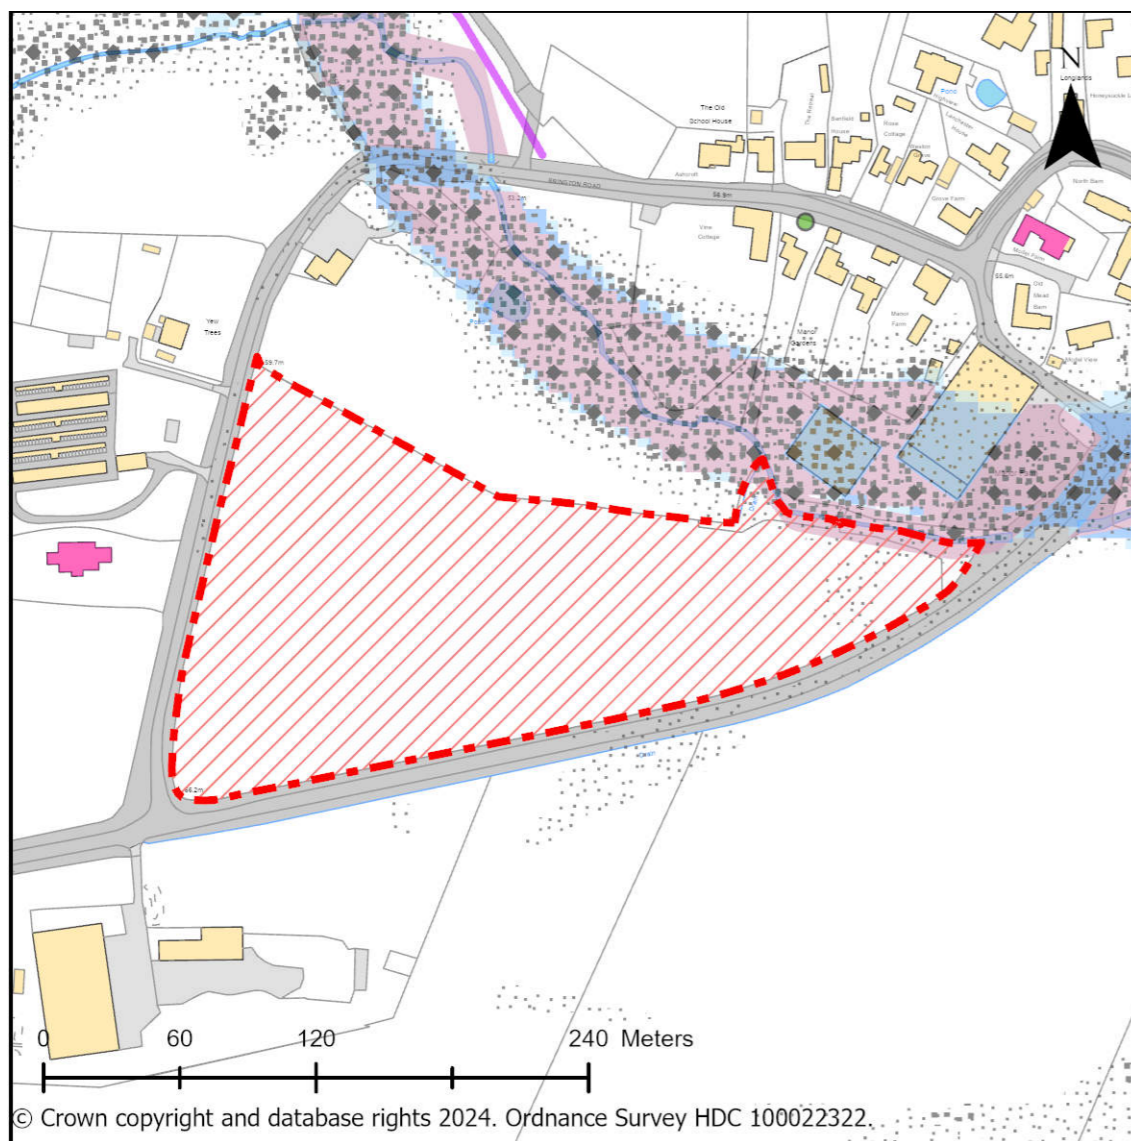

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable homes</li> </ul> Natural, green or open spaces <ul style="list-style-type: none"> <li>Biodiversity net gain</li> <li>Land to safeguard against flooding</li> </ul>	20 homes  All open space uses capacity to be confirmed  Flooding safeguarding to protect Manor Farm from flood risk to the north of the site	Available 2024 -2028  Delivery over 3 to 7 years

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is largely in flood zone 1 although a corridor of flood zone 3b runs along a small stream north of the site covering just 2% of the site. The land is wholly classified as agricultural grade 2. The land slopes gently from the southern edge of the site down to the stream but is of similar elevation to the surrounding land. The site is bounded by intermittent trees and hedging on all boundaries but can be clearly seen from Brington Road and sections of the B660 so development would have a localised landscape impact and landscaping reinforcement would be needed. Few buildings surround the site boundaries. Manor Farm is situated to the northeast of the site, separated by the stream which would require landscaping space between them to allow for flood protection. Any built development</p>	~
--	---

<p>would need to be located close to Manor Farm to facilitate integration into the built form of the village. St Swithin's Church is to the west with a clear view into the site. The site is large relative to the scale of Old Weston, the built character of which primarily comprises properties with direct road frontages. Substantial landscape buffers to sensitive neighbouring uses would be required along with preservation of the vast majority of the site in open space uses to maintain the rural character of the southern approaches to Old Weston.</p> <p>There is no known contamination or pollution within the site. No oil or gas pipeline infrastructure crosses the site and no overhead powerlines are present.</p> <p>There are no known heritage assets within the site but it is close proximity to the grade II* listed St Swithin's Church; the site layout and boundary landscaping would need to ensure any development avoided impact on this. There are no designated nature conservation assets within the site. The site currently has a footbridge access from Manor Farm and road frontages onto both Brington Road and the B660.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single landowner who supports its development. There are no known legal restrictions affecting the site. The site is available for development from 2024 due to changes in the overall farming operation of Manor Farm.</p>	+
<p><b>Achievability</b></p> <p>The site is already served by electricity with water, digital and telecommunications infrastructure accessible from the site boundary. There is no local access to mains gas. The site is relatively flat with a slight slope down towards the stream in the north. The proposed scale of built development is low relative to the site size reflecting the village nature of its location and the need to avoid development impacting on the setting of the grade II* listed St Swithin's Church. No known major infrastructure would be required to serve development of the site although further investigation of access will be required. No buildings currently exist on site so no clearance work would be required.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site has minimal physical constraints to development although impact on the immediate setting will need careful consideration and landscape mitigation. It is contrary to current adopted planning policy so allocation status would be necessary to support its development. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward the site:

- Largely in flood zone 1 and provides a opportunity to resolve surface water flooding from the brook north of the site
- Wholly grade 2 agricultural land
- Remote from publicly accessible greenspace but close to public rights of way
- Large in scale compared to village but only a small portion is proposed for built development adjacent to existing buildings
- Remote from retail, education and employment opportunities
- Very limited public transport access
- Limited impact on heritage assets

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for residential development on a small portion in the north eastern part where careful masterplanning could provide effective integration into the village
- Would provide the opportunity to mitigate surface water flood risk from the brook to the northern boundary
- Would primarily need to be retained for biodiversity net gain to maintain the transition between the village and the adjoining countryside
- Could support national aspirations to facilitate growth on less than 1 ha of land

Page 909 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 3.52 ha  Due to flood risk 5% is removed from the gross site area although this may accommodate flood mitigation measures leaving 3.34 ha.  Around 0.4 ha of built development may be appropriate given the local character, equivalent to a net built developable area of 12%.	Residential - market and/ or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 0.4 ha x 25 dph = <b>10 homes</b>	Subject to allocation  Build out over 2 years for the residential element; open space uses may take significantly longer to establish.

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The remainder being a range of open space uses which can accommodate any landscape buffers and sustainable drainage system requirements that would otherwise be deducted from the gross site area.  Net developable area of <b>0.4 ha built development; 0.18 ha for flood mitigation and 2.94 ha for open space biodiversity net gain uses.</b>	Flood mitigation along the northern boundary of at least <b>0.18 ha</b>  Open space and biodiversity net gain = <b>2.94 ha</b>	

**Updates after the Initial Assessment**

--

**Old Weston 2: Land South of St Swithin's Church, Old Weston**

<b>Site reference</b>	Old Weston 2
<b>Site name</b>	Land South of St Swithin's Church, Old Weston

Land South of St Swithin's Church, Old Weston	Old Weston	1.18

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Space: Natural, green or open spaces	5 to 7 homes	Available 2024 - 2028 Build out over 3 to 5 years

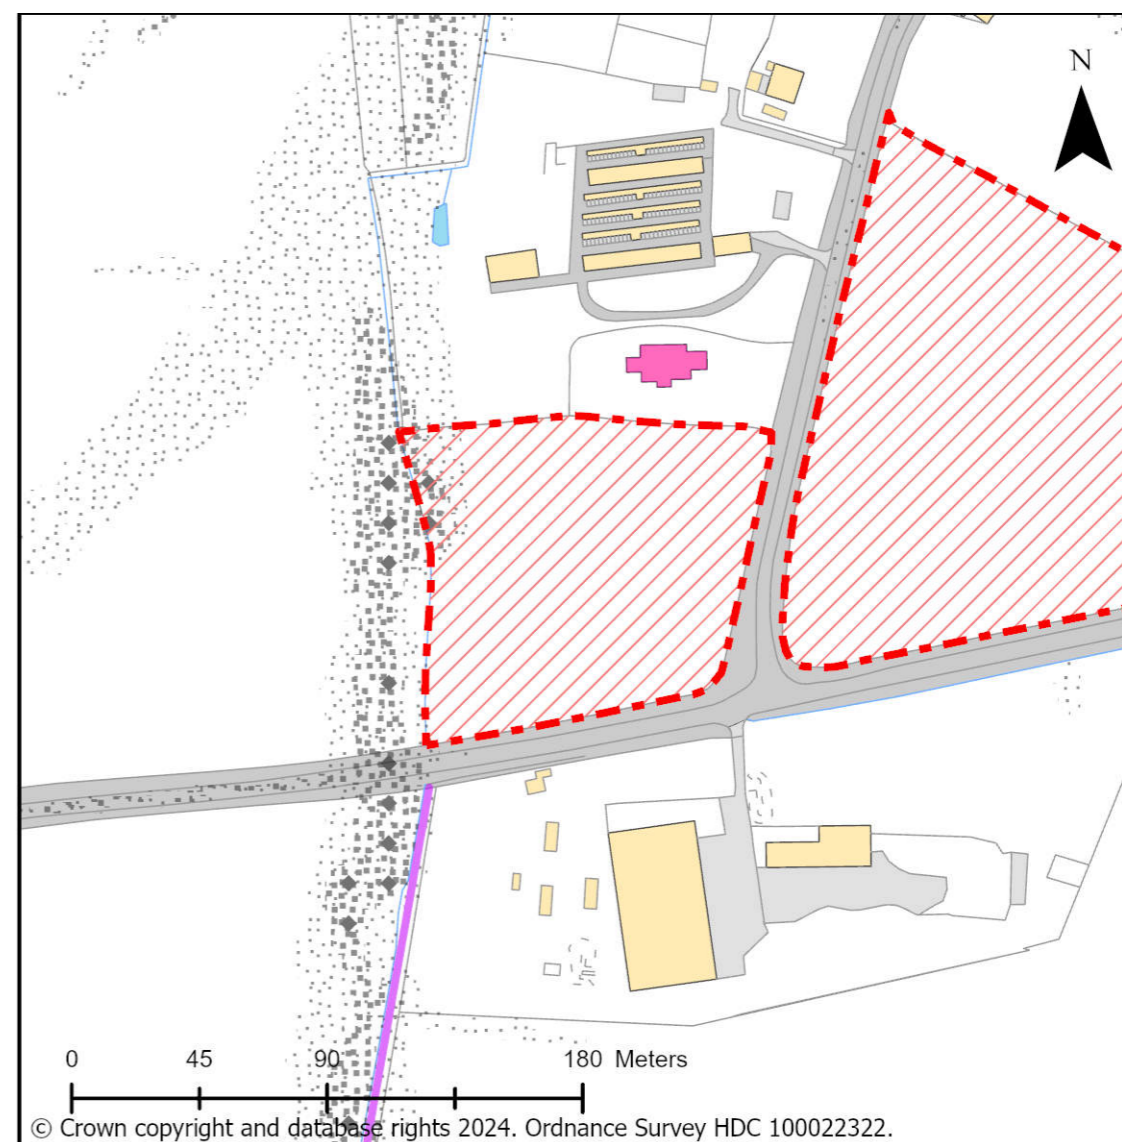

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference: CfS:23
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 911 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1, there is some surface water flood risk in the north western corner of the site. The vast majority of the site is classified as grade 2 agricultural land with only a small proportion of the north-western corner being grade 3. The site has tree lines along its northern, western and southern edges, to the east are views over gently rising countryside. The site is mainly flat with the site rising slightly in its southwestern corner. There are few buildings nearby, most notably immediately to the north of the site is the grade II* listed St Swithin's Church. There is a tree line along the northern boundary which provides some screening but the church spire is still prominent in views and any development would be likely to impact on the setting of the church.</p> <p>On land adjoining the north western corner of the site there is a redundant piggery which has planning permission for the removal of its agricultural structures and erection of two dwellings. To the south of Molesworth Road is a large but well screened pet food and supplies business. There are no nature designations on site or immediately adjoining it. Highway access is from the B660 and Brington Road.</p> <p>The site is wholly greenfield and in agricultural use with no structures on it, there is no known contamination or pollution on site. There are no gas or oil pipelines running through the site.</p> <p>The site is wholly greenfield so would not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The promoter seeks a potential partnership of land owner and developer, pending allocation status. The promoter suggests the land would be available 2024-2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services but gas supply are accessible from the site boundary. The site comprises broadly level ground with a small watercourse running along the western boundary. A comprehensive landscaping buffer would be required to mitigate any harm to heritage assets and to the wider landscape. There are no buildings on site so no clearance work would be required.</p>	+
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the impact on the immediate setting of the grade II\* listed heritage asset would need careful consideration in term sof layout of any development scheme and landscape mitigation. The site promoter also seeks a potential partnership of land owner and developer, pending allocation status, given the timescales anticipated to achieve the desired allocation delivery post 2028 would be more realistic. Therefore, it is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward this site:

- The site is greenfield and predominantly consists of land classified as grade 2 agricultural land, although some is grade 3
- Remote from a local shop, primary education and local leisure and community facilities
- Very limited public transport access
- Remote from natural greenspace
- It adjoins the grade II\* St Swithin's Church
- Physically detached from the main built form of the village; functionally related to it solely by virtue of the site adjoining the parish church

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development because it will not support sustainable lifestyles as it is remote from key day to day services, employment and cannot be accessed via sustainable modes of transport
- Although adjacent to St Swithin's Church the site is not well related to the form of Old Weston village

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	15 homes	Available 2024 - 2028 Build out over 2 to 5 years

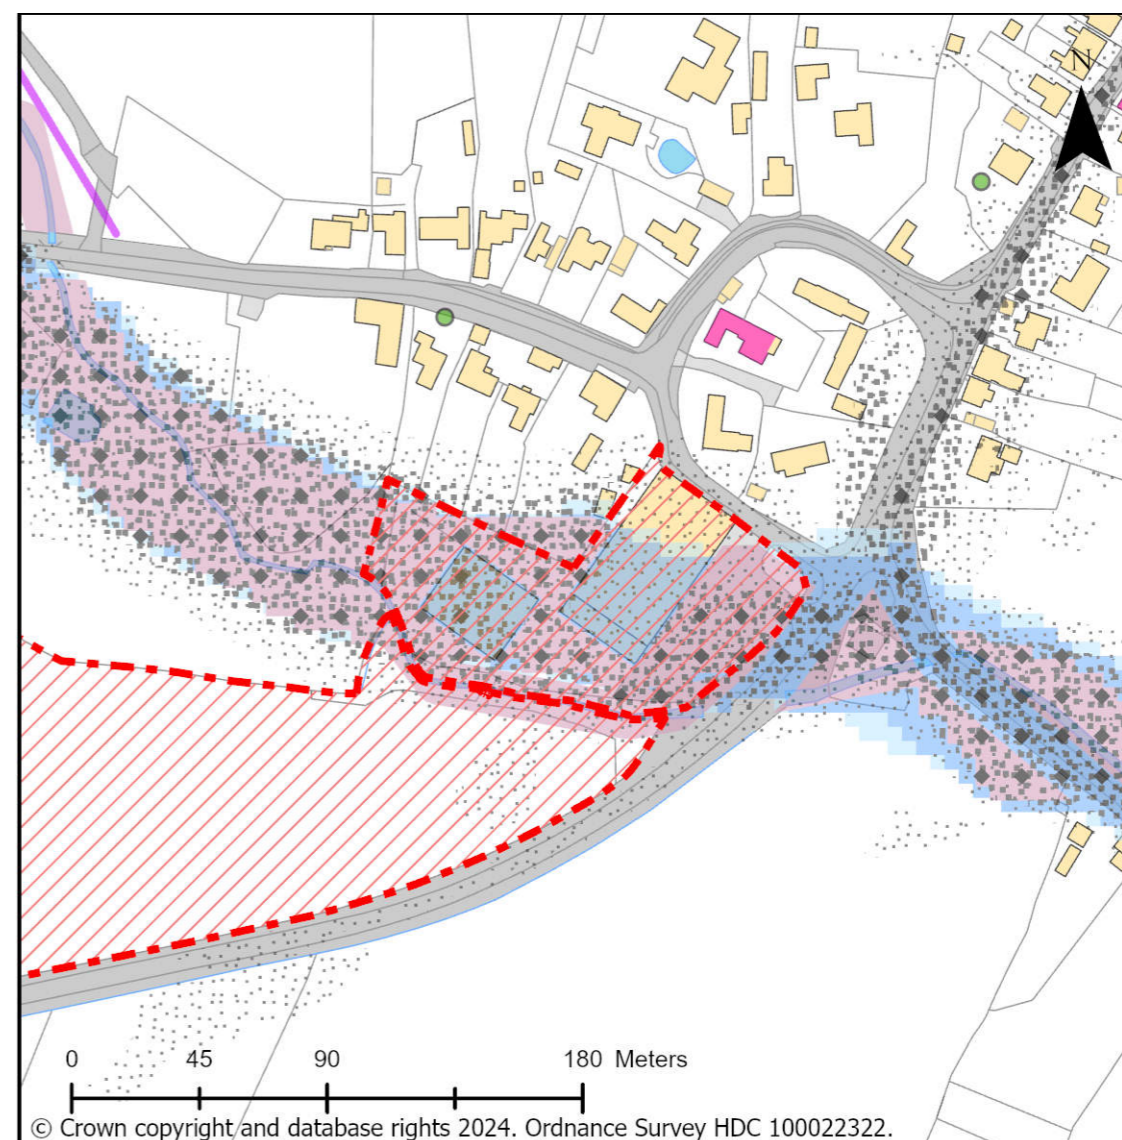

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:340
Relevant planning history	None relevant
Land type	Part previously developed land / part greenfield land (agricultural buildings)
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Flood Risk Assessment (May 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	58% of the site is within flood zone 3b, 28% is within flood zone 3a.	Fail

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No due to the majority of the site being located within flood zone 3b and 3a and the proposed residential uses being classed as a more vulnerable use.
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

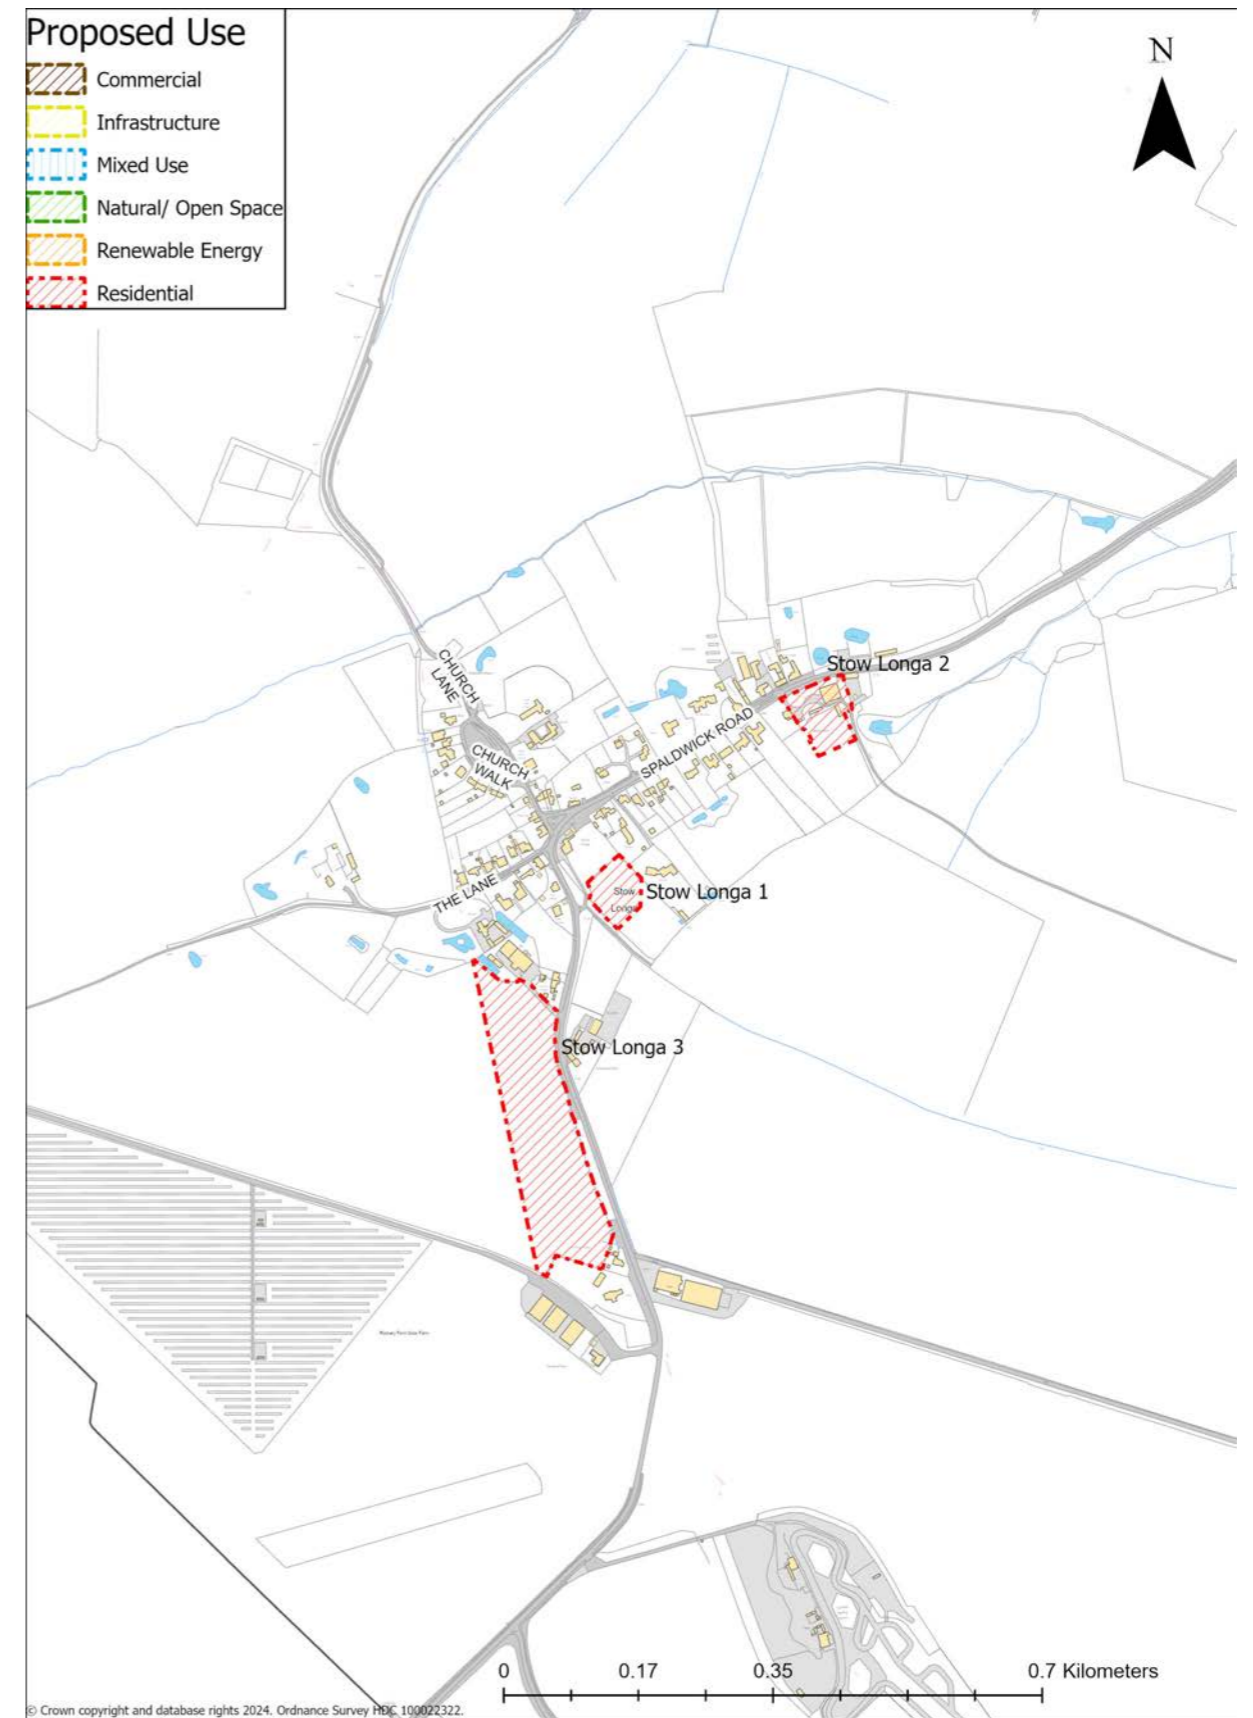

**Updates after the Initial Assessment**

## 11 Stow Longa

11.1 A total of 3 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Stow Longa 1: Land East of Kimbolton Road, Stow Longa
- Stow Longa 2: Land to the South of Spaldwick Road, Stow Longa
- Stow Longa 3: Land North of Rookery Farm, Stow Longa

11.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Stow Longa 1: Land East of Kimbolton Road, Stow Longa**

<b>Site reference</b>	Stow Longa 1
<b>Site name</b>	Land East of Kimbolton Road, Stow Longa

Site address	Parish(es)	Site area (ha)
Land East of Kimbolton Road, Stow Longa	Stow Longa	0.42

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Custom and self build housing	4 homes (either market and/or affordable or custom and self build)	Available 2023 Build out over 1 year

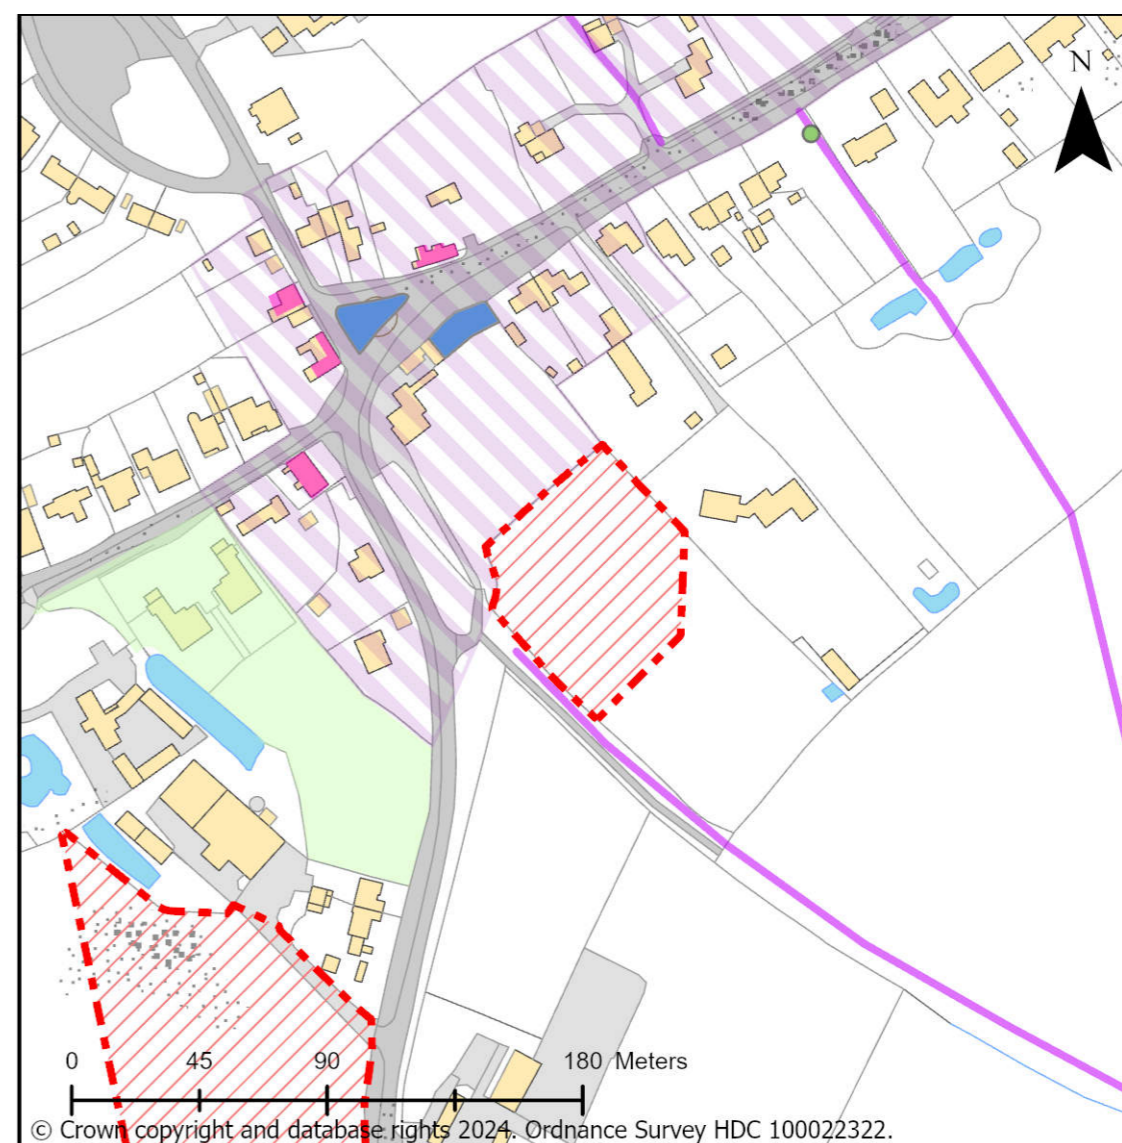

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:219
Relevant planning history	21/02341/OUT - an application for outline planning permission with all matters reserved except for access for the proposed development of 4no self/custom build dwellings. This was appealed for non-determination (APP/H0520/W/22/3300792) but was dismissed on 13/03/2023
Land type	Wholly greenfield land
Current use of the site	Vacant
Supporting information	Indicative block plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 and does not include land at higher risk of surface water flooding. The site is classified as grade 2 agricultural land. The site comprises flat ground which can be partially viewed from Kimbolton Road and the public right of way to the west. The site is fairly well screened from view due to hedgerows, trees and other forms of vegetation. There are residential properties to the north and east with an area of trees separating the site from properties to the west of Kimbolton Road. There are no existing structures on site.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. It adjoins a conservation area and also the Old Vicarage, a non designated heritage asset with the site forming part of the rural setting of these heritage assets. There are no nature conservation designations on site. Highways access could possibly be achieved from Kimbolton Road but would necessitate removal of multiple mature trees and protection of the public right of way.</p> <p>The site is wholly greenfield so would not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The promoter seeks to deliver development via a housebuilder. As highlighted in the core information above, there has been a recent application made for four homes on site. The promoter suggests the land would be available from 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. The site comprises broadly level ground and is fairly well contained due to the presence of hedgerows and trees. The impact of any development will need to be sensitive to these as well as the adjoining conservation area. There are no buildings on site so no clearance work would be required.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the impact on the immediate setting of the conservation area would need careful consideration in design and landscape mitigation. The site promoter identifies that development will be delivered directly by a housebuilder.</p>	~

Page 917 of 3488

As the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is wholly greenfield and classified as grade 2 agricultural land
- Development would impact on local character
- Remote from a local shop, primary education and local leisure and community facilities
- Very limited public transport access
- Remote from natural greenspace
- Adjoins a conservation area and also a non-designated heritage asset so development could have an adverse impact on their setting

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to its potential adverse impact on local character and heritage assets

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

**Stow Longa 2: Land South of Spaldwick Road, Stow Longa**

<b>Site reference</b>	Stow Longa 2
<b>Site name</b>	Land to the South of Spaldwick Road, Stow Longa

Site address	Parish(es)	Site area (ha)
Land to the South of Spaldwick Road, Stow Longa	Stow Longa	0.48

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable homes	about 4 homes	Available 2023 Build out over 1 to 2 years

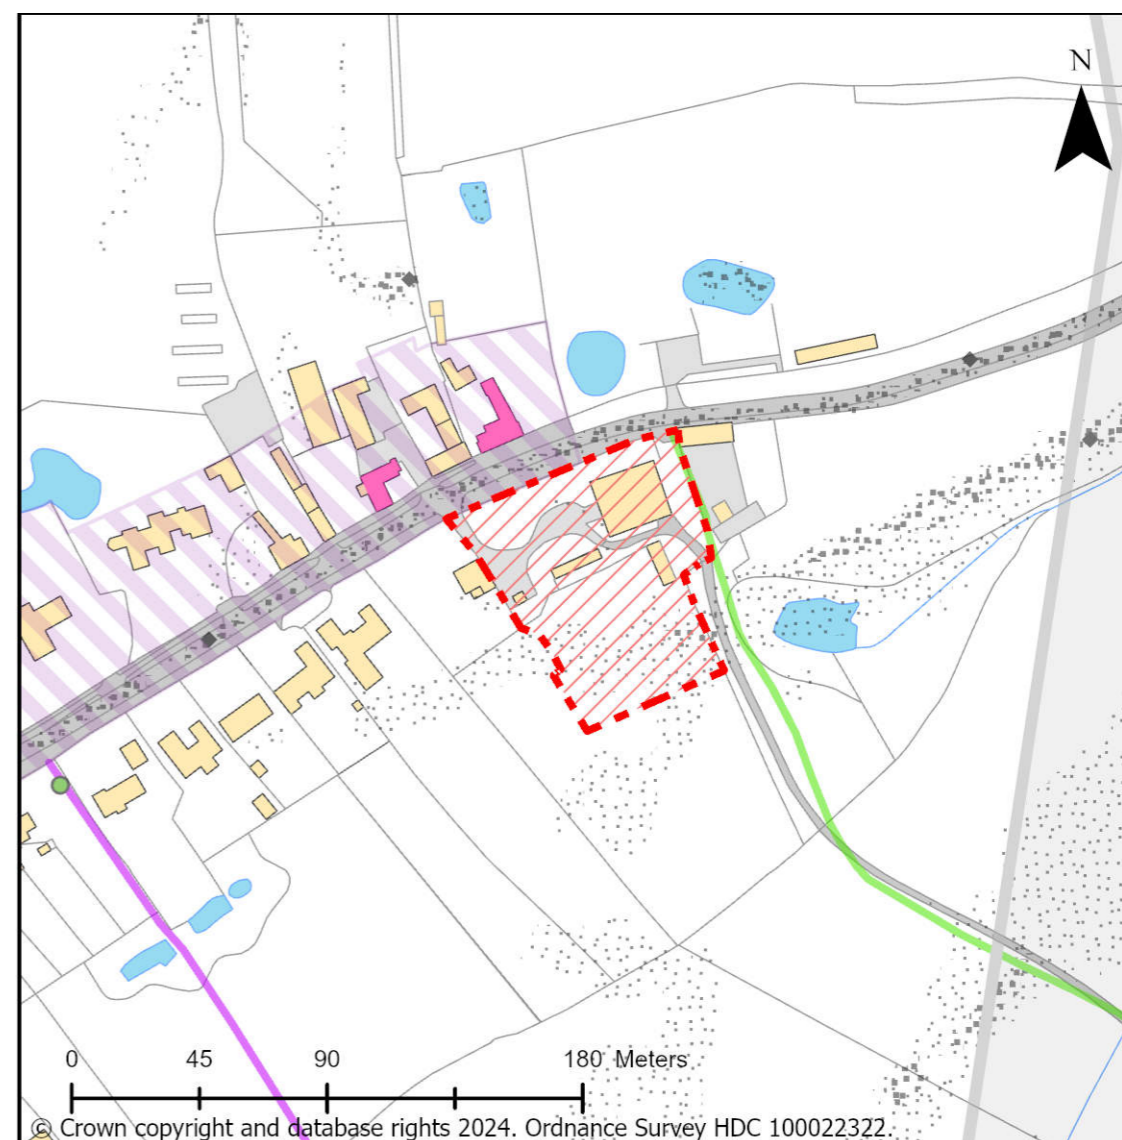

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:319
Relevant planning history	None relevant The site was included in the HELAA (2017) (197 - Manor Farm, Stow Longa) but was not assessed in detail as the site was not classified as being in a sustainable location.
Land type	Greenfield land (including agricultural buildings)
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 and includes land at higher risk of surface water flooding. The site is predominantly classified as grade 2 agricultural land apart from a small portion of the north eastern corner of the site being grade 3. The site comprises broadly flat ground with land sloping slightly to the north east. A public right of way runs along the eastern boundary providing views into the site. The site is fairly well screened from view along Spaldwick Road due to trees and other forms of vegetation. There are residential properties to the west and north across Spaldwick Road.</p> <p>There are several existing agricultural structures and hardstanding on site. There is no known contamination or pollution on site but this may need further investigation as the site has been in use as a farm. No gas or oil pipelines run through the site. It adjoins the conservation area to the north and is also opposite the grade II listed Stow Cottage. There are no nature conservation designations on or near to the site. Highways access can be achieved from Spaldwick Road.</p> <p>Although classified as greenfield land the site contains agricultural buildings so its development could contribute to regeneration. It is not situated in a mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The promoter seeks acquire planning permission and then sell to a third party for development following the site being made an allocation.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from electricity supply which is within the site boundary. The site comprises broadly level ground and is fairly well contained due to the presence of hedgerows and trees when viewing the site from Spaldwick Road. The site is however more visible from the public right of way running along its eastern boundary. The impact of any development will need to be sensitive to these as well as the adjoining conservation area and nearby listed building. There are several buildings and hardstanding on site so clearance work would be required.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are existing structures to clear and hardstanding to remove. Additionally, the impact on the immediate setting of the conservation area and listed building, as well as impact on the surrounding countryside will need careful consideration in design and landscape</p>	~

Page 919 of 3488

<p>mitigation. The site promoter identifies that development will be delivered by a housebuilder following the site acquiring allocation status and planning approval. The site is therefore categorised as developable.</p>	
--	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward this site:

- Although classified as greenfield land the site contains existing agricultural structures and predominantly consists of land classified as grade 2 agricultural land, although some is grade 3
- Remote from a local shop, primary education and local leisure and community facilities
- Very limited public transport access
- Remote from natural greenspace
- It adjoins a conservation area and is close to listed buildings
- Opportunity for small scale growth in a location that could retain and reflect the character of the area

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for built development and would support development on a site of less than 1ha
- Would require careful design in terms of landscape and heritage impact
- Development should be linear in form and not be in depth in order to reflect the character of the area

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.42 ha</p> <p>Given the linear form of development along Spaldwick Road rather than calculate a net developable area the calculation is based on potential frontage widths acknowledging that those in the immediate area are quite</p>	<p>Residential use - market and/ or affordable housing</p> <p>85m frontage x 15m width per plot</p> <p>Capacity = 85/15 = <b>6 homes</b></p>	<p>Available post 2028 subject to successful allocation status</p> <p>Build out over 1 year</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>varied. Substantial landscaping would be required on the southern boundary which could be contained within extensive gardens recognising the character of the immediate locality.</p> <p>Net developable area of 140m frontage x 15m width per plot.</p>		

**Updates after the Initial Assessment**

--

**Stow Longa 3: Land North of Rookery Farm, Stow Road, Stow Longa**

<b>Site reference</b>	Stow Longa 3
<b>Site name</b>	Land North of Rookery Farm, Stow Road, Stow Longa

Site address	Parish(es)	Site area (ha)
Land North of Rookery Farm, Stow Road, Stow Longa	Stow Longa	3.51

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market homes</li> </ul> Open spaces: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> <li>Land to safeguard against flooding - please state the number of hectares</li> </ul>	9 homes  1 ha of land for natural, green or open spaces  1 ha of land for biodiversity net gain  0.51 ha of land to safeguard against flooding	Available 2024 - 2028  Build out over 1 - 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:304
Relevant planning history	None relevant on site  On land immediately adjoining to the north 21/02754/FUL for the 'erection of four dwellings following demolition of agricultural buildings' approved in February 2023.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Infographic leaflet

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1. In terms of surface water flooding Kimbolton Road, onto which the site fronts, is at high risk and immediately north of the site is a small area of high/medium/low risk around a pond. The site is wholly classified as grade 2 agricultural land which is currently in arable use. The site comprises higher ground rising from Kimbolton Road to the west and continuing to do so beyond the site boundary, so it is prominent in terms of wider landscape views to the west where there are no clear boundaries such as hedgerows to the site. From the east the site is not clearly visible from Kimbolton Road due to the presence of vegetation. A public right of way cuts through the middle of the site and provides views across the site and the wider landscape including both the countryside</p>	~
---	---

<p>and the solar farm which at its nearest point is around 100m from the south western corner of the site. The northern boundary of the site adjoins a small group of both residential and agricultural buildings that currently sit on the outskirts of Stow Longa. To the south of the site are two residential properties and several barns currently in the open countryside.</p> <p>There are no existing structures on site. There is no known contamination or pollution on site. No gas or oil pipelines run through the site but electricity powerlines can be found running along the eastern edge of the site. There are no heritage assets or nature conservation designations within the site or immediately adjoining it. A pedestrian bridge crosses the ditch providing access from Kimbolton Road to the public right of way which is broadly central in the site frontage; an equivalent route would need to be maintained. Highways access may be achieved from Kimbolton Road although there is no separate access at present.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in a mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. The site promoter highlights that there are legal restrictions affecting the site. Their client currently owns the access to the north which is being sold as part of the development granted under 21/02754/FUL, but the client will retain right of access over the land. The site promoter states that an allocation status is sought where the site will then be sold to a third party for obtaining planning permission and development. The promoter suggests the site will be available between 2024 and 2028.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that mains water supply and the public highway are accessible from the site boundary with an electricity supply available within the site. It is unknown if there is a gas supply or digital and telecommunications infrastructure available to the site. The site comprises broadly level ground but on land that is elevated which with very limited hedgerows to on the site's western boundary meaning the site is prominent in wider landscape views. The impact of any development would need to be sensitive to the impact on the wider countryside and views from public rights of way. There are no buildings on site so no clearance work would be required.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the impact on the immediate setting of the conservation area will need careful consideration in design and landscape mitigation. The site promoter identifies that an allocation status is sought before selling the site to a third party for obtaining planning permission. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is wholly greenfield and classified as grade 2 agricultural land
- Remote from local shop, primary education and local leisure and community facilities
- Very limited public transport access
- Remote from natural greenspace
- The site is located such that it cannot be effectively masterplanned to become part of the existing place and community and also retain the character of the area

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development as it would adversely impact the character of the area and would not support sustainable placemaking principles

Page 923 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:352
Relevant planning history	<ul style="list-style-type: none"> <li>20/00824/HED - application for the removal of the hedgerow was refused in May 2020. A Hedgerow Retention Notice was served in July 2020.</li> <li>22/01332/FUL - June 2022 planning application submitted for rural exceptions housing development of 7 new dwellings - withdrawn</li> <li>22/01459/FUL - July 2022 planning application submitted for the erection of a farm shop, restaurant and plant centre – withdrawn</li> <li>23/01069/FUL - June 2023 revised planning application submitted for rural exceptions housing development of 7 new dwellings - refused December 2023</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land

Supporting information	None submitted
------------------------	----------------

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 but there is some surface water flood risk in the south eastern corner of the site. The site is wholly classified as grade 2 agricultural land. The site is wholly greenfield and in agricultural use with no structures on it, The site is mainly flat but does slope downwards slightly in its north eastern corner. The site is fairly well contained due to hedgerows and tree lines along all of its boundaries, there are gaps within these allowing for some longer distance views.</p>	~
---	---

There are residential properties and Village Hall to the west of the site along Church Lane. There are more residential properties to the north. The site is located wholly within a conservation area, the grade I listed All Saints Church is located to the north of the site which is a prominent local landmark. Any proposed development would need to avoid harm to the setting of this significant heritage asset which is clearly visible from the site. There are no nature conservation designations on site. The boundary trees contribute to the character of the conservation area and their retention should be prioritised. A public right of way cuts through the site which should be retained to facilitate access to the wider countryside beyond the site to the east. Highways access may be achieved from the B645 but Church Lane is narrow and access would be highly constrained.

There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site but electricity powerlines run along the B645 frontage which would need to be diverted or otherwise mitigated in any development layout. The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The promoter seeks to deliver development directly by the land owner. There have been several recent planning applications made on site for residential and retail uses. The promoter suggests the land would be available 2024-2028.

**Achievability**

The site promoter has identified that all main services are accessible from the site boundary other than gas supply as this is unknown. The site comprises broadly level ground and is fairly well contained due to the presence of hedgerows and trees. The impact of any development would need to be sensitive to these as well as heritage assets. There are no buildings on site so no clearance work would be required. B645 but Church Lane is narrow and access would be highly constrained.

**Deliverability / developability**

There are no existing structures to clear but the impact on the immediate setting of the conservation area and grade I listed heritage asset will need careful consideration through design and landscape mitigation. The site promoter identifies that development will be delivered directly by the landowner. It is unclear from the call for sites information whether the housing or retail element would be built first or if they are proposed to come forward concurrently. The submission highlights that this site is to provide rural exceptions housing

--

+
---

~
---

~
---

meeting the identified need of Tilbrook, therefore under current policy the residential element has the potential to be approved. It is less clear if the retail element would be acceptable under current policy as the proposed floorspace has not been provided in the call for sites submission. Therefore, the site as a whole is categorised as developable.	
--	--

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site consists of greenfield land classified as grade 2 agricultural land
- Remote from natural greenspace
- Highly constrained by heritage assets including the conservation area approach to the village from the east
- Limited access to public transport
- Situated such that development could be sustainably integrated with the existing place and community
- Limited accessibility to local shops, services, primary education and employment within Tilbrook and in neighbouring Kimbolton

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to the potential adverse impacts on heritage assets including the setting of the village's conservation area

Page 928 of 3488

## Document Information

**Title:** Central Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Central Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 Central Huntingdonshire Area

1.1 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

1.2 This document sets out the site assessments for the sites located within 'Central Huntingdonshire'. This grouping consists of Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Brampton - 19 sites
- Godmanchester - 12 sites
- Hemingford Abbots - 3 sites
- Huntingdon - 3 sites
- Offord Cluny and Offord D'Arcy - 8 sites

Map 1.1 Huntingdonshire site assessment groupings

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal to obtain a complete picture of the Council's initial consideration of the site.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites.

#### 3.4 Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next 5 years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or was occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape or been revegetated
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

- **CfS** - Call for Sites
- **Dph** - Dwelling per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.5 The assessment of each site consists of several sections, each is detailed below:

**Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.

**Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.

**Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.

**Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.

**Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a local green space, having a nature conservation designation, within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.

**Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.

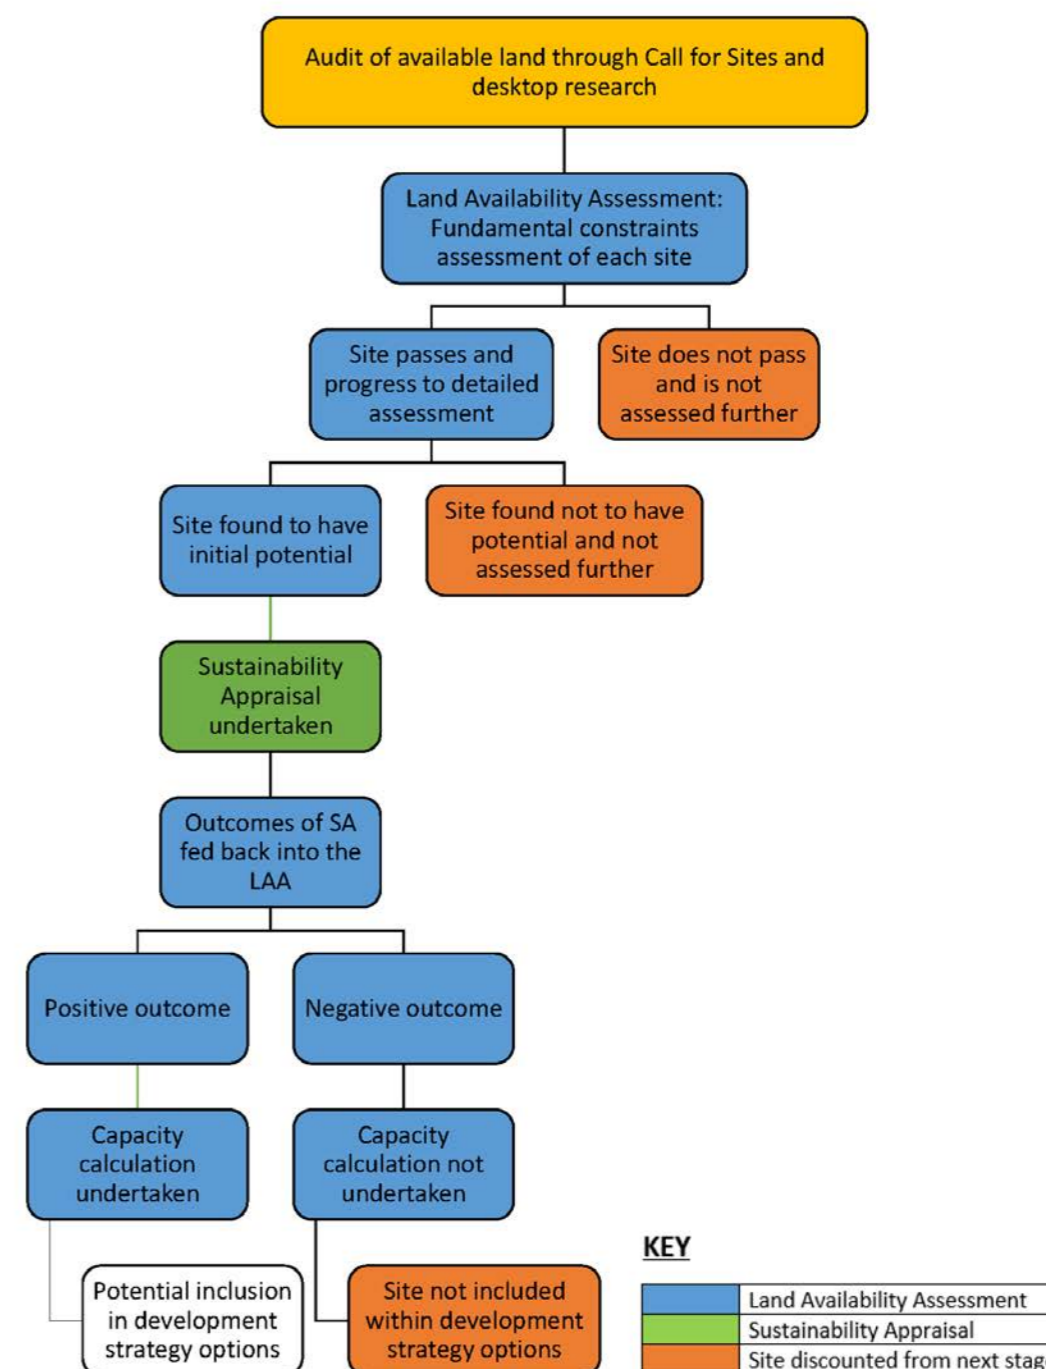

**Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.

**Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.

**HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, we will calculate an indicative capacity for the site and uses. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.

**Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

### Site Assessment Process

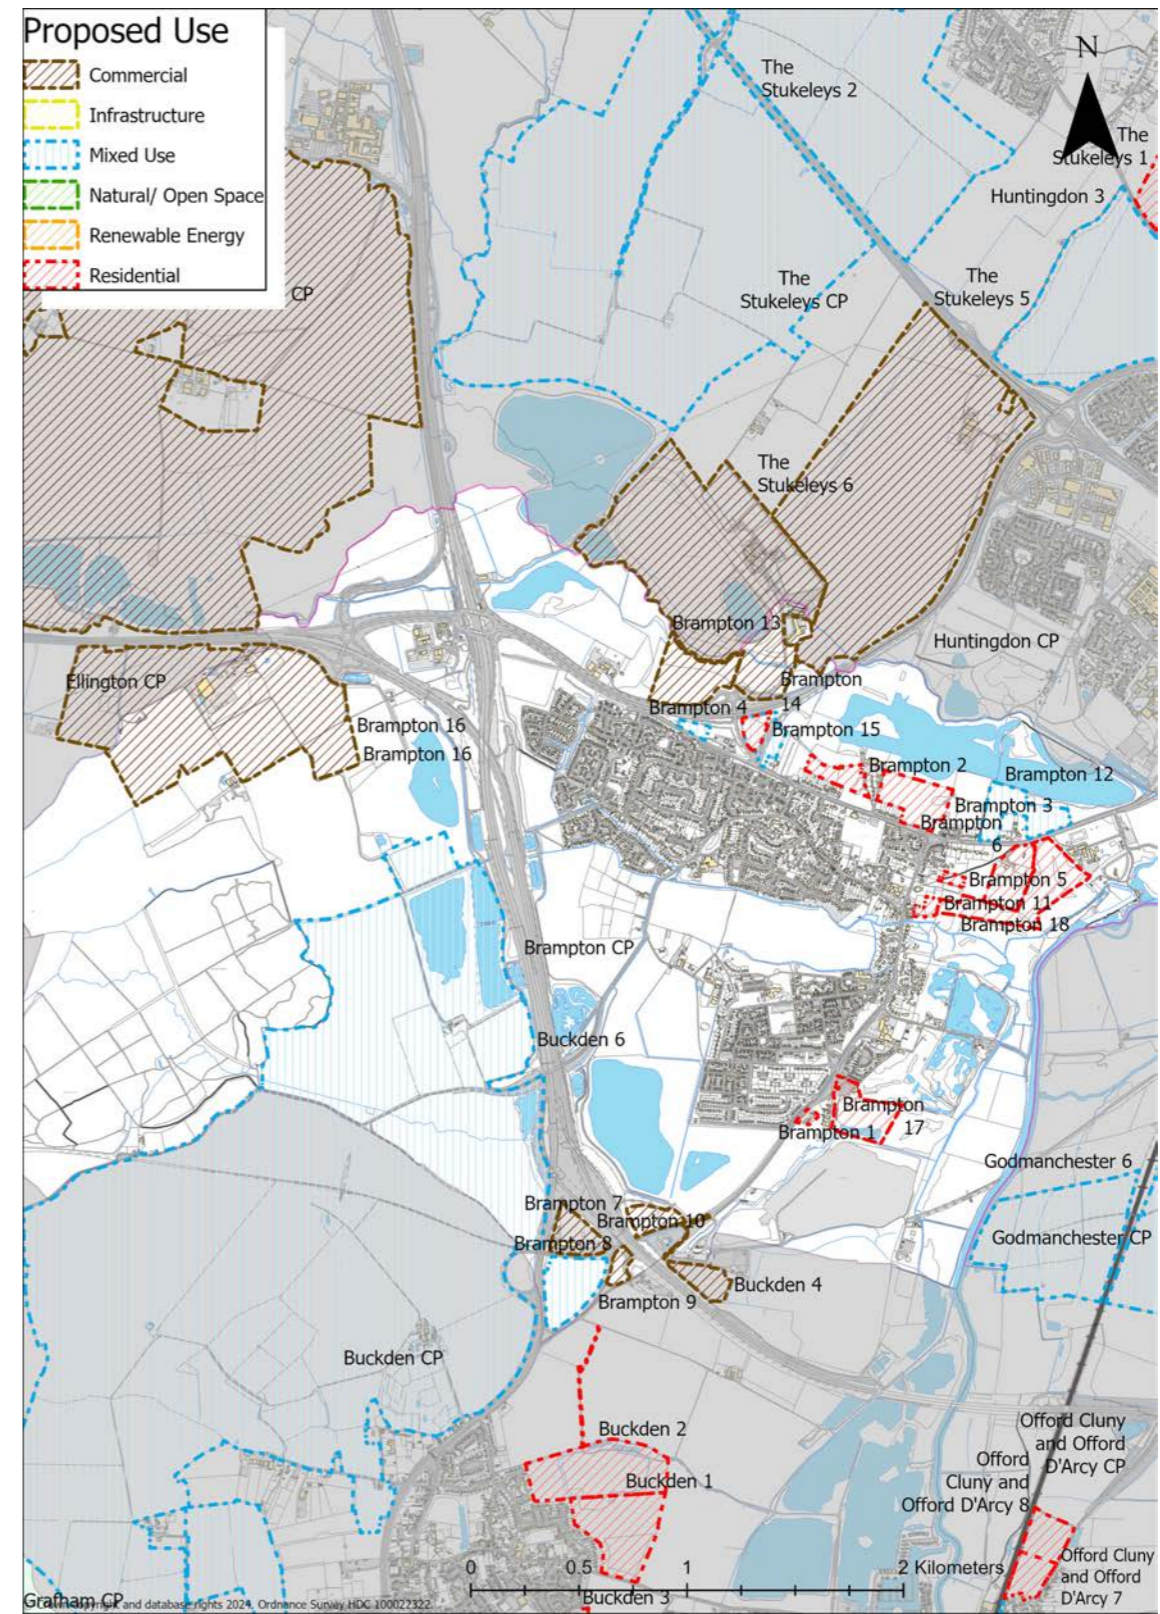

# 1 Brampton

1.1 A total of 18 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Brampton 1: Swift Car Care, Buckden Road, Brampton
- Brampton 2: Land to the North of Thrapston road Brampton and West of Poplars Farm 38, Brampton
- Brampton 3: Land to the North of Thrapston Road (opposite The Hurdles), Brampton
- Brampton 4: Wallis Land, Thrapston Road, Brampton
- Brampton 5: Land adjacent The Rectory, Church Road, Brampton
- Brampton 6: Land at Water Meadows, South of Huntingdon Road, Brampton
- Brampton 7: Area 1 Park Farm, Brampton
- Brampton 8: Area 2 Park Farm, Brampton
- Brampton 9: Area 3 Park Farm, Brampton
- Brampton 10: Area 4 Park Farm, Brampton
- Brampton 11: Manor Farm, Brampton
- Brampton 12: Land off Huntingdon Road, Brampton
- Brampton 13: Land North of A141, South of Brampton racecourse, Brampton
- Brampton 14: Land North of Thrapston Road and South of the A141 (larger site), Brampton
- Brampton 15: Land North of Thrapston Road and South of the A141 (smaller site), Brampton
- Brampton 16: Land at Low Harthay and Woodhatch Farms, Brampton - this site also partially falls within Ellington parish. As the majority of the site falls within Brampton parish, the site has been assessed here instead. A link to the site can also be found within the Ellington section of the Western Huntingdonshire LAA document.
- Brampton 17: Brampton Park Golf Club (South site)
- Brampton 18: Brampton Park Golf Club (North site)

1.2 Please note that the following sites also partially fall within Brampton parish:

- The Stukeleys 6: Huntingdon Racecourse also partially falls within Brampton parish but is predominately within The Stukeleys parish so the site assessment has been included within The Stukeleys parish of the Northern Central Huntingdonshire LAA document.
- Buckden 6: Land West of A1 from Buckden to Brampton also partially falls within Brampton parish but is predominately within Buckden parish so the site assessment has been included within Buckden parish of the Southern Huntingdonshire LAA document.

1.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Site name</b>	Swift Car Care, Buckden Road, Brampton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Swift Car Care, Buckden Road, Brampton	Brampton	0.4

**Promoter's Intentions**

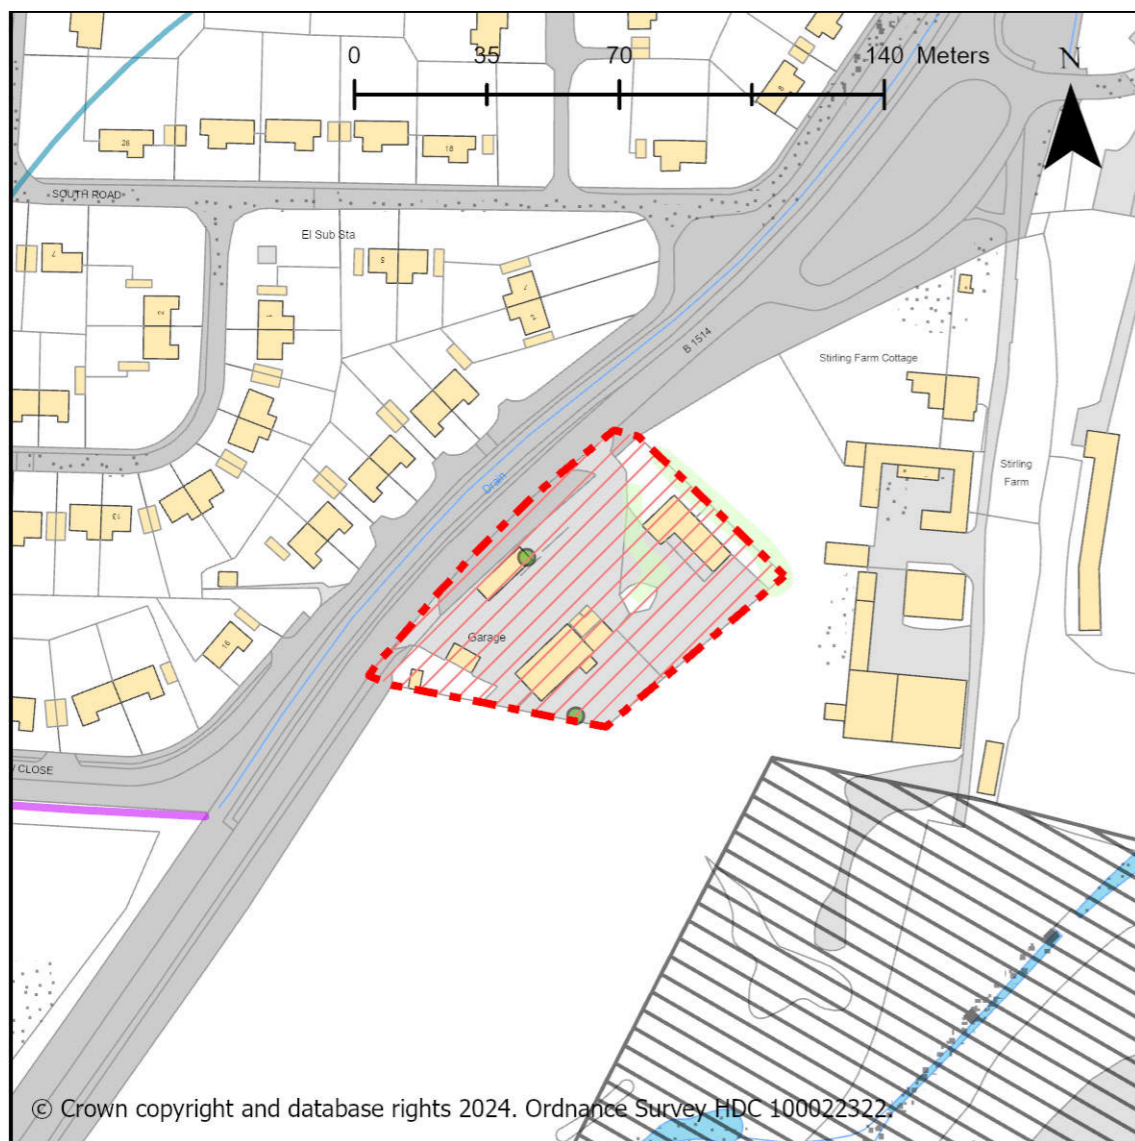

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable homes	9 homes	Available 2023  Built out over 12 - 18 months

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:124
Relevant planning history	<ul style="list-style-type: none"> <li>The site was assessed in the HELAA 2017 (Park View Garage) was considered suitable for employment development to comprise light industrial (class B1c) use. The site was subsequently allocated in the Huntingdonshire Local Plan to 2036 under HU13 for employment development to be comprised of light industrial use (class 'B1c').</li> <li>20/00400/FUL for the erection of new commercial buildings comprising four light industrial units was approved in January 2021.</li> </ul>
Land type	Previously developed land
Current use of the site	Commercial/ industrial
Supporting information	<ul style="list-style-type: none"> <li>Covering Letter (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site is within 50m of Buckden Landfill Waste Management Area (WMA) and within the consultation area for the WMA. No assessment has been made by the site promoter on the impact of the proposed development on the MWA. It is noted that in the submitted covering letter than an odour assessment is being undertaken and will be made available in due course.	Fail
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is within 50m of Buckden Landfill Waste Management Area (WMA) and within the consultation area for the WMA.	N/A	N/A

**Updates after the Initial Assessment**

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No because the site falls within 250m of a waste management area. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of residential development on the MWA. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and

**Brampton 2: Land to the North of Thrapston road Brampton and West of Poplars Farm 38, Brampton**

<b>Site reference</b>	Brampton 2
<b>Site name</b>	Land to the North of Thrapston road Brampton and West of Poplars Farm 38, Brampton

Site address	Parish(es)	Site area (ha)
Land to the North of Thrapston road Brampton and West of Poplars Farm 38, Brampton	Brampton	2.3

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Specialist housing	55 homes	Available 2023 Build out over 2 - 3 years

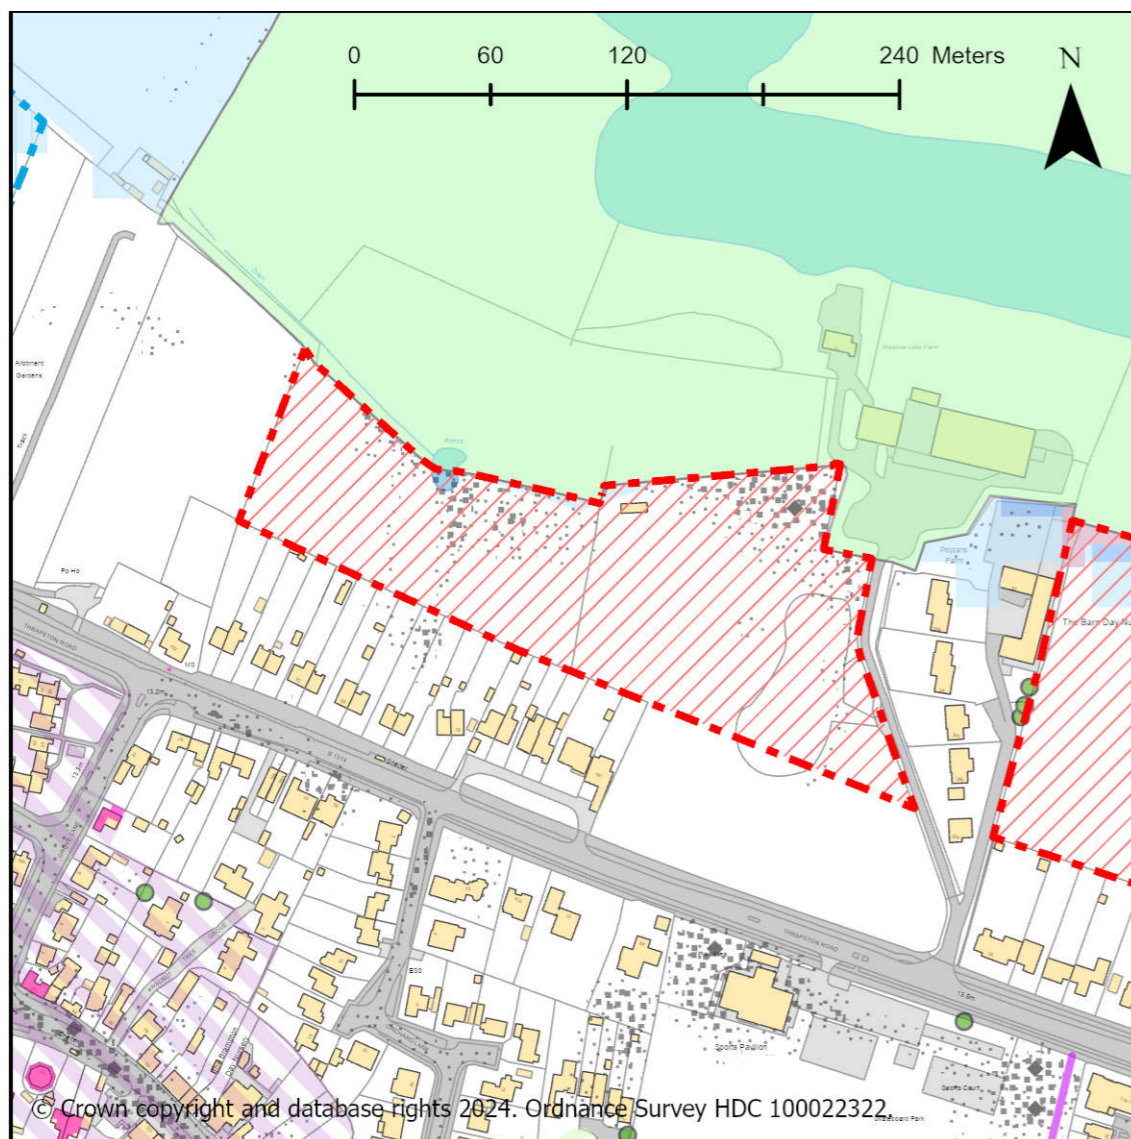

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:138
Relevant planning history	<ul style="list-style-type: none"> <li>The site was assessed as part of a larger site in the HELAA 2017 (Thrapston Road West, Brampton (amended boundary), site reference 212) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> <li>This site and additional land along Thrapston Road was subject to 16/01255/OUT for the erection of 63 dwellings but was refused in January 2017 and an appeal later dismissed in December 2017.</li> <li>On adjoining land to the south that directly fronts onto Thrapston Road, outline permission was been granted in May 2019 under 18/02569/OUT for the erection of 16 dwellings.</li> </ul>

Land type	Wholly greenfield land
Current use of the site	Pasture land
Supporting information	<ul style="list-style-type: none"> <li>Tree Survey and Arboricultural Impact Assessment (June 2016)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>It is located north of the B1514 between Hinchingsbrooke Country Park and Brampton. The vast majority of the site is located within flood zone 1 with a very small portion on the northern boundary being within flood zone 2. There is a significant risk from surface water flooding running through the centre of the site. The site is wholly classified as grade 3 agricultural land and comprises land of rough pasture. The site is broadly level and has unbroken tree belt running along its northern, southern and western edges. The site has limited visibility from the road due to hedgerow trees but is of significant value to the setting</p>	~
--	---

<p>of the country park. Along most of its southern boundary, the site adjoins residential development along Thrapston Road, to the east is Poplars Farm, to the west and north is countryside with Hinchingsbrooke Country Park north of the site.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site but along its northern boundary the site adjoins the Hinchingsbrooke Gravel Pits County Wildlife Site. There are no heritage designations on site but it is nearby to a conservation area. Access to the site can be achieved from Thrapston Road. While development along Thrapston Road has been permitted under 18/02569/OUT, the approved masterplan shows that a farm track access is planned to enable access to the land behind (this call for site submission).</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission then sell it to a third party for development. The landowner suggests the land is available now and take between 2 and 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There is significant levels of surface water flood risk through the centre of the site which will require sustainable drainage mitigation. Additionally, the location of development forming in depth development along Thrapston Road will require landscaping to mitigation adverse landscape impact as well as amenity impact on existing properties. The provision of access from Thrapston Road is possible, however the details of this may be dependent on the delivery of the residential scheme permitted to the south east of the site.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site is in a sensitive location in terms of landscape impact and also context in relation to existing development. The site has planning history and has previously been assessed as part of earlier local plan works. It is intended to acquire planning permission then sell it to a third party for development. While the site promoter states that the site is available now, no new planning application has been</p>	~

submitted. Additionally, the tree survey submitted to support the call for sites submission is somewhat dated now being from June 2016, therefore updated technical work will be required. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land
- Is mostly within flood zone 1 but there is of the northern part of the site in flood zone 2, there is some surface water flood risk
- In walking distance to services and facilities, primary education and employment opportunities within Brampton and Huntingdon
- Good accessibility to public transport options
- Accessible to natural green space
- Adjacent to designated natural conservation sites and is within the Great Ouse Valley Green Infrastructure Priority Area
- Has a very close relationship to Hinchingsbrooke Country Park and forms a key part of its rural setting
- Located on the northern edge of the built form of Brampton village characterised by ribbon development, in depth development would adversely impact this character

In combination the outcomes of the LAA and SA indicate that the site:

- Is not appropriate for development due to the likely adverse impacts on the rural setting of Hinchingsbrooke Country Park and the adverse impacts on the character of Brampton.

Page 943 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Updates after the Initial Assessment**

## Brampton 3: Land to the North of Thrapston Road (opposite The Hurdles), Brampton

<b>Site reference</b>	Brampton 3
<b>Site name</b>	Land to the North of Thrapston Road (opposite The Hurdles), Brampton

Site address	Parish(es)	Site area (ha)
Land to the North of Thrapston Road (opposite The Hurdles), Brampton	Brampton	5.7

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	circa 10 homes	Available 2023 Build out over 1 - 2 years

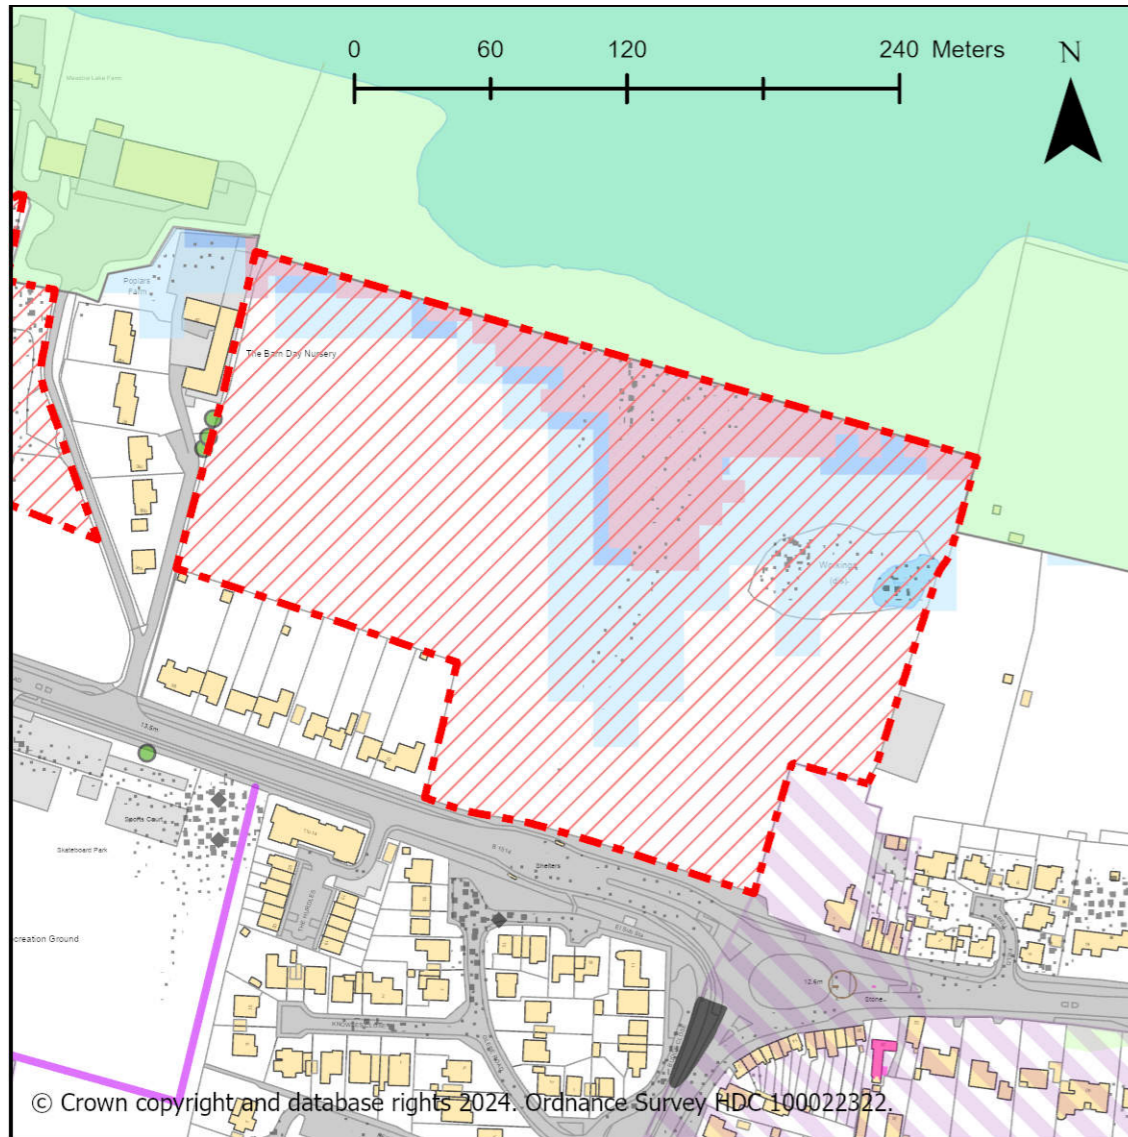

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:320
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA 2017 (Thrapston Road East) but was not taken forward as a site allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	A small portion of the northern edge of the site is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>It is located north of the B1514 between Hinchingsbrooke Country Park and Brampton. Approximately a third of the site is located within flood 2 with its northern edge being located within flood zone 3a and 3b. There is a significant risk from surface water flooding running through the centre of the site. The site is wholly classified as grade 3 agricultural land and comprises land of rough pasture. The site is broadly level and has unbroken tree belts running along its northern and southern edges. The site is more open on its eastern and western edges but there are some trees protected by Tree Preservation Orders along the site's western boundary. The site has limited visibility from the road due to hedgerow trees</p>	~
---	---

but is of significant value to the setting of the country park. Along most of its southern boundary, the site adjoins residential development along Thrapston Road, it is surrounded by countryside to the north, east and to the west by Poplars Farm.

There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site but along its northern boundary the site adjoins the Hinchingsbrooke Gravel Pits County Wildlife Site. There are no heritage designations on site but it is adjacent to a conservation area on its south eastern boundary. Access to the site can be achieved from Thrapston Road.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions impacting the site. At this stage it is anticipated that planning permission would be acquired by the landowner following an allocation and the site sold to a housebuilder. The landowner suggests the land is available now and take between 1 and 2 years to complete.</p>	+
---	---

<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is constrained by flooding particularly towards the rear of the site. To mitigate sustainable drainage will be required and it may only be appropriate to develop along the site's frontage along Thrapston Road where there is no risk of flooding. Landscaping will also be required to mitigation adverse landscape impact as well as impact on the adjoining conservation area. The provision of access from Thrapston Road is possible.</p>	~
---	---

<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site is in a sensitive location in terms of landscape impact and also context in relation to existing development. The site promoter anticipates that the landowner will acquire planning permission following an allocation status and then sell the site to a housebuilder for the delivery of the development. While the site promoter states that the site is available now, the site promoter is seeking an allocation status for the site, as such, the site is categorised as developable.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land
- Is constrained by fluvial flood risk with some of the northern part of the site being within flood zones 2, 3a and 3b and surface water flood risk through the centre of the site
- In walking distance to services and facilities, primary education and employment opportunities within Brampton and Huntingdon
- Good accessibility to public transport options
- Accessible to natural green space
- Adjacent to heritage and natural conservation sites and is within the Great Ouse Valley Green Infrastructure Priority Area
- Has a very close relationship to Hinchingsbrooke Country Park and forms a key part of its rural setting
- Located on the northern edge of the built form of Brampton village characterised by ribbon development, in depth development would adversely impact this character

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for a frontage only scheme which would reflect the form of development along Thrapston Road and ensure built development was retained within flood zone 1

Page 946 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 5.7ha  15% net developable area allowed to enable a frontage only development which would reflect the form of development along Thrapston Road and ensure built development was placed within flood zone 1.  5.7 ha x standard proportion of 15% = <b>0.86 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 0.86 ha x 25 dph = 19 homes but considering that development should be linear in form in order to	Available 2024 - 2028  Build out over 1 - 2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	reflect the existing character of the site's immediate environs, this brings the capacity down to <b>10 homes</b> .

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Space Uses: Natural, green or open spaces	15 homes 0.4ha of public open space	Available 2024 - 2028 Build out over 1 year

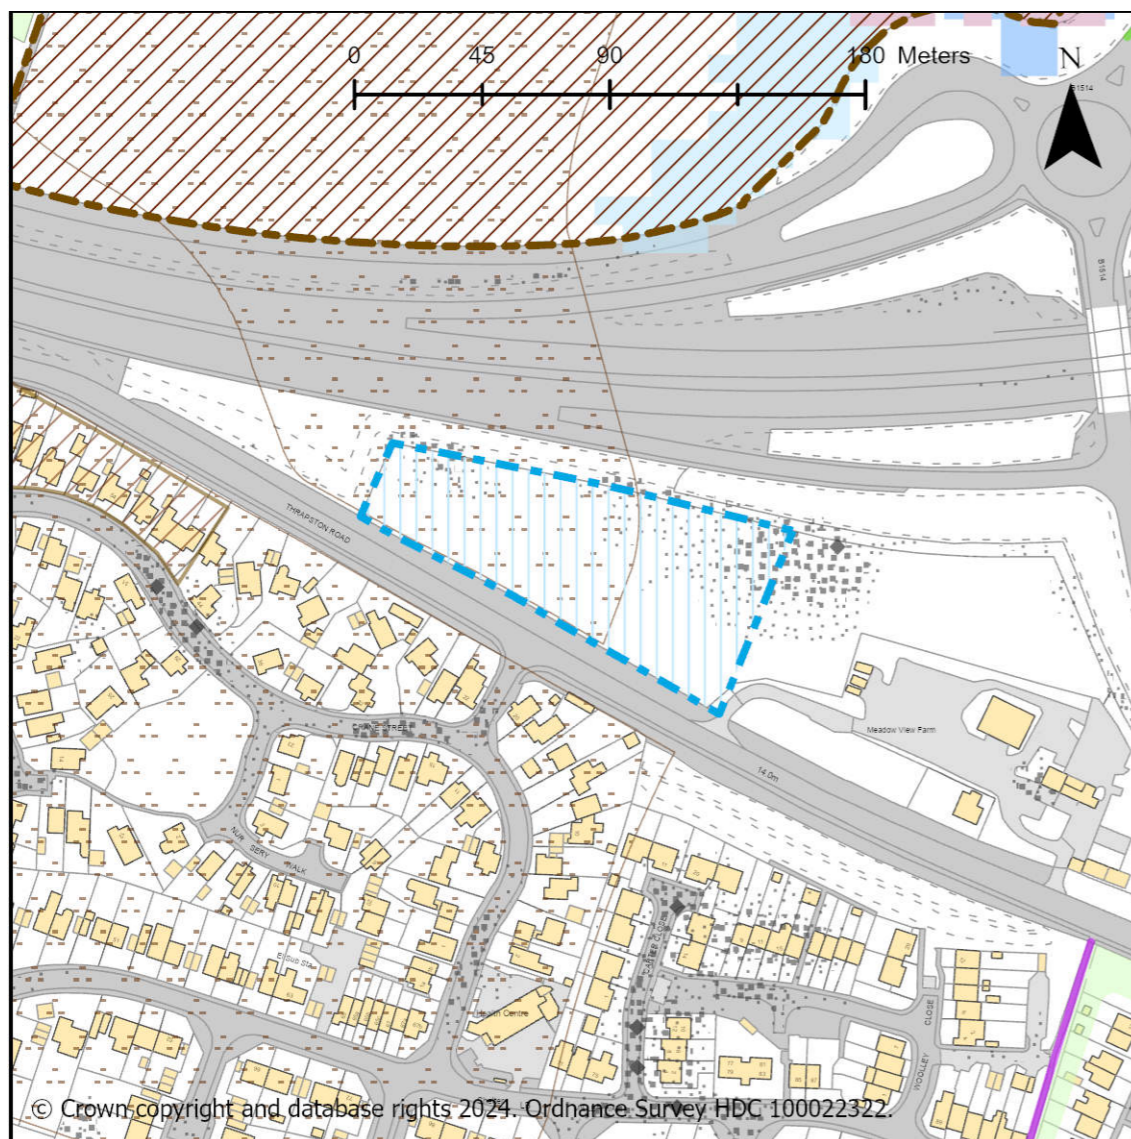

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:341
Relevant planning history	<ul style="list-style-type: none"> <li>19/00038/OUT for residential development of up to 30 dwellings and a care home of up to 70 beds, with all matters reserved except for the two main vehicular accesses (phased development). Permission granted in April 2021.</li> <li>21/01043/REM for the details of appearance, landscaping, layout and scale pursuant to outline application 19/00038/OUT for the erection of 30 dwellings. This was consented in June 2022. This relates to land to the east of the call for site submission.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land

Supporting information	<ul style="list-style-type: none"> <li>Concept Plan (drawing number: JOXXX_007) (June 2023)</li> </ul>
------------------------	--

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is within flood zone 1 but the northern and western edges of the site are at risk from surface water flooding. The site is wholly classified as grade 2 agricultural land. The site forms part of a wider piece of land that already has outline planning permission. The site has a strong boundary to the north with the A141 and to the south with Thrapston Road, all of the site's boundaries are clearly marked by a belt of vegetation apart from its eastern edge which is open. The land is broadly level. The site is bounded by residential development to the south, by the road network to the north and west and by Meadow View Farm to the east (permitted to be redeveloped for 30 new homes).</p>	~
---	---

<p>There is no known contamination on site and no oil or gas pipelines running through the site. The site is bounded by the strategic road network to the north and west meaning there is an increased likelihood of air, light and noise pollution which should be mitigated against. It is adjacent to an Air Quality Management Area. There are no nature conservation designations on site. The site is not within a conservation area and there are no listed buildings nearby, there is however a Scheduled Monument designation that covers approximately two thirds of the site. Access to the site can be achieved from Thrapston Road as shown on the submitted concept plan.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled and owned by a single organisation who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission then sell it to a third party for development. The landowner suggests the land will be available between 2024 and 2028 and take 1 year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. The submitted concept plan shows that it is proposed to build on the south eastern corner of the site that fronts onto Thrapston Road and provide open space on the remaining part of the site, this coincides with the Scheduled Monument designation. Assessment on the impact of development on the Scheduled Monument will be required. The site is at greater risk from surface water flooding on its northern and western edges so sustainable drainage will be required. Additionally adequate noise mitigation will be required due to its proximity to the A141.</p>	~
<p><b>Deliverability / developability</b></p> <p>The whole site has outline planning approval with the eastern parcel benefiting from detailed planning approval for residential development. The eastern parcel (this call for sites submission) seeks to promote residential development on land originally permitted for a care facility. As a revised application for this site has not yet been submitted and considering that it is intended to acquire planning permission then sell it to a third party for development, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land classified as grade 2 agricultural land</li> <li>• In walking distance to services and facilities, primary education and employment opportunities within Brampton and Huntingdon</li> <li>• Good accessibility to public transport options</li> <li>• Accessible to natural green space</li> <li>• 0.4ha of the site is constrained by a Scheduled Monument designation</li> <li>• It is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Located on the northern edge of the built form of Brampton village contained by the strategic road network</li> <li>• Is potential for increased levels of air, light and noise pollution</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development on 0.3ha of the site that is not within the Scheduled Monument designation.</li> <li>• The part of the site contained the Scheduled Monument should be used for landscaping, noise mitigation and public open space</li> <li>• Provide housing on a site of less than 1ha.</li> </ul>

**Updates after the Initial Assessment**

--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.7ha</p> <p>Remove 0.4ha of this as this falls within the Scheduled Monument - this part of the site could be used for public open space and provide a buffer between development and the strategic road network.</p> <p>This leaves <b>0.3ha</b> for the net development.</p>	<p>Residential - market and/or affordable homes</p> <p>Low density of 35 dph anticipated due to the site's location on the edge of one of Huntingdonshire's larger villages.</p> <p>Low density of 35 dph = 0.3 ha x 35 dph = <b>11 homes</b>.</p>	<p>Available 2024 - 2028</p> <p>Build out over 1 year</p>

## Brampton 5: Land adjacent The Rectory, Church Road, Brampton

<b>Site reference</b>	Brampton 5
<b>Site name</b>	Land adjacent The Rectory, Church Road, Brampton

Site address	Parish(es)	Site area (ha)
Land adjacent The Rectory, Church Road, Brampton	Brampton	0.52

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	3 homes	Available 2023 Build out over 1 year

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:168
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The site is wholly located within flood zone 1 with no recorded risk from surface water flooding. The site is wholly classified as urban land. It is located to the rear of properties along Church Road on the eastern edge of Brampton. The site is broadly level with trees and vegetation along all of its boundaries enclosing the site. To the west the site adjoins a Rectory and St Mary Magdalene Church Hall, to the south are cemetery grounds associated with St Mary's Church. To the north are more residential properties and to the east is the Great Ouse Valley and open countryside. A public right of way runs through the site providing a connection from Church Road to Huntingdon Road to the north east.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. It is however wholly located within a conservation area and to the east of several listed building namely the grade I listed St Mary's Church, grade II listed properties along Church Road. There is currently no vehicular access to the site, there is currently an access from Church Road to the adjoining Rectory to the west of the site but it is unclear whether access can be extended to serve this site and whether there has been agreement from the adjoining landowners to do this.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner (Diocese of Ely) who supports its redevelopment. There are no known legal restrictions impacting the site. It is intended to acquire planning permission then sell it to a third party for development. The landowner suggests the land is available now and take approximately 1 year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. However, as highlighted previously there is no direct access from the public highway to the site and it is unclear if access from the adjoining property can be extended to serve this site or the landowners would be willing to sell some of their land to enable this. Also the access is likely to cut through an existing public right of way. Therefore, the achievability of vehicular access is very unlikely.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site is located in a sensitive location in terms of heritage and landscaping being located within a conservation area, within the setting of several listed buildings and proposing back land development extending into the Great</p>	-

Ouse Valley landscape. Also, any design will need to integrate the existing public right of way that runs through the site. Additionally, achieving an access to the site is a key issue to the site's deliverability. It is intended to acquire planning permission and then sell the site to a third party for development. While the site promoter states the site is available now, no planning application has yet been submitted, so the site is categorised as not being deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to the cumulative constraints impacting the site and the uncertainty of the achievability of access to the site, it is considered unsuitable for development and therefore not deliverable.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

The site has not progressed to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

## Brampton 6: Land at Water Meadows, South of Huntingdon Road, Brampton

<b>Site reference</b>	Brampton 6
<b>Site name</b>	Land at Water Meadows, South of Huntingdon Road, Brampton

Site address	Parish(es)	Site area (ha)
Land at Water Meadows, South of Huntingdon Road, Brampton	Brampton	4.7

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential:	Approximately 50 homes	Available 2024 - 2028
Market and/or affordable housing	Approximately 80 bed spaces	Build out over 2 years
Nursing and care homes		

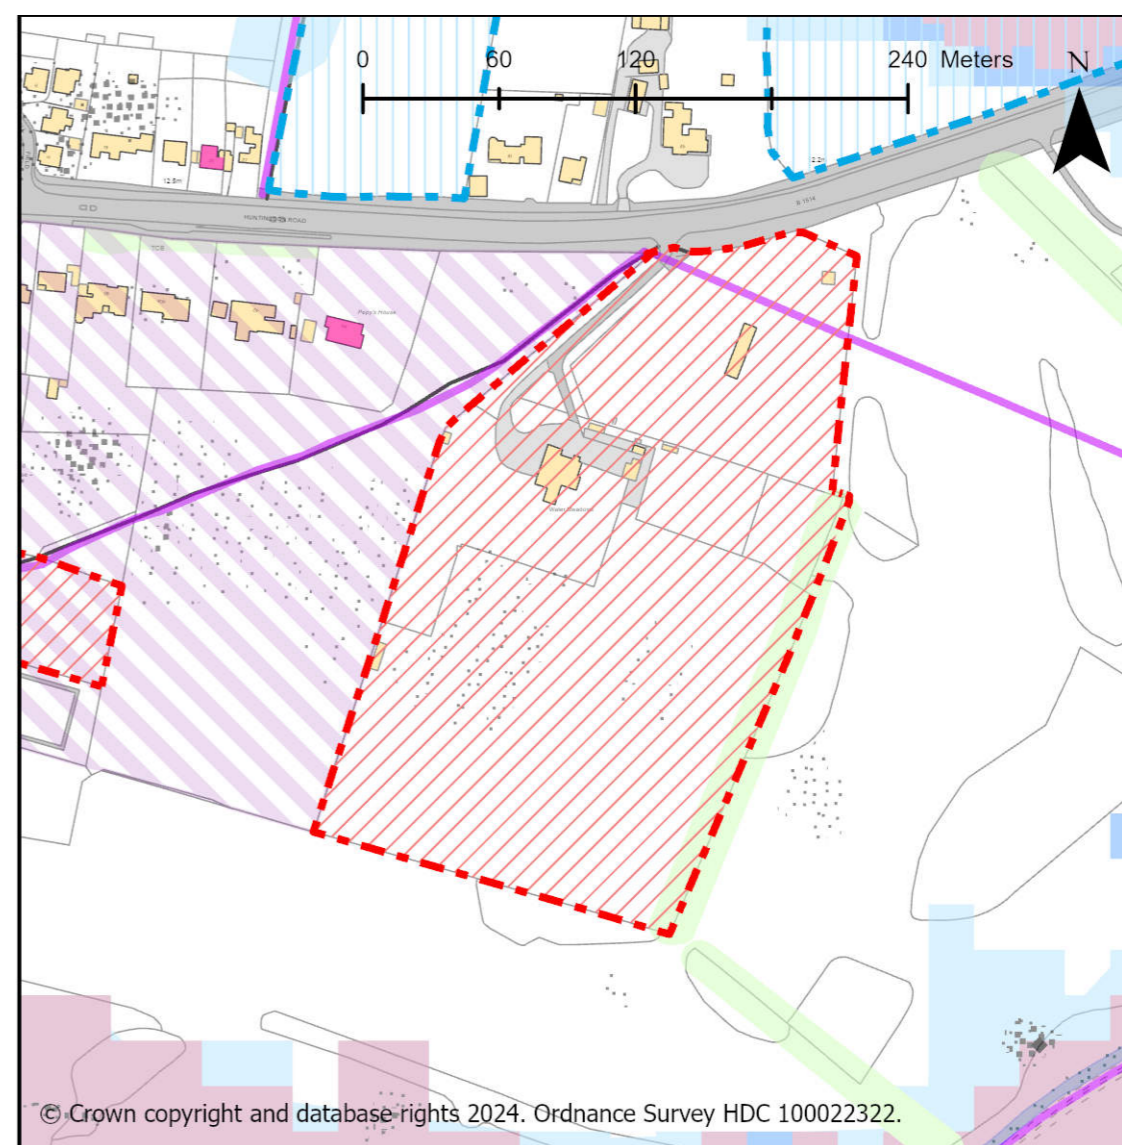

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:245
Relevant planning history	None relevant
Land type	Partly greenfield/ partly previously developed land
Current use of the site	Partly residential/ partly agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Pre-application Document (September 2022)</li> </ul>

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 with some recorded risk from surface water flooding towards the centre of the site. The site is wholly classified as grade 3 agricultural land. The site is broadly level with trees and vegetation along all of its boundaries enclosing the site, it has a strong northern edge where it is bounded by Huntingdon Road. There is a public right of way that cuts through the northern part of the site connecting through from Church Road out across into the Great Ouse Valley. The site promoter's pre-application document submitted to support the Call for Sites submission states that the site is irregular in shape and divided into three discrete elements. The central part of the site consists of a single dwelling, with gardens and driveway, as well as a tennis court (accessed via a tree lined driveway along the western boundary); land in the southern part of the site is primarily used as grazing land for cattle; and land in the northern parcel is also used for grazing is also the site of a World War II era bomb shelter and two prefabricated structures. To the west of the site is residential development in the form of Pepys House and meadow ground. To the south and east is the Great Ouse Valley and open countryside. To the north is Huntingdon Road and ribbon development.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. The site does however adjoin on its western edge a conservation area and to the west are several listed building namely the grade I Pepys House and its associated meadows. Access to the site could be achieved from Huntingdon Road.</p> <p>The site is predominately greenfield with some previously developed element, so its development will only partially contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner (a developer/housebuilding company) who supports its redevelopment. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the landowner who is also a developer/ housebuilder. The landowner suggests the land will be available between 2024 and 2028 and take approximately 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The submitted pre-application document details the current proposal for the site. That the existing dwelling will be retained and that scheme would likely comprise of a centrally located main building that contains, recreational and leisure facilities and a number of residential apartments and form a 'managed community' that will form an integrated retirement community. The main building will be surrounded by other apartment blocs with</p>	~

<p>cottages and other dwellings located in the northern and south eastern parts of the site. There will be significant levels of landscaping on the western edge of the site where it adjoins Pepys Meadow and the conservation area and further landscaping to the south where it adjoins the open countryside. The feasibility of these proposals will need to tested and may evolve through the planning process.</p>	
<p><b>Deliverability / developability</b></p> <p>There are structures to clear and the site is located in a sensitive location in terms of heritage and landscaping being located adjoining a conservation area and nearby to listed buildings as well as being within the Great Ouse Valley landscape. Also, any design will need to integrate the existing public right of way that runs through the northern part of the site. It is intended to deliver the site directly via a housebuilder. The site promoter states the site will be available between 2024 and 2028. No planning application has yet been submitted but technical works and masterplanning is underway, as such the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is mostly greenfield land but there are some existing structures on site</li> <li>● In walking distance to services and facilities</li> <li>● Good accessibility to public transport options</li> <li>● Accessible to natural green space</li> <li>● It is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>● Located on the north eastern edge of the built form of Brampton village but has a much stronger relationship to the Great Ouse Valley</li> <li>● Adjacent to a conservation area and the grade 1 listed Pepys House and its associated meadow land which could be adversely impacted by proposals</li> <li>● There is a public right of way running across the northern part of the site</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is not appropriate for development due to the likely significant adverse impacts on designated heritage assets and also the erosion of the rural character of the area and encroachment into the Great Ouse Valley landscape</li> </ul>

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:225
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Call for Sites Submission Statement</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	Only a portion of the north eastern corner of the site falls within the consultation area of a WMA.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with some recorded risk from surface water flooding along its northern edge. The site is wholly classified as grade 2 agricultural land. The site is located between Brampton and Buckden villages within the countryside and within a landscape that has changed considerably following the development of the new A14. The site is lowest on its northern edge and rises upwards to the south where land levels are some 12m higher. The site is bounded by the two spurs of the B1514 (Buckden and Brampton Roads) and the A1. Boundaries are marked by post and wire fencing which has been planted with hedge plants. This means the site is fairly prominent in views and the lack of established boundaries increases the potential for landscape impact.</p>	~
---	---

<p>There is no known contamination on site and no oil or gas pipelines running through the site. The site is adjacent to the A1 and B1514 meaning there is likely to be increased levels of air, noise and light pollution. There are no nature conservation designations or heritage designations on site. The site promoter identifies that access to the site is via the northern spur of the B1514 (Buckden Road). The feasibility of this as an access and the impact of additional traffic movements in this location will require engagement with Cambridgeshire County Council.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. Only a portion of the north eastern corner of the site falls within the consultation area of a WMA. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The site promoter suggests the land is available now and take approximately 3 to 5 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from within the site boundary apart from gas supply which is unknown. The site promoter indicates in their supporting statement that residential uses could be placed in the southern part of the site and employment to the north. The impact of built development on the southern part of the site in particular where the land rises will require further detailed assessment as well as the impact on amenity for future residents and users of the site arising from its proximity to the strategic road network. The feasibility of access and the impact of additional traffic movements in this location will require engagement with Cambridgeshire County Council.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear and works to the surrounding road network arising from the A14 are now complete. The site promoter states that the site is available now and it is intended to acquire planning permission and then sell the site to a third party for development. As no planning application has been submitted for a mixed use scheme, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Consists of land formerly used as a depot for National Highways</li> <li>• Is classified as grade 2 agricultural land</li> <li>• Is within flood zone 1 but there is surface water flood risk along its northern edge</li> <li>• Is remote from village services and facilities and public transport options</li> <li>• Could provide some space for employment development with good connections to the strategic road network</li> <li>• Remote from natural green space but is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Detached from a main settlement so development would be located within the countryside</li> <li>• The works to enhance the A14 seek to integrate it into the landscape, thus development in this location would introduce an uncharacteristic urbanising form of development</li> <li>• Bounded by the strategic road network so there is the increased risk of enhanced levels of air, light and noise pollution</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development as it would be located within the open countryside not served by public transport. Future users would most likely use private vehicles therefore not supporting sustainable modes of transport.</li> <li>• Development is likely to be quite prominent on the local landscape.</li> </ul>

## Brampton 10: Area 4 Park Farm, Brampton

<b>Site reference</b>	Brampton 10
<b>Site name</b>	Area 4 Park Farm, Brampton

Site address	Parish(es)	Site area (ha)
Area 4 Park Farm, Brampton	Brampton	3.8

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment	Approximately 15,000sqm	Available 2023 Build out over 2 - 4 years

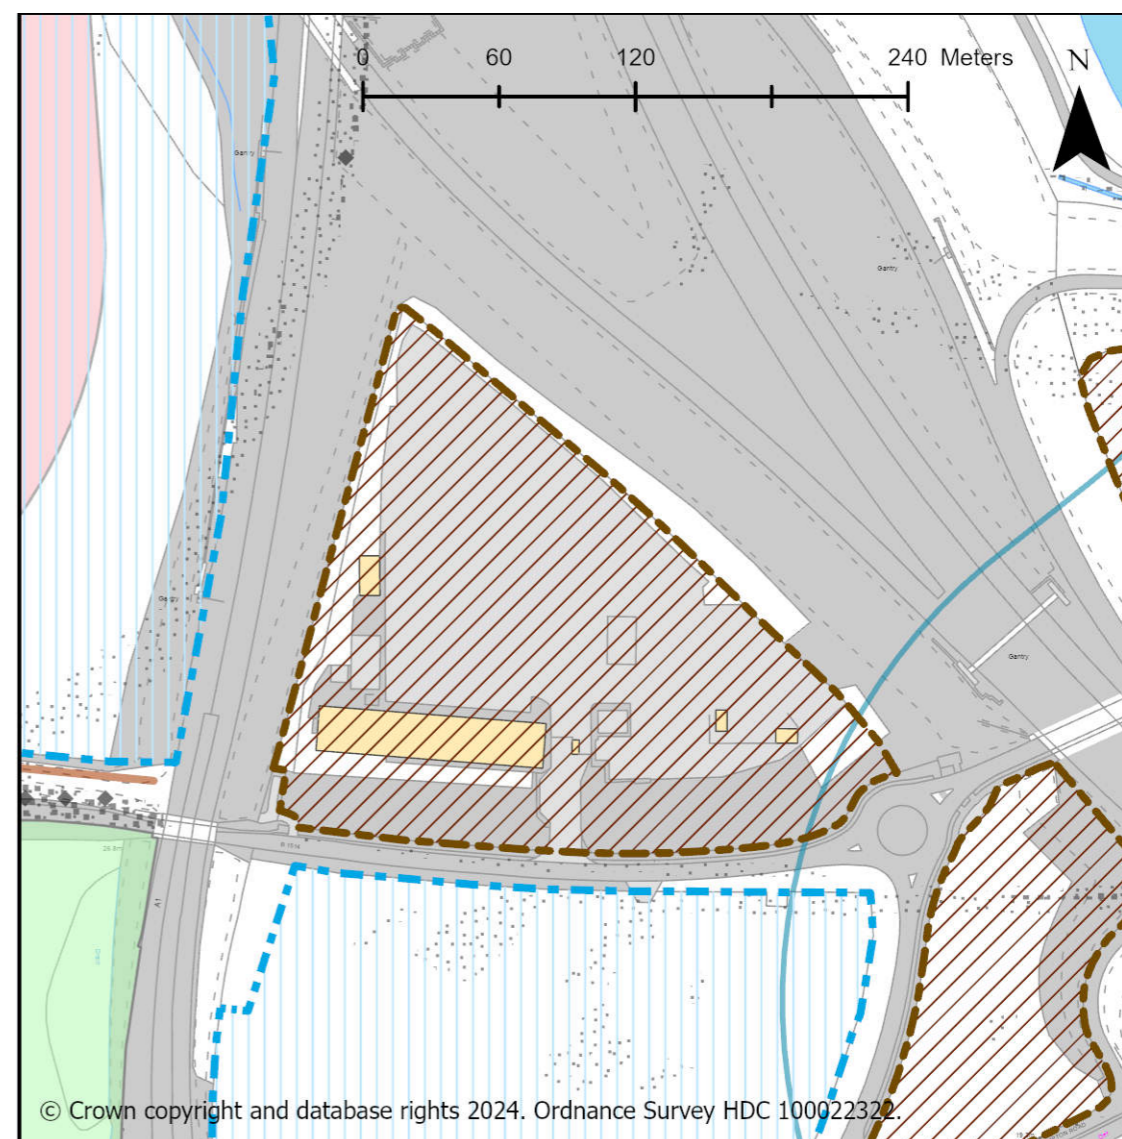

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:226
Relevant planning history	None relevant
Land type	Wholly previously developed land
Current use of the site	Recently used by National Highways as a site compound for the A14 re-alignment - now cleared.
Supporting information	<ul style="list-style-type: none"> <li>Call for Sites Submission Statement</li> </ul>

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	Only a very small portion of the south eastern corner of the site falls within the consultation area of a WMA.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 with no recorded risk from surface water flooding. The site is wholly classified as grade 2 agricultural land but was most recently in use as a temporary National Highways depot which has now been cleared. The site is located between Brampton and Buckden villages within the countryside within a landscape that has changed considerably following the development of the new A14. The site is visually prominent from the A14. The boundary to the A14 is an embankment, as is the boundary to the A1, although both boundaries are fenced with post and wire increasing the prominence of the site visually. The lowest part of the site is along its northern and eastern edges, the land rises upwards to the south and west where land levels are some 5m higher.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site but this may require further investigation considering the previous use of the site as National Highways depot. The site is adjacent to the A14, A1 and B1514 meaning there is likely to be increased levels of air, noise and light pollution. There are no nature conservation designations or heritage designations on site. The site promoter identifies that access to the site is via the northern spur of the B1514 (Buckden Road). The feasibility of this as an access and the impact of additional traffic movements in this location will require engagement with Cambridgeshire County Council.</p> <p>The site is previously developed, so its redevelopment will contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. Only a portion of the south eastern corner of the site falls within the consultation area of a WMA. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its redevelopment. There are no known legal restrictions impacting the site. It is intended to acquire an allocation status for the site and then sell to a third party for obtaining planning permission and development. The site promoter suggests the land is available now and take approximately 2 to 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from within the site boundary apart from gas supply which is unknown. The site has already been cleared, the feasibility of access will require further investigation as well as the potential for land contamination. Landscaping will be required to minimise the impact of development on the wider landscape. The impact of the strategic road network on future development in terms of amenity impacts arising from pollution will require investigation and mitigation.</p>	~

<p><b>Deliverability / developability</b></p> <p>The site has already been cleared. While the site promoter states that the site is available now, it is intended to acquire an allocation status for the site and then sell to a third party for obtaining planning permission and development. As such, the site is categorised as developable.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Consists of greenfield land classified as grade 2 agricultural land</li> <li>• Is within flood zone 1 but there is surface water flood risk along its northern edge</li> <li>• Is remote from village services, primary education and facilities and public transport options</li> <li>• Could provide some space for employment development with good connections to the strategic road network</li> <li>• Remote from natural green space but is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Detached from a main settlement so development would be located within the countryside</li> <li>• The works to enhance the A14 seek to integrate it into the landscape, thus development in this location would introduce an uncharacteristic urbanising form of development</li> <li>• Bounded by the strategic road network so there is the increased risk of enhanced levels of air, light and noise pollution</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development as it would be located within the open countryside not served by public transport. Future users would most likely use private vehicles therefore not supporting sustainable modes of transport.</li> <li>• Development is likely to be quite prominent on the local landscape.</li> </ul>
---

**HDC's Delivery Calculations**

**Brampton 11: Manor Farm, Brampton**

<b>Site reference</b>	Brampton 11
<b>Site name</b>	Manor Farm, Brampton

Site address	Parish(es)	Site area (ha)
Manor Farm, Brampton	Brampton	0.75

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Custom and self build housing	6 custom and self built plots	Available 2023 Build out over 3 years

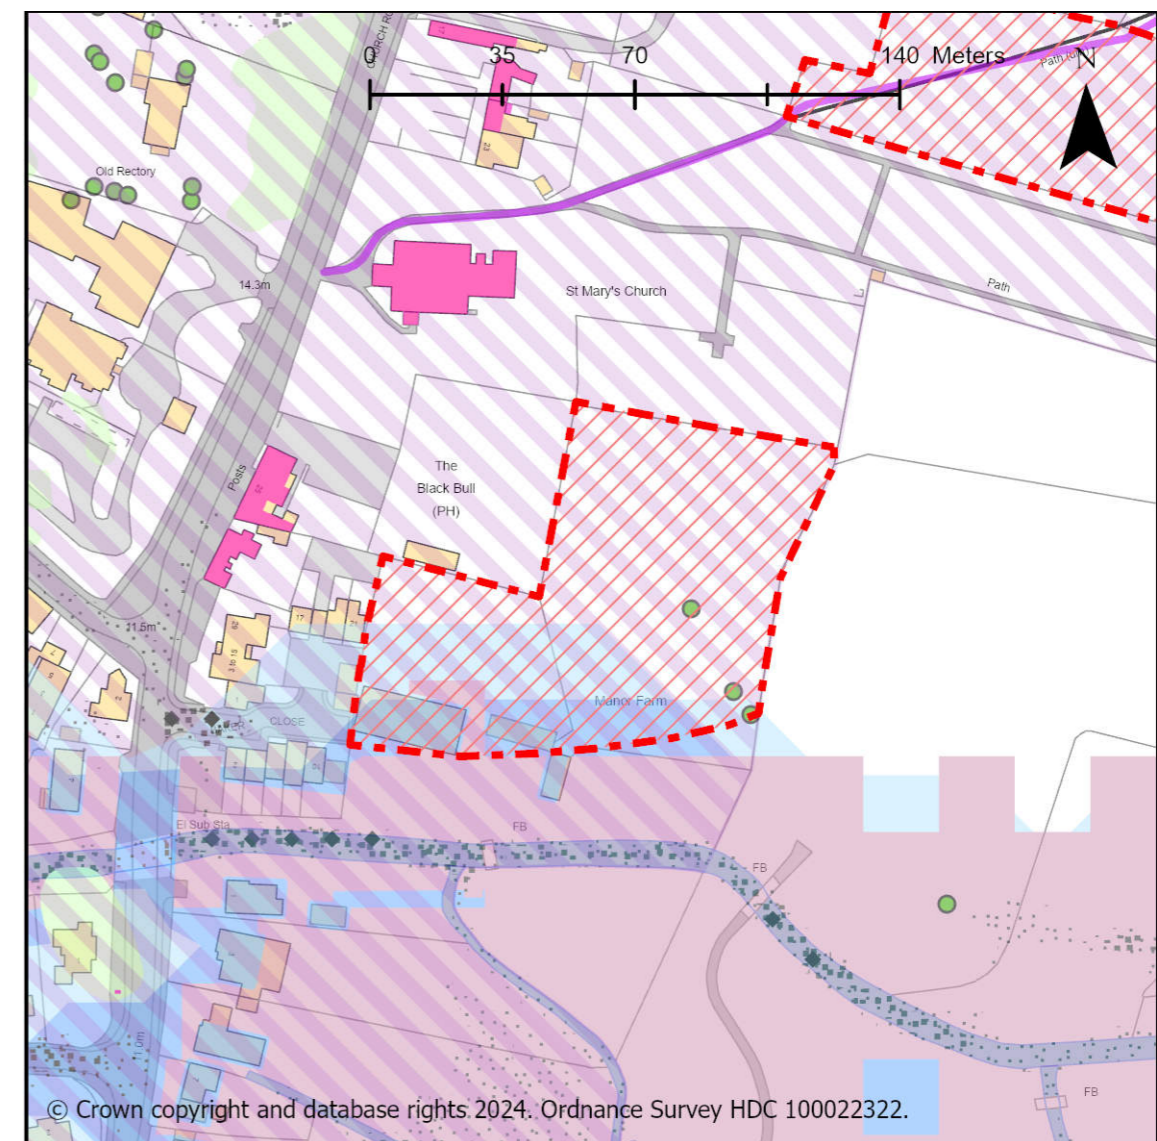

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:261
Relevant planning history	19/01145/FUL for the conversion of an agricultural building to form 4no. dwellings. This was withdrawn in October 2019.
Land type	Partly greenfield/ partly previously developed (agricultural structures)
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>About half of the site is located within flood zone 1 apart from the southern edge of the site which is within flood zone 2, 3a and some within 3b where it is closest to a tributary of the River Great Ouse. Surface water flood risk is also a constraint on the southern edge of the site. The site is wholly classified as urban land but has several agricultural structures on site associated with Manor Farm. It is located to the rear of properties within Baker Close on the eastern edge of Brampton. The site is broadly level with trees and vegetation along some of its boundaries and within the site. These are not particularly well established so the site is fairly open. To the west and south the site adjoins residential properties, the Black Bull Public House adjoins the northern boundary of the site and to the east is the Great Ouse Valley and open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site, although this may require further investigation considering the agricultural structures on site. There are no nature conservation designations on site. It is however wholly located within a conservation area and to the east are several listed buildings. There are also several trees protected by Tree Preservation Orders on site. Access to the site is via Baker Close where there is an existing access point to the site.</p> <p>The site is mostly greenfield with some agricultural structures, so its development will not greatly contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver a scheme of self and custom plots, it is unclear at this stage whether an allocation status is sought or whether an outline permission will be pursued whereby the site will then be sold to individual self and custom builders to deliver each plot. The landowner suggests the land is available now and take approximately 3 years to complete.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from within the site boundary apart from the public highway which is accessible from the site boundary. The site can utilise an existing access, but the potential access point of access is land at a higher risk of flooding which may make the achievability for safe entrance and exit into and out of the site more challenging. The site is in a sensitive location in terms of landscape, heritage and flooding which masterplanning will need to carefully consider to ensure the site can be successfully integrated with the adjoining residential development</p>	~

<p>at Baker Close. Although it is noted that the site promoter is seeking a self and custom build development which may make it more challenging to deliver a harmonious and well designed scheme that reflects the site's context.</p>	
<p><b>Deliverability / developability</b></p> <p>There are some agricultural structures to clear on site, it is also located in a sensitive location in terms of heritage and landscaping being located within a conservation area, within the setting of several listed buildings and proposing further back land development extending into the Great Ouse Valley landscape. While the site promoter states the site is available now, no revised planning application has yet been submitted, so the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land but there are some existing structures on site</li> <li>• Constrained by fluvial and surface water flood risk, particularly on its southern half</li> <li>• In walking distance to services, facilities, primary education and employment opportunities</li> <li>• Good accessibility to public transport options</li> <li>• Accessible to natural green space</li> <li>• It is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Located on the eastern edge of the built form of Brampton village extending from contemporary development at Baker Close</li> <li>• Is part of Brampton's rural edge with the Great Ouse Valley</li> <li>• Within a conservation area and nearby to several listed buildings</li> <li>• Would provide housing on a site less than 1ha in size</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not appropriate for development due to the flood risk on the southern half of the site, while development could be placed on land within flood zone 1 this would not sit comfortably with the surrounding character and form of development</li> <li>• Additionally, the point of access is heavily constrained by flood risk which makes the achievability of safe entrance and exit into and out of the site uncertain</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

## Brampton 12: Land off Huntingdon Road, Brampton

<b>Site reference</b>	Brampton 12
<b>Site name</b>	Land off Huntingdon Road, Brampton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land off Huntingdon Road, Brampton	Brampton	5.97

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable homes</li> <li>Self and custom build housing</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Car park</li> </ul> Open Space uses: <ul style="list-style-type: none"> <li>Natural, green or open space</li> </ul>	30 - 40 homes (including approximately 5 self and custom build plots)  Include publicly accessible open space/opportunity to include an additional car park for Hinchingsbrooke Country Park  4.5ha of natural, green or open space	Available 2023  Built out over 1 - 2 years

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:242
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA 2017 where it formed part of a wider area (Hinchingsbrooke Country Park Extension). The site was allocated in the Huntingdonshire Local Plan to 2036 under site allocation HU8 Hinchingsbrooke Country Park Extension, allocated for green infrastructure uses.</li> </ul>
Land type	Wholly greenfield land

Current use of the site	Agricultural land
Supporting information	None submitted

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 50% of the site is within FZ3b, the site promoter only proposes built development on 1.5ha towards the site's frontage along Huntingdon Road which falls within flood zone 1.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Approximately half of the site lies within flood zone 3b with a further 10% within flood zones 2 and 3a. There is also risk from surface water flooding within the site. The site is wholly classified as grade 3 agricultural land. The site gently slopes downwards in a northern direction with land along Thrapston Road being several metres higher than the northern edge of the site. This may lead to increased landscape impact particularly when considering the open nature of the site and the limited amount of vegetation along its site boundaries. There is also a public right of way along its western boundary. The site has a strong southern</p>	~
---	---

<p>boundary arising from Huntingdon Road, the site is surrounded by open countryside to the north, east and west with some residential development on its south western boundary as well as punctuating the centre of the site.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Overhead power lines run along the western edge of the site. There are no nature conservation designations on site but it adjoins the Hinchingsbrooke Gravel Pits County Wildlife Sites along its northern boundary. There are no heritage assets on site but to the south the conservation area is adjacent to the site as is the grade II listed 23 Huntingdon Road to the west and to the south the grade I listed Pepys House. Access to the site can be achieved from Huntingdon Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire an allocation status for the site and then sell it to a third part for obtaining planning permission and development. The site promoter suggests the land is available now and could complete within 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site promoter is seeking built development on 1.5ha of the site delivered across two separate parcels along the site frontage: one scheme of about 25-35 homes; and the second parcel being for 4-5 homes, potentially self-build opportunities. This is to avoid placing built development within areas at higher risk of flooding. In addition, the site promoter considers that the site could support Hinchingsbrooke Country Park by including a parking area. Sustainable drainage, landscaping and mitigation on adverse impacts on heritage assets as well as the location of overhead power lines and the public right of way are other constraints to consider.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear but there are significant constraints on site to mitigate. Flood risk, landscaping and the impact on heritage assets are key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and then sell it to a third part for obtaining planning permission and development. As such as the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Is significantly constrained by fluvial flooding with approximately half of the site being within flood zone 3b with a further 10% within flood zones 2 and 3a
- Is within the Great Ouse Valley Green Infrastructure Priority Area
- Is located adjacent to a conservation area and listed buildings
- Good accessibility via public transport options but accessible on foot or cycle
- Accessible to natural green space
- Located adjoining Hinchingsbrooke Country Park so provided opportunities to enhance green infrastructure and nature conservation sites
- The addition of a car park on this side of the Country Park could be beneficial as this would likely reduce the number of car journeys along Huntingdon Road and Hinchingsbrooke Park Road therefore easing congestion

In combination the outcomes of the LAA and SA indicate that the site:

- The site is not considered to be suitable for built development due to flood risk on site and the current allocation status of site for green infrastructure to support the Country Park, the site is considered suitable for car parking for the Country Park and for open space uses and green infrastructure that supports the Country Park.

Page 970 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The gross site area is 5.97 ha	Open space uses and biodiversity net gain opportunities  Car parking facilities for the Country Park  5.97ha of land for such uses	Available 2024 - 2028  Complete within 1 - 2 years

**Updates after the Initial Assessment**

--

**Brampton 13: Land North of A141, South of Brampton racecourse, Brampton**

<b>Site reference</b>	Brampton 13
<b>Site name</b>	Land North of A141, South of Brampton racecourse, Brampton

Site address	Parish(es)	Site area (ha)
Land North of A141, South of Brampton racecourse, Brampton	Brampton	7.45

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: <ul style="list-style-type: none"> <li>• Employment</li> <li>• Retail</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>• Renewable energy</li> </ul> Open Space Uses: <ul style="list-style-type: none"> <li>• Natural, green or open spaces</li> <li>• Biodiversity net gain</li> </ul>	Total floorspace to total 8,099 sqm  Potential for an on-the-go ultra-rapid EV charging hub with co-located commercial amenities	Available 2024 - 2028  Build out within 5 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:343
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>• Concept Plan (drawing number: JOXXX_009) (June 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 40% of the site lies within flood zone 3b with a further 20% within flood zones 2 and 3a. This still leaves more than 0.25ha of the site in flood zone 1.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Approximately 40% of the site lies within flood zone 3b with a further 20% within flood zones 2 and 3a. This flood risk is attributed to Alconbury Brook which runs along the northern boundary of the site. There is also risk from surface water flooding in the northern half of the site. About half of the site is classified as grade 2 agricultural land on its south eastern side with the remaining half being classified as grade 3. The site has a strong southern boundary arising from the A141 but there is no vegetation meaning the site is very open when viewed along the south. There is a tree belt along its northern boundary where it adjoins Alconbury Brook and belts of vegetation along its eastern and western</p>	~
--	---

<p>edges which encloses the site here. The site is broadly flat but is very slightly elevated on its southern edge. The site is surrounded by open countryside to the north, east and west with the A141 to the south.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. The site is bounded by the strategic road network to the north and west meaning there is an increased likelihood of air, light and noise pollution which should be mitigated against. It is adjacent to an Air Quality Management Area. There are no nature conservation designations on site but is nearby to the Brampton Racecourse SSSI. The site is not within a conservation area and there are no listed buildings nearby, there is however a Scheduled Monument designation that covers approximately two thirds of the site. Access to the site can be achieved from a farm access off the roundabout between the B1514 and A141 but this would need to be accessed whether other traffic can use this access.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled and owned by a single organisation who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission then sell it to a third party for development. The landowner suggests the land will be available between 2024 and 2028 and development will be complete within 5 years from planning approval.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. The submitted concept plan shows that it is proposed to build three large blocks for employment development with associated parking within the south western corner of the site where the site is within flood zone 1, although some built development is proposed within flood zone 2. This part of the site does also however coincide with the Scheduled Monument designation on site. Assessment on the impact of development on the Scheduled Monument will be required as well as the impact of flooding. Additionally adequate noise mitigation will be required due to its proximity to the A141.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no structures on site to clear but there are significant constraints on site to mitigate. Flood risk and the impact on the scheduled monument as well as the feasibility of access being key issues. It is intended to acquire planning permission then sell it to a third party for development. As no planning application has yet been submitted, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land split between grade 2 and 3 agricultural land
- Is heavily constrained by fluvial flood risk
- Limited accessibility to services and facilities and to public transport options
- Is within the Great Ouse Valley Green Infrastructure Priority Area
- Located to the north of Brampton separated by the A141, therefore it has a much closer relationship to the open countryside
- There is a scheduled monument designation covering two thirds of the site
- Within 1km of the Brampton Racecourse SSSI

In combination the outcomes of the LAA and SA indicate that the site:

- Is not appropriate for development due to the flood risk on the northern half of the site, while there is land within flood zone 1, this land is constrained by a Scheduled Monument designation
- Additionally, development is likely to adversely impact the landscape particularly to the open countryside to the north

Page 973 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

## Brampton 14: Land North of Thrapston Road and South of the A141 (larger site), Brampton

<b>Site reference</b>	Brampton 14
<b>Site name</b>	Land North of Thrapston Road and South of the A141 (larger site), Brampton

Site address	Parish(es)	Site area (ha)
Land North of Thrapston Road and South of the A141 (larger site), Brampton	Brampton	3.2

### Promoter's Intentions

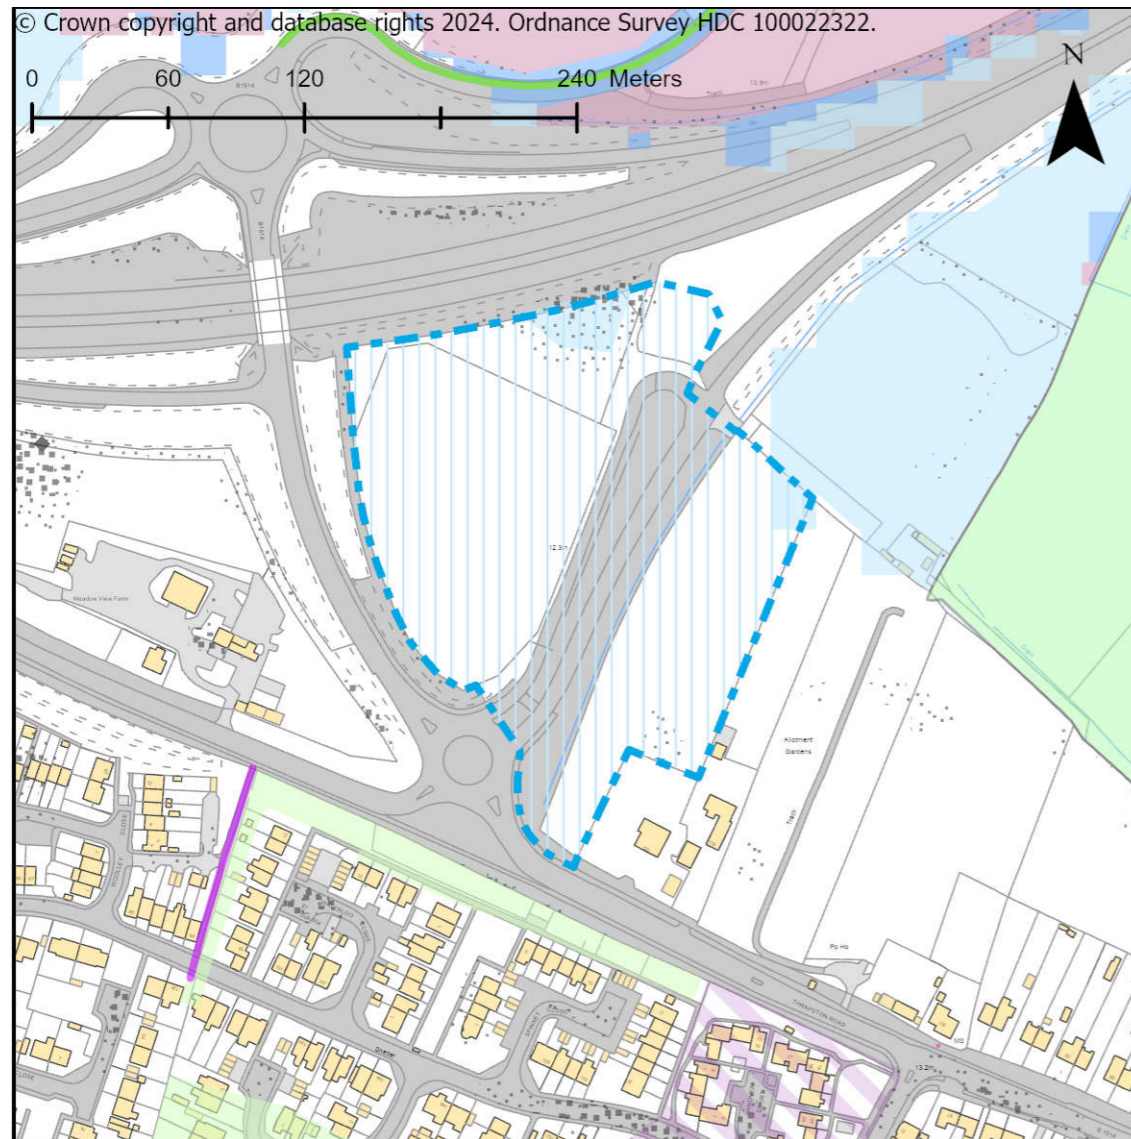

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> <li>Nursing and care homes</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Employment</li> <li>Commercial leisure uses</li> </ul>	Capacities not provided by site promoter	Available 2023 Build out over 2 years

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:129
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The vast majority of the site is mostly within flood zone 1 apart from two small sections along the site's northern and north western edge which is within flood zone 2. The site is wholly classified as grade 3 agricultural land. The site consists of two land parcels, a western parcel immediately south of the A141 and Spittals roundabout which is broadly oval in shape and an eastern parcel which crosses the road and consists of a broadly rectangular plot of land that residential development and allotment gardens along Thrapston Road. The whole site is broadly level and its boundaries well defined with established vegetation and boundary markers. The most open part of the site is the centre where the</p>	
---	--

road between there is the access route between the A141 and B1514 cuts through the site, vegetation to the eastern of the road is very limited but more apparent to the west of it.

There is no known contamination on site and no oil or gas pipelines running through the site. The site is bounded by the strategic road network meaning there is an increased likelihood of air, light and noise pollution which should be mitigated against. There are no nature conservation or heritage designations on site. Access to both parcels could be achieved from road between the A141 and B1514, access to the eastern parcel could also be achieved from Thrapston Road although this may not be feasible considering the proximity of the site's edge to the B1514 roundabout. Additionally, it will need to be assessed whether increased vehicles movements arising from residential, commercial or potentially both uses would be acceptable on the local road network in this location.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

--

**Availability**

The site is controlled by two landowners: Jockey Club Racecourses and Cambridgeshire County Council, both landowners support its development but there is no current legal agreement in place. The site promoter states that the parties are in discussion to promote the site jointly for a mixed use development for residential and/or care home use and commercial uses, subject to the County Council's disposal policy and approval by their Members if required with further details of the intended uses/extent of development will be submitted in due course. Part of the site has also been submitted by Cambridgeshire County Council covering its landholdings which consist of the western parcel (see call for site reference Cf:342 - Brampton 15). There are no known legal restrictions impacting the site. It is not known how the site will be delivered at this stage. The site promoters states that the land is available now and may take about 2 years to complete.

--

**Achievability**

The site promoter has identified that it is unknown whether there is a gas supply, mains water supply, electricity supply, and digital and telecommunications infrastructure to service the site. They have identified that the public highway is accessible from the site boundary. The proximity of the site to the strategic road network may give rise to increased levels of pollution which will require mitigation, additionally landscaping and sustainable drainage will be required. The proposed uses and capacities are somewhat uncertain at this stage with the site being put forward for a mixed use residential and commercial scheme. It is

--

<p>unclear at this stage where these uses may be located, the related call for site submission for the western parcel would indicate that it is intended to concentrate residential development on that parcel.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site's proximity to the strategic road network and risk of flooding require careful design to mitigate against. The site promoter identifies that they are unsure how the site will be delivered at this stage. Although the site promoter states the site is available now, as no planning application has yet been submitted and considering the uncertainty whether the site will be brought forward as a whole and for what uses or whether both parcels will be brought forward separately, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Constrained by some flood risk</li> <li>• Limited accessibility to services, facilities, primary education and employment opportunities</li> <li>• Limited accessibility to public transport options</li> <li>• Accessible to natural green space</li> <li>• It is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Located to the north of the main built form of Brampton bounded by the road network increasing the risk of higher levels of pollution</li> <li>• Development would not reinforce the form of development which is categorised by typically linear development that facing into the village from Thrapston Road</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not appropriate for development due to very poor opportunities to successfully integrate the site with the existing place and community. Development on the site would not support sustainable place making principles</li> <li>• The site area would also need to be reduced to remove the A141/B1514 slip road as this is not in the ownership of either landowners</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>The site is considered inappropriate for development so no capacity calculation has been undertaken.</p>	<p>N/A</p>	<p>N/A</p>

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	28 homes	Available 2024 - 2028 Build out over 1 year

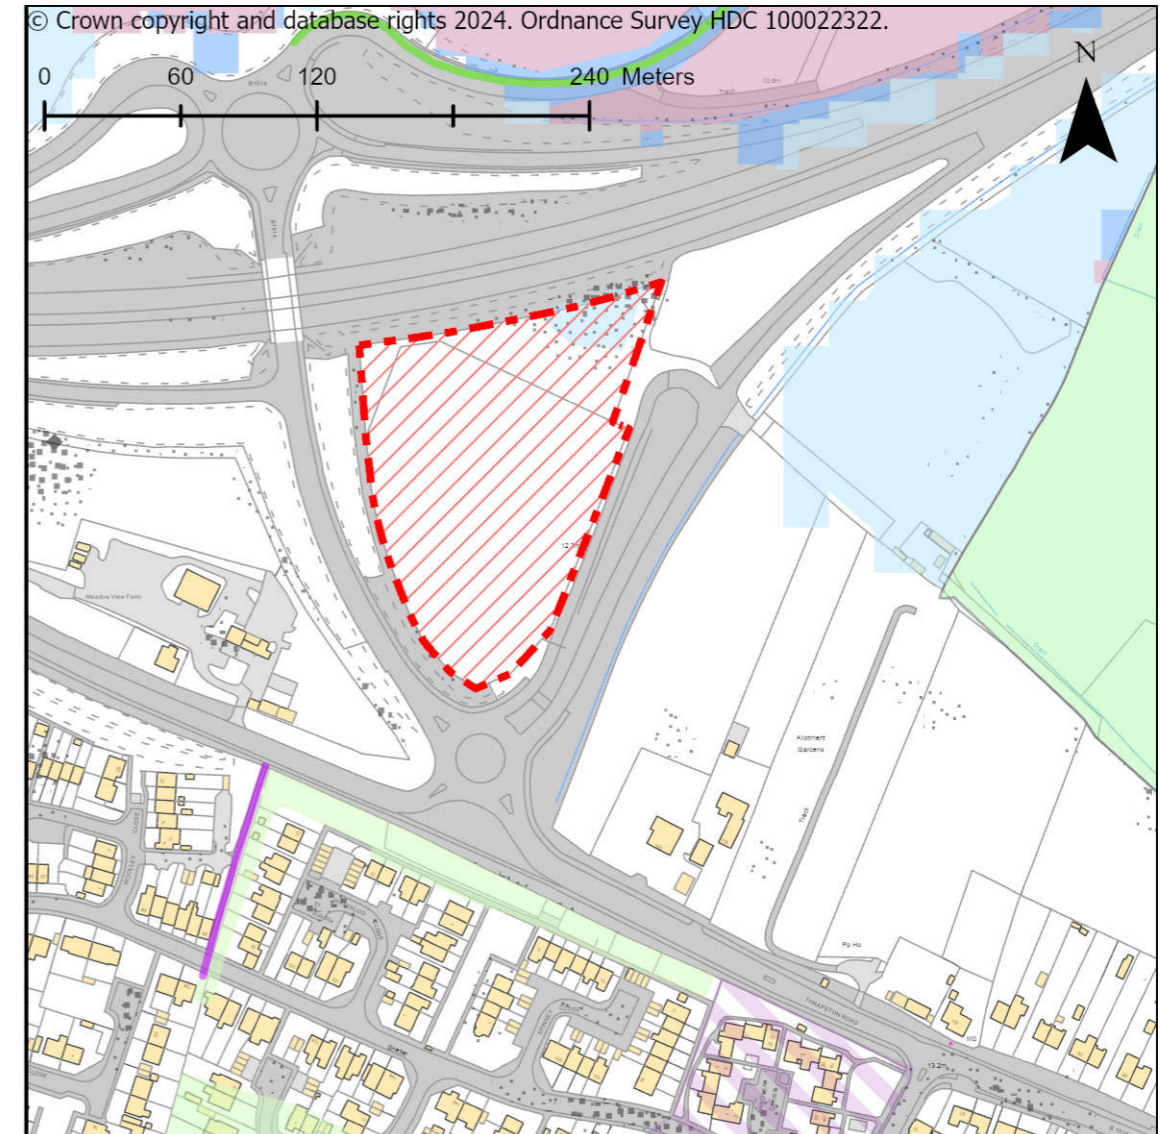

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:342
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Concept Plan (drawing number: JOXXX_008) (June 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is predominately located within flood zone 1 with a very small portion of the north eastern corner being located within flood zone 2. There is also risk from surface water flooding which coincides with the area of land within flood zone 2. The site is wholly classified as grade 3 agricultural land. The site is broadly level and oval in shape. It is bounded on all sides by the road network with the A141 and Spittals roundabout to the north, the B1514 to west and south and by a link route between the A141 and B1514 roundabout to the east. As such the site is well defined and there is existing vegetation and trees along its boundaries screening the roads from view. Across the B1514 to the west of the site is Meadow View Farm which has permission to be redeveloped for 30 new homes. To the south is Brampton village and to the east is residential development and allotment grounds located along Thrapston Road.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. The site is bounded by the strategic road network on all sides meaning there is an increased likelihood of air, light and noise pollution which should be mitigated against. There are no nature conservation or heritage designations on site. Access to the site could be achieved from from an existing access between the A141 and B1514 roundabout.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled and owned by a single organisation who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission then sell it to a third party for development. The landowner suggests the land will be available between 2024 and 2028 and take 1 year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. The submitted concept plan shows that it is proposed to provide increased landscaping along the site's northern edge and and provide a water attenuation basin in the north eastern corner which coincides with the area of the site at higher risk from flooding. There will need to be adequate noise mitigation due to its proximity to the A141. Access can be achieved from an existing access between the A141 and B1514 roundabout although it is unclear if this access is within the same ownership as the site. This site and a wider land area which includes the access has also</p>	~

Page 978 of 3488

<p>been submitted for a mixed use development by a site promoter acting on behalf of the Jockey Club Racecourses. Therefore further investigation on the achievability of access to just this smaller site will require further engagement.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site's proximity to the strategic road network and risk of flooding require careful design to mitigate against. Additionally successful access requires further investigation. It is intended to acquire planning permission then sell it to a third party for development and that the site will be available between 2024 and 2028. As no planning application has yet been submitted and considering the uncertainty whether the site will be brought forward as part of a larger site in collaboration with the adjoining landowner, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land</li> <li>● Constrained by fluvial and surface water flood risk, particularly on its southern half</li> <li>● Limited accessibility to services, facilities, primary education and employment opportunities</li> <li>● Limited accessibility to public transport options</li> <li>● Accessible to natural green space</li> <li>● It is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>● Located to the north of the main built form of Brampton bounded by the road network increasing the risk of higher levels of pollution</li> <li>● Development would not reinforce the form of development which is categorised by typically linear development that facing into the village from Thrapston Road</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is not appropriate for development due to very poor opportunities to successfully integrate the site with the existing place and community. Development on the site would not support sustainable place making principles</li> </ul>

## Brampton 16: Land at Low Harthay and Woodhatch Farms, Brampton

Note: This site has been submitted twice, once on behalf of both landowners (Markham and George Ltd & Lenton Brothers Ltd) and the other on behalf of one of the landowners (Lenton Brothers Ltd). There are some variations in proposed uses and capacities:

- CfS:44 for commercial (employment, logistics and distribution development). This was submitted on behalf of both landowners Markham and George Ltd & Lenton Brothers Ltd.
- CfS:140 for (employment, logistics and distribution development). This was submitted on behalf of one of the landowners, Lenton Brothers Ltd.

Each site has been assessed within this site assessment to avoid duplication.

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site includes an active waste recycling centre with much of the wider site falling within its 250m buffer. As not all all of the site falls within this area and more than 0.25ha of land remains that could accommodate built development, the site passes the fundamental constraints.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 981 of 3488

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is located to the east of Ellington and to the west of Brampton and the Brampton Hut roundabout. The site is currently occupied by a Waste Recycling Centre; an energy from waste plant and farm. It is located immediately south of the A14.

The site is wholly within flood zone 1 but there is significant surface water flood risk across the site particularly focused along the centre of the northern edge of the site. The site is mostly classified as grade 3 agricultural land although its south eastern corner is classified as grade 2. The site rises from its lowest point along its northern edge adjoining the A14 reaching its highest point along the centre of its southern boundary, this is some 30m

<p>higher. The site is well defined by hedgerows and field boundaries but is fairly open particularly to the south as it is more well defined and confined to the north by the strategic road network. The site is located within the countryside with a public right of way found towards the western edge of the site.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. However, this will likely require further investigation considering the current use of the site. There are also pylons running over the north western part of the site. The site is bounded by the strategic road network to the north meaning there is an increased likelihood of air, light and noise pollution which should be mitigated against. There are no nature conservation or heritage designations on site. The site already benefits from access to the site to the north onto the A14/A141 interchange. This access is both used for agricultural purposes and to provide access and egress from Woodhatch Farm adjacent to the site, which is currently used by HGV's accessing Woodhatch Farm.</p> <p>The site is a mixture of greenfield and previously developed land, so its development will somewhat contribute to the reuse of previously developed land or regeneration if the existing waste recycling site was included in the development site. The majority of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site but as highlighted includes a waste management area.</p>	
<p><b>Availability</b></p> <p>The whole site is owned by two landowners: with the land ownership split 10ha and 61ha.</p> <p>The site promoter putting forward the whole of the site states that it is their intention to deliver the scheme directly by the landowner identifying that the site will be available between 2024 and 2028 and take between 3 to 5 years to complete. The site promoter is working on behalf of just one of the landowners who states that it is their intention to acquire an allocation status for the site and then sell it to a third party for obtaining planning permission and development. They agree that the site will be available between 2024 and 2028 and take about 4 years to complete.</p>	~
<p><b>Achievability</b></p> <p>The site promoter putting forward the whole site identifies that gas supply not immediately accessible, the public highway is accessible from the site boundary while the remaining utilities (mains water supply, electricity supply, and digital and telecommunications infrastructure) are available within the site. While the site promoter acting on behalf of the Lenton Brothers identifies that access to gas supply and digital and telecommunications infrastructure is unknown, the public highway is accessible from the site boundary, while mains water supply and electricity supply are available within the site.</p>	~

<p>The site promoter states that the existing facility will be either completely relocated or retained on site within the site boundary. It is unclear if there has been detailed feasibility work on this or whether it is compatible to locate it alongside the proposed employment and logistics development. No detailed odour assessment has been submitted to assess the impact of development on future users of the site. It is also unclear if the proposed development will impact the operational capacity of the recycling centre in the long term, and during its relocation whether there will be disruption in supply. Additionally, it is unclear if there has been consultation with Cambridgeshire County Council on the proposal.</p> <p>The site promoter has identified that there is currently a strip of non adopted land at the proposed access in the ownership of Highways England. They state that discussions are underway to resolve this matter. The site promoter also identifies high power cables run over the north western corner of the site meaning that this part of the site may only be suitable for solar panels and parking. Additionally the existing public right of way will need to be considered in proposals.</p>	
<p><b>Deliverability / developability</b></p> <p>The feasibility of relocating and or integrating the existing waste recycling plant within any future development of the wider site is uncertain. Additionally, there are several site constraints across the site to address namely overhead pylons, surface water flood risk, landscaping and masterplanning a appropriate mix of uses to consider as well a potential ransom strip. As highlighted within the availability section, there is some uncertainty on how to deliver the site, it appears this may depend on whether the waste recycling plant is included within future proposals or not. Due to this uncertainty and the lack of a planning application, the site is categorised a developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is partially greenfield land and partially previously developed land with a water recycling centre and energy plant within the site</li> <li>• Mostly classified as grade 3 agricultural land with some grade 2</li> <li>• Is within flood zone 1 but is somewhat constrained by surface water flood risk</li> <li>• Is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area providing opportunities for some linkages</li> <li>• Is not constrained by heritage designations</li> </ul>
--

- Is located south of the A14 near to the Brampton Hut roundabout providing excellent connections to the strategic road network
- The site is a strategic scale employment site which would contribute to economic opportunities in the district through construction and associated trades for the duration of its delivery and its operation and could support significant high density economic opportunities in the district
- Is at increased risk from air, light and noise pollution arising from its proximity to the strategic road network and has the potential to increase levels of pollution. The water recycling centre and energy plant on the site may also increase this
- Limited accessibility to public transport options
- Detached from a settlement located within the countryside providing an opportunity for a mini commercial employment centre but the impact on the landscape could be most significant to the south and west

In combination the outcomes of the LAA and SA indicate that the site:

- A critical factor is to determine through engagement with Cambridgeshire County Council whether developing the site could adversely impact the existing water recycling centre and if commercial uses can be successfully integrated with it. There are two options, one to develop the site leaving the water recycling centre where it is or relocate the water recycling centre to elsewhere in the site.

Page 983 of 3488

### Core information

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-248
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Golf course
Supporting information	None submitted

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

### Assessment of Site Potential

<b>Suitability and constraints</b>	~
------------------------------------	---

<p>The site is located within flood zone 1 with areas of recorded risk from surface water. The majority of the site is classified as grade 3 agricultural land with only a small portion of its western most edge adjacent to St Mary's Church is classified as urban land. The site is broadly level and located on the western edge of Brampton consisting of land currently used as a golf course. Within the site, there are various trees, hedges and bunkers. The site's edges are clearly defined by hedgerows which enclose but it still affords views out across the wider landscape to the east and south. To the west vegetation is slightly denser where it adjoins residential gardens and a churchyard. To the north of the site is Thrapston Road, to the west is Brampton village and to the south and east the open countryside. A public right of way runs through the northern half of the site from Thrapston Road connecting to a series of other public rights of way paths to the east of the site which connect through to the Ouse Valley landscape.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets on site, although the site adjoins the conservation area on some of its western edges and is adjacent to listed buildings located along the western edge of Brampton so development could impact the setting of heritage assets. There are also no nature conservation designations on site, however the site is within the Great Ouse Valley Green Infrastructure Priority Area so development of the site will have a significant impact on the Great Ouse Valley landscape as well as the rural edge of Brampton and its relationship with the Ouse Valley. Access can be achieved from Thrapston Road.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single company with land control arrangements in place by legal agreement with multiple individuals/ companies. The development of the land is supported by the landowner which is subject to a shareholder vote. There is a restrictive covenant in place requiring 'no part of the property shall be used other than for agricultural purposes or for the extension of the existing golf course and the provision of a driving range...'. Also, Brampton Park Golf Club has security of tenure on the land until 2039 with rights to renew under the Landlord and Tenant Act 1954. The Golf Club has expressed their intention to seek an extension to their tenancy. The site promoter states that the early ending of the lease would be subject to private negotiation and agreement. The site promoter also states that it their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2035 and 2039 but as stated above the golf club has tenure of the land until 2039.</p>	
<p><b>Achievability</b></p>	

<p>The site promoter has identified that all main services are accessible from the site boundary. There are few major topographical challenges in developing the site, however the landscape impact of development would be very significant. The site also has a public right of way within the site which would need to be considered and integrated into any master plan for the site. The availability of the site is also uncertain with the site not likely being available before 2039 and also subject to negotiation between the landowner and the tenant (Brampton Park Golf Course) who may reach an agreement to extend the tenancy.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield and is currently in use as a golf course. The availability of the site for development is subject to the current use of the land coming to an end which is not expected until after 2039. The site forms part of the rural edge of Brampton and its development would encroach into the Great Ouse Valley Green Infrastructure Priority Area. Considering these factors the site is considered to be developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land currently in use as a golf course</li> <li>• Consists of mostly grade 3 agricultural land with some urban land</li> <li>• In walking distance to services and facilities</li> <li>• Good accessibility to public transport options</li> <li>• Accessible to natural green space</li> <li>• It is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Located on the north eastern edge of the built form of Brampton village but has a much stronger relationship to the Great Ouse Valley</li> <li>• Adjacent to a conservation area which could be adversely impacted by proposals</li> <li>• There is a public right of way running across the northern part of the site connecting through to the village and out across the Ouse Valley landscape</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- Is not appropriate for development due to the likely very significant adverse impacts on the landscape as it would result in the erosion of the rural character of the area and encroachment into the Great Ouse Valley landscape.
- There is uncertainty on the availability of the site even once the lease ends in 2039 as it is the intention of the Golf Club to extend their tenancy of the land.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as it is inappropriate for development due to its very significant likely landscape impact. The availability of the site is also uncertain.	N/A	N/A

2 Godmanchester

2.1 A total of 12 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Godmanchester 1: Former RGE Engineering Site and HDC Car Park, The Avenue, Godmanchester
- Godmanchester 2: Corpus Christi Paddock, Godmanchester
- Godmanchester 3: Dexters Farm, Godmanchester
- Godmanchester 4: Emmanuel Knoll Village, Godmanchester
- Godmanchester 5: Land West of London Road and South of Stokes Drive, Godmanchester
- Godmanchester 6: Land to the South of Godmanchester including land at Corpus Christi Farm and Lower Debden Farm, Godmanchester
- Godmanchester 7: Land West of A1198 (North of Bleakley Farm), Godmanchester
- Godmanchester 8: Land East of A1198 - (East of Bleakley Farm), Godmanchester
- Godmanchester 9: Land adjacent to London Road (A1198), adjoining Bleakley Farm, Godmanchester
- Godmanchester 10: Land East of Silver Street, Godmanchester
- Godmanchester 11: Land to the south of the A1307, Godmanchester

2.2 Please note that 'Hemingford Abbots 3: The Lattenburys (land to the South of the A1307 and North of A14, and West of A1198)' also partially falls within Godmanchester parish, but it has been included under Hemingford Abbots as most of the site lies within that parish area.

2.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	130 homes	Available from 2023 Build out over 3 - 5 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - Cfs:275
Relevant planning history	HLP2023 allocation: reference HU 14 REGE Engineering, Godmanchester (Note: this is a slightly reduced site area from that allocated.)
Land type	Wholly previously developed land
Current use of the site	Part industrial and part car park
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately one sixth of the site is in flood zone 3b	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 993 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>Flood risk is a substantial constraint on this site with approximately one sixth being located within flood zone 3b functional floodplain and around a third of the total site being in flood zone 2 or higher.</p> <p>The site is wholly previously developed so there is no loss of agricultural land, having formerly been used for a flour mill and railway sidings..</p> <p>The land is flat and with industrial buildings covering the northern section and hard surfaced car parking covering the remainder. The northern boundary adjoins the extensive Westside Common and the southern and eastern sides being formed by Cooks Stream; both of these connect into the wider open landscape of the Great Ouse Valley. The south western boundary faces onto The Avenue (B1044) which connects Godmanchester to Huntingdon across the medieval bridge. The north western boundary faces the 4 and 5 storey Riverside Mill apartments and their associated car parking area; clear views can be obtained across the garaging and surface car parking to the Mill building. Limited views of the northern edge of the site can be obtained from Riverside Park in Huntingdon with a row of trees providing some screening. The eastern and southern boundaries have some boundary trees and hedging along Cooks Stream. Views directly south are limited by the bridge and embankment associated with the A1307; long distance views eastwards across Westside Common lead to Godmanchester nature reserve and former gravel pits along Cow Lane. There are, however, very limited public rights of way in the area with the nearest point being over 200 m to the east where a well screened footpath connects to the nature reserve. The site would be highly visible from the western boundary as it is slightly raised above the level of The Avenue but it would immediately connect into other established development at Riverside Mill. The proposed use would be compatible with the neighbouring residential development.</p> <p>The very south eastern edge of the site lies within a 250 m buffer zone of the collection of landfill sites around Cow Lane although it is beyond that distance of any active sites. The site is not affected by any oil pipelines or electricity power lines but a gas pipeline runs along the southern boundary. The site does not contain any heritage or nature conservation assets along it is close proximity to both Huntingdon and Godmanchester conservation areas. There are six trees with preservation orders along the north western site boundary.</p> <p>As the site is wholly previously developed and contains a range of buildings which are no longer in use redevelopment could contribute to regeneration of the site. The site is wholly within a sand and gravel mineral safeguarding area and Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that might constrain development. It is situated outside the 400 m buffer of any water recycling centre.</p>	~
<p><b>Availability</b></p>	+

<p>The site is in multiple ownership with a legal agreement for combined promotion and development. There are no known legal restrictions affecting the site. The southern part of the site is currently in use as a public car park; this use will either need to be ceased or reprovided elsewhere. The current site allocation is larger than this proposal with land to the south of that currently proposed potentially providing an alternative for some car parking provision. The site promoter suggests that the site is expected to be delivered by a housebuilder who is already working in partnership with them.</p>	
<p><b>Achievability</b></p> <p>Gas, water, electricity and telecommunications infrastructure are all available within the existing site. The site already has established highway access to The Avenue. There are no topographical challenges in terms of site delivery although avoid of areas of substantial flood risk and flood mitigation measures will impact on the capacity and layout of the site. The gas pipeline along the southern boundary will also form a constraint the layout of development as acknowledged by the site promoter. The site has direct access to the B1044 and currently includes a public car park giving good access to the public highway for both construction and future occupiers. The site promoter has indicated a preference for development of a higher number of homes than are currently allocated along with inclusion of some retail floorspace. Clearance of the existing RGE Engineering buildings will be necessary along with any decontamination that might be required given the previous use.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are substantial buildings to clear and car park hard surfacing to deal with to enable development. The site is sensitively located in terms of landscape given its position within the Great Ouse Valley landscape and proximity to Westside Common in particular. The site is wholly contained within the boundary of the current allocation and a housebuilder is involved in the scheme. Therefore, it is categorised as deliverable.</p>	+

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is mainly in flood zone 1 but nearly a third is in flood zone 3</li> <li>● Is wholly previously developed land with a range of buildings and hardstanding</li> <li>● Highly accessible to services, facilities and public transport</li> </ul>
--

- Accessible to employment opportunities
  - Good access to open spaces
  - Development would provide the opportunity for redevelopment which would improve the appearance of the area
  - Located adjoining existing high density residential accommodation and open countryside
- In combination the outcomes of the LAA and SA indicate that the site:
- Would make effective use of the land and provide the opportunity to create new homes in a highly sustainable location
  - Has potential to provide built development of a scale that could be integrated into the existing place and community and enhance the character of the local area
  - Requires careful masterplanning and design to ensure integration and harmonisation with surrounding development and countryside

HDC's Delivery Calculations

Page 994 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 2.46ha</p> <p>Removed 0.79ha as being outside flood zone 1 with 100 year climate change allowance which could be partially used for open space, landscaping and flood mitigation.</p> <p>This leaves 1.67ha of which 90% net developable area to allow for open space and landscaping.</p> <p>1.67ha x 90% = <b>1.5ha</b></p>	<p>Residential - market and/or affordable housing</p> <p>A combination of 50% of the net developable area at 85 dph reflecting the opportunity to maximise new homes in such a sustainable location and 50% at moderate density of 50 dph reflecting the need for sensitivity to the adjoining Westside Common.</p> <p>High density of 85 dph x 0.75ha = 64 homes and</p> <p>Moderate density of 50 dph x 0.75ha = 38 homes</p> <p>Total capacity for <b>102 homes</b></p>	<p>2024-2028</p> <p>The site is already allocated in the adopted Local Plan.</p> <p>Build out over 2 years</p>

**Godmanchester 2: Corpus Christi Paddock, Godmanchester**

<b>Site reference</b>	Godmanchester 2
<b>Site name</b>	Corpus Christi Paddock, Godmanchester

Site address	Parish(es)	Site area (ha)
Corpus Christi Paddock, off Old Court Hall, Godmanchester	Godmanchester	0.51

**Promoter's Intentions**

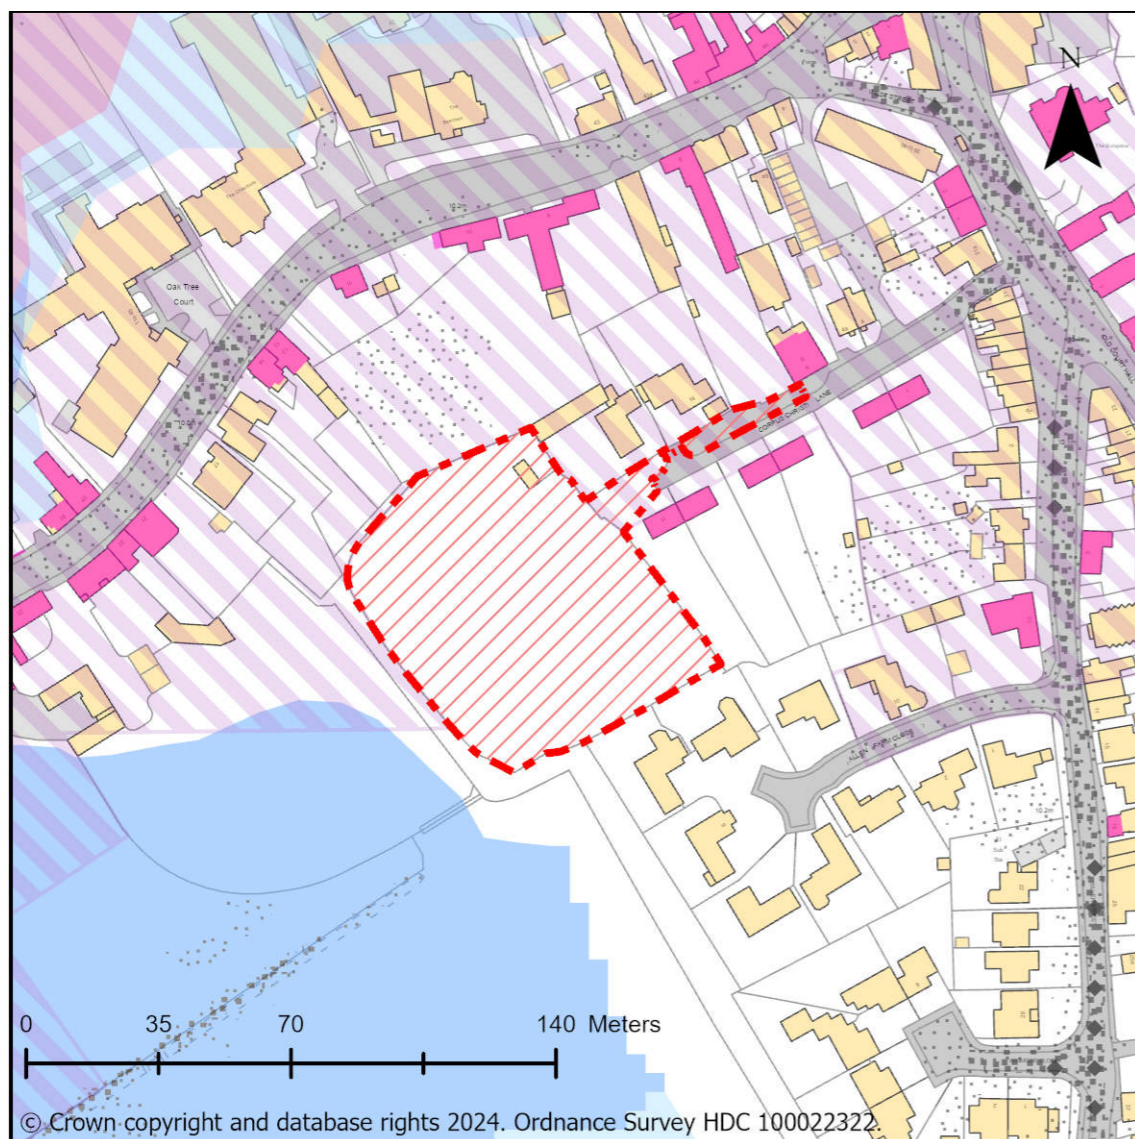

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Approximately 15 homes	Available 2023 Build out over 1 - 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:323
Relevant planning history	Application number: 15/01955/FUL Proposed development: Erection of 20 dwellings following demolition of 6 dwellings Outcome: Withdrawn February 2016 Previous applications for residential development in 1991, 1981 and 1975 all refused HELAA (December 2017): Corpus Christi Paddock (196)
Land type	Wholly greenfield land
Current use of the site	Agricultural land (paddock)
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is wholly in flood zone 1 with no surface water flood risk either. The land use type is classified as urban although it is actually in use as a paddock. The land is level with no substantial built structures. It is situated at the end of a cul-de-sac and is encompassed by rear gardens to properties on West Street, Corpus Christi Lane and Allen Farm Close. All boundaries are enclosed by trees and hedging strongly limiting any visibility between the site and surrounding uses other than in the south eastern corner and by the access gate from Corpus Christi Lane. The northern and western edges of the site adjoin extensive rear gardens to properties on West Street. The southern edge adjoins late 20th century homes and the eastern edge adjoins the side of rear gardens on Corpus Christi Lane. The

site cannot be seen from any public viewpoint other than the current access gate. The landscape impact of development would be limited provided the existing boundary trees and hedges were retained. There are no known pollution or contamination constraints affecting the site, nor any oil or gas pipelines or electricity powerlines.

While there are no heritage assets within the site it is highly sensitive in terms of heritage constraints. The northern half of the site is encompassed by the conservation area. The approach to the site adjoins 1-11 (odds) Corpus Christi Lane which is a group of six listed 20th century agricultural workers cottages for which the setting formed by the rural nature of Corpus Christi Lane and the adjoining paddock are highly relevant to the justification for their designation. There are no nature conservation designations within the site. Immediately south of the site is a tree subject to a tree preservation order.

Highway access to the site is a substantial constraint due to the narrow nature of Corpus Christi Lane and the pinch point created by the listed property number 6-8. The exit from Corpus Christi Lane onto Old Court Hall is not segregated and so crosses a wide stretch of pavement. The limited visibility of the access point poses a risk to pedestrians which is a significant constraint to developing the site.

Development of the site would not contribute towards regeneration as it is wholly greenfield. It is situated within a sand and gravel mineral safeguarding area and Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that might constrain development.

**Availability**

The site is in the control of an individual company which supports its promotion for development. There are no known legal restrictions affecting the site. The landowner anticipates that following allocation, planning permission would be acquired and the site sold to a third party for development.

**Achievability**

Gas, water, electricity, telecommunications and the public highway are all accessible from the site boundary. Access using Corpus Christi Lane and onto Old Court Hall are heavily constrained and may impede the achievability of the site either in its entirety or to the level sought by the site promoter. Alternatively, significant improvements to the junction arrangement will be required.

There are no utility infrastructure constraints affecting the site's achievability. The site is 1.5 kms from the railway and just over 2 kms from the A14 so noise constraints are unlikely to impact it. The site promoter has provided no indication of proposals for mitigating the impact of development on the adjoining heritage assets. The site promoter has repeatedly sought to achieve residential development on the site.

<b>Deliverability / developability</b>	
The site is highly constrained by surrounding heritage assets and access arrangements. Therefore it is categorised as physically developable subject to highway access being achievable.	-

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No due to the highly sensitive nature of the heritage constraints affecting the site and the cumulative challenges posed by securing a safe access both within Corpus Christi Lane itself by the pinch point and at the crossing of Old Court Hall.
--	---

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.
--

**HDC's Delivery Calculations**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Open space uses: Natural, green or open spaces for a variety of uses	230 homes 0.95 ha of open space uses	Available 2024 - 2028 Build out over around 4 years

**Core information**

How was the site identified?	Call for sites submission: site reference - CfS:87
Relevant planning history	HELAA (December 2017) - southern part of Dexter's Farm site 188
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Access and Highways Technical Note Concept Plan Preliminary Ecological Appraisal Vision Document

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 and has very low risk of surface water flooding. It comprises wholly grade 2 agricultural land. The land slopes gently rising from the boundary with the A1198 up towards the eastern corner of the site. This increasing elevation is part of the wider open agricultural landscape which rises to the south east of the site to a high point directly north of Wood Green Animal Shelter. Land to the west of the site across the A1198 falls away gently towards Stoneyhill Brook. The northern boundary of the site adjoins Whitehill Gardens 21<sup>st</sup> century housing development and Godmanchester Rovers football club which includes a floodlit pitch. These have limited hedgerow screening and development of the site would be visible from both. The eastern and southern boundaries adjoin arable</p>	~
--	---

<p>agricultural fields separated by hedgerows interspersed by some trees with the south western section being very open. The western boundary adjoins the A1198 from which it is separated by a ditch and hedgerow. The site is visible from the A1198 both from further south by Wood Green and in close proximity by the site boundary. Very limited long distance views can be obtained from Silver Street to the west but there are no public rights of way in the vicinity providing any other viewpoints. The site would be seen from the southern aspect in the wider context of modern residential development although it would have an impact on the wider landscape as development would extend the urban edge of Godmanchester in an isolated location if the site was to be brought forward on its own, although it is noted that the site promoter has suggested that it could form part of a larger scheme connecting through to the A1307.</p> <p>The site has no record of pollution or contamination constraints and there are no oil or gas pipelines or overhead power lines affecting the site. There are no known heritage assets affecting the site. The site has no designated nature conservation assets recorded and there are no tree preservation orders.</p> <p>The site is wholly greenfield so would not contribute to regeneration in any way. It is situated outside of any minerals safeguarding areas or any water recycling centre buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership and optioned by a housebuilder. There are no known legal restrictions affecting the site. There are no current uses requiring relocation. The site is promoted by the housebuilder who has an option on the land and intends to deliver the development themselves.</p>	+
<p><b>Achievability</b></p> <p>All utility services are accessible from the site boundary. Initial access for a first phase of 50-60 homes is proposed by the site promoter to be taken through Whitehill Gardens. To develop the whole site a the promoter suggests a new roundabout with the A1198 would be provided with a road link through this site and on to land around the east of Godmanchester and ultimately connecting to the A1307. The slope of the land does not pose significant challenge from a construction perspective but will necessitate careful landscaping buffers around western, southern and eastern boundaries of the site. No utility infrastructure is present to impact on achievability. The site adjoins the A1198 and at its nearest point is 1.2 kms from the A14 and with 680m of Wood Green animal shelter both of which may generate noise levels on occasion that could cause disturbance. The site promoter has provided a concept plan indicating their broad intentions of the site containing a first phase accessed off their Whitehill Gardens development and a second larger phase accessed from a new roundabout on the A1198 in conjunction with the Godmanchester 4</p>	~

- Emmanuel Knoll Village proposal. However, the latter is proposing an alternative roundabout and link road further south which would not be reliant upon this access point and may significantly impact its achievability.	
<b>Deliverability / developability</b>	
The site would extend the built form of Godmanchester significantly into the surrounding countryside if developed in isolation. Development as part of a collaborative scheme with Godmanchester 4 Emmanuel Knoll Village would require collaborative working and substantial new highway infrastructure. Therefore, the site is categorised as developable.	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It is wholly greenfield land of grade 2 agricultural value</li> <li>• Flood zone 1 with very limited surface water flood risk</li> <li>• No nature conservation or heritage designations nearby</li> <li>• Services and facilities are within reasonable distances but accessibility is impeded by the lack of footpath connectivity along the A1198 along the southwestern section of Romans' Edge</li> <li>• Significant challenges in terms of impact on the wider landscape</li> <li>• Impact on the wider built form of Godmanchester through further isolated development to the south along the A1198</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Would not be appropriate for development in isolation due to its lack of connectivity into the wider built form of Godmanchester and impact on the landscape to the south and east</li> <li>• Could be appropriate if it were brought forward as an integrated element of a larger scheme to the south and east of Godmanchester forming a complete new neighbourhood</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 10.18ha.	N/A for the site in isolation	N/A for the site in isolation

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
In isolation the site is not considered appropriate for development and so no capacity calculation has been undertaken in this context.		
<p>Should the site be brought forward in combination with adjoining land to the east and south (Godmanchester 5 and Godmanchester 8) then the gross site area is 10.18ha</p> <p>60% net developable area to allow for landscape mitigation and integration with adjoining sites.</p> <p>10.18ha x 60% = <b>6.11ha</b></p>	<p>Residential market and/or affordable housing</p> <p>Low density of 35 dph due to the potential scale of a larger integrated scheme and reflecting similarity of density to Romans' Edge.</p> <p>Low density of 35 dph x 6.11 ha = <b>214 homes</b></p>	<p>Available post 2028</p> <p>Build out over 4-5 years</p>

**Core information**

How was the site identified?	Call for sites 2023 submission : site reference - CfS:207
------------------------------	---

Relevant planning history	HELAA (December 2017) part of East of Romans' Edge site (123)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Acoustics technical note</li> <li>Emmanuel Knoll Vision document</li> <li>Energy sustainability briefing note</li> <li>Heritage assessment</li> <li>Landscape technical paper</li> <li>Preliminary Ecological Appraisal with bird survey and bat activity reports</li> <li>Transport technical notes (6)</li> <li>Utilities guidance note</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

sits within the South East Claylands landscape character area and demonstrates typical characteristics of this through its gently undulating landform, long established hedgerows with frequent hedgerow trees, occasional blocks of woodland and heavy clay soils. The site sits on more elevated land than the established town of Godmanchester and forms a high point in the wider landscape which falls broadly in a north westerly direct to the low lying Ouse Valley. The north western boundary of the site adjoins the 21<sup>st</sup> century Romans' Edge residential development which currently forms the south eastern edge of Godmanchester with an open space landscaping belt separating the site from recently built housing. The northern boundary adjoins the A1307 dual carriageway (formerly the A14). This boundary is relatively open with more solid hedgerow and trees in the eastern part near Emmanuel Knoll Plantation and with a mixture of low hedging and open wooden fencing along the remainder, becoming more substantial towards Romans' Edge. Immediately beyond the boundary is the A1307. The slip road to the junction with the A1198 runs along around the western third of this section starting adjacent to an open sided agricultural barn situated within the site. The northern part of the eastern boundary is formed by Emmanuel Knoll Plantation which comprises a substantial tree belt of between 30 - 40 m wide screening the approach to the site from the east. The southern part of the eastern boundary is comprised of traditional field hedgerow giving more limited screening into the the higher southern part of the site from Moats Way. The southern boundary adjoins two arable fields with the eastern part comprising a 10 m tree belt and the western side being an open track to the Kings Bush wind turbine which is situated just south of the site boundary. The south western boundary partially adjoins the A1198 with a ditch and low hedge allowing clear views from the road into the rising land of the site. Further north along this boundary are a series of field boundaries with hedging and groups of hedgerow trees with the most northerly section adjoining sports and play facilities associated with Romans' Edge along with a residential bungalow which is outside the site boundary and a cluster of agricultural buildings inside the site. There are no public rights of way within or in the immediate vicinity of the site. However, views into the site can be obtained from the north not only from the A1307 but also further north from Eastside Common which includes several recreational paths. Parts of the site can be seen from the east along Moats Way along with views out from higher land within the site to the east and south. Views can be obtained into and out of the site from the A1198 and long distance glimpses of parts of the site can be had from the Pathfinder long distance footpath where it runs along Silver Street into the south western edge of Godmanchester. The site is highly visible from within Romans' Edge which was designed to contain built development below the 30 m contour line with land within the site rising just over 10 m above this. Given the scale of the site and its increasing elevation away from the current built up area development would be highly visible in the landscape. Careful use would need to be made of the existing hedgerows and trees with substantial planting reinforcements to help mitigate this impact. Placement of buildings within the site would also need to be carefully limited to reduce the landscape impact on more sensitive locations and external viewpoints. A particular constraint is the location of the site's boundary with the A1198 which is separated from the existing built form of Godmanchester by two open agricultural fields.

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 with approximately 9% subject to surface water flood risk. Broadly the northern half of the site is grade 3 agricultural land and the southern half is grade 2. It is primarily arable but there is a central area of pasture. The scale of the site is large at around 50% of the current built up area of Godmanchester thus having potential to significantly alter the context of the current town.</p> <p>The land slopes overall from a high point just north of Wood Green Animal Shelter descending towards the northwest; along the northern boundary it also falls from Emmanuel Knoll plantation down towards the western edge by Cardinal Park business park. The site</p>	
---	--

<p>A very small part of the north western corner of the site adjacent to Stirling Square falls within the 250 m buffer zone of the Cow Lane landfill site. There is no known pollution or contamination affecting the site. Information supplied by the site promoter indicates that a low high pressure gas main enters the site halfway along the northern boundary and crosses it to exit partway along Emmanuel Knoll Plantation. It is noted as having approximately a 12 m easement within which built development should not take place and that this may have implications for the proposed northern roundabout with the A1307. No oil pipelines are recorded as affecting the site.</p> <p>There are no designated heritage assets within the site. However, the central pasture field contains well preserved ridge and furrow patterns. The field pattern is also of historic interest remaining broadly unchanged since the 1880s Ordnance Survey maps. The site promoter acknowledges the contribution of both of these and suggests retaining them within the scheme to provide open space and established landscaping connections. Sub-surface archaeological remains may exist on site given that the south western and northern boundaries both broadly follow the lines of Roman roads and that prehistoric finds have been made nearby. Further investigation of archaeological potential would be required. No designated nature conservation areas exist within the site. However, information supplied by the site promoter indicates a moderate to high potential for the presence of great crested newts in the ponds and associated habitats on site. There is also a moderate likelihood of protected or notable bird species and a moderate to high likelihood of the site supporting roosting bats along with bats using hedgerows to forage and move between locations. Suitable habitat also exists on site for a range of mammals. Biodiversity net gain is now a mandatory requirement and the site offers plentiful opportunities to reinforce the natural habitats present. There are no tree preservation orders within the site.</p> <p>Achievability of the proposed access arrangements are a very significant constraint for this site. New roundabouts would be required with both the A1198 and the A1307 along with provision of a substantial link road proposed by the site promoter as being a suitable alternative for the A1198 facilitating downgrading of the A1198 between Romans' Edge and the rest of Godmanchester to allow for better integration. The proposed roundabout with the A1307 is located in very close proximity to the existing slip roads and may give rise to highway safety concerns and deliverability challenges.</p> <p>The site is wholly greenfield land so offers no regeneration potential as the limited number of agricultural buildings present are not classified as previously developed land under the national definition. The site is located outside of any mineral safeguarding areas and of any water recycling centre area.</p>	
<p><b>Availability</b></p>	+

<p>The land is within the control of a single company and has investor controlled arrangements with development supported. There are no known legal restrictions affecting the site. The land is currently in agricultural use but there is no use that would require relocating. The site promoter seeks to obtain allocation status for the site and then sell it onto a third party to obtain planning permission and develop.</p>	
<p><b>Achievability</b></p> <p>All utility services are accessible from the site boundary. The site promoter proposes substantial alterations to the local highway network which will affect both the physical achievability of the scheme and potentially its viability. A gas pipeline crosses part of the site with approximately a 12 m wide easement strip that cannot be built over; this is in close proximity to the proposed northern roundabout. The site promoter's evidence indicates that diversion of this would be costly and may impact on achievability of the proposed access arrangements. The primary challenge to achievability of the site is provision of the relief road which in some form is necessary to provide access to the land. This would require provision of major infrastructure including around 2kms of highway, a roundabout onto the A1307 dual carriageway and a further roundabout on the A1198. The viability of achieving this level of infrastructure provision with the scale of residential development proposed will need thorough investigation. Should delivery of the relief road prove to be achievable the achievability status of this site could change.</p> <p>The site has direct boundaries with the A1198 and the A1307 both of which will generate noise, particularly the latter, that may impact the developable area. Should access be achievable via either of these routes construction deliveries will have good accessibility. There is limited clarity over the site promoter's intentions as there is a significant range in the number of homes proposed and no certainty over the provision of employment, retail or leisure floorspace although greater clarity is provided on electricity generation, open space and community uses.</p> <p>The site contains significant slopes within the local context although these are all gentle; higher elements are visible in both long distance and local views and will impact on the developable portions of the site. A further constraint exists at the southern end of the site arising from the Kings Bush wind turbine which creates shadow flicker over a small portion of the site and again may impact on the developable area.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints to bringing the site forward. The greatest challenge is the feasibility of achieving the proposed access arrangements which substantially influences the deliverability of the site, particularly the proposed roundabout on the A1307 given its proximity to the sliproads for the junction with the A1198 (formerly A14 junction 24) and nature as a dual carriageway. This requires further investigation with</p>	~

Cambridgeshire County Council as the highway authority. If this constraint can be overcome and the relief road demonstrated to be achievable then the site may be considered developable.	
---	--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward this site:

- It is greenfield land comprising a mixture of grade 2 and grade 3 agricultural land
- It is within flood zone 1 and has little risk of surface water flooding
- Enhanced environmental standards are advocated including provision of an on-site solar park to meet about 40% of the demand of the site
- No impact on designated nature conservation but very limited opportunities to support existing strategic habitats
- No impact on designated heritage sites and proposed retention of an existing ridge and furrow field pattern
- The amount of development proposed does not represent efficient use of land
- The proposal would provide a continuation of the character established by Romans' Edge forming a further new neighbourhood east of the A1198
- It has negligible connection to the wider town of Godmanchester
- Provision of the southern roundabout for the link road would significantly impact on the rural approach to Godmanchester
- It would support provision of a wide range of housing but very little employment is promoted
- The site is within most threshold distances for public transport and services although safe footpath connections do not currently exist from the southern part of the site and routes would need to connect through Romans' Edge

In combination the outcomes of the LAA and SA indicate that the site:

- Would provide a very substantial extension to Godmanchester but does not make efficient use of land as currently proposed; on this basis a capacity calculation is provided below to give a comparable figure to other similar scale sites promoted across the district
- Would face substantial challenges in providing the relief road required for access

Page 1004 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 106ha</p> <p>The concept masterplan promotes an exceptionally low net developable area based on the exclusion of:</p> <ul style="list-style-type: none"> <li>• 44.45ha public open space and biodiversity enhancements</li> <li>• 17.35ha existing plantation, allotments, retained farmland and drainage/attenuation</li> <li>• 16.65ha for relief and primary roads, primary school and solar energy park</li> </ul> <p>This leaves a balance of 27.55ha equivalent to 26% net developable area.</p> <p>A comparable assessment based on the methodology applied to other sites in the LAAs would apply a net developable area of 50% which site allows for exclusion of the 15% of land for the existing plantation, drainage/attenuation, relief and primary roads, and primary school and leaves 35% for other open space and biodiversity uses.</p> <p>This gives a net developable area of 106ha x 50% = <b>53ha</b>.</p>	<p>The net developable area is 53ha.</p> <p><b>All calculations are subject to the achievability of the proposed access arrangements.</b></p> <p>Mixed use development to include:</p> <p><b>Solar energy park of 7.1ha</b></p> <p><b>4.59 ha is deducted for a local centre including commercial and retail uses and employment uses representing 10% of the outstanding site area</b></p> <p><b>45.9ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect the capacity of very large developments to accommodate a wide range of housing types, sizes and tenures.</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph; 1.38ha x 145dph = 200 homes</li> <li>• 7% of land at high density 85dph; 3.21ha x 85dph = 273 homes</li> <li>• 25% of land at moderate density 50dph; 11.48ha x 50dph = 574 homes</li> </ul>	<p>This would represent an increase of some 55% in the number of homes in Godmanchester which is not considered proportionate to the existing town and would be detrimental to the character of the community and not represent sustainable development. Therefore, no delivery estimate is given.</p> <p>It is noted that the capacity calculated is significantly higher than the site promoter's stated aspirations but it is based on a consistent methodological approach to allow comparability between all site assessments.</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<ul style="list-style-type: none"> <li>• 55% of land at low density 35dph; 22.95ha x 35dph = 803 homes</li> <li>• 10% of land at very low density 25dph; 4.59ha x 25dph = 115 homes</li> </ul> <p><b>1,965 total homes</b></p>	

Updates after the Initial Assessment

**Godmanchester 5: Land West of London Road and South of Stokes Drive, Godmanchester**

<b>Site reference</b>	Godmanchester 5	
<b>Site name</b>	Land west of London Road and south of Stokes Drive	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
West of London Road and south of Stokes Drive, Godmanchester	Godmanchester	12.3

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Acknowledgement of requirement for additional cemetery land but preference expressed for provision of a financial contribution to provision elsewhere Open space: Natural, green and open spaces	300 homes (affordable housing led at 60%) 4.07 ha of natural, green and open spaces	Available 2023 Build out over around 6 years

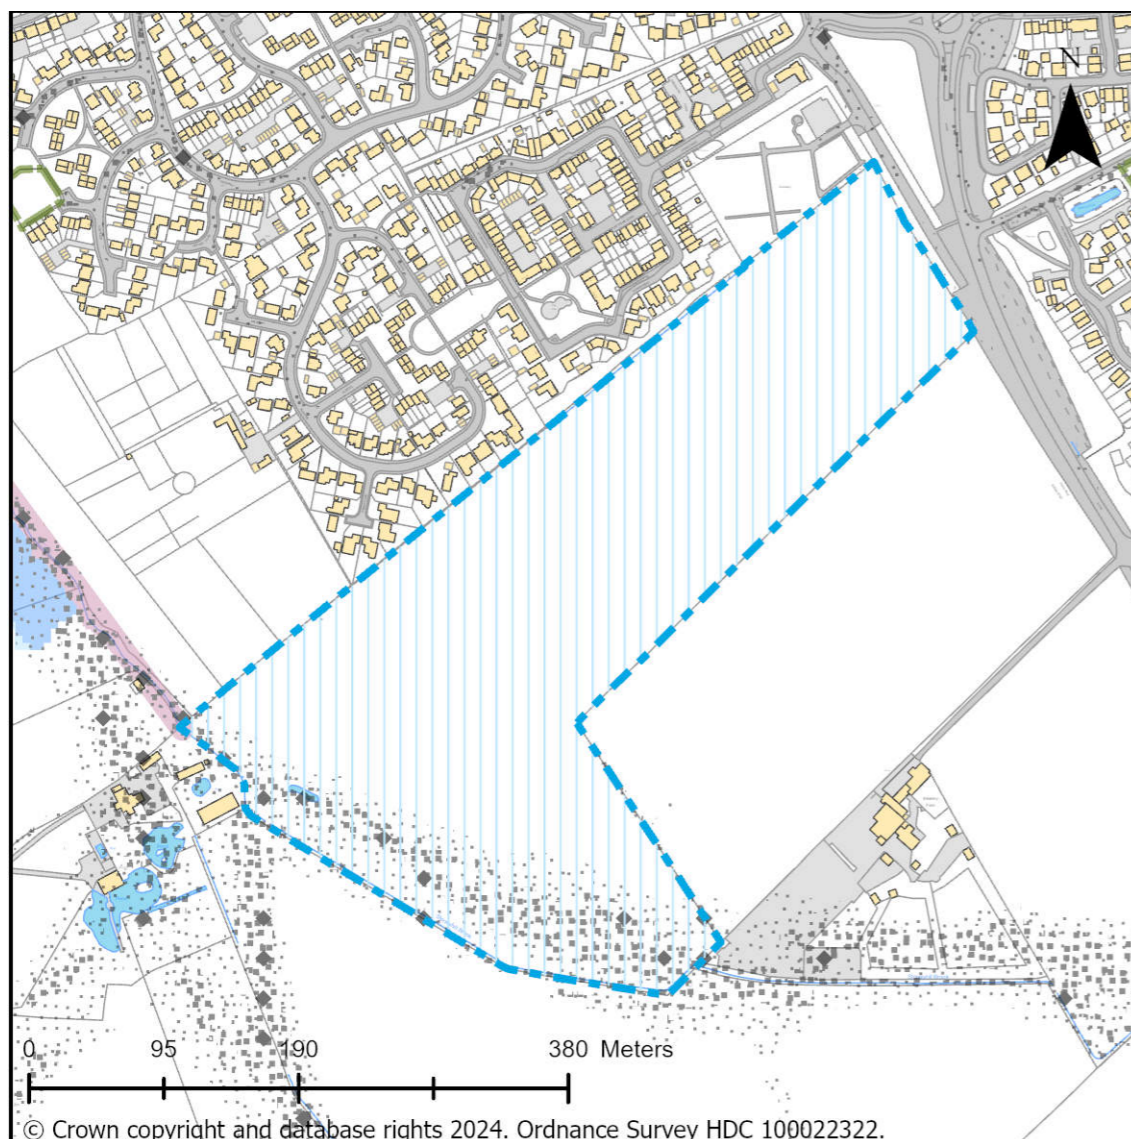

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:139
Relevant planning history	HELAA (December 2017): South of Stokes Drive and Bluegae, Godmanchester (152)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Land areas plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	0.05%	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

them from the site. Most of the northern boundary of the site adjoins late 20th/21<sup>st</sup> century homes at Bluegate and Stokes Drive which have rear gardens and hedging adjoining the site, with the Godmanchester cemetery at the north eastern end. The eastern boundary fronts onto the old London Road which is now a closed off track serving as pedestrian access to the crossing over the A1198 to Godmanchester Rovers football ground. This is edged by a tall hedgerow interspersed by trees. The southern and south eastern boundaries adjoin an arable field with a self storage unit to the east of the corner of the site in a former farmyard. The western boundary comprises low hedging with a few trees with an arable field and a waterfowl sanctuary beyond it.

The site is visible from the A1198 close up near the junction with Bearscroft Lane and from further south at the access to Bleakley Farm and the self-storage units where the site forms part of the countryside setting of Godmanchester. Development would have a notable landscape impact from this direction. It can also be seen in very local views from the Old London Road footpath on the eastern frontage. Longer distance views can be had from Silver Street and the Pathfinder long distance footpath although many of these are partially screened by hedgerows and trees restricting the landscape impact from the west.

There are no recorded pollution or contamination constraints impacting on the site and no gas or oil pipelines or electricity powerline routes crossing the site. No heritage assets are located within or immediately adjacent to the site. There are no nature conservation assets on the site but a waterfowl sanctuary operates on land immediately adjoining to the west.

The site has a direct frontage onto the old London Road which is currently a deadend track providing a path to a crossing of the A1198 to Bearscroft Lane. This would need substantial upgrading which would impact on the immediate character and provision of a footpath connecting to the existing one to the cemetery.

The site would not contribute to reuse of previously developed land or regeneration. It is not constrained by any minerals safeguarding areas or any water recycling centre.

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is 99.95% in flood zone 1 with just the tiny remaining portion in flood zone 3b. Around 10% of the site is at risk of surface water flooding relating to Stoneyhill Brook which adjoins the south western boundary. The site is almost entirely grade 2 agricultural land with a very small portion of grade 3 land in the western corner. The land falls away gradually from the eastern edge of the site by the A1198 to the west, with this slope continuing down to Stoneyhill Brook which forms the western boundary of the site. Land to the south also rises gently as part of the wider landform relating to the Wood Green ridge. There are no buildings within the site but a small cluster of storage units adjoin the southern tip. The north western section of the boundary adjoins paddocks with a low hedgerow separating

**Availability**

The site is in single individual/ company ownership who support its development and it is optioned for development. There are no known legal restrictions affecting the site. The aspiration is to obtain an allocation, then planning permission prior to development by a house builder. The site promoter suggests an initial phase of around 200 homes followed by a second phase further west for the remaining 100 homes.

**Achievability**

The site promoter has stated that all utility services are accessible from the site boundary. Access would need to be taken from the old London Road which would require upgrading to accommodate the proposed scale of growth. The site does not present any particular topographical challenges although although land slopes gently down to Stoneyhill

<p>Brook along the south western boundary. There are no oil, gas or electricity infrastructure impediments to delivering development on the site. The A14 bypass is situated about 1.2 kms from the main part of the site where the developer proposes to build. The site promoter has provided an indicative masterplan including an illustrative layout of the development they are aspiring to provide and are promoting an affordable housing led scheme.</p>	
<p><b>Deliverability / developability</b></p> <p>The scale of the site is beyond that likely to be supported by the current Local Plan rural exceptions policy and the Godmanchester Neighbourhood Plan policy GMC13, so allocation status would be necessary to support it. Therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It is greenfield grade 2 agricultural land</li> <li>• Flood zone 1 but surface water prevails along Stoneyhill Brook</li> <li>• No impact on designated nature conservation or heritage assets</li> <li>• No opportunities for integration with adjoining residential areas to aid connectivity to the established community</li> <li>• Proposed relatively dense development would impact on long distance views and the adjoining open countryside</li> <li>• Good accessibility to primary education, social, sporting, local retail facilities and employment</li> <li>• Reasonable public transport connectivity</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential for development but this would require careful masterplanning to maximise opportunities for integration into the existing community</li> <li>• Would need to mitigate the impact of development on Stoneyhill Brook and the adjoining countryside</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 12.3ha</p> <p>55% net developable area to allow for flood attenuation, open space and landscaping and retention of the open form of the western part of the site in alignment with Pinder Close.</p> <p>12.3ha x 55% = <b>6.77ha</b></p>	<p>Residential - market and/or affordable homes</p> <p>Extension to adjoining cemetery depending on demonstration of long term need (0.5ha allowance deducted until a figure is known).</p> <p>Low density of 35dph anticipated due to the edge of settlement location.</p> <p>Capacity = 6.27ha x 35dph = <b>220 homes</b></p>	<p>Post 2028</p> <p>Build out over 4-5 years</p>

Available 2023  Build out across 30 years or more

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
<ul style="list-style-type: none"> <li>Play and sport areas</li> <li>Biodiversity net gain</li> </ul>		

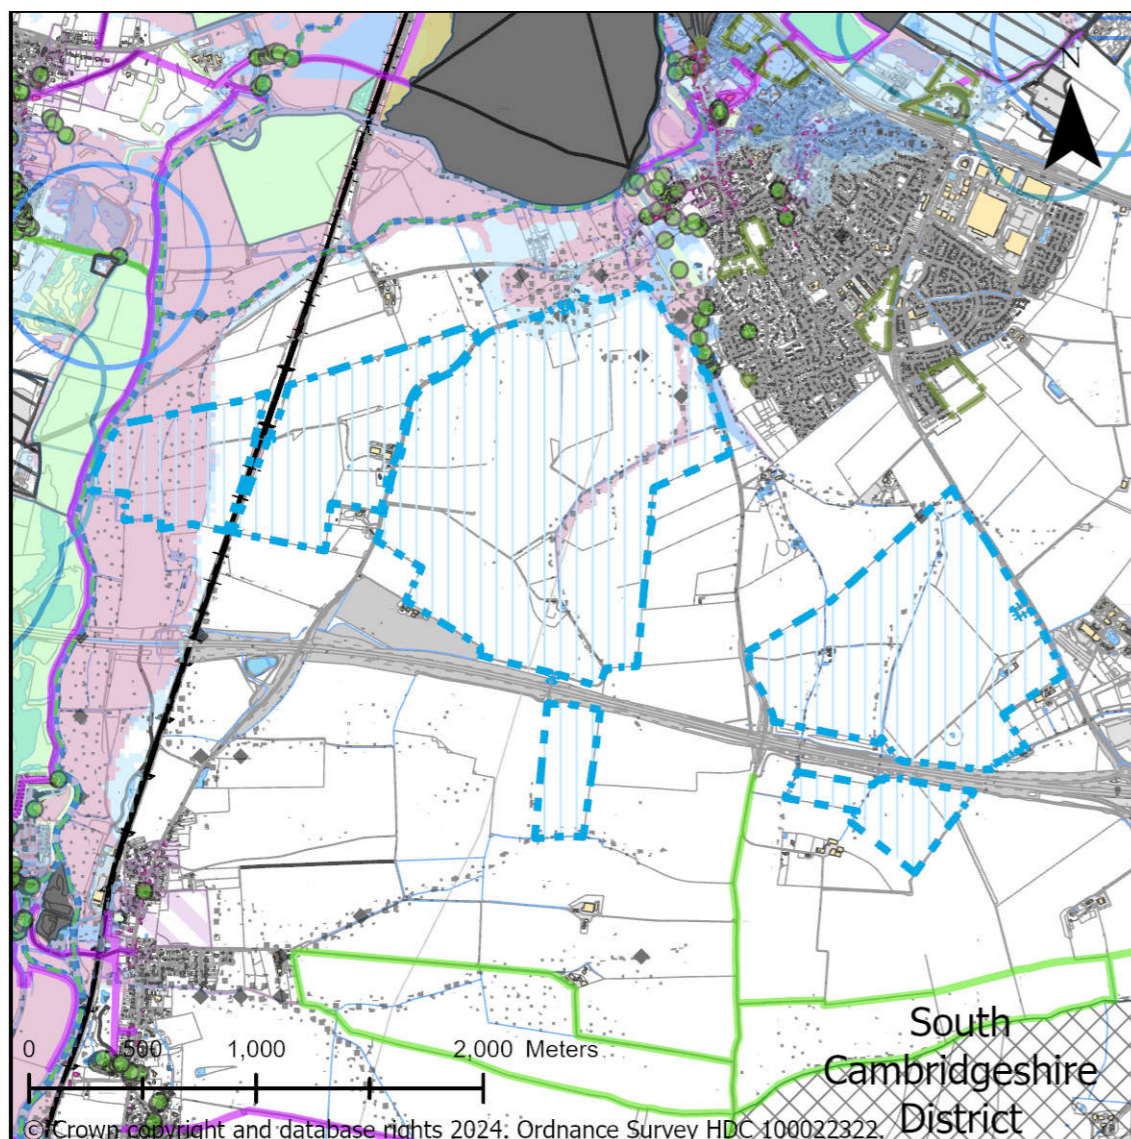

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:376
Relevant planning history	None
Land type	Part previously developed and part greenfield land
Current use of the site	Agricultural land
Supporting information	None supplied

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 6% is flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

This is a large, multi-parcel site the majority of which sits south and west of Godmanchester but which also includes one parcel of land separated from the rest of the site by the East Coast mainline railway and two parcels of land separated by the A14. It is significantly larger than the existing town. Development at this scale would fundamentally alter the context of the existing town.

90% of the site is situated within flood zone 1. Other areas, predominantly close to the River Great Ouse and its floodplain are at higher risk, with around 8% of the site being within flood zone 3 (mostly 3b) and therefore at highest risk preventing built development

within this part of the site unless for water compatible uses. Channels of surface water flood risk also exist with these expecting to cover around 5% of the site once predicted climate change risk is also taken into account. The great majority of the site is grade 2 agricultural land; however, there are small pockets of grade 3 in the northern section of Corpus Christi Farm and west of the East Coast mainline railway which then deteriorates to grade 4 as the land approaches the River Great Ouse.

The landform of the site broadly follows that of the Ouse Valley. The northern and western parts are lowest where they relate closely to the river and floodplain meadows. The highest land is found in the vicinity of Offord Hill Farm and Debden Farm broadly aligned with the A14 route. The eastern edge of the site peaks in the southernmost part opposite Wood Green Animal Shelter and then descends gently towards Godmanchester which can be clearly seen in the wider landscape context from the A1198. The westernmost parcel of land relates solely to the Ouse Valley lying between the river and the East Coast mainline railway. The large western section relating primarily to Corpus Christi Farm and Wyboston Farm is mostly in arable use with large fields separated by hedgerows and a few groups of trees; this area is bisected by the B1043 and contains the farmhouse and related agricultural buildings of Corpus Christi Farm. The separate southernmost parcel of land in the western group comprises a single arable field situated to the south of the A14 accessed by a field track which includes a bridge over the A14. This parcel of land slopes downwards to the south and has no visual connection with the main element of the site as the A14 landscaping bunds separate it from the landscape to the north. The large eastern section contains primarily agricultural buildings associated with Corpus Christi Farm, Lower Debden Farm and Debden Farm. The boundary with the A14 separates the land from the wider countryside to the south which rises initially and then falls away to the south from a high point near Debden Top Farm. Field sizes are again generally large with three small wooded areas, mainly near Stoneyhill Brook. A further two contiguous parcels of land lie to the south of the A14. The landform of these rises to a high point by Debden Top Farm buildings and although the landscaping bund paralleling the A14 limit views into this portion of the site from the A14 it is highly visible in the landscape from Silver Street where it bridges the A14 and several public rights of way to the south and west. The landscape impact of the development would be substantial, not least because of its scale, but also because of the level of visibility in a variety of local and long distance views from areas surrounding many parts of the site. This would include visual impacts on both the Pathfinder long distance footpath and the Ouse Valley Way.

No oil or gas pipelines or their buffer zones cross the site and there are no overhead power lines within it.

The site adjoins both the western and southern boundaries of Godmanchester but is not a contiguous parcel of land which would result in variation to its impacts across the wider area. The scale of the proposals would increase the current housing numbers in Godmanchester by around 2.3 times and hence completely change the character of the existing settlement.

<p>No heritage assets have been identified within the site although given that the eastern edge of the site adjoins the Roman Ermine Street route archaeological finds may be present and would need further investigation. There are no nationally designated nature conservation assets within the site although the westernmost parcel of land is wholly situated within the Ouse Valley strategic green infrastructure area.</p> <p>Achievability of highway access would need thorough investigation with Cambridgeshire County Council and National Highways. It is noted that the site promoter suggests that the site is well located for access to Cambridge along the A14; however, this is not the case as junction 23 with the A1198 is a limited access junction only facilitating travel to and from the west.</p> <p>The site is greenfield other than a very few houses within it so would not contribute to regeneration. The northern and western parts of the site fall within the minerals safeguarding area for sand and gravel resources. It is not constrained by any water recycling centre areas.</p>	
<p><b>Availability</b></p> <p>The site is in individual control with the landowner supporting its promotion for development. There are no known legal restrictions affecting the site. The site promoters also advocate consideration of a holistic review by the Council of the opportunity for wider strategic development to include land situated between the two main parcels put forward which they do not control.</p> <p>The site promoter aspires to secure an allocation for the land and obtain planning permission then work jointly with a developer to bring the scheme forward.</p>	~
<p><b>Achievability</b></p> <p>Other than provision of highway access from the site boundary the site promoter states that the accessibility of other utility services is unknown. Given that there is a scattering of existing properties across some of the site parcels it may be expected that electricity and telecommunications infrastructure at the least are available nearby.</p> <p>The site comprises nine parcels of land with limited interconnectivity with the most prominent omission being land either side of Silver Street. The absence of this severely inhibits opportunities to achieve a masterplan for cohesive sustainable development. Other parcels are separated by the East Coast mainline railway and by the A14 which reinforce this challenge.</p> <p>Major infrastructure provision would be required to support development of the proposed scale. Substantial parcels only have access onto the B1043 which would require traffic to pass through Godmanchester to reach the A1307 to go towards Cambridge and connect to the new A14 eastbound or to link to the A1198 to access the A14 westbound. To reach</p>	-

<p>the A1 development on these western parts of the site would need to go through Offord Cluny and Buckden adding to existing congestion at the Offord level crossing. Other parcels, particularly those south of the A14 only have to single lane road/ farm tracks that would require substantial upgrading to facilitate development of the proposed scale. Other infrastructure provision would require utility services, primary and secondary education.</p> <p>There is very little clarity from the site promoter on their development intentions beyond a suggested capacity of 8,120 homes; all other uses are put forward as subject to masterplanning.</p>	
<p><b>Deliverability / developability</b></p> <p>The proposed development has significant achievability challenges and would have wide ranging impacts on other settlements including Godmanchester, the Offords and Buckden. There are no apparent prospects of these constraints being overcome so the site is considered not to be developable at present.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Although the site is not considered to be suitable, achievable or developable a sustainability appraisal is completed to provide more detailed analysis and evidence to reinforce this assessment due to the potential for the site to influence the overall development strategy for Huntingdonshire should it be brought forward.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It is greenfield land and the majority is T grade 2 agricultural land; however, there are small pockets of grade 3 agricultural land</li> <li>• The non-contiguous nature of the land parcels would make them dependent upon inclusion of additional land potentially increasing the capacity of the scheme further</li> <li>• Attractively located for the housing market but development would not contribute to regeneration or reducing deprivation</li> <li>• Substantial harm would be caused to the character of the local landscape</li> <li>• The scale of development would overwhelm the character of the partially adjoining small town of Godmanchester and alter the balance of the historic relationship between Godmanchester and Huntingdon</li> </ul>
---

- Employment would need to be included but lack of direct access onto the A14 eastbound to Cambridge may detrimentally impact on the site's attractiveness to the market
  - Traffic travelling east would need to route through Godmanchester via the A1198 further impeding the ability to integrate the recent development of Romans' Edge into the main built up part of the town
- In combination the outcomes of the LAA and SA indicate that the site:
- Does not have potential for development of the scale and nature proposed due to its impacts on Godmanchester and the character of the surrounding landscape, its challenges in terms of integration and the impact of traffic particularly that heading eastbound

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site is considered inappropriate for development.	N/A	N/A

Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Urban expansion plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Call for Sites Reference Number:	285	369
<b>Context, constraints and potential suitability</b>		
The site is wholly in flood zone 1 and there is minimal risk of surface water flooding remaining at less than 2% even with the climate change allowance included. The site is entirely classified as grade 2 agricultural land. The south eastern site boundary is very open to the adjoining countryside and to the Bleakley Farm complex which includes residential and commercial properties. The south western and north western boundaries comprise mostly low level hedgerows which provide very limited screening. The north eastern boundary adjoining the A1198 comprises a line of deciduous trees which screen the site part of the year. Much of the site is surrounded by arable agricultural land (also	-	-

put forward for development) with a small area of existing development at Bleakley Farm and Whitehill Gardens housing development east of the site across the A1198. Substantial planting would be needed to reduce the impact of any development from the south as the site is prominent from this direction due to the rising landform and from the north due to visibility from housing on the current southern edge of Godmanchester. The landscape impact of development of this site individually would be high due to its isolation from current development. Prior completion of development on the intervening land (Godmanchester 5) would be necessary to effectively integrate it into the town, hence the site is unsuitable for development on its own. Immediately to the south is a very small group of residential properties and a self-storage business which should not be incompatible with residential use as it is not accessible overnight.

The proposed urban extension comprising 4 parcels of land of Godmanchester 7, 8, 9 and 10 are not contiguous with only Godmanchester 10 actually adjoining the existing built up area and with Stoneyhill Brook running through the central length of the site. Sites Godmanchester 7 and 8 are both wholly dependent on development of intervening land outside the site promoter's control to deliver integration with the existing built up area.

There is no known contamination on site and no oil or gas pipelines running through the site. There are no electricity lines crossing the site. No heritage assets affect the site. Nor are there any nature conservation designations or tree preservation orders posing constraints. The land has a boundary to the highway on the A1198 but does not include the existing access road to Bleakley Farm. So access arrangements would need to be clarified with Cambridgeshire County Council.

The site is greenfield land so would not contribute to the reuse of previously developed land. The site is outside of any mineral safeguarding area and beyond the buffer zone of the water recycling centre.

**Availability**

The site is in single family control with an agent appointed. There are no known known legal restrictions affecting the site. The site is currently in agricultural use so there are no uses to be relocated. CfS:285 was submitted directly by the landowner and estimates availability from 2024 with a smaller number of homes than the submission made by the agent (CfS:369) which incorporated the land into a larger scheme with an availability date given of from 2029.

**Achievability**

The site promoters indicate that electricity supply is available from the site boundary and highway access can be obtained. The availability of all other services is unknown. There are no significant topographical challenges to developing the site. There are no oil or gas

+	+
~	~

<p>buffer zones or overhead power lines affecting the site. The site immediately adjoins the A1198. No major infrastructure would be required, and no demolition is necessary to facilitate development.</p> <p>There is some lack of clarity over the scale of development intentions between the two site submissions with the agent's proposal forming part of a larger scheme and the landowners' scheme being a freestanding proposal which does not integrate into the current built up area of Godmanchester.</p> <p>The site is put forward by an agent as one element of an urban extension comprising four parcels of land only two of which are contiguous. Inclusion of two additional fields that are in other ownerships is also suggested. These would be essential as they form the intervening land between the scheme and the existing built up area of Godmanchester which would be necessary both to effectively integrate any scheme into the town and for it to form a cohesive development. Achievability of the proposed urban extension scheme would be wholly dependent on collaborative working with the other sites which are Godmanchester 3 and 5. Achievability of this site alone would depend on prior completion of Godmanchester 5.</p>		
<p><b>Deliverability / developability</b></p> <p>The site is in a sensitive location in terms of landscape impact and also context in relation to existing development as it is currently wholly detached from Godmanchester and would be reliant upon the development of intervening land to integrate it. Thus, as a freestanding site it is not considered to be developable. However, allocation status as part of a larger scheme involving land outside the control of the site promoter could make the potential urban extension scheme developable.</p>	-	~

<ul style="list-style-type: none"> <li>• It is greenfield grade 2 agricultural land</li> <li>• It is within reasonable distance of local employment and retail facilities</li> <li>• The potential urban extension as a whole would have capacity to integrate open and natural greenspace</li> <li>• There are no recorded nature conservation or heritage assets in the area</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is unsuitable for development on its own</li> <li>• The necessary intervening land to integrate the site into Godmanchester is not in the site promoter's control and has integration challenges of its own</li> <li>• The potential urban extension land comprises 4 parcels of land only two of which adjoin; to include this site within a cohesive development 5 of the parcels would be required collectively posing significant design and achievability challenges</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation is not provided as the site could not be developed as a freestanding site and successful promotion of the collective parcels for an urban extension would be dependent upon prior development of Godmanchester 3 and 5 to facilitate integration.	N/A	N/A

Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 1017 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability
The site is wholly in flood zone 1 but has some surface water flood risk along the frontage with the A1198. The site is entirely classified as grade 2 agricultural land. The site slopes upwards from the A1198 towards the NE with the land forming part the Wood Green Ridge in combination with Godmanchester sites 3 and 4. There are no built structures within it.

<p>While there are some trees on the western and northern boundaries the majority are open or comprise low hedgerows. The site comprises arable agricultural land and clearly relates to the open countryside as there are no buildings adjoining the site on any boundary with all adjoining land also being arable farmland. The site is clearly visible from the A1198 but there are no public footpaths in the vicinity. It is it comprises rising land to the south of Godmanchester and development would be partially visible from Whitehill Gardens and Godmanchester Rovers football ground. The landscape impact of development would be significant on the rural approach to Godmanchester. The site is separated from the existing built up area by Godmanchester 3 and would not be suitable for development in isolation.</p> <p>The proposed urban extension comprising 4 parcels of land of Godmanchester 7, 8, 9 and 10 are not contiguous with only Godmanchester 10 actually adjoining the existing built up area and with Stoneyhill Brook running through the central length of the site. Sites Godmanchester 7 and 8 are both wholly dependent on development of intervening land outside the site promoter's control to deliver integration with the existing built up area</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no electricity lines crossing the site. No heritage assets affect the site. No nature conservation assets affect the site and there are no tree preservation orders. The site adjoins the public highway on the A1198 and access maybe achievable from here.</p> <p>The site is greenfield land so would not contribute to the reuse of previously developed land. The site is outside of any mineral safeguarding area and beyond the buffer zone of the water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site is in individual control with the landowner supporting its development. There are no known legal restrictions affecting the site. It is put forward for allocation then sale and development by a third party giving an expected start date from 2029 onwards.</p>	+
<p><b>Achievability</b></p> <p>The site promoter advises that an electricity supply is available from the site boundary, as is access to the public highway. Accessibility to all other services is unknown. The presence of a small drainage ditch and associated flood risk on the highway frontage forms a minor challenge to development of the site.</p> <p>The site is put forward as one element of an urban extension comprising four parcels of land only two of which are contiguous. Inclusion of two additional fields that are in other ownerships is also suggested. These would be essential as they form the intervening land between the scheme and the existing built up area of Godmanchester which would be necessary both to effectively integrate any scheme into the town and for it to form a cohesive development. Achievability would be wholly dependent on collaborative working with the other sites which are Godmanchester 3 and 5.</p>	~

Achievability of the site as a freestanding scheme would be wholly dependent upon the prior completion of Godmanchester 3.	
<b>Deliverability / developability</b>	
The site is in a sensitive location in terms of landscape impact and also context in relation to existing development as it is currently wholly detached from Godmanchester and would be reliant upon the development of intervening land to integrate it. This would, by itself, lead to an incongruous form of development to the south of Godmanchester which could only be overcome by comprehensive development of all six parcels of land.	

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	The site would not merit progression through to SA on its own but given its potential to form part of a comprehensive scheme with other sites it is put through.
--	--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield grade 2 agricultural land located in flood zone.</li> <li>• It is separated from the existing built up area of Godmanchester and so wholly dependent on intervening land for integration.</li> <li>• The necessary intervening land is not one of the 4 parcels submitted by the agent for consideration as a potential urban extension and development of just these two parcels of land would result in an unbalanced form of development extending south from the town along the eastern side of the A1198.</li> <li>• Its location adjoining the adjoining open countryside would give rise to impacts on long distance views.</li> <li>• Has poor accessibility to primary education, social and local retail facilities and employment.</li> <li>• Also has poor public transport and active travel connectivity.</li> <li>• Would not impact on nature conservation or known heritage designations.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is unsuitable for development on its own</li> <li>• The necessary intervening land to integrate the site into Godmanchester is not in the site promoter's control</li> <li>• The potential urban extension land comprises 4 parcels of land only two of which adjoin with the southeasternmost one (Godmanchester 8) again being dependent upon delivery of intervening</li> </ul>

Page 1020 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site is wholly in flood zone 1 for fluvial flooding but around 11% of it is at risk of surface water flooding. The site is entirely classified as grade 2 agricultural land. The site is predominantly surrounded by countryside being situated some 350m south of the nearest part of the existing built up area of Godmanchester on the western side of the A1198,	-

<p>although it is just under 100m from new development at Whitehill Gardens to the east of the A1198 but this is well screened by a long established mature tree belt so has no intervisibility. The western corner adjoins the Bleakley Farm complex which includes residential and commercial properties. The north eastern and south western boundaries comprise mostly low level hedgerows with occasional trees which provide limited screening including to the A1198 which adjoins the eastern side of the site. The north western and south eastern boundaries are very open leaving the site highly exposed to view, particularly from the south.</p> <p>Substantial planting would be needed to reduce the impact of any development from the south as the site is visible from the A1198 and along the north western edge to mitigate disturbance from vehicles accessing the self-storage units at Bleakley Farm. The landscape impact of development of this site individually would be high due to its isolation from current development. Prior completion of development on the intervening land (Godmanchester 5 and 7) would be necessary to effectively integrate it into the town, hence the site is unsuitable for development on its own.</p> <p>The site forms the southernmost element of a proposed urban extension comprising 4 parcels of land of Godmanchester 7, 8, 9 and 10. These are not contiguous with Godmanchester 10 being the only site actually adjoining the existing built up area and with Stoneyhill Brook running through the central length of this. Sites Godmanchester 7 and 9 are both wholly dependent on development of the intervening land outside the site promoter's control (Godmanchester 3) to deliver integration with the existing built up area.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no electricity lines crossing the site. No heritage assets affect the site. Nor are there any nature conservation designations or tree preservation orders posing constraints. The land has a boundary to the highway on the A1198 but does not include the existing access road to Bleakley Farm. So access arrangements would need to be clarified with Cambridgeshire County Council.</p> <p>The site is greenfield land so would not contribute to the reuse of previously developed land. The site is outside of any mineral safeguarding area and beyond the buffer zone of the water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site is in individual control with the landowner supporting its development. There are no known legal restrictions affecting the site. It is put forward for allocation then sale and development by a third party giving an expected start date from 2029 onwards.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter advises that an electricity supply is available from the site boundary, as is access to the public highway. Accessibility to all other services is unknown. The presence of Stoneyhill Brook and its associated flood risk presents some challenge to development of the southern part of the site.</p> <p>The site is put forward as one element of an urban extension comprising four parcels of land only two of which are contiguous. Inclusion of two additional fields that are in other ownerships is also suggested. These would be essential as they form the intervening land between the scheme and the existing built up area of Godmanchester which would be necessary both to effectively integrate any scheme into the town and for it to form a cohesive development. Achievability would be wholly dependent on collaborative working with the other sites which are Godmanchester 3 and 5.</p> <p>Achievability of the site as a freestanding scheme would be wholly dependent upon the prior completion of Godmanchester 5.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is in a sensitive location in terms of landscape impact and also context in relation to existing development as it is currently wholly detached from Godmanchester and would be reliant upon the development of intervening land to integrate it. Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homesP	Yes	Pass

Page 1023 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability
<p>The site lies on the south western edge of Godmanchester with Stoneyhill Brook running through its length; and some 42% of the site lies within flood zone 3 of which 14.5% is classified as 3b functional floodplain. Around 25% is at high or medium risk of surface water flooding. The land is wholly classified as agricultural grade 3 and is greenfield</p>

<p>pastureland with a small cluster of derelict brick agricultural sheds in the north western corner. The land rises very gently towards the south with the drop into the Stoneyhill Brook channel just east of the central field boundary forming the primary feature of the site. A hedgerow with intermittent trees runs most of the length of the Brook fading out towards the southern end. The northern part of the site comprises two fields situated between Silver Street and homes on Cob Place and Fishers Way. The Silver Street boundary comprises consistent hedgerow with occasional trees. The northern boundary adjoins open space and a balancing pond and is separated by substantial trees. The eastern boundary comprises a mixture of garden fences and hedgerow. The southern field is adjoined by paddocks on both sides with trees and hedgerows providing some screening from the wider landscape. The site relates well to the wider landscape of Stoneyhill Brook as a tributary to the Rover Great Ouse to the north. The site is intermittently visible from Silver Street which serves as part of the Pathfinder long distance walk. Whilst visible in places the proposed use as open space and biodiversity net gain is unlikely to detrimentally impact on views from the surrounding uses.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no heritage designations on site and it is remote from the conservation area. There are no nature conservation assets within the site; the southern tip is close to an independent Waterfowl Sanctuary. There are three protected trees in the northern tip of the site close to the more recently established public open space. A gate separates the northern end of the site from Silver Street near the derelict buildings with a narrow grass strip having served as an access point.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single company who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire an allocation then sell it to a third party for development giving an expected start date from 2029 onwards.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has advised that the public highway is accessible from the site boundary as is an electricity supply. Availability of all other services is unknown. There are no topographic challenges inhibiting the proposed uses. The current field access is very close to one of the protected trees and may be unsuitable for more intensive use. The proposed open space, biodiversity net gain and nature reserve uses could be supported on the site in isolation from the larger urban extension of which the site forms the northernmost of the</p>	~

4 parcels of land. However, no clear indication has been provided of the landowner/ site promoter's intentions to bring this forward as a freestanding site rather than as a supporting element of the larger proposal so its achievability is uncertain.	
<p><b>Deliverability / developability</b></p> <p>Whilst the site is sensitively located in the local landscape making it unsuitable for any form of built development the proposed open spaces uses may be appropriate in this context and the site is classified as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It has good potential for the proposed open space and biodiversity net gain use</li> <li>• It offers some opportunities for consolidation with the open space created west of Comden Drive and along Silver Street and for provision of habitat linkages between open countryside and Portholme.</li> <li>• It could reinforce the rural character of Silver Street and Stoneyhill Brook</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Could be appropriate for use for open space and biodiversity net gain but that built development would be inappropriate due to the impact on the character of the local area.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
5.12ha gross area	Open space and biodiversity net gain	Site area wholly suitable for proposed use but not in conjunction with the wider urban extension involving additional sites. Delivery as a freestanding scheme may not be achievable but could be from 2024.

**Updates after the Initial Assessment**

Page 1026 of 3488

the clear view over the rising land from the A1307 largely contained by Emmanuel Knoll Plantation. There are no built structures within the site. The eastern and south eastern boundaries comprise low hedgerows with the trees of Emmanuel Knoll Plantation forming the south western and western boundaries. The northern boundary fronting on to the A1307 includes a shallow ditch and low scrub and bushes. There is only minimal visibility from any rights of way or other routes. Other than on the northern edge the site is surrounded by arable farmland. Development would have a significant impact on the appearance of the site from the main public vantage point of the A1307 from which views currently continue over the adjoining rising countryside other than where the plantation separates the site from the land to the west. Development of the site alone would be unsuitable given its isolated context; however, the site promoter's proposal is for the land to be integrated with that to the west for a comprehensive scheme. The long established Emmanuel Knoll Plantation currently forms a significant barrier to achieving this. This is a broadleaved woodland identified by the Wildlife Trust BCN as a potential ancient woodland.

No oil or gas pipelines or buffer zones are indicated as affecting the site although a gas pipeline is acknowledged as being present on the adjoining site with a buffer zone continuing along the section of Emmanuel Knoll Plantation that forms the south western boundary of this land so this will require further investigation. No heritage assets or nature conservation designations affect the site and there are no tree preservation orders within it. Highway access will need to be further investigated with Cambridgeshire County Council. The site currently has two field access points onto the westbound carriageway of the A1307 and would be dependent upon collaboration with a larger scheme to the west to achieve access for development.

The site contains no previously developed land and so would not contribute to regeneration. The site is outside of any mineral safeguarding area and is also outside the buffer zone from any water recycling centre.

**Availability**

The site is in family ownership with the landowners supporting the proposed development. There are no known legal restrictions affecting the site. The current use would cease if the site were to be developed so no relocation is required. The site promoter envisages that the land could be brought forward as part of a wider urban expansion scheme being promoted on land to the west of the site but the delivery method is currently unknown.

**Achievability**

The land bounds the A1307 to the north with two existing field accesses although these would require substantial upgrading with access arrangements likely to require a new roundabout onto the A1307 as part of the wider proposed urban extension scheme which may or may not fall within the area of this site. An electricity supply is known to be available from the site boundary but accessibility to water, gas and digital and telecommunications

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is wholly within flood zone 1 and has minimal surface water flood risk. A band of low risk curves through the site with a very small amount of land at medium and high risk of surface water flooding. It comprises grade 3 agricultural land in arable use. The land rises steadily from the north eastern corner to the south west away from the A1307 with

<p>infrastructure are all unknown. No oil or gas pipelines or buffer zones are indicated as affecting the site although a gas pipeline is acknowledged as being present on the adjoining site with a buffer zone continuing along the section of Emmanuel Knoll Plantation that forms the south western boundary of this land. Major infrastructure provision is likely to be required as part of the wider scheme to facilitate access and support the scale of development. The development intentions for the land as an individual site are limited beyond the suggested scale of development as the site promoter envisages the land being brought forward in conjunction with the larger site to the west rather than independently. However, this would necessitate removal of part of Emmanuel Knoll Plantation to facilitate any physical or visual connection.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are significant constraints to developing the site as it cannot be integrated into the wider site to the west upon which its development depends. The site is therefore categorised as not developable.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No because the site cannot be integrated into the wider scheme upon which its delivery would depend without causing substantial landscape and biodiversity harm through removal of significant sections of Emmanuel Knoll Plantation.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

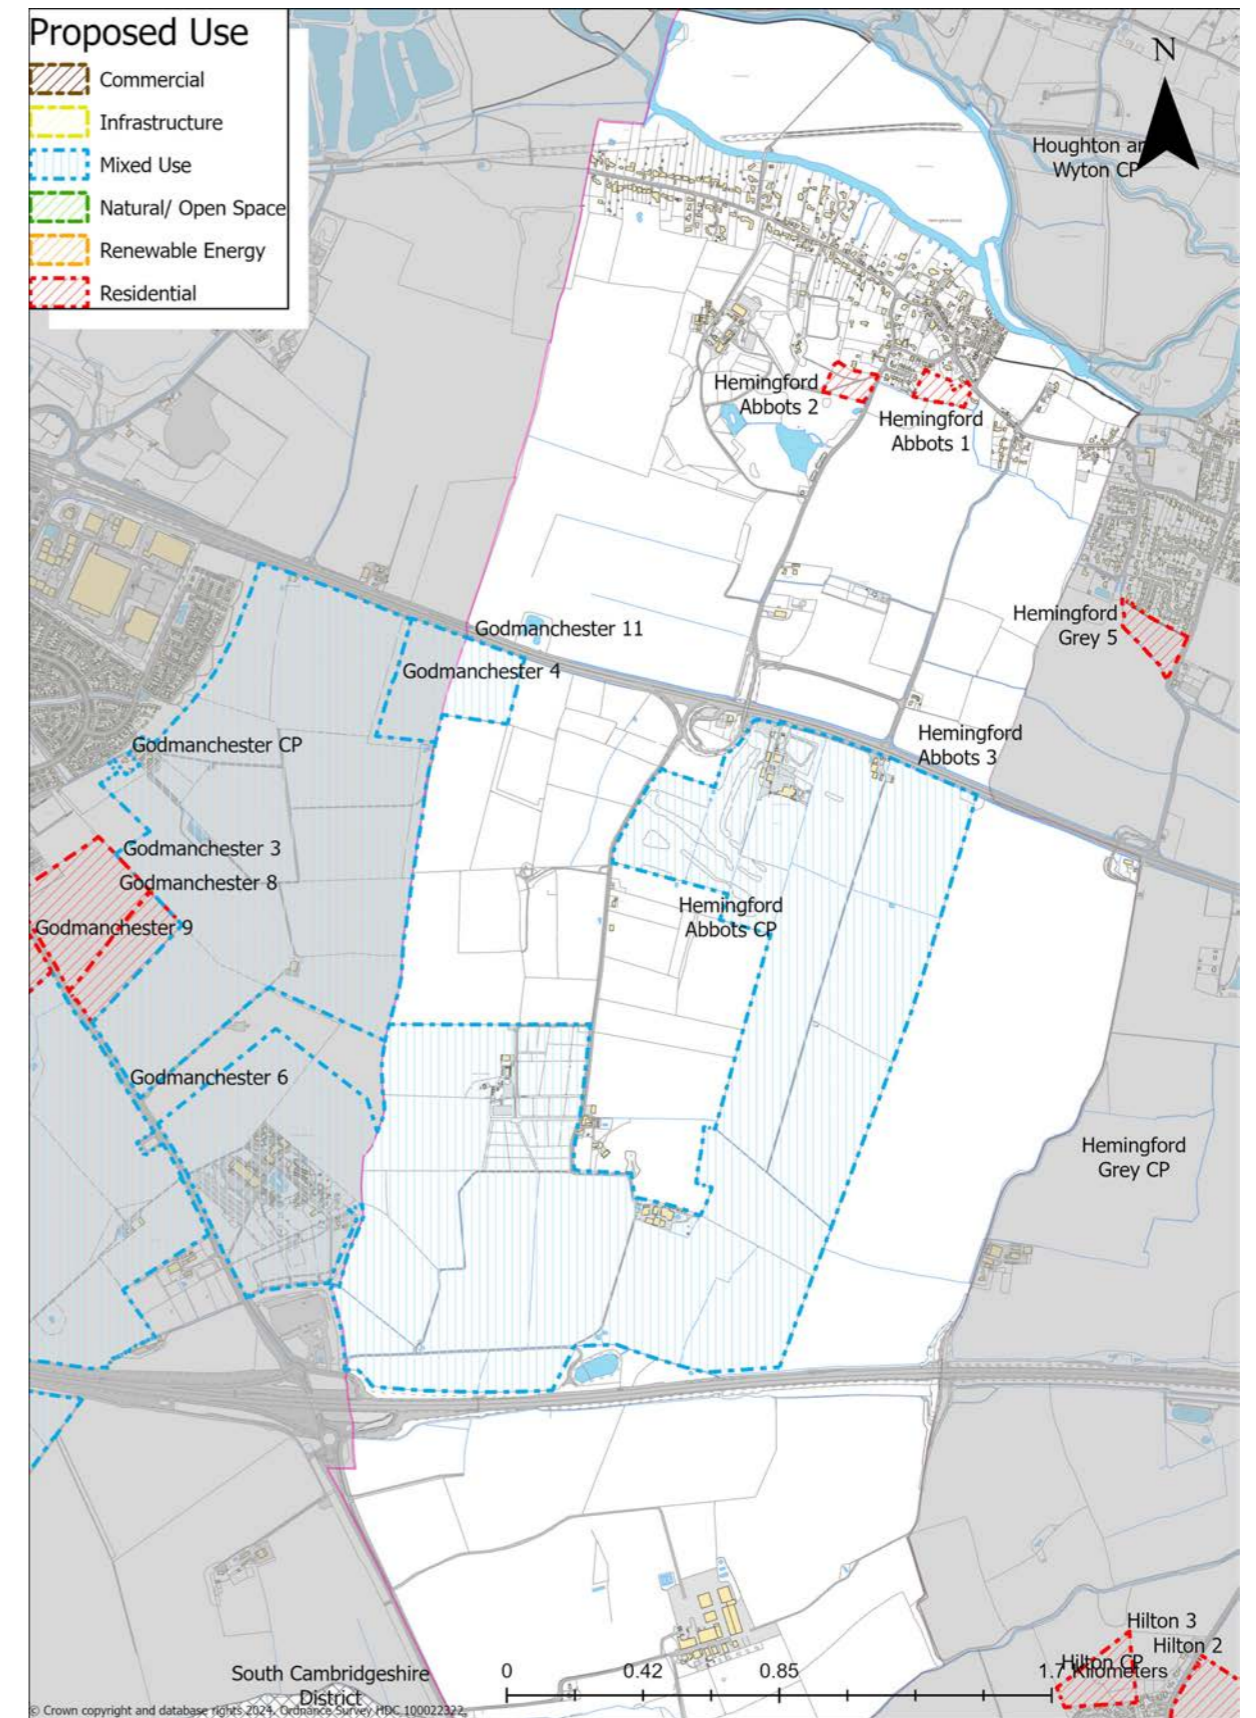

## 3 Hemingford Abbots

Huntingdonshire District Council | Central Huntingdonshire Land Availability Assessment

### 3 Hemingford Abbots

3.1 A total of 3 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Hemingford Abbots 1: Royal Oak Gardens, High Street, Hemingford Abbots
- Hemingford Abbots 2: Land West of Rideaway, Hemingford Abbots
- Hemingford Abbots 3: The Lattenburys (land to the South of the A1307 and North of A14, and West of A1198) - this site also partially falls within Godmanchester parish.

3.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Page 1029 of 3488

### 3 Hemingford Abbots

#### Hemingford Abbots 1: Royal Oak Gardens, High Street, Hemingford Abbots

<b>Site reference</b>	Hemingford Abbots 1
<b>Site name</b>	Royal Oak Gardens

Site address	Parish(es)	Site area (ha)
Royal Oak Corner High Street Hemingford Abbots Huntingdon PE28 9AE	Hemingford Abbots	1.17

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Custom and self-build housing Market and/or affordable housing	8 homes / 8 plots	Available 2024 - 2028 Build out over 2 years

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CFS:2
Relevant planning history	<ul style="list-style-type: none"> <li>18/01296/FUL - Erection of 4 bedroom two storey dwelling with attic room. Withdrawn</li> <li>18/02203/FUL - Erection of 4 bedroom two storey dwelling with attic room. Refused</li> </ul>
Land type	Garden land
Current use of the site	Garden land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Approximately 23% of the western part of site is within FZ2 and the rest of the site is within FZ3a due the proximity of the River Great Ouse to Hemingford Abbots. The site is at a low risk of flooding from surface water. It is wholly classified as grade 3 agricultural land. The site is flat and has a similar topography to the surrounding land. It is covered with matured trees and has no built structures. It adjoins residential buildings to the north, east and west and is exposed to the open countryside on the southern boundary. It has mature trees and hedging along its boundaries providing screening.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. The site is within the Hemingfords conservation area and does not contain no listed buildings or other known heritage assets though it adjoins a listed building (The White Cottage). There are no designated nature conservation assets within the site. The entire site is a Tree Preservation Order Area (TPO 10.90). The site can be accessed from the High Street; highway access from the the A1307.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. It is does not lie within a mineral safeguarding area and is beyond 400m from a water recycling centre.</p>	-
<p><b>Availability</b></p> <p>The site is in multiple ownership but is controlled by an individual/company. The development of the site is supported by all landowners. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The landowner suggests the land is available now and seeks to obtain an allocation before delivering it directly.</p>	+
<p><b>Achievability</b></p> <p>Electricity, gas, water and digital and telecommunications infrastructure are all accessible from the site boundary. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be accessed from the High Street and is situated 1.07 km north of the A1307. There are no built structures on the site that require clearance. The site promoter seeks residential development of either 8 homes or 8 plots for custom and self build housing. The entire site is covered with matured trees and there is a Tree Preservation Order on all trees on the site. As such, an aboricultural impact assessment or an ecological assessment will not be enough to mitigate the impact of the proposed development on the existing trees as there is no vacant portion of the site that can accommodate any housing development without harming the trees. The site being within a conservation area and it's proximity to a listed building (The White Cottage) to the north means that any future development will need to be sensitive to its impact on the character</p>	-

Page 1031 of 3488

<p>and appearance of the conservation area and the setting of the listed building. Also, as a large proportion of the site is within FZ3a and there is a residual risk of flooding at the site in the event of a breach of the River Great Ouse, development of the site faces flooding constraints.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are significant constraints on site than cannot be mitigated. Flood risk, impact on heritage assets and impact on existing protected trees are key development considerations that makes the deliverability of the site impossible. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as not developable.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No because the entire site is covered with mature trees with Tree Preservation Order and is constrained by flooding.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

<p>The site did not progress to Sustainability Appraisal.</p>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

### 3 Hemingford Abbots

#### Hemingford Abbots 2: Land West of Rideaway, Hemingford Abbots

<b>Site reference</b>	Hemingford Abbots 2
<b>Site name</b>	Land West of Rideaway, Hemingford Abbots

Site address	Parish(es)	Site area (ha)
Land West of Rideaway, Hemingford Abbots	Hemingford Abbots	1.30

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	9 homes	Available 2024 - 2028 Build out over 2 years

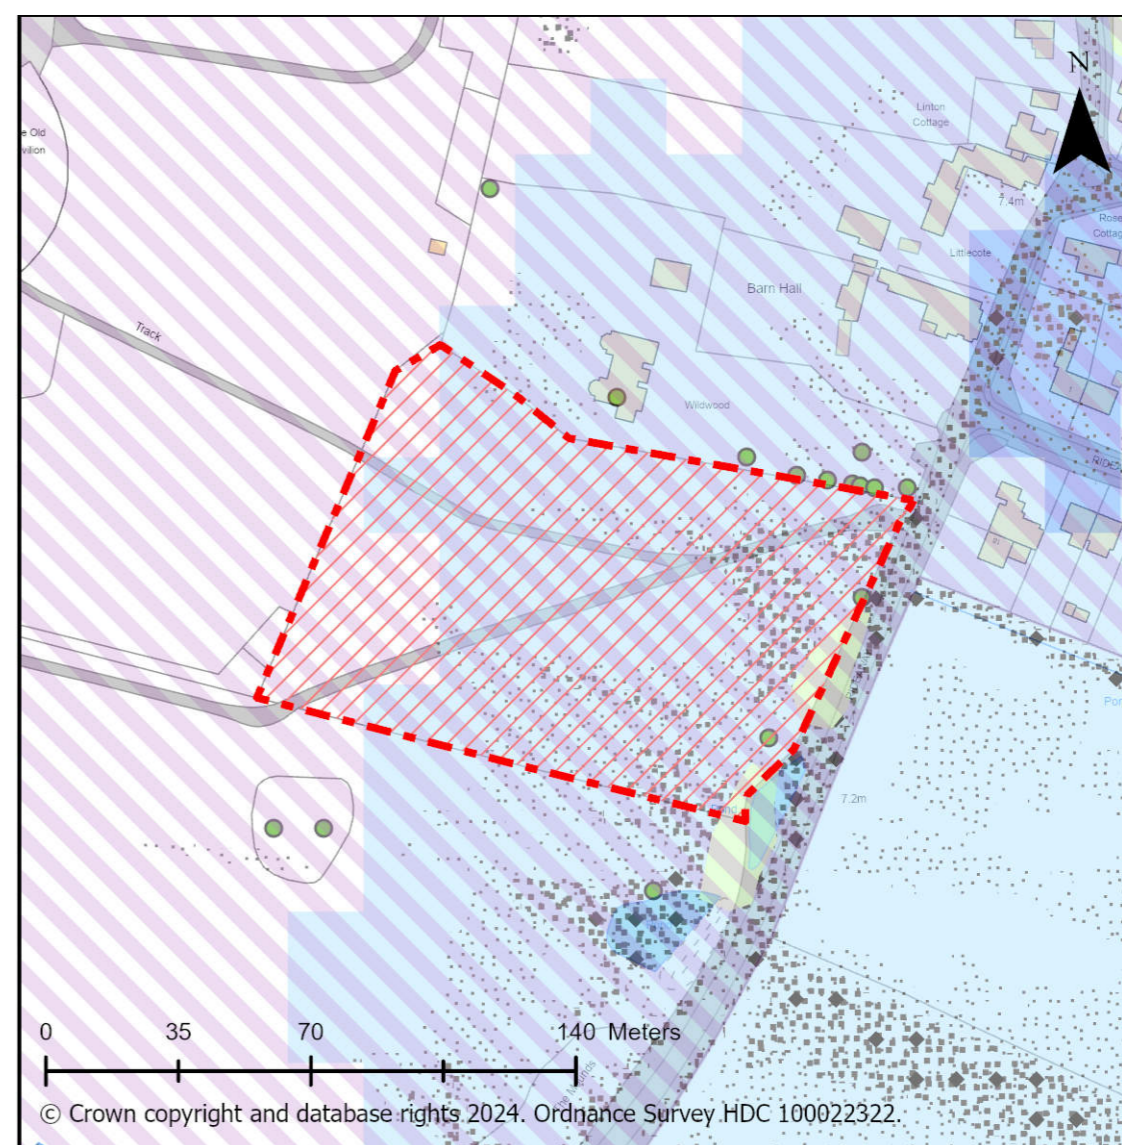

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:252
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Supporting Statement (Ref: P23-0902) (June 2023)</li> </ul>

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	~
---	---

<p>Approximately 18% of the western part of site is within FZ1 and the rest of the site is within FZ2. A large proportion the entire site is at a low risk of flooding from surface water with about 1.6% of the eastern portion of the site having a high risk of flooding from surface water. The site is immediately south of the southernmost extent of Hemingford Abbots and it is wholly classified as a grade 3 agricultural land. It is made up of an entirely flat uniformed land and has a similar topography to the surrounding land. It comprises a few trees and hedges along its northern and eastern which provides limited screening from the adjoining residential building. The northern boundary of the site is made up of the curtilage of Wildwood. Although the proposed use of site is fairly compatible with the neighbouring uses, the western and southern boundaries have little to no trees which exposes the site to the open countryside. Two track roads run through the site from the western and northern corridors and links Hemingford Park Hall and the Old Pavilion to Rideaway road which adjoins the site to the east. The site was previously used as a means of access during construction works at Hemingford Park Hall which sits to the west.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. The site is within the Hemingfords conservation area but does not contain any listed building or other known heritage assets though it is in close proximity to The Old Pavilion which is a listed building. There are no designated nature conservation assets within the site. The site can be accessed from the Rideaway; highway access from the A1307.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. It does not lie within a mineral safeguarding area and is beyond 400m from a water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who support its development and are in partnership with a developer/ housebuilder to bring the site forward. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain an allocation before delivering it .</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary apart from gas supply and digital and telecommunications infrastructure which is unknown. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be accessed from the Rideaway Street and is situated 1.03 kms north of the A1307. There are no built structures on the site that require clearance. The site promoter seeks residential uses of 9 homes. Landscaping will be required to mitigate the impact of the site on the countryside.</p>	~

<p>Also, the site being within a conservation area and its proximity to a listed building (The Old Pavilion) to the west means that any future development will need to be sensitive to its impact on the character and appearance of the CA and the setting of the listed building.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are significant constraints on site to mitigate. Landscaping and the impact on the CA and heritage assets are key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by house builder after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Has very limited accessibility to local services, employment and public transport</li> <li>• Good connectivity to the strategic road network</li> <li>• Small scale development could be integrated into the existing place and community</li> <li>• Would have potential impact on the conservation area and the setting of a listed building</li> <li>• Approximately 82% of the site is at risk of fluvial flooding with climate change at 1 in 100</li> <li>• The site is exposed to the adjoining countryside.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development</li> <li>• Could not support place-making and sustainable lifestyle</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Capacity calculation not undertaken as site is inappropriate for development.</p>	<p>N/A</p>	<p>N/A</p>

**Updates after the Initial Assessment**

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 0.13% of the site is within FZ3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	22.50 ha (9.25% of site) is within a mineral development area	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

### Assessment of Site Potential

#### Context, constraints and potential suitability

The site is almost entirely within flood zone 1 with just 0.33ha in flood zone 3b. Nearly 13% experiences high or medium risk of surface water flooding primarily in three bands running east-west, first near the northern edge of the site, then directly east of Littlebury Farm buildings and finally near the southern edge of the site. The majority of the site is greenfield which wholly comprises grade 2 agricultural land. Towards the south western edge the site also includes Wood Green pets charity which is proposed to be retained. There are a small number of buildings within the site comprising farms with associated residential and agricultural properties, a small waste management area off Rideaway and Moats Way equestrian centre.

The site comprises rising land reaching its highest point in the south west near Wood Green pets charity linked to a ridge rising to the west through the centre of the site. Land falls away from this both to the north east towards the A1307 and the south east towards the A14 making the site highly visible from both major highways and from villages to the north. The site is largely cut off from the surrounding area to the north and south by major highways with the lower lying Hemingfords situated beyond to the north and further lower lying agricultural land to the south. The site boundaries are complex. The northern boundary adjoins the A1307 with the Rideaway junction providing access to and from the westbound carriageway of the A1307. Established trees and hedgerows adjoin the northern boundary providing limited local level screening. The eastern boundary comprises low level field hedgerows. The southern boundary mostly adjoins the A14 skirting around a balancing pond for which the access track cuts through the south western part of the site. The site is very open to view from the A14 on the eastern stretch of this boundary but A14 is largely embanked along the western stretch of the southern boundary obscuring views in to the site; tree planting is being established along much of this length. The south western corner of the site omits the former A14 construction compound adjoining the junction with the A1198 which is largely screened by trees, but then heads west such that the western boundary of the site mostly adjoins the A1198. Wood Green pets charity forms part of the site and presently has a very open frontage to the A1198 with paddocks forming a setting to car parking and buildings beyond which are largely screened by well established trees. The remainder of the site boundaries are predominantly field boundaries with a mixture of low hedgerows and open field margins with Moats Way forming small sections of boundary, aganlargely edged with hedgerows. Moats Way is a public right of way giving visibility into the centre of the site. A public footpath also runs the length of Mere Way to the east of the site with open views towards the eastern portion of the site and across its rising landform. Visibility from Godmanchester is impeded by landform, trees and hedges, however, there is some visibility of the site from Hemingford Abbots. Given the scale of the proposal landscape impact will be significant but much is contained by major highways and tree belts with the greatest visibility being from the east.

<p>There are no active or historic landfill sites in the area although a small waste management area is located at New Farm in the north of the site which may give rise to pollution issues that would need to be addressed. The adjoining A14 may give rise to noise and air pollution issues due to the volume and nature of traffic. Three wind turbines are within or very close to the site boundaries and the visual and noise impacts of these will constrain any future development layout. There is a medium pressure gas main crossing the northern section of the site from east to west which would require a buffer zone from development. The site promoter has also acknowledged that high and low voltage overhead and underground electricity cables lie within and adjacent to the site. There is just one designated heritage asset within the site, the grade II listed Rectory Farm fronting onto the A1307. Similarly there are no designated nature conservation assets within the site.</p> <p>The site contains very small pockets of previously developed land, the current uses of some of these are intended to be retained by the site promoter hence, overall the developable portion of the site would be almost entirely greenfield and so not contribute to reuse of previously developed land. The waste management area at New Farm has a buffer zone around it within which Cambridgeshire County Council would need to be consulted about any development although the site promoter's concept plan appears to remove this use. The north eastern tip of the site falls within a sand and gravel safeguarding area and again advice would need to be sought from Cambridgeshire County Council.</p>	
<p><b>Availability</b></p> <p>The site is currently in multiple ownerships with a mixture of family control and control by a developer company. The development is supported by all landowners. There are no known legal restrictions affecting the site. The primary current use to be incorporated into the proposed development scheme is Wood Green pets charity and potentially the equestrian centre. The site promoter's intention is for the proposal to be delivered by a master developer.</p>	+
<p><b>Achievability</b></p> <p>All utility services are available either within the site already or from the site boundary. The site has boundaries with the A1307 and the A1198 with existing accesses to both and is close to the limited access junction of the A1198 and A14. There is also access to the north via Rideaway. The site promoter proposes a new roundabout onto the A1307 to the east of the existing grade separated Rideaway junction along with a new roundabout on the A1198. The site promoter proposes promotion of a sustainable travel hierarchy linking into public footpaths and promoting enhancement and establishment of active travel and public transport routes. Engagement with Cambridgeshire County Council will be necessary to demonstrate the feasibility of the access proposals. The A1307 provides a connection to Huntingdon railway station. The site has a distinct topography based around the central ridge which would necessitate careful design to minimise impact on the wider landscape. The known gas pipeline across the north of the site would require a buffer zone from built</p>	

<p>development impacting on the layout of development in this area. Infrastructure proposals from the site promoter include a secondary school, two primary schools and other community facilities along with the two roundabouts necessary to support access to the level of growth proposed. The site promoter has provided a clear vision document supporting their proposal with illustrative layouts indicating the scale, mix and layout of their development proposals.</p>	
<p><b>Deliverability / developability</b></p> <p>The site promoter has a masterplan for the site and has stated their intention to progress technical studies alongside the Local Plan process. The masterplan indicates development of two villages connected by a country park and travel corridors delivered over a 15-20 year period. No details have been provided yet of the intended delivery methods and rate. The scheme would require allocation and therefore is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It is predominantly greenfield with very small pockets of previously developed land and some existing uses to be retained</li> <li>• It is at minimal risk of fluvial flooding although surface water flood risk would need management</li> <li>• The landform contains a clear ridge of higher land typical of the area which could contribute to establishing the sense of place of any future development</li> <li>• The proposed scheme has strong environmental credentials aimed at minimising impacts on climate change and promoting resilience to future impacts</li> <li>• It is well located in terms of proximity to services and facilities in both Huntingdon and St Ives</li> <li>• The proposed mix of uses includes housing, community facilities, employment and a country park</li> <li>• The site is bounded on three sides by existing highways providing a level of separation from the wider countryside particularly to the north and south.</li> <li>• It has potential to link into the Ouse Valley green infrastructure priority area and promote additional habitat connectivity</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for mixed use development of a new community in a sustainable location</li> <li>• Is promoted with strong environmental credentials which would need to be incorporated into a strong masterplan and design code to ensure effective delivery</li> </ul>
---

- Has access to all main utilities but consultation will also be required with utilities and other infrastructure providers to ensure the development has adequate infrastructure to serve it
- Would require additional junctions onto the A1307 and A1198 for which engagement with Cambridgeshire County Council would be necessary to ensure their deliverability
- Detailed masterplanning would be essential to minimise the impact of any development on the ridge of higher land in the centre of the site on the wider surrounding landscape

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 243.00 ha.</p> <p>Given the scale of the site the starting point for calculating the net developable area is 50% of the land area which gives 121.5 ha.</p> <p>Further specific exclusions are:</p> <p>10ha for a secondary school and up to three primary schools and 9.96ha for retention of Wood Green pets charity.</p> <p>The net developable area for built development is (243.0 ha x 50%) = 121.5 - 10 = <b>101.54 ha</b></p>	<p><b>121.5 ha for open space, country park, sports facilities, biodiversity and other planting and sustainable drainage.</b></p> <p><b>10 ha for a secondary school and up to three primary schools</b></p> <p><b>9.96 ha for Wood Green pets charity</b></p> <p><b>The net developable area for other built development is 101.54 ha.</b></p> <p><b>6.1 ha for local centre</b> (this includes retail/ leisure/ community/ coworking space uses) (slight uplift to reflect the split nature of the proposed villages)</p> <p><b>9.72 ha for employment uses</b> (slight uplift to reflect the site promoter's aspirations)</p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 15 years</p>

Page 1037 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<p><b>85.72 ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments:</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 2.6ha x 145dph = 377 homes</li> <li>• 7% of land at high density 85dph. 6.0ha x 85dph = 510 homes</li> <li>• 25% of land at moderate density 50dph. 21.4ha x 50dph = 1,070 homes</li> <li>• 55% of land at low density 35dph. 47.2ha x 35dph = 1,652 homes</li> <li>• 10% of land at very low density 25dph. 8.6ha x 25dph = 215 homes</li> </ul> <p><b>3,824 total homes</b></p>	

**Updates after the Initial Assessment**

--

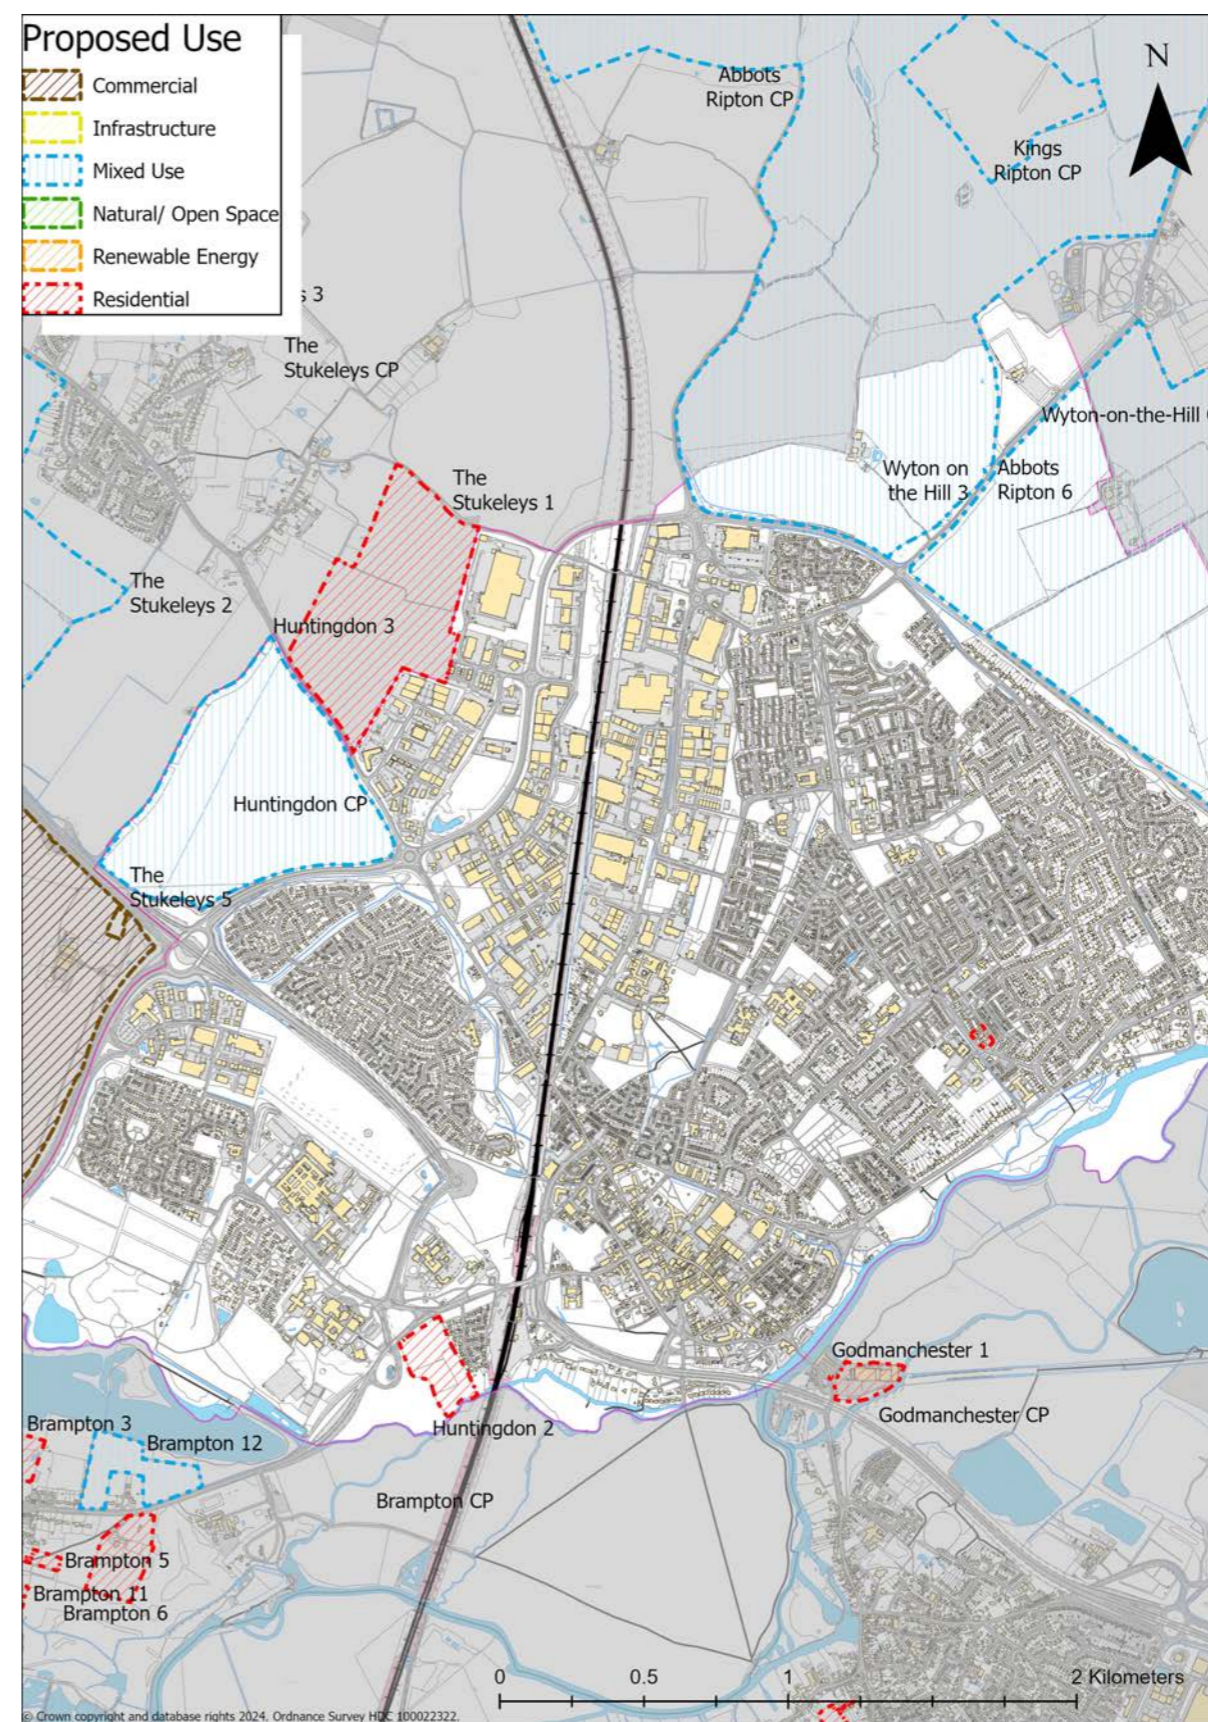

## 4 Huntingdon

4.1 A total of 3 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Huntingdon 1: Amber Centre, 36 Mayfield Road, Huntingdon
- Huntingdon 2: Land West of Scholars Avenue, Huntingdon
- Huntingdon 3: Land South of Ermine Street (adjoining Huntingdon)

4.2 Please note the following sites partially fall within Huntingdon parish:

- Abbots Ripton 6: Sapley Park Garden Village also partially falls within Huntingdon parish as well as Kings Ripton and The Stukeleys parishes, but it has been included under Abbots Ripton as most of the site lies within that parish area so the site assessment has been included within Abbots Ripton parish of the North Central Huntingdonshire LAA document.
- Houghton and Wyton 4: Land off Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton) - note that this site crosses over Huntingdon and Houghton and Wyton parishes and is predominately within Houghton and Wyton parish so the site assessment has been included within Houghton and Wyton parish of the Eastern Huntingdonshire LAA document.
- Houghton and Wyton 5: Land North of 6 Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton)- note that this site crosses over Huntingdon and Houghton and Wyton parishes and is predominately within Houghton and Wyton parish so the site assessment has been included within Houghton and Wyton parish of the Eastern Huntingdonshire LAA document.
- Wyton on the Hill 3: Lodge Farm, North of A141, Huntingdon (Wyton on the Hill) - note that this site crosses over Wyton-on-the-Hill and Huntingdon parishes and is predominately within Wyton-on-the-Hill parish so the site assessment has been included within Wyton-on-the-Hill parish of the Eastern Huntingdonshire LAA document.

4.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

## 4 Huntingdon

### Huntingdon 1: Amber Centre, 36 Mayfield Road, Huntingdon

<b>Site reference</b>	Huntingdon 1	
<b>Site name</b>	Amber Centre, 36 Mayfield Road, Huntingdon	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Amber Centre, 36 Mayfield Road, Huntingdon	Huntingdon	0.35

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	TBC	Available 2024 - 2028 Built out rate TBC

#### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:347
Relevant planning history	None relevant
Land type	Wholly previously developed
Current use of the site	Community uses
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly within flood zone 1, there is some surface water flood risk within the site. The site is wholly classified as urban and is previously developed consisting of an expansive single storey building used for community uses. The site is fairly level and open with very limited boundary markers. The building is set back from the pavement with a strip of greenspace encircling the building adding to the sense of openness. The site is located within a residential area with housing to the north, east and south and Hartford Junior School to the west.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations or heritage designations on site. Access is possible via Mayfield Road where there is an existing access.</p> <p>The site is previously developed land, so its redevelopment will contribute to reuse of previously developed land or regeneration. The site is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single organisation who supports its redevelopment. There are no known legal restrictions impacting the site. The Call for Sites submission details that the previous use for the building ceased 1 year ago and that Cambridgeshire County Council Education have considered the property but have no need for the facility meaning that an alternative use for the site is being explored. It is intended to acquire an allocation status for the site and then sell it to a third party for obtaining planning permission and development. The landowner suggests the land will be available between 2024 and 2028, it is unsure how long the site will take to redevelop.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There is an expansive building to clear, which will if it is only single storey covers a large footprint of the site. The site has an existing access and redevelopment for residential uses would compliment surrounding uses, although there should be careful consideration on how to successfully integrate the site and enhance the character of the area. There is a known risk from surface water flooding within the site, as such sustainable drainage and appropriate landscaping will need to be incorporated into any design proposals.</p>	+
<p><b>Deliverability / developability</b></p>	~

This is a redevelopment opportunity within an existing urban area. There have been several redevelopment schemes within the surrounding area over the last 20 years. It is intended to acquire an allocation status for the site and then sell it to a third party for obtaining planning permission and development. The site promoter states the site will be available between 2024 and 2028, therefore, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly previously developed land formerly within community and educational uses but these have now ceased
- Is within flood zone 1 but there is some surface water flood risk
- In walking distance to town services and facilities, primary education and employment opportunities
- Very good accessibility to public transport options
- Accessible to natural green space
- Located within the built form of Huntingdon, its redevelopment could enhance the character of the immediate area and provide a further minor regeneration opportunity within the Oxmoor Estate
- Can be integrated into the existing place and community

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that could be integrated into the existing place and community and enhance the character of the local area
- Requires careful masterplanning and design to ensure integration and harmonisation with surrounding development
- Provide development on a previously developed site that is less than 1ha in size
- Should ensure that proper investigation is made to assess whether any other community or educational use could be opened on the site, if there is insufficient this may further justify an alternative use on the site

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.35ha  95% net developable area to allow for some sustainable drainage to mitigate against surface water flood risk.  0.35 ha x standard proportion of 95% = <b>0.33 ha</b>	Residential - market and/or affordable homes  Low density of 35 dph anticipated due to the site's location within an existing residential estate within a town.  Low density of 35 dph = 0.33 ha x 35 dph = <b>12 homes</b>	Available 2024 - 2028  Site promoter seeks an allocation status for the site so delivery from 2028  Built out rate 1 year

Updates after the Initial Assessment

--

### Huntingdon 2: Land West of Scholars Avenue, Huntingdon

<b>Site reference</b>	Huntingdon 2
<b>Site name</b>	Land West of Scholars Avenue, Huntingdon

Site address	Parish(es)	Site area (ha)
Land West of Scholars Avenue, Huntingdon	Huntingdon	4.68

#### Promoter's Intentions

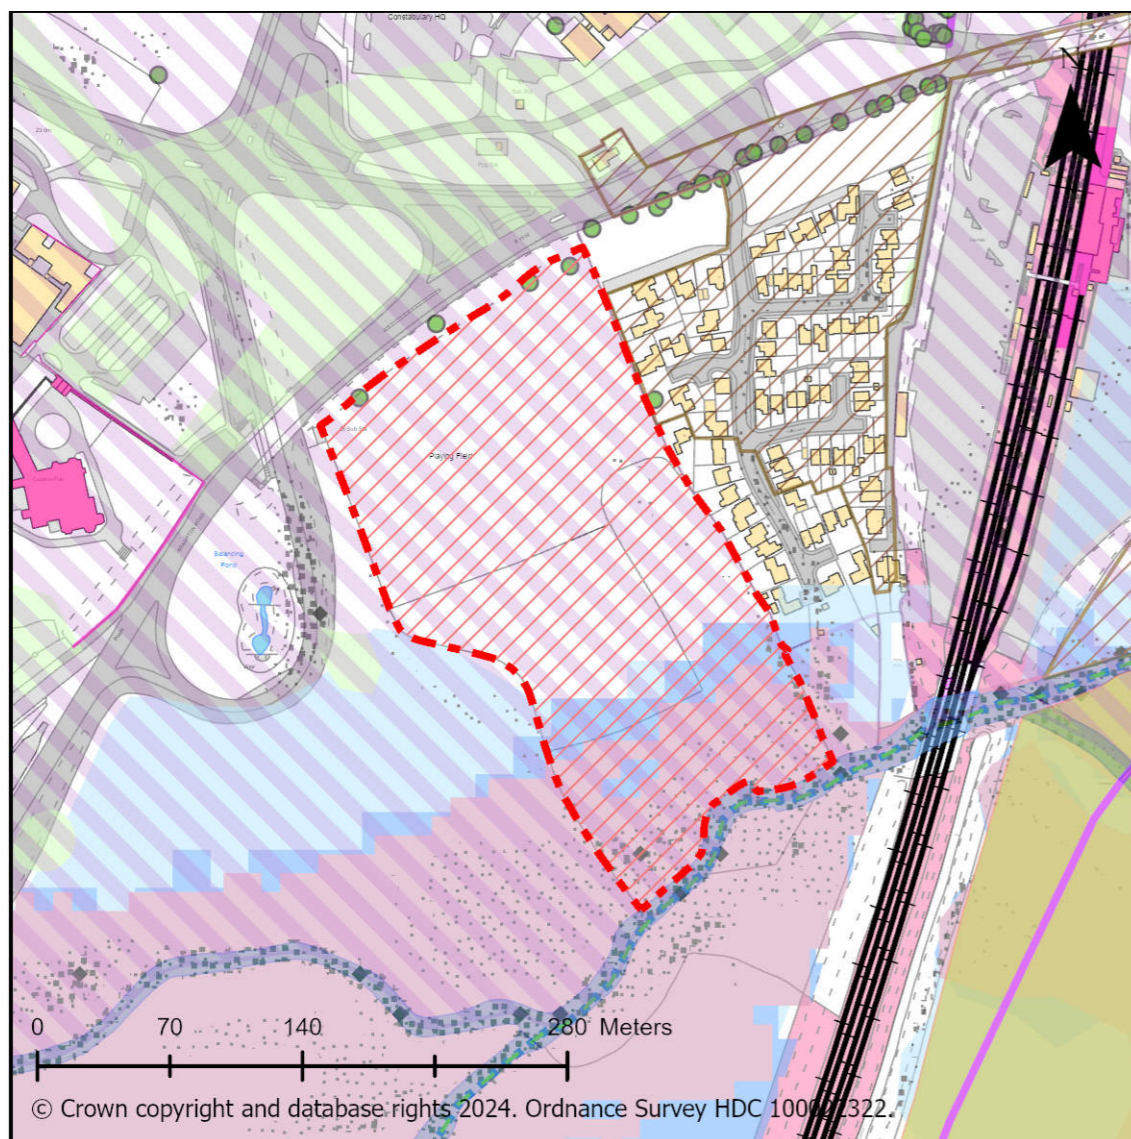

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Space Uses: Natural, green or open space uses	53 homes  6.51 hectares of public open space, including a MUGA and grassed pitch	Available 2024 - 2028  Build out over 2 - 3 years

#### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:344
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>This site was assessed although with a differing boundary in the HELAA 2017 (South of Brampton Road, West of Scholars Avenue, Huntingdon, site reference 080) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Playing fields
Supporting information	<ul style="list-style-type: none"> <li>Concept Plan (drawing number: JOXXX_010) (June 2023)</li> </ul>

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	A small portion of the southern part of the site is within flood zone 3b, but the majority of the site is within flood zone 1	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is mostly within flood zone 1 but the southern third of the site is at higher risk of flooding from Alconbury Brook with some of it falling within flood zone 3b. There is also increased risk from surface water flooding in the southern part of the site. The site is wholly classified as non-agricultural and is currently used as playing fields and open space. The site has a strong boundary to the north where a tree line visually separates the sites from Brampton Road, some of these trees are protected by a Tree Preservation Order. The land level also slopes downwards from the road. The site is enclosed along some of its western edge where it is closest to the A1307. Vegetation also provides a physical separation from the site to properties off Scholars Avenue to the east. The northern half</p>	~
--	---

<p>of the site consists of playing fields so grass levels are kept low and the site's character is very open. The southern half of the site is much more natural in appearance and feel where there is trees and hedgerows throughout the site. The site is fairly level and open with very limited boundary markers. The site is bounded by residential development to the east, by Brampton Road to the north and by open countryside to the south and west.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. To the east immediately adjoining the site is an Air Quality Management Area. There are no nature conservation designations on site, it is however located within a conservation area. Also, to the north west is the grade I listed Hinchingsbrooke House. There is currently no vehicular access to the site, it is accessible on foot via a footpath off Scholars Avenue. The submitted concept plan indicates that a vehicular access may be achieved from Scholars Avenue.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single organisation who supports its redevelopment. There are no known legal restrictions impacting the site. It is intended to acquire planning permission then sell it to a third party for development. The landowner suggests the land will be available between 2024 and 2028 and take 2 - 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. The achievability of vehicular access is unclear at this stage. The submitted concept plan shows that it is proposed to build on where existing playing fields are and provide playing fields and also a MUGA further south. The site is at greater risk from flooding to the south so sustainable drainage will be required.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site is located in a sensitive location in terms of flood risk and landscape impact due to it being located along the gateway into Huntingdon along Brampton Road. Additionally, successful integration with the adjoining residential estate and appropriate vehicular access are key considerations in any future design proposal. It is intended to acquire planning permission and then sell the site to a third party for development. The site promoter states the site will be available between 2024 and 2028 and work is underway on compiling relevant supporting documents including a heritage</p>	~

statement and ecological appraisal. A concept plan has been prepared. As these are still to be undertaken and no planning application has yet been submitted, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land with playing fields
- Is largely within flood zone 1 but the southern part of the site is at higher risk form flooding
- In walking distance to town services and facilities, primary education and employment opportunities
- Very good accessibility to public transport options
- Accessible to natural green space
- Located on the edge of the built form of Huntingdon, adjoining existing residential development
- At risk form increased levels of air, light and noise pollution arising from its proximity to Brampton Road
- Is likely to have a significant adverse impact on the setting of the grade I listed Hinchingsbrooke House due to the prominence of the site in longer distance views

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to likely significant impact on the setting of designated heritage assets
- Would result in the relocation of playing fields to a location at higher risk from flooding
- The achievability of vehicular access to the site is also a key constraint

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Updates after the Initial Assessment**

--

**Huntingdon 3: Land South of Ermine Street (adjoining Huntingdon)**

<b>Site reference</b>	Huntingdon 3
<b>Site name</b>	Land South of Ermine Street (adjoining Huntingdon)

Site address	Parish(es)	Site area (ha)
Land South of Ermine Street (adjoining Huntingdon)	Huntingdon	50.21

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Retail</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Supporting infrastructure</li> </ul> Open Space Uses: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> </ul>	circa 1,000 homes  circa 1,000sqm of retail floorspace  Up to 205sqm community floorspace, 2FE primary school with 3FE core (for future expansion)  21ha of natural, green or open space	Available 2023  Build out over 8 - 10 years

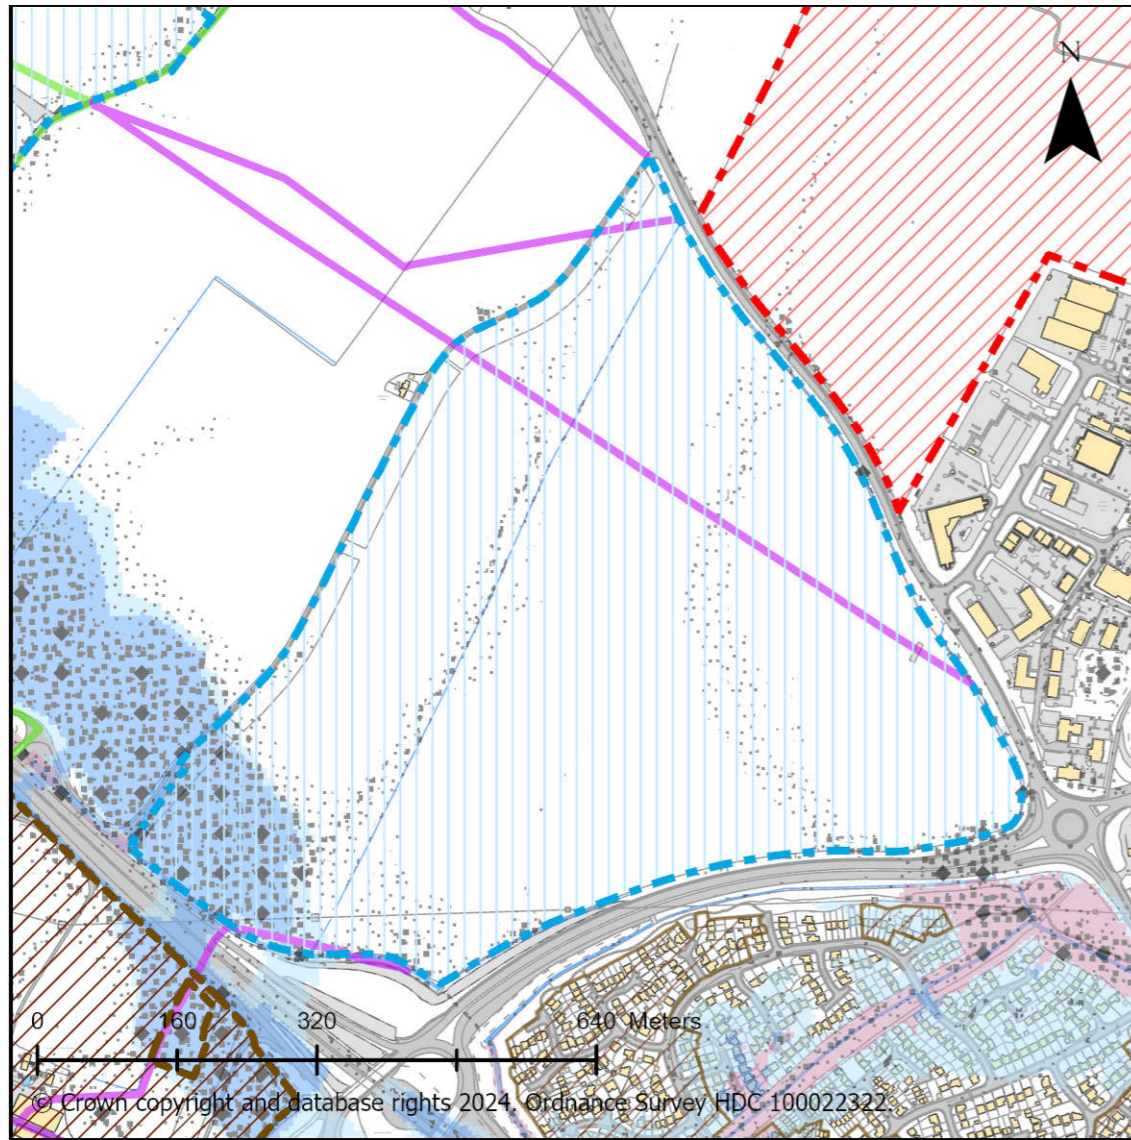

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:236
Relevant planning history	<ul style="list-style-type: none"> <li>The site was assessed in the HELAA 2017 (South of Ermine Street), it was subsequently allocated as part of a larger land area in the Huntingdonshire Local Plan to 2036 under site allocation HU1 (Ermine Street, Huntingdon) for a mixed use development.</li> <li>18/01918/OUT for a mixed use development comprising: up to 1,000 dwellings, Primary School including early years provision, Up to 205sqm community floorspace, Up to 1,000sqm retail floorspace (Class A1), Food and drink uses (Classes</li> </ul>

	A3-A4), Open space and play areas, Landscaping, Pedestrian and cycle links, Associated drainage and engineering works and, highway connections including primary and secondary vehicle access from Ermine Street and the A141 (Outline Planning Application for phased development with all matters reserved except means of access onto the local highway network). This was approved subject to the signing of a S106 at Development Management Committee in November 2023.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Indicative masterplan (drawing number: B.0375_06 REV: ZC) (March 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The land is situated between the A14, Spittals interchange and Ermine Business Park. Currently the land is being used for agricultural purposes. The majority of the land is in zone 1, although a portion on the western edge is in flood zones 2 and 3a. Surface water flood risk is also greater along the western edge of the site, there is also an increased risk running through the centre of the site from Ermine Street to the A141. The site is almost all classified as grade 3 agricultural land apart from its northern most corner closest to Ermine Street which is classified as grade 2. Land levels within the site undulate, with the highest point being the northern most corner of the site along Ermine Street at around 28m. The lowest is along the site's western edge near to the Spittals Interchange. As such</p>	+
---	---

the site slopes from the north down. The topology of the land makes it highly visible in the local landscape and can be seen from several long distance viewpoints. Physically, the site is bordered by the A141 to the southeast, the A1307 to the southwest and Ermine Street to the northeast, with another footpath running along the northern side of Ermine Street. The site slopes from the northeast to the southwest, with the low point sitting close to the A1307. There is established vegetation along its boundaries, with the exception of the northeast boundary with Ermine Street, which is more sparsely vegetated and open to views across the entirety of the site. There are several public rights of way that run through the site, one runs within the site from the eastern corner to the north west, with a further footpath running east-west across the northern corner and another running east-west along the southern corner, crossing the former A14. To the east is the Ermine Business Park, to the south is the A141 and Stukeley Meadows, to the west is the A1307 and to the north is open countryside which separates the site from Great Stukeley.

There is no known contamination on site and no oil or gas pipelines running through the site. To the south is an Air Quality Management Area. There are no nature conservation or heritage designations on site. The indicative masterplan submitted alongside the call for site submission shows that access is proposed off from Ermine Street to the east and off from the A141 to the south.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is not situated in an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.

**Availability**

The site is controlled by a single owner who supports its development and the site has been optioned with an outline planning application submitted on behalf of two developers. The site has been actively promoted through previous local plans. There are no known legal restrictions impacting the site. An outline application (18/01918/OUT) is pending consideration with the Council and was approved subject to the signing of a S106 legal agreement. It is intended to deliver the site via a housebuilder. The site promoter states that the site is available now and that following reserved matters applications, the site could be delivered over 8 to 10 years.

**Achievability**

The site promoter has identified that all access and services are accessible from the site boundary. The indicative masterplan submitted shows that the areas at increased risk of flooding will be where open space and recreational facilities will be located. Additionally, it shows that existing public rights of way will either be retained or diverted. Also, the indicative masterplan shows that access is proposed off from Ermine Street to the east and off from the A141 to the south. These proposed accesses have been subject to a road safety audit with the County Council who has considered the design in principle and consider

+
+

<p>that the arrangements are suitably safe subject to further detailed design work. Development at this scale will generate a significant level of additional traffic which has been assessed as part of the outline application. A Transport Assessment has been undertaken and indicates that sufficient capacity can be created within the network through intervention to support the development. Furthermore, the Combined Authority are working on a realigned A141 which will cut through part of the site. Technical specialists responsible for the delivery of the realigned A141 have provided plans of a corridor and while further detailed work on the road scheme will be required, the outline application has safeguarded land for a realigned A141 while also being able to accommodate the proposed development. While detailed matters will largely be addressed in subsequent reserved matters applications, constraints have been assessed and technical studies undertaken or conditioned as appropriate, therefore the development is achievable.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear. The site is already an allocation in the Huntingdonshire Local Plan to 2036 and it has subsequently been granted outline permission for a mixed use development consisting of 1,000 homes subject to the signing of a S106 legal agreement. As this has yet to be signed and permissioned formally granted and considering the scale of development it is likely that several reserved matters will come forward for the site over several years. Considering this, the site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land</li> <li>• Is largely within flood zone 1 but the western edge is at some higher risk from flooding</li> <li>• Limited accessibility to services and facilities but is of a scale that can provide its own services and facilities as well as primary education</li> <li>• Good accessibility to public transport options</li> <li>• Very good accessibility to employment opportunities</li> <li>• Accessible to natural green space but is of a scale that could provide a substantial amount of greenspace within the site</li> <li>• Located on the north-western edge of the built form of Huntingdon separated by the A141, this may give rise to increased levels of air, light and noise pollution</li> </ul>
--

<ul style="list-style-type: none"> <li>• Is of a scale to be comprehensively masterplanned to provide a sustainable mix of uses, housing types, sizes and tenures alongside landscaping to mitigate its landscape impact</li> <li>• Public rights of way will either need to be diverted or integrated within the development</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is appropriate for built development that can be comprehensively masterplanned that supports sustainable placemaking principles</li> <li>• The outline planning application has been able to safeguard land for a realigned A141 while also being able to accommodate the proposed development</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>The gross site area of 50.21ha</p> <p>52.2% net developable area allowed following the exclusion of land as proposed in the submitted masterplan for:</p> <ul style="list-style-type: none"> <li>• 3ha for primary school</li> <li>• 21ha for green infrastructure, sustainable drainage and accommodation of flood zones</li> <li>• Safeguarded land for the A141 realigned route</li> </ul> <p>50.21ha x 52.2% = <b>25.21 ha</b></p>	<p>The net developable area is 25.21ha.</p> <p><b>1ha is deducted for a local centre</b> (this includes retail and leisure uses), this leaves 24.21ha.</p> <p><b>2.5ha is deducted for additional commercial and employment uses</b> representing 10% of the outstanding site area.</p> <p><b>22.71ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments.</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 0.68ha x 145dph = 99 homes</li> <li>• 7% of land at high density 85dph. 1.6ha x 85dph = 135 homes</li> </ul>	<p>Available now</p> <p>Build out over 8 - 10 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<ul style="list-style-type: none"> <li>• 25% of land at moderate density 50dph. 5.7ha x 50dph = 284 homes</li> <li>• 55% of land at low density 35dph. 12.5ha x 35dph = 437 homes</li> <li>• 10% of land at very low density 25dph. 2.3ha x 10dph = 57 homes</li> </ul> <p><b>1,012 total homes</b></p>	

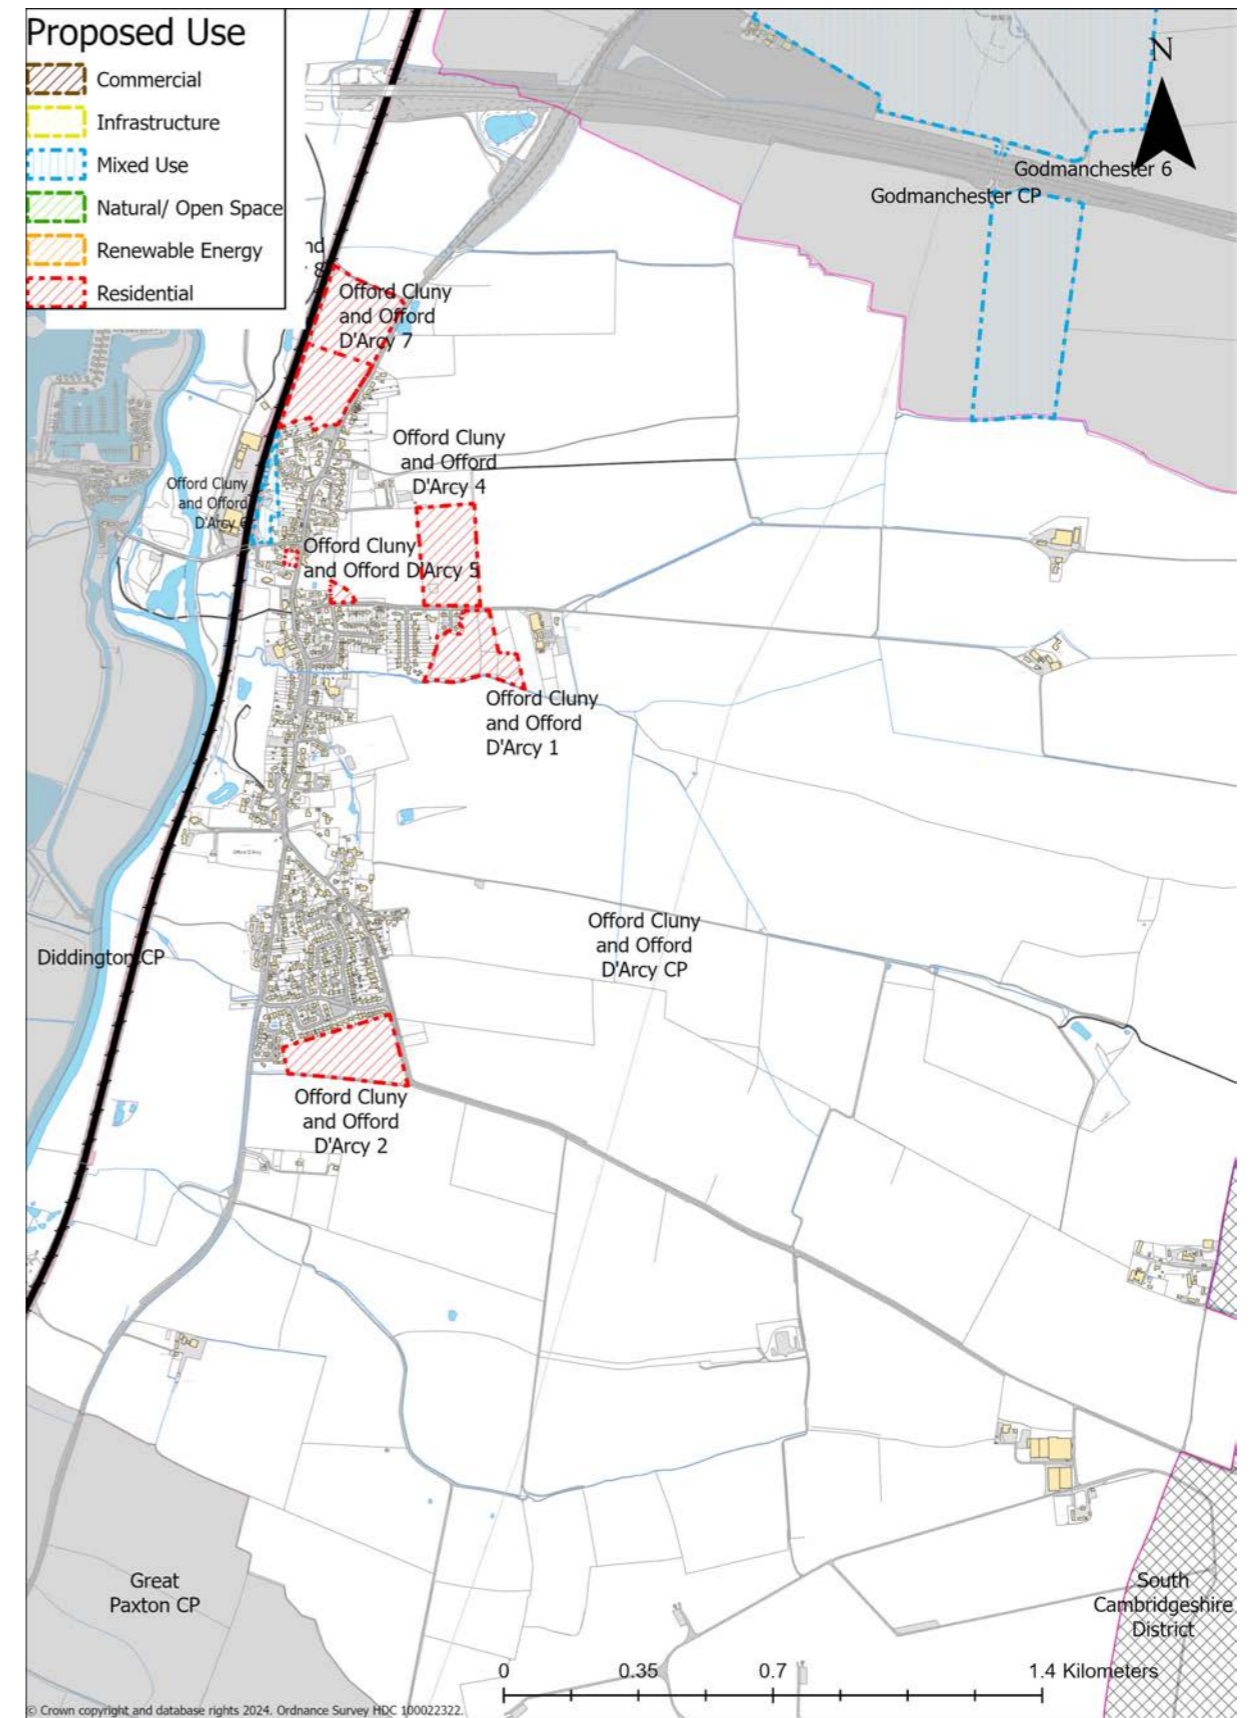

Updates after the Initial Assessment

Land type	Wholly greenfield land
Current use of the site	Equestrian paddock land

Supporting information	Access Appraisal Concept Plan Drainage Strategy Technical Note Ecological Impact Assessment Facilities Plan Site Location Plan Site Promotion Document
------------------------	--

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	0.15ha in flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The majority of the site is in flood zone 1 with associated with drainage on the southern boundary, risk of flooding from surface water is present across the site. The site is wholly grade 2 agricultural land. The land is flat in keeping with the surrounding area, with mature tree and hedgerow bounding the northern edge and continuing more sparsely to the south and east. To the north is open countryside. The site is bounded to the west by a small residential site (the Glebe) and equestrian related units to the east. The landscape impact of development on the site would be limited due to the existing trees and hedges on the boundaries which would need to be predominantly retained.

~

A narrow single track road provides access to the site. The site is removed from the main residential development of the settlement and more related to the countryside.

There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.

**Availability**

The site owned by a single individual / company and development supported by the landowners. The land is optioned. There are no known legal restrictions. The land is anticipated to be available from 2024 - 2028, the site would be delivered by house builder with an anticipated build out rate of 1 to 2 years.

+

**Achievability**

Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. Site access is via a narrow single track which is currently not conducive to residential development and would require remediation. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. There are no other known constraints.

The evidence submitted on behalf of the landowner suggest safe access can be provided to the site with low traffic generation expected. 85.68% Biodiversity net gain is proposed including the retention addition of hedgerow and bird and bat boxes. Residential development is proposed to the north of the site with the southern half retained and greenfield with a circular walk. A drainage strategy has also been submitted.

~

**Deliverability / developability**

There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Safe access would be required to the site during and post construction. The proposed development is contrary to current adopted planning policy so allocation status would be required. The site is categorised as developable.

~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is constrained by fluvial flood risk on 5% of the site, the greatest restriction is surface water flood risk which affects the southern half of the site.
- The site is grade 2 agricultural land, is wholly greenfield and in use as an equestrian paddock.
- Landscape impact would be minimal if trees and hedgerow are retained and no heritage designations are affected
- The site is close to local services and facilities and small scale employment opportunities.
- Its relationship with the countryside and the nearby conservation area could pose challenges to the comprehensive integration of the site with the village and nearby residential development.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place and community
- Would need to provide safe and suitable means of access by motorised vehicle and active travel.
- Would need to address any impact on the conservation area, countryside and trees and hedgerows
- Would need to address fluvial and surface water flood risk which could potentially limit development.

Page 1054 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 2.94ha 50% net developable area to mitigate against surface water flood risk in the south of the site. 2.947ha x 50% = <b>1.47ha</b>	The net developable area is 1.47ha Residential - market and/or affordable homes and custom and self-build housing. Very low density of 25 dph anticipated due to the edge of settlement location and location within smaller sustainable settlement.	Available post 2028 Build out 1-2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Capacity = 1.47ha x 25 dph = <b>37 homes</b>	

**Updates after the Initial Assessment**

**Offord Cluny and Offord D'Arcy 2: Land to the West of Graveley Road, Offord D'Arcy**

<b>Site reference</b>	Offord Cluny and Offord D'Arcy 2	
<b>Site name</b>	Land to the west of Graveley Road, Offord D'Arcy	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land to the west of Graveley Road, Offord D'Arcy	Offord Cluny and Offord D'Arcy	Approximately 4.05ha

**Promoter's Intentions**

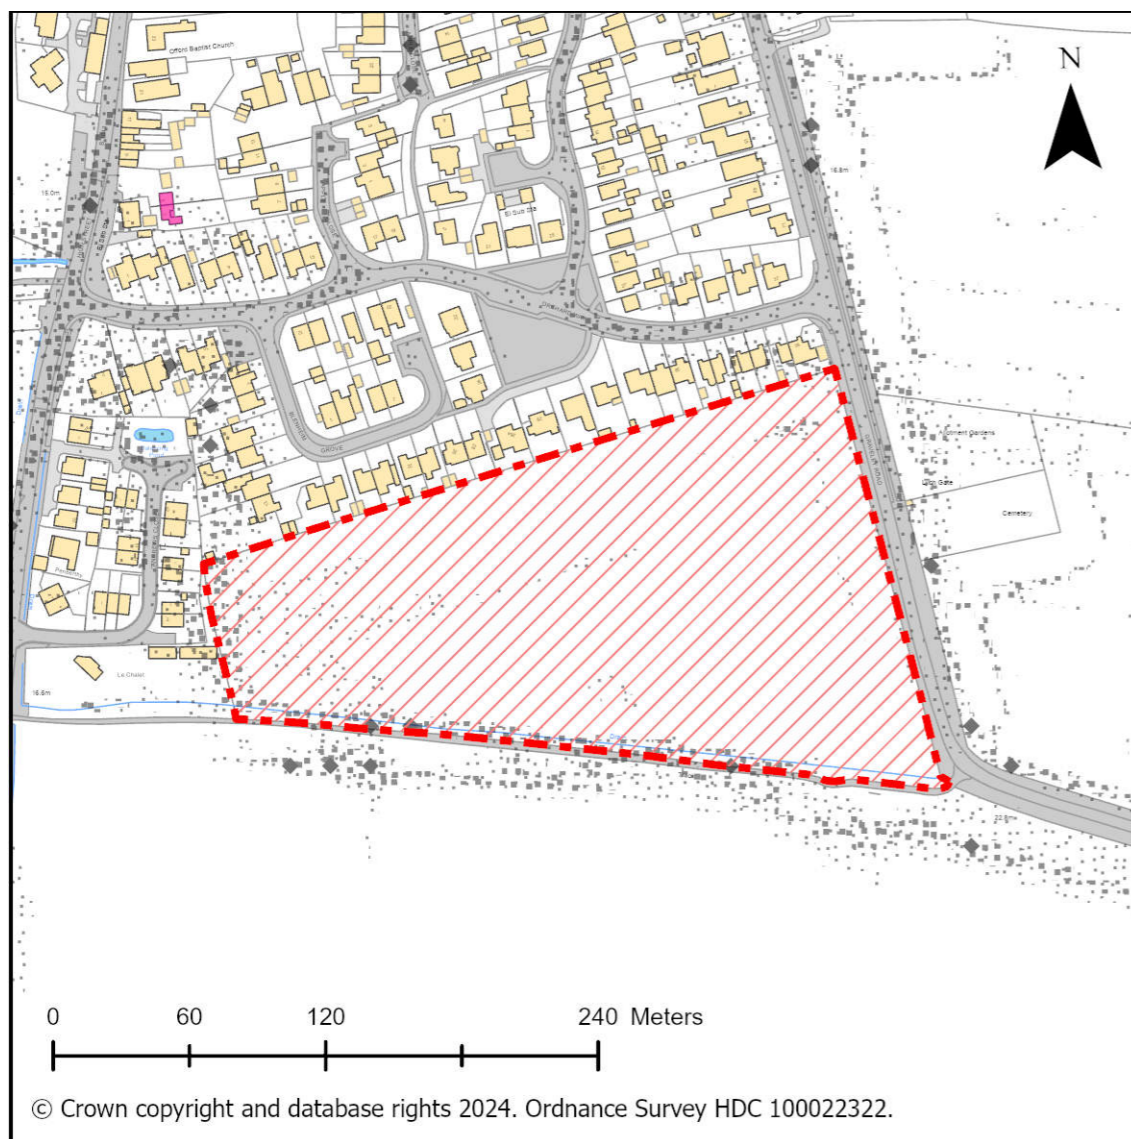

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Spaces: Natural, green or open spaces for a variety of uses Land to safeguard against flooding	The site can accommodate up to 80 new homes  Natural, green or open spaces circa 1.34ha  Land to safeguard against flooding circa 0.13ha	Available 2023  Build out over 5 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:174
Relevant planning history	HELAA (December 2017): West of Graveley Road, South of Orchard Way, Offord D'Arcy (006)
Land type	Wholly Greenfield Land
Current use of the site	Agricultural land
Supporting information	Location Plan  Vision Document

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is in Flood zone 1. Surface water flood risk is present along the east, west and southern boundary. Approximately half of the site to the west is grade 3 agricultural land with the remaining land grade 2.</p> <p>The land slopes upwards northwest to south east, the site is enclosed on three sides by mature hedgerow and trees, with the northern boundary defined by residential back gardens with a mixture of fencing and vegetation meaning that landscape impact would be limited, existing trees and hedges on the boundaries would need to be predominantly retained. Access to the site is proposed off Graveley Road.</p>	+
--	---

<p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership. A promotion agreement has been agreed with land agents and development is supported by the landowner. There are no known legal restrictions. The land is anticipated to be available from 2023, planning permission would be acquired before the land is sold to a third party for development with build out taking approximately 5 years,</p>	+
<p><b>Achievability</b></p> <p>The site proposal notes that gas supply is located in the housing estate to the north investigation as to the capacity and upgrade works required will need to be carried out. Mains Water Supply shows a 4 inch water main (reducing to a 3 inch) running along the track on the south edge of the site, upgrading the main on the south of the site may be required. Electricity supply are noted as being accessible from site boundary and digital and telecommunications infrastructure from the housing estate to the north. Information indicates a High Pressure main running within 50m of the southeast corner of the site, requiring careful consideration to the method of construction. Site access is proposed from Graveley Road which would require a transport assessment due to a sweeping bend south of the site which could cause safety concerns for those accessing or exiting the site. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site.</p> <p>The site promoter has provided a vision document with an indicative masterplan showing access and layout, and noted that a transport report has been undertaken. Equipped/natural play areas are proposed alongside open spaces.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Safe access would be required to the site during and post construction. The proposed development is contrary to current adopted planning policy so allocation status would be required. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk and surface water flood risk is minimal.
- The site is grade 2 and 3 agricultural land and is wholly greenfield.
- Landscape impact would be minimal if trees and hedgerow are retained and no heritage designations are affected
- The site is close to some local services and facilities and small scale employment opportunities.
- The design, layout of the site and elevations would require consideration of chalet bungalows to the north to avoid overbearing.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place and community
- Would need to provide safe and suitable means of access by motorised vehicle and active travel.
- Would need to address any impact on residential development to the north and retain trees and hedgerows
- The site would require assessment to ensure construction methods do not impact the high pressure main within the southeast corner of the site.

Page 1057 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 4.05ha  80% net developable area to allow for retention of trees and hedgerow and open spaces.  4.05ha x 80% = <b>3.24ha</b>	The net developable area is 3.24ha  Residential - Market and/or affordable homes  Very low density of 25 dph to reflect the edge of settlement location, surrounding housing densities and location within a smaller sustainable settlement.	Available post 2028  Build out 5-6 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Capacity = 3.24ha x 25 dph = <b>81 homes</b>

## 5 Offord Cluny and Offord D'Arcy

Huntingdonshire District Council | Central Huntingdonshire Land Availability Assessment

### Offord Cluny and Offord D'Arcy 3: Land adjacent to Manor Court, Offord Cluny

<b>Site reference</b>	Offord Cluny and Offord D'Arcy 3
<b>Site name</b>	Land adjacent to Manor Court, Offord Cluny

Site address	Parish(es)	Site area (ha)
Land adjacent to Manor Court, New Road, Offord Cluny	Offord Cluny and Offord D'Arcy	0.24ha

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Custom and self-build housing	5 custom and self-build plots	Available 2024-2028 Build out 1 year

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 199
Relevant planning history	None
Land type	Garden Land
Current use of the site	Garden Land
Supporting information	Location Plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The site is not constrained by fluvial or surface water flood risk. The site is garden land and grade 3 agricultural land. The site is flat and covered with established trees, which also bound the southern boundary. The site falls within a conservation area and forms part of the garden land of Manor House, (High Street) a Grade II listed building. Removal of established trees and establishment of residential properties would fundamentally impact the character and setting of the listed building and the conservation area, whilst also significantly reducing the biodiversity and ecological value of the site. Site access would be required from New Road.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known nature conservation assets are located within the site, there are no tree preservation orders affecting it, but the site being within a conservation area means that the trees within the site are afforded a level of protection of which their removal would fundamentally impact the conservation area and street scene.. The site is wholly garden land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family/ individual control, development supported by all landowners. There are no known legal restrictions. The site promoter states that land is anticipated to be available from 2024-208, delivered by land owner and build out to take 1 year.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. Site access would be required from New Road. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. There are no other known constraints.</p> <p>The felling of established trees would be required to develop the site, which would impact biodiversity.</p> <p>The site promoter seeks 5 custom and self build plots but has not provided indication on the scale or nature of these.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. There are substantial constraints with no apparent prospect of them being overcome including impact on</p>	-

biodiversity and the character and setting of a listed building and conservation area. The proposed development is contrary to current adopted policy so allocation status would be necessary to support it. The site is categorised as not developable.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No, due to the fundamental impact on the character and setting of the listed building and the conservation area, whilst also significantly reducing the biodiversity and ecological value of the site.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential:	50 homes	Available 2024-2028
Market and/or affordable housing	40 plots	Build out over 2 years
Custom and self-build		

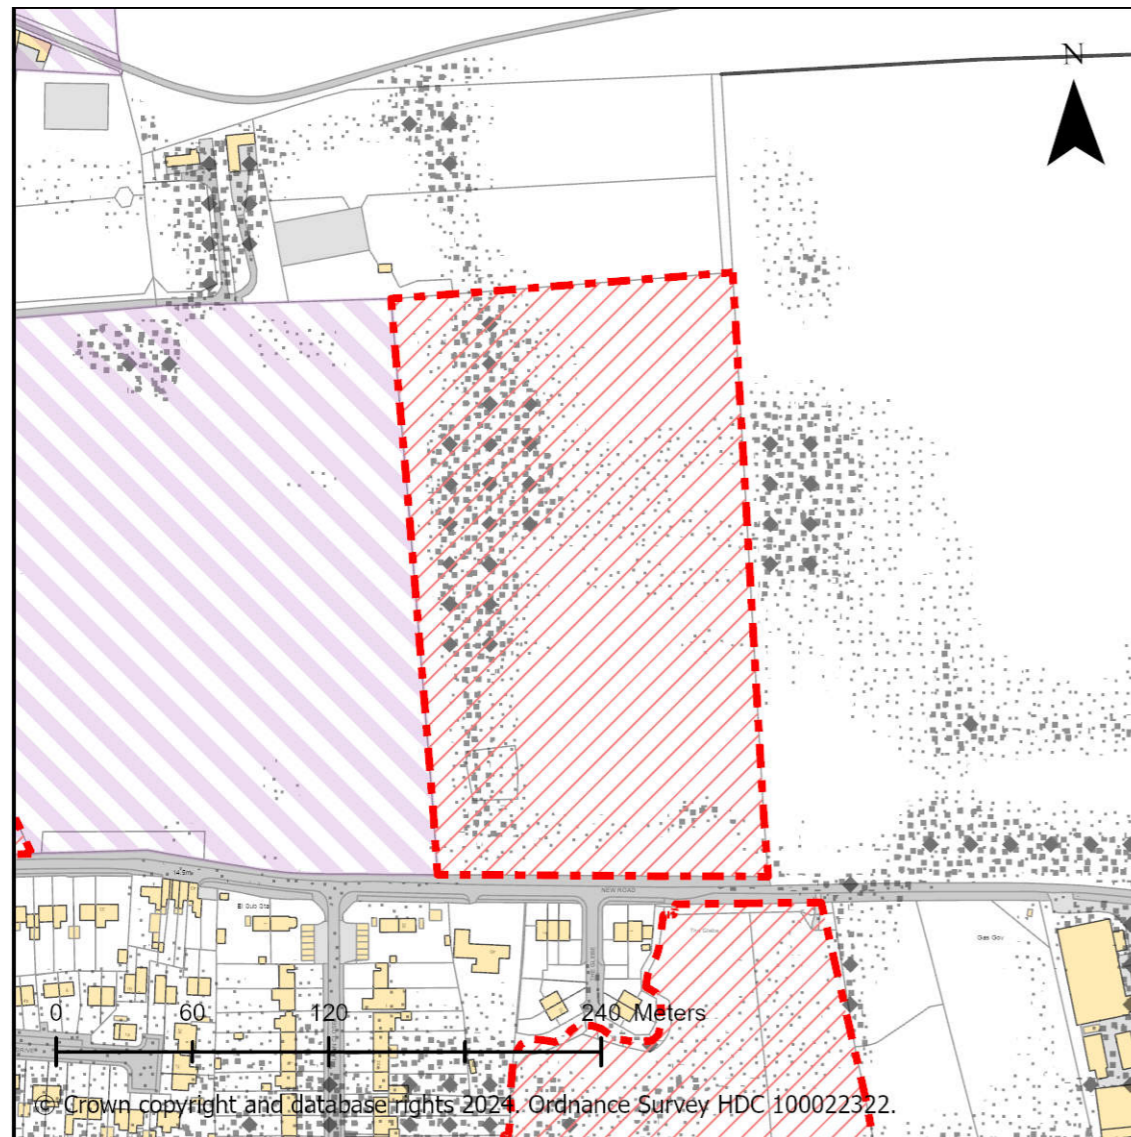

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:135
Relevant planning history	Application number: 16/00962/OUT Proposed development: Erection of single dwelling, garage and associated access Outcome: Refused and dismissed at appeal HELAA (December 2017): Opposite The Glebe, New Road, Offord Cluny (082). Comprises part of the submitted site.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan.

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, surface water flood risk is present across the site. The site is wholly greenfield grade 2 agricultural land. The site is flat and well screened from New Road by established trees and hedgerow which continues along the eastern and western boundaries. The western boundary of the site is immediately adjacent to the conservation area and the setting of Manor House - a Grade II listed building. The site is removed from the main residential development of the settlement and more related to the countryside. Impact on the setting of the listed building and removal of established trees may significantly impact the character, setting and biodiversity and ecological value of the site. Site access would be required from New Road.</p>	~
---	---

<p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known nature conservation assets are located within the site, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>Single family control and development is supported by all landowners. There are no known legal restrictions. The site promoter states that land is anticipated to be available from 2024-2028, planning permission would be acquired before selling the land to a third party for development, build out is estimated to take 2 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. There are no other known constraints. Site access would be required from New Road. The landowner notes that they own the frontage for the whole of New Road which offers the possible potential widening of the road if planning permission was granted.</p> <p>The site promoter seeks market and/or affordable housing and custom and self-build but has not provided indication on the scale or nature of these.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Impact on biodiversity, rural setting of the settlement and the setting of a listed building are considered a significant constraint. The proposed development is contrary to current adopted policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk and surface water flood risk is minimal.</li> </ul>
---

- The site is grade 2 agricultural land and is wholly greenfield.
  - Landscape impact would be significant especially in the context of the scale of the site and is disproportionate when compared to immediate area.
  - The proposed development could significantly impact on the setting of the Grade II listed building immediately west of the site.
  - The site is close to local services and facilities and small scale employment opportunities.
  - Transport and safety impacts due to increased population and narrow road
- In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as it:
- Would have significant heritage and landscape impact
  - Is removed from the main residential development of the settlement and more related to the countryside.
  - Creates disproportionate development out of keeping with the surrounding area
  - Could create significant transport impact due to its location.

	Site submission including concept plan.
--	---

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	36% of the land is flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is constrained by fluvial flood risk 3b, 3a and 2 in the southern half of the site, the narrow triangular portion of the site in the north is flood zone 1, but provides little practical space for development. Surface water flood risk is present on the majority site. The site is part previously developed and part greenfield land with some trees and classified as grade 3 and 4 agricultural land. The site is surrounded to the east and south by a conservation area and residential properties and bounded by railway line to the west. Access to the site could be via the narrow Aspin's Lane, access from the south would be from Station Lane in</p>	~
--	---

<p>very close proximity to the railway crossing causing potential safety issues. The proximity to the railway line could present significant noise, particulate, light and vibrational pollution issues to residents and would require remediation.</p> <p>Overhead electricity lines are present on the west as a result of the railway line and are also present to the east. There are no known gas or oil pipelines and buffer zones within the site, however use of the site as historic railway sidings yard and storage purposes could present contamination issues. No known nature conservation assets are located within the site, there are no tree preservation orders affecting it. The site is part previously developed land and as such could offer some opportunity to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is owned by a single individual/company and is in individual control, the development is supported by the landowner. There are no known legal restrictions. The site is available 2024-2028 and would be delivered directly by the land owner, build out is estimated to be 1-2 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure.</p> <p>No gas or oil pipelines and buffer zones. Overhead electricity lines are present on the west as a result of the railway line and are present to the east. There are significant constraints to development which would require mitigation including safe access, flooding, noise, particulate and vibrational issues as a result of the railway and potential contamination. Although there is a current access from Station Lane significant traffic here could cause a safety issue. Significant constraints if overcome could present viability implications for the site rendering it undeliverable.</p> <p>The site promoter notes that further detailed investigations in respect of contamination, noise, ecology and highways would be required. Regarding proximity to The Offords conservation area it is proposed that the impact could be managed through the design and form of development. They also propose a full flood risk assessment. A concept masterplan proposes residential development to the north to link in with Aspin's Lane, employment to the south alongside an attenuation pond.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. There are a number of significant constraints to overcome. The site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- There is significant fluvial and surface water flood risk on the site which will be exacerbated by the impact of climate change.
- The site presents the opportunity to regenerate previously developed land and relates well to existing development with no landscape impact.
- There is a distinct possibility of on-site contamination
- The site is close to local services and facilities and small scale employment opportunities.
- Significant challenges include access, safety, proximity to a railway crossing, mitigation from noise, air, light and vibrational impact from the railway line and contamination.
- Unusual shape of site may limit development potential.

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for development with significant constraints which if overcome could present viability implications for the site rendering it undeliverable.
- Presents significant challenges regarding noise, air and light pollution and vibrational impacts from the railway line, overhead electricity lines and land contamination.
- May present safety issues regarding access and exit to the site from Station Lane especially and due to its proximity to a railway crossing.
- Access via Asplin's name is a considerable constraint due to the narrow nature of the lane
- Has significant flood risk.
- Would need to demonstrate that fluvial and surface water flood risk could be mitigated

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken due to significant constraints including access, flooding, safety, pollution, contamination and overhead powerlines.	N/A	N/A

**Updates after the Initial Assessment**

Supporting information	Location plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present but minimal. The site is wholly greenfield grade 3 agricultural land. The land is relatively flat and is open countryside in keeping with the wider area. Impact on the landscape would require mitigation providing a transition to the countryside. The site is bounded to the west by the railway line which can be clearly seen and across the road to the east sits a ribbon of residential properties. South of the site is residential development which stretches towards the railway line to the west and edged by trees and hedgerow. The eastern edge is edged by low hedgerow with views clearly seen into the site. The site is outside the conservation area which sits to the south. A small portion of the site to the west is part of the Great Ouse Green Infrastructure Strategic area and also a Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley), however this is separated by the railway line.</p> <p>Access to the site could be via the High Street. Proximity to the railway line could present noise, particulate, light and vibrational pollution issues to residents and would require remediation.</p> <p>Overhead electricity lines are present to the west as a result of the railway line. There are no known gas or oil pipelines and buffer zones within the site. No known nature conservation assets are located within the site, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunity for regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.</p>	+
<p><b>Availability</b></p> <p>The site is owned by a family and family control, the development is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, it is anticipated that planning permission would be acquired before the land is sold to a third party for development. Build out is expected to take 2 to 3 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. The site is accessible from the B1043.</p> <p>No gas or oil pipelines and buffer zones cross the site. Overhead electricity lines are present to the west as a result of the railway line and would require consideration in the design of development. Mitigation would be required to address noise, light, particulate and vibrational issues as a result of the railway.</p>	~

Page 1069 of 3488

<p>The site promoter provides no further information on this site specifically, but a larger site including this land has been put forward as <i>Offord D'Arcy and Offord Cluny 8</i> which provides additional information on site mitigation. It is however unclear if the same approach would be taken here.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. The site would need to address issues relating to the railway line and landscape impact. The proposed development is contrary to current adopted policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk and surface water flood risk is minimal.</li> <li>• The site is grade 3 agricultural land and is wholly greenfield.</li> <li>• The site has a strong relationship to the countryside, but also a close relationship with the residential element of the village.</li> <li>• Landscape impact would be required to transition to the countryside</li> <li>• The site is close to some local services and facilities and small scale employment opportunities.</li> <li>• The transport impacts on the village due to increased population would require assessment to ensure safety</li> <li>• The western edge abuts the East Coast Mainline subjecting this area to light, noise, air and vibrational pollution.</li> <li>• The site adjoins to a conservation area and is in proximity to listed buildings which could be impacted by the development.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The site is of a size that could contribute to the housing needs of the district.</li> <li>• Would require mitigation against noise, air and light pollution from the railway line and overhead electricity lines.</li> <li>• Would require sensitive masterplanning to ensure development is complementary to the conservation area and setting of nearby listed buildings.</li> </ul>
---

- Would require lower density development to reflect the character of the existing village.
- Would require assessment of transport and safety impacts due to increased population.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 2.80ha</p> <p>65% net developable area to allow for strategic landscaping and mitigation from the railway line.</p> <p>2.80 ha x 65% = <b>1.82ha</b></p>	<p>The net developable area is 1.82ha</p> <p>Residential - Market and/or affordable homes</p> <p>Very low density of 25 dph to reflect the edge of settlement location, surrounding housing densities and location within a smaller sustainable settlement.</p> <p>Capacity = 1.82ha x 25 dph = <b>46 homes</b></p>	<p>Available post 2028</p> <p>Build out 2-3 years</p>

Page 1070 of 3488

**Updates after the Initial Assessment**

--

**Offord Cluny and Offord D'Arcy 8: Land West of High Street and North of Dunstall Close (larger site), Offord Cluny**

<b>Site reference</b>	Offord Cluny and Offord D'Arcy 8
<b>Site name</b>	Land west of High Street and North of Dunstall Close (larger site) Offord Cluny

Site address	Parish(es)	Site area (ha)
Land west of High Street and North of Dunstall Close (larger site) Offord Cluny	Offord Cluny and Offord D'Arcy	6.82ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable homes Open Space: Biodiversity net gain/open space/surface water attenuation Other: Potential noise mitigation	130 homes  1ha Biodiversity net gain/open space/surface water attenuation  0.50ha Potential noise mitigation	Available 2024-2028  Build out over 3 years

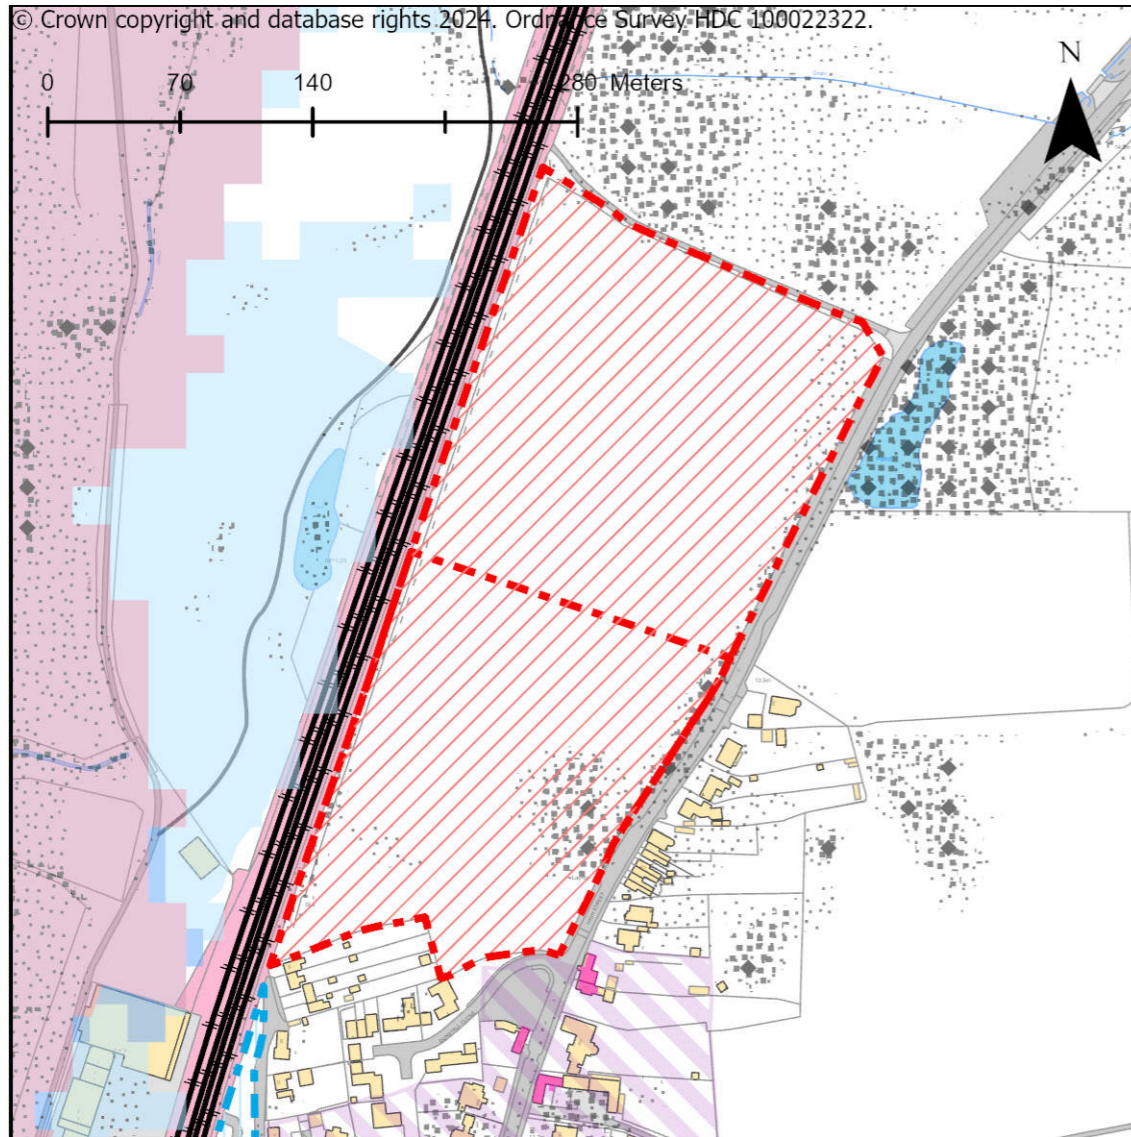

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 326
Relevant planning history	None
Land type	Wholly Greenfield Land
Current use of the site	Agricultural Land
Supporting information	Location Plan

	Site summary document
--	-----------------------

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present but minimal. The site is wholly greenfield grade 3 agricultural land. The land is relatively flat and is open countryside in keeping with the wider area. Impact on the landscape would require mitigation providing a transition to the countryside. The site is bounded to the west by the railway line which can be clearly seen and across the road to the south east sits a ribbon of residential properties. South of the site is residential development which stretches towards the railway line to the west and edged by trees and hedgerow. The eastern edge is edged by low hedgerow with views clearly seen into the site. The site is outside the conservation area which sits to the south. A small portion of the site to the west is part of</p>	~
--	---

<p>the Great Ouse Green Infrastructure Strategic area and also a Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley), however this is separated by the railway line. The site is of a size that would constitute disproportionate development in comparison to the size of the existing settlement.</p> <p>Access to the site could be via the High Street. Proximity to the railway line could present noise, particulate, light and vibrational pollution issues to residents and would require remediation.</p> <p>Overhead electricity lines are present to the west as a result of the railway line. There are no known gas or oil pipelines and buffer zones within the site. No known nature conservation assets are located within the site, there are no tree preservation orders affecting it. The site is wholly greenfield land and as such offers no opportunity to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is owned by a family and family control, the development is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, build out is expected to take 3 years.</p> <p>The site promoter provides no further information on how the site would be delivered and notes this as 'unknown' however site <i>Offord D'Arcy and Offord Cluny 7</i> (which constitutes a smaller portion of this site) does provide some information on delivery. It is however unclear if the same approach would be taken here.</p>	~
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. The site is accessible from the B1043.</p> <p>No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. Mitigation would be required to address particulate and vibrational issues as a result of the railway. The site promoter notes that there have been no historic contaminative uses on the site, concluding that the likelihood of ground contamination is low.</p> <p>The site promoter provides further information noting the need for strategic landscaping, surface water drainage, 10% biodiversity net gain and sensitive design and technology to mitigate any noise arising from the railway, for example triple glazing and non-opening windows in susceptible elevations.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. The site would need to address issues relating to the railway line and landscape impact. The proposed development is contrary to current adopted policy so allocation status would be necessary to support it. The site is categorised as developable. Delivery of the site is noted as unknown at this moment in time, meaning there may be some uncertainty over its deliverability.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk and surface water flood risk is minimal.
- The site is grade 3 agricultural land and is wholly greenfield.
- The site in its entirety has a strong relationship to the countryside due to its scale. The southern half relates more closely to residential element of the village.
- Landscape impact would be required to transition to the countryside.
- The site could provide a wide range of housing types and tenures.
- The site is close to some local services and facilities and small scale employment opportunities.
- The transport impacts on the village due to increased population would require assessment to ensure safety
- The western edge abuts the East Coast Mainline subjecting this area to light, noise, air and vibrational pollution.
- The site adjoins to a conservation area and is in proximity to listed buildings which could be impacted by the development.
- The scale of development proposed would be disproportionate compared to the existing settlement

In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as it:

- Would be disproportionate in size compared to the existing settlement increasing the size of the village by over a fifth.
- Would have significant transport impacts on the village
- Would have significant landscape impact

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to landscape, scale and transport impacts.	N/A	N/A

	Wyton on the Hill 5: Land North of Houghton Road (larger site), St Ives (Wyton on the Hill)	194

## Document Information

**Title:** Eastern Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Eastern Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 Eastern Huntingdonshire Area

**1.1** To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

**1.2** This document sets out the site assessments for the sites located within 'Eastern Huntingdonshire'. This grouping consists of Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; and St Ives wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Bluntisham - 5 sites
- Colne - 7 sites
- Earith - 2 sites
- Fenstanton - 4 sites
- Hemingford Grey - 13 sites
- Hilton - 4 sites
- Holywell-cum-Needingworth - 7 sites
- Houghton and Wyton - 5 sites
- St Ives - 7 sites
- Wyton on the Hill - 5 sites

**Map 1.1 Huntingdonshire site assessment groupings**

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal to obtain a complete picture of the Council's initial consideration of the site.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites.

#### 3.4 Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next 5 years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or was occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape or been revegetated
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

- **CfS** - Call for Sites
- **Dph** - Dwelling per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.5 The assessment of each site consists of several sections, each is detailed below:

**Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.

**Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.

**Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.

**Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.

**Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a local green space, having a nature conservation designation, within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.

**Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.

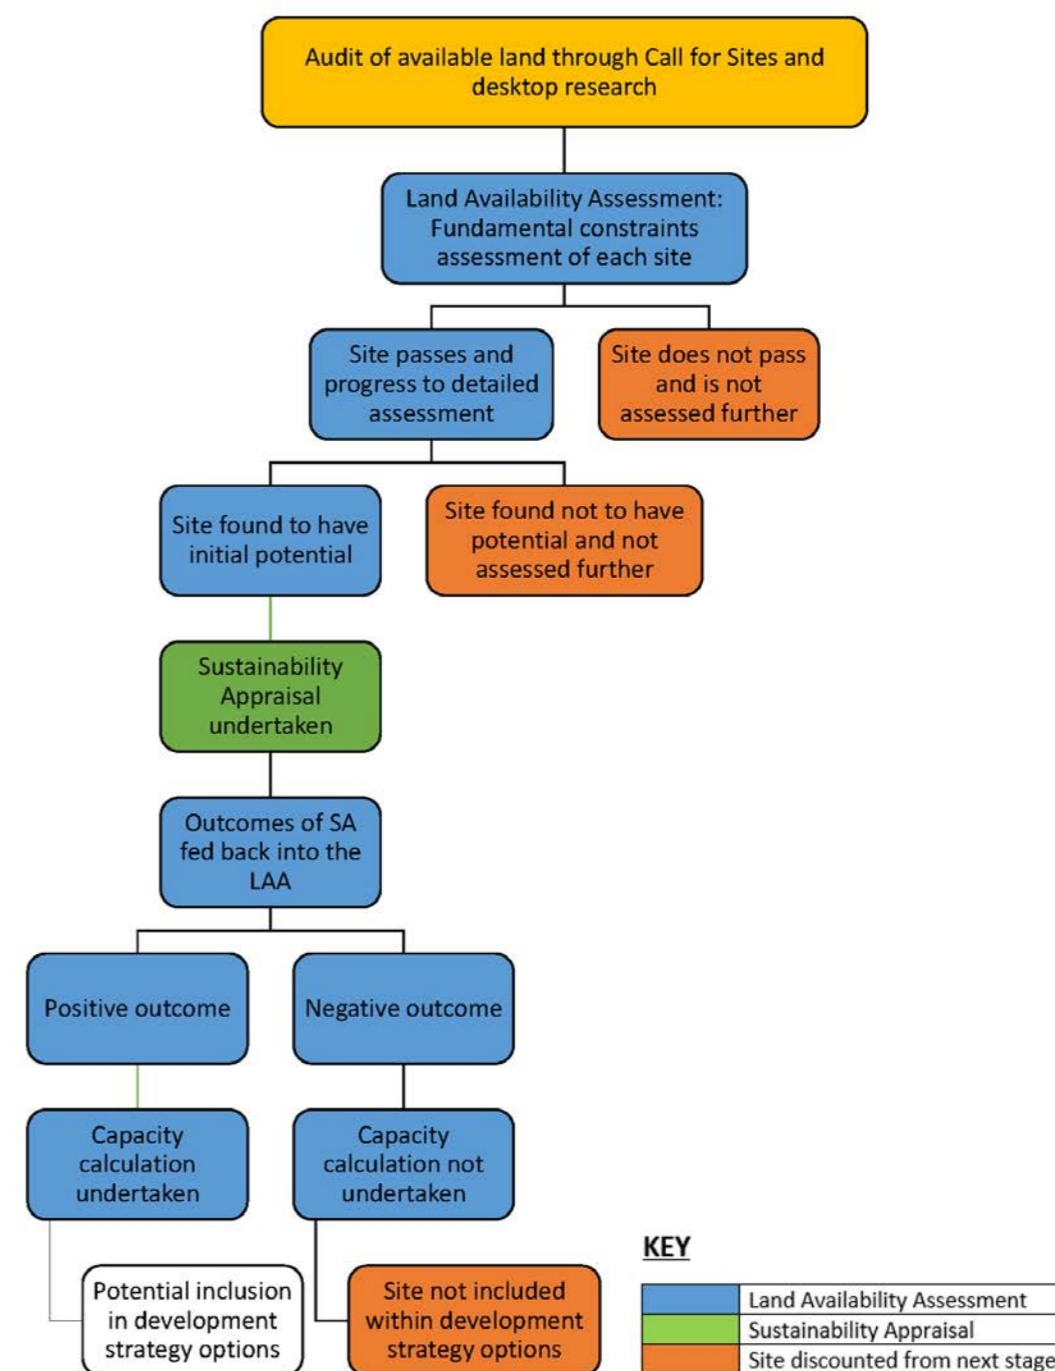

**Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.

**Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.

**HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, we will calculate an indicative capacity for the site and uses. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.

**Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

### Site Assessment Process

## 1 Bluntisham

1.1 A total of 5 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Bluntisham 1: Land to the South of Rectory Close, Bluntisham
- Bluntisham 2: Land West of Colne Road, Bluntisham
- Bluntisham 3: Land West of Bluntisham
- Bluntisham 4: Land North of Station Road, Bluntisham
- Bluntisham 5: Land to the North and South of Bluntisham Heath Road/ Wood End, Bluntisham

1.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Legend	
	Commercial sites
	Infrastructure sites

<b>Site reference</b>	Bluntisham 1
<b>Site name</b>	Land to the South of Rectory Close, Bluntisham

Site address	Parish(es)	Site area (ha)
Land to the south of Rectory Close, Bluntisham	Bluntisham	1.53

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Up to 35 homes	Available 2024 Build out over 1 year

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:167
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Context, constraints and potential suitability
The site is wholly within flood zone 1 but the southern quarter of the site is constrained by surface water flood risk. The site is wholly classified as grade 3 agricultural land. The site is fairly level but does gently rise up towards Rectory Road. The boundaries of the site are clearly marked out by trees lines, vegetation and hedging and on its southern edge by a

<p>track road. The trees and hedging are most substantial along the site's eastern side with boundary features being more open on its southern and western sides where there are longer range views into and out of the site. There is a low lying hedge on the site's frontage along Rectory Road and a point of access. To the north, east and west the site is surrounded by residential properties, to the south is open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Electricity cables run along the site's frontage along Rectory Road. There are no nature conservation designations or heritage designations on site although the site is adjacent to a conservation area and the grade II listed building, Bluntisham House. There is an existing access onto Rectory Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and would take one year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are no buildings on site to clear and the topography of the site is fairly even with a gentle incline up to Rectory Road. There is a known risk from surface water flooding in the southern quarter of the site meaning sustainable drainage will need to be incorporated into any design proposal. Also, the site's generally open nature means that landscaping would be required to reduce landscape impact. Access exists from Rectory Road.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but sustainable drainage and landscape mitigation would be required in any future design proposals to mitigate these constraints. The impact on the setting of the adjacent conservation area and listed Bluntisham House would be also need to be thoroughly considered and mitigated. The site promoter does not appear to seek an allocation status for the site but intends to acquire planning permission and then sell the site to a third party for development. The site promoter states the site is available now but taking into account the constraints to development and that no planning application has been submitted yet, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land within flood zone 1 but surface water flood risk along the southern boundary</li> <li>• In walking distance to village services and facilities and primary education</li> <li>• Reasonable accessibility to public transport options and employment opportunities</li> <li>• Remote from natural green space</li> <li>• Within 1km of Berry Fen SSSI</li> <li>• Located on the southern edge of the village and could be integrated into the existing place and community</li> <li>• Potential for some impact on heritage assets</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential to provide built development of a scale that could be integrated into the existing place and community</li> <li>• Should provide landscaping to minimise the visual impact of development on the countryside to the south</li> <li>• Development should be focused within northern half of the site as in depth development up to the southern boundary would not reflect the character of the area</li> <li>• Would require assessment of the impact on heritage asset.</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 1.53ha</p> <p>50% net developable area allowed to enable a frontage only development to avoid areas at risk from surface water flood risk and reflect local character.</p> <p>1.53 ha x 50% = <b>0.77 ha</b></p>	<p>Residential - market and/or affordable homes</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Very low density of 25 dph = 0.77 ha x 25 dph = <b>19 homes</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 1 year</p>

**Updates after the Initial Assessment**

<b>Site reference</b>	Bluntisham 2
<b>Site name</b>	Land West of Colne Road, Bluntisham

Site address	Parish(es)	Site area (ha)
Land west of Colne Road, Bluntisham	Bluntisham	7.78ha

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Supporting infrastructure</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> </ul>	90 homes (market and affordable)  Land for school staff car park  Open space and land for Suitable Alternative Natural Greenspace and biodiversity net gain. This is defined as an area of land designated for recreational purposes that is designed to offset pressures on sites that are protected for their habitat value under Conservation of Habitats and Species Regulations 2017.	Available 2024 - 2028  Build out over 2 years

### Core information

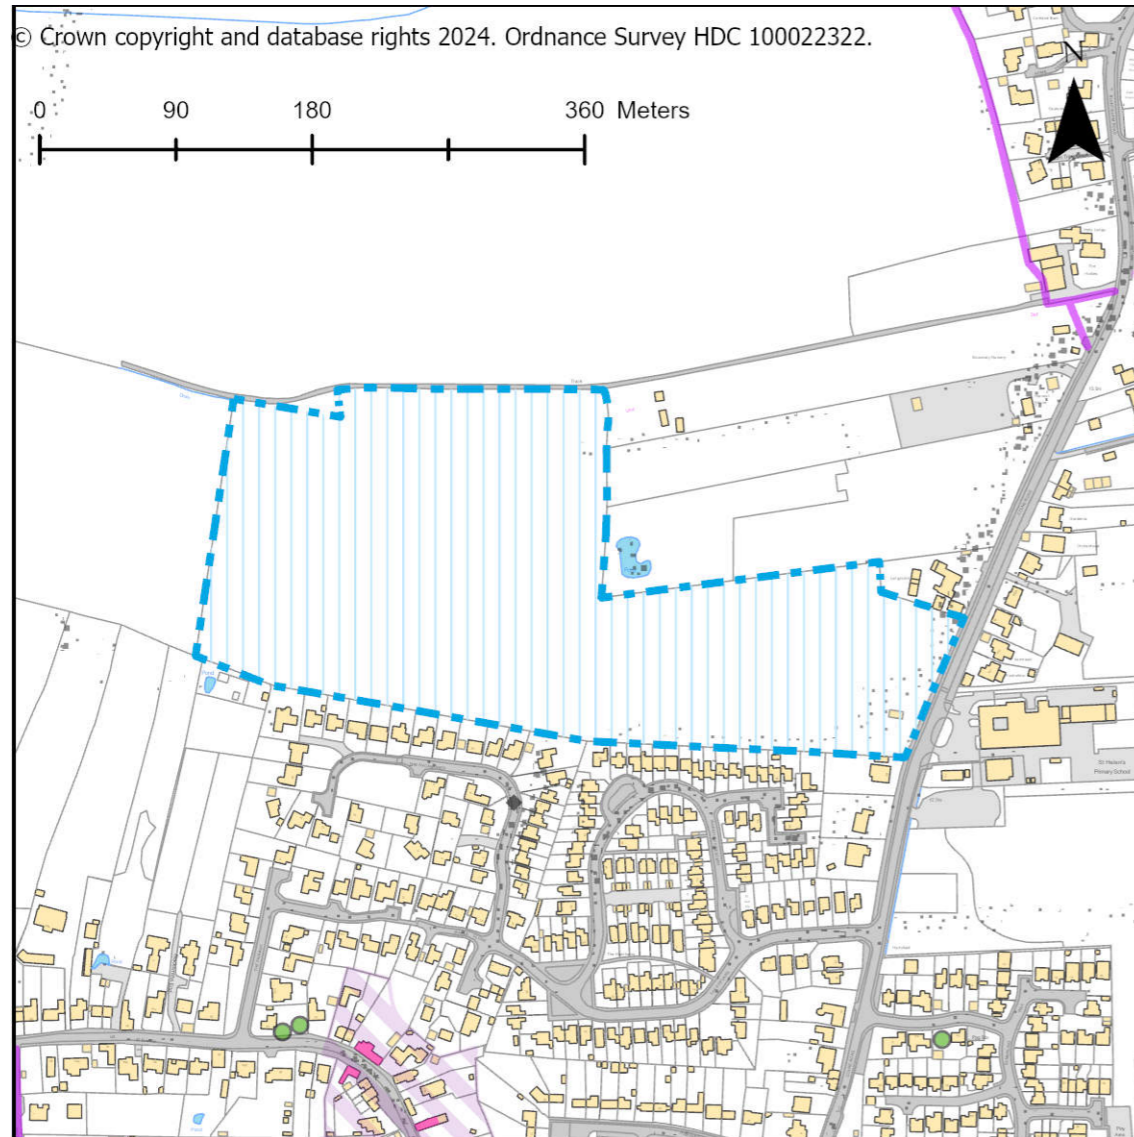

How was the site identified?	Call for Sites 2023 submission: site reference - CfS:248
Relevant planning history	HELAA2036 (December 2017): Land west of Longacres Bluntisham (site reference 157)  Application number: 17/00906/OUT  Proposal: Outline planning application was submitted for 135 dwellings and open space

	Outcome: Withdrawn
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Vision Statement</li> <li>Illustrative Masterplan (drawing number: A_1608 PLI 0 revision: B) (April 2017)</li> <li>Supporting Statement (June 2023)</li> </ul>

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, there is recorded risk from surface water flooding along the site's frontage along Colne Road and along the southern edge of the site. The site is wholly classified as grade 2 agricultural land. The topography of the land gently rises away from Colne Road meaning that the western edge of the site is some 10m higher than the eastern edge. The site is bounded by a mature hedgerow on the eastern frontage and mixed hedging and fencing to residential properties along the southern boundary. It is located on the northern edge of Bluntisham but impact on the wider landscape to the north and west is reduced by the landform which slopes down from these boundaries towards Colne Road. To the south and east is residential development and St Helen's</p>	+
---	---

<p>Primary School and to the north and west is open countryside. The illustrative masterplan submitted alongside the call for sites submission shows that it intended to place a Suitable Alternative Natural Greenspace in the north western part of the site which would reduce the impact of development on the wider landscape and provide a softer development edge.</p> <p>This site was previously put forward as an allocation in Huntingdonshire's Local Plan to 2036 (BL 1 West of Longacres). The site was removed through the Local Plan examination process as it was included within the Local Service Centres category. This category was considered not to be required at the time.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Electricity cables run along the site's Colne Road frontage. There are no nature conservation designations or heritage designations on site. Access should be possible from Colne Road but this would require the removal of some of the hedgerow in order to create an adequate access point.</p> <p>The site is greenfield, so its development would not contribute to reuse of previously developed land or regeneration. Most of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development and a developer/ housebuilder is involved with bringing the site forward. There are no known legal restrictions impacting the site. It is intended to deliver the site via a housebuilder. The promoter suggests the land will be available between 2024 and 2028 and would take two years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are no buildings on site to clear but part of the mature hedgerow would need to be cleared to create an access off Colne Road. There is a known risk from surface water flooding on site and it's location on the northern edge of the village will require sensitive incorporation of mitigation measures. The illustrative masterplan submitted alongside the call for site submission shows that it intended to place a Suitable Alternative Natural Greenspace in the north western part of the site which could also reduce the impact of development on the wider landscape and provide a softer development edge. The masterplan also shows that development is proposed at a very low density to allow for a substantial amount of greenspace to be incorporated within proposals as well as the proposed car park.</p>	+
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but sustainable drainage and landscape mitigation would be required in any future design proposals to mitigate these constraints. The site promoter does not appear to seek an allocation status for the site but intends to deliver the site via a housebuilder. The site promoter states the site will be available between 2024 and 2028. There have been previous attempts to bring forward this site and a vision document and illustrative masterplan have been submitted as part of the call for sites submission. The submission also outlines the various technical studies and assessments that were prepared in 2017 for the site which will need to be updated. Taking into account the stated availability of the site and that the site is not currently subject to a planning application, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 2 agricultural land
- Is within flood zone 1 but there is surface water flood risk along the southern boundary and along Colne Road
- In walking distance to village services and facilities and primary education
- Reasonable accessibility to public transport options and employment opportunities
- Good accessibility to natural green space
- Within 1km of Berry Fen SSSI
- Located on the northern edge of the village adjacent to the primary school and could be integrated into the existing place and community

In combination, the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that could be integrated into the existing place and community
- Should provide landscaping to minimise the visual impact of development on the countryside to the north and west
- Would require assessment on recreational impact on nearby SSSI

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 7.78 ha  Excluding approximately 3ha of the site for the SANG and 0.2ha for car parking leaves 4.58ha. Of this, 75% net developable area is allowed to incorporate SUDs and landscaping throughout the development and paths to connect and integrate development with the SANG.  4.58 ha x 75% = <b>3.44 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 3.44 ha x 25 dph = <b>86 homes</b>	Available post 2028 subject to allocation  Build out over 2 years

**Updates after the Initial Assessment**

Residential: Market and/or affordable housing Open space uses: Natural, green or open spaces Biodiversity net gain opportunities Land to safeguard against flooding	Up to 250 market and affordable houses  3ha of biodiversity net gain/ open space/ surface water attenuation	Available 2024 - 2028  Build out over 3 to 5 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:328
Relevant planning history	None relevant within the site  Land immediately to the south of the site:  Application number: 17/01015/OUT  Proposed development: Proposed residential and commercial development (up to 26 dwellings and 4 commercial units)  Outcome: Permission  Application number: 21/02690/REM

	Proposal: Details of access, appearance, landscaping, layout and scale in respect of the residential element only of the approved scheme  Outcome: Approved
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Site Plan as Proposed (drawing number: 23_068_SK001_A) (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, there is some recorded risk from surface water flooding within the eastern side of the site. The site is wholly classified as grade 2 agricultural land. The land gently rises with the northern edge of the site being some 10-15m higher than the southernmost edge. The boundaries to the site are clearly marked out by field lines and some trees and vegetation. The southernmost part of the site has a tree preservation order protection on it which is a clear development constraint. Along the site's western and northern edges are public rights of way, development would therefore impact views from public vantage points and require integration with the public right of way. The site adjoins residential development on its northern and eastern edges with orchard land</p>	~
---	---

<p>and the countryside to the west and south. The site is located on the western edge of Bluntisham and extends into the countryside, it is therefore located in a very sensitive location, landscape mitigation would be required.</p> <p>A small portion of southern most extent of the site was previously put forward as an allocation in Huntingdonshire's Local Plan to 2036 (BL2 North of Station Road). The site was removed through the Local Plan examination process as it was included within the Local Service Centres category. This category was considered not to be required at the time.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations or heritage designations on site. The site adjoins a conservation area on its eastern edge and is also adjacent to the back gardens of several listed buildings. As such, development could impact on the setting of various heritage assets, which would require further assessment. The proposed site plans submitted alongside the call for sites submission show that the site promoter's intention is to provide an access to the site via the permitted development on land immediately adjoining the southernmost point of this site (approved under 21/02690/REM) and where a tree preservation order designation is, additional points of access are proposed from Nobles Lane and Meridian Close. These all run through existing residential developments, therefore they will have to be assessed to determine whether these can provide sufficient points of access for the scale of development proposed.</p> <p>The site is greenfield, so its development would not contribute to reuse of previously developed land or regeneration. The site is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by multiple owners who all support its development. The site promoter has stated that they are unsure if there are any legal restrictions impacting the site. It is intended to deliver the site via a housebuilder. They state that the land will be available between 2024 and 2028 and would take three to five years to complete.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are no buildings on site to clear but development may result in the loss of protected trees. There is a known risk from surface water flooding and its location on the western edge of the village may impact the setting of heritage assets. As such substantial mitigation would be required in the design of any scheme.</p>	~

<p>Access to the site is a significant constraint to the achievability of the site. The site submission proposes potential access points from a permitted development on land immediately adjoining the southernmost point of this site. This would require removal of trees within a preservation area and therefore be a fundamental constraint to development, impacting also the ecology and biodiversity of the area. Additional points of access are proposed from Nobles Lane and Meridian Close. The former is a narrow lane running between residential properties, with the potential to cause amenity impact on local residents due to the increase in traffic movements from a development of such a scale. Access from Meridian Close would require the construction of access routes outside the boundary plan of the site, which may present issues relating to ransom strips and would again see substantial traffic through a small residential development.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but flooding, trees, landscape and heritage mitigation would be required in any future design proposals to mitigate these constraints. It is unclear whether an allocation status is sought at this time as the site promoter states the site will be available between 2024 and 2028 and a housebuilder is involved. As the site is not proposed as a rural exceptions scheme, the proposed development is contrary to current adopted planning policy so allocation status would be required. Coupled with the fact that the site has substantial constraints to overcome, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land classified as grade 2 agricultural land</li> <li>• Is within flood zone 1 but there is surface water flood risk along the eastern part of the site</li> <li>• In walking distance to village services and facilities and primary education</li> <li>• Reasonable accessibility to public transport options and employment opportunities</li> <li>• Within 1km of Berry Fen SSSI</li> <li>• TPO protected trees in the southern part of the site</li> <li>• Located on the western edge of the village adjacent several designated heritage assets</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that :</p>
---

- The site has significant constraints to development which prevent it from being effectively masterplanned to become part of the existing community.
- Access from the south would require removal of trees within a TPO area.
- Access proposed from Nobles Lane and Meridian Close are narrow roads running between residential properties. These have the potential to cause amenity impact on local residents due to the increase in traffic movements from a development of such a scale.
- Access from Meridian Close presents a current constraint with the potential for ransom strips.
- Two access points one from Meridian Close and the other from a permitted development site to the south are reliant on adjoining site cooperation.
- The site has the potential to impact the conservation area and heritage assets.
- Would require strategic landscaping and integration of public right of way

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The site is considered inappropriate for development, due to access, heritage and landscape issues so no capacity calculation has been undertaken.</p>	<p>N/A</p>	<p>N/A</p>

**Updates after the Initial Assessment**

Land North of Station Road, Bluntisham	Bluntisham	12.47

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	160 homes	Available 2023 Build out over 3 years

### Core information

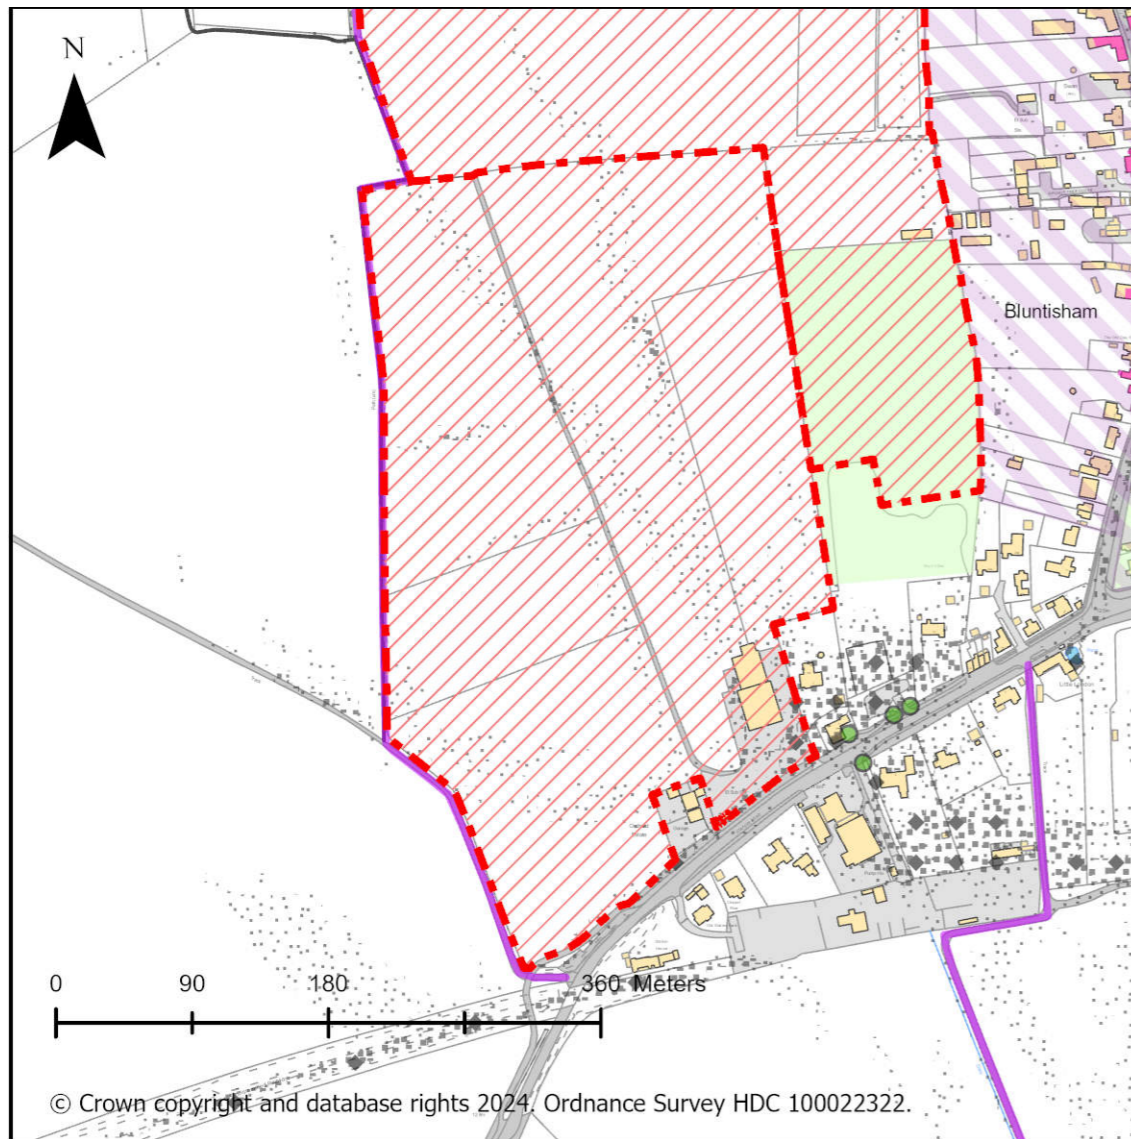

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:230
Relevant planning history	HELAA (December 2017): North of Orchard Estates, Station Road Bluntisham (180)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Vision Document (June 2023)</li> <li>Landscape Summary Report (September 2022)</li> <li>Preliminary Ecological Appraisal - Survey Report (September 2022)</li> <li>Biodiversity Impact Assessment (October 2022)</li> <li>Preliminary Arboricultural Implications Assessment (May 2023)</li> </ul>

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 but it is heavily constrained by surface water flood risk. The majority of the site is classified as grade 2 agricultural land with only a small portion of the site's frontage being grade 3. The site is situated to the north of Station Road (A1123) and is located on the western edge of the village extending into the countryside. Large parts of the site consist of commercial orchards, but a small portion of the site is hardstanding associated with agricultural buildings. The site is situated within the Central Claylands, extensive apple and plum orchards formerly dominated much of the eastern part of the area around Somersham and Bluntisham, meaning the remaining orchards</p>	~
--	---

represent a significant value in terms of the history of these settlements and their identity. The Landscape Townscape Assessment SPD 2022 noted that the retention, revitalisation and protection of these orchards are of importance to the character of these areas.

The topography of the site gently rises from Station Road. Although there is boundary hedging to the west, south and east there are long distance views from the northern boundary. Additionally, a public right of way runs along the site's western edge meaning there are views across the site from a public vantage point, integration of this with the site would be required. To the north and west of the site is open countryside, with an area of TPO protected trees situated to the east of the site. An auto centre sits just outside the southern boundary, the integration of which would require consideration.

There is no known contamination on site but this will require further investigation as the site has been in use as an orchard for many years which means there could be land contamination from agricultural pesticides. The A1123 adjoins the southern edge of the site and noise could be a minor issue. There are no nature conservation designations or heritage assets on site. Access to the site could be achieved from Station Road, however engagement with Cambridgeshire County Council would be required to ascertain if this is appropriate and whether safe access for the scale of development proposed could be achieved.

The site is mostly greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.

**Availability**

The site is owned by a single family who supports its development. An option agreement was due to be signed when the call for sites submission was made and a housebuilder is involved with the site. There are no known legal restrictions impacting the site. It is intended to deliver the site via a housebuilder. The site promoter states that the land is available now and that there are no issues to resolve before the site is available for development. They consider that it would take three years to complete.

**Achievability**

The site promoter has identified that all access and services are accessible from the site boundary. There are agricultural buildings on site to clear and some hardstanding would need to be removed. There is a known risk from surface water flooding which will require substantial amounts of sustainable drainage across the site. Additionally, the site is heavily constrained by its sensitive location and potential impact on the countryside and character of the area if orchards were to be removed. As such substantial landscape mitigation would be required in the design of any scheme. Access could be achieved from Station Road but the achievability of this access for the scale of development will require further assessment.

Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1100 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site consists of two parcels of land, one north of Wood End and the other south of Wood End to the west of Bluntisham.</p> <p>The site is wholly within flood zone 1 with some minimal surface water flood risk. It is also wholly classified as grade 2 agricultural land. The northern parcel is broadly level and consists of orchard land. Orchard land is becoming increasingly scarce across the district and is a key characteristic of the landscape of this part of the district. There are minimal amounts of vegetation along its boundaries so the site is open, it is most dense along its eastern edge. It also adjoins a residential property on its south eastern corner. The southern parcel gently slopes southwards with the site levels sloping some 6m from its frontage to its southern most edge. There is a dense tree belt along the eastern edge of the southern parcel, there is minimal vegetation along its other boundaries with its northern edge having no vegetation meaning there are long distance views into and across the site from Bluntisham Heath Road/Wood End so development could have a prominent impact on the landscape. To the west is Higham Farm and to the east is Meridian Close, to the south and south west is the open countryside.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site although electricity powerlines are located long the frontage of both parcels along Bluntisham Heath Road/ Wood End. There is also a water tank and covered reservoir immediately to the north of the northern parcel and another water tower on its western edge. There are no heritage assets and no nature conservation designations on site. The northern parcel's south eastern corner is adjacent to a list building (59 Wood End) which is grade II listed. Access to both parcels can be achieved from Bluntisham Heath Road/ Wood End.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single company who who supports its development. The site has been optioned and a housebuilder is involved with the site. There are no known legal restrictions affecting the site. The site promoter states that it their intention to deliver the site directly by a master developer and that the suggest that the land is available now and could take 2 years to build out.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that all main services are accessible from the site boundary. The site comprises two parcels of land, the northern being orchard land. There are electricity cables running both the frontages of each parcel and landscaping constraints to overcome. The impact of any development will need to be sensitive to the countryside. There are no buildings on site so no clearance work would be required, however development on the northern parcel would see the loss of an orchard which would impact the landscape character of the area.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the impact but both parcels are sensitively located to the west of Bluntisham extending into the countryside. The site promoter does not appear to seek an allocation and intends to deliver the site via a master developer. As the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● The site is wholly greenfield land consisting of grade 2 agricultural land</li> <li>● The northern parcel is orchard land, an increasingly scarce landscape feature across the district</li> <li>● Is within flood zone 1 with minimal surface water flood risk</li> <li>● Has limited accessibility to employment opportunities, primary education and services and facilities</li> <li>● There is no footpath along the site frontage, the closest is some 150m from the site making integration more challenging</li> <li>● Is not accessible to natural greenspace</li> <li>● Development of the whole site would be out of character due to its location in relation to the existing village</li> <li>● Very low potential to integrate built development into the existing community so it would not support sustainable place-making</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is inappropriate for built development due to its limitations in successfully integrating development with the existing place and community and impact on the character of Bluntisham as well as the further erosion of orchard land

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to low potential for integration with the village.	N/A	N/A

**Updates after the Initial Assessment**

## 2 Colne

2.1 A total of 7 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Colne 1: Land North of The Meadows, Earith Road, Colne
- Colne 2: Land at Ramadie, Earith Road, Colne
- Colne 3: Land North West of Holme Fen Drove, Colne
- Colne 4: Land at Cranbrook Plants, Colne Road, Somersham (Colne)
- Colne 5: Land at Colne Road, Somersham (Colne)
- Colne 6: Land West of the B1050, Earith Road, Colne
- Colne 7: Colne Fen Farm and Fishery, South of Chatteris Road, Somersham (Colne) - this site partially falls within Earith parish. As the majority of the site falls within Colne parish, the site has been assessed here instead.

2.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<h3>Legend</h3> <ul style="list-style-type: none"> <li>Commercial sites</li> <li>Infrastructure sites</li> <li>Mixed Use sites</li> <li>Natural/ Open Space sites</li> <li>Renewable Energy sites</li> <li>Residential sites</li> </ul>		<h3>Hazards and Infrastructure</h3> <ul style="list-style-type: none"> <li>Air Quality Management Area</li> <li>Contaminated Land</li> <li>Overhead Line Towers</li> <li>Overhead Line Routes</li> <li>Gas Pipeline</li> <li>Gas Pipeline Buffer</li> <li>Pipeline (Oil)</li> <li>Pipeline (Oil) Buffer</li> <li>A428 Notification Area</li> </ul>

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 1106 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 but most of the site is at risk from surface water flooding. The site is wholly grade 2 agricultural land previously planted out as an orchard. Orchard land is becoming increasingly scarce across the district and is a key characteristic of the landscape of this part of the district. In their submission, the site promoter states</p>	~
--	---

<p>that the site is 'formerly an orchard, the trees have since been grubbed up and the site lies unused.' The topography of the site is broadly level. Its frontage to Earith Road consists of established trees and hedgerows which obscure views of the site from the road. There are some individual trees on the southern boundary of the site protected by Tree Preservation Order. To the north, west and south of the site adjoins residential development whilst the eastern boundary is contiguous with the remaining elements of the orchard use which leads into the open countryside beyond. The site is situated within the Fen Margin, the key characteristics of which include "generally well vegetated, with deciduous woodland, hedgerow trees and orchards, particularly around the village of Colne", meaning the remaining orchards represent a significant value in terms of the history of the settlements and its identity. The Landscape Townscape Assessment SPD 2022 noted that the establishment or reinstatement of these orchards are of importance to the character of these areas.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however electricity powerlines located along the site's frontage with Earith Road. There are no nature conservation designations or heritage assets within the site. The schematic block plan submitted shows a single access to all dwellings is intended from Earith Road.</p> <p>The site is greenfield, so its development would not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take one to two years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from the site boundary. There are no structures on site to clear, the site is broadly level but orchard land is becoming increasingly scarce and the site is highly constrained from surface water flood risk. There are TPO protected trees in the southern corner of the site. There are electricity poles located along the site's frontage with Colne Road. The site could be accessed from Earith Road.</p>	~
<p><b>Deliverability / developability</b></p>	~

The site is greenfield, the loss of orchard land is a constraint as is the surface water flood risk and potential landscape impact of development. The site promoter intends to acquire planning permission and then sell the site to a third party for development, it does not appear that an allocation status is sought. The site has a recent planning refusal for self and custom build housing, as it is not intended to bring forward a rural exceptions scheme on site, the site is still contrary to policy so an allocation status would be required for successful development. Also, the site promoter states the site will be available between 2024 and 2028. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 2 agricultural land
- Is within flood zone 1 but almost all of the site is at risk from surface water flooding
- In walking distance to village services and facilities but primary education and shops are located in the nearby village of Earith
- Reasonable accessibility to public transport options and employment opportunities
- Remote from natural green space
- Contains former orchard land which is a key characteristic of the local landscape, development would further erode this landscape character.
- Is less than 1 ha in size

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to its potential impact on losing valuable landscape characteristics and risk from surface water flooding

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Updates after the Initial Assessment**

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	12 homes	Available 2023 Built out over 1 - 2 years

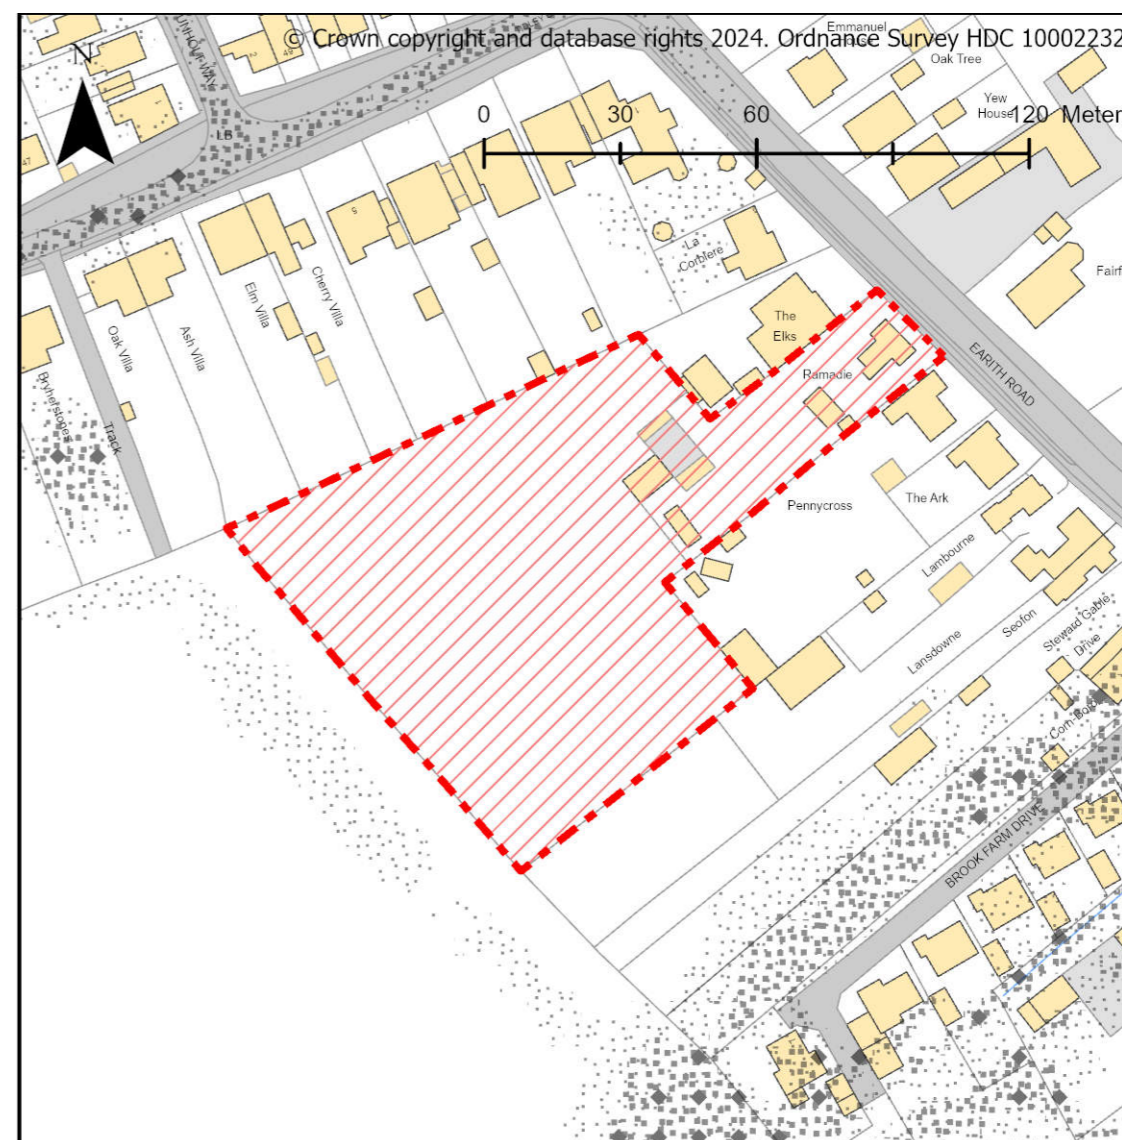

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:75
Relevant planning history	Application number: 23/00717/PIP Proposed development: Demolition of former piggery and storage barn and the construction of three dwellings. Outcome: Refused
Land type	Partly greenfield and partly previously developed land
Current use of the site	Part residential, amenity grassland used in connection with Ramadie, former pigsty, storage building and stables
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1109 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 and there is no recorded risk from surface water flood risk. However, the site is within an area identified as high risk of groundwater flooding. It is wholly classified as grade 2 agricultural land. The site contains a residential property 'Ramadie' and a former piggery, storage building and stables and section of grassed paddock to the rear (south-west) of Ramadie. The land within and surrounding the site is broadly level, meaning there are no topographical constraints that would impact the site coming forward. The site is bounded by residential development on its northern and eastern sides. The paddock itself is well-contained on its western boundary by an existing hedgerow and contains level grassland. This screens the site from being viewed from agricultural land beyond the western boundary. Hence, considering the adjoining uses, boundary screening and flat nature of the land within and surrounding the site there would likely be minimal landscape impact levied by the proposal.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however overhead telegraph lines located along the site's frontage along Earith Road. The site promoter states that the overhead telegraph line can be moved subject to obtaining the necessary approvals and is not a constraint to development. There are no nature conservation designations or heritage assets within the site. The property has an existing access from Earith Road.</p> <p>The site is primarily greenfield, so its development will not significantly contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and would take one to two years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible within the site apart from the public highway which is accessible from the site boundary. There are structures on site to clear and there are overhead telegraph lines to be moved. There are no topographical constraints that would impact the viability or achievability of the site.</p>	~

<p><b>Deliverability / developability</b></p> <p>The site has structures to clear, it is unclear from the call for sites submission if the existing property is to be demolished as well or if the proposed development would utilise the existing access just north of Ramadie. The site promoter intends to acquire planning permission and then sell the site to a third party for development, it does not appear that an allocation status is sought. The site has a recent planning refusal for the permission in principle for 12 homes on the site. As it does not appear the site promoter's intention to bring forward a rural exceptions scheme on site, the site is still contrary to policy so an allocation status would be required for successful development. Taking this into account, and while the site promoter states the site is available now, the site is categorised as developable.</p>	~
--	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is mostly greenfield paddock land classified as grade 2 agricultural land but there is also an existing dwelling on site</li> <li>● Is within flood zone 1 and has no risk from surface water flooding</li> <li>● In walking distance to village services and facilities but primary education and shops are located in the nearby village of Earith</li> <li>● Reasonable accessibility to public transport options and employment opportunities</li> <li>● Remote from natural green space</li> <li>● Is less than 1 ha in size</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Has potential to provide built development of a scale that could be integrated into the existing place and community</li> <li>● Provide housing on a site less than 1ha</li> <li>● Retain existing hedgerows to minimise landscape impact and retain the contained nature of the existing paddock land</li> <li>● Electricity lines along the site frontage may need to be redirected</li> </ul>
---

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.85 ha</p> <p>After removing 0.1ha of the site which contains the existing dwelling 'Ramadie' as it is unclear if this dwelling is to remain, a 80% net developable area allowed for landscaping and retention of existing hedgerows to retain local character.</p> <p>0.75 ha x 80% = <b>0.6 ha</b></p>	<p>Residential - market and/or affordable homes</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Very low density of 25 dph = 0.6 ha x 25 dph = <b>15 homes</b></p>	<p>Post 2028 subject to allocation</p> <p>Built out over 1 - 2 years</p>

Updates after the Initial Assessment

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly located within flood zone 1 and only very minimally impacted by surface water flood risk. It is wholly classified as grade 2 agricultural land. The topography of the site is fairly flat and located on the eastern edge of the village of Colne. The site contains an agricultural building, and is heavily vegetated including some trees on site. Vegetation and trees form strong boundary edges to the site therefore minimising its visibility and impact on the wider landscape. The presence of such established vegetated boundaries minimises the potential adverse landscape impacts of development on the countryside due to being shielded from surrounding views. The site is immediately north west of two properties located along Holme Fen Drove. To the west it adjoins another residential property and to the north are agricultural structures. To the east is the open countryside.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site, although contamination risk may require further investigation considering the presence of an large agricultural structure on site. There are however overhead telegraph lines located along the site's eastern edge. There are no nature conservation designations or heritage assets within the site. There is an existing access to the site from Holme Fen Drove.</p> <p>The site is classified as greenfield, so its development would not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and is anticipated to take one and half years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that gas supply is not immediately accessible, that mains water supply and electricity supply are within the site, and that the public highway and digital and telecommunications infrastructure are accessible from the site boundary. There is a structure on site to clear and substantial trees and other vegetation to be retained and managed. The site can be accessed from Holme Fen Drove.</p>	+
<p><b>Deliverability / developability</b></p> <p>There is a structure to clear on site. An arboricultural assessment and tree surveys to ascertain which should be retained and which trees and vegetation can be removed would be required. The site promoter intends to acquire planning permission and then sell the</p>	~

site to a third party for development, it does not appear that an allocation status is sought. The site promoter states that the site is available now but there is no active planning application yet on site. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as grade 2 agricultural land but there is an existing large agricultural building on site
- Is within flood zone 1 and has minor risk from surface water flooding
- In walking distance to village services and facilities but primary education and shops are located in the nearby village of Earith
- Reasonable accessibility to public transport options and employment opportunities
- Remote from natural green space
- Is less than 1 ha in size

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that could be integrated into the existing place and community
- Provide housing on a site less than 1ha
- Should retain boundary trees and hedgerows to minimise landscape impact and provide an established development edge

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Gross site area of 0.37ha  60% net developable area allowed to retain existing mature trees and hedgerows  0.37 ha x 60% = <b>0.23 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.	Available post 2024 subject to allocation  Build out over 1 - 5 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Very low density of 25 dph = 0.23ha x 25 dph = <b>6 homes</b>

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:159
Relevant planning history	Application number: 23/01160/FUL  Proposed development: Full planning permission for 64 dwellings and community building including access and associated landscaping  Outcome: Pending Consideration  Application number: 22/01510/FUL  Proposed development: Full planning permission for 78 dwellings and community building including access and associated landscaping  Outcome: Refused
Land type	Part greenfield and part previously developed

Current use of the site	Commercial
Supporting information	<ul style="list-style-type: none"> <li>Proposed site layout (drawing number: LS02401-P-003) (May 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site completely falls within 400m of a Water Recycling Area. The site promoter did not submitted an odour assessment with the call for sites submission. However, one has been submitted in support of planning application 23/01160/FUL which has been reviewed.  This suggests that a 15m strip of landscaping reinforcing the south western boundary would provide adequate odour screening for residential properties.  It is noted that the south western boundary of the site lies within 75m of the water recycling area (sewage works) and that the site is directly downwind of the prevailing south westerly winds. Therefore the site is	Fail

Fundamental constraints	Status	Outcome
	considered to be vulnerable to detrimental impacts such as odours and flies.	
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No because the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.
--	---

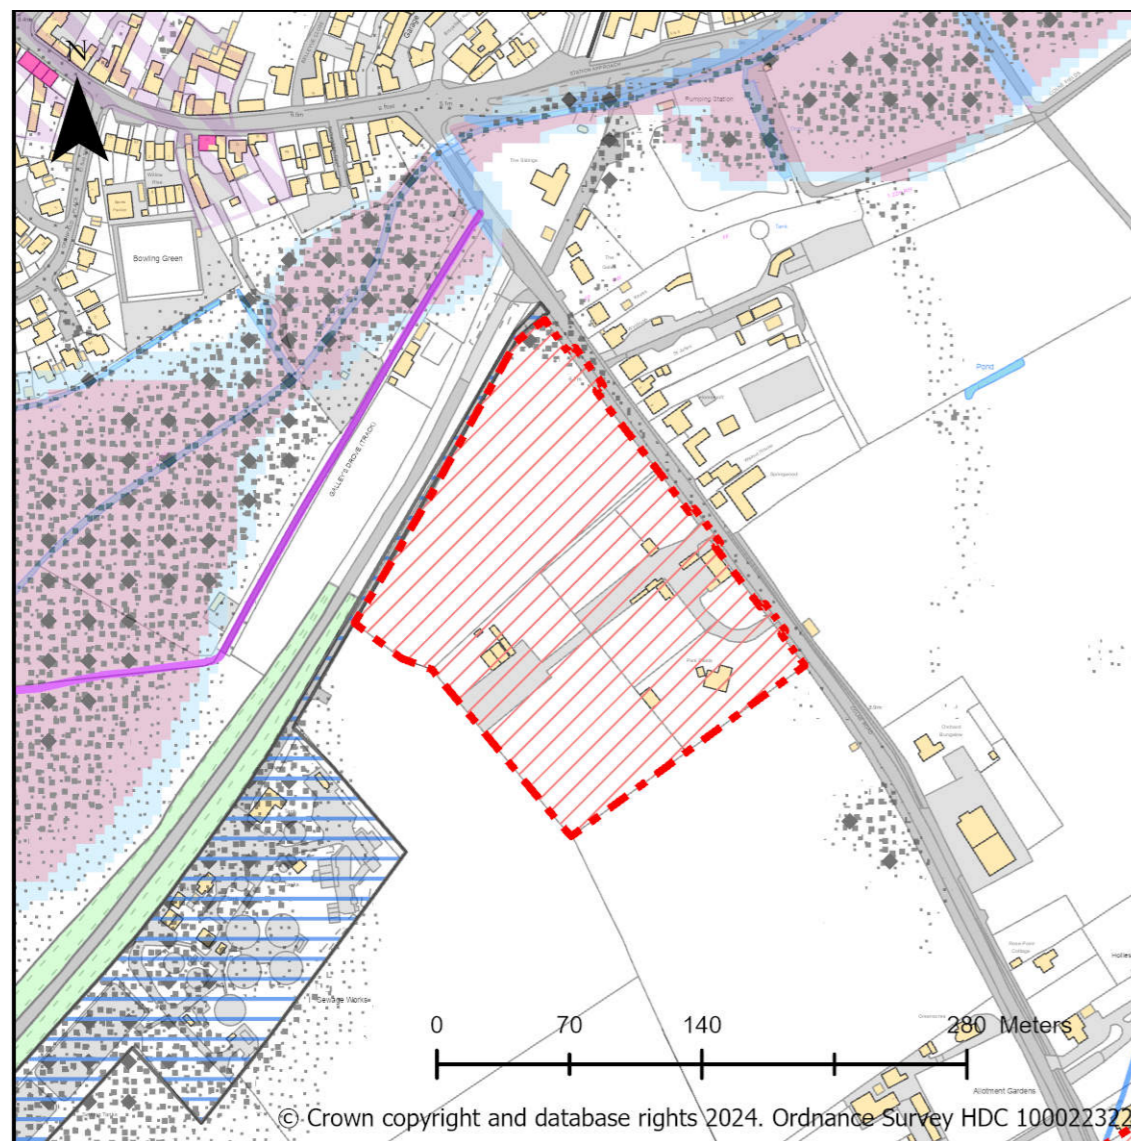

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site falls entirely within 400m of a Water Recycling Area.	N/A	N/A

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Custom and self build housing	5 plots	Available 2024 Build out over 3 years

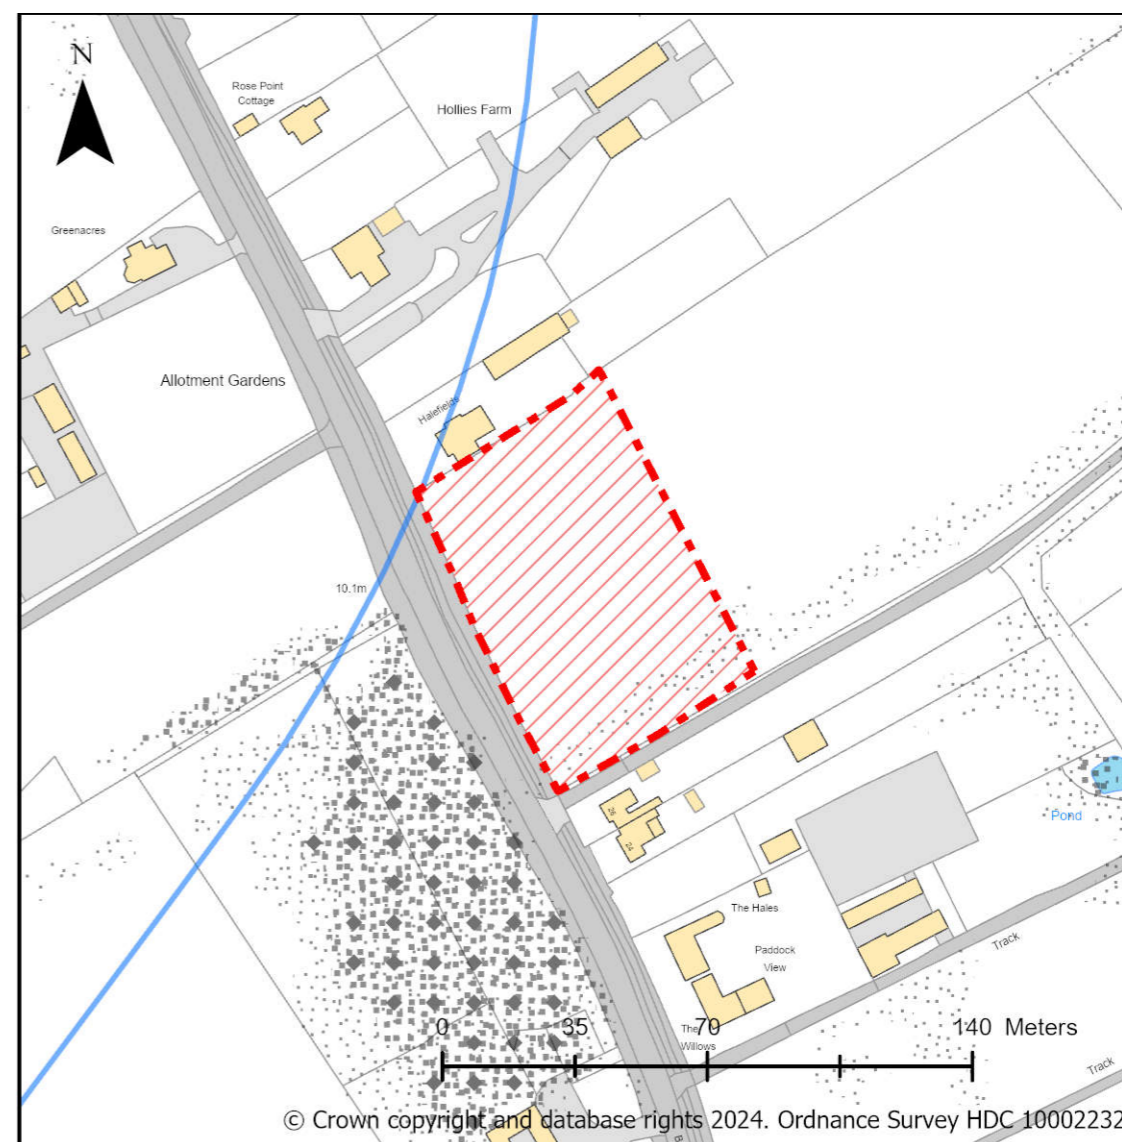

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:238
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	The site is wholly classified as grade 1 agricultural land	Fail
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No, as the site is wholly classified as grade 1 agricultural land. Grade 1 is the highest quality agricultural land.
--	--

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is wholly classified as grade 1 agricultural land	N/A	N/A

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:316
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Vision Document (June 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, the southern part of the site is at very low risk of surface water flooding but the northern part of the site is at higher risk. The submitted vision document indicates that built development will be concentrated in the southern half with the northern half of the site being used for open space. The site is wholly classified as grade 2 agricultural land. The site is greenfield, its topography is relatively level, it does slope very gently southwards meaning the most elevated part being at the south west corner of the site along Earith Road. Trees and hedgerows bound the western side of the site, with existing residential properties located along the southern boundary. Views into the site are very open, especially from Earith Road (the B1050), as well as from homes located immediately south of the site accessed via Dunholt Way, Osier Holt and Elizabeth Way.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage assets within the site. Access to the site can be achieved from Earith Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is in single ownership, the owner of the site supports its development. The site has been optioned. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and take 18 months to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from the site boundary. There are structures on site to clear and the site is broadly level. The surface water flood risk on site is a constraint as is the potential landscape impact of the development. Both will require mitigation through sustainable drainage and a well considered landscape plan. The site can be accessed from Earith Road.</p>	~
<p><b>Deliverability / developability</b></p>	~

Page 1119 of 3488

<p>The site has no structures to clear. The site promoter intends to acquire planning permission and then sell the site to a third party for development, it doesn't appear that an allocation status is sought. The site will be available between 2024 and 2028, as no planning application has yet been submitted, the site is categorised as developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as grade 2 agricultural land
- Is within flood zone 1 and has some risk from surface water flooding
- In walking distance to village services and facilities but primary education and shops are located in the nearby village of Earith
- Reasonable accessibility to public transport options and employment opportunities
- Remote from natural green space
- Could adversely impact the setting of St Helens Church
- Provides a sense of openness in this part of the village and its development would therefore result in a large infill and erode this sense of openness.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that could be integrated into the existing place and community
- Should use the northern part of the site for landscaping and sustainable drainage to overcome the higher risk of surface water flood risk in this part of the site meaning that residential development will be focused in the southern half of the site where it would adjoin existing residential development.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 4.75ha	Residential - market and/or affordable homes	Post 2028 subject to allocation

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>50% net developable area allowed to provide landscaping and sustainable drainage focusing development in the southern half of the site adjoining existing development.</p> <p>4.75 ha x standard proportion of 50% = <b>2.375 ha</b></p>	<p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Very low density of 25 dph = 2.375 ha x 25 dph = <b>59 homes</b></p>	<p>Build out over approximately 18 months</p>

Updates after the Initial Assessment

Page 1122 of 3488

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

This is a large site that falls within Colne and Earith parishes but is mostly located within Colne. Its eastern edge adjoins the boundary with East Cambridgeshire and Fenland districts. It consists of some 165ha of land used for quarrying of sand and gravel since the 1940s but by 2013 the bulk excavation of minerals had ceased and restoration works commenced.

The majority of the site is classified as grade 3 agricultural land, there is some land classified as grade 2 on the northern edge and southern edge of the site which corresponds with the Earith Gravel Pits County Wildlife Site designation. About 70% of the site is within flood zone 1, some 24% of the site is within flood zone 3b. There is some surface water flood risk across the site. The Cranbrook Drain flows adjacent to the northern and eastern site boundaries. The drain rises on locally high ground near Woodhurst, some 6.5 kms to the west of the site. Some 2 kms southeast of the site the Cranbrook Drain joins the Old Bedford River. There are a number of other smaller drains in the vicinity of the site, all of which generally flow north-eastwards to the Cranbrook Drain. There are numerous waterbodies associated with areas of former mineral extraction in the vicinity of the site, some of which have or will be infilled as part of the restoration works ongoing on site. The topography of the site is generally very flat with most of the site being only a few metres above sea level. The site is generally higher on its western edge and lower towards its eastern edge. There are several rights of way across the site as well as tracks across the site. A public right of way links from Chatteris Road to Holme Drove along the site's western edge.

There is no known contamination or pollution on site but this may require further investigation considering the historic use of the site and following the ongoing restoration works on site. There are no gas or oil pipelines running through the site. The Earith Gravel Pits County Wildlife Site falls within the southernmost part of the site. There are no heritage assets within the site. Access to the site can be achieved from the B1050 (Chatteris Road) along the northern boundary of the site and along the south eastern most corner of the site there is an existing access along Holme Fen Drove.

The site is classified as greenfield, so its development would not contribute to reuse of previously developed land but there are opportunities for further land regeneration. Two lakes within the site are already used for fishing. The site is also undergoing restoration works bringing a former gravel pits for nature conservation, fishing and other leisure uses. It is situated in an extensive mineral safeguarding area for sand and gravel although the site specific deposits have been worked out but engagement with Cambridgeshire County Council would be required given their involvement in restoration plans. The majority of the site is beyond 400m from a water recycling site apart from the northern corner of the site which falls within the 400m buffer zone.

<b>Availability</b>	
The site is in single ownership, the owner supports its development. There are known legal restrictions impacting the site relating to a Right of Way Agreement on the western boundary which links Holme Fen Road to Chatteris Road. It is intended to secure an allocation status	+

<p>and then sell the site to a third party for obtaining planning permission and development. The promoter suggests the land will be available between 2024 and 2028 and will take 5 years for the restoration works to be completed. The site promoter states that this 5 years is from September 2023, indicating completion to be towards the end of 2028. Restoration works are ongoing and now at a stage where the applicant is looking to diversify the land uses on site from nature and recreation to include commercial leisure uses as outlined on the indicative masterplan.</p>	
<p><b>Achievability</b></p> <p>The site promoter has identified that mains water supply and electricity supply are available within the site; with the public highway and digital and telecommunications infrastructure being accessible from the site boundary; and finally gas supply being not immediately accessible. The flood risk on site as well as impact of built development on the landscape are constraints, both of which would require mitigation and recognition in the scale and location of development proposed. The site can be accessed from the B1050 (Chatteris Road) and also Holme Fen Drove.</p>	~
<p><b>Deliverability / developability</b></p> <p>Restoration works are underway and an indicative masterplan for commercial leisure uses has been prepared, although there is no further more detailed information and technical studies relating to the commercial leisure uses. The restoration works are due to complete in 2028 after which it is assumed that built development may be pursued and planning sought. As such the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is 165ha formerly used for former gravel extraction and quarry works</li> <li>• It is currently undergoing restoration and is in use as a fishery</li> <li>• There are nature conservation designations within the site and also nearby including the Ouse Washes</li> <li>• Majority of the site is classified as grade 3 agricultural land, with some grade 2</li> <li>• About 70% of the site is within flood zone 1 and some 24% in flood zone 3b</li> <li>• Has the potential to boost local tourism and also nature conservation projects by providing holiday lodges and a place for water based and nature conservation tourism</li> </ul>
--

<ul style="list-style-type: none"> <li>• Has the potential to provide a modest amount of employment</li> <li>• Not constrained by heritage designations</li> <li>• Limited accessibility via public transport so future users would likely access the site via private vehicles and other less sustainable modes of transport</li> <li>• Has the potential to link into the public rights of way network</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for a leisure based development which could assist in the longer term management and enjoyment of the site following its restoration after gravel extraction.</li> </ul>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area is 165ha</p>	<p>Commercial leisure uses and open space uses including natural, green or open spaces and biodiversity net gain opportunities subject to engagement with site promoters to ascertain an appropriate mix of of uses and capacities.</p>	<p>Post 2028 subject to allocation status being secured and completion of restoration works</p>

## 3 Earith

### 3 Earith

3.1 Two sites have been identified/ put forward through the desktop review or Call for Sites process. This is:

- Earith 1: New Farm, Meadow Lane, Earith
- Earith 2: Land On The South Side Of Meadow Drove, Earith

3.2 Please note that 'Colne 7: Colne Fen Farm and Fishery, South of Chatteris Road, Somersham (Colne)' also partially falls within Earith parish, but it has been included under Colne as most of the site lies within that parish area.

3.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	15 - 20 homes	Available 2029 - 2034 Build out over 1 -2 years

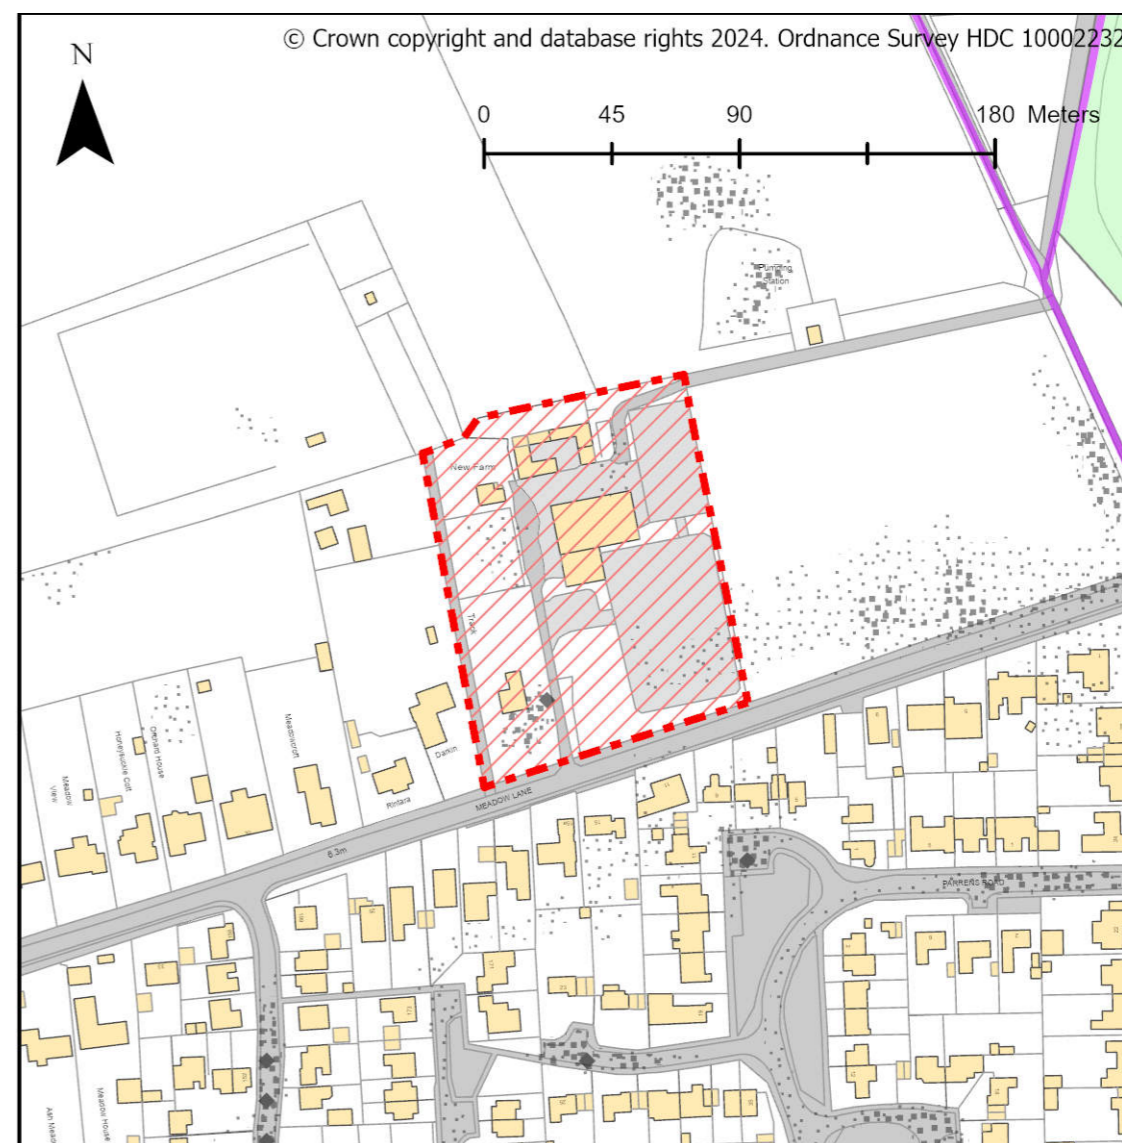

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:345
Relevant planning history	Application number: 17/00241/FUL Proposed development: Installation of horse riding arena (manege) Outcome: Permission
Land type	Partly previously developed and partly greenfield
Current use of the site	Mixed residential, commercial and agricultural uses
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly within flood zone 1, there is some recorded risk from surface water across the site. The site is wholly classified as grade 2 agricultural land. The site is generally flat and is fairly well contained with its boundaries being clearly marked out by trees and vegetation. The site is partly previously developed with existing structures on site relating to its current use as an equestrian centre with residential accommodation. To the west and the south are residential properties, to the north and east is the countryside.</p> <p>There is no known contamination or pollution on site but this may require further investigation considering the current use of the site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. The site is within 200m of the Earith Gravel Pits County Wildlife Site, is within 1km of Berry Fen SSSI and is within 0.5km of the Ouse Washes Ramsar/SPA/SSSI site. Access is possible via Meadow Lane.</p> <p>The site is partly previously developed and partly greenfield, so its development will contribute to the reuse of previously developed land and regeneration. The majority of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single organisation and let out to a tenant. The landowner supports the development of the site. There are no known legal restrictions impacting the site. The site will be available between 2029 and 2034 as the existing equestrian centre tenancy on the site expires at 2032, it is unlikely to become available prior to this. It is intended to acquire planning permission and then sell the site to a third party for development. The landowner suggests the redevelopment of the site could take between 1 and 2 years to complete.</p>	
<p><b>Achievability</b></p> <p>The site promoter has identified that all mains access and supplies are accessible from the site boundary apart from gas supply which is unknown. The current occupancy on the site is expected to end in 2032. There are buildings on site to clear and may require some decontamination. The site is fairly level, it is however constrained by some surface water flood risk. The site could be accessed from Meadow Lane.</p>	
<p><b>Deliverability / developability</b></p> <p>There are existing structures to clear and potentially some decontamination to undertake relating to the sites current use. Additionally, the location of the site on the northern edge of the village means that any future development will need to be sensitive to its location and context. It will also need to incorporate sustainable drainage solutions to address</p>	

surface water flood risk. The landowner does not expect the site to be available before 2032 as this is when the existing equestrian centre tenancy expires. As such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is classified as being grade 2 agricultural land but contains several structures and hardstanding relating to its current equestrian use
- Is within flood zone 1 but there is some risk from surface water flooding
- Limited accessibility to public transport options
- Reasonable accessibility to local services, primary education and employment opportunities
- Remote from natural green space
- Within 1km of Berry Fen SSSI, 200m of the Earith Gravel Pits CWS and is within 0.5km of the Ouse Washes Ramsar/SPA/SSSI
- Located on the northern edge of the village and is in current use as an equestrian site so redevelopment could be integrated into the existing place and community

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that could be integrated into the existing place and community
- Should provide landscaping to minimise the visual impact of development on the countryside to the north and east

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Gross site area of 1.16ha  80% net developable area allowed to enable SuDs and landscaping and provide a soft development edge to the site.	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.	Available 2029 - 2034  Build out over 1 -2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
1.16 ha x standard proportion of 80% = <b>0.93 ha</b>	Very low density of 25 dph = 0.93 ha x 25 dph = <b>23 homes</b>	

Updates after the Initial Assessment

--

**Earith 2: Land On The South Side Of Meadow Drive, Earith**

<b>Site reference</b>	Earith 2	
<b>Site name</b>	Land On The South Side Of Meadow Drive, Earith	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land On The South Side Of Meadow Drive, Earith	Earith	2.67

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	55 homes	Available 2024 - 2028 Build out over 2 years

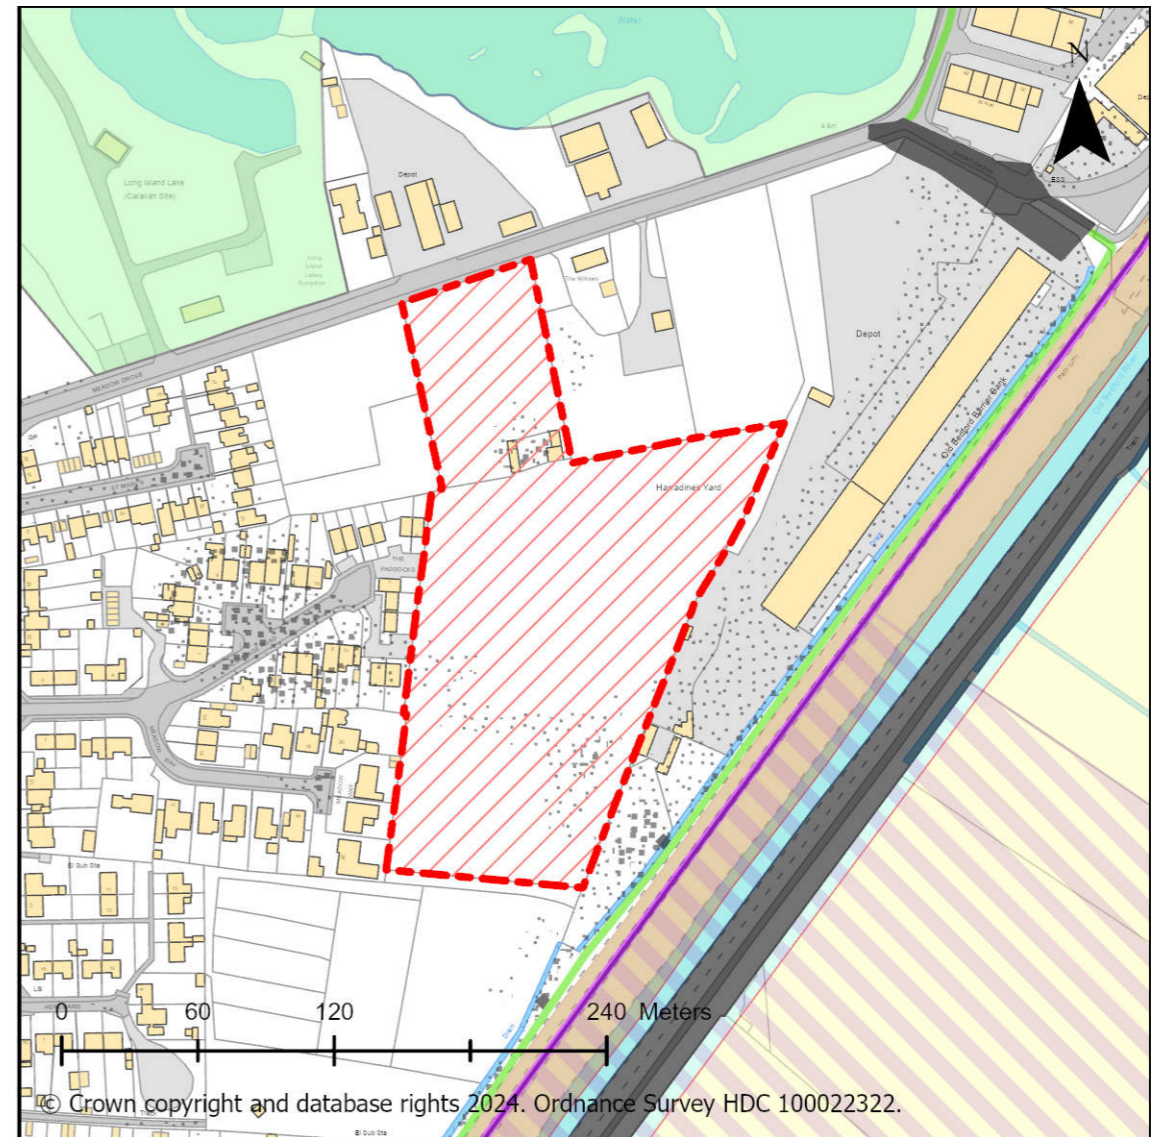

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-2410
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 with some surface water flood risk through the centre of the site. It is wholly classified as grade 3 agricultural land with a few agricultural structures on site. The site is broadly level, there is vegetation along its frontage along Meadow Drove with some gaps providing views into the site. There are intermittent trees and bushes along its eastern edge providing some screening form the Business Park but vegetation is much lower and less substantial along its western edge. To the west of the site are residential properties, to the east is the Earith Business Park, north of the site is the Earith Gravel Pits County Wildlife Site and to the south are further paddock land and the river Delph and the Ouse Washes.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. The site is within 50m of the Earith Gravel Pits County Wildlife Site and also about 50m from the Ouse Washes Ramsar/SPA/SSSI site and some 50m from a conservation area. Access is possible via Meadow Drove.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single individual/ company who supports its development. The site promoter identifies that there is housebuilder interest with the site but there is no legal agreement in place. There are no known legal restrictions impacting the site. The site promoter identifies that it is intended to acquire planning permission and then sell the site to a third party for development. They state that the site will be available between 2024 and 2028 and take two years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. The site is located on the eastern edge of Earith in a sensitive location being in close proximity to several designated nature conservation sites including the Ouse Washes which could be impacted by the proposed development. There are no topographical challenges in developing the site as it is very flat. Sustainable drainage and landscaping would be required to overcome surface water and landscaping constraints present on the site.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield so there are no existing structures to clear. There are no topographical challenges to overcome but there are some constraints to mitigate. The site promoter seeks to acquire planning permission and then sell the site to a third party for development. They</p>	~

state that there is housebuilder involved with the site and that the site will be available between 2024 and 2028. Considering this and that no planning application has been submitted, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as being grade 3 agricultural land
- Is within flood zone 1 but there is some risk from surface water flooding
- Limited accessibility to public transport options
- Limited accessibility to local services and primary education but good accessibility to employment opportunities
- Very good accessibility to natural green space
- Within 50m of the Earith Gravel Pits CWS and is within 50m of the Ouse Washes Ramsar/SPA/SSSI and about 1km from Berry Fen SSSI
- Located on the eastern edge of the village with no existing footpath connections, additionally, development would face the rear gardens of existing developments making integration further challenging
- Development would erode the rural eastern edge of the village and extend the built form further towards the Ouse Washes

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered to be inappropriate for built development considering the challenges in successfully integrating the site with the existing place and community.

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Capacity calculation not undertaken as the site is inappropriate for development due to low potential for integration with the village.	N/A	N/A

**Updates after the Initial Assessment**

### 4 Fenstanton

4.1 A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Fenstanton 1: Galley Hill, Fenstanton
- Fenstanton 2: Land West of Huntingdon Road slip road from A1307, Fenstanton
- Fenstanton 3: Land East of Hilton Road, Fenstanton
- Fenstanton 4: Land of Conington Road, Fenstanton

4.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Fenstanton 1: Galley Hill, Fenstanton**

<b>Site reference</b>	Galley Hill, Fenstanton
<b>Site name</b>	Fenstanton 1

Site address	Parish(es)	Site area (ha)
Galley Hill, Fenstanton	Fenstanton	Total site is 61ha but the site promoter only seeks development on 25ha of the site

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: <ul style="list-style-type: none"> <li>• Employment</li> <li>• Logistics, distribution</li> </ul>	Approximately 109,000 sqm of B2 and B8 floorspace. The supporting document to the site submission provides a potential break down as follows for the site: <ul style="list-style-type: none"> <li>• 50,771 sqm B8 (warehousing) floorspace</li> <li>• 50,771 sqm B2 (industrial) floorspace</li> <li>• 7,246 sqm ancillary office floorspace</li> </ul>	Available 2024 - 2028  Build out over 2 years

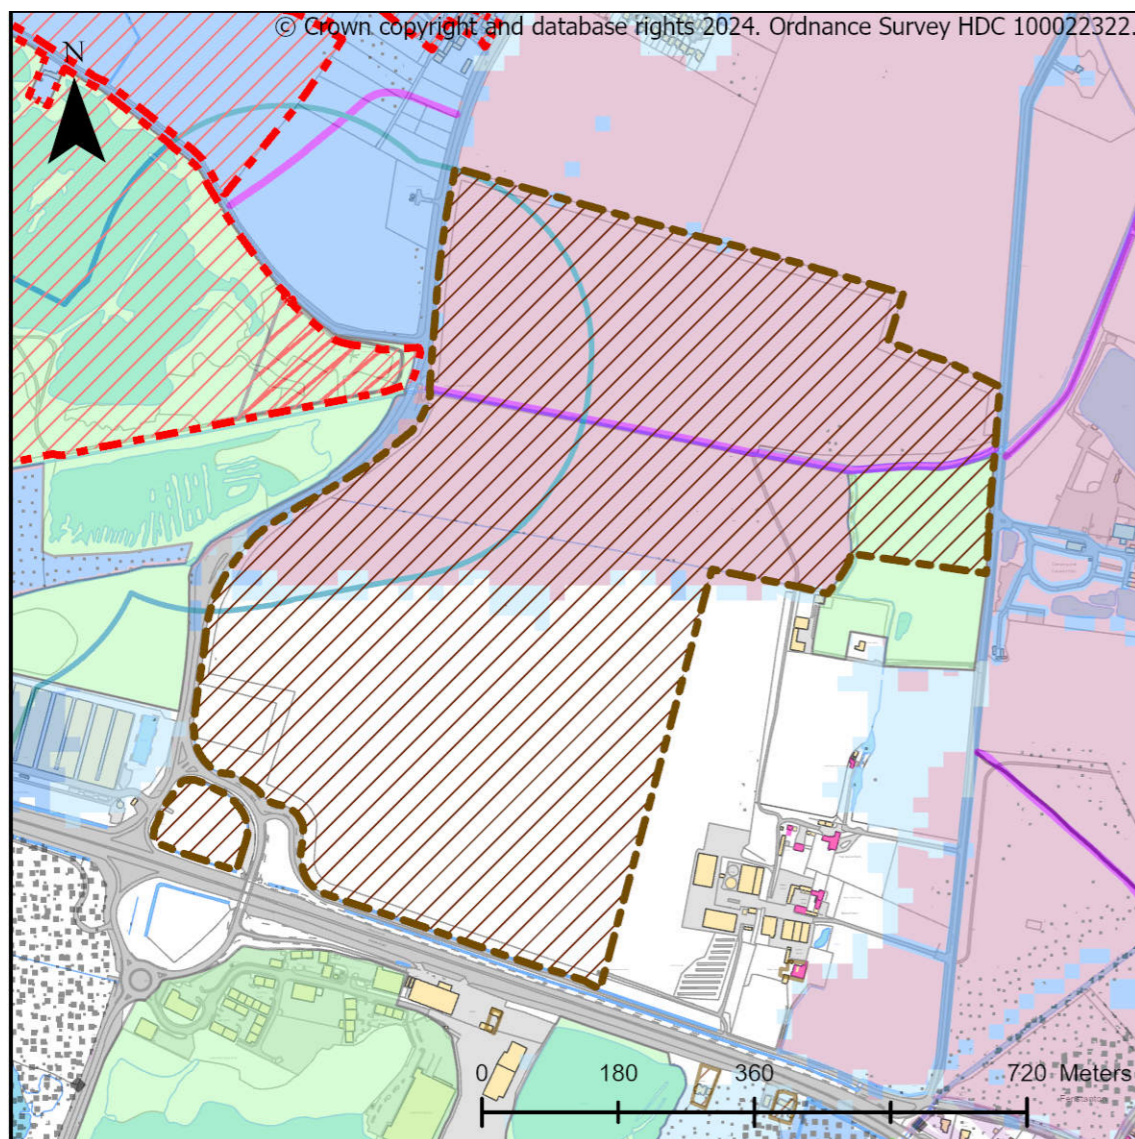

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:46
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Consultation response document (June 2023) which includes the following information:

	<ul style="list-style-type: none"> <li>• Parameters Plan (drawing number: HUN-PHP-02-XX-DR-A-4619-006 Revision P02) (March 2023)</li> <li>• Masterplan (drawing number: HUN-PHP-02-XX-DR-A-4619-001 Revision P03) (April 2022)</li> <li>• Constraints Plan (drawing number: HUN-PHP-02-XX-DR-A-4619-004 Revision P02) (April 2023)</li> <li>• Transport Strategy with indicative access strategy (June 2023)</li> <li>• Economic Benefits Assessment (June 2023)</li> </ul>
--	---

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 50% of the site is within flood zone 3b leaving more than 0.25ha of land.	Pass
Designated local green space	None	Pass
Nature conservation designation	The Low Road Meadows (West) County Wildlife Site partially falls within the site.	Pass
Within mineral development area or water recycling area	Part of the western edge of the site is within the buffer zone for a mineral development area.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

the south western edge of the site is classified as non-agricultural land. The site is broadly flat with land levels not varying greatly. A public right of way runs across the northern half of the site, this runs alongside Lake Brook. The site is fairly open and via field boundaries split into three distinct land parcels with trees and vegetation clearly defining these and the outer edges of the site which assists in obscuring the site from view. The site is bound by Huntingdon Road to the south, London Road to the west, farm buildings to the east and open land to the north.

There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. The site is north of parcels of land included within the A14 Fenstanton Air Quality Management Area. The Low Road Meadows (West) County Wildlife Site partially falls within the site. There are no heritage designations on site but there is a cluster of listed farmhouses and barns to the east of the site including Hall Green Farm and Manor Farm. The land parcel is currently accessed from Low Road via an existing informal priority tee junction arrangement, currently serving a farm. The supporting statement states that a Transport Strategy has been undertaken to support this submission and can be found in Appendix E. It is proposed that the London Road junction with St Ives Road is improved to a roundabout junction as part of the development proposals, with an arm designed to serve the site as part of the indicative access strategy. The site promoter also states that initial traffic impact assessment work has been carried out and it is concluded that the local highway network will not incur material changes in operational efficiency as a result of the development. Further detailed work is still required and engagement with Cambridgeshire County Council and other relevant authorities will be required to assess this.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site but part of its western edge is within the buffer zone of a mineral development area.

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is physically detached from Fenstanton village and is located on the opposite side of the A1307 from the Lakes Business Park. About 40% of the site is within flood zone 1, with 56% of the site being in flood zone 3b (this consists of the northern half of the site) and the rest in flood zone 2. This is largely attributed to watercourses running through the site such as Lake Brook. There is minimal surface water flood risk in some areas of the site. The site promoter states in their submission that all built development can be accommodated on land classified as being in flood zone 1. This is demonstrated later in Appendix B to their supporting statement through a masterplan of the site. Over a third of the site is classified as grade 2 agricultural land, another third is classified as grade 3 and</p>	~
--	---

<p><b>Availability</b></p> <p>The site is in single ownership, the landowner supports the development of the site. The site has been optioned. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the landowner. The site promoter states that the site will be available between 2024 and 2028 and take about 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all mains access and supplies are accessible from the site boundary. There are no buildings on site to clear. The site is fairly level, the northern half of the is however constrained by fluvial flood risk. Incorporating the northern land allows for the holistic planning of the site and incorporation of appropriate landscaping and</p>	~

<p>sustainable drainage. This part of the site also includes the County Wildlife Site which could be sensitively incorporated into proposals, however the impact of commercial development on the protected site will require further assessment. There is an existing farm access to the site from Low Road but it is proposed to improve the London Road junction with St Ives Road is improved to a roundabout junction as part of the development proposals. The achievability of this will need to be assessed further with Cambridgeshire County Council. The public right of way will also need to be considered and incorporated as part of any landscaping or sustainable drainage scheme.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear and masterplanning and some technical studies have already been undertaken to development site proposals. Fluvial flood risk is a significant constraint on the northern half of the site, it is proposed to place built development on the southern parcel which is classified as flood zone 1. The site promoter states that the site has been optioned and that it should be available between 2024 and 2028. They anticipate it being delivered directly by the landowner. The site is located on the opposite side of the A1307 from the Lakes Business Park. The access and transport improvements need to be scoped out further. As such the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land with about a third of the site being classified as grade 2 agricultural land</li> <li>• Over half of the site is within flood zone 3b</li> <li>• Detached from a main settlement but located adjacent to an existing business park</li> <li>• Well connected to the strategic transport network if an access can be provided on it but poorly located for public transport options</li> <li>• Remote from natural green space</li> <li>• Located within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• The Low Road Meadows (West) County Wildlife Site partially falls within the site and the Marsh Lane Gravel Pits CWS and Fenstanton Pits (West End Pits) CWS are within 200m of the site.</li> <li>• Potential for some impact on heritage assets</li> <li>• Opportunity to provide a significant amount of land for employment development</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- Has potential to provide built development of a scale that could compliment nearby uses
- Should provide landscaping to minimise the visual impact of development on the countryside to the north
- Provide an appropriate access from the A1307 and or A1096
- Development should be focused within the southern half of the site to avoid land that it is at risk of flooding and constrained by nature conservation designations

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area is 61ha (including 0.92ha for the island land parcel where a new roundabout is proposed) but built development is only proposed on 25ha of the site as this is not within flood zone 3b. As such the site area has been reduced to 25ha.</p> <p>For solely employment developments, the gross site area is used as there is usually being minimal differences between net and gross site areas in schemes providing purely employment uses due to the need for large amounts of hardstanding for parking, manoeuvring and deliveries and more incidental landscaping.</p>	<p>Commercial - employment</p> <p>The site promoter states that the site could provide a mix of offices, B2 (industrial) and B8 (warehousing) uses, the 0.4 plot ratio is most appropriate to use to calculate an indicative capacity:</p> <p>0.40 plot ratio x 25 ha = 10 ha of land for employment uses</p> <p>equating to <b>100,000 sqm.</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 2 years</p>

**Updates after the Initial Assessment**

<p> </p>

Page 1137 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 with some surface water flood risk on its northern edge where the site adjoins Cambridge Road. Northern half of the site is classified as grade 3 agricultural land, the southern half is classified as grade 2. It is a narrow site extensively covered by trees. The site fairly flat and is well contained by extensive trees</p>	~
---	---

<p>and vegetation. The site appears to have been used for some storage. The entirety of the western edge of the site is covered by a Tree Preservation Order area and along its eastern edge is a line of trees largely screening the site from view. To the north and west are residential properties, to the south is the A1307 and to the east is Huntingdon Road which forms a flyover to the A1307.</p> <p>There is no known contamination on site but this may require further investigation as this site and the adjoining site which has now been redeveloped, have potential of contamination arising from the previous use of the land including historic road construction works. There are no oil pipelines running through the site, but the site promoter has identified that a gas main runs through part of the site. The proximity of the site in relation to the A1307 may give rise to additional levels of air, noise and visual pollution which may require mitigation. There are no nature conservation designations or heritage designations on site. Access is possible via Cambridge Road/ Huntingdon Road where there is an existing access into the site but this is at a point where several roads meet and joins with the flyover to the A1307, therefore consultation with Cambridgeshire County Council will be required to ascertain if this is an appropriate point of access.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration although there appears to be some storage units on site which will need to be removed. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and take one year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are no buildings on site to clear but some storage units will be have to be removed. The site is fairly level, it is however constrained by protected trees and its proximity to the A1307. The site promoter identifies that a gas main runs through part of the site but considers that development can still be accommodated with the required offset. Access is possible via Cambridge Road/ Huntingdon Road where there is an existing access into the site but this will need to be assessed to ascertain if this would be appropriate. Additionally, taking into consideration the narrowness of the site and the presence of extensive TPO protected trees, the A1307 and gas mains, means it is highly constrained</p>	~

<p>in design terms meaning it will be incredibly challenging to deliver a high quality living environment for any future residents. This is likely to result in a linear form of development which would be functionally very detached from the rest of the village.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location of the site in proximity to the A1307 will need mitigation as will be impact on protected trees. The site promoter does not appear to seek an allocation status for the site but intends to acquire planning permission and then sell the site to a third party for development. The site promoter states the site is available now but taking into account the constraints to development and that no planning application has been submitted yet, the site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Has been used for storage but is classified as being grade 2 and 3 agricultural land</li> <li>• Is within flood zone 1 but there is some risk from surface water flooding</li> <li>• Good accessibility to public transport options, local services, primary education and employment opportunities</li> <li>• Remote from natural green space</li> <li>• May be impacted from increased levels of pollution due to its proximity to the A1307</li> <li>• Whilst it adjoins existing residential development on its western edge there is no connectivity through to it from the site making integration more challenging with the existing place and community and would therefore not support sustainable place making</li> <li>• TPO protected trees on site</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development as it would be extremely challenging to successfully integrate development due to its access constraints</li> <li>• Is constrained by TPO protected trees, its proximity to the A1307 and narrowness which cumulatively would be challenging to design a scheme that could address these and still provide a high quality living environment</li> </ul>
---

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Assessment of Site Potential

Page 1140 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The vast majority of the site is within flood zone 1 but a very small area of the land abutting Hilton Road is classed as flood zone 3a. Across the site there are pockets of land at risk from surface water flooding. The land is wholly classified as grade 3 agricultural land. The site is located to the south of the A1307 and is adjacent to development at Hilton Road. It is currently used for arable farmland, as such it is detached from the main settlement of Fenstanton. The site is broadly level with some trees and vegetation along its boundaries, however these are not continuous so there are longer range views into and out of the site. Development in this location at scale is likely to alter the mainly rural character of this location and give rise to significant landscape impact. There are some residential properties along its western edge and to the south west with the open countryside to the south and east as well as the A1307 to the north with a small parcel of private land separating the site from the A1307.</p> <p>There is no known contamination on site. There are no oil or gas pipelines running through the site, but electricity lines run along the site's frontage along Hilton Road. The proximity of the site in relation to the A1307 may give rise to additional levels of air, noise and visual pollution which may require mitigation. The northern most part of the site adjoins an Air Quality Management Area associated with the former A14 (now A1307) works. There are no nature conservation designations or heritage designations on site. However, the site is adjacent to several listed buildings: The Gables (Grade II Listed), the Barn to the east/south-east of The Gables Farmhouse (Grade II Listed) and the Barn to the south east of The Gables Farmhouse (Grade II Listed). Given the current undeveloped nature of the site and the proximity of the adjacent listed buildings, development of the site could have a detrimental impact upon the settings of heritage assets. Access is possible via Hilton Road, the scale of the proposed development in this location means that engagement with Cambridgeshire County Council will be required to ascertain if this is an appropriate point of access.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a multiple owners, the site promoter identifies that the site is in multiple control with a legal agreement in place and that development is supported by all owners. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 3 years to complete.</p>	+

<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are no buildings on site to clear and is fairly level, it is however constrained by heritage assets and its potential landscape impact as well as its proximity to the A1307. Access is possible via Hilton Road but it will need to be assessed whether this is an appropriate point of access. Additionally, the site is physically detached from Fenstanton connected via a pedestrian footpath running under the A1307, as such integrating it with the existing settlement will be challenging It would also densify the largely rural character of the area where residential development is minimal and loose knit.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location of the site in proximity to the A1307 will need mitigation as will the impact on heritage assets and the landscape. The site promoter does not appear to seek an allocation status for the site but intends to acquire planning permission and then sell the site to a third party for development. The site promoter states the site will be available between 2024 and 2028 and taking into account the constraints to development and that no planning application has been submitted yet, the site is categorised as developable.</p>	~

Progression of Site through to Sustainability Appraisal

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

Impact of the Sustainability Appraisal on the assessment

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land largely within flood zone 1 apart from a small amount of the site being in flood zone 3a along Hilton Road</li> <li>● Is physically detached from the main built form of Fenstanton separated by the A1307</li> <li>● Potential for increased levels of pollution arising from its proximity to the A1307</li> <li>● Has very limited access to public transport options</li> <li>● Access to services and facilities, primary education and employment opportunities</li> <li>● Remote from natural green space</li> <li>● Located within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>● Potential for adverse impacts on heritage assets</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is inappropriate for built development due to the adverse impacts on the landscape and on heritage assets disrupting the character of the area. Also, the site's detached nature from Fenstanton would not support sustainable place making.

**HDC's Delivery Calculations**

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

former Conington Road routeing. Parcels C and D (the most easterly of the parcels south of Conington Road) are bisected by the southerly spur of the realigned Conington Road.

The site is within flood zone 1, however a very small portion of the south western corner of parcel B is at a higher risk of flooding. This is associated with existing watercourses located beyond the site boundaries to the west and east of the site. There is recorded risk form surface water flooding along the south-west boundary and within the central parts of the site. Parcel A is wholly classified as grade 2 agricultural land, parcel B is mainly grade 3 with only a small portion of its north eastern corner being grade 2, parcel C is half grade 2 and half grade 3, and parcel D is mainly grade 3 agricultural land with only some of its northern edge being grade 2 agricultural land. The site generally flat with some vegetation and trees along its site boundaries. The site is very open and with minimal vegetation to enclose the site visually, development is likely to have significant landscape impacts and require substantial levels of landscaping and green infrastructure to mitigate this impact.

There is no known contamination on site, however the site promoter has stated that an assessment of contamination will need to be undertaken as there may be contamination relating to the current and historic agricultural use of the site. There are no oil pipelines running through the site but there is an existing water main cutting across the central part of the site and an intermediate pressure gas main running along the southern site boundary. The site is located to the south of the A1307 (formerly the A14), as such there are likely to be increased levels of air, noise and visual forms of pollution which will require mitigation. There are no nature conservation designations or heritage assets within the site. However, there are three grade II listed buildings (The Gables, Barn and Former Barn) Hilton Road & along Hilton Road located to the north of Parcel B whose setting could be impacted by development. There are public rights of way running along the northern and eastern edges of Parcel A which extend out into the open countryside and also run through the eastern half of Parcel D. The Transport Technical Note identifies that vehicular access to the development parcels comprising the site can be achieved via Conington Road with with suitable junction arrangements. The exact location and form of the junctions, priority T-junctions or roundabouts, will be discussed and agreed with Cambridgeshire County Council.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site has four distinct land parcels currently used for agricultural purposes. The Transport Technical Note submitted as part of this call for sites submission have identified them as parcels A-D (for ease, these will be used in this site assessment):</p> <ul style="list-style-type: none"> <li>Parcel A lies on land to the south of the A1307 (Cambridge Road) and north of Conington Road.</li> <li>Parcels B-D are all on land to the south of Conington Road. Parcels B (the most westerly of the parcels south of Conington Road) and C (the central of the parcels south of Conington Road) are bisected by an existing agricultural access road, the</li> </ul>	
---	--

<p><b>Availability</b></p>	<p>+</p>
----------------------------	----------

<p>The site is in single family ownership with a promotion agreement in place. The site promoter has identified that the development is supported by the landowners and that there are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 8 years to complete.</p>	
<p><b>Achievability</b></p> <p>The Civils Technical Note that supports the call for site submission identifies that asset plans have identified existing potable water, electric and gas infrastructure located within the proposed site boundaries. There is an existing water main cutting across the central part of the site, an intermediate pressure gas main running along the southern site boundary, and a small section of existing electrical apparatus located within the north-west part of the site which serves the existing Model Farm. The public highway and digital and telecommunications infrastructure are accessible from the site boundary. There are no buildings on site to clear and the site is fairly level. There are likely to be substantial landscape impacts arising from the development which will require mitigation as will impact due to the site's proximity to the A1307. Access is possible via Conington Road but it will need to be assessed whether this road can accommodate the proposed scale of development and the necessary transport infrastructure works. Additionally, the site is physically detached from Fenstanton, while the scale of the proposed development is proposed to be a somewhat self sustaining community with a small local centre and some employment opportunities, there will still be the need to access services and education within Fenstanton. Therefore, integrating it with the existing settlement will be challenging. It would also densify the largely rural character of the area.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location of the site in proximity to the A1307 will need mitigation as will the impact on the landscape and the rural nature of the area. The presence of a gas mains will also need to be considered in future design proposals. The site promoter does not appear to seek an allocation status for the site but intends to acquire planning permission and then sell the site to a third party for development. The site promoter states the site will be available between 2024 and 2028. Taking into account the scale of potential development and the constraints to development and that no planning application has been submitted yet, the site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land largely within flood zone 1 apart from a small amount of the site being at a higher risk of flooding</li> <li>• Is physically detached from the main built form of Fenstanton separated by the A1307</li> <li>• Potential for increased levels of pollution arising from its proximity to the A1307</li> <li>• Has very limited access to public transport options</li> <li>• Limited accessibility to services and facilities, primary education and employment opportunities as there is no footpath connecting the site.</li> <li>• A pedestrian route is available via an underpass, however this may present safety concerns which would require assessment.</li> <li>• Remote from natural green space</li> <li>• Located within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Potential for adverse impacts on heritage assets</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The development could not be masterplanned so that it would effectively integrate with the existing place and community due to its physical detachment from the main settlement (Fenstanton) which is located on the other side of the A1307.</li> <li>• Would not support sustainable place making.</li> <li>• Presents safety concerns due to potential increased usage of underpass to access Fenstanton.</li> <li>• Is inappropriate for built development due to the adverse impacts on the landscape and on heritage assets.</li> <li>• Would significantly disrupt the rural character of the area due to the scale of the proposal</li> </ul>

## 5 Hemingford Grey

5.1 A total of 13 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Hemingford Grey 1: Mill Lane Field, Hemingford Grey
- Hemingford Grey 2: Land West of Cullum Farm, London Road, Hemingford Grey
- Hemingford Grey 3: Land South of Marsh Lane and East of Long Lane, Hemingford Grey
- Hemingford Grey 4: Land North of Marsh Lane and East of Dendys, Hemingford Grey
- Hemingford Grey 5: Land off Gore Tree Road, Hemingford Grey
- Hemingford Grey 6: Land East of Daintree Way, Hemingford Grey
- Hemingford Grey 7: Land West of Cullum Farm and Yes! Estate, London Road, Hemingford Grey
- Hemingford Grey 8: Garden at 1 Hemingford Road, St Ives (Hemingford Grey)
- Hemingford Grey 9: Land South of Hemingford road, Hemingford Grey
- Hemingford Grey 10: Dockesy's Farm, North of St Ives Road, Hemingford Grey
- Hemingford Grey 11: Hemingford Grey Lake, South of Marsh Lane, Hemingford Grey
- Hemingford Grey 12: Land North of Hemingford Road, Hemingford Grey
- Hemingford Grey 13: Land West of London Road, Hemingford Grey

5.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

### Hemingford Grey 1: Mill Lane Field, Hemingford Grey

Note: This site has been submitted twice, once by the landowners (Cambridgeshire County Council) and by Hemingford Grey Paris Council for differing uses:

- CfS:29 for open space uses (natural, green or open space uses, and biodiversity net gain opportunities) and land for a cemetery. This was submitted by Hemingford Grey Parish Council.
- CfS:336 for residential development by Cambridgeshire County Council (the landowners).

Each permutation has been assessed within this site assessment to avoid duplication.

<b>Site reference</b>	Hemingford Grey 1
<b>Site name</b>	Mill Lane field, Hemingford Grey

Site address	Parish(es)	Site area (ha)
Mill Lane field, Hemingford Grey	Hemingford Grey	5.45

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Proposed use submitted by landowner under CfS:336: Residential: Market and/or affordable housing	70+ homes	Available 2024 - 2028 Build out over 3 - 4 years
Proposed use submitted by Hemingford Grey Parish Council under CfS:29 Open space uses: Natural, green or open spaces Biodiversity net gain opportunities Other: Cemetery	2.22ha for open spaces 2.23ha for biodiversity net gain 1ha for cemetery	Available 2024 - 2028 Complete over 2 - 3 years

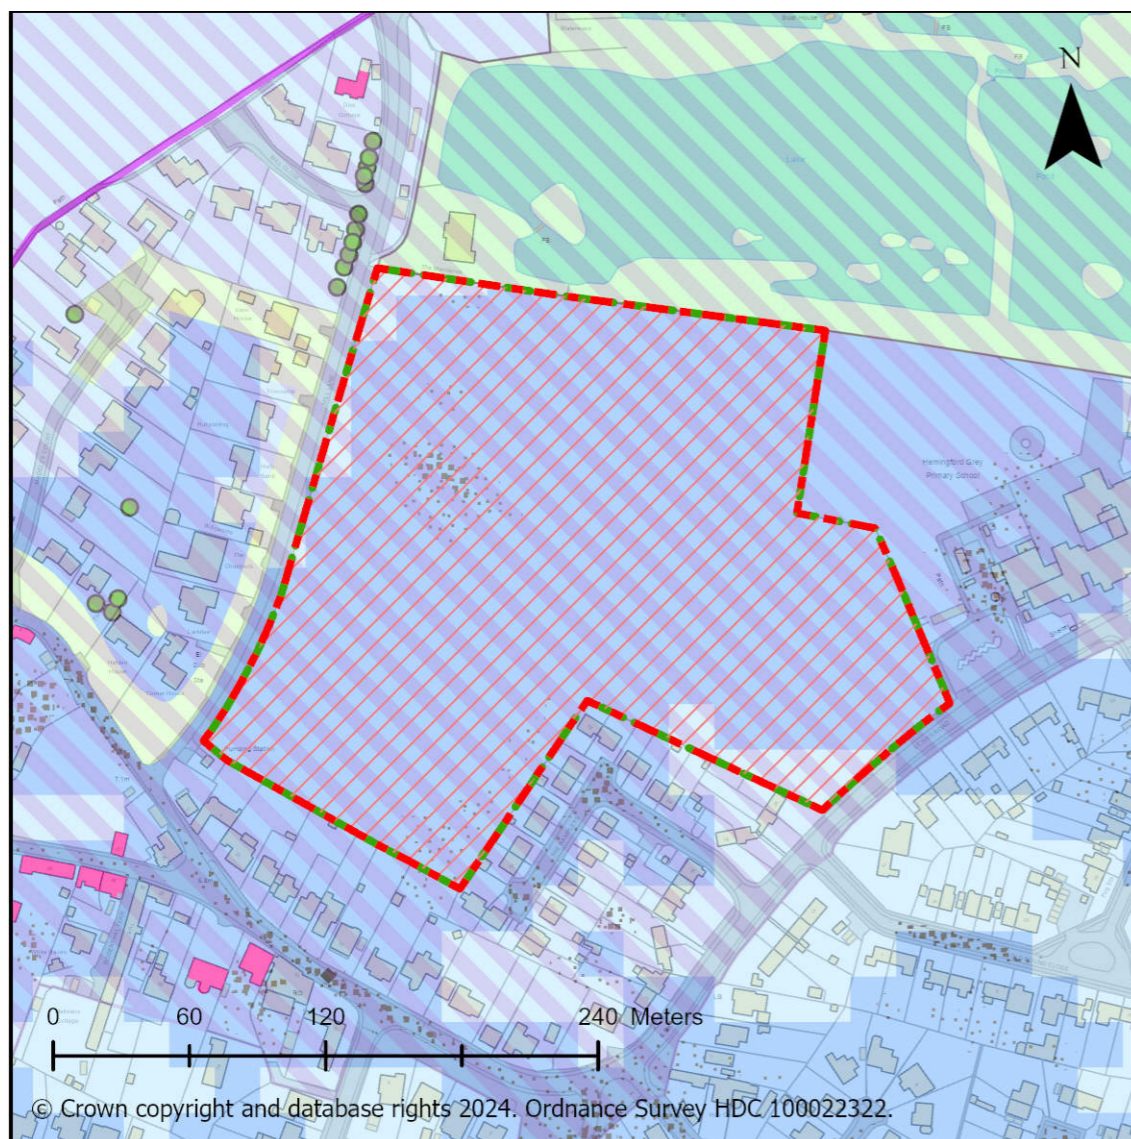

#### Core information

How was the site identified?	Call for Sites 2023 submissions: 1. site reference CfS:29 by Hemingford Grey Parish Council 2. site reference CfS:336 by Cambridgeshire County Council (the landowners)
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	90% of the site is within flood zone 3a but not in flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Call for Sites Reference Number:</b>	<b>336</b>	<b>29</b>
<b>Context, constraints and potential suitability</b>		
Approximately 90% of the site is classified as being in flood zone 3a with the remaining land being flood zone 2, this makes the proposed residential uses submitted under CfS:336 unsuitable as there is not sufficient amount of land left in a lower flood zone (or any in flood zone 1) that could accommodate residential development. Residential uses are classified as being a more vulnerable use as per NPPF and development in such locations are strongly discouraged. However, the site could potentially be used for open space and biodiversity net gain as submitted under CfS:29. It may not be suitable for a cemetery as submitted under CfS:29 due to the level of flood risk on the site which could result in greater	-	+

risk of contamination. This would require guidance and engagement with the Environment Agency. The site also has some surface water flood risk. The majority of the site is classified as grade 3 agricultural land with the northern quarter being classified as grade 4. The site is broadly flat with planting along its boundaries, most densely along its western edge along Mill Lane and also along its northern edge where the site adjoins the Hemingford Grey Gravel Pits County Wildlife Site. The site's boundaries are more open on its eastern edge. To the south and west are residential properties, to the north the County Wildlife Site and to the east Hemingford Grey Primary School.

There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations on site but it adjoins the Hemingford Grey Gravel Pits County Wildlife Site to the north. The site is wholly located within a conservation area and there is a grade II listed building (Oak Cottage) abutting the southwestern edge of the site. Access is possible via St Ives Road.

The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is owned and controlled by a single organisation. The landowner supports the development of the site for residential uses. There are no known legal restrictions impacting the site. The site promoter working on behalf of the landowners state that it is their intention to acquire planning permission and then sell to a third party for development. They state that the site could be available between 2024 and 2028 and take 3 to 4 years to complete.

A third party also submitted this site for consideration, in their submission they state that they wish buy or lease the land from the landowner and would then apply for the necessary planning permissions for cemetery and other natural, green or open space use. The availability of the site to this third party is therefore dependent upon agreement with the landowner.

**Achievability**

Hemingford Parish Council in their submission state that all mains access and supplies are accessible from the site boundary. The site promoter working on behalf of the landowner state that the public highway and digital and telecommunications infrastructure are accessible from the site boundary but gas supply, mains water supply and electricity supply are unknown. There are no buildings on site to clear. The site is fairly level, it is however heavily constrained by fluvial flood risk, as such residential uses are considered to be unsuitable but open space and biodiversity uses could be pursued on site. The potential cemetery is also uncertain without further engagement with the Environment Agency.

+	~
-	~

<p>Additionally, the Parish Council identify that grants and/or loans would be required for them to develop the cemetery and open space and biodiversity with tree planting and footpaths. The Parish Council have stated that they wish to buy or lease the land from the landowner for such uses. The site could be accessed from St Ives Road.</p> <p>The potentially suitable open space and biodiversity net gain uses have not been submitted by the landowners and also conflict with the aspirations of the landowner, as such the achievability of delivering these land uses is uncertain.</p>		
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear, delivering open space and biodiversity net gain opportunities on the site are likely to be more achievable on the site with little need for mitigation. Residential uses are unsuitable on this site as flooding is a key development constraint and will shape future proposals in particular the type of open space and the types of habitats that could be supported and maintained on the site. The landowner has differing aspirations for the site which may impact the delivery of the site for open space and biodiversity net gain. As such, the site is categorised as developable.</p>	-	~

- May be appropriate for open space uses and biodiversity net gain opportunities providing linkages to the CWS and within the Green Infrastructure Priority Area. Although the flood risk on the site will shape the type of open space and the types of habitats that could be supported and maintained on the site.
- It may not be suitable for a cemetery as submitted under CfS:29 due to the level of flood risk on the site which could result in greater risk of contamination
- This is also subject to the agreement of the landowners who have differing aspirations for the site and also if funding can be secured to deliver the open space uses and biodiversity net gain projects.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The gross site area is 5.45 ha	Open space uses and biodiversity net gain opportunities  5.45ha of land for such uses	Available 2024 - 2028  Complete over 2 - 3 years - subject to grant funding and agreement of the landowners

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>The site will progress to the sustainability appraisal stage but it will only be appraised for open space uses and biodiversity net gain opportunities. The risk of flooding on site makes the site unsuitable for residential uses and as a cemetery.</p>
---	---

**Updates after the Initial Assessment**

<p> </p>
----------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Is significantly constrained by fluvial flooding with 90% of the site within flood zone 3a</li> <li>• Is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Is located within a conservation area and adjacent a listed building</li> <li>• Very limited accessibility via public transport options but accessible on foot or cycle</li> <li>• Located within the main built form of Hemingford Grey adjoining residential development and primary school so can be integrated into the existing place and community</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

**Hemingford Grey 2: Land West of Cullum Farm, London Road, Hemingford Grey**

<b>Site reference</b>	Hemingford Grey 2
<b>Site name</b>	Land West of Cullum Farm, London Road, Hemingford Grey

Site address	Parish(es)	Site area (ha)
Land West of Cullum Farm, London Road, Hemingford Grey	Hemingford Grey	1.4

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Custom and self build housing	30 - 40 homes	Available 2024 - 2028 Build out over 2 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:91
Relevant planning history	None relevant HELAA (December 2017): West of Cullum Farm
Land type	Part greenfield and part previously developed
Current use of the site	Agricultural land and residential
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	The whole of the site is located within flood zone 3a but none in flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 3a. The site promoter has put the site forward for residential uses which are classes as being more vulnerable in the NPPF. There is some surface water flood risk towards the centre of the site. The site is wholly classified as grade 3 agricultural land. The site is broadly flat and includes a farm house and associated buildings on the eastern part, with the larger western part comprised of rough grassland, used for grazing ponies. To the north of the eastern part of the site are more farm buildings and a paddock; beyond this and adjacent to the western part of the site is recent residential development; to the south and west, separated by hedgerows, is open countryside.</p>	-
--	---

<p>There is no known contamination or pollution on site but this may require further investigation considering the current agricultural use of the site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. Access can be achieved from London Road.</p> <p>The site is mostly greenfield with some previously developed land where the farmhouse is, so its development will somewhat contribute to the reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership but the site promoter states that it is within individual control. They state that all landowners support the development of the site. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by a housebuilder. The promoter suggests the land will be available between 2024 and 2028 and take between 2 and 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are buildings on site to clear and it is heavily constrained by fluvial flood risk with all of the site being within flood zone 3a. The site can be accessed from London Road where there is an existing access to the site.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are some existing structures to clear but there is very significant risk from flooding across the entirety of the site meaning development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. The site promoter seeks to deliver the site directly by a housebuilder. The site promoter states the site will be available between 2024 and 2028, but considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at this time.</p>	-

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No, due to the site being wholly located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.
---	---

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
No capacity is calculated as the site is considered to be unsuitable for development	N/A	N/A

**Updates after the Initial Assessment**

<b>Site reference</b>	Hemingford Grey 3
<b>Site name</b>	Land South of Marsh Lane and East of Long Lane, Hemingford Grey

Site address	Parish(es)	Site area (ha)
Land South of Marsh Lane and East of Long Lane, Hemingford Grey	Hemingford Grey	3.4

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Custom and self build housing Nursing and care homes	25 market and/or affordable homes 14 self and custom build plots 50 bedrooms	Available 2024 - 2028 Build out over 1 to 2 years

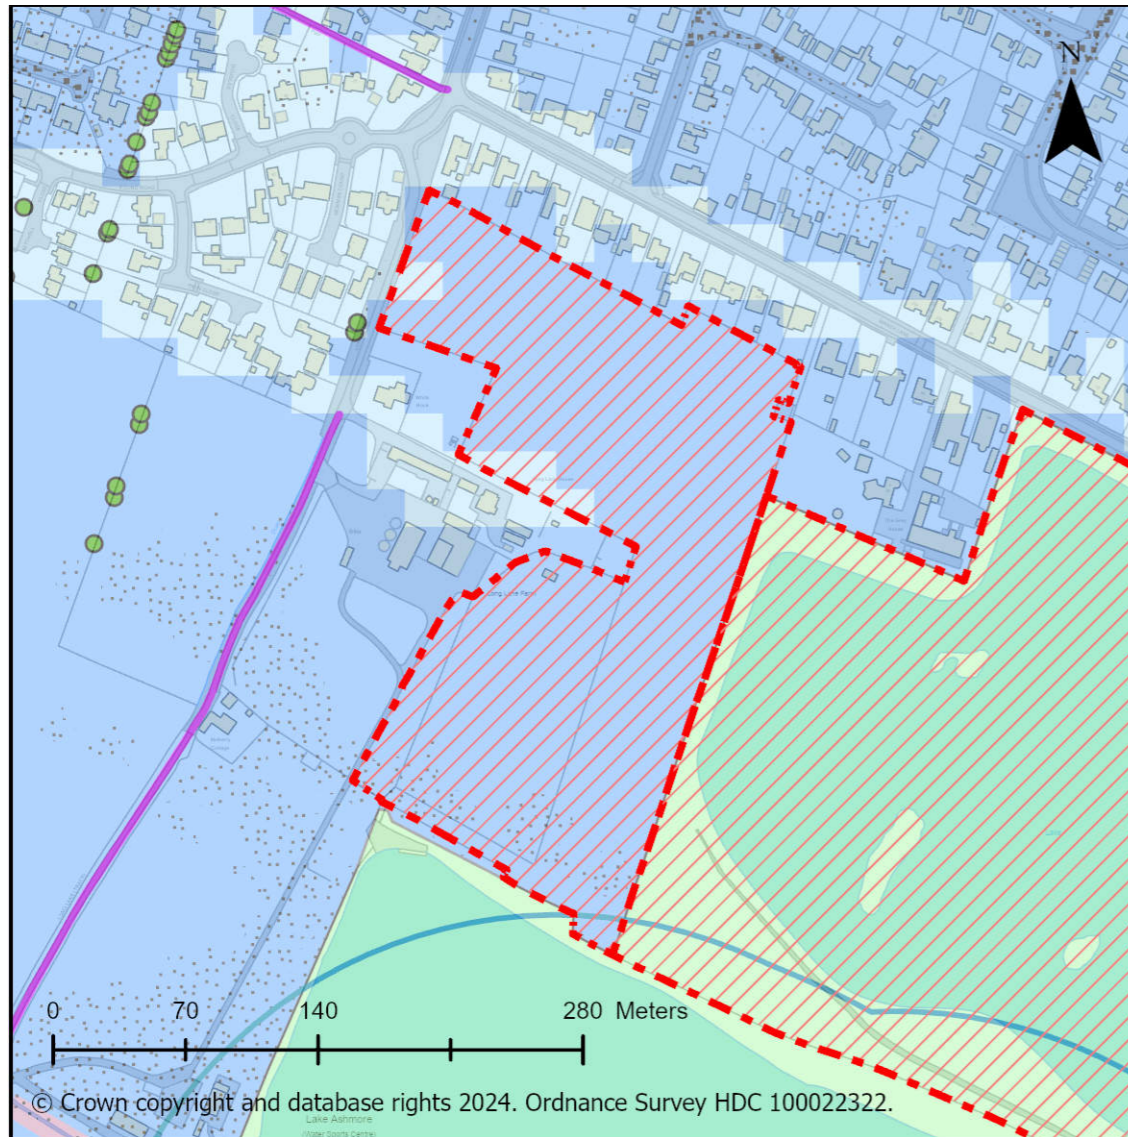

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:49
Relevant planning history	None relevant HELAA (December 2017): East of Long Lane, South of Marsh Lane, Hemingford Grey (103)
Land type	Greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	The site is almost completely within flood zone 3a but not 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is almost wholly located within flood zone 3a with a small patch of the site north of Long Lane House and Farm which is within flood zone 2. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. The site is wholly classified as grade 3 agricultural land. The site broadly level with trees and hedgerows along most of the site's boundaries apart from the western edge where it adjoins London Road where it is completely open providing views into and across the site. Trees and vegetation are most dense along the site's eastern boundary where it adjoins the Marsh Lane Gravel Pits County Wildlife Site. To the north</p>	-
---	---

<p>of the site and along a section of the eastern and western site boundaries is residential development. Abutting the remaining sides is open countryside. The Marsh Lane Gravel Pits County Wildlife Site is situated immediately east and south of the site.</p> <p>There is no known contamination or pollution on site. Telegraph poles run along the site's frontage along Long Lane. There are no gas or oil pipelines running through the site. There are no nature conservation designations on site but it adjoins a County Wildlife Site. There are no heritage designations on site. The site can be accessed from Long Lane.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports the development of the site. There are no known legal restrictions impacting the site. It is intended to acquire an allocation status for the site and then sell the site to a third party for obtaining planning permission and development. The promoter suggests the land will be available between 2024 and 2028 and take between 1 to 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from electricity supply which is available within the site. Telegraph poles run along the site's frontage. Additionally, the site adjoins a County Wildlife Site which may be impacted by the proposed development. There are no buildings on site to clear apart from outbuilding and it is heavily constrained by fluvial flood risk with all of the site being within flood zone 3a. The site can be accessed from Long Lane.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear apart from an outbuilding on site but there is very significant risk from flooding on the site across the entirety of the site means that development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. The site promoter seeks to acquire an allocation status for the site and then sell the site to a third party for obtaining planning permission and then development. The site promoter states the site will be available between 2024 and 2028, but considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at this time.</p>	-

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No, due to the vast majority of the site being located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.
---	---

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
No capacity is calculated as the site is considered to be unsuitable.

Within mineral development area or water recycling area	Part of the south eastern corner of the site is within the buffer zone of a Mineral Development Area.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1157 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 3a. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. There is some surface water flood risk along the drain that is present through the site. The site is wholly classified as grade 3 agricultural land. The land within the site is fairly level. There is a hedgerow along the site's eastern edge and along the drain. The site is very open on its northern and southern edges meaning there are longer range views into and across the site. To the south is the Marsh Lane Grave Pits County Wildlife Site, to the west is residential development and countryside to the north and east.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations on site but it is adjacent to the a County Wildlife Site. There are no heritage designations on site. The site can be accessed from Marsh Lane.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site but the south eastern corner of the site falls within the buffer zone of a mineral development area.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	-
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports the development of the site. There are no known legal restrictions impacting the site. It is intended to acquire an allocation status for the site and then sell the site to a third party for obtaining planning permission and development. The promoter suggests the land will be available between 2024 and 2028 and take 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are no buildings on site to clear and it is heavily constrained by fluvial flood risk with all of the site being within flood zone 3a. The site is adjacent to a County Wildlife Site, the impact of potential development will need to be assessed. Also, development is likely to result in significant landscape impact arising from the open nature of the site. The site can be accessed from Marsh Lane.</p>	-
<p><b>Deliverability / developability</b></p>	-

There are no existing structures to clear but there is very significant risk from flooding on the site across the entirety of the site means that development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. The site promoter seeks to acquire an allocation status for the site and then sell the site to a third party for obtaining planning permission and then development. The site promoter states the site will be available between 2024 and 2028, but considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No, due to the site being wholly located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>No capacity is calculated as the site is considered to be unsuitable.</p>

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1159 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 3a. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. About half of the site on its southern and western edges is at risk from surface water flood risk. This is attributed to a drain which defines the southern and western boundaries of the site. The site is wholly classified as grade 3 agricultural land. The land is flat and very open with no substantial vegetation on the southern and eastern boundaries. A public right of way runs along the northern boundary of the site providing further views of the site from public vantage points. North of the site is residential development, whilst to the east, south and west is predominantly open countryside.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations on site. There are no heritage designations on site but it is adjacent to a conservation area to the north west of the site. The site could potentially be accessed from Gore Tree Road but the feasibility and achievability of access will require engagement with Cambridgeshire County Council.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	-
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports the development of the site. There are no known legal restrictions impacting the site. It is intended to acquire planning permission for the site and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are no buildings on site to clear and it is heavily constrained by fluvial flood risk and surface water flood risk with all of the site being within flood zone 3a. The development is likely to result in significant landscape impacts considering the current openness of the site. Additionally, the public right of way will need to be retained within any masterplanning of the site. The achievability of the access from Gore Tree Road also requires further scoping.</p>	-
<p><b>Deliverability / developability</b></p>	-

There are no existing structures to clear but there is very significant risk from flooding on the entirety of the site meaning development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. The site promoter seeks to acquire planning permission and then sell the site to a third party for development. The site promoter states the site will be available between 2024 and 2028, but considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to the site being wholly located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.</p>

<p>No capacity is calculated as the site is considered to be unsuitable.</p>		

**Updates after the Initial Assessment**

## Hemingford Grey 6: Land East of Daintree Way, Hemingford Grey

Note: This site has been submitted twice, once by the landowner and by Hemingford Grey Parish Council for differing uses:

- CfS:105 for residential development by an agent working on behalf of the landowner
- CfS:170 for infrastructure (transport/parking), open space uses (natural, green or open space, and biodiversity net gain opportunities) and a cemetery by Hemingford Grey Parish Council.

Each site submission has been assessed within this site assessment to avoid duplication.

<b>Site reference</b>	Hemingford Grey 6	
<b>Site name</b>	Land East of Daintree Way, Hemingford Grey	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land East of Daintree Way, Hemingford Grey	Hemingford Grey	5.8

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Proposed use submitted by landowner under CfS:105: Residential: Market and/or affordable housing	170 homes (102 market and 68 affordable homes at 30dph)	Available 2024 - 2028 Build out over 4 years
Proposed use submitted by Hemingford Grey Parish Council under CfS:170 Infrastructure: • Transport and parking Open space uses: • Natural, green or open spaces • Biodiversity net gain opportunities	0.15ha for parking 2.3ha for natural or open space 2.3ha for biodiversity net gain 1ha for cemetery	Available 2024 - 2028 Complete over 2 - 3 years

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Other: • Cemetery		

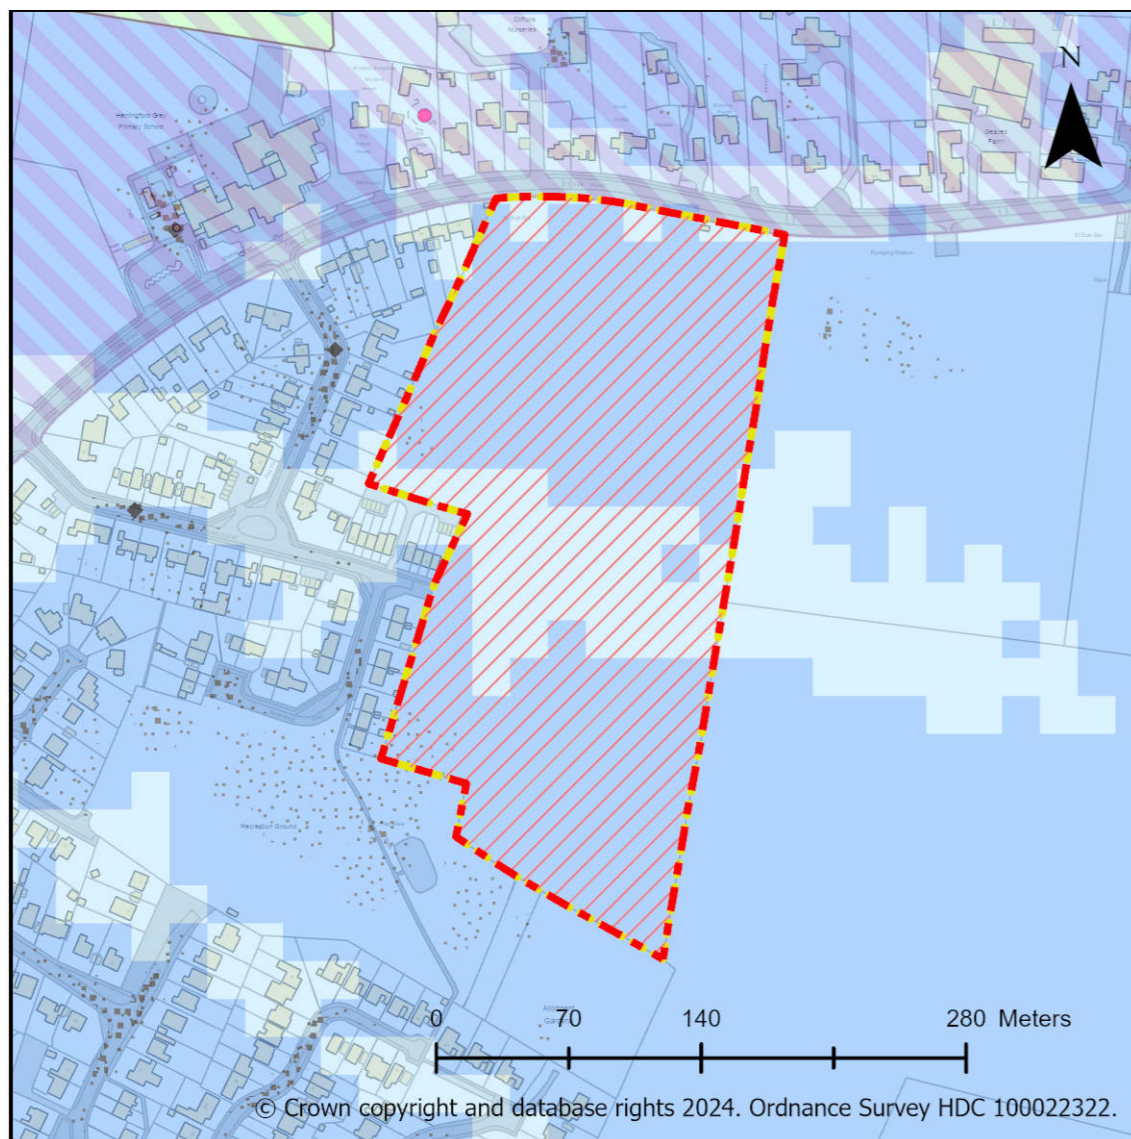

### Core information

How was the site identified?	Call for Sites 2023 submissions: 1. site reference CfS:105 by the landowner 2. site reference CfS:170 by Hemingford Grey Parish Council
Relevant planning history	None relevant  HELAA (December 2017): South of St Ives Road, East of Old Pount Close, Hemingford Grey (121)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	The following have been submitted under CfS105: • Access and Transport Statement (April 2023) • Flood Risk and Drainage Site Appraisal (November 2022)

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 75% of the site falls within flood zone 3a and 25% in flood zone 2. None in 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 1161 of 3488

**Assessment of Site Potential**

Call for Sites Reference Number:	105	170
Context, constraints and potential suitability	-	+

Approximately 75% of the site falls within flood zone 3a and 25% in flood zone 2, this makes the proposed residential uses submitted under CfS:105 unsuitable as there is not sufficient amount of land left in a lower flood zone (or any in flood zone 1) that could accommodate residential development. Residential uses are classified as being a more vulnerable use as per NPPF and development in such locations are strongly discouraged. The site promoter working on behalf of the landowner has submitted a Flood Risk and Drainage Assessment which concludes that whilst the site is within flood zone 3, it benefits from defences making it safe from flooding. The updated SFRA has shown that the site is still within flood zone 3a. Rather than housing, the site could potentially be used for open space and biodiversity net gain as submitted under CfS:170. It may not be suitable for a cemetery or for parking as submitted under CfS:170 due to the level of flood risk on the site which could result in greater risk of contamination and surface water runoff. This would require guidance and engagement with the Environment Agency and Cambridgeshire County Council as the Local Lead Flood Authority and as the Highways Authority. The site has minimal risk from surface water flood risk. The majority of the site is classified as grade 3 agricultural land with the northern edge being classified as grade 4. The site broadly flat and is bordered by trees and hedgerows which provide some screening, but there are long distance views across and beyond the site from the north western corner of the site on Hemingford Road towards the south east. To the south of the site are allotments and a play area, situated within the playing fields. To the opposite side of St Ives Road and to the west of the site is residential development. To the east of the site is open countryside.

There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. Electricity lines run along the site's frontage along St Ives Road/ Hemingford Road. There are no nature conservation designations on site. There are no heritage designations on site either but the site is immediately adjacent to a conservation area and the grade II listed The Windmill is nearby, approximately 60m, to the north-west of the site. Access to the site is currently available via an existing gated agricultural access from St Ives Road/ Hemingford Road to the north east of the site. Submission CfS:105 have submitted an Access and Transport Statement which sets out the proposed access to serve residential development.

The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is within the ownership of a family with multiple owners. The landowners support the development of the site for residential uses. There are no known legal restrictions impacting the site. The site promoter working on behalf of the landowners state that it is their intention to deliver the site via a housebuilder. They state that the site could be available between 2024 and 2028 and take up to 4 years to complete.

+	~

<p>A third party has also submitted this site for assessment, in their submission they state that they wish buy or lease the land and would then apply for the necessary planning permissions for cemetery and other natural, green or open space use. The availability of the site to the third party is therefore dependent upon agreement with the landowner.</p>		
<p><b>Achievability</b></p> <p>Hemingford Parish Council in their submission state that all mains access and supplies are accessible from the site boundary. The site promoter working on behalf of the landowner state that all are accessible from the site boundary apart from mains water supply which is available within the site. There are no buildings on site to clear. The site is fairly level, it is however heavily constrained by fluvial flood risk, as such residential uses are considered to be unsuitable but open space and biodiversity uses could be pursued on site. The potential cemetery is also uncertain without further engagement with the Environment Agency. Also, the potential parking uses on site which could lead to increased surface water runoff and it needs to be access if the traffic movements this would generate can be accommodate here. Additionally, the Parish Council identify that grants and/or loans would be required for them to develop the cemetery and open space and biodiversity with tree planting and footpaths. They also identify that Cambridgeshire County Council Highways would need to be consulted and would be responsible for delivering possible mixed use cycle path(s).The Parish Council have stated that they wish to buy or lease the land from the landowner for such uses. The site could be accessed from St Ives Road/ Hemingford Road.</p> <p>The potentially suitable open space and biodiversity net gain uses have not been submitted by the landowners and also conflict with the aspirations of the landowner, as such the achievability of delivering these land uses is uncertain.</p>	-	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear, delivering open space and biodiversity net gain opportunities on the site are likely to be more achievable on the site with little need for mitigation. Residential uses are unsuitable on this site as flooding is a key development constraint and will shape future proposals in particular the type of open space and the types of habitats that could be supported and maintained on the site. The landowner has differing aspirations for the site which may impact the delivery of the site for open space and biodiversity net gain. As such, the site is categorised as developable.</p>	-	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>The site will progress to the sustainability appraisal stage but it will only be appraised for open space uses</p>
---	---

	<p>and biodiversity net gain opportunities. The risk of flooding on site makes the site unsuitable for residential uses and as a cemetery or parking.</p>
--	---

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Is significantly constrained by fluvial flooding with 90% of the site within flood zone 3a</li> <li>• Is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>• Is located within a conservation area and adjacent a listed building</li> <li>• Very limited accessibility via public transport options but accessible on foot or cycle</li> <li>• Located within the main built form of Hemingford Grey adjoining residential, allotment and play space uses so can be integrated into the existing place and community</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for open space uses and biodiversity net gain opportunities providing linkages to the CWS and within the Green Infrastructure Priority Area. Although the flood risk on the site will shape the type of open space and the types of habitats that could be supported and maintained on the site.</li> <li>• May not be suitable for a cemetery or for parking as submitted under CfS:170 due to the level of flood risk on the site which could result in greater risk of contamination and surface water runoff.</li> <li>• This is also subject to the agreement of the landowners who have differing aspirations for the site and also if funding can be secured to deliver the open space uses and biodiversity net gain projects.</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 5.8ha</p>	<p>Open space uses and biodiversity net gain opportunities</p> <p><b>5.8ha</b> of land for such uses</p>	<p>Available 2024 - 2028</p> <p>Complete over 2 - 3 years - subject to grant funding and agreement of the landowners</p>

**Updates after the Initial Assessment**

Page 1164 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site is wholly located within flood zone 3a. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. There is surface water flood risk along the eastern edge of the site. The site is	-

<p>wholly classified as grade 3 agricultural land. The land within the site is broadly level with along its boundaries. There is residential development immediately to the east of the site and countryside to the north, south and west.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations on site. There are no heritage designations on site. The site has no access of its own and could only be delivered together with or following development at West of Cullum Farm (see CfS:91 - Hemingford Grey 2).</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership but with individual control. Development is supported by all owners. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by a housebuilder. The promoter suggests the land will be available between 2024 and 2028 and take between 3 and 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from the public highway which is not immediately accessible. There are no buildings on site to clear and it is heavily constrained by fluvial flood risk with all of the site being within flood zone 3a. The achievability of the access also requires further scoping as there is no highways access to the site currently with it only being potentially achievable in conjunction with any development of Cullum Farm which adjoins the south east corner of the site.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but there is very significant risk from flooding on the site across the entirety of the site means that development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. Access is also a key constraint in developing the site. The site which could assist in the deliver of an access route (CfS:91 - Hemingford Grey 2) has been assessed as being unsuitable for development. The site promoter seeks to deliver the site directly by a housebuilder. The</p>	-

site promoter states the site will be available between 2024 and 2028, but considering the significant flooding issues on the site and the issues with access, the site is not considered to be deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No due to the site being wholly located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.
--	--

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
No capacity is calculated as the site is considered to be unsuitable.		

**Updates after the Initial Assessment**

Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	Almost completely within flood zone 3a, with a small portion of the northern edge of the site being in flood zone 2. None in flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is almost completely located within flood zone 3a, with a small portion of the northern edge and centre of the site being in flood zone 2. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. There is some surface water flood risk across the site. The vast majority of the site is classified as grade 3 agricultural land with its northern edge being grade 4. The site consists of several agricultural fields. The land is flat and the landscape is generally open with limited substantial vegetation apart from hedgerows on some field boundaries. The site forms a green wedge between residential development. Parts of the</p>	-
---	---

<p>site along the northern and western site boundaries abut residential development, with fields extending to the south of the site. Part of the western site boundary abuts allotments beyond which are playing fields.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are telegraph poles running across the site. There are no nature conservation designations on site. There are no heritage designations on site but it is adjacent to a conservation area on its northern boundary. The site could be accessed from Hemingford Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is in single individual control, the owner supports the development of the site. There are no known legal restrictions impacting the site. It is intended to acquire an allocation status or the site and then sell it to a third party for obtaining planning permission and development. The promoter suggests the land is available now and is unsure how long it will take to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are no buildings on site to clear and it is heavily constrained by fluvial flood risk with almost all of the site being within flood zone 3a. The site could be accessed from Hemingford Road. The site forms a green wedge within the village which would be eroded if developed and impact the landscape and townscape character of the village. The presence of telegraph poles across the site is also a constraint.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but there is very significant risk from flooding on almost all of the site meaning that development cannot be located in a part of the site at lower flood risk. The site promoter identifies that a detailed assessment of the flood risk including site specific mitigation measures will be required. The site promoter seeks to acquire an allocation status for the site and then sell it to a third party for obtaining planning</p>	-

permission and development. The site promoter states the site is available now, but considering the significant flooding issues on the site and the issues with access, the site is not considered to be deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No due to the site being almost completely located within flood zone 3a, with a small portion of the northern edge of the site being in flood zone 2 and the proposed residential uses being classed as a more vulnerable use.

Residential: Market and/or affordable housing	25 - 30 homes	Available 2024 - 2028 Build out over 1 year

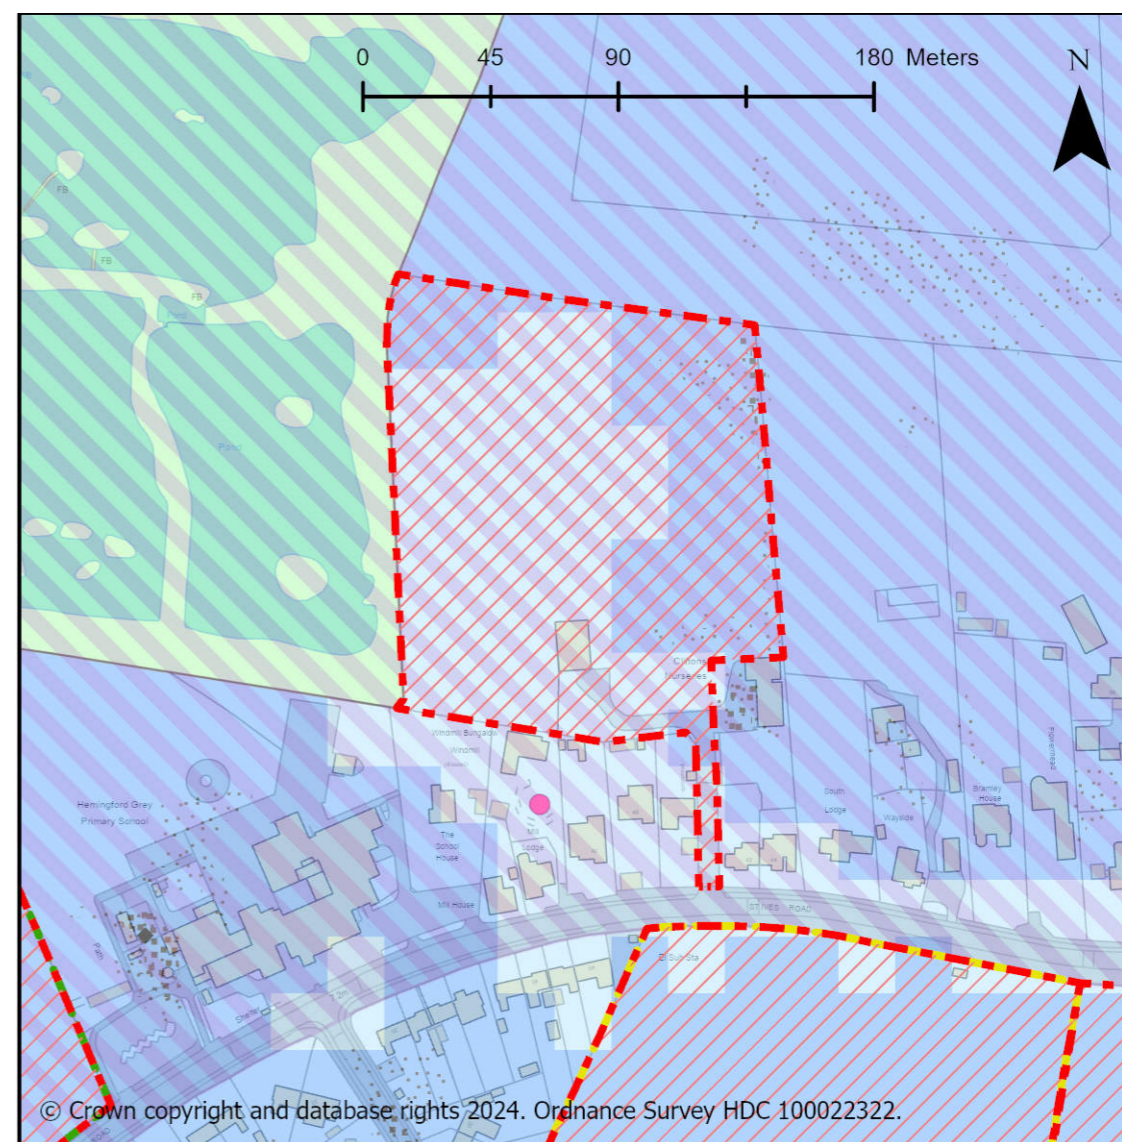

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:337
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Mostly flood zone 2 and 3a, no flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The entire site is constrained by fluvial flooding with all of the site being within flood zone 2 with about a third of the site being within flood zone 3a on its northern and eastern edges. There is some risk from surface water flooding along its eastern edge. Residential uses are classified as being a more vulnerable use as per the NPPF. The site is wholly classified as grade 4 agricultural land. The site is broadly level with extensive trees and vegetation along all of its boundaries enclosing the site. There are several agricultural structures along the southern edge of the site. The site adjoins residential development on its southern boundary and open countryside to the north, south and east. The Hemingford Grey Gravel Pits County Wildlife Site adjoins the site on its western edge.</p> <p>There is no known contamination on site and there are no oil pipelines running through the site. There are no nature conservation designations within the site but it does adjoin the Hemingford Grey Gravel Pits County Wildlife Site to the west. The site is wholly located within a conservation area and there is the grade II listed The Windmill to the south of the site. There is an existing gated access to the site from St Ives Road/ Hemingford Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site but the south western corner of the site falls within 400m of a waste management area.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single organisation who support the development of the site. There are no known legal restrictions impacting the site. It is intended to acquire planning permission for the site and then sell it to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 1 year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are unknown apart from access to a public highway which is accessible from the site boundary. There are several structures on site to clear and it is heavily constrained by fluvial flood risk. The site promoter identifies that a series of technical studies will be required including a heritage statement, ecological assessment and a flood risk assessment to accompany any future planning application. The potential impact on the County Wildlife Site and on designated heritage assets are key development constraints. Additionally, the development of the site would introduce in depth development which is less characteristic of the area and could give rise</p>	

<p>to impacts on residential amenity, a thorough consideration of these constraints will be required in future masterplanning. The site has an existing access from St Ives Road/ Hemingford Road.</p>	
<p><b>Deliverability / developability</b></p> <p>There are several existing structures to clear but flooding and the impact of development on heritage, nature conservation sites and the wider countryside are key barriers to overcome which may impact the deliverability and developability of the site. The site promoter states that they anticipate that the site will be available between 2024 and 2028, as such the site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Is significantly constrained by fluvial flooding with 75% of the site within flood zone 2 and the remaining 25% being flood zone 3a</li> <li>• Is within the Great Ouse Valley Green Infrastructure Priority Area and adjoins the Hemingford Grey Gravel Pits CWS to the west</li> <li>• Is located within a conservation area and adjacent a listed building</li> <li>• Very limited accessibility via public transport options but accessible on foot or cycle</li> <li>• Good accessibility to primary education, shops and leisure and cultural facilities within Hemingford Grey and to employment options in St Ives</li> <li>• Located adjoining the main built form of Hemingford Grey so could be integrated into the existing place and community but would extend the form of the village into the countryside which could adversely impact the landscape character of the area</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development due to the significant risk of flooding across the whole of the site, its potential landscape impact as well as its potential adverse impact on nature conservation and heritage designations</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Updates after the Initial Assessment**

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Moorings	68 berths	Available 2024 - 2028  Complete over 2 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:216
Relevant planning history	<p>Cambridgeshire County Council applications relating to mineral extraction on the site:</p> <ul style="list-style-type: none"> <li>H/0655/95/CM to enable the quarry to be reopened and for mineral extraction to recommence.</li> <li>H/0655/95/CM/N1) was approved in August 2019 which allowed changes to the working, restoration and landscaping schemes affecting conditions 8, 10, 11, 13 and 25 of H/0655/95/CM. These changes were necessary as a consequence of the archaeological mitigation strategy which includes retaining a mid-Iron Age farmstead complex at the southwest of the site in situ. No mineral working activities including movement of vehicles or storing of soils will be permitted in this area which will be fenced off to protect it.</li> <li>CCC/20/064/NMA was approved in October 2020 which allowed further changes to the phasing and working and restoration affecting condition 10.</li> </ul>

Land type	Greenfield land
Current use of the site	Lake
Supporting information	<ul style="list-style-type: none"> <li>Covering letter (June 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	The site is completely classified as being within flood zone 3a, not 3b. The proposed development of moorings is a water compatible development.	Pass
Designated local green space	None	Pass
Nature conservation designation	The site is completely located within the Marsh Lane Gravel Pits County Wildlife Site.	Pass
Within mineral development area or water recycling area	The south eastern corner of the site includes a Mineral Development Area and approximately half of the site falls within the buffer zone of this MDA as well as another MDA located to the south west of the site. The covering letter does not assess the impact of the proposed development on the MDAs.	Pass

Page 1175 of 3488

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Context, constraints and potential suitability
The site comprises a large lake to the southeast of Hemingford Grey, situated south of Marsh Lane, also known as Hemingford Grey Lake. The site is completely located within flood zone 3a, while proposed for residential uses it is proposed to deliver moorings which are a form of water compatible development. Although engagement with the Environment

<p>Agency will still be required to ensure that any berths are adequately installed and boats securely in place. Most of the site is classified as non-agricultural land but nearly half of the site is classified as grade 3 agricultural land. The site is broadly level and is bounded by mature trees and the eastern end of the site comprises overgrown land. The north-western edge of the site adjoins residential development on Marsh Lane. To the north and east of the site are agricultural fields. To the south is a lake used for outdoor recreational sport activities with associated facilities.</p> <p>There is no known contamination on site but this may require further investigation as some of the site is within a mineral development area. There are no oil pipelines running through the site. The site completely falls within the Marsh Lane Gravel Pits County Wildlife Site. The Inland Waterways Association identify that moorings are required to have a hard edge and an adequate depth of water which could impact the CWS. Impact of location berths within the County Wildlife Site will be required. There are no heritage designations on site. The site promoter identifies that there is a private track road that runs around the perimeter of the lake but this is only accessible to permit holders. The lake is not connected to the river so houseboats would have to be delivered to the site via the road network and Marsh Lane.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site but the south eastern corner of the site includes a Mineral Development Area and approximately half of the site falls within the buffer zone of this MDA as well as another MDA located to the south west of the site. The covering letter does not assess the impact of the proposed development on the MDAs. It is understood that the gravel extraction within the south eastern corner of the site has been completed and works to restore the land are underway. Engagement with Cambridgeshire County Council will be required.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The promoter suggests the land will be available between 2024 and 2028 and take two years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that the public highway is accessible from the site's boundary and that all other services are unknown. In their submission, the site promoter has identified that several technical studies will be required including an arboricultural assessment, landscape and visual impact assessment and an ecological conservation management plan. The site is within flood zone 3a but the proposed berths fall within water</p>	~

<p>compatible development. The site promoter states that 'the design of the floating structure would be adequately secured in the event of a flood in the proposed location, considering the risk if the proposed development becomes mobile in the event of a flood (for example if the structure because mobile it could cause a blockage or increase flood risk elsewhere)'. Further engagement with the Environment Agency would be required. The lake is not connected to the river so houseboats would have to be delivered to the site via the road network and Marsh Lane. The potential achievability of the development will not overload the environmental, navigational or flood conveyance capacity of the watercourse or water body. Assessment will require engagement with the relevant water bodies and organisations to assess this. Additionally, it needs to be understood the progress made on mineral extraction on site and whether works have now completed on site enabling the site to be further restored and reused for other uses. No site plan has been submitted to date, an extract of a potential layout showing the potential spacing between berths have been provided in the site promoter's covering letter in support of the submission. Also, impact on the County Wildlife Site will need to be assessed.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is heavily constrained from flood risk and by falling completely within a County Wildlife Site with substantial amount of trees and vegetation present. The site is also an active mineral extraction site. The site promoter intends to deliver the site via a master developer delivering up to 68 berths across the site. They identify that the site will be available between 2024 and 2028, it is unclear at this stage the location of these potential berths in relation to the mineral extraction activities on site and whether works are nearing completion on site. Considering this and the constraints on site, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● The site is wholly within flood zone 3a</li> <li>● Is within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>● The site is within the Marsh Lane Gravel Pits CWS</li> <li>● Very limited accessibility via public transport options but accessible on foot or cycle</li> </ul>
--

- Good accessibility to primary education, shops and leisure and cultural facilities within Hemingford Grey and to employment options in St Ives
- Located near to the main built form of Hemingford Grey so could be integrated into the existing place and community as well as establishing a micro community of house boats but would consideration would be needed on the types of moorings to be provided (leisure and or residential)

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for provision of moorings (leisure and/or residential), consideration would be needed on the scale of the potential moorings on the CWS and wider landscape impact.

**HDC's Delivery Calculations**

Page 1177 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the river and the physical layout of any moorings.	Moorings (leisure and/or residential)	Post 2028 Build out over 1-2 years

**Updates after the Initial Assessment**

Land north of Hemingford Road, Hemingford Grey	Hemingford Grey	0.4

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	TBC	Available 2024 Build out rate to be confirmed

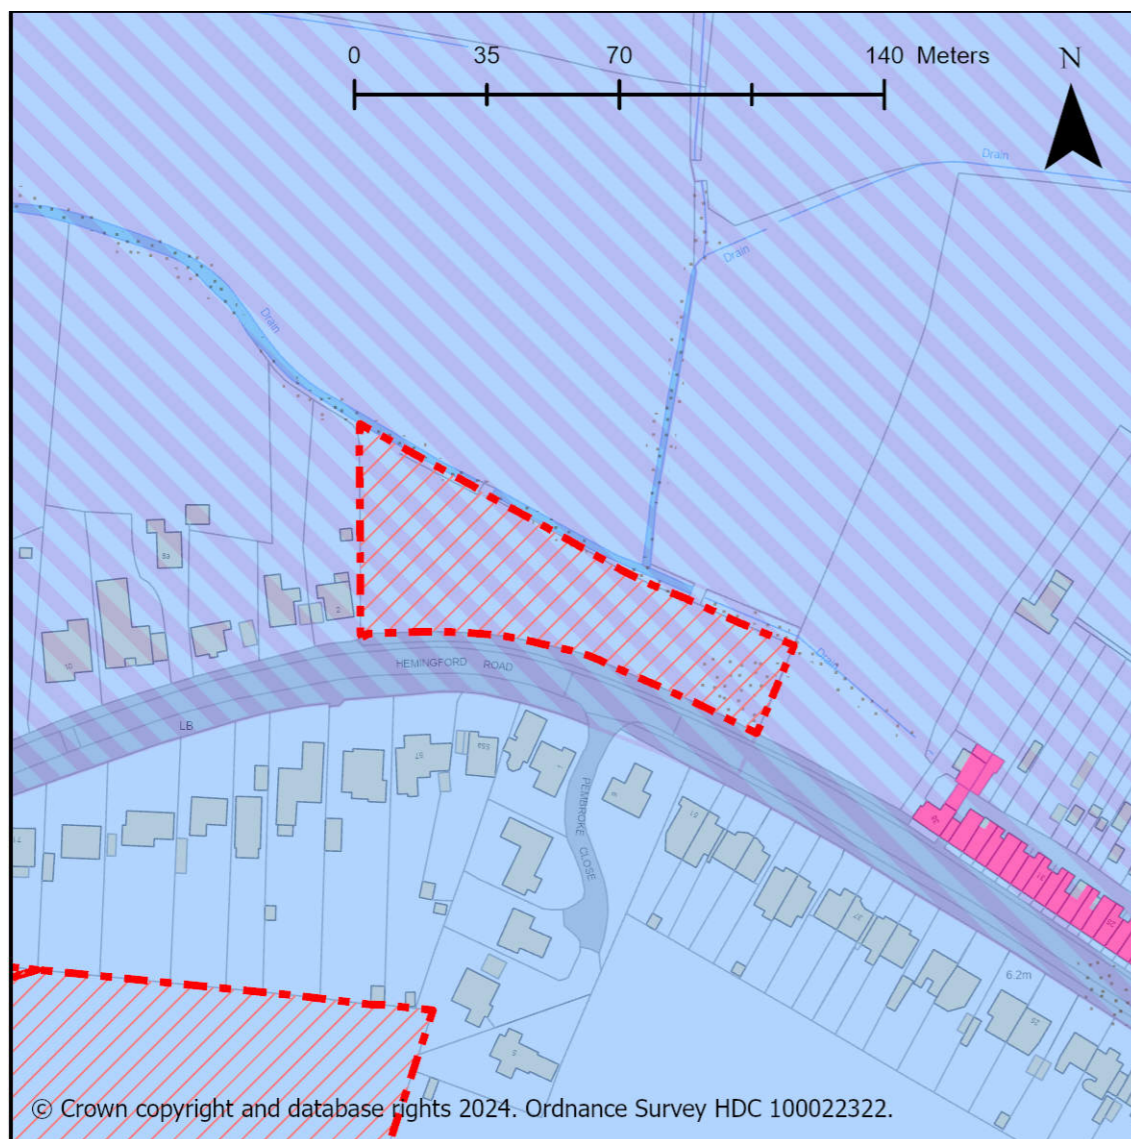

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:333
Relevant planning history	None relevant HELAA (December 2017): Opposite Pembroke Close, Hemingford Road, Hemingford Grey (169)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	Wholly within flood zone 3a, not flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	None	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 3a. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. There is a risk from surface water flooding along its northern edge arising from a drain which runs along the site's boundary. The site is wholly classified as grade 4 agricultural land. The land is flat and is bordered by trees and hedgerows which provide some screening, but which allow some views through to fields to the north. The site adjoins residential development on its western edge, to the south is Hemingford Road and further residential development. To the east is a field separating the site from further residential development and to the north is open countryside.</p>	-
---	---

<p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations on site. The site is wholly located within a conservation area and is adjacent to a series of grade II listed Victoria Terraces to the east along Hemingford Road. The site could be accessed from Hemingford Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is in single individual control, the owner supports the development of the site. There are no known legal restrictions impacting the site. It is intended to acquire an allocation status or the site and then sell it to a third party for obtaining planning permission and development. The promoter suggests the land is available now and is unsure how long it will take to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are no buildings on site to clear and it is heavily constrained by fluvial flood risk with all of the site being within flood zone 3a. The site promoter identifies that a mitigation assessment could be undertaken as the 'village is protected by a flood bank and a pumping station elsewhere on the client's land'. The site could be accessed from Hemingford Road.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but there is very significant risk from flooding on the site across the entirety of the site means that development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. The site promoter seeks to acquire an allocation status or the site and then sell it to a third party for obtaining planning permission and development. The site promoter states the site is available now, but considering the significant flooding issues on the site and the issues with access, the site is not considered to be deliverable or developable at this time.</p>	-

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No, due to the site being wholly located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.
---	---

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
No capacity is calculated as the site is considered to be unsuitable.	N/A	N/A

**Updates after the Initial Assessment**

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1182 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 3a. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. The southern half of the site is also at risk form surface water flooding arising from the presence of a drain and sluice which is associated with a pumping station located immediately south of the site. Almost all of the land is classified as grade 4 agricultural land, with the exception of a small area on the southern edge of the site being grade 3. The site broadly flat and is well screened by trees and hedgerows on the western boundary of the site with some more modest planting along its eastern boundary along London Road. The site is completely open on its northern edge with no planting, as such, there are views across the site towards St Ives medieval town bridge and Hemingford Meadow. There is a public right of way adjacent to the site's western boundary. London Road forms an eastern edge to the site. There is a pumping station and residential property immediately south of the site. Across the road from the site is further residential development. The site is located at a junction between London Road, Hemingford Road and Low Road.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site but this may require further investigation considering the proximity to a pumping station. There are no nature conservation designations on site. The site is wholly located within a conservation area and adjacent to the grade II listed Victoria Terrace, 18, 19, 20 and 21 London Road.</p> <p>The site could be accessed from London Road but this would require further scoping and engagement with Cambridgeshire County Council.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	-
<p><b>Availability</b></p> <p>The site is in single individual control, the owner supports the development of the site. There are no known legal restrictions impacting the site. **Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:42
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly within flood zone 1, there is some recorded risk from surface water across the site with most recorded along the western half of the site running north to south. The site is wholly classified as grade 2 agricultural land. The site is generally flat but does gently rise to the west. The site is clearly marked out by trees and vegetation but there are gaps within these allowing for views into the site. This in combination with the generally flat landscape means that development will likely have a more prominent landscape impact. The site while located on the edge of Hilton, extends significantly into the countryside. To the east of the site are residential properties, to the north, western and south is open countryside.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. Access is possible via Potton Road at the southern most corner of the site.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a family with multiple owners, development is supported by all. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and take between 3 and 7 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter notes that access to gas, mains water and electricity supply alongside digital and communications infrastructure is unknown.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site.</p> <p>The site promoter has identified that the public highway is accessible from the site boundary/ within the site with all other services being unknown. There are no buildings on site to clear and the site is fairly level, it is however constrained by some flood risk and landscape impacts could be significant. The site could be accessed from Potton Road.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear, location of the site on the western edge of the village means that landscape impact will require mitigation. Flood mitigation would be required. The proposal would require confirmation of access to gas, mains water and electricity supply alongside digital and communications infrastructure. The site promoter states the site is available now, as it is not proposed as a rural exceptions scheme the proposed development is contrary to current adopted planning policy so allocation status would be required. As such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield classified as being grade 2 agricultural land
- Is within flood zone 1 but there is some risk from surface water flooding
- Limited accessibility to public transport options, local services, primary education and employment opportunities
- Accessible to natural green space
- The site is opposite existing residential development presenting the opportunity to mirror the built form to the east.
- It is well located to the existing settlement on the western edge of the village but the size of the site and potential scale of development would alter the character of the village and surrounding countryside

In combination the outcomes of the LAA and SA indicate that the site:

- Is well related to the existing settlement meaning it could be effectively masterplanned to become part of the existing community.
- Due to its scale and location would extend the village significantly into the countryside altering the landscape and character of the village and surrounding countryside and require landscape mitigation.
- Would require a reduction in developable area to provide development proportionate to the existing village context.
- Would require confirmation of access to gas, mains water and electricity supply alongside digital and communications infrastructure.
- Requires flood mitigation

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 9.24ha</p> <p>Reduction of gross site area by 50% to provide proportionate development in keeping with the existing settlement.</p> <p>9.24ha x 50% = 4.62ha gross site area</p> <p>70% net developable area to allow for strategic landscaping.</p> <p>4.62ha x 70% = <b>2.772ha</b></p>	<p>Net developable area of 2.722 ha</p> <p>Very low density of 25dph to reflect site's location within a smaller village and the lower density context of the surrounding housing.</p> <p>Capacity = 2.722ha x 25dph = <b>67 homes</b></p>	<p>Available post 2028 to allow for allocation</p> <p>Build out 2 to 5 years</p>

**Updates after the Initial Assessment**

Residential: Market and/or affordable housing	60 - 70 homes	Available 2023 Build out over 3-6 years

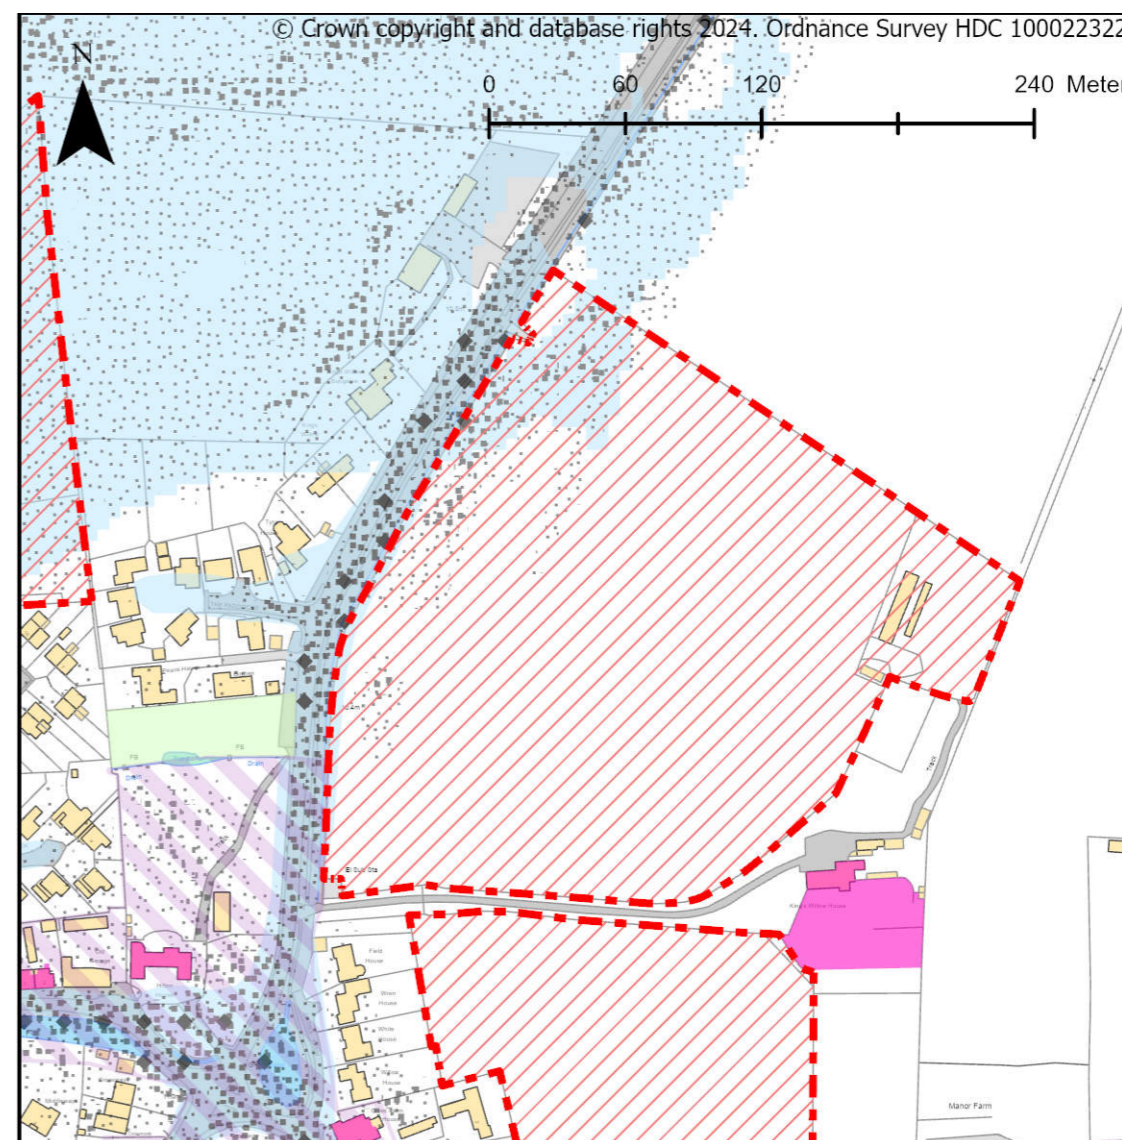

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:41
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is largely within flood zone 1, with small portion of the northern most corner of the site falling with flood zone 2. The site is also constrained by surface water flood risk along its western edge. The site is wholly classified as grade 2 agricultural land. The site is generally flat but land levels gently undulate across the site. The site is well contained with trees and vegetation clearly marking out its southern and western boundaries. Its western edge adjoins St Ives Road where there is very minimal vegetation making the site very open on this side. There is some vegetation along its northern edge but there are several gaps meaning with the generally flat landscape of the site and the surrounding area, development could have a more significant impact on longer range views across the countryside. The site is surrounded by residential properties and agricultural buildings and grazing land on its southern, eastern and western edges, to the north is the open countryside.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. The site does adjoin the conservation area at its south western corner and to the south east of the site is the grade II listed King's Willow House. Access is possible via St Ives Road (the B1040) where there is an existing access for farm vehicles.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. Only a portion of the southern part of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a family with multiple owners, development is supported by all. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land is available now and take between 3 and 6 years to complete.</p>	+
<p><b>Achievability</b></p> <p>Achievability The site promoter has identified that the public highway is accessible from the site boundary/ within the site with all other services being unknown. There are no buildings on site to clear and the site is fairly level, it is however constrained by some flood risk and there also some heritage constraints to consider. Development can be located within flood zone 1. The site has an existing access from St Ives Road.</p>	+
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the location of the site on the northern edge of the village means that any future development will need to be very sensitive to its location and context particularly in relation to landscape and heritage assets. It will also need to incorporate sustainable drainage solutions to address flood risk issues. The site promoter does not appear to seek an allocation status for the site but intends to acquire planning permission and then sell the site to a third party for development. The site promoter states the site is available now, as it is not proposed as a rural exceptions scheme, it is likely that the success development of the site will require an allocation status. As such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield classified as being grade 2 agricultural land
- Is mostly within flood zone 1 but a portion of the northern corner is in flood zone 2 and there is some risk from surface water flooding
- Limited accessibility to public transport options, local services, primary education and employment opportunities
- Accessible to natural green space
- Located on the north eastern edge of village and of a scale that could be integrated with the existing place and community
- May impact the setting of designated heritage assets

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for built development
- Development will be required to be located in flood zone 1 incorporating landscaping and sustainable drainage to mitigate the flood risk on site and to provide a soft development edge to minimise its impact on the countryside and on heritage assets

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 5.29ha  65% net developable area allowed to enable the northern third of the site to be used for landscaping and sustainable drainage to mitigate against flooding risk and landscape impact.  5.29 ha x standard proportion of 65% = <b>3.43 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 3.43 ha x 25 dph = <b>86 homes</b>	Available 2024 - 2028  Build out over 3-6 years

Updates after the Initial Assessment

**Hilton 3: Land North of New England, Hilton**

<b>Site reference</b>	Hilton 3
<b>Site name</b>	Land North of New England, Hilton

Site address	Parish(es)	Site area (ha)
Land north of New England, Hilton	Hilton	3.41

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	50 - 60 homes	Available 2023 Build out over 3-5 years

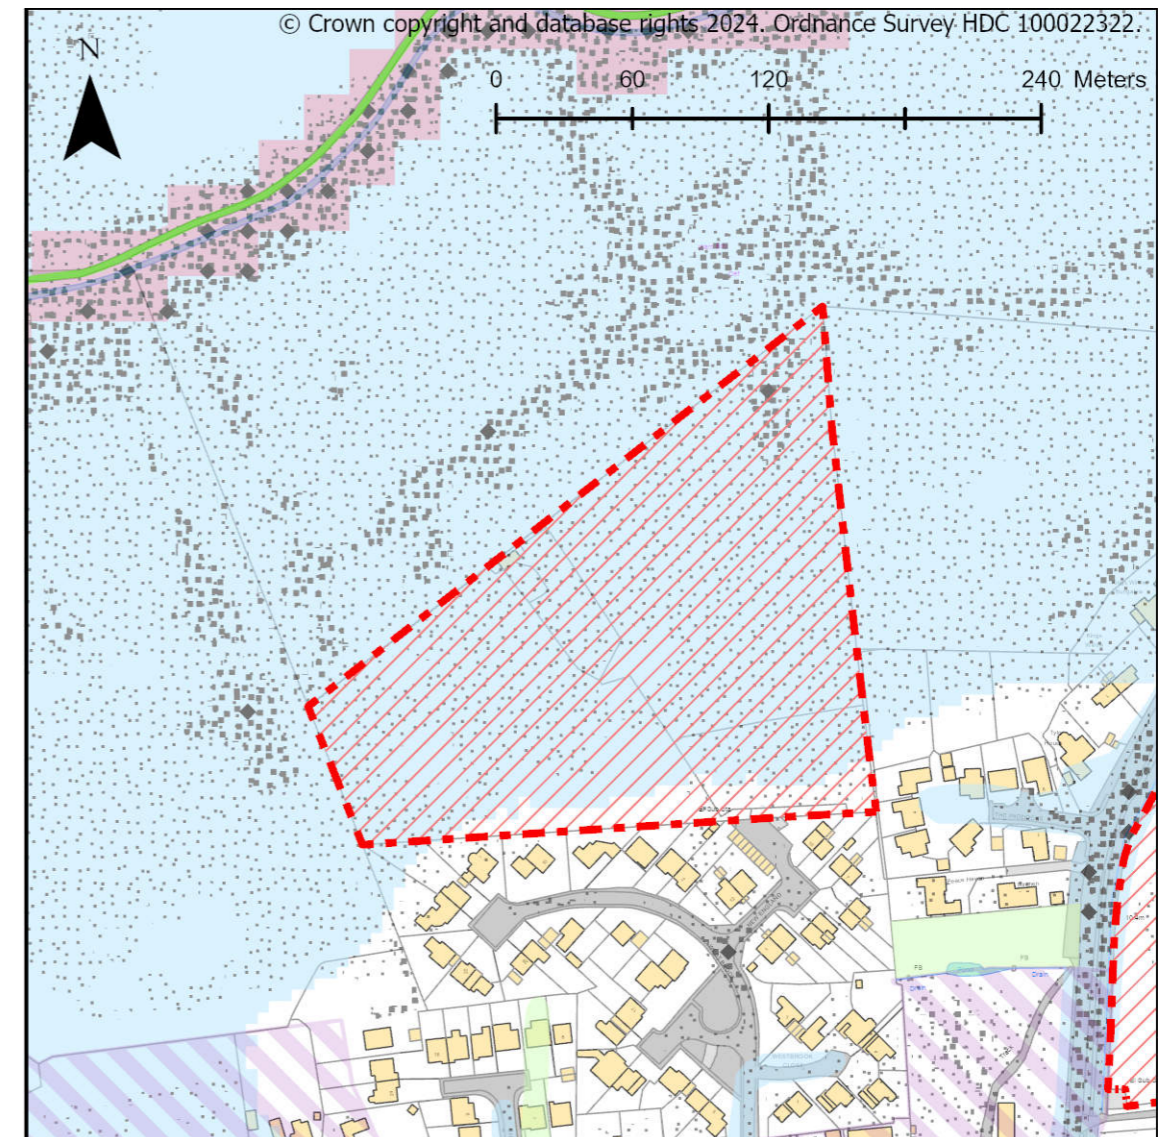

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:40
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None of the site is within flood zone 3b but almost all of the site is within FZ3a apart from a thin strip along the southern edge of the site.	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1192 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>Approximately 90% of the site is located within flood zone 3a. The site promoter has put the site forward for residential uses which are classed as being more vulnerable to flooding according to the NPPF. The site is almost entirely at risk from surface water flooding. The site is wholly classified as grade 2 agricultural land. The site is generally flat and open with trees and hedgerows running along the boundaries of the site. To the south and south east the site adjoins residential development. To the north and west is open countryside.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. There is no direct highway access to the site, however it may be possible to provide an access off from New England where there is an existing access to the site. Engagement would be required with Cambridgeshire County Council as to the feasibility of this and whether this would be an appropriate access for the additional traffic movements.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and the very small proportion of the site that is located within a lower at risk zone, the site is considered unsuitable for development.</p>	-
<p><b>Availability</b></p> <p>The site is controlled by a family with multiple owners, development is supported by all. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development with the owners aiming to work on a promotion agreement basis with a third party to achieve planning and sale. The promoter suggests the land is available now and take between 3 and 5 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that the public highway is accessible from the site boundary/ within the site with all other services being unknown. There are no buildings on site to clear and the site is fairly level, it is however heavily constrained by fluvial and surface water flood risk and landscape impacts could be significant. Less than 10% of the site is within a lower flood zone than 3a, and almost all of the site is at risk from surface water flood risk.</p>	-

<p>The site promoter identifies that a flood risk assessment and a sustainable drainage strategy will need to be prepared. The site could be accessed from New England where there is an existing access to the site.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but very significant risk from flooding across the entirety of the site means that development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. The site promoter does not appear to seek an allocation status for the site but intends to acquire planning permission and then sell the site to a third party for development. The site promoter states the site is available now, but considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at thi time.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to vast majority of the site being located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

<p>The site did not progress to Sustainability Appraisal.</p>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	Up to 47 homes	Available 2024-2028  Build out between 1 and 5 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:235
Relevant planning history	Application number: 9801552 and 0602793S73 Proposed development: Outline planning permission for the erection of a single dwelling and garage  Outcome: Granted  A subsequent reserved matters was submitted in in 2008:  Application number: 0701300REM  Proposal: Approval of siting, design, external appearance, means of access and landscaping for the erection of a dwelling.  Outcome: Granted
Land type	Wholly greenfield land
Current use of the site	Agricultural land

Supporting information	<ul style="list-style-type: none"> <li>Covering letter (June 2023) with an appendix detailing the illustrative Visions submitted by potential development partners:</li> <li>Vision Document RIBA Stage 1 by Campbell Buchanan George (Document Reference: 4119-PEN-XX-XX-SA-A-8000-S0-P6)</li> <li>Vision Document by Stonebond (May 2023)</li> </ul>
------------------------	--

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is within flood zone 1, with only a very small portion of the site's frontage onto the High Street being within Flood zone 2. The site is only constrained by surface water flood risk where it adjoins the High Street. The site is mostly classified as grade 3 agricultural land with some of the northern half of the site being grade 2. The site is generally flat and is currently used for grazing. The site is well contained with trees and vegetation clearly marking out its boundaries. The site is surrounded by residential properties and large residential gardens on its eastern, western and southern edges, to the north is the open countryside.</p>	~
--	---

There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations on site but there are several trees protected by Tree Preservation Orders along the site's frontage and within the site. To the north east of the site is the grade II listed King's Willow House and part of the site which fronts onto the High Street falls within the conservation area. Access is possible via the High Street frontage which would require clearing existing vegetation and potentially TPO trees, and there is also an existing access in the north western corner of the site via Cross Farm Close.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

<p><b>Availability</b></p> <p>The site is in single individual ownership and controlled by an investor who supports its development. There are understood to be some restrictive covenants on the titles to the parcels of land. These relate primarily to the plot with frontage onto High Street and include a restriction to limit its development to no more than a single dwelling. At present the land is let to an agricultural tenant. Permission was granted for residential development in 1998 which was renewed in 2003 on the site's frontage and reserved matters granted in 2008 but this has not been taken forward. The site remains in the same ownership since this time.</p> <p>The site promoter states that the landowner is working closely with planning agent to market the site to potential development partners. Following the selection of a development partner, a comprehensive masterplan would be prepared for the site. Alongside the Call for Sites submission, two illustrative visions have been developed. The promoter suggests the land will be available between 2024 and 2028 and take up to 5 years to complete.</p>	~
---	---

<p><b>Achievability</b></p> <p>The site promoter has identified that all access and servicing are accessible from the site's boundary. There are no buildings on site to clear but there are several trees, some of which are protected by TPOs. The site is fairly flat and constrained by some minimal flood risk, there are also heritage constraints to consider. The site has an existing access but an additional access could be achieved from the High Street but an assessment on the impact to protected trees will be required.</p>	~
--	---

<p><b>Deliverability / developability</b></p>	~
---	---

There are no existing structures to clear but the presence of protected trees and the location means that any future development will need to be very sensitive to its location and context particularly in relation to heritage assets. The site promoter does not appear to seek an allocation status for the site. The landowner is working with a planning agent to market the site to potential development partners and two draft vision documents setting out potential schemes for the site have been prepared. The site promoter anticipates the site to be available between 2024 and 2028, as such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield, mostly classified as being grade 3 agricultural land but with some of the northern half being grade 2
- Is mostly within flood zone 1 but a portion of the frontage is in flood zone 2 and there is some risk from surface water flooding
- Limited accessibility to public transport options, local services, primary education and employment opportunities
- Accessible to natural green space
- Relates well to the settlement being accessed from the High Street and of a scale that could be integrated with the existing place and community
- The site's frontage is located within a conservation area, development may also impact the setting of the grade II listed King's Willow House to the north
- TPO protected trees along the site's frontage

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for built development
- Development will be required to be located in flood zone 1, incorporating landscaping and sustainable drainage to mitigate the flood risk on site and to provide a soft development edge to minimise its impact on the countryside and on heritage assets
- Will need to assess the impact on TPO protected trees and what vegetation will need to be removed in order to enable an access into the site

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 2ha  70% net developable area allowed to enable the northern third of the site to be used for landscaping and sustainable drainage to mitigate against flooding risk and landscape impact.  2 ha x standard proportion of 70% = <b>1.4 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the village location.  Very low density of 25 dph = 1.4 ha x 25 dph = <b>35 homes</b>	Available 2024-2028  Build out between 1 and 5 years

**Updates after the Initial Assessment**

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:185
Relevant planning history	None relevant
Land type	Mostly greenfield land with some agricultural structures
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Site layout plan (drawing number: 23/05/201/01) (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 but has some surface water flood risk along its northern edge along the A1123 (Needlingworth Road) which runs into the centre of the site. The northern edge of the site is classified as grade 3 agricultural land with the majority of the site classified as grade 2. The site is greenfield with some agricultural structures remaining related to Townsend Farm. The site gently slopes downwards towards the A1123, with its boundaries being clearly marked out by field lines, vegetation and trees, the thickest being along its northern edge providing a buffer form the A1123. The site is open apart from several trees located around some agricultural structures and silos to the south of the site's centre. To the north of the site is the A1123, to the east is residential development. To the</p>	~
--	---

<p>west are agricultural fields and to the south is some residential development at Silverdale Close. The south western edge borders a site that has permission for residential development.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however electricity and telegraph poles located along the site's frontage along Bluntisham Road and also within the site. The site promoter states that these telephone and power lines will be placed underground as part of the proposed development. The site's proximity to the A1123 may give rise to additional levels of air and noise pollution. There are no nature conservation designations or heritage designations on site. Access is possible via a pre-existing access point to serve agricultural uses on the site from Bluntisham Road which runs through the site connecting to the A1123. The proposed site layout plan submitted alongside the call for sites submission proposes that the access point at the A1123 will not be used instead only access from Bluntisham Road will be used. Engagement will be required with the County Council to ascertain how suitable this access point will be to serve the scale and type of development proposed as the existing point of access is located on a curve along Bluntisham Road. Traffic levels arising from the development and in particular the retail element will also need to be assessed.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a family with multiple owners, development is supported by all. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development although in the submission, the site promoter appears to seek an allocation for the site. The promoter suggests the land will be available between 2024 and 2028 and take 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from the site boundary. There are some agricultural structures on site to clear, the site gently slopes downwards towards the A1123 and has some surface water flood risk. There are electricity poles located along the site's frontage along Bluntisham Road and also within the site. The site promoter states that these telephone and power lines will be placed underground as part of the proposed development. Engagement with utility providers will be required to ascertain if this will be achievable and viable. The site can be accessed from Bluntisham Road.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are minimal structures to clear on site, but the presence of electricity poles, surface water flood risk and access are constraints to development. The site promoter intends to acquire planning permission and then sell the site to a third party for development, it also appears that they seek an allocation status for the site. The site promoter states the site will be available between 2024 and 2028, as such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land, mostly classified as grade 2 agricultural land
- Is within flood zone 1 but there is some surface water flood risk
- Proximity to the A1123 may give rise to additional levels of pollution
- In walking distance to village services and facilities and primary education
- Reasonable accessibility to public transport options and employment opportunities
- Remote from natural green space
- Located on the north western edge of the village and could be integrated into the existing place and community providing additional retail facilities to support the sustainability of the village

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially suitable but access and traffic flows will be a key consideration
- Has potential to provide built development of a scale that could be integrated into the existing place and community particularly following recent planning permissions on adjoining land
- Should provide landscaping to provide noise mitigation and sustainable drainage to address surface water flood risk

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 10.6ha Minus 4.6ha for open space uses leaves 6ha	Residential - market and/or affordable homes Commercial - retail	Available 2028 subject to allocation Build out over 4 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
75% net developable area to incorporate additional landscaping for noise mitigation and also sustainable drainage.  6 ha x standard proportion of 75% = <b>4.5 ha</b>	0.6ha of the net developable area for retail uses leaving 3.9ha for residential uses  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 3.9 ha x 25 dph = <b>98 homes</b>  Retail outlet using 0.25 plot ratio = 0.6 x 0.25 = 0.15 x 10,000 = <b>1,500 sqm</b>	

**Updates after the Initial Assessment**

<b>Site reference</b>	Holywell-cum-Needingworth 2	
<b>Site name</b>	Land East of Bluntisham Road (northern part), Bluntisham	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land east of Bluntisham Road (northern part), Bluntisham	Holywell-cum-Needingworth	14.7

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	150 homes (90 market and 60 affordable homes)	Available 2024 - 2028 Build out over 3 to 4 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:290
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Supporting Statement</li> <li>Indicative Site Access Plan (drawing number: 19157-NEED-5-101) (June 2022)</li> <li>Vision document and masterplan</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	The eastern third of the site is within flood zone 3b, there is more than 0.25ha of the site in flood zone 1.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site falls within 250m of a mineral development area and the eastern edge of the site is within the mineral development area itself.	Fail
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site falls within 250m of a mineral development area and the eastern edge of the site is within the mineral development area itself.	N/A	N/A

**Updates after the Initial Assessment**

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No because the site falls within 250m of a mineral development area and the eastern edge of the site is within the mineral development area itself. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of residential development on the MDA.

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:211
Relevant planning history	Application number: 20/00443/FUL  Proposed development: Erection of 14 dwellings with associated landscaping, parking, cycle and refuse storage, sustainable drainage system (SUDs) and vehicular access point off Mill Way.  Outcome: Refused  Appeal outcome: Dismissed  Application number: 19/00080/FUL

	Proposed development: The erection of 40 dwellings with associated landscaping, parking, cycle and refuse storage, sustainable drainage systems (SuDs) and vehicular access point off Mill Way.  Outcome: Refused
Land type	Wholly agricultural land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Development principles plan</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately a quarter of the site is within flood zone 3b, it is proposed that this part of the site will form a green wedge/ open space / biodiversity and flood balancing opportunities.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

Half of the site is within flood zone 1 but almost all of the western half of the site is constrained by fluvial flood risk (a quarter being within flood zone 3b), this coincides with the site's western boundary aligning with the a drainage channel. The development principles plan submitted alongside the call for sites submission proposes that this part of the site will form a green wedge/ open space / biodiversity and flood balancing opportunities. There are however several other drainage channels that run through the site which will require careful consideration in any potential detailed masterplan for the site. The majority of the site is classified as grade 3 agricultural land with only the eastern edge being classified as grade 2. The site is greenfield and located to the west of Needlingworth extending into the

countryside, large residential curtilages provide separation between the main built form and the site, it only adjoins the main built form of the settlement along Mill Way. The site slopes downwards to the west, the gently increasing land levels towards Mill Way reduces the risk of flooding on this part of the site. It also means that focusing development on the eastern half of the site will have greater landscape impact as it is also where the land is highest. A public right of way runs along part of the site's northern and western edge. The site is very open due to limited substantial boundary markers, the site's southern edge is completely open. This increases the potential impact of development of the landscape setting of the settlement and also reinforces it close relationship with the countryside.

There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however electricity lines located along the site's frontage along Mill Way and along the site's eastern edge. There are no nature conservation designations or heritage designations on site. Access is possible via two pre-existing access points along Mill Way. A further access could be provided from the High Street along the site's northern most edge.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is in single ownership who supports its development. There are no known legal restrictions impacting the site. The site promoter states that it is intended to deliver the site via a master developer. The promoter suggests the land will be available between 2024 and 2028 and take 12 years to complete.

**Achievability**

The site promoter has identified that all services and access are accessible from the site boundary. There are no structures on site to clear, the site gently slopes downwards to the west and the site is generally very open so landscape impacts are potentially more significant. Additionally, approximately half the site is constrained by fluvial flood risk minimising the potential net developable area. Access is possible via two pre-existing access points along Mill Way. A further access could be provided from the High Street along the site's northern most edge.

**Deliverability / developability**

There are no structures to clear on site, but the flood risk on site as well as potential landscape impact are clear constraints to development. The site promoter intends to deliver the site via a master developer. The site promoter states the site will be available between 2024 and 2028, as such, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Heavily constrained by fluvial flood risk with almost half of the site within flood zone 3b
- In walking distance to village services and facilities and primary education and natural greenspace
- Reasonable accessibility to public transport options and employment opportunities
- Within the Great Ouse Valley Green Infrastructure Priority Area
- Is located to the west of Needingworth extending into the countryside, it is separated from the built form by large residential curtilages
- A green wedge is proposed to mitigate against landscape and flooding issues, however, this does address the harm that development on the rest of the site would result on settlement character

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for development as it would fundamentally adversely impact the character of Needingworth.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Updates after the Initial Assessment**

Page 1213 of 3488

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	
---	--

The site is located on the eastern edge of St Ives but in Holywell-cum-Needlingworth parish. The site is bordered by Somersham Road (B1040) to the west and Somersham Road Industrial Estate and Compass Business Park established employment areas; the A1123 to the south; St Ives Golf Club to the east; and agricultural land and the Golf Club towards the north. It adjoins St Ives but extends considerably into the countryside. The site currently primarily comprises of greenfield land for agricultural land use, and farm buildings associated with Giffords Farm. The Soils and Agricultural document identifies that 58% of the site comprises grade 3a agricultural land with 42% of the site being classified as grade 3b. Most of the site is within flood zone 1 but there are areas within flood zones 2 and 3a particularly on its western edge and towards the centre of the site as well as an area in the north east of the site. The Vision document submitted alongside the call for sites submissions proposes that these areas at higher flood risk will consist of green infrastructure and Giffords Park with play spaces and open space uses. A very large proportion of the centre of the site is constrained by surface water flood risk as is the southern edge along the A1123. The site consists of 13 fields, the land is level to very gently sloping, with an average elevation of approximately 10m with the highest points of the site found on its eastern edge. There is a small area of woodland located to the north of Gifford's Farm and Bridge Close Yard is located in the centre of the site. Several drains and tracks are located across the overall site. A small pond feature was recorded in the north-east corner of the site. The flat landscape to the south east of the site does allow some distant views from short sections of the public footpath network. Views towards the site from residential properties on the western and northern edges of Needlingworth and Holywell are typically screened by intervening vegetation at a range of distances.

There is no known contamination or pollution on site, however this may require further investigation when considering the agricultural uses on site. The Ground Condition Assessment submitted concludes that there is potential for asbestos to exist within building materials on-site. The report also identified on-site potential sources of contamination from the dismantled railway line that historically existed in the south-east corner of the site and burning areas and ground fuel storage tanks associated with Giffords Farm and Bridge Close Yard. The report concludes that the overall risk of contamination on-site is very low to moderate/low. There are no gas or oil pipelines running through the site. There are however overhead power lines across the site as shown in the submitted Utilities Constraints Plan. There are no nature conservation designations on site but there is the potential for ecology in the various hedgerows, mature trees, woodlands, watercourses and areas of standing water, found across the site. There are no heritage designations on site but the submitted Heritage Desk-Based Assessment concludes that the site is known to contain the remains of a Roman settlement in its south eastern corner. This is a large cropmark complex and is considered to be of regional significance. The rest of the site is considered to have moderate potential for Prehistoric and Roman remains. The site is considered to have low potential for remains of all other archaeological periods. As such, engagement with Cambridgeshire County Council on the potential of archaeology will be required. The site can be accessed off the A1123 via an existing hardstanding access road linking to the existing farm buildings. There are also opportunities to access the site off the B1040. The scale of the proposed development will require engagement with Cambridgeshire County

<p>Council to ascertain if there is capacity in the current and future road network considering anticipated future changes to strategic road network arising from the A141 and St Ives Improvements schemes.</p> <p>The site is greenfield with agricultural structures associated with Gifford's Farm, so its development will not contribute to reuse of previously developed land or regeneration. The majority of the site is located outside of a mineral safeguarding area, however, the southern most edge and eastern edge of the site fall within the sand and gravel mineral safeguarding area; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. A small portion of the western edge of the site is within 400m of a water recycling area, but the majority of it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who supports its development. There are no known legal restrictions impacting the site. The site is currently optioned with a developer involved in delivering the site. The site promoter states it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 10 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from the site boundary apart from electricity supply which is located within the site. The site is broadly level but gently rises to the east. There are substantial areas of the site at risk from flood risk (both fluvial and surface water), landscape impact of development, and access and road capacity for the scale and proposed mix of uses. Significant highway infrastructure upgrades in the area will be necessary to accommodate the volume of traffic that a site of this scale would be expected to generate. This would need to be supported by increased public transport and active travel infrastructure provision. Substantial work was undertaken during preparation of Huntingdonshire's Local Plan to 2036 to assess deliverability of transport solutions for this site. As at autumn 2023, the Cambridgeshire and Peterborough Combined Authority are preparing an outline business case for a substantial upgrade scheme for the transport network within St Ives. Delivery of the resultant scheme has potential to significantly enhance the achievability of redevelopment of Giffords Park.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are considerable constraints to overcome particularly arising from flood risk, access and road capacity. The outcomes of the Cambridgeshire and Peterborough Combined Authority's substantial upgrade scheme for the transport network within St Ives will likely impact proposals on site. The site is currently optioned with Hallam Land Management the developer involved in delivering the site. The site promoter states it is their intention to</p>	~

acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 10 years to complete, as such the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 3 agricultural land
- Is mostly within flood zone 1 but there are areas within flood zone 3a particularly on its western edge and towards the centre of the site as well as an area in the north east of the site
- A very large proportion of the centre of the site is constrained by surface water flood risk as is the southern edge along the A1123
- In walking distance to services and facilities within St Ives as well as primary education and natural greenspace
- Of a scale to provide a mix of housing types, sizes and tenures
- Excellent accessibility to public transport options via the Guided Busway and also to several employment sites
- Within the Great Ouse Valley Green Infrastructure Priority Area
- Located on the eastern edge of St Ives and could be integrated into the existing place and community as a strategic expansion of the town

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially suitable for development but access capacity on the road network is a key consideration. Engagement with the County Council will be required
- Has potential to provide built development of a scale that could be integrated into the existing place and community
- Is located in a sustainable location utilising sustainable modes of transport
- Detailed masterplanning will be required to mitigate landscape impacts and to ensure successful integration with the existing settlement and community
- Consultation will also be required with utilities and other infrastructure providers to ensure the development has adequate infrastructure to serve it

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area of 122ha</p> <p>41.2% net developable area allowed following the exclusion of land as proposed in the submitted masterplan for:</p> <ul style="list-style-type: none"> <li>3ha for primary school</li> <li>3.3ha for a solar farm</li> <li>65.48ha for green infrastructure, sustainable drainage and accommodation of flood zones.</li> </ul> <p>122ha x 41.2% = <b>50.3 ha</b></p>	<p>The net developable area is 50.3ha.</p> <p><b>0.5ha is deducted for a care home and</b></p> <p><b>4.2ha is deducted for a local centre</b> (this includes retail/employment/health uses), this leaves 45.6ha.</p> <p><b>4.56ha is deducted for additional commercial and employment uses</b> representing 10% of the outstanding site area.</p> <p><b>41.04ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments.</p> <ul style="list-style-type: none"> <li>3% of land at very high density 145dph. 1.23ha x 145dph = 178 homes</li> <li>7% of land at high density 85dph. 2.87ha x 85dph = 244 homes</li> <li>25% of land at moderate density 50dph. 10.26ha x 50dph = 513 homes</li> <li>55% of land at low density 35dph. 22.57ha x 35dph = 790 homes</li> <li>10% of land at very low density 25dph. 4.1ha x 25dph = 103 homes</li> </ul>	<p>Available post 2028 subject to allocation</p> <p>Build out over 10 years</p>

## 8 Houghton and Wyton

8.1 A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Houghton and Wyton 1: tir na Nog, Sawtry Way, Houghton
- Houghton and Wyton 2: Land at New Manor Farm, Sawtry Way, Wyton
- Houghton and Wyton 3: Land between Houghton Hill Road and Sawtry Way, Sawtry
- Houghton and Wyton 4: Land off Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton) - this site also partially falls within Huntingdon parish. As the majority of the site falls within Houghton and Wyton parish, the site has been assessed here instead. A link to the site can also be found within the Huntingdon section of the Central Huntingdonshire LAA document.
- Houghton and Wyton 5: Land North of 6 Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton) - this site also partially falls within Huntingdon parish. As the majority of the site falls within Houghton and Wyton parish, the site has been assessed here instead. A link to the site can also be found within the Huntingdon section of the Central Huntingdonshire LAA document.

8.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Multiple options including: Residential: <ul style="list-style-type: none"> <li>Specialist housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Employment</li> <li>Logistics, distribution</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Transport and parking</li> <li>Renewable energy</li> </ul>	Approximately 30 static home pitches Employment floorspace TBC Logistics and distribution floorspace TBC 0.92ha for transport and parking Solar panels	Available 2024 - 2028 Complete over 1 - 2 years

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:90
Relevant planning history	Application number: 19/00195/PIP Proposed development: Permission in principle application for three houses Outcome: Refused
Land type	Partly greenfield and partly previously developed
Current use of the site	Partly residential and partly commercial
Supporting information	<ul style="list-style-type: none"> <li>Planning Statement (May 2023)</li> </ul>

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, there is a patch of the northern most corner of the site at risk of surface water flooding. The site is wholly classified as grade 2 agricultural land. The topography of the site is broadly level and is consists of elevated ground which falls away to the west which could result in greater landscape impacts in this direction. The site is located within the open countryside. It is fairly well enclosed with a hedgerow running along the frontage of the site along Sawtry Way, an established vegetation belt along its opposite edge and slightly loose vegetation along its eastern and western edges. A bridleway runs along the site's north-western edge.</p>	~
---	---

<p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however overhead power cables located along the site's frontage along Sawtry Way and also within the site. There are no nature conservation designations or heritage designations on site. The site contains an existing residential dwelling served by an existing vehicular access off Sawtry Way. The site promoter states that it is considered that the residential property could be demolished to facilitate development, or that it might be retained as offices or on-site residential accommodation for either of the suggested future development uses. The residential property is no longer required by the owners/applicants.</p> <p>The site is partially previously developed and partially greenfield, so its development will partially contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in ownership of a single family who supports its development. There are known legal restrictions impacting the site relating to overhead power cables. It is intended to deliver the site via the landowner, the site promoter states that the residential property is no longer required by the owners. The supporting statement states that an allocation status is sought for specialist static home pitches, commercial, employment, logistics and renewables development. The promoter suggests the land will be available between 2024 and 2028 and will take 1 to 2 years to complete.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from within the site apart from gas supply which is not immediately accessible. There are potentially structures on site to clear, there are overhead power cables located along the site's frontage and within the site, the site promoter states that these can be relocated underground. Consultation with utility providers will need to be undertaken to assess if these is feasible, practical and viable. The site can be accessed from Sawtry Way.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are potentially structures to clear on site, the site promoter states that these could be retained and reused within the redevelopment of the site. The presence of overhead power cables is a constraint. The site is located within the open countryside and while it is broadly level, it is located on elevated ground resulting in potentially great longer range landscape impacts particularly where land levels drop to the west. The site promoter intends to deliver the site via the landowners and an allocation status is sought. The site promoter states the site will be available between 2024 and 2028, as such, the site is categorised as developable.</p>	~

Progression of Site through to Sustainability Appraisal

Should the site progress to the sustainability stage?	Yes
---	-----

Impact of the Sustainability Appraisal on the assessment

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is partially greenfield land and partly previously developed land, classified as grade 2 agricultural land
- Is within flood zone 1 but surface water flood risk in the norther most corner of the site
- Somewhat remote from services and facilities and primary education
- Good accessibility to public transport options and employment opportunities
- Remote from natural green space
- Is adjacent to the Great Ouse Valley Green Infrastructure Priority Area
- Is located within the countryside along Sawtry Way
- Promoter is seeing a mix of employment and commercial uses as well as some renewable energy generation and retirement park homes - it is unclear how well these uses can be integrated with each other especially considering the site is less than 1ha in size, nor has evidence on the need for additional park homes in the vicinity has been provided

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially suitable for additional employment and commercial uses (not logistics and distribution) as well as some renewable energy generation
- Is not considered suitable for retirement park homes due to its remoteness from key village serves and facilities.
- The site is within the countryside so will need to provide landscaping to minimise the visual impact of development on the countryside to the south

Page 1220 of 3488

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 0.92ha  For solely employment developments, the gross site area is used as there is usually being minimal differences between net and gross site areas in schemes providing purely employment	Commercial - employment  The 0.35 plot ratio is most appropriate to use to calculate an indicative capacity for the site.	Available 2028, subject to allocation  Build out over 1- 2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
uses due to the need for large amounts of hardstanding for parking, manoeuvring and deliveries and more incidental landscaping.  The site has an existing property on site which could be demolished or retained and converted to offices. As such two capacities will be undertaken, one to reflect the site being cleared and the other where the property is converted.	In the scenario where the site is cleared:  0.35 plot ratio x 0.92 ha =0.322 ha of land for employment uses  equating to <b>3,220 sqm</b> .  In the scenario where the property is retained and converted:  The property and its curtilage make up approximately 0.26ha of the site. The building is approximately 150sqm  0.35 plot ratio x 0.66ha (remainder of the site) = 0.23ha of land for employment uses equating to 2,300 sqm.  Together this could provide <b>2,450 sqm</b> of commercial floorspace.	

Updates after the Initial Assessment

**Houghton and Wyton 2: Land at New Manor Farm, Sawtry Way, Wyton**

<b>Site reference</b>	Houghton and Wyton 2
<b>Site name</b>	Land at New Manor Farm, Sawtry Way, Wyton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land at New Manor Farm, Sawtry Way, Wyton	Houghton and Wyton	3.3

**Promoter's Intentions**

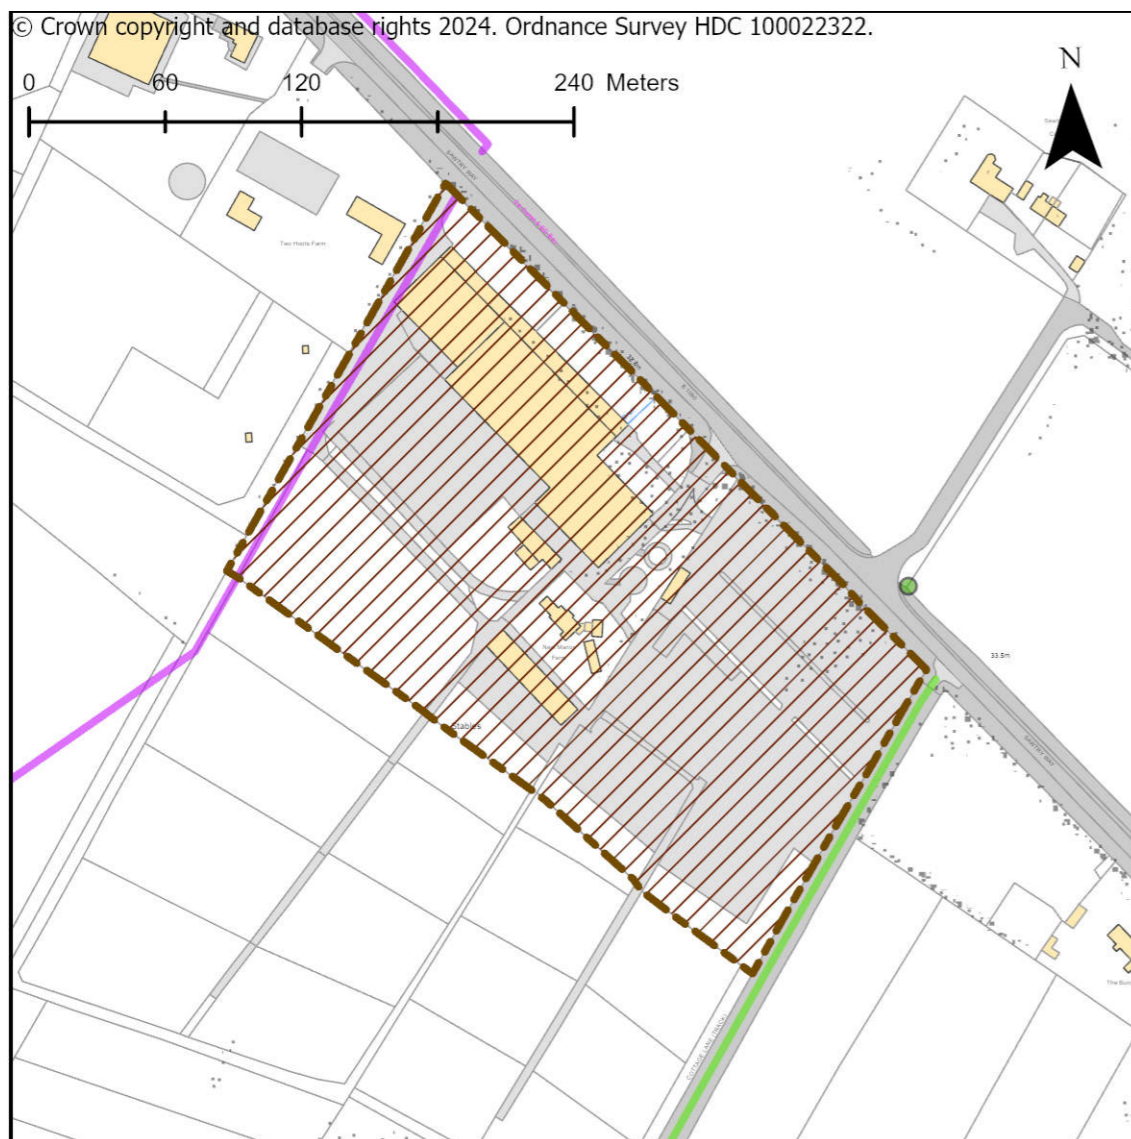

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Commercial: Employment	6,415sqm	Available 2023  Build out over 2 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:196
Relevant planning history	There is an extensive planning history on the site relating to its commercial uses.  HELAA (December 2017): New Manor Farm Equestrian Centre, Sawtry Way, Houghton and Wyton (108)
Land type	Partly greenfield and partly previously developed
Current use of the site	Commercial, residential and industrial
Supporting information	<ul style="list-style-type: none"> <li>Indicative Framework Site Plan (drawings number: P23-0902_DE_01__02)</li> <li>Supporting Statement (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, although there are areas at risk from surface water flood risk in the centre of the site. The site is wholly classified as grade 2 agricultural land. The site's location in the open countryside means that impact on the surrounding landscape is a development constraint. The topography of the site is broadly flat but the site is elevated with landscape dropping to the west, there is therefore greater risk of landscape impact of development to the west and south west towards the Great Ouse Valley. The site is screened to the north by trees on the boundary, but there is limited screening to the south, where there are long views across the Great Ouse Valley.</p>	~
---	---

<p>The site has had an extensive planning history with recent development on site and committed development yet to be delivered which is altering the landscaping of the wider site. There is a public right way running along the site's northwestern boundary.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however overhead power cables located along the site's frontage along Sawtry Way. There are no nature conservation designations or heritage designations on site. The site currently accommodates a mix of commercial uses on the frontage with an agricultural building and storage uses permitted to the rear. The frontage buildings are principally large span buildings that were originally erected for equestrian use. The site promoter states that it is proposed that these buildings be retained in commercial uses and could either be converted to alternative commercial uses or retained in their existing uses. Additionally, it is proposed to convert the existing dwelling on site to a commercial use. The site can be accessed from an existing access along Sawtry Way. The Indicative Framework Plan submitted alongside the call for site submissions shows the potential location of new buildings on site as well as change of uses of existing buildings. The submitted supporting statement also sets out in greater detail the proposed uses intended on site including a potential farm shop/ cafe.</p> <p>The site is partially previously developed and partially greenfield, so its development will partially contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in ownership of a single individual who supports its development. There is a development company involved with the site. There are no known legal restrictions impacting the site. It is intended to deliver the site via the landowner. The promoter suggests the land is available now and will take 2 to 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that main water supply and electricity supply are accessible within the site, that the public highway and digital and telecommunications infrastructure being accessible from the site's boundary, and finally gas supply being unknown. The site is already in a mixed residential and commercial use. The site can be accessed from Sawtry Way.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site promoter seeks to expand the current commercial uses on site by constructing additional buildings on site as well as changing the use of several existing structures. The site is broadly level but located on elevated ground resulting in potentially great longer range landscape impacts particularly where land levels drop to the west and south west</p>	~

towards the Great Ouse Valley. The site promoter intends to deliver the site via the landowners, it doesn't appear that an allocation status is sought. The site is located in the countryside and seeks to expand and diversify an existing commercial site. The site promoter states the site is available now but as there is not an active planning application for the proposed uses at present, and therefore the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is partially greenfield land and partly previously developed land, classified as grade 2 agricultural land
- Is within flood zone 1 but surface water flood risk in the norther most corner of the site
- Somewhat remote from services and facilities and primary education
- Good accessibility to public transport options and employment opportunities
- Remote from natural green space
- Is adjacent to the Great Ouse Valley Green Infrastructure Priority Area
- Is located within the countryside along Sawtry Way
- Seeking to intensify the consented employment and commercial uses on site with additional commercial buildings as well as a potential farm shop/ café

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially suitable for additional employment and commercial uses. Planning approval has already been granted to provide additional commercial floorspace in the north western part of the site
- The site is within the countryside so will need to provide landscaping to minimise the visual impact of development on the countryside to the south and west

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 3.3ha	Commercial - employment	Available 2024 Build out over 2 - 3 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Normally, for solely employment developments, the gross site area is used as there is usually being minimal differences between net and gross site areas in such schemes. However, as the site promoter is seeking some greenspace and enhanced landscaping to mitigate potential landscape impact, a net developable area will be used for this site. Taking this into account, a 80% net developable area will be used to calculate an indicative capacity for the site.</p> <p>3.3 ha x 80% = <b>2.64 ha</b></p>	<p>A 0.35 plot ratio will be used reflecting the proposed land uses and location of the site:</p> <p>0.35 plot ratio x 2.64 ha = 0.924 ha of land for employment uses equating to <b>9,240 sqm</b> (this includes a potential farm shop/ café and the existing dwelling on site which could be converted to office space. The site promoter has only stated the potential capacity for three additional large commercial units on site, hence the difference in potential capacities).</p>	

**Updates after the Initial Assessment**

## Houghton and Wyton 3: Land between Houghton Hill Road and Sawtry Way, Wyton

<b>Site reference</b>	Houghton and Wyton 3
<b>Site name</b>	Land between Houghton Hill Road and Sawtry Way, Wyton

Site address	Parish(es)	Site area (ha)
Land between Houghton Hill Road and Sawtry Way, Wyton	Houghton and Wyton	3.7

### Promoter's Intentions

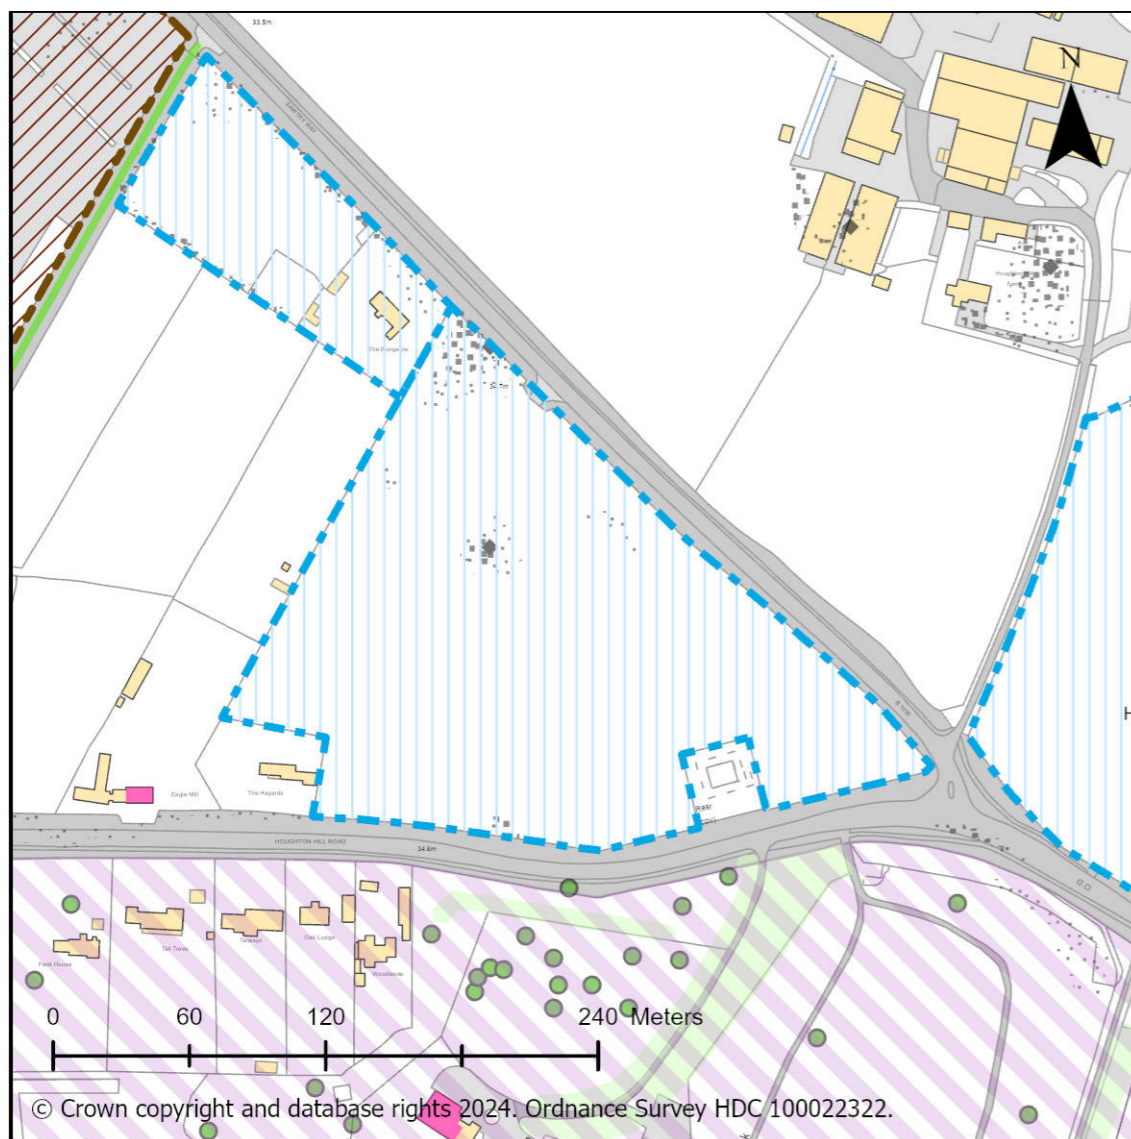

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open space uses: Natural, green or open spaces	Up to 9 homes 3ha for a semi-natural, woodland burial site	Available 2023 Built out over 2 years

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:200
Relevant planning history	<ul style="list-style-type: none"> <li>0802235FUL for the construction of an access on the northern site boundary with Sawtry Way. Permission was granted in September 2008, with the access implemented in full shortly thereafter.</li> <li>The site was assessed in the HELAA 2017 (Between Houghton Hill Road and Sawtry Way, Houghton &amp; Wyton, site reference 117) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Supporting Statement (June 2023)</li> </ul>

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 but there are pockets of surface water flood risk concentrated within the northern half of the site. The majority of the site is classified as grade 3 agricultural land with only the northern tip of the site, situated adjacent to 'The Bungalow' along Sawtry Way being classified as grade 2. The site is greenfield land located to the north of Houghton Hill Road and to the north of Houghton village. The site features substantial hedging along the western and southern boundaries. The site is broadly level but is located on slightly elevated land which may increase adverse landscape impacts arising from development. Along parts of the southern boundary and to the opposite side of Houghton Hill Road is residential development. Abutting each of the other site boundaries</p>	~
--	---

<p>is open countryside with a pocket of industrial development at Houghton Hill Farm opposite the eastern boundary. The supporting statement accompanying the call for site's submission includes an indicative framework plan showing that the proposed dwellings would be located along Sawtry Way with the majority of the site being used for a semi-natural burial site. The site promoter states that the dwellings are proposed to secure financial viability of the project in the short-term whilst the woodland burial plots become established. This area will include extensive tree planting and vegetation, open space and pockets of woodland which would screen the impact of built development. Consultation will be required with the Environment Agency on the impact of a burial site here on groundwater.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however overhead electricity and telegraph lines located along the site's frontage along Houghton Hill Road, along the site's eastern edge along Sawtry Way and also within the site. There are no nature conservation designations or heritage designations on site. The site is however adjacent to the Houghton and Wyton Conservation area and Eagle Mill (grade II listed) is nearby to the south west. Access is possible via Sawtry Way where permission was granted and subsequently implemented for the construction of an access point into the site. The supporting statement shows that this is the only intended point of access into the site.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership with the owner supporting its development. A development company is involved with the site. There are no known legal restrictions impacting the site. It is intended to deliver the site via the landowner, who is also a housebuilder. The promoter suggests the land is available now and will take 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from the site boundary apart from gas supply which is unknown. There are no structures on site to clear, there are several overhead electricity and telegraph lines located along the site's boundaries and within the site, also the site is located on elevated and which may increase adverse landscape impacts. The site can be accessed from Sawtry Way. Consultation will be required with the Environment Agency on the impact of a burial site here on groundwater.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are minimal structures to clear on site, but the presence of electricity poles, proximity to heritage assets and landscape impacts are constraints to development. The site promoter intends to deliver the site via the landowners who is also a housebuilder., it doesn't appear that an allocation status is sought. The site is located in the countryside and as it does not appear to be the intention of the landowner to bring this site forward as a rural exceptions scheme, it is likely that the success development of the site will require an allocation status. The site promoter states the site is available now but no planning application has yet been made. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land mostly grade 3 agricultural quality
- Is within flood zone 1 but there is some surface water flood risk within the site
- Somewhat remote from services and facilities and primary education
- Good accessibility to public transport options and employment opportunities
- Is adjacent to the Great Ouse Valley Green Infrastructure Priority Area
- Is located within the countryside along Sawtry Way so integration with the existing place and community is more challenging
- Seeking to provide up to 9 homes along Sawtry Way and the remainder of the site to be used as a natural burial ground with extensive trees and vegetation planted to create a mini woodland which would impact the character of the area
- Potential impact on the setting of designated heritage assets

In combination the outcomes of the LAA and SA indicate that the site:

- Is not appropriate for built development as homes on the site could not be effectively integrated into a existing place or community and are not sustainably located to access day to day services.
- The potential burial ground could be accommodated into the landscape and reinforce the perception of separation of Houghton from St Ives

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The site is considered inappropriate for residential development so no capacity calculation has been undertaken for that use</p> <p>The whole site could form the net developable area for a woodland burial ground including appropriate parking provision.</p>	Woodland burial ground including associated car parking	<p>Post 2028</p> <p>Delivery over an extended period after initial planting and landscaping</p>

**Updates after the Initial Assessment**

**Houghton and Wyton 4: Land off Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton)**

<b>Site reference</b>	Houghton and Wyton 4
<b>Site name</b>	Land off Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton)

Site address	Parish(es)	Site area (ha)
Land off Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton)	Houghton and Wyton and Huntingdon	3

**Promoter's Intentions**

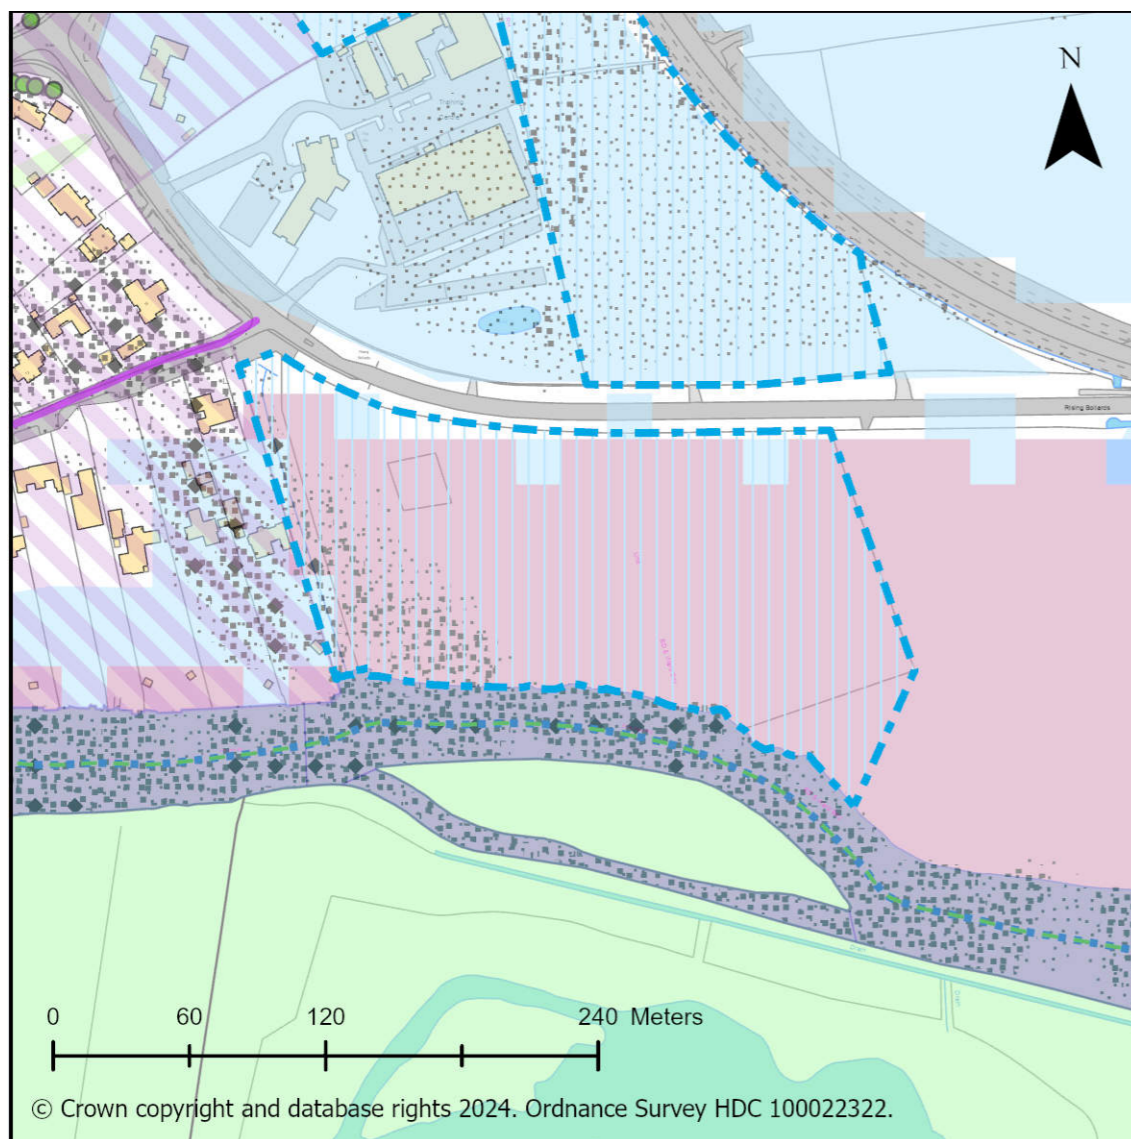

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Specialist housing</li> <li>Custom and self build housing</li> <li>Moorings</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Commercial leisure uses</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>Land to safeguard against flooding</li> </ul>	Quantity for specialist housing not provided 6 custom and self build plots 20 - 40 berths 500sqm for commercial leisure uses 0.5ha for land to safeguard against flooding	Available 2024 - 2028 Complete over 2 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:183
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Almost all of the site is within flood zone 3b. Some of the proposed land uses are water compatible development.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is almost completely constrained by fluvial flood risk, approximately 90% of the site is within flood zone 3b with a further 5% within flood zones 2 and 3a. There is about 5% within flood zone 1. This makes the site unsuitable for built development such as specialist housing, self and custom build housing and commercial development. Residential uses are classified as being a more vulnerable use and commercial development as a less vulnerable use as per the NPPF and development in such locations is strongly discouraged. However, the site could potentially be used for moorings and flood mitigation. The western edge of the site is also at risk from surface water flooding. The western half of the site is classified as urban and the eastern half of the site is non-agricultural. The site is broadly</p>	~
--	---

<p>flat and is bounded by the River Great Ouse along its southern boundary. Trees and vegetation border the extent of the site's boundaries screening it somewhat from public view and adding to the rural character of the Great Ouse Valley. To the west is residential development, to the north is the former West Anglia Training Centre and to the south and east is open countryside defined by the Great Ouse Valley.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are no nature conservation designations on site. There are no heritage designations on site either but the site adjoins a conservation area on its western edge. Access to the site could be achieved from Old Houghton Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states that it is intended to deliver the site directly by the landowner. The promoter suggests the land will be available between 2024 and 2028 and take 2 to 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that the public highway is accessible from the site's boundary but that all other services are unknown. There are no buildings on site to clear. The site is however very significantly constrained by fluvial flooding which makes built development unsuitable. The delivery of land to mitigate against flooding and moorings are potentially suitable. The site also adjoins a conservation area and the site is in a prominent location in terms of its relationship with the Great Ouse Valley. Access is possible via Old Houghton Road. The potential achievability of the development would depend upon it not overloading the environmental, navigational or flood conveyance capacity of the river. Assessment will require engagement with the relevant water bodies and organisations to determine this.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear. There are constraints on site that would need to be overcome such as flood risk, landscape impact and heritage impacts. The site promoter states that it is intended to deliver development on site directly by the landowner and that the site will be available between 2024 and 2028. The site has however been promoted for a mixed use scheme consisting of residential development (specialist housing and custom and self build housing), moorings, commercial leisure uses and land to mitigate against</p>	~

flood risk. Due to the fluvial flood risk built development is unsuitable on site but land for moorings and flood mitigation may be potentially suitable. It is unclear if the landowner intends to develop a scheme with reduced land uses.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes but appraised for providing flood mitigation and moorings land uses as built development is unsuitable due to the level of flood risk across the site.
--	--

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Very high fluvial flood risk eliminating the potential for built development
- Good accessibility to natural greenspace
- Provision of additional moorings could reflect the local character of the river uses
- Good accessibility to shopping and local services including public houses
- Good accessibility to bus services facilitating travel to surrounding tourism and leisure destinations
- Limited scope for impact on adjoining conservation area

In combination the outcomes of the LAA and SA indicate that the site:

- Is not suitable for built development due to flood risk other than minimal water compatible structures
- Is suitable for provision of moorings along the river frontage and flood mitigation works
- Access connections to Old Hartford Road would need to be located by the eastern boundary of the site to minimise the landscape impact

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the river and the physical layout of any moorings.	Moorings (leisure or residential)  Flood mitigation	Post 2028  Build out over 1-2 years

**Updates after the Initial Assessment**

Page 1231 of 3488

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is an irregular shape consisting of two parcels, the northern parcel is located within Huntingdon parish and the southern parcel within Houghton and Wyton parish.

The site is almost completely constrained by fluvial flood risk, approximately 90% of the site is within flood zone 2 with the remaining 10% being within flood zone 1. Residential uses are classified as being a more vulnerable use and commercial development as a less vulnerable use as per the NPPF. The site is also almost completely at risk from surface water flooding. Further assessment will be required on flood risk following the approval

<p>of 22/01134/FUL for engineering works to improve drainage and ground conditions and it is noted that the site promoter states that the flood risk is not from the River Great Ouse but arises from poor drainage within the site.</p> <p>In terms of agricultural land class classification, the site is broadly split into thirds, the northern third of the site is classified as grade 2, the middle third as urban and the southern third as grade 3. The site is broadly flat and is bounded by the River Great Ouse along its southern boundary. The site is on the edge of Huntingdon and is currently screened from longer views across open countryside by mature trees and hedges on the site boundaries. This vegetation also adds to the rural character of the Great Ouse Valley. To the north is residential development, to the west is residential development and the former East of West Anglia Training Centre, to the south is open countryside defined by the Great Ouse Valley and to the east the site is defined by the A1123.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. The site is however adjacent to the A1123 and the roundabout between the A1123, A141 and B1514. This could give rise to increased levels air, noise and light pollution. There are no nature conservation designations on site. There are no heritage designations on site either but the site partially adjoins a conservation area on its north western edge. Access to the site could be achieved from Main Street.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single individual who supports its development. There are no known legal restrictions impacting the site. The site promoter states that it is intended to deliver the site directly by the landowner. The promoter suggests the land will be available between 2024 and 2028 and take 1 to 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site's boundary. There are no buildings on site to clear and there are no major topographical challenges to overcome. The site is however very significantly constrained by fluvial and surface water flooding which makes built development potentially unsuitable. The delivery of land to mitigate against flooding and for biodiversity net gain are potentially suitable. The site also adjoins a conservation area and the site is in a prominent location in terms of its relationship with the Great Ouse Valley. Access is possible via Main Street. The</p>	~

<p>potential achievability of the development will not overload the environmental, navigational or flood conveyance capacity of the watercourse or water body. Assessment will require engagement with the relevant water bodies and organisations to assess this.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear. There are constraints on site that will need to be overcome such as flood risk, landscape impact and heritage impacts. The site promoter states that it is intended to deliver development on site directly by the landowner and that the site will be available between 2024 and 2028. The site has however been promoted for a mixed use scheme consisting of residential development, retail uses, biodiversity net gain and land to mitigate against flood risk. Due to the fluvial flood risk built development is potentially unsuitable on site but planning permission has been granted for engineering works to help address flood risk on site. Land for biodiversity net gain and for flood mitigation may be potentially suitable. It is unclear if the landowner would wish to develop a scheme with reduced land uses.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Risk of fluvial flooding across almost the entire site (flood zone 2)</li> <li>● Risk of surface water flooding across almost the entire site</li> <li>● It is noted permission exists for works to address some flood risk</li> <li>● Reasonable access to natural greenspace</li> <li>● Has established landscaping and is well contained particularly on the eastern edge with the A1123 by mature trees</li> <li>● Good accessibility to town centre shops and services, employment and public transport</li> <li>● Located in good proximity to existing development</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Heavily constrained by flood risk, would require sequential flood testing to demonstrate no suitable land being available at lower flood risk to justify development</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Net developable area dependent on outcome of sequential testing.	Moorings (leisure or residential)  Flood mitigation	TBC

**Assessment of Site Potential**

Page 1238 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>This site has also been submitted within a larger site area under CfS:386 (St Ives 2).</p> <p>The site is located on the western edge of a lake and consists of a previous industrial quarry site. The site is mostly within flood zone 1 but its northern edge being within flood zones 3a and 3b. There is also some surface water flood risk along the site's edges. Residential uses are classified as being a more vulnerable use as per NPPF and development in such locations are strongly discouraged. The site is wholly classified as urban. The site is broadly level but does very gently slope downwards on its northern and eastern edges where it adjoins the lake. Across the whole of the site are established trees and vegetation. Its eastern and northern edges are defined by the lake and its western edge by the A1096 (Harrison Way), which beyond that is residential development. To the south is the Meadow Lane Business Park and to the north is further greenspace and Hunts Sailing Club.</p> <p>There is no known contamination on site but this may require further investigation as some of the site is a former industrial quarry site. There are no oil pipelines running through the site. Additionally, the site's proximity to the A1096 may result increased levels of air, noise and visual forms of pollution. The site completely falls within the Meadow Lane Gravel Pits County Wildlife Site. There are no heritage designations on site but it is adjacent to a conservation area with the A1096 (Harrison Way) separating the site from it. There are two existing points of access into the site located along Meadow Lane.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. Only the south eastern most corner of the site is situated in an extensive mineral safeguarding area for sand and gravel, the rest of the site is outside; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. A developer company is involved with the site. There are no known legal restrictions impacting the site. It is intended to acquire planning permission before selling the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take approximately a year and a half to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site's boundary. There are no structures to clear but there is extensive trees and vegetation across the site, some of which will need to be cleared. The site is within flood zone 2 with</p>	~

<p>some of its eastern edge falling within flood zones 3a and 3b. The parts of the site at highest flood risk could potentially be mitigated through landscaping and sustainable drainage but further engagement with the Environment Agency would be required considering that the site is being proposed for residential uses. Also, impact on the County Wildlife Site will need to be assessed. There will need to be adequate mitigation against air, noise and visual pollution arising from its proximity to the A1096 on future residents.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is heavily constrained from flood risk and by falling completely within a County Wildlife Site with substantial amount of trees and vegetation present on site. The site's location in relation to the A1096 is also a constraint in terms of the potential for higher level of pollution impacting the amenity of future residents. The site promoter states that the site will be available between 2024 and 2028 and that a developer company is involved with the site. It does not appear that an allocation status is sought for the site. Considering this and the constraints on site, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land</li> <li>● The site is mostly within flood zone 1 but its northern edge being within flood zones 3a and 3b</li> <li>● In walking distance to town centre services and facilities, primary education and employment opportunities although crossing the A1123 to access these is challenging as a result of minimal appropriate crossing points</li> <li>● Good accessibility to public transport options</li> <li>● Remote from natural green space</li> <li>● The site completely falls within the Meadow Lane Gravel Pits County Wildlife Site, built development is likely to adversely impact this and the landscape character of the area</li> <li>● Within the Great Ouse Valley Green Infrastructure Priority Area</li> <li>● Potential for increased levels of pollution arising from its proximity to the A1123</li> <li>● Located on the eastern edge of St Ives separated by the A1123 (Harrison Way), there is potential that it could be integrated with the existing place and community but this is more challenging</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is inappropriate for development as successfully integrating the site with the existing place and community would be challenging and development would likely adversely impact the character of the County Wildlife Site.

**HDC's Delivery Calculations**

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located on the western edge of a lake and consists of a previous industrial quarry site. The site is mostly within flood zone 1 but its northern edge being within flood zones 3a and 3b. There is also some surface water flood risk along the site's edges. Residential uses are classified as being a more vulnerable use as per NPPF and development in such locations are strongly discouraged. The site is wholly classified as urban. The site is broadly level but does very gently slope downwards on its eastern edge where it adjoins the lake. Across the whole of the site are established trees and vegetation forming a green wedge between the lake and the urbanised town environment to the west.</p>	~
---	---

Its eastern edge is defined by the lake and its western edge defined by the A1096 (Harrison Way), which beyond that is residential development. To the south is the Meadow Lane Business Park and to the north is further greenspace and Hunts Sailing Club.

There is no known contamination on site but this may require further investigation as some of the site considering that it is a former industrial quarry site. There are no oil pipelines running through the site. Additionally, the site's proximity to the A1096 may result increased levels of air, noise and visual forms of pollution. The site completely falls within the Meadow Lane Gravel Pits County Wildlife Site. There are no heritage designations on site but it is adjacent to a conservation area with the A1096 (Harrison Way) separating the site from it. The site promoter identifies that vehicle access to the site is expected to retain the site's two existing vehicular access points, located approximately 60m and 120m to the southeast of the existing A1096/Meadow Lane roundabout. The site promoter's supporting statement identifies that built development will be focused on the southern most part of the site facing onto Meadow Lane utilising the existing access points (this southern part of the site has also been submitted under CfS:100 - St Ives 1, this submission excludes the land north that loops around the lake towards the sailing club). The remaining northern part of the site that loops around the lake will be used for open space. The site promoter also states that there is an informal track parallel to Harrison Way, and that this provides an opportunity to make a loop to provide amenity value. They also state that existing planting will remain in order to screen and provide a barrier to vehicle noise.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. Only the south eastern most corner of the site is situated in an extensive mineral safeguarding area for sand and gravel, the rest of the site is outside; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is controlled by a single owner who supports its development. The site has been optioned. There are no known legal restrictions impacting the site. It is intended to acquire planning permission before selling the site to a third party for development. The promoter suggests the land is available now and take less than one year to complete.

+

**Achievability**

The site promoter has identified that all access and services are accessible from the site's boundary. There are no structures to clear but there is extensive trees and vegetation across the site, some of which will need to be cleared. The site is within flood zone 2 with some of its eastern edge falling within flood zones 3a and 3b. The parts of the site at highest flood risk could potentially be mitigated through landscaping and sustainable drainage but further engagement with the Environment Agency would be required considering that the

~

<p>site is being proposed for specialist housing. Also, impact on the County Wildlife Site will need to be assessed. There will need to be adequate mitigation against air, noise and visual pollution arising from its proximity to the A1096 on future residents.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is heavily constrained from flood risk and by falling completely within a County Wildlife Site with substantial amount of trees and vegetation present on site. The site's location in relation to the A1096 is also a constraint in terms of the potential for higher level of pollution impacting the amenity of future residents. The site promoter states that the site is available now and does not appear to seek an allocation status for the site. Also, while the site promoter identifies that the site has been optioned, no information has been provided as to whether a house builder or specialist housing provider is currently involved with the site. However, information provided under CfS:100 (St Ives 1) identifies that a specialist housing/ retirement accommodation provider is involved. Considering this and the constraints on site, the site is categorised as developable.</p>	

- The site is inappropriate for development as successful integration with the existing place and community is challenging and development would adversely impact the character of the County Wildlife Site.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site consists of a children's nursery and café. The site is within flood zone 1. The majority of the site is classified as urban apart from the north eastern corner of the site which is classified as non-agricultural. The site is broadly level with more established vegetation along its western and southern edges where the site adjoins the Meadow Lane Business Park and residential curtilages respectively. The site's boundaries are more open to the east and north. To the north is Meadow Lane and to the east is open grassland.</p> <p>There is no known contamination on site but this may require further investigation considering the site is previously developed. There are no oil pipelines running through the site. There are telegraph poles located along the site's eastern boundary. Additionally, the site's proximity to the A1096 may result increased levels of air, noise and visual forms of pollution. There are no nature conservation or heritage designations on site. There is an existing access into the site from Meadow Lane.</p> <p>The site is previously developed, so its redevelopment will contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. There are no known legal restrictions impacting the site, however, the site promoter states that a key constraint to development is to work with the existing tenants to find alternative locations for their businesses. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2029 and 2034 and take two years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that gas supply, the public highway and digital and telecommunications infrastructure are accessible from the site boundary, with mains water supply and electricity supply available within the site. There are several existing buildings and structures to clear, some of which are substantial and permanent in structure. The site is fairly level with very few topographical constraints to overcome, however it is heavily constrained by fluvial flood risk. The site has an existing access from Meadow Lane which serves the children's nursery on site. The site promoter states that they will work with existing tenants to relocate, however it is unclear at this stage how feasible that is and if an appropriate site is available.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are several existing structures to clear in order to redevelop this previously developed site. There are also existing business on site that will need to relocate before development can commence. The site promoter states that they anticipate that the site will be available between 2029 and 2034, as such the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is previously developed land
- The site is within flood zone 1
- In walking distance to town centre services and facilities, primary education and employment opportunities
- Good accessibility to public transport options
- Remote from natural green space
- Within the Great Ouse Valley Green Infrastructure Priority Area and within 200m of the Meadow Lane Gravel Pits CWS
- Potential for increased levels of pollution arising from its proximity to the A1123
- Located on the eastern edge of St Ives separated by the A1123 (Harrison Way) and adjoins an established employment area making integration of residential uses more challenging

In combination the outcomes of the LAA and SA indicate that the site:

- The site could be potentially suitable for residential development utilising previously developed land on the edge of St Ives. Integration is more challenging by virtue of its edge of town location. Appropriate noise mitigation will be required to mitigate the impact of the A1123 and nearby employment uses.
- Support residential development on sites of less than 1ha
- This is also dependent on the successful relocation of the existing occupiers of the site.

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.65ha</p> <p>90% net developable area allowed to incorporate landscaping and noise mitigation from the A1123 and nearby employment uses.</p> <p>0.65ha x standard proportion of 90% = <b>0.585 ha</b></p>	<p>Residential - market and/or affordable homes</p> <p>Low density of 35 dph anticipated due to the edge of town location.</p> <p>Low density of 35 dph = 0.585ha x 35 dph = <b>20 homes</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 1 year</p>

Updates after the Initial Assessment

**St Ives 4: Land North of Meadow Lane, St Ives**

<b>Site reference</b>	St Ives 4
<b>Site name</b>	Land North of Meadow Lane, St Ives

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land North of Meadow Lane, St Ives	St Ives	7.95

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Commercial: Employment	Circa 28,000 sqm	Available 2024 - 2028 Build out over 3 - 4 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:110
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Grazing land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	Almost the entirety of the site is within flood zone 2, some of the site's edges fall within flood zones 3a and 3b but this is less than 50% of the site area.	Pass

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Designated local green space	None	Pass
Nature conservation designation	The Meadow Lane Gravel Pits County Wildlife Site is partially within the site along its north-western edge.	Pass
Within mineral development area or water recycling area	The south western corner of the site falls within 400m of a waste management area	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Two thirds of the site is within flood zone 2 with some of the site's edges falling within flood zones 3a and 3b. There is some minimal risk from surface water flooding. Employment uses are classified as being a less vulnerable use as per the NPPF. The site is wholly classified as non-agricultural. The site is broadly level but does rise gently towards its eastern edge. The boundaries of the site are clearly defined by hedgerows and trees. It is most open along Meadow Lane. To the south of the site on the opposite side of Meadow Lane is commercial development, to the north, east and west is the open countryside consisting of the Meadow Lane Gravel Pits County Wildlife Site.</p>	~
--	---

<p>There is no known contamination on site but this may require further investigation considering the site is previously developed. There are no oil pipelines running through the site. There are telegraph poles located along the site's frontage. The Meadow Lane Gravel Pits County Wildlife Site is partially within the site along its north-western edge. There are no heritage designations on site. There is an existing access from Meadow Lane which links to a track that runs through the site. It is unclear at this stage what form of commercial development would be acceptable on site and the volume and type of vehicle movements it may generate. Engagement with Cambridgeshire County Council will be required to determine if the existing access and local road network can accommodate the development.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site but the south western corner of the site falls within 400m of a waste management area.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single owner who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take between 3 and 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. Fluvial flood risk is a key constraint to development, additionally, the County Wildlife Site is another constraint which built development could impact. The site has an existing access from Meadow Lane, the achievability of this access and the local road network being able to accommodate the proposed quantum of development will need to be assessed with the Highways Authority.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but flooding and the impact of development on nature conservation sites and the wider countryside are key barriers to overcome which may impact the deliverability and developability of the site. The site promoter states that they anticipate the site will be available between 2024 and 2028, as such the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Two thirds of the site is within flood zone 2 with some of the site's edges falling within flood zones 3a and 3b</li> <li>• Reasonable accessibility to town centre services and facilities</li> <li>• Good accessibility to public transport options</li> <li>• Remote from natural green space</li> <li>• Within the Great Ouse Valley Green Infrastructure Priority Area and the Meadow Lane Gravel Pits CWS partially falls within the site</li> <li>• Potential to provide new employment and job growth</li> <li>• Located to the east of St Ives, located along Meadow Lane where there is a series of commercial development but located on the other side of the road. Development on this side is uncharacteristic of the immediate area and would significantly alter the character of the landscape</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development due to its potentially significant adverse impacts on the landscape, nature conservation designations and on local ecology</li> <li>• The site is also significantly constrained by fluvial flood risk</li> </ul>

Land at Marley Road, St Ives	St Ives	36.12

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable homes	Up to 600 homes	Available 2024 - 2028 Build out over 10 - 15 years

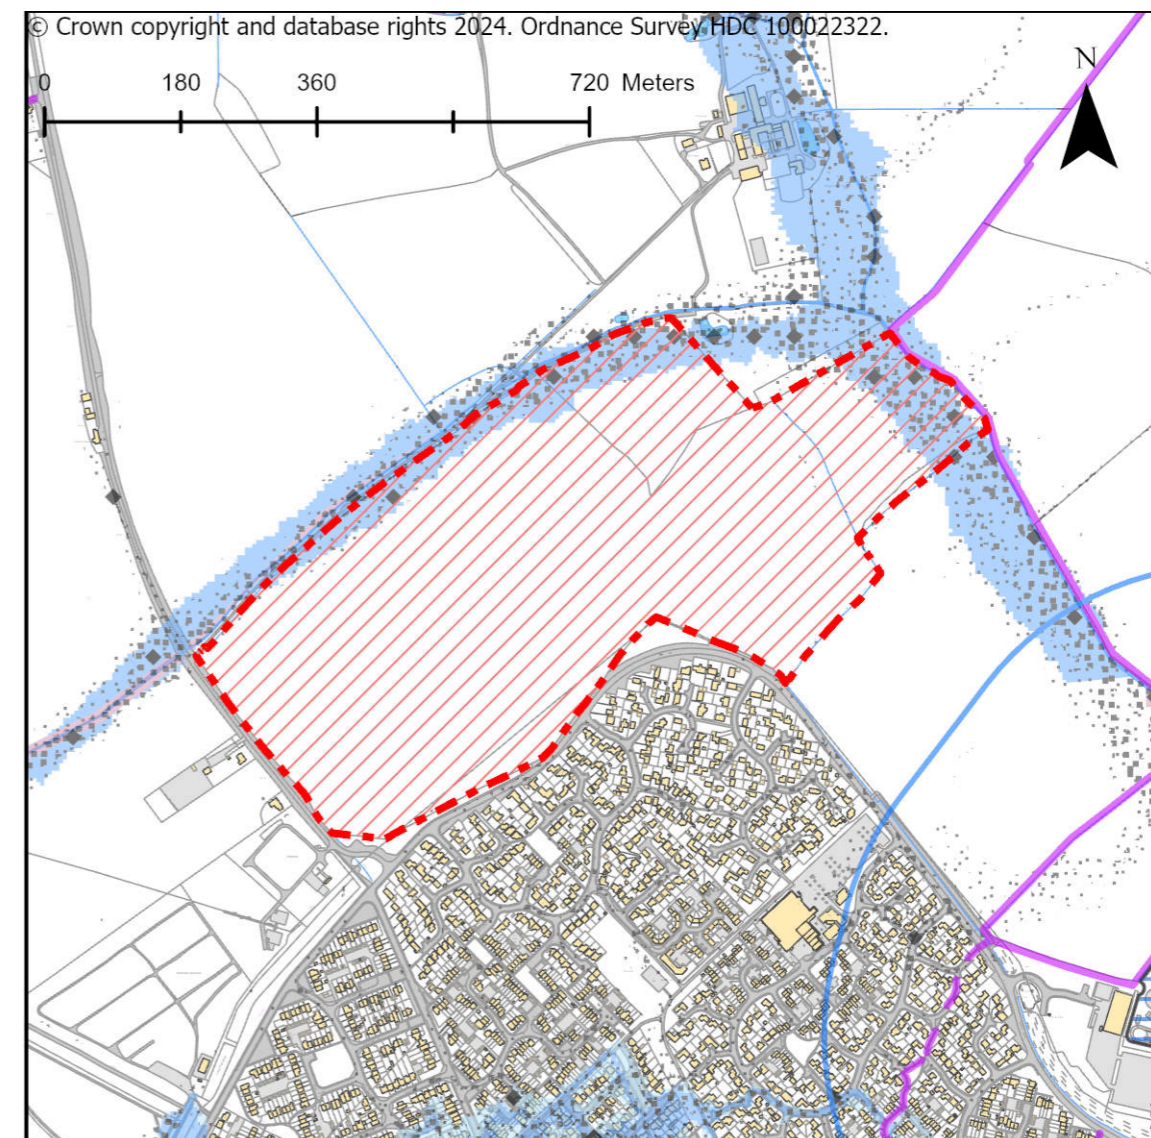

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:292
Relevant planning history	None relevant  HELAA (December 2017): East of Old Ramsey Road, St Ives (206)  HELAA (December 2017): North of St Ives (130). The site included as part of a larger site.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1250 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>Most of the land is classed as flood zone 1 but parts along the northern and eastern boundary are classed as flood zone 3a, with more limited areas along these boundaries being classed as flood zone 2. Along the southern boundary, an area of the site is classed as flood zone 3a, with a further area being classified as flood zone 2. Surface water flood risk is also a constraint in these parts of the site.</p> <p>The majority of the site is classified as grade 2 agricultural land, with approximately 25% of the site being classified as grade 3 in the eastern part of the site. The site is greenfield located on the northern edge of St Ives adjoining residential development along Marley Road at its southern boundary, to the north west and east is open countryside. Along its northern boundary is a private access road to Wiggin Hill Farm. The topography of the site is relatively flat in the western and central parts of the site but is more low lying towards the eastern end of the site. The site rises towards the western end of the site, and a ridge runs southwest to northeast along the centre of the western end of the site. The site is screened by hedgerows and trees. Development would be visible from Old Ramsey Road and footpaths to the north of the site. These in combination mean that development is likely to result in greater landscape impacts.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however telegraph lines located along the site's northern edge along the private access road to Wiggin Hill Farm. There are no nature conservation designations or heritage designations on site. Access could be provided along Old Ramsey Road, the scale of the proposed development will however require an assessment that safe and appropriate access can be provided and that any adverse transport impacts can be adequately mitigated.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There is a Planning Promotion Agreement in place between the landowners and a developer. The site promoter states that there are known legal restrictions impacting the site but details have not provided. The site promoter states it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available between 2024 and 2028 and take 10-15 years to complete.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that only the public highway is accessible from the site boundary, electricity supply is available within the site, with gas supply, mains water supply and digital and telecommunications infrastructure being unknown. There are no structures on site to clear, the site is largely flat but slopes downwards to the east, as such it is fairly prominent in landscape views and from public rights of way which will require additional landscaping to mitigate adverse impacts. The site is also heavily constrained by flood risk along the its northern, eastern and southern edges which to mitigate against will further minimise the potential net developable area. Access is possible via Old Ramsey Road but it needs to be assessed if the scale of development can be accommodated in transport terms.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear on site, but the flood risk on site as well as potential landscape impact are very clear constraints to development as well as appropriate access to the site. The site promoter states it is their intention to acquire planning permission and then sell the site to a third party for development. The site promoter states the site will be available between 2024 and 2028, as such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land with approximately 75% of the site being classified as grade 2 agricultural land</li> <li>● Is mostly within flood zone 1 but there are parts within flood zone 2 and 3a</li> <li>● Has good accessibility to town services and facilities, primary education, public transport options and employment opportunities</li> <li>● Remote from natural green space</li> <li>● Is of a scale that could provide a mix of housing sizes, types and tenures</li> <li>● Adjoins the northern edge of St Ives extending into the countryside, the scale of the potential development would alter the townscape and landscape considerably</li> <li>● Integration with the existing place and community is challenging as there is no footpath along Old Ramsey Road along the site's frontage and connections may not be possible into existing adjoining residential areas</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is inappropriate for built development due to the significant likely adverse impacts on the character of St Ives and the surrounding countryside. Integration with the existing place and community is also challenging.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

**Core information**

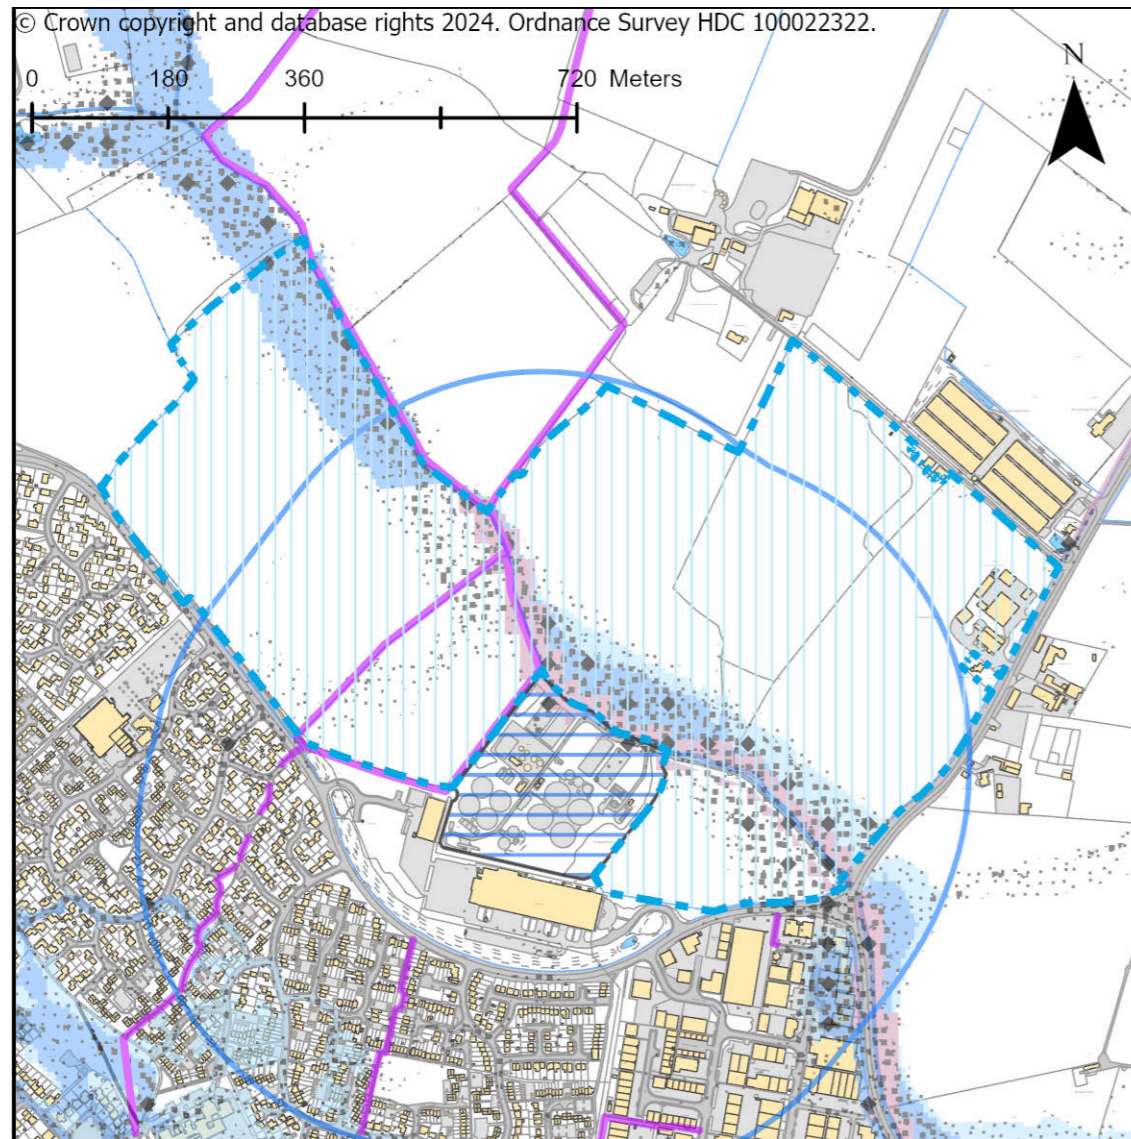

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:246
Relevant planning history	None relevant

	HELAA (December 2017): North of St Ives (130). The western half of the site was assessed as part of an alternate site area.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Vision document (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	No land within flood zone 3b but a proportion of land through the centre of the site is within flood zone 3a.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	Approximately 75% of the site falls within a water recycling area as the site adjoins a sewage works. No odour assessment has been submitted as part of the call for sites submission. The land that does not fall within the water recycling area and is very detached from St Ives so its development would not relate well to the settlement being located in the open countryside.	Fail
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 1253 of 3488

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as approximately 75% of the site falls within a water recycling area as the site adjoins a sewage works.	N/A	N/A

**Updates after the Initial Assessment**

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No because approximately 75% of the site falls within a water recycling area as the site adjoins a sewage works. No odour assessment has been submitted as part of the call for sites submission. The land that does not fall within the water recycling area is very detached from St Ives so its development would not relate well to the settlement being located in the open countryside.

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Most of the land is classed as flood zone 1 but limited areas along the northern boundary, abutting the drain, are classed as flood zone 2 and flood zone 3a. Flooding from surface water is also a risk along the site's northern edge. The site is wholly classified as grade 2 agricultural land. The site is greenfield located to the west of Old Ramsey Road to the north of St Ives. To the south of the site is allotments whilst immediately east of the site is a residential dwelling. To the north and west of the site is open countryside. The topography of the site gentle slopes downwards to its northern boundary. The site is clearly defined through vegetation and trees along its western, southern and eastern boundaries, however the site itself is relatively open in nature and there are long views into the site from Old</p>	~
---	---

<p>Ramsey Road to the north and views out of the site to Wyton on the Hill. Development would be visible in such views. These in combination mean that development is likely to result in greater landscape impacts.</p> <p>There is no known contamination or pollution on site and there are no gas or oil pipelines running through the site. There are however telegraph lines located along the site's frontage along Old Ramsey Road. There are no nature conservation designations or heritage designations on site. Access can be provided along Old Ramsey Road, the scale of the proposed development will however require an assessment that safe and appropriate access can be provided and that any adverse transport impacts can be adequately mitigated.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land will be available now and take 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services and access are accessible from the site boundary. There are no structures on site to clear, the site gently slopes downwards to the north and is fairly prominent in landscape views which will require additional landscaping to mitigate adverse impacts. There is flood risk along the site's northern edge arising from its adjoining a drain which to mitigate against will further minimise the potential net developable area. Access is possible via Old Ramsey Road.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear on site, but the flood risk on site as well as potential landscape impact are clear constraints to development. The site promoter states it is their intention to acquire planning permission and then sell the site to a third party for development. The site promoter states the site will be available now but there is not a live planning application on site, as such, the site is categorised as developable</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land and is wholly classified as grade 2 agricultural land
- Is mostly within flood zone 1 but some of its northern boundary is within flood zone 2 and 3a where it abuts a drain
- Has good accessibility to town services and facilities, primary education, public transport options and employment opportunities
- Is accessible to natural green space
- Is of a scale that could provide a mix of housing sizes, types and tenures
- Is detached from the main settlement adjoining a allotments and a cemetery, it relates more closely to the countryside, as such integration with the existing place and community is challenging as there is no footpath along Old Ramsey Road along the site's frontage

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to the significant likely adverse impacts on the character of St Ives and the surrounding countryside. Integration with the existing place and community is also challenging.

Page 1256 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken.	N/A	N/A

### 10 Wyton on the Hill

10.1 A total of 5 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Wyton on the Hill 1: Wyton Airfield
- Wyton on the Hill 2: Hungary Hall, West of A141, Wyton on the Hill - this does largely fall within Broughton parish but has been assessed here due to its close relationship with Wyton on the Hill 1.
- Wyton on the Hill 3: Lodge Farm, North of A141, Huntingdon (Wyton on the Hill) - this site also partially falls within Huntingdon parish. As the majority of the site falls within Wyton-on-the-Hill parish, the site has been assessed here instead. A link to the site can also be found within the Huntingdon section of the Central Huntingdonshire LAA document.
- Wyton on the Hill 4: Land North of Houghton Road (southern portion), St Ives (Wyton on the Hill)
- Wyton on the Hill 5: Land North of Houghton Road (larger site), St Ives (Wyton on the Hill)

Page 1257 of 3488

10.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Core information**

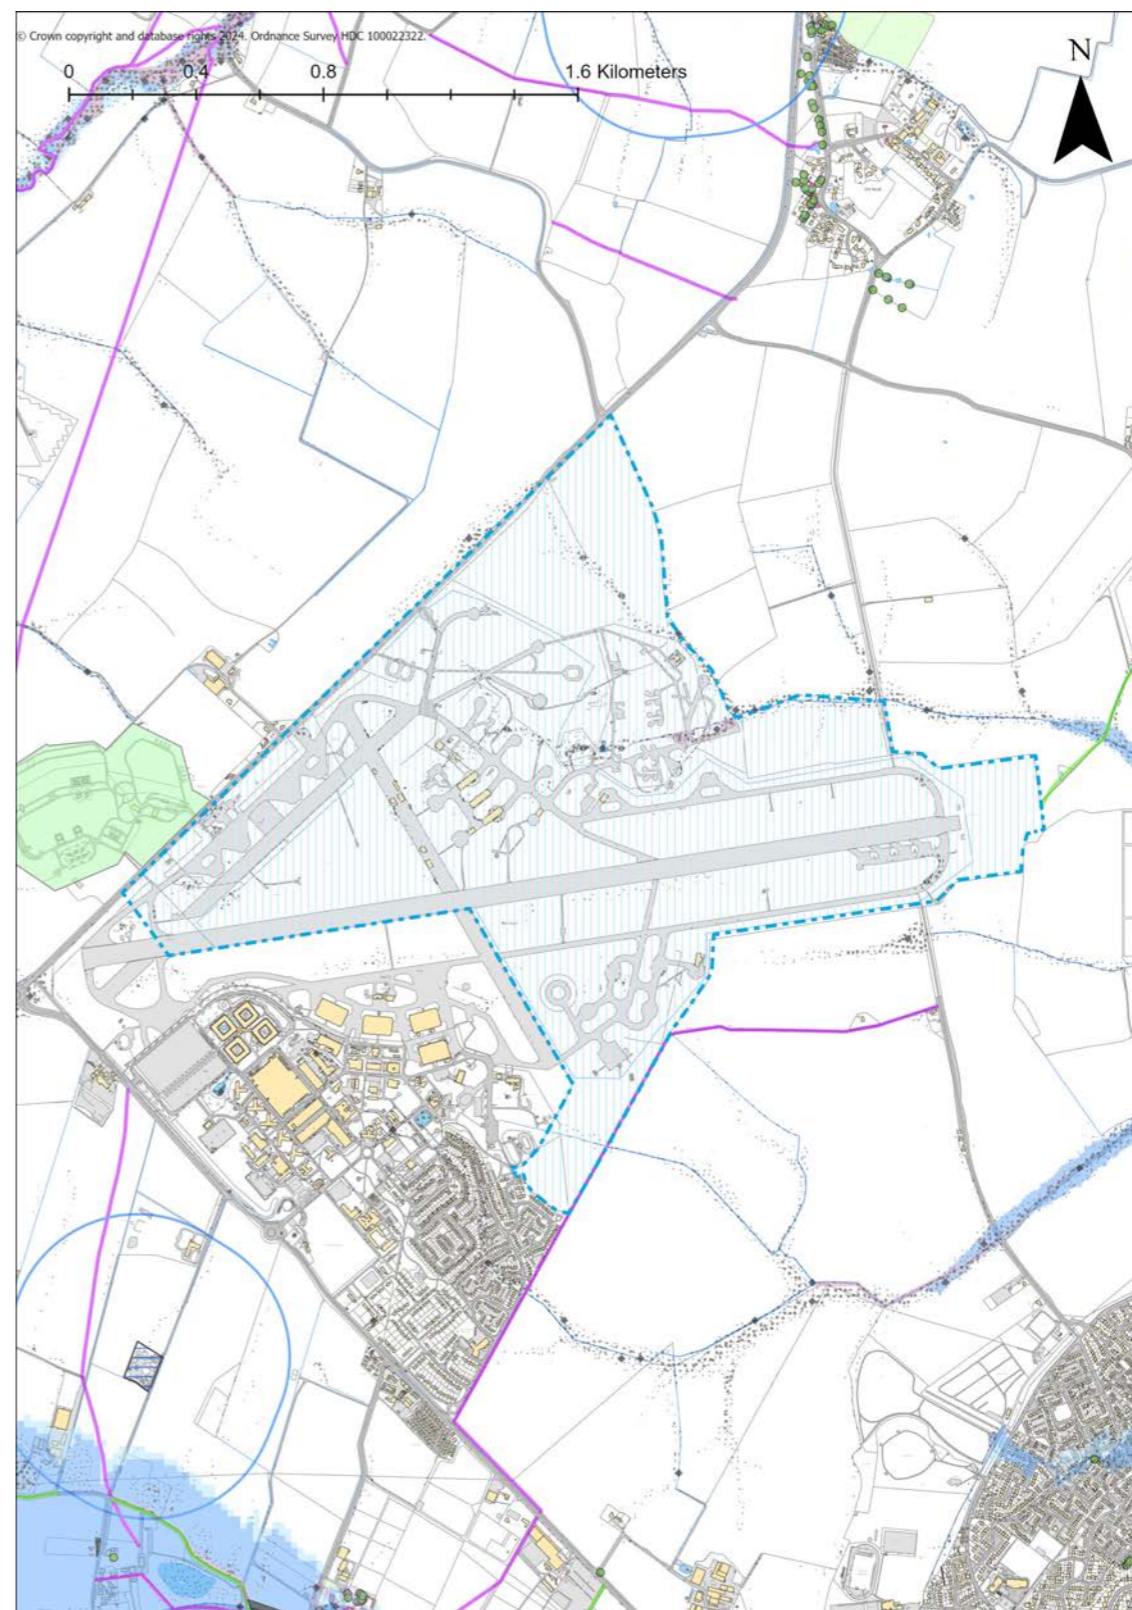

How was the site identified?	Call for Sites 2023 submission: site reference CfS:95
Relevant planning history	HELAA (December 2017): Wyton Airfield  On part of the site  Application number: 19/01836/FUL

	Proposed Development: 595 homes including 193 retirement dwellings, 1,668 sqm of employment floorspace, neighbourhood centre, community hub, open space and community uses with new access points onto the A141 plus outline permission sought for 105 homes, 150 extra care dwellings and 68 care home bedspaces, 3,954 sqm of employment, a public house, open space and associated infrastructure.  Outcome: Withdrawn  Application number: 16/70043/SCOP  Proposal: Environmental impact assessment scoping for residential led scheme of approximately 4,500 homes, 55,000 sqm of employment floorspace, a foodstore, ancillary retail facilities, a care homes, 2-3 primary schools, a secondary school, community facilities and green infrastructure.  Outcome: Withdrawn  Various temporary open storage applications approved.
Land type	Part previously developed land and part greenfield land
Current use of the site	Former RAF airfield with some commercial uses on site, air ambulance base and agricultural land.
Supporting information	None

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is wholly in flood zone 1 but does have areas of surface water flood risk with a number of channels which ultimately flow south east to feed into Marley Brook around the north of St Ives. The majority of the site is classified as non-agricultural land other than a relatively narrow strip paralleling the boundary with the A141. Reflecting its former use as an airfield, the land forms part of an elevated, open plateau with the land sloping gently to the east from a high point at the western end of the former runway. The south eastern section of the site adjoins the remaining RAF Wyton base which contains a range of substantial buildings and wraps round to the north eastern corner of housing at Wyton on the Hill. Other than this the majority of the site is contiguous with the surrounding countryside in terms of landform being part of a large area of open relatively flat open land predominantly in agricultural use.

Much of the north western boundary of the site with the A141 contains a mixture of hedgerows and trees with occasional breaks where access points exist into the airfield. The hedgerows and trees provide some screening of the site from the A141 and there are only limited glimpses into it from longer distances views from settlements to the west or routes such as the B1090 as they are on slightly lower ground. Very few buildings sit along the opposite side of the A141 other than Hungary Hall Farm and derelict Ministry of Defence properties. The north eastern boundary is more open with intermittent low and medium height hedgerows and occasional trees. The densest tree cover on this edge is around the north eastern end of the runway close to the Old St Ives Road which was cut off by the runway and remains as dead-end tracks approaching the north and south sides of the eastern end of the runway. Long distance views can be obtained into the airfield site and to the RAF station beyond from Old Hurst Road connecting the villages of Old Hurst and Woodhurst.

To the south eastern edge of the runway there is again low and medium height hedgerow along the boundary providing only limited screening from the public right of way that runs parallel to the site boundary and from Old Ramsey Road as the runway area is on slightly higher ground than much of the surroundings and so is visible in longer distance views. To the south east of the proposed site there are limited views across to existing buildings from Old Ramsey Road due to localised undulations in the landform which is used for arable farming. However, the southern edge of the site is clearly visible forming the horizon from Sawtry Way to the south around Houghton Hill Farm.

The south western edge of the site adjoins the village of Wyton on the Hill (formerly the RAF married quarters housing) and the remaining RAF Wyton base which includes four hangars, a large two storey office complex, an extensive area of surface level parking and a section of the former runway close to the site boundary. There is limited screening on this edge between existing uses and the proposed site which is to be expected given that the site is part of the larger RAF base. The offices and parking area have some tree and hedge screening along the northern edge but the remainder is predominantly open.

Long distance views into the site can be obtained from public rights of way to the north east near Woodhurst and forming the skyline from routes south of Broughton.

As the site sits primarily on a plateau it can be seen forming the skyline in long distance views from many locations although it is frequently screened by localised trees and hedgerows. Closer to the site most boundaries have tree or hedge screening with the primary exception being the remaining RAF base. This would be separated from the site by fencing for security purposes and substantial landscaping would be required along this boundary. The relative elevation of the site and its long distance visibility result in a level of landscape impact that would need to be minimised through careful landscaping and design to limit the height of any potential development.

Much of the adjoining land is agricultural but development would need to be compatible with existing uses at Wyton on the Hill and RAF Wyton. Given the scale of the site the traffic implications of the potential level of development and its potential impact on local roads and nearby villages and towns will require careful assessment and implementation of necessary highway and active travel upgrades.

Contamination risks exist due to the former use of the site as a military airfield; a contamination assessment will be required and all identified remediation works will need to be completed to appropriate standards for the proposed uses. There are no known gas or oil pipelines or buffer zones affecting the site.

No buildings within the site are listed as being of special architectural or historic interest; the nearest are in nearby villages particularly Houghton and Wyton and Old Hurst. However, due to the extensive military history of the site a heritage assessment would be required. A programme of archaeological investigation may be also required prior to development to ascertain the value of below ground remains and make appropriate provision for their preservation or recording. There are no designated nature conservation areas within the site, However, the former RAF Wyton bomb dump is now designated as a county wildlife site and is located immediately across the A141 from the western tip of the site.

The site benefits from a long frontage onto the A141 which provide opportunities for creation of access points, although there are only very limited existing access points. Detailed transport appraisal will be required to ascertain the impact on the local road network and the feasibility of delivering active travel and public transport routes as these are currently constrained.

The site comprises previously developed land with a variety of buildings, and large areas of hardstanding including the former runway and taxiways, with areas of grassland in between. The site has significant potential to contribute to regeneration through use of the former airfield site for mixed use redevelopment which could also enhance the sustainability of RAF Wyton and the community at Wyton on the Hill. The site is outside of any mineral safeguarding areas and outside any water recycling area buffer zone so neither of these form constraints.

<p><b>Availability</b></p> <p>The site is in single ownership and has been declared surplus to requirements by the Ministry of Defence. Its development is supported by the owner who has a promotion agreement with a housebuilder to masterplan any development scheme and be involved in bringing it forward. There are no known legal restrictions affecting the site. There are several short term uses on the site which may need to be relocated with the timings of this subject to the potential phasing of any development scheme.</p>	+
<p><b>Achievability</b></p> <p>The site is wholly in the ownership of the Defence Infrastructure Organisation which has a partnership with a housebuilder to bring the site forward through a management agreement. There are no known legal restrictions affecting the site. A variety of temporary uses occupy parts of the site; a phased delivery programme would be necessary to facilitate development alongside relocation of existing businesses. The site will be delivered by a house builder operating as a master developer.</p> <p>All main utility services are accessible from the site boundary and some supplies are already on site. The site is relatively level but its location on a raised plateau will impact on the height and scale of buildings that can be accommodated without causing significant landscape harm. The site is not constrained by any oil or gas pipelines or electricity lines. It adjoins the A141 which provides a major transport link between the Fens and the strategic road network of the A1 and A14. Significant highway infrastructure upgrades in the area will be necessary to accommodate the volume of traffic that a site of this scale would be expected to generate. This would need to be supported by increased public transport and active travel infrastructure provision. Substantial work was undertaken during preparation of Huntingdonshire's Local Plan to 2036 to assess deliverability of transport solutions for this site. As of summer 2024, the Cambridgeshire and Peterborough Combined Authority are preparing an outline business case for a substantial upgrade scheme for the A141 and the transport network within St Ives. Delivery of the resultant scheme has potential to significantly enhance the achievability of redevelopment of Wyton Airfield. Given the scale of the site other major infrastructure provision would be required in particular secondary education.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site has few physical constraints to development but phasing would be required to facilitate relocation of existing businesses with temporary uses currently operating there. It would need careful masterplanning to enable it to be successfully integrated into the surrounding landscape. Significant infrastructure constraints will need to be overcome to enable it to be delivered but potential solutions are already being progressed. Therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• It is wholly classified as previously developed land and development would contribute towards regeneration</li> <li>• It adjoins the existing community of Wyton-on-the-Hill and development would need to be effectively integrated with this and could boost the sustainability of the existing community through this</li> <li>• It is in close proximity to diverse employment opportunities in Huntingdon, St Ives and at RAF Wyton</li> <li>• It has potential to benefit from proposed upgrades to the A141</li> <li>• It could benefit from high quality public transport by extension or diversion of existing Busway services</li> <li>• The Old Ramsey Road could be enhanced to facilitate active travel routes</li> <li>• Established boundary hedging and trees to help reduce the visual impact of development</li> <li>• Due to its raised plateau location development would impact on view from Woodhurst, Old Hurst and the wider countryside</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential for redevelopment with a residential led scheme as it would make efficient use of previously developed land and is well located in relation to Huntingdon and St Ives for the provision of employment and services</li> <li>• Is highly dependent on transport infrastructure upgrades to the A141 and active travel infrastructure in the St Ives area promoted by the CPCA to be able to accommodate the level of travel demand that would arise from future occupiers of the site</li> <li>• Is available for development with a masterplanning team already involved</li> <li>• Has few physical constraints to development although phasing would be required to release parcels of land with temporary uses in operation</li> </ul>
--

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 253.89 ha.</p> <p>Given the scale of the site the starting point for calculating the net developable area is 50% of the land area which gives 126.95 ha.</p> <p>Further specific exclusions are:</p> <p>10ha for a secondary school and up to three primary schools.</p> <p>The net developable area for built development is (253.89 ha x 50%) = 126.95 - 10 = <b>116.11 ha</b></p>	<p><b>126.95ha for open space, sports facilities, biodiversity and other planting and sustainable drainage.</b></p> <p><b>10ha for a secondary school and up to three primary schools</b></p> <p><b>The net developable area for other built development is 116.11 ha.</b></p> <p><b>5.8 ha for local centre</b> (this includes retail/ leisure/ community/ health space uses)</p> <p><b>9.3 ha for employment uses</b></p> <p><b>101.01 ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments:</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 3.0ha x 145dph = 435 homes</li> <li>• 7% of land at high density 85dph. 7.0ha x 85dph = 595 homes</li> <li>• 25% of land at moderate density 50dph. 25.3ha x 50dph = 1,265 homes</li> </ul>	<p>Available post 2028 subject to allocation and adequate progress with an enhancement scheme for the A141 to accommodate the anticipated traffic generation.</p> <p>Build out over 20 years</p>

**Core information**

How was the site identified?	Call for sites submission 2023: Site reference - CfS:47
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	Less than 1%	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

98.66% of the site is within flood zone 1 totaling some 378 ha of land. The remainder includes small parts in each of flood zones 2, 3a and 3b all of which form a constraint to development but total only 5.1ha Surface water flooding also affects a small proportion of the site with 3.2% being affected by medium risk including a 40% allowance for climate change. A level 2 SRFA demonstrates how the flood risk of the site could be managed. The majority of the site is classified as grade 2 agricultural land with a belt of grade 3 land in the north west. The land is primarily used for arable farming with limited field boundary hedging and trees dispersed throughout the site.

The highest part of the site broadly parallels the A141 with the land sloping gently down towards the north west with an overall fall of around 15m across the site. Land to the north of the site continues to fall away between Broughton and Old Hurst. to the west the land starts to rise again beyond the site between Kings Ripton and the western edge of Broughton. South of the site across the B1090 the land rises slightly providing some separation from Huntingdon. Across the A141 lies Wyton Airfield much of which is at a similar height as the site with south western parts lying slightly higher than this site, providing a level of visual containment in the landscape.

The site has complex boundaries with frontages onto Sawtry Way (the B1090), the A141 and Bridge Road to Broughton. Much of the farmland to the west is separated from the site by a brook with the visual separation reinforced by trees along the water's edge. Internally the site surrounds two parcels of land which are excluded from the promoted site. The largest of these is Lodge Farm Broughton including the solar farm immediately to the south east; while the farm buildings are mainly contained by mature trees and hedging the solar farm is only surrounded by low narrow hedging. The second parcel of excluded land is along Bridge Road including Mill Barn Farm and Ashley Lodge both of which are only screened by low hedging and limited tree cover.

The closest village to the site is Broughton which is directly to the north with linear development on the southern edge of the village being virtually contiguous with the site. Masterplanning of any potential development would be needed to ensure that a strong landscape buffer is provided to ensure separation from Broughton to allow retention of the integrity of the existing village and avoid coalescence. The south western edge of the site falls approximately 650 m from the closest properties in Kings Ripton. This would also require a strong landscape buffer to reinforce the existing landform around the brook which aids separation of the site from the adjoining landscape here. In contrast, RAF Wyton is situated directly across the A141 from the eastern boundary of the site. This contains a range of large scale buildings separated by extensive areas of hardstanding and grass. Masterplanning would again be required to ensure that any development could be successfully co-located adjacent to this.

<p>A public right of way follows the north western boundary of the site and a second cuts directly through the site from the edge near Broughton towards the southern tip. Two parallel footpaths run close to the north eastern boundary. The site has visibility from all of these public vantage points with some screening from hedges in sections outside the site but the route through the site cuts directly across open fields. All the public rights of way would be impacted by development of the site; boundary screening and landscaping would be required to minimise the impact.</p> <p>The scale of the site and its proximity to Broughton and Kings Ripton would mean that development would have a significant impact on the landscape and sensitive masterplanning and boundary treatments would be essential to reduce this and ensure the avoidance of coalescence. Development could give rise to localised pressures on surrounding uses although the cessation of flying from RAF Wyton will reduce the impact of the adjoining military base.</p> <p>There are no recorded pollution or contamination impacts constraining the site and no oil or gas pipelines or buffer zones affecting it.</p> <p>No heritage assets are present within the site but both Broughton and Kings Ripton have conservation areas and multiple listed buildings. Development will be constrained by the need to not to detrimentally impact on the setting of listed buildings; mitigation approaches would need to be set out in a site specific heritage assessment. A programme of archaeological investigation would be required prior to development to ascertain the value of below ground remains and make appropriate provision for their preservation or recording.</p> <p>Part of the RAF Wyton bomb dump county wildlife site falls within the southern edge of the site. This will need to be adequately protected and appropriate biodiversity net gain measures put in place to reinforce the nature conservation assets on this site.</p> <p>The site benefits from frontages onto the A141 and B1090 which provide opportunities for creation of access points, although there are only very limited existing access points. Bridge Road connecting the A141 to Broughton adjoins the northern boundary of the site but is narrow. Detailed transport appraisal will be required to ascertain the impact on the local road network and the feasibility of delivering active travel and public transport routes as these are currently constrained.</p> <p>The site comprises greenfield land so offers no benefits in terms of reuse of previously developed land or regeneration. The site is unconstrained by any mineral safeguarding or water recycling issues.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership of a registered charity with the landowner supporting the development proposal. Although there is no formal land control agreement with a developer the landowner has experience in large scale master planned development. There are no</p>	+

<p>known legal restrictions affecting the site. There are no current uses requiring relocation. The landowner anticipates that the site would be delivered by a master developer and advocates co-operative working with the promoters of Wyton Airfield to bring the two sites forward together as a consolidated strategic site.</p>	
<p><b>Achievability</b></p> <p>All main utility services are accessible from the site boundary. The site will need very careful masterplanning and boundary treatments to ensure it would not cause significant landscape harm. The site is not constrained by any oil or gas pipelines or electricity lines. It adjoins the A141 which provides a major transport link between the Fens and the strategic road network of the A1 and A14. Significant highway infrastructure upgrades in the area will be necessary to accommodate the volume of traffic that a site of this scale would be expected to generate, particularly if delivered in conjunction with Wyton Airfield as promoted by the landowner. This would need to be supported by increased public transport and active travel infrastructure provision. Substantial work was undertaken during preparation of Huntingdonshire's Local Plan to 2036 to assess deliverability of transport solutions for the A141. As of summer 2024, the Cambridgeshire and Peterborough Combined Authority are preparing an outline business case for a substantial upgrade scheme for the A141 and the transport network within St Ives. Delivery of the resultant scheme has potential to significantly enhance the achievability of this site. it also has a frontage to the B1090 offering linkages towards Sawtry and the A1(M).</p> <p>There are no built structures on the site but mitigation of impact on the parcels of land excluded from the site but surrounded by it would need very careful layout of development.</p> <p>The landowners are reasonably clear in their aspirations in as much as they are promoting the site for mixed use development to be brought forward as a large scale residential led scheme alongside Wyton Airfield as part of a consolidated strategic site. The landowner contends that joint allocation could substantially support upgrading works to the A141.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is open agricultural land with few integral constraints to development although landscape impact and in particular the impact on Broughton village would need to be very sensitively addressed through careful masterplanning. Significant infrastructure constraints will need to be overcome to enable it to be delivered with A141 upgrade proposals already in progress through the Combined Authority. Liaison with the Defence Infrastructure Organisation and master developers of Wyton Airfield would be essential to facilitate integration of this site into a larger consolidated proposal for development. Therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• Hungary Hall Farm is a wholly greenfield site comprising predominantly grade 2 agricultural land</li> <li>• Is relatively close to Huntingdon via the A141 which provides opportunities for access to a range of employment and services</li> <li>• Has limited sustainable travel opportunities currently with a bus service running along the A141 on the eastern side although this has potential for enhancement. The CPCA is promoting substantial upgrades to public and active travel in the wider A141 corridor which this site has potential to link into from its eastern side.</li> <li>• Would require substantial facilities as education, local convenience shopping, community and leisure infrastructure to support sustainable lifestyles for any future residents</li> <li>• Has an opportunity to be integrated development with Wyton Airfield which could provide opportunities for enhanced sustainability of this site although would not overcome the impacts it would have on high quality agricultural land</li> <li>• Has limited sustainability benefits in terms of nature conservation and access to strategic infrastructure</li> <li>• Is promoted for mixed use although the amount of non-residential use remains to be determined</li> <li>• Proposal is unlikely to be close enough to give rise to detrimental impacts on green infrastructure asses but equally is not close enough to facilitate significant connectivity improvements other than to the Wyton bomb dump county wildlife site</li> <li>• Development of this site would significantly impact on the rural character of the local area, in particular it would significantly detrimentally impact on Broughton, the primary approach to it and its conservation area. The development of the site in isolation would give rise to a wholly detached area of development that would not relate well to the existing landscape character or settlement hierarchy of Huntingdonshire. However, if development were to occur in conjunction with Wyton Airfield it might support a more sustainable new settlement as whole.</li> <li>• Has a mixture of boundary landscaping at present with trees and hedgerows containing much but not all of the site. These would form the basis of a landscaping scheme to assist with integration of any development into the surrounding landscape but would need substantial reinforcement, particularly on the northern and western parts of the site.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The site promoter advocates bringing the site forward in conjunction with redevelopment of Wyton Airfield which could boost the sustainability of the overall scheme, certainly to the benefit of Hungary Hall Farm. However, by the point of submission in 2023 there was no indication that any liaison had taken place to co-ordinate a single scheme or that the proposal was acceptable</li> </ul>
--

Page 1267 of 3488

<p>to the promoter of Wyton Airfield. More recent discussions with both parties have indicated an in principle willingness to explore this option further.</p> <ul style="list-style-type: none"> <li>• Is well located in relation to Huntingdon for the provision of employment and services</li> <li>• Is highly dependent on transport infrastructure upgrades to the A141 and active travel infrastructure promoted by the CPCA to be able to accommodate the level of travel demand that would arise from future occupiers of the site</li> <li>• Would have a substantial impact on Broughton and its significant heritage assets; masterplanning should ensure that built development is concentrated in the southern part of the site only to minimise this which is likely to impact on the overall net developable area</li> <li>• Has few physical constraints to development within the site although it contains or encircles several parcels of land where existing uses are to be retained which would need careful masterplanning to ensure the design and layout did not detrimentally impact on them</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 383.36 ha.</p> <p>Given the scale of the site the starting point for calculating the net developable area is 50% of the land area which gives 158.85 ha. However, given the sensitivity of the site's relationship with Broughton and the need to protect the extensive heritage assets of the village and to a lesser extent the relationship with King's Ripton conservation area the net developable area is reduced further to 30% of the total site to allow for concentration of development in the southern portion of the site only.</p> <p>Further specific exclusions are:</p> <p>10ha for a secondary school and up to three primary schools.</p> <p>The net developable area for built development is (383.36 ha x 30%) = 115.01 - 10 = <b>105.01 ha</b></p>	<p><b>268.35 ha for open space, sports facilities, biodiversity and other planting and sustainable drainage.</b></p> <p><b>10ha for a secondary school and up to three primary schools</b></p> <p><b>The net developable area for other built development is 105.01 ha.</b></p> <p><b>5.3 ha for local centre</b> (this includes retail/ leisure/ community/ co-working space uses)</p> <p><b>8.4 ha for employment uses</b></p> <p><b>91.3 ha residential development area</b> for a variety of market and affordable homes.</p>	<p>Available post 2028 subject to allocation and adequate progress with an enhancement scheme for the A141 to accommodate the anticipated traffic generation.</p> <p>Build out over 20 years or longer in collaboration with Wyton Airfield.</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<p>Mixed densities to reflect a range of densities reflective of large developments:</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 2.7ha x 145dph = 392 homes</li> <li>• 7% of land at high density 85dph. 6.4ha x 85dph = 544 homes</li> <li>• 25% of land at moderate density 50dph. 22.8ha x 50dph = 1,140 homes</li> <li>• 55% of land at low density 35dph. 50.2ha x 35dph = 1,757 homes</li> <li>• 10% of land at very low density 25dph. 9.1ha x 25dph = 228 homes</li> </ul> <p><b>4,061 total homes</b></p>

**Core information**

How was the site identified?	Call for sites submission: site reference - CfS:256
------------------------------	---

Relevant planning history	Housing and Economic Land Availability Assessment (December 2017): Lodge Farm, Huntingdon
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	A series of supporting documents were submitted as part of the call for sites. These were: <ul style="list-style-type: none"> <li>Vision document 2023</li> <li>Illustrative framework plan</li> <li>Landscape technical note</li> <li>Access review technical note</li> <li>Agricultural land classification</li> <li>Arboricultural survey report</li> <li>Ground conditions technical note</li> <li>Heritage technical note</li> <li>Heritage desk-based assessment</li> <li>Indicative surface water drainage strategy</li> <li>Preliminary ecological appraisal</li> <li>Utilities technical note</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	1.16%	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

Over 98% of the site is situated within flood zone 1 presenting the lowest level of risk from fluvial flooding. Around 14% of the site has some risk of surface water flooding, most of which is low risk although there is a slight increase in additional risk when climate change is accounted for. The constraints arising from this proportion of the site being subject to flooding risk could be mitigated through sustainable drainage and landscaping schemes.

HDC mapping indicates the whole site is classified as grade 2 agricultural land. The detailed site specific soil assessment submitted by the site promoter indicates approximately 40% of the site as grade 2, 40% as grade 3a and 20% as grade 3b with classification affected by soil wetness.

The topography of the site poses some challenges, particularly in the south eastern part where the land rises from around 10m in the far corner to around 35m further west. This comprises the edge of the Ouse Valley with similar topography continuing to curve around on land to the east of the site. Within the site with much of the site is at around 35m elevation. Land broadly paralleling the boundary with the B1090 drops slightly towards the road across around a 500m strip. The highest point of the site is near the Lodge Farm buildings which are excluded from the proposed site. The variations in topography and overall height of the land in relation to adjoining land, including existing properties within Huntingdon would need to be taken account of in the overall layout of development.

The south western boundary of the site with the A141 is contained by a mixture of medium height hedgerows interspersed with trees providing limited screening only. Across the A141 homes along the north eastern edge of Huntingdon are screened by a substantial tree belt reducing the potential for visual impact but also limiting the potential for integration of any new development into the existing residential community. The south eastern boundary to the former RAF Wyton bomb dump and the A141 is more open with low level hedgerows along much of its length and sporadic clusters of trees such as those near the entrance to Hungary Hall Farm itself. The site's boundary with Bridge Road leading to Broughton is largely open with some stretches of low level hedgerow. These two boundaries both allow extensive views into the site and out from it. Extensive views to the north west can be obtained from the north eastern part of the site. The northern part of the north western edge of the site adjoins open agricultural land which rises back up from the stream that edges the southern boundary of this field with views from the site across the open countryside. Halfway along the north western edge the site adjoins the Rally Karting Centre. South from this point the site has a frontage to Kings Ripton Road with the Jubilee Playing Fields and Huntingdon Crematorium and Cemetery immediately across the road. The playing fields and karting track will generate intermittent noise, particularly during weekends and evenings. The crematorium will generate significant intermittent traffic but is otherwise well landscaped to create a peaceful location. This cluster of uses are all noise sensitive either from the noise they generate or as a noise receptor. This will form a constraint on development within the site in this immediate vicinity that could be addressed through careful layout and introduction of structural landscaping.

There are no public rights of way crossing or adjoining the site. There is limited potential for long distance views from public rights of way leading south from Broughton and south from Sawtry Way to the north western end of Houghton and Wyton.

The scale of the site and rising nature of the landform along the southern section mean that it would have significant landscape impact. Sensitive masterplanning and boundary treatments would be essential to minimise the impact of any development on nearby uses. The site offers the potential to create a contiguous new neighbourhood with Huntingdon although substantial works would need to be undertaken to the A141 to facilitate integration.

<p>The site is not affected by any oil or gas pipelines or their buffer zones. No known designated heritage assets are present within the site. At its closest point it is situated about 100m from the Hartford conservation area although the intervening housing and tree belt prevents views between the site and the conservation area. A desk based Heritage Assessment has been submitted with the proposal which has identified potential for a range of pre-historic and Romano-British activity on the site along with areas of medieval ridge and furrow earthworks. Long distance views can be obtained of listed church spires such as St Margaret's in Hemingford Abbots. The impact on the settings of nearby conservation areas is reduced by distance and intervening land uses; careful masterplanning and structural landscaping could mitigate impacts of the development on these. A programme of archaeological investigation would be required prior to development to ascertain the value of below ground remains and make appropriate provision for their preservation or recording.</p> <p>No designated nature conservation assets are present within the site to form any constraints although there is a scattering of trees with preservation orders on that would need to be retained within any landscaping scheme.</p> <p>The site benefits from two frontages onto the A141 and a third onto the B1090. Proposals for upgrade works to the A141 are being prepared by the Cambridgeshire and Peterborough Combined Authority which will significantly influence the transport accessibility of this site as the A141 currently forms a substantial constraint to its development. Detailed transport appraisal will be required to ascertain the impact on the local road network and the feasibility of delivering active travel and public transport routes as these are currently constrained.</p> <p>The site is wholly greenfield land and offers no potential to contribute towards regeneration. The southern corner falls within a Minerals Safeguarding area for sand and gravel and discussions will be needed with Cambridgeshire County Council regarding working or protecting these resources. It is located outside any water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownerships and fully optioned by a housebuilder/ developer. All landowners are supportive of the proposal. There are no known legal restrictions affecting the site. The site would be delivered by the housebuilder holding the options.</p>	+
<p><b>Achievability</b></p> <p>Mins water, gas, digital and telecommunications infrastructure are all accessible from the site boundary. A 33KV overhead electricity line crosses the south west corner of the site and 11KV overhead line and underground cable cross the east of the site. The site promoter has submitted a utilities technical note providing additional details. This note that the constraint arising from the overhead wires could be overcome by diverting or undergrounding them to increase the developable area. They acknowledge challenges from the existing electricity network having insufficient capacity to service the proposed development</p>	~

<p>necessitating off site reinforcements. This is to be expected given the scale and location of the site and expected increases in demand for electricity due to national ambitions regarding use of electric powered heating in new homes and installation of electric vehicle requirements.</p> <p>The topography of the site poses some challenges in the south eastern part where the land rises from around 10m in the far corner to around 35m further west within the site. This would need to be taken account of in the overall layout of development and the height of individual properties to ensure amenity levels were maintained.</p> <p>There are no oil or gas pipelines affecting the site.</p> <p>The A141 forms both the south western and south eastern boundaries of the site. This provides a major transport link between the Fens and the strategic road network of the A1 and A14. Significant highway infrastructure upgrades in the area will be necessary to accommodate the volume of traffic that a site of this scale would be expected to generate. This would need to be supported by increased public transport and active travel infrastructure provision. Substantial work was undertaken during preparation of Huntingdonshire's Local Plan to 2036 to assess capacity of the A141. As at autumn 2023, the Cambridgeshire and Peterborough Combined Authority are preparing an outline business case for a substantial upgrade scheme for the A141 and the transport network within St Ives. Delivery of the resultant scheme has potential to significantly enhance the achievability of development along this corridor. Given the scale of the site other major infrastructure would be required in addition to resolving highway issues, in particular secondary education provision would be required.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is open agricultural land with few integral constraints to development although landscape impact would need to be very sensitively addressed through careful masterplanning. Masterplanning would also be needed to either facilitate effective integration with the existing built form of Huntingdon or to create a new, distinctive free-standing development within its own identity. Significant infrastructure constraints will need to be overcome to enable it to be delivered with A141 upgrade proposals already in progress through the Combined Authority. Therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward the site:

- Lodge Farm is a wholly greenfield site comprising a mixture of grade 2 and grade 3 agricultural land
  - It adjoins Huntingdon on the south western side with the A141 forming two of the site's boundaries
  - Is located such that it has opportunities to benefit from CPCA proposed upgrades to the A141 and active travel routes in its vicinity potentially enhancing potential occupiers' accessibility to sustainable forms of travel although there is currently no public transport or active travel infrastructure along the A141 where it adjoins Huntingdon and only a limited service on the stretch along the eastern edge of the site.
  - is situated on rising land where development would have a significant impact on existing major transport routes
  - Has limited opportunities exist to link to and enhance strategic green infrastructure areas
  - There are no designated nature conservation assets within the site but a network of green landscaping corridors runs through and around the site offering opportunities for enhancement.
  - Development would form a major extension to Huntingdon and push the town's boundary out beyond that established by the A141 since the 1980s which contain the existing late 20th century development of 'The Birds' estate. Opportunities for integration are limited and potential would need to be maximised to gain the sustainability benefits of the site's location adjoining an existing town and providing opportunities to access existing services and facilities rather than being a freestanding site in the countryside.
  - Is in an area of mixed housing market demand with relatively low levels of deprivation.
  - Is in relatively good proximity to a wider range of employment, social and community services. Some would also be expected to be provided on site given the scale of the development enhancing access to local scale facilities.
  - Given its relationship with Huntingdon development may boost the town centre as a result of more expenditure capacity in the local area.
- In combination the outcomes of the LAA and SA indicate that the site:
- Is well located in relation to Huntingdon but would experience significant challenges in achieving connectivity particularly by active travel routes
  - Is highly dependent on transport infrastructure upgrades to the A141 promoted by the CPCA to be able to accommodate the level of travel demand that would arise from future occupiers of the site
  - Would have a significant landscape impact on land rising to the north of Huntingdon

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 317.69 ha.</p> <p>Given the scale of the site the starting point for calculating the net developable area is 50% of the land area which gives 158.85 ha.</p> <p>Further specific exclusions are:</p> <p>22.74 ha is reserved for the A141 bypass corridor as this bisects the site and 10ha for a secondary school and up to three primary schools.</p> <p>The net developable area for built development is (317.69 ha x 50%) = 158.85 - 32.74 = <b>126.11 ha</b></p>	<p><b>158.85 ha for open space, sports facilities, biodiversity and other planting and sustainable drainage.</b></p> <p><b>22.74 ha for the A141 bypass corridor</b></p> <p><b>10ha for a secondary school and up to three primary schools</b></p> <p><b>The net developable area for other built development is 126.11 ha.</b></p> <p><b>6.4 ha for local centre</b> (this includes retail/ leisure/ community/ coworking space uses)</p> <p><b>7.9 ha for employment uses</b></p> <p><b>111.81 ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments:</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 3.4ha x 145dph = 493 homes</li> <li>• 7% of land at high density 85dph. 7.8ha x 85dph = 663 homes</li> </ul>	<p>Available post 2028 subject to allocation and adequate progress with an enhancement scheme for the A141 to accommodate the anticipated traffic generation.</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<ul style="list-style-type: none"> <li>• 25% of land at moderate density 50dph. 28.0ha x 50dph = 1,400 homes</li> <li>• 55% of land at low density 35dph. 61.5ha x 35dph = 2,153 homes</li> <li>• 10% of land at very low density 25dph. 11.2ha x 25dph = 280 homes</li> </ul> <p><b>4,989 total homes</b></p>	

Updates after the Initial Assessment

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:263
Relevant planning history	Application number: 18/01882/OUT

	Proposed development: Erection of up to 325 dwellings, provision of new roundabout access, public open space and landscaping, surface water attenuation and associated infrastructure.  Outcome: Withdrawn 9/04/2020  Housing and Economic Land Availability Assessment 2017 - Houghton Hill Farm
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Vision Document June 2023

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 1275 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability
<p>The site is wholly in flood zone 1 with very small areas at risk of surface water flooding primarily near the south eastern edge of the site and the northern half of the western boundary. A drainage ditch runs along the eastern edge. The majority of the site is classified as grade 2 agricultural land with approximately the southern third being grade 3. The site</p>

<p>entirely comprises open agricultural land with no buildings on it. The site slopes very slightly down towards the north leading into an extensive area of relatively flat land to the north and west of the site.</p> <p>The site is situated on the western edge of St Ives. The southern boundary adjoins the A1123 Houghton Road with new development at Houghton Grange fronting the southern side of this road. The southern third of the eastern edge of the site adjoins modern housing development on Slepe Meadows. The northern section adjoins the St Ivo Outdoor Sports Complex on the eastern side with its football pitch and athletics stadium close to the site. The northern boundary of the site adjoins an extensive area of open agricultural land extending to Wyton Airfield. The western boundary of the site adjoins Houghton Hill Farm and Houghton Hill industries which provide a small element of containment on this edge which is bounded by a track.</p> <p>The site has very little boundary landscaping on the western edge although Houghton Hill Farm and properties associated with Houghton Hill industries provide a limited element of screening from Sawtry Way. The northern edge is very open allowing significant visibility in long distance views from the public right of way that links Sawtry Way to the Old Ramsey Road and properties on the southern edge of Wyton on the Hill. The eastern boundary has a narrow belt of hedging and trees screening it from the St Ivo Outdoor Sports Complex although the landscaping provided to the west of the Slepe Meadow development provides more screening from these properties. The southern boundary nearest to St Ives comprises a mixture of substantial hedging with some trees but further to the west opposite Houghton Grange there are substantial gaps in the hedging through which the site is clearly visible. The limited boundary landscaping would result in impact on the landscape particularly from the north and west. Substantial landscaping buffers would be required to reduce the impact of any built development on the long distance views from Wyton on the Hill and the surrounding countryside.</p> <p>Development on the site has potential to be compatible with surrounding uses providing the impacts on the outdoor sports complex are adequately mitigated. However, properties may be impacted by industrial uses at Houghton Hill Industries and by lighting and noise from the outdoor sports complex. There are no known sources of pollution or contamination constraints affecting the site.</p> <p>Houghton and Wyton conservation area runs along the southern edge of the A1123 in close proximity to the southern boundary of the site. There are no listed buildings within the site but the East and West Lodges to Houghton Grange are directly across the A1123 which are grade II listed; further south from these is the grade II listed Houghton Grange although new development in the grounds of this will minimise the potential for any impact on its setting from development of this site. There are no designated nature conservation assets within the site.</p> <p>The site has a frontage to the A1123 with the site promoter proposing access via a new roundabout to be created at the junction of the A1123 and Sawtry Way.</p>	
--	--

<p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is unaffected by any minerals safeguarding area and is beyond any protection buffers around a water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site has multiple owners all of whom support its development. it is optioned by a housebuilder. There are no known legal restrictions affecting the site. The current use is agricultural so there is no use to be relocated. The site is promoted on behalf of a housebuilder whose delivery intentions are clearly set out in the supporting Vision Document which presents three scenarios in terms of the numbers of homes, the mix of uses, their distribution across the site and the potential for phasing of delivery with this parcel of land being put forward as the southern part of a potentially larger site assessed separately as Wyton on the Hill 5. The Vision Document promotes two scenarios on this parcel of land with scenario 2 having an additional 89 homes and a second entrance onto the A1123.</p>	+
<p><b>Achievability</b></p> <p>Electricity, gas, water and digital/ telecommunications infrastructure are all accessible from the site boundary which has a frontage on to the public highway. The site is served by the A1123 providing good connectivity for deliveries. The site comprises broadly level open ground with any low spots and ditches in close proximity to the boundaries where they could be incorporated into landscaping schemes. No oil or gas pipeline infrastructure affects the site and no electricity cables cross it. The eastern side adjoins the St Ivo Outdoor Sports Complex which has potential to impact on the site through light and limited noise pollution that would need to be carefully mitigated. Substantial junction improvements will be required to ensure safe access is provided into the site and to minimise impacts on existing road and footpath users in the vicinity. The site promoter intends to incorporate a 4-arm roundabout at the junction of the A1123 and Sawtry Way to address access issues and incorporate a footpath/ cycleway along the frontage to link into the existing network near Garner Way.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints to bringing the site forward. It is promoted by a housebuilding company which has prepared a masterplan scheme with 3 variants which they intend to deliver themselves. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward the site:

- Is wholly greenfield land of which around two thirds is grade 2 agricultural land
- Is just beyond the threshold for likely impact on several designated nature conservation sites and the Ouse Valley green infrastructure priority area. It adjoins outdoor sports facilities potentially allowing for sustainable access to them although light and noise pollution may affect any future homes from these
- Has good proximity to a range of services and facilities being on the outskirts of St Ives as well as access to some more local facilities including primary education
- Has good access to high quality public transport but active travel routes would require a crossing of the A1123 or new provision
- Is sensitively located to the west of St Ives and would extend the built form into the surrounding countryside
- Is immediately north of Houghton and Wyton conservation area including Houghton Grange
- Development has potential to give rise to reinforcing the perception of coalescence of St Ives and Houghton and Wyton

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for development as it is sustainably located on the outskirts of a market town with good access to public transport
- Would need very sensitive design and masterplanning to minimise the perception of coalescence of St Ives with Houghton and Wyton
- Would need substantial landscaping to minimise impacts on the Ivo Outdoor Centre and the open countryside to the north and west

Page 1277 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 14.47ha  55% net developable area allowed to support substantial landscaping provision and avoid conflict with the Ivo Outdoor Centre allowing for 6.5 ha of open space uses  14.47 ha x 55% = <b>7.96 ha net developable area</b>	Mixed uses to include:  <b>6.5ha open space and landscaping</b>  <b>1.65ha transport infrastructure</b> (lorry parking to support A1123)  <b>0.1ha for local retail</b>	Available post 2028 subject to allocation  Build out over 1 - 3 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Residential - market and/or affordable homes  Low density of 35 dph anticipated due to the edge of town location.  Low density of 35 dph = 6.21ha x 35 dph = <b>217 homes</b>	

**Updates after the Initial Assessment**

Site address	Parish(es)	Site area (ha)
Land north of Houghton Road, St Ives	Wyton on the Hill	23.91

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and affordable housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Retail convenience store</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Transport and parking/ lorry parking</li> </ul> Open space: <ul style="list-style-type: none"> <li>Natural, green and open space</li> </ul>	237 to 400 homes 325 sqm convenience shop 1.65ha of transport and parking/ lorry parking 10.53ha open space uses	Build out over 4 to 8 years

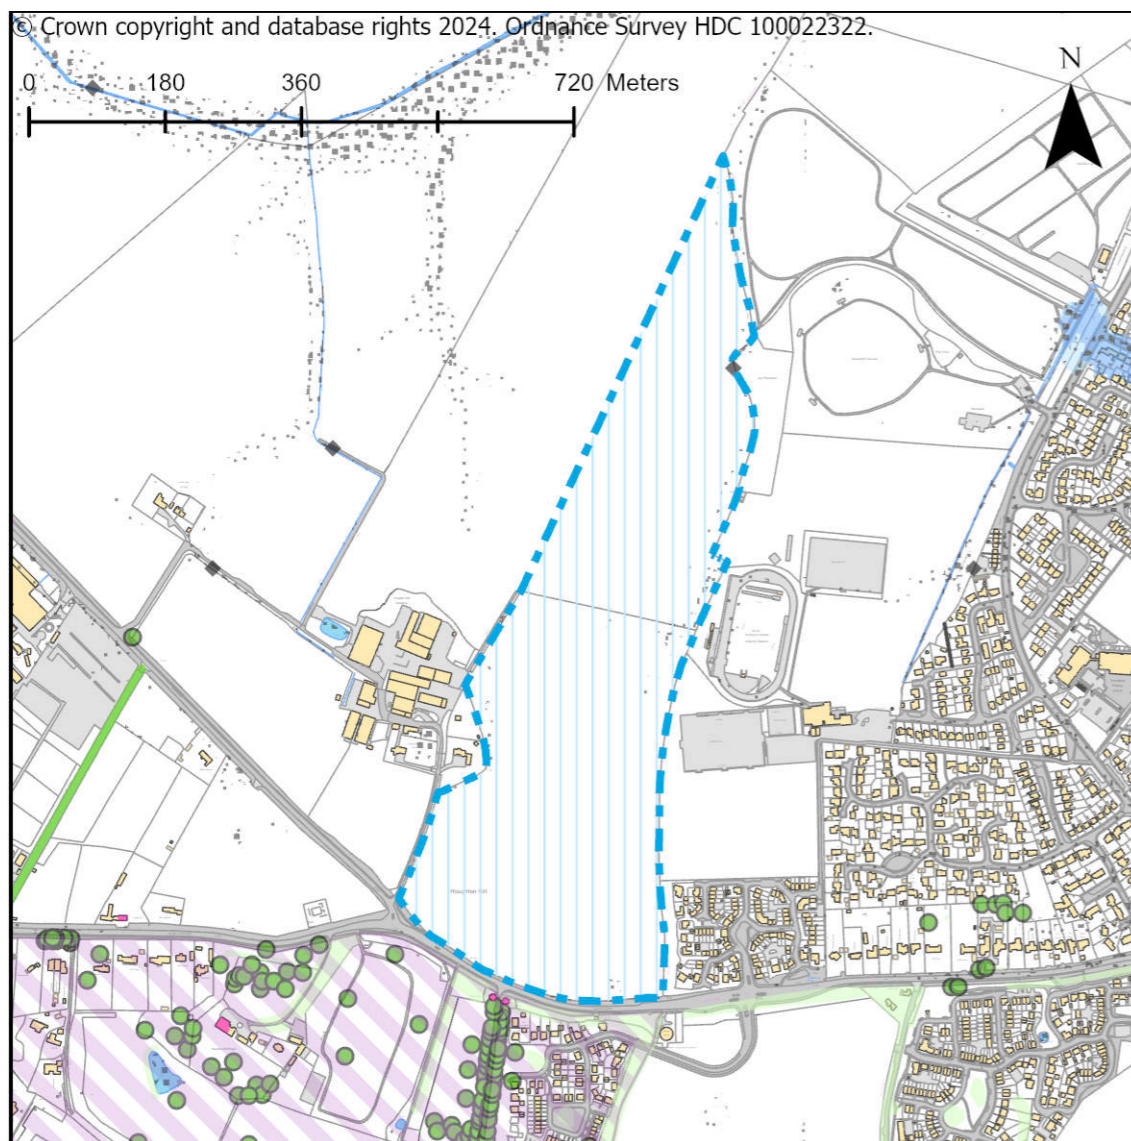

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:198
Relevant planning history	Application number: 18/01882/OUT  Proposed development: Erection of up to 325 dwellings, provision of new roundabout access, public open space and landscaping, surface water attenuation and associated infrastructure.

	Outcome: Withdrawn 9/04/2020 HELAA (December 2017): Houghton Hill Farm
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Vision Document June 2023

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

with a small portion of the southern edge being grade 3. The site entirely comprises open agricultural land with no buildings on it. The site slopes very slightly down towards the north leading into an extensive area of relatively flat land to the north and west of the site.

The site is situated on the western edge of St Ives. The southern boundary adjoins the A1123 Houghton Road with new development at Houghton Grange fronting the southern side of this road. A small portion at the southern end of the eastern edge of the site adjoins modern housing development on Slepe Meadows. North from this the site adjoins the St Ivo Outdoor Sports Complex on the eastern side Hill Rise Park and Top Plantation. The northern boundary of the site adjoins an extensive area of open agricultural land extending to Wyton airfield. Houghton Hill Farm and Houghton Hill industries adjoin the south western edge of the site with the remainder of the western edge being integral to the adjoining agricultural land.

The site has very little boundary landscaping on the western edge other than that in the vicinity of Houghton Hill Farm and properties associated with Houghton Hill industries; much of the western and the northern boundaries currently have no definition from the larger agricultural field of which the northern end of the site forms part. They are very open allowing significant visibility from points along Sawtry Way, in long distance views from the public right of way that links Sawtry Way to the Old Ramsey Road and properties on the southern edge of Wyton on the Hill. The south eastern boundary benefits from the landscaping provided to the west of the Slepe Meadow development which provides screening from these properties. The remainder of the eastern boundary has a narrow belt of hedging and trees screening it from the St Ivo Outdoor Sports Complex, Top Plantation provides a landscaping buffer to much of Hill Rise Park with hedging and trees along the northernmost section. The southern boundary nearest to St Ives comprises of a mixture of substantial hedging with some trees but further to the west opposite Houghton Grange there are substantial gaps in the hedging through which the site is clearly visible. The scale of the site and limited boundary landscaping would result in some impact on the landscape particularly from the north and west. Substantial landscaping buffers would be required to reduce the impact of any built development on the long distance views from Wyton on the Hill and the surrounding countryside.

Development on the site has potential to be compatible with surrounding uses providing the impacts on the outdoor sports complex are adequately mitigated. However, properties may be impacted by industrial uses at Houghton Hill Industries and by lighting and noise from the outdoor sports complex. There are no known sources of pollution or contamination constraints affecting the site.

Houghton and Wyton conservation area runs along the southern edge of the A1123 in close proximity to the southern boundary of the site. There are no listed buildings within the site but the East and West Lodges to Houghton Grange are directly across the A1123 which are grade II listed; further south from these is the grade II listed Houghton Grange

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site incorporates the whole of the site Wyton on the Hill 4 and extends further to the north just beyond Hill Rise park and Top Plantation.

The site is wholly in flood zone 1 with small areas at risk of surface water flooding near the south eastern edge of the site, across the central field boundary, along the north eastern edge and close to buildings adjoining the western boundary. A drainage ditch runs along the eastern edge. The majority of the site is classified as grade 2 agricultural land

<p>although new development in the grounds of this will minimise the potential for any impact on its setting from development of this site. There are no designated nature conservation assets within the site.</p> <p>The site has a frontage to the A1123 with the site promoter proposing access via a new roundabout to be created at the junction of the A1123 and Sawtry Way.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is unaffected by any minerals safeguarding area and is beyond any protection buffers around a water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site has multiple owners all of whom support its development. it is optioned by a housebuilder. There are no known legal restrictions affecting the site. The current use is agricultural so there is no use to be relocated. The site is promoted on behalf of a housebuilder whose delivery intentions are clearly set out in the supporting Vision Document which presents three scenarios in terms of the numbers of homes, the mix of uses, their distribution across the site and the potential for phasing of delivery with this larger site containing scenario 3 with approximately 400 new homes and more extensive open space than Wyton on the Hill 4.</p>	+
<p><b>Achievability</b></p> <p>Electricity, gas, water and digital/ telecommunications infrastructure are all accessible from the site boundary which has a frontage on to the public highway. The site is served by the A1123 providing good connectivity for deliveries. The site comprises broadly level open ground with any low spots and ditches in close proximity to the boundaries where they could be incorporated into landscaping schemes. No oil or gas pipeline infrastructure affects the site and no electricity cables cross it. The eastern side adjoins the St Ivo Outdoor Sports Complex which has potential to impact on the site through light and limited noise pollution that would need to be carefully mitigated. Substantial junction improvements will be required to ensure safe access is provided into the site and to minimise impacts on existing road and footpath users in the vicinity. The site promoter intends to incorporate a 4-arm roundabout at the junction of the A1123 and Sawtry Way to address access issues and incorporate a footpath/ cycleway along the frontage to link into the existing network near Garner Way.</p>	~
<p><b>Deliverability / developability</b></p>	~

## Document Information

**Title:** Southern Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Southern Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 Southern Huntingdonshire Area

1.1 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

Map 1.1 Huntingdonshire site assessment groupings

1.2 This document sets out the site assessments for the sites located within 'Southern Huntingdonshire'. This grouping consists of Buckden; Great Paxton; and St Neots wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Abbotsley - 6 sites
- Buckden - 6 sites
- Diddington - 1 site
- Great Gransden - 4 sites
- Great Paxton - 4 sites
- Little Paxton - 2 sites
- Southoe and Midloe - 2 sites
- St Neots - 8 sites
- Toseland - 0 sites
- Waresley-cum-Tetworth - 0 sites
- Yelling - 2 sites

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal to obtain a complete picture of the Council's initial consideration of the site.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites.

#### 3.4 Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next 5 years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or was occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape or been revegetated
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

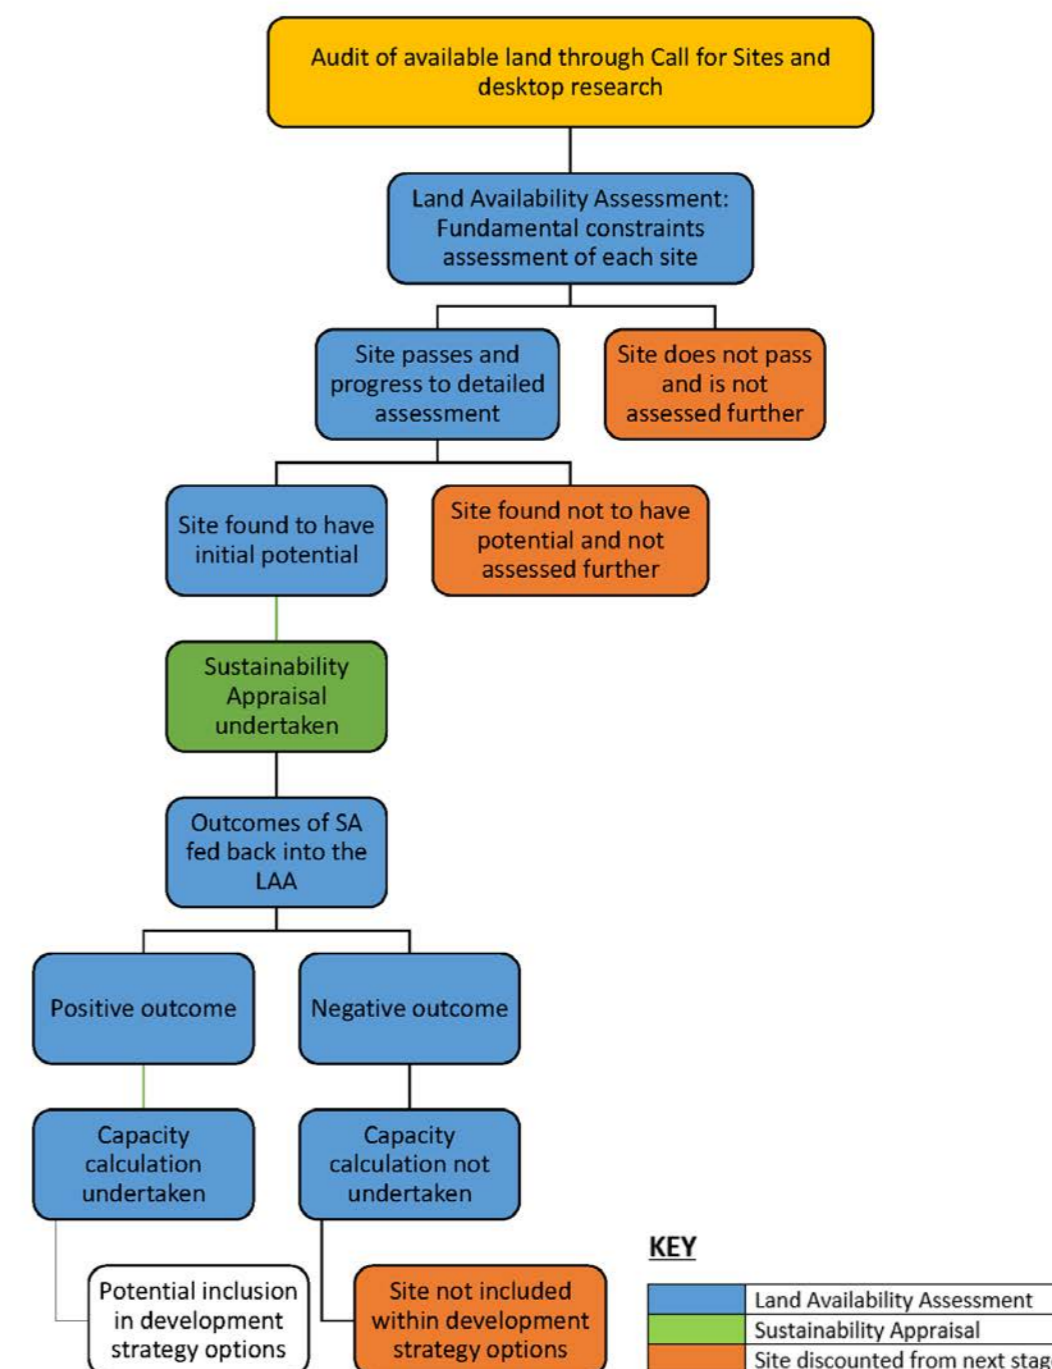

- **CfS** - Call for Sites
- **Dph** - Dwelling per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.5 The assessment of each site consists of several sections, each is detailed below:

- Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.
- Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.
- Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.
- Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.
- Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a local green space, having a nature conservation designation, within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.
- Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.
- Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.
- Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.
- HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, we will calculate an indicative capacity for the site and uses. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.
- Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

### Site Assessment Process

### 1 Abbotsley

1.1 A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Abbotsley 1: Land at Potton Road (Rectory Farm), Eynesbury Hardwicke
- Abbotsley 2: Land East of Wintringham Park, St Neots
- Abbotsley 3: Land East of St Neots
- Abbotsley 4: Pear Tree Solar Farm, Abbotsley
- Abbotsley 5: North of Wintringham Hall, Cambridge Road, St Neots
- Abbotsley 6: Abbotsley Golf Club

1.2 Please note that 'St Neots 8: Land East of Loves Farm (Tithe Farm extension), St Neots' also partially falls within Abbotsley parish, but it has been included under St Neots as most of the site lies within that parish area.

1.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Legend	
	Commercial sites
	Infrastructure sites

**Abbotsley 1: Land at Potton Road (Rectory Farm), Eynesbury Hardwicke**

<b>Site reference</b>	Abbotsley 1
<b>Site name</b>	Land at Potton Road (Rectory Farm), Eynesbury Hardwicke

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land between current A428 and proposed new A421 road, west of Potton Road (B1046).	Abbotsley	53.0

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Employment</li> <li>Retail</li> </ul> Supporting Infrastructure: <ul style="list-style-type: none"> <li>Local community centre (if required)</li> <li>Primary school (if required)</li> <li>Health facilities (if required)</li> </ul> Open spaces: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> </ul>	Approximately 1100-1200 homes on 30 hectares, average density 35-40 dph.  Employment floorspace to be confirmed on up to 1.5 ha.  Retail floorspace 1,100 sqm on 0.3 ha.  Local community centre (if required) - 225 sqm on 0.2 ha.  Primary School (if required) - 1.10 ha for 1 Form Entry, 1.8 ha for 2 form entry.  Health facilities (if required) - 0.5 ha.  Natural, green or open spaces for a variety of uses.  Approximately 18 -19 ha of green space and biodiversity net gain opportunities	Available 2024 - 2028  Build out over 9 - 10 years

Page 1293 of 3488

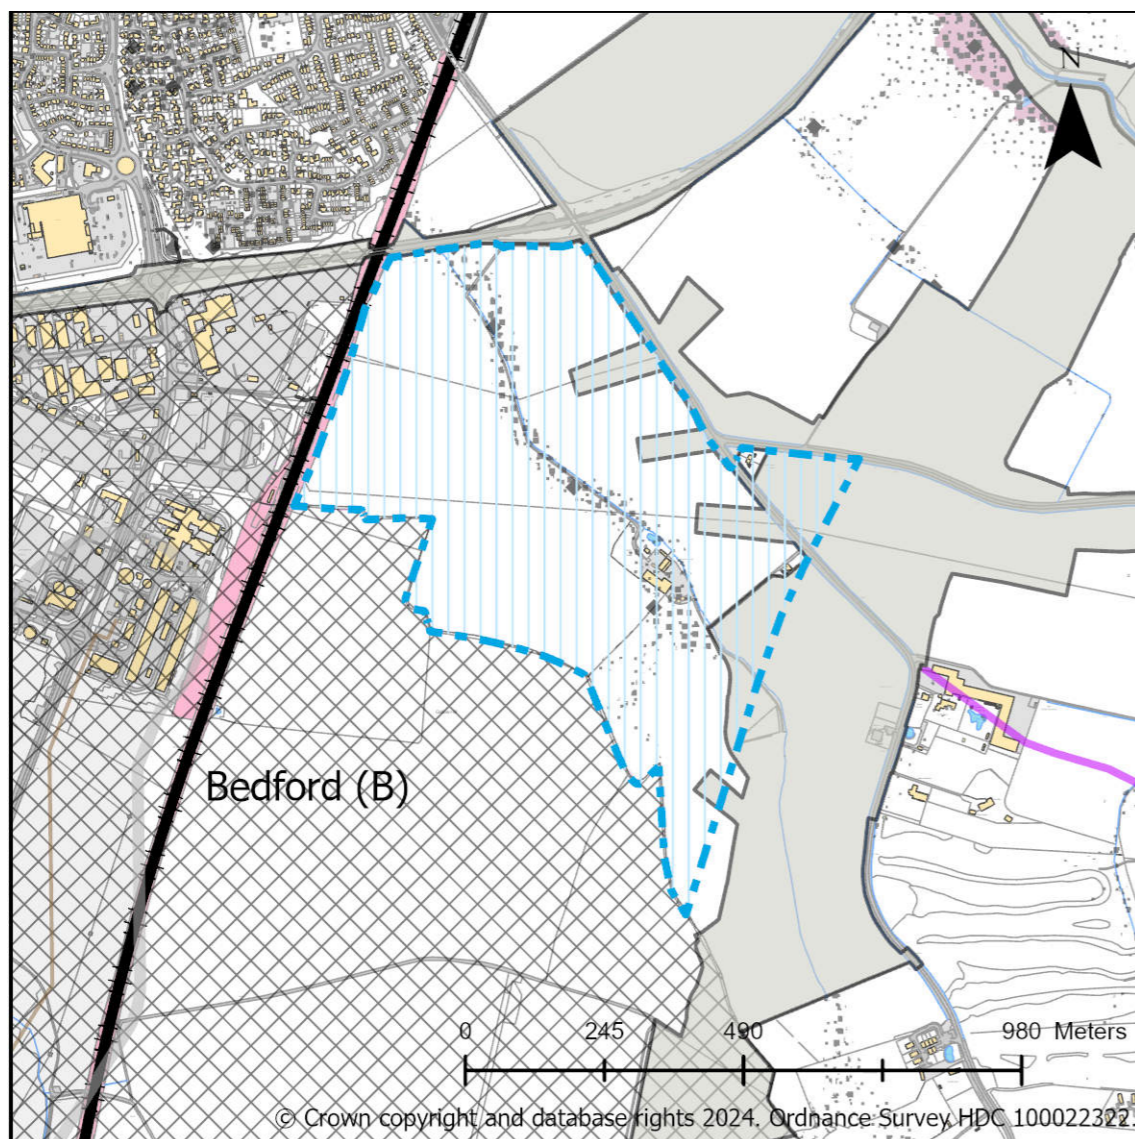

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:21
Relevant planning history	Application number: 1401687FUL  Proposed development: Laying of underground cable to connect solar farm to grid network and reinstatement of land involving land south of St Neots Bypass St Neots (extreme northern edge of site only).  Outcome: Approved 14 Jan 2015  Development Consent Order - 2022 No. 934 Infrastructure Planning - The A428 Black Cat to Caxton Gibbet Development Consent Order 2022 (made 18 Aug 2022). Approval for 10 mile two lane dual carriage way between the Black Cat junction and Caxton Gibbet Junction.
Land type	Part previously developed land and part greenfield land
Current use of the site	Agricultural
Supporting information	None

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1; surface water flood risk runs through the centre of the site. There is a pond located in the southern half of the site. The site is wholly classified as grade 2 agricultural land. The site comprises mostly agricultural land, with some agricultural buildings (Rectory Farm), hard standings and access tracks and a small number of existing residential properties (in the landowner's control). The northern half of the site is flat rising gently towards the southern edge. The topography is consistent with the surrounding area and open countryside. The northern edge of the site is bounded by hedgerow and the A428 and the western edge by the railway line. There is sporadic tree planting within the site. Approximately 10.5 ha of the north western edge of the site (adjacent</p>	~
--	---

to the railway line) is identified as part of the Great Ouse Green Infrastructure Strategic area which is also a Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley). Biodiversity, landscape and environmental impacts of the site would need to be addressed. The landowner notes that the site may contribute to the landscape, wildlife, cultural and historic value of the area which can be met by incorporating the area into the site's strategic landscape and ecology strategy. Opportunities to connect to the potential Little Barford New Settlement green infrastructure strategy would be provided. The site can be clearly seen from the B1046 and Potton Road and is highly exposed in both the local landscape and in longer distance views from the north and east. Significant landscaping buffers would be required to mitigate impact of the development.

There is no known pollution or contamination and no oil pipelines or associated buffer zones cross the site. However, a high pressure gas pipe line runs along the western boundary of the site. Electricity lines cross the site running west-east from Little Barford power station which is situated to the south west of the site. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation orders affecting it.

The portion of Strategic Expansion Location SEL2: St Neots East known as Wintringham Park is located to the north of the site and is currently under construction with some homes already occupied. The A428 and B1046 separate the submitted site and strategic expansion location making integration difficult to achieve until development on the southern end of SEL2 is complete. The site is currently isolated from other residential areas. The site also bounds the proposed Bedfordshire local plan allocation: Policy HOU Little Barford New Settlement, which is south west of the proposed site. At the time of assessment, the examination of the Bedfordshire Local Plan had been suspended and allocation of the proposed allocation (for 4,000 new homes with an estimated 3,800 to be delivered by 2040) is under question. Land within the proposed allocation had been set aside ('contingency land') for the potential East West Rail route, the station for which is anticipated to be in Tempsford, south of Little Barford. The proposed East West Rail route may separate the submitted site and proposed allocation meaning integration with this site may also be difficult to achieve.

The site is not within a mineral safeguarding area or water recycling area.

<p><b>Availability</b></p> <p>The site is in single/ individual company control. Land is owned in Trust and development is supported by the landowners. There are no known legal restrictions affecting the site. It is unclear whether current residential uses on site would require relocation.</p> <p>The site promoter states that it is the intention to gain allocation status and then sell the land to a third party for obtaining planning permission and development. The promoter suggests the land is available between 2024 and 2028 and delivery is likely to be multi-phased over a 9-10 year period.</p>	+
---	---

<p><b>Achievability</b></p> <p>The site promoter notes that gas supply is accessible from the site boundary and mains water and electricity supply and digital and telecommunications infrastructure are accessible within the site. Potton Road is accessible from the site boundary.</p> <p>The northern and eastern edges of the site adjoin the A428 and the B1046 and the western edge parallels the East Coast mainline railway. Substantial noise mitigation measures will be required to ensure a high quality residential environment.</p> <p>Portions of the eastern part of the site fall within the A428 Development Consent Order boundary potentially restricting development at least whilst construction is underway. Likewise the southern edge of the site bounds the proposed rerouting of the A428. Noise mitigation measures would be required to address this. The finalisation of the East West Rail route, if it is brought forward, may also have similar impacts (including vibrational) on the site and available land, but these are currently unknown. Air quality as a result of the new A428 (A421) and East West Rail may also impact upon the proposed site.</p> <p>Two overhead powerline routes traverse the site from Little Barford power station which is located to the west of the site beyond the railway line. Mitigation would be required to relocate the powerlines underground, or mitigate their presence, which could impact viability of the site. Utility easements exist within the site; the site promoter anticipates incorporating them into any landscaping scheme.</p> <p>Access to A and B road networks would provide good long term road connectivity and assist with the logistics of construction. Major infrastructure would be required to support development, such as schools, local services and green spaces/infrastructure. The presence of major roads would require further measures to safely integrate the community from the proposed site with the existing residential area of St Neots - for example foot and cycle bridges as there is no segregated footway or cycleway along the B1046 to allow connectivity into St Neots.</p> <p>There are several existing residential properties that will need to be either integrated into any proposed scheme or demolished; as they are within the landowner's control these are not an impediment to achieving the site.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to Little Barford power station and the East Coast mainline railway and proposed A428(A421) and East West Rail may impact on the scale, layout and mix of uses appropriate on the site and there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk but surface water flood risk runs through the centre of the site</li> <li>• The site is predominantly greenfield and grade 2 agricultural land.</li> <li>• The site could relate well to Wintringam Park to the north once complete having the potential to be integrated with the community.</li> <li>• Integration with Bedford Local Plan allocation Policy HOU Little Barford New Settlement is uncertain.</li> <li>• There is potential for the East West Rail route to dissect the site meaning integration may be difficult to achieve.</li> <li>• Impact on the countryside would be significant due to the site's current isolated location and size</li> <li>• Proximity to the new A428(A421) and potentially East West Rail could increase the likelihood of noise light, vibrational and visual pollution</li> <li>• The site has opportunity to provide green space and biodiversity net gain opportunities.</li> <li>• Access to the railway station is within reasonable distance, as is access to St Neots town centre.</li> <li>• The site proposes employment and retail uses and could include a local community centre; primary school and land for health facilities. These could provide additional employment and social benefit to the new community.</li> <li>• The site is within 1km of 10 ha natural greenspace</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for development in the long term contributing to meeting the housing needs of the district and supporting sustainable place-making</li> <li>• Major infrastructure would be required to support development</li> <li>• In addition to housing, the site would provide opportunities for employment, retail and proposes a community centre, primary school and health facilities if required</li> <li>• Access to A and B road networks would provide good long term road connectivity</li> <li>• The presence of major roads would require further measures to safely integrate the community and connect into St Neots</li> <li>• Integration of existing residential properties may be required</li> </ul>
--

- Mitigation would be required to relocate or integrate powerlines
- Biodiversity, landscape and environmental impacts of the site would need to be addressed

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	There is a veteran Elm tree on the north east boundary. No further nature conservation designations within the site.	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 1298 of 3488

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The majority of the site is in flood zone 1. Several minor watercourses and land drainage ditches are present within the site boundary. The presence of Hen Brook (which traverses the northern half of the site from east to west) means that some of the site is within flood zones 2 and 3a. The site is risk of flooding from surface water in association with Hen Brook and drainage ditches.

The site is wholly classified as grade 2 agricultural land which is in arable use. The landform slopes from both northern and southern edges down into the Hen Brook channel which traverses the site from west to east and forms the primary visual feature within the site.

<p>The site is broadly consistent with the form of the wider landscape which slopes gently towards St Neots from higher land to the east with Abbotsley Brook following a similar path to Hen Brook only located to the north of the site.</p> <p>To the north of Hen Brook the site is bounded by some hedgerows and trees; some also follow the line of Hen Brook across the site. The southern boundary has a few sporadic trees but the site can be clearly seen from the B1046 other than by a small copse of trees by the intersection of the B1046 and the A428. The eastern boundary is currently very open but will in time be formed by the rerouted A428 (A421). One public right of way traverses the northern half of the site (east to west) with a second on the northern boundary line. The site is highly exposed in both the local landscape and in longer distance views from the B1046, Potton Road and public rights of way along with glimpses from the East Coast mainline railway. Significant landscaping buffers would be required to mitigate the impact of the development on the surrounding landscape.</p> <p>The portion of Strategic Expansion Location SEL2: St Neots East known as Wintringham Park is located to the west of the site and is currently under construction with some homes already occupied. The A428 separates the submitted site and strategic expansion location making integration difficult to achieve.</p> <p>There is no known pollution or contamination and no gas/oil pipelines or associated buffer zones cross the site. Two overhead powerline routes traverse the site from Little Barford power station which is located to the south-west of the site beyond the railway line. No known heritage assets or nature conservation assets are located within the site and there are no tree preservation orders affecting it although there is a veteran elm tree on the north east boundary.</p> <p>As the site is wholly greenfield land it does not offer any potential for regeneration. It is not within a mineral safeguarding area or water recycling area so these do not form any constraint to development.</p>	
<p><b>Availability</b></p> <p>The site is in single/ individual company control with a hybrid control agreement for its promotion for development which is supported by the landowners. There are no known legal restrictions affecting the site and no identified uses to be relocated. There do not appear to be any current uses on site requiring relocation.</p> <p>The site promoter states that it is the intention to gain allocation, obtain planning permission and for the site to then be delivered by a housebuilder. The promoter suggests the land is available between 2024 and 2028 and anticipates completion of 80 to 100 homes per year.</p>	+
<p><b>Achievability</b></p>	~

<p>The submission states that gas, mains water, electricity and digital communications supply are accessible from the site boundary.</p> <p>Portions of the site fall within the A428 Development Consent Order boundary, and the eastern edge of the site bounds the proposed rerouting of the A428(A421). This may potentially restrict development in the short term but the A428 upgrade is expected to open in 2027. Noise mitigation measures would be required to mitigate the new A428(A421) rerouting, the existing A428 and the B1046. The finalisation of the East West Rail route, if the project is confirmed, may also have similar impacts on the site (including vibrational) and available land, but this is currently unknown. Air quality as a result of the new A428(A421) and East West Rail may also impact upon the proposed site. Access to A and B road networks would provide good long term road connectivity and assist with the logistics of construction.</p> <p>Two overhead powerline routes traverse the site from Little Barford power station which is located to the south-west of the site beyond the railway line. Mitigation would be required to relocate the powerlines underground, or mitigate the presence of the powerlines, which could impact viability of the site.</p> <p>Major infrastructure would be required to support development, such as schools, local services and green spaces/infrastructure. The presence of major roads would require further measures to safely integrate the community from the proposed site with the existing built up area of St Neots - for example foot and cycle bridges/crossings.</p> <p>The site promoter provided supporting information to suggest how some of these issues may be mitigated for example a flood risk and drainage strategy has been prepared, noting that watercourse easements and SUDs would be required, and open space provided to coincide with Hen Brook. An Initial Air Quality Review conducted proposes a noise barrier next to the proposed A428(A421) and climate measures suggest include building all homes to an EPC standard of B or above and using a 'fabric first' approach. A Travel Plan would be implemented to address sustainable travel principles and landscape guidelines produced.</p>	
<p><b>Deliverability / developability</b></p> <p>Proximity to the existing A428 and proposed A428 (A421) and East West Rail may impact on the layout and mix of uses appropriate on the site and there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

Impact of the Sustainability Appraisal on the assessment

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The majority of the site is within flood zone 1, although flood zone 2 and 3a and some surface water flood risk are present
- The site is wholly greenfield and grade 2 agricultural land.
- The proposed rerouting of the A428(A421) increases the likelihood of noise, light, air and visual pollution as does the potential East West Rail route, which could impede comprehensive site development
- The site is reasonably accessible to St Neots town centre
- Potential additional retail could support the immediate needs of a new community
- The site could relate well to Wintringham Park to the west once complete having the potential to be integrated with the community (safe crossings and enhanced transport infrastructure permitting).
- Landscape impact would require significant mitigation
- Proximity to the new A428(A421) and potential East West Rail could potentially increase the likelihood of noise light, and visual pollution

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential for development in the long term contributing to the housing needs of the district and supporting sustainable place-making
- Would require flood mitigation
- Would require significant infrastructure to create linkages into Wintringham Park
- Access to A road networks would provide good long term road connectivity
- Would be required to relocate or integrate powerlines
- Would require substantial landscaping to minimise the landscape impacts of development
- May be bisected by the proposed East West Rail route impeding integration or development of the site
- Would need to integrate public rights of way

Page 1300 of 3488

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 54.47ha</p> <p>34.94% net developable area allowed as guided by the site submission following the exclusion for:</p> <ul style="list-style-type: none"> <li>• 2ha for primary school</li> <li>• 0.5 ha for community centre</li> <li>• 22.38ha for natural green or open spaces</li> <li>• 5.5ha for biodiversity net gain</li> <li>• 5.06ha for flood mitigation</li> </ul> <p>54.47ha x 34.94% = <b>19.03 ha</b></p>	<p>The net developable area is 19ha.</p> <p><b>0.5ha is deducted for business hub</b></p> <p><b>1ha is deducted for live/work hub and retail uses</b></p> <p><b>17.5ha residential development area</b> for a variety of market/affordable homes, self and custom build housing and specialist housing</p> <p>Mixed densities to reflect a range of densities reflective of large developments.</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 0.525ha x 145dph = 76 homes</li> <li>• 7% of land at high density 85dph. 1.23ha x 85dph = 106 homes</li> <li>• 25% of land at moderate density 50dph. 4.38ha x 50dph = 219 homes</li> <li>• 55% of land at low density 35dph. 9.64ha x 35dph = 337 homes</li> <li>• 10% of land at very low density 25dph. 1.75ha x 25dph = 44 homes</li> </ul> <p><b>781 total homes</b></p>	<p>Post 2035 subject to allocation and further progress on Wintringham Park to facilitate integration and further certainty on the EastWest rail route and delivery if the scheme is confirmed.</p> <p>Build out expected over 8 - 10 years.</p>

**Core information**

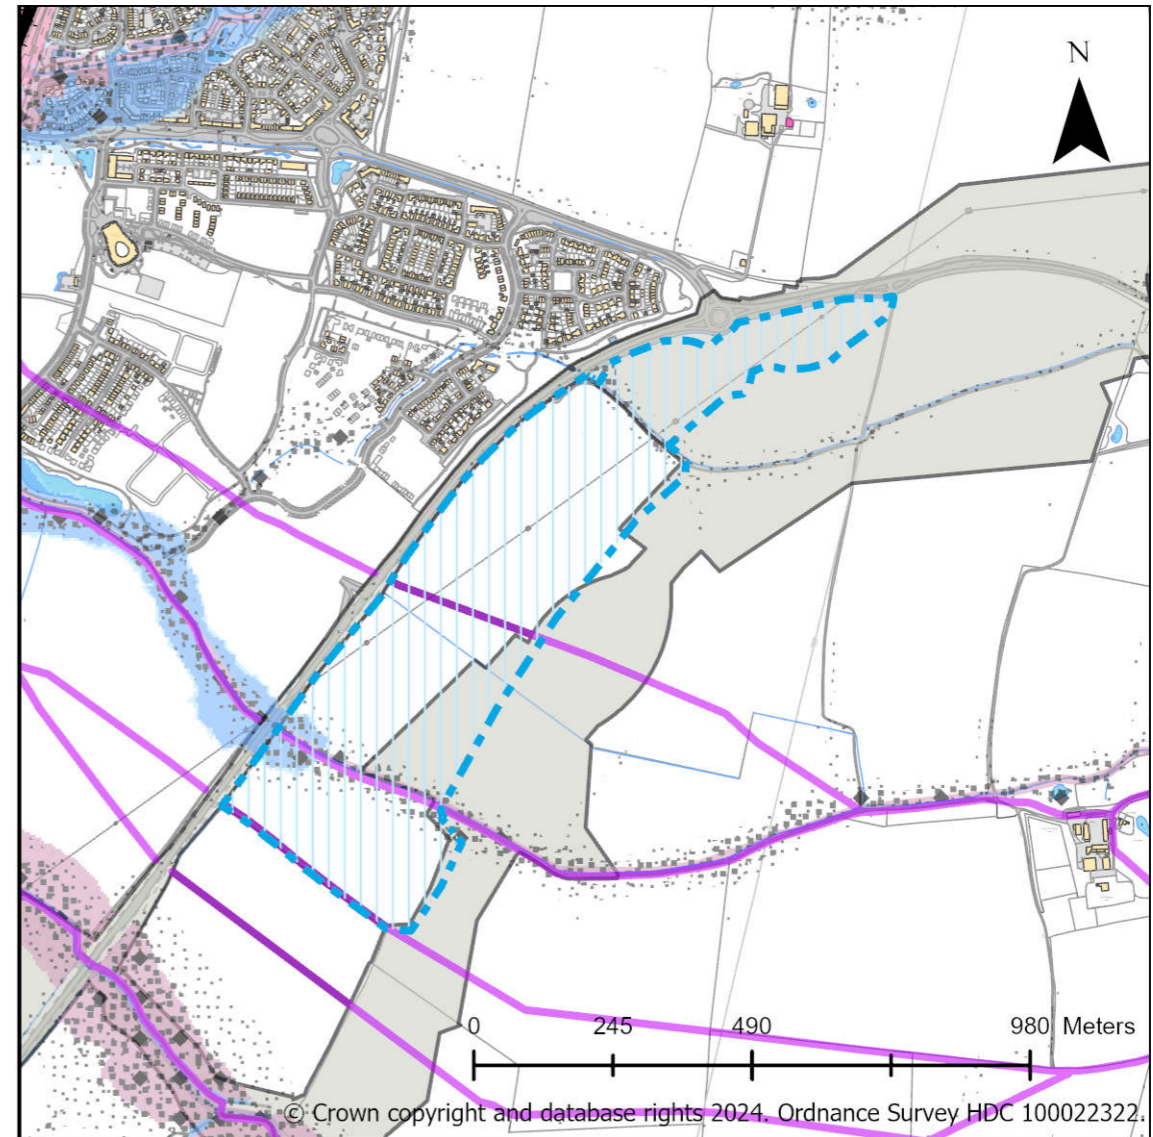

How was the site identified?	Call for sites 2023 submission: site reference – CfS:253
Relevant planning history	Application: 22/01344/FUL  Proposed development: Archaeological excavation and engineering works with associated temporary change of use and formation of site compound comprising site offices, welfare facilities and off-road parking facilities as part of the A428 Black Cat to Caxton Gibbet improvements.  Outcome: Permitted  Development Consent Order - 2022 No. 934 Infrastructure Planning - The A428 Black Cat to Caxton Gibbet Development Consent Order 2022 (made 18 Aug 2022). Approval for 10 mile two land dual carriage way between the Black Cat junction and Caxton Gibbet Junction.

	A site in the same location but of a slightly differing size was submitted in the HELAA (December 2017): South east of A428 from roundabout with B1425 Cambridge Road, St Neots (077)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>• Call for Sites Submission - Representation Report</li> <li>• Initial environmental noise assessment for a proposed development off the A428 St Neots</li> <li>• Land East of St Neots - Vision Document</li> <li>• Landscape and Visual Appraisal</li> <li>• Landscape and Visual Appraisal - Appendix A.1 Figures 1 to 10</li> <li>• Landscape and Visual Appraisal - Appendix A.2 Figure 11</li> <li>• Landscape and Visual Appraisal - Appendix B Extracts from Published Landscape Character Assessment</li> <li>• Location Plan</li> <li>• Residential development Access Strategy Options</li> <li>• Technical Note - Transport and Access Considerations</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1. A small proportion north of the south west corner of the site is located within flood zones 2 and 3a. Three drainage ditches traverse the site from east to west, one in the northern half of the site and two in the southern half.</p>	
---	--

<p>The southern and northernmost of which are susceptible to surface water flooding. The site is wholly classified as grade 2 agricultural land. Three public rights of way traverse the southern half of the site (east to west) one of which is on the southern boundary.</p> <p>The land slopes from north to south with an approximate level difference of 14m from the highest to the lowest points. The topography is consistent with the surrounding area and open countryside. The site is in use as agricultural land. The western edge of the site is bounded by hedgerow and trees. There is sporadic planting within the site. The site can be clearly seen from the public rights of way within the site, from the B1046 and Potton Road and is highly exposed in both the local landscape and in longer distance views from the B1046. Significant landscaping buffers would be required to mitigate the impact of the development. The A428 bounds the western edge of the site.</p> <p>Strategic Expansion Location SEL2: St Neots East (otherwise known as Wintringham Park and Loves Farm 2) is located to the west and north of the site and is currently under construction with some homes already occupied. The A428 separates the submitted site and strategic expansion location making integration difficult to achieve until development on the eastern edge is complete.</p> <p>There is no known pollution or contamination and no gas/oil pipelines or associated buffer zones cross the site. A 132 kW power line runs over head north-east to southwest through the site. A second low voltage overhead line runs also north-west to south from Little Barford power station which is located to the south-west of the site beyond the railway line. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation orders affecting it.</p> <p>As the site is wholly greenfield land it does not offer any potential for regeneration. It is not within a mineral safeguarding area or water recycling area so these do not form a constraint to development.</p>	
<p><b>Availability</b></p> <p>The site is in family control and development is supported by all landowners. There are no known legal restrictions and no identified uses to be relocated.</p> <p>The site promoter states that it is the intention that planning permission is obtained and then the land sold to a third party for development. The landowners suggest the land is available between 2024 and 2028 and likely to be delivered over 7 to 8 years depending on market conditions.</p>	+
<p><b>Achievability</b></p> <p>The landowner notes that access to gas supply is unknown; mains water and electricity supply are accessible from within the site and digital and telecommunications infrastructure accessible from the site boundary.</p>	~

<p>The northern section of the site and portions of the eastern part of the site fall within the A428 Development Consent Order boundary. Likewise the eastern edge of the site bounds the proposed rerouting of the A428(A421). This may potentially restrict development in the short term but the A428 upgrade is expected to open in 2027. Noise mitigation measures would be required to address the new A428(A421) rerouting and the current A428. The finalisation of the East West Rail route may also have similar impacts (including vibrational) on the site and available land, but this is currently unknown. Air quality as a result of the new A428(A421) and East West Rail may also impact upon the proposed site. Access to the 'A' road network would provide good long term road connectivity and assist with the logistics of construction.</p> <p>Two overhead powerline routes traverse the site, mitigation would be required to relocate the powerlines underground, or address their presence which could impact viability of the site. Significant infrastructure would be required to support development, such as schools, local services and green spaces/infrastructure. The presence of major roads would require further measures to safely integrate the community from the proposed site with the existing built up area of St Neots - for example foot and cycle bridges.</p> <p>The site promoter provided supporting information to suggest how some of the constraints may be overcome including the screening of pylons by a green corridor which would run through the length of the site creating a network extension from Wintringham Park and into the wider countryside. Green buffers/ecology corridors are proposed to minimise the impact of the new A428(A421) and pedestrian and cycle routes included within the site and a Travel Plan prepared. Residential and access options include roundabouts and T-junctions</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to the existing A428 and proposed A428(A421) and East West Rail may impact on the scale, layout and mix of uses appropriate on the site and there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>The majority of the site is within flood zone 1, flood zone 2 and 3a and some surface water flood risk are present</li> </ul>
---

- The site is wholly greenfield and grade 2 agricultural land.
  - The proposed rerouting of the A428(A421) increases the likelihood of noise, light, air and visual pollution as does the potential East West Rail route
  - The site is reasonably close to St Neots town centre, railway station, employment and education facilities
  - Potential additional employment, primary school, community/health centre and retail could support the immediate needs of a new community
  - The site could relate well to Wintringham Park to the west once complete having the potential to be integrated with the community (safe crossings and enhanced transport infrastructure permitting).
  - Landscape impact would require significant mitigation associated with topographical challenges
  - Proximity to the new A428(A421) and potential East West Rail could potentially increase the likelihood of noise light, and visual pollution
- In combination the outcomes of the LAA and SA indicate that the site:
- Has potential for development in the long term contributing to the housing needs of the district and supporting sustainable place-making.
  - Would require flood mitigation
  - Would require significant infrastructure to create linkages into Wintringham Park
  - Would be required to relocate or integrate powerlines
  - Would require substantial landscaping to minimise the landscape impacts of development
  - May be bisected by the proposed East West Rail route impeding integration or development of the site
  - Would need to integrate public rights of way

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 31ha  60.32% net developable area allowed as guided by the site submission and vision document following the exclusion for: <ul style="list-style-type: none"> <li>• 2.3ha for primary school</li> </ul>	The net developable area is 18.7ha.  <b>5ha is deducted for a care home, KIBS and Creative industry use class - E(g) and C2 use class</b>  <b>13.7ha residential development area</b> for a variety of market/affordable homes.	Post 2035 subject to allocation and further progress on Wintringham Park to facilitate integration and further certainty on the EastWest rail route and delivery if the scheme is confirmed.  Build out expected over 8 - 10 years

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is within flood zone 1. Surface water flood risk runs north to south across the site from two main locations. The site is wholly classified as grade 2 agricultural land. The land slopes gently downwards from south to north. The site is consistent with the wider area which is predominantly agricultural land. The northern site boundary which adjoins</p>	+
--	---

<p>Abbotsley Golf Hotel and Course is partially screened by a tree line. Potton Road to the west of the site is screened by a mixture of trees and medium hedgerows. Longer distance views into the site can be seen from the public rights of way and from the northern access road and Drewels Lane to the south (edged by small hedgerow). There is sporadic tree planting within the site and a wooded area bounding eastern boundary and south eastern corner. Three public rights of way traverse the site; one footpath is located in western half of site running north to south, one footpath is located along northern boundary of site running west to east and crossing into north eastern part of site and a bridleway runs along eastern edge of the site. The landscape impact would be limited given the boundary trees and hedging around most of the site. However, the impact from the southern aspect may be noticeable, limited landscape buffers may be required.</p> <p>The site promoter provides supporting information to suggest how some constraints may be overcome such as buffer zones either side of existing footpaths. Decommissioning of the site after a 40 year period to return the land to agricultural use with any legacy planting to remain. A planning application would be accompanied by a landscape and visual impact assessment and where possible hedgerows, trees, field patterns and strong boundary features will be used to mitigate the visual impact of solar energy developments.</p> <p>The site is in use as arable agricultural land and has no buildings within or immediately adjacent to the site. The presence of solar farms are compatible with agricultural land as they can be temporary in nature and can revert back to agricultural use potential having positive impacts on intensively farmed land allowing time for restoration. Some agricultural uses would also be able to continue around and within solar farm sites depending on their nature. Solar farms can contribute to addressing climate change.</p> <p>There is no known pollution or contamination and no gas/oil pipelines and buffer zones cross the site. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation orders affecting it. It is not within a mineral safeguarding area or water recycling area so these do not form a constraint to development.</p>	
<p><b>Availability</b></p> <p>The site is in single/individual company control and the land is optioned. The proposed development is supported by all landowners. There are no known legal restrictions. There appears to be no current uses on site requiring relocation.</p> <p>The site promoter states that it is the intention to acquire planning permission and then be delivered by a renewables company. The site is available between 2024 and 2028 and likely to be delivered over 16 weeks with a temporary use period of 40 years.</p>	+
<p><b>Achievability</b></p>	+

<p>The submission notes that access to gas, mains water and electricity supply are accessible from the site boundary as is the public highway and digital and telecommunications infrastructure. No gas/oil pipelines and buffer zones cross the site or electricity pylons/infrastructure. No noise impacts are expected from the use of the site.</p> <p>The site is surrounded on three sides by B and access roads which would provide connectivity and assist with the logistics of construction.. No additional major infrastructure would be required. Limited landscape buffers may be required and the retention of public rights of way though and adjoining the site.</p> <p>The site promoter notes that consideration will be given to the access roads, security fencing, lighting and any buildings so as to minimise its visual impact, whilst ensuring that the development causes no risk to public safety. A transport statement and construction management statement would also be provided to consider impact on highways network.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints and minimal constraints to overcome. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is in flood zone 1 with surface water flood risk</li> <li>• The site is wholly classified as grade 2 agricultural land.</li> <li>• Consideration of impact on Eynesbury Hardwicke House may require mitigation</li> <li>• The site use compatible with agricultural land with potential to positively impact on agricultural land quality one use is removed.</li> <li>• Some agricultural uses would also be able to continue around and within the site.</li> <li>• the proposed use is classified as essential infrastructure meaning development is compatible.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May help to contribute towards achieving net zero ambitions and address climate change</li> <li>• Is suitable for solar energy generation</li> <li>• Public Rights of Way would require integration</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 72ha</p> <p>80% net developable area following land excluded for landscaping and Biodiveristy Net Gain.</p> <p>72ha x 80% = <b>57.6ha</b></p>	<p><b>Net developable area 57.6ha for a Solar Farm</b></p>	<p>Available 2024-2028</p> <p>Build out over 4-8 months</p>

**Updates after the Initial Assessment**

**Abbotsley 5: North of Wintringham Hall, Cambridge Road, St Neots**

<b>Site reference</b>	Abbotsley 5
<b>Site name</b>	North of Wintringham Hall, Cambridge Road, St Neots

Site address	Parish(es)	Site area (ha)
The site is located to the East of St Neots, north of the A428 and Wintringham Hall	Abbotsley	19.0

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment Logistics	1,500 sqm of employment (Knowledge Intensive Business Services - KIBS - use class E(g))  15,000 sqm of logistics	Available 2024 - 2028  Build out over 2 - 3 years

**Core information**

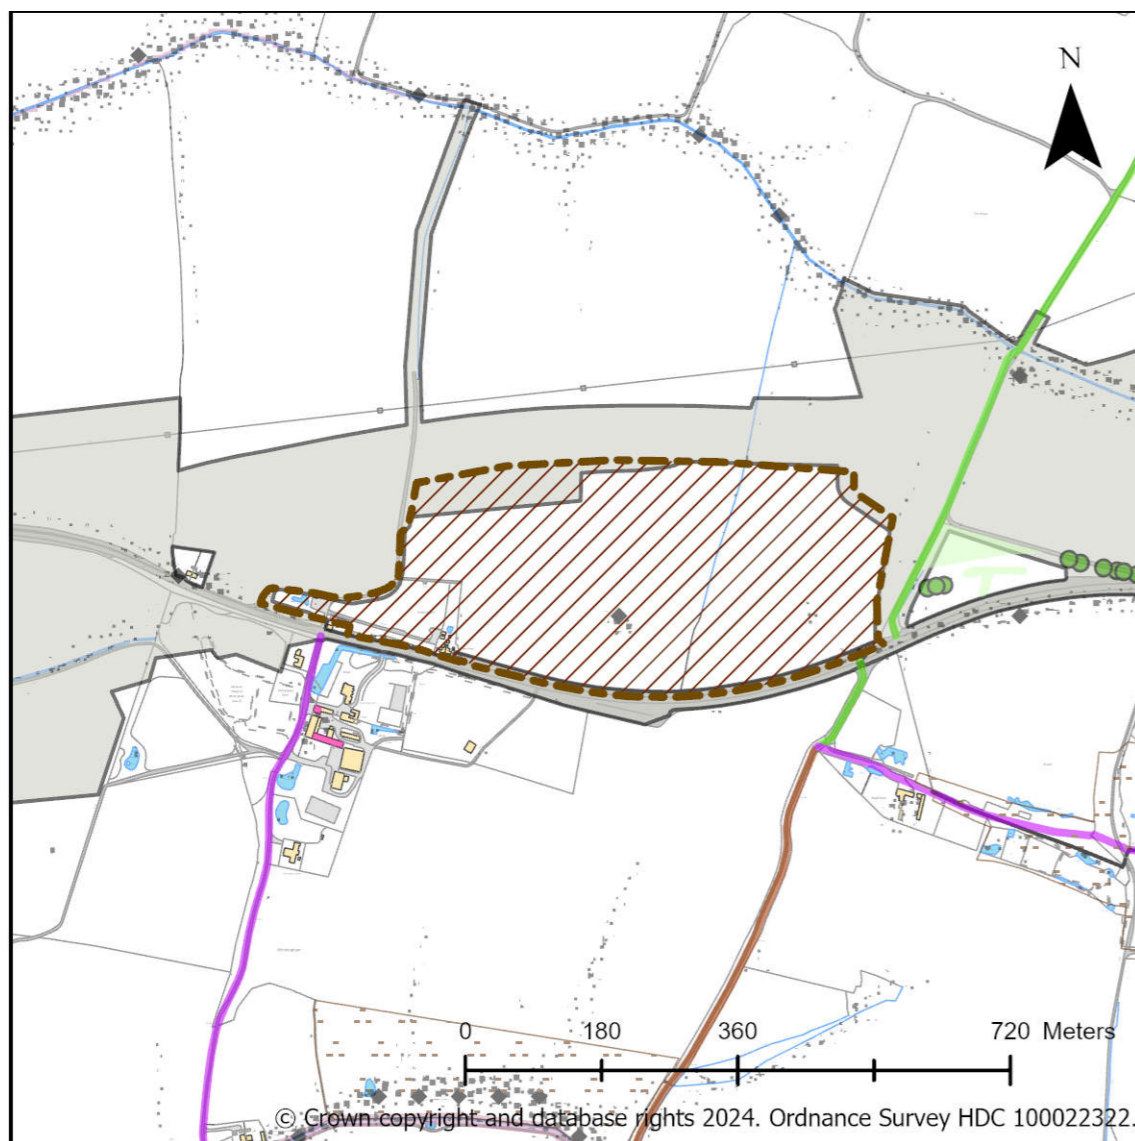

How was the site identified?	Call for sites 2023 submission: site reference - CfS:278
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Call for Sites Submission - Representation Report Land East of St Neots - Vision Document Landscape and Visual Appraisal Landscape and Visual Appraisal - Appendix A.1 Figures 1 to 10

	Landscape and Visual Appraisal - Appendix A.2 Figure 11  Landscape and Visual Appraisal - Appendix B Extracts from Published Landscape Character Assessment  Location Plan  Commercial Development Access Strategy Options  Technical Note - Transport and Access Considerations
--	--

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1. The site has elements of surface water flood along the southern boundary as well as associated with drainage ditches that enter the site from the north. The site is wholly classified as grade 2 agricultural land which is in arable use. The site is relatively flat just sloping slightly down from the south east corner to the north west and forms the higher part of the local landscape which falls away to the north west towards Fox Brook but continues at a similar elevation to the site towards the north east. The southern boundary is edged by trees and hedgerow which screen the site from the A428. All other boundaries are relatively open with just some sporadic hedgerow sections along the eastern boundary. The site is located in open countryside and views</p>	
--	--

<p>into the site can be currently seen from the bridleway to the east of the site. Long distance views can be seen from Priory Hill and public rights of way to the north of the site making it highly exposed from the north. Significant landscaping buffers would be required to mitigate the impact of any development on the adjoining countryside. Toll Gate Cottage is located just outside the south west boundary of the site and the semi-detached Wintringham Cottages are located within the southern boundary. The compatibility of the proposed land use and the significance of the properties and their setting would require further assessment.</p> <p>The site promoter provides supporting information to suggest how some of the constraints may be overcome including a green buffer to the south and east and an ecology corridor to the north. The Vision Document presents the opportunity for a smaller cluster of employment buildings for KIBS and creative industries in the south western corner in keeping with surrounding properties, with large scale logistics buildings on the remainder of the land (8.00ha) separated by a green buffer.</p> <p>There is no known pollution or contamination and no gas/oil pipelines and buffer zones cross the site. No known heritage assets are located within the site although the deserted medieval settlement of Wintringham and listed buildings at Wintringham Hall are located just to the south. There are no nature conservation assets within the site and there are no tree preservation orders affecting it.</p> <p>As the site is wholly greenfield land it does not offer any potential for regeneration. It is not within a mineral safeguarding area or water recycling area so these do not form a constraint to development.</p>	
<p><b>Availability</b></p> <p>The site is in single/individual company control and the proposed development is supported by all landowners. There are no known legal restrictions affecting the site. There are current residential uses on site which would require integration.</p> <p>The site promoter states that it is their intention to acquire planning permission and then sell to a third party for development. The site is available between 2024 and 2028 and likely to be delivered over 2-3 years.</p>	
<p><b>Achievability</b></p> <p>There is no access to gas supply and access to digital telecommunications infrastructure for the site is unknown. Mains water and electricity supply are accessible from the site boundary. No gas/oil pipelines or their associated buffer zones cross the site and there are no overhead power lines or infrastructure within the site. Noise impacts are expected from the use of the site which would require mitigation.</p>	

<p>The site has immediate access to the A428 from the southern boundary. Transport movements as a result of the proposed employment and logistics uses may impact on the safety of the local road network. The site is surrounded by the A428 Development Consent Order boundary with both northern and southern portions of the site directly impacted by the DCO boundary. The northern edge of the site bounds the proposed rerouting of the A428(A421) which may impact on potential accesses for the site and its orientation. The DCO may potentially restrict development in the short term but the A428(A421) upgrade is expected to open in 2027.</p> <p>Noise mitigation measures would be required to address the new A428(A421) routing as well as traffic on the current A428. The finalisation of the East West Rail route may also have similar impacts (including vibrational) on the site and available land (potentially being located to the north of the site), but this is currently unknown. Air quality as a result of the proposed use of the site, new A428(A421) and East West Rail may also impact upon the proposed site and existing residential properties. Integration of the proposed site with the existing properties would need careful consideration. Access to the A road network would provide good long term road connectivity and assist with the logistics of construction.</p> <p>The site promoter proposes access to the site via a new roundabout on the A428 and a second entry only junction opposite the entrance to Wintringham Hall. There is some flexibility regarding the type and quantum of employment uses on the site. Sustainable transport options proposed for employees may include walking, cycling or public transport infrastructure and the site promoters note that a Travel plan would be provided.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to the existing A428 and proposed A428(A421) and East West Rail may impact on the layout and mix of uses appropriate on the site and there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk, or nature conservation designations, some surface water flooding is present</li> <li>• It is grade 2 agricultural land and wholly greenfield</li> </ul>
--

<ul style="list-style-type: none"> <li>• The site has potential to adversely impact nearby listed buildings</li> <li>• The site is in proximity to St Neots train station and a public right of way, but no substantial active travel links are available to facilitate non-motorised vehicular commuting</li> <li>• The site would be surrounded by the existing A428 and new route of the A428(A421). The local transport network may be impacted by the proposed uses</li> <li>• The proposed use could increase light, odour and visual pollution</li> <li>• The site is in open countryside and landscape impact of development would require mitigation</li> <li>• Successful integration of properties within and just outside the site would require careful masterplanning</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for employment and small logistics development</li> <li>• Would be surrounded by the new and old A428 which would require mitigation from light, air and visual pollution</li> <li>• Would require landscape integration</li> <li>• Would require a transport impact assessment and traffic movement and access solutions</li> <li>• Would require careful masterplanning to minimise impact on listed buildings and buildings within and nearby the site</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 19ha</p> <p>60% net developable area following land being excluded for landscaping, integration of existing buildings and mitigation for impact on listed building, biodiversity net gain, movement of HGVs and mitigation from new and existing A428</p> <p>19ha x 60% = <b>11.4ha</b></p>	<p>The net developable area is 11.4ha</p> <p>8ha is for Logistics. (8ha of land at 0.40 plot ratio) x 10,000sqm = (8ha x 0.40) x 10,000 = <b>32,000sqm of logistics</b></p> <p>2.4ha is for KIBS and Creative industries (Knowledge Intensive Business Services - KIBS E(g) use class)</p> <p>2.4 ha of land at 0.35 plot ratio) x 10,000sqm = (2.4ha x 0.35) x 10,000</p>	<p>Available from 2029 subject to allocation.</p> <p>Build out expected over 2-5 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	= 8,400sqm of E(g) use class

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Specialist housing	500 - 1,000 homes  Retirement complex - including limited retail and employment opportunities commensurate to the proposed scale and uses.	Available 2024 - 2028  Build out over 6 years

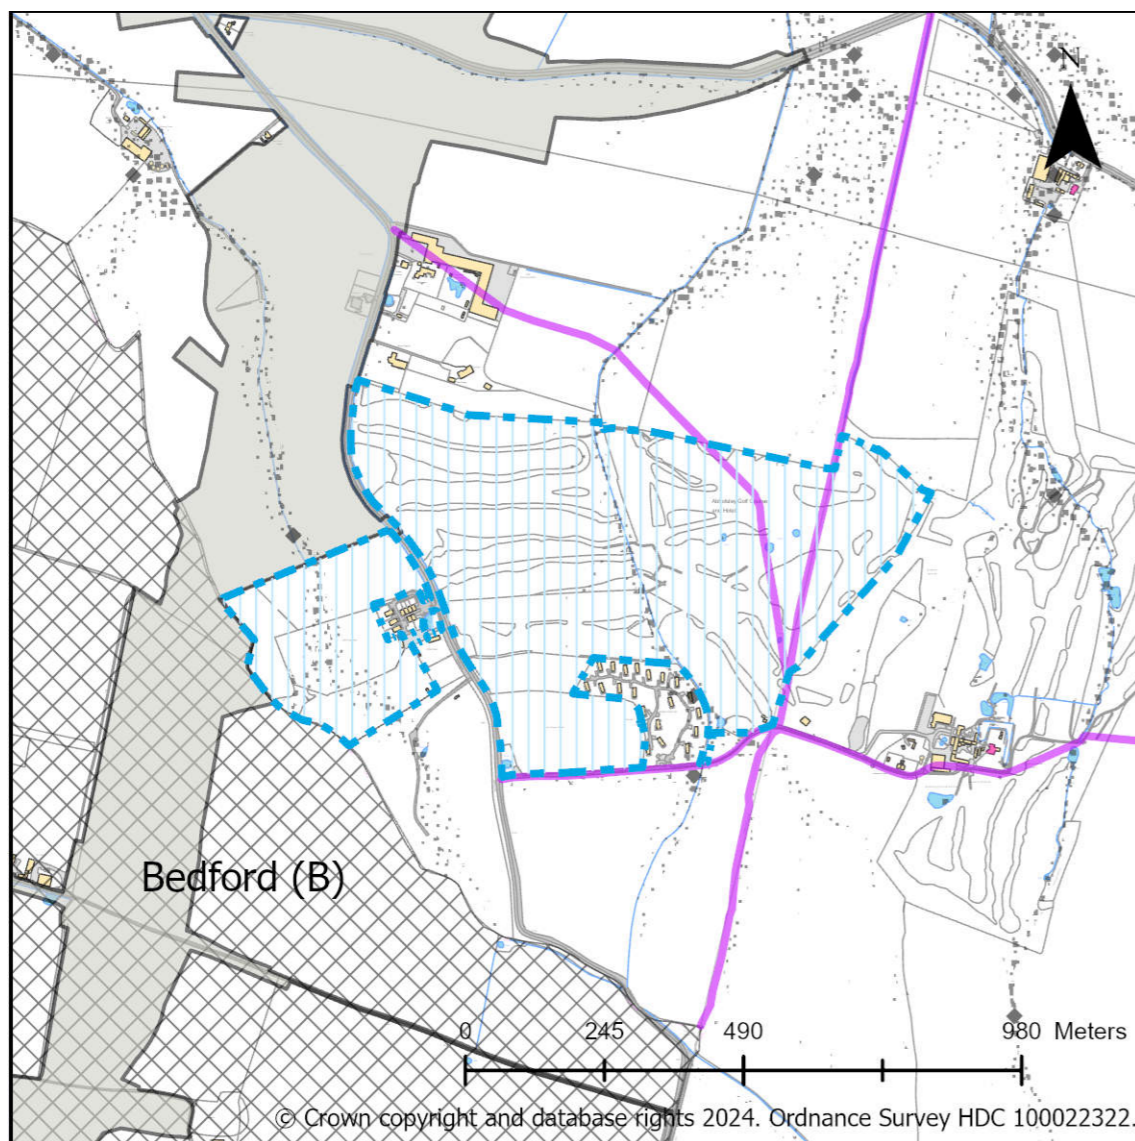

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:234
Relevant planning history	Application Number: 22/01129/S106  Proposed Development: Remove the obligation relating to the woodland area and the occupancy of the approved lodges for holiday use only - 91/0949  Outcome: Pending Decision.  HELAA (December 2017) Abbotsley Squash Club and Cromwell Golf Course, South of B1046, Abbotsley  (051)

Land type	Wholly greenfield land  Note: Promoter considers land to be wholly previously developed land
Current use of the site	Leisure use
Supporting information	Bedford Borough Council Local Plan 2040: Plan for Submission April 2022  Location Plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is in flood zone 1. The site is separated into two parcels of land by Potton Road. The western section of the site shows surface water flood risk running north to south through the centre. The western portion of the site wraps around built development at The Range and Orchard House with the majority being grassland with hedgerows and intermittent trees fronting all boundaries including that to Potton Road. A strong tree belt sits within the site running west from The Range.</p>	~
---	---

The eastern section of the site experiences surface water flood risk through the centre of that part of the site and some ponds are present on site. The site is wholly classified as grade 2 agricultural land. The land slopes gently upwards from north to south. Two public rights of way traverse the site south to north from the southeast boundary. Mature trees and hedgerows surround the boundaries with Potton Road and the southern boundary. Longer distance views can be seen from within the site from the public footpaths. There is mature tree planting within the site associated with its landscaping as a golf course. Jenny Wissen Wood is located on the southern boundary of the site immediately east of Potton Road. The southern part of the site boundary excludes Abbotsley Country Homes holiday homes park which is largely screened by tree belts other than a small portion of their western boundary with the site. Further landscaping may be required to reinforce the amenity of users of this leisure site. The eastern portion of the site is currently laid out as a golf course. The northern boundary of the site is also largely contained by a hedgerow with sporadic trees. To the north west corner of this section of the site there are a couple of residential properties and a small cluster of low level industrial and warehousing buildings. Tall development within the site that exceeds the height of existing landscaping would be readily visible from multiple public viewing points and would likely have a detrimental impact on the landscape.

The site is in an isolated countryside location but bounds the proposed Bedfordshire local plan allocation: Policy HOU Little Barford New Settlement, which is to the west of the proposed site. At the time of assessment, the examination of the Bedfordshire Local Plan had been suspended and allocation of the proposed allocation (for 4,000 new homes with an estimated 3,800 to be delivered by 2040) is under question. Land within the proposed allocation had been set aside ('contingency land') for the new East West Rail route, the station for which is anticipated to be in Tempsford, south of Little Barford. The proposed East West Rail route may separate the submitted site and proposed allocation meaning integration with other nearby development would be difficult to achieve.

There is no known pollution or contamination and no gas/oil pipelines and associated buffer zones cross the site. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation areas affecting it.

As the site is wholly greenfield land it does not offer any potential for regeneration. It is not within a mineral safeguarding area or water recycling area so these do not form a constraint to development.

<p><b>Availability</b></p> <p>The site is in single individual/company control and development is supported by the landowner. There are no known legal restrictions affecting the site. The submission states that it is the intention to acquire planning permission before selling the land a third party for development. The submission suggests the land is available between 2024 and 2028 and is likely to be delivered over 6 years.</p>	+
--	---

<p><b>Achievability</b></p> <p>The submission notes that gas, mains water and electricity supplies are accessible from the site boundary as is digital and telecommunications infrastructure. The public highway runs through the site with the larger portion to the east. No gas or oil pipelines or associated buffer zones cross the site or overhead power lines/infrastructure.</p> <p>The north western and western boundaries of the western edge of the site are bounded by the A428 Development Consent Order boundary potentially restricting development whilst construction is underway. This route may in time result in noise impacts on the site. The finalisation of the East West Rail route may also have similar impacts (including vibrational) on the site and available land, but this is currently unknown. Air quality as a result of East West Rail and the new A428(A421) may also impact upon the proposed site.</p> <p>Access to Potton Road would provide long term road connectivity and assist with the logistics of construction. The presence of major roads including the new A428(A421) and proposed East West Rail would require further measures to safely integrate the community from the submitted site with the proposed allocation at Little Barford (if it were to proceed to allocation), for example foot and cycle bridges. Integration or effective screening of the proposed site with the existing properties would need careful consideration.</p> <p>The site promoter provides some supporting information to suggest how some of these issues may be mitigated for example supporting infrastructure and green spaces and improved accessibility through the opportunity to provide a strategic road junction off the new A428(A421) and proximity to the East West Rail station. It was also envisaged that the proposed allocation at Little Barford (if it were to proceed to allocation) would create sustainable transport links which could serve the future residents at Abbotsley through improved connectivity at Little Barford.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to the A428, new A428(A421) and proposed East West Rail may impact on the layout and mix of uses appropriate on the site. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	~

<ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk but some surface water flood risk is present</li> <li>• The site is wholly greenfield and grade 2 agricultural land</li> <li>• The site is in an isolated countryside location and integration with nearby residential areas would not be feasible</li> <li>• The status of Bedford Local Plan proposed allocation HOU Little Barford New Settlement (where further integration is proposed is also currently unknown)</li> <li>• The proposed rerouting of the A428 increases the likelihood of noise, light, air and visual pollution as does the potential East West Rail route , which could impede comprehensive site development dependant on its location within or adjacent to the site and further separating the site from the proposed Little Barford allocation</li> <li>• Impact on the countryside would be significant due to the site's current isolated location and size</li> <li>• Access to the railway station via motorised vehicle is within reasonable distance, as is access to St Neots town centre, education and employment opportunities.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not appropriate for development and does not supporting sustainable place-making</li> <li>• The site would be separated and dissected by the new A428(A421) and potentially East West Rail making integration with any potential development in Bedfordshire difficult to achieve without significant infrastructure and could impede achievability of development</li> <li>• Major infrastructure would be required to support development</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to its landscape impact and isolated location.	N/A	N/A

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

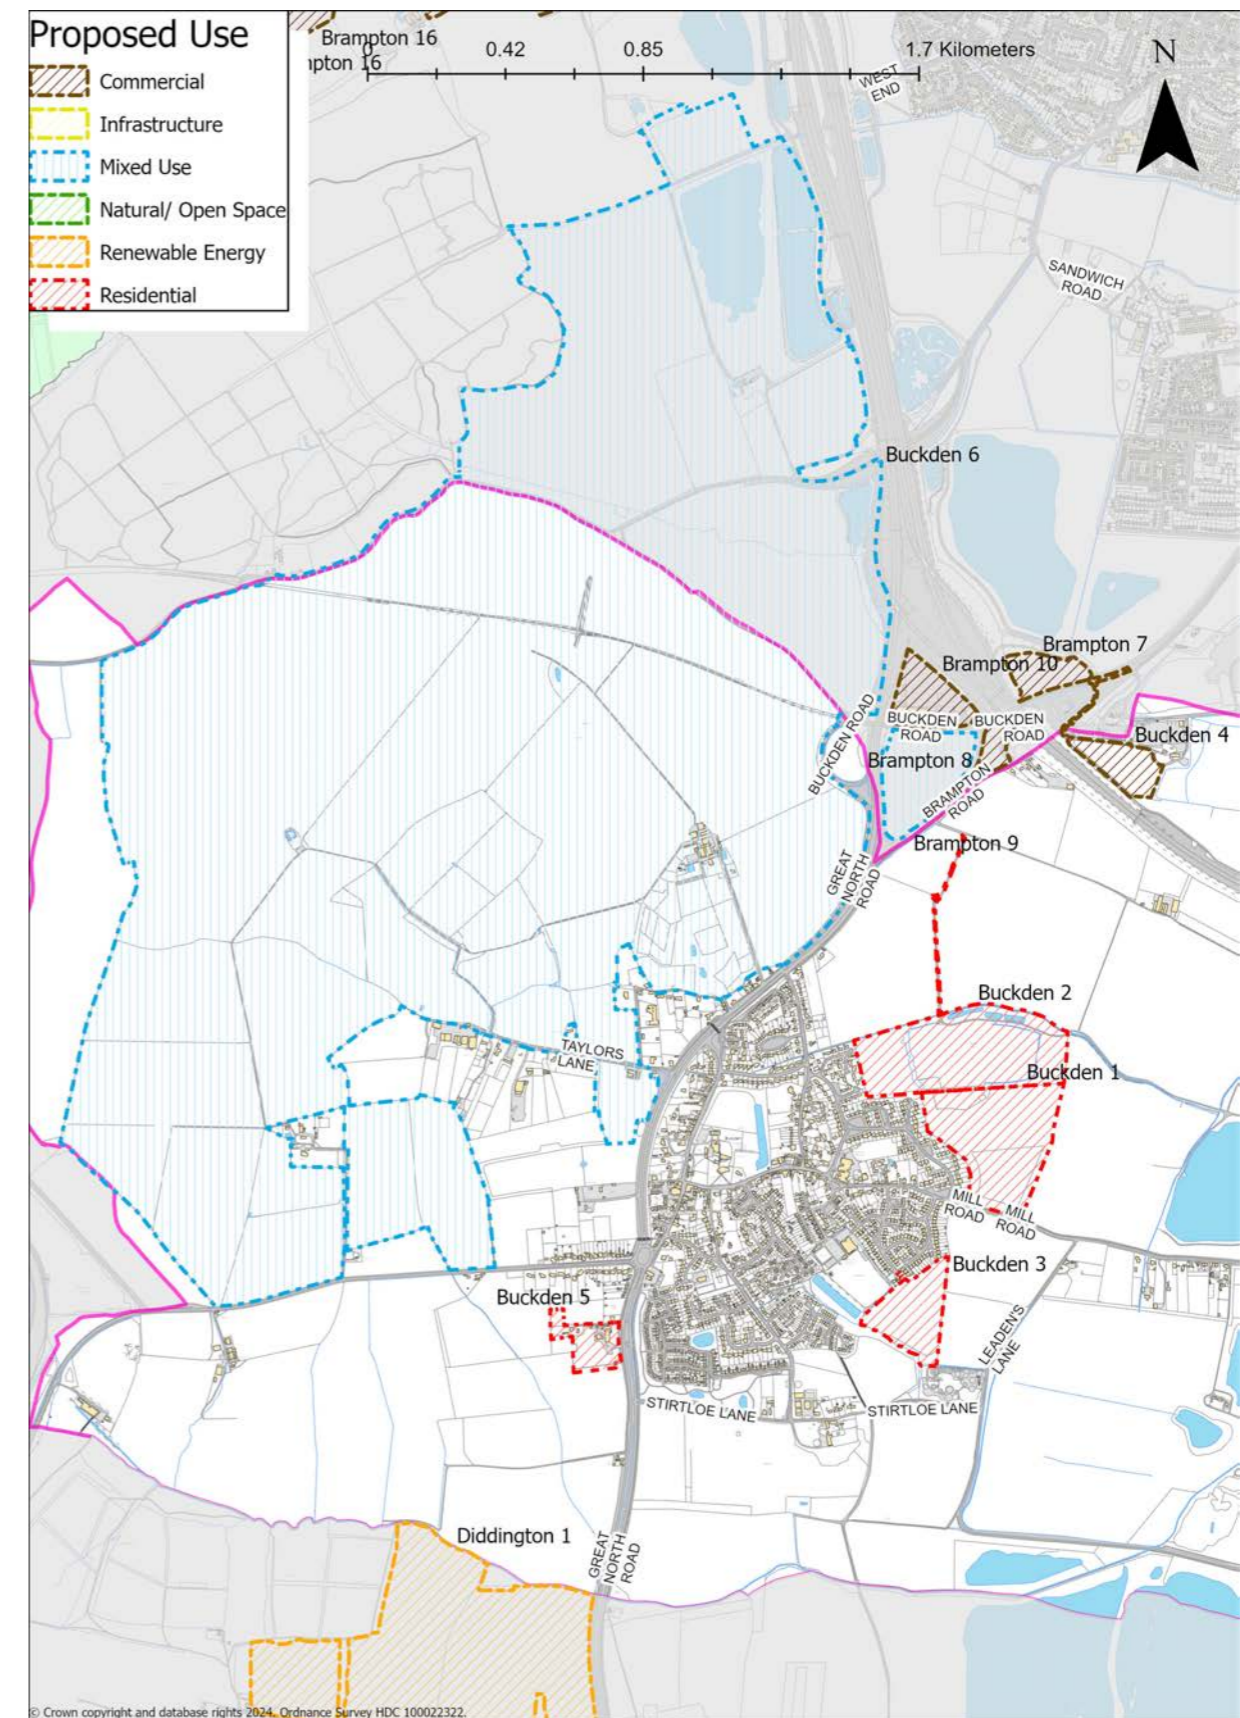

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:
---

### 2 Buckden

2.1 A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Buckden 1: Land at Mill Road, Buckden
- Buckden 2: Land South of the B1514, Buckden
- Buckden 3: Land off Vineyard Way, Buckden
- Buckden 4: Brampton Road, Buckden
- Buckden 5: Land at Westfield Farm, Great North Road, Buckden
- Buckden 6: Land West of A1 from Buckden to Brampton - this site crosses over into Brampton parish but is assessed here as the majority of the site areas falls within Buckden parish.

2.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Residential: Market and/or affordable housing	230 homes 3.86 ha	Available 2024 - 2028 Build out over 4 - 5 years
Open space: Natural, green and open space		

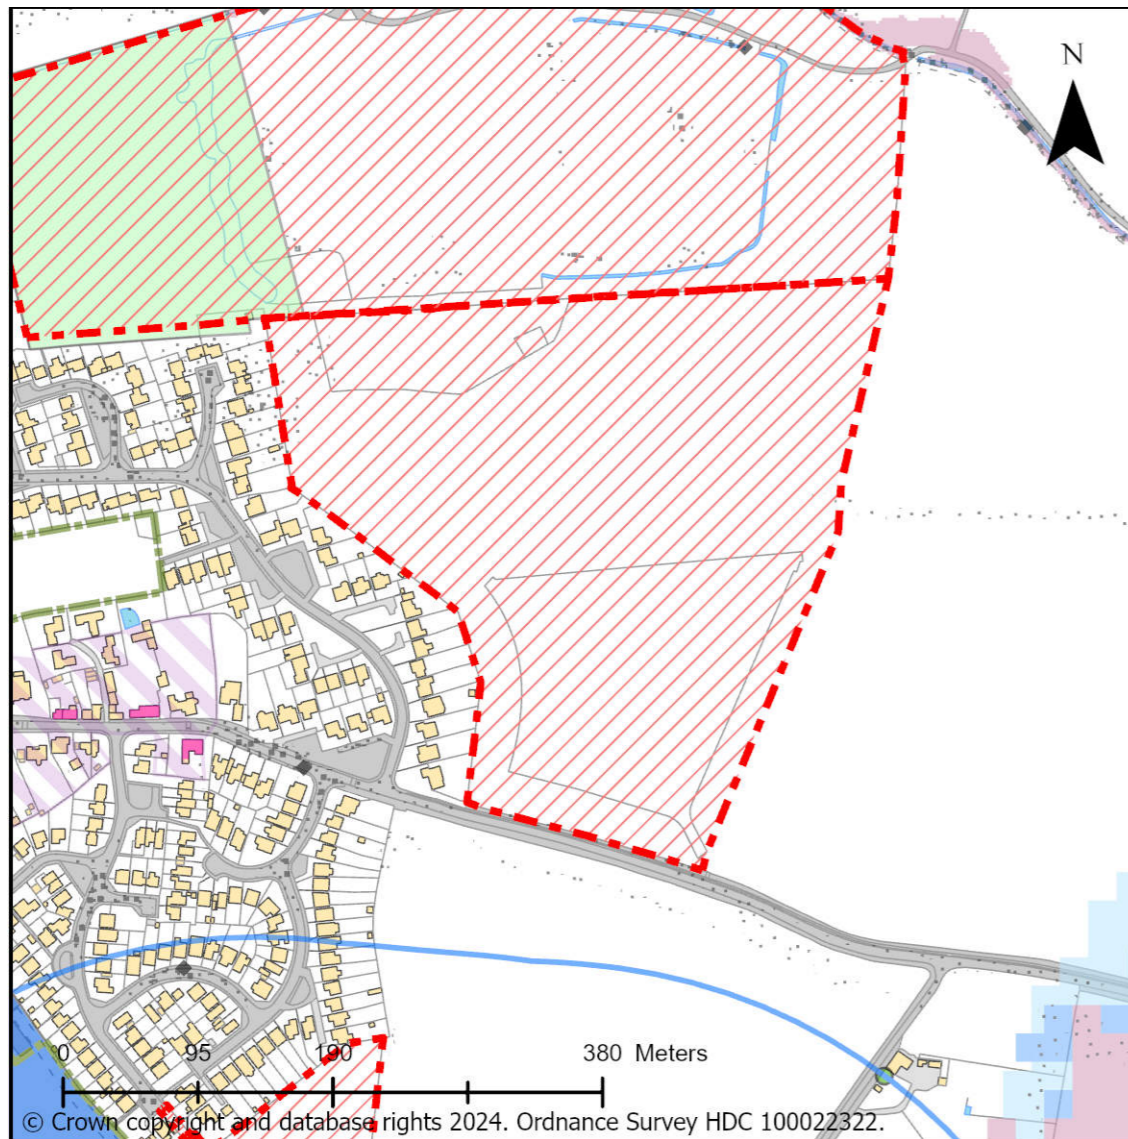

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:294
Relevant planning history	Application number: 18/01395/OUT  Proposed development: The erection of up to 195 dwellings with public open space, landscaping and sustainable drainage system (SuDS). All matters reserved.  Outcome: Withdrawn on 17th March 2023
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Responses to the Issues Engagement Paper (July 2023)

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 placing it at low flood risk. It is classified as grade 2 agricultural land which is in arable use with no buildings in it. The landform is a continuation of the gentle slope rising up from the River Great Ouse to the east into the village with the highest point being in the south west corner. The northern boundary of the site comprises hedgerows and trees which limit views through to the disused sand and gravel pit and the Settling Bed county wildlife site that adjoins the north western corner of the site. The eastern boundary is very open with a narrow, low level hedgerow providing limited separation from the adjoining field. Mill Road forms the southern boundary of the site which is lined by a substantial hedgerow with some trees providing effective screening of the site from the</p>	~
--	---

road and an attractive rural approach to Buckden. To the south of Mill Road is further level arable land also bounded by a substantial hedgerow. The western edge of the site adjoins residential properties on Greenway and Hoo Close which predominantly have hedgerows and trees separating their rear gardens from the site. Overall the site sits well within the wider gently undulating arable landscape. The nearest public rights of way are at some distance from the site. Long distance views from the Ouse Valley Way to the east are limited by hedgerows and trees around the intervening lakes; those from the public right of way along Diddington Brook are well screened by trees and hedgerows. Leaden's Lane which runs south from Mill Road sits lower in the landscape than intervening land to the west which reduces any visibility of the site from there. Development would necessitate removal of some of the southern boundary trees and hedgerow to facilitate access to the site would increase its visibility from Mill Road and the wider landscape to the south east. A strong landscaping buffer would be needed on the eastern edge to reduce the impact on the Great Ouse Valley green infrastructure priority area which follows the course of the river to the east of the site. Natural landscaping would also be essential to facilitate connections between the Settling Beds county wildlife site and the wider Great Ouse valley ecological network.

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. The site is not within the Buckden conservation area although at its nearest point is just 110m away and around 200m away along Mill Road. It does not contain any listed buildings or other known heritage assets. The north eastern parcel of the site is designated as being within the Great Ouse Valley green infrastructure priority area. The site also adjoins the Settling Beds county wildlife site which is covered by an area tree preservation order. The site can potentially be accessed from Mill Road. Investigations during the previous planning application indicated that the potential amount of traffic generation from the site may have significant impact on the local road network and capacity and safe operation of the Buckden roundabout on the A1.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is wholly covered by a minerals safeguarding area for sand and gravel; consultation would be required with Cambridgeshire County Council to determine the prospects of the site being a workable resource. It is beyond the 400m buffer around a water recycling site.

<p><b>Availability</b></p> <p>The site is owned and controlled by a single family which supports its development; a planning promotion agreement is in place with a consultancy. There are no known legal restrictions affecting the site. The promoter proposes the site will be delivered by obtaining planning permission before being sold to a third party for development. There are no current uses to be relocated. The promoter suggests the land would be available 2024-2028. Given the timescales anticipated to achieve the desired allocation availability post 2028 is more realistic.</p>	+
---	---

<p><b>Achievability</b></p> <p>Mains water, digital and telecoms infrastructure are accessible from the site boundary with gas supply and electricity not being immediately available. The site has a boundary to Mill Road and the site promoter acknowledges the achievability challenges faced by their 2018 planning application for development of the site and the need for further highway investigations. Highways mitigation works are expected to be required potentially including works to the Buckden roundabout on the A1 which may have significant viability challenges. The site comprises broadly level ground and there are no known topographical challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are very significant constraints that require mitigation. Landscaping, impact on the Great Ouse Valley green infrastructure priority area and Cambridgeshire Wildlife Site and impact on highways are key development considerations within a future masterplanning of the site. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

- Is inappropriate for a built development due to impact on nearby green infrastructure assets and highway constraints

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Assessment of Site Potential

Page 1322 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site wholly in flood zone 1 but there is risk of surface water flooding as there is a stream that runs through the northern part of the site joining a lake about 560m away from site; there are also small ponds near the north eastern edge of the site. Around 15% of the site is classified as grade 3 agricultural land and the rest as grade 2 agricultural land. However, the western quarter is predominantly covered in trees and shrubs which are designated as the Buckden Settling Beds county wildlife site, with the trees also protected by a tree preservation order. The remainder of the site is levelled former sand and gravel workings. The site is relatively flat with a slight slope up from the Ouse Valley to the east towards the existing edge of Buckden. It is contiguous with the broader landscape of the Ouse Valley. The northern boundary is predominantly trees and hedgerows with a small copse in the centre of this boundary. Beyond this new residential development is permitted. The eastern boundary comprises a hedgerow with trees dispersed throughout the easternmost 100m of the site. The southern boundary is the most open with an approximately 15m wide belt of hedgerows and shrubs. Collectively these provide reasonable screening from the adjoining countryside. The western edge of the site is fully covered with trees extending approximately 150m into the site forming the county wildlife site. However, immediately adjoining the western edge are residential properties at Bishops Way with homes on Aragon Close and Hoo Close adjoining a small portion of the south western boundary. The nearest public right of way is the Ouse Valley path over 1km to the east with views limited by intervening lakes, trees and hedgerows. Glimpsed views may be obtained from the road network to the north but these are largely obscured by trees and hedgerows. The site is relatively isolated in its countryside setting and development would have a substantial impact on the local landscape.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. The site is not within the Buckden conservation area, it contains no listed buildings and no other known heritage assets. The western part of the site is recognised as a county wildlife site and covered by a tree preservation order, and the eastern part of the site lies within the Ouse Valley green infrastructure priority area. The site has very limited access to the public highway network via a long track; however, the site promoter proposes putting an access in through the county wildlife site to connect to Bishops Way.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is wholly covered by a minerals safeguarding area for sand and gravel; consultation would be required with Cambridgeshire County Council to determine the prospects of the site being a workable resource. It is beyond the 400m buffer around a water recycling site.</p>	-
<p><b>Availability</b></p>	+

<p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The promoter suggests the land would be available 2024-2028 and would be delivered by a master developer. Given the timescales anticipated to achieve the desired allocation availability post 2028 is more realistic.</p>	
<p><b>Achievability</b></p> <p>The site promoter acknowledges that access to electricity, gas, water and digital and telecommunications infrastructure from the site boundary are currently unknown. The site is relatively level but is constrained by the risk of surface flooding from ponds and drainage ditches particularly near its northern boundary. The site is also constrained by the classification of the eastern parcel as a green infrastructure priority area and recognition of the western parcel as a county wildlife site. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site access is currently from a long track to the north adjoining with B1514. The site promoter proposes cutting an access through the county wildlife site and linking into Bishops Way. Although there is a turning head, there is a strip of land approximately 10m wide between the site boundary and the public highway which is in the ownership of the two adjoining houses; acquisition may significantly impact on achievability. There are no built structures on the site that require clearance. The site promoter seek residential development of 162 homes.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear but there are significant constraints that impede the development of the site. Impact on the Great Ouse Valley green infrastructure priority area, County Wildlife Site and the the wider ecological network of the Ouse Valley would be detrimental. Also, access to the site from Bishops Way may be unachievable. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as not developable.</p>	~

Progression of Site through to Sustainability Appraisal

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No, due to significant constraints that impede the development of the site, impact on the Great Ouse Valley green infrastructure priority area, County Wildlife Site and the the wider ecological network of the Ouse Valley. Access to the site from Bishops Way may also be unachievable.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 but there some pockets of surface water flood risk within the site mostly concentrated within the portion closest to the A1. The site is classified as being predominately grade 2 agricultural land with the eastern most third of the site being grade 3. The site is slightly higher along the western edge and slopes downwards towards the A1. The rising land to the western edge forms part of a larger landscape feature which continues to rise to the north west across Perry Road. The site is most constrained visually on its eastern side where a mixture of trees, hedgerows and fencing largely obscures the site from view from the footpath which runs along the A1. The northern, southern and western edges of the site are more open with low and medium height hedgerows forming boundary edges. The site contains two residential homes and</p>	~
---	---

<p>a variety of agricultural structures and outbuildings. To the north of most of the site is a paddock of which is small portion is included within the site. Beyond this is ribbon development along Perry Road and fronting onto the A1 along with an allotment garden. The A1 forms a strong boundary feature to the east separating the site from the main part of Buckden village. To the west and south is open countryside which gradually falls to Diddington Brook. The site's proximity to the A1 gives rise to constraints in terms of noise, air and visual forms of pollution for future users.</p> <p>There is no known contamination or pollution on site however this may require further investigations considering the current use of the site. No gas or oil pipelines run through the site, however, a portion of the western part of the site falls within an oil pipeline buffer. Telecommunications cables also run over the site. There are no heritage or nature conservation designations on site. There is currently access from the A1 which will need to be further investigated to ensure that safe access can be secured at this point particularly considering how close the access is to the Buckden roundabout. Consultation with Cambridgeshire County Council and National Highways will be required on this.</p> <p>The site is partially greenfield and partially previously developed so will contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual/ company who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire an allocation status and then sell the site to a third party for obtaining planning permission and development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from within the site apart from the public highway which is accessible from the site boundary. There are buildings on site so clearance work would be required or integration of existing residential property if the aspiration is to retain either or both of them. Telecommunications cables run over the site. There is currently access from the A1 which will need to be further investigated to ensure that safe access can be secured at this point particularly considering how close the access is to the Buckden roundabout. The site promoter has stated there is also a potential access to be secured from Perry Road as the site ownership includes land that links to Perry Road although this land has not been submitted as part of the Call for Sites so is not taken into consideration in this assessment.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are existing structures to clear, the site is located in a sensitive location being so close to the A1 and detached from the main built form of Buckden being on the opposite side of the A1 from that. The site promoter seeks an allocation status and then intends to sell the site to a third party for obtaining planning permission and development. As it appears that a housebuilder is not involved with the site and a planning application has not yet been made, the site is therefore categorised as developable.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is predominantly grade 2 agricultural land</li> <li>• Is physically detached from the main built form of Buckden and relates more closely to the countryside</li> <li>• Has reduced accessibility to village services, shops and facilities</li> <li>• Has very low potential for integration of built development into the existing community</li> <li>• Is likely to be impacted from higher levels of air, noise and light pollution arising from its proximity to the A1</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development</li> <li>• Will have a detrimental impact the form and character of the area</li> <li>• Will not support sustainable place-making</li> </ul>

Nature conservation designation	None within the site	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

### Assessment of Site Potential

#### Context, constraints and potential suitability

This very extensive area of land lies for the most part adjacent to the A1 in open countryside and extends from Brampton Wood south almost to Grafham Water. The land is almost entirely used as arable farmland, as such the vast majority of the land is greenfield. A small number of farmhouses and cottages within the site form a small amount of previously developed land.

Most of the land is classed as flood zone 1. However, a very small area in the south-west corner of the site, adjacent to Shooter's Hollow Cottage, is classed as flood zone 2. Within the north-east corner and along the eastern boundary to Great North Road, small areas of the land are classed as flood zone 3a and with a very limited area classed as flood zone 3b in the north-east corner of the site.. Surface water flood risk is present across the site coinciding with the network of drains found across the site. The vast majority of the land is classed as grade 2 agricultural land. However, a small part of the land which abuts Buckden is classed as grade 3 and a limited area of the land abutting Brampton Wood is classed as non agricultural.

The site is very large and its topography rises towards the centre of the site. The lowest part of the site is at its north eastern corner, the highest along its western side which is some 30m higher. The landscape is generally open with limited substantial vegetation apart from that found along field boundaries. From its northernmost edge to its southernmost edge, the site measures almost 4km and from east to west some 2km. It is wholly within the Southern Wolds Landscape Character Area which is characterised by ridges and valleys with very gently undulating ground divided by the steep ridge that contains Grafham Water. Considering these factors and the rising land levels of the site, development would be visible from a significant distance from a number of different directions and very significantly alter the landscape character of the area and of surrounding settlements such as Brampton, Buckden and Grafham. There are several public rights of way within the site, one that continues from Taylors Lane, another from Hardwick Lane and one from Buckden roundabout.

There is no known contamination or pollution on site however this may require further investigations across the whole of the site area. An oil pipeline and its buffer zone runs through the eastern edge of the site. Large parts of the site are adjacent to the A1 so development may be subject to air, noise and light pollution. There are no heritage or nature conservation designations on site but there are several designations nearby to the site. Brampton Wood SSSI and ancient woodland is adjacent to the north-western boundary of the site and Grafham Water SSSI is around 290m from the southwestern boundary. Development of the site could have significant detrimental impacts on both of these. The site is within 5km of the Portholme Meadow Special Area of Conservation and SSSI located to the east of the site. There are also a number of county wildlife sites within close proximity of the site. Buckden conservation area is situated approximately 200 metres east of the site along Taylors Lane and 17 Taylors Lane, approximately 50 metres east of the site, is

<p>grade II listed. There is currently access from the A1 which will need to be further scoped to ensure that safe access can be secured at this point particularly considering how close the access is to Buckden roundabout. Assessment will also need to be made on the impact on traffic flows and what sort of infrastructure requirements would be required onto the A1 and the local road network. Engagement with Cambridgeshire County Council and National Highways will be required on this.</p> <p>The site is predominantly greenfield with some previously developed elements where residential properties are located. As such the development of the site would not contribute towards the reuse of previously developed land or regeneration. The majority of the site is located outside of an extensive mineral safeguarding area, but the north eastern edge of the site is located in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single organisation who support its development. There are no known legal restrictions affecting the site. The site promoter states that it is anticipated that the landowner will seek to secure an allocation and planning permission before jointly working with a developer to deliver the scheme. The site promoter states that the Church Commissioners are developing a masterplan for the site which will be underpinned by a suite of technical information but none have been provided to date. The promoter suggests the land is available now.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has stated that access to all main services are unknown apart from the public highway which is accessible from the site boundary. The site's topography rises to the west and there is potential for significant landscape impact arising from development. There are multiple nature conservation designations of national significance in very close proximity to the site which form substantial constraints as well as Portholme Meadow to the east which could be impacted by development. The proposed scale of the site would also give rise to significant transport impacts arising from additional traffic and vehicle movements. The site can be accessed from the A1 but the feasibility of this supporting the amount of development will need to be assessed particularly considering the existing capacity constraints arising from the Buckden roundabout on the A1. Considering the constraints to developing the site of this scale, the proposed development is not considered to be achievable.</p>	-
<p><b>Deliverability / developability</b></p>	-

The site has significant issues and development constraints to overcome and masterplanning would be required including landscape impact, access and transport and impact to nature conservation sites. The site promoter states that it is anticipated that the landowner will seek to secure an allocation and planning permission before jointly working with a developer to deliver the scheme. A masterplan is being prepared which will be supported by technical evidence, it is unclear what studies will be undertaken at this stage and the timelines for producing these. Due to the complexity of potentially delivering a scheme at this scale and considering the very early stages of its masterplanning, the site is categorised as not being deliverable or developable.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Although the site is not considered to be suitable, achievable or developable a sustainability appraisal is completed to provide more detailed analysis and evidence to reinforce this assessment due to the potential for the site to influence the overall development strategy for Huntingdonshire should it be brought forward.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site consists of 527ha of land and is greenfield land with some previously developed elements
- Most of the site is classified as flood zone 1 with some minimal elements being within higher flood risk zones
- The site is generally not accessible to natural greenspace but is near to Grafham Water and is of a scale that could provide substantial amounts of open space as part of a balanced and mixed community
- The site is located adjacent to the A1(M) nearby to several settlements but is not particularly accessible via sustainable modes of transport to these to access services and facilities, employment opportunities or shops and education. The proposed development would however be a free standing community which would provide all of these elements
- Is nearby to designated nature conservation designations including being within 5km of Portholme Meadow, as a result it is likely to impact these sites but could provide opportunities to enhance and link these at a strategic scale
- Development would require a new junction onto the A1(M) as well as onto other roads which is likely to be very costly and may not be feasible in highways terms

- The site is not served by public transport but could potentially be linked into the public transport network
  - A mix of housing sizes, types and tenures would be provided as part of a mixed and balanced community meeting various market and affordable needs
  - Development at this scale would result in a very significant impact on the landscape which while of a scale to provide landscape buffers and zones to mitigate impact, would fundamentally alter the character of the area
- In combination the outcomes of the LAA and SA indicate that the site:
- The site is inappropriate for development due to the very significant landscape impact of the development and the scale of development fundamentally impacting the character of the landscape and setting of various settlements.
  - Access and a new junction onto the A1(M) will require considerable engagement with Cambridgeshire County Council as well as detailed viability work which has not been undertaken to date.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:143
Relevant planning history	<ul style="list-style-type: none"> <li>23/00258/FUL for the installation of a solar photovoltaic (PV) park generating up to 35 MW of electricity comprising of ground-mounted photovoltaic solar arrays, together with inverters/transformer stations, Distribution Network Operator (DNO) Substation, customer substation/switchgear and meter kiosk, internal buried cabling and private wire cable to Anglian Water facility, internal access tracks, security fencing and gates and CCTV cameras, upgraded existing site access, other ancillary infrastructure, landscaping and biodiversity enhancements. Pending consideration as at April 2024.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Site location and plan detailing surrounding land in the same ownership (drawing number:</li> </ul>

	C_D01_21 1003 Revision 5P) (November 2021).
--	---

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1, there are some large areas of surface water flood risk located along the site's northern boundary which in places flows into the centre of the site. This flood risk is attributed to Diddington Brook. The site is mostly classified as grade 3 agricultural land, however there are small portions of the site's northern and western edges that are classified as grade 2. The site consists of several fields clearly marked by field lines and strong boundary edges arising from dense vegetation. The southern part of the site is some 20m higher than the northern edge. It adjoins Jubilee Copse and Coronation</p>	~
---	---

<p>Wood on its north western corner. The A1 forms a clear eastern edge to the site. To the north, southwest and south is predominantly open countryside with two large residential properties the south close to each corner of the southern boundary.</p> <p>There is no known contamination or pollution on site. No gas pipelines run through the site, however an oil pipeline runs through the site and about half of the site falls within the oil pipeline buffer zone. Telecommunications cables run along the site's southern and northern boundaries. There are no heritage or nature conservation designations on site. However, the site is in close proximity to country wildlife sites and ancient woodland. The site can be accessed via a trackway along Vicarage Lane which connects directly onto the A1.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. The vast majority of the site is not situated in an extensive mineral safeguarding area, but the north eastern corner of the site falls within the sand and gravel mineral safeguarding area; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual/ company who supports its development. The site promoter has identified that the site has been optioned. There are no known legal restrictions affecting the site. The site promoter states that it their intention to acquire planning permission and then sell the site to a third party for development. They identify that the land is leased by the owner for 40 years. The promoter suggests the land would be available from 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that the public highway and digital and telecommunications infrastructure are accessible from the site boundary with gas supply, mains water supply and electricity supply being not immediately accessible. There are no buildings on site so no clearance work would be required. Telecommunications cables run along the site's southern and northern boundaries. The site can be accessed via a trackway along Vicarage Lan which connects directly onto the A1.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the site's location and topography means that any future development will need to be sensitive to its landscape setting and be designed to reduce and mitigate any landscape impact. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. It appears the site has already been optioned. The site location and boundary plan shows that the much of the land around the site is within the ownership of the site</p>	~

promoter's client. It shows that there will be two parcels of land used for solar panels and a private wire cable route of approximately 3m wide running to the west of the site. There is also proposed to be a UKPN 33kVA cable route to connect the panels to the grid. Consultation will be required with various utilities providers. A planning application is pending consideration for a solar farm, as this has not yet been determined the site is categorised as developable.

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land with most of the site classified as grade 3 agricultural land
- Is in very close proximity to designated nature sites and ancient woodland
- Is adjacent to the Great Ouse Valley and Grafham Water Green Infrastructure Priority Areas
- Surface water flood risk along boundary adjoining Diddington Brook
- Solar farm will assist in the generation of renewable energy
- There may be some impact on designated heritage assets but this is likely to be minimal considering that development will be ground mounted solar panels

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for a solar farm development incorporating appropriate levels of landscaping to mitigate landscape impact and harm to designated nature conservation sites.
- Solar farm will assist in the generation of renewable energy

Page 1339 of 3488

**HDC's Delivery Calculations**

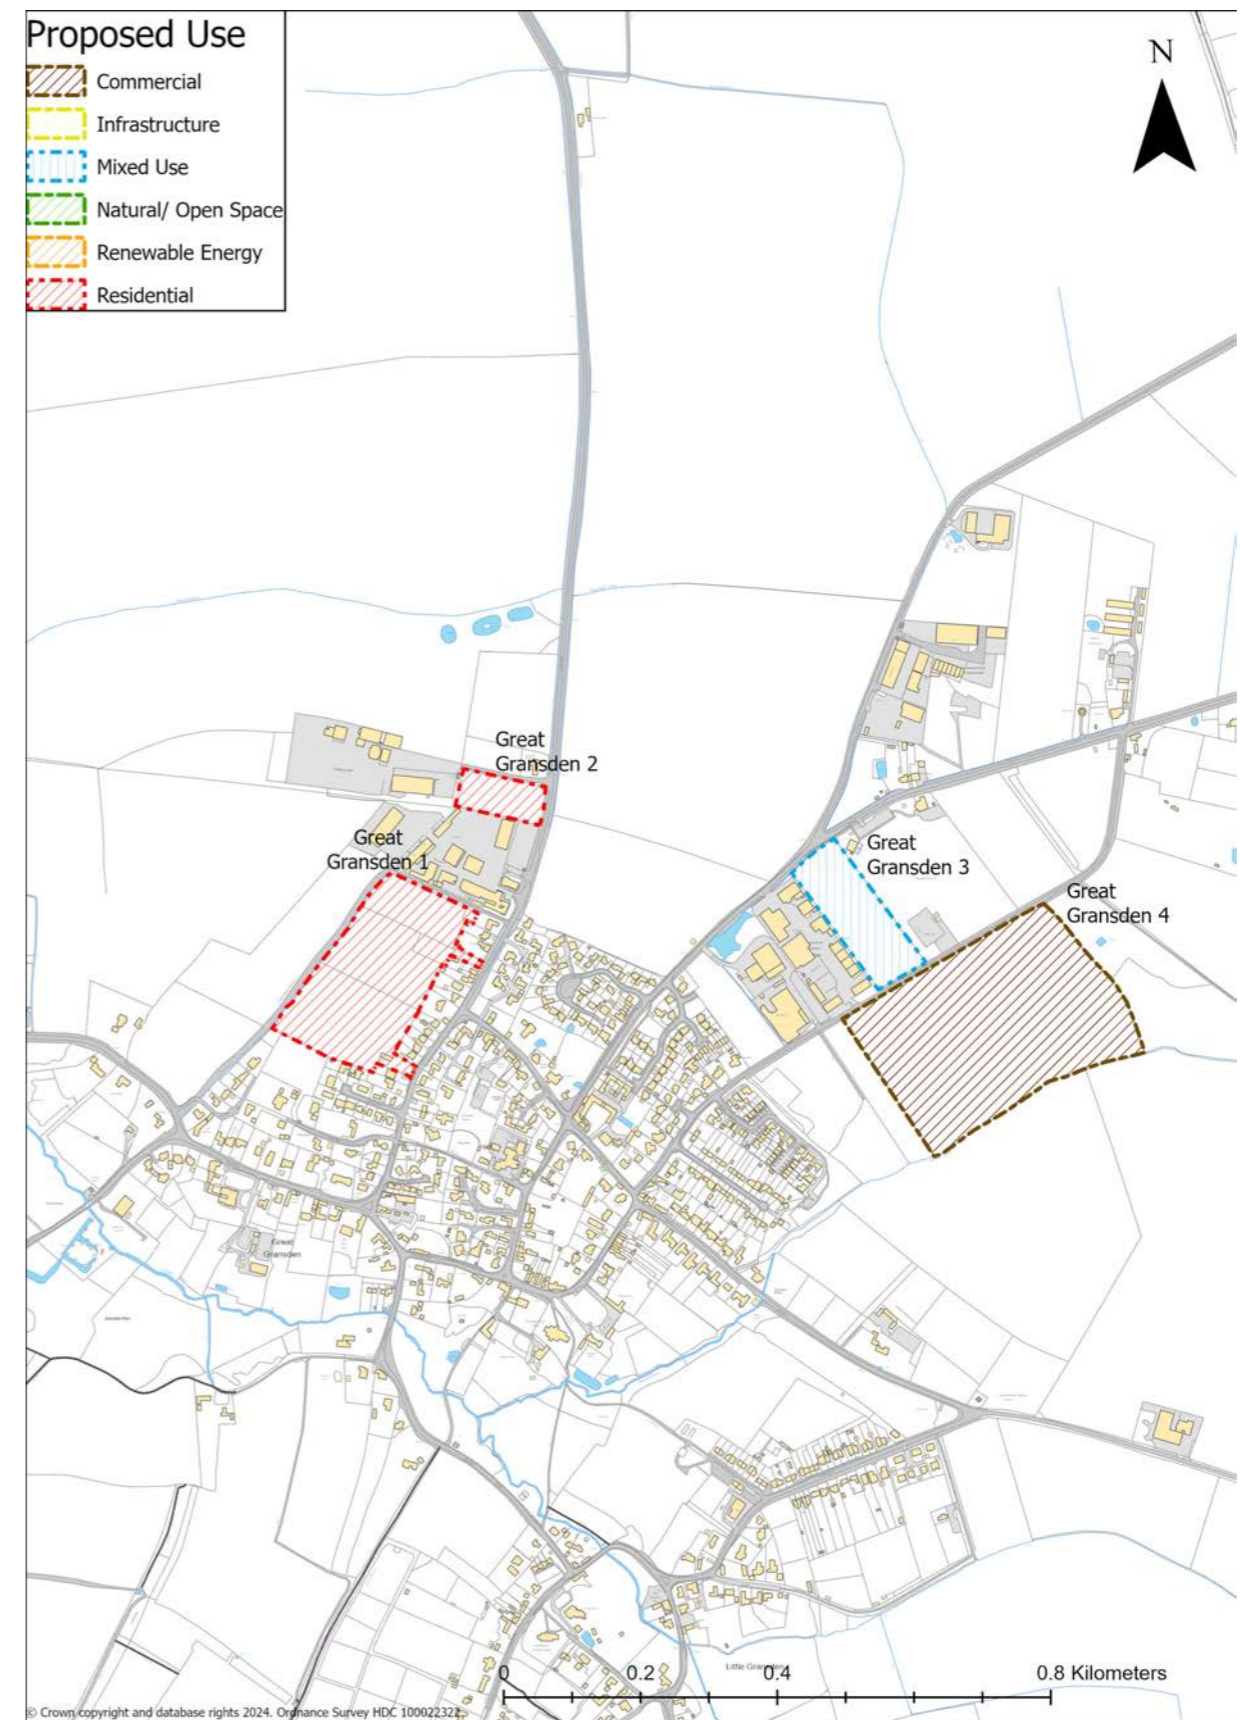

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 47.17 ha.  80% net developable area to allow for appropriate landscaping.  47.17 ha x standard proportion of 80% = <b>37.7 ha</b>	Infrastructure - renewable energy - solar  <b>37.7ha</b> of ground mounted solar panels	Available 2024 - 2028  Build out over 12 months in line with site promoter's expectations

## 4 Great Gransden

4.1 A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Great Gransden 1: Land West of West Street, Great Gransden
- Great Gransden 2: Land West of Eltisleys Road, Great Gransden
- Great Gransden 3: Land South of Caxton Road, Great Gransden
- Great Gransden 4: Land at Sand Road, Great Gransden

4.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	65 homes	Available 2024 - 2028 Build out over 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:257
Relevant planning history	<ul style="list-style-type: none"> <li>18/02720/OUT - Outline planning permission for the erection of up to 33 dwellings with all matters reserved apart from access. This was withdrawn in February 2020.</li> <li>22/01631/PIP - Permission in principle for residential development containing up to eight dwellings (rural exceptions housing) on the south eastern corner of the site. This was refused in April 2023.</li> <li>The site was included in the HELAA (2017) (124 - North West of West Street, Great Gransden), the site was considered potentially suitable for low density residential development across a net developable area of 60% of the site but was not taken forward as an allocation.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Design Vision Document (June 2023)</li> <li>Supporting text to CfS257</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located wholly within flood zone 1, there is some surface water flood risk along its western edge. The site is classified as grade 2 agricultural land with no existing structures on site apart from an agricultural building which is situated along the eastern boundary. The site is located on the western edge of Great Gransden. The site slopes downwards in a westerly direction, to its low point at the south western boundary. To the north of the site is an existing industrial area which has permission to be relocated and redeveloped for self and custom build homes. To the east and south is residential development and to the west of the site is open countryside. The site hosts substantial trees and hedgerows along its boundaries and within the site which is virtually sub-divided into three parts by</p>	~
---	---

<p>existing mature trees and hedgerows. These contribute to the setting of the adjacent conservation area and act as a constraint to development. A public right of way runs along the site's western and northern boundaries.</p> <p>The site promoter has stated that in support of a previous planning application on site a Phase 1 Environmental Site Assessment (dated October 2018) was undertaken, it identified that the potential sources of contamination at the site presented a low risk to residential development. No gas or oil pipelines run through the site but there are overhead 11kV (HV) cables within the site. The central portion of the site is adjacent to the conservation area. There is potential for archaeology on site particularly arising from medieval agricultural practices which will require investigation. There are no nature conservation designations on site but the site promoter in their Call for Sites submission has highlighted that previous studies on site have shown the presence of bats on site and presence of other wildlife of ecological value. There is a footpath connection at its south western corner which links to a pedestrian path. There are two points of access, one to the south and to the north of the site, both adjoining to West Street and both fairly narrow. A Transport Statement dated December 2018) identified that suitable highway access could be provided, with junction arrangement, footways and visibility splays that were in accordance with highway design standards. This will need to be reviewed with the County Council to ensure this is still the case when considering the proposed capacity of the site.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. In terms of land control arrangements, a development company is involved with the site. The site promoter states that it their intention to deliver the development directly via a housebuilder and that there are no issues to resolve before the site can be made available for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. The site is broadly level and there are no buildings on site so no clearance work would be required, there are however quite considerable amounts of mature trees and hedgerows. The access to the site is from West Street which is fairly narrow so access will need careful consideration.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the impact on the immediate setting of the conservation area will need careful consideration in design terms and landscape mitigation as well as the impact on any mature trees and hedgerows. The site promoter does not seek an allocation before acquiring planning permission. As it appears that the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield grade 2 agricultural land
- In walking distance to village services and facilities and employment opportunities
- Accessible to natural green space
- Located on the western edge of the village and could be integrated into the existing place and community
- Limited public transport access
- Potential for some impact on heritage assets and archaeology

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that could be integrated into the existing place and community
- Should provide landscaping to minimise the visual impact of development

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 4.4 ha  60% net developable area allowed due to need for landscaping, SuDs to address surface water flood risk and allow for sensitive design to minimise harm any impact on heritage assets.	Residential - market and/or affordable homes	Available 2024 - 2028

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
4.4 ha x standard proportion of 60% = <b>2.64 ha</b>	Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 2.64 ha x 25 dph = <b>66 homes</b>	Build out over 2 years

**Updates after the Initial Assessment**

--

**Great Gransden 2: Land West of Eltisley Road, Great Gransden**

<b>Site reference</b>	Great Gransden 2
<b>Site name</b>	Land West of Eltisley Road, Great Gransden

Site address	Parish(es)	Site area (ha)
Land West of Eltisley Road, Great Gransden	Great Gransden	0.7

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	circa 15 homes	Available 2023 Build out over 1 to 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:249
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 and the only recorded risk from surface water flooding is a very small amount in the site's south western corner. The site is classified as grade 2 agricultural land with no existing structures on site. The site is broadly level but slopes downwards slightly towards its western end. The site is set within landscape that is gently rising in a northern direction from Great Gransden. The site is completely enclosed by vegetation on all sides obscuring much of the site from public view. To the south of the site is Kingspan Timber Solution's industrial site (this has permission to redevelop the site for self and custom build residential properties). To the west is another employment site and to the north of the site is a residential property. It is also opposite a field used for the Gransden Show.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets within the site and there are no nature conservation designations on site. Vehicular access can be achieved from Eltisle Road but there is no footpath to the site. If development were to take place, some of the established vegetation along the site's boundaries would possibly have to be removed to establish an access point into the site.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in a mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission following the site being allocated. The development will be delivered by an SME or potentially via self-builders. The promoter suggests the land would be available from 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. The site is broadly level and there are no buildings on site so no clearance work would be required, however some vegetation would probably have to be removed to provide an access into the site from Eltisle Road.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but some vegetation would have to be removed. There will need to be careful consideration on its landscape impact and how it can integrate with surrounding uses. Even though the site to the south has planning permission for residential development, it is unclear when this may be delivered which may impact the</p>	~

viability of proposals on this site. The site promoter seeks an allocation before acquiring planning permission and then seeks to deliver the development via potentially SME housebuilders or custom and self builders. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 2 agricultural land
- Remote from public transport access and natural green space
- In close proximity to local services and employment but there is no footpath provision connecting the site
- Development of the whole site would be out of character until the adjoining site is redeveloped for housing
- Very low potential to integrate built development into the existing community so it would not support sustainable place-making

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for built development once the adjoining site is developed for housing

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
<p>Gross site area of 0.70 ha</p> <p>90% net developable area allowed for incorporation of landscaping.</p> <p>0.7 ha x 90% = <b>0.63 ha</b></p>	<p>Residential - market and/or affordable homes and custom and self build housing</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 0.63 ha x 25 dph = <b>16 homes</b></p>	<p>Post delivery of adjoining site</p>

**Updates after the Initial Assessment**

--

## 4 Great Gransden

### Great Gransden 3: Land South of Caxton Road, Great Gransden

<b>Site reference</b>	Great Gransden 3
<b>Site name</b>	Land South of Caxton Road, Great Gransden

Site address	Parish(es)	Site area (ha)
Land South of Caxton Road, Great Gransden	Great Gransden	1.8

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Or Commercial: Employment	41 homes or 6,500 sqm of mixed commercial floorspace	Available 2024 - 2028  Build out over 2 years

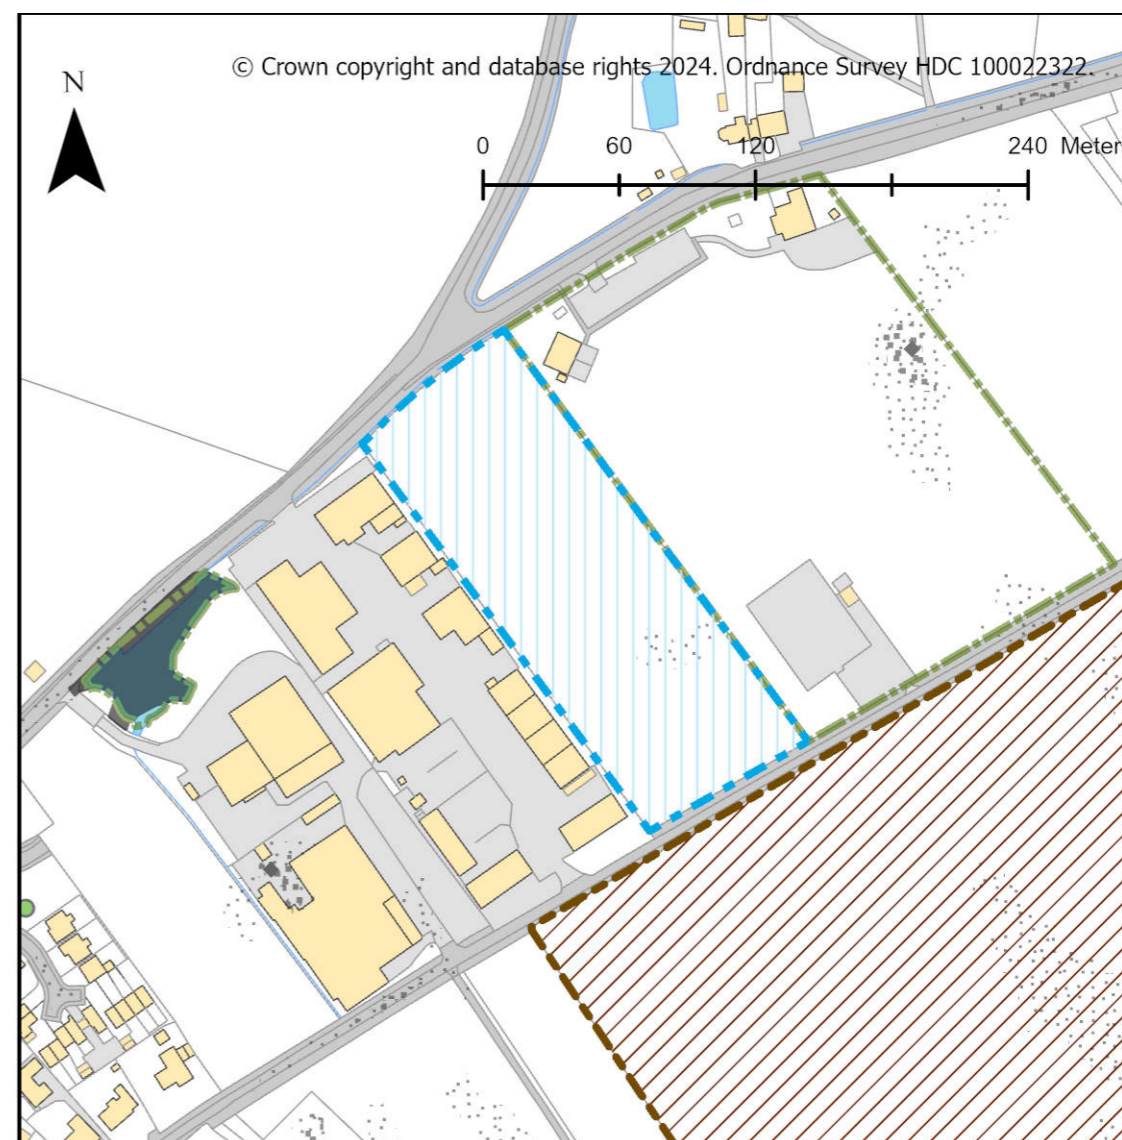

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:202
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 and there is only a small patch of recorded surface water flood risk within the southern part of the site. The site is classified as grade 2 agricultural land with no existing structures on site. The site is broadly level. The site's boundaries are clearly marked by lines of hedgerows and trees. Along Caxton Road and Sand Road, the site is enclosed by trees which largely obscure the site from public view. The site is adjoins the Sand Road Industrial Estate on its western edge and a sports field and sports club on its eastern edge. The football club is designated as a local green space within the Great Gransden Neighbourhood Plan. To the south is open countryside but the field opposite this site has also been submitted in the Call for Sites for employment development. To the north is open agricultural land. The site promoter has submitted the site for either residential development or employment development. They state that it is the preference of the landowners to develop the site for housing but could provide employment as a fall back position. The integration of housing next to the industrial estate and football club will need very careful consideration and masterplanning.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets within the site and there are no nature conservation designations on site. Access can be achieved from Caxton Road and/or Sand Road but trees and hedging will have to be removed to provide this. It may be more likely that access would have to be from Sand Road due to the position of a small junction along Caxton Road where Hardwicke Road joins. The views of Cambridgeshire County Council will be required to assess this.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to obtain an allocation status and then sell the site to a third party to secure planning permission and develop the site. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that the public highway is accessible from the site boundary, gas supply is not immediately accessible and that access to mains water supply, electricity supply and digital and telecommunications infrastructure are unknown. The site promoter has stated that these are unknown at this time because a utilities search has not yet been</p>	~

Page 1349 of 3488

<p>completed; but they consider it is likely the site has access to utilities as the adjoining Industrial Estate and sports club are understood to benefit from service provision. The site is broadly level and there are no buildings on site so no clearance work would be required. The access to the site could be achieved from Caxton Road and/or Sand Road.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear. The site promoter seeks an allocation status before selling the site to a third party for obtaining planning permission and development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land classified as grade 2 agricultural land</li> <li>• Adjoins existing employment development</li> <li>• Limited access to public transport</li> <li>• Residential development in proximity to the industrial estate would be out of character with the pattern of development within Great Gransden</li> <li>• The compatibility of uses with large scale residential adjacent to Sand Road industrial estate may present multiple amenity issues in relation to transport movements, noise and vibration.</li> <li>• It is considered that the proposed residential use may present difficulties with integration with the existing uses.</li> <li>• It adjoins an existing industrial estate and could provide an opportunity to expand it providing greater diversity in employment options within the settlement.</li> <li>• It adjoins an existing industrial estate and could provide an opportunity to expand it providing greater diversity in employment options within the settlement</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not appropriate for residential development, considering the proximity to the industrial estate and that such large cluster of residential properties would be out of character with the pattern of development within Great Gransden</li> <li>• May be appropriate for employment development as an extension to the existing Sand Road Industrial Estate</li> </ul>
---

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of <b>1.8 ha</b></p> <p>For solely employment developments, the gross site area is used as there is usually minimal differences between net and gross site areas due to the need for large amounts of hardstanding for parking, manoeuvring and deliveries and more incidental landscaping.</p>	<p>Commercial - employment</p> <p>The industrial areas (0.40 plot ratio) has been used to calculate a potential capacity for the site as this is complimentary to the adjoining land uses:</p> <p>0.40 plot ratio x 1.8 ha = 0.72 ha of land for employment uses equating to <b>7,200 sqm.</b></p>	<p>Available 2024 - 2028</p> <p>Build out over 2 years</p>

Updates after the Initial Assessment

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment	Phased development that could provide between 5,000 and 10,000 sqm	Available 2024 - 2028 Build out over 3 - 4 years

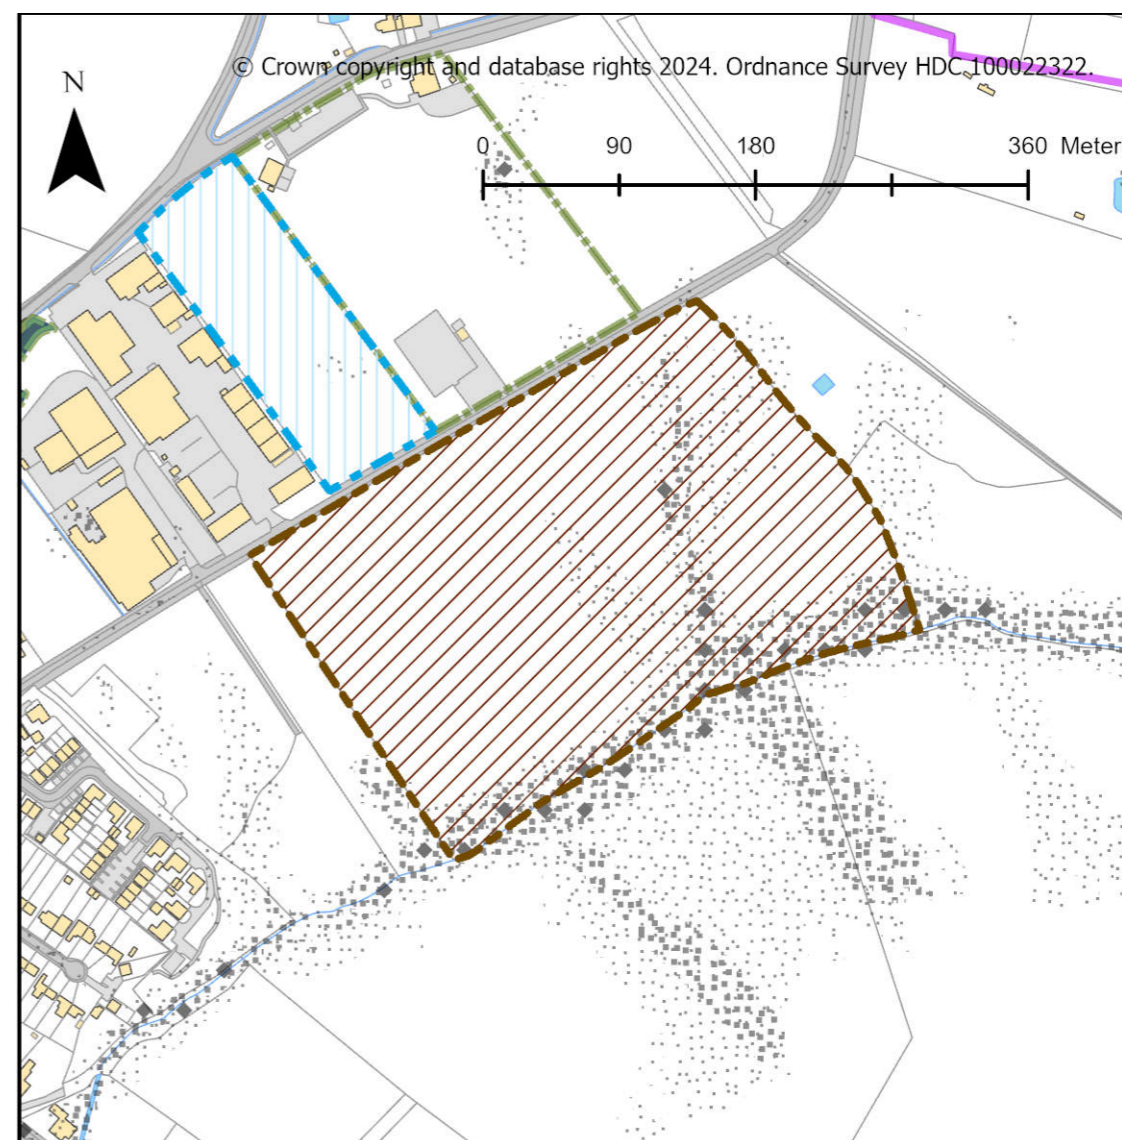

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:297
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 but there is quite considerable risk from surface water flooding along the site's southern boundary and on its eastern side arising from its proximity to Mandeau Brook. The site is classified as grade 2 agricultural land with no existing structures on site. The site slopes downwards somewhat in a south eastern direction and as such development would be prominent in long distance views in the landscape. Along Sand Road there is a line of vegetation obscuring much of the site from public view although it is more visible during winter. The site's boundaries are clearly delineated with a hedgerow on the western side, Mandeau Brook on the southern boundary and a copse on the eastern edge. The frontage to Sand Road is entirely open with just a narrow strip of grassland separating the arable field from the road. To the north are Sand Road Industrial Estate and a sports field and sports club. To the west is a field which separates the site from the edge of Great Gransden. To the south and south east is open countryside in agricultural use with a small copse adjoining the north eastern corner of the site.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Telegraph poles run along the site's western edge. There are no heritage assets within the site and there are no nature conservation designations on site. Access could be achieved from Sand Road.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. The site slopes downwards somewhat in a south eastern direction meaning that landscape impact would be greater. Surface water flood risk is a constraint at the southern and eastern edge of the site but these parts could be used for landscaping to mitigate against any impact and also keeping development outside of areas at risk of known flooding. There are no buildings on site so no clearance work would be required.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the impact on the landscape will need careful consideration in design and landscape mitigation. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As a result, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 2 agricultural land
- Very limited public transport access
- Has considerable surface water flood risk
- Is detached from the main built form of the village although partially located adjacent to existing employment development
- Is prominent in the local landscape and likely to give rise to significant landscape impact

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to the potential serious adverse impacts on the landscape

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

### 5 Great Paxton

5.1 A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Great Paxton 1: West of High Street, Great Paxton
- Great Paxton 2: Land to the West of High Street, Great Paxton
- Great Paxton 3: Land East of Dovecote Lane, Great Paxton
- Great Paxton 4: Land North of Harley Industrial Park, Paxton Hill, Great Paxton

5.2 Please note that 'St Neots 1: Land North of Priory Park, St Neots' also partially falls within Great Paxton and Little Paxton parishes, but it has been included under St Neots as most of the site lies within that parish area.

5.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

© Crown copyright and database rights 2024. Ordnance Survey HDC 100022322.

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with no recorded risk of surface water flooding. The site is grade 3 agricultural land and contains overgrown vegetation and trees. The site is broadly level and is largely obscured from view as it is located behind residential development along the High Street. The site adjoins residential development to the north and east. Along its southern boundary it adjoins an access route to the football club and playing fields. To the west is part of the recreation ground with further scrubland north of this.</p>	+
--	---

<p>There is no known contamination or pollution on site. No gas or oil pipes lines run through the site, there are however some electricity poles that run through and around the site. The land is near to the East Coast Mainline Railway so noise could potentially be an issue. There are no nature conservation designations on site, however, the site is located within the Great Ouse Valley strategic green infrastructure area. There are no heritage designations within the site. The site's proposed access is opposite two listed buildings, but as the proposed development site is backland and largely obscured from public view the impact on heritage is reduced. The site promoter has submitted alongside this site a Heritage Statement dated May 2019 which was undertaken to support the adjoining planning application (19/00959/FUL) which redeveloped the adjoining site with a direct frontage onto the High Street for five homes.</p> <p>The adjoining planning permission secured an access route from the High Street to garage units at the back of the proposed dwellings, from the site plan submitted as part of the Call for Sites submission it appears that the site promoter seeks to extend this access route past the garages and into this site. In their submission, the site promoter states that transport advice from Cambridgeshire County Council confirmed the access can be utilised as a private access. Based on the indicative site plan submitted, the building line would not extend further than those properties to the north, additionally, the garages permitted on the adjoining land have already started to establish in depth development along the High Street in the immediate vicinity.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership all of whom support its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell each plot to a self/custom builder. The site promoter has identified that this site could assist in meeting the self and custom build interest for the St Neots and surrounding areas. The promoter suggests the land would be available from 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible within the site apart from the public highway which is accessible from the site boundary. There are no buildings on site so no clearance work would be required but there will need to be extensive site clearance of existing trees and vegetation. Cables running between telecommunication masts do run over the site and would need to be incorporated. The access to the site could be achieved from the High Street.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its immediate environment being a backland site. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to self/custom builders. As the site is within the built up area of Great Paxton this site may offer an opportunity for small scale organic growth within the village providing that all criteria are met and mitigations are put in place. The adjoining development permitted under 19/00959/FUL is now complete and it appears an access could be provided through this. As no planning application has yet been submitted and it is the intention to sell the site to self and custom builders, the site is therefore categorised as developable.</p>	
--	--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Is accessible to natural green space</li> <li>• Good accessibility to local services and employment opportunities</li> <li>• Not at risk from flooding</li> <li>• In very close proximity to the East Coast Mainline Railway which could increase levels of noise pollution</li> <li>• Development could be integrated into the existing place and community</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for built development that could be integrated within the existing place and community</li> <li>• Support residential development on sites of less than 1ha</li> <li>• Should include adequate noise mitigation and landscaping to mitigate the impact of the East Coast Mainline Railway</li> </ul>	
--	--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.5 ha  80% net developable area allowed due to need for landscaping and noise mitigation.  0.5 ha x 80% = <b>0.4 ha</b>	Residential - self and custom build plots or market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 0.4 ha x 25 dph = <b>10 homes</b>	Available from 2023  Build out over 1 to 2 years

**Updates after the Initial Assessment**

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly located within flood zone 1, there is recorded risk from surface water flooding along the site's western and southern edges. The site is classified as grade 3 agricultural land and is in use as grassland. There are no existing structures on site. The site is broadly level with a pond present within the site. The site adjoins residential development along its eastern and southern boundaries, to the north is a field separating the site from the football club and playing fields. Immediately to the west is the East Coast mainline railway so noise would be a constraint. The site is well contained on several sites with established tree and hedgerow lines. It is most open where it adjoins the High Street from which there are clear views into the site.</p> <p>There is no known contamination or pollution on site. No gas or oil pipes lines run through the site, there are however some electricity poles running along the site's frontage with the High Street. There are no nature conservation designations on site, however, the site is located within the Great Ouse Valley green infrastructure area. There are no heritage designations within the site but there is a listed building at 26 High Street that adjoins the eastern edge of the site. Access can be achieved from the High Street.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a Charitable Trust who support its development. There are no known legal restrictions affecting the site. The site promoter has stated that at present it is unknown how the site will be delivered. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. There are no buildings on site so no clearance work would be required. Cables running between telecommunication masts do run along the site's frontage. The access to the site is from the High Street where there is also an established footpath.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its impact on the amenity of nearby residential properties being in part a backland development opportunity and provide adequate mitigation in terms of noise from the East Coast mainline railway on future users. It is unclear at this time how the site will be delivered and whether an allocation status is sought before obtaining planning permission. As such, the site is categorised as developable.</p>	~

Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly located within flood zone 1 but there is some surface water flood risk along the northern edge of the site which follows the route of a watercourse. The land is classified as grade 3 agricultural land. The site is located at the end of Dovecote Lane and is a former farm yard. The land comprises rough grassland and appears to be in use as a field access. It is broadly level and is enclosed by trees and other vegetation which limit its wider landscape impact. To the north and west of the site are residential properties with open countryside in arable use to the south and a small wooded copse to the east with arable land beyond.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no nature conservation or heritage designations within the site but the site is adjacent to the listed Low Farm. A series of brick buildings partially screen the listed building from the site but the access route passes directly by it. Access can be extended to the site from Dovecote Lane which directly links from the High Street, the views of Cambridgeshire County Council will be required to assess whether this route can service the quantum of development proposed on the site.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply which is unknown. There are no buildings on site so no clearance work would be required. The access to the site is from Dovecote Lane which is a narrow lane meaning access may be challenging so will need careful consideration.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its edge of settlement location and the nearby listed building. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. It appears that either market homes or self and custom build homes will be pursued on site which may impact the method of</p>	~

its delivery and the timelines in securing any detailed planning consents. As it appears that a housebuilder is not involved with the site and a planning application has not yet been made, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Surface water flood risk
- Adjacent to a heritage assets which could be impacted by proposals
- Good accessibility to local services and employment opportunities
- Development could be integrated into the existing place and community

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for built development
- Should include adequate landscaping to minimise the visual impact of development on the landscape and on heritage assets
- Provide sustainable drainage to mitigate against surface water flood risk
- Supports residential development on sites of less than 1ha

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Gross site area of 0.47 ha  80% net developable area allowed due to need for landscaping and flood mitigation.  0.47 ha x 80% = <b>0.37 ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location.  Very low density of 25 dph = 0.37 ha x 25 dph = <b>9 homes</b>	Available 2024 - 2028  Build out over 1 -2 years

**Updates after the Initial Assessment**

<b>Site reference</b>	Great Paxton 4
<b>Site name</b>	Land North of Harley Industrial Park, Paxton Hill, Great Paxton

Site address	Parish(es)	Site area (ha)
Land North of Harley Industrial Park, Paxton Hill, Great Paxton	Great Paxton	3.6

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment	Phased development to provide between 5,000 and 10,000sqm of floorspace	Available 2024 - 2028 Build out over 3 - 4 years

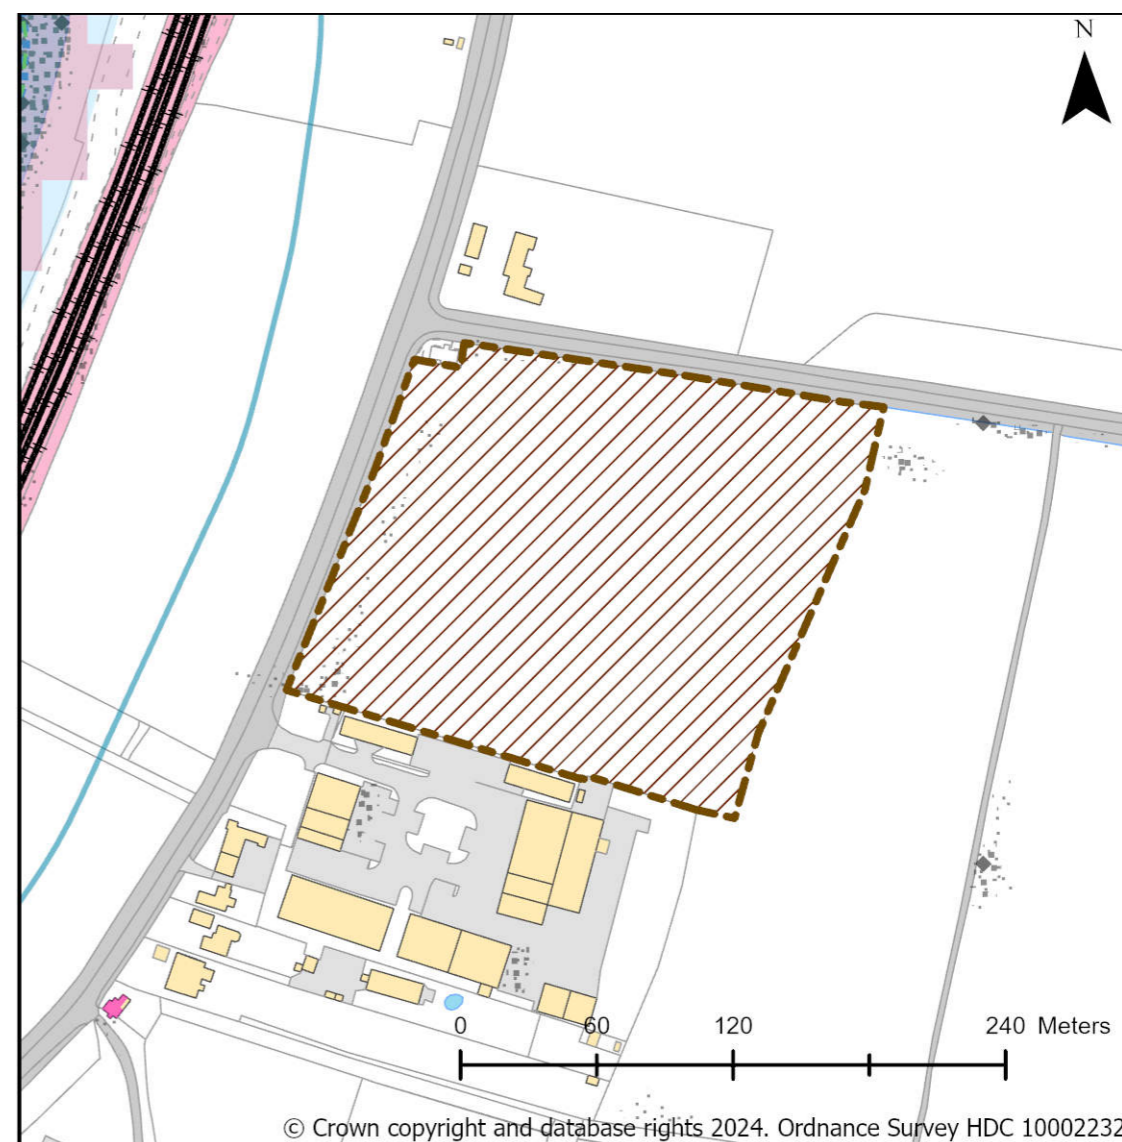

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:302
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 but there is some recorded risk from surface water flooding along its northern and western edges. The site is wholly classified as grade 2 agricultural land with no existing structures within the site although a covered reservoir situated immediately to the north western corner. Whilst most of the site is fairly level the northern part slopes downwards in a northern direction towards Great Paxton reflecting the site's location at the western end of a ridge of higher land that falls away to both the north and south while staying broadly level to the east. Its elevation and lack of dense or established vegetation along its boundaries mean the site is prominent in longer landscape views, particularly along the road from Toseland and would require landscaping to reduce this constraint. The site adjoins the Harley Industrial Estate to the south, an established employment area. To the west is the East Coast mainline railway. The B1043 and Paxton Road form strong western and northern edges to the site respectively. To the north and east is open countryside in arable agricultural use.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Cables running between telecommunication masts run along the site's frontage with the B1043 and along its northern edge along Paxton Road. There are no heritage or nature conservation designations within the site. Access to the site could be achieved from the B1043 similarly to that to the Harley Industrial Estate immediately south of the site. Alternatively, depending on the proposed layout the site, access could be achieved via the existing industrial estate.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. Approximately half of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who support its development. There are no known legal restrictions affecting the site. The site promoter states that it their intention to acquire an allocation status before selling the site to a third party for obtaining planning permission and development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that public highway and electricity supply are available from the site boundary but gas supply, mains water supply and digital and telecommunications infrastructure are all unknown at this time. The site promoter has also identified that there are other constraints to the site's development which are a potential ransom strip and overhead power lines. There are no buildings on site so no clearance work would be required. The access to the site could be achieved either from the B1043 or via the existing industrial estate to the south.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location and elevated position of the site means that any future development will need to be very sensitive to its impact on the landscape and provide adequate mitigation. The site promoter states that it their intention to acquire an allocation status before selling the site to a third party for obtaining planning permission and development. As such, the site is categorised as developable.</p>	~
--	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land classified as grade 2 agricultural land</li> <li>• Adjoins the Harley Industrial Estate</li> <li>• Limited public transport access</li> <li>• Relates more to the countryside but could be integrated as an extension to the adjoining industrial estate</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The site could be considered appropriate for employment development extending an existing employment location</li> <li>• Development would require substantial landscaping to mitigate landscape impact</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of <b>3.6 ha</b></p> <p>Due to the need for substantial landscaping along the eastern and northern boundaries the net developable area is reduced to 80%.</p> <p>3.6ha x 80% = 2.88 ha</p>	<p>Commercial - employment</p> <p>The industrial areas (0.40 plot ratio) has been used as development could compliment the adjoining industrial estate:</p>	<p>Available 2024 - 2028</p> <p>Build out over 3 - 4 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	0.40 plot ratio x 2.88 ha = 1.15 ha of land for employment uses equating to <b>11,520 sqm.</b>	

Updates after the Initial Assessment

## 6 Little Paxton

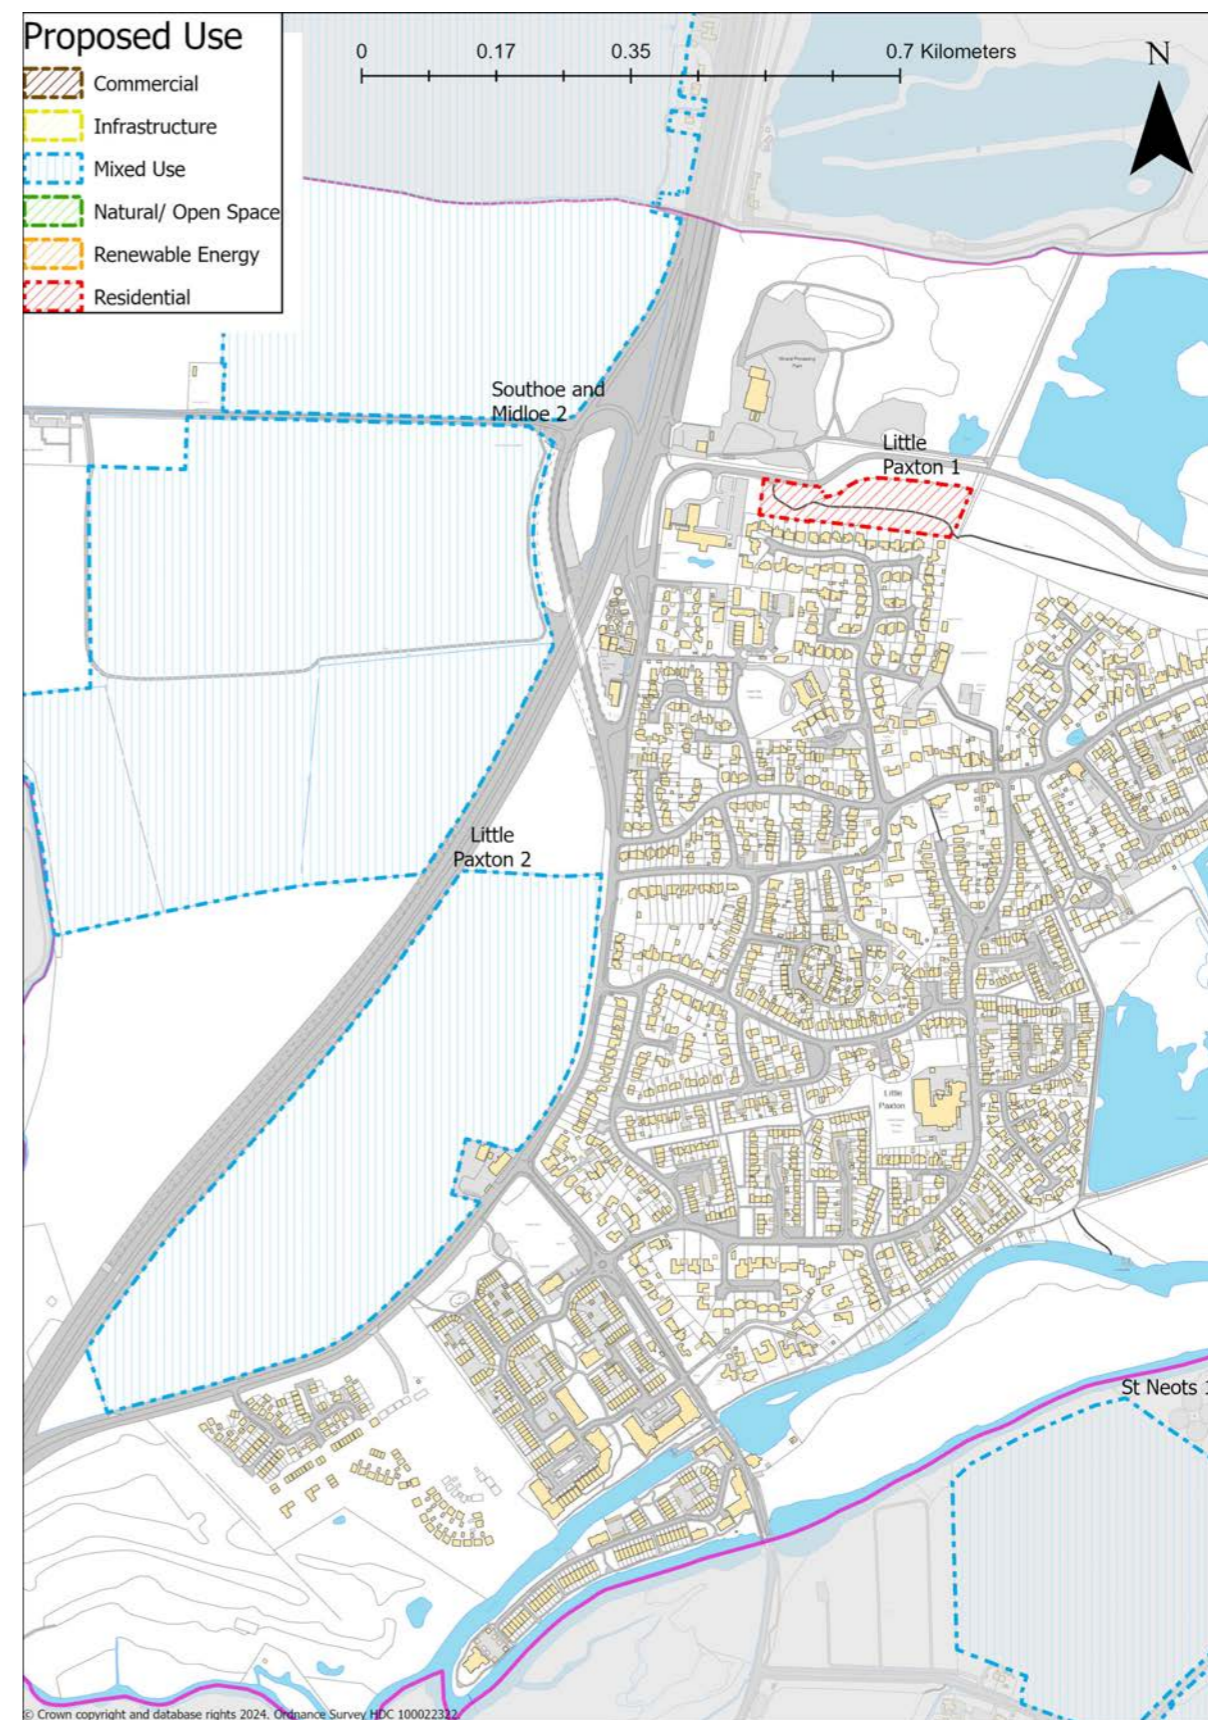

6.1 A total of 2 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Little Paxton 1: Land North of St James Road, Little Paxton
- Little Paxton 2: Land West of Little Paxton

6.2 Please note that the following sites also partially fall within Little Paxton parish:

- 'Southoe and Midloe 2: Southoe Garden Village, Southoe', but it has been included under Southoe and Midloe as most of the site lies within that parish area.
- 'St Neots 1: Land North of Priory Park, St Neots' also partially falls within Little Paxton and Great Paxton parishes, but it has been included under St Neots as most of the site lies within that parish area.

Page 1365 of 3488

6.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Site name</b>	Land North of St James Road, Little Paxton

Site address	Parish(es)	Site area (ha)
Land north of St James Road, Little Paxton	Little Paxton	1.30

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	38 homes	Available 2024 - 2028 Build out over 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:78
Relevant planning history	<p>Application Number: H/00080/58/CM Proposed Development: Redlands East Of Great North Road - Gravel Extraction Outcome: Permitted</p> <p>Application Number: H/00055/62/CM Proposed Development: Adjacent West Of Little Paxton Sand And Gravel Pit - Gravel Extraction Outcome: Permitted</p> <p>Application Number: H/00883/81/CM Proposed Development: Within Land South Of Little Paxton Sand And Gravel Pit - Retention Of Sand &amp; Gravel Plant &amp; Asphalt Plant &amp; Sites</p>

	<p>Outcome: Permitted</p> <p>Application Number: H/00845/87/CW</p> <p>Proposed Development: Little Paxton Quarry Off Great North Road - Importation Of Fill Material To Restore Disused Gravel Working.</p> <p>Outcome: Permitted</p> <p>HLP2036 Site Allocation: SN5 North of St James Road, Little Paxton for 35 homes</p> <p>HELAA (December 2017): North of St James Road to North of High Street, Little Paxton (220). This site was 4.70ha and included the submitted site which formed the western portion of the HELAA site.</p>
Land type	Wholly greenfield land
Current use of the site	Rough grassland and trees
Supporting information	Land North of St James Road - Indicative Layout

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1. Surface water flood risk is negligible. The site is wholly classified as non-agricultural land so the site will not impact upon the best and most versatile agricultural land.</p> <p>The land within the site is flat and the topography broadly consistent with the surrounding area. It predominantly comprises rough grassland with trees and shrubs. A mineral processing plant is located to the north west and Paxton Pits Nature Reserve SSSI is approximately 30m to the north. Paxton Pits Nature Reserve (county wildlife site) sits on the eastern boundary of the site. A tree lined bank between the site and Old Great North</p>	~
---	---

<p>Road screens views of the site from the road and from the quarry works to the north. A public right of way crosses the site from the north and continues along the southern boundary. Trees and hedgerows encircle the site. Access to the mineral development area is via the road running along the northern boundary of the site, but is screened by trees. The site is wholly within the Great Ouse strategic green infrastructure area and is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley). Residential development on this site would have to address biodiversity and environmental impacts. Safe integration with the built up area of Little Paxton would require consideration as existing residential areas do not provide access or connectivity to the proposed site.</p> <p>The site promoter says that "Ground contamination remediation of made ground will be required". No oil or gas pipelines or associated buffer zones cross the site nor are there any overhead electricity lines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it.</p> <p>The site is wholly within a sand and gravel mineral safeguarding area and mineral development consultation area, however the site has been quarried and refilled and greenfield use re-established. As the site is therefore wholly greenfield now it does not offer any potential for regeneration. Across the road to the north lies a waste management area. The site is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership via a Trust and development is supported by the landowner. There are no known legal restrictions affectign the site. The site promoter states that it is their intention that planning permission is acquired before the land is sold to a third party for development. The land is available from 2024-2028 and would be delivered over 2 years.</p> <p>The site promoter says that the site is allocated for residential development by allocation SN 5 in Huntingdonshire's Local Plan to 2036. The site is submitted to reiterate their commitment to deliver the site within the current plan period.</p>	+
<p><b>Achievability</b></p> <p>Gas, water and electricity supply are accessible from the site boundary. Access to digital and telecommunications infrastructure is unknown.</p> <p>The site may be accessible from the west directly off Old Great North Road or via Enterprise House, further work to investigate access options would be required. The road bounding the northern boundary of the site is within a mineral development area and provides access for vehicles associated with its operation. Safety of access for residents, particularly for active travel, would require consideration and may present a barrier to development</p>	~

<p>The site is a green infrastructure priority area and is also in a Natural Cambridgeshire priority landscape area (Great Ouse Valley), but is somewhat removed from the River Great Ouse (0.9 miles straight line distance). Established trees and hedgerows bound the site which is adjacent to Paxton Pits Nature Reserve. Residential development on this site would have to address biodiversity, landscape, and environmental impacts.</p> <p>No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. Proximity to the A1 and Old Great North Road would provide long term connectivity and assist with the logistics of construction. The site is near a mineral development area, noise, pollution and vibrational impacts from this would need mitigation for the proposed residential use.</p> <p>Although the proposed development is within a mineral safeguarding area, extraction and importation of fill material to restore disused gravel working has been completed. Ground contamination remediation of made ground will be required. This site promoter has provided an indicative masterplan demonstrating site layout and access.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Other constrains such as access, landscape, biodiversity and environmental impact and contamination would require resolution. The site is allocated with suitable criteria in Huntingdonshire's Local Plan to 2036 and is available from 2024-2028. The site is categorised as deliverable.</p>	+

- Has potential to provide development of a scale that could be integrated into the existing place and community
- Would need to provide safe and suitable means of access by motorised vehicle and active travel
- Would need to address any impact on nature conservation designations and trees and hedgerows
- May require ground contamination remediation
- Address presence and/or integration of the public right of way

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 1.30ha</p> <p>80% net developable area to accommodate existing trees and hedgerow.</p> <p>1.30ha x 80% = 1.04ha</p>	<p>The net developable area is 1.04ha</p> <p>Residential - market and/or affordable homes</p> <p>Low density of 35 dph anticipated due to the edge of settlement location.</p> <p>Capacity = 1.04ha x 35 dph = <b>36 homes</b></p>	<p>Available immediately as site is currently allocated.</p> <p>Build out over 2 years</p>

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk and surface water flood risk is negligible</li> <li>• The site is wholly greenfield land and non-agricultural land</li> <li>• The site is within proximity of designated nature conservation areas</li> <li>• Landscape impact would be minimal and no heritage designations are affected</li> <li>• The site is close to St Neots town centre and railway station, multiple culture and leisure facilities, a primary school and concentrations of employment providing sustainable employment, social opportunities and sustainable transport options</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>

**Updates after the Initial Assessment**

--

**Little Paxton 2: Land West of Little Paxton**

<b>Site reference</b>	Little Paxton 2
<b>Site name</b>	Little Paxton (West)

Site address	Parish(es)	Site area (ha)
Land to the west of Little Paxton, and east of the (new) A1	Little Paxton	20.36

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Custom and self-build housing Nursing and care homes	400 - 450 homes 10 - 20 custom and self-build homes 60 - 80 nursing and care homes bed spaces	Available 2024 - 26 years
Infrastructure: Associated social/community facilities Open Spaces Natural, green or open spaces for a variety of uses Biodiversity net gain opportunities	Scope for associated social/community facilities 4.00 to 5.00ha of natural, green or open spaces 10% biodiversity net gain opportunities	

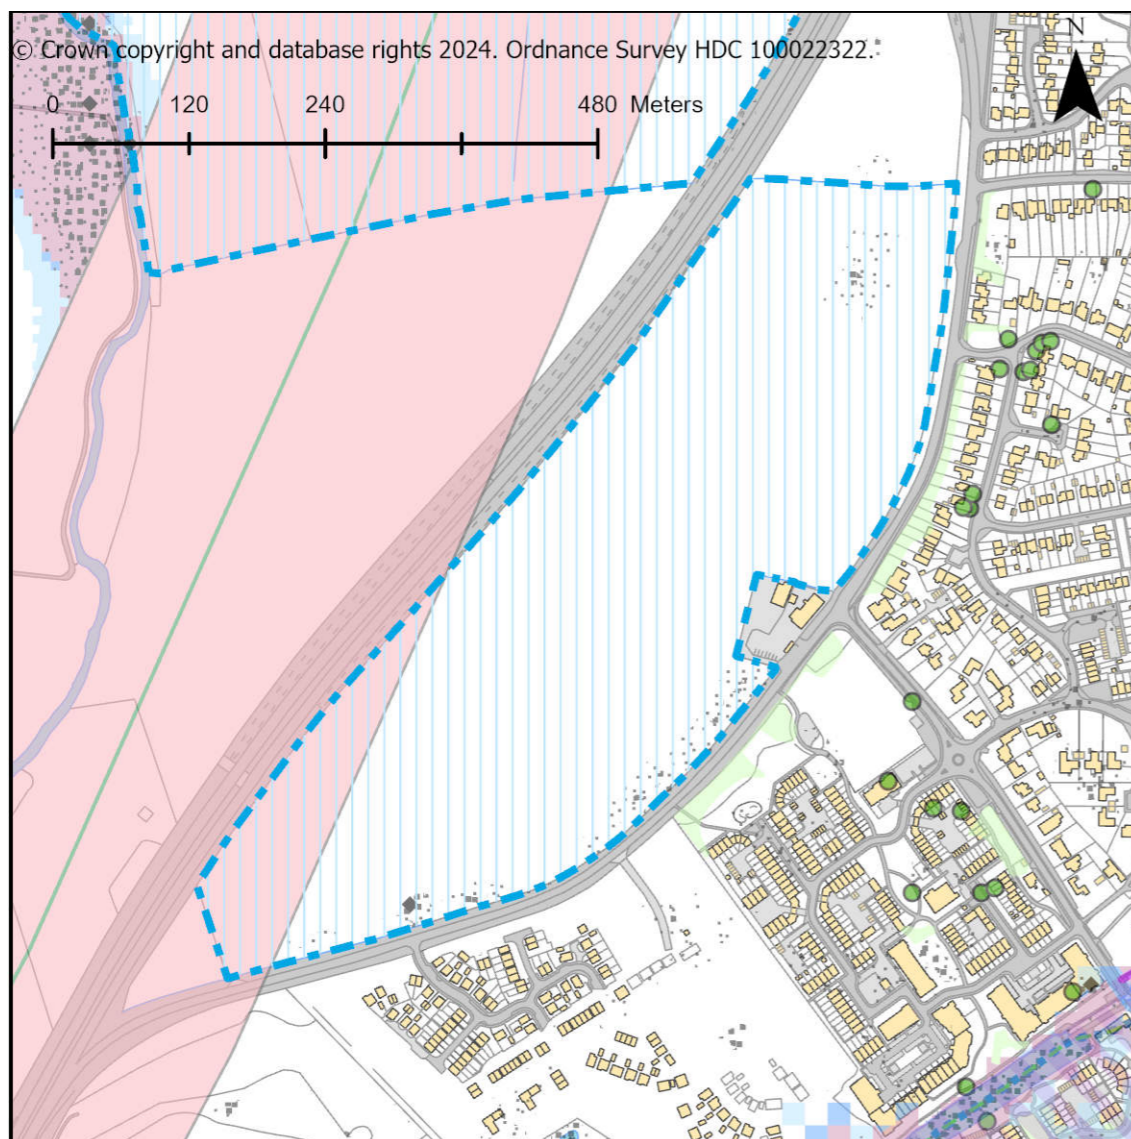

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:203
Relevant planning history	HELAA (December 2017): West of Little Paxton
Land type	Wholly greenfield land

Current use of the site	Agricultural land
Supporting information	Huntingdonshire District Council Issues Engagement Paper - Responses on Behalf of De Merke Estates  Location Plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1. Surface water flood risk is present but negligible along the south eastern boundary and in pockets within the northern quarter of the site. The site is wholly classified as grade 2 agricultural land and is predominantly in arable agricultural use.</p> <p>The land rises noticeably east to west in the southern half of the site. Views across the A1 and to continuing countryside can be seen clearly from multiple points on the eastern boundary despite it being interspersed by mature trees and hedgerow demonstrating the continuing elevation of the landscape. Clear views into the site can be seen from the B1041</p>	~
---	---

<p>both along the eastern boundary of the site and from the north west where it crosses over the A1. A substantial landscaping buffer would be required on the western boundary to mitigate noise and light pollution from traffic on the A1. The site acts as a green wedge between Little Paxton and the A1, perceived as forming part of the wider countryside. A light industrial complex is located on the eastern boundary opposite the B1041/Mill Lane. East of the Great North Road (B1041) are residential properties. Those north of Mill Lane predominantly have their rear gardens facing towards the road and hence the site posing a constraint to integration. However, south of Mill Lane 21st century development presents a more open frontage to Great North Road with a small area in the southern corner comprising St Neots golf course which is well screened by trees. Access to the site is via a narrow track opposite Little Paxton Lane. The site is wholly within the Great Ouse green infrastructure strategic area and is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley). Residential development on this site would have significant biodiversity, landscape, light and environmental impacts which would need to be addressed. No public rights of way traverse the site.</p> <p>There is no known pollution or contamination and no oil pipelines and buffer zones cross the site nor do any overhead electricity lines. No known heritage assets are located within the site and there are no tree preservation orders affecting it.</p> <p>As the site is wholly greenfield land it does not offer the potential for regeneration. The site is entirely within a sand and gravel mineral safeguarding area, Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that may constrain development. The site is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single individual control and ownership, development is supported by the landowner. There are no known legal restrictions affecting the site. Delivery of the site is anticipated to be facilitated by acquiring planning permission before being sold to a third party for development. The land is available from 2024 - 2028, and the site promoter estimates delivery over 5 - 6 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply and digital and telecommunications infrastructure are accessible from site boundary. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site.</p> <p>The site is accessible by road from Great North Road (B1041) which would assist with long term access and the logistics of construction, however, the impacts of transport as a result of construction and occupation of the promoted 400 - 450 dwellings would require</p>	~

<p>significant consideration and mitigation, especially to homes adjoining Great North Road. The site would generate a significant amount of additional traffic during construction and after occupation which would require addressing.</p> <p>The site forms part of the Great Ouse green infrastructure strategic area and is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley). The site's relationship with the wider landscape would require mitigation and consideration given to building height elevations due to the sloping nature of the site. Significant landscape buffers would be required on the western boundary of the site. Mitigation measures would be required to address the noise and pollution impacts of the A1. Development would require consideration of the integration of the residential development with the built up area of Little Paxton. The presence of Great North Road would require further measures to allow for safe crossing of residents. Major infrastructure may be required to support development.</p> <p>Careful consideration would be required to address how the current employment uses could be integrated within the development without detrimentally impacting upon their continued use.</p> <p>The site promoter provides supporting information to suggest how some of the constraints may be overcome including landscaping to address potential noise from the A1 and bringing forward a high quality landscape-led development to address landscape constraints and the potential provision of community facilities.</p>		
<b>Deliverability / developability</b>	~	
<p>There are no known legal or ownership constraints. There are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>		

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk or heritage designations and surface water flood risk is negligible</li> <li>• It is grade 2 agricultural land and is wholly greenfield</li> <li>• The site is in a sensitive landscape location which would require strategic landscaping and integration of existing woodland address topographical challenges</li> <li>• The site is within proximity of 10 ha of a nature conservation designation</li> </ul>
---

<ul style="list-style-type: none"> <li>• The site is close to St Neots town centre and railway station, multiple cultural and leisure facilities, a primary school and concentrations of employment providing sustainable employment, social opportunities and sustainable transport options</li> <li>• The site abuts the A1 and is therefore likely to be subject to noise, air and light pollution</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for development in the long term contributing to the housing needs of the district and supporting sustainable place-making, however there are substantial constraints to overcome.</li> <li>• Is located such that it could be effectively masterplanned to become part of the existing place and community</li> <li>• Would require strategic landscaping</li> <li>• Would require careful integration to ensure continued use of current employment uses on the site boundary</li> <li>• Would require noise, air and light mitigation</li> <li>• Would require mitigation of transport impacts</li> <li>• Would require sensitively masterplanned development to address topographical challenges</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 20.36ha</p> <p>60% net developable area to accommodate strategic landscaping, noise, air and light pollution mitigation, integration of existing woodland and topographical challenges.</p> <p>20.36ha x 60% = 12.22ha</p>	<p>Net developable area 12.22ha.</p> <p><b>0.5ha removed for community uses</b> leaving 11.72ha developable area.</p> <p>Residential - market and/or affordable homes, nursing and care homes bed spaces</p> <p>Low density of 35 dph anticipated due to the edge of settlement location.</p> <p>Capacity = 11.72ha x 35 dph = <b>410 homes</b></p>	<p>Available from 2029 subject to allocation.</p> <p>Build out expected over 5 - 7 years.</p>

<b>Site reference</b>	Southoe and Midloe 1
<b>Site name</b>	Midloe Grange Farm

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Midloe Grange Farm, Rectory Lane, Southoe	Southoe and Midloe	20.26

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Open Space: Biodiversity net gain	20.26ha	Available 2023  Information on proposed delivery timing not provided

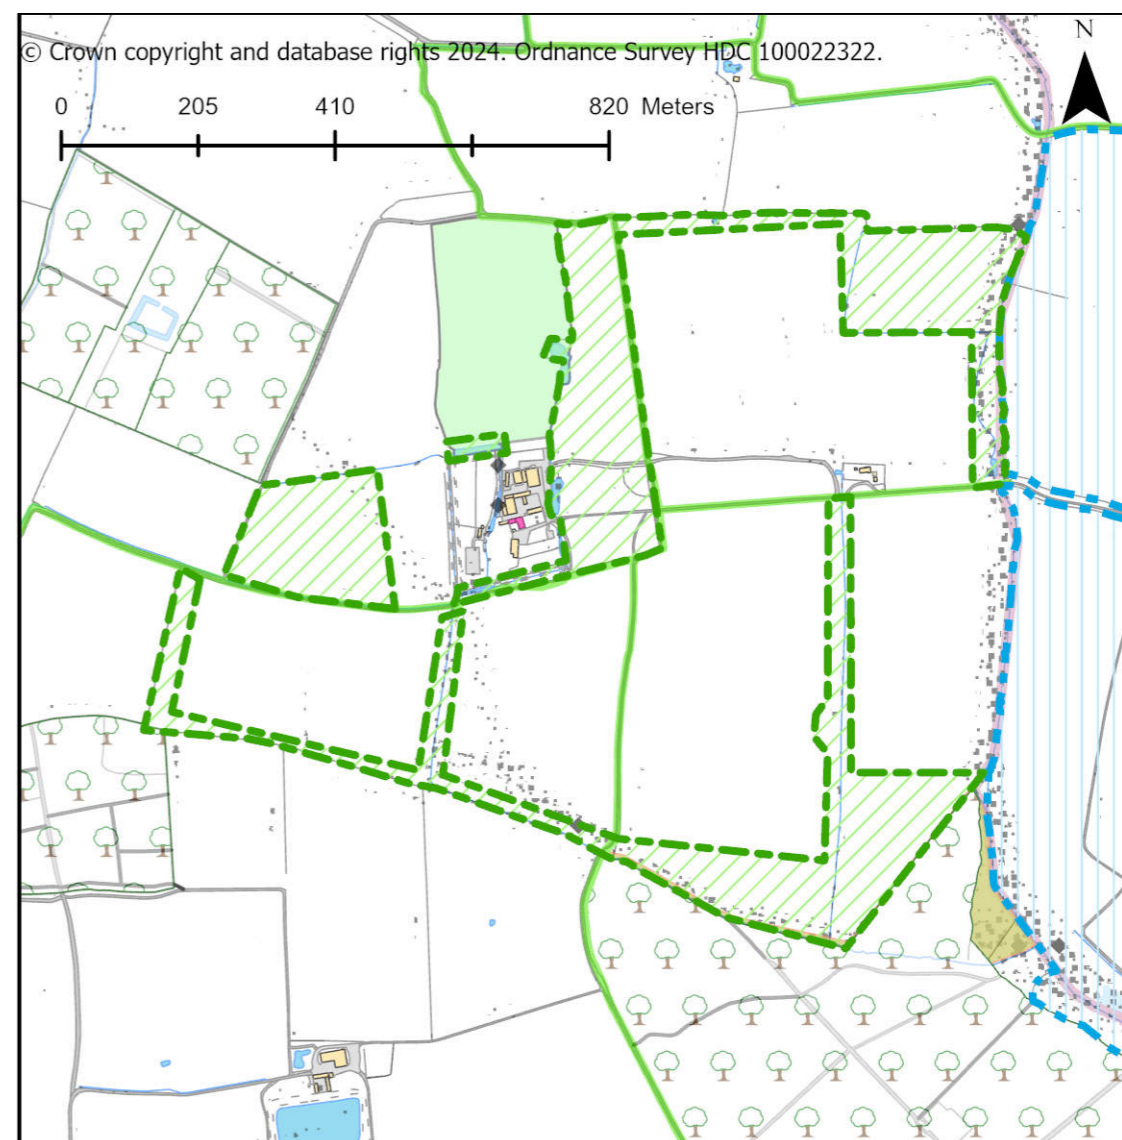

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:331
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural (field margins)
Supporting information	Biodiversity offsite management plan  Statement of reasons  Preliminary ecological appraisal

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1377 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site comprises four separate areas which constitute field margins. 99% of the site is in flood zone 1, with the remainder in flood zone 3b. Surface water flood risk is present in association with field boundaries and drainage ditches, some ponds are present to the north. The site is wholly grade 2 agricultural land with most currently serving as field margins to arable fields.</p> <p>The land slopes gently down from the northern boundary and is consistent with the open countryside within which it is situated. Little Paxton Wood (a SSSI and ancient woodland) bounds the south east corner of the site, ancient woodland is also found just outside the north west and south west boundary, both of which are also designated as county wildlife sites. The northernmost rectangle of the proposed site is also within a county wildlife site. Two residential properties sit just outside the boundary which are Midloe Grange (a grade II listed building) and Midloe Cottage. Two public rights of way (bridleways) traverse the site, north to south and east to west.</p> <p>Due to the proposed use of the site it is unlikely that any adverse landscape or ecological impact would occur. The proposed use of the site for biodiversity net gain would be considered complementary to active agricultural use and has the potential to enhance the surrounding sites of nature conservation importance.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or their associated buffer zones cross the site, nor do any overhead electricity powerlines. No known heritage assets are located within the site although there may be archaeological potential associated with the former monastic site. The site is not within a mineral safeguarding or water recycling area.</p>	+
<p><b>Availability</b></p> <p>The site is in single individual control and use of the site for biodiversity net gain is supported by the landowner. There are no known legal restrictions associated with the site. The site is available from 2023.</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains and electricity supply are unknown, as is access to digital and telecommunications infrastructure although the proposed use would generate limited if any demand for utility services. No gas or oil pipelines and buffer zones, nor overhead electricity lines cross the site. There is no known pollution or contamination. The proposal to create biodiversity net gain would enhance the biodiversity and ecological profile of the area and has the potential to connect existing areas of nature conservation value.</p>	+

<p>Access is via a single lane farm road and across fields. Due to the nature of the proposal it is not considered that this would affect the achievability of the site given the landowner actively farms the land.</p> <p>The site promoter provides further information as to how biodiversity net gain would be achieved on the site including a construction environmental management plan, environmental DNA surveys, and species surveys. Baseline ecological conditions have been established and a biodiversity offsite management plan provided.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is deliverable. There are no known legal or ownership constraints. The site would be delivered by the landowner and the landowner's agent, who would act as a planning authority liaison and facilitate credit brokerage and managing the sale process. The landowner would be responsible for establishing the habitats and managing the site for the nationally required minimum period of 30 years.</p>	+

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● 99% of the site is in flood zone 1, with the remainder in flood zone 3b and the proposed use would have a positive impact on flood risk</li> <li>● It can contribute to increasing resilience to the impacts of climate change, through planting and habitat restoration</li> <li>● It would contribute further to the development of ecological corridors connecting sites of importance that sit just outside the site boundary</li> <li>● Public rights of way provide access to natural greenspace and leisure opportunities</li> <li>● The site would have a positive impact on the surrounding landscape and ecology and the setting of Midloe Grange, a listed building</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● May be appropriate for biodiversity net gain</li> <li>● Construction environmental management plan, environmental DNA surveys, species surveys and baseline ecological conditions and an offsite management plan demonstrate facilitation of the site.</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 20.26ha  100% net developable area due to proposed use of site.	20.26ha for biodiversity net gain	Available from 2023  Build out and retention - 30 years minimum

**Updates after the Initial Assessment**

Land surrounding Southoe (west of the A1)	Little Paxton; Southoe and Midloe	300.0

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> <li>Custom and self-build housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Employment</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Primary school</li> <li>Secondary school</li> <li>Neighbourhood hubs</li> <li>District centre</li> </ul> Open Space Uses: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> <li>Land to safeguard against flooding</li> </ul>	2,500 to 3,000 homes  A suitable proportion of custom and self-build housing can be incorporated  20,000 sqm of employment floorspace  Two primary schools, one secondary school, neighbourhood hubs, and a district centre to support residential development.  175 ha of open space uses in total including 140 ha biodiversity net gain and 25 ha of land to safeguard against flooding.	Available 2024 - 2028  Build out over approximately 12 years

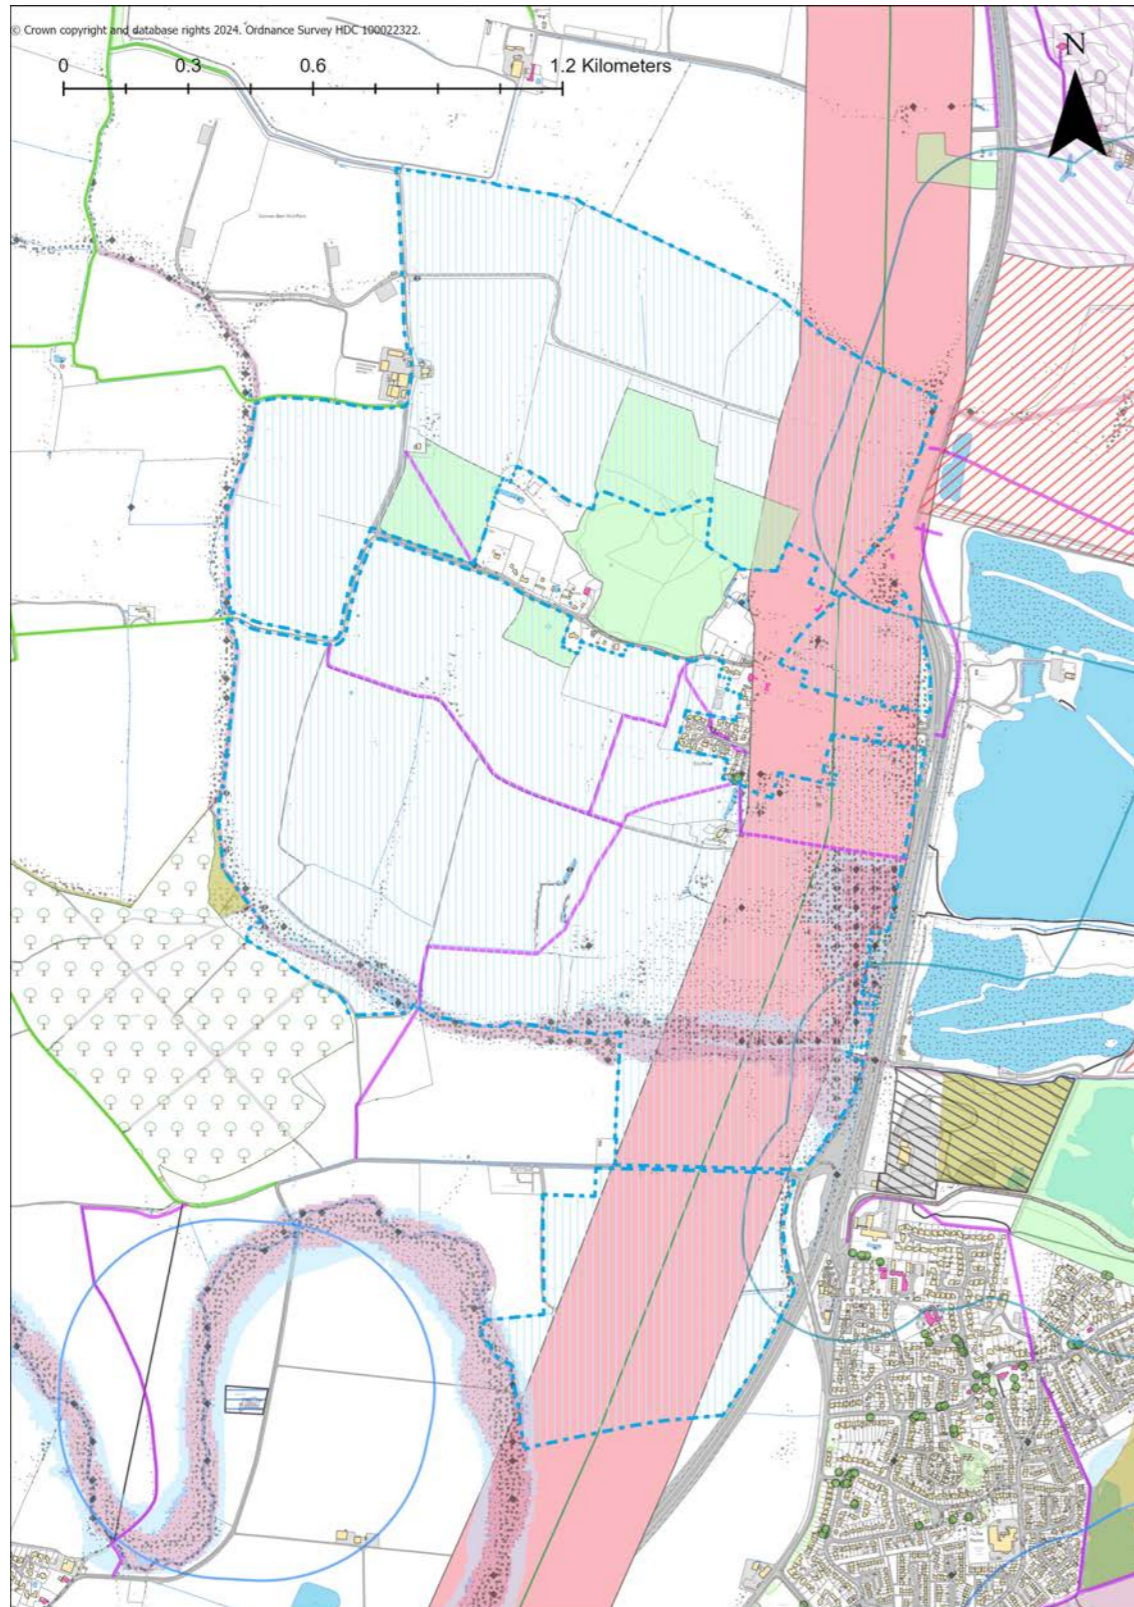

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:227
------------------------------	--

Relevant planning history	HELAA (December 2017): South of Lees Lane, Southoe (219). This represents 7.60ha of the submitted site
Land type	Wholly greenfield land except for 2 residential properties and some hard surfacing at the play area
Current use of the site	Agricultural
Supporting information	Southoe a Garden Village, Vision Document  Southoe Garden Village Location Plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	Approximately 7.08 ha grade 1 agricultural land	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	Approximately 20.72 ha of the eastern portion of the site is within a water recycling area.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The submitted site comprises four parcels of land; two to the south of Southoe and two to the north. they are currently in a mixture of arable and pastoral agricultural use with a very small number of residential properties and several agricultural buildings within the site.

Areas of flood zone 2 and flood zone 3a are located in the south of the site as the result of the River Kym, linking to the River Great Ouse and farm drainage. The remainder of the land is flood zone 1 (approximately 94%). Risk from surface water flooding is present across the site in parallel to the A1 and associated with field drainage and topography with several ponds being present. Approximately 7ha of the site is grade 1 agricultural land focussed immediately north of Southoe and immediately west of the A1, the remainder of the site is grade 2 agricultural land. Development of a best and most versatile agricultural land poses a constraint to this site.

The land slopes downwards toward the A1, with its lowest point being its south eastern corner. This is some 25m lower than its north western corner. Views across the countryside can be clearly seen from the A1 to the east and from a public right of way that crosses the site from Church Farm House north west away from the village towards Church Farm Cottage and another that follows the northern edge of the site from Common Barn Farm and beyond to the west. Three 125m wind turbines can be seen just to the north west at Common Barn wind farm. The broadly triangular portion of land immediately west of the A1 is bounded on the southern edge by residential properties which run along Lees Lane. Bell Lane which bounds the west of this parcel has some residential properties in the south opening up to clear views that can be seen across the agricultural field (looking south and with tree and hedgerow to the north of Bell Lane).

The largest parcel of the site is situated immediately south of Southoe village with a boundary to many existing homes. The impact on residential amenity of all affected homes forms a constraint on the scale, layout and nature of any development proposals. This portion of the site includes multiple public rights of way links which transect the site allowing clear 360 degree views of open countryside to be seen from these and from Brook End to the south. Little Paxton Wood (a SSSI and ancient woodland) bounds the western edge of this parcel directly south of Southoe village. The sensitivity of this natural environment also poses a constraint on development. A single track road, leading to Hail Weston, separates the two southernmost parcels with open views into the countryside north and south. Little Paxton cemetery is located to the north western corner of the southernmost parcel of land. The south western boundary adjoins the River Kym with the land falling away from the high point close to the road down to the river channel which supports a line of trees and shrubs provising limited screening from the south west, although the southern boundary comprises a low hedgerow. Residential properties fronting the A1 are immediately outside the eastern boundary, but Manor Farm has been included which lies south of the village. The site is highly exposed in both the local landscape and in longer distance views so significant landscaping buffers would be required to mitigate

<p>impact of the development. The north western corner of the southernmost parcel of land adjoins the junction of the A1 with the B1041 and the road to Hail Weston. Proximity to the A1 and associated slip roads may give rise to noise and light pollution constraints affecting development potential.</p> <p>The proposed site will surround the small village of Southoe. The scale and nature of the proposed development would fundamentally change the existing scale and character of the Southoe as a village. The impact of the proposal on the existing village and the ability to integrate the two would require serious consideration in both environmental and social terms.</p> <p>There is no known pollution or contamination and no known gas pipelines and buffer zones cross the site. An oil pipeline and buffer zone runs through the southernmost parcel of the submitted site and continues northwards through other all parcels just west of the A1. The buffer zone covers much of the north eastern and southernmost parcels. Overhead electricity lines are present within the site. There are no known heritage assets within the site although archaeological potential exists with several medieval moats and earthworks around the village. Two Cambridgeshire wildlife sites are within the site comprising Church Farm / Old Rectory Grasslands (20.06ha) and Southoe Hill Pasture (1.67ha). Little Paxton woods (a SSSI and ancient woodland) bounds the western edge of southern parcel of the site. It is estimated that over 60ha of the eastern edge of the site is identified as part of the Great Ouse green infrastructure strategic area which is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley). The site has significant biodiversity, landscape and environmental constraints impacting on its suitability.</p> <p>The site is almost wholly greenfield land and offers no opportunities to contribute to regeneration. Approximately 21ha of the site is within a water recycling area and 138ha of the site is within a sand and gravel mineral safeguarding area, Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that may constrain development.</p>	
<p><b>Availability</b></p> <p>The site is owned by multiple owners (a family and Corporate Trust) and is in multiple control with no legal agreement. Development is supported by all landowners. The site promoter notes that it is not known if there are any legal restrictions, this would require further investigation. The submission anticipates that planning permission would be acquired before the land is sold to a third party for development. The land is available from 2024 - 2028 and delivery estimated to take 12 years.</p>	~
<p><b>Achievability</b></p>	~

<p>Gas, mains water and electricity supplies are accessible from the site boundary as is digital and telecommunications infrastructure. Multiple accesses are available to the proposed parcels of land, however these are village or country lanes which will need substantial upgrading to serve the proposed development.</p> <p>The elevation of any potential buildings will require consideration due to the sloping nature of the site and their exposure within the wider landscape. The presence of nearby SSSI and wind turbines; and county wildlife sites and green infrastructure areas within the site would mean that landscaping solutions to integrate existing woodland would be required. The site is highly exposed in both the local landscape and in longer distance views, significant strategic landscaping would be required to mitigate the impact of the development. Residential development on this site may have significant biodiversity, landscape, light and environmental impacts which would need to be addressed. Integration with the existing village of Southoe would require careful consideration.</p> <p>The presence of an oil pipeline and buffer would constrain development on the eastern edge. Overhead powerlines on the site mean that mitigation would be required to relocate the powerlines underground, or mitigate the presence of the powerlines. The presence of mineral safeguarding areas and a water recycling area within the site may affect the location and layout of development.</p> <p>Access to the A1 is via two T junctions with short slip roads, safe access for construction and occupation of the site would be a major constraint which would require significant additional infrastructure and assessment of the impact of development on the road network. The presence of the A1 would also require noise and pollution mitigation. Due to the proposed number of homes, major infrastructure would be required to support the community such as primary schools and a secondary school (or major extension to an existing school in St Neots along with provision of safe active travel routes), local services and facilities and green spaces/infrastructure.</p> <p>The site promoter provided some supporting information to suggest how some of these issues may be mitigated for example, biodiversity net gain opportunities and natural, green or open spaces including land to be safeguarded for flooding. It is proposed that a 20m offset is included in the site to address the presence of the oil pipeline and buffer zone. A new A1 junction, extension of existing walking and cycling routes and the creation of a blue infrastructure network incorporating SUDS is also proposed. Integration of the existing community would be via extending the High Street, Bell Lane and Rectory Lane and integrating Manor Farm into the development with the larger agricultural barns removed. A 500m offset would be implemented from the wind turbines. A 50m offset would be included from the A1.</p>	
<p><b>Deliverability / developability</b></p>	~

Legal constraints are yet to be identified. There are significant constraints to be overcome and major infrastructure would be required including new safe access onto the A1. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p> <p>A sustainability appraisal is completed to provide more detailed analysis and evidence due to the potential for the site to influence the overall development strategy for Huntingdonshire should it be brought forward.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is greenfield with the majority being classified as grade 2 agricultural land and the rest being grade 1
- The majority of the site is flood zone 1 with areas of flood zone 2 and 3a located in the south of the site attributed to the River Kym
- The scale of the site would result in significant landscape impact arising from its topography
- Could adversely impact designated nature conservation sites, Little Paxton Wood (a SSSI and ancient woodlands) ancient woodlands and county wildlife sites
- Development would have fundamental impacts on Southoe completely transforming the scale, nature and character of the existing rural settlement and its resident community
- Has potential to increase traffic and travel on and around the A1 with the potential to increase air pollution
- The site is in an area of relatively high market demand for new homes
- The site is currently remote from services, employment, primary education, shops and public transport, but could provide these as part of an holistic development
- There is archaeological potential within the site

In combination the outcomes of the LAA and SA indicate that the site:

- The site is inappropriate for development due to its likely significant impacts on the character of the landscape and on Southoe as well as designated nature conservation sites
- The achievability of the development is unclear because of significant infrastructure requirements including new access(s) onto the A1, the presence of pipelines and overhead powerlines

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

## 8 St Neots

8.1 Please also look at sites in 1 'Abbotsley' parish to get a complete picture of proposals around St Neots due to where parish boundaries fall.

8.2 A total of 8 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- St Neots 1: Land North of Priory Park, St Neots - this site crosses over into Little Paxton and Great Paxton parishes but is assessed here as the majority of the site areas falls within St Neots parish.
- St Neots 2: Land East of Brook Road, Eaton Ford, St Neots
- St Neots 3: Peppercorn Meadows, Eaton Socon, St Neots
- St Neots 4: Land North of the A428, St Neots
- St Neots 5: Albert Hall Memorial Field, Hall Road, Eynesbury, St Neots
- St Neots 6: Land South West of Potton Road, Eynesbury, St Neots
- St Neots 7: Land North East of Wintringham, St Neots
- St Neots 8: Land East of Loves Farm (Tithe Farm extension), St Neots

8.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**St Neots 1: Land North of Priory Park, St Neots**

<b>Site reference</b>	St Neots 1
<b>Site name</b>	Land North of Priory Park, St Neots

Site address	Parish(es)	Site area (ha)
The land to the north of Priory Park and Mill Lane, east and west of Huntingdon Road/B1043.	St Neots; Little Paxton; Great Paxton	89.00ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable homes</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Retail</li> </ul> Supporting Infrastructure: <ul style="list-style-type: none"> <li>Community facility</li> </ul> Open Spaces: <ul style="list-style-type: none"> <li>Natural, green or open spaces: Extension to Priory Park, allotments/community orchard, wetland wildlife and biodiversity net gain enhancements.</li> </ul>	Approximately 600 market and/or affordable homes  Potential for retail, complementary uses to support residential development and community facility, size to be confirmed.  Natural, green or open spaces would amount to around some 28.0 ha or so, 13.9 ha on the western parcel and 14.2 ha on the eastern parcel, this would include opportunities for biodiversity net gain.	Available 2024 - 2028  Build out over approximately 6 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:239
Relevant planning history	None
Land type	Wholly greenfield land

Current use of the site	Agricultural land
Supporting information	Land North of Priory Park St Neots - Indicative Land Use Areas  Land North of Priory Park St Neots - Masterplan Concept  Location Plan  Odour Modelling Assessment  Place Prospectus

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 0.7 ha of the western boundary of the site in within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	34.7 ha of the site is within a water recycling area.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The proposed land is located to the north of the built up area of St Neots and straddles Huntingdon Road/B1043 creating an eastern and western parcel of land (approximately 42.80ha and 46ha respectively). An additional separate parcel of land of approximately 0.20ha is located to the north constituting the curtilage and residential property, Skewbridge Cottage, which is surrounded and contains extensive tree cover.

Approximately two thirds of western parcel is in flood zone 3a and 3b. Flood zone 3a also runs through the northern half of the eastern portion of the site as a result of Gallow Brook. Flood zone 2 covers the majority of the western portion of the site and the western edge of the eastern portion of the site. A drain runs through the southern half of the eastern

portion of the site which includes a pond, associated surface water flood risk is present in locations similar to the aforementioned water bodies. The eastern portion of the site is grade 2 agricultural land, with the western parcel providing a mix of grade 2, 3 and non agricultural land. Skewbridge Cottage contains grade 2 agricultural land. The majority of the sites are in arable agricultural use with lengths of hedgerows and small clusters of trees throughout.

The site is separated by Priory Hill Road/Mill Lane meaning that the site is currently isolated from other residential areas which are well screened from Priory Hill Road by mature trees making integration challenging. The western portion of the site is relatively flat and includes a strip of land lying between the two channels of the River Great Ouse and representing part of the conservation area; Mill Cottage sits on the northern boundary. East of the B1043 the land slopes significantly upwards (by approximately 15 to 20m) towards the railway line that bounds the eastern edge. Some trees and a hedgerow are present on the southern boundary of the site and part of the eastern edge of the B1043, however long distance views of open countryside can be seen from the south and north and from the B1043. Significant strategic landscaping would be required to mitigate impact of the development.

The far south west corner of the proposed site includes two cottages and is bounded by the Rowley allotments. St Neots water recycling centre sits within the centre of western portion of the site forming a substantial constraint. Brooks Farm is located in the north of the eastern parcel with Gallow Brook running through it. Outside the south eastern corner is an electricity substation. The River Great Ouse forms the western boundary. Several of the surrounding uses are either sensitive to development or pose constraints that would impact on the scale, nature and layout of any development proposals.

The site promoter proposes green infrastructure/biodiversity net gain, environmental initiatives and allotments to the west of the B1043 reflecting constraints arising from the water recycling centre, and flood risk. An extension to Priory Park to the east of the B1043 is proposed with residential uses on the far eastern portion which is bounded by the railway line.

There is no known pollution or contamination and no known gas or oil pipelines or associated buffer zones cross the site. Overhead power lines are present within the eastern portion of the site. No known heritage assets are located within the site, the western edge of the western part of the site and the southern boundary of the eastern part of the site both adjoin the conservation area, the area of land to the west and separated by the River Great Ouse lies entirely within a conservation area. There are no designated nature conservation assets within the site.

As the site is wholly greenfield land it does not offer any potential for regeneration. The majority of the site is within a water recycling area buffer zone which significantly impacts on its suitability for uses where people will spend extended periods of time such as homes, some land in the far eastern parcel is outside this. The majority of the site is within a sand

<p>and gravel mineral safeguarding area meaning and Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that might constrain development.</p>	
<p><b>Availability</b></p> <p>The site is in single family control and the land optioned, the development is supported by all landowners. There are no known legal restrictions affecting the site. The site promoter anticipates that the land is available from 2024 - 2028 and would be delivered by a house builder over a 6 year period.</p>	+
<p><b>Achievability</b></p> <p>The site promoter notes that gas, mains water and electricity supply are accessible from site boundary as is digital and telecommunications infrastructure. The proposed location of residential development is to the east of the site as the site begins to slope upwards towards the railway line, elevation of the buildings may have a significant impact on the landscape character and significant strategic landscape would be required.</p> <p>Overhead powerlines are present within the eastern portion of site where residential development is proposed, mitigation would be required to relocate the powerlines underground, or mitigate the presence of the powerlines, this may impact viability of the site.</p> <p>Priory Hill Road and Mill lane bounds the southern edge of the site and the B1043 runs through the middle of the site. The eastern boundary is bound by the railway line. Any residential development may be subject to noise, air quality and vibrational impacts. Access to the road networks would assist with long term accessibility and the logistics of construction.</p> <p>The separation of the site from the north of St Neots by Priory Hill Road/Mill Lane and the B1043 would require further measures (for example safe crossing points) to safely integrate the proposed site with the existing built up area of St Neots and to enable safe access to the proposed open space uses (Green Infrastructure and Priory Park extension). Development would require consideration of the integration of the existing residential developments and relationship to the conservation areas.</p> <p>The site is within a water recycling area buffer zone, includes a water recycling centre and is within a sand and gravel mineral safeguarding area. As a result, the open space uses may be considered acceptable, however the residential uses proposed may be difficult to achieve.</p> <p>The site promoter has provided some supporting information to suggest how some of these issues may be mitigated for example they state that " Potential noise and vibration effects associated with the [railway] line could be mitigated as there is sufficient land available to</p>	~

<p>provide suitable technical measures. Undergrounding of existing low voltage electricity cables [would be undertaken and]. Additional technical work will be undertaken to confirm that the extent of proposed residential development in proximity to the waste water treatment works is appropriate using guidance on the assessment of odour". An odour assessment has been completed, the findings of which quote "that it is highly unlikely that there would be any odour complaints from residential receptors within the proposed area. Impacts on the proposed extension to Priory Park and other green infrastructure are considered to be negligible." The site promoter also proposed a landscape buffer and tree planting to visually screen the water recycling centre and aid in odour dispersal. A network of recreational paths are proposed within the open spaces.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The site's location within a mineral safeguarding area and water recycling area would limit the possibility of residential uses on site, but green uses could be considered acceptable, so there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Subject to overcoming the constraints the site could be categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is wholly greenfield and grade 2 agricultural land</li> <li>• Flood zone 2 covers the entirety of the western parcel of land, flood zone 1 is only present on just over half of the eastern parcel; flood zones 3a and 3b are also present</li> <li>• Proximity to St Neots water recycling centre increases the potential odour impact on future residents</li> <li>• The site relates more closely to the countryside, the proposal would create an isolated pocket of residential development exacerbated by its topography, with little relationship to its surrounding countryside location or existing residential properties</li> <li>• Proposed uses for green infrastructure, and biodiversity net gain would support and enhance the landscape setting, biodiversity and ecology, and the setting of the Great River Ouse within and adjacent to the Great Ouse Valley priority area.</li> </ul>
---

- Opportunities for an extension to Priory Park, green infrastructure, and biodiversity net gain could provide additional leisure opportunities
  - Access to the railway station is within reasonable distance, as is access to St Neots town centre, education and employment opportunities
- In combination the outcomes of the LAA and SA indicate that the site:
- Is inappropriate for residential development
  - Will not support sustainable place-making
  - The achievability of the development is unclear because of the presence of overhead powerlines, odour and flood mitigation, noise and vibrational mitigation resultant from proximity to the railway line
  - Is appropriate for green infrastructure, biodiversity net gain and potential extension to Priory Park subject to provision of safe crossing(s)

Page 1388 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 48.50 ha  Proposed residential development discounted as considered inappropriate development.	Green infrastructure  Biodiversity net gain Priory Park extension  Site capacity 48.50ha  If a Priory Park extension is taken forward, provision for car parking may be required slightly reducing the net developable area for green space uses	Available 2024 onwards  Build out 2024 - 2028 onwards: establishment of biodiversity net gain would be a long-term process with maintenance and monitoring required for at least 30 years.

**Updates after the Initial Assessment**

--

**St Neots 2: Land East of Brook Road, Eaton Ford, St Neots**

<b>Site reference</b>	St Neots 2
<b>Site name</b>	Land East of Brook Road

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land east of Brook Road, St Neots	St Neots	14.00

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Specialist housing Open spaces: Natural, green or open spaces for a variety of uses Biodiversity net gain opportunities	Around 120 homes, the amount of specialist housing to be confirmed.  Open space areas to be confirmed.	Available 2024 - 2028  Build out over 3 to 3.5 years

**Core information**

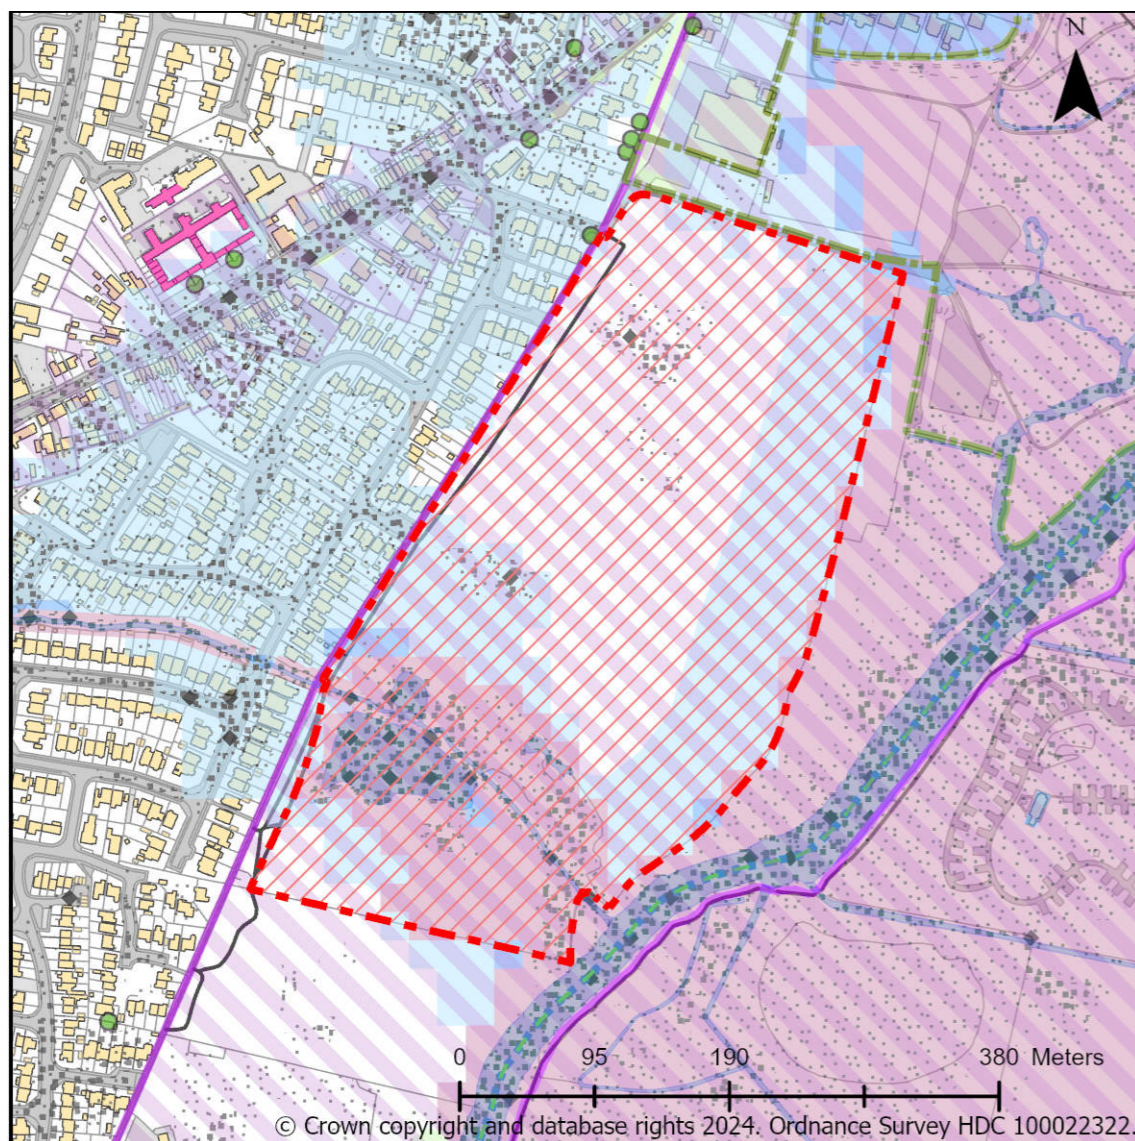

How was the site identified?	Call for sites 2023 submission: site reference - CfS:283
Relevant planning history	HELAA (December 2017): East of Brook Road St Neots (165)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Call for Sites Submission  Land Use Budget Plan - North Site

	Location Plan
--	---------------

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 2.76 ha of the site is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

Some of the southern portion of the site is within flood zone 3a and 3b, this is associated with the River Great Ouse and Duloe Brook which runs east to west through the southern half of the site. Over half of the site is within flood zone 2. Surface water flood risk is present and associated with Duloe Brook and ponds and the north west quadrant of the site is at risk of surface water flooding. This is also present immediately outside the eastern boundary. The site is wholly classified as grade 3 agricultural land.

~

The site slopes gently from west to east and forms part of the green corridor between Eaton Ford and Eynesbury and north towards the town centre and Riverside Park. On the northern boundary is the designated local green space of Riverside Park. Immediately east of the site is the River Great Ouse. It is mainly rough grassland with mature trees along the Duloe Brook margins. The site also contains a pond, and other trees and hedging around parts of the boundaries. To the north of the site is Eaton Socon Football and Bowls Club, while west of the site is residential development which predominantly has rear gardens adjoining the site. The south of the site bounds The Pightle Millennium Green. A foot and cycle path bounds the northern and western boundary (public right of way) of the site where open views can be seen clearly across the site. Access to the site foot and cycle path is also available from Brook Road in two locations connecting the built development. The site is wholly within the Great Ouse green infrastructure strategic area and is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley). Residential development on this site would have to overcome significant biodiversity, landscape, light and environmental impact constraints.

The site forms a fundamental part of the open space setting to the River Great Ouse providing a green lung through the centre of St Neots and towards the east. Development would detrimentally affect the character of the wider environment and open countryside. The design of any development proposal and its landscaping scheme would need to demonstrate how it would mitigate and minimise landscape impact.

There is no known pollution or contamination, and no oil pipelines and buffer zones cross the site nor do overhead electricity lines. The site is wholly within a conservation area.

As the site is wholly greenfield land it does not offer any potential for regeneration. The site is entirely within a sand and gravel mineral safeguarding area, so Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that might constrain development. The site is not within a water recycling area.

**Availability**

The site owned by a single/individual company and in developer company control. Development is supported by the landowner and there are no known legal restrictions affecting the site. Delivery of the site is anticipated to be facilitated by acquiring planning permission before being sold to a third party for development. The land is available from 2024 - 2028, the submission estimates that by applying a standard build out rate of between 35 and 40 per year, delivery of 120 dwellings would be completed within 3 to 3.5 years.

+

**Achievability**

~

<p>Gas, mains water and electricity supply and digital and telecommunications infrastructure are accessible from the site boundary. No gas or oil pipelines and associated buffer zones nor any overhead electricity lines cross the site.</p> <p>The site is accessible by road from River Road (a narrow residential road) off the B1428 meaning logistics may be hampered during development and impact on local residents. The achievability of upgraded accesses sufficient for the proposed development could present a financial and physical constraint. The site forms a fundamental part of the open space setting of the River Great Ouse and as such any built development would have significant landscape impact requiring substantial mitigation. The impacts of transport as a result of construction and occupation of around 600 dwellings would require significant consideration and mitigation, especially to the occupants of River Road or other access points off Brooks Road. Development would require consideration of the integration of the residential development with Brooks Farm.</p> <p>The site promoter has provided some supporting information to suggest how some of these issues may be mitigated for example through a continuation of Riverside Park to the east, linking to allotments and The Pightle, green infrastructure and attenuation basins would continue to the south, all of which is intended to steer development away from flood zones 3a, b and 2. Access to the residential units would be via River Road. The proposal would be accompanied by a heritage impact assessment, arboricultural assessment and a flood risk assessment and drainage strategy. Woodland would be retained.</p>		
<b>Deliverability / developability</b>		~
<p>There are no known legal or ownership constraints. The sites location which is wholly within a mineral safeguarding area, and the Great Ouse green infrastructure strategic area, and a Natural Cambridgeshire priority landscape area (Great Ouse Valley) would have very substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>		

<ul style="list-style-type: none"> <li>• The site would fundamentally impact the the landscape setting, biodiversity and ecology of the area, wider countryside, nature designations and valued green space</li> <li>• The site would fundamentally impact a significant part of a green infrastructure corridor associated with the River Great Ouse priority landscape area</li> <li>• Residential development on this site would have significant light impacts.</li> <li>• Employment, primary education, shops, cultural and leisure facilities and public transport are within an accessible distance</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that:</p> <ul style="list-style-type: none"> <li>• The site is inappropriate for residential development and would fundamentally impact the landscape setting</li> <li>• The achievability of upgraded accesses sufficient for the proposed development could present a financial and physical constraint</li> </ul>

How was the site identified?	Call for sites 2023 submission: site reference - CfS:383
Relevant planning history	<p>Application Number:16/01468/OUT</p> <p>Proposed Development: Hybrid application for proposed residential development of 5 dwellings accessed from Peppercorns Lane (outline), new access to cricket club from Shakespeare Road and change of use of land to town park (full)</p> <p>Outcome: Refused and appeal (APP/H0520/W/18/3200875) dismissed</p> <p>Application Number: 19/02354/FUL</p> <p>Proposed Development: Access to Eaton Socon Cricket Club for vehicles from Shakespeare Road.</p> <p>Outcome: Withdrawn</p>

	HELAA (December 2017): Peppercorns Lane. This site was 4.79 ha. The site submitted is the western portion of the HELAA site.
Land type	Wholly greenfield land
Current use of the site	Agricultural Note: The submission states it is uncultivated with public access
Supporting information	Peppercorn Meadows Map Peppercorn Meadows Supporting Map

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

from existing homes by trees and hedgerows and therefore the site would not integrate with the existing community. To the north of the site is Eaton Socon Cricket Club and Ground. Castle Hills scheduled monument bounds the south eastern corner of the site with mature trees and hedgerows separating this from the site. A protected ash tree sits just outside the north eastern boundary. Long distance open views can be seen into and from the site into the open countryside of the Great Ouse river valley. The majority of the site (minus 0.24ha of the south western corner) is within the Great Ouse Green infrastructure strategic area as set out in set out in the Cambridgeshire Green Infrastructure Strategy (2011) and is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley). Residential development on this site would be constrained by its significant biodiversity, landscape, light and environmental impacts which would need to be addressed. The site forms part of the open space setting to the River Great Ouse providing a green lung through the centre of St Neots and towards the east, development could detrimentally affect the character of the wider environment and open countryside. The site is wholly within a conservation area. The design of any development proposal and its landscaping scheme would need to demonstrate how it would mitigate and minimise landscape impact, how it would protect the character of the conservation area and the setting of the scheduled monument.

The site promoter states that recent site clearing exposed asbestos contamination (from a collapsed agricultural roof) around the area of the old stable foundations. All surface contamination was professionally removed and disposed of but contamination still remains below the surface. No oil pipelines and buffer zones cross the site. Overhead power lines dissect the site running north to south. No known heritage assets are located within the site.

As the site is wholly greenfield land it does not offer any potential for regeneration. The site is entirely within a sand and gravel mineral safeguarding area and 0.58ha is also within a brickclay mineral safeguarding area, Cambridgeshire County Council will need to be consulted to ascertain if these are workable resources that might constrain development. The site is not within a water recycling area.

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located wholly in flood zone 1. The site is at risk from surface water flooding. The land is wholly grade 3 agricultural land.</p> <p>This site is an uncultivated field with public access, it forms part of the green corridor between Eaton Socon and Eynesbury and north towards the town centre and Riverside Park. On the northern boundary is a footpath and cycleway which heads towards Willow Bridge which is a River Great Ouse crossing point and into the river meadows at Eynesbury. The path connects with Shakespeare Road and the western edge of the site which includes a public right of way which accessible from Peppercorns Lane. The footpath is separated</p>	~
--	---

<p><b>Availability</b></p> <p>The site has multiple owners in family control with development supported by all landowners. There are no known legal restrictions affecting the site. Delivery is proposed to be achieved by gaining outline consent with the owners going into partnership with a builder who specialises in small developments of high quality dwellings. The site is available from 2024 - 2028 and the submission expects development to take 18 months after an access to Shakespeare Road is approved.</p>	+
---	---

<p><b>Achievability</b></p>	~
-----------------------------	---

<p>Mains water and electricity supply are accessible from site boundary. The submission states that access to gas supply and digital and telecommunications infrastructure is unknown. No gas or oil pipelines or buffer zones cross the site. Overhead powerlines dissect the site so mitigation would be required to relocate the powerlines underground or divert them, this would impact viability and layout of the site. Issues of contamination as a result of asbestos would also require investigation and remediation.</p> <p>The site is accessible by road from Peppercorns Lane via a narrow track located on a corner (also used to access the local cricket club) meaning logistics may be hampered during development and potential traffic would impact on local residents. Proposed secondary access to the site is currently via a footpath off Shakespeare Road, access would have to cross the cycleway and potentially land owned by the Pightle Trust immediately north of the site boundary. The achievability of upgraded accesses sufficient for the proposed development could present a financial and physical constraint. Land in the south eastern edge of the site may also be in the ownership of the Pightle Trust and would require further investigation and/or consideration of the integration of the site with this land.</p> <p>The site forms a fundamental part of the open space setting of the River Great Ouse and a scheduled monument and as such any built development would have significant landscape, and heritage impact requiring significant mitigation. The impacts of transport and safety as a result of construction and occupation of around 6 dwellings would require significant consideration and mitigation, especially to the occupants of Peppercorns Lane and those using the public footpaths that bound the site.</p> <p>The site promoter suggests how some of these issues may be mitigated by referring to the previous refused planning application 16/01468/OUT which states that dwellings would be in keeping with the local vernacular of existing building nearby and that the areas of highest ecological value, particularly the boundary trees, would be recommended for retention.</p> <p>In addition, the submission notes that overhead electricity lines would need repositioning underground and that below surface asbestos comes from a collapsed agricultural roof and can be quickly removed for disposal. Access from Shakespeare Road is also under investigation which could result in access of some properties from there and some from Peppercorns Lane.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal constraints but there may be ownership constraints or a narrow band on the eastern edge of the site. The site's location is wholly within a mineral safeguarding area and mostly within another. The majority of the site is also within the Great Ouse green infrastructure strategic area as set out in set out Cambridgeshire Green Infrastructure Strategy (2011) and is also a Natural Cambridgeshire priority landscape area (Great Ouse Valley) and immediately adjacent a scheduled monument demonstrating that</p>	

there are very substantial constraints to overcome and site access could present a significant barrier. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it, therefore it is classified as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is wholly greenfield and grade 3 agricultural land
- The site is not constrained by fluvial flood risk, but surface water flood risk is present on site
- The site would fundamentally impact the the landscape setting and gateway to a green infrastructure corridor associated with the River Great Ouse priority landscape area
- Residential development in this location would create an isolated pocket of development, with little relationship to its surrounding countryside location
- The site could impact the setting of a scheduled monument
- Employment, primary education, shops, cultural and leisure facilities and public transport are within an accessible distance

In combination the outcomes of the LAA and SA indicate that:

- The site is inappropriate for residential development and would fundamentally impact the landscape setting and gateway to a green infrastructure corridor
- The achievability of upgraded accesses sufficient for the proposed development could present a financial and physical constraint as could mitigation of overhead electricity lines and ground contamination as a result of asbestos

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 1398 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is within flood zone 2 which places it at enhanced flood risk with very small pockets on the western boundary being in flood zone 3. Flood risk would form a substantial constraint on development. Approximately 25% of the south western part of the site is classified as grade 1 agricultural land which should be protected from built development. However, in reality this land is an integral part of the football field and its circulation and viewing space and is integral with the remainder which is classified as urban land. Therefore, this is not considered to form a significant constraint on the site's capacity. The north western part of the site is surfaced as a games court with the majority of the site laid out as a football club with associated viewing stands, outbuildings and a parking area. The whole site comprises level ground. The current use as a football field forms a constraint in itself as national policy specifies that such land should not be built on unless the space has been clearly shown to be surplus of requirements or it would be replaced by equivalent or better provision in a suitable location. No such evidence has been provided.</p> <p>The south western quarter of the site is situated within the Great Ouse green infrastructure priority area. However, landscape impact of potential development is partially reduced by the presence of the main viewing stand being situated on the western edge of the site already. Some longer distance views to the open landscape are screened by existing hedging, surrounding buildings and adjacent playing pitches. However, the site can be seen from the public footpath running north from the James Toller statue, along the eastern edge of the camping and caravanning site and linking in to the Coneygeare car park. Residential development bounds the northern and eastern edges of the site with educational buildings to the south and playing fields to the west. A small number of properties on The Broad Walk directly overlook the site and layout would need to take these homes in to account. Residential use of the site would be compatible with these.</p> <p>There is no known contamination or pollution within the site. No oil or gas pipelines or their associated buffer zones constrain the site and there are no electricity powerlines crossing it. No heritage assets exist within or immediately adjoining the site so there is no constraint from this. Highway access already exists from Hall Road facilitating access for construction and future residents. The northern boundary is separated from The Broad Walk by a drainage ditch. There are no public rights of way within the site</p> <p>The site would involve reuse of previously developed land. It lies within a mineral safeguarding area for sand and gravel but given its small scale is unlikely to form a viable resource. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p>	~

<p>The site is controlled by a charitable trust which supports its development. There are no known legal restrictions affecting the site. Redevelopment would require the existing football club facilities to be relocated which would be dependent upon funds being received from allocation and planning consent for residential development. The promoter suggests allocation status will be sought and the site then sold to a third party for development.</p>	~
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary. The site comprises level ground with a small urban watercourse parallel to the northern boundary. Demolition of the existing stands and other football club facilities would be required. Communications towers on site may also need to be relocated</p>	~
<p><b>Deliverability / developability</b></p> <p>Release of the site for residential development is dependent upon relocation of the existing football club. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● 97% is in flood zone 2 and around half suffers from surface water flooding too</li> <li>● Most is urban land but around a quarter is classified as grade 1 agricultural land</li> <li>● It is previously developed land</li> <li>● Good access to education, employment, social and community facilities</li> <li>● Some challenges in integrating development with adjoining uses</li> <li>● Liable to noise and light pollution from the adjoining school and sports uses</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is inappropriate for residential use due to flood risk</li> <li>● The current use as a football ground should be retained unless well-located, equal or better quality provision is provided</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is located in flood zone 1, surface water flood risk is located in the south west corner of the site and extends somewhat along the southern and eastern boundary. Approximately 3ha of the site is grade 2 agricultural land with the northern tip classified as urban. The site is in use as arable agricultural land.

The site slopes from south west to north east with a height difference of approximately 10m. The site is bounded to the west by the East Coast mainline railway which is raised and banked. The southern edge is bounded by the A428 which is in a cutting at the eastern end before heading under the B1046. The frontage to the A428 includes substantial copses

of woodland at either end of this frontage with just one gap through which clear views can be obtained across the site. The eastern boundary is edged by the B1046 which is lined by a more consistent tree belt of around 12 m in width screening the site with only the gap for the field entrance currently allowing limited glimpses into the site. Landscape impact would be limited, however the elevation of the buildings could make the development more prominent due to the sloping nature of the site. Approximately 1.15 ha of the north western edge of site adjacent to the railway line is identified as part of the Great Ouse green infrastructure strategic area and also a Natural Cambridgeshire priority landscape area for the Great Ouse Valley. Biodiversity, landscape and environmental impacts would all pose constraints to development of the site.

There is no known pollution or contamination and no oil pipelines and buffer zones cross the site. However, a high pressure gas pipe line runs along the western boundary of the site. High voltage overhead powerlines traverse the site from the centre point of the western boundary to the eastern boundary which form a significant constraint. Noise and light pollution may impact the layout and scale of development given proximity to the railway and the A428. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation orders affecting it.

Strategic Expansion Location SEL2: St Neots East (otherwise known as Wintringham Park) is located to the north east of the site and is currently under construction with some homes already occupied. The B1046 separates the submitted site and the strategic expansion location; integration would be difficult to achieve until development on the southern end of SEL2 is complete. The site is currently isolated from other residential areas.

As the site is wholly greenfield land it does not offer any potential for regeneration. Approximately 0.05ha of the central western edge of the site falls within a sand and gravel mineral safeguarding area, the rest of which is separated by the railway line. The site is not within a water recycling area.

**Availability**

The site is in single family control and development is supported by all landowners. There are no known legal restrictions affecting the site. The submission states that it is the intention to acquire planning permission before selling the land a third party for development. The submission suggests the land is available between 2024 and 2028 and is likely to be delivered over 2 to 3 years

**Achievability**

The submission notes that gas, mains water and electricity supply are accessible from site boundary as is digital and telecommunications infrastructure. The elevation of the buildings may require consideration due to the sloping nature of the site. The presence of a high pressure gas pipeline would constrain development on the western edge.

<p>The southern edge of the site is bounded by A428, the eastern edge by the B1046 and the western edge by the railway line, which would require noise mitigation measures. Portions of the southern and eastern parts of the site fall within the A428 Development Consent Order boundary potentially restricting development whilst construction is underway. The finalisation of the EastWest Rail route may also have similar impacts on the site and available land, but this is currently unknown. Air quality and vibrations as a result of East West Rail may also impact upon the proposed site. High voltage overhead powerlines traverse the site from the centre point of the western boundary to the eastern boundary which cross the railway line. Mitigation would be required to relocate the powerlines underground, or mitigate the presence of the powerlines, this would impact viability of the site, and could be difficult to remedy.</p> <p>Access to A and B road networks would assist with long term access to the site and the logistics of construction, current access is from the B1046. The presence of major roads would require further measures to safely integrate the community from proposed site with the existing residential community of St Neots, for example through provision of foot and cycle bridges.</p> <p>The site promoter has provided supporting information to suggest how some of these issues may be mitigated, for example it notes that the outline planning permission shows that the high voltage overhead electricity lines and high-pressure gas pipeline can be mitigated and that the site can have a neutral visual effect as confirmed by the Landscape and Visual Impact Assessment. The site promoter also notes that the outline consent addressed noise and vibration impacts.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to the A428, B1046 and railway may impact on the layout and mix of uses appropriate on the site and there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• The site is wholly greenfield and grade 2 agricultural land</li> <li>• The site is not constrained by fluvial flood risk with minimal surface water flood risk</li> </ul>
--

<ul style="list-style-type: none"> <li>• The has no direct relationship to the landscape</li> <li>• The topographical challenges could influence the layout of buildings and elevations</li> <li>• The site could relate well to Wintringam Park to the north once complete having the potential to be integrated with the community</li> <li>• The site is within reasonable distance to St Neots town centre, a primary school, employment opportunities and the railway station</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that:</p> <ul style="list-style-type: none"> <li>• May be appropriate for development in the long term contributing to the housing needs of the district and supporting sustainable place-making</li> <li>• Would require careful consideration of building elevations</li> <li>• The achievability of the site would be reliant upon mitigation of overhead electricity lines, safe response to the presence of a gas pipeline, and mitigation of noise and vibrational impacts due to proximity to the railway line.</li> </ul>
---

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1 and no surface water risk is present within the boundaries. The site is wholly classified as a grade 2 agricultural land and is currently covered with rough grassland. The land is flat and abuts the roundabout joining the A428 and B1428 Cambridge Road which form the southern and western boundaries respectively. The northern boundary comprises a mix of trees and shrubs with the access track to Greyholme and Tithe Farm just beyond the western half. Both road frontages have post and rail fencing giving a very open aspect. The site can be clearly seen from all sides. Landscape design to transition to open countryside to both north and south of the site or</p>	~
---	---

<p>to set back development may be required dependent on the use to ensure adequate amenity for users. The narrow width of the site at around 30m may be a constraint to achieving this.</p> <p>Strategic Expansion Location SEL2: St Neots East (Wintringham Park development) is located to the west of the site separated by Cambridge Road; the Loves Farm 2 development (also part of SEL2) is located northwest of the site. The compatibility of the proposed land use with the road network, roundabout and strategic expansion locations would be dependent on its future use. The noise and lights from traffic will form a constraint given their proximity to the site boundary.</p> <p>There is no known pollution or contamination and no gas/oil pipelines or associated buffer zones cross the site. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation orders affecting it. The site currently has a field access from Cambridge Road.</p> <p>As the site is wholly greenfield land it does not offer the potential for regeneration. It is not within a mineral safeguarding area or water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in individual company control by a developer; development is supported by the landowners. There are no known legal restrictions affecting the site. The site promoter states that the site would be delivered by a master developer. The site is available between 2024 and 2028 and likely to be delivered over 2 years.</p>	+
<p><b>Achievability</b></p> <p>The landowner notes that gas, mains water and electricity supply and digital and telecommunications infrastructure are all accessible from the site boundary. No gas/oil pipelines and buffer zones cross the site or overhead power lines/infrastructure.</p> <p>The A428 and B1428 Cambridge Road bound the site which would assist with the logistics of construction. Depending on the use, noise mitigation and landscape design to transition to open countryside may be required which could give rise to a constrained site shape. Resultant transport movements from proposed employment uses may impact on the safety of the local road network. The site promoter states site access is a constraint that would have to be confirmed from the existing road frontage. The site is located on a roundabout, safe access to and from the site may be impeded due to this location.</p> <p>The southern edge of the site is within the A428 Development Consent Order boundary potentially restricting development whilst construction is underway. The southern edge of the site will be in proximity to the proposed rerouting of the A428(A421). Landscape design to transition to open countryside may be required on the northern boundary of the site. Noise mitigation measures would be required to address the new A428(A421) rerouting and the</p>	~

<p>current A428 dependent on the proposed use. The finalisation of the East West Rail route may also have similar impacts (including vibrational) on the site and available land, but this is currently unknown. Air quality as a result of the new A428(A421) and East West Rail may also impact upon the proposed site use.</p> <p>Mitigation measures to address all of the above may affect the feasibility of the site for residential or employment use.</p> <p>The site promoter states that "Development at SEL2 and Wintringham in particular has taken a sustainable and responsive approach to transport provision including investment in new footpaths, cycleways and bridleways that will link the site to surrounding communities. Delivery in this location will additionally support usage of local public transport including rail and in particular new bus routes and cycle ways linking Wintringham to St Neots."</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to the existing A428, Cambridge Road and proposed A428 and EastWest Rail may impact on the layout and uses appropriate for the site and there are substantial constraints to overcome regarding access. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Subject to demonstrating a safe access the site could potentially be developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The proposed site presented 3 options for consideration:</p> <ul style="list-style-type: none"> <li>Option 1 Residential: To be confirmed at around 15 homes (potential for Market and/or affordable housing, Specialist housing, Custom and self-build housing, or Nursing and care homes);</li> <li>Option 2 Commercial: To be confirmed at around 2,500 sqm (including employment, retail or logistics/distribution)</li> <li>Option 3 Infrastructure: To be confirmed e.g. battery storage</li> </ul> <p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>The site is wholly greenfield land and grade 2 agricultural land</li> <li>The site is not constrained by fluvial or surface water flood risk</li> <li>The site is less than one hectare and would contribute to the government's aspiration to promote sites suitable for SME builders</li> </ul>
---

<ul style="list-style-type: none"> <li>The site currently acts as a landscape transition from the A428/Cambridge Road roundabout and residential development further north west mirroring the intention of strategic allocation (Wintringham Park) to the east, development here could impinge on this</li> <li>The site is within reasonable distance of St Neots town centre, a primary school, employment opportunities and public transport in the form of St Neots railway station and a bus stop</li> <li>The site is bounded by the A428 and abuts the Cambridge Road roundabout so is likely to suffer from noise, air light and air pollution and commercial or retail uses could exacerbate this</li> </ul> <p>In combination with the outcomes of the LAA and SA indicate that:</p> <ul style="list-style-type: none"> <li>The site may be appropriate for development provided this was not residential as amenity levels would be inadequate</li> <li>Landscaping to address this visual impact would be essential to the compatibility of the scheme with the form and character of the area</li> <li>Access to the site by vehicle in a safe manner could be a barrier to the safety of road users and pedestrians if residential or commercial options were chosen due to proximity to the roundabout</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 0.3ha</p> <ul style="list-style-type: none"> <li>Option 1 Residential</li> <li>Option 2 Commercial including employment, retail or logistics/distribution</li> <li>Option 3 Infrastructure</li> </ul> <p>60% net developable area maximum to reflect the need for substantial landscaping and set back from the A428.</p> <p>0.3 x 60% = <b>0.18 ha net developable area</b></p>	<p><u>Option 1 Residential</u></p> <p>The assessments demonstrate that the option of residential development is not feasible due to poor residential amenity.</p> <p><u>Option 2 Commercial</u></p> <p>Comprising employment, retail or logistics/distribution</p> <p>Retail (food store) at 0.25 plot ratio = (0.18ha x 0.25) x 10,000sqm = 450sqm floorspace</p> <p>Employment at 0.35 plot ratio = (0.18ha x 0.35) x 10,000sqm = 630 sqm floorspace</p>	<p>Undeliverable</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<p>Logistics at 0.4 plot ration -                      (0.18ha x 0.40) x 10,000sqm                      =720 sqm</p> <p><u>Option 3 Infrastructure</u></p> <p>Centrica advise that approximately 0.80ha is the minimum land requirement for battery storage, as the site is less than a quarter of this size it appears to not to be achievable.</p>	

Updates after the Initial Assessment

**St Neots 8: Land East of Loves Farm (Tithe Farm extension), St Neots**

<b>Site reference</b>	St Neots 8
<b>Site name</b>	Land East of Loves Farm (Tithe Farm extension), St Neots

Site address	Parish(es)	Site area (ha)
Land East of Loves Farm and north of Cambridge Road (B1428), St Neots	St Neots and Abbotsley	99.55 ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/ or affordable housing</li> <li>Specialist housing</li> <li>Custom and self-build housing</li> <li>Nursing or care homes</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Employment</li> <li>Retail</li> <li>Commercial leisure</li> </ul> Supporting infrastructure: <ul style="list-style-type: none"> <li>School</li> <li>Health uses</li> <li>Renewable energy</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>Natural, green and open space</li> <li>Biodiversity net gain</li> </ul>	Up to 1,500 new homes  All other proposed uses to be determined	Available 2029 - 2034  Build out over circa 10 years

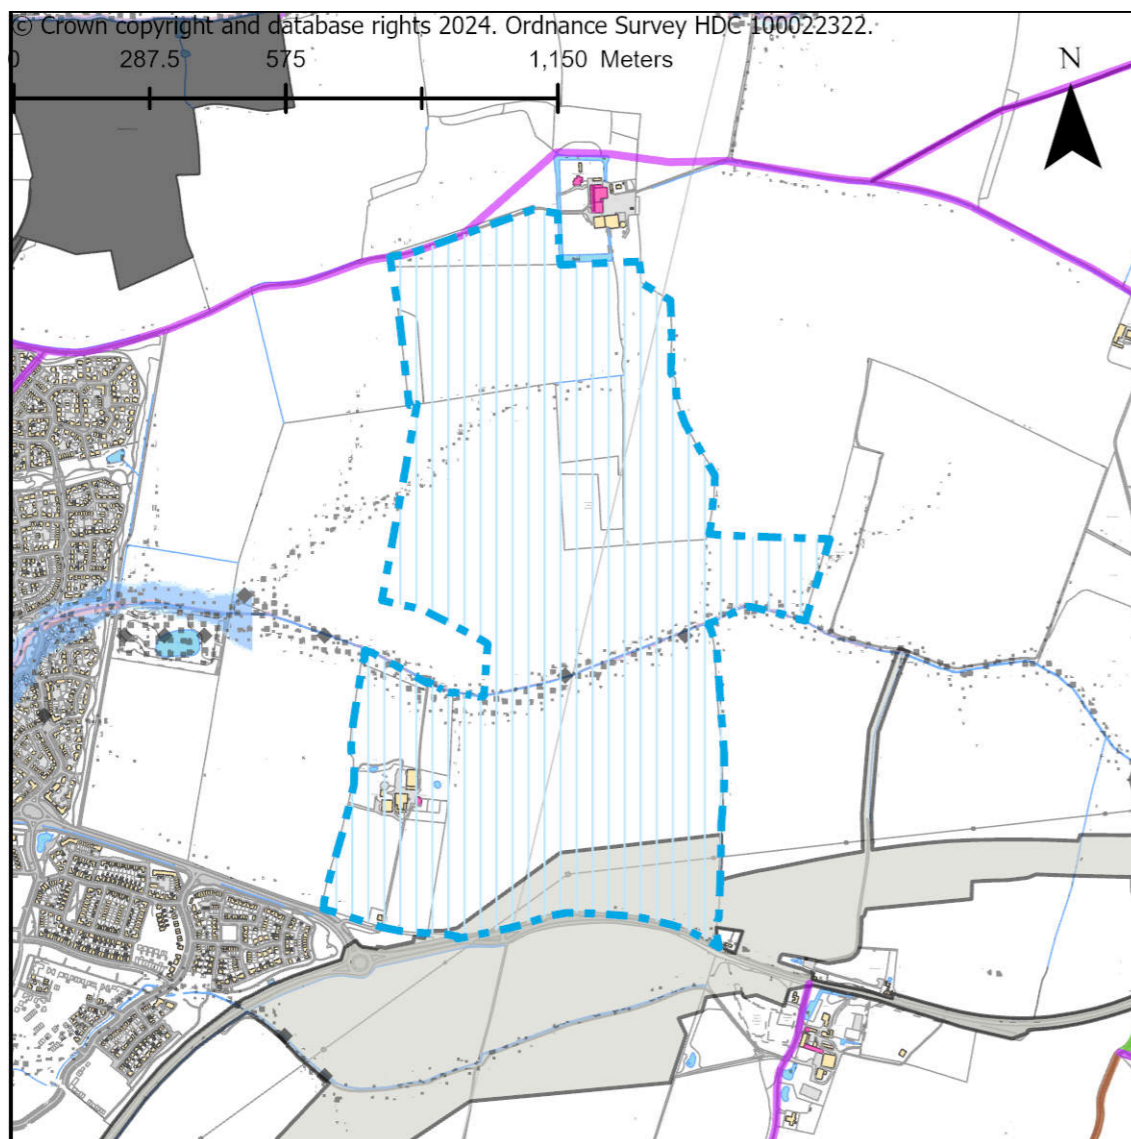

**Core information**

How was the site identified?	Call for sites 2023 submission: CfS:16
------------------------------	--

Relevant planning history	11.6 ha of the south west corner of the proposed site was included in the HELAA (December 2017): Tithe Farm
Land type	Part previously developed land and part greenfield land
Current use of the site	Agricultural and commercial
Supporting information	Location Plan including Loves Farm 2 masterplan. Loves Farm Expansion Concept Framework

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1, 0.3ha of the site is in flood zone 3b along Fox Book which runs east to west just below centre of site. Minimal surface water flood risk a is present on site. Two ponds are located within the Tithe Farm curtilage. The site is wholly classified as grade 2 agricultural land. A public right of way bounds the north east boundary (Priory Hill). The land slopes gently down from the north and south towards Fox Brook. Cambridge Road and the A428 bound the southern boundary and views from here are screened by trees and hedgerow. The site is located in open countryside. Long distance</p>	+
---	---

<p>views can be currently seen from Priory Hill and public rights of way to the north of the site making it highly exposed from the north, significant landscaping buffers may be required to mitigate impact on the adjoining countryside.</p> <p>Part of Strategic Expansion Location SEL2: St Neots East (otherwise known as Loves Farm 2) adjoins the western boundary; construction has not begun. SEL2 (Wintringham Park), currently under construction, is located to the south west and is separated by Cambridge Road. The site has the potential to be integrated with the current allocation.</p> <p>There is no known pollution or contamination and no gas/oil pipelines and buffer zones cross the site. Overhead powerlines traverse the site, one from the central point of southern boundary heading towards east and one south to north dissecting the site.</p> <p>There are a number of buildings within the site (approximately 6) associated with Tithe Farm, one of which is Grade II Listed. Integration and retention of this would be required.</p> <p>There are patches of wooded area across the site including Cromwell's Close Plantation (approximately 4.70ha) located in the north east quadrant, and approximately 0.68ha in the northwest quadrant with 0.56ha north of and surrounding Tithe farm. There are no nature conservation assets.</p> <p>The site is a mix of greenfield and previously developed land, however the majority of the site is greenfield meaning the opportunities for regeneration are limited. The site is not within a mineral safeguarding area or water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in the control of a single individual/ company with development supported by the landowner. There are no known legal restrictions affecting the site. The site promoter states that the site would be delivered by a master developer and that the land is available from 2029 - 2034 with delivery over circa 10 years.</p>	+
<p><b>Achievability</b></p> <p>The submission states that gas supply is not immediately accessible from the site. Mains water and electricity supply and digital and telecommunications infrastructure are accessible from the site boundary.</p> <p>The southern section of the site falls within the A428 Development Consent Order boundary and rerouting of the A428 potentially restricting development whilst construction is underway and/or affecting the amount of developable land. Noise mitigation measures would be required to address the new A428 rerouting and the current A428. The finalisation of the EastWest Rail route may also have similar impacts (including vibrational) on the site and available land potentially running through the site, but this is currently unknown. Air quality as a result of the new A428 and EastWest rail may also impact upon the proposed site.</p>	

<p>Two overhead powerline routes traverse the site, mitigation would be required to relocate the powerlines underground, or address the presence of the powerlines, this would impact viability of the site.</p> <p>Access to the A428 road network would assist with the logistics of construction. Major infrastructure would be required to support development, such as schools, local services and green spaces/infrastructure.</p> <p>Landscape buffers and integration of existing woodland would be required. Retention of the listed building would be required and the future of remaining buildings would require assessment as they fall within the setting of the listed building.</p> <p>The site promoter has provided a Loves Farm Expansion Concept Framework which provides a visual example of how the site could be integrated with the existing Strategic Expansion Location SEL2 (Loves Farm 2). The framework suggests semi-natural greenspace within the A428 DCO boundary, Tithe Farm to be retained to become a neighbourhood hub and retention of woodland with a green corridor surrounding Fox Brook. Other proposed land uses include sports, play, allotments, biodiversity, drainage and a 2 Form Entry Primary School.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Proximity to the existing A428 and proposed A428 and EastWest Rail may impact on the layout and mix of uses appropriate on the site and there are substantial constraints to overcome. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The majority of the site is within flood zone 1, 0.3ha of the site is in flood zone 3b</li> <li>• The site is predominantly greenfield and grade 2 agricultural land.</li> <li>• Preservation and enhancement of listed building its setting and existing woodland would be required.</li> <li>• The site could relate well to Loves Farm 2 to the west once complete having the potential to be integrated with the community.</li> </ul>
--

<ul style="list-style-type: none"> <li>• Landscape impact could be mitigated if masterplanned effectively due to a steep rise in topography to the north of the site mitigation measures to the north and east would require addressing.</li> <li>• Proximity to the new A428 and potentially could increase the likelihood noise light, and visual pollution although development in this area has demonstrated this can be mitigated</li> <li>• The site is close to St Neots town centre, railway, Primary Academy and employment providing potential employment and social opportunities. Active travel opportunities would be achievable from pavement that adjoins the site frontage, which can provide active travel opportunities.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for development in the long term contributing to the housing needs of the district and supporting sustainable place-making.</li> <li>• Flood mitigation would be required</li> <li>• Linkages into Loves Farm 2 to create integration are uncertain until reserved matters on Loves Farm 2 are confirmed.</li> <li>• Major infrastructure would be required to support development.</li> <li>• Access to A road networks would provide good long term road connectivity</li> <li>• Mitigation would be required to relocate or integrate powerlines</li> <li>• Biodiversity, landscape and environmental impacts of the site would need to be addressed.</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 99.5ha</p> <p>37.9% net developable area allowed following the exclusion land as proposed in the submitted masterplan for:</p> <ul style="list-style-type: none"> <li>• 10.2ha for primary school (including land for potential through school expansion at 8.2ha),</li> <li>• 5.61ha for formal open space</li> </ul>	<p>The net developable area is 37.73ha.</p> <p><b>1.23ha is deducted for a neighbourhood hub</b> (this includes the listed buildings), this leaves 36.5ha.</p> <p><b>3.65 ha is deducted for commercial, employment and retail uses</b> representing 10% of the outstanding site area.</p>	<p>Post 2035 subject to allocation and further progress on Loves Farm 2 to facilitate integration.</p> <p>Build out expected to require more than 10 years.</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<ul style="list-style-type: none"> <li>38.58ha for green infrastructure, sustainable drainage and accommodation of flood zones.</li> <li>7.43ha for informal open spaces (parks and gardens, natural/semi-natural green space, amenity green space, allotments)</li> </ul> <p>99.5ha x 37.9% = <b>37.73 ha</b></p>	<p><b>32.85 ha residential development area</b> for a variety of market/affordable homes, self and custom build housing and specialist housing.</p> <p>Mixed densities to reflect a range of densities reflective of large developments.</p> <ul style="list-style-type: none"> <li>3% of land at very high density 145dph. 0.9855ha x 145dph = 143 homes</li> <li>7% of land at high density 85dph. 2.2995ha x 85dph = 195 homes</li> <li>25% of land at moderate density 50dph. 8.2125ha x 50dph = 411 homes</li> <li>55% of land at low density 35dph. 18.0675 ha x 35dph = 632 homes</li> <li>10% of land at very low density 25dph. 3.285ha x 25dph = 82 homes</li> </ul> <p><b>1,463 total homes</b></p> <p><b>Note:</b> this calculation is indicative and may be subject to review if there is further certainty on the prospects of EastWest Rail coming forward, it is not taken into account in the above.</p>

Residential: Custom and self-build housing Market and/or affordable housing	15 homes and 5 plots	Available 2024 - 2028 Build out over 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CFS:269
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Paddock land
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly in flood zone 1 and is classified as grade 3 agricultural land currently used for pasture with a few individual trees in the southern part. The site is broadly level with a very slight slope to the east as part of the wider topography to its surrounding areas. The northern and western boundaries of the site adjoin High Street with residential properties across the road; the boundaries comprise mature trees and hedges which reduce exposure to the adjoining residential developments. The eastern boundary comprises a variety of hedges, trees and outbuildings associated with Manor Farm. The southern boundary is more distinctive as it is open to the adjoining former cricket club and open field. The landscape impact of development would be limited given the extensive boundary trees and hedging around most of the site. However, the impact from the southern aspect would be noticeable particularly from the public right of way that crosses the south western corner of the site and continues north east of the cricket pitch as a clear view over the site can be obtained from the path and the cricket pitch. Substantial planting would be needed to screen development from the southern aspect.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. Although the site is within the Yelling conservation area, it contains no listed buildings or other known heritage assets. There are no designated nature conservation assets within the site nor are any of the trees on site designated with tree protection orders. The site has a field access from the High Street shared with the former cricket pitch and field (Yelling 2). It would be necessary to enhance this access to facilitate development.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site and does not include a mineral safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. There are no current uses to be relocated. The promoter suggests the land would be available 2024-2028 and anticipates seeking allocation status then selling the site to a third party for development. Given the timescales anticipated to achieve the desired allocation availability post 2028 is more realistic.</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary except for gas supply. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site has an existing field access from the High Street although this crosses a public right of way which would need to be retained. It is approximately 1.9kms west of the B1040.</p>	~

<p>There are no built structures on the site that require clearance. The site promoter suggests residential development of 15 homes with a small proportion of custom and self build plots although there is no certainty over how these would be secured.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The site being within the conservation area means that any future development will need to be sensitive to its impact on the character and appearance of the conservation area and nearby listed buildings. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Has limited accessibility to shops, primary education, local leisure and community facilities</li> <li>● Has limited public transport access and access to employment opportunities</li> <li>● Reasonable connectivity to the strategic road network</li> <li>● Small scale development could be integrated into the existing place and community</li> <li>● Is within the Yelling conservation area and the setting of a grade 2 listed building</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● May be appropriate for built development</li> <li>● Would contribute to the housing needs of the district</li> <li>● Would need to be sensitive to its impact on the character and appearance of the conservation area and the setting of a listed building.</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 1.09 ha</p>	<p>Residential use - market and/or affordable housing</p>	<p>Available post 2028</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
80% net developable area to allow for adequate of landscaping  1.09 ha x 80% = <b>net developable area of 0.87 ha</b>	Custom and self-build housing  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 25 x 0.87 = <b>21 homes/plots</b>	Build out over 2 years

Updates after the Initial Assessment

--

**Yelling 2: Land South of Manor Farm, Yelling**

<b>Site reference</b>	Yelling 2
<b>Site name</b>	Land South of Manor Farm, Yelling

Site address	Parish(es)	Site area (ha)
Land South of Manor Farm, Yelling	Yelling	3.01

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Custom and self-build housing Market and/or affordable housing	40 homes and 5 plots	Available 2024 - 2028 Build out over 2 years

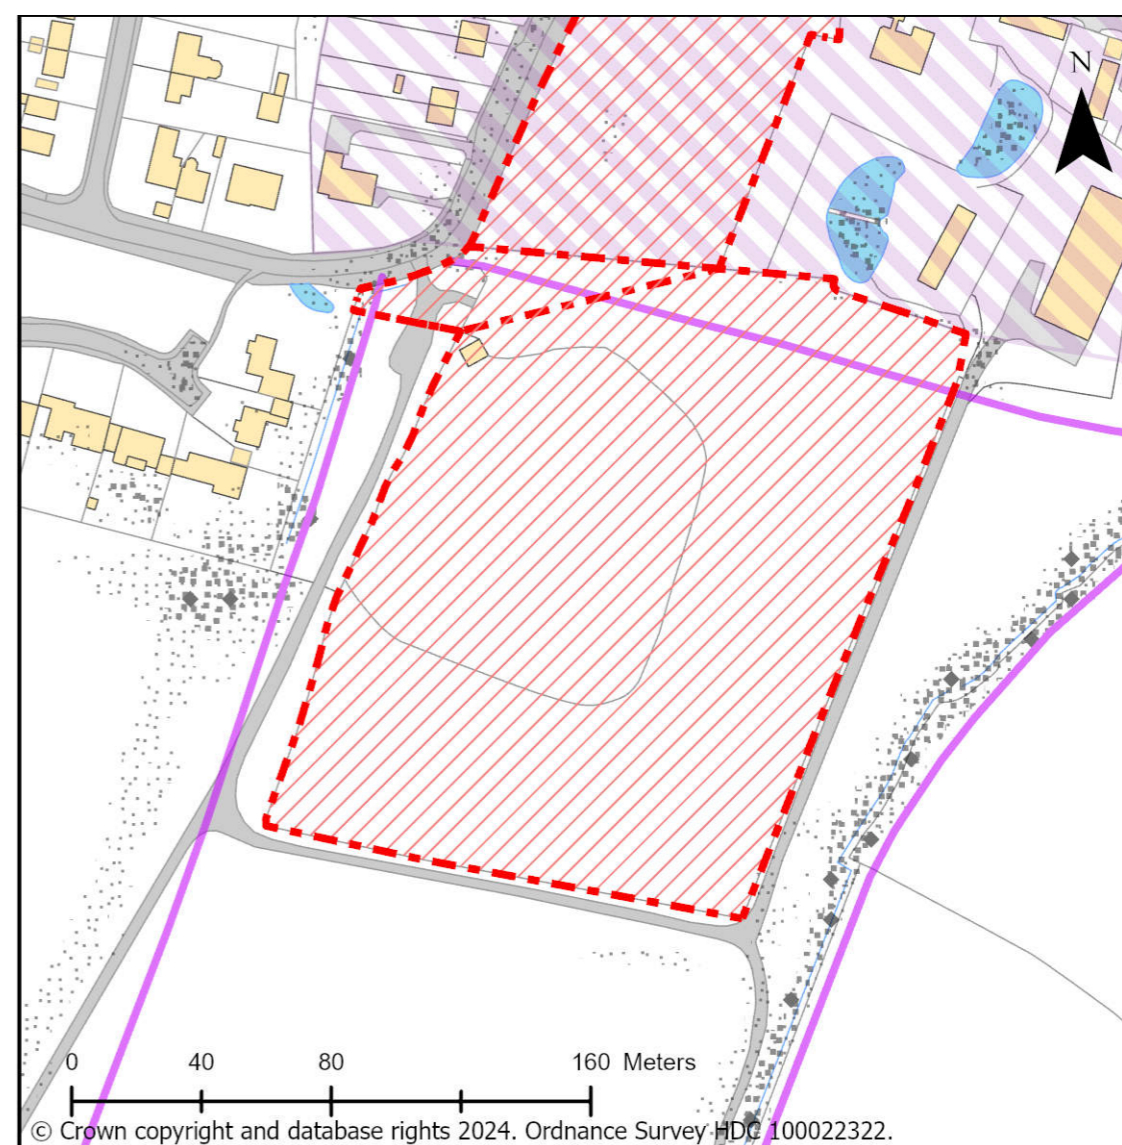

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:274
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Other (vacant grassland and former cricket club)
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly in flood zone 1 and is classified as grade 3 agricultural land. It contains an area formerly used for the Cricket Club with a small clubhouse building. The site is relatively flat with a very slight slope downwards to the east contiguous with the topography of the wider area. The western boundary comprises mature trees and hedging separating the site from a track and public footpath which sit between the site and the rear gardens of three houses on High Street to the northern half and open countryside on the southern half. The southern boundary comprises a less dense hedgerow and intermittent trees again adjoining a track separating the site from the open countryside. The planting reduces exposure to the adjoining residential development to the west and the open countryside to the south. The northern boundary is open to the adjoining paddock with land and outbuildings associated with Manor Farm on the north eastern corner. The eastern boundary is entirely open to a farm track with open countryside beyond with limited screening from trees and shrubs along a nearby drainage ditch. Development of the site would be visible from northern and eastern boundaries and a strong landscaping buffer would be required to mitigate impact on the adjoining countryside to the east and paddock land to the north and the existing southern boundary planting would need reinforcing. The landscape impact of development on the site would be quite high given its limited boundary screening and relationship with the open countryside.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. Although the site lies next to the Yelling conservation area, it contains no listed buildings or other known heritage assets. There are no designated nature conservation assets within the site and no tree preservation orders. The site has a field access from the High Street shared with the land to the north (Yelling 1). It would be necessary to enhance this access to facilitate development.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site and does not include a mineral safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. Part of the site was used as a cricket ground but the Cricket Club ceased playing in 2021. The promoter suggests the land would be available 2024 - 2028 and seeks to obtain an allocation before selling the site to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all main services are accessible from the site boundary except for a gas supply. The site comprises broadly level ground and there are no known topographical challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be accessed from a track road that connects</p>	~

<p>to High Street although it would require significant upgrading. It is located approximately 2kms from the B1040 to the east. The site is a disused cricket ground and has a small clubhouse on it that would require clearance. The site promoter suggests residential use with a small proportion of custom and self build plots although there is no certainty over how these would be secured.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Future development will need to be sensitive to the setting of the conservation area adjoining the site to the north. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Has limited accessibility to shops, primary education, local leisure and community facilities</li> <li>● Has limited public transport access and limited access to employment opportunities</li> <li>● Intensification of use of the field access which connects the site to the highway network may not be ideal and would require further scoping</li> <li>● Small scale development could be integrated into the existing place and community</li> <li>● Is adjacent to the Yelling conservation area and the setting of a grade 2 listed building</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is inappropriate for a built development as it would not reflect the character of Yelling and would be of a scale inappropriate to the village.</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Key Decision – Yes**

## **HUNTINGDONSHIRE DISTRICT COUNCIL**

**Title/Subject Matter:** Sustainability Appraisal for the Local Plan Update  
Further Issues and Options and Land Availability  
Assessments

**Meeting/Date:** Overview and Scrutiny (Performance and  
Growth) – 4 September 2024  
Cabinet – 10 September 2024

**Executive Portfolio:** Executive Councillor for Planning

**Report by:** Chief Planning Officer

**Ward(s) affected:** All Wards

---

### **Executive Summary:**

Sustainability Appraisal and Strategic Environmental Assessment are statutory requirements of Local Plan preparation with them being combined into a single document to avoid repetition. It is also necessary to demonstrate that plan-making is in compliance with the National Planning Policy Framework's ambitions for sustainable development.

Sustainability Appraisal is an iterative process running across five required stages. Stage A was completed last year with the Scoping Report being issued for public engagement in February 2023. The Sustainability Appraisal includes a non-technical summary which summarises the process and progress up to autumn 2024. It lists the sustainability objectives which focus on responding to the climate emergency, tackling environmental aspects of sustainability and addressing socio-economic aspects of sustainability.

This stage is the first iteration of Stage B which seeks to develop options and appraise effects. This document includes comparative appraisals of all the options put forward in the Further Issues and Options 2024 engagement paper and of the sites included in the Land Availability Assessment.

It is now proposed that the Sustainability Appraisal is consulted upon alongside the Further Issues and Options consultation document and the Land Availability Assessment to allow members of the public, statutory consultees, landowners, developers and interested parties to see the results of the sustainability appraisals and to provide comments. The consultation is proposed to be held over 10 weeks between 18 September and 27 November 2024.

**Recommendations:**

The Cabinet/Committee is

**RECOMMENDED**

- 1) To endorse the content of the Sustainability Appraisal 2024
- 2) To agree that the Sustainability Appraisal be published for public engagement for ten weeks between 18 September and 27 November 2024 under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012
- 3) To grant delegated authority to the Chief Planning Officer, in consultation with the Executive Councillor for Planning to make any necessary typographical or other minor changes to the document prior to its publication for consultation.

## **1. PURPOSE OF THE REPORT**

- 1.1 Sustainability Appraisal is a key statutory element of preparation of a Local Plan. This report sets out the initial draft of the Sustainability Appraisal that will accompany the Local Plan Update throughout its preparation. It is proposed to publish the Sustainability Appraisal for public engagement alongside the Further Issues and Options 2024 engagement paper and the Land Availability Assessment. It will provide our communities with their next opportunity to help shape the future development plan for Huntingdonshire.

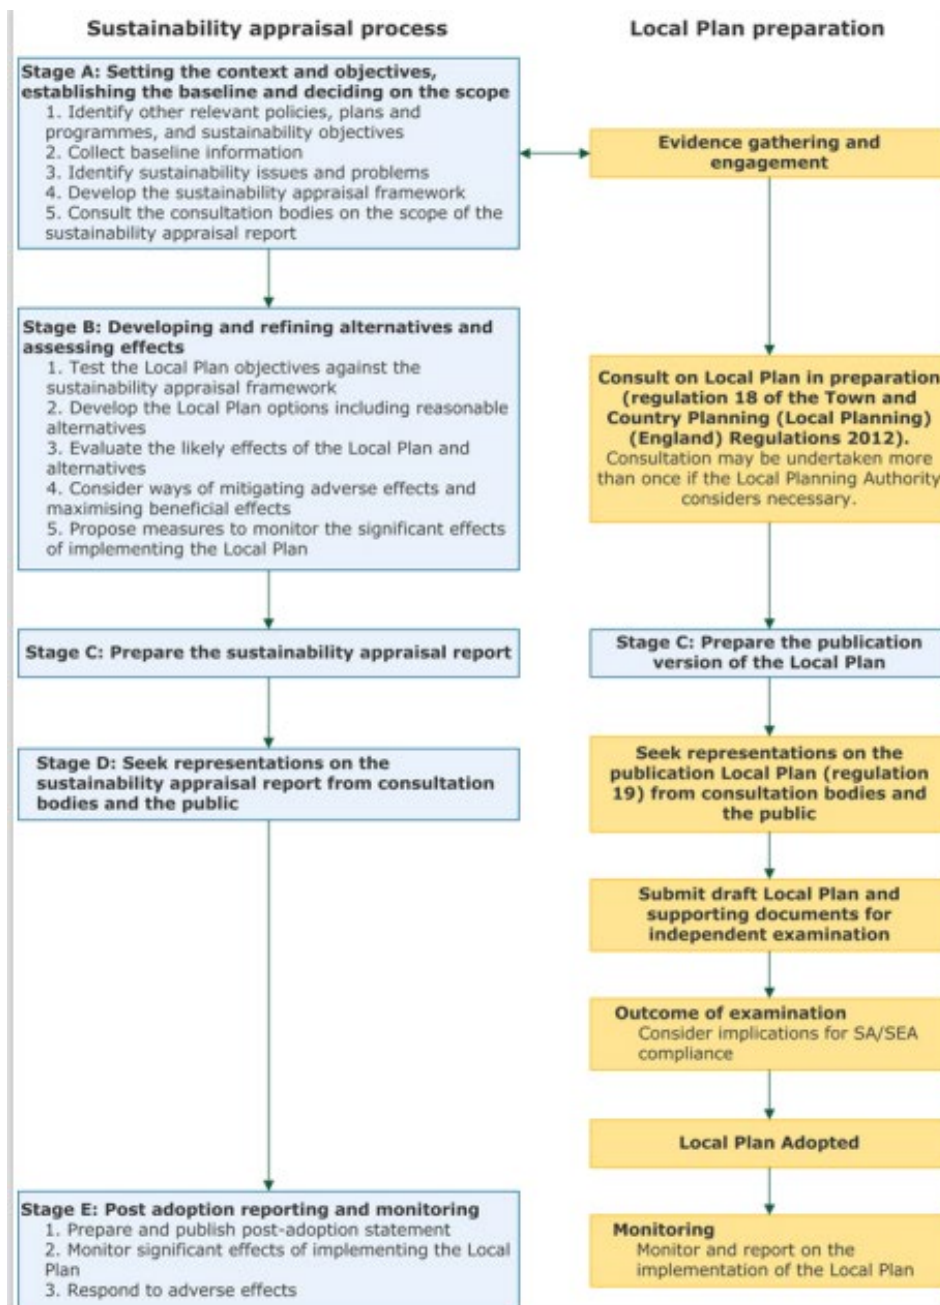

## **2. BACKGROUND**

- 2.1 Local Plans require strategic environmental assessment through the [Environmental Assessment of Plans and Programmes Regulations 2004](#). They also require sustainability appraisal through the [Planning and Compulsory Purchase Act 2004 \(as amended\)](#). These requirements are typically combined into a single Sustainability Appraisal report which is the approach being taken here.
- 2.2 The National Planning Policy Framework (NPPF) places a strong emphasis on achievement of sustainable development. NPPF paragraph 8 provides definitions of the three objectives of sustainable development which are focused as economic, social and environmental.
- 2.3 NPPF paragraph 9 states that: 'These objectives should be delivered through the preparation and implementation of plans ... Planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.'
- 2.4 NPPG paragraph 11 states that: 'Plans and decisions should apply a presumption in favour of sustainable development.  
For plan-making this means that:
- a) all plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects'.
- 2.5 The Sustainability Appraisal evaluates all proposals and allows for consideration of reasonable alternatives; it considers whether any anticipated negative impacts can be adequately mitigated by changes to the proposed plan. It is the primary way in which the Council can demonstrate to the Planning Inspector during the Local Plan's examination in public that these requirements have been met.

### 3. SUSTAINABILITY APPRAISAL

3.1 Sustainability Appraisal is an iterative process running across five required stages. Stage A was completed last year with the Scoping Report being issued for public engagement in February 2023. This stage is the first iteration of Stage B which seeks to develop options and appraise effects. The report itself forms the first iteration of Stage C which is to present the findings from Stage B. The process is summarised in the following diagram.

3.2 The Sustainability Appraisal includes a non-technical summary which summarises the process and progress up to autumn 2024. It lists the sustainability objectives which focus on responding to the climate emergency, tackling environmental aspects of sustainability and addressing socio-economic aspects of sustainability. It also explains the development of options and appraisal of their effects at this stage.

- 3.3 At this stage the Sustainability Appraisal sets out analysis of:
- The development strategy which includes each of the topic-based chapters from the Further Issues and Options 2024 engagement paper. Within each topic each related set of options are assessed in a comparative table so that it is easier to see how the options perform relative to each other.
  - The sites which are assessed in the same groupings as the Land Availability Appraisals (LAA). The site sustainability appraisals provide an opportunity for consideration of detailed sustainability aspects of the sites submitted for consideration for development. They are complementary to the assessments of site potential in the LAAs with the impacts of the SA fed back into the LAA assessment to complete the comprehensive assessment of the site.
- 3.4 Each sustainability objective is provided with both a commentary and a score which is based on the following chart indicating the effect of the approach on the objective.

Score	Effect of the approach
++	Contributes significantly to the achievement of the objective
+	Contributes to the achievement of the objective
N	No clear relationship to achieving the objective, the outcome is uncertain or the outcome may depend on delivery specific factors
	The objective is not relevant to the proposal
-	Detracts from achievement of the objective
--	Significantly detracts from achievement of the objective

#### 4. COMMENTS OF OVERVIEW & SCRUTINY

- 4.1 The comments of the relevant Overview and Scrutiny Panel will be forwarded to the Cabinet prior to its consideration of this report.

#### 5. KEY IMPACTS / RISKS

- 5.1 Failure to carry out the sustainability appraisal process properly can expose the plan to legal challenge.

#### 6. WHAT ACTIONS WILL BE TAKEN AND TIMETABLE FOR IMPLEMENTATION

- 6.1 Public engagement on the Sustainability Appraisal is proposed to be held over 10 weeks between 18 September and 27 November 2024.
- 6.2 At the close of consultation, the comments made will be assessed and outcomes used to shape policy development and proposed site allocations for the Preferred Options Draft Local Plan Update.

## **7. LINK TO THE CORPORATE PLAN, STRATEGIC PRIORITIES AND/OR CORPORATE OBJECTIVES**

- 7.1 The production of the Sustainability Appraisal aligns with Priority 2: Creating a better Huntingdonshire for future generations set out in the Corporate Plan 2023 to 2028, a key action of which is:

“Continue the update to the Local plan, including updating evidence bases in line with National Planning Policy, particularly where it relates to Economy, Environment and Housing.”

## **8. LEGAL IMPLICATIONS**

- 8.1 Section 19 of the [Planning and Compulsory Purchase Act 2004 \(as amended\)](#) requires a local planning authority to carry out an SA of each of the proposals in a Local Plan during its preparation. More generally, section 39 of the Act requires that the authority preparing a Local Plan must do so '*with the objective of contributing to the achievement of sustainable development*'. Sustainability appraisals incorporate the requirements of the [2004 Environmental Assessment Regulations](#), meaning the SA and SEA are carried out together as part of the preparation of planning documents and are collectively known as the SA process.

## **9. HEALTH IMPLICATIONS**

- 9.1 Population and health is one of the required considerations within the Sustainability Appraisal process. This is primarily addressed within the socio-economic group of objectives including basic health related aspects such as provision of shelter through access to housing that meets people's needs, promotion of social inclusion to support people's mental well-being and promotion of active travel opportunities for physical health. Other health related aspects are addressed through objectives related to responding to the climate emergency including adaptability and resilience of developments, provision of green infrastructure and promotion of participation in healthy lifestyles through nature based or outdoor leisure activities and minimisation of pollution.

## **10. ENVIRONMENT AND CLIMATE CHANGE IMPLICATIONS**

- 10.1 Paragraph 9 of the National Planning Policy Framework requires that 'planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.' This includes ensuring that the Local Plan and its policies meet the principles of sustainable development; achieving net gains from an economic, social and environmental perspective defined in NPPF paragraph 8 as follows:

- a) 'an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure;
- b) a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and
- c) an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy.'

10.2 The Council's response to climate change and promotion of environmental sustainability run throughout the Sustainability Appraisal. Three objectives relate specifically to the response to the climate emergency with a further five relating specifically to environmental issues. These will all shape the content of the Preferred Options Draft Local Plan Update. The Local Plan Update is also supported by a series of evidence base documents relating to climate change providing expert recommendations on the approaches to be taken.

## **11. REASONS FOR THE RECOMMENDED DECISIONS**

11.1 Public engagement on the Sustainability Appraisal is an integral part of preparation of the Local Plan Update. It will also contribute towards achieving action 32 of the Corporate Plan 2023 – 2028's annual Action Plan for this year, "Continue the update to the Local plan, including updating evidence bases in line with National Planning Policy, particularly where it relates to Economy, Environment and Housing.". Receipt and consideration of responses from residents, businesses, organisations and other stakeholders will contribute towards preparation of the Preferred Options Draft Local Plan Update.

11.2 The recommendations are therefore:

- To approve the contents of the Sustainability Appraisal
- To agree that the Sustainability Appraisal be published for public consultation for ten weeks between 18 September and 27 November 2024.
- To grant delegated authority to the Chief Planning Officer, in consultation with the Executive Councillor for Planning to make any necessary typographical or other minor changes to the document prior to its publication for consultation.

**Document Information**

## i Non-technical Summary

This is the non-technical summary of the draft sustainability appraisal report which has been produced alongside the Huntingdonshire Local Plan Update.

### Why do we do sustainability appraisal?

When drawing up new planning documents the effects they will have on the environment and people's quality of life, both now and in the future are some of the most important things to consider. To be sure that the plan does not cause economic, environmental and social problems, at the heart of the plan production process there is a system of assessment known as Sustainability Appraisal (SA).

SA is a systematic process for assessing the extent to which the emerging plan will help to achieve sustainable development. It is an opportunity to consider ways by which the plan can contribute to improvements in economic, environmental and social conditions, as well as a means of identifying and mitigating any potential adverse effects that the plan might otherwise have.

The purpose of the planning system is to contribute to the achievement of sustainable development. The Government's view of what constitutes sustainable development is set out in the National Planning Policy Framework (NPPF). The NPPF uses the United Nations definition of sustainable development as 'development that meets the needs of the present without compromising the ability of future generations to meet their own needs'.

### How will the appraisal be done?

The SA process requires the following stages and tasks be met:

Table 1 Stages A to E in the SA/SEA process

<b>Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope</b>
<p><b>A1: Identifying relevant plans and programmes' (Schedule 2, (1) and (5))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to establish how the plan is affected by outside factors, to suggest ideas for how any constraints can be addressed, and to help identify environmental protection objectives.</li> </ul>
<p><b>A2: Collecting baseline information' (Schedule 2, (2) and (3))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to provide an evidence base for environmental impacts, prediction of what will happen without the plan as well as what effects it could have, monitoring and to help in the development of SA objectives.</li> </ul>
<p><b>A3: Identifying sustainability issues and problems' (Schedule 2, (4) and Schedule 1, (1))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to help focus the SA and streamline the subsequent stages, including baseline information analysis, setting the SA objectives, prediction of effects and monitoring</li> </ul>
<p><b>A4: Developing the SA framework' (Schedule 2, (6))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to provide a means by which the environmental performance of the plan or programme and alternatives can be assessed.</li> </ul>
<p><b>A5: Consulting on the scope of the SA' (Part 3(5))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to ensure that the SA covers the likely significant environmental effects of the plan and to ensure that the SA process is and will be robust and suitably comprehensive in order to support production of the plan.</li> </ul>
<b>Stage B: Developing and refining options and assessing effects</b>

**i Non-technical Summary**

Page 1434 of 3488

**B1: Testing the plan objectives against the SA framework (Schedule 2, (6))**

- The purpose of this task is to identify potential synergies or inconsistencies between the objectives of the plan and the SA objectives.

**B2: Developing plan options (Part 3(12) and Schedule 2, (8))**

- The purpose of this task is to develop and refine options.

**B3: Predicting the effects of the plan and alternatives (Schedule 2, (6))**

- The purpose of this task is to predict the significant environmental effects of the plan and alternatives.

**B4: Evaluating the effects of the plan and alternatives (Schedule 2, (6))**

- The purpose of this task is to evaluate the predicted effects of the plan and alternatives in order to assist in the refinement of the plan.

**B5: Considering ways of mitigating adverse effects and maximising beneficial effects (Schedule 2, (7))**

- The purpose of this task is to ensure that adverse effects are identified and potential mitigation measures are considered.

**B6: Proposing measures to monitor the significant effects of implementing the plan (Schedule 2, (9))**

- The purpose of this task is to detail the means by which the environmental performance of the plan can be assessed.

**Stage C: Preparing the Sustainability Appraisal Report**

**C1: Preparing the Sustainability Appraisal Report (Part 3(12) and Schedule 2, (6) to (10))**

- The purpose of this task is to present the predicted effects of the plan, including alternatives, in a form suitable for public consultation and use by decision makers.

**Stage D: Consulting on the draft plan and the Sustainability Appraisal Report**

**D1: Public participation on the draft plan and the Sustainability Appraisal report (Part 3(13))**

- The purpose of this task is to give the public and Consultation Bodies an opportunity to express their opinions on the findings of the Environmental Report and to use it as a reference point in commenting on the plan. To gather more information through the opinions and concerns of the public.

**D2: Appraising significant changes (Schedule 2, (6))**

- The purpose of this task is to ensure that the environmental implications of any significant changes to the draft plan are assessed and taken into account.

**D3: Making decisions and providing information (Part 4(16))**

- The purpose of this task is to provide information on how the Sustainability Appraisal Report and consultees' opinions were taken into account in deciding the final format of the plan to be adopted.

**Stage E: Monitoring the significant effects of implementing the plan on the environment**

**E1: Developing aims and methods for monitoring (Part 4(17))**

- The purpose of this task is to track the environmental effects of the plan to show whether they are as predicted; to help identify any adverse effects.

**E2: Responding to adverse effects (Part 4(17))**

- The purpose of this task is to prepare for appropriate responses where adverse effects are identified.

## What has been done so far up to Autumn 2024?

### Stage A - The Scoping stage

#### A1 - Identifying relevant plans, programmes and strategies

Plans, programmes and strategies that were considered to be relevant were reviewed. A full list of these is provided in Appendix 1 to the SA. The appendix splits these into international, national, regional, sub-regional, county and local level documents. The key aims, objectives, and targets/ indicators for each plan, programme and strategy are identified alongside how they will shape the Huntingdonshire Local Plan and what baseline topic they relate to.

The key aims, messages and objectives from the relevant plans, programmes and strategies are summarised below:

Grouping	Key aims, messages and objectives
<b>Procedural</b>	<ul style="list-style-type: none"> <li>The Local Plan and its proposals are required to undergo a Sustainability Appraisal (including an Environmental Impact Assessment)</li> <li>The Local Plan must undergo a Habitats Regulations Assessment (HRA)</li> <li>The Local Plan and its proposals must be assessed for their impact on protected characteristics through an Equality Impact Assessment</li> <li>Evidence used to shape the Local Plan must be made publicly available</li> <li>Consultation will be undertaken throughout the plan making process and recorded in a Statement of Consultation document</li> </ul>
<b>Overarching</b>	<ul style="list-style-type: none"> <li>The Local Plan must promote all strands of sustainable development (economic, environmental and social) in a holistic way</li> </ul>

Grouping	Key aims, messages and objectives
	<ul style="list-style-type: none"> <li>Sustainability is an underlying principle of the planning system</li> <li>Consider the economic, environmental and social ambitions of the Oxford-Cambridge Arc (now known as the Oxford to Cambridge Pan-regional Partnership)</li> <li>Incorporate where possible the Cambridgeshire &amp; Peterborough Combined Authority's and Huntingdonshire District Council's corporate aims and objectives</li> <li>Development needs to be well designed and where people want to live and work</li> </ul>
<b>Climate change:</b>	<ul style="list-style-type: none"> <li>The Local Plan must include policies on climate change</li> <li>The UK Government has pledged to be carbon neutral by 2050, the District Council has set a target of reaching net zero carbon by 2040</li> </ul>
Carbon Emissions and Targets	<ul style="list-style-type: none"> <li>Plan for and respond to the impacts of climate change</li> <li>Promote opportunities for renewable and low carbon energy generation including community led generation</li> </ul>
Renewable Energy and Energy Efficiency	<ul style="list-style-type: none"> <li>Improve the energy performance of buildings to reduce energy consumption and reduce costs to residents</li> <li>Support retrofitting of older and less energy efficient housing stock and non-residential buildings</li> </ul>
Flooding and Water	<ul style="list-style-type: none"> <li>Minimise the damage of flooding to people and property</li> <li>Incorporate flood resilient and resistant design into new builds where there is a risk of flooding from any source</li> </ul>
Waste and Recycling	<ul style="list-style-type: none"> <li>Ensure there is sufficient water capacity to service growth</li> <li>Promote the development of water efficient homes and non-residential buildings</li> <li>Integrate the 'waste hierarchy' of reduce waste and increase the amount which is re-used and recycled to meet national and local targets</li> </ul>

## i Non-technical Summary

Grouping	Key aims, messages and objectives
	<ul style="list-style-type: none"> <li>Promote opportunities to create a circular economy by maximising the reuse of materials, particularly in construction</li> <li>Ensure sustainable waste management practices are in place</li> </ul>
<b>Environmental:</b>	<ul style="list-style-type: none"> <li>Protect and enhance the various landscapes and their key characteristics</li> </ul>
Landscape	<ul style="list-style-type: none"> <li>Maintain and enhance landscape and townscape character</li> </ul>
Land, Soils and Agriculture	<ul style="list-style-type: none"> <li>Promote landscape protection, management and planning</li> <li>Conserve and where possible enhance the best and most versatile agricultural land</li> </ul>
Biodiversity, Habitats and the Natural Environment	<ul style="list-style-type: none"> <li>Support sustainable agricultural practices</li> <li>Conserve and restore peatland</li> <li>Prioritise the reuse of previously developed land (brownfield land) over greenfield land</li> </ul>
Green Infrastructure and Open Space	<ul style="list-style-type: none"> <li>Protect and enhance biodiversity, natural habitats and wild fauna and flora, including international, national and local designated sites</li> <li>Policies and proposals must seek a minimum 10% biodiversity net gain</li> </ul>
Pollution	<ul style="list-style-type: none"> <li>Conserve existing tree cover and support additional tree planting</li> <li>Support access to the countryside and the public rights of way network</li> <li>Protect and enhance green infrastructure</li> <li>Ensure that all residents have access to open and green space</li> <li>Improve the quality and quantity of open spaces and accessibility to these spaces</li> </ul>

Grouping	Key aims, messages and objectives
	<ul style="list-style-type: none"> <li>Minimise water pollution to increase the ecology quality of rivers and groundwater</li> <li>Reduce the concentration of air pollutants and keep levels of pollutants below maximum levels</li> </ul>
<b>Socio-economic:</b>	<ul style="list-style-type: none"> <li>Identify land that will meet the housing needs of the district</li> </ul>
Housing	<ul style="list-style-type: none"> <li>Provide a variety of housing types, mix and tenures across the district</li> <li>Tackle affordability issues</li> </ul>
Population and Health	<ul style="list-style-type: none"> <li>Provide homes that meet people's needs or are capable of being adapted in the future to accommodate changing needs</li> </ul>
Income and Deprivation	<ul style="list-style-type: none"> <li>Ensure the needs of Gypsy and Travellers are met</li> <li>Provide care homes, accommodation and health facilities to meet the needs of the elderly or those with specific medical needs in accessible locations</li> </ul>
Employment and Business	<ul style="list-style-type: none"> <li>Support self and custom build housing</li> </ul>
Travel and Transport	<ul style="list-style-type: none"> <li>Promote high quality design for housing products that reflect local character and are integrated into the surrounding community</li> </ul>
Digital Infrastructure and Communications	<ul style="list-style-type: none"> <li>Improve health and well-being</li> <li>Enhance quality and quantity of indoors and outdoors sports facilities</li> <li>Tackle inequalities to raise quality of life</li> <li>Promote social inclusion and integration</li> </ul>
Retail and Town Centres	<ul style="list-style-type: none"> <li>Promote Huntingdonshire's contribution to the wider Cambridgeshire and Peterborough economy</li> </ul>
Tourism and Leisure	<ul style="list-style-type: none"> <li>Support existing businesses</li> <li>Enhance employment opportunities for all</li> <li>Support small and medium sized businesses to grow and thrive within the district</li> </ul>

Grouping	Key aims, messages and objectives
Community Services and Facilities	<ul style="list-style-type: none"> <li>• Ensure adequate public transport infrastructure to access services, facilities and employment destinations via more sustainable modes of transport</li> <li>• Reduce the dependency on private car usage</li> <li>• Improve public transport in rural areas</li> <li>• Support strategic highway and transport projects</li> <li>• Ensure communities are digitally connected</li> <li>• Support digital connectivity particularly in more rural parts of the district</li> <li>• Support Huntingdonshire's high streets and retail centres</li> <li>• Support the tourism and leisure sector</li> <li>• Ensure there is good access to facilities such as community, sports, health and leisure facilities</li> <li>• Support the provision of additional community services and facilities</li> </ul>
Education	
Heritage	

Grouping	Key aims, messages and objectives
	<ul style="list-style-type: none"> <li>• Ensure that everyone has access to education and training</li> <li>• Maintain townscape character</li> <li>• Protect heritage assets and the historic environment and their cultural and architectural significance</li> <li>• Promote the contribution the historic environment makes to the social, economic and cultural aspects of life</li> <li>• Recognise and protect archaeological heritage</li> </ul>

**A2 - Collecting baseline information**

The baseline information has been split into three groupings: climate emergency, environmental and socio-economic. These groupings are used throughout this report. More detail on the baseline information can be found in 'A2: Collecting baseline information'.

The below image summarises the key baseline information found:

i Non-technical Summary

<p>District is 913 square km 9 landscape character areas Most land is high quality agricultural land for crops</p>  <p>The habitat and nature restoration project: Great Fen supporting eco tourism Numerous waterways and marinas 3 national cycleways</p>  <p>River Great Ouse and River Nene Flood risk prominent 634 water bodies</p>  <p>Anglian region : 2017/18 109 megalitres/day demand, in 2045 could rise to 1,240 megalitres/day</p>	<p>Internationally protected nature sites (Ouse Washes, Portholme &amp; Woodwalton Fen) 26 SSSIs and 135 County Wildlife Sites</p>  <p>605 greenspaces totalling 1,229ha+ 87sqm greenspace/person</p>  <p>4 Air Quality Management Areas</p>	<p>70 wind turbines 12 solar farms</p>   <p>Be net zero by 2040 44% of carbon emissions from transport</p>  <p>90% of households have organic waste collection 2021/22 - 58% waste recycled/ composted</p>  <p>30% housing stock built 1950s/60s, 40% 1970s-90s and 19% since 2000 2020 - 10.95% households in fuel poverty</p>
<p>86,000 employees in 2020 7,895 enterprises (89.93% 0-9 employees) Median weekly pay £589</p>  <p>4 market towns &amp; 4 out of town retail parks</p>  <p>68.92% have indoor 4G coverage from all operators</p>  <p>40.8% premises have superfast broadband &amp; 54.8% have ultrafast</p>  <p>Strategic transport connections - A1, A14, A428, A141, A1123, A1096, A1198, A605 Guided busway &amp; 2 railway stations</p>	<p>86,473 dwellings in April 2022 71.3% owner occupied in 2011 12.9% of homes are social rented</p>  <p>Mar 2022 - £320,699 avg. house price 2021 ONS affordability ratio = 9.6</p>  <p>2021 census = 180,800 population Life expectancy of those born 2001-03, females 81.5 and males 77.5 years</p> 	<p>956 care beds 1 hospital &amp; 21 full time GP surgeries 69th least deprived district in England</p>  <p>2,216 listed buildings 84 scheduled monument 61 conservation areas 5 registered parks &amp; gardens</p>  <p>10 libraries and 2 mobile services 28 Assets of Community Value in Oct 2022</p>  <p>73 state schools 2.1% of people have no qualifications 60.7% people have NVQ1 41.5% people have NVQ4+</p> 

**A3 - Identifying sustainability issues and problems**

Following the collection of baseline data, the following key sustainability issues and problems were identified, these have been set out below. Section "A3: Identifying sustainability issues and problems" also identifies how these issues and problems could shape the SA framework.

Page 1439 of 3488

Sustainability issues and problems
<p><b>Carbon Emissions and Targets:</b></p> <ul style="list-style-type: none"> <li>Increased summer temperatures will impact on comfort and usability of existing properties</li> <li>Drier summers and wetter winters will create issues for flooding, water storage and management, soil and agricultural productivity and habitat survival</li> <li>CO<sub>2</sub> emissions are reducing across industrial, commercial, domestic and public sectors</li> <li>CO<sub>2</sub> emissions are very high for transport, influenced by the presence of the A1, A14 and East Coast Mainline Railway coupled with the largely rural nature of the district</li> <li>Per capita emissions are significantly higher than for England but typical for Cambridgeshire</li> <li>Increasing the climate resilience and energy efficiency of buildings and spaces</li> </ul>
<p><b>Renewable Energy and Energy Efficiency:</b></p> <ul style="list-style-type: none"> <li>Renewable power generation within Huntingdonshire has shifted from a focus on wind turbines to solar farms requiring extensive areas of land but with some scope for complementary agricultural use</li> <li>The age of the housing stock means that retrofitting of energy efficiency measures will be crucial in boosting the sustainability of the district's homes</li> <li>Fuel poverty was already an issue for over 1 in 10 households before the April 2022 price rises; this is expected to become more intense in the short term</li> </ul>

Sustainability issues and problems
<ul style="list-style-type: none"> <li>Access to mains gas is not universal throughout the district with some locations relying on individual oil tanks; in such circumstances alternative community heating systems may offer a more sustainable solution</li> <li>The visual impact of on-shore renewable energy production needs to be balanced with the impact on local landscape and communities</li> </ul>
<p><b>Flooding and Water:</b></p> <ul style="list-style-type: none"> <li>The impacts of climate change will see increases in extreme weather events, leading to increased rainfall, rainfall intensity and sea level rises all of which will increase the impact of all sources of flooding in the district. Potential to impact on existing and new developments, infrastructure and agricultural productivity, social and economic impacts across the district</li> <li>Potential need to set aside land for flood mitigation measures due to increased flood risk and understand effectiveness flood management infrastructure</li> <li>Increased flood risk may influence where development can be sustainably located</li> <li>Ensuring that new growth does not adversely affect water resources or water resources management infrastructure and that there are sufficient measures in place to balance water supply across the district</li> <li>Ensuring that homes and businesses are resilient to flooding and provide effective water management to maintain water resources for all</li> <li>Ensuring new development does not adversely impact on the ecological and biological status of water bodies</li> </ul>
<p><b>Waste and Recycling:</b></p> <ul style="list-style-type: none"> <li>Many tonnes of waste are sent to landfills and recycling centres</li> <li>Increasing levels of recycling and re-using materials reduces how much material ends up in landfills reducing their environmental effects and supporting a circular economy</li> </ul>

## i Non-technical Summary

Sustainability issues and problems
<ul style="list-style-type: none"> <li>• Growth places additional demand on existing waste and recycling collection services</li> <li>• The waste attributed to the construction of new buildings</li> </ul>
<p><b>Landscape:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire's landscape and its distinctive qualities are vulnerable to the impacts of climate change, insensitive new development and land management practices</li> <li>• Water management is key to landscape character throughout much of the district</li> <li>• The expansive, flat wetlands of the Fens are particularly vulnerable to the impacts of climate change degrading fertile peat soils and its landscape character</li> <li>• The River Great Ouse flows through or around three of Huntingdonshire's four market towns providing a high quality landscape setting to them and recreational opportunities but also an increased risk of flooding</li> </ul>
<p><b>Land, Soils and Agriculture:</b></p> <ul style="list-style-type: none"> <li>• A very high proportion of the district's agricultural land is classified as best and most versatile, whilst this is beneficial for production and food security it provides challenges for focusing development onto less valuable land</li> <li>• Degradation of peat and soil erosion resulting in the loss of the most fertile soils</li> <li>• There are limited remaining opportunities for largescale reuse of previously developed land</li> </ul>
<p><b>Biodiversity, Habitats and the Natural Environment:</b></p> <ul style="list-style-type: none"> <li>• There are several sites designated at an international and national level for their biodiversity and habitat value as well as non-designated sites identified for their local nature conservation value</li> <li>• Nature conservation sites and ancient woodland are vulnerable to new developments and land management practices.</li> </ul>

Sustainability issues and problems
<ul style="list-style-type: none"> <li>• Two thirds of SSSIs in Huntingdonshire are in a favourable state, with approximately a third of SSSIs not in a favourable condition, although these are in a recovering state</li> <li>• Visitor pressures on designated and non-designated sites may harm the quality of these sites for nature conservation and vital habitats</li> <li>• Nature conservation sites and other natural environments are vulnerable to the impacts of climate change</li> <li>• Trees are a natural carbon store, with established and mature trees taking in the most carbon</li> </ul>
<p><b>Green Infrastructure and Open Space:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire has several strategic green infrastructure areas: the Great Fen, Nene Valley, Great Ouse Valley and the West Cambridgeshire Hundreds</li> <li>• Strategic green infrastructure and localised provision of open green space provide important social benefits to human health and wellbeing as well as opportunities for habitat and biodiversity conservation and enhancement</li> <li>• Green infrastructure and open space must be located in accessible places</li> <li>• Several public parks and gardens are managed to the Green Flag Award standard, with others aspiring to the standard</li> </ul>
<p><b>Pollution:</b></p> <ul style="list-style-type: none"> <li>• The most significant air quality issues arise from traffic and congestion</li> <li>• Air, noise and light pollution can have serious implications on the health and wellbeing of people and cause harm to the natural environment and disrupt the lifecycles of wildlife</li> <li>• Homes, employment, schools, services and facilities should be accessible via walking, cycling and public transport</li> <li>• Light and noise pollution can reduce the tranquillity of the countryside and green spaces within settlements</li> </ul>

Sustainability issues and problems
<p><b>Housing:</b></p> <ul style="list-style-type: none"> <li>• Ensuring the delivery of an ongoing supply of new homes in sustainable locations</li> <li>• Ensuring new homes provide a mix of types, sizes and tenures aligned with the composition of the local population</li> <li>• Affordability ratios of house prices to around 9 times average earnings create significant stress in the housing market and result in strong social sustainability challenges</li> <li>• Proactive work through the prevention duty regarding homelessness has high effectiveness rates and reduces social sustainability challenges through the trauma otherwise experienced by those who become homeless</li> <li>• Ensuring a range of accessible, adaptable and specialist new homes are available suitable to meet the changing needs of residents as the population ages overall</li> </ul>
<p><b>Population and Health:</b></p> <ul style="list-style-type: none"> <li>• The ageing and in some locations declining population may lead to challenges for the social sustainability of communities, for health and social provision and provision of appropriate housing options.</li> <li>• Decreasing proportion of the population is of working age raising the proportion of dependants.</li> <li>• Natural change is decreasing and may result in a negative rate of population growth unless in-migration is sufficient to counterbalance falling population numbers</li> <li>• GP surgeries are concentrated in larger settlements necessitating residents of almost all villages to travel for appointments or rely on telephone or other remote forms of consultations</li> <li>• Health indicators suggest that Huntingdonshire's population is typically slightly healthier than that for England on average but deaths from particulate air pollution were higher than average in 2019 although it should be noted that this was prior to the rerouting of the A14 and consequent impact on air quality management areas</li> </ul>

Sustainability issues and problems
<p><b>Income and Deprivation:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire shows great disparity across the district in terms of income and deprivation</li> <li>• Median weekly pay in Huntingdonshire is in decline potentially creating a less financially stable population</li> </ul>
<p><b>Employment and Businesses:</b></p> <ul style="list-style-type: none"> <li>• Post-pandemic recovery: addressing the decline in the number of jobs in the district</li> <li>• Supporting and maintaining a stable economy: facilitating growth of key industries by providing appropriate land for development and expansion</li> <li>• Supporting rural enterprises to provide sustainable job opportunities in outside the existing employment clusters</li> <li>• Addressing the post-pandemic decline in the number of enterprises in the district</li> <li>• Facilitating access to higher level occupations where required across the district</li> <li>• Addressing the contribution that Huntingdonshire makes to Knowledge Intensive industries</li> <li>• Providing complementary enterprises to support supply chains and economic growth</li> </ul>
<p><b>Travel and Transport:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire is well located in terms of the strategic road network creating pressure from logistics businesses for new sites and generating high levels of road based through travel and locally generated car travel</li> <li>• A variety of road and active travel infrastructure improvements are proposed which may reduce congestion, improve journey times and increase the attractiveness of active travel modes for journeys</li> <li>• The district's semi-rural nature means some parts are relatively remote which increases reliance on private vehicles and engenders viability</li> </ul>

## i Non-technical Summary

Sustainability issues and problems
<p>challenges for public transport; the distances involved can make walking and cycling unattractive options for many journeys</p>
<p><b>Digital Infrastructure and Communications:</b></p> <ul style="list-style-type: none"> <li>• Reducing inequality, economic opportunity and vital access to services via digital infrastructure</li> <li>• Reducing social exclusion by providing improved access to improved online services especially in rural areas</li> <li>• Enabling businesses and rural businesses to thrive through improved broadband and mobile coverage</li> <li>• Decreasing rural isolation through improved broadband and mobile coverage</li> </ul>
<p><b>Retail and Town Centres:</b></p> <ul style="list-style-type: none"> <li>• Increase in retail/ town centre use vacancies in key locations that provide accessible sustainable access to leisure, services and retail, impacting on social and economic health of the district</li> <li>• Potential contraction of the high street and detrimental impacts on business viability</li> <li>• Perceived safety threats from vacant units and low activity levels potentially creating inhospitable and unsafe neighbourhoods</li> <li>• Ensuring high streets in the district provide easy access to leisure, services and retail</li> </ul>
<p><b>Tourism and Leisure:</b></p> <ul style="list-style-type: none"> <li>• The conservation of wildlife and landscapes are not harmed through tourism and leisure pursuits</li> <li>• Tourism and leisure play an important role in people's health and well being so needs to be accessible to all</li> <li>• Growth places additional demand on existing tourist attractions and leisure facilities</li> </ul>

Sustainability issues and problems
<ul style="list-style-type: none"> <li>• Local tourist attractions and leisure facilities contribute towards the local economy and supports local communities through employment, voluntary opportunities and celebrating local heritage and past times</li> </ul>
<p><b>Community Services and Facilities:</b></p> <ul style="list-style-type: none"> <li>• Availability of multi-use community spaces where people can gather</li> <li>• Sustainable access to services and facilities across the district</li> <li>• Retention of and long-term sustainability of community services and facilities</li> </ul>
<p><b>Education:</b></p> <ul style="list-style-type: none"> <li>• Ensuring residents have access to a range of educational providers in sustainable locations to meet the growing population</li> <li>• Ensuring education levels and range of qualifications are available for all to facilitate social mobility and job prospects for residents, intern contributing to the economic growth of the district</li> <li>• Providing enough SEND provision as a result of new growth</li> </ul>
<p><b>Heritage:</b></p> <ul style="list-style-type: none"> <li>• There are many designated and non-designated structures assets, a small proportion are judged to be at risk</li> <li>• Heritage assets face pressures from future development that may cause harm to them and to their setting</li> <li>• Conservation areas may see a gradual erosion of their special features which may undermine the original reasons for designation</li> <li>• Significant archaeology may yet to be discovered</li> <li>• Climate change and flooding events pose significant risks to the historic environment</li> </ul>

#### A4 - Developing the sustainability appraisal framework

Following the review of relevant plans, programmes and strategies, the identification of baseline information and sustainability issues and problems, the following SA objectives were considered to be:

##### Climate emergency

- **SA1** - Contribute to achieving the district's ambition to reach net zero carbon emissions by 2040
- **SA2** - Improve adaptability and resilience to the unavoidable impacts of the climate emergency
- **SA3** - Manage Huntingdonshire's water resources in a sustainable manner and reduce the risk all potential sources of flooding to people, properties and the environment

##### Environmental

- **SA4** - Make efficient use of land by maximising development on previously developed land where this is not of high biodiversity value and minimising that on the best and most versatile agricultural land
- **SA5** - Improve the quantity and quality of publicly accessible natural green space and enhance the strategic green and blue infrastructure network and links to it
- **SA6** - Promote conservation, enhancement, recovery and connectivity of sites of biodiversity or geodiversity significance
- **SA7** - Conserve and enhance the special qualities and integrity of our landscape and townscape character and the local distinctiveness of settlements
- **SA8** - Contribute to the minimisation and reduction of all forms of pollution

##### Socio-economic

- **SA9** - All people have access to high quality affordable homes that meet their needs across their lifetime
- **SA10** - Enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion
- **SA11** - Enhance the quality, range and accessibility of economic opportunities for all communities
- **SA12** - Reduce the need to travel by car and promote active travel and public transport infrastructure
- **SA13** - Strengthen, modernise and diversify the local economy and promote opportunities for growth of indigenous companies as well as encouraging sustainable inward investment
- **SA14** - Support the successful response of town, local and village retail centres to changing shopping and social trends
- **SA15** - Promote high quality design and placemaking that enables attractive, safe and resilient communities
- **SA16** - Conserve, sustain and enhance designated and non-designated heritage assets and their setting(s)

A series of decision aiding questions have been drawn up for each objective. The decision aiding questions have been specifically worded so that the appraisal can be applied to the three different types of policy that will be part of the new Local Plan. This means that there is at least one decision aiding question for strategic, site specific and development management policies for each objective.

The full sustainability appraisal framework, including all the decision aiding questions, can be found in 'A4: Developing the SA framework'.

#### A5 - Consulting on the scope of the sustainability appraisal

The council is required to consult on the scope of the SA with the Environment Agency, Historic England and Natural England, often referred to as the SA Bodies. Consultation with environmental bodies ran between 20 October and 30 November 2022.

## i Non-technical Summary

Comments on a draft of the scoping report were received from all three environmental bodies. Their comments have been compiled into a table alongside the Council's response to them highlighting where amendments have been made to this report. This table can be found in Appendix 2 of the SA.

The draft scoping report was made available for anyone to make comments between 1 February and 15 March 2023. This was so that the scoping report is as robust as possible and to promote participation in production of the new Huntingdonshire Local Plan. Comments received can be viewed on our [consultation portal](#), a summary of these comments and the changes made to the report can be found in the Statement of Consultation.

Stage A was completed with the publication of this [final scoping report](#).

More information can be found in 'A5: Consulting on the scope of the SA'.

### Stage B - Develop Options and Appraise Effects

This stage integrates the SA process into plan preparation and completing the appraisals at an early stage so that the findings can inform and shape the way that all parts of the plan evolve in a meaningful way.

#### B1 - Testing the plan objectives against the SA framework

At the Further Issues and Options stage (Autumn 2024), stage B1 is not yet complete as we are consulting on options for the objectives of the Local Plan Update. This task is where we identify potential synergies or inconsistencies between the objectives of the Local Plan, referred to as Spatial Objectives and the SA Objectives established in Stage A.

#### B2 - Developing plan options, B3 - Predicting the effects of the plan and alternatives, B4 - Evaluating the effects of the plan and alternatives, B5 - Considering ways of mitigating adverse effects and maximising beneficial effects

Reflecting the iterative and interconnections between tasks B2, B3, B4 and B5, these have been undertaken together under 'B2 to B5: Developing and appraising plan options' section.

These tasks are where we develop and refine options for the development strategy, policies and site allocations for the Local Plan. It is also where we predict the significant effects of the plan and alternatives, whether they are economic, social or environmental; it is where we evaluate the predicted effects of the plan and alternatives in order to assist in the refinement of the plan. Finally, it is to ensure that adverse effects are identified and potential mitigation measures are considered.

At the Further and Issues and Options stage (Autumn 2024), we are assessing:

- the **Development Strategy** - this consists of the options put forward in the Further Issues and Options Paper 2024 address the strategic issues for the Local Plan Update and how the development strategy may be shaped. The issues covered are listed below:
  - The Local Plan Vision and Objectives
  - Settlement Hierarchy for Huntingdonshire
  - Approach to Employment and Economy
  - Housing Figures and Requirement
  - Achieving well-designed and beautiful places (note no options have been put forward at this stage but the FI&O Paper includes an additional question)
  - Growth Strategy Options
  - Green and Blue Infrastructure
  - The Approach to Climate Change
  - Tackling Flooding and Water
  - Housing Tenures and Housing Mix
  - Transport and Connectivity
- **Sites** - the appraisal for sites can be found within the appendices to the main SA report. The outcomes of the site appraisals were fed back into the Land Availability Assessment to conclude whether sites

were potentially suitable for further exploration or not and an indicative capacity undertaken or not.

All options and sites were appraised using the relevant Strategy and Sites decision aiding questions respectively developed in our Table 21 'SA framework' (see Table 20 of the SA Scoping Report). Each of were scored using the following scoring matrix:

Score	Effect of the approach
++	Contributes significantly to the achievement of the objective
+	Contributes to the achievement of the objective
N	No clear relationship to achieving the objective, the outcome is uncertain or the outcome may depend on delivery specific factors
	The objective is not relevant to the proposal
-	Detracts from achievement of the objective
--	Significantly detracts from achievement of the objective

Please note that for **Development Management Policies** we will appraise these against the policies section of the SA framework. Policies have not been included in the Further Issues and Options stage this section but will be included at a later stage.

### B6 - Proposing measures to monitor the significant effects of implementing the plan

At the end of this stage is task B6 which is where we will propose how to measure and monitor the significant effects of implementing the Local Plan Update by ensuring that adverse effects are identified and potential mitigation measures are considered.

This stage will be completed after the Further Issues and Options stage and following the development of more detailed development management policies.

### Stage C - Prepare the SA Report

Stage C is underway through with the production of this SA report. It sets out the work undertaken the Local Plan Update up to the Further Issues and Options consultation (Autumn 2024). This SA is accompanied by a series of appendices:

- Appendix 1 - A1 Plans and Programs
- Appendix 2 - A5 Consultation Comments
- Appendix 3 - Northern Huntingdonshire Site Appraisals
- Appendix 4 - North Eastern Huntingdonshire Site Appraisals
- Appendix 5 - Northern Central Huntingdonshire Site Appraisals
- Appendix 6 - Western Huntingdonshire Site Appraisals
- Appendix 7 - Central Huntingdonshire Site Appraisals
- Appendix 8 - Eastern Huntingdonshire Site Appraisals
- Appendix 9 - Southern Huntingdonshire Site Appraisals

### Future steps

The methodology contained in this scoping report will be used to complete the sustainability appraisal process as part of the production of the new Local Plan:

- Remaining elements of Stage B: Elements will be completed as we move through to our Preferred Options.
- Stage D: Consulting on the draft plan and the Sustainability Appraisal Report' will be started with consultation on the draft Local Plan and will continue through the publication of the Proposed Submission Local Plan and through the examination process.
- Stage E: Monitoring the significant effects of implementing the plan on the environment' will start with preparation of the Proposed Submission Local Plan and continue through the examination process and will then continue after the adoption of the Local Plan with the Annual Monitoring Report.

## 1 Sustainability Appraisal

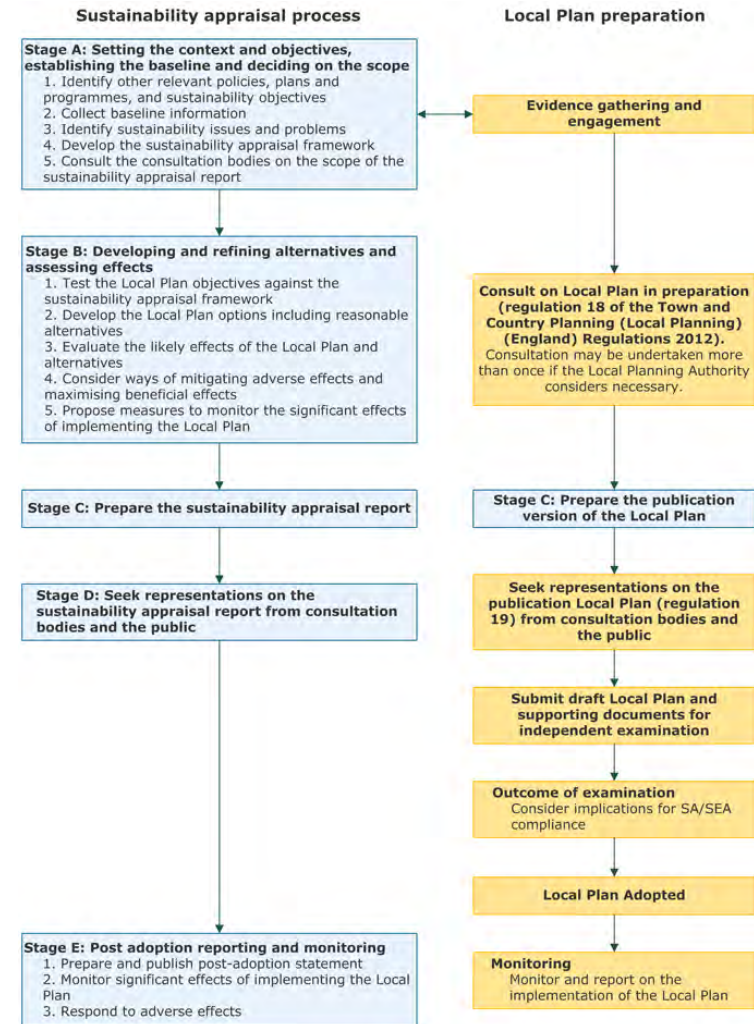

- 1.1** When drawing up new planning documents the effects they will have on the environment and people's quality of life, both now and in the future are some of the most important things to consider. To be sure that the plan does not cause economic, environmental and social problems, at the heart of the plan production process there is a system of assessment known as Sustainability Appraisal (SA).
- 1.2** SA is a systematic process for assessing the extent to which the emerging plan will help to achieve sustainable development. It is an opportunity to consider ways by which the plan can contribute to improvements in economic, environmental and social conditions, as well as a means of identifying and mitigating any potential adverse effects that the plan might otherwise have.
- 1.3** The commitment to the achievement of sustainable development is set out at an international and national level.
- 1.4** The purpose of the planning system is to contribute to the achievement of sustainable development. The Government's view of what constitutes sustainable development is set out in the [National Planning Policy Framework](#) (NPPF). The NPPF uses the United Nations definition of sustainable development as '*development that meets the needs of the present without compromising the ability of future generations to meet their own needs*'. The NPPF also refers to the [United Nation's 17 Global Goals for Sustainable Development](#) which address social progress, economic well-being and environmental protection by 2030. Members of the United Nations (including the United Kingdom) have agreed to pursue these goals. At the heart of the NPPF is a presumption in favour of sustainable development which should be seen as a golden thread running through both plan-making and decision-taking.
- 1.5** For plan-making this means that:
- a. all plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects;
  - b. strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas, unless:
    - i. the application of policies in this Framework that protect areas or assets of particular importance provides a strong reason for restricting the overall scale, type or distribution of development in the plan area; or
    - ii. any adverse impacts of doing so would significantly and demonstrably outweigh the benefits, when assessed against the policies in this Framework taken as a whole.
- 1.6** Legal requirements for new planning documents require an assessment of the plan's impact on the environment to be undertaken. This process is known as Strategic Environmental Assessment (SEA) and is required under the SEA Directive. In 2004, the European SEA Directive was transposed into UK law through the [Environmental Assessment of Plans and Programmes Regulations 2004](#), (commonly referred to as the Strategic Environmental Assessment Regulations).
- 1.7** Furthermore, section 19 of the [Planning and Compulsory Purchase Act 2004 \(as amended\)](#) requires a local planning authority to carry out an SA of each of the proposals in a Local Plan during its preparation. More generally, section 39 of the Act requires that the authority preparing a Local Plan must do so '*with the objective of contributing to the achievement of sustainable development*'. Sustainability appraisals incorporate the requirements of the 2004 Environmental Assessment Regulations, meaning the SA and SEA are carried out together as part of the preparation of planning documents and are collectively known as the SA process.

# 1 Sustainability Appraisal

1.8 The methodology for the SA process takes into account the National Planning Practice Guidance (NPPG) on [Plan Making](#) and Sustainability Appraisals and incorporates requirements set out in the 2005 '[A Practical Guide to the Strategic Environmental Assessment Directive](#)'. The SA process consists of five stages (A-E), each of the stages are undertaken in tandem with the development of a local plan, as illustrated below.

**Figure 1.1 Flowchart of the SA process alongside Local Plan production**

## The new Local Plan

- 1.9** The Local Plan will set out the planning policy for Huntingdonshire. It will include the strategy for spatial development of Huntingdonshire, the Council's policies for managing development in the district, and sites for achieving the development requirements. Initial engagement will focus on issues facing the district and identifying potential development sites. These will be refined through a series of options exploring the sustainability of potential policies and packages of development sites. Each phase of engagement will be accompanied by appropriate SA materials to explore the sustainability of the options being considered and a draft final SA will support the pre-submission version of the updated Huntingdonshire Local Plan.
- 1.10** The updated Huntingdonshire Local Plan and hence updated SA is necessary due to many changes to the context in which the Local Plan sits, summarised here:
- UK's formal withdrawal from the European Union
  - Planning and Levelling Up White Papers and Levelling Up and Regeneration Bill
  - Increasing emphasis on the impacts of climate change and reducing carbon emissions
  - Revised NPPF (and proposed further revisions to come) and new National Model Design Guide and Design Code
  - New use classes
  - Oxford-Cambridge Arc
  - National and sub-regional transport infrastructure projects
  - Updates and reviews to neighbouring local authorities' local plans
  - Coronavirus pandemic

## How the SA will influence the Local Plan

- 1.11** The Council considers that SA is an integral part of the plan production process and is a core element of good planning. It is necessary to ensure that development occurring within the district takes the most sustainable form possible in economic, environmental and social terms. The Council has approached the SA in accordance with national guidance and undertaken the process in-house as part of the production of the Local Plan so that the SA and plan production are fully integrated.

## Other appraisals and assessments

- 1.12** There are a range of appraisals and assessments associated with the production of the Local Plan. Where it is considered appropriate these other appraisals and assessments will be combined with the sustainability appraisal or completed at the same time.

## Habitats Regulations Assessment

- 1.13** Probably the most important other assessment will be the Habitats Regulations Assessment (HRA), sometimes known as Appropriate Assessment. The HRA looks at the impact that the Local Plan is likely to have on European Sites (Special Areas of Conservation, Special Protection Areas and Ramsar sites). HRA is a two stage process that starts with a screening stage. If significant impacts on European sites cannot be ruled out by the screening stage a more detailed Appropriate Assessment will be required. The Appropriate Assessment will look at ways that significant effects can be avoided or mitigated against. HRA is required to be a separate process to sustainability appraisal.

## Equality Impact Assessment

- 1.14** The Equalities Act 2010 requires the Council to have due regard to the need to eliminate unlawful discrimination, advance equality of opportunity and foster good relations. The Council also needs to demonstrate its compliance with the Equality Duty. The Council therefore needs to

# 1 Sustainability Appraisal

understand how its decisions and activities impact on different people and how they are affected by policies and practices. An Equality Impact Assessment (EqIA) is the method by which the Council can assess the impact of a new strategy, policy or decision.

**1.15** The assessment focuses primarily on identifying circumstances where an adverse impact may occur; an adverse impact is defined as occurring when a strategy, policy or decision has a disproportionately negative effect on a protected group or groups. The characteristics protected by the Equality Act are:

- Age
- Disability
- Gender
- Gender reassignment
- Marriage and civil partnership
- Pregnancy and maternity
- Religion and belief
- Race
- Sex
- Sexual orientation

## Health Impact Assessment

**1.16** HIA is a process used to evaluate the significance of the potential health effects of a proposed plan. It helps to inform choices about actions to prevent ill-health, promote good health and reduce health inequalities. When applied in the planning system, an HIA puts people at the heart of the process and seeks to address the barriers and opportunities for creating healthy places. The HIA can help identify a set of evidence-based practical recommendations to promote and protect the health of local communities. [Guidance from Public Health England](#) indicates that a health impact assessment may be combined with an SA or completed as a standalone document.

## 2 Sustainability Appraisal Methodology

- 2.1** The purpose of this chapter is to formulate a methodology for the SA and to complete the necessary steps to enable the Council to draw up the Local Plan and undertake the SA. The Council proposes a methodology for the SA process that is based on the tasks and stages set out in the government's ['A Practical Guide to the Strategic Environmental Assessment Directive'](#).
- 2.2** [Schedule 2](#) of the SEA Regulations sets out the information that must be provided within the SA:

1. an outline of the contents, main objectives of the plan or programme and relationship with other relevant plans and programmes;
2. the relevant aspects of the current state of the environment and the likely evolution thereof without implementation of the plan or programme;
3. the environmental characteristics of areas likely to be significantly affected;
4. any existing environmental problems which are relevant to the plan or programme including, in particular, those relating to any areas of a particular environmental importance, such as areas designated pursuant to Directives 79/409/EEC and 92/43/EEC;
5. the environmental protection objectives, established at international, Community or Member State level, which are relevant to the plan or programme and the way those objectives and any environmental considerations have been taken into account during its preparation;
6. the likely significant effects on the environment, including on issues such as:
  - a. biodiversity,
  - b. population,
  - c. human health,
  - d. fauna,

- e. flora,
- f. soil,
- g. water,
- h. air,
- i. climatic factors,
- j. material assets,
- k. cultural heritage including architectural and archaeological heritage,
- l. landscape, and
- m. the interrelationship between the above factors;

7. the measures envisaged to prevent, reduce and as fully as possible offset any significant adverse effects on the environment of implementing the plan or programme;
8. an outline of the reasons for selecting the alternatives dealt with, and a description of how the assessment was undertaken including any difficulties (such as technical deficiencies or lack of know-how) encountered in compiling the required information;
9. a description of the measures envisaged concerning monitoring in accordance with Article 10;
10. a non-technical summary of the information provided under the above headings.

- 2.3** The issues (a-m) identified are reflected in the topics used throughout this scoping report. To ensure all of these issues are addressed, the following table shows which topic addresses each of the Schedule 2 issues. The significant effects on these need to be assessed in terms of short, medium and long-term effects, permanent and temporary effects, positive and negative effects, and secondary, cumulative and synergistic effects.

## 2 Sustainability Appraisal Methodology

Table 2 Scoping report topics and the Schedule 2 issues they address

Issues listed in Schedule 2	Scoping report topic
a. biodiversity	<ul style="list-style-type: none"> <li>Biodiversity, Habitats and the Natural Environment</li> <li>Green Infrastructure and Open Space</li> </ul>
b. population	<ul style="list-style-type: none"> <li>Housing</li> <li>Population and Health</li> <li>Income and Deprivation</li> <li>Employment and Businesses</li> <li>Retail and Town Centres</li> <li>Education</li> </ul>
c. human health	<ul style="list-style-type: none"> <li>Population and Health</li> <li>Income and Deprivation</li> <li>Green Infrastructure and Open Space</li> </ul>
d. fauna	<ul style="list-style-type: none"> <li>Biodiversity, Habitats and the Natural Environment</li> </ul>
e. flora	<ul style="list-style-type: none"> <li>Biodiversity, Habitats and the Natural Environment</li> </ul>
f. soil	<ul style="list-style-type: none"> <li>Land, Soils and Agriculture</li> </ul>
g. water	<ul style="list-style-type: none"> <li>Flooding and Water</li> </ul>
h. air	<ul style="list-style-type: none"> <li>Pollution</li> </ul>
i. climatic factors	<ul style="list-style-type: none"> <li>Climate Emissions and Targets</li> <li>Flooding and Water</li> </ul>

Issues listed in Schedule 2	Scoping report topic
j. material assets	<ul style="list-style-type: none"> <li>Housing</li> <li>Travel and Transport</li> <li>Digital Infrastructure and Communications</li> <li>Community Services and Facilities</li> <li>Renewable Energy and Energy Efficiency</li> <li>Waste and Recycling</li> </ul>
k. cultural heritage, including architectural and archaeological heritage	<ul style="list-style-type: none"> <li>Heritage</li> </ul>
l. landscape	<ul style="list-style-type: none"> <li>Landscape</li> </ul>
m. the inter-relationship between the issues referred to in (a) to (l)	<ul style="list-style-type: none"> <li>Many of these topics overlap, where they do so this has been reflected in the baseline commentary for the topic(s).</li> </ul>

2.4 [Schedule 1](#) of the SEA Regulations sets out the criteria for determining the likely significance of effects on the issues referred to in Schedule 2 (a-m):

1. The characteristics of plans and programmes, having regard, in particular, to
  - the degree to which the plan or programme sets a framework for projects and other activities, either with regard to the location, nature, size and operating conditions or by allocating resources,
  - the degree to which the plan or programme influences other plans and programmes including those in a hierarchy,
  - the relevance of the plan or programme for the integration of environmental considerations in particular with a view to promoting sustainable development,
  - environmental problems relevant to the plan or programme,
  - the relevance of the plan or programme for the implementation of Community legislation on the environment (e.g. plans and programmes linked to waste-management or water protection).
2. Characteristics of the effects and of the area likely to be affected, having regard, in particular, to
  - the probability, duration, frequency and reversibility of the effects,
  - the cumulative nature of the effects,
  - the transboundary nature of the effects,
  - the risks to human health or the environment (e.g. due to accidents),
  - the magnitude and spatial extent of the effects (geographical area and size of the population likely to be affected),
  - the value and vulnerability of the area likely to be affected due to:
    - special natural characteristics or cultural heritage,

- exceeded environmental quality standards or limit values,
- intensive land-use,
- the effects on areas or landscapes which have a recognised national, Community or international protection status

- 2.5 The stages and tasks covered by this scoping report are set out below (Stage A). Tasks A1 to A4 are not intended to be completed in a purely linear process as they will inform each other. The iterative nature of the SA process is summarised in the Figure 2.1 from the government's ['A Practical Guide to the Strategic Environmental Assessment Directive'](#).
- 2.6 Stages B to E in the SA/SEA process, set out below, and are carried out as part of the plan production process. Stage E will lead to indicators that will be reported on in the Annual Monitoring Report (AMR) as part of the monitoring of the effectiveness of the Local Plan. M
- 2.7 Tasks B2, B3, B4 and B5 are not intended to be completed in a purely linear process as they will inform each other. Stage E will help considerations of whether or not to review the plan and will feed into future sustainability appraisal processes for future plans. This is also reflected in the below figure.

## 2 Sustainability Appraisal Methodology

Figure 2.1 SA tasks process flow chart

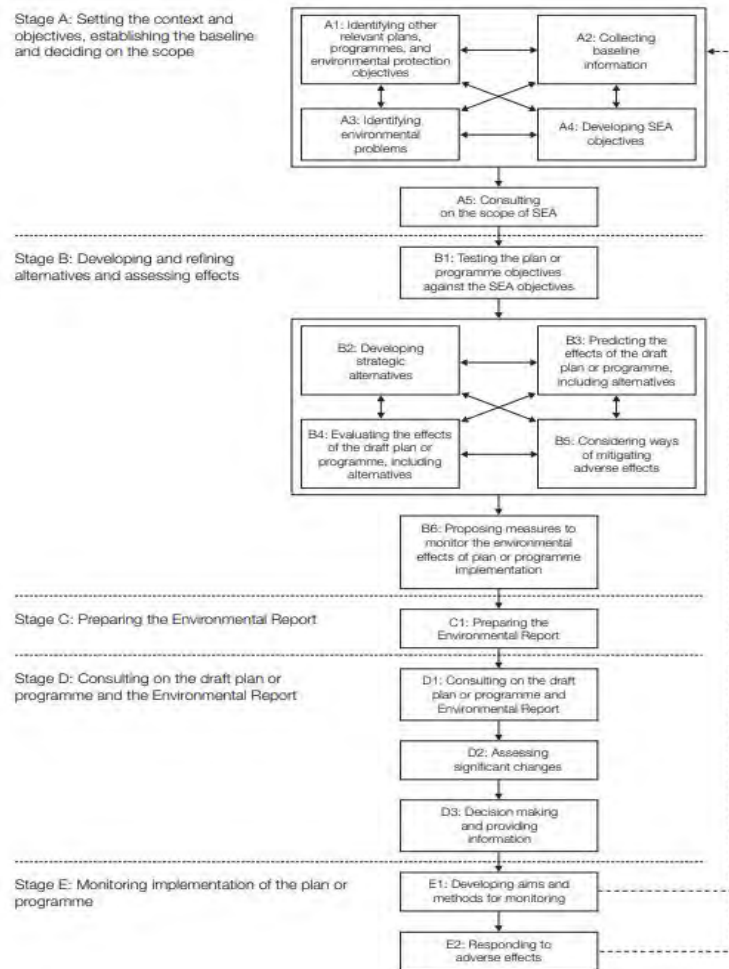

Table 3 Stages A to E in the SA/SEA process

<p><b>Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope</b></p>
<p><b>A1: Identifying relevant plans and programmes' (Schedule 2, (1) and (5))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to establish how the plan is affected by outside factors, to suggest ideas for how any constraints can be addressed, and to help identify environmental protection objectives.</li> </ul>
<p><b>A2: Collecting baseline information' (Schedule 2, (2) and (3))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to provide an evidence base for environmental impacts, prediction of what will happen without the plan as well as what effects it could have, monitoring and to help in the development of SA objectives.</li> </ul>
<p><b>A3: Identifying sustainability issues and problems' (Schedule 2, (4) and Schedule 1, (1))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to help focus the SA and streamline the subsequent stages, including baseline information analysis, setting the SA objectives, prediction of effects and monitoring</li> </ul>
<p><b>A4: Developing the SA framework' (Schedule 2, (6))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to provide a means by which the environmental performance of the plan or programme and alternatives can be assessed.</li> </ul>
<p><b>A5: Consulting on the scope of the SA' (Part 3(5))</b></p> <ul style="list-style-type: none"> <li>The purpose of this task is to ensure that the SA covers the likely significant environmental effects of the plan and to ensure that the SA process is and will be robust and suitably comprehensive in order to support production of the plan.</li> </ul>

**Stage B: Developing and refining options and assessing effects**

## Sustainability Appraisal Methodology 2

### **B1: Testing the plan objectives against the SA framework (Schedule 2, (6))**

- The purpose of this task is to identify potential synergies or inconsistencies between the objectives of the plan and the SA objectives.

### **B2: Developing plan options (Part 3(12) and Schedule 2, (8))**

- The purpose of this task is to develop and refine options.

### **B3: Predicting the effects of the plan and alternatives (Schedule 2, (6))**

- The purpose of this task is to predict the significant environmental effects of the plan and alternatives.

### **B4: Evaluating the effects of the plan and alternatives (Schedule 2, (6))**

- The purpose of this task is to evaluate the predicted effects of the plan and alternatives in order to assist in the refinement of the plan.

### **B5: Considering ways of mitigating adverse effects and maximising beneficial effects (Schedule 2, (7))**

- The purpose of this task is to ensure that adverse effects are identified and potential mitigation measures are considered.

### **B6: Proposing measures to monitor the significant effects of implementing the plan (Schedule 2, (9))**

- The purpose of this task is to detail the means by which the environmental performance of the plan can be assessed.

## **Stage C: Preparing the Sustainability Appraisal Report**

### **C1: Preparing the Sustainability Appraisal Report (Part 3(12) and Schedule 2, (6) to (10))**

- The purpose of this task is to present the predicted effects of the plan, including alternatives, in a form suitable for public consultation and use by decision makers.

## **Stage D: Consulting on the draft plan and the Sustainability Appraisal Report**

### **D1: Public participation on the draft plan and the Sustainability Appraisal report (Part 3(13))**

- The purpose of this task is to give the public and Consultation Bodies an opportunity to express their opinions on the findings of the Environmental Report and to use it as a reference point in commenting on the plan. To gather more information through the opinions and concerns of the public.

### **D2: Appraising significant changes (Schedule 2, (6))**

- The purpose of this task is to ensure that the environmental implications of any significant changes to the draft plan are assessed and taken into account.

### **D3: Making decisions and providing information (Part 4(16))**

- The purpose of this task is to provide information on how the Sustainability Appraisal Report and consultees' opinions were taken into account in deciding the final format of the plan to be adopted.

## **Stage E: Monitoring the significant effects of implementing the plan on the environment**

### **E1: Developing aims and methods for monitoring (Part 4(17))**

- The purpose of this task is to track the environmental effects of the plan to show whether they are as predicted; to help identify any adverse effects.

### **E2: Responding to adverse effects (Part 4(17))**

- The purpose of this task is to prepare for appropriate responses where adverse effects are identified.

### 3 Stage A - The Scoping Process

### 3 Stage A - The Scoping Process

<b>A:</b>	Setting the context and objectives, establishing the baseline and deciding on the scope.	Known as the 'Scoping Stage' the purpose of this stage is to establish the context for sustainability appraisal by assembling the evidence needed to inform the appraisal and to establish the framework by setting up sustainability objectives and decision aiding questions, for undertaking the appraisal (Stage B).
-----------	--	--

- 3.1 The scoping stage (Stage A) must identify the scope and level of detail of the information to be included in the sustainability appraisal report. It should set out the context, objectives and approach of the assessment; and identify relevant environmental, economic and social issues and objectives.
- 3.2 This chapter sets out the work completed for Stage A tasks as identified in Chapter 2 'Sustainability Appraisal Methodology'. Each task being:
  - A1: Identifying relevant policies, plans, programmes and objectives
  - A2: Collecting baseline information
  - A3: Identifying sustainability issues and problems
  - A4: Developing the SA framework
  - A5: Consulting on the scope of the SA
- 3.3 For each task, there is commentary within this SA on how each was achieved.
- 3.4 The final Scoping Report can be found on [our website](#).

#### A1: Identifying relevant plans and programmes

- 3.5 The purpose of this task is to establish how the plan is affected by outside factors, to suggest ideas for how any constraints can be addressed, and to help identify environmental protection objectives.
- 3.6 For the production of the Local Plan to be effective, a wide range of plans, programmes and strategies need to be taken into account. Such plans, programmes and strategies contain objectives and specific policy requirements that need to be considered. Identifying and reviewing these documents is an important element of the SA process, as it can help to shape the objectives against which emerging policies should be appraised, as well as pointing to particular issues and problems that should be tackled.

#### How was this task achieved?

##### Identifying relevant plans and programmes

- 3.7 This review used the previously produced scoping report for the Huntingdonshire Local Plan to 2036 as a starting point but expanded to look at plans, programmes and strategies that could affect the new Local Plan including ones that had been published since the last scoping report was written.
- 3.8 The assessment of relevant plans, programmes and strategies were also informed by best practice work of other local authorities and advice from council officers. It also included various plans, programmes and strategies that are emerging such as changes to national planning policy and legislation.

##### Grouping and assessing the impact of the plans and programmes

- 3.9 Relevant plans, programmes and strategies were originally grouped into international, national, regional and sub-regional/county/local level. The key aims, objectives, and targets/ indicators for each plan, programme and strategy were identified alongside how they may shape the updated

Huntingdonshire Local Plan and what SEA topic they relate to. This exercise also highlighted aspects that the local plan could directly influence and what issues are already being addressed through other plans and strategies as well as any synergies and common themes between them.

plans, programmes and strategies to save duplication. Instead, the UK legislation have been included with an explanation of their key aims, objectives and targets/ indicators and implications for the Local Plan within the following table and Appendix 1.

**3.10** Following this, the SEA topics were reviewed and it was possible to categorise them into one of the following: climate emergency, environmental or socio-economic.

**3.13** A summary of the findings of the detailed review are shown in the following table. This has been achieved by grouping plans, programmes and strategies by their relevant SEA topics which had already previously been categorised into either the climate emergency, environmental and socio-economic groupings. The table also identifies the plans, programmes and strategies that are procedural (requirements that the Local Plan and its supporting evidence must do) and those that are overarching (cross over all groupings) as it is recognised that some will cross over and overlap.

**Bringing together the findings**

**3.11** A detailed review of these documents can be found in Appendix 1 of the SA. These are presented in tables for international, national, regional and sub-regional/county/local level plans, programmes and strategies.

**3.14** The plans, programmes and strategies with an asterisk (\*) are documents which were produced to support the Huntingdonshire Local Plan to 2036 and the most recent versions of these documents at the time this scoping report was prepared.

**3.12** In Appendix 1 there is a list of relevant EU Directives and the UK legislation that transposes their requirements. As these EU Directives have been transposed into UK law, they have not been added to the list of

**Table 4 Key aims, messages and objectives from the review of relevant plans, programmes and strategies**

Grouping	Key aims, messages and objectives that will shape the Huntingdonshire Local Plan	Plans, Programmes and Strategies

**Continual Review**

3.15 The Council recognises that relevant plans and programmes will emerge throughout the plan production process. It is particularly true at the current time with continued changes to the planning process anticipated following the Levelling Up and Regeneration Bill. With this in mind the Council have added to, or replaced the plans and programmes reviewed to ensure that they are relevant.

**A2: Collecting baseline information**

3.16 The purpose of this task is to provide an evidence base for environmental impacts, prediction of what will happen without the plan as well as what effects it could have, monitoring and to help in the development of SA objectives.

3.17 Baseline information provides the starting point for predicting and monitoring effects of plans as well as what is likely to happen without the plan and helps to identify problems and potential solutions for dealing with them. Sufficient information about the current and likely states of the plan area is

required to allow the plan's effect to be accurately predicted. Collection of baseline data also enables the identification of key sustainability issues affecting the district which are useful in developing SA objectives.

**How was this task achieved?**

**Identifying key information**

3.18 The baseline information has been structured using the groupings identified from the SEA topics: climate emergency, environmental and socio-economic characteristics. Both qualitative and quantitative information has been used to provide a picture of what the current baseline is and trends over time. As up to date sources of information have been used where possible to inform this as well as discussions with other Council teams.

**Generic limitations affecting the data presented**

3.19 Much of the data presented is either collected by external bodies or collected in partnership between them and the District Council. Therefore the Council has limited control over the temporal and spatial scope of some of the data collected and whether data collection methods have changed over time.

### 3 Stage A - The Scoping Process

These factors may limit the ability to make reliable comparisons, however when reviewing the baseline information an analytical view was taken to identify where there may be need for updated information or additional sources of data.

**3.20** It is important to recognise that there are some gaps in the data collected as not all information is available at the local level for recent time periods. This will be added to as the plan production process and as future Annual Monitoring Reports are published. A significant new source of data that will become available is the 2021 Census. Other sources will become available during the plan production process and so in the future, it may be necessary to alter the SA framework depending on the baseline information available at the time.

#### Considering what would happen without the plan

**3.21** At the end of each baseline topic, there is a box summarising the key sustainability issues and problems identified and what may happen if there were no local plan. This acts as a concluding section to reach baseline topic and highlights how the next task, A3, has been achieved.

#### What we found

**3.22** A summary of the key information found during the collecting of baseline information are provided below:

**3.23** The following sections sets out in detail the baseline information in topics which correspond with the SEA topics identified previously. These topics have been grouped into climate emergency, environmental and socio-economic characteristics.

## Climate Emergency

3.24 The following topics were reviewed:

- Carbon emissions and targets
- Renewable energy and energy efficiency
- Flooding and water
- Waste and recycling

## Carbon Emissions and Targets

3.25 Greenhouse gas emissions are the largest single driver of climate change. The European Commission states that carbon dioxide (CO<sub>2</sub>) produced by human activities is the largest contributor to global warming. By 2020, its concentration in the atmosphere had risen to 48% above its pre-industrial level before 1750. Other greenhouse gases are emitted by human activity in smaller quantities. Methane is a more powerful greenhouse gas than CO<sub>2</sub> but has a shorter atmospheric lifetime. Nitrous oxide, like CO<sub>2</sub>, is a long-lived greenhouse gas that accumulates in the atmosphere over decades to centuries. The main anthropogenic causes for increases in emissions are burning coal, gas and oil, deforestation, increasing livestock farming, increased use of nitrogen based fertilisers and emissions of fluorinated gases. Natural causes, such as changes in solar radiation or volcanic activity are estimated to have contributed less than plus or minus 0.1°C to total warming between 1890 and 2010.

3.26 2011-2020 was the warmest decade recorded, with global average temperature reaching 1.1°C above pre-industrial levels in 2019. Anthropogenic global warming is presently increasing at a rate of 0.2°C per decade. The primary aim of the [Paris Agreement](#) on climate change is to keep the increase in the global temperature to well below 2°C above pre-industrial levels and to pursue efforts to limit the temperature increase to 1.5°C above pre-industrial levels. An increase of 2°C compared to the temperature in pre-industrial times is associated with serious negative

impacts to the natural environment and human health and wellbeing, including a much higher risk that dangerous and possibly catastrophic changes in the global environment will occur.

3.27 The UK government has committed to the target of being net zero carbon by the year 2050 compared to the 1990 baseline. The UK government has also made the commitment to reduce emissions by 78% by 2035 compared to 1990 levels as part of its sixth carbon budget.

3.28 Strong and sustained reductions in emissions of CO<sub>2</sub> and other greenhouse gases would limit climate change. Some benefits such as improved air quality would be seen in the short term, however, the [IPCC Working Group I report, Climate Change 2021: the Physical Science Basis](#) notes that it would take 20-30 years to see global temperatures stabilise. The report finds that unless there are immediate, rapid and large-scale reductions in greenhouse gas emissions, limiting warming to close to 1.5°C or even 2°C will be beyond reach, making the targets of the Paris Agreement unachievable.

3.29 In December 2021, Huntingdonshire District Council adopted the aspiration of a net carbon zero Huntingdonshire by 2040, complemented by a series of environmental principles based on those agreed by authorities across the OxCam Arc. Our environmental principles are:

- to target net-zero carbon at a district level by 2040
- to protect, enhance and restore existing nature areas (green spaces) and create new ones (where it is viable to do so)
- to pursue the ambitions of 'A Green Future: Our 25-year Plan to Improve the Environment' and that new development should be designed with a view to minimising and mitigating the effects of climate change
- to ensure existing and new communities see real benefits in their well-being from living in Huntingdonshire
- to use natural resources wisely.

## 3 Stage A - The Scoping Process

**3.30** The Meteorological Office has prepared climate projections and visualisations based on 12km square grids across the UK, searchable by postcode. A postcode was selected to represent the central point of Huntingdonshire (see below table). The data is published in collaboration with the BBC and can be found at [Climate projections and visualisations by postcode](#). This projects changes in temperatures and rainfall by summer and winter dependent on global warming being restrained to an increase of 2°C or being 4°C. <sup>(1)</sup>

**Table 5 Predicted impacts of climate change in Huntingdonshire**

Area of change	Season	Current (1991-2019)	2°C global warming	4°C global warming
Hottest day	Summer	37.2°C	38.9°C	43°C
	Winter	18.5°C	19°C	20.2°C
Days reaching above 25°C per month	Summer	5	10	19
	Winter	8	8	8
Rainy days	Summer	8	8	8
	Winter	9	9	9
Wettest day	Summer	61 mm of rain	56 mm of rain	60 mm of rain
	Winter	28 mm of rain	38 mm of rain	40 mm of rain

**3.31** The Met Office climate projections for the UK indicate significant temperature rises in the decades ahead for both winter and summer, with the greatest increases in the already warmer southern parts of the UK. Extreme weather could become more frequent and intense. Although the number of rainy days is predicted to remain the same the amount of rainfall on the wettest winter days may increase by 41% if global warming reaches 4°C.

**3.32** The [Department for Business, Energy and Industrial Strategy \(BEIS\)](#) annual statistics on territorial carbon dioxide emissions by local authority show CO<sub>2</sub> emissions annually since 2005 by sector although the figures exclude aviation, shipping and military transport for which there is no obvious basis for allocation to local areas. The UK total CO<sub>2</sub> emissions have declined from 537,128 Kt in 2005 to 344,511 Kt in 2019, a fall of nearly a third. Transport makes up the single largest generator of this at 36% of all UK CO<sub>2</sub> emissions in 2019. Huntingdonshire's share of these emissions has declined from 2,100 Kt in 2005 to 1,597 Kt in 2019. Transport comprises a particularly high proportion of the district's CO<sub>2</sub> emissions at 44% of the 2019 total reflecting the presence of the A1, A14 and East Coast mainline railways running through the district. The figure below shows the levels and changing patterns of CO<sub>2</sub> emissions at selected years between 2005 and 2019 <sup>(2)</sup>. BEIS also publish data reflecting emissions which are within the scope of influence of local authorities which excludes very large industrial sites, railways, motorways and land use. When these figures are considered, the emissions from transport in 2019 fell from 708 Kt to 544 Kt reflecting the high volume of long distance road and rail transport which traverses Huntingdonshire.

<sup>1</sup> The modelled projections in this data do not represent a specific time period. Instead, they show what conditions could be like in these two different levels of global warming.

<sup>2</sup> LULUCF stands for land use, land use change and forestry and is measured as net emissions as some elements of this sector absorb more CO<sub>2</sub> than they emit.

Figure 3.1 Carbon dioxide emissions by category

see significant decreases. Comparing to the average per capita for England also changes with Huntingdonshire sitting some 40% above the average, in part reflecting its semi-rural nature.

Figure 3.2 Comparative per capita carbon dioxide emissions, 2019

3.33 The below figure shows the per capita CO<sub>2</sub> emissions in 2019 for each local authority within Cambridgeshire and for England as a whole to set Huntingdonshire's levels into perspective. This contains both the total territorial emissions data and that for emissions which are within the scope of the local authority. It shows the significant differences that arise from removing transport and land use, land use change and forestry. When all emissions are taken into account Huntingdonshire's outputs per capita are slightly below the average for Cambridgeshire, however they are some 80% higher than the per capita average for England. When only emissions which fall within the scope of local authorities are taken into account the picture is significantly different. Huntingdonshire's emissions are reduced to 64% of the former figure and East Cambridgeshire and Fenland similarly

3.34 The [Climate Change Commission's report 'Local Authorities and the Sixth Carbon Budget' \(2020\)](#) stated in their key recommendations that:

*'More than half of the emissions cuts needed rely on people and businesses taking up low-carbon solutions – decisions that are made at a local and individual level. Many of these decisions depend on having supporting infrastructure and systems in place. Local authorities have powers or influence over roughly a third of emissions in their local areas.'*

3.35 Key elements which can be influenced at the local authority level include: using planning powers to shape future buildings and local transport infrastructure, enforcement of building regulations to ensure policies setting out more ambitious targets are delivered in new buildings when built, managing risks such as flooding, and protecting the natural environment, wildlife and heritage.

### 3 Stage A - The Scoping Process

**3.36** The Tyndall Centre of the University of Manchester has prepared reports setting climate commitments for all local authorities in England which quantify the implications of the United Nations Paris Agreement for each authority's area. The report for Huntingdonshire was prepared in October 2021. It presents climate change targets for the district derived from commitments enshrined in the Paris Agreement setting out the district's contribution to achieving national targets based on translating the global temperature target of 'well below 2°C' and pursuing 1.5°C as a preferable maximum increase over pre-industrial global temperatures. The Tyndall Report gives the following key recommendations for Huntingdonshire:

1. To stay within a maximum cumulative carbon dioxide emissions budget of 7.6 million tonnes (Mt CO<sub>2</sub>) for the period of 2020 to 2100. At 2017 CO<sub>2</sub> emission levels, Huntingdonshire would use this entire budget within 6 years from 2020.
2. To initiate an immediate programme of CO<sub>2</sub> mitigation to deliver cuts in emissions averaging a minimum of -14.1% per year to deliver a Paris aligned carbon budget. These annual reductions in emissions require national and local action, and could be part of a wider collaboration with other local authorities.
3. To reach zero or near zero carbon no later than 2040. This provides an indicative CO<sub>2</sub> reduction pathway that stays within the recommended maximum carbon budget of 7.6 Mt CO<sub>2</sub>. At 2040 just 5% of the budget remains.

**3.37** The carbon budgets set out in the report apply only to CO<sub>2</sub> emissions from the energy system. The report notes that although all greenhouse gas emissions such as methane affect the rate of climate change long term warming is mainly driven by CO<sub>2</sub> emissions; this approach ensures consistency with the global carbon budgets in the Intergovernmental Panel on Climate Change's Special Report on 1.5°C. The below figure sets out the carbon budget ascribed to Huntingdonshire by the Tyndall Centre with data including 2018 and 2019 in addition to the budget set out in 1 above

giving a total of 10.2 Mt CO<sub>2</sub>. This shows the maximum cumulative CO<sub>2</sub> amount consistent with the district's fair contribution to the Paris Agreement and meeting the budget must not rely on carbon offsets.

**Figure 3.3 Recommended Carbon Budget 2018 to 2100**

#### Key sustainability issues and problems

- Increased summer temperatures will impact on comfort and usability of existing properties
- Drier summers and wetter winters will create issues for flooding, water storage and management, soil and agricultural productivity and habitat survival
- CO<sub>2</sub> emissions are reducing across industrial, commercial, domestic and public sectors
- CO<sub>2</sub> emissions are very high for transport, influenced by the presence of the A1, A14 and East Coast Mainline Railway coupled with the largely rural nature of the district

- Per capita emissions are significantly higher than for England but typical for Cambridgeshire
  - Increasing the climate resilience and energy efficiency of buildings and spaces
- What may happen without a Local Plan**
- Emission levels are likely to continue to fall due to enhanced national policy and technological improvements but the Local Plan offers opportunities to accelerate reductions locally
  - New or renovated buildings may be less resilient to the impacts of climate change

**Figure 3.4 New renewable energy installations by type 2011 to 2021**

**Renewable Energy and Energy Efficiency**

**3.38** In order to reach global climate and sustainable energy goals a dramatic acceleration is needed in the transition to clean, sustainable energy. Renewable energy also provides energy security to essential infrastructure. Data from the [Department for Business, Energy and Industrial Strategy for 2020](#) details electricity consumption levels for Huntingdonshire of 324.3 GWh for all domestic use and 486.6 GWh for non-domestic use. [Equivalent BEIS data for gas consumption in 2020](#) details gas consumption levels at 877.5 GWh for all domestic use and 235.1 GWh for non-domestic use.

**3.39** Renewable energy within Huntingdonshire is provided through wind power, photovoltaic panels (solar power) and a small amount of biomass power generation. The next figure shows the proportion of each power source installed from 2011/12 to 2020/21. This illustrates the shift from installation of wind turbines in the early part of the decade to the dominance of photovoltaic panels as the main source of renewable energy generation within the district. The capacity figures of installations show the high discrepancy between renewable capacity and current levels of energy demand.

**3.40** Since 2011/12 to March 2021 photovoltaic panels requiring planning permission or prior notification have been installed that are capable of generating 158.583 MW of power. The largest solar farm in the district as at March 2022 is situated at Little Staughton Airfield/ Top Farm covering 149 ha and capable of generating 40 MW of power. Two solar farms at Abbotsley and Abbots Ripton are each capable of generating 25 MW of power. Nine smaller solar farms can collectively generate 53 MW of power one of which was granted permission in December 2021 for an extension to provide an additional 20 MW of power. The remaining 52 schemes installed in this time requiring planning permission or prior notification are all small scale installations, many on the roofs of existing buildings, and collectively providing just over 3 MW of power.

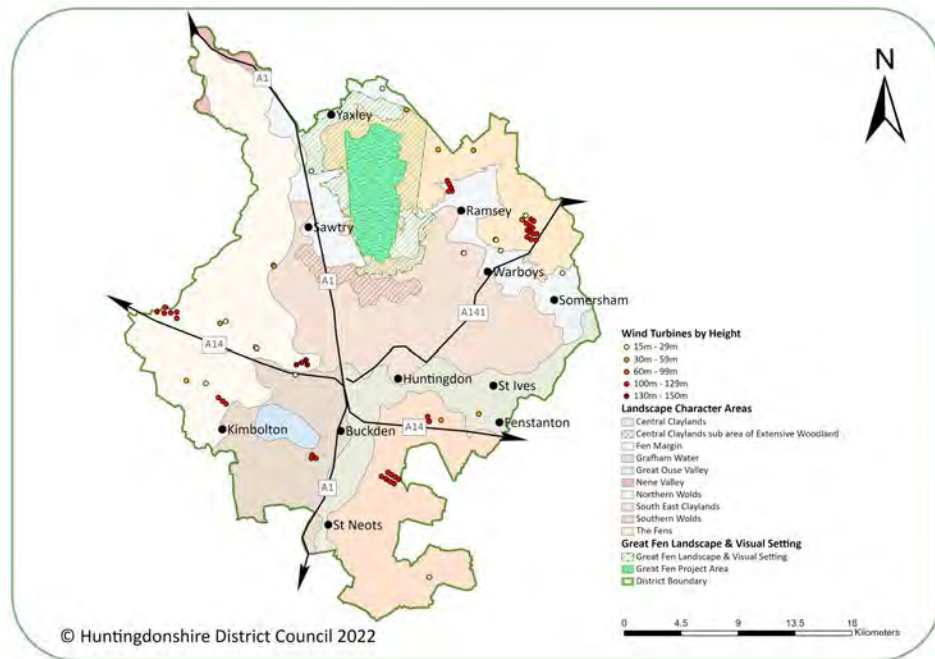

### 3 Stage A - The Scoping Process

#### Solar panels near Grafham Water

The following map shows the distribution of wind turbines throughout Huntingdonshire including the height to the blade tip. Huntingdonshire's Local Plan to 2036 has prevented further erection of wind turbines within the area of the Great Fen and its visual and landscape setting to protect this valuable nature conservation site. [Guidance](#) has been provided locally since 2006 on landscape sensitivity when planning wind turbine proposals and for the consideration of the cumulative impact of schemes.

Map 3.1 Wind Turbine Locations

3.42 Biomass is a very limited source of renewable power within Huntingdonshire. Only 11 schemes have been granted planning permission from 2011/12 to 2021/22 collectively capable of providing around 4 MW of power. Biomass power installations have primarily been at educational, agricultural and industrial sites.

3.43 Improving energy efficiency is also important both in reducing the climate impacts of fossil fuel based power and heating systems and in reducing fuel poverty. The Local Plan will have a key role to play in promoting energy efficiency standards within new buildings. However, the construction age and energy performance of the current housing stock presents the greater challenge in effective retrofitting to bring these homes closer to net zero standards. The next figure shows the percentages of Huntingdonshire's housing stock built across different time periods, followed by a graph showing the ratings of EPCs issued for homes in Huntingdonshire from 2011 to 2021.

3.44 Prior to the 1930s most properties were of solid wall construction; this represents around 12% of the district's housing stock including a substantial number of listed heritage properties which present particular challenges in retrofitting. Uninsulated cavity walls were introduced in the 1930s; and the building boom of the 1950s and 1960s predominantly constructed properties with cavity walls and saw the introduction of around 50mm of roof insulation as standard towards the end of the period. Around 30% of Huntingdonshire's homes were built in this period. Standards improved gradually through the remainder of the century with deeper loft insulation and double glazed windows common by the 1990s. This building phase represents nearly 40% of homes in the district. Many residents have already undertaken some upgrades to properties with double glazing and roof insulation improvements being common. However, substantial additional measures will be required to bring older homes as close as possible to net zero carbon standards. Homes built since 2000 typically included insulation in the cavity walls, double glazed windows, and deeper roof insulation.; however this

accounts for only 19% of the district's homes and the vast majority will still need some level of retrofitting of energy efficiency measures to reach net zero carbon standards.

**Figure 3.5 Age Distribution of Huntingdonshire's Housing Stock**

**3.45** Energy efficiency of new buildings is fundamentally shaped by Building Control Regulations which changed on 15 June 2022 as part of the governments' efforts towards the transition to net zero. CO<sub>2</sub> emissions from new build homes must be around 30% lower than the previous standards and emissions from other new buildings, including offices and shops which must be reduced by 27%. These are expected to be an interim measure to be followed in 2025 by introduction of the Future Homes and Buildings Standard which is intended to ensure that any new homes built after 2025 will not require further energy efficiency retrofit work to become zero-carbon as the electricity grid continues to decarbonise.

**3.46** Since 2008 homes have required an Energy Performance Certificate when they are built or marketed for sale or rental, although listed buildings are exempt from the requirement. Each property is given a rating from 'A' which is the most energy efficient to 'G' which is the least energy efficient. Within these categories are more refined scores from 1-100 points based on the government's standard assessment procedure (SAP). A certificate is valid for 10 years. DLUHC provide [quarterly monitoring for all EPC certificates](#) issued on homes; it should be noted that there may be some double counting of properties over the years if replacement certificates are issued. The EPC certificates issues across Huntingdonshire between 2011 and June 2022 are shown in Figure 4.6. Energy efficiency ratings typically vary by age of property too. The average for a home in England built before 1900 is 54, for a mid-20th century property it is 63 and for one built from 2012 onwards it is 83 which gives a 'B' EPC rating. A sample of new homes being built in Huntingdonshire in 2021/22 shows that EPC ratings of 'A' and 'B' are being achieved.

**Figure 3.6 EPC for Huntingdonshire 2011 to June 2022**

### 3 Stage A - The Scoping Process

3.47 Energy efficiency is linked to fuel poverty which is both a social and climate related issue. The figure below shows central heating by power source as recorded in the 2011 Census and reflects the dominance of gas powered central heating in Huntingdonshire along with the majority of England. Oil heating still has a significant role to play in heating homes in Huntingdonshire though at 8.5% and is particularly common in more remote locations which are not served by the mains gas grid.

**Figure 3.7 Types of central heating across Huntingdonshire (ONS 2011 Census)**

3.48 Fuel poverty is an issue for communities across Huntingdonshire for a variety of reasons. Significant parts of the district, particularly in the more sparsely populated western and northern areas do not have access to mains gas supplies so households tend to be dependent on oil fired boilers or electric heating systems. Although prices vary significantly oil boilers are typically around 30% more expensive to run than mains gas ones.

Households are considered to be in fuel poverty if their dwellings equates to an energy efficiency rating of band D to G and a disposable income after housing costs and energy needs of less than 60% below the national median.

3.49 BEIS publish fuel poverty data annually at lower super output area level giving a very detailed picture of where communities are facing fuel poverty. The [2020 dataset](#) is the most recent available and shows that within Huntingdonshire fuel poverty affect 10.95% of households overall. With the increase in fuel prices during 2022 and uncertainty over future prices and supply, it is anticipated that a greater proportion of households will now be in fuel poverty or will be in the future. The 2020 data shows that the lowest levels of fuel poverty at 4.2% of households is experienced in parts of Stukeley Meadows in Huntingdon and north of St Ives and along the B1040; both of these areas comprise late 20th century homes with a high proportion of larger detached properties that have access to the mains gas grid. The mid-range of fuel poverty at between 11 and 14% is experienced in a diverse range of locations including Sawtry and the Giddings, Southoe, central Yaxley, Great Staughton, the Mallard Lane area of St Neots and Ramsey St Mary's. These areas typically contain a much wider range of house types including older properties and between 45 to 65% of homes tend to be off the gas grid. The highest levels of fuel poverty in Huntingdonshire at 21 and 22% are experienced in the Thongsley and Norfolk Road/ Nene Road areas of the Oxmoor estate in Huntingdon which have high concentrations of households living in relative poverty overall and out in rural parts of the district around Great Raveley and Woodwalton where mains gas grid access is typically less than half of all households and the age and nature of the housing stock is very varied.

#### Key sustainability issues and problems

- Renewable power generation within Huntingdonshire has shifted from a focus on wind turbines to solar farms requiring extensive areas of land but with some scope for complementary agricultural use

- The age of the housing stock means that retrofitting of energy efficiency measures will be crucial in boosting the sustainability of the district's homes
- Fuel poverty was already an issue for over 1 in 10 households before the April 2022 price rises; this is expected to become more intense in the short term
- Access to mains gas is not universal throughout the district with some locations relying on individual oil tanks; in such circumstances alternative community heating systems may offer a more sustainable solution
- The visual impact of on-shore renewable energy production needs to be balanced with the impact on local landscape and communities

#### What may happen without a Local Plan

- Lack of local criteria establishing where and in what circumstances renewable energy infrastructure installations may be acceptable
- Reliance upon national standards for energy efficiency of building construction
- Lack of support for community heating schemes

### Flooding and Water

3.50 Huntingdonshire has a number of water courses within its administrative area including the Rivers Great Ouse and Nene. In addition, there are several brooks and other water courses as well as numerous lakes, many made from old gravel workings and the Grafham Water reservoir. Some areas of Huntingdonshire located in the Fens area are below sea level. Flood zones within and around Huntingdonshire are shown in the following

map. A map showing all the rivers, brooks and water bodies within the district can be found on the Council's interactive [Strategic Flood Risk Assessment map](#).

- 3.51 The district sits within the administrative area for Water Resources East, the Anglian River Basin district and the Anglian Water and part of Cambridge Water catchment areas. The district is located in the driest region in the country, most of the East of England receives less than 700mm of rain a year in comparison to the wettest regions in the country - the Lake District and the Scottish Mountains which receive 3000mm and 4000mm respectively. However, there is a much more even distribution of rainfall throughout the year than in other regions, in the winter (December to February) the region averages 30 days of rainfall whilst the summer (June to August) sees an average of 25 days<sup>(3)</sup>.
- 3.52 Historically, the district has experienced a number of surface water / drainage related flood events; causes range from insufficient storm and combined drainage capacity to poor surface water management<sup>(4)</sup>. The majority of fluvial flood events are associated with the River Great Ouse and its tributaries, whilst in Ramsey fluvial flood risk results from High Lode which flows northwards through the town. This is reflected in flood risk mapping which sets out flood risk from rivers and seas. Tidal flood risk can cause a potential risk within the district, although the tidal limit of the River Great Ouse is at Brownhill, just upstream of Earith, the river as far upstream as St Ives can still be affected by the tide ([Future Fens Flood Risk Management Baseline Report 2020](#)).
- 3.53 The impacts of climate change will see increases in extreme weather events, leading to increased rainfall, rainfall intensity and sea level rises all of which will increase the impact of all sources of flooding in the district. The three months from October to December 2020 saw increased rainfall across the East equivalent to 154% of the Longtime Average Rainfall (LTA) for the

3 Met Office - [description of regional climates in the UK](#)

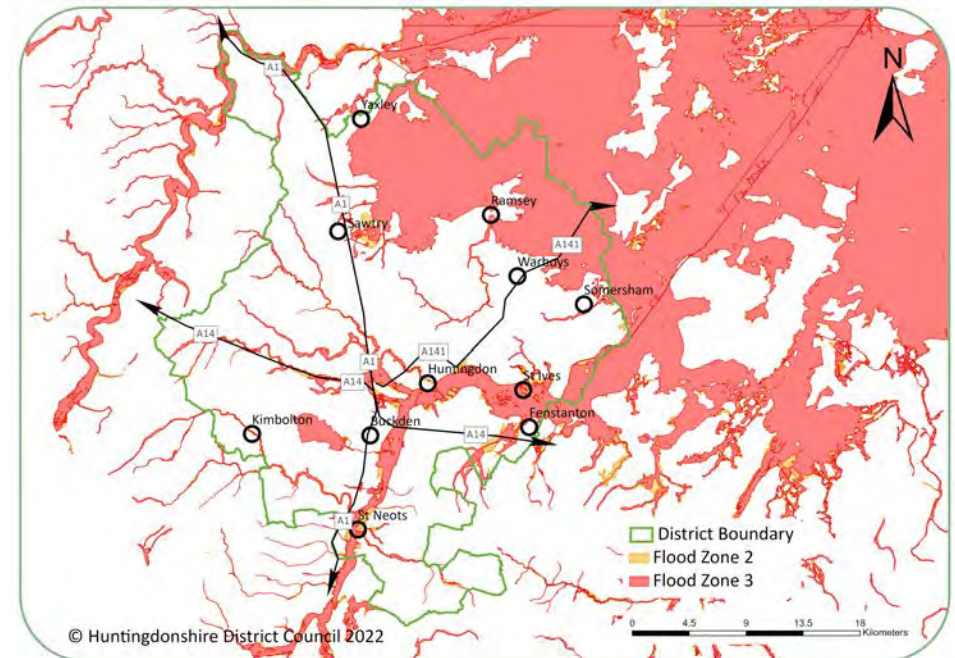

4 [Huntingdonshire Strategic Flood Risk Assessment 2017](#)

## 3 Stage A - The Scoping Process

region. The most significant river levels were recorded on the River Great Ouse, the Tove, Kym, Alconbury Brook and Bury Brook and the region saw the most significant flood event of such a scale since 1998. Across the whole of 2020 rainfall across the region was 115% of the LTA <sup>(5)</sup>

3.54 Water supply and management in Huntingdonshire is undertaken by Anglian Water (a water and sewerage undertaker,) and by Cambridge Water (a water undertaker). Water supply in the Anglian Water region comes from surface water supplies such as rivers and reservoirs or ground water sources such as wells, boreholes and springs. The majority of Huntingdonshire sits within the Ruthamford South Water Resource Zone (WRZ) which covers an area of 1,419km<sup>2</sup>. Water resources are in general supplied "from surface water [82%], with a direct abstraction on the River Great Ouse going to Grafham Water reservoir. There is also a small groundwater contribution [18%] from the abstraction in the Woburn Sands aquifer."<sup>(6)</sup> Grafham Water also exports water to Affinity Water; 84.6 MI/d (Megalitres a day) were exported in 2020.

Map 3.2 Flood Zones

3.55 In the Anglian Water Region, total water demand is expected to increase from 109MI/d (2017/18) to 1,240MI/d by 2045 if no further action is taken to manage demand. In general it is assumed that the increase in water demand is a result of population growth as non household demand is expected to decrease from 275 MI/d (2017/18) to 273MI/d by 2045. In Ruthamford South water resource requirements as a result of population

5 Cambridgeshire County Council [Winter Flooding 2020](#)

6 [Anglian Water WRZ Summaries 2019](#)

growth are expected to increase by 13% between 2017/18 and 2045. Notably climate change is expected to increase the vulnerability of the River Great Ouse, which feeds Clapham intake and Grafham Water<sup>(7)</sup>.

**3.56** Cambridge Water supplies water to the Eastern edge of Huntingdonshire covering the towns of St Ives and Ramsey and villages such as Bluntisham and Earith, Needingworth and Holywell. Cambridge Water is a Single Water Resource Zone, it typically supplies an average of 80 million litres of water a day (MI/d), this can increase by up to 20 to 25% during periods of peak demand experienced during hot, dry summers<sup>(8)</sup>.

**3.57** Cambridge Water's supply comes from groundwater sources, 97% from chalk aquifers and the remaining 3% from greensand aquifers. Small bulk water supplies are provided to and from Anglian Water and Affinity Water. In the Cambridge Water Region overall household 'dry year' demand is expected to rise between 2017/18 to 2044/45 by around 8 MI/d. A slow rise in demand is expected by non-household and other business customers over the same time period. 8 of the 28 sources of water supply assessed by Cambridge Water are expected to be vulnerable to the impacts of climate change<sup>(9)</sup>.

**3.58** To protect drinking water supply from pollution, the Environment Agency defines a number of Source Protection Zones (SPZ), these zones include areas where the level of risk of contamination is high. This can be exacerbated by certain situations such as storing pollutants like petrol underground or from soakaways from septic tanks. Any development within a SPZ should demonstrate that it will not cause contamination to ensure that water is safe for human consumption. Source Protection Zones in Huntingdonshire run from the east of Huntingdon, south of St Ives to Fenstanton and are also located in Little Paxton and to the south and east of Waresley/ Great Grandsden<sup>(10)</sup>.

**3.59** [The Emerging Water Resources Regional Plan for Eastern England January 2022](#) identifies that the Environment Agency has classified the whole of Eastern England as being in 'in serious water stress'. Taking into account population growth and climate change and the need to restore and protect the environment, current predictions estimate that by 2050 there will be a water deficit of between 703 MI/d and 2,267 MI/d. Around 30 to 98% higher than the region's current water use. In addition, the Plan highlights that shifts in water consumption between water companies has occurred as a result of the COVID-19 pandemic, which re-distributed population (from towns and cities to rural areas) and instigated more working from home (page 31). Anglian Water and Cambridge Water work together to develop strategic solutions, through Water Resources Management Plans current projects include:

- a proposed new reservoir expected to be located in Lincolnshire (The South Lincolnshire Reservoir)
- a proposed new reservoir in the Fens to the north of Chatteris approximately 6kms from Huntingdonshire
- a proposed new piece of infrastructure that would transfer water from the Anglian Water region to supply Affinity Water customers via potential sources such as the above reservoirs or a new source from the River Trent.
- additional work to increase smart metering combined with behaviour change, leakage reduction and additional water efficiency activity.

Source: [Anglian Water](#)

**3.60** Water Resources East also notes the importance of local water resources to the farming community. Farming relies on local water resources that lie beneath, stored on their farm or flow past their farm. More than 60% of England's abstraction licences for irrigation are located in the Eastern region.

7 [Anglian Water Water Resources Management Plan 2019](#), pages 27-28, 32

8 [Cambridge Water Draft Drought Plan 2021](#), page 4

9 [Cambridge Water, Water Resources Management Plan 2019](#), pages 14-17, 109

10 Environment Agency - [Groundwater Source Protection Zones](#)

## 3 Stage A - The Scoping Process

Power generation also requires a lot of water. "Energy plants across the region are major users of freshwater, particularly from the River Trent and River Great Ouse", ([The Emerging Water Resources Regional Plan for Eastern England January 2022](#), page 27) and it is incorrect to assume that renewable energy production will not impact on water abstraction or usage. Decreased flows and reduced ground and surface water means less water to abstract for essential services such as food production and power generation.

3.61 Huntingdonshire sits within the Anglian River Basin District. Classification data from the [Environment Agency](#) shows the environmental condition or "status" of water bodies in the Anglian River Basin District. 634 water bodies are identified within this District which comprise 526 rivers, canals and surface water transfers, 46 lakes, 13 coastal, 18 estuarine and 31 groundwater. Surface and ground waters are also assessed by ecological and chemical status. The following tables show classification data from the [Environment Agency](#) (data was last updated on 22 May 2022).

**Table 6 Ecological status for surface waters in the Anglian River Basin District**

Ecological status or potential	Bad	Poor	Moderate	Good	High	Total
Number of water bodies	22	105	428	47	0	602
Number of water body elements	111	406	663	824	3,138	5,142

**Table 7 Chemical status for surface waters in the Anglian River Basin District**

Chemical status	Fail	Good	Total
Number of water bodies	603	0	603
Number of water body elements	1,205	7,007	8,212

**Table 8 Quantitative status for ground waters in the Anglian River Basin District**

Quantitative status	Poor	Good	Total
Number of water bodies	14	17	31
Number of water body elements	15	109	124

**Table 9 Chemical status for ground waters in the Anglian River Basin District**

Chemical status	Poor	Good	Total
Number of water bodies	15	16	31
Number of water body elements	23	132	155

- 3.62 The Environment Agency's approach to managing and protecting groundwater are provided in a series of [Groundwater Protection Position Statements](#). The primary aim of all of the position statements is the prevention of pollution of groundwater and protection of it as a resource.
- 3.63 Impacts of climate change and growth could increase pressure on water bodies for example through increased surface water run-off. This may impact on the future ecological status of these water bodies in terms of chemical pollutants or reduced ecological status.
- 3.64 Huntingdonshire's [Stage 2: Detailed Water Cycle Study December 2014](#) provides information about the capacity of the water environment and water services infrastructure to accommodate required growth during the current Local Plan period (2011-2036).
- 3.65 It identified, at the time of the study, that there was constrained water treatment capacity at the waste water treatment works (WwTW) at Oldhurst, Ramsey, Somersham and St Neots. It also identified that without further capacity measures the WwTW at Buckden and Huntingdon would reach the constraints of water treatment capacity during the current local plan period (up to 2036), based on allocations contained in that plan. Proposals such as the [Oxford Cambridge Arc](#) growth corridor and growth in nearby authorities could also place increasing strain on wastewater treatment works, water quality and flooding from all sources which will need to be considered by Huntingdonshire District Council, private water companies and public and private organisations. A revised study will be undertaken as part of the next local plan to understand how capacity has changed and where there may be capacity issues.

#### Key sustainability issues and problems

- The impacts of climate change will see increases in extreme weather events, leading to increased rainfall, rainfall intensity and sea level rises all of which will increase the impact of all sources of flooding in the district. Potential to impact on existing and new developments,

infrastructure and agricultural productivity, social and economic impacts across the district

- Potential need to set aside land for flood mitigation measures due to increased flood risk and understand effectiveness flood management infrastructure
- Increased flood risk may influence where development can be sustainably located
- Ensuring that new growth does not adversely affect water resources or water resources management infrastructure and that there are sufficient measures in place to balance water supply across the district
- Ensuring that homes and businesses are resilient to flooding and provide effective water management to maintain water resources for all
- Ensuring new development does not adversely impact on the ecological and biological status of water bodies

#### What may happen without a Local Plan

- Inappropriately located development, putting economies, people, ecology and biodiversity at risk
- Lack of water resources to new and existing support residents, businesses and agricultural requirements
- Increased pressure on water resource management infrastructure

#### Waste and Recycling

- 3.66 The waste hierarchy, gives priority to preventing the creation of waste in the first place, followed by preparing waste for reuse; to recycling, and then recovery. Disposal, such as landfill, is regarded as the worst option. This moves away from landfilling the majority of waste to a more circular economy where products and materials are recovered and regenerated where possible giving them a new lease of life, maximising their value and minimising waste. It also minimises the harmful environmental impacts of landfills and prolongs the lifespan of existing landfills and reduces the need

### 3 Stage A - The Scoping Process

to use finite natural resources and can help to lower green house gas emissions. This leads to a more sustainable way of consuming and using resources and ultimately a more sustainable way of living.

**3.67** All households in Huntingdonshire are provided with a collection for residual and dry recycling waste while 90% of residents have access to an organic waste collection service. Residents have access to a network of 23 textile recycling banks from which all materials collected are re-used. There are three household recycling centres in the district located in Alconbury, Bluntisham and St Neots that are run by Amey for Cambridgeshire County Council (the waste disposal authority).

**3.68** The [Cambridgeshire and Peterborough Minerals and Waste Local Plan](#) (adopted July 2021) identifies several Waste Management Areas (WMAs) within Huntingdonshire. These are areas of existing operational sites, and committed sites (i.e. those with planning permission but which are not yet operational) that make a significant contribution to managing any waste stream. There are WMAs in Alconbury, Bluntisham, Buckden, Godmanchester, Hemingford Abbots, Little Paxton, Ramsey, St Neots and Somersham. The Minerals and Waste Local Plan does not allocate any sites for future waste management development as a Waste Needs Assessment prepared alongside the Plan did not identify any capacity gaps.

**3.69** Local zero waste initiatives and projects are also available across in and around Huntingdonshire such as toy libraries, refill/ eco shops and pop-up repair cafes, full details on where these are and how to find more information is available on [HDC's website](#). The Council works with the [Cambridgeshire and Peterborough Waste Partnership](#) (RECAP) to continuously improve waste services, increase recycling and reduce waste and find cost effective and environmentally responsible ways to meet the needs of local communities.

**3.70** The below figure shows that more than 55% of the waste collected has been sent for recycling or composting over the past 10 years. Since 2011, HDC have performed on or above targets. The rates of recycling plateaued between 2015/16 and 2018/19 before picking up again from 2019/20. <sup>(11)</sup>.

**Figure 3.8 Recycling rates in Huntingdonshire since 2010/11**

**3.71** Each year the number of domestic properties that the Council's waste collection team service has increased. Despite the increase, the next figure shows that across domestic properties, the tonnes of waste collected across dry recycling, organic waste and residual waste have stayed relatively constant.

<sup>11</sup> Data collected from HDC's Waste and Recycling Team and reported annually in Annual Monitoring Reports up to 2018/19

**Figure 3.9 Amount of waste in tonnes collected from domestic properties since 2016/17**

#### Key sustainability issues and problems

- Many tonnes of waste are sent to landfills and recycling centres
- Increasing levels of recycling and re-using materials reduces how much material ends up in landfills reducing their environmental effects and supporting a circular economy
- Growth places additional demand on existing waste and recycling collection services
- The waste attributed to the construction of new buildings

#### What may happen without a Local Plan

- Less sustainable reuse of waste, particularly construction material
- Growth may not maximise the inclusion of additional recycling facilities and zero waste initiatives

**3.72** The contamination of dry recycling has considerable financial implications as well as environmental ones and means waste that could have been recycled may end up in landfill. In 2021/22, the Council's rejections rate of dry recycling material was 5.67% equating to approximately 1,068 tonnes (down from 6.86% in 2019/20 and from 7.97% in 2017/18). HDC's contamination rate is below the national average of 12.7%.

**3.73** HDC's Waste and Recycling team carry out customer satisfaction surveys to give the Council an opportunity to gather residents' opinions on communication methods as well as more insight into how residents dispose of their waste. The 2020 survey found that overall 97% of respondents were satisfied or very satisfied with the refuse/recycling service, this was an improvement from 89% in the 2019 survey.

## 3 Stage A - The Scoping Process

### Environmental Characteristics

3.74 The following topics were reviewed:

- Landscape
- Land, soils and agriculture
- Biodiversity, habitats and the natural environment
- Green infrastructure and open space
- Pollution

### Landscape

3.75 Huntingdonshire is a largely rural district. It is 913km<sup>2</sup> (about 350 square miles). Huntingdonshire's landscape comprises many elements formed over millions of years which are constantly evolving through a combination of natural and human influences and exhibit features from different stages in their history and development. The majority of Huntingdonshire lies on Jurassic clay with glacial till covering the higher land in the northern and western parts of the district. The distinctive low lying, flat landscape of the Fens was formed by the post-glacial accumulation and subsequent drainage of peat. Alluvial material has been deposited along the floodplains of the Rivers Nene and Great Ouse giving fertile flood meadows with extensive gravel deposits in the Ouse valley. A small area to the north-west of the district is underlain by Oolitic limestone extensively used in the traditional buildings of the Nene valley.

3.76 The highest land in the district, rising to 70m AOD, lies across the western and southern parts with the eastern parts being typically no more than 30m AOD. The district is incised by the wide valley of the River Great Ouse as well as the steeper, narrower valleys of its tributaries, especially the River Kym, Ellington Brook and Alconbury Brook. The valley of the River Great Ouse flows south to north before turning west to east at Huntingdon. It comprises a broad, shallow sided valley with a wide floodplain which has been extensively worked for gravel extraction shaping the landscape through the resultant large bodies of water. The River Great Ouse flows through or

around three of Huntingdonshire's four market towns and historically was a significant transport corridor supporting the local and regional economy allowing the district to prosper.

3.77 The Fens are flat and at or below sea level. Former wetlands they were drained to allow agriculture on the rich, fertile soils. The landscape is dominated by straight, artificial watercourses with deep field ditches and a network of drainage channels. Inland of the fens the land rises steeply into the claylands which gently undulate between 10 and 50m AOD. Streams in this area are typically narrow, and flow generally west to east but they are not a strong visual feature in the landscape.

3.78 Huntingdonshire has nine identified landscape character areas (see the following map), these are:

- The Fens
- Fen Margin
- Central Claylands
- Great Ouse Valley
- South East Claylands
- Northern Wolds
- Grafham Water
- Southern Wolds
- Nene Valley

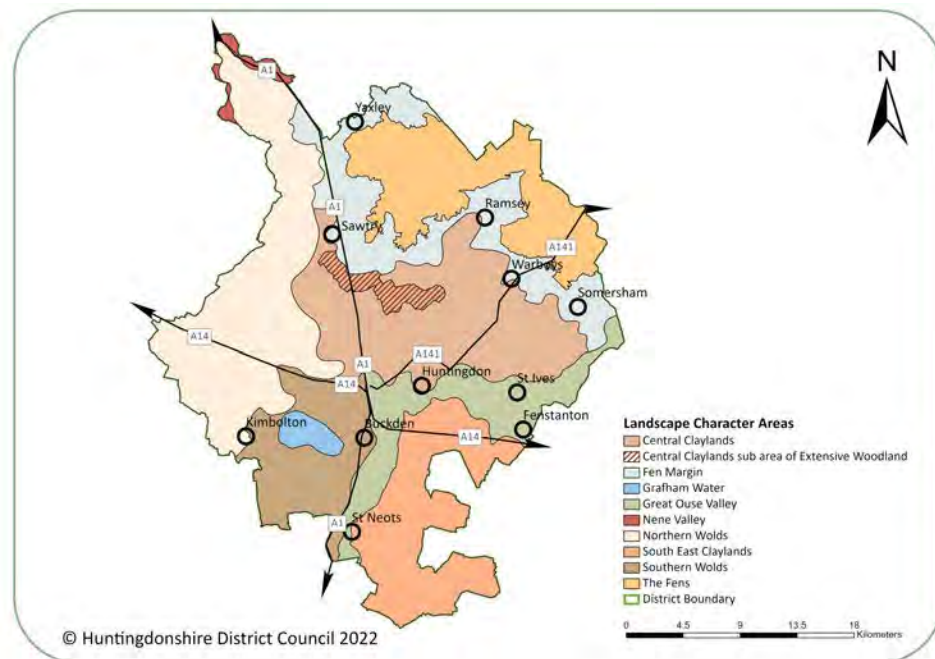

3.79 These landscape character areas can be broadly divided into the low-lying fens, undulating claylands, upland areas (the Wolds) and main river valleys. A summary of their key characteristics is provided within this report but detailed character assessments of each landscape and pressures going forward are set out in Huntingdonshire's [Landscape and Townscape SPD \(2022\)](#) .

3.80 The identification of landscape character areas is an approach which protects the distinctive features of each type rather than favouring a particular selection, and provides clear criteria for making judgements. The

Local Plan will seek to ensure that both the quality and distinctive characteristics of these areas are conserved and enhanced through the allocation process and as subsequent development occurs.

**Map 3.3 Huntingdonshire's Landscape Character Areas**

a few linear villages along main roads. The area includes the Great Fen project which seeks to protect remaining fragments of the ancient fenland landscape, create large areas for wildlife and prevent further loss of the peat soils.

### Fen Margin

**3.82** The Fen Margin landscape character area comprises a narrow arc forming a transition between the Fens to the north and east and the Central Claylands and Northern Wolds landscape character areas to the south and west. The area is generally well vegetated, with deciduous woodland, hedgerows, trees and orchards. There is a matrix of land uses, comprising arable farmland, pasture, airfield, orchards, woodland and settlements.

### Central Claylands

**3.83** The Central Claylands is a large character area in the centre of Huntingdonshire. It includes Huntingdon, Alconbury Weald and St Ives and major transport corridors namely the A1/A14. In the northern part of the character area there is a small sub-area of extensive ancient woodland located between Aversley Wood and Wennington Woods.

### Great Ouse Valley

**3.84** The broad, shallow valley of the River Great Ouse flows roughly south to north between St Neots and Huntingdon then turns to flow west to east via St Ives and exits Huntingdonshire near Earith, thus influencing three of Huntingdonshire's towns. It has experienced large scale gravel extraction; the resultant pits have since been flooded to create habitats for wildlife, nature reserves and fisheries. The floodplain meadows play an essential role for flood storage and flow attenuation and are of high ecological value.

### The Fens

**3.81** The Fens landscape character area lies in the north east of Huntingdonshire and is distinctive for its low-lying, flat, regular open character arising from its man-made network of drainage channels and waterways. It is predominantly used for arable agriculture on its dark peaty soil, as such there is sparse woodland cover. Settlement is limited to isolated farms, with

## 3 Stage A - The Scoping Process

### South East Claylands

**3.85** The South East Claylands character area is situated in the south eastern corner of Huntingdonshire stretching up to the Great Ouse Valley in the north and west. It includes large areas of high quality landscape with a varied and typically gently undulating landform, established hedgerows and woodland and historic settlement patterns.

### Northern Wolds

**3.86** The Northern Wolds landscape character area forms a broad north-south strip on the western edge of Huntingdonshire. It has a strong topography of ridges bisected by pronounced valleys. The ridges are generally used for arable farming. The area has been significantly influenced by medieval development with many scheduled monuments present and distinctive historic villages and ecclesiastical architecture.

### Grafham Water

**3.87** The Grafham Water landscape character area is defined and dominated by the reservoir and its immediate landscape setting. Grafham Water is managed by Anglian Water. It has a strong sense of identity and is unique within Huntingdonshire being predominantly open water and is the third largest reservoir in England by area and is the largest Site of Special Scientific Interest in Huntingdonshire at 806ha. Recreation is a key activity, with facilities for sailing, fishing, walking, cycling and horse riding.

### Southern Wolds

**3.88** The Southern Wolds landscape character area incorporates the lower valleys of the River Kym and Ellington Brook. It completely encircles the Grafham Water landscape character area. It has a well-wooded landscape, with hedged fields, and some more recent plantations. There are scattered villages and isolated farms throughout.

### Nene Valley

**3.89** The Nene Valley landscape character area covers land associated with the River Nene just in the north west tip of Huntingdonshire, although the Nene valley stretches beyond the district boundaries into Northamptonshire. The local availability of limestone has strongly influenced the vernacular architecture of the area. The Nene Valley steam railway provides a recreational function, and distinctive landscape feature.

#### Low-lying Fens landscape

#### Undulating Claylands

#### Upland areas known as the Wolds

#### Main river valleys

**Key sustainability issues and problems**

- Huntingdonshire's landscape and its distinctive qualities are vulnerable to the impacts of climate change, insensitive new development and land management practices
- Water management is key to landscape character throughout much of the district
- The expansive, flat wetlands of the Fens are particularly vulnerable to the impacts of climate change degrading fertile peat soils and its landscape character
- The River Great Ouse flows through or around three of Huntingdonshire's four market towns providing a high quality landscape setting to them and recreational opportunities but also an increased risk of flooding

**What may happen without a Local Plan**

- Distinctive landscape features such as ancient woodlands, nature sites and orchards which enrich Huntingdonshire's landscape and ecological quality may be harmed or lost
- A scale and nature of new development may be implemented that is detrimental to the character of Huntingdonshire's landscapes
- New developments that are not sensitively integrated with their surroundings and do not incorporate appropriate landscaping may permanently harm Huntingdonshire's landscape and historic settlements
- Poorly managed riverside attractions along the Rivers Great Ouse and Nene may damage the landscape quality of the areas and the framing of villages and towns nearby

**Land, Soils and Agriculture****Soils**

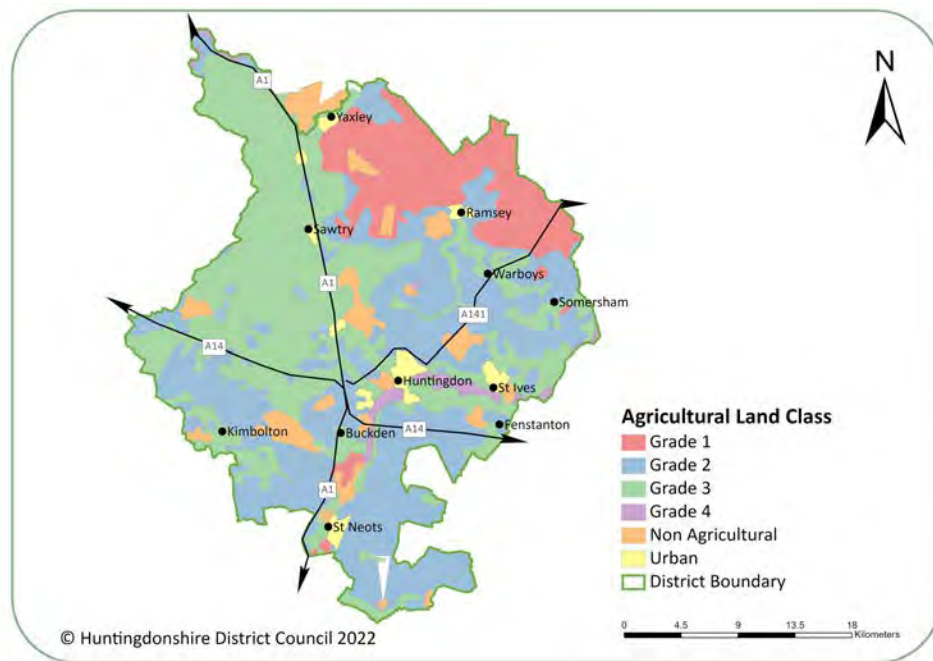

- 3.90** Huntingdonshire benefits from good quality agricultural land throughout almost all of the district outside of the built up areas. The below map shows the distribution of agricultural land grades across the district.
- 3.91** Grade 1 land is the best and most versatile agricultural land which predominates in the north east of the district where fenland peat is found. Peat is particularly vulnerable to the impacts of climate change due to increased variability in water levels and higher temperatures affecting the peat. Drying out of the peat may worsen this further by releasing carbon emissions itself and through suffering greater wind erosion causing more depletion of the peat soils which exposes less fertile ground.
- 3.92** Much of the western and southern parts of the district comprise grade 2 agricultural land which is also highly productive; the only exceptions to this are predominantly found along the Great Ouse Valley and a belt of grade 3 land broadly running east from Woodwalton to Warboys and on to Somersham. The majority of the north west of Huntingdonshire comprises grade 3 agricultural land within which elements of grade 3a land are still classified as best and most versatile and so forming valuable productive agricultural land. Detailed mapping of 3a and 3b suitable for use at a site specific level is not currently available.
- 3.93** In terms of underlying geology, the vast majority of the district comprises Oxford clay (mudstone) with the eastern edge being formed of West Walton and Ampthill clay (mudstone). In the south eastern edge of the district Waresley and Great Gransden are situated on a Woburn Sands formation (sandstone). Geologically the northern tip of Huntingdonshire is by far the most diverse with narrow bands of bedrock relating to the River Nene routing. Directly under the river the bedrock mainly comprises Whitby Mudstone, adjoined by Grantham formation of sandstone, siltstone and mudstone. A band of Rutland formation argillaceous rocks with subordinate sandstone and limestone follows the same looping formation. Upper,

## 3 Stage A - The Scoping Process

Lower, Blisworth and Cornbrash limestone are also all present along with small areas of Blisworth and Kellaways clay (mudstone). Overlaying much of the bedrock are superficial deposits comprised of clay, silt, sand and gravel some of which have been extracted often for construction materials.

**Map 3.4 Agricultural Land Classification**

only include commercial scale production. The next table below shows that cereal crops account for just over half (52.8%) of all farmed land within Huntingdonshire with other arable crops comprising the second most extensive farmland. Fruit and vegetable growing has shown a marked increase in Huntingdonshire between 2010 and 2016 although it fell across Cambridgeshire overall. The numbers of livestock kept were more volatile in this period as shown in the below table. Sheep and poultry numbers both decreased slightly in Huntingdonshire but the proportion of them compared to livestock across the whole of Cambridgeshire decreased significantly due to increases in the numbers kept in Fenland and Peterborough.

## Agriculture

**3.94** Most farms in Huntingdonshire focus on cereal and general cropping production with limited amounts of livestock. DEFRA collate data on land and crop areas, livestock populations and agricultural workforce numbers as at 1 June to indicate the nature of the agricultural economy. The figures

Table 10 Agricultural Land Use in Huntingdonshire 2010 and 2016

Crop	Total farmed area (ha)		Cereals (ha)		Arable (excluding cereals) (ha)		Fruit and vegetables (ha)		Grassland (ha)	
	2010	2016	2010	2016	2010	2016	2010	2016	2010	2016
Huntingdonshire	70,635	74,656	35,976	39,411	20,853	19,021	884	1,296	9,025	8,845
Cambridgeshire	262,465	268,034	130,396	139,552	73,826	70,547	11,069	7,863	29,878	29,735
Proportion grown in Huntingdonshire	26.9%	27.9%	27.6	28.2	28.2	27.0	8.0	16.5	30.2	29.8

Table 11 Numbers of Livestock on Huntingdonshire's Farms 2010 and 2016

Livestock	Cattle		Sheep		Pigs		Poultry	
	2010	2016	2010	2016	2010	2016	2010	2016
Huntingdonshire	8,948	9,194	11,548	9,114	5,226	5,447	685,502	515,491
Cambridgeshire	26,552	27,606	36,037	41,329	29,225	24,903	2,015,238	2,182,263
Proportion produced in Huntingdonshire	33.7%	33.3%	32.0%	22.1%	17.9%	21.9%	34.0%	23.6%

### 3 Stage A - The Scoping Process

#### Previously developed land

**3.95** Previously developed land is concentrated almost entirely within former airfields and existing towns and villages. To reduce the greenfield land take, Huntingdonshire's Local Plan to 2036 allocated all the elements of RAF Alconbury and RAF Brampton that were redundant from military use for redevelopment for new homes, employment and community uses. The built elements of RAF Upwood were also allocated for redevelopment although the airfield itself remained. Some pockets of previously developed land remain available for reuse; others may be identified through a call for sites where existing land uses are of low viability. In accordance with the Town and Country Planning (Brownfield Land Register) Regulations 2017 the Council maintains a [brownfield register](#).

**3.96** The percentage of completions on previously developed land within Huntingdonshire since the 2011/12 monitoring year are provided in the next figure.

**Figure 3.10 % of new dwellings completed on PDL**

#### Key sustainability issues and problems

- A very high proportion of the district's agricultural land is classified as best and most versatile, whilst this is beneficial for production and food security it provides challenges for focusing development onto less valuable land
- Degradation of peat and soil erosion resulting in the loss of the most fertile soils
- There are limited remaining opportunities for largescale reuse of previously developed land

#### What may happen without a Local Plan

- Greenfield land may be at greater risk of development
- Land that is classed as best and most versatile may be permanently lost through development reducing the capability for production and food security

#### Biodiversity, Habitats and the Natural Environment

**3.97** Huntingdonshire contains many sites that are of biodiversity importance, including those designated at international level recognising their strategic contribution to biodiversity. The below table below identifies natural habitats in Huntingdonshire with international level designations reflecting their high level of importance for nature conservation. Special Areas of Conservation (SAC) and Special Protection Areas (SPAs) formerly identified as part of the Natura 2000 ecological network are now designated with the same status under the UK's National Site Network. Designated Wetlands of International Importance (known as Ramsar sites) are not part of the national site network. However, many overlap with SACs and SPAs, and may be designated for the same or different species and habitats and remain protected in the same way.

Table 12 Internationally Designated Sites

Site name	Designation(s)	Area (ha)	Habitat description
Ouse Washes	Ramsar	2,518.66	Seasonally-flooded washland habitat supporting nationally and internationally important numbers of wintering waterfowl and nationally important numbers of breeding waterfowl. Of particular significance are the flocks of teal, pintail, wigeon, shoveler, pochard and Bewick's swan.
	SAC	337.73	
	SPA	2,498.6	The site Includes large areas of unimproved neutral grassland primarily managed as traditional hay meadows. The grassland areas are characterised by such grasses as reed and floating sweet-grass, reed canary-grass, marsh foxtail and a variety of sedges and rushes. The watercourses host aquatic species such as the fringed water-lily, greater water-parsnip and duckweeds.
	Site of Scientific Interest (SSSI)	2,518.66 (45.24 ha in Hunts)	
Portholme	SAC	91.79	Alluvial flood meadow grassland including as Yorkshire fog, yellow oat-grass, meadow foxtail, and meadow fescue. The range of herbs includes lady's bedstraw, pepper-saxifrage and great burnet. Portholme is one of the largest areas of this grassland type in the country and continues to be managed in a traditional manner with seasonal flooding adding nutrients to the otherwise unimproved grassland. Watercourses on the periphery of the site have populations of some uncommon invertebrates, including one dragonfly of nationally restricted distribution.
	SSSI	106	
Woodwalton Fen	Ramsar National Nature Reserve SPA SSSI	209 (all)	Mixed fenland habitat with fen, marsh, reedbeds, open water, scrub and woodland supporting very diverse flora and fauna. Flower-rich mixed fen covers much of the reserve and supports yellow flag, swamp meadow grass and great water dock. The acid peat supports purple moor-grass, ling, bog myrtle, tormentil and saw sedge. Woodwalton Fen provides habitats for some rare fen plants including fen wood-rush and fen violet; ditches support the rare water violet and carnivorous bladderwort. Bird species are found at the site include great bittern, reed bunting, tree pipit, long-eared owl and common teal. The area also provides habitats for around 900 moth species including marsh, lunar yellow underwing, four spotted, white-spotted pinion and silky wave. Over 1,000 beetle species, both terrestrial and aquatic, have also been recorded at the site.

3.98 The next table identifies nationally designated sites within Huntingdonshire. By area, 62.9% of SSSIs in Huntingdonshire were judged to be in favourable condition in 2020/21, with a further 32.5% in an unfavourable but recovering state.

## 3 Stage A - The Scoping Process

Table 13 Nationally Designated Sites

Site name	Designation(s)	Area (ha)	Habitat description
Aversley Wood	SSSI	60	Ancient ash and maple woodland
Berry Fen	SSSI	18	Washland habitat of neutral grassland
Brampton Meadow	SSSI	0.95	Calcareous grassland
Brampton Racecourse	SSSI	21	Species rich neutral grassland
Brampton Wood	SSSI	132	Ancient wet ash and maple woodland with rich neutral grassland flora
Castor Flood Meadows	SSSI	42 (Part in Hunts)	Wet alluvial grasslands and alluvial meadow grassland
Godmanchester Eastside Common	SSSI	29.7	Calcareous loam and calcareous clay grassland
Grafham Water	SSSI	806	Reservoir and marginal land supporting wetland birds
Great Stukeley Railway Cutting	SSSI	34.7	Calcareous clay grassland
Hemingford Grey (Arthur's) Meadow	SSSI	0.67	Calcareous clay grassland
Houghton Meadows	SSSI	4.74	Neutral ridge and furrow grassland
Holme Fen	National Nature Reserve SSSI	63	Remnant fen habitat now containing the largest birch woodland in lowland England, ancient bog, acid grassland and heath. Three meres (lakes) with shallow banks and islands are the result of peat cutting. Holme Fen supports many birds such as siskin, redpoll, nightingale, blackcap and woodpecker. The habitat also supports dragonflies and marsh plants such as golden dock, twayblade meadow rue and fen wood-rush. The damp habitat also supports some 500 species of fungi.
Little Catworth meadow	SSSI	5.23	Calcareous loam grassland

## Stage A - The Scoping Process

Site name	Designation(s)	Area (ha)	Habitat description
Little Paxton Pits	SSSI	127	Flooded gravel workings supporting wildfowl and invertebrates with nationally important levels of wintering wildfowl
	Local Nature Reserve	59.95	
Little Paxton Woods	SSSI	44	Wet ash and maple woodland with diverse shrub layer and ground flora
Monks Wood	SSSI	157	Broadleaf ancient woodland including oak, ash, field maple and wild service trees with an understorey of hazel, blackthorn, dogwood and willow. The woodland also supports neutral grassland. The woodland provides suitable habitat for over 400 plant species including greater butterfly orchid, violet helleborine, crested cow-wheat, small teasel and water purslane. Monks Wood also supports a wide variety of birds including tawny owls, red kites and buzzards along with badgers, hares and foxes. Butterflies including white admiral, grizzled skipper and white-letter hairstreak are found along with over 1,000 species of beetles.
The Odd Quarter (linked to Monks Wood)	SSSI	13	Wet ash and maple woodland with wild service trees
Perry Woods	SSSI	67.9	Ancient ash and maple woodland
St Neots Common	SSSI	33.35	Alluvial grassland with willow carr, ponds and ditches supporting aquatic flora and fauna
Somersham LNR	Local Nature Reserve	9.54	Mixed woodland, grassland, lake and wet woodland
Upwood Meadows	National Nature Reserve SSSI	6	Upwood Meadow comprises three fields of lowland grassland bordered by veteran trees and mature hedgerows. Designated for its diversity of flora the meadow supports cowslip, greater burnet, saw-wort, dropwort, sulphur clover and a large colony of green-winged orchids. The flora in turn support a diversity of bees and butterflies. The trees and hedgerows provide nesting habitats for many birds including turtle dove, blackcap and whitethroat and support winter visitors such as fieldfare and redwing.
Warboys and Wistow Woods	SSSI	44.5	Ancient ash and maple woodland also supporting invertebrates

## 3 Stage A - The Scoping Process

Site name	Designation(s)	Area (ha)	Habitat description
Warboys Claypit	SSSI	12.5	Surface exposure of Upper Oxford lay and Ampthill clay
Waresley Wood	SSSI	62	Ancient ash and maple woodland with diverse flora enriched by varied underlying geology
Weaveley and Sand Woods	SSSI	76	Ancient ash and maple woodland straddling diverse geological formations
Woodwalton Marsh	SSSI	0.76	Lowland neutral grassland

**3.99** Natural England's Impact Risk Zones (IRZs) available through [Magic Map](#) are a GIS tool developed by Natural England to make a rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts.

**3.100** Huntingdonshire also benefits from having 135 County Wildlife Sites (CWS) which are judged to be of local nature conservation, biological or geological interest. These cover 2,348.7 ha of the district along with 133.9 kms of linear sites which are waterways where the county wildlife site comprises the river and adjacent semi-natural habitat.

**3.101** The district also contains ancient woodland. Ancient woods are areas of woodland that have persisted since AD1600 in England. They cover just 2.5% of the UK, yet these are irreplaceable environments which contain complex communities of plants, fungi, insects and other microorganisms. In Huntingdonshire there are in the region of 45 Ancient Semi Natural Woodland (ASNW) sites and 25 Plantation on Ancient Woodland (PAWS) sites, totaling approximately 1,500ha of woodland. Huntingdonshire's [Tree Strategy 2020-2030](#) states that there are no ASNW or PAWS known to be currently under threat in Huntingdonshire. Some of these ancient woodland sites will also be designated as SSSIs or CWS.

**3.102** Huntingdonshire benefits from an extensive network of rivers, drainage canals and lakes which are already widely used for tourism, sport and leisure activities including boating, windsurfing, fishing and birdwatching. They also provide valuable wildlife habitats, for instance the River Great Ouse and its tributaries flow in part into the Ouse Washes, an important area for birds and many other species as shown in the table above. The main rivers running through the district are the River Great Ouse, River Nene, River Kym and Alconbury Brook. Huntingdonshire's [Landscape and Townscape SPD \(2022\)](#) provides further information on their importance in shaping the landscape character of the district and the wildlife habitats they provide and support.

**3.103** Enhancing biodiversity has become a bigger focus area at the national level, as demonstrated in the now mandatory minimum of 10% biodiversity net gain for all new developments via the Environment Act 2021. Locally, in 2019 [Natural Cambridgeshire](#) set an ambition of doubling nature across Cambridgeshire and Peterborough by 2050. This includes land managed for nature. Within this, it aims to create living landscapes, promote good practice for local food and farming, create better places to live, create sustainable jobs, healthy communities and promote heritage, culture and leisure.

**Key sustainability issues and problems**

- There are several sites designated at an international and national level for their biodiversity and habitat value as well as non-designated sites identified for their local nature conservation value
- Nature conservation sites and ancient woodland are vulnerable to new developments and land management practices.
- Two thirds of SSSIs in Huntingdonshire are in a favourable state, with approximately a third of SSSIs not in a favourable condition, although these are in a recovering state
- Visitor pressures on designated and non-designated sites may harm the quality of these sites for nature conservation and vital habitats
- Nature conservation sites and other natural environments are vulnerable to the impacts of climate change
- Trees are a natural carbon store, with established and mature trees taking in the most carbon

**What may happen without a Local Plan**

- Development may adversely impact on the condition of designated and non-designated sites and damage vital habitats for wildlife
- Habitats may become fragmented
- Development may adversely impact protected species and their habitats

comprises rural and urban green infrastructure of different sizes and character, and the connections and links between them. It is part of (and contributes to) the wider environment.'

**3.105** The Cambridgeshire Green Infrastructure Strategy established a series of strategic green infrastructure areas three of which cover land within Huntingdonshire: the River Nene, Huntingdonshire Fens and Woods and the Great Ouse (see below). This has been supplemented by designation of priority landscape scale nature recovery area of which four relate closely to Huntingdonshire: the Nene Valley, Great Fen, Great Ouse Valley and West Cambridgeshire Hundreds.

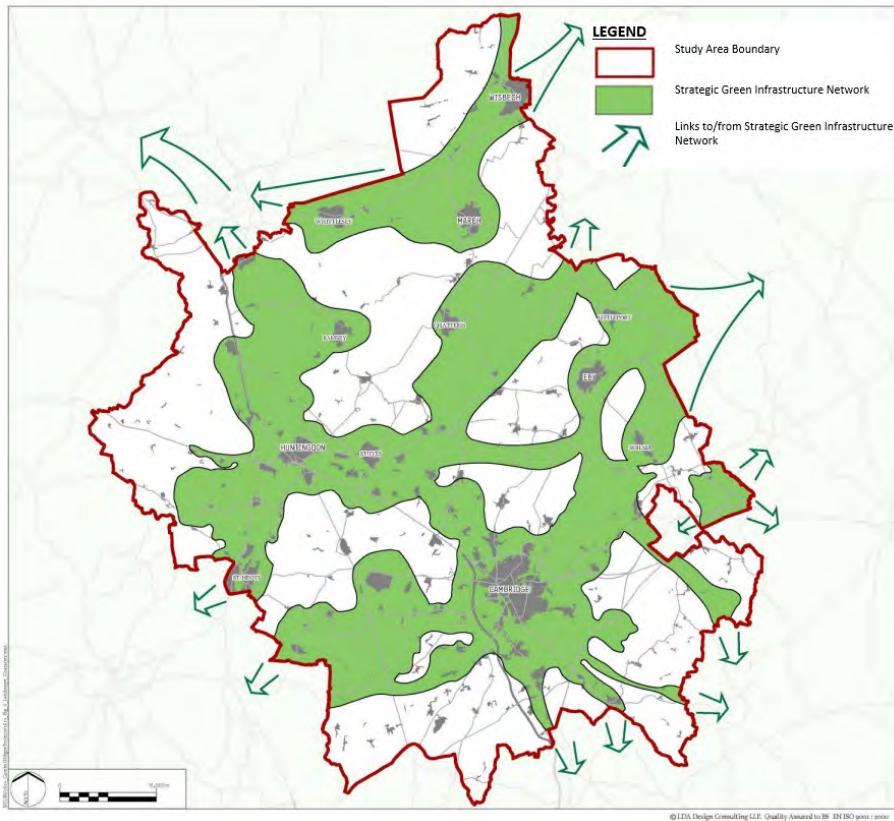

**3.106** Green infrastructure supports a range of functions, including recreation and wildlife as well as landscape enhancement. Green infrastructure is essential to enhancing biodiversity by creating new habitats and helping to protect against habitat fragmentation, it aids mitigation and adaptation to climate change and provides multiple benefits for human health. The coronavirus pandemic has highlighted the importance of access to local green space for people's physical and mental health as well as a place for social activity and local tourism. Huntingdonshire District Council collaborates with Natural Cambridgeshire, the local nature partnership, to help deliver the vision of doubling the area of rich wildlife habitats and natural greenspace across Cambridgeshire by 2050.

**Green Infrastructure and Open Space**

**3.104** The last [Cambridgeshire Green Infrastructure Strategy](#) was completed in 2011 and defines green infrastructure as 'a strategic, multi-functional network of public green spaces and routes, landscapes, biodiversity and heritage. It includes a wide range of elements such as country parks, wildlife habitats, rights of way, commons and greens, nature reserves, waterways and bodies of water, and historic landscapes and monuments. The network

3 Stage A - The Scoping Process

Figure 3.11 Cambridgeshire Strategic Green Infrastructure Network

results from the Healthy Open Spaces Strategy indicated that 68% of Huntingdonshire's residents visit a greenspace at least once a fortnight compared to the UK average of 57%.

3.108 The [Ordnance Survey National Greenspace Map](#) has mapped parks, open spaces, village greens and play areas across Britain. It must be noted that the data set does not include all sites on a local level but gives a good picture at a strategic level the provision of various types of open green spaces available. At this strategic level, mapping data from April 2022 identified that there were 605 open green spaces across the district covering 1,229ha of land, including 276ha of land set out as public parks and gardens. As well as large scale sites 209 play areas were identified covering 16.4 ha of land. Further details can be found in the following table.

Table 14 Ordnance Survey open green space data as at April 2022

Type of open green space	Number of sites	Total Area (m <sup>2</sup> )	% of total open green space
Allotments or Community Growing Spaces	47	615,147.93	5%
Bowling Green	19	55,175.03	0.45%
Cemetery	44	408,093.47	3.32%
Golf Course	10	5,263,372.33	42.81%
Other Sports Facility	36	496,595	4.04%
Play Space	209	164,329.85	1.34%
Playing Field	88	2,120,592.44	17.25%
Public Park or Garden	37	2,758,285.89	22.44%

3.107 [Huntingdonshire's Healthy Open Spaces Strategy \(2020\)](#) identified that our communities benefit from a wealth of greenspaces. Across Huntingdonshire there is an average of 87 m<sup>2</sup> of green space per person which is significantly higher than the average across the East of England of 42.75 m<sup>2</sup>. Survey

Type of open green space	Number of sites	Total Area (m <sup>2</sup> )	% of total open green space
Religious Grounds	98	392,592.55	3.19%
Tennis Court	17	19,987.93	0.16%
<b>Total open green space</b>	<b>605</b>	<b>12,294,172.42</b>	<b>100%</b>

**3.109** Across Huntingdonshire's towns and villages there are also opportunities for more formal sports facilities and play spaces, these are usually managed by parish and town councils and meet the needs of local communities. Additionally, the District Council manages One Leisure centres in Huntingdon, Ramsey, St Ives and St Neots providing for a range of indoor and outdoor sports and leisure activities.

**3.110** The Green Flag Award is the benchmark international standard for publicly accessible parks and green spaces in the United Kingdom. As of July 2022, there are three open spaces managed to the Green Flag Award by Huntingdonshire District Council. These are Hinchingsbrooke Country Park in Huntingdon (60ha), Paxton Pits Nature Reserve in Little Paxton (75ha) and Priory Park in St Neots (32ha). Sudbury Meadow in St Neots (0.8ha) has not reapplied due to a lack of resources and voluntary commitment. In 2022, the St Neots Riverside Miniature Railway were awarded a Green Flag Community Award. In addition to open spaces managed by the Council, Grafham Water, which is managed by Anglian Water, holds a Green Flag, as does the Queen Elizabeth II playing field in Little Paxton.

Hinchingsbrooke Country Park

Little Paxton Pits Weedy Lake

#### Key sustainability issues and problems

- Huntingdonshire has several strategic green infrastructure areas: the Great Fen, Nene Valley, Great Ouse Valley and the West Cambridgeshire Hundreds
- Strategic green infrastructure and localised provision of open green space provide important social benefits to human health and wellbeing as well as opportunities for habitat and biodiversity conservation and enhancement
- Green infrastructure and open space must be located in accessible places
- Several public parks and gardens are managed to the Green Flag Award standard, with others aspiring to the standard

#### What may happen without a Local Plan

- Developments may not provide adequate provision for open green space to meet the needs arising from them and put pressure on existing spaces through overuse

## 3 Stage A - The Scoping Process

- Open green space may not be provided in accessible locations
- Planning contributions and obligations may not be made/secured to improve the quality and quantity of open green spaces and strategic green infrastructure projects

### Pollution

#### Air Quality and Pollution

- 3.111** Air quality impacts human health, quality of life, the natural environment and built environment in the short and long term. Air quality across Huntingdonshire is considered to be good, there are however, four Air Quality Management Areas (AQMA) across the district in Huntingdon, St Neots, Brampton and along the A14 from Hemingford to Fenstanton. These were designated in 2005 and 2006. An AQMA is an area where air pollutant concentrations exceed / are likely to exceed the relevant air quality objectives and are declared for specific pollutants and objectives.
- 3.112** The main air quality issues within Huntingdonshire primarily relate to NO<sub>2</sub> (nitrogen dioxide) from vehicle emissions, mostly originating from the strategic road network along the A14 and to a lesser extent the A1. Local traffic and congestion within the market towns also contributes to some elevated levels locally, compared to the rest of the district. The AQMA designations reflect these areas where elevated air pollutants are found.
- 3.113** HDC's Environmental Health team continually monitor air quality across the district and produce an [Air Quality Annual Status Report](#) every year. The report monitors the presence of air pollutants within each AQMA and assess whether objectives are being met or exceeded. For Huntingdonshire, these objectives were set in the [Cambridgeshire Air Quality Action Plan \(2009\)](#) undertaken in collaboration with Cambridge City Council and South Cambridgeshire District Council.

**3.114** In 2021, it was recorded that all sites met the NO<sub>2</sub> objective level (not exceeding 40µg/m<sup>3</sup>, or 40 micrograms per one cubic metre of air). Results in 2020 were significantly lower than previous years likely due to the relocation of the A14 and travel restriction measures to stop the spread of coronavirus. Results in 2021 were overall very slightly up from 2020 levels but still lower than pre-2020 levels. Although national travel restriction measures were less stringent as those in 2020, they are still likely to have resulted in a reduction in traffic, and therefore an improvement in related pollution levels. These measures, coupled with the continued A14 works to remove the viaduct within Huntingdon centre, have influenced the air quality results, continuing to make it difficult to assess the benefit of relocating the A14.

**3.115** Fine particulate matter PM2.5 concentrations for the past five years have shown an overall downward trend and a reduction in the annual mean from 8.67µg/m<sup>3</sup> in 2019 to 8µg/m<sup>3</sup> in 2021. Also over the last five years, there has been an overall reduction in particulate matter PM10. The annual mean PM10 figure decreased from 15.74µg/m<sup>3</sup> in 2019 to 14µg/m<sup>3</sup> in 2020 with a slight increase to 15µg/m<sup>3</sup> in 2021. The figure below shows the performance against the annual mean, the [Air Quality Annual Status Reports](#) include detailed assessment on each objective.

**Figure 3.12 Annual mean monitoring results shown in  $\mu\text{g}/\text{m}^3$  for PM2.5, PM10 and NO2. For PM10 there was no data recorded in 2018.**

**3.116** As objectives have been complied with over the last several years, the Council proposes to revoke St Neots, Brampton, and the A14 Hemingford to Fenstanton AQMA's. The Huntingdon AQMA will also be reviewed as its objectives are being met, however due to travel restrictions arising from Covid-19 in 2020, it has not yet been possible to fully assess what the impact the re-routing of the A14 has had on air pollution. Also Covid restrictions on traffic means the data is unlikely to be representative of long-term trends in pollutant concentrations. In addition, the A428 upgrade of the route between the Black Cat roundabout and Caxton Gibbet roundabout with a new 10-mile dual carriageway and a number of junction improvements may have an impact on air quality particularly around St Neots.

**3.117** The annual all-cause adult mortality attributable to anthropogenic (human-made) particulate air pollution (measured as fine particulate matter, PM2.5) is expressed as the percentage of annual deaths from all causes in those aged 30+. The next figure shows that the fraction of mortality attributable to particulate air pollution in 2020 (the last available year at the time of writing) was 5.7% in Huntingdonshire, this was slightly higher than the recorded fractions for England (5.6%)<sup>(12)</sup>. The slight increase in the 2019 and then again in the 2020 data coincides with an increase in the recorded annual means of PM2.5 for 2018 (a figure which has since decreased from 2019) and NO<sub>2</sub> in 2019 (a figure which in 2020 and 2021 has since decreased).

**Figure 3.13 Fraction of mortality attributable to particulate air pollution**

12 Office for Health Improvements and Disparities, public health data: indicator [D01 - fraction of mortality attributable to particulate air pollution](#)

## 3 Stage A - The Scoping Process

### Noise Pollution

3.118 Noise can have an effect on health, wellbeing, productivity and the natural environment. Within Huntingdonshire, [Defra's strategic noise mapping data](#) shows that along the strategic transport (road and rail) network there are several Important Areas (IAs). These are 'hotspot' locations where the highest 1% of noise levels at residential locations can be found. These are along the A1, A14, A141, A1307, A1123 and the East Coast Mainline Railway.

### Light Pollution

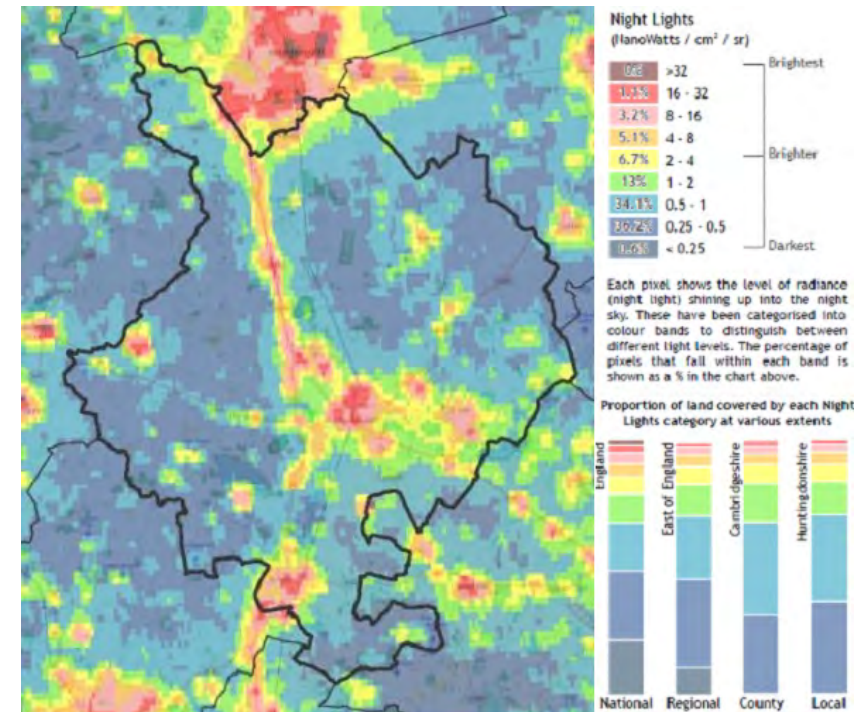

3.119 There is increasing awareness of the potential impacts of light pollution on wildlife by interrupting natural rhythms including migration, reproduction and feeding patterns and the quality of life of residents by disrupting sleep and for some increasing levels of anxiety. It can also harm people's enjoyment of the countryside. In 2015, the Campaign to Protect Rural England (CPRE) commissioned a national [interactive map of England's light pollution](#). The light pollution maps help define areas of dark skies.

3.120 This maps shows that Huntingdonshire is the 92nd darkest authority area of the 326 within England recorded on the dataset. Huntingdonshire has a greater proportion of its land covered by darker skies when compared to the proportion for all of Cambridgeshire, see below <sup>(13)</sup>.

3.121 The market towns of Huntingdon and St Neots are shown to be the brightest areas. The strategic road network contributes to increased levels of light particularly along the A1. The rural parts of the district are the darkest with some small concentrations of increased levels of light within villages. Generally, darker skies are also observed where there are nature reserves and sites designated as Special Areas of Conservation, Ramsar, Special Protection Areas and Sites of Special Scientific Interest. The Great Fen enjoys dark skies and has been awarded the designation of a Dark

Sky Discovery Site by the Science and Technologies Facilities Council at two sites: The Wildlife Trust Countryside Centre and New Decoy Farm Information Point.

Figure 3.14 Light pollution map for Huntingdonshire

### Key sustainability issues and problems

- The most significant air quality issues arise from traffic and congestion

- Air, noise and light pollution can have serious implications on the health and wellbeing of people and cause harm to the natural environment and disrupt the lifecycles of wildlife
- Homes, employment, schools, services and facilities should be accessible via walking, cycling and public transport
- Light and noise pollution can reduce the tranquillity of the countryside and green spaces within settlements

#### **What may happen without a Local Plan**

- Development may take place without adequate assessment on air quality and may increase concentration levels of pollutants such as nitrogen dioxide and particulate matter
- Development may be located in locations that reinforce car usage rather than in areas that can utilise lower polluting or non-polluting means of travel such as public transport, cycling and walking
- The health and quality of life of Huntingdonshire residents may be adversely affected as a result of air, light and noise pollution
- Development may take place without full consideration on the suitability, location and design of lighting within schemes and as such lighting may be obtrusive

### **Socio-Economic Characteristics**

**3.122** The following topics were reviewed:

- Housing
- Population and health
- Income and deprivation
- Employment and businesses
- Travel and transport
- Digital infrastructure and communications
- Retail and town centres
- Tourism and leisure
- Community services and facilities
- Education
- Heritage

### **Housing**

#### **Current housing stock**

**3.123** Huntingdonshire has an estimated 80,021 dwellings as of 1 April 2022. This is based upon the 2011 Census figure of 71,450 plus known completions from 1 April 2011 to 31 March 2022. The composition of the housing stock is shown below. This illustrates how Huntingdonshire's dwelling stock is strongly weighted towards provision of detached houses at twice the average proportion for these in England. There are correspondingly far fewer flats or maisonettes than the average for England reflecting the district's semi-rural nature and relatively small scale of the towns.

3 Stage A - The Scoping Process

Figure 3.15 Dwelling Type, 2011

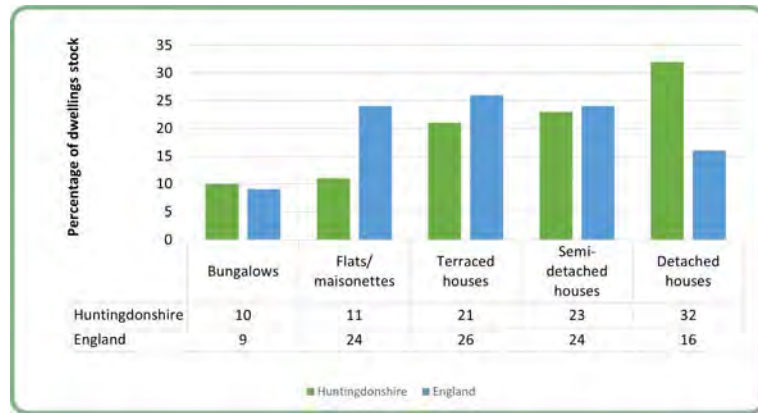

Figure 3.16 % Tenure of Dwelling Stock, 2011

Page 1498 of 3488

3.124 The figure below shows housing tenure data from the 2011 Census (table KS402UK). Owner occupied housing dominates at 71.3% which exceeds both the Cambridgeshire average of 66% and the England average of 63.4%. Social rented stock in Huntingdonshire is notably low at 12.9% compared to the Cambridgeshire average of 15.4% and the England average of 17.7%. However, considerable efforts have been made since 2011 to increase the availability of social and affordable rented properties and to diversify the affordable tenures available to include more shared ownership properties.

3.125 Recent housing growth has been shaped by Policy LP2 of Huntingdonshire's Local Plan to 2036 which has sought to focus approximately 75% of the district's new housing growth within the four designated spatial planning areas focused on Huntingdon, St Neots, St Ives and Ramsey. The remaining 25% is focused on the seven key services centres of Buckden, Fenstanton, Kimbolton, Sawtry, Somersham, Warboys and Yaxley as well as being distributed around the many smaller settlements. The distribution pattern achieved for completed new homes from 2015/16 to 2021/22 is shown in the figure below which illustrates how 69.7% of completions in that time were situated within the spatial planning areas. This is expected to increase as homes on more recently granted planning permissions come through to completion, in particular those at the St Neots East strategic expansion location.

**Figure 3.17 Distribution of housing growth 2016-22**

111% from £265,308 in August 2006 to £560,674 in March 2022 and in Fenland prices rose 57% from £154,234 in August 2006 to £242,460 in March 2022.

**3.128** House prices are measured in two ways to indicate the average overall and the average of the lowest priced quarter of the market. The median average comprises the sale price of the middle home in a list of properties ranked from the highest sale price to lowest over a set period of time. The lower quartile house price comprises the sale price which is valued at a quarter of the way through the total range of sales when ordered from lowest to highest. It is used to provide an indicator of the costs incurred by those purchasing homes in the more affordable section of the market.

**Figure 3.18 Average House Prices**

**Affordability**

**3.126** Housing affordability has been an increasing challenge for Huntingdonshire's residents over the last three decades (see the next figure). In March 2022 the average residential property price based on sales and valuations in Huntingdonshire was £360,295<sup>(14)</sup> based on both sales and valuations. This is an increase of £33,539 over the previous 6 months and an increase of £27,214 over the previous 12 months.

**3.127** Actual sales prices vary from valuations. The average actual sales price in March 2022 was lower at £320,699 (down by £3,573 on the previous 6 months and down by £11,211 over the previous 12 months). In August 2006 this figure was £205,088. This indicates an increase of 56% across a 15 year period. By way of comparison prices in Cambridge City rose

14 Source: Hometrack data, presented in the quarterly Housing Market Bulletins prepared by the Housing Board for Cambridgeshire, Peterborough & West Suffolk, the [last edition](#) was published in July 2022 using data from March 2022

## 3 Stage A - The Scoping Process

- 3.129** Affordability ratios are used to assess house prices compared to average earnings to show how many times local income local house prices represent. They are calculated by dividing house prices by gross annual workplace or residence-based earnings. The higher the ratio, the less affordable it is for people to get onto the property ladder. Lower ratios tend to suggest greater affordability but may indicate lower earnings, reduced purchasing power and/or lower demand in an area. It should be noted that affordability ratios are calculated on a district wide basis and can hide significant variations between different locations within the district. The Office for National Statistics publish an annual affordability ratio based on the median price paid for residential property and earnings data, the 2021 data gives a figure of 9.6 for Huntingdonshire.
- 3.130** In Huntingdonshire the lowest median house price affordability ratio since December 2016 was experienced in June 2017 at 6.5 and the highest in September 2021 at 9.4, this had dropped to 7.6 by March 2022. For those in the lower quartile of earnings and seeking properties within the lower quartile of the market the affordability ratio is even more challenging. The lowest affordability ratio experienced since December 2016 was 8.8 also in June 2017 with the highest being 10.1 in March 2022. By way of comparison elsewhere within the Cambridge sub-region housing market area the worst median affordability ratio as at March 2022 was in Cambridge City at 10.6 and the best in Peterborough being 7.1. Again in March 2022, for the lower quartile the lack of affordability is even more stark with Cambridge City again being worst at 14 and Fenland and Peterborough being best at 9.9. The amount that can be borrowed for a mortgage varies across different lenders but typically ranges between 3 and a maximum of 4.5 times the household's income. Although Huntingdonshire is one of the less expensive districts within the housing market area both the median and lower quartile ratios significantly exceed the typical lending ranges indicating considerable financial challenges to those trying to enter the housing market, particularly for the first time or if relocating from a lower value area.
- 3.131** Around a quarter of homes within Huntingdonshire are rented, either privately or through a range of social landlords. Weekly median private rents in March 2022 were £150 for a 1 bedroom property, £190 for 2 bedrooms, and £229 for a 3 bedroom property. The local housing allowances for the Huntingdon broad market area which covers the majority of the district range from £65.59 for a room, £130 for a 1 bedroom property up to £253.15 for a 4 bedroom property. For all accommodation sizes the local housing allowance is lower than the weekly median private rents. The northern part of the district, including Ramsey and Yaxley fall within the Peterborough broad rental market where prices and local housing allowances are correspondingly lower. Weekly median private rents in March 2022 were £137 for a 1 bedroom property, £172 for 2 bedrooms and £201 for a 3 bedroom property. The local housing allowance ranged from £65.59 for a room, £110.47 for a 1 bedroom property up to £207.12 for a 4 bedroom property.
- 3.132** Housing associations (also known as registered social providers/ landlords) provide the majority of rented affordable homes in Huntingdonshire. Rent levels vary depending upon the nature of the contract. Net weekly rental charges for general needs housing for 2021-22 for those in social rented properties were £81 for 1 bedroom, £94 for 2 bedroom and £103 for 3 bedroom and for those in 'affordable rented properties were £112 for 1 bedroom, £133 for 2 bedroom and £157 for 3 bedroom. 4 bedroom prices are not listed due to the rarity of such properties.
- 3.133** As can be seen from the baseline data above, provision of affordable housing remains a major challenge for the next Local Plan.

### Homelessness

- 3.134** The Homelessness Reduction Act 2017 places a duty to both prevent and relieve homelessness on local authorities. The prevention duties include activities aimed at preventing a household threatened with homelessness within 56 days from becoming homeless which can include relocation to alternative accommodation as well as assisting people to remain in their existing property. For those who are homeless, or become so within the

56 days of the prevention duty period, the relief duty requires local authorities to take all reasonable steps to help eligible people to secure suitable accommodation. The next figure shows the significance of the prevention duty in resolving cases with the majority of cases addressed at this stage rather than through the relief duty.

the relief duty period started of which 143 households were considered to be in priority need primarily through having dependent children or containing household members with physical or mental health problems. The main duty ended for 145 households during 2020-21 with 113 accepting social housing offers and 2 accepting private rental offers; 10 households however were reclassified as becoming intentionally homeless from temporary accommodation.

**3.135** Data taken from the DLUHC/ MHCLG [Statutory Homelessness](#) detailed local authority level tables financial year 2020-21 show that 928 households were assessed as owed a duty of prevention or relief from homelessness. Where issues cannot be resolved through the prevention actions a household may be counted again within those seeking help under the relief duty. The largest single cause of homelessness was family or friends no longer being willing or able to provide accommodation.

**Specialist housing**

**3.137** Older people can have specialist housing needs ranging from properties with improved accessibility within an otherwise standard house type through to care home beds with high levels of support. The [Cambridgeshire and West Suffolk Housing Needs of Specific Groups study \(2021\)](#) indicates the current supply of specialist older people's housing as shown below.

**Figure 3.19 Reasons for Homelessness, 2021-22**

**Figure 3.20 Specialist Older People's Accommodation by Property Type, 2020**

**3.136** Of the 659 households for whom the prevention duty ended during 2020-21 accommodation for 6 months or more was successfully secured for 370 households. Of those for whom the relief duty ended accommodation for 6 months or more was successfully secured for 157 households. 172 households were accepted as remaining homeless more than 56 days after

## 3 Stage A - The Scoping Process

**3.138** Based on the SHOP@ Assumptions the level of need for specialist accommodation in Huntingdonshire is forecast to increase by a total of 2,082 units by 2040. The expected housing types for these comprise additional demand for 554 rented housing units with support, 977 leasehold housing units with support, 241 rented housing units with care and 310 leasehold housing units with care. The provision of a choice of attractive, suitable housing options for older people is a key element of providing a good housing mix. This may enable some older households to downsize from homes that no longer meet their housing needs or are expensive to run and can provide opportunities to move into suitable, accessible accommodation that helps improve people's quality of life.

### Household Characteristics

**3.139** Average size is one of the key characteristics of households that affects planning for housing. A household may be a single person or any group of people, related or not, who live in a property and share cooking and other facilities; communal establishments such as nursing homes or prisons are excluded. Average household size is the typical number of people living within a single property. The next figure shows the [Office for National Statistics](#)' predicted average household size for Huntingdonshire up to 2043. It reflects a decline from 2.36 people per household in 2018 to 2.20 by 2043.

**Figure 3.21 Average household size predictions**

### Key sustainability issues and problems

- Ensuring the delivery of an ongoing supply of new homes in sustainable locations
- Ensuring new homes provide a mix of types, sizes and tenures aligned with the composition of the local population
- Affordability ratios of house prices to around 9 times average earnings create significant stress in the housing market and result in strong social sustainability challenges
- Proactive work through the prevention duty regarding homelessness has high effectiveness rates and reduces social sustainability challenges through the trauma otherwise experienced by those who become homeless
- Ensuring a range of accessible, adaptable and specialist new homes are available suitable to meet the changing needs of residents as the population ages overall

#### What may happen without a Local Plan

- The amount of new housing provided may be insufficient to meet needs creating further price inflation or an excessive supply may be permitted resulting in uncertainty over delivery of sites
- New housing provision may be less well suited to meeting local needs in terms of size and type
- The specialist accommodation needs of older people may not be met

## Population and Health

### Population Characteristics

- 3.140** The national Census is taken every 10 years and records the current population. The 2021 census recorded a total population for Huntingdonshire as being 180,830 people, this is an increase of 6.7% from the 2011 Census where there were 169,500 people. At 6.7%, Huntingdonshire's population increase is lower than the increase for the East of England (8.3%). Bedford, Cambridge and Peterborough saw their populations increase by around 17.7%, 17.6% and 17.5% respectively, while others such as Fenland saw an increase of 7.6% and East Cambridgeshire saw smaller growth (4.6%).
- 3.141** The fastest growth rate experienced by Huntingdonshire's population was during the 1960s and 1970s. The 1961 Census gave a population of 66,068; by 1981 this had grown by 89% to 124,773. By 2021, the population had increased by 44.9% over the 1981 figure. These growth rates should be treated with a degree of caution reflecting changes in Census methodologies and area boundaries over time.
- 3.142** Detailed population data showing the proportion of the population belonging to each ethnic group have not yet been released for the 2021 Census. The 2011 Census recorded that 89.5% of Huntingdonshire's population were white British, with 2.5% recorded as being Asian/Asian British, 1% Black/Black British and 1.5% recording themselves as mixed ethnicity.

- 3.143** There were 434 residents/km<sup>2</sup> in England in 2021, up from 407/km<sup>2</sup> in 2011. As of 2021, Huntingdonshire is the 14th least densely populated of the East of England's 45 local authority areas, with around one person living on each football pitch-sized area of land.
- 3.144** The first results of the 2021 census provides data for Huntingdonshire's resident population by 5 year age groups (see below figure). It only provides projections by traditional male or female categories; no data is available for people identifying as gender neutral. Huntingdonshire's census 2021 population is estimated as 49.6% male (89,700 residents) and 50.4% female (91,100 residents). This is a 0.3% change from census 2011. The gender balance of the population is broadly equal in younger age groups. Broadly, Huntingdonshire has seen higher population growth in older age groups, in particular the 65 years and over age group (increased by 33.7%). In contrast, younger population groups have seen limited growth or small declines (for example, an increase of 1.5% in people aged 15 to 64 years, and an increase of 1.8% in children aged under 15 years).

3 Stage A - The Scoping Process

**Figure 3.22 Age structure of Huntingdonshire's population at the 2021 census**

3.146 [Cambridgeshire Insight](#) are releasing localised Census 2021 outputs. Recent summaries have shown that population growth at ward level in Huntingdonshire has been more unevenly spread compared to other districts in Cambridgeshire and Peterborough. Huntingdon North is the most populous ward with 12,700 people followed by St Neots Eynesbury (11,640) and then Yaxley (11,200). The least populous ward is St Ives West with 2,970 people. See the below figure for more details.

**Figure 3.23 Huntingdonshire's population by ward, Census 2021**

3.145 Huntingdonshire's average population per household (calculated for only residents living in households) decreased from 2.41 in Census 2011 to 2.32 in Census 2021.

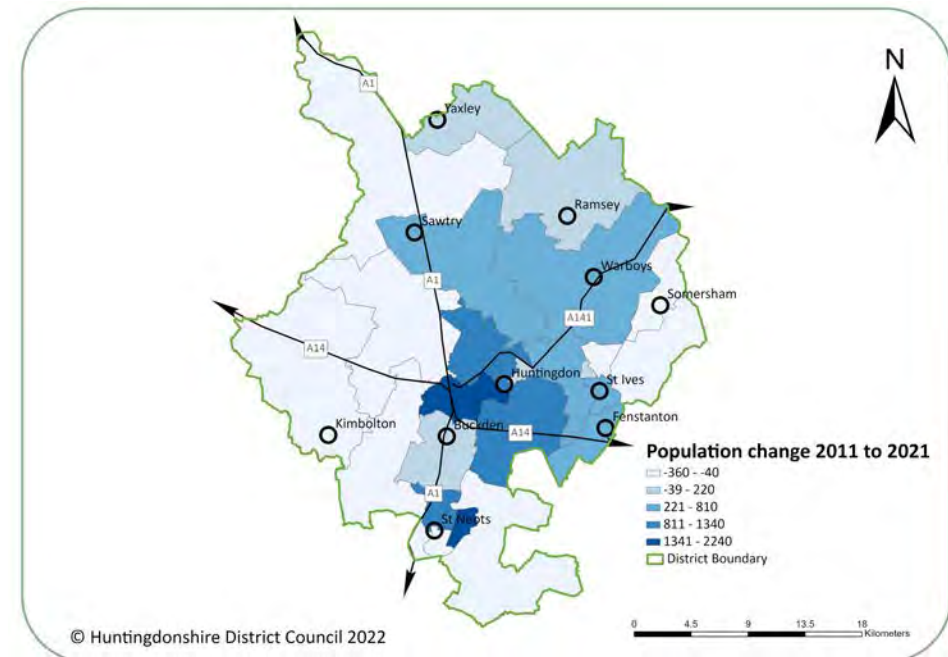

3.147 16 wards have seen population increases since Census 2011, whereas 10 wards have seen population decreases. The largest decrease has been in St Ives East, with a population decrease of -360 residents or -5.2%. In contrast, there has been notable population growth in the wards of:

- **St Neots East:** an increase of 2,240 residents - growth of 118.5% - and an increase of 770 households. This is the second highest percentage population growth in Cambridgeshire and Peterborough. This is largely attributed to development of Loves Farm and now Wintringham Park.
- **Brampton:** an increase of 2,060 residents - growth of 29% - and an increase of 900 households. This is attributed towards the redevelopment of RAF Brampton and other major developments within the village.
- **The Stukeleys:** an increase of 1,290 residents - growth of 27.6% - and an increase of 670 households. This is a result of the Alconbury Weald development that is ongoing.

3.148 The below map shows visually the population change between 2011 and 2021 in each of Huntingdonshire's wards. Data has been taken from the [Census 2021: Cambridgeshire and Peterborough provisional ward level population summary](#) document published on Cambridgeshire Insight. The map shows that the rural western part of the district has seen population decline throughout with increases focused in and around the towns and larger villages. Population decline gives rise to challenges in supporting local services because there are less people to use them.

Map 3.5 Population change between 2011 and 2021 at ward level

### Population Projections

3.149 The next figure shows the forecasted age structure for Huntingdonshire for 2042<sup>(15)</sup>. The data shows that by 2042 the proportion of people aged 0-19 is predicted to decline from 21.9% of the population to 19.7% and those aged 20-64 to decline to 53.7%. In contrast those aged 65-79 are predicted to increase to 17.4%. The greatest relative increase is predicted amongst those aged 80 and over going up to 9.3%.

15 These projections are produced by the [Office for National Statistics](#), the last available data are 2018-based population projections. ONS aim to update these projections towards the end of 2022 following the data outputs from the 2021 census

## 3 Stage A - The Scoping Process

Figure 3.24 Age structure forecast for 2042

2018-2020 was 84.46 years with both being higher than the average for England at 83.14 years. Life expectancy for males was lower than that for females across all dates and locations.

- 3.152** As of 2001-2003 a male's life expectancy was 77.50 years in Huntingdonshire, increasing to 80.77 years by 2010-2012 and further increasing fractionally to 80.98 years by 2018-2020. Again this was marginally below the average for Cambridgeshire for 2018-2020 at 81.07 years but but were higher than the average for England at 79.40 years.
- 3.153** The next figure shows the trends in live births, deaths and subsequent natural population change for 2011 to 2020. It broadly indicates that annual deaths are exceeding whilst live annual births are decreasing. Natural change is still giving rise to a small positive growth rate but this has declined significantly over the decade from a peak natural change growth of 875 in 2011 to just 112 in 2020. Given the projected population profile for Huntingdonshire by 2042 it is likely that natural change rates will be negative.

**3.150** Life expectancy in Huntingdonshire at birth is higher than the national average for both males and females. The ONS calculate life expectancy based on a three year average figure.

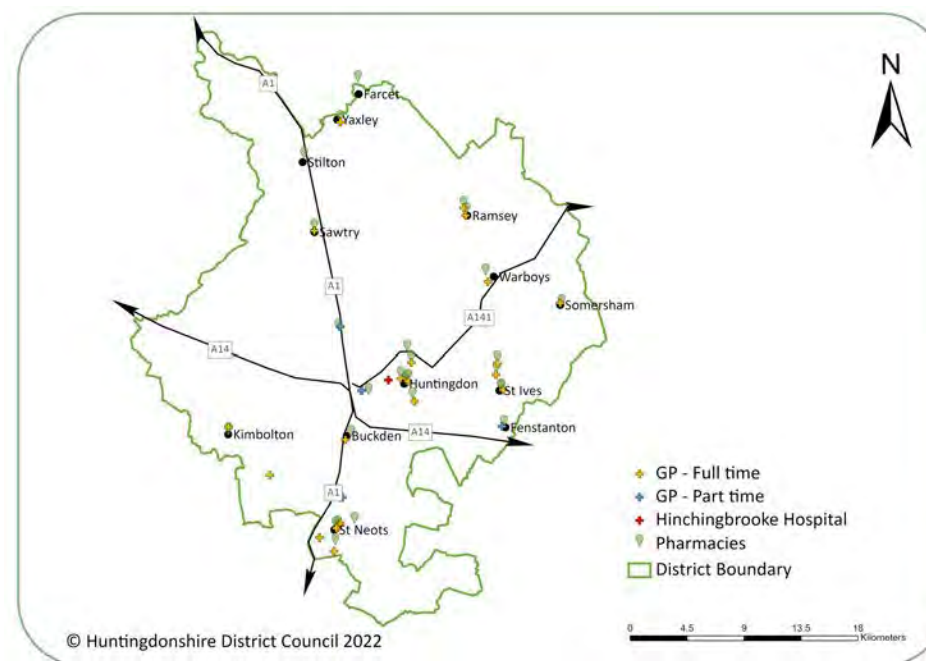

**3.151** For a female born 2001-2003 life expectancy was 81.56 years, by a birth date of 2010-2012 this had increased to 84.18 years and by a birth date of 2018-2020 a female's life expectancy had fractionally decreased to 84.14 years. For Cambridgeshire as a whole a female's life expectancy for

**Figure 3.25 Natural change rate of population 2011 to 2020**

3.156 There are 21 full time General Practitioner Surgeries with also many offering extended hours on specific evenings and the St Neots Health Centre offering some weekend access. The greatest concentrations of GP surgery provision are within Huntingdon and St Neots reflecting the greater density of population in these towns. Four surgeries provide GP access on a part time basis in smaller settlements each offering services at least three days a week. In September 2020 the Church Street Surgery in Somersham closed down which also resulted in the closure of its two branch surgeries in Earith and Bluntisham which had limited opening hours. Again for some residents the nearest GP surgery may be outside Huntingdonshire.

**Map 3.6 Health Facilities in Huntingdonshire, March 2022**

3.154 The [Office for National Statistics](#) has recorded weekly death occurrences by all causes and those specifically attributed to Covid-19. There were two distinct peaks of Covid-19 related deaths, firstly in spring 2020 and secondly in the first quarter of 2021. In 2020, week 20 saw 50% of deaths recorded in Huntingdonshire as being related to Covid-19. The first quarter of 2021 saw a peak of 40% of deaths attributed to Covid-19 in week 4, since then rates continued to fall.

3.155 A range of NHS primary care facilities are available within Huntingdonshire to support the local population's health (see the below map). Hinchingbrooke Hospital is a 304 bed district general hospital located in Huntingdon offering a range of general surgery, specialist units, maternity and emergency care along with a 23 bed treatment centre. Residents also frequently access services at Addenbrookes Hospital in Cambridge and Peterborough City Hospital.

## 3 Stage A - The Scoping Process

3.157 Data from the [Office for Health Improvement and Disparities](#) indicates that in overall terms the health of Huntingdonshire's population is slightly better than that for England as a whole. A small range of health indicators which relate reasonably closely to impacts of the built environment on health are presented in the below table to provide a summary picture of this.

**Table 15 Health Indicators**

Indicator	Date range	Huntingdonshire	England
Fraction of mortality attributable to particulate air pollution	2020	5.7%	5.6%
Percentage of physically active adults	2020/21	68.6%	65.9%
Under 75s mortality rate from cardiovascular diseases (1 year range)	2020	55.8 per 100,000	70.4 per 100,000
Hip fractures in people aged 65 and over	2020/21	509 per 100,000	529 per 100,000
Under 75 mortality rate from cancer (1 year range)	2020	104.6 per 100,000	125.1 per 100,000
Percentage of adults (aged 18+) classified as overweight or obese	2020/21	65.3%	63.5%
Prevalence of obesity or severe obesity for children in Year 6 (10-11 years old)	2019/20	19.6%	21.0%

Page 1508 of 3488

### Key sustainability issues and problems

- The ageing and in some locations declining population may lead to challenges for the social sustainability of communities, for health and social provision and provision of appropriate housing options
- Decreasing proportion of the population is of working age raising the proportion of dependants
- Natural change is decreasing and may result in a negative rate of population growth unless in-migration is sufficient to counterbalance falling population numbers
- GP surgeries are concentrated in larger settlements necessitating residents of almost all villages to travel for appointments or rely on telephone or other remote forms of consultations
- Health indicators suggest that Huntingdonshire's population is typically slightly healthier than that for England on average but deaths from particulate air pollution were higher than average in 2019 although it should be noted that this was prior to the rerouting of the A14 and consequent impact on air quality management areas

### What may happen without a Local Plan

- New homes may not contribute to the provision of additional healthcare provision designed to meet the increased needs generated
- Less emphasis may be placed on development of sustainable neighbourhoods facilitating active forms of travel which can boost people's physical and mental health
- Less emphasis may be placed on construction of safe, accessible developments which facilitate ease of access for all
- Rural areas may continue to see their populations decline and subsequent loss of any remaining services

## Income and Deprivation

**3.158** The Index of Multiple Deprivation (IMD) is the official measure of relative deprivation in England and is part of a suite of outputs that form the Indices of Deprivation (IoD). The [English Indices of Deprivation 2019](#) measures deprivation levels across England based on 7 topic areas:

1. Income
2. Employment
3. Education, Skills and Training
4. Health Deprivation and Disability
5. Crime
6. Barriers to Housing and Services
7. Living Environment

**3.159** Each topic area has a subset of detailed indicators to derive a comprehensive assessment of deprivation across geographical areas such as Local Authority areas and Lower Super Output Areas (LSOA)<sup>(16)</sup>. Huntingdonshire is the 69th least deprived district out of 317 English Local Authorities. Of other Cambridgeshire authorities, South Cambridgeshire is the 16th least deprived, East Cambridgeshire is 45th least deprived, Cambridge City is the 107th least deprived, and Fenland and Peterborough rank 80th and 51st respectively. When comparing all LSOA across England results show that Huntingdonshire has two LSOAs that fall within the 20% most deprived (H 008A in Huntingdon West and H 008B in Huntingdon North). A summary report on deprivation in Huntingdonshire can be found at [Cambridgeshire Insight](#).

**3.160** The next map shows the Index of Multiple Deprivation by deciles across Huntingdonshire. Of the deprivation categories identified in the IMD for Huntingdonshire, 'Barriers to Housing and Services' ranks as the lowest nationally (117 out of 317 authorities of which 1 is the most deprived). 'Income', 'Employment' and 'Health and Disability' categories perform above average, ranking 250th, 245th and 242nd out of 317 local authorities respectively.

**3.161** Within Huntingdonshire income deprivation rankings vary significantly. Of the 105 LSOAs in Huntingdonshire, 1 LSOA falls within the 2nd decile of most income deprived areas (this is Huntingdon North), whereas 20 fall within the 10th decile (the least deprived).

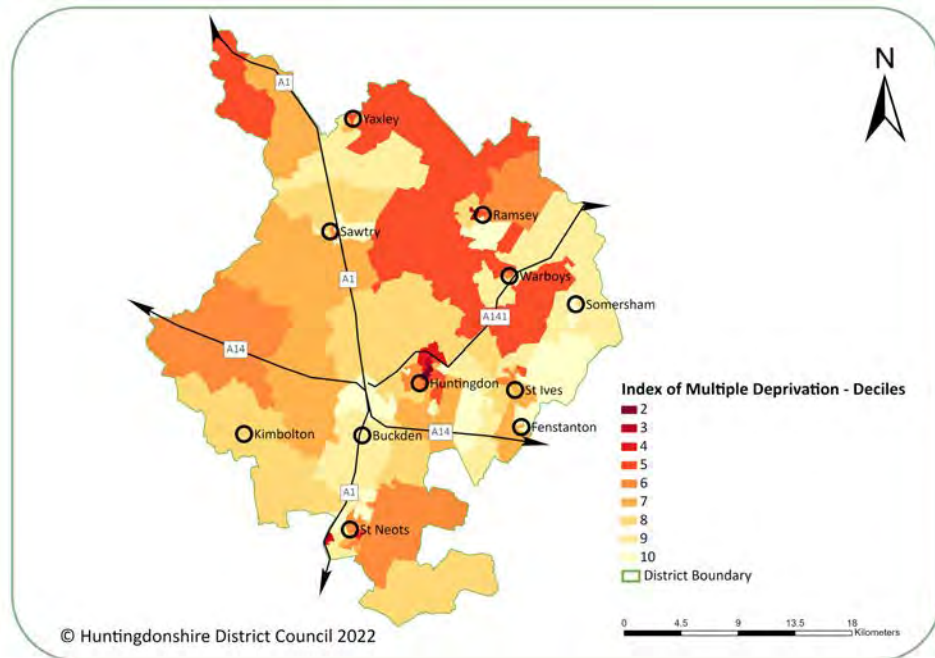

**3.162** In Huntingdonshire 79.7% of the working age population (16 to 64 years) were in employment (Jul 2021-Jun 2022)<sup>(17)</sup>, this compares to % in the 80.3% in the Eastern region and 78.6% for Great Britain.

16 A LSOA is split in areas that contain up to 3,000 people or 1,200 households Source: ONS: [Census Geography](#)

17 Employment and unemployment (Jul 2021 - Jun 2022) - ONS Annual Population Survey from [NOMIS](#) Local Authority Profiles

3 Stage A - The Scoping Process

Map 3.7 Index of Multiple Deprivation by Deciles - 2019

Page 1510 of 3488

in Cambridge and South Cambridgeshire earn on average more ranging between £728 and £783 respectively. It is notable that median weekly pay in East Cambridge was £629 in 2021 (the third highest within Cambridgeshire and Peterborough), whilst Peterborough and Fenland sit below the national average at approximately £565 and £546 respectively.

Figure 3.26 Weekly Pay (Gross)

3.163 Median weekly pay (gross) in Huntingdonshire has bucked local and regional trends (see below). The ONS annual survey of hours and earnings (resident analysis 2021) demonstrates that although median weekly pay continues to rise in Cambridgeshire, regionally and nationally, pay in Huntingdonshire has been slowly declining since 2018. Weekly median pay in Huntingdonshire peaked at approximately £600 in 2018. 2020 saw a temporary decrease in weekly pay across the country as a result of the pandemic, however other authorities in Cambridgeshire and Peterborough have recovered to demonstrate increasing pay since. Currently median weekly pay in Huntingdonshire sits at approximately £589, this is below regional and English pay of around £628 and £613 respectively. Residents

3.164 Although median weekly pay has decreased in Huntingdonshire, the claimant rate as a proportion of economically active residents aged 16+ has remained in line with local and national trends (see below). Claimant rates peaked in 2021 appearing to coincide with the post lockdown impacts on businesses and the gradual repeal of the national furlough scheme. As at September 2022 claimant rates in England, the East and across Cambridgeshire have continued to decline. Within the Cambridgeshire and Peterborough area Huntingdonshire has the third lowest claimant count rate (2.2 as at September 2022) after South Cambridgeshire (1.8) and East Cambridgeshire (2.0). (ONS Claimant Count - [Claimants as a proportion](#)

of economically active residents aged 16+)) Distributed across age ranges approximately (as at September 2022) 16% of claimants in Huntingdonshire were aged 16 to 24 and 25% aged 50 or over; the majority of claimants sit within the 24 to 49 age group (59%). There remain future challenges ahead including but not limited to increasing energy price rises, uncertainty surrounding the economy and the impact that this may have on the cost of living.

**Figure 3.27 Claimants as a proportion of economically active residents aged 16+**

**Key sustainability issues and problems**

- Huntingdonshire shows great disparity across the district in terms of income and deprivation
- Median weekly pay in Huntingdonshire is in decline potentially creating a less financially stable population

**What may happen without a Local Plan**

- Income and deprivation disparity may continue to increase
- Residents across the district may continue to face financial hardship exacerbating the cost of living crisis

**Employment and Businesses**

3.165 There are approximately 86,000 employees in Huntingdonshire, the fourth highest in Cambridgeshire and Peterborough after Cambridge City Council (133,000), Peterborough (130,000) and South Cambridgeshire District Council (97,000)<sup>(18)</sup>. The number of jobs in Huntingdonshire declined by 4.4% between 2019 and 2020; the decline although greater mirrors a downward trend in the Eastern region of 0.76% and in England of 3%. South Cambridgeshire also saw a decline of 2.2% however other local authorities in Cambridgeshire and Peterborough have bucked the national decline, see the below figure.

18 Source: [ONS jobs density](#) 2020. Total jobs includes employees, self-employed, government-supported trainees and HM Forces

3 Stage A - The Scoping Process

Figure 3.28 Number of Jobs 2020

Cambridgeshire (12.6%). when comparing Huntingdonshire to the Cambridgeshire and Peterborough area, those in Skilled Trades and Occupations (12.7%) are second proportionately only to Fenland (18.2%).

Figure 3.29 Employment by Occupation

Source: ONS Annual Population Survey - [Employment by occupation \(Oct 2020-Sep 2021\)](#)

3.167 Huntingdonshire has approximately 7,845 enterprises (see below figure). 89.93% of which are classed as Micro organisations (employ 0-9 workers), 8.29% are Small (10 to 49), with 1.47% Medium (50 to 249 employees) and 0.38% Large (employing over 250). The percentage of businesses by size is generally reflective of County, Regional and English distribution (Source: [Inter Departmental Business Register 2022](#) (ONS)<sup>(20)</sup> The effects of Covid and Brexit appear to have impacted on the number of enterprises in Huntingdonshire, declining by

3.166 Huntingdonshire has a diverse range of occupations (see next figure), 22.5% of residents are employed in Professional Occupations, this occupational classification requires residents to have "a degree or equivalent qualification, with some occupations requiring postgraduate qualifications and/or a formal period of experience-related training"<sup>(19)</sup>. This is generally in line with trends in the Eastern region (21.9%) and in England (23.4%). The neighbouring authorities of Cambridge and South Cambridgeshire exhibit a higher percentage of high level occupations than average displaying 41.5% and 39.9% of their population in Professional Occupations. Conversely those in Managers, Directors and Senior Officials occupations in Huntingdonshire (10.3%) is more similar to Cambridge (10.5%) and South

19 ONS: [SOC2010 volume 1: structure and descriptions of unit groups](#)

20 An **enterprise** can be thought of as the overall business, made up of all the individual sites or workplaces. It is defined as the smallest combination of legal units (generally based on VAT and/or PAYE records) that has a certain degree of autonomy within an enterprise group.

approximately 3.7% between 2020 and 2022. This decline is largely reflected across the Eastern Region, with the exception locally of Cambridge (no change), Peterborough (increase of 6.05%) and Fenland (increase of 3.46%). Generally across England the number of Enterprises has remained relatively stable with a slight increase of 0.71%, whilst the Eastern region has returned to positive position (0.48% increase since 2020); Cambridgeshire demonstrated a decrease of -1.70%.

**Figure 3.30 Number of Enterprises**

clearly demonstrate the district's links with manufacturing and advanced manufacturing which is a high priority sector for the district (Huntingdonshire's [Economic Growth Strategy For Huntingdonshire District 2020-2025](#)), whilst the influence of organisations such as Hinchingbrooke Hospital can be clearly seen in the Large organisation category.

**Table 16 Industries by Size of Business**

Micro 0-9 employees	SME 10-249 employees	Large 250+ employees
<ul style="list-style-type: none"> <li>• Creative and digital industries</li> <li>• Building, plumbing, electrician</li> <li>• Computer consultancy</li> <li>• Biotech</li> <li>• Hairdressing &amp; beauty therapy</li> <li>• Accounting &amp; auditing services</li> </ul>	<ul style="list-style-type: none"> <li>• Management consultancy</li> <li>• Plastics manufacturing</li> <li>• Paper manufacturer</li> <li>• Composites</li> <li>• Metal fabrication</li> <li>• Hospitality</li> <li>• Primary education</li> <li>• Freight transport</li> <li>• Retail</li> <li>• Financial management</li> </ul>	<ul style="list-style-type: none"> <li>• Meat processing &amp; preserving</li> <li>• Food manufacturing</li> <li>• Hospital &amp; other human health activities</li> <li>• Utilities (Water collection, treatment &amp; supply)</li> <li>• Manufacture of electrical equipment</li> <li>• Secondary education</li> </ul>

Source: [ONS Inter Departmental Business Register](#) (2021).

**3.168** The below table shows the *Industries by Size of Business* and sets out the main types of business that reside within Micro, SME and Large categories. Unsurprisingly the table demonstrates that the majority of micro organisations include small scale businesses such as hairdressers, builders, plumbers, electricians and accountancy services; more surprisingly some micro organisations fit within the creative, digital and biotech industries. This could be as a result of the 'Cambridge effect', however more research would be required to understand if this is the case. SME organisations

**3.169** As with the number of enterprises, the trend in the number of local units over time is similar, with local units seeing a decline of approximately 3% between 2020 and 2022. Around 9,075 local business units exist in Huntingdonshire, see the below figure. The distribution of these local units across industry show a high proportion of businesses in the construction and professional, scientific and technical industries. Since 2015 a downward trend has occurred in the wholesale, information and communication,

### 3 Stage A - The Scoping Process

agriculture and public administration and defence, whilst there has been more substantial growth in transport and storage, accommodation and food services, construction and motor trades.

**Figure 3.31 Business Counts in Huntingdonshire**

Industry	2015	2022	2015 vs 2022	Trend
1 : Agriculture, forestry & fishing (A)	525	480	-9%	
2 : Mining, quarrying & utilities (B,D and E)	65	75	15%	
3 : Manufacturing (C)	545	555	2%	
4 : Construction (F)	1,005	1,245	24%	
5 : Motor trades (Part G)	275	335	22%	
6 : Wholesale (Part G)	455	380	-16%	
7 : Retail (Part G)	640	670	5%	
8 : Transport & storage (inc postal) (H)	345	510	48%	
9 : Accommodation & food services (I)	400	525	31%	
10 : Information & communication (J)	660	570	-14%	
11 : Financial & insurance (K)	155	155	0%	
12 : Property (L)	265	310	17%	
13 : Professional, scientific & technical (M)	1,290	1,275	-1%	
14 : Business administration & support services (N)	750	735	-2%	
15 : Public administration & defence (O)	120	110	-8%	
16 : Education (P)	170	190	12%	
17 : Health (Q)	395	400	1%	
18 : Arts, entertainment, recreation & other services (R,S,T and U)	520	550	6%	
<b>Total</b>	<b>8,585</b>	<b>9,075</b>	<b>6%</b>	

10.3% respectively. Manufacturing and retail trade, repair of motor vehicles and motorcycles account for 15.4% of employment in combination. See the below figure.

**Figure 3.32 Employee Jobs by Industry 2021**

Source: [Employee Jobs 2021](#): ONS Business Register and Employment Survey. <sup>(21)</sup>

Page 1514 of 3488

Source: [UK Business Counts - local units by industry and employment size band, 2022](#)

**3.170** Although the number of local units show that Huntingdonshire has a high proportion of businesses in the construction and professional, scientific and technical industries, it is manufacturing (C) and human health and social work (Q) that employ the largest proportion of employees at 12.8% and

**3.171** Research by the Council's Economic Development team identifies that the business density is higher in the district's market towns of St Neots, Huntingdon and St Ives. Clear business clustering can also be seen around Ramsey, Sawtry and Yaxley (see the next figure).

**3.172** The black dots represent the location of employees (i.e. trading address/registered office). The size of the dot represents the number of employees in that place. The blue lines represent kernel density bands

21 Latest data as at October 2022 was for the year 2021. The definition of employee jobs excludes self-employed, government-supported trainees and HM Forces and farm-based agriculture.

which show the relative density of the combined dots across the entire District demonstrating where both the number and total employees across the district are grouped closely together.

**Figure 3.33 Kernel density estimations of all enterprises, scaled to number of employees**

Source: FAME (2021) and IDBR (2020) data

**3.173** The graphic below shows the contribution of the main industry sectors to GVA in Huntingdonshire. Sectors with a dashed border denotes location of Knowledge Intensive (KI) subcategories<sup>(22)</sup> within the overall sectors that contain both KI and non-KI subcategories. The sectors of *manufacturing* include high-tech & life sciences; *administrative and support services* includes KI services; *professional, scientific and technical services* includes life sciences and *information and communication*, and *other service activities*, include ICT all of which are major contributors to overall GVA within the District.

**Figure 3.34 Main Industry Sectors**

Source: ONS Regional Accounts (2018) data. GVA by subcategory is not available.

22 as defined by Cambridge Ahead's [Cambridge Cluster Insights](#) methodology: [CBR Database Methodology - Companies in the wider Cambridge region 2021](#)

## 3 Stage A - The Scoping Process

### Key sustainability issues and problems

- Post-pandemic recovery: addressing the decline in the number of jobs in the district
- Supporting and maintaining a stable economy: facilitating growth of key industries by providing appropriate land for development and expansion
- Supporting rural enterprises to provide sustainable job opportunities in outside the existing employment clusters
- Addressing the post-pandemic decline in the number of enterprises in the district
- Facilitating access to higher level occupations where required across the district
- Addressing the contribution that Huntingdonshire makes to Knowledge Intensive industries
- Providing complementary enterprises to support supply chains and economic growth

### What may happen without a Local Plan

- Continued decline in the number of jobs and enterprises resulting in less sustainable access to employment
- Reduced opportunity for rural enterprises to thrive, limiting employment opportunities in rural areas
- Lack of land to facilitate economic growth resulting in the loss of key industries outside the district
- Inability to deliver sustainable development and a strong and competitive economy

### Travel and Transport

**3.174** Huntingdonshire has very good connections to the national and regional strategic road network including the A14, A1 and A1(M), A428, A141, A1123, A1096, A1198 and A605. In terms of rail travel, the district is bisected by the East Coast mainline railway and is served by railway stations at Huntingdon and St Neots providing services south to London St Pancras International and onwards to the South Coast and north to Peterborough where onward connections run north to Edinburgh.

**3.175** High quality bus services are provided via The Busway which operates three routes within the district primarily linking Cambridge to St Ives and Huntingdon supplemented by connecting services to Peterborough and several villages. St Neots is served by buses connecting Cambridge to Bedford as well as to Huntingdon. Several bus operators provide commercial services within the district connecting villages to our market

**St Ives bus station**

towns and on to larger service centres in surrounding districts. Bus services in the north-east and western parts of the district are less frequent although a [Ting service](#) now covers the West Huntingdonshire area including key towns such as St Neots, Huntingdon, Sawtry and surrounding villages. The service has been introduced to West Huntingdonshire to improve transport links for those living in rural areas, removing young people's dependence on parents for lifts and allowing local residents to lessen their reliance on cars.

**3.176** A variety of active travel routes are found across the district. National cycleway routes 12, 24 and 51 all run through parts of Huntingdonshire. A cycleway also runs parallel to The Busway providing an off-road route from St Ives towards Cambridge. Dedicated cycleways serve parts of Huntingdon, St Neots and St Ives, generally as shared routes with footpaths. Grafham

Water offers a significant leisure cycling opportunity. Within towns and villages roadside pavements provide high levels of local connectivity with footpaths often providing more direct linkages and shortcuts only available to people walking. Extensive networks of bridleways and public rights of way offer horse riding and walking opportunities throughout the district.

- 3.177** Waterways provide leisure travel routes around the district with several marinas facilitating long and short stays along with boat servicing and maintenance. The River Great Ouse provides a major route through St Neots, Huntingdon and St Ives and the River Nene provides routes around the northern edge of the district. The Middle Level Navigations offer a network of Fenland leisure routes.

**The Waits at St Ives**

- 3.178** A range of transport infrastructure improvement projects are underway or proposed which have the potential to significantly enhance transport opportunities and connectivity for Huntingdonshire's residents and businesses. The main projects are briefly summarised below.

- 3.179** Improvements to the A14 are drawing to an end with the main new carriageway section having opened in May 2020 and the previous route being reclassified as the A1307. Pathfinder Link Road connecting the eastern section of A1307 into Huntingdon ring road at Mill Common opened in October 2019. Views Common Road linking the north western section of the A1307 to Hinchingsbrooke Park Road opened in September 2020. Mill Common Link Road will provide a connection between Pathfinder Link Road and the junction of Edison Bell

**A14 bypass south of Godmanchester**

Way near the railway station using the line of the old A14 but at lower grade. Preparation for demolition of the A14 viaduct across the East Coast mainline began in 2019 and demolition completed in 2022. This is followed by works around Huntingdon railway station to improve the forecourt and improve connectivity between different travel modes.

- 3.180** The A428 between the Black Cat and Caxton Gibbet roundabouts is a Nationally Significant Infrastructure Project as it is a large, complex infrastructure project which needs to be brought forward under a Development Consent Order (DCO). The [DCO](#) was granted by the Secretary of State for Transport in August 2022. The proposal is to upgrade the A428 route between the Black Cat roundabout on the A1 and the Caxton Gibbet roundabout at the junction of the A428 with the A1198 which is the only remaining single carriageway stretch on the A421/ A428 route from Milton Keynes to Cambridge and a focal point for traffic congestion regularly affecting people travelling between St Neots and Cambridge. Proposed improvements include provision of a 10 mile stretch of dual carriageway, a three tier junction at the Black Cat roundabout to allow traffic to flow freely on the A1 and new junctions at Caxton Gibbet and at Cambridge Road St Neots to connect the proposed route to the existing A428. Intended works also include new bridges over the River Great Ouse and East Coast mainline railway and improved routes for pedestrians, cyclists and horse riders that connect with existing public rights of way.

- 3.181** The A141 around the north of Huntingdon connects westwards to the A14 and A1 at Brampton Hut junction and eastwards to Warboys, Chatteris and onto Wisbech serving as a major route into the Fens. The road network around St Ives includes the A1123, A1096, B1040 and B1090; the Busway crosses the A1096 at the south eastern tip of the town from where the route transfers eastwards onto the formal guideway. Congestion levels can be high particularly at peak times with road safety issues and lack of safe cycling and walking routes impeding take up of active travel options. Promoted by the [Cambridgeshire and Peterborough Combined Authority](#) options for potential improvements were published for consultation in 2021 with further consultation in 2022. The intention is for the highway

### 3 Stage A - The Scoping Process

works to be complemented with support for active travel and public transport improvements to aid sustainable travel options alongside reducing congestion and improving safety on the roads. Further details of the project are expected to be developed through 2022 through a Strategic Outline Business Case.

- 3.182** Recent improvement to the East Coast mainline railway targeted at increasing capacity include a grade separated tunnel at Werrington, extra track and a new platform at Stevenage and track and signalling upgrades on the approach to Kings Cross. [Network Rail's Eastern Region Strategic Plan \(2021\)](#) sets out their delivery aspirations for 2019-24. [Huntingdon: A Prospectus for Growth](#) published by the District Council in 2020 recognises the importance of the proposal to add a railway station at Alconbury Weald and join it to the national rail network and acknowledges the challenges of doing so.
- 3.183** [East West Rail](#) proposes a new rail route connecting Oxford to Cambridge via Bicester, Bletchley and Bedford. From Oxford to Bedford the route involves existing and refurbished tracks, however, from Bedford to Cambridge a wholly new route is required. This is the section of greatest relevance to Huntingdonshire. A preferred route corridor has been identified; in 2021 public consultation was held on possible route alignments within this preferred corridor including suggestions for a new railway station south of St Neots or at Tempsford. The proposed scheme offers opportunities for faster and better long-term connectivity for local residents to Cambridge and Bedford and beyond, investment in economic growth and new jobs and further transport infrastructure improvements joining any new railway station into St Neots and the existing railway station.
- 3.184** Cambridgeshire County Council published a [Local Cycling and Walking Infrastructure Plan](#) for consultation in 2021 which identified priority cycling and walking routes in main urban areas across the county. The plan will be used to seek funding for improvements to the walking and cycling network which focus on actions likely to significantly enhance the ability of walkers and cyclists to travel between key employment, school, leisure and shopping

destinations and particularly favours routes to schools. The Cambridgeshire and Peterborough Combined Authority are strong advocates of active travel including walking, cycling and horse riding along with micro-mobility options such as e-bikes and e-scooters. Improvement projects and trials of innovative travel modes are funded and supported with some as pilot projects to ascertain their suitability for use across wider areas of Cambridgeshire and Peterborough.

- 3.185** In October 2022, Cambridgeshire County Council commenced consultation on a [transport strategy for Fenland and Huntingdonshire](#). These will provide a strategy and an action plan of schemes to address the transport challenges facing those districts, whilst also looking at sustainable access to services and a safe and healthy environment. The County Council are also consulting on an [Active Travel Strategy](#) which aims to make active travel the 'go to' option for local journeys.
- 3.186** Daily travel patterns have been disrupted throughout 2020 and 2021 due to the Covid-19 pandemic with uncertainty remaining over their form and scale going forwards. Hybrid working options are impacting some previous commuting patterns, use of deliveries has affected shopping trip patterns and changes to use of cars, public transport, cycling and walking both for business and leisure have yet to settle down into new routines. There is limited data availability at district level with most being published at county or wider areas.
- 3.187** The [Department for Transport \(DfT\)](#) produce some statistics at individual district level which provide indications of the levels of accessibility residents experience to key services and facilities. These indicate that in 2019 85% of Huntingdonshire's primary school pupils lived within 15 minutes walking or public transport distance and 97% were within 30 minutes. In contrast just 18% of secondary school students were within 15 minutes by walking or public transport. However, 74% were calculated as being within 15 minutes by cycle based on 16 kms/h; it is noted that this seems extremely high given some of the traveling distances involved particularly from western parts of Huntingdonshire into catchment schools in Huntingdon and St

Neots and from many villages into Ramsey. DfT statistics also indicated that in 2019 17% of Huntingdonshire's households were within 15 minutes walking or public transport time of a town centre, 45% of households were within 15 minutes cycle distance of a town centre and 76% within 30 minutes cycle distance. In terms of traveling to work, the DfT consider access for the population aged between 16 and 74. Of this group some 77% are within 15 minutes walking or public transport travel of an employment centre offering between 100 and 499 jobs with 85% within 15 minutes by cycle. Access to larger employment centres offering between 500 and 4,999 jobs can be obtained within 15 minutes walking or public transport travel for 66% of the group and by cycle for 85%.

#### Key sustainability issues and problems

- Huntingdonshire is well located in terms of the strategic road network creating pressure from logistics businesses for new sites and generating high levels of road based through travel and locally generated car travel
- A variety of road and active travel infrastructure improvements are proposed which may reduce congestion, improve journey times and increase the attractiveness of active travel modes for journeys
- The district's semi-rural nature means some parts are relatively remote which increases reliance on private vehicles and engenders viability challenges for public transport; the distances involved can make walking and cycling unattractive options for many journeys

#### What may happen without a Local Plan

- An increase in developments reliant upon the strategic road network may arise
- Encouragement of infrastructure provision for active travel would be more dependent upon countywide or national policies
- Reduced coordination with local and strategic transport infrastructure providers impacting on effective cooperation and timely provision of interdependent infrastructure and other developments

#### Digital Infrastructure and Communications

- 3.188** A reliable mobile and internet connection is now widely accepted as essential to facilitate a good standard of living. Fast, reliable mobile connections and broadband technology allows residents to access online services, such as banking and retail, to promote home working and to gain access to essential emergency services. In general, cities and large towns have more reliable and faster broadband capacity with many rural areas lagging behind due to lack of investment or cost benefit due to smaller population sizes.
- 3.189** Economic success across the district also relies on employers and commercial operations having high quality connections to mobile and broadband infrastructure. A reliable service maximises opportunities for productivity, efficiency and increases access to markets. Cambridgeshire and Peterborough Combined Authority produced '[Connecting Cambridgeshire Delivering a Digital Connectivity Strategy for Cambridgeshire and Peterborough 2018 -2022](#) (2018)' which aims to capitalise on these benefits by providing more reliable infrastructure across the County.
- 3.190** Data from Ofcom's [Connected Nations update: Spring 2019](#) sets out the most recent information on mobile and broadband connectivity. Connection speeds reflective of standard broadband speeds between 10Mb to 20Mb for uploads and downloads, are only really sufficient for "two people who're looking to just send emails, browse social media and do some online shopping". However a large family who may be "simultaneously streaming and gaming across multiple devices will require a much faster fibre broadband package, which start at a superfast 24Mb and go all the way up to a premium ultrafast 350Mb offering" (Source: [Broadband Compared](#)). The rollout of full fibre connections is the next stage in improving internet reliability and speed; it uses fibre-optic cables replacing the old copper

### 3 Stage A - The Scoping Process

connections. Speeds with full fibre connectivity can reach speeds of one gigabit per second<sup>(23)</sup>. Broadband connectivity in Huntingdonshire is as follows:

- Percentage of premises that have Superfast Broadband (SFBB, 30Mbit/s to less than 300Mbit/s) coverage - 40.8%
- Percentage of premises that have Ultrafast Broadband (UFBB, 300Mbit/s or greater) coverage - 54.8%
- Percentage of premises that have coverage from a full fibre service - 3%
- Percentage of premises that do not have access to services above 30Mbit/s - 4.4%

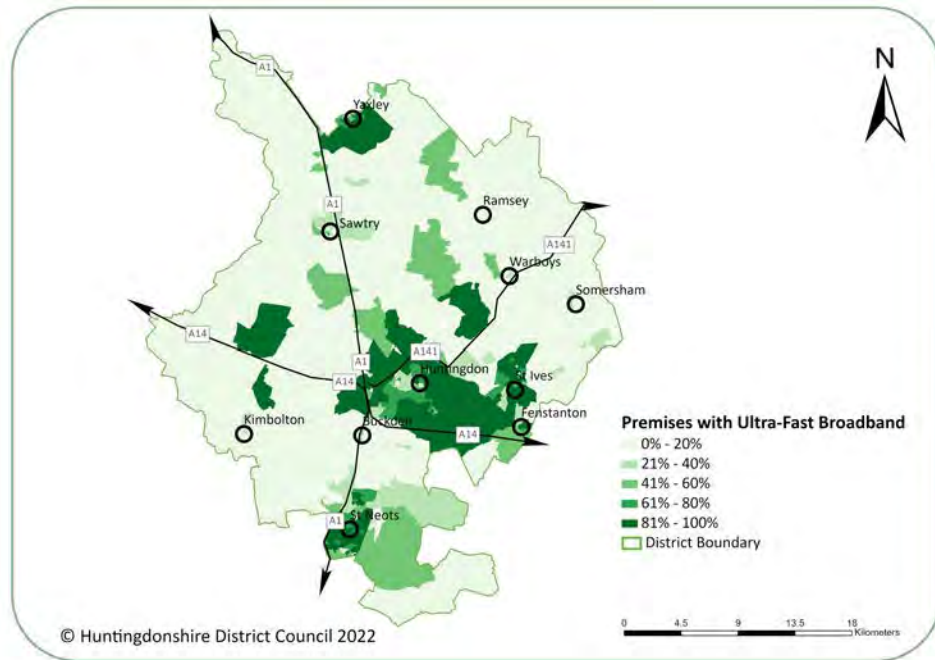

**3.191** Across the Cambridgeshire and Peterborough the type and availability of services is variable, in 2019 Fenland district saw the highest percentage of properties with access to full fibre (26.3%), whilst Cambridge demonstrates the majority of properties have access to Ultrafast Broadband (87.5%), see the next figure.

**Figure 3.35 Broadband availability as a percentage of all premises**

**3.192** The most recent data from Ofcom (2019) demonstrates that the rollout of Ultra-Fast broadband connections is mostly centred around the more urban areas in the district (see the below map). Whilst largely rural areas show that Ultra-Fast broadband is not readily available, some rollout has occurred.

Map 3.8 Percentage of properties with Ultra-Fast Broadband

Source: Ofcom: [Connected Nations update: Spring 2019](#) - Fixed Local and Unitary Authority Data

3.193 Although the Government is currently working towards rolling out 5G network services across the country (Department for Culture Media & Sport: Guidance: [Factsheet 6: 5G](#), 24 November 2020), Ofcom is not yet readily recording the availability of this network. In fact, in a recent speech by Digital Infrastructure Minister Matt Warman noted that 4G coverage across 95% of the UK is not expected until the end of 2025<sup>(24)</sup>.

3.194 The below figure shows the percentage of local authority area and the number of providers that provide indoor access to the 4G network. Data from Ofcom's [Connected Nations update: Spring 2019](#) shows that indoor 4G coverage with an adequate choice of providers (all operators) has not yet been fully implemented across the whole of Huntingdonshire (only 68.92% of the district), meaning the choice of available network providers and as such the cost options available to residents, reflecting the range of people on varying incomes that can access mobile service provision varies across the district. This is reflective of the rural nature of the district, all round provision across the district is lagging behind the more urban authorities of Cambridge and Peterborough.

Figure 3.36 Number of 4G providers that provide indoor 4G networks by Local Authority

3.195 In contrast however, Ofcom's [Connected Nations update: Spring 2019](#) shows that outdoor 4G provision in Huntingdonshire is much more achievable:

## 3 Stage A - The Scoping Process

- Percentage of geographic area that can receive a 4G signal (indoor) from all operators - 68.92% , 21.24% from 3 operators, 8.82% from 2 operators, 0.99% from 1 operator
- Percentage of premises that (outdoor) that receive a 4G signal from all mobile operators - 95.27%
- Percentage of geographic area that can receive a 4G signal (outdoor) from all operators - 97.1%

Note: all operators refers to four mobile network providers: EE, O2, Vodafone and Three. There are other mobile service providers, however Ofcom confirms that these providers will all use one of the four identified networks via a wholesale arrangement.

**3.196** A number of improvements have been made in the district through the Connecting Cambridgeshire Strategy including:

- Upgrades in Spaldwick from superfast to gigabit broadband in July 2021 following a successful Community Fibre Partnership with Openreach using the Government's Gigabit Broadband Voucher scheme to fund the installation of Fibre to the Premises (FTTP) to the majority of premises. FTTP allows every single building the opportunity to access ultrafast speeds up to 900 Mbps, resulting in improved reliability and faster speeds at affordable prices (page 5)
- Expansion of CambWifi across Huntingdonshire's market towns allowing free public access to Wifi in public buildings, village halls and community sites (page 6)
- "Smart market towns Digital totems are being installed in Huntingdon town centre to display useful information for residents and visitors about what's on, shopping, and travel options, which will also be accessible via mobile phones." (page 9)

Source: [Cambridgeshire and Peterborough Digital Connectivity Strategy 2021-2025](#)

### Key sustainability issues and problems

- Reducing inequality, economic opportunity and vital access to services via digital infrastructure
- Reducing social exclusion by providing improved access to improved online services especially in rural areas
- Enabling businesses and rural businesses to thrive through improved broadband and mobile coverage
- Decreasing rural isolation through improved broadband and mobile coverage

### What may happen without a Local Plan

- The lack of improved broadband and mobile coverage in rural areas will continue to create a divide between rural and urban areas
- Social inclusion, economic opportunity and maintaining and developing successful enterprises in rural locations will be difficult to achieve

### Retail and Town Centres

**3.197** Huntingdonshire sits within a largely rural district, key retail, services and facilities are largely based around the four market towns of Huntingdon, St Neots, St Ives and Ramsey, acting as service centres for nearby settlements (Huntingdonshire contains one other town, Godmanchester.) Huntingdonshire's Local Plan to 2036 also identified seven further settlements that were considered to provide a healthy concentration of services and facilities that could provide services to other nearby communities, these are: Buckden, Fenstanton, Kimbolton, Sawtry, Somersham, Warboys and Yaxley.

**3.198** The market towns of Huntingdon and St Neots also provide additionality in the form of 'Out-of-Town' Retail parks. These out of town retail parks provide access to more specialised retail such as hardware and DIY stores, warehouse retailing, garden centres, furniture stores etc. where a larger store footprint is required and car use to transport goods is more essential due to the nature of the items purchased. This can provide an offer to the wider area and is a signifier of a larger settlement. The most notable retail parks include:

- Stukeley Road Retail Park, Huntingdon
- Huntingdon Retail Park, Huntingdon
- Quora Retail Park, St Neots
- Abbey Retail Park, St Ives

**St Ives, Market Hill**

**Quora Retail Park, St Neots**

**3.199** Further work is underway by the Council to enhance the market towns in Huntingdonshire. The Council has secured funding from the Government's Future High Streets Fund, £12.8 million is anticipated to be invested in St Neots town centre. The [investment will deliver six projects](#), transforming the market town for the benefit of local people, businesses, and visitors. Construction associated to the six projects is expected to commence in 2023.

**3.200** The Council is working on a [Market Towns Programme](#) to develop interventions to improve the town centres of Huntingdon, St Ives and Ramsey is also underway. Studies and baseline reports have been commissioned by the Council which have informed a 'masterplan' for each area outlining interventions to enhance the vitality and viability of the town centres. These masterplans have been out for [consultation](#) during the Autumn of 2022. The Masterplans follow on from previous work on the 'Prospectus for Growth' documents which identified a vision and key objectives to enhance the three market towns.

**3.201** The [2021 Baseline Reports](#) for Huntingdon, St Ives and Ramsey identify a number of key insights into the health of the town centres and retail. The reports identify that footfall in Huntingdon and St Ives is strongly concentrated between 8am and 5pm. In Huntingdon the night-time economy only accounts for around 10% - 12% of total quarterly expenditure, seemingly limited in comparison to the size of the town. St Ives' evening economy however accounted for 20% of daily spend in 2020 and retail spend is reported to rely more on attracting residents from other towns and visitors to the area than the towns of Huntingdon and Ramsey. In fact Ramsey exhibits a very small evening economy with 70% of retail spend coming from people living within 10km of the town.

**3.202** In Huntingdon St Benedict's Court (comprising 29 commercial units) has been unsuccessful in finding a tenant for the former Waitrose unit (Unit 15); the 2,538 sq. m. unit has lain empty since 2017. The impact of more recent Permitted Development Orders on the health of the high streets are also currently unknown; these include:

- the amendment to the Town and Country Planning (Use Classes) Order 1987<sup>(25)</sup> in July 2020 which consolidated a number of uses, including but not limited to uses such as shops, restaurants, financial services, offices, indoor sports and fitness facilities, certain types of

## 3 Stage A - The Scoping Process

- medical and health services and nurseries to a single Commercial, Business and Service Class E use; and
- the amendment to the General Permitted Development) (England) Order 2015<sup>(26)</sup> which allows for the change of use of Class E properties to residential (limitations/exemptions apply).

**3.203** In the wider Huntingdonshire area the Baseline reports (using CoStar data) identified that retail market values in 2021 fell below £200 per square foot, whilst market yields have increased since 2018 to 6.9%, this expected to increase to over 7% in 2022. Yields for retail space in Huntingdon, St Ives and Ramsey were estimated in 2021 to be 8.5%, 9% and 9.5% respectively. These figures are reflective of a good secondary high street location (Knight Frank Yield Guide notes that good secondary high street retail locations are generally achieving yields in the order of 8.25% - 8.50%, whilst secondary/tertiary retail high streets are achieving yields of circa 10%).

**3.204** It is well known that the use of online retailing services increased during the pandemic. The Office of National Statistics notes that there has been a continuing decline in online retail spending which peaked in February 2021 (36.8%). Whilst the online spending represented 26.9% in November 2021, this does however still remain far higher than the proportion of online retail spending in February 2020 before the coronavirus (COVID-19) pandemic, which was 19.7%.<sup>(27)</sup> The general trends towards increasing online sales has had a marked effect on high streets across the country<sup>(28)</sup>.

### Key sustainability issues and problems

- Increase in retail/ town centre use vacancies in key locations that provide accessible sustainable access to leisure, services and retail, impacting on social and economic health of the district
- Potential contraction of the high street and detrimental impacts on business viability
- Perceived safety threats from vacant units and low activity levels potentially creating inhospitable and unsafe neighbourhoods
- Ensuring high streets in the district provide easy access to leisure, services and retail

### What may happen without a Local Plan

- Decline of the high street and retail centres
- Decrease in viability for remaining high street businesses due to reduced high street 'offer'
- Lack of sustainable access to leisure, services, retail and centralised employment opportunities
- Increased perception of unsafe neighbourhoods

## Tourism and Leisure

**3.205** Huntingdonshire has a smaller tourism sector than other parts of the county such as Cambridge and Peterborough but it is diverse and widely spread across the district. Due to the predominately rural nature of the district, tourist attractions are comparatively modest in nature but do nevertheless contribute to the local economy.

26 Introduced through Class MA of The Town and Country Planning (General Permitted Development etc.) (England) (Amendment) Order 2021

27 Source: ONS, [Retail Sales, Great Britain, November 2021](#)

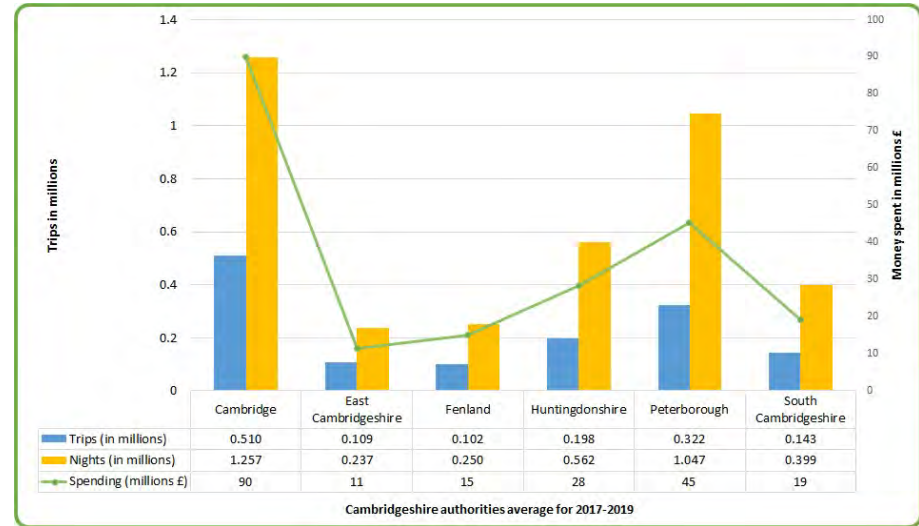

28 The Royal Society for Public Health's study [Health on the High Street 2019 - Running on Empty](#)

**3.206** There is limited up to date data at local authority level on tourism, the [Great Britain Tourism Survey](#) (GBTS) is however a useful resource to gain an insight into tourism trends. The GBTS is a national consumer survey measuring the volume and value of domestic overnight tourism trips taken by residents in Great Britain and provides detailed information about trip and visitor characteristics. Data from the most recently published report and survey have been extracted for Huntingdonshire and other Cambridgeshire authorities to gain an insight into the trends up to 2019 in the tourism sector <sup>(29)</sup>.

**3.207** The most recently published data from the GBTS shows that on average, between 2017 and 2019, 1.38 million trips were taken each year to Cambridgeshire, of which 198,000 where to Huntingdonshire. These equated to 3.75 million nights per year to Cambridgeshire and 560,000 nights per year to Huntingdonshire. The annual value of these trips were £210 million and £28 million respectively <sup>(30)</sup>. As shown in the following figure, only Cambridge and Peterborough had a higher number of trips and higher annual value for them. Most trips within Huntingdonshire and also across Cambridgeshire were to visit family and friends.

**3.208** The impact of the pandemic on levels of domestic and localised tourism remains to be seen. There is anecdotal evidence to suggest that as a result of the pandemic, people will be visiting more local tourist attractions and undertake leisure pursuits closer to home. As restrictions relating to international travel cease, the longer term impact on local tourism destinations will be more apparent.

**Figure 3.37 Average number of trips, nights and money spent for all Cambridgeshire authorities 2017-2019**

**3.209** Due to the abundance of wildlife sites, strategic green infrastructure areas and variety of landscapes found across the district, Huntingdonshire's tourism sector is primarily nature and conservation based with opportunities to enjoy the wildlife and undertake leisure pursuits such as walking, cycling and water based activities.

**3.210** Huntingdonshire has an extensive public rights of way (PROW) network enabling access to the countryside and to leisure opportunities. There are also three national cycle routes that run through parts of the district, these are routes 12, 24 and 51. Route 12 runs in sections from Enfield Lock in

29 The survey is undertaken continuously throughout the year, however, there has been a disruption to this due to the coronavirus pandemic. Fieldwork resumed in April 2021 with plans to publish results in the Autumn of 2022.

30 The GBTS 2019 Annual Report is available from [Visit Britain's website](#) , on page 121 of the report (table 2.8 – Local authority destination and purpose) there is a link to download Local Authority data

## 3 Stage A - The Scoping Process

north London to Spalding via Stevenage, St Neots and Peterborough. This route connects to the Grafham Water circular route. Route 24 is a traffic route on the network and is found south of St Ives heading through Fenstanton. Route 51 is a long-distance cycling route that connects several cities in southern England, on its route from Oxford to the coast at Felixstowe, it runs through Huntingdonshire via St Neots, Huntingdon and St Ives. A cycleway also runs parallel to The Busway route from St Ives towards Cambridge where access to and views across the Great Ouse Valley landscape character area can be enjoyed.

**River Great Ouse**

**Sailing at Grafham Water**

**3.211** The River Great Ouse provides recreational opportunities for water based sports and past times with a long distance footpath extending the whole length of the area. The numerous lakes, linked by the river provide boating and canoeing opportunities along with fishing, walking and wildlife viewing. Sensitive restoration of many gravel workings has enabled them to blend successfully into the landscape as nature reserves and fishing lakes, Paxton Pits is an example. There are several marinas across the district such as Buckden, Huntingdon, Hartford which provide a range of fixed and floating moorings to suit the majority of craft types found on inland waterways. Huntingdon Boathaven also provides caravan pitches for camping and caravanning trips as does the Crystal Lakes leisure and fishing park in Fenstanton.

**3.212** Grafham Water attracts thousands of visitors throughout the year for walking, cycling and watching wildlife at the Wildlife Trust nature reserve, as well as attending events such as triathlons and fishing competitions. It is home to an array of wildlife with 170 species of birds recorded there.

**3.213** [The Great Fen](#) is a strategic habitat restoration project of national significance. As well as the environmental benefits of the project, it is promoting the eco-tourism sector within the district. There are several key sites to visit namely Ramsey Heights Nature Reserve, Woodwalton Fen, Holme Fen and New Decoy. There are walks and trails, there is also an electric all-terrain electric Trampler which is available to hire for those with mobility issues. Another key aim of the project is to celebrate and preserve the fenland heritage through education and outreach programmes.

**3.214** Another aspect of Huntingdonshire's tourism sector is the historic environment. There is an abundance of historic buildings and structures found across the district, as well as villages that have retained their historic form and historic landscapes, monuments and registered parks and gardens.

**3.215** There are several key attractions found across the district, a sample are: Houghton Mill, a working 18th-century watermill and campsite managed by the National Trust; Huntingdon Race Course which hosts a number of national horse racing events every year with dining and hospitality services; Hamerton Zoo, a popular attraction for families with its collection of rare and endangered animals; the ruins of Ramsey Abbey managed by the National Trust; and Elton Hall and its gardens.

**3.216** The market towns provide the greatest draw for tourism due to the concentration and mix of restaurants, cafes, shops and built heritage as well as their connecting routes out in to the countryside. The River Great Ouse flows through or around all towns but Ramsey which has routes out into the Fenland landscape. Each of Huntingdonshire's market towns have their own museum: the Norris Museum in St Ives, the St Neots Museum, the Cromwell Museum in Huntingdon, and Ramsey Rural Museum. The Cromwell Museum was recorded as being the 15th most visited free attraction in the East of England for 2020<sup>(31)</sup>. These museums are frequently involved in local history events and weekends and visited by schools. Huntingdon and St Ives also have weekly markets with all market towns hosting farmer or themed markets throughout the year.

**3.217** Improvements to the tourism and leisure offer within the market towns are underway through the District Council's [Market Towns Programme](#) .

**Houghton Mill and the River Great Ouse**

#### Key sustainability issues and problems

- The conservation of wildlife and landscapes are not harmed through tourism and leisure pursuits
- Tourism and leisure play an important role in people's health and well being so needs to be accessible to all
- Growth places additional demand on existing tourist attractions and leisure facilities
- Local tourist attractions and leisure facilities contribute towards the local economy and supports local communities through employment, voluntary opportunities and celebrating local heritage and past times

#### What may happen without a Local Plan

- Development may take place without adequate assessment on the additional demand they will place on existing tourist attractions, strategic green infrastructure and leisure facilities
- Development may be located in locations that are not accessible by walking and cycling to tourist attractions, strategic green space and leisure facilities
- Opportunities for the improvement or expansion of existing tourist attractions may not be realised

#### Community Services and Facilities

**3.218** The [National Planning Policy Framework 2021](#) states that healthy communities require shared spaces and community facilities to promote social interaction and healthy lifestyles. It identifies local shops, meeting places, sports venues, open space, cultural buildings, public houses and

### 3 Stage A - The Scoping Process

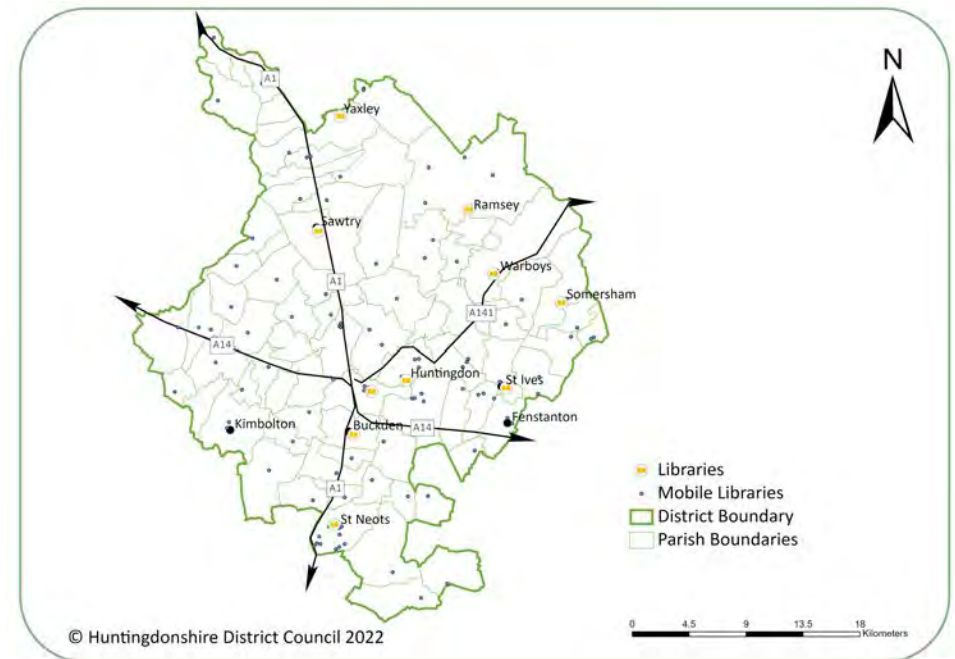

places of worship (Paragraph 93 a). This section will focus on those spaces that have not been covered in other sections - i.e. libraries, community centres, town and village centres and public houses.

**3.219** The library provision in the district is centered primarily in the market towns and larger villages (see the next map). There are eight libraries in total plus two community libraries in Brampton and Somersham. Libraries are important community centres, often including more than just library services with activities and events, volunteering, community support, and Local Authority services among the services offered.

**3.220** According to Cambridgeshire Insight's [Library Data](#), 31,356 people attended 2,118 event dates hosted by Huntingdonshire's eight libraries in 2019. Between April 2018 and December 2019 the District's libraries were visited 830,616 times. Buckden Library received the least visits with 13,653, whilst Huntingdon Library received the most with 321,310. These attendance figures highlight the key role libraries play as community centres.

**3.221** As of April 2022 there were [two mobile library services](#) operating in the district - Fenland and Huntingdonshire mobile libraries. Mobile libraries increase accessibility to services allowing those who cannot travel to the main libraries to benefit from the service. The two mobile libraries operate monthly or twice monthly visits to over 113 stops throughout the district. Overall, library services can be accessed in 68 out of 81 parishes in the District.

**Map 3.9 Library Provision in Huntingdonshire**

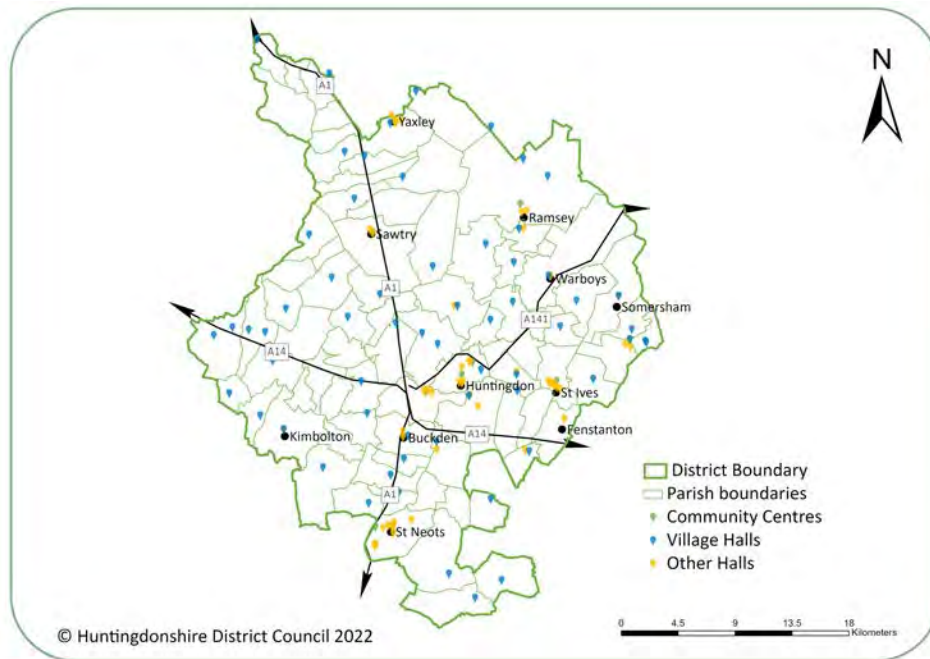

**3.222** Community centres, village halls and other halls, for example church halls or scout halls - are vital meeting places that provided indoor space for a variety of purposes, such as pre-school and after school activities, parish meetings, sports activities, community support groups as well as other social events throughout the year.

**3.223** As of April 2022, community centres (which may also include public services) were located in the market towns and some of the district's larger villages, whilst village halls were located in villages in rural areas, ensuring the availability of these spaces throughout the district (see the next map).

There are approximately 68 identified village halls in the district; work is currently underway through the Huntingdonshire Built Facility Strategy to assess the 'offer', demand for the halls, quality and accessibility.

**Map 3.10 Community Facilities in Huntingdonshire**

to purchase or lease the land or building, delaying sale on the open market and allowing the community the time to potentially buy the Asset for their community.

**3.225** As of October 2022, there were 28 [Assets of Community Value](#) on the Council's *List of Community Assets*. The assets were registered by 14 different town or parish councils and one by the Huntingdonshire Branch of the Campaign for Real Ale (CAMRA). Little Paxton and Houghton and Wyton Parish Councils have registered the most assets - eight and six respectively. Six parishes registered 1 asset; whilst St Neots has registered 3, Great Gransden 2, and Hemingford Grey 4.

**3.226** Sixteen of the community asset nominations are located in small settlements, reflecting the difficulty of maintaining services; a further 11 are located in Spatial Planning Areas - specifically Godmanchester, St Neots and Little Paxton. Public houses are by far the most commonly registered community asset. The types of registered Assets of Community Value are shown in the below figure.

**3.224** The [Community Right to Bid](#) aims to keep valued buildings or land in use by a community. Local community groups can nominate buildings or other land to be included on the Council's list of Assets of Community Value. To be classed as an Asset the building or land should contribute to the community's social well-being or social interests. Once on the register, if an asset is put up for sale or lease, community groups are given a moratorium period of six months to determine if they can raise the finance

## 3 Stage A - The Scoping Process

Figure 3.38 Assets of Community Value - Oct 2022

**Key sustainability issues and problems**

- Availability of multi-use community spaces where people can gather
- Sustainable access to services and facilities across the district
- Retention of and long-term sustainability of community services and facilities

**What may happen without a Local Plan**

- Development in areas without access to services and facilities
- Loss of existing services and facilities which may lead to an increase in social exclusion, loneliness and negative impacts on health
- Increasing reliance on motorised transport for access to services and facilities
- Access to services for the ageing population

**Education**

**3.228** Good quality education contributes to the creation of sustainable communities by reducing inequality and deprivation and providing more future economic opportunity for children. Cambridgeshire County Council (CCC) is the education authority, in Huntingdonshire they oversee 7 infant schools, 7 junior schools, 49 primary schools, 7 secondary schools (all with a sixth-form) and 3 schools that specialise in Special Education Needs and Disabilities (SEND) (see the following map). Catchment areas allow for Huntingdonshire pupils to be educated in the district but some families choose to school their children outside the district. Huntingdonshire has one public school provider, Kimbolton School for boys and girls with currently 1,100 pupils aged 4 to 18 years.

**3.229** The following secondary schools and further education providers are available in Huntingdonshire:

**3.227** Public houses are considered to provide a number of benefits to the community, presenting themselves as community hubs where people can gather and share ideas and trades, meet new people and socialise. As of April 2022, 29 pubs across 14 parishes had closed in the district since 2012 according to the Campaign for Real Ale [What Pub? webpage](#). This is an important loss as according to the same organisation there were 155 pubs in the district as at April 2022. Public houses were therefore in decline prior to the recent Covid-19 pandemic, the effects of which on the financial stability of these community facilities has yet to be determined. The current situation is illustrated further by the fact that Public Houses are the most commonly registered Assets of Community Value - 9 in total and spread over 9 different settlements, highlighting their value and precarity across the district.

- Abbey College, Ramsey - secondary and sixth form
- Cambridge Regional College, Huntingdon - sixth form/further education provider
- Ernulf Academy, Eynesbury - secondary and sixth form
- Hinchingsbrooke School, Huntingdon - secondary and sixth form
- Longsands Academy, St Neots - secondary and sixth form
- Kimbolton School - preparatory, secondary and sixth form
- St Ivo School, St Ives - secondary and sixth form
- St Peters School, Huntingdon - secondary and sixth form
- Sawtry Village Academy, Sawtry - secondary and sixth form

- Riverside Meadows Academy, St Neots - Secondary School
- Samuel Pepys School, Eynesbury - Pre-school, Primary and Secondary (ages 2 to 19)
- Spring Common Academy, Huntingdon - Pre-school, Primary and Secondary School (ages 2 to 19)

**3.233** These schools provide specialist, tailored education to pupils who have severe or complex learning difficulties, disabilities, or have additional needs such as medical, social, emotional, behavioural and sensory or physical, or those who require modification to the curriculum and personalised learning approaches. Improvements have been made to the Spring Common Academy to address issues with suitable accommodation; the Samuel Pepys School in St Neots is currently operating at capacity. As a result the County Council has identified a project to expand the school by 63 places, this is due to be fulfilled by September 2023. Further SEND provision will be required as a due to the development at Alconbury Weald, this is anticipated to be addressed by the building of an 'Area Special School' (Prestely Wood) containing 150 places covering the ages of 2 to 19 and be run by the Spring Common Academy Trust <sup>(32)</sup>.

**3.230** Huntingdonshire Regional College merged with Cambridge Regional College to become Cambridge Regional College in 2017. The college provides post-GCSE programmes, further education qualifications and some higher education courses. T Levels started being rolled out in September 2020 which are equivalent to 3 A levels developed in collaboration with employers and businesses combining classroom and on the job training.

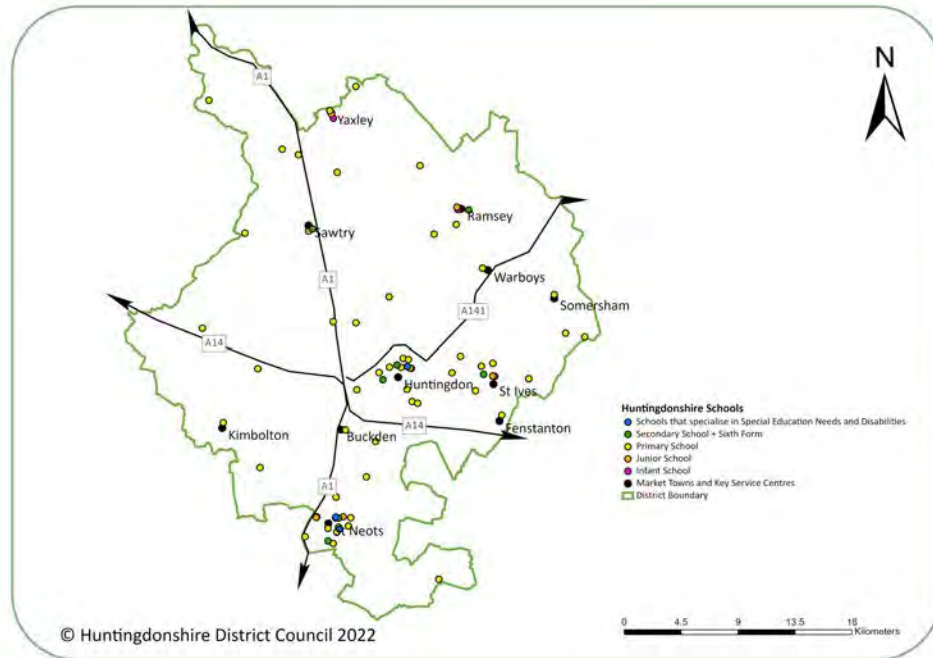

**3.231** CCC's [Cambridgeshire's 0-19 Education Organisation Plan 2021-2022](#) (Page 64) identified that the average annual cohort size of Huntingdonshire residents attending sixth forms or sixth form college provision in the period 2016-18 was 860. Of those 9% travelled to Cambridge City or South Cambridgeshire, 1.7% travelled to Peterborough and 0.3% to Fenland. For Further Education in the same time period the cohort was 570, of these 32.2% went to providers in Cambridge City or South Cambridgeshire, 20.1% went to Peterborough and 17.3% outside Cambridgeshire (for example Bedford) and 0.4% to Fenland. It is expected that future planned provision in the district and through new developments such as Alconbury Weald will meet future needs to 2036.

**3.232** Huntingdonshire has three schools that specialise in Special Education Needs and Disabilities (SEND):

## 3 Stage A - The Scoping Process

**Map 3.11 Cambridgeshire County Council provided schools across Huntingdonshire**

facilities allows families to return to work (where possible or wanted) and help to draw people with young children to an area, thus helping to stimulate the economy and improve the prosperity of residents. The availability of places in pre-schools and nurseries provides an indication of the opportunities available for potential new residents and the sustainability of a settlement to provide services to its existing residents or those working within it.

**3.235** The below figure shows that since 2011 Huntingdonshire has seen an increase in the percentage of residents aged 16 to 64 who have qualifications equivalent to and including NVQ level 1 and above <sup>(33)</sup>. In particular, the percentage of those with an NVQ Level 3 (or equivalent) has increased from 48.8% in 2011 to 60.7% in 2020 <sup>(34)</sup>. Those with no qualifications has decreased from 8.9% to 2.1% between 2011 and 2020, demonstrating improvements in [Cambridgeshire County Council's strategy](#) to support all children to achieve their potential.

**3.234** Local childcare is a particular requirement for those with young children. CCC's statutory responsibility in respect of early years and childcare includes: securing sufficient, accessible, flexible and affordable childcare to enable parents to work or to undertake education or training which could lead to employment. A [directory](#) of childcare providers can be found on the County Council's website. Provision of sufficient pre-school and nursery

33 Definitions: NVQ Level 1 (equivalent to 1-4 GCSEs), NVQ Level 2 (equivalent to 5 or more GCSEs), NVQ Level 3 (equivalent to 2 or more A Levels or equivalent), NVQ Level 4 or above (equivalent to first or higher degree, or equivalent professional qualifications), Other qualifications (other vocational work, work related qualifications and non-UK foreign qualifications).

34 All data is measured from January to December

**Figure 3.39 Percentage of Huntingdonshire residents ages 16 to 64 with qualifications**

**Figure 3.40 Percentage of residents ages 16 to 64 with qualifications**

Source: [ONS annual Population Survey](#)

**3.236** When compared against the average qualification levels across England, the percentage of residents with an NVQ 4 or above or equivalent (41.5%) is slightly below the English average of 42.8%. Huntingdonshire trails behind Cambridge and South Cambridgeshire when compared with those who have NVQ level 3 or equivalent or above. See the below figure.

**Key sustainability issues and problems**

- Ensuring residents have access to a range of educational providers in sustainable locations to meet the growing population
- Ensuring education levels and range of qualifications are available for all to facilitate social mobility and job prospects for residents, intern contributing to the economic growth of the district
- Providing enough SEND provision as a result of new growth

**What may happen without a Local Plan**

- Limited access to education may limited resident social mobility and economic growth of the district

## 3 Stage A - The Scoping Process

- Lack of pre-school provision could limit parents who wish to return to work, limiting household income
- Lack of access to a range of qualifications and education providers may lead to some residents travelling further or relocating elsewhere

### Heritage

**3.237** Huntingdonshire has a rich history and this is reflected in the large number of historic structures and environments found within the district, many of which are protected as listed buildings, conservation areas, registered parks and gardens and scheduled monuments. These heritage assets and their setting and the historic environment more widely play an important role in placemaking by shaping high quality design reflective of local character. Huntingdonshire's [Landscape and Townscape SPD \(2022\)](#) provides further details.

**3.238** Listing marks and celebrates a building or structure's special architectural and historic interest. Listing also brings them under the consideration of the planning system, so that they can be protected for future generations. Structures that can be listed range from bridges, signposts, walls and gates that have architectural or historic value.

**3.239** Listed structures across Huntingdonshire are incredibly varied ranging from medieval parish churches, timber framed buildings, vernacular cottages, grand houses, Georgian town houses, Victorian/Edwardian terraced houses, agricultural buildings and outbuildings, former mill and industrial buildings, bridges, commemorative statues, war memorials, walls and railings. There are also local variations across the district reflecting the variety of building materials used. For example, limestone and stonework detailing are a characteristic of historic properties located in the Nene Valley to the north of the district.

**3.240** At the time of writing, there are some 2,216 designations across Huntingdonshire listed on Historic England's website. Gradings for listings are as follows:

- 62 grade I designations (2.8%)
- 130 grade II\* designations (5.9%)
- 2,024 grade II designated (91.3%)

**3.241** The above includes five registered parks and gardens (one at grade II\* and four at grade II), these are: Elton Hall, Abbots Ripton Hall, Hamerton, Hilton Maze and Leighton Bromswold. Parks and gardens include gardens, grounds and other planned open spaces, such as town squares. They are protected due to their significance as a 'designed' landscape and are popular local tourist attractions.

**3.242** A full list of these can be found on [Historic England's website](#) and visually on [HDC's Planning Policies map](#) and [Conservation webpage](#). Historic England also have several Advice Notes such as [Advice Note 3 The Setting of Heritage Assets](#) and [Good Practice Advice in Planning 1: The Historic Environment in Local Plans](#).

**3.243** Between 2011 and April 2022, there have been 25 new listings across Huntingdonshire, all grade II. The majority of these are war memorials but this also includes the How in St Ives which was listed in 2019. Since 2013, there have been 2 delists.

Elton Park

Hartford Church and cottages

- 3.244** Scheduled monuments are the oldest form of designation and relates to nationally important archaeological sites. There are 84 such sites across Huntingdonshire ranging from deserted medieval villages, ruins of a castle and abbeys, former Bishop's palaces and sites of Roman settlements.
- 3.245** Huntingdonshire contains extensive archaeological remains dating from successive waves of settlement, and reflecting its diversity of landscape types with the Fens and the river valleys having been particular areas of activity. Roman towns existed at Godmanchester and Water Newton, along the line of the Roman Road (Ermine Street) which runs across the district from south east to north west. Ramsey Abbey was established on a peninsula in the fen in the tenth century, and smaller monastic houses in St Ives, St Neots and Huntingdon had a major impact on the growth of these towns. The main threats to these remains are agriculture and development. This makes it particularly important that provision is made for appropriate excavation, analysis, recording and preservation in areas of archaeological potential.
- 3.246** Despite the growth that has taken place across the district, many of Huntingdonshire's smaller villages retain some of their historic form. Nucleated forms, with development clustered around a church and/or village green, and linear patterns are both common. Hamlets are comparatively rare in Huntingdonshire, but isolated farms are scattered across the area.

- 3.247** Huntingdonshire also has 61 designated conservation areas. The areas vary significantly in character and size from a relatively small group of buildings to a substantial part of an individual town or village. Character assessment statements have been prepared for many of these and can be found on the Council's website as [Conservation Area Documents](#).

Listed buildings along the Causeway in Godmanchester

Listed buildings in St Neots Market Square

- 3.248** The [Cambridgeshire Historic Environment Record](#) (CHER) is a comprehensive source of information on non-designated heritage assets and archaeological sites and finds in Cambridgeshire. The County Council are working in collaboration with Huntingdonshire and other Cambridgeshire authorities on compiling a local listing criteria with the intention of identifying non-designated heritage assets.
- 3.249** Huntingdonshire has a wealth of heritage, some of which is at risk. Historic England maintains a [Heritage at Risk Register](#), which includes several listed structures and 4 scheduled monuments 'at risk' in the district.
- 3.250** Overarchingly, climate change poses significant risks to the historic environment, including the preservation of archaeology, flood and water damage, soil shrinkage and changes in temperatures leading to increased fungal, plant and insect infestation in historic buildings.

### 3 Stage A - The Scoping Process

Page 1536 of 3488

**Key sustainability issues and problems**

- There are many designated and non-designated structures assets, a small proportion are judged to be at risk
- Heritage assets face pressures from future development that may cause harm to them and to their setting
- Conservation areas may see a gradual erosion of their special features which may undermine the original reasons for designation
- Significant archaeology may yet to be discovered
- Climate change and flooding events pose significant risks to the historic environment

**What may happen without a Local Plan**

- More listed structures and scheduled monuments may go onto the Heritage at Risk Register
- More designated and non-designated heritage assets and their settings may see a harm or a gradual erosion of significance
- Sites of archaeological potential may go undiscovered or lost through development without proper investigation

**A3: Identifying sustainability issues and problems**

**3.251** The purpose of this task is to help focus the SA and streamline the subsequent stages, including baseline information analysis, setting the SA objectives, prediction of effects and monitoring.

**How was this task achieved?**

**3.252** At the end of each of the topic chapters within the A2 stage, a box summarises the key issues and problems. These have been used to inform the A3 phase of work within the scoping process. Each of these have been compiled and presented into one of the following tables (one for the climate emergency, environmental and socio-economic).

**3.253** The tables also then take these issues a step further by exploring how these issues could shape the SA framework. In doing this, consideration was given to what is within the scope of a local plan and how realistic objectives could be derived from the findings of tasks A2 and A3.

**Table 17 Sustainability issues and how these could shape the SA framework for climate emergency baseline topics**

Sustainability issues and problems	How this could shape the SA framework
<p><b>Carbon Emissions and Targets:</b></p> <ul style="list-style-type: none"> <li>• Increased summer temperatures will impact on comfort and usability of existing properties</li> <li>• Drier summers and wetter winters will create issues for flooding, water storage and management, soil and agricultural productivity and habitat survival</li> <li>• CO<sub>2</sub> emissions are reducing across industrial, commercial, domestic and public sectors</li> <li>• CO<sub>2</sub> emissions are very high for transport, influenced by the presence of the A1, A14 and East Coast Mainline Railway coupled with the largely rural nature of the district</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Support transition to low carbon and eventually zero carbon</li> <li>• Reduce carbon emissions arising from transport</li> <li>• Reduce reliance on private car usage</li> <li>• Locate development in sustainable developments that can utilise sustainable modes of transport</li> </ul>

Sustainability issues and problems	How this could shape the SA framework
<ul style="list-style-type: none"> <li>Per capita emissions are significantly higher than for England but typical for Cambridgeshire</li> <li>Increasing the climate resilience and energy efficiency of buildings and spaces</li> </ul>	<ul style="list-style-type: none"> <li>Development must be resilient to the impacts of climate change and be low or zero carbon</li> <li>Support provision of electric vehicle charging points</li> </ul>
<p><b>Renewable Energy and Energy Efficiency:</b></p> <ul style="list-style-type: none"> <li>Renewable power generation within Huntingdonshire has shifted from a focus on wind turbines to solar farms requiring extensive areas of land but with some scope for complementary agricultural use</li> <li>The age of the housing stock means that retrofitting of energy efficiency measures will be crucial in boosting the sustainability of the district's homes</li> <li>Fuel poverty was already an issue for over 1 in 10 households before the April 2022 price rises; this is expected to become more intense in the short term</li> <li>Access to mains gas is not universal throughout the district with some locations relying on individual oil tanks; in such circumstances alternative community heating systems may offer a more sustainable solution</li> <li>The visual impact of on-shore renewable energy production needs to be balanced with the impact on local landscape and communities</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Support appropriate renewable energy generation</li> <li>Support community energy generation projects to meet local need and reduce reliance on oil tanks to heat homes, particularly in rural parts of the district</li> <li>Promote retrofitting of older properties to make them more energy efficient and reduce the cost to residents</li> <li>Build homes to a high standard of energy efficiency</li> <li>Support provision of electric vehicle charging points</li> <li>Ensure there is capability and capacity for new development to be connected to the national grid</li> </ul>
<p><b>Flooding and Water:</b></p> <ul style="list-style-type: none"> <li>The impacts of climate change will see increases in extreme weather events, leading to increased rainfall, rainfall intensity and sea level rises all of which will increase the impact of all sources of flooding in the district. Potential to impact on existing and new developments, infrastructure and agricultural productivity, social and economic impacts across the district</li> <li>Potential need to set aside land for flood mitigation measures due to increased flood risk and understand effectiveness flood management infrastructure</li> <li>Increased flood risk may influence where development can be sustainably located</li> <li>Ensuring that new growth does not adversely affect water resources or water resources management infrastructure and that there are sufficient measures in place to balance water supply across the district</li> <li>Ensuring that homes and businesses are resilient to flooding and provide effective water management to maintain water resources for all</li> <li>Ensuring new development does not adversely impact on the ecological and biological status of water bodies</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Support flood mitigation measures and flood management infrastructure</li> <li>Minimise the risk to life and property arising from flooding events</li> <li>Locate development in areas that are not in an area at risk of flooding</li> <li>Ensure there is sufficient water supply to service growth</li> <li>Use water sustainably</li> <li>Locate development where there is waste water capacity or where it can be made available</li> <li>Avoid harm to the ecological and biological status of water bodies</li> </ul>

## 3 Stage A - The Scoping Process

Sustainability issues and problems	How this could shape the SA framework
<p><b>Waste and Recycling:</b></p> <ul style="list-style-type: none"> <li>• Many tonnes of waste are sent to landfills and recycling centres</li> <li>• Increasing levels of recycling and re-using materials reduces how much material ends up in landfills reducing their environmental effects and supporting a circular economy</li> <li>• Growth places additional demand on existing waste and recycling collection services</li> <li>• The waste attributed to the construction of new buildings</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Reduce waste production and increase reuse, recycling and composting</li> <li>• Promote the reuse of materials, particularly in construction to support a circular economy</li> <li>• Promote sustainable waste management</li> </ul>

Table 18 Sustainability issues and how these could shape the SA framework for environmental baseline topics

Sustainability issues and problems	How this could shape the SA framework
<p><b>Landscape:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire's landscape and its distinctive qualities are vulnerable to the impacts of climate change, insensitive new development and land management practices</li> <li>• Water management is key to landscape character throughout much of the district</li> <li>• The expansive, flat wetlands of the Fens are particularly vulnerable to the impacts of climate change degrading fertile peat soils and its landscape character</li> <li>• The River Great Ouse flows through or around three of Huntingdonshire's four market towns providing a high quality landscape setting to them and recreational opportunities but also an increased risk of flooding</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Protection of important landscapes and their characteristics</li> <li>• Mitigate the impacts of climate change on the natural environment</li> <li>• Minimise the impact of human actions on the landscape through sustainable land and water management and agricultural practices</li> </ul>
<p><b>Land, Soils and Agriculture:</b></p> <ul style="list-style-type: none"> <li>• A very high proportion of the district's agricultural land is classified as best and most versatile, whilst this is beneficial for production and food security it provides challenges for focusing development onto less valuable land</li> <li>• Degradation of peat and soil erosion resulting in the loss of the most fertile soils</li> <li>• There are limited remaining opportunities for largescale reuse of previously developed land</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Promote the reuse of previously developed land</li> <li>• Make most efficient use of land</li> <li>• Restore peatland and minimise soil erosion</li> <li>• Support sustainable agricultural practices vital for food supply and a prosperous rural economy</li> </ul>

Sustainability issues and problems	How this could shape the SA framework
<p><b>Biodiversity, Habitats and the Natural Environment:</b></p> <ul style="list-style-type: none"> <li>• There are several sites designated at an international and national level for their biodiversity and habitat value as well as non-designated sites identified for their local nature conservation value</li> <li>• Nature conservation sites and ancient woodland are vulnerable to new developments and land management practices.</li> <li>• Two thirds of SSSIs in Huntingdonshire are in a favourable state, with approximately a third of SSSIs not in a favourable condition, although these are in a recovering state</li> <li>• Visitor pressures on designated and non-designated sites may harm the quality of these sites for nature conservation and vital habitats</li> <li>• Nature conservation sites and other natural environments are vulnerable to the impacts of climate change</li> <li>• Trees are a natural carbon store, with established and mature trees taking in the most carbon</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Protection and enhancement of biodiversity for species and habitats in designated and non-designated areas</li> <li>• Preserve ancient woodland</li> <li>• Improve the condition of SSSIs across the district</li> <li>• Minimise visitor pressures to nature sites</li> <li>• Conserve and enhance tree coverage across the district</li> </ul>
<p><b>Green Infrastructure and Open Space:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire has several strategic green infrastructure areas: the Great Fen, Nene Valley, Great Ouse Valley and the West Cambridgeshire Hundreds</li> <li>• Strategic green infrastructure and localised provision of open green space provide important social benefits to human health and wellbeing as well as opportunities for habitat and biodiversity conservation and enhancement</li> <li>• Green infrastructure and open space must be located in accessible places</li> <li>• Several public parks and gardens are managed to the Green Flag Award standard, with others aspiring to the standard</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Support and enhance the strategic green infrastructure network</li> <li>• Enhance connectivity and accessibility to green infrastructure and open space</li> <li>• Sustainably manage areas of open space and strategic green infrastructure</li> <li>• Provide additional open spaces to support growth</li> </ul>
<p><b>Pollution:</b></p> <ul style="list-style-type: none"> <li>• The most significant air quality issues arise from traffic and congestion</li> <li>• Air, noise and light pollution can have serious implications on the health and wellbeing of people and cause harm to the natural environment and disrupt the lifecycles of wildlife</li> <li>• Homes, employment, schools, services and facilities should be accessible via walking, cycling and public transport</li> <li>• Light and noise pollution can reduce the tranquillity of the countryside and green spaces within settlements</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Reduce air, light and noise pollution</li> <li>• Support walking and cycling opportunities</li> <li>• Reduce reliance on private cars for journeys</li> <li>• Locate development in sustainable locations</li> </ul>

## 3 Stage A - The Scoping Process

Table 19 Sustainability issues and how these could shape the SA framework for socio-economic baseline topics

Sustainability issues and problems	How this could shape the SA framework
<p><b>Housing:</b></p> <ul style="list-style-type: none"> <li>Ensuring the delivery of an ongoing supply of new homes in sustainable locations</li> <li>Ensuring new homes provide a mix of types, sizes and tenures aligned with the composition of the local population</li> <li>Affordability ratios of house prices to around 9 times average earnings create significant stress in the housing market and result in strong social sustainability challenges</li> <li>Proactive work through the prevention duty regarding homelessness has high effectiveness rates and reduces social sustainability challenges through the trauma otherwise experienced by those who become homeless</li> <li>Ensuring a range of accessible, adaptable and specialist new homes are available suitable to meet the changing needs of residents as the population ages overall</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Increasing housing supply including affordable housing in sustainable locations</li> <li>Delivery of new homes that offer a mix of types, sizes and tenures to meet local needs including gypsy and traveller pitches</li> <li>Planning for demographic changes and changing needs of residents</li> </ul>
<p><b>Population and Health:</b></p> <ul style="list-style-type: none"> <li>The ageing and in some locations declining population may lead to challenges for the social sustainability of communities, for health and social provision and provision of appropriate housing options.</li> <li>Decreasing proportion of the population is of working age raising the proportion of dependants.</li> <li>Natural change is decreasing and may result in a negative rate of population growth unless in-migration is sufficient to counterbalance falling population numbers</li> <li>GP surgeries are concentrated in larger settlements necessitating residents of almost all villages to travel for appointments or rely on telephone or other remote forms of consultations</li> <li>Health indicators suggest that Huntingdonshire's population is typically slightly healthier than that for England on average but deaths from particulate air pollution were higher than average in 2019 although it should be noted that this was prior to the rerouting of the A14 and consequent impact on air quality management areas</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Supporting sufficient growth in all communities to maintain current population levels in order to support existing services</li> <li>Supporting employment growth with complementary housing provision to attract people of working age to live here</li> <li>Reducing air pollution to decrease its contribution to respiratory diseases</li> </ul>
<p><b>Income and Deprivation:</b></p> <ul style="list-style-type: none"> <li>Huntingdonshire shows great disparity across the district in terms of income and deprivation</li> <li>Median weekly pay in Huntingdonshire is in decline potentially creating a less financially stable population</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Supporting employment growth in locations accessible to lower income and more deprived areas</li> <li>Supporting enhanced skills and diversity of employment opportunities</li> </ul>

Sustainability issues and problems	How this could shape the SA framework
<p><b>Employment and Businesses:</b></p> <ul style="list-style-type: none"> <li>• Post-pandemic recovery: addressing the decline in the number of jobs in the district</li> <li>• Supporting and maintaining a stable economy: facilitating growth of key industries by providing appropriate land for development and expansion</li> <li>• Supporting rural enterprises to provide sustainable job opportunities in outside the existing employment clusters</li> <li>• Addressing the post-pandemic decline in the number of enterprises in the district</li> <li>• Facilitating access to higher level occupations where required across the district</li> <li>• Addressing the contribution that Huntingdonshire makes to Knowledge Intensive industries</li> <li>• Providing complementary enterprises to support supply chains and economic growth</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Supporting employment growth and providing appropriate and attractive sites to facilitate growth and expansion of key industries</li> <li>• Supporting diversity of employment opportunities</li> <li>• Enhancing availability of higher level employment opportunities</li> </ul>
<p><b>Travel and Transport:</b></p> <ul style="list-style-type: none"> <li>• Huntingdonshire is well located in terms of the strategic road network creating pressure from logistics businesses for new sites and generating high levels of road based through travel and locally generated car travel</li> <li>• A variety of road and active travel infrastructure improvements are proposed which may reduce congestion, improve journey times and increase the attractiveness of active travel modes for journeys</li> <li>• The district's semi-rural nature means some parts are relatively remote which increases reliance on private vehicles and engenders viability challenges for public transport; the distances involved can make walking and cycling unattractive options for many journeys</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Reducing reliance on private cars for journeys</li> <li>• Support an enhanced network of walking and cycling routes and public transport provision</li> <li>• Development located in sustainable locations within or near to existing communities</li> </ul>
<p><b>Digital Infrastructure and Communications:</b></p> <ul style="list-style-type: none"> <li>• Reducing inequality, economic opportunity and vital access to services via digital infrastructure</li> <li>• Reducing social exclusion by providing improved access to improved online services especially in rural areas</li> <li>• Enabling businesses and rural businesses to thrive through improved broadband and mobile coverage</li> <li>• Decreasing rural isolation through improved broadband and mobile coverage</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Enhance digital infrastructure (mobile and internet provision) across the district but in particular in rural areas</li> </ul>
<p><b>Retail and Town Centres:</b></p> <ul style="list-style-type: none"> <li>• Increase in retail/ town centre use vacancies in key locations that provide accessible sustainable access to leisure, services and retail, impacting on social and economic health of the district</li> <li>• Potential contraction of the high street and detrimental impacts on business viability</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>• Promote and support the vitality of the district's market towns</li> <li>• Tackle vacancy rates within town centres</li> <li>• Provide a mix of sustainable uses to support the needs of the local population</li> </ul>

### 3 Stage A - The Scoping Process

Sustainability issues and problems	How this could shape the SA framework
<ul style="list-style-type: none"> <li>Perceived safety threats from vacant units and low activity levels potentially creating inhospitable and unsafe neighbourhoods</li> <li>Ensuring high streets in the district provide easy access to leisure, services and retail</li> </ul>	
<p><b>Tourism and Leisure:</b></p> <ul style="list-style-type: none"> <li>The conservation of wildlife and landscapes are not harmed through tourism and leisure pursuits</li> <li>Tourism and leisure play an important role in people's health and well being so needs to be accessible to all</li> <li>Growth places additional demand on existing tourist attractions and leisure facilities</li> <li>Local tourist attractions and leisure facilities contribute towards the local economy and supports local communities through employment, voluntary opportunities and celebrating local heritage and past times</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Support existing tourism and leisure across the district</li> <li>Minimise any harmful impacts of tourism and leisure pursuits on the natural environment and historic environment</li> <li>Enhance the tourism offer across the district</li> </ul>
<p><b>Community Services and Facilities:</b></p> <ul style="list-style-type: none"> <li>Availability of multi-use community spaces where people can gather</li> <li>Sustainable access to services and facilities across the district</li> <li>Retention of and long-term sustainability of community services and facilities</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Support existing community services and facilities</li> <li>Promote social cohesion</li> <li>Promote multi-use community spaces to support their long term vitality</li> <li>Locate new community services and facilities in sustainable locations</li> </ul>
<p><b>Education:</b></p> <ul style="list-style-type: none"> <li>Ensuring residents have access to a range of educational providers in sustainable locations to meet the growing population</li> <li>Ensuring education levels and range of qualifications are available for all to facilitate social mobility and job prospects for residents, intern contributing to the economic growth of the district</li> <li>Providing enough SEND provision as a result of new growth</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Ensuring that the educational needs of all residents can be met locally</li> <li>Enhance learning and training opportunities across the district</li> </ul>
<p><b>Heritage:</b></p> <ul style="list-style-type: none"> <li>There are many designated and non-designated structures assets, a small proportion are judged to be at risk</li> <li>Heritage assets face pressures from future development that may cause harm to them and to their setting</li> </ul>	<p>SA framework objectives could include:</p> <ul style="list-style-type: none"> <li>Conservation and enhancement of the historic environment</li> <li>Preserve designated and non-designated heritage assets and their setting</li> <li>Recognition of the importance of archaeological heritage</li> </ul>

Sustainability issues and problems	How this could shape the SA framework
<ul style="list-style-type: none"> <li>• Conservation areas may see a gradual erosion of their special features which may undermine the original reasons for designation</li> <li>• Significant archaeology may yet to be discovered</li> <li>• Climate change and flooding events pose significant risks to the historic environment</li> </ul>	

**A4: Developing the SA framework**

3.254 The purpose of this task is to provide a means by which the environmental performance of the plan or programme and alternatives can be assessed.

**How was this task achieved?**

**Establishing SA objectives**

3.255 SA objectives are used to help show whether the objectives of the plan are beneficial compared to the effects of alternatives. SA objectives were informed by the previous tasks: 'A1: Identifying relevant plans and programmes', 'A2: Collecting baseline information' and in 'A3: Identifying sustainability issues and problems'.

3.256 The SA framework comprises SA objectives and supporting decision aiding questions, which together provide a means by which the sustainability performance of the plan and alternatives can be assessed.

3.257 The Sustainability Appraisal Framework for Huntingdonshire's Local Plan to 2036 was last updated in 2013. It was necessary to review this in the light of the updated baseline information and changes to the policy context within which the next local plan will be prepared, as established through the review of plans and programmes at international, national and local level. The SA framework and objectives have been updated to reflect the

key sustainability issues for the district identified in task A3; in particular they have been updated to reflect an increased emphasis on responding to the climate emergency.

3.258 The SA framework has been structured using the three groupings of the climate emergency, environmental and socio-economic which have been used through the scoping tasks. This approach was favoured over structuring it by SEA topic because it avoids duplication between objectives and reflects that some topics and hence their objectives are interconnected. Each grouping has a number of SA objectives which are the overall sustainability goals that have been derived from the analysis carried out in stage 'A3: Identifying sustainability issues and problems'.

3.259 The following table illustrates how the SA objectives address the issues listed in Annex I of the SEA Directive. It demonstrates how each of the SEA topics are reflected in the framework.

**Table 20 How SA objectives address the issues listed in annex I of the SEA Directive**

Issue from Annex I of the SEA Directive	Responding SA objective(s)
Soil	4
Water	3
Biodiversity (incorporating flora and fauna)	5 and 6
Air	8

### 3 Stage A - The Scoping Process

Issue from Annex I of the SEA Directive	Responding SA objective(s)
Landscape	7
Cultural heritage including architectural and archaeological heritage	16
Climatic factors	1 and 2
Human health	10 and 12
Population	9 and 11
Material assets	13 and 14

**3.260** In writing SA objectives, the following principles were applied:

- keep the number of objectives to a manageable number (12–18 maximum) - this requires each SA objective to be high-level and to cover a relatively broad range of issues;
- ensure that objectives are strategic - this is so that they can be applied at the strategy, sites and policy level;
- write the objectives using plain English - the SA objectives have been written using a common structure. The writing of the objective has included consideration of the impact of using a particular verb (for example, 'minimise' can have very different connotations to 'reduce'); and
- ensure there is a reasonable balance across the objectives in terms of economic, environmental and social issues. This was achieved by identifying several SA objectives to address each of the climate emergency, environmental and socio-economic categories used throughout the scoping stages.

**3.261** Establishing decision aiding questions

**3.262** Each SA objective is accompanied by a series of decision aiding questions which will be used to appraise options for the strategy and its alternatives, site allocations and development management policies. Different decision aiding questions are used for each of the strategy and its alternatives, site allocations and development management policies to allow for a more refined assessment.

**3.263** For the strategy and alternatives (including new settlement and strategic expansion location proposals) the questions are relatively high level and seek to distinguish the broad differences in sustainability between different approaches. For the potential site allocations the questions are more specific with a mixture of qualitative questions and more specific quantifiable questions for some indicators to provide a more detailed comparative assessment. In writing these, the following principles were followed:

- keep the decision aiding questions to a manageable number; and
- write the decision aiding questions using plain English

**3.264** In addition to these, the decision aiding questions have been worded to try to limit the number of instances where an 'uncertain' result is possible. It was considered that if an 'uncertain' result were to be included in the scoring system for all questions, appraisals could be undermined by a high proportion of 'uncertain' results. In this way a clear appraisal result can be gained and quantifiable differences between options clearly identified.

**3.265** The following table sets out in detail the assessment implications to aid interpretation of the sites decision aiding questions. For the development management policies the questions are predominantly qualitative whilst being more specific than those for the strategy and alternatives.

Table 21 SA framework

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
	<b>Climate emergency</b>			
SA 1	Contribute to achieving the district's ambition to reach net zero carbon emissions by 2040.	<ul style="list-style-type: none"> <li>Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?</li> <li>Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?</li> </ul>	<ul style="list-style-type: none"> <li>Promote low and zero carbon technologies?</li> <li>Not contain, and be at least 200m from an air quality management area?</li> <li>Support the circular economy through the reuse and recycling of existing land, buildings or materials?</li> </ul>	<ul style="list-style-type: none"> <li>Promote energy efficient design?</li> <li>Increase the amount of CO<sub>2</sub> captured by plants and trees?</li> </ul>
SA 2	Improve adaptability and resilience to the unavoidable impacts of the climate emergency.	<ul style="list-style-type: none"> <li>Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?</li> <li>Support habitats in adjusting to the impacts of the climate emergency?</li> </ul>	<ul style="list-style-type: none"> <li>Is the site located in an area with lower resilience to the predicted impacts of climate change?</li> </ul>	<ul style="list-style-type: none"> <li>Help protect against the increased extremes of weather anticipated from the climate emergency?</li> <li>Promote opportunities for adaptation to unavoidable impacts of the climate emergency?</li> </ul>
SA 3	Manage Huntingdonshire's water resources in a sustainable manner and reduce the risk from all potential sources of flooding to people, properties and the environment.	<ul style="list-style-type: none"> <li>Maintain and where possible improve the quality and availability of water resources?</li> <li>Minimise the risk of flooding from all sources?</li> </ul>	<ul style="list-style-type: none"> <li>Be served by existing waste water infrastructure or will it require infrastructure upgrades to facilitate growth?</li> <li>Use land in flood zone 1 (unless the proposed use is water compatible) taking into account the impact from surface water flood risk?</li> </ul>	<ul style="list-style-type: none"> <li>Reduce or help prevent water resource pollution from all sources?</li> <li>Promote efficient use of water resources?</li> <li>Reduce the risk of flooding from all sources?</li> </ul>

## 3 Stage A - The Scoping Process

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
	<b>Environmental</b>			
SA 4	Make efficient use of land by maximising development on previously developed land where this is not of high biodiversity value and minimising that on the best and most versatile agricultural land.	<ul style="list-style-type: none"> <li>• Enable the use of land that has previously been developed in preference to greenfield land?</li> <li>• Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?</li> </ul>	<ul style="list-style-type: none"> <li>• Prioritise development of previously developed land?</li> <li>• Prioritise development on land of agricultural land grade 3 or lower (including urban and non-agricultural land)?</li> </ul>	<ul style="list-style-type: none"> <li>• Promote the use of previously developed land in preference to greenfield land?</li> <li>• Promote the use of land of agricultural land grade 3 or lower (including urban and non-agricultural land) in preference to grade 1 or 2 agricultural land?</li> </ul>
SA 5	Improve the quantity and quality of publicly accessible natural green space and enhance the strategic green and blue infrastructure network and links to it.	<ul style="list-style-type: none"> <li>• Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?</li> <li>• Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?</li> </ul>	<ul style="list-style-type: none"> <li>• Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space?</li> <li>• Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?</li> </ul>	<ul style="list-style-type: none"> <li>• Support the provision, retention or enhancement of publicly accessible areas of open and natural green space?</li> <li>• Support the provision or enhancement of the strategic green or blue infrastructure network?</li> <li>• Encourage greater participation in healthy lifestyles through nature based or outdoor leisure activities?</li> <li>• Promote access to natural greenspace?</li> </ul>

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
SA 6	Promote conservation, enhancement, recovery and connectivity of sites of biodiversity or geodiversity significance.	<ul style="list-style-type: none"> <li>Protect sites of designated biodiversity or geodiversity significance?</li> <li>Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?</li> </ul>	<ul style="list-style-type: none"> <li>Impact on a designated site of biodiversity or geodiversity significance?</li> <li>Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?</li> </ul>	<ul style="list-style-type: none"> <li>Support the protection, recovery or enhancement of sites of designated biodiversity or geodiversity significance?</li> <li>Promote opportunities for enhanced connectivity of sites of biodiversity or geodiversity significance?</li> </ul>
SA 7	Conserve and enhance the special qualities and integrity of our landscape and townscape character and the local distinctiveness of settlements.	<ul style="list-style-type: none"> <li>Promote opportunities to protect and enhance valued landscape and townscape characteristics?</li> <li>Reinforce local distinctiveness and a sense of place?</li> </ul>	<ul style="list-style-type: none"> <li>Make efficient use of land whilst also protecting the form and character of the local area?</li> </ul>	<ul style="list-style-type: none"> <li>Protect or enhance landscape and/ or townscape character?</li> <li>Promote local distinctiveness?</li> </ul>
SA 8	Contribute to the minimisation and reduction of all forms of pollution.	<ul style="list-style-type: none"> <li>Promote actions to reduce contributions to air pollution?</li> <li>Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment</li> </ul>	<ul style="list-style-type: none"> <li>Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?</li> </ul>	<ul style="list-style-type: none"> <li>Support proposals that contribute to the reduction of air pollution?</li> <li>Support proposals that minimise or contribute to the reduction of light, noise, odour and visual pollution?</li> </ul>
<b>Socio-economic</b>				
SA 9	All people have access to high quality affordable homes that meet their needs across their lifetime.	<ul style="list-style-type: none"> <li>Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?</li> </ul>	<ul style="list-style-type: none"> <li>Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?</li> </ul>	<ul style="list-style-type: none"> <li>Support provision of market and affordable homes to meet identified needs and support the district's economic growth aspirations?</li> </ul>

## 3 Stage A - The Scoping Process

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
			<ul style="list-style-type: none"> <li>Meet the needs of specific housing groups such as gypsies and travellers or older people?</li> <li>Contribute to diversification of the housing supply by being no more than 1 ha in size?</li> </ul>	<ul style="list-style-type: none"> <li>Support construction of accessible, adaptable homes with potential to meet the lifetime needs of occupiers?</li> <li>Support provision of accommodation to meet specific needs?</li> </ul>
SA 10	Enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion.	<ul style="list-style-type: none"> <li>Support and enhance the more deprived areas of the district?</li> <li>Maximise opportunities for access to existing or proposed social and community facilities and services?</li> </ul>	<ul style="list-style-type: none"> <li>Minimise the distance people need to travel to access town centres and local convenience shops</li> <li>Minimise the distance people need to travel to access education facilities?</li> <li>Minimise the distance people need to travel to access leisure and cultural facilities?</li> </ul>	<ul style="list-style-type: none"> <li>Contribute towards promoting community cohesion?</li> <li>Reduce the potential for social exclusion and isolation particularly among disadvantaged and protected groups?</li> <li>Retain or enhance accessibility to retail, education, health, leisure or cultural facilities?</li> </ul>
SA 11	Enhance the quality, range and accessibility of economic opportunities for all communities.	<ul style="list-style-type: none"> <li>Contribute to regeneration activities?</li> <li>Enhance and diversify economic opportunities with the district?</li> </ul>	<ul style="list-style-type: none"> <li>Facilitate access to a range of employment opportunities?</li> <li>Be in a location with high quality digital infrastructure?</li> </ul>	<ul style="list-style-type: none"> <li>Contribute towards economic opportunities for local residents?</li> <li>Improve digital infrastructure provision?</li> </ul>
SA 12	Reduce the need to travel by car and promote active travel and public transport infrastructure.	<ul style="list-style-type: none"> <li>Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?</li> </ul>	<ul style="list-style-type: none"> <li>Benefit from access to public transport infrastructure?</li> <li>Benefit from access to active travel infrastructure for practical and social activities?</li> </ul>	<ul style="list-style-type: none"> <li>Support the provision of infrastructure for public transport?</li> <li>Support the provision of infrastructure for active travel?</li> </ul>

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
SA 13	Strengthen, modernise and diversify the local economy and promote opportunities for growth of indigenous companies as well as encouraging sustainable inward investment.	<ul style="list-style-type: none"> <li>Attract new investment and provide opportunities to improve the resilience of the local economy?</li> <li>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</li> <li>Support retention and growth of indigenous companies?</li> <li>Encourage sustainable tourism?</li> </ul>	<ul style="list-style-type: none"> <li>Provide opportunities for the creation of new businesses beyond supporting people working from home?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Support provision of tourism facilities or services appropriate to the sustainability of its location?</li> </ul>	<ul style="list-style-type: none"> <li>Support jobs in high knowledge or skill sectors?</li> <li>Facilitate retention or expansion of existing businesses?</li> <li>Retain or create rural or tourism employment opportunities?</li> <li>Assist in increasing the viability of the agricultural economy?</li> </ul>
SA 14	Support the successful response of town, local and village retail centres to changing shopping and social trends.	<ul style="list-style-type: none"> <li>Facilitate modernisation of existing town centres to meet current and anticipated needs?</li> </ul>	<ul style="list-style-type: none"> <li>Reinforce the role of town, local and village centres in serving their communities?</li> </ul>	<ul style="list-style-type: none"> <li>Promote enhancement of town centres?</li> <li>Support the retention or creation of local scale retail or social facilities?</li> </ul>
SA 15	Promote high quality design and placemaking that enables attractive, safe and resilient communities.	<ul style="list-style-type: none"> <li>Strengthen a local sense of place?</li> <li>Retain the character of existing settlements?</li> </ul>	<ul style="list-style-type: none"> <li>Provide high quality development sensitive to the character of the local environment?</li> <li>Promote sustainable design solutions?</li> <li>Provide opportunities to incorporate crime reduction measures?</li> </ul>	<ul style="list-style-type: none"> <li>Contribute to the construction of well designed and sustainably constructed buildings and places?</li> <li>Promote innovation whilst respecting local character and context?</li> <li>Facilitate enhancement of the public realm?</li> <li>Minimise opportunities for crime and help reduce the fear of crime?</li> </ul>
SA 16	Conserve, sustain and enhance designated and non-designated heritage assets and their setting(s).	<ul style="list-style-type: none"> <li>Conserve and where possible enhance sites, features and area of</li> </ul>	<ul style="list-style-type: none"> <li>Impact on any heritage assets or their settings?</li> </ul>	<ul style="list-style-type: none"> <li>Promote the conservation or enhancement of heritage assets and their settings?</li> </ul>

### 3 Stage A - The Scoping Process

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
		archaeological value throughout the district?		

#### Devising a scoring matrix

- 3.266 A scoring system/matrix has been devised in order to score how each option performs against the appropriate decision aiding questions.
- 3.267 Each option will be assessed against the following classification of the potential effect as appropriate for each objective (see the below table). The scoring matrix will be used to judge each item in the SA Framework to assess the relative performance of each option. This is refined to consider the level of significance of the impact either positively or negatively. A neutral category is included where there may no clear relationship, the outcome is uncertain or it may depend on details on delivery or implementation mechanisms unknown at the time of assessment.
- 3.268 The supporting commentary to each assessment will consider whether any identified impact is likely to be long or short term and permanent or temporary.

Table 22 Scoring matrix

Score	Effect of the approach
++	Contributes significantly to the achievement of the objective
+	Contributes to the achievement of the objective
N	No clear relationship to achieving the objective, the outcome is uncertain or the outcome may depend on delivery specific factors
	The objective is not relevant to the proposal
-	Detracts from achievement of the objective
--	Significantly detracts from achievement of the objective

- 3.269 The proposed scoring system/matrix consists of a mixture of qualitative and quantitative measures. The quantitative measures are shown below, these measurable criteria will assist with scoring various accessibility related decision aiding questions relating to the sustainability of individual sites. All distances will be measured from the centre point of the site and then by the most appropriate mode of travel to the destination or feature.

Table 23 Site decision aiding questions supporting criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
SA1	Promote provision and use of low and zero carbon technologies?	The scheme is for renewable energy generation or a large site with renewable energy provision that is proposed to meet the majority of the needs of the development.	++
		Clear renewable energy provision/ building standards to contribute to meeting the site's needs/ significantly enhanced building standards; or The site is proposed solely for biodiversity net gain opportunities.	+
		Build to building regulations at the time of development.	N
		Not contain, and be at least 200m from an air quality management area?	Beyond 200m of an AQMA
		Within 200m of an AQMA	-
		Within an AQMA	--
		Support the circular economy through the reuse and recycling of existing land, buildings or materials?	The site has significant existing structures with potential for recycling and reuse on site. Change of use of existing building
	The site has some existing structures with potential for recycling and reuse on site. Change of use or retention of existing building with some redevelopment		+
	There are no existing structures		-
	SA2	Is the site located in an area with lower resilience to the predicted impacts of climate change?	The scheme is for entirely biodiversity net gain, flood mitigation, open space or renewable energy generation Or there is no fluvial flood risk with climate change

## 3 Stage A - The Scoping Process

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
		There is risk of fluvial flooding with climate change at 1 in 100 (Design Flood) which is not more than 20% of the site area	+
		Risk of fluvial flooding with climate change at 1 in 100 (Design Flood) is greater than 20% and not more than 50% of the site area	-
		Risk of fluvial flooding with climate change at 1 in 100 (Design Flood) is greater than 50% of the site area	--
SA3	Be served by existing waste water infrastructure or will it require infrastructure upgrades to facilitate growth?	More than 10% of the flow permit for the water recycling centre catchment is remaining after existing committed growth is taken into account.	+
		Development in this location may require an increase in the water recycling centre catchment flow permit and/or upgrades to the treatment process to accommodate further growth.	-
		The water recycling centre catchment has significant constraints in providing upgrades to the WRC to accommodate future growth.  or  The site is a new settlement and will most likely require a new water recycling centre to serve the population.	--
	Use land in flood zone 1 (unless the proposed use is water compatible) taking into account the impact from surface water flood risk?	100% of the site in flood zone 1 and none or minimal recorded risk of surface water flooding; or  Proposal is for water compatible development	++
		50-99% of the site in flood zone 1 and none or minimal risk of surface water; or  100% of the site in flood zone 1 but with significant risk of surface water flooding	+

SA Objective	Site appraisal decision aiding question	Assessment indicators	Scoring matrix
	<b>Will allocation of the site:</b>		
		50-99% of the site in Flood zone 1 with significant risk of surface water flooding	-
		<50% of the site flood zone 1, mainly flood zone 2 irrespective of surface water flood risk	
		<50% of the site flood zone 1, mainly flood zone 3 irrespective of surface water flood risk	--
SA4	Prioritise development of previously developed land?	>60% of the site is previously developed land	++
		1-59% of the site is previously developed land	+
		The site is proposed solely for biodiversity net gain opportunities	N
		The site is technically classified at greenfield but includes substantial built structures such as agricultural barns	-
		The site is wholly greenfield land with no existing structures	--
	Prioritise development on land of agricultural land grade 3 or lower (including urban and non-agricultural land)?	The site is classified as urban or non-agricultural land	++
		The site is grades 4 and/or 5	+
		The site is grade 1 but the proposed uses are for greenspace, biodiversity net gain or flood mitigation	N
		The site is predominantly grade 3	-
		The site is predominantly grade 2	--
SA5	Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space?	The site meets at least 3 of the following: <ul style="list-style-type: none"> <li>is within 1 km of a 10 ha area of natural green space</li> <li>is within 300 m of a 2 ha natural green space</li> </ul>	++

## 3 Stage A - The Scoping Process

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
	Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?	<ul style="list-style-type: none"> <li>• is within 200 m of a 0.5 ha area of greenspace</li> <li>• has direct opportunities to link to the strategic green or blue infrastructure network</li> </ul> <p>the site has capacity for 200 or more new homes or 1,000 sqm or more of non-residential built development with natural green space included within the site</p>	
		<p>The site meets 1 of the above criteria</p> <ul style="list-style-type: none"> <li>• is within 1 km of a 10 ha area of natural green space</li> <li>• is within 300 m of a 2 ha natural green space</li> <li>• is within 200 m of a 0.5 ha area of greenspace</li> </ul>	+
		<p>The site meets none of the above criteria but has some capacity for linkages to the existing strategic green or blue infrastructure network</p>	-
		<p>The site meets none of the above criteria and has no/ very limited capacity for linkages to the existing strategic green or blue infrastructure network</p>	--
SA6	Impact on a designated site of biodiversity or geodiversity significance?	<p>The site meets all of the following:</p> <ul style="list-style-type: none"> <li>• is more than 2 kms from a Ramsar, Special Area of Conservation or Special Protection Area</li> <li>• is more than 1 km from a Site of Special Scientific Interest</li> <li>• is more than 200 m from a County Wildlife Site</li> <li>• is more than 200 m from a Local Geological Site</li> </ul>	++
		<p>The site meets at least 2 of the following:</p> <ul style="list-style-type: none"> <li>• is more than 2 kms from a Ramsar, Special Area of Conservation or Special Protection Area</li> <li>• is more than 1 km from a Site of Special Scientific Interest</li> <li>• is more than 200 m from a County Wildlife Site</li> <li>• is more than 200 m from a Local Geological Site</li> </ul>	+

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
		The site meets at least 3 of the following: <ul style="list-style-type: none"> <li>• contains or is within 2 kms of a Ramsar, Special Area of Conservation or Special Protection Area</li> <li>• contains or is within 1 km from a Site of Special Scientific Interest</li> <li>• contains or is within 200 m from a County Wildlife Site</li> <li>• contains or is within 200 m from a Local Geological Site</li> </ul>	--
	Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?	The site is located within one of Natural Cambridgeshire's Priority Landscapes and has potential to contribute to improvements strategically in habitat connectivity.	+
		The site is located outside any of Natural Cambridgeshire's Priority Landscapes and has limited potential to contribute towards improvements strategically in habitat connectivity.	-
SA7	Make efficient use of land whilst also protecting the form and character of the local area?	The scale and/ or location of the site: <ul style="list-style-type: none"> <li>• relate well to the existing settlement;</li> <li>• the amount of development would contribute to protecting the form and character of the surrounding townscape and landscape;</li> <li>• the density is similar to or slightly higher than surrounding properties.</li> </ul>	++
		The scale and/ or location of the site: <ul style="list-style-type: none"> <li>• relate well to the existing settlement;</li> <li>• the amount of development would contribute to protecting the form and character of the surrounding townscape and landscape;</li> <li>• the proposed density would not make efficient use of land.</li> </ul>	+
		The scale and/ or location of the site: <ul style="list-style-type: none"> <li>• do not relate well to the existing settlement;</li> <li>• the proposed density would make efficient use of land.</li> </ul>	-
		The scale and/ or location of the site: <ul style="list-style-type: none"> <li>• do not relate well to the existing settlement;</li> </ul>	--

## 3 Stage A - The Scoping Process

SA Objective	Site appraisal decision aiding question	Assessment indicators	Scoring matrix
	<b>Will allocation of the site:</b>		
		<ul style="list-style-type: none"> <li>would not contribute to protecting the form and character of the surrounding townscape and landscape or could result in coalescence with another settlement(s);</li> <li>the density would not make efficient use of land.</li> </ul>	
SA8	Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution	+
		For residential proposals, the site is located near to the strategic transport network or near to a major employment site.  For non-residential proposals, the site is close to major sources of pollution and/or is of a scale likely to cause substantial pollution	-
		The proposal could undermine the Dark Sky Discovery Sites designated at the Great Fen	--
SA9	Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?  Meet the needs of specific housing groups such as gypsies and travellers or older people?  Contribute to diversification of the housing supply by being no more than 1 ha in size?	The site is likely to support over 100 new homes which could include a wide range of types, sizes and tenures, or  The site is suitable to meet specialist needs of identified groups, or  The site is 1 ha or less and contributes to the government's aspiration to promote sites suitable for SME builders	++
		The site will contribute to meeting the housing needs of the district	+
		The site is for non-residential uses	N
SA10	Minimise the distance people need to travel to access town centres and local convenience shops?	The site is within 5 kms of a town centre	++
		The site is within 800 m of a local convenience shop or 2.5 kms of a freestanding supermarket	+
		The site is proposed solely for biodiversity net gain or renewable energy opportunities	N

SA Objective	Site appraisal decision aiding question	Assessment indicators	Scoring matrix
	Will allocation of the site:	The site is more than 800 m from a local convenience shop or 2.5 kms from a freestanding supermarket	-
	Minimise the distance people need to travel to education facilities?	The site meets at least 1 of the following: <ul style="list-style-type: none"> <li>• is within 800 m of a town based primary school</li> <li>• is within 800 m of a village primary school</li> <li>• the site has capacity for at least 1,000 dwellings and will include a primary school</li> </ul>	++
		The site does not meet the criteria above but is either within 1.5 kms of a town based primary school or is in a village containing a primary school	+
		The site is either for non-residential use or for residential accommodation specifically targeted at older people.	N
		The site is beyond 1.5 kms of a town based primary school; or  Is in a village which does not have a primary school and is of insufficient capacity to provide a school on site.	--
	Minimise the distance people need to travel to leisure and cultural facilities?	The site meets at least 5 of the following, is within 800 m of: <ul style="list-style-type: none"> <li>• public hall/ meeting place</li> <li>• pub</li> <li>• place of worship</li> <li>• museum</li> <li>• library</li> <li>• cinema</li> <li>• sports centre</li> <li>• playing fields</li> <li>• the site has capacity for at least 1,000 dwellings and will include new leisure and/ or cultural facilities</li> </ul>	++

## 3 Stage A - The Scoping Process

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
		The proposal provides additional leisure and /or cultural facilities.	
		The site meets at least 3 of the following, is within 800 m of: <ul style="list-style-type: none"> <li>• public hall/ meeting place</li> <li>• pub</li> <li>• place of worship</li> <li>• museum</li> <li>• library</li> <li>• cinema</li> <li>• sports centre</li> <li>• playing fields</li> </ul>	+
		The site meets at least 1 of the following, is within 800 m of: <ul style="list-style-type: none"> <li>• public hall/ meeting place</li> <li>• pub</li> <li>• place of worship</li> <li>• museum</li> <li>• library</li> <li>• cinema</li> <li>• sports centre</li> <li>• playing fields</li> </ul> Or The site is proposed solely for biodiversity net gain or renewable energy opportunities	N
		The site is beyond 800 m of all the following: <ul style="list-style-type: none"> <li>• public hall/ meeting place</li> </ul>	-

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
		<ul style="list-style-type: none"> <li>• pub</li> <li>• place of worship</li> <li>• museum</li> <li>• library</li> <li>• cinema</li> <li>• sports centre</li> <li>• playing fields</li> </ul>	
SA11	Facilitate access to a range of employment opportunities?	<p>The site is within 1.5 kms of multiple concentrations of employment (eg town centre, industrial estate, secondary school) or the site itself will provide over 5 ha of employment land.</p> <p>The site meets at least 1 of the following:</p> <ul style="list-style-type: none"> <li>• is within 5 kms of multiple concentrations of employment</li> <li>• is within 1.5 kms of a range of employment sources</li> </ul> <p>Will provide over 2 ha of employment</p> <p>The site is proposed solely for renewable energy opportunities, biodiversity net gain or open space uses</p> <p>The site meets at least 2 of the following:</p> <ul style="list-style-type: none"> <li>• is more than 5 kms from multiple concentrations of employment</li> <li>• is more than 1.5 kms from a range of employment sources</li> </ul> <p>Will not provide at least 2 ha of employment</p> <p>The site meets all of the following:</p>	<p>++</p> <p>+</p> <p>N</p> <p>-</p> <p>--</p>

3 Stage A - The Scoping Process

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
		<ul style="list-style-type: none"> <li>• is more than 5 kms from multiple concentrations of employment</li> <li>• is more than 1.5 kms from a range of employment sources</li> </ul> <p>Will not provide at least 2 ha of employment</p>	
	Be in a location with high quality digital infrastructure?	Ultrafast broadband is available in the vicinity	++
		Superfast broadband is available in the vicinity	+
		The site is proposed solely for biodiversity net gain opportunities	N
		Standard or no broadband is available in the vicinity	-
SA12	Benefit from access to public transport infrastructure?	The site is within 5 kms of a railway station and 800 m of a bus service rated B- or higher on the Place Based Carbon Calculator (approximately every 20 minutes Mon-Sat)	++
		The site is within 800 m of a bus service rated D+ or higher on the Place Based Carbon Calculator (approximately hourly Mon-Sat)	+
		The site is within 800 m of a bus service rated F+ or higher on the Place Based Carbon Calculator (approximately 3 per day Mon-Fri)	-
		The site is within 800 m of a bus service rated F or lower on the Place Based Carbon Calculator (approximately 1 per day Mon-Fri) or is beyond 800 m of any bus service	--
	Benefit from access to active travel infrastructure for practical and social activities?	<p>A pavement adjoins the site frontage or is immediately across the road from the site; or</p> <p>A footpath along the site frontage will need to be created to join the site with a nearby footpath; or</p> <p>There is a public right of way/ segregated cycleway within the site.</p>	++

SA Objective	Site appraisal decision aiding question <b>Will allocation of the site:</b>	Assessment indicators	Scoring matrix
		The site is within 500 m of a public right of way and/ or segregated cycleway	+
		The site is within 1 km of a public right of way and/ or segregated cycleway	-
		The site is more than 1 km of a public right of way and/ or segregated cycleway	--
SA13	Provide opportunities for the creation of new businesses beyond supporting people working from home?  Facilitate retention or expansion of existing businesses?  Support provision of tourism facilities or services appropriate to the sustainability of its location?	The proposal includes high job density employment use(s) such as offices, or  Facilitate the expansion of an existing business(es)	++
		The proposal would support new low job density employment use(s) such as logistics or industrial uses, or  Facilitate the retention of an existing business(es), or  Supports the retention of existing tourism facilities or services appropriate to the location	+
		The proposal does not include employment, commercial or tourism uses	N
		The proposal would result in the loss of employment, commercial or tourism facilities and services	-
SA14	Reinforce the role of town, local and village centres in serving their communities?	The proposal supports provision of additional retail or social facilities within an existing town, local or village centre	++
		The proposal is for the retention, modernisation or expansion of an existing retail or social facility	+
		The proposal does not include retail or social uses so does not apply.	N
		The proposal would result in the loss of retail or social facilities within an existing town, local or village centre	-

## 3 Stage A - The Scoping Process

SA Objective	Site appraisal decision aiding question	Assessment indicators	Scoring matrix
	<b>Will allocation of the site:</b>		
SA15	Provide high quality development sensitive to the character of the local environment?	The proposal includes the redevelopment of a site that is previously developed and derelict, or	++
	Promote sustainable design solutions?	Where there is a known issue, the proposal offers opportunities to address crime and /or anti-social behaviour issues.	
	Provide opportunities to incorporate crime reduction measures?		
		The site is located such that it can be effectively masterplanned to become part of the existing place and community.	-
		The site is located such that it could not be effectively integrated with the existing community.	-
SA16	Impact on any heritage assets or their settings?	There are no designated heritage assets within the site or in the immediate vicinity of the site	++
		The proposal could enhance a heritage asset where there is currently a negative impact	+
		There are designated heritage assets that could be adversely impacted by the development	-

**3.270** The inclusion of a commentary for each decision aiding question will enable factors considered in the decision making process to be identified. The answers are not intended to be added up to a score, but instead the options should be compared on an objective by objective basis. This will mean that the overall summary and conclusions will be influenced by the number of positive and negative assessments identified but will be of a qualitative rather than quantitative nature.

### A5: Consulting on the scope of the SA

**3.271** The purpose of this task is to ensure that the SA covers the likely significant environmental effects of the plan and to ensure that the SA process is and will be robust and suitably comprehensive in order to support production of the plan.

## How was this task achieved?

### Comments on the Draft Scoping Report and Council's response to these

- 3.272** Consultation is an important part of producing the Local Plan and the Council is committed to engaging during the process in ways that give people opportunities to get involved. Details of how the Council intends to engage during the production of the Local Plan can be found in the [Statement of Community Involvement](#), which is available on the Council's website.
- 3.273** The council is required to consult on the scope of the SA with the following three bodies:
- Environment Agency
  - Historic England
  - Natural England
- 3.274** Consultation with environmental bodies ran between 20 October and 30 November 2022.
- 3.275** Comments on a draft of the scoping report were received from all three environmental bodies. Their comments have been compiled into a table alongside the Council's response to them highlighting where amendments have been made to this report. This table can be found in Appendix 2 of the SA.
- 3.276** Following this, the scoping report was made available for anyone to make comments between 1 February and 15 March 2023. This was so that the scoping report is as robust as possible and to promote participation in production of the new Huntingdonshire Local Plan. Comments received can be viewed on our [consultation portal](#), a summary of these comments and the changes made to the report are provided in the Statement of Consultation. In total, 91 comments were made by 18 persons/organisations.

## Final Scoping Report

- 3.277** Stage A was completed with the publication of the [final scoping report](#).

## 4 Stage B - Develop options and appraise effects

### 4 Stage B - Develop options and appraise effects

<b>B:</b>	Develop options and appraise effects.	The purpose of this stage is to appraise the plan objectives, options and preferred options/policies, to propose measures for alleviating adverse effects and maximising benefits and to propose indicators for monitoring the plan’s sustainability.
-----------	---------------------------------------	---

- 4.1 The main benefits of stage B come from integrating the SA process into plan preparation and completing the appraisals at an early stage so that the findings can inform and shape the way that all parts of the plan evolve in a meaningful way.
- 4.2 This stage consists of 6 tasks:
  - B1: Testing the plan objectives against the SA framework
  - B2: Developing plan options
  - B3: Predicting the effects of the plan and alternatives
  - B4: Evaluating the effects of the plan and alternatives
  - B5: Considering ways of mitigating adverse effects and maximising beneficial effects
  - B6: Proposing measures to monitor the significant effects of implementing the plan
- 4.3 At the Further Issues and Options stage (Autumn 2024), stage B1 is not yet complete as we are consulting on options for the objectives of the Local Plan Update. This task is where we identify potential synergies or inconsistencies between the objectives of the Local Plan, referred to as Spatial Objectives and the SA Objectives established in Stage A.
- 4.4 Also, reflecting the iterative and interconnections between tasks B2, B3, B4 and B5, these have been undertaken together under 'B2 to B5: Developing and appraising plan options' section. These tasks are where

we develop and refine options for the development strategy, policies and site allocations for the Local Plan. It is also where we predict the significant effects of the plan and alternatives, whether they are economic, social or environmental; it is where we evaluate the predicted effects of the plan and alternatives in order to assist in the refinement of the plan. Finally, it is to ensure that adverse effects are identified and potential mitigation measures are considered.

- 4.5 At the end of this stage is task B6 which is where we will propose how to measure and monitor the significant effects of implementing the Local Plan Update by ensuring that adverse effects are identified and potential mitigation measures are considered. This stage will be completed after the Further Issues and Options stage.

#### B1: Testing the plan objectives against the SA framework

- 4.6 The options for the objectives of the Local Plan Update have been appraised in the 'Development Strategy' section. Once a preferred set of options have been consulted upon, the final list of objectives will be set out here.

#### B2 to B5: Developing and appraising plan options

- 4.7 The following subsections demonstrate how the options for the Local Plan Update have been appraised. These options are split into the three sections of the SA Framework (strategy, sites and policies):
  - **Development Strategy** - this consists of the options put forward in the Further Issues and Options Paper 2024 address the strategic issues for the Local Plan Update and how the development strategy may be shaped.
  - **Sites** - this consists a summary of the outcome of the site assessments and which may be appropriate allocations in the Local Plan Update. The appraisal for sites can be found within the appendices to the main SA report. The outcomes of the site appraisals were fed back into the Land Availability Assessment to conclude

whether sites were potentially suitable for further exploration or not and an indicative capacity undertaken or not.

- **Development Management Policies** - this section appraises development management policies against the policies section of the SA framework, policies have not been included in the Further Issues and options stage this section but will be included at a later stage.

**Development Strategy**

4.8 The Further Issues and Options Paper 2024 sets out options and further questions for a series of issues that are key to the future planning of Huntingdonshire. The issues covered are:

- The Local Plan Vision and Objectives
- Settlement Hierarchy for Huntingdonshire
- Approach to Employment and Economy
- Housing Figures and Requirement
- Achieving well-designed and beautiful places (note no options have been put forward at this stage but the FI&O Paper includes an additional question)
- Growth Strategy Options
- Green and Blue Infrastructure
- The Approach to Climate Change
- Tackling Flooding and Water
- Housing Tenures and Housing Mix
- Transport and Connectivity

4.9 Each of these issues have a series of options and questions. The options put forward within the consultation material have gone through SA to assess how each potential option performs against the strategic options developed in our Table 21 'SA framework ' (see Table 20 of the SA Scoping Report). Each of these options will be scored using the following scoring matrix:

**Table 24 Scoring matrix**

Score	Effect of the approach
++	Contributes significantly to the achievement of the objective
+	Contributes to the achievement of the objective
N	No clear relationship to achieving the objective, the outcome is uncertain or the outcome may depend on delivery specific factors
	The objective is not relevant to the proposal
-	Detracts from achievement of the objective
--	Significantly detracts from achievement of the objective

4.10 Each set of options will include a box setting out the options put forward so that they can be read alongside the SA of them.

4.11 Not all objectives are directly relevant to each option. Where there are objectives not relevant to options, the objective(s) have been removed from the appraisal of those options. This is make the tables more manageable and reduce any repetition.

## 4 Stage B - Develop options and appraise effects

### The Local Plan Vision and Objectives

#### The Local Plan Vision

##### Option - The Vision

##### Should we...

*(Please pick one option.)*

##### Option A: Have a Vision based strongly on the Huntingdonshire Futures Place Strategy and the Corporate Plan to 2028:

'By 2046 Huntingdonshire will be a place which people take pride in, where the economy is inclusive of everyone, health and happiness are highly valued, our local landscapes are protected and enhanced with environmental innovation welcomed, and travel is transformed to focus on transitioning away from cars.'

##### Option B: Have a Vision of a better future achieved through ambitious climate action and a just transition<sup>(35)</sup> towards more social and economic equity.

'By 2046 Huntingdonshire will be a place where our decisions about land use and planning have helped enable lasting benefits for nature and climate, enhanced the well-being of our residents and have facilitated a just transition towards a more sustainable economy.'

##### Option C: Retain the current Vision with minor amendments:

By 2046 Huntingdonshire's physical environment will support the health and wellbeing of all its residents, by:

Supporting a diverse and thriving economy	Providing sufficient infrastructure to support vibrant, inclusive communities	Accelerating our climate change response actions	Meeting our changing population's needs	Protecting and enhancing our landscape and heritage
---	---	--	---	---

##### Option D: Have a Vision describing how Huntingdonshire intends to evolve focused on the three strands of economic, social and environmental sustainability:

'Huntingdonshire to be a place where high quality growth enhances our communities and supports sustainable living and a high quality of life, balanced with protecting and enhancing our landscape and open spaces for the benefit of people and nature.'

##### Option E: Consider an alternative Vision.

Please let us know what it should be.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	++	+	+	Overall, all options perform positively but Option B performs the most positively in maximising actions towards reducing greenhouse gas emissions and enhancements to green infrastructure networks.
		This option would have an emphasis on environmental innovation and working towards a zero carbon future including renewable energy production balanced with other local priorities.	This option would maximise our efforts towards reducing greenhouse gas emissions seeking to exceed nationally set targets through ambitious climate action.	The amendments to the current vision would incorporate accelerating our climate change response however it is still not the primary focus of the option.	This option focuses on a balanced response between environmental, economic and social sustainability which would contribute towards reducing greenhouse gas emissions but is not its primary focus.	
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	++	++	+	+	
		Huntingdonshire Futures has a strong emphasis on environmental improvements and nature based infrastructure which would facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants.	The expectation of enabling lasting benefits for nature and climate through this option would strongly support the enhancements of green infrastructure networks contributing to this objective.	The option only places minor emphasis on enhancements of green infrastructure.	This option focuses on a balanced response between environmental, economic and social sustainability which would contribute promoting enhancements to green infrastructure networks but is not its primary focus.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	+	++	+	++	All options perform positively against this objective. Option B most positively with its more direct focus on planning for benefits for nature and climate.
	This options seeks to create resilient urban and natural environments which would contribute to adapting to the impacts of climate change.	This option's primary focus is on decisions about land and use planning enabling lasting benefits for nature and climate which would shape where development would be concentrated.	This option incorporates an accelerated actions in response to climate change which would likely include focusing development in locations that are more resilient to the impacts of climate change.	This option includes supporting sustainable living and a high quality of life which would involve placing development in places in locations that are more resilient to the impacts of climate change in order to achieve this.		
SA2	Support habitats in adjusting to the impacts of the climate emergency?	++	++	+	+	All options perform positively against this objective. Option B most positively with its more direct focus on planning for benefits for nature and climate.
	Huntingdonshire Futures has a strong emphasis on environmental improvements and nature based infrastructure which would support habitats.	The expectation of enabling lasting benefits for nature and climate through this option would strongly support habitats	The option only places minor emphasis on supporting habitats.	This option focuses on a balanced response between environmental, economic and social sustainability which would contribute promoting enhancements to the natural environment and also habitats but this is not its primary focus.		

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA3	Maintain and where possible improve the quality and availability of water resources?	++	++	+	+	Again, all options perform positively and work towards meeting this objective. Overall, Option B performs marginally more positively than the other three options.
		A key part of Huntingdonshire Futures is environmental innovation, to achieve this sustainable drainage solutions are highlighted as an mechanism to reduce the risk of flooding and enhance water quality.	This option includes ambitious climate action which will include an emphasis on Huntingdonshire being an area of water stress and actions to address this.	Within this option, sufficient infrastructure for communities is highlighted but there is no mention of natural environment which may impact how well this option achieves this objective.	In order to support sustainable living, there will need to be a reduction in the demands on water to achieve this. This option looks at the three strands of sustainability so can tackle water consumption from each of these perspectives.	
	Minimise the risk of flooding from all sources?	+	++	+	++	
		Within this option, Huntingdonshire Futures places an emphasis on environmental innovation and sustainable drainage solutions to reduce the risk of flooding and enhance water quality.	This option seeks enabling lasting benefits for nature and climate which would necessitate high quality flood management.	This option would contribute towards minimising flood risk through accelerating our climate change response and protecting our landscape.	This option focuses on sustainable living and balancing this with landscape protection which would necessitate high quality flood management.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	+	++	+	++	Options B and D perform the most positively against this option although all options do perform positively.
		This option is more likely to focus development towards existing communities which may increase the likelihood of previously developed land being used over greenfield land.	To achieve ambitious climate action and a just transition, this option would need to emphasise more concentrated development in towns where there is a greater likelihood of previously developed land being available.	This option is more likely to focus development towards existing communities which may increase the likelihood of previously developed land being used over greenfield land.	This option will focus on high quality growth promoting environmental, economic and social sustainability. All of which are more likely to emphasise more concentrated development in towns where there is a greater likelihood of previously developed land being available.	
	Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	+	+	+	+	
		This option is more likely to focus development towards existing communities which may minimise the use of higher grade agricultural land but this will be dependent on the location and scale of sites.	This option is more likely to be town based or new communities which may minimise the use of higher grade agricultural land but this will be dependent on the location and scale of sites.	This option is more likely to be town based or new communities which may minimise the use of higher grade agricultural land but this will be dependent on the location and scale of sites.	This option is more likely to be town based or new communities which may minimise the use of higher grade agricultural land but this will be dependent on the location and scale of sites.	

Stage B - Develop options and appraise effects

Page 1571 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	+	+	+	+	Options A and B perform most positively in achieving this objective.
		This option seeks to protect the local landscape and establish places where people can enjoy open and natural greenspace.	This option seeks to protect the local landscape and establish places where people can enjoy open and natural greenspace.	This option seeks to protect the local landscape and establish places where people can enjoy open and natural greenspace.	This option seeks to protect the local landscape and establish places where people can enjoy open and natural greenspace.	
	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	++	++	+	+	This option focuses on a balanced response between environmental, economic and social sustainability which would contribute to promoting enhancements to strategic green and blue infrastructure but this is not its primary focus.
		Huntingdonshire Futures has a strong emphasis on environmental improvements and nature based infrastructure which would support strategic green and blue infrastructure.	The expectation of enabling lasting benefits for nature and climate through this option would strongly support strategic green and blue infrastructure.	The option only places minor emphasis on supporting strategic green and blue infrastructure.		
SA6	Protect sites of designated biodiversity or geodiversity significance?	++	++	++	++	All options perform very positively against the first the first decision aiding question. Options A and B perform marginally
		This option seeks to protect the local landscape which would	This option seeks to protect the local landscape which would	This option seeks to protect the local landscape which would	This option seeks to protect the local landscape which would	

4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
		positively work towards protecting sites of designated biodiversity or geodiversity significance.	positively work towards protecting sites of designated biodiversity or geodiversity significance.	positively work towards protecting sites of designated biodiversity or geodiversity significance.	positively work towards protecting sites of designated biodiversity or geodiversity significance.	more positively overall as they have a slightly stronger emphasis on environmental action.
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	++	++	+	+	
		Conserving the natural environment is an important element to this option as is environmental innovation utilising our natural assets.	The expectation of enabling lasting benefits for nature and climate through this option would promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance.	The option only places minor emphasis on opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance.	This option focuses on a balanced response between environmental, economic and social sustainability which would contribute to opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance but this is not its primary focus.	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?	++	+	++	+	Options A and C perform most positively as they have a more direct focus on meeting this objective.
		The Huntingdonshire Futures Place Strategy places a strong focus on pride in place,	This option seeks enhancement of people's well-being and ensuring lasting	This option places a key focus on protecting and enhancing the districts' landscapes	This option focuses on a balanced response between environmental, economic and social	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
	Reinforce local distinctiveness and a sense of place?	reinforcing local character and celebrating our history.	benefits to nature and the climate as well as transition to a more sustainable economy. There is less emphasis on reinforcing and protecting local character and distinctiveness.	and heritage as well as supporting vibrant communities.	sustainability so local distinctiveness and character is not its primary focus.	
SA8	Promote actions to reduce contributions to air pollution?	+	+	+	+	Overall, all options perform positively towards this objective.
	Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	This options places a focus on moving away from car usage and building up resilience within communities which will help to reduce levels of pollution.	This options places a focus on land use decisions enabling lasting benefits for nature and climate as well as the enhanced well-being of residents which would include lowering levels of pollution.	This option would contribute towards reducing levels of pollution across the district.	This option focuses on sustainable living and balancing this with landscape protection which would include lowering levels of pollution.	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	+	++	+	++	All options perform positively with Options B and D performing more

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
		The focus would be more on pride in place than growth and wider aspirations for homes that meet people's needs.	Would give a strong emphasis on sustainable location of new homes and meeting the needs of all sectors of the community so that none are left behind on the journey to net zero.	This would look to meet the needs of a changing population including the growth needs and would work with the environment to promote sustainability.	Would strongly emphasize the sustainability of growth and meeting the social and economic needs of the community.	so with their stronger emphasis on sustainable housing where they meet the needs of the community.
SA10	Support and enhance the more deprived areas of the district?	<b>++</b>	<b>+</b>	<b>N</b>	<b>++</b>	Options A and D perform most positively as they have stronger focus on community resilience and wellbeing of our communities.
		Would emphasise the need for community resilience and cohesion, local economic growth and easy access to healthy living choices for all which could significantly benefit more deprived areas.	Emphasis on a just transition would significantly assist more deprived areas by ensuring they are included in the benefits associated with responding to climate change.	Emphasis focuses more on how the physical environment contributes to the health and wellbeing of all residents without distinguishing between areas.	Social sustainability is one of the 3 core strands so this option would look to support the social wellbeing of residents which should enhance the conditions in more deprived areas of the district.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	<b>++</b>	<b>+</b>	<b>++</b>	<b>+</b>	Social sustainability is one of the 3 core strands so this option would look to support access to social and community facilities
		Huntingdonshire Futures focuses strongly on community resilience which would include access to services and facilities.	This option would have limited influence in access to social and community facilities	The current vision places a strong emphasis on provision of infrastructure to support communities as a way of supporting		

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
			and services other than by aspiring to promote equality of access.	residents' health and wellbeing to which access to social and community facilities and services contributes.	and services but not seek specifically to maximise this.	
SA11	Contribute to regeneration activities?	+	+	+	++	All options perform positively, Option D more so against the first question of this objective. For the second question, all options perform very positively.
		This approach would place a strong emphasis on creating places where businesses flourish which could support regeneration activities.	Regeneration would form part of the response to climate change and the need for a just transition through ensuring growth focuses on areas in need of regeneration.	This would seek to support a thriving diverse economy which could contribute to regeneration activities.	Emphasising economic sustainability should increase the focus on supporting regeneration over use of greenfield land for economic growth.	
	Enhance and diversify economic opportunities with the district?	++	++	++	++	
		This approach would place a strong emphasis on promoting a strong inclusive economy supported by significantly improved travel opportunities.	Securing a just transition would include enhancement and diversification of economic opportunities.	This would directly seek to support a thriving diverse economy	Emphasising economic sustainability should increase the focus on enhancing and diversifying economic opportunities.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	++	++	+	++	Options A, B and D perform very positively in supporting active travel and sustainable modal behaviours. Option C does as well but not as strongly.
		Travel transformed is key strand of Huntingdonshire Futures to promote alternatives to car travel.	Ambitious climate action would require substantial behavioural change for travel so development would strongly emphasise provision of active travel and public transport opportunities.	This approach looks to support infrastructure provision to meet communities' needs but does not specifically relate to active travel and public transport.	The emphasis on both environmental and social sustainability would work towards supporting this objective.	
SA13	<p>Attract new investment and provide opportunities to improve the resilience of the local economy?</p> <p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>	++	+	+	+	Option A is most likely to support an investment and the local economy with its strong focus on promoting a strong inclusive economy and being a place where our businesses can flourish.
		This approach would place a strong emphasis on promoting a strong inclusive economy and being a place where our businesses can flourish.	Securing a just transition would include enhancement and diversification of economic opportunities but does not specifically focus on some elements of this objective.	This would seek to support a thriving diverse economy which would promote resilience and contribute to provision of land.	Emphasising economic sustainability should increase the focus on supporting resilience and retention of existing companies.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	++	+	+	+	Option A is most likely to support the modernisation of out town centres.
		Many strands of Huntingdonshire Futures would contribute to achieving this objective through aspects such as ensuring our high streets are the centre of cultural and social life in the district.	Aspirations for efficient buildings and enhanced active travel and public transport would contribute to modernising town centres.	Both supporting the economy and meeting the needs of our changing population could contribute towards modernisation of town centres.	Emphasising economic sustainability should assist in promoting successful town centres.	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	+	+	++	+	Option C performs the most positively in directly meeting this objective.
		This option seeks to protect the local landscapes and support places that people take pride in. This will also be dependent on specific site proposals and the scale and location of growth.	This option places less emphasis on this over the well-being of residents, sustainable economy and enabling lasting benefits for nature and the climate. This will also be dependent on specific site proposals and the scale and location of growth.	The option places a strong emphasis on protecting and enhancing our landscape and heritage.	This option focuses on a balanced response between environmental, economic and social sustainability which would contribute to strengthening a sense of place and retaining existing character but this is not its primary focus.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	++	N	++	+	Options A and C perform most positively in achieving this objective.
		The emphasis on pride in place would contribute to achieving this objective through enhancement and protection of archaeological and other heritage assets.	This option does not place any emphasis on this objective.	Working with our heritage is a direct strand of this option so would directly support the objective.	Promoting environmental sustainability would contribute towards this to a limited extent.	

## The Local Plan Objectives

### Option - The Objectives

#### *Should we...*

(Please choose whether there is a particular group of objectives which you prefer or pick any individual suggested objectives that you support)

**Option A** - The objectives build on Vision Option A and are **shaped by the key 'pathways' that support the Huntingdonshire Futures Place Strategy journeys:**

**Option B** - The objectives build on Vision Option B and **aim to help achieve a better future through a just transition towards ambitious climate action.**

**Option C** - **Minor amendments to the current list** of 25 objectives

**Option D** - The objectives build on Vision Option D and are **focused on the three strands of economic, social and environmental sustainability:**

**Option E - Consider alternative objectives** - Please suggest any that you think would be appropriate.

- 4.12 The objectives are wholly dependent on the Vision as their purpose is to shape its delivery therefore the options align with those above and do not yet merit separate sustainability appraisal.

## 4 Stage B - Develop options and appraise effects

### Settlement Hierarchy for Huntingdonshire

**4.13** Options A to D are assessed in the first table as these relate to the whole settlement hierarchy, while Options E to I have not been appraised as they represent individual elements of the potential hierarchy and multiple options can be selected and combined into the final Settlement Hierarchy.

#### Option - Settlement Hierarchy

##### **Should we...**

*(You may pick multiple options)*

*Options A to D relate to the whole Settlement Hierarchy.*

**Option A** - Keep the existing settlement hierarchy of Spatial Planning Areas, Key Service Centres, Small Settlements and Countryside with the same list of settlements in each

**Option B** - Keep the current categories in the existing settlement hierarchy but update the settlements included in the categories based on their current sustainability (informed by the Sustainability of Settlements outcomes)

**Option C** - Strictly reflect the Sustainability of Settlements scoring outcomes of individual settlements and apply a categorisation based on a preferred number of groupings

**Option D** - Remove the category of Spatial Planning Areas and group each settlement based on its individual merits

*Options E to I relate to specific elements of the Settlement Hierarchy.*

**Option E** - Put Huntingdon and St Neots in a higher category on their own, reflecting their higher level of services (with or without their associated other SPA settlements)

**Option F** - Have the four market towns of Huntingdon, St Ives, St Neots and Ramsey as the highest category in the settlement hierarchy so as to direct most growth to these areas.

**Option G** - Replace the Key Service Centres and Small Settlements categories with 3 categories to reflect the significant variation in levels of services and facilities (informed by the Sustainability of Settlements outcomes)

**Option H** - Recognise clusters of villages which benefit from shared services or facilities and group them together as one 'settlement'.

**Option I** - Move less or unsustainable small settlements into a hamlets and/or countryside category

**Option J** - Consider an alternative option. Please let us know.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	++	++	+	Generally, all options score positively in relation to this objective as each option serves to place growth based on the sustainability of the settlement. However, of these options, Options B and C perform the most positively.
		The existing strategy for development focuses 75% of its housing requirement to spatial planning areas due to their more comprehensive range of services and facilities and access to public and sustainable travel modes which helps to reduce carbon emissions. Retaining the existing SPA category and the settlements within it does not recognise if there are changes to the sustainability of the existing SPA settlements meaning they may not be as sustainable as others, this may not maximise opportunities to reduce carbon emissions.	The existing strategy for development focuses 75% of its housing requirement to spatial planning areas due to their more comprehensive range of services and facilities and access to public and sustainable travel modes. Amending the settlements within this category to those with the most sustainability now allows development to be focused to the most sustainable locations and maximise opportunities to reduce carbon emissions.	This approach could support a potentially finer grade categorisation allowing for decreasing scales of growth as settlements are less sustainable. This would mean that development is focused towards the more sustainable of settlements meaning that there are greater opportunities to reduce carbon emissions as people will not need to travel via private car to access key services such as shops, employment and education.	This approach would mean that development is focused towards the more sustainable of settlements meaning that there are greater opportunities to reduce carbon emissions as people will not need to travel via private car to access key services such as shops, employment and education.	

4 Stage B - Develop options and appraise effects

Page 1582 of 3488

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
	Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	development to the most sustainable locations meaning there may be increased risk from pollution by virtue of cumulative development.	majority of development to the settlements within the top of the hierarchy means there may be increased risk from pollution by virtue of cumulative development.	categorisation allowing for decreasing scales of growth as settlements are less sustainable but still and potentially result in development being more spread out across various settlements across the district which could minimise pollution in concentrated areas.	categorisation allowing for decreasing scales of growth as settlements are less sustainable but still and potentially result in development being more spread out across various settlements across the district which could minimise pollution in concentrated areas.	more spread across the various settlements in Huntingdonshire.
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	+	++	++	-	Options B ad C perform best as they allow for consideration and categorisation of towns and villages as they are currently.
		The existing strategy for development focuses the majority of development to the most sustainable locations but some settlements may be in more or less sustainable now than when previously categorised.	Retaining the categories with updated settlements would allow for acknowledgement of changed sustainability levels since the previous categorisation was established. Focusing growth in the most sustainable locations would meet the majority of the community's needs.	This option could support a potentially finer grade categorisation allowing for decreasing scales of growth as settlements are less sustainable but still offering some support to smaller communities to prevent them from fossilising.	This would mean that satellite settlements in close proximity to larger ones could be in lower categories if based solely on their own services and sustainability pushing growth away from relatively sustainable locations.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA10	Support and enhance the more deprived areas of the district?	N	N	+	+	On balance all options perform relatively equally on this objective, although option B would best promote access to existing social and community facilities and services.
		The existing categorisation focuses the majority of growth into the SPA areas which contain most of the urban concentrations of deprivation, however, this approach would do very little to support areas of rural deprivation.	Retaining the existing categorisation, even updated, would focus the majority of growth into the SPA areas which contain most of the urban concentrations of deprivation, however, this approach would do very little to support areas of rural deprivation.	Strictly reflecting the current sustainability of settlements would help to recognise those that are least sustainable and may facilitate enhancement of areas of rural deprivation, however, it would contribute little towards tackling urban deprivation as this occurs in specific pockets within towns rather than the entire town.	This option would reflect the current sustainability of settlements which would help to recognise those that are least sustainable and may facilitate enhancement of areas of rural deprivation, however, it would contribute little towards tackling urban deprivation as this occurs in specific pockets within towns rather than the entire town	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	+	++	+	+

		Option A	Option B	Option C	Option D	
		comprehensive range of social and community facilities. Retaining the existing SPA areas would likely result in the majority of development being focused to these areas again where there is still the greatest range of services. However, this approach does not recognise if there are changes to the sustainability of the existing SPA settlements meaning they may not be as sustainable as others.	comprehensive range of social and community facilities. Retaining the existing SPA areas would likely result in the majority of development being focused to these areas again where there is still the greatest range of services meaning less carbon impact. Amending the settlements within this category to those with the most sustainability now allows development to be focused to the most sustainable locations.	opportunities for people to access social and community facilities.	opportunities for people to access social and community facilities.	
SA11	Contribute to regeneration activities?	<b>N</b>	<b>N</b>	<b>N</b>	<b>N</b>	Option C offers the best potential for a positive approach to this objective through allowing a full refresh based on current sustainability of settlements assessment
		Objective not directly relevant to this option.	Objective not directly relevant to this option.	Objective not directly relevant to this option.	Objective not directly relevant to this option.	
	Enhance and diversify economic opportunities with the district?	<b>+</b>	<b>+</b>	<b>++</b>	<b>-</b>	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
		Retaining the existing hierarchy with the same settlements within each category will provide continuity for those looking to invest in Huntingdonshire but may limit diversification opportunities.	Retaining the existing hierarchy but updating the settlements within each category will continue to focus development including economic opportunities in the more sustainable settlements across the district, this may reduce diversification opportunities across the rest of the district.	The option would allow for a comprehensive refresh of the settlement hierarchy which may enhance and diversify economic opportunities as the considerations include availability of the workforce in proximity to a location which may assist businesses looking to set up or expand.	This option could limit recognition of available workforce and economic networking and supply chain benefits that may arise from recognition of SAPs.	which includes identification of business and workforce clusters.
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	+	+	+	+	All options have some prospect of contributing positively to this objective in differing ways.
		This option places most sustainable locations in higher categories with public transport being one of the determining factors. However, it would not reflect any recent changes to service levels or provision of additional or upgraded active travel infrastructure.	This option places most sustainable locations in higher categories with public transport being one of the determining factors and would reflect current provision, however, it is not the sole determining factor in the sustainability of settlements assessment so other	This option could clearly reflect current public transport provision but this is not the sole determining factor in the sustainability of settlements assessment so other factors considered could skew the outcome.	Removing the SPA category could detrimentally impact on consideration of the role of active travel routes in providing links. Otherwise grouping settlements on their merits could facilitate recognition of public transport opportunities.	

## 4 Stage B - Develop options and appraise effects

		Option A	Option B	Option C	Option D	
			factors considered could skew the outcome.			
SA13	<p>Attract new investment and provide opportunities to improve the resilience of the local economy?</p> <p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>	+	+	++	-	A full revision of the settlement hierarchy is most likely to support the local economy by reflecting the current situation and facilitating new categorisation of all towns and villages as well as the countryside.
		The settlement hierarchy helps to direct business investment to more sustainable locations and this option should assist with retention of existing businesses by providing continuity of approach.	Updating the settlements in the current categories could allow inclusion of some into different categories than at present providing more support for employment land in sustainable locations.	Reflecting the current overall sustainability of settlements and creating a new grouping could support both retention and growth of existing businesses and provision of land in sustainable locations throughout the district to encourage new investment.	Grouping each settlement on its own merits could detrimentally impact on business locations which are close to larger settlements but would be categorised under other less sustainable places and risk having lower levels of growth supported.	
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	N	N	N	N	The response to this objective is likely to be equal for all options.
		The response to this objective is likely to be equal for all options.	The response to this objective is likely to be equal for all options.	The response to this objective is likely to be equal for all options.	The response to this objective is likely to be equal for all options.

This scale of growth could have greater opportunities for proportionate growth to support communities and services and also reinforce local character.	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	N	N	N	The response to this objective is likely to be equal for all options.
		The response to this objective is likely to be equal for all options.	The response to this objective is likely to be equal for all options.	The response to this objective is likely to be equal for all options.	The response to this objective is likely to be equal for all options.	

4.14 Options E to I have not been appraised as they represent individual elements of the potential hierarchy and multiple options can be selected and combined into the final Settlement Hierarchy.

## 4 Stage B - Develop options and appraise effects

### Approach to Employment and Economy

4.15 The first set of options for employment and economy relate to the strategy ambitions

#### Option - Strategy Ambitions

**Should we...**

*(Please pick one option.)*

**Option A: Plan for limited (low) employment growth** to support Huntingdonshire's existing businesses. Growth guided exclusively by criteria based policies.

**Option B: Plan for sustainable (medium) growth** by supplying a sufficient amount of employment land/ allocations to allow for some business expansion and investment and to provide a flexible approach to changing market conditions.

**Option C: Plan for ambitious (high) growth** capitalising on key priority sectors of the wider economy and creating business clusters.

**Option D: Consider an alternative strategy ambition.** Please let us know what it should be.

Stage B - Develop options and appraise effects

Page 1595 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	++	+	-	Option A performs more positively in regard to potentially lowering carbon emissions as it would support slightly less built development which could be located in locations that utilise more sustainable modes of transport. Option C performs most positively in regard to supporting green space that could absorb pollutants.
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	+	++	
SA2	Concentrate new development in locations that maximise	++	+	-	Provision of additional employment growth increases the potential

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	Low employment growth would likely require less land which minimises development in at risk locations.	Medium employment growth could require additional land which may increase the risk of placing development in at risk locations.	High employment growth could require additional land which may increase the risk of placing development in at risk locations.	likely development of land that may be less resilient to the impacts of flooding. Option C provides the potential to support habitats further alongside additional growth.
	Support habitats in adjusting to the impacts of the climate emergency?	+	+	++	
	Low employment growth has the potential to support habitats adjust to the impacts of the climate emergency.	Medium employment growth could support more habitats adjust to the impacts of the climate emergency.	High employment growth has further opportunities to support habitats adjust to the impacts of the climate emergency.		
SA3	Maintain and where possible improve the quality and availability of water resources?	+	-	--	Option A performs most positively as it Plans for the low employment growth, more employment could put additional strain on water resources and mean more development in vulnerable locations.
	Some enhanced water infrastructure will likely be required to facilitate growth at this scale across the Plan period.	More employment growth will likely put additional pressure on existing water infrastructure.	The high growth employment option will put even further pressure on water infrastructure, this pressure may be more acute in certain areas where business clusters are located.		
	Minimise the risk of flooding from all sources?	++	+	-	
	Minimise the risk of flooding from all sources?	Low employment growth would likely require less land which minimises development in at risk locations.	Medium employment growth could require additional land which may increase the risk of placing development in at risk locations.	High employment growth could require additional land which may increase the risk of placing development in at risk locations.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	+	-	--	The options perform less favourably was the level of ambition increases.
		Huntingdonshire is a largely rural district with minimal previously developed land available that could be used to meet development targets, while previously developed land can be prioritised, greenfield land will still likely be required.	A medium growth ambition could require development on more greenfield land to meet this target if densities are not marginally increased.	A higher growth option is more likely to require additional greenfield land in order to meet this target if densities are not marginally increased.	
	Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	+	-	--	
		Huntingdonshire is a largely rural district with a large proportion of it being grade 3 or higher. The majority of development could likely be focused on land grade 3 or lower.	A medium employment ambition could require additional land to meet this target which could be of higher agricultural value.	A high employment ambition could require additional land to meet this target which could be of higher agricultural value.	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	+	+	-	Provision of employment growth could impact on green infrastructure networks, this impact increases as the level of ambition does. Equally, the higher growth can also provide more
		The level of ambition for employment growth has limited relevance to this objective but lower levels could ensure it is easier to locate growth where it would be accessible to open and natural greenspace.	The level of ambition for employment growth has limited relevance to this objective but medium levels could be slightly more difficult to locate growth where it would be accessible to open and natural greenspace.	The level of ambition for employment growth has limited relevance to this objective but highly ambitious levels could be more difficult to locate growth where it would be accessible to open and natural greenspace.	

4 Stage B - Develop options and appraise effects

Page 1598 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	N	+	+	opportunities for their improvement and potential expansion.
		New employment development could provide opportunities for linkages to existing green infrastructure networks, it could also increase pressure on these networks without appropriate masterplanning and design.	A medium employment ambition could require additional land which may put some additional pressure on existing green infrastructure networks, equally it could provide future extensions.	A higher employment ambition could require additional land which may put some additional pressure on existing green infrastructure networks, equally it could provide future extensions.	
SA6	Protect sites of designated biodiversity or geodiversity significance?	N	-	--	Provision of employment growth could result in impact on designated nature sites. This impact will be less in the lower employment growth option as less development would be proposed, however, equally with more development there can also be more opportunities for their recovery and enhanced connectivity.
		Development could have an impact on designated nature conservation sites without the appropriate mitigation measures.	A medium ambition could have an additional impact on designated nature conservation sites without the appropriate mitigation measures.	A higher ambition could have an even greater impact on designated nature conservation sites without the appropriate mitigation measures.	
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	N	+	+	
		New employment development at the lower level of ambition could provide opportunities for linkages to and between designated nature conservation sites, it could also increase pressure on these networks without appropriate masterplanning and design.	A medium level of employment growth ambition could enable additional opportunities for linkages to and between designated nature conservation sites, it could also increase pressure on these networks without appropriate masterplanning and design.	A higher level of employment growth ambition could enable even further opportunities for linkages to and between designated nature conservation sites, it could also increase pressure on these networks without appropriate masterplanning and design.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	<b>++</b>	<b>+</b>	<b>-</b>	Option A performs the most favourably as lower employment growth is more likely to successfully integrate with local character. Option C with the highest levels of employment growth could result in greater risk to the retention of existing settlement character.
		The lower employment growth option may have greater potential to protect and enhance landscape and townscape features.	A medium employment growth may have a slightly greater potential impact on local landscape and townscape character which will require high quality design sensitive to local character.	A higher employment growth option could result in increased challenges in ensuring development reflects and enhances local landscape and townscape character. This option could also include large scale strategic new employment sites which would have their own character and require mitigation in terms of wider countryside and landscape impact.	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>-</b>	<b>--</b>	The risk of increasing pollution and development being impacted by pollution increases as the employment ambition increases.
		New employment could increase levels of pollution and be impacted by pollution depending on the location and scale of new employment. This impact would potential be more acute within strategic transport corridors.	More employment growth may raise the risk of increasing levels of pollution marginally. This impact would potential be more acute within strategic transport corridors.	The higher employment ambition raise the risk of increasing levels of pollution. This impact would potential be more acute within strategic transport corridors.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	-	+	+	The higher growth options provide the best potential for supporting housing needs.
		Limited employment growth may reduce the amount of housing required to meet the community's needs facilitating its concentration in the most sustainable locations. However, it would not help support housing delivery overall.	A medium level of employment growth may provide a balance between supporting jobs for residents of a medium number of homes that can help to meet the community's needs.	An ambitious level of employment growth is likely to support the greatest number of new homes but there may be more challenges in delivering these in sustainable locations.	
SA10	Support and enhance the more deprived areas of the district?	-	+	++	Option C provides greatest potential for investment and job opportunities that may benefit more deprived areas of the district. In contrast Options A and C have greatest potential to either be close to existing facilities and services or provide additional ones.
		Providing only low levels of additional employment development minimises the scope for additional investment in and job opportunities for residents of the more deprived areas of the district.	Providing a medium level of additional employment growth will provide more enhanced scope for additional investment in and job opportunities for residents of the more deprived areas of the district provided it does not result in existing companies moving out to new sites elsewhere in the district.	Providing for an ambitious level of employment growth will provide for the best scope for additional investment in and job opportunities for residents of the more deprived areas of the district provided it does not result in existing companies moving out to new sites elsewhere in the district.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	+	N	+	
		The level of ambition for employment growth has limited relevance to this objective but lower levels could ensure it is	The level of ambition for employment growth has limited relevance to this objective but medium levels could be slightly	The level of ambition for employment growth has limited relevance to this objective but highly ambitious levels could be

		Option A	Option B	Option C	
		easier to locate growth where it would have access to social and community facilities and services.	more difficult to locate growth where it would have access to social and community facilities and services.	more difficult to locate growth where it would have access to existing social and community facilities and services but may provide opportunities for new provision.	
SA11	Contribute to regeneration activities?	--	+	++	Option C would contribute best to meeting this objective as it is most likely to see greatest investment in the district.
		Limited employment growth would only provide a limited contribution to regeneration activities.	This option would provide some potential to contribute to regeneration activities.	The option would maximise employment growth and should provide the greatest contribution to regeneration activities through enhanced investment in the district.	
	Enhance and diversify economic opportunities with the district?	-	+	++	
		Limited employment growth would only provide limited opportunities for enhancing and diversifying the local economy.	A medium level of employment growth would contribute somewhat to opportunities for enhancing and diversifying the local economy.	This option would maximise the opportunities for enhancing and diversifying the local economy.	
SA12	Support development in locations with good active travel and public transport links and services or provide	N	+	++	Option C has greatest potential to support additional provision which can make a wider contribution to this objective.
		Limited employment growth could have more potential for being concentrated	This option has potential to concentrate much growth in locations with good good active	This option has scope for some of the growth to be concentrated in locations with good active	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	opportunities for significant improvements?	within locations with good active travel and public transport links and services but is less likely to support provision of significant improvements.	travel and public transport links and services but to some extent it depends on the nature of the employment uses sought and their operational preferences.	travel and public transport links and services and further scope for supporting improvements.	
SA13	<p>Attract new investment and provide opportunities to improve the resilience of the local economy?</p> <p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>	<p><b>N</b></p> <p>While this option would contribute to this objective it would provide limited flexibility and opportunities both for current businesses and future investment.</p>	<p><b>+</b></p> <p>This option would facilitate new investment and support retention of existing businesses meeting the objectives to some degree although may not assist with encouraging sustainable tourism.</p>	<p><b>++</b></p> <p>An ambitious level of employment growth would best contribute to objectives for growth and retention although may not assist with encouraging sustainable tourism.</p>	Option C offers greatest support for investment in the local economy.
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<b>N</b>	<b>+</b>	<b>++</b>	Option C offers greatest potential for local wealth generation that may

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		Low employment growth may reduce opportunities for local spending from employees in town centres and minimise town centre investment.	Medium employment growth may support some additional town centre spending from employees in town centres and provide some opportunities for town centre investment.	Ambitious employment growth and hence higher local employment levels are most likely to generate local wealth that might be spent in the town centres and facilitate modernisation and investment in them.	create demand for and support investment in town centre modernisation.
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	++	+	-	Option A performs the most favourably as lower employment growth is more likely to be integrated with local character. Option C with the highest levels of employment growth could result in greater risk to the retention of existing settlement character but some sites be of a scale whereby they create their own distinct character and identity.
		A lower level of employment growth ambition provides opportunities to integrate new development within or on the edge of existing settlements and employment locations which can protect and enhance landscape and townscape features through high quality design.	This option would result in increased employment development which may be more challenging to successfully integrate and protect and enhance existing settlement character.	Ambitious levels of employment growth may make protecting and enhancing local character more challenging. Equally, this option is likely to involve some strategic large scale employment sites which will have their own character being potentially freestanding development.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>	<b>N</b>	<b>N</b>	All options have potential for both positive and negative contributions with the implications being site specific.
		The reduced amount of growth is least likely to impact on archaeological sites and features but also least likely to contribute to new discoveries.	More growth is more likely to result in an impact on archaeological sites and features but slightly more likely to contribute to new discoveries.	The greatest level of growth is most likely to result in an impact on archaeological sites and features but also more likely to contribute to new discoveries.	

4.16 The next set of options relate to the location of employment development

### Option - Location of Development

**Should we (subject to an Employment Land Study)...**

*(You may pick multiple options)*

**Option A: Focus employment growth within and adjacent to Established Employment Areas.**

**Option B: Focus employment growth strategically along major highways** such as the A1.

**Option C: Focus employment growth next to or within large scale housing sites** promoting mixed use development aligning employment growth with housing growth.

**Option D: Focus employment growth in sustainable locations** such as allocating sites that are accessible by public transport and active travel.

**Option E: Focus employment growth in existing economic centres** which are located in market towns and larger settlements.

**Option F: Consider an alternative strategy ambition.** Please let us know what it should be.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:					Commentary
		Option A	Option B	Option C	Option D	Option E	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	<b>++</b>	<b>N</b>	<b>+</b>	<b>++</b>	<b>++</b>	Options A, D and E perform most positively, Option C also performs positively. Option B is a neutral at this stage as its impact in reducing carbon emissions is dependent on employment uses, location and establishing sustainable travel connections.
	Many of the EEAs are in towns and larger villages, focusing development to within or adjacent these areas, it would support reducing carbon emissions as they are accessible via sustainable modes of transport.	This option may incentivise private car usage if public and active travel connections are not made to new employment sites. Once connections are established, it could have a significant impact in working towards a lower carbon future. The usage within the employment sites are also important as development in these locations may be more logistics and distribution based and decarbonising their vehicle fleet may be more challenging.	This option could positively work towards reducing carbon emissions as it will place development near to new housing developments which in combination can support upgrades to public transport and incorporate active travel routes.	This option will positively work towards reducing carbon emissions as it relies on placing development in locations accessible via sustainable modes of transport.	Focusing development in existing economic centres would support reducing carbon emissions as these locations are typically better served via public transport and active travel routes.		

Stage B - Develop options and appraise effects

### 4.17 Next are options relating to Established Employment Areas

#### Option - Established Employment Areas

##### **Should we...**

*(You may pick multiple options)*

**Option A:** Remove the designation of EEA that protects and encourages use class B (general industrial, storage and distribution uses) being located within these areas.

**Option B:** Continue with safeguarding and enhancement of EEA accounting for changes to national policy and regulations.

**Option C:** Continue with safeguarding and enhancement of EEA but review the type of uses that are acceptable within them and the criteria used to assess their suitability.

**Option D:** Create additional and / or extended employment areas by reviewing existing employment sites or allocating new employment sites.

**Option E:** Consider an alternative option. Please let us know.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	-	+	++	+	Option C performs marginally more positively than Options B and D as it could utilise a criteria based approach to assess the suitability of uses within existing EEAs supporting their continued function and viability.
	Promote enhancements to green infrastructure networks to facilitate	N	N	N	N	

Many of the EEAs are in towns and larger villages, removing the designation may result in people travelling further to access employment opportunities. These journeys may not be possible via sustainable modes of transport and so may encourage private car usage which will not work towards meeting this objective.

This option could help in reducing carbon emissions as retaining EEAs but accounting for changes from a national level in potential uses help to ensure that they thrive and serve to direct growth to these existing areas. As many of the EEAs are in towns and larger villages, this would reduce the need to travel to new locations that may not be well served by sustainable travel modes.

This option could help in reducing carbon emissions as retaining EEAs but accounting for changes in potential uses based on a criteria which could utilise local evidence and need over those from a national level may help to ensure that EEAs thrive and serve to direct growth to these existing areas. As many of the EEAs are in towns and larger villages, this would reduce the need to travel to new locations that may not be well served by sustainable travel modes.

This option could create new employment areas and also extend existing areas. Extending existing areas could help in reducing carbon emissions through supporting those in areas accessible by sustainable modes of transport. New areas may not necessarily be in areas currently accessible via sustainable travel modes or may form part of a strategic new development which could take time to establish these routes.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
	increased absorption and dissipation of nitrogen dioxide and other pollutants?	The impact will depend on the location of the larger development schemes so their impact cannot be predetermined.	The precise mix of uses protected in EEAs will not impact this objective.	The precise mix of uses protected in EEAs will not impact this objective.	The impact will depend on the location of the larger development schemes so their impact cannot be predetermined.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	-	+	++	-	Option C performs most positively with Option B also performing positively. Options A and D perform somewhat negatively against this objective.
		Removing the designation of EEA may result in employment development being located in locations that are not as resilient to the impacts of climate change.	This option will still focus development towards the EEAs but the potential mix of uses may not be compatible with local business need which may result in some business looking to locate in areas that may not be as resilient to the impacts of climate change.	This option will still focus development towards the EEAs and the potential mix of uses may better reflect local business need which may result in fewer businesses looking to locate in areas that may not be as resilient to the impacts of climate change.	This option could create new employment areas and also extend existing areas. New EEAs may be located in parts of the district that are less resilient to the impacts of climate change and extending existing EEAs may exacerbate resilience challenges for these areas if they are already in at risk areas.	
	Support habitats in adjusting to the impacts of the climate emergency?	N	N	N	N	
		The impact will depend on the location of the larger development	The precise mix of uses protected in EEAs will not impact this objective.	The precise mix of uses protected in EEAs will not impact this objective.	The impact will depend on the location of the larger development

		reduce employment opportunities for people in the more deprived areas of the district.			reduce local employment opportunities.	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	-	N	N	+	
		Many of the EEAs are in towns and larger villages, removing the designation may reduce the ability of people to access social and community facilities and services near their places of work.	The precise mix of uses protected in EEAs will not impact this objective.	The precise mix of uses protected in EEAs will not impact this objective.	Extending EEAs may reinforce the ability of people to access social and community facilities and services near their places of work.	
SA11	Contribute to regeneration activities?	N	++	++	+	Options B, C and D all offer advantages through potential regeneration and enhancing economic uses.
		This option has a complex relationship with this objective as removing the designation could facilitate regeneration of some EEAs but may reduce employment opportunities near others.	Safeguarding and enhancing EEAs will directly boost their regeneration.	Safeguarding and enhancing EEAs will directly boost their regeneration.	Extending EEAs could contribute to regeneration activities. the contribution of designating additional ones would depend upon their location.	

## Stage B - Develop options and appraise effects

4

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
	Enhance and diversify economic opportunities with the district?	+	+	+	++	
		Removing the designation from existing EEAs could facilitate provision of new economic opportunities.	This option would allow for some enhancement and diversification of economic uses within EEAs.	This option would allow for some enhancement and diversification of economic uses within EEAs.	This option would provide positive support for new economic opportunities within the district and could support diversification depending on the mix of uses supported and protected.	
SA12	Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	-	+	+	+	Options B, C and D could equally contribute to this objective depending upon the location of each EEA.
		Removing the designation could reduce employment development in locations with good active travel and public transport links and services but may facilitate alternative development on the currently designated sites.	Many of the EEAs are in towns and larger villages which either already have, or have potential to have, good active travel and public transport links and services.	Many of the EEAs are in towns and larger villages which either already have, or have potential to have, good active travel and public transport links and services.	Extended EEAs may have potential to access existing active travel and public transport links and services; the ability of additional ones to contribute to this objective will depend upon their location although if large enough they may help to support additional provision.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA13	<p>Attract new investment and provide opportunities to improve the resilience of the local economy?</p> <p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>	<b>N</b>	<b>+</b>	<b>+</b>	<b>++</b>	Option D would both protect existing EEAs and the companies within them from threat of redevelopment for alternative uses and provide additional options to diversify the choice of employment land across the district.
		The outcome of this option could be very varied in terms of contributing to this objective as the option could facilitate investment and established of new sites across the district but it could also put the retention and growth of existing companies at risk if any EEA was placed at threat of redevelopment for alternative uses.	This option provides certainty over the existence of existing EEAs which could encourage investment in them supporting this objective.	This option provides certainty over the existence of existing EEAs which could encourage investment in them supporting this objective.	This option would both protect existing EEAs to the benefit of indigenous companies and provide investment opportunities to support the local economy and add to the portfolio of employment land.	
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<b>-</b>	<b>+</b>	<b>+</b>	<b>+</b>	Options B, C and D could all make minor contributions to achieving this objective through retention or enhancement of spending power in or near town centres.
		The impact of this option on town centres is unclear depending on their future uses of any former EEA.	Some established employment areas are close to town centres so increased investment nearby and more people working locally could support	Some established employment areas are close to town centres so increased investment nearby and more people working locally could support	Some established employment areas are close to town centres so increased investment nearby and more people working locally could support	

## Stage B - Develop options and appraise effects

4

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
			additional demand and hence investment in the town centres.	additional demand and hence investment in the town centres.	additional demand and hence investment in the town centres.	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	-	+	+	++	Option D performs marginally more positively over Options B and C with Option A performing the most negatively against this objective.
		This option will remove the designation of EEA which means that these existing employment areas may have limited protection resulting in their character and sense of place diminishing over time.	Continuing to safeguard and enhance EEAs but will reinforce their employment character and use. Changes of uses within them may impact their function and as a result their character to some degree.	Continuing to safeguard and enhance EEAs but will reinforce their employment character and use. Changes of uses within them may impact their function and as a result their character to some degree.	Creating new EEAs could be masterplanned so that a strong sense of place can be integrated as they develop. Extending existing areas could also protect and enhance their character.	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	N	N	N	There is little connection between EEAs and achievement of this objective.
		The option is not directly relevant to this objective.	The option is not directly relevant to this objective.	The option is not directly relevant to this objective.	The option could support exploration and identification of unknown assets of archaeological value but also could put them at risk.	

## 4 Stage B - Develop options and appraise effects

### Housing Figures and Requirement

#### Option - Housing Requirement

##### Should we....

*(Please pick one option.)*

**Option A - Plan for the standard method number** (approved current methodology = 874 new homes a year and draft proposed methodology =1,203 new homes a year)

**Option B - A 5% uplift** on the standard method number to allow a small amount of flexibility in case some sites do not deliver as expected (approved current methodology = 918 new homes a year and draft proposed methodology =1,263 new homes a year)

**Option C - A 10% uplift** on the standard method number to allow a some flexibility in case some sites do not deliver as expected or affordability ratios worsen (approved current methodology = 961 new homes a year and draft proposed methodology =1,323 new homes a year)

**Option D - Consider an alternative option.** Please let us know.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	-	--	Option A performs more positively in regard to potentially lowering carbon emissions as it would support slightly less built development. Option C performs most positively in regard to supporting green space that could absorb pollutants.
		Housing growth will have a carbon impact, this impact is likely to reduce further into the Plan period as technologies and renewable energy advance. It also means it may be more likely that development could be placed in locations better served by sustainable modes of transport.	Slightly more housing will increase the potential carbon impact of new development if not build to high energy efficiency standards. It be slightly more challenging to locate all development in locations better served by sustainable modes of transport.	Even further housing will increase the potential carbon impact of new development if not build to high energy efficiency standards. It be more challenging to locate all development in locations better served by sustainable modes of transport.	
SA1	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	+	++	
		Housing growth at this scale will have the potential to enhance green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants.	Slightly more housing could provide additional habitats and green infrastructure that could increase the absorption and dissipation of nitrogen dioxide and other pollutants.	Even further housing could provide additional habitats and green infrastructure that could increase the absorption and dissipation of nitrogen dioxide and other pollutants.	
SA2	Concentrate new development in locations that maximise	+	-	--	Provision of additional housing increases the potential likely development of land that may be

4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	Land will be required to accommodate new housing growth, this land could be reduced if densities are increased.	A 5% uplift may require additional land if densities are not increased. This land may be in locations that are at risk from the impacts of climate change.	A 10% uplift will likely require additional land if densities are not increased substantially. This land may be in locations that are at risk from the impacts of climate change.	less resilient to the impacts of flooding. Option C provides the potential to support habitats further alongside additional growth.
	Support habitats in adjusting to the impacts of the climate emergency?	+	+	++	
SA3	Maintain and where possible improve the quality and availability of water resources?	+	-	--	Option A performs most positively as it Plans for the fewest homes, more homes could put additional strain on water resources and without increasing densities could mean more development in vulnerable locations.
		Enhanced water infrastructure will be required to facilitate growth at this scale across the Plan period.	More housing will likely put additional strain on existing water infrastructure.	Even further housing will put additional strain on existing water infrastructure.	
	Minimise the risk of flooding from all sources?	+	-	--	
		Land will be required to accommodate new housing growth, the	A 5% uplift may require additional land if densities are not increased. This	A 10% uplift will likely require additional land if densities are not increased	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		amount of land could be reduced if densities are increased. This could assist in placing development in locations not at risk from flooding.	land may be in locations that are at risk from flooding.	substantially. This land may be in locations that are at risk from flooding.	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	+	-	--	Provision of additional housing increases the potential likely development of greenfield land and potentially land of higher agricultural value.
		Huntingdonshire is a largely rural district with minimal previously developed land available that could be used to meet development targets, while previously developed land can be prioritised, greenfield land will still likely be required.	A 5% uplift could require development on more greenfield land to meet this target if densities are not marginally increased.	A 10% uplift is more likely to require additional greenfield land in order to meet this target if densities are not marginally increased.	
	Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	+	-	--	
		Huntingdonshire is a largely rural district with a large proportion of it being grade 3 or higher. The majority of development could likely be focused on land grade 3 or lower.	A 5% uplift could require additional land to meet this target which could be of higher agricultural value if densities are not marginally increased.	A 10% uplift could require even more additional land to meet this target which could be of higher agricultural value if densities are not increased.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	+	+	-	Provision of additional housing increases the potential impact on green infrastructure networks but equally can also provide more opportunities for their improvement and potential expansion.
	Lower levels could ensure it is easier to locate growth where it would be accessible to open and natural greenspace.	Medium levels could be slightly more difficult to locate growth where it would be accessible to open and natural greenspace.	Higher levels of growth could be more difficult to locate growth where it would be accessible to open and natural greenspace.		
SA5	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	N	+	+	
	New development could provide opportunities for linkages to existing green infrastructure networks, it could also increase pressure on these networks without appropriate masterplanning and design.	A 5% uplift could require additional land which may put some additional pressure on existing green infrastructure networks, equally it could provide future extensions.	A 10% uplift could require additional land which may put some additional pressure on existing green infrastructure networks, equally it could provide future extensions.		
SA6	Protect sites of designated biodiversity or geodiversity significance?	N	-	--	Provision of additional housing increases the potential impact on designated nature sites but equally can also provide more opportunities for their recovery and enhanced connectivity.
	Development could have an impact on designated nature conservation sites without the appropriate mitigation measures.	A 5% uplift could have an additional impact on designated nature conservation sites without the appropriate mitigation measures.	A 10% uplift could have an even greater impact on designated nature conservation sites without the appropriate mitigation measures.		

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	N	+	+	
		New development could provide opportunities for linkages to and between designated nature conservation sites, it could also increase pressure on these networks without appropriate masterplanning and design.	A 5% uplift could enable additional opportunities for linkages to and between designated nature conservation sites, it could also increase pressure on these networks without appropriate masterplanning and design.	A 10% uplift could enable even further opportunities for linkages to and between designated nature conservation sites, it could also increase pressure on these networks without appropriate masterplanning and design.	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?  Reinforce local distinctiveness and a sense of place?	+	-	-	All options perform similarly any new development will provide opportunities to enhance local character and all can equally adversely impact character without high quality design. Option C with the highest growth could result in greater risk to the retention of existing settlement character.
		New housing growth across the district provides opportunities to protect and enhance landscape and townscape features through high quality design and potentially some regeneration opportunities.	Slightly more housing offers further opportunity to provide high quality design sensitive to local character, however this additional growth may also adversely character depending on the scale, concentration and density of this additional housing.	Further housing offers further opportunities to provide high quality design sensitive to local character, however this additional growth may also adversely character depending on the scale, concentration and growth of this additional housing.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	<b>N</b>	<b>-</b>	<b>--</b>	The risk of increasing pollution and development being impacted by pollution increases as the housing requirement figure increases.
		New development could increase levels of pollution and be impacted by pollution depending on the location and scale of new housing.	Slightly more housing may raise the risk of increasing levels of pollution marginally.	Further housing may raise the risk of increasing levels of pollution.	
SA9	Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	<b>+</b>	<b>++</b>	<b>++</b>	Provision of additional housing through higher growth options allows greater potential for meeting the community's needs but may place challenges in the sustainability of locational choices.
		Providing the required number of homes to meet identified needs would facilitate their provision in sustainable locations meeting the community's needs.	Providing slightly more than the required number of homes could facilitate provision of homes in more diverse locations providing additional housing choices for the community.	Providing more than the required number of homes would facilitate additional housing choices meeting needs of wider sections of the community.	
SA10	Support and enhance the more deprived areas of the district?	<b>+</b>	<b>++</b>	<b>++</b>	Provision of additional housing through higher growth options allows greater potential to maximise new housing and employment opportunities for residents of more deprived areas.
		Meeting housing needs will help provide additional housing for residents of more deprived areas and potentially provide employment and training opportunities too.	Providing slightly more homes provides additional housing opportunities for residents of more deprived areas and potentially provide employment and training opportunities too.	This option maximises opportunities for housing provision to support the housing needs of residents of more deprived areas and potentially provide employment and training opportunities too.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	Maximise opportunities for access to existing or proposed social and community facilities and services?	+	++	++	
		This option allows for a higher proportion of new homes to be located close to existing social and community facilities and services	This option allows for a blend of providing new homes near existing social and community facilities and services and supporting additional provision of them	This option allows for a blend of providing new homes near existing social and community facilities and services and supporting additional provision of them	
SA11	Contribute to regeneration activities?	+	++	++	Provision of additional housing through higher growth options maximises its economic contribution.
		Housing construction can help contribute to regeneration both through use of land and creation of local wealth.	Slightly more housing construction could help contribute to regeneration both through use of more previously developed land if it is available and creation of local wealth.	Further housing construction could help contribute to regeneration both through use of more previously developed land if it is available and creation of local wealth.	
	Enhance and diversify economic opportunities with the district?	+	++	++	
		Physical construction of housing will provide economic opportunities and new homes will potentially provide additional workforce for businesses.	Physical construction of slightly housing will provide economic opportunities and new homes will potentially provide additional workforce for businesses.	Physical construction of more housing will provide economic opportunities and new homes will potentially provide additional workforce for businesses.	

## 4 Stage B - Develop options and appraise effects

## Growth Strategy Options

### Option - Approach to Strategic Growth

#### **Should we....**

*(You may pick a combination of options or parts of options)*

**Option A - Continue with the existing growth strategy** set out in our current Local Plan (Policy LP2 Strategy for Development). This currently focusses on 75% growth in Spatial Planning Areas and 25% elsewhere e.g. Key Service Centres and Small Settlements.

**Option B** - Focus on **strategic expansions to existing towns**

**Option C** - Focus growth on **public transport corridors**. This corridors would be located around the A428/A421, the guided bus route and future ambitions to provide East West Rail, the proposal to reroute the A141, a a public transport corridor from Cambridge to Alconbury Weald and a possible railway station at Alconbury Weald.

**Option D** - Concentrate development around the **strategic road network** i.e. The A1, A14, A428

**Option E** - Distribute growth across many settlements in Huntingdonshire and limit growth in our towns creating **dispersed growth**.

**Option F** - Provide 1 **one or more new community/ies plus some dispersed growth**.

**Option G** - Consider an alternative option. Please let us know.

4 Stage B - Develop options and appraise effects

Page 1644 of 3488

SA Obj.	Decision aiding questions: Will approach/ option help to....	Likely Impact of:						Commentary
		Option A	Option B	Option C	Option D	Option E	Option F	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	++	+	-	-	+	Overall, Option B and C perform the most positively. Other options also perform positively which could support a hybrid growth option to maximise efforts to work towards net zero carbon targets.
	The existing strategy for development focuses 75% of its housing requirement to spatial planning areas due to their more comprehensive range of services and facilities and access to public and sustainable travel modes which helps to reduce carbon emissions. This approach would not take into account changes to the sustainability of some settlements and	Strategic expansions to existing towns would focus development towards the more sustainable settlements in the district. This scale of development will also support new services and facilities to meet the needs of development. This option therefore provides greater opportunities to reduce the need to travel to meet day to day needs and enhance the opportunities for active travel by	Focusing growth along public transport corridors could incentivise take up of public transport and support their continuation and potential expansion aiding a wider modal shift in travel behaviours which would reduce emissions outputs.	Concentrating growth along the strategic road network may incentivise car usage which would not reduce emissions outputs at least in the short term. While these routes can also support public transport development needs to create a critical mass of patronage and distances between concentrations of potential customers may be lengthy.	This option would spread development across the district including potentially to places that are not currently well served by sustainable modes of transport. This could incentivise car usage and make carbon reduction targets more challenging to achieve.	Comprehensive masterplanning of new communities would enable public transport and active travel infrastructure to be designed into the settlement to make these attractive and feasible travel options along with the provision of day to day local services reducing both the need to travel and enhancing use of low carbon emission transport options. Dispersed growth may result in some development in

		and dissipation of nitrogen dioxide and other pollutants but will have limited impact on the remaining parts of the district.	nitrogen dioxide and other pollutants but will have limited impact on the remaining parts of the district.	nitrogen dioxide and other pollutants.		of absorption and dissipation of nitrogen dioxide and other pollutants.	pollutants. Dispersed growth would have more limited opportunities to achieve this.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	-	-	+	+	++	++	Overall, several options perform positively. Option F performs the most positively. This could lend it self to a hybrid option whereby elements of several options are combined in the final preferred growth strategy option.
		Focusing development in line with the existing growth strategy may not focus development in locations most resilient to the impacts of climate change in particular due to enhanced flood risk depending on the nature of the specific locations selected.	Focusing development towards the towns may not focus development in locations most resilient to the impacts of climate change in particular due to enhanced flood risk depending on the nature of the specific locations selected.	Development along public transport could focus development to areas that may more resilient to the impacts of climate change.	Development along strategic highway corridors could focus development to areas that may more resilient to the impacts of climate change through avoidance of river corridors.	Dispersed growth provides opportunities to spread development across the district into areas that may be more resilient to the impacts of climate change in particular those at lowest risk of flooding.	It will depend on which new community(ies) is pursued but in principle sites of this scale are more capable of providing infrastructure and mitigation to build in resilience against the impacts of climate change. Dispersed growth can also compliment this and spread smaller	

Stage B - Develop options and appraise effects

SA Obj.	Decision aiding questions: Will approach/ option help to....	Likely Impact of:						Commentary
		Option A	Option B	Option C	Option D	Option E	Option F	
							scale developments across the district in resilient areas.	
	Support habitats in adjusting to the impacts of the climate emergency?	+	+	+	+	+	++	
		This option could support habitats within and around the existing SPAs and larger villages but not necessarily more widely across the district.	This option could support habitats within and around our towns three of which include the Ouse Valley green infrastructure corridor, however, it would not necessarily support adjustments of habitats more widely across the district.	This option will support habitats along public transport routes and within nearby settlements. The only part of the district this option would not greatly support is the western part of Huntingdonshire.	This option could support habitats along strategic road networks and within nearby settlements.	This option could support habitats at a localised scale.	This could support habitats at a strategic level through establishment of new habitats within new communities and their linkages to existing habitat networks along with supporting habitats at a localised level associated with dispersed growth.	
SA3	Maintain and where possible improve the quality and	-	--	+	+	++	--	Option E performs the most positively but Options C and D also perform positively
		The cumulative impact of development on water	The cumulative impact of development and particularly of	Development within public transport corridors may be able to	Development within the strategic highways corridors may be	Dispersed growth is more likely to provide development of a	A new community will likely require substantial upgrades and/or

SA Obj.	Decision aiding questions: Will approach/ option help to....	Likely Impact of:						Commentary
		Option A	Option B	Option C	Option D	Option E	Option F	
	availability of water resources?	infrastructure will be greater in certain locations and as such require upgrades to ensure sufficient capacity.	strategic expansions on water infrastructure will be greater in the towns and as such require upgrades to ensure sufficient capacity.	utilise existing capacity in some areas depending on the scale and concentration of potential development and proximity to existing settlements.	able to utilise existing capacity in some areas depending on the scale and concentration of potential development and proximity to existing settlements.	propionate scale across the district putting less cumulative pressure on infrastructure.	new infrastructure to meet water demands of the development. Dispersed growth is more likely to utilise existing capacity.	depending on the location and concertation of development within these corridors.
	Minimise the risk of flooding from all sources?	-	-	+	+	++	++	
		All of the SPA areas within the existing growth strategy have flood risk issues and so continuing to focus development towards these areas may make them less resilient to flooding depending on the specific locations chosen for development.	All of our towns experience some issues with flooding so focusing development towards these areas may make them less resilient to flooding overall depending on the specific locations chosen for development.	Development along public transport can focus development to areas within these corridors that are at lower risk of flooding.	Development along strategic highway corridors can focus development to areas within these corridors that are at lower risk of flooding.	Dispersed growth provides opportunities to spread development across the district and in areas that may be less at risk from flooding.	It will depend on which new community(ies) is pursued but in principle sites of this scale are more capable of providing flood mitigation if there are elements of the site at risk. Dispersed growth can complement this and spread smaller scale	

Stage B - Develop options and appraise effects

SA Obj.	Decision aiding questions: Will approach/ option help to....	Likely Impact of:						Commentary
		Option A	Option B	Option C	Option D	Option E	Option F	
							developments across the district in at low flood risk areas.	
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	+	++	+	+	--	-	Option B most positively supports this objective, with Options A, C and D also performing positively. Option F performs the most negatively with the greatest potential for the use of greenfield of higher agricultural quality . Option G is also somewhat negative.
		This option may result in some opportunities for previously developed land regeneration within towns and larger villages. It may also reduce the need for greenfield land especially as it could facilitate more dense development.	This option may result in some opportunities for previously developed land regeneration within towns and may also reduce the need for greenfield land especially as it could facilitate more dense development.	This option may result in some opportunities for previously developed land regeneration within settlements along these corridors and provide opportunities for various densities which may also reduce the need for greenfield land.	This option may result in some opportunities for previously developed land regeneration within towns and larger villages along strategic road networks therefore reduce the need for greenfield land especially as it could facilitate more dense development in larger settlements.	Dispersed growth could utilise previously developed land across the district but this is likely to be minimal in more rural areas. Also densities in these areas are likely to be much lower which could increase the use of greenfield land.	A new community(ies) will require a large amount of land, much is likely to be greenfield land. Various densities can be achieved in these sites which would reduce the pressure on using greenfield and in other locations less. Dispersed growth could utilise previously developed land across the district but this is likely to be minimal in more rural areas.

## 4 Stage B - Develop options and appraise effects

SA Obj.	Decision aiding questions: Will approach/ option help to....	Likely Impact of:						Commentary
		Option A	Option B	Option C	Option D	Option E	Option F	
			distance from central facilities although due to their scale some facilities would be expected to be provided within the sites.			travel would be required to meet many needs.		
SA10	Support and enhance the more deprived areas of the district?	<b>N</b>	<b>N</b>	<b>N</b>	<b>--</b>	<b>+</b>	<b>+</b>	Option D performs particularly poorly against this objective with Options A and B offering most potential for linkages to existing social and community facilities and services.
		This option would support growth in the towns where most of the more deprived urban areas are located but offers limited support for growth in areas of rural deprivation.	This option would support growth in the towns where most of the more deprived urban areas are located but offers limited support for growth in areas of rural deprivation.	The main public transport corridors serve some more deprived areas but not all so this option would have a mixed impact on this objective.	The strategic road network is remote from most of the more deprived areas of the district so focusing growth there would not help achieve this objective.	This option could support growth across more deprived areas in more rural areas and to a lesser extent within towns depending on specific development sites brought forward.	New communities are unlikely to support or enhance more deprived areas although they could contribute to assisting with areas of rural deprivation as could the dispersed growth element.	
	Maximise opportunities for access to	<b>++</b>	<b>++</b>	<b>-</b>	<b>--</b>	<b>N</b>	<b>+</b>	

Stage B - Develop options and appraise effects

SA Obj.	Decision aiding questions: Will approach/ option help to....	Likely Impact of:						Commentary
		Option A	Option B	Option C	Option D	Option E	Option F	
	existing or proposed social and community facilities and services?	This option continues to maximise growth in and around settlements with existing social and community facilities and services.	This option would focus most housing growth around the district's main towns which currently provide the best offer for social and community facilities and services. Additional services and facilities could be included within the strategic expansion locations.	Some developments would be in reasonable proximity to existing social and community facilities and services but others could be remote and dependent on additional provision.	Most developments would be remote from existing social and community facilities and services leading to reduced accessibility and the need for substantial additional provision.	A high proportion of our villages have some form of social and community facilities and services but these are limited in most smaller villages reducing the overall range of services and facilities that could be accessed.	New communities would be expected to provide social and community facilities and services within them but the range of provision is likely to be limited compared to long established larger villages and towns. Provision for the dispersed element of growth would depend on specific settlements where growth was focused.	
SA11	Contribute to regeneration activities?	++	-	N	-	-	N	All options have potential to contribute towards this objective in term sof enhancing economic
		This option could contribute towards regeneration activities in our	Focusing growth on the outskirts of our towns is unlikely to support regeneration	The contribution of this option to delivery of the objective cannot be predetermined	This option is primarily expected to involve greenfield sites given the nature of	Although dispersed sites in villages could include some previously	The impact of this option will depend on the nature of the new community sites

		Option A	Option B	Option C	
		accessible. Some however are located within the countryside where accessibility via public transport is very limited. There may be public rights of way that link the sites but route length and their accessibility to all users will vary.	blue infrastructure is within sustainable travel routes for more communities. Some may still be within the countryside where access is difficult.	blue infrastructure is within sustainable travel routes for more communities. Some may still be within the countryside where access is difficult.	
SA13	<p>Attract new investment and provide opportunities to improve the resilience of the local economy?</p> <p>Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?</p> <p>Support retention and growth of indigenous companies?</p> <p>Encourage sustainable tourism?</p>	<p style="text-align: center;"><b>+</b></p> <p>The existing green infrastructure priority areas support various scales of tourism, continuing their designation would continue to support tourism, small local businesses and investment.</p>	<p style="text-align: center;"><b>++</b></p> <p>Retaining the existing priority areas and also designating additional priority areas will support the attainment of this objective by providing further opportunities for local and small business to set up within these areas as well as tourism.</p>	<p style="text-align: center;"><b>++</b></p> <p>Allocating land for additional priority areas and or land for existing priority areas to expand to will support the attainment of this objective by providing further opportunities for local and small business to set up within these areas as well as tourism.</p>	All options have the potential to positively contribute towards localised tourism activities and leisure activities, options B and C more so as more land will be designated/allocated for green and blue infrastructure.
SA14	Facilitate modernisation of existing town centres to meet current and anticipated needs?	<p style="text-align: center;"><b>N</b></p> <p>Objective not relevant to option.</p>	<p style="text-align: center;"><b>N</b></p> <p>Objective not relevant to option.</p>	<p style="text-align: center;"><b>N</b></p> <p>Objective not relevant to option.</p>	Objective not relevant to option.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	<b>+</b>	<b>++</b>	<b>++</b>	Accessible strategic and localised scale green and blue infrastructure supports healthy and resilient communities, all options perform positively but Options B and C perform more positively as they will allocate additional areas of land for green and blue infrastructure.
		Areas of accessible strategic and localised scale green and blue infrastructure supports healthy and resilient communities. It can also provide important landscape settings to settlements and shape the identity of communities. Retaining the existing areas would support this objective.	Retaining existing priority areas would support this objective, designating further areas would further support the objective.	Allocating new sites for green and blue infrastructure will give greater importance to areas of localised and strategic scale importance to communities and support their retention. Also allocating land for existing areas to expand onto will do this.	
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	<b>N</b>	<b>N</b>	<b>N</b>	The impact will depend on the location of green and blue infrastructure so it cannot be predetermined at this stage.
		The impact will depend on the location of green and blue infrastructure so it cannot be predetermined at this stage.	The impact will depend on the location of green and blue infrastructure so it cannot be predetermined at this stage.	The impact will depend on the location of green and blue infrastructure so it cannot be predetermined at this stage.	

## 4 Stage B - Develop options and appraise effects

### The Approach to Climate Change

4.18 Our first set of options relate to decarbonisation scenarios

#### Option - Decarbonisation Scenarios

**Should we....**

*(Please pick one option.)*

**Option A - Business as usual** with electric vehicle uptake reflecting recent trends

**Option B - Maximise reductions by 2040** using current technologies

**Option C** - Follow the national **Climate Change Commission's 'Balanced pathway'** approach

4.19 The first three SA objectives are directly relevant, the remaining SA objectives have been removed as a result.

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	--	++	+	Option B is the most ambitious carbon reduction option by maximising reductions as far as possible up to 2040 ahead of national targets. Option C also
		This option will largely continue existing trends and would only reduce carbon emissions by 28% by 2050.	This option is a more ambitious option which aims to maximise carbon emissions by as much as	This option broadly align with CCC's balanced pathway for decarbonisation. This option	

Stage B - Develop options and appraise effects

Page 1675 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		This will leave the district substantially short of national targets of being at zero by 2050.	possible by 2040 ahead of national targets. With current technologies available carbon reductions could be about 53% by 2040 and will be higher by 2050.	sees emissions reduce by 76% with a net zero by 2050 only be achieved through carbon capture/ removal technologies.	performs positively but looks forward to 2050 instead and identifies a pathway for achieving net zero.
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	--	++	++	
		This option would likely have a limited impact on facilitating enhancements to green infrastructure to assist in meeting this ambition decarbonisation scenario.	This option could facilitate enhancements to green infrastructure to assist in meeting this ambition decarbonisation scenario.	In order to achieve net zero by 2050 carbon removal and capture technologies will be required. Green infrastructure will play an important role in achieving this. Therefore this option would require enhancements to existing and new networks of strategic green infrastructure to meet required carbon removal targets.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	+	+	+	Options B and C perform most positively against this objective.
		To maximise opportunities to reduce emissions development would have to be placed in sustainable locations that could utilise	To maximise opportunities to reduce emissions development would have to be placed in sustainable locations that could utilise	To maximise opportunities to reduce emissions development would have to be placed in sustainable locations that could utilise

		Option A	Option B	Option C	
		however, this option will have a limited impact as emissions may only reduce by 28% meaning that the impacts of climate change including flooding would continue and may worsen.	option provides an accelerated approach to maximising net zero by 2040 which would have an impact on minimising potential climate change associated flooding.	option provides an approach demonstrating that net zero can be achieved by 2050 which would have an impact on minimising potential climate change associated flooding.	

## 4 Stage B - Develop options and appraise effects

4.20 The second set of options relate to renewable energy

### Option - Renewable Energy

**Should we....**

*(Please pick one option.)*

**Option A** - Business as usual with renewable and low carbon energy meeting 39% of expected demand by 2046 and 41% by 2050

**Option B** - Ambitious approach meeting national targets with renewable and low carbon energy meeting 79% of expected demand by 2046 and 80% by 2050

4.21 Only the most directly relevant SA objectives have been included below, the remaining SA objectives have been removed as a result.

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	++	Option B performs more positively as it is more ambitious in meeting more of our energy demand from renewable sources and therefore supporting to reduce emissions.
		A business as usual option will move the district towards increasing our update of renewables, however only 41% of our energy demand would be met by renewable sources of energy.	An ambitious option would move the district substantially closer towards meeting the majority of our demand through renewable energy, up to about 80% by 2050.	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	N	N	
		Renewable energy generation will have a limited impact on this promoting enhancements to green infrastructure.	Renewable energy generation will have a limited impact on this promoting enhancements to green infrastructure.	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	N	N	Overall, both options perform similarly against this objective.
		Renewable energy installations will be required to be located in places where they are sustainable and resilient to ensure that energy generation is also resilient.	Renewable energy installations will be required to be located in places where they are sustainable and resilient to ensure that energy generation is also resilient. More renewable energy installations may result in more development in less resilient locations.	
	Support habitats in adjusting to the impacts of the climate emergency?	+	++	
		Renewable energy places an important role in reducing our carbon emissions. Reducing emissions can have a positive impact on supporting habitats and minimising climate impacts on them.	Renewable energy places an important role in reducing our carbon emissions. Reducing emissions can have a positive impact on supporting habitats and minimising climate impacts on them. This option is an ambitious one so would help to maximise these opportunities up to 2050.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA3	Maintain and where possible improve the quality and availability of water resources?	<b>N</b>	<b>N</b>	Overall, Option B being the more ambitious option performs more positively as it increases the uptake of renewable energy in meeting energy demand and therefore places a more significant role in reducing emissions and climate change related impacts such as flooding.
		This is not directly relevant to this option.	This is not directly relevant to this option.	
Minimise the risk of flooding from all sources?	<b>+</b>	<b>++</b>		
	Renewable energy places an important role in reducing carbon emissions. Reducing emissions will help to reduce the impact of climate change including the risk of flooding.	Renewable energy places an important role in reducing carbon emissions. Reducing emissions will help to reduce the impact of climate change including the risk of flooding. This option is an ambitious one so would help to minimise the risk form climate change related flooding.		
SA4	Enable the use of land that has previously been developed in preference to greenfield land?	<b>-</b>	<b>-</b>	Both options perform similarly, Option A is marginally more positive as it may result in less land being developed for renewable energy than Option B.
		There may be opportunities across the district to utilise some previously developed land or on existing buildings for renewable energy but it is likely that greenfield land will also be required. However, the amount of land required could vary significantly depending on the technologies adopted with some such as rooftop solar being an integral part of other development.	Increasing the quantity of renewable energy installations to facilitate this increase in usage would likely require more greenfield land to do this but opportunities on previously developed land can still be utilised. However, the amount of land required could vary significantly depending on the technologies adopted with some	

Stage B - Develop options and appraise effects

Page 1681 of 3488

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
			such as rooftop solar being an integral part of other development.	
	Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	++	++	
		There may be opportunities across the district to utilise land of the lowest agricultural quality in order to meet the land requirements of this option.	In the developable potential, grade 1 and 2 land have been discounted conserving the highest quality land to minimise the impact of renewable energy installations on higher grade agricultural land.	
SA5	Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	N	N	Both options perform similarly, Option A is marginally more positive as it may result in less adverse impact on strategic green and blue infrastructure improvements.
		This is not directly relevant to this option.	This is not directly relevant to this option.	
	Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	+	+	
		Designated green infrastructure areas were considered as one of the constraints before calculating the potential capacity for renewable energy generation technologies and sufficient areas identified to deliver this option without compromising networks subject to appropriate site selection.	Designated green infrastructure areas were considered as one of the constraints before calculating the potential capacity for renewable energy generation technologies and sufficient areas identified to deliver this option without compromising networks subject to appropriate site selection.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
SA6	Protect sites of designated biodiversity or geodiversity significance?	<b>+</b>	<b>+</b>	Both options perform similarly against this objective as nature conservation sites were taken into account when calculating capacity but achieving it is dependent on the specific sites selected.
		Designated nature conservation assets were considered as one of the constraints before calculating the potential capacity for renewable energy generation technologies and sufficient areas identified to deliver this option without compromising protected sites subject to appropriate site selection.	Designated nature conservation assets were considered as one of the constraints before calculating the potential capacity for renewable energy generation technologies and sufficient areas identified to deliver this option without compromising protected sites subject to appropriate site selection.	
	Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	<b>N</b>	<b>N</b>	
		Renewable energy generation will have a limited impact on this promoting enhancements to designated nature sites.	Renewable energy generation will have a limited impact on this promoting enhancements to designated nature sites.	
SA7	Promote opportunities to protect and enhance valued landscape and townscape characteristics?	<b>N</b>	<b>N</b>	The impact of both options depend on the location and scale of renewable energy proposals.
	Reinforce local distinctiveness and a sense of place?	The impact will depend on location of development schemes and cannot be predetermined. Minor scale renewable energy proposals are less likely to detrimentally impact upon local character, however this may be more acute where there are designated heritage assets. Larger scale proposals may result	The impact will depend on location of development schemes and cannot be predetermined. SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		in greater landscape impact which will require assessment and mitigation. Ultimately, this impact should be considered in balance with the impacts arising from climate change.	in greater landscape impact which will require assessment and mitigation. Ultimately, this impact should be considered in balance with the impacts arising from climate change.	
SA8	Promote actions to reduce contributions to air pollution?  Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	+	++	Option B offers the greatest potential to contribute towards this objective by maximising our contribution towards reducing the burning of fossil fuels.
SA15	Strengthen a local sense of place?  Retain the character of existing settlements?	N	N	The impact will depend on location of development schemes and cannot be predetermined.
SA16	Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	+	+	Whilst designated heritage assets were taken into account the potential remains for previously unknown archaeological assets to be impacted on any potential site.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:		Commentary
		Option A	Option B	
		deliver this option without compromising protected sites subject to appropriate site selection.	deliver this option without compromising protected sites subject to appropriate site selection.	

## Tackling Flooding and Water

4.22 We have set out several options relating to flooding and water. The first two sets of options relate to Integrated Flood and Water Management. Only a limited number of the sustainability appraisal objectives are relevant to these issues so all others have been deleted.

### Option - Integrated Flood and Water Management 1

#### **Should we....**

*(You may pick multiple options)*

**Option A - Meet national requirements only.**

**Option B - Require natural flood management techniques as part of an integrated approach** to flood risk management and impact on water quality **on all developments** (excluding extensions).

**Option C - Require natural flood management techniques as part of an integrated approach** to flood risk management and water quality **on all developments in high and medium risk areas** (excluding extensions).

**Option D - Consider an alternative option.** Please let us know.

4.23 The first three SA objectives are directly relevant, the remaining SA objectives have been removed as a result.

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA1	Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	++	+	Option B would provide the most diverse approaches to integrated flood and water management, including enhancements and additions to green infrastructure networks, which would assist with carbon sequestration. Options A and C would both make a positive contribution towards the objective.
	Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	++	+	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	N	++	+	Option B would provide most opportunities to adapt and enhance resilience to impacts of climate change through being applied across the
		This option would not contribute towards this objective at any enhanced	This option would facilitate the greatest long term resilience above and	This option would contribute towards this objective by supporting approaches that would minimise risk in	

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		level or speed above national requirements and would be subject to national changes in priorities.	beyond current modelling levels of potential climate change impact levels.	areas known to be of higher and medium vulnerability to unavoidable impacts of climate change.	whole district allowing for more longer term resilience and promoting multifunctional benefits for habitats.
	Support habitats in adjusting to the impacts of the climate emergency?	+	++	+	
		National guidance does not require but suggests that it is possible to integrate natural flood management techniques with any proposed sustainable drainage systems and green infrastructure provision to maximise multifunctional benefits which should contribute to supporting habitats and meeting this objective.	Requiring natural flood management techniques within all developments schemes, potentially alongside sustainable drainage systems and green infrastructure provision would maximise multifunctional benefits contributing to supporting habitats and meeting this objective across the district.	Requiring natural flood management techniques within all developments schemes, potentially alongside sustainable drainage systems and green infrastructure provision would maximise multifunctional benefits contributing to supporting habitats and meeting this objective in high and medium risk locations.	
SA3	Maintain and where possible improve the quality and availability of water resources?	+	++	+	Option B again provides the greatest opportunities to achieve this objective through working towards integrated flooding and water management across the whole district rather than only in specific locations and by using the greatest range of potential techniques.
		Applying national guidance would support delivery of this objective in terms of maintaining water resources but may not achieve improvements to quality that could arise from wider introduction of natural flood management techniques.	Requiring natural flood management techniques within all developments schemes could assist in improving the quality and availability of water resources throughout the district.	Requiring natural flood management techniques within all developments schemes could assist in improving the quality and availability of water resources in high and medium risk locations.	

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
	Minimise the risk of flooding from all sources?	+	++	+	
		Applying national guidance would support delivery of this objective but may not bring other co-benefits such as green infrastructure.	This option would provide the greatest diversity of approaches to minimising flood risk and require this throughout the district.	This option would provide the greatest diversity of approaches to minimising flood risk but only require it in specific locations.	

**Option - Integrated Flood and Water Management 2**

**Should we...**

*(You may pick multiple options)*

**Option A - Ask that developments do not increase flood risk elsewhere**

**Option B - Ask that all developments seek a betterment of existing flood risk both within the site and in surrounding areas.**

**Option C - Ask that developments (excluding minor extensions) in high or medium risk areas seek betterment of existing flood risk both within the site and in surrounding areas.**

**Option D - Require developments to provide surface water management plans where applicable, addressing run off rates.**

**Option E - Consider an alternative option.** Please let us know.

4.24 Two SA objectives are directly relevant, the remaining SA objectives have been removed as a result.

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:				Commentary
		Option A	Option B	Option C	Option D	
SA2	Concentrate new development in locations that maximise	N	N	N	N	Option B through seeking betterment throughout the district would make the

		objective but may assist in maintaining quality and availability of water resources through limited reduction of flooding.	maximise the opportunities to improve water quality by avoidance of contamination and availability of water through ensuring management of water flows from new developments.	high and medium flood risk areas would maximise their opportunities to improve water quality by minimisation of contamination and availability of water through ensuring management of water flows from new developments.	improvement of water quality through minimisation of contamination of surface water flows.	provide betterment throughout the whole of the district.
	Minimise the risk of flooding from all sources?	+	++	+	N	
		This approach would offer a limited contribution to minimising flooding by avoiding its impacts beyond the site.	This option would seek minimisation of flooding within the site and the surrounding area and betterment of any current flood risk throughout the district.	This option would seek minimisation of flooding within the site and the surrounding area and betterment of any current flood risk within parts of the district at high and medium risk of flooding.	This option would concentrate on minimising the risk of surface water flooding only and not address all sources.	

## 4 Stage B - Develop options and appraise effects

- 4.25 The next two sets of options relate to water efficiency, the first is water efficiency in residential developments and the second is water efficiency in non-household development.

### Option - Water Efficiency in Residential Development

#### **Should we...**

*(You may pick multiple options)*

**Option A** - Have no policy, meaning that **all development would meet existing and future Building Regulations Standards of 125 litres per person per day** (possible future equivalent of 105 l/p/d) for residential buildings.

**Option B** - Ask that **all residential developments meet Building Regulations optional standards or future equivalent and require 110 l/p/d** (possible future equivalent of 100 l/p/d) as in the current Local Plan.

**Option C** - Ask that **all residential developments go above current/future Building Regulations standards and require up to 80 l/p/d** if practicable, investigating opportunities for efficient fixtures and fittings, rainwater harvesting and greywater recycling <sup>(36)</sup>

**Option D** - **Consider an alternative option.** Please let us know.

- 4.26 Two SA objectives are directly relevant, the remaining SA objectives have been removed as a result.

36 Government published [guidance in March 2024](#) noted that water reuse systems can typically lower drinking water consumption from 144 down to 80 litres per person per day, a significant reduction below that of the current Building Regulations requirements.

Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/ option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
SA2	Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	<b>N</b>	<b>N</b>	<b>N</b>	Option C would best contribute to this option by minimising the additional demands on water supply of new homes adapting to increased likelihood of seasonal droughts and supporting habitats by making lower water demands on them.
	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option does not impact where development is located so does not contribute towards this objective.	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option does not impact where development is located so does not contribute towards this objective but would promote resilience to unavoidable impacts of the climate emergency in terms of reduced water availability.	While accepting that all new development will increase the demands on water supply which is challenged as a result of the climate emergency, this option does not impact where development is located so does not contribute towards this objective but would promote resilience to unavoidable impacts of the climate emergency in terms of reduced water availability.		
SA2	Support habitats in adjusting to the impacts of the climate emergency?	<b>-</b>	<b>+</b>	<b>++</b>	
	This would introduce a higher water allowance per person per day in new homes than the adopted Local Plan policy and place additional stress on water habitats and supplies.	This option would build on the current approach to water consumption that would reduce proportionate demand from new homes slightly contributing towards this objective.	Substantially reducing the water demands of new properties should help support habitats in adjusting to the impacts of the climate emergency by making lower water demands on them.		
SA3	Maintain and where possible improve the quality and availability of water resources?	<b>--</b>	<b>+</b>	<b>++</b>	Option C again would make the best contribution towards achieving this objective by

## 4 Stage B - Develop options and appraise effects

SA Objective	Decision aiding questions: Will approach/option help to....	Likely Impact of:			Commentary
		Option A	Option B	Option C	
		Huntingdonshire is within an area of severe water stress; this option would enable new homes to take a higher water allowance per person per day than the adopted Local Plan policy and place additional stress on quality and availability of water resources	Huntingdonshire is within an area of severe water stress; this option would build on the current approach to water consumption that would reduce proportionate demand from new homes contributing towards maintain of quality and availability of water resources.	Substantially reducing the water demands of new homes would contribute towards maintaining and potentially improving the quality and availability of water resources in the longer term.	making the least additional demands on the availability of water resources allowing the greatest potential for maintenance of water quality.
	Minimise the risk of flooding from all sources?	<b>N</b>	<b>N</b>	<b>N</b>	
		The amount of water allowed in new homes per person per day would not impact on flood risk minimisation.	The amount of water allowed in new homes per person per day would not impact on flood risk minimisation.	The amount of water allowed in new homes per person per day would not impact on flood risk minimisation.	

**Option - Water Efficiency in Non-Household Development**

**Should we....**

*(You may pick multiple options)*

**Option A - Have no policy.**

**Option B - Ask that all 'non-household' development be required to achieve 'outstanding' for category Wat 01 of BREEAM unless demonstrated impracticable**

**Option C - Ask that all 'non-household' development be required to achieve 'excellent' for category Wat 01 of BREEAM unless demonstrated impracticable**
