The Panel is invited to comment on the Corporate Performance Report 2024/25 Quarter 1 Report.

**Contact Officer: N Sloper  
01480 388635**

27 day of August 2024

***Michelle Sacks***

Chief Executive and Head of Paid Service

**Disclosable Pecuniary Interests and other Registerable and Non-Registerable Interests.**

Further information on [Disclosable Pecuniary Interests and other Registerable and Non-Registerable Interests is available in the Council's Constitution](#)

**Filming, Photography and Recording (including Live Streaming) at Council Meetings**

This meeting will be filmed for live and/or subsequent broadcast on the Council's YouTube site. The whole of the meeting will be filmed, except where there are confidential or exempt items. If you make a representation to the meeting you will be deemed to have consented to being filmed. By entering the meeting you are also consenting to being filmed and to the possible use of those images and sound recordings for webcasting and/or training purposes. If you have any queries regarding the streaming of Council meetings, please contact Democratic Services on 01480 388169.

The District Council also permits filming, recording and the taking of photographs at its meetings that are open to the public. Arrangements for these activities should operate in accordance with [guidelines](#) agreed by the Council.

**Please contact Mrs Beccy Buddle, Democratic Services Officer (Scrutiny), Tel No. 01480 388008/e-mail [Beccy.Buddle@huntingdonshire.gov.uk](mailto:Beccy.Buddle@huntingdonshire.gov.uk) if you have a general query on any Agenda Item, wish to tender your apologies for absence from the meeting, or would like information on any decision taken by the Committee/Panel.**

Specific enquiries with regard to items on the Agenda should be directed towards the Contact Officer.

Members of the public are welcome to attend this meeting as observers except during consideration of confidential or exempt items of business.

Agenda and enclosures can be viewed on the [District Council's website](#).

### **Emergency Procedure**

In the event of the fire alarm being sounded and on the instruction of the Meeting Administrator, all attendees are requested to vacate the building via the closest emergency exit.

## HUNTINGDONSHIRE DISTRICT COUNCIL

MINUTES of the meeting of the OVERVIEW AND SCRUTINY PANEL (PERFORMANCE AND GROWTH) held in Civic Suite, Pathfinder House, St Mary's Street, Huntingdon PE29 3TN on Wednesday, 10 July 2024.

PRESENT: Councillor C M Gleadow – Chair.

Councillors A Blackwell, S Cawley,  
S J Corney, I D Gardener, S A Howell,  
R Martin, Dr M Pickering and N Wells.

APOLOGIES: Apologies for absence from the meeting were submitted on behalf of Councillors A R Jennings and D Terry.

IN ATTENDANCE: Councillors S J Conboy and S Wakeford.

### 15. MINUTES

The Minutes of the meeting held on 5th June 2024 were approved as a correct record and signed by the Chair.

### 16. MEMBERS' INTERESTS

Councillor S Corney declared an other registerable interest in minute 24/18 as a member of the North West Cambridgeshire Conservative Association whose office is based within the Ramsey Mews.

Councillor R Martin declared an other registerable interest in minute 24/18 as a member of the North West Cambridgeshire Conservative Association whose office is based within the Ramsey Mews.

### 17. RESPONSES TO QUESTIONS ARISING FROM PREVIOUS MEETINGS

The responses to questions asked at previous meetings were noted.

### 18. OVERVIEW AND SCRUTINY WORK PROGRAMME

With the aid of a report by the Democratic Services Officer (Scrutiny) (a copy of which is appended in the Minute Book) the Overview and Scrutiny Work Programme and the current Notice of Key Executive Decisions which had been prepared by the Leader for the period 1st July 2024 to 31st October 2024 were presented to the Panel.

### 19. MARKET TOWNS PROGRAMME SUMMER UPDATE

By means of a report by the Regeneration and Housing Delivery Manager the Market Towns Programme Summer Update (a copy of which was appended in the Minute Book) was presented to the Panel.

In response to a question from Councillor Pickering, the Panel heard

that in relation to St Neots, only a small number of the shop front grants had been successful, this was due to the remaining applications not fulfilling the criteria for the scheme. The recommendation was that the scheme is expanded to include areas outside of the market towns and previously unsuccessful applications would have the opportunity to reapply.

Following requests for clarification from Councillor Cawley and Councillor Gardener over the proposed purchase of an additional location for the Cromwell Museum and the long term ownership of that property, the Panel were assured that whilst the ownership would sit with Huntingdon Town Council, grant agreement documents would have clauses built in to protect this asset and clarify the use of funds from any future sale.

The Panel heard, following a question from Councillor Pickering, that the gas boiler at the Priority Centre was in good working order and it was not planned to replace this until necessary. In addition it was noted that the current timescales for the project were based upon industry standard assumptions but that it was hoped that additional efficiencies could be established once a contractor was appointed.

Councillor Catmur enquired whether any further hidden risks were anticipated within the St Neots market square project, following the discovery of a previously unidentified pipe through the project, following which, the Panel were advised that all the interrogation into the ground works was now complete, therefore no other unexpected discoveries were anticipated. The Panel were further assured that tolerances had been built into the project timescales and that this was not expected to impact the overall project timescales.

In response to a question from Councillor Martin, the Panel heard that the objections received for the Priory Centre application were no unexpected and that the team were working through those comments. The Panel were also advised that 80% of the anticipated works were internal works and that the external works were looking to bring a more vibrant visual impact for the centre. Work was continuing with the team liaising with planning consultants, conservation team and English Heritage to provide the best solution for all.

Councillor Martin praised the overall plans for the Ramsey project but expressed concern that the proposed pop up shops may affect the street scene and visibility for existing and established businesses. The team were assured that retail champions had been employed to ensure that the scheme would benefit all residents and business owners. The Panel was also assured, following an enquiry from Councillor Catmur, that the popup shops and pedestrianisation of the area were being developed to be accessibility compliant.

Following a question from Councillor Gardener regarding the location of sensors on the Great Ouse River, the Panel heard that detail on this would be sought and brought back to the Panel.

Following the discussion, the Panel were informed that their comments would be added to the Cabinet report in order for an informed decision to be made on the report recommendations

## **20. HUNTINGDONSHIRE PLACE STRATEGY UPDATE**

By means of a report and a presentation by the Assistant Director (Strategic Insights and Delivery) (copies of which are appended in the Minute Book) the Huntingdonshire Place Strategy Update report was presented to the Panel.

Following questions from Councillors Gardener and Cawley, the Panel heard that the Council would be developing its own priorities for the district as it acknowledged that due to working with the County Council, the current plan could not be changed but that the Council could influence future plans. It was also confirmed that local flood groups were not prohibited from applying for funding under the environmental innovation category. It was also acknowledged that although funding was limited, it was also a quick process and alternative funding options were recommended to groups as appropriate.

In response to a question from Councillor Howell on Member involvement, the Panel were advised that this had been hugely successful in giving partners a voice and opportunities to develop this for the future would be investigated and developed.

The Panel were assured, in response to a question from Councillor Martin, that opportunities with health partners were being developed, it was observed that this was a complex field but that the Council aimed to work in conjunction where possible or alternatively in parallel to ensure the best possible outcome for residents. Councillor Martin expressed concern that health partners were unwilling to be influenced by the Council, however the Panel were assured that the development of a Health and Wealth Strategy would address these concerns and would be brought through the democratic cycle in the coming months.

In response to further questions by Councillor Martin and Gardener on the upcoming mayoral elections and how this would affect the CPCA's transport plans and projects, the Panel were assured that a pipeline of projects had been committed to. The Panel were also assured that the Council was aware of the issues in the delivery of the TING bus service and that concerns had been raised with the CPCA to resolve the matter.

Councillor Martin expressed concern that there was an emphasis on buying and eating locally within the strategy but that there did not appear to be a proportionate focus on farming within the district to deliver these objectives. The Panel were assured that many layers existed within the policy and that farming along with associated innovation and technology was well represented.

## **21. PRODUCTIVITY PLANS**

By means of a report by the Corporate Director (People) (a copy of which was appended in the Minute book), the Productivity Plan report was presented to the Panel.

In response to a comment from Councillor Martin, the Panel were

assured that regular benchmarking against industry standards and other neighbouring authorities took place, and that the proposed increase in productivity would not be at the expense of quality. Following a further question from Councillor Martin, the Panel heard that the plans would be embedded within the organisation through key metrics and the Corporate Plan. By using strategic engagement and reporting across the organisation, best practice could be employed for all. It was also noted that the Workforce Strategy would address the required skills and capabilities going forward which would allow for key actions and best practice to be embedded within the culture.

Following a concern raised by Councillor Blackwell regarding the lack of numerical targets, the Panel were assured that metrics and KPIs would be used to measure in each area but that these were already being captured in the performance reports which are regularly brought through the democratic cycle and were therefore not duplicated within this report.

Councillor Pickering observed that there was an issue with some of the links contained within the document, this was noted and the correct documents will be circulated to the Panel following the meeting.

In response to a question from Councillor Wells regarding the 4 day working week model used at South Cambs District Council, the Panel heard that the Council was constantly monitoring best practice and evidence of what works, and continually review opportunities to be more effective. Following a question from Councillor Cawley, the Panel were advised that the aim was not to reduce residents abilities to contact the Council but to reduce the need to contact, by working harder there should be less need to contact the Council. In response to a further question from Councillor Cawley, the Panel heard that AI opportunities were being investigated where they could provide benefit to the Council, with the example of note and minute taking being given as an opportunity currently being explored.

Whereupon it was thereby

**RESOLVED**

that the comments from the Panel would be added to the Cabinet report in order for an informed decision to be made on the report recommendations.

## **22. CORPORATE PEER CHALLENGE**

The Panel were advised that the item was withdrawn from the agenda as the report had not yet been received from the Local Government Association and that it was intended to be heard at the next full Council meeting.

Notice is hereby given of:

- Key decisions that will be taken by the Cabinet (or other decision maker)
- Confidential or exempt executive decisions that will be taken in a meeting from which the public will be excluded (for whole or part).

Notice/agenda together with reports and supporting documents for each meeting will be published at least five working days before the date of the meeting. In order to enquire about the availability of documents and subject to any restrictions on their disclosure, copies may be requested by contacting the Democratic Services Team on 01480 388169 or E-mail [Democratic.Services@huntingdonshire.gov.uk](mailto:Democratic.Services@huntingdonshire.gov.uk).

Agendas may be accessed electronically at the [District Council's website](#).

Formal notice is hereby given under The Local Authorities (Executive Arrangements) (Meetings and Access to Information) (England) Regulations 2012 that, where indicated part of the meetings listed in this notice will be held in private because the agenda and reports for the meeting will contain confidential or exempt information under Part 1 of Schedule 12A to the Local Government (Access to Information) Act 1985 (as amended) and that the public interest in withholding the information outweighs the public interest in disclosing it. See the relevant paragraphs below.

Any person who wishes to make representations to the decision maker about a decision which is to be made or wishes to object to an item being considered in private may do so by emailing [Democratic.Services@huntingdonshire.gov.uk](mailto:Democratic.Services@huntingdonshire.gov.uk) or by contacting the Democratic Services Team. If representations are received at least eight working days before the date of the meeting, they will be published with the agenda together with a statement of the District Council's response. Any representations received after this time will be verbally reported and considered at the meeting.

**Paragraphs of Part 1 of Schedule 12A to the Local Government (Access to Information) Act 1985 (as amended) (Reason for the report to be considered in private)**

1. Information relating to any individual
2. Information which is likely to reveal the identity of an individual
3. Information relating to the Financial and Business Affairs of any particular person (including the Authority holding that information)
4. Information relating to any consultations or negotiations or contemplated consultations or negotiations in connection with any labour relations that are arising between the Authority or a Minister of the Crown and employees of or office holders under the Authority
5. Information in respect of which a claim to legal professional privilege could be maintained in legal proceedings
6. Information which reveals that the Authority proposes:-
  - (a) To give under any announcement a notice under or by virtue of which requirements are imposed on a person; or
  - (b) To make an Order or Direction under any enactment
7. Information relating to any action taken or to be taken in connection with the prevention, investigation or prosecution of crime.

Huntingdonshire District Council  
Pathfinder House  
St Mary's Street  
Huntingdon PE29 3TN.

- Notes:-
- (i) Additions changes from the previous Forward Plan are annotated \*\*\*
  - (ii) Part II confidential items which will be considered in private are annotated ## and shown in italic.

### RECOMMENDATION

The Panel is invited to comment on the response to the Planning Inspectorate in respect of the East Park Solar Farm as contained within the report attached.

This page is intentionally left blank

**Public**  
**Key Decision – Yes**

## **HUNTINGDONSHIRE DISTRICT COUNCIL**

**Title/Subject Matter:** East Park Solar Farm

**Meeting/Date:** 4<sup>th</sup> September – Overview and Scrutiny  
(Performance and Growth)  
10<sup>th</sup> September - Cabinet

**Executive Portfolio:** Executive Councillor for Planning

**Report by:** Chief Planning Officer

**Wards affected:** Great Staughton

---

### **Executive Summary:**

East Park Energy is a proposed new solar farm and energy battery storage scheme that is located to the north-west of St Neots, straddling the Huntingdonshire District, Bedfordshire (Bedford Borough) and Cambridgeshire County boundaries. The scheme proposes connection to the National Grid at the existing substation at Eaton Socon.

The Scheme as proposed would be capable of generating and exporting more than 50 megawatts of renewable energy; therefore, it meets the threshold to be a solar National Significant Infrastructure Project (NSIP) rather than determined by the Local Planning Authorities.

The Applicant has an export agreement with National Grid to provide 400 megawatts of renewable energy generation via the Eaton Socon Substation to the west of St Neots. A 100MW Battery Energy Storage Facility is proposed to be co-located with the solar infrastructure to allow for energy storage at times when grid demand is lower.

As an NSIP application (for which a Development Consent Order (DCO) is required), the proposed solar farm will not be determined locally by Huntingdonshire District Council with input by the County Council. Responsibility for accepting, examining and determining NSIP applications rests with the Secretary of State (in this case the SoS for Energy Security and Net Zero). The Planning Inspectorate (PINS) carries out certain functions related to national infrastructure planning on behalf of the Secretary of State. During the consultation and examination of the NSIP all stakeholders will be invited to comment but their comments are to be submitted directed to PINS, on behalf of the SoS.

The project has been submitted to the Planning Inspectorate and is still at pre-application stage; the applicant's intention is for a round of statutory consultation to take place w/c 24th September. Non-statutory pre-application consultation took place in Autumn 2023, this included stakeholders and the local community including Cabinet Members and Ward Councillors for the three Host Authorities being invited to attend a briefing on the 13th October 2023. The applicant submitted their Environmental Impact Assessment Scoping Report to PINS on 30 October 2023.

A Memorandum of Understanding has been entered into between the three Host Authorities (HDC, Cambridge County Council and Bedford Borough Council) and we are in the final stages of agreeing a shared Planning Performance Agreement with the applicant. This collaborative joint working allows us to share resource where possible.

Due to the statutory timings associated with NSIPs and the DCO process, a short window of time is given in order for consultation documentation to be considered and responded to by specialists across the Council. As such the proposal this report seeks authorisation for is the responses to the formal consultations to be prepared with officers and authorisation delegated to the Chief Planning Officer, in consultation with the Leader and Executive Councillor for Planning.

**Recommendation(s):**

**The Cabinet is**

**RECOMMENDED**

1. delegate authority to the Chief Planning Officer, in consultation with the Leader and Executive Councillor for Planning to take all associated action necessary in the interests of the efficient and timely conduct of the Council's compliance with the East Park Solar Farm DCO procedures including but not limited to:
  - a) prepare the Council's responses to any written questions from the Examining Authority during the DCO Examinations and to submit those to the Examining Authority,
  - b) settle the content of and submit any Written Representations to the Examining Authority,
  - c) to negotiate, settle and complete any legal agreements relevant to secure the granting of a DCO pursuant to the applications,
  - d) settling and the submission of the Statement of Common Ground to the Examining Authority,
  - e) the instruction of witnesses and legal advisors throughout the Examination process if required,
  - f) the discharge of DCO requirements made under any development consent order granted by Secretary of State.

## **1. PURPOSE OF THE REPORT**

- 1.1 This report provides an overview of the East Park Energy Solar Farm Development Consent Order (DCO) application. This solar farm will cross two counties and includes three 'Host Authorities', namely Huntingdonshire District Council (HDC), Cambridgeshire County Council (CCC) and Bedford Borough Council (BBC). It sets out the background to these proposals at this stage, which is part of the pre-app stage prior to the submission of the project as a Development Consent Order (DCO) application. Due to the timing of the consultation, delegation is sought to enable the Council response to be submitted within the statutory, short timelines.

## **2. WHY IS THIS REPORT NECESSARY/BACKGROUND**

- 2.1 The East Park Solar Farm is recognised as a Nationally Significant Infrastructure Project (NSIP). A statutory consultation is currently planned for late September 2024. This will be a formal consultation undertaken by the applicant that will need to comply with all statutory requirements. To avoid any undue delay to the NSIP process and Examination, it is important that the tight deadlines set out in the Examination Timetable are met. The timescale for handling an NSIP application are set out in the legislation. It is noted that PINS, as the Examining Authority, may disregard late responses, which is why officers are seeking to follow PINS guidance and get delegation in place to allow for comments to be provided in time. PINS guidance document for Local Authorities sets out the following timescales for the DCO process:

- Scoping Response (28 Days)
- Statement Of Community Consultation Response (28 Days)
- Principal Areas of Disagreement Summary Statement
- Non-Statutory and Statutory Consultation Response (Deadline For Response Provided by The Applicant)
- Adequacy Of Consultation Milestone Response
- Adequacy Of Consultation Representation (14 Days)

At the pre-examination and examination stages there are activities that are also likely to need approval, such as:

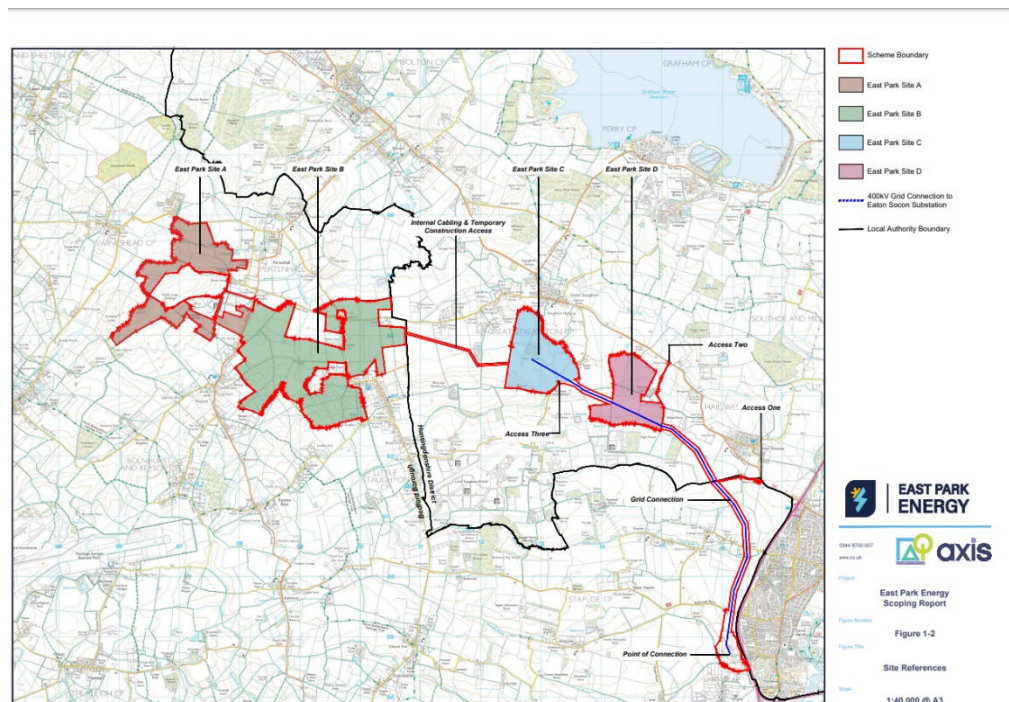

- Relevant Representation (Minimum 30 Days)
- Local Impact Report (Early in the Examination Stage)
- Written Representation (Early in the Examination Stage)
- Responses to the Examining Authority's Written Questions and Requests For Information
- Statement Of Common Ground (to be agreed, where possible, by the close of Examination – a maximum of 6 Months, or 4 Months For Fast-Track Consent Applications)
- DCO Obligation (If Appropriate)

- 2.2 Early engagement will also ensure that that broader key objectives of the Councils Corporate Plan and Place Strategy can be shared with the applicant, ensuring that opportunities are maximised for Huntingdonshire across key themes, including (but not limited to) ensuring skills

opportunities in delivery are maximised for the residents of Huntingdonshire alongside ensuring ambitious Biodiversity Net Gain is part of the scheme.

### 3. EAST PARK PROPOSALS

- 3.1 East Park Energy is a proposed new solar farm and energy battery storage scheme that is located to the north-west of St Neots, straddling the Huntingdonshire District, Bedfordshire (Bedford Borough) and Cambridgeshire County boundaries. The scheme proposes connection to the National Grid at the existing substation at Eaton Socon. The plan below indicates the proposal with the black line marking the Council boundaries with land to the east and north of the line being within HDC, and land to the west and south lying within BBC. The site is in the Great Staughton Ward with Great Staughton and Hail Weston parishes falling within the HDC administrative area.

- 3.2 The Applicant has an export agreement with National Grid to provide 400 megawatts of renewable energy generation via the Eaton Socon Substation to the west of St Neots. A 100MW Battery Energy Storage Facility is proposed to be co-located with the solar infrastructure to allow for energy storage at times when grid demand is lower.
- 3.3 As the scheme would be capable of generating and exporting more than 50 megawatts of renewable energy it meets the threshold to be a solar NSIP rather than determined by the Local Planning Authorities. As an NSIP application the proposed solar farm will not be determined by Huntingdonshire District Council with input by the County Council as responsibility for accepting and examining the NSIP applications rests with the Secretary of State (for Energy Security and Net Zero). The Planning Inspectorate (PINS) carries out certain functions related to national infrastructure planning on behalf of the Secretary of State.

## 4. CONSULTATION

- 4.1 The project has been submitted to the Planning Inspectorate and is still at pre-application stage; the applicant's intention is for a round of statutory consultation to take place w/c 24th September.
- 4.2 As an NSIP proposal, the East Park Energy Solar Farm Project has already undertaken pre-application consultations in Autumn 2023 with stakeholders and the local community at the non-statutory consultation stage including Cabinet Members and the Ward Cllr being invited to attend a briefing on the 13<sup>th</sup> October. This has taken place alongside pre-application discussions on technical matters with key specialisms within the three Host Authorities, to help inform their proposal prior to the submission of their application to PINS and further to the Scoping Opinion adopted by PINS.
- 4.3 Once East Park Energy submits their DCO application to PINS for the solar farm project, currently programmed for Q1 of 2025, the project will move into the 'acceptance' stage. If their application is accepted for examination by PINS, the Council should be notified of this, including whether the Secretary of State will appoint a single Examining Inspector, or a panel of up to five Examining Inspectors (known as the Examining Authority (ExA)) to examine the application. The Examination is carried out in public.
- 4.4 Following notification of the above, the local authorities will then be notified of the preliminary meeting to discuss procedural matters. After which an Examination timetable should be set, including tight deadlines for when information needs to be submitted to PINS. At the pre-examination stage, local authorities are encouraged to continue to engage with the developer. Agreement on any remaining issues should be sought and/or negotiations continued. There may also be the need to continue negotiation in respect of any compulsory acquisition affecting any local 'host' authority's land holdings or interests. Reaching agreement on as many issues as possible in advance of the examination is likely to lead to a more focused and expedient examination process for all participants.
- 4.5 During the Examination, the local authorities will:
- Respond to the Examining Authority's (ExA's) written questions which are normally based on an initial assessment of the application, (including the principal issues of the proposed scheme), and the representations received from interested parties;
  - Prepare and submit to PINS a Local Impact Report (LIR), setting out the likely impacts of the proposed scheme on the Huntingdonshire area by using local knowledge and robust evidence, and set out the relevant local planning policy framework and guidance;
  - Prepare and submit to the Planning Inspectorate a Statement of Common Ground (SOCG), a joint written statement between the applicant and the Council and/or other parties or Host Authorities, setting out matters that they agree or disagree on; and

- Represent the Council and make oral representation at the issue specific hearing(s) and if necessary the open floor hearing(s). The subject of the hearings is based on specific elements / issues of the application that are raised during the NSIP process.
- There is also provision in the Planning Act 2008 (as amended) for the applicant to apply for other consents, for example Compulsory Purchase Order (CPO) and drainage consents, deemed by a DCO.

4.6 Local Authorities are statutory consultees in the NSIP process and it should be noted that the views of the local community, including Town and Parish Councils have to be submitted as Relevant Representations directly to PINS and that HDC, as a Host Authority, cannot respond on behalf of individual parties.

## **5. COMMENTS OF OVERVIEW & SCRUTINY**

5.1 The comments of the relevant Overview and Scrutiny Panel will be forwarded to Cabinet prior to its consideration of the report.

## **6. KEY IMPACTS / RISKS**

6.1 The key impact from not carefully considering the solar farm proposals could be significant negative impacts on ecology, landscape and heritage and that views of Huntingdonshire communities are not heard. With that in mind, and given the defined timescales of the DCO it is important that any formal response of HDC is submitted within the defined DCO timescales. It cannot be assumed that PINs would grant any extension of time.

6.2 In the event of tight timescales that do not allow for the formal cycle of meetings delegations are sought now to ensure prompt responses to future consultations.

## **7. WHAT ACTIONS WILL BE TAKEN/TIMETABLE FOR IMPLEMENTATION**

7.1 Subject to Cabinet approval of the recommendations in this report, the Council will continue to work with the East Park applicants, Bedford Borough Council and Cambridgeshire County Council and respond to submissions as required by PINS.

## **8. LINK TO THE CORPORATE PLAN, STRATEGIC PRIORITIES AND/OR CORPORATE OBJECTIVES**

(See [corporate-plan.pdf \(huntingdonshire.gov.uk\)](#))

8.1 This will help to deliver across a range of the Council's Corporate Plan priorities specifically Creating a better Huntingdonshire for future generations by:

- Forward-thinking economic growth – 32. Continue to update the Local plan.
- Forward-thinking economic growth - 36. Influence delivery of infrastructure including East West Rail, A428, A141 Strategic Outline Business Case and future Transport Strategies
- Lowering carbon emissions – 44. Support community projects and plans that reduce carbon emissions.
- Lowering carbon emissions – 45. Deliver Biodiversity for All (2023-2025) to enable community action and support green skills development.

## **9. LEGAL IMPLICATIONS**

- 9.1 There are no significant implications for this priority, other than the financial and resource implications required to support this project, which has the potential to include significant legal advice. Part 6 of the Planning Act 2008 sets out the legal requirements regarding Development Consent Order applications.

## **10.RESOURCE IMPLICATIONS**

- 10.1 A Memorandum of Understanding has been entered into between the three Host Authorities and we are in the final stages of agreeing a shared Planning Performance Agreement with the applicant in order to share resource where possible with some income received for non-statutory elements of the DCO process. However, for the formal statutory processes HDC will not be reimbursed for the additional resource
- 10.2 This NSIP is in addition to the requirement to determine planning applications within their statutory timelines and work to support the development of the new Local Plan. . A number of specialist officers across the Council are engaging in this process. As a NSIP this resource is considered necessary and is programmed and monitored within Planning Services and the wider Council. Specialist officer input will increase as the NSIP progresses, and through the DCO examination. Resource will need to be carefully planned for and balanced against other areas of statutory work including the determination of planning application and progress of the Local Plan.
- 10.3 There may be future budget implications for resource and or legal support through the formal DCO process.

## **11.HEALTH, ENVIRONMENT, CLIMATE CHANGE AND POLICY IMPLICATIONS**

- 11.1 As the NSIP progress, specialist officers will consider all appropriate implications for our current and future communities and businesses in responding appropriately and proportionately to the application.
- 11.2 Through the consultation process East Park will be strongly encouraged to maximise opportunities for environmental enhancements, to maximise biodiversity net gain and inclusion of PROW enhancements where

possible, which will contribute to environmental and ecology improvements while improving health and wellbeing of residents.

## **12. REASONS FOR THE RECOMMENDED DECISIONS**

- 12.1 Delegation is recommended to meet the requirements for responses to the East Park DCO process as set out by PINS as the Examining Authority.

## **13. LIST OF APPENDICES INCLUDED**

- 13.1 None appended.

## **14. BACKGROUND PAPERS**

## HUNTINGDONSHIRE DISTRICT COUNCIL

**Title/Subject Matter:** Further Issues and Options 2024 engagement paper for the Local Plan Update

**Meeting/Date:** Overview and Scrutiny (Performance and Growth) – 4 September 2024  
Cabinet – 10 September 2024

**Executive Portfolio:** Executive Councillor for Planning

**Report by:** Chief Planning Officer

**Ward(s) affected:** All Wards

---

### **Executive Summary:**

Local Plan preparation is highly shaped by statutory requirements. A local planning authority is required under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 to invite representations on the potential content of any future development plan document.

Engagement on the content of the Local Plan Update started at the beginning of 2023. The three 'Issues Engagement Papers' from published for engagement in April 2023 have been analysed and the responses have contributed to the next stage of preparation of the Local Plan Update.

This report presents the proposed Further Issues and Options 2024 engagement paper which gives options on potential strategy and policy areas for inclusion in the Local Plan Update. Its purpose is to provide our communities with their next opportunity to help shape the future development plan for Huntingdonshire. This report is linked to those on the Land Availability Assessments and Sustainability Appraisal which all form part of this set of engagement opportunities.

A communications plan has been prepared in collaboration with the Communications team. The intention is to use a multi-channel approach to communications to try to maximise the diversity of residents, organisations and businesses who can engage with and make comments on the Further Issues and Options 2024. A 10 week engagement period is proposed to run from 18 September to 27 November 2024.

### **Recommendation(s):**

The Cabinet/Committee is

## **RECOMMENDED**

- 1) To endorse the content of the Further Issues and Options 2024
- 2) To agree that the Further Issues and Options 2024 paper be published for public engagement for ten weeks between 18 September and 27 November 2024 under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012
- 3) To grant delegated authority to the Chief Planning Officer, in consultation with the Executive Councillor for Planning to make any necessary typographical or other minor changes to the Report prior to its publication for consultation.

## **1. PURPOSE OF THE REPORT**

- 1.1 Public engagement is a key element of preparation of a Local Plan. This report presents an engagement document which gives options on potential strategy and policy areas for inclusion in the Local Plan Update. This is to provide our communities with their next opportunity to help shape the future development plan for Huntingdonshire. This report is linked to those on the Land Availability Assessments and Sustainability Appraisal which all form part of this set of engagement opportunities.

## **2. BACKGROUND**

- 2.1 The Further Issues and Options 2024 engagement paper builds on the series of engagement opportunities that took place throughout the spring and early summer of 2023. In particular, it responds to comments that were made on the series of Issues Engagement Papers (full, summary and easy read) and builds these into options for inclusion in the Preferred Options draft Local Plan Update for next year.
- 2.2 A local planning authority is required under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 to invite representations from specific and general consultations bodies, residents and those carrying on businesses within the district on what the Local Plan should contain. This is reflected in the National Planning Policy Framework in paragraph 16c). This engagement opportunity would fulfil this statutory requirement. The engagement will align with the methods established in the Statement of Community Involvement approved by Cabinet on 24 January 2023.
- 2.3 Regulation 22 (1) (c) of The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended), asks that the Council provides a document to demonstrate how the plan has been shaped. This Statement of Consultation forms a supporting document to preparation of the Local Plan. It reports the engagement opportunities that were made available throughout spring and early summer 2023 on the Sustainability Appraisal Scoping report, the Statement of Community Involvement, the Sustainability of Settlements (Settlement Hierarchy) and Land Availability Assessment methodologies, the Call for Sites and the Issues Engagement Papers. The Statement of Consultation summarises the comments and representations received to each of these and explains how we have taken them into account in preparation of this stage. It is an iterative document with this forming the initial version of it; it will be updated after each main phase of engagement.

## **3. FURTHER ISSUES AND OPTIONS 2024 ENGAGEMENT PAPER**

- 3.1 The Further Issues and Options 2024 engagement paper (Appendix 1) starts with an executive summary which highlights the topics that are covered and stresses that people do not need to read all of it, they are welcome to jump straight to the topics they are interested in and only read

and respond on those areas of interest if they wish to. This is followed by an Introduction which explains what we have to do, what we have done so far towards updating the Local Plan, how the document is structured and how it links to other aspects of this phase of engagement which are addressed in the related two reports also being presented to this meeting.

3.2 This is followed by 11 topic-based chapters covering:

- Local Plan Vision and Objectives – what sort of place we want to be and how we achieve sustainable development
- A Settlement Hierarchy for Huntingdonshire – how we can group our towns and villages based on their service provision, size and function
- Approach to Economy and Employment – how and where we should try to grow our local economy
- Housing Figures and Requirement – how we support provision of the homes needed here
- Achieving Well Designed Places – what our design aspirations are for creating high quality places
- Growth Strategy Options – illustrates different ways we could distribute new development around the district
- Our Green and Blue Infrastructure – looks at how we balanced growth with nature and open space to support biodiversity, recreation and landscape enhancement
- The Approach to Climate Change – how we can contribute to national objectives on emissions reductions and ambitious we should be
- Tackling Flooding and Water – how we manage our limited water supplies and minimise the impacts of flood risk
- Housing Tenures and Housing Mix – focuses on the housing choices people have and how we meet the needs of specific groups within our community
- Transport and Connectivity – considers how we can contribute towards reducing the need to travel and promoting access to sustainable and active travel choices

3.3 Each topic-based chapter is structured in a consistent manner to help people navigate the document. The four sections are:

- Introduction - to briefly explain the issue
- What you told us - a summary of the points raised in 2023's Issues Engagement Papers
- What is this about? - a discussion of our adopted policies, changes in national policy and guidance since they were agreed in 2019 and what any evidence we have so far is telling us
- What should we do? - this sets out the options that we think might be possible and asks for opinions on them

3.4 A choice of options is presented within each topic-based chapter with the number of options varying depending on the nature of the issue. This is part of enabling us to demonstrate through the Examination in public process that we have considered reasonable alternatives to the

approaches that we include in the Local plan Update. Most sets of options also include the opportunity for people to suggest an alternative option should they wish to. Direct questions are posed on some issues to explore them where this approach is more appropriate.

#### **4. PROPOSED ENGAGEMENT APPROACH**

4.1 The intention is to use a multi-channel approach to communications to try to maximise the diversity of residents, organisations and businesses who can engage with and make comments on the Further Issues and Options 2024. A 10 week engagement period is proposed to run from 18 September to 27 November 2024.

4.2 A communications plan has been prepared in collaboration with the Communications team which will cover online, social media, face to face and traditional media methods of publicising the engagement opportunities. Videos will be used to present accessible information on the engagement opportunities.

4.3 All material will also be available through our online engagement portal and information and links added on Let's Talk Huntingdonshire and the Council's main website.

4.4 At the time of writing this report workshops are proposed specifically for Members and Town and Parish Councils to provide support through explaining the purpose and content of the Further Issues and Options 2024 and other related engagement opportunities (particularly the site assessments). These are also proposed to provide advice and support on how to respond to the engagement opportunities. Workshops and individual meetings will also be held with other stakeholder groups, such as adjoining local authorities, to ensure the requirements of the duty to co-operate are met.

4.5 To provide face to face engagement opportunities seven exhibitions are proposed around the district at Huntingdon, Kimbolton, Ramsey, Sawtry, St Ives, St Neots and Yaxley. The opportunity will be taken to attend other events such as the Parishes Forum and the Annual Climate Conference.

4.6 Social media, banners in places such as parks, posters on the Council's refuse freighters will all be used to draw attention to engagement opportunities. The support of Members and Town and Parish Councils will be sought to raise awareness, for example through provision of posters for local noticeboards.

#### **5. COMMENTS OF OVERVIEW & SCRUTINY**

5.1 The comments of the relevant Overview and Scrutiny Panel will be circulated to the Cabinet prior to its consideration of the report.

## **6. RISKS**

- 6.1 An updated draft National Planning Policy framework was published for consultation was launched on 30 July 2024 and will close on 24 September 2024. This will change the policy environment within which the Local Plan Update is prepared. The government intends to reintroduce mandatory housing targets and has put forward a revised 'standard method' for calculating the number of new homes the Local Plan is expected to accommodate. The housing requirement options set out in chapter 6 take account of this proposed change by including both the potential number of homes required through the current approved methodology and the potential number through the draft proposed methodology.
- 6.2 The Planning and Infrastructure Bill was introduced during the King's speech on 17 July 2024. This includes proposals for improving land assembly processes which may impact the Local Plan preparation process, particularly regarding the overall growth strategy and potential site allocation choices.

## **7. LINK TO THE CORPORATE PLAN, STRATEGIC PRIORITIES AND/OR CORPORATE OBJECTIVES**

- 7.1 The Further Issues and Options 2024 aligns strongly with priority 2 of the Corporate Plan 2023-2028 which seeks to create a better Huntingdonshire for future generations. It contains options relating to each aspect of 'Improving housing', 'Forward thinking economic growth' and 'Lowering our carbon emissions'. It also aligns with priority 1 on improving the quality of life for local people through options relating to creating well-designed places that people are proud to call home, providing affordable homes to help those who need them and attracting employers and visitors.

## **8. LEGAL IMPLICATIONS**

- 8.1 The Council must follow due Regulations in preparing the Local Plan. Eventually, once the final document is adopted, the Council has a legal duty to determine planning applications in accordance with development plan policies unless there are material considerations that indicate otherwise.

## **9. RESOURCE IMPLICATIONS**

- 9.1 There are limited financial resource implications directly for the engagement work, primarily for exhibition hall hire and board production, publicity materials and printing. Staffing for the exhibitions will be drawn from across the wider Planning department. The Local Plan Update has a rolling budget for preparation to cover the costs of specialisation evidence preparation by consultants and legal representation for the examination in public stage. The Further Issues and Options public engagement will also

encompass that for the Land Availability Assessment and Sustainability Appraisal that are presented in the two following items.

## **10. HEALTH IMPLICATIONS**

- 10.1 The well-designed places element of the Further Issues and Options contains a strong focus on facilitating healthy lifestyle choices through incorporation of active travel routes within new developments. The more detailed design aspects that will result from this and the influence of the climate change response will assist with long term health implications relating to aspects such as heating and cooling of buildings and air pollution.

## **11. ENVIRONMENT AND CLIMATE CHANGE IMPLICATIONS**

- 11.1 Paragraph 9 of the National Planning Policy Framework requires that 'planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.' This includes ensuring that the Local Plan and its policies meet the principles of sustainable development; achieving net gains from an economic, social and environmental perspective defined in NPPF paragraph 8 as follows:

- a) 'an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure;
- b) a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and
- c) an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy.'

- 11.2 The Council's response to climate change and promotion of environmental sustainability run throughout the Further Issues and Options 2024. In particular, chapter 10 directly sets out options regarding climate change and the Council's level of ambition and approaches in responding to these. Other aspects of our response are addressed through topic-based chapters such as Flooding and Water and Achieving Well Designed Places. The Local Plan Update is supported by a series of evidence base documents relating to climate change providing expert recommendations on the approaches to be taken.

## **12. OTHER IMPLICATIONS**

- 12.1 Equalities impact assessment is not required at this stage of Local Plan preparation as there are no draft policies yet.

## **13. REASONS FOR THE RECOMMENDED DECISIONS**

13.1 Public engagement is a statutorily required element of local plan preparation. It will also contribute towards achieving action 32 of the Corporate Plan 2023 – 2028's annual Action Plan for this year, "Continue the update to the Local plan, including updating evidence bases in line with National Planning Policy, particularly where it relates to Economy, Environment and Housing.". Receipt and consideration of responses from residents, businesses, organisations and other stakeholders will contribute towards preparation of the Preferred Options Draft Local Plan Update.

13.2 The recommendations are therefore:

- To endorse the content of the Further Issues and Options 2024
- To agree that the Further Issues and Options 2024 paper be published for public engagement for ten weeks between 18 September and 27 November 2024 under Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012
- To grant delegated authority to the Chief Planning Officer, in consultation with the Executive Councillor for Planning to make any necessary typographical or other minor changes to the document prior to its publication for consultation.

12	Housing Tenures and Housing Mix	71
13	Transport and Connectivity	78
14	Appendix 1 - Detailed Objectives	82

## 1 Executive Summary

The purpose of a Local Plan is to set out a vision and policy framework for the future development of the district. It is expected to provide for enough new development to meet the needs of the district and to provide policies to guide that development. It will be used to judge planning applications against. Public engagement is a strong part of the process to make sure that the Local Plan reflects the needs and aspirations of local people and businesses.

### This Further Issues and Options Engagement paper

This document sets out options for a series of issues that are key to the future planning of Huntingdonshire. There are 11 topics with each chapter structured as:

- Introduction - to briefly explain the issue
- What you told us - a summary of what people told us on the 2023' consultation about the issue
- What is this about? - this gives context to the issue explaining our adopted policies, changes in national policy and guidance since they were agreed in 2019 and what any evidence we have so far is telling us. Some suggest potential pros and cons of an option
- What should we do? - this sets out the options that we think might be possible, and asks you to select an option or options from a list of choices on how we can address the issue through the Local Plan. Many also give you the chance to suggest other approaches if you think they could work well here too. Some contain a series of sub-issues where detailed opinions would be valuable to us. Some also have additional questions relating to the issue.

You don't have to read the whole document, please feel free to use the links below to jump straight to the bits you're interested in.

2 'Introduction' - this covers what we have to do, what we have done so far, explains this Further Issues and Options consultation, explains other parts of this consultation phase, lets you know how to respond to the consultation and tells you what we think the end date of the Local Plan Update should be.

3 'Local Plan Vision and Objectives' - this is about setting a vision which aims to achieve sustainable development by outlining what sort of place we want Huntingdonshire to be in the future. This will help set a clear direction for the Local Plan, and to ensure the vision is delivered it is supported by a series of objectives.

4 'A Settlement Hierarchy for Huntingdonshire' - this looks at how we can group our towns and villages into certain categories based on levels of services, size and function to create a hierarchy which can then be used to determine and develop planning policies in an area and helps to decide where new growth should be distributed.

5 'Approach to Employment and Economy' - this asks about the sort of businesses and jobs we should be looking to attract in Huntingdonshire, and how and where we should try to grow our local economy.

6 'Housing Figures and Requirement' - this looks a key role of the Local Plan which is to ensure it supports provision of enough homes to meet needs as having safe, secure and affordable homes is a basic necessity and providing enough homes is an important factor in creating sustainable communities and ensuring people have a high quality of life.

7 'Achieving Well Designed Places' - creating high quality buildings and places is fundamental to what the planning and development process should achieve. This chapter has questions on design aspirations for the district and what to do about national development management policies if they are introduced.

8 'Growth Strategy Options' - this shows a series of different ways we could look to distribute growth around the district showing the broad development location, potential pros and cons and a visual representation (map) of the strategy.

# 1 Executive Summary

9 'Our Green and Blue Infrastructure' - balancing growth with nature and open space is important to support biodiversity, recreation, and landscape enhancement. Green infrastructure refers to areas such as parks, green space, and woodland. Blue infrastructure includes watercourses, rivers, ponds and lakes.

10 'The Approach to Climate Change' - this asks for opinions on how we can contribute to national objectives to reduce our carbon emissions and how ambitious we should be looking at aspects such as decarbonisation ambitions, renewable energy and energy efficiency of new buildings.

11 'Tackling Flooding and Water' - Huntingdonshire sits within the driest region in the country, the Rivers Great Ouse, Nene and Kym run through the district and Grafham Water Reservoir plays an important role in the supply of water to our district and the surrounding areas. Some areas of Huntingdonshire located in the Fens are below sea level. With these key issues and the effects of climate change it is important that we understand the impact of flooding, water supply, water quality and wastewater treatment in our district.

12 'Housing Tenures and Housing Mix' - housing is about more than just numbers - this chapter looks at the choices around homes for sale and rent and how we meet the needs of particular groups within our community including older people and Gypsies and Travellers.

13 'Transport and Connectivity' - the Council has a limited role in planning for transport and travel infrastructure as most is done by higher level organisations but this explores how we can contribute to achieving higher level ambitions such as reducing the need to travel and promoting access to active travel infrastructure.

14 'Appendix 1 - Detailed Objectives' - this sets out lists of some the detailed suggestions for possible objectives to help you decide your choices for the Local Plan Vision and Objectives

## Site Assessments

Sitting alongside this consultation document are others which give you the chance to look at our assessments of all the sites that have been put forward to us for possible allocation in the Local Plan Update.

The Call for Sites 2023 along with our research on other known potential development sites generated around 400 sites to consider. An Ongoing Call for Sites followed on from this to ensure people continued to have the opportunity to promote sites throughout early preparation of the Local Plan Update to reduce the number of sites being submitted late on in the process.

All the sites are assessed through a 2 stage approach:

1. Land Availability Assessment - which contains individual assessments of each site
2. Sustainability Appraisal - the appendices contain detailed assessment of each site against the sustainability objectives

Outcomes of both assessments are combined in the Land Availability Assessment. These provide a summary of whether the site is considered potentially appropriate for development, and if so for what uses and how much development the site could take.

## 2 Introduction

### What we have to do

The purpose of a Local Plan is to set out a vision and policy framework for the future development of the district. It is expected to provide for enough new development to meet the needs of the district and to provide policies to guide that development and be used to judge planning applications against. Public engagement is a strong part of the process to make sure that the Local Plan reflects the needs and aspirations of local people and businesses.

The Local Plan process is heavily shaped by national legislation and government policy. We have to follow set processes when preparing a Local Plan and all the policies we put in it must be consistent with national planning rules. There is a legal requirement for the Council to prepare a Local Plan for Huntingdonshire and to review it every 5 years.

We have to think about the wider area beyond Huntingdonshire to make sure that what we do here works well with the surrounding area in economic, social and environmental terms. We work with neighbouring local authorities, infrastructure and service providers and other partners to make sure that the growth and environmental aspirations of our Local Plan and be achieved. We have to meet a legal test known as the Duty to Cooperate. This means we have to engage constructively, actively and on an ongoing basis with our neighbouring authorities over matters which affect the wider area such as strategic infrastructure, healthcare and development proposals that are near authority boundaries.

Before any local plan is finalised it goes through an 'examination in public' where an independent Planning Inspector tests it in accordance with paragraph 35 of the National Planning Policy Framework (NPPF) to see if it is:

- Positively prepared - it provides a strategy which meets the area's needs such as for housing and employment
- Justified - it contains an appropriate strategy after looking at reasonable alternatives and is based on proportionate evidence

- Effective - the policies and site allocations are deliverable over the lifetime of the plan
- Consistent with national policy - it will enable the delivery of sustainable development in accordance with the NPPF and other relevant statements of national planning policy

Significant changes to the plan-making system are proposed but the details of what these will be and when they will be brought in are uncertain. The aim of these is to make preparation of local plans significantly quicker while giving local people control over what is built and where. Alongside this the Levelling Up and Regeneration Act (2023) allows for change and introduced the prospect of national policies being brought in for Development Management to influence decisions on planning applications. These would be prepared at national government level to cover nationally important issues and operate alongside the Local Plan. Local plan policies will focus just on locally important issues. The nature and level of detail in the national Development Management policies is as yet unknown, or even if they will now be introduced. If they are not, we will review the adopted Development Management policies against the latest NPPF and other legislation and amend those that are no longer aligned. Consequently, this phase of engagement focuses more on key strategic policy aspects with some more detailed elements that will help feed into the more locally specific elements of Development Management policies.

## 2 Introduction

Key elements of the NPPF (December 2023 version) which will shape the Local Plan Update are set out in boxes below.

### NPPF paragraph 11

Plans and decisions should apply a presumption in favour of sustainable development.

For plan-making this means that:

- a) all plans should promote a sustainable pattern of development that seeks to: meet the development needs of their area; align growth and infrastructure; improve the environment; mitigate climate change (including by making effective use of land in urban areas) and adapt to its effects;
- b) strategic policies should, as a minimum, provide for objectively assessed needs for housing and other uses, as well as any needs that cannot be met within neighbouring areas

### NPPF paragraph 16

Plans should:

- a) be prepared with the objective of contributing to the achievement of sustainable development;
- b) be prepared positively, in a way that is aspirational but deliverable;
- c) be shaped by early, proportionate and effective engagement between plan-makers and communities, local organisations, businesses, infrastructure providers and operators and statutory consultees;

### NPPF paragraph 20

Strategic policies should set out an overall strategy for the pattern, scale and design quality of places (to ensure outcomes support beauty and placemaking), and make sufficient provision for:

- a) housing (including affordable housing), employment, retail, leisure and other commercial development;
- b) infrastructure for transport, telecommunications, security, waste management, water supply, wastewater, flood risk and coastal change management, and the provision of minerals and energy (including heat);
- c) community facilities (such as health, education and cultural infrastructure); and
- d) conservation and enhancement of the natural, built and historic environment, including landscapes and green infrastructure, and planning measures to address climate change mitigation and adaptation.

### NPPF paragraph 22

Strategic policies should look ahead over a minimum 15 year period from adoption, to anticipate and respond to long-term requirements and opportunities, such as those arising from major improvements in infrastructure.

There are many opportunities to get involved in preparation of the Local Plan update. Our intention is to use the outcomes of this phase of public engagement to shape our preferred policies and site allocations. These will then be published for public engagement again as a full draft of our next Local Plan. After the 'Preferred

Options Local Plan' we will again look at all the comments made and prepare an updated Local Plan that we will ask for formal representations on that will be sent to the Planning Inspectorate for formal consideration by an independent Planning Inspector through a public examination process.

### What we have done so far

After a review of the policies and site allocations in Huntingdonshire's Local Plan to 2036 the decision was made at the Council's Cabinet meeting on 24/01/2024 to start work on an update to ensure our local plan reflects up-to-date issues and approaches and is compliant with the latest national policy. During the spring of 2023 we consulted on the following:

- **Statement of Community Involvement 2023** - which set out how the Council will engage on planning related matters.
- **Sustainability Appraisal Scoping Report 2023** - which gives baseline information for Huntingdonshire to inform the development of sustainability objectives to test the Local Plan against.
- **Draft Settlement Hierarchy Methodology** - which set out how we will assess the sustainability of settlements and will aid in the decision-making on their suitability for future growth in the next Local Plan
- **Draft Land Availability Assessment Methodology** - which set out how we will consider potential sites that have been put forward for potential allocation in the Local Plan
- A **Call for Sites** - which asked for details of sites that people wanted to have considered for allocation for residential, commercial, infrastructure and open space uses
- **Issues Engagement Paper** - this highlighted known issues in the district and asked for opinions on topics including responding to the climate crisis, enhancing the natural environment, supporting places, meeting housing needs for all, promoting a prosperous economy, developing high quality sustainable communities with supporting infrastructure, and distributing new growth.

- **Issues Engagement Paper Summary** - this gave a summary of the Issues Engagement Paper which highlighted known issues in the district and asked for opinions on topics including responding to the climate crisis, enhancing the natural environment, supporting places, meeting housing needs for all, promoting a prosperous economy, developing high quality sustainable communities with supporting infrastructure, and distributing new growth.
- **Issues Easy Read Version** - this explained what the next Local Plan could do in a very short form. The survey form asked 12 questions. The questions aimed to find out what is most important to respondents about planning for Huntingdonshire's future.

A report called Statement of Consultation for the Local Plan Update accompanies this public consultation. It provides summaries of the issues raised and how the responses have been taken into account in preparation of this Further Issues and Options document. The Statement of Consultation is an ongoing document and will be updated at each stage of the Local Plan Update's preparation.

### This Further Issues and Options Consultation

This document sets out options for a series of issues that are key to the future planning of Huntingdonshire. Before we write a full draft of the Local Plan Update which will include detailed policy wording and proposed site allocations, we would like your views on the options we are suggesting or any other options that you would like to put forward.

The main issues are structured as:

- Introduction - to briefly explain the issue
- What you told us - a summary of the points raised in 2023's Issues Engagement Papers

## 2 Introduction

- What is this about? - a discussion of our adopted policies, changes in national policy and guidance since they were agreed in 2019 and what any evidence we have so far is telling us
- What should we do? - this sets out the options that we think might be possible and asks for your opinions on them and gives you the chance to suggest other approaches if you think they could work well here too. Some contain a series of sub-issues where detailed opinions would be valuable to us.

If you think we have missed a key issue please let us know.

### Other parts of this consultation

This Further Issues and Options paper is only one part of this current consultation. Please take the time to look at and respond to other elements where they are of interest to you.

### Site Assessments

The Local Plan sets out a strategy for development in the district over certain period, including housing and job growth figures. To ensure the growth targets are met, new land for employment, housing and other uses needs to be supplied. The Local Plan can allocate sites for development from available land, stating the use, criteria required for the site to be successful and other important considerations.

The Call for Sites 2023 along with our research on other known potential development sites generated around 400 sites to consider. An Ongoing Call for Sites followed on from this to ensure people continued to have the opportunity to promote sites throughout early preparation of the Local Plan Update to reduce the number of sites being submitted late on in the process.

All the sites are assessed through a 2 stage approach:

1. Land Availability Assessment - which contains individual assessments of each site
2. Sustainability Appraisal - the appendices contain detailed assessment of each site against the sustainability objectives

### Land Availability Assessment

**2.1** Land Availability Assessments follow a five stage process to assess a site:

- Fundamental constraints such as being on a flood plain or being grade 1 best and most versatile agricultural land
- Looking at the context, constraints and potential suitability
- Checking a site is available for development without legal or ownership constraints
- Considering the achievability in terms of issues that may impact on costs, layout, capacity and certainty of delivering development
- Thinking about whether development of a site could be delivered and if so when

### Sustainability Appraisal

The Sustainability Appraisal is a systematic process for assessing the extent to which the emerging plan will help to achieve sustainable development. It is an opportunity to consider ways by which the plan can contribute to improvements in economic, environmental and social conditions, as well as a means of identifying and mitigating any potential adverse effects that the plan might otherwise have. Hence, the Sustainability Appraisal has 16 'Sustainability Objectives' including for example, achieving the districts target of zero carbon emissions by 2040. The site is scored based on how it might contribute to this overall objective using decision aiding questions. The purpose of this stage is to appraise the plan objectives and options to propose measures for alleviating adverse effects and maximise potential benefits.

## Evidence documents

We need evidence to help us shape many of the technical parts of the Local Plan Update. Some of these we prepare within the Council, others we commission technical specialists and for some we draw on strategies and documents prepared by other organisations. Not all evidence documents are available at this stage as some are dependent on outcomes from this engagement phase and all need to be as up-to-date as possible when we submit the Local Plan Update to the Secretary of State for examination by an independent Planning Inspector. All evidence documents that are available can be seen on our consultation portal on the supporting documents section.

Newly prepared evidence includes:

- Sustainability of Settlements - this scores all towns and villages in Huntingdonshire against a series of services and facilities to judge how sustainable they are. Its main purpose is to help develop a settlement hierarchy to shape the future growth strategy for the district.
- Integrated Water Management Strategy - this contains two reports comprising the level 1 strategic flood risk assessment and the stage 1 water cycle study which will help focus development away from areas of flood risk, minimise the impact of development on flooding and support the management of water supplies and disposal.
- Gypsy, Traveller, Travelling Showpeople, Boat dwellers and other Caravan dwellers Accommodation Assessment - this assesses the level and types of need for new pitches, plots and moorings for people seeking these types of accommodation.
- Climate change - this is addressed in a series of 6 documents which cover:
  - The role of the Local Plan Update in responding to climate change
  - Position statement and analysis of baseline and forecast future emissions

- The contribution of sustainable design to achieving net zero carbon
- Assessment of spatial strategy options
- Infrastructure and renewable energy
- Offsetting and sequestering emissions

## How to respond to this consultation

**We strongly encourage residents, businesses, local organisations and interest groups to get involved now rather than wait for a planning application to come in for development and then object to it when the principle of the proposal has already been agreed through the Local Plan and there are only the details left to influence.**

The Consultation Paper was assessed by Overview and Scrutiny (Performance and Growth) Panel on **XXX 2024 before being approved for consultation at Cabinet on XXX 2024**. Engagement opportunities on the Consultation Paper are available from: **XXX 2024 to XXX 2024**.

Comments can be made via the Council's online consultation portal at: <https://consult.huntingdonshire.gov.uk/kse> There is a set of 'FAQs' which explain how to register if you are new to the system and how to reset your password if you need a reminder of it.

Each document being consulted on is shown in a box which gives the start and finish dates for the public engagement period. These are followed by two green buttons to help you get to the right part of the consultation portal:

**LEARN MORE**

**RESPOND**

1) The '**Learn more**' button takes you to a page showing the following choices:

## 2 Introduction

### About This Consultation

### PROPOSAL

### WHAT PEOPLE SAY

- Selecting 'About this consultation' will take you to a page with information about the consultation and links to any supporting documents.
- Selecting 'Proposal' will allow you to scroll through and read the consultation document.
- Selecting 'What people say' will allow you to see the comments that people have made on each section, option or question.

2) The '**Respond**' button takes you a page asking you to either login or, if you haven't used the system before, to register as a user. You can then navigate the document using the chapter list down the left hand side to take you to the section you are interested in. Then you will be able to enter your comment on that section/ option/ question.

### Where to see a paper copy

Printed copies are available to view at: Customer Services Centre, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. Opening hours are: Monday to Thursday 8:45 to 17:00 and Friday 8:45 to 16:30 (excluding Bank Holidays). Printed copies will also be available to view in all [libraries](#) in Huntingdonshire and on the mobile library; details of the dates and times of routes can be found at [mobile library stops](#)

Queries can be directed to Planning Policy by:

- **Email:** [local.plan@huntingdonshire.gov.uk](mailto:local.plan@huntingdonshire.gov.uk)
- **Telephone:** 01480 388424
- **Post:** Planning Policy, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN
- **Social media:** [Huntingdonshire DC](#) | [Twitter](#), [Instagram](#), [Facebook](#) | [Linktree](#)

Following the close of consultation we will look at all the responses use them to help write the Preferred Options version of the Local Plan Update. This will include complete draft policies and site specific proposed development allocations.

## End date of the Local Plan Update

A key element of preparing a Local Plan update is deciding how long it should run for. The current Local Plan has a plan period of 2011 to 2036. It is proposed to use 2021 as the base date for this Local Plan as this will coincide with the Census 2021 which forms a robust source of evidence on many aspects of population, housing, health and employment.

In our Issues consultations held between April and July 2023 we asked you how far into the future the plan period should be for the updated Local Plan, the responses have been summarised as follows:

- Approximately 12% of respondents said the end date of the local plan should be 2043 - the shortest time likely to be possible and still retain 15 years lifespan after adoption
- Approximately 51% of respondents said the end date of the local plan should be 2046 - retaining 15 years lifespan after adoption and allowing flexibility to respond to national changes in the planning system
- Approximately 16% of respondents said the end date of the local plan should be 2050 - aligning the Local Plan update with the national target date for achieving net zero
- Other dates ranged between 2052 to 2060
- Many noted that a 30 year plan would help to encompass the delivery of new settlements or strategic sites
- Some encouraged the vision of the local plan to look 30 years ahead regardless of the end date

### Question 1

#### End date of the Local Plan Update

An end date of 2046 was the most popular choice last year. Do you agree with this?  
If you would prefer a different date please tell us what you think it should be.

## 3 Local Plan Vision and Objectives

### 3 Local Plan Vision and Objectives

#### Introduction

The fundamental basis for planning policy is set out in the National Planning Framework (December 2023) which states in paragraph 7:

'The purpose of the planning system is to contribute to the achievement of sustainable development, including the provision of homes, commercial development, and supporting infrastructure in a sustainable manner. At a very high level, the objective of sustainable development can be summarised as meeting the needs of the present without compromising the ability of future generations to meet their own needs. At a similarly high level, members of the United Nations –including the United Kingdom – have agreed to pursue the 17 Global Goals for Sustainable Development in the period to 2030. These address social progress, economic well-being and environmental protection.'

To contribute towards truly sustainable development in Huntingdonshire the Local Plan Update's Vision needs to send a clear message on the sort of place we want Huntingdonshire to be in the future.

#### What you told us

In our Issues consultations held between April and July 2023 we asked for your thoughts on what the vision and objectives should be. Suggestions were for:

##### The vision to include reference to:

- The delivery of housing and affordable housing, green infrastructure and biodiversity net gain, employment land, health services and other community needs, infrastructure, high quality development and sustainable transport
- Reflect the Huntingdonshire Futures Place Strategy
- A positive vision for the future of each area, consideration of the four market towns.
- Supporting development (homes and businesses) in locations which will deliver benefits that will enhance the sustainability of existing communities
- Provision of homes that meet everyone's needs
- Becoming a leader in high quality, affordable housing within integrated communities
- Protecting, preserving, providing and enhancing existing green spaces, landscape and countryside for the public and wildlife to enjoy in harmony
- Working towards achieving net carbon zero by 2050, mitigating and adapting to climate change and supporting sustainable living
- Facilitating opportunities for people to pursue a healthy lifestyle and have a high quality of life
- Taking advantage of new strategic infrastructure
- Ensuring the natural environment is well looked after

**The objectives to include:**

- Objectives from Huntingdonshire Corporate Plan 2023- 2028 (March 2023) and Place Strategy
- Delivering sufficient new homes / meeting housing need
- Delivering a balanced housing mix and affordable housing
- Supporting minor developments
- Sustainability
- Protecting small settlements and rural character
- Addressing climate change – mitigation and adaption / net carbon zero by 2050
- Prioritising education
- Locating growth along public transport corridors e.g. the busway / promoting sustainable movement and travel
- Investing in appropriate infrastructure and services to support growth
- Conserving and enhancing the historic environment
- Protecting local green spaces and enhancing green and blue spaces enhancing and providing new areas for biodiversity
- Current local plan objectives
- Water related objectives around land drainage, water level and flood risk management, water resources/water neutrality, environmental conservation and enhancement, navigation water quality/nutrient neutrality.
- Providing solutions for farming
- Promoting healthy living and wellbeing

**What is this about?**

The Local Plan's Vision statement is a key element of a Local Plan. Its role is to set a clear direction for the Local Plan to provide a framework on which all the policies and proposals are built such that collectively they will help to deliver the vision for Huntingdonshire. It will be supported by a series of strategic objectives which are intended to help with the delivery of the Vision.

Together the Vision and Strategic Objectives will need to try to balance out the inherent conflicts that arise from new development: the Council's ambitions for growth, challenging net zero carbon aspirations and environmental improvements and improving people's quality of life and well-being. They will need to be complementary to each other rather than considered in isolation. Collectively the Vision, all the Strategic Objectives and the Local Plan policies that follow on from them will need to deliver new development that achieves environmental, social and economic benefits for Huntingdonshire.

**Huntingdonshire's Local Plan to 2036 vision:**

By 2036 Huntingdonshire's physical environment will support the health and wellbeing of all its residents, by:			
Supporting a diverse, thriving economy	Providing sufficient infrastructure to support healthy communities	Meeting the needs of a changing population	Working with our climate, landscape and heritage

This vision is supported by 25 objectives based on the 4 categories in the second row. These are set out in Appendix 1 for reference with a few examples below.

To maintain a good supply of suitable land for growth in sustainable locations and focusing on previously developed land, offering sites of a variety of sizes and types to meet a range of market demands.

### 3 Local Plan Vision and Objectives

To enhance the role of Huntingdon, St Neots, St Ives and Ramsey's town centres helping them to adapt to modern retail trends and focusing commercial developments towards the most accessible locations.

To promote attractive, safe and distinctive residential neighbourhoods in which people can meet their day-to-day social, health, educational, recreational and convenience shopping requirements with access to sustainable transport to meet other needs.

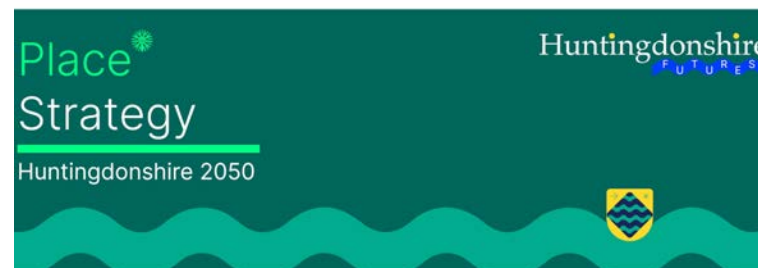

To maintain, enhance and conserve Huntingdonshire's historic environment, characteristic landscapes, natural habitats and biodiversity.

#### Huntingdonshire Futures Place Strategy

One of the main roles of the Local Plan Update is to help deliver the aspirations of the Huntingdonshire Futures Place Strategy. This was prepared through 2022 and early 2023 based on extensive engagement with local residents, organisations and community service providers. Firstly it sought to establish understanding of local people's aspirations for the future of Huntingdonshire, on the themes of people, place, economy, and the environment, then it explored priorities for change and what actions could be taken to deliver it. The Huntingdonshire Futures Place Strategy (2023) sets out a shared vision for Huntingdonshire in 2050 which seeks to shape bold, long term plans and priorities for the district. It is structured around 5 core elements, referred to as journeys:

- Pride in place
- Inclusive economy
- Health embedded
- Environmental innovation
- Travel transformed

The Local Plan Update is one of many delivery mechanisms that will help to achieve these. The aspirations of the Huntingdonshire Futures Place Strategy and the Corporate Plan to 2028 can work in tandem to help shape the Vision and Objectives of the Local Plan update so that in turn it can contribute to delivery of these high level aspirations.

Each of these is supported by 5 'pathways' setting out more detailed priorities which will need different actions to achieve their aspirations and involve a wide range of people and organisations in their delivery. Many aspects that are raised in the Huntingdonshire Futures Place Strategy will involve land use planning in their achievement and the Local Plan Update's vision, objectives and the supporting policies may assist in their delivery. All based on the question 'What if?', the most clearly related pathways include:

- Our homes responded to our needs
- We built up the resilience of our communities
- Our high streets were the centre of social and cultural life
- We created a place where our businesses could flourish
- It was easier to live healthily
- This was a vibrant place for children and young people
- Zero carbon became the norm
- Our natural assets inspired a new infrastructure
- All our energy was produced within the district
- The car wasn't the first choice of transport

The Local Plan Update's strategy, allocations and policies will make a significant contribution to delivering the ambitions of the Huntingdonshire Futures Place Strategy.

## Local Plan Vision and Objectives 3

Our Corporate Plan to 2028 aims to make sure Huntingdonshire is a place where people can thrive. It is made up of three key priorities.

### What should we do?

We have listened to what you said both in shaping the Huntingdonshire Future's Place Strategy and in response to the Issues engagement papers of 2023. We are now asking you to help us to shape the Vision and Objectives for Huntingdonshire for the next few decades building on the priorities that you have already told us about. We have set out some options below and would like to know what you think.

#### The Vision

##### Options - The Vision

###### Should we...

*(Please pick one option.)*

###### **Option A: Have a Vision based strongly on the Huntingdonshire Futures Place Strategy and the Corporate Plan to 2028:**

'By 2046 Huntingdonshire will be a place which people take pride in, where the economy is inclusive of everyone, health and happiness are highly valued, our local landscapes are protected and enhanced with environmental innovation welcomed, and travel is transformed to focus on transitioning away from cars.'

###### **Option B: Have a Vision of a better future achieved through ambitious climate action and a just transition<sup>(1)</sup> towards more social and economic equity.**

'By 2046 Huntingdonshire will be a place where our decisions about land use and planning have helped enable lasting benefits for nature and climate, enhanced the well-being of our residents and have facilitated a just transition towards a more sustainable economy.'

### 3 Local Plan Vision and Objectives

**Option C: Retain the current Vision with minor amendments:**

By 2046 Huntingdonshire's physical environment will support the health and wellbeing of all its residents, by:				
Supporting a diverse and thriving economy	Providing sufficient infrastructure to support vibrant, inclusive communities	Accelerating our climate change response actions	Meeting our changing population's needs	Protecting and enhancing our landscape and heritage

**Option D: Have a Vision describing how Huntingdonshire intends to evolve focused on the three strands of economic, social and environmental sustainability:**

'Huntingdonshire to be a place where high quality growth enhances our communities and supports sustainable living and a high quality of life, balanced with protecting and enhancing our landscape and open spaces for the benefit of people and nature.'

**Option E: Consider an alternative Vision.**

Please let us know what it should be.

**The Objectives**

Suggested lists of detailed objectives are set out in Appendix 1 due to their length. Options are presented for different sets of objectives to support each Vision option. Please choose whether there is a particular group of objectives which you prefer or pick any individual suggested objectives that you support.

**Options - The Objectives**

**Should we...**

(Please choose whether there is a particular group of objectives which you prefer or pick any individual suggested objectives that you support)

**Option A** - The objectives build on Vision Option A and are **shaped by the key 'pathways'** that support the Huntingdonshire Futures Place Strategy journeys:

**Option B** - The objectives build on Vision Option B and **aim to help achieve a better future through a just transition towards ambitious climate action.**

**Option C** - **Minor amendments to the current list** of 25 objectives

**Option D** - The objectives build on Vision Option D and are **focused on the three strands of economic, social and environmental sustainability:**

**Option E** - **Consider alternative objectives** - Please suggest any that you think would be appropriate.

## A Settlement Hierarchy for Huntingdonshire

4

### 4 A Settlement Hierarchy for Huntingdonshire

#### Introduction

A settlement hierarchy is a way of grouping settlements into certain categories, for example a hierarchy may include cities, towns, villages and hamlets, each of which will be of differing size, have different levels of services and facilities and different functions. This hierarchy of settlements can then be used to determine and develop planning policies which can set out what is and is not acceptable in planning terms for an area and provide a guide for acceptable locations for the distribution of new growth. The policies included in the local plan can then be used to assess planning applications.

#### What you told us

In our Issues consultations held between April and July 2023 we asked you where in Huntingdonshire future growth should be focussed. Suggestions were for:

- Proportionate growth of existing settlements/ sustainable villages / small to medium sites to help protect and enhance existing facilities and services
- Densification of/ focus around existing market towns where existing infrastructure and employment is located
- Densification/expansion of existing urban areas / urban extensions
- Putting development in locations that are near/along public transport corridors to reduce congestion and emissions, and improve air quality and public health
- Continuing with the current local plan approach
- A combination of the identified development scenarios in the [Issues consultation document](#) (chapter 9)
- Focussing on areas with good services and facilities or where growth could help retain services.
- Avoid developing in small rural villages/hamlets and the countryside especially where there are no services and facilities to support growth

#### What is this about?

In 2023 we consulted on a methodology to assess the sustainability of our settlements. After amending the methodology from comments received we used this to identify what services and facilities were available in our towns, villages and hamlets and how sustainable they are in terms of meeting the needs of our communities. You can find the full details and outcomes for each place in our [Sustainability of Settlements](#) document.

## 4 A Settlement Hierarchy for Huntingdonshire

We looked at all places in Huntingdonshire with 30 or more homes using the detailed methodology. We also did a basic assessment of each named settlement with fewer than 30 homes. The Sustainability of Settlements 2023 showed that our top 12 most sustainable settlements were: Huntingdon, St Neots, St Ives, Yaxley, Godmanchester, Brampton, Ramsey, Little Paxton, Sawtry, Fenstanton, Houghton and Wyton and Farcet.

The methodology produced scores for all the indicators shown in the table below. These were weighted to show whether they are used by most of the population or some of the population and whether they are used occasionally or frequently.

Indicator	Usage	Frequency
H1 - Time taken to an accident and emergency department from settlement by car	Most of the population	Occasionally
H2 - Access to and capacity of GP surgeries for settlement	Most of the population	Occasionally
E1 - Access to and capacity of catchment primary school(s) for settlement	Some of the population	Frequently
E2 - Access to and capacity of catchment secondary school(s) for settlement	Some of the population	Frequently
RS1 - Presence of foodstore by type	Most of the population	Frequently
RS2 - Number of other shops and services in settlement	Most of the population	Occasionally
CF1 - Cultural and community meeting places	Some of the population	Occasionally
CF2 - Small-scale social meeting places	Some of the population	Occasionally
CF3 - Diversity of formal indoor and outdoor sports facilities	Some of the population	Frequently
PT1 - Frequency of Bus Service	Some of the population	Frequently
PT 2 - Presence of Railway Station	Most of the population	Occasionally
C1 - Coverage of broadband service across a settlement	Most of the population	Frequently
C2 - Number of service providers that provide 'good' indoor 4G voice coverage in settlement	Most of the population	Frequently
EM 1 - Access to employment	Most of the population	Frequently

## A Settlement Hierarchy for Huntingdonshire

4

This work can help us to identify the most sustainable places to locate new homes and jobs and will be one part of the evidence influencing the growth strategy option that we take along with technical evidence on issues such as flood risk, transport infrastructure, environmental constraints and your comments on this document.

In [Huntingdonshire's Local Plan to 2036](#) the current settlement hierarchy is set out in policy 'LP2 Strategy for Development'. It groups Huntingdonshire's settlements as follows.

- **Spatial Planning Areas:** Huntingdon including Brampton and Godmanchester, St Neots including Little Paxton, St Ives including parts of surrounding parishes in the contiguous built-up area, Ramsey including Bury
- **Key Service Centres:** Buckden, Fenstanton, Kimbolton, Sawtry, Somersham, Warboys, and Yaxley
- **Small Settlements:** all other villages containing 30 or more homes
- **The Countryside:** All land outside of these is considered to be the countryside including hamlets of less than 30 homes, small clusters and individual properties

The majority of housing and employment growth (75%) is focussed within the Spatial Planning Areas as these were considered the most sustainable locations. Approximately 25% is directed to Key Service Centres and Small Settlements. Specific sites for new development were allocated in the Spatial Planning Areas and Key Services. Development in Small Settlements was supported through policy criteria if the amount and location of growth proposed was considered sustainable. Development in the Countryside was limited to specific opportunities such as supporting the rural economy so as to protect the best agricultural land and the landscape.

### What should we do?

We are now asking you to input into the settlement hierarchy which will be included in the next local plan. The settlement hierarchy will help to determine which locations growth may be directed to and how much. We will also use the settlement hierarchy to outline what may or may not be acceptable in these areas. We have set some options below and would like to know what you think.

**Note:** The Sustainability of Settlements outcomes can be found [here](#).

#### Options - Settlement Hierarchy

##### **Should we...**

*(You may pick multiple options)*

*Options A to D relate to the whole Settlement Hierarchy.*

**Option A** - Keep the existing settlement hierarchy of Spatial Planning Areas, Key Service Centres, Small Settlements and Countryside with the same list of settlements in each

**Option B** - Keep the current categories in the existing settlement hierarchy but update the settlements included in the categories based on their current sustainability (informed by the Sustainability of Settlements outcomes)

**Option C** - Strictly reflect the Sustainability of Settlements scoring outcomes of individual settlements and apply a categorisation based on a preferred number of groupings

**Option D** - Remove the category of Spatial Planning Areas and group each settlement based on its individual merits

## 4 A Settlement Hierarchy for Huntingdonshire

*Options E to I relate to specific elements of the Settlement Hierarchy.*

**Option E** - Put Huntingdon and St Neots in a higher category on their own, reflecting their higher level of services (with or without their associated other SPA settlements)

**Option F** - Have the four market towns of Huntingdon, St Ives, St Neots and Ramsey as the highest category in the settlement hierarchy so as to direct most growth to these areas.

**Option G** - Replace the Key Service Centres and Small Settlements categories with 3 categories to reflect the significant variation in levels of services and facilities (informed by the Sustainability of Settlements outcomes)

**Option H** - Recognise clusters of villages which benefit from shared services or facilities and group them together as one 'settlement'.

**Option I** - Move less or unsustainable small settlements into a hamlets and/or countryside category

**Option J** - Consider an alternative option. Please let us know.

## 5 Approach to Employment and Economy

### Introduction

We need to think about our approach to employment and the economy, how much employment growth is needed and what we want the district to look like in the future. Our Issues Engagement consultation held between April and July 2023 raised a number of issues relating to retail and town centres, the rural economy, logistics and distribution and the green economy. We have taken these comments on board and will be gathering evidence and investigating our approach to these issues. This chapter therefore focuses on more of our strategic economic priorities and asks for your opinions on these options moving forward.

### What you told us

In our Issues consultations held between April and July 2023 we asked for your thoughts on employment and the economy. Suggestions were for:

- Requiring new business to be sustainable contributing towards net zero
- Allowing space for businesses to grow
- Understanding the impact and influence of Cambridge and Peterborough on the local economy.
- Supporting for the green economy, jobs and logistics
- More sites for logistics and distribution especially along major roads such as the A1 and A14.
- Logistics and distribution will have a negative impact on transport infrastructure and pollution (especially in villages) and will produce minimal jobs with little opportunity for upskilling.
- Support small businesses and start-ups.
- Protection and enhancement of town centres, independent shops and retail sector, provide policies that are flexible, adapt to market conditions and increase employment opportunities
- Ensure appropriate infrastructure to support increased working from home and opportunities for co-working facilities.
- Support for the rural economy, farm diversification and rural business hubs.
- Protection of agricultural land to ensure food security.
- Encourage and promote the small scale rural tourist economy focussed on nature and heritage assets.
- Create employment sites locations which meet the emerging sectors' demands easily accessible by road, active travel and public transport.
- Support and encourage specific sectors including advanced manufacturing, biotechnology, hi-tech, life sciences, health, construction/ housebuilding, creative industry, leisure

## 5 Approach to Employment and Economy

### What is this about?

The Local Plan can influence the local economy and employment in the district number of ways, it can allocate sites for development, set requirements for new developments and buildings and establish what type of development is considered acceptable or unacceptable and in what locations. Local Plans can identify the type and use class of business that they would like to see in the district, they can encourage specific sectors in specific locations. These requirements would need to be supported by identifying the use class proposed and the criteria that planning applications will be assessed on, robust evidence would be required to justify these decisions. An example of this from our current is Local Plan Policy LP18 Established Employment Areas which supports class 'B uses' (employment uses) within our Established Employment Areas (EEA) unless it can be demonstrated that other specific criteria are met such as being compatible with the existing employment use. These [B uses](#) included general industrial uses (B2), storage or distribution (B8), offices (B1a), research and development of products or processes (B1b) and industrial processes (B1c). In 2020 the categorisation of these uses were amended and the B1 uses were moved into a new [Category E - Commercial, Business and Service](#) it includes but is not limited to uses such as retail, professional services, sport, recreation and fitness, medical and health services, nurseries and creches.

The NPPF identifies that planning policies should help create the environment *"in which businesses can invest, expand and adapt."*, this means an element of flexibility within the policies may be required to meet changing market conditions. Local Plans should also look at and assess local business needs and wider opportunities for development to help the district to *"build on its strengths, counter any weaknesses and address the challenges of the future."*

Our current local plan includes policies on the number of jobs the plan makes provision for, preferred locations for business development and the identification, protection and expansion of Established Employment Areas, including appropriate uses. There are 37 [EEAs](#) dispersed across 20 settlements around the district. It also includes a policy to promote a vibrant rural economy in the countryside and

identifies acceptable uses. Alconbury Enterprise Zone also provides opportunities for investment and the economy with a potential for at least 290,000sqm of business floorspace.

The NPPF says that planning policies should have regard to Local Industrial Strategies, other local policies for economic development and regeneration. This means that we will need to understand the ambitions of the Cambridgeshire and Peterborough Local Industrial Strategy, aims of the Oxford to Cambridge Pan-Regional Partnership, Huntingdonshire Futures Place Strategy and our own future Economic Growth Strategies. We will need to assess and test what this means for us and how and if these ambitions can be achieved through evidence.

The [Oxford to Cambridge pan-Regional Partnership](#) is working to draw investment opportunities along the Oxford to Cambridge Arc, with a key focus on knowledge intensive businesses, research and development and collaboration networks. The East West rail proposal connects Oxford, Cambridge and areas in the region with the potential to facilitate growth and productivity gains.

The [Local Industrial Strategy](#) identifies 3 sub-economies within Cambridgeshire and Peterborough focussed on Peterborough, Greater Cambridge and the Fens, Huntingdonshire is located within all three sub-economies meaning it has the potential to support and benefit from all three. The key priority sectors were identified as life sciences, digital and information technologies (including artificial intelligence), advanced manufacturing and materials and agri-tech. These are complimented by supporting sectors such as logistics, health and social care, education, visitor economy and business tourism, and construction.

The [Huntingdonshire Futures Place Strategy](#) created a shared vision on what Huntingdonshire should be like by 2050 with a clear path or 'journeys' relating to inclusive economy, and environmental innovation including the aim to create an environment where businesses can prosper including start ups and established industries. It looks towards securing the right workspaces to respond to business needs including flexible workspaces, circular economy principles for new developments, clusters, hybrid working, innovative green R&D and energy, warehousing and production facilities with easy distribution access, accessible by public transport and situated at strategic locations.

A refresh of our economic growth strategy will look towards building on these principles and target sectors to establish local growth and priority areas to complement and unlock our economic potential within the district.

Industry cluster mapping undertaken by our economic development team looked at the location of businesses in our district based on sector such as advanced manufacturing, life science, knowledge intensive industries, wholesale/retail distribution, business services, construction and utilities, I.T., transport and travel.

The sector mapping shows that a large proportion of business activity occurs in the main economic centres in the district, namely Huntingdon, St Ives and St Neots and key service centres/ larger settlements. Advanced manufacturing/ manufacturing is clustered within Established Employment Areas and town centres, and strategically located along major roads such as the A1. In addition, relative to scale/ population size, the density of manufacturing businesses in the north of the district is greater, particularly in Yaxley, which could be due to its relationship with Peterborough and the A1. The knowledge intensive sector shows a higher density of businesses in southern/ central Huntingdonshire and a similar trend is demonstrated within the life science sector, particularly St Ives where there is clustering within and surrounding Compass Business Park potentially benefiting from being in proximity to Cambridge. <sup>(2)</sup>

### Advanced Manufacturing Industries

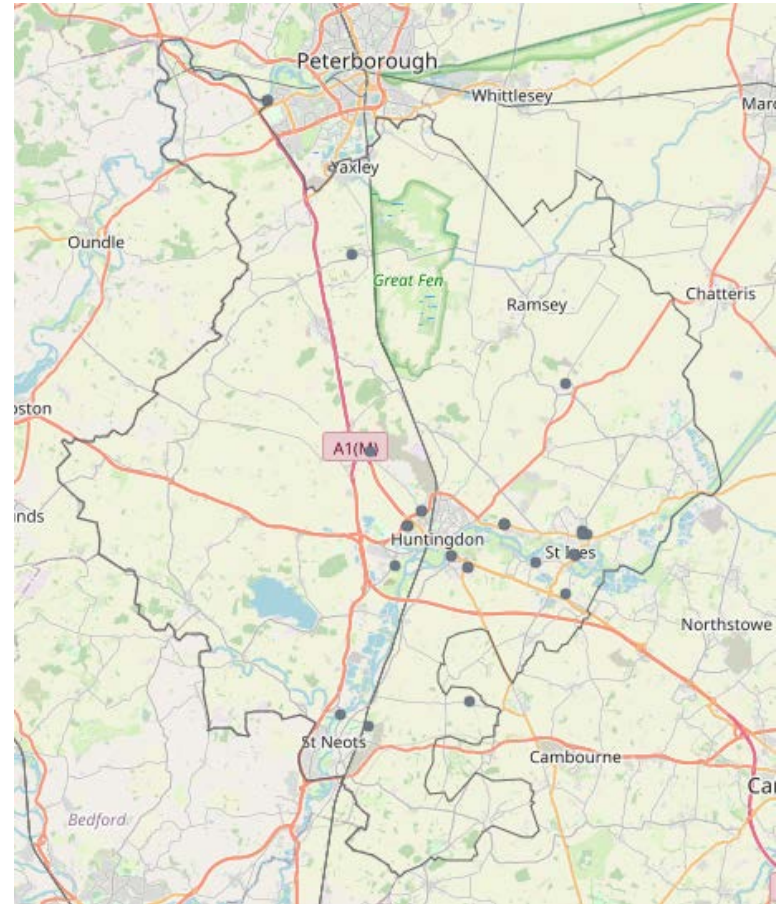

# 5 Approach to Employment and Economy

### Knowledge Intensive Industries

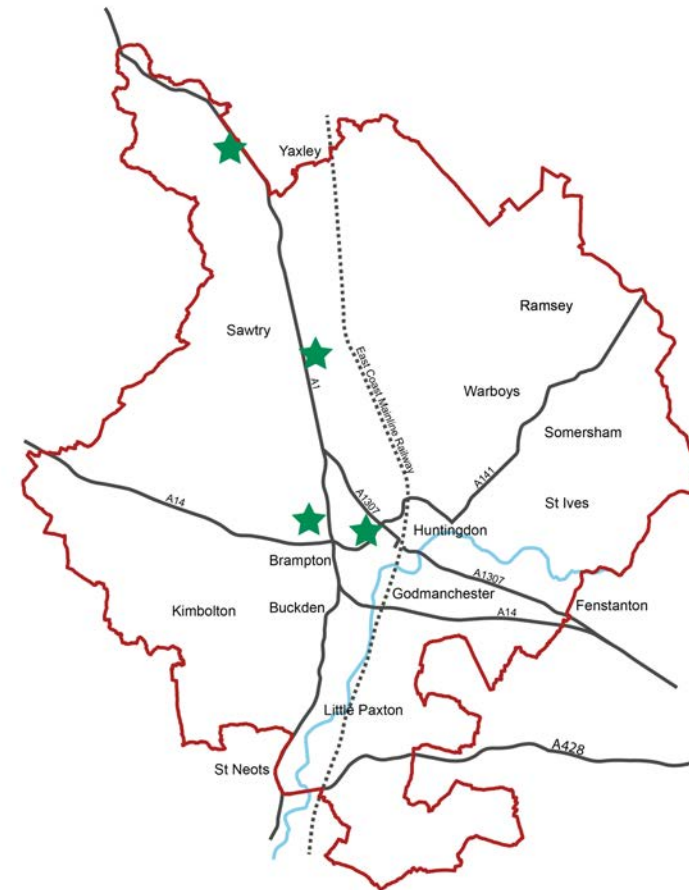

### Life Science Industries

Comparing business completions and commitments data with the location of Established Employment Areas indicates the policies in the current Local Plan are broadly functioning with a significant amount of employment land activity occurring within and adjoining EEA. There may be an emerging trend whereby a combination of retail and employment are becoming more popular within some EEAs, however, this will be investigated further through and evidence base for confirmation. There has been some development and approved applications outside of EEAs in new locations, most notable of which is a commitment for a mixed-use development including employment uses north of Ramsey Tesco.

During our [Call for Sites consultation](#) in 2023 a number of large scale (strategic) sites and clusters of employment sites were put forward for consideration as new employment locations which could be included in the next Local Plan as employment allocations. These sites include locations in the north of the district and west of the A1, south east of Sawtry, at Brampton Cross (west of the A1 and north of the A14) and north west of Huntingdon (north of the A141). Most of these sites have the potential to provide 120,000sqm or more of employment focussed development as a standalone site or as part of a cluster of sites.

- Administrative Boundary
- Roads
- River Great Ouse
- ... East Coast Mainline Railway
- ★ Large Scale Employment Sites

## 5 Approach to Employment and Economy

Our Economic Development team has looked at a cross section of businesses and sectors across Huntingdonshire to help us to gain an understanding of the number of jobs that could be created per 100sqm of new business floorspace. Sectors such as advanced manufacturing in general see between 2 to 3 jobs per 100sqm and logistics and distribution 1 to 2 jobs. Knowledge intensive services within Huntingdonshire produce a higher number of jobs per square metre demonstrating 3 to 4 jobs per 100sqm, whilst I.T. and Telecoms sees a greater concentration of employment at 8 to 10 jobs. This information could enable us to understand what an increase in business floorspace would mean in the district in terms of job creation and the need for new homes. A strong focus towards economic growth could see the requirement for additional housing provision above the standard method to reduce travel distances enabling a more sustainable strategy.

To help inform future policies and develop our strategy for economic growth an evidence base will be produced. We will draw on strategic documents and a future economic growth strategy for Huntingdonshire, establish a baseline for the current supply and demand of employment land and properties in the market, the status and functioning of EEAs and growth forecasts. This will help to identify any failures within the market, adapting to increased premises demand for growing sectors and business whilst responding to a changing market which may include aspects such as sector decline. Landowners and developers have submitted potential sites for consideration as new employment allocations, these will assist in identifying potential suitable land.

The evidence will help us to understand what policies are working, what target sectors we should focus on, whether new land is required for protection or allocation, how much business space is needed and the most appropriate locations for this. We will also investigate where we can benefit from existing and adjoining economies.

### What should we do?

We are now asking you to input into how the next Local Plan can support, enhance and respond to the local economy

#### Strategy ambitions

##### Options - Strategy Ambitions

###### **Should we...**

*(Please pick one option.)*

**Option A: Plan for limited (low) employment growth** to support Huntingdonshire's existing businesses. Growth guided exclusively by criteria based policies.

**Option B: Plan for sustainable (medium) growth** by supplying a sufficient amount of employment land/ allocations to allow for some business expansion and investment and to provide a flexible approach to changing market conditions.

**Option C: Plan for ambitious (high) growth** capitalising on key priority sectors of the wider economy and creating business clusters.

**Option D: Consider an alternative strategy ambition.** Please let us know what it should be.

## Location of development

## Options - Location of Development

**Should we (subject to an Employment Land Study)...**

*(You may pick multiple options)*

**Option A: Focus employment growth within and adjacent to Established Employment Areas.**

**Option B: Focus employment growth strategically along major highways** such as the A1.

**Option C: Focus employment growth next to or within large scale housing sites** promoting mixed use development aligning employment growth with housing growth.

**Option D: Focus employment growth in sustainable locations** such as allocating sites that are accessible by public transport and active travel.

**Option E: Focus employment growth in existing economic centres** which are located in market towns and larger settlements.

**Option F: Consider an alternative strategy ambition.** Please let us know what it should be.

## Established Employment Areas

## Options - Established Employment Areas

**Should we...**

*(You may pick multiple options)*

**Option A:** Remove the designation of EEA that protects and encourages use class B (general industrial, storage and distribution uses) being located within these areas.

**Option B:** Continue with safeguarding and enhancement of EEA accounting for changes to national policy and regulations.

**Option C:** Continue with safeguarding and enhancement of EEA but review the type of uses that are acceptable within them and the criteria used to assess their suitability.

**Option D:** Create additional and / or extended employment areas by reviewing existing employment sites or allocating new employment sites.

**Option E:** Consider an alternative option. Please let us know.

## 6 Housing Figures and Requirement

### 6 Housing Figures and Requirement

#### Introduction

Having a safe, secure and affordable home is a basic necessity that provides shelter and supports a person's health, well-being and independence. Collectively, homes that meet people's needs help to build thriving sustainable communities where residents can experience a high quality of life.

A key role of the Local Plan is to provide a strategy for meeting Huntingdonshire's housing needs in terms of the quantity, size, type and tenure of new homes. It will aim to ensure that the housing needs of all types of households are provided for. Housing is often seen as the crux of a Local Plan as proposals for new housing growth can have direct impacts on existing communities. However, housing is just one element of many that go towards making up sustainable communities and assisting people in having a high quality of life.

#### What you told us

In our Issues consultations held between April and July 2023 we asked for your thoughts on what the housing requirement should be. Suggestions were for:

- The standard methodology for housing need to form the baseline but the Housing Needs of Specific Groups evidence should be updated to advise the level of additional uplift justified
- More than the standard methodology number should be provided to give flexibility, this could be between 10-20% to respond to changes in delivery rates, changes in national policy and unexpected circumstances
- An uplift is required as the anticipated decline in average household size will necessitate additional housing to accommodate the existing population before allowing for extra population growth
- An uplift in overall housing and hence market housing supply is needed to be able to support adequate affordable housing to meet needs while being viable to deliver
- A higher housing requirement above the standard method to meet the economic aspirations of the Huntingdonshire Futures Place Strategy and support the commitment of economic growth along the Oxford to Cambridge corridor
- Additional housing to maximise the value of significant strategic infrastructure investment in the area
- The Local Plan could over-allocate where there is evidence of suitable, available and sustainable sites to contribute to national aspirations to significantly boost housing supply
- Potential for taking on additional homes where there is an unmet needs from neighbouring authorities
- Prioritising delivery of smaller new homes for local people to a maximum 5% growth in rural area residential properties in any plan period

## Housing Figures and Requirement

6

### What is this about?

The government is committed to significantly increasing the supply of new homes with the ambition to deliver 370,000 new homes a year across England during the lifetime of this parliament as part of a growth focused approach to the planning system. Their aim is for us to meet the area's identified housing need including with an appropriate mix of housing types for the local community.

Huntingdonshire's Local Plan to 2036 has an annual housing target of 804 new homes per year, based on an overall target of 20,100 new homes across its 25 year lifespan. This is set out in policy 'LP1 Amount of Development'. By 31st March 2023, 9,821 new homes had been completed since 1 April 2011, the equivalent of 818 per year. 1,115 new homes were under construction and 10,638 homes had planning permission that hadn't been started. For context, over the last 5 years under the strategy adopted in Huntingdonshire's Local Plan to 2036 on average 1,079 homes have been built a year. In the longer term of 10 years, on average 855 homes have been built a year. In 2022/23 1,250 new homes were completed. The following graph shows how many homes have been delivered in relation to our current target (completions for 2023/24 are shown in red as these are yet to be finalised but initial data shows it will be at this level):

The Huntingdonshire Futures Place Strategy recognised the importance of having homes in the district that meet our needs. People valued high quality, accessible homes that are affordable to all who need them and located in inclusive, well serviced communities.

The starting point for the number of homes that we have to plan for comes from a nationally set formula known as the government's 'standard method' number. A revised standard methodology approach was published for consultation on 30 July 2024. The government have announced their intention is for the revised housing targets to be mandatory. However, until the revised methodology is finalised we cannot be certain what the minimum target number will be. Until then we cannot be sure what level of housing growth we should plan for.

The current approved standard method is based on the 2014 household projections and makes allowance for any historic under-supply. It also aims to address housing affordability problems by applying an adjustment factor based on local median workplace based affordability ratios which are updated in March each year. The uplift to account for affordability is currently around 30% with the maximum required being capped at 40%. In the National Planning Policy Framework (December 2023), paragraph 67 advises that the housing requirement 'may be higher than the identified housing need if, for example, it includes provision for neighbouring areas, or reflects growth ambitions linked to economic development or infrastructure investment'.

A proposed revised method has been issued for public consultation from 30 July to 24 September 2024. This is set out within a revised draft of the National Planning Policy framework. The proposed revised standard method is based on the housing stock as at 2023 and includes a greater adjustment to address the relative affordability of homes in the district. The expectation is that this will be a mandatory target to provide the basis for plan making, not the final housing requirement. The draft National Planning Policy Framework states that the government are absolutely clear that authorities may justify planning for a lower number only where they can evidence hard constraints to the Planning Inspectorate. Given the annual nature of the updates to the standard method housing number it will be fixed at a point when the Local Plan is nearing completion.

## 6 Housing Figures and Requirement

The box below shows what the approved standard method calculation was at the start of the Plan period (2021), what it is now in 2024 and what it would be using the draft revised methodology to allow a comparison of the figures.

### Huntingdonshire's Standard Method Housing Calculation

2021 standard method figure	2024 standard method figure	Proposed revised standard method figure
Number of households in 2021 = 77,962	Number of households in 2024 = 80,282	Housing stock estimates 2023 = 82,155
Number of households projected in 2031 = 85,146	Number of households projected in 2034 = 87,022	0.8% of dwelling stock as baseline starting point = 657.24
Total projected household growth = 7,184	Total projected household growth = 6,740	Average house price to workplace based earnings affordability ratio over the last 3 years = 9.53
Annual projected growth = 718.4	Annual projected growth = 674	Adjustment factor = $\frac{((9.53-4)/4) \times 0.6}{1} + 1 = 1.83$
Local median workplace based affordability ratio = 9.97	Local median workplace based affordability ratio = 8.75	Draft proposed standard method outcome = $657.24 \times 1.83 = 1,203$ new homes per year
Adjustment factor = $\frac{(((9.97-4)/4) \times 0.25)}{1} + 1 = 1.373$	Adjustment factor = $\frac{(((8.75-4)/4) \times 0.25)}{1} + 1 = 1.297$	

2021 standard method figure	2024 standard method figure	Proposed revised standard method figure
Standard method outcome = 718.4 x 1.373 = 987 new homes per year	Standard method outcome = 674 x 1.297 = 874 new homes per year	<b>Over the period 2021-2046 (25 years) = 30,069 new homes</b>
Over the period 2021-2046 (25 years) = <b>24,675 new homes</b>	Over the period 2021-2046 (25 years) = <b>21,850 new homes</b>	

The Cambridgeshire and Peterborough devolution deal (2017) committed to delivering substantial economic growth across the area with the ambition of virtually doubling the area's economic output over 25 years to over £40billion. The aspiration is to evolve into an area which is internationally renowned for its low carbon, knowledge based economy and has further developed key sectors of life sciences, information and communications technologies, creative and digital industries, clean tech, high value engineering and agri-business. In March 2024 the former government issued an update to 'The Case for Cambridge' which sought to grow Greater Cambridge by 150,000 new homes and associated employment and other uses estimated to add around £6.4billion to the economy. The future for this is now uncertain in the light of the proposed revised standard method which would lead to a 56% uplift in Cambridge's housing target over the current figure anyway. The government promotes effective strategic planning across local planning authority boundaries to support sustainable growth including meeting housing needs. Given the proximity of Huntingdonshire to Greater Cambridge and the existing and potential transport and connectivity levels we may continue to play an important role in supporting the economic and housing needs of the wider area.

The [Housing Needs of Specific Groups for Cambridgeshire and West Suffolk \(2021\)](#) provides evidence on the level of housing need in Huntingdonshire and details of needs for specific groups within our community. It is recognised that this needs to be updated now that the relevant Census 2021 data has been published. Updated evidence will provide detail on the nature of the housing that is required as is explained more in chapter 11 'Housing Tenures and Housing mix'.

NPPF paragraph 67 states a requirement that within the overall housing requirement of the Local Plan, strategic policies should also set out a housing requirement for designated neighbourhood areas which reflects the overall strategy for the pattern and scale of development and any relevant allocations.

We have looked at what you suggested and provided four main options to ensure that they are significantly different from each other. These are identified below with a brief assessment of the pros and cons that the option may have.

**Option A - Plan for the standard method number (approved current methodology = 874 new homes a year and draft proposed methodology =1,203 new homes a year)**

Pros	Cons
<ul style="list-style-type: none"> <li>• Meets the minimum requirements of the NPPF</li> <li>• Minimises the amount of land needed for development</li> <li>• Allows for selection of the most sustainable sites only</li> <li>• Minimises the delivery targets measured at the national level which minimises the risk of the application of the 'tilted balance' where the bar to refuse planning applications for new homes is much higher</li> <li>• Higher delivery rates could be supported through policies, additional to allocations, without the risk of being measured at the national level against higher targets</li> </ul>	<ul style="list-style-type: none"> <li>• Would not align with the growth aspirations of the Huntingdonshire Futures Place Strategy</li> <li>• Does not provide any flexibility should the standard method number increase</li> <li>• Could leave the Local Plan Update vulnerable to inclusion of additional sites through the examination process with less local input to decision making if proposed allocations prove unachievable</li> <li>• Liable to challenge at examination that it does not address the exceptional circumstances of the wider Cambridgeshire and Peterborough area</li> </ul>

## 6 Housing Figures and Requirement

**Option B - A 5% uplift on the standard method number to allow a small amount of flexibility in case some sites do not deliver as expected (approved current methodology = 918 new homes a year and draft proposed methodology =1,263 new homes a year)**

Pros	Cons
<ul style="list-style-type: none"> <li>Slightly more allocations gives some resilience against housing market changes and enhanced demand for housing or speeding up of housing delivery rates</li> <li>Would help support the growth aspirations of the Huntingdonshire Futures Place Strategy</li> <li>A greater overall amount of housing could help with the viability of delivering affordable housing</li> <li>Could help to support and sustain local services and facilities</li> <li>Would enhance market choice</li> </ul>	<ul style="list-style-type: none"> <li>Limited flexibility if some proposed site allocations prove unacceptable through the Local Plan examination and the numbers are not fully made up on alternative allocations</li> <li>Housing delivery is monitored from the base date of the plan; delivery may be in deficit for the early years unless easy to deliver allocations come through to completion very quickly; some risk of application of the national presumption in favour of sustainable development where the bar to refuse planning applications for new homes is much higher resulting in probable approvals of schemes which are not compliant with the Local Plan Update's policies.</li> <li>Could increase the pressure for development on less sustainable sites</li> </ul>

**Option C - A 10% uplift on the standard method number to allow a some flexibility in case some sites do not deliver as expected or affordability ratios worsen (approved current methodology = 961 new homes a year and draft proposed methodology =1,323 new homes a year)**

Pros	Cons
<ul style="list-style-type: none"> <li>Provides a clear statement of support for aspirations for enhanced economic growth</li> <li>Could help to meet needs from Greater Cambridge to support the wider economy and facilitate timely housing growth</li> <li>Increased housebuilding would stimulate economic growth and support mobility of employees</li> <li>Could help meet housing needs throughout the district including in smaller villages</li> <li>Could help to support and sustain local services and facilities</li> <li>Would maximise market choice</li> <li>A greater overall amount of housing would help with the viability of delivering affordable housing</li> <li>A phased housing target could be included in to account for the lead-in time for delivery of strategic scale sites but this would result in even higher annual housing targets later in the plan's lifetime</li> </ul>	<ul style="list-style-type: none"> <li>Under the proposed revised standard method number the annual housing target would be higher than the number of new homes completed in any year since 2000/01.</li> <li>Housing delivery is monitored from the base date of the plan; delivery is likely to be in deficit for the early years giving high risk of the national presumption in favour of sustainable development where the bar to refuse planning applications for new homes is much higher resulting in probable approvals of schemes which are not compliant with the Local Plan Update's policies unless a phased target is included.</li> <li>Would increase development pressure throughout the district and increase the amount of land needed</li> <li>Could give rise to market absorption challenges in locations of highly concentrated growth</li> </ul>

Pros	Cons
	<ul style="list-style-type: none"> <li>• Additional housing would give rise to increased carbon emissions, and increased travel and transport demands</li> <li>• Achieving the housing target would be vulnerable to market fluctuations from non-planning related impacts such as recession or national/ international political instability.</li> </ul>

**What should we do?**

We are now asking you to input how what the housing requirement should be for the updated Local Plan.

**Options - Housing Requirement**

**Should we....**

*(Please pick one option.)*

**Option A - Plan for the standard method number** (approved current methodology = 874 new homes a year and draft proposed methodology =1,203 new homes a year)

**Option B - A 5% uplift** on the standard method number to allow a small amount of flexibility in case some sites do not deliver as expected (approved current methodology = 918 new homes a year and draft proposed methodology =1,263 new homes a year)

**Option C - A 10% uplift** on the standard method number to allow a some flexibility in case some sites do not deliver as expected or affordability ratios worsen (approved current methodology = 961 new homes a year and draft proposed methodology =1,323 new homes a year)

**Option D - Consider an alternative option.** Please let us know.

## 7 Achieving Well Designed Places

### 7 Achieving Well Designed Places

#### Introduction

Creating high quality buildings and places is fundamental to what the planning and development process should achieve. Building design is an aspect of this with other aspects relating to context, identity, movement around places, public and open spaces, land uses, and green infrastructure.

Settlement character is hugely influenced by the design of buildings. This character is continually evolving with the types, variety, materials, construction methods and age of buildings playing an important role. Development proposals need to respond to their context. Building design is a key way in which developments can be sustainably integrated into towns and villages as part of wider placemaking principles.

#### What you told us

In our Issues consultations held between April and July 2023 we asked you how the updated Local Plan can deliver high quality places reflective of settlement character. Suggestions were for:

- The updated Local Plan to give consideration to national policy and guidance as well as local guidance within Huntingdonshire's Design Guide and Landscape and Townscape SPD.
- Development to be net carbon zero, energy efficient and climate resilient
- Be of high quality and reflective of local character and design and where appropriate draw on opportunities offered by the historic environment and reflect local character and distinctiveness
- Integrated walkable neighbourhoods containing local facilities
- Provide a wide range of housing to suit all needs in terms of household composition, affordability, demographics and specialist needs, and doing so in a manner that promotes mixed communities
- Prioritising active travel and public transport and supporting the public rights of way network
- Supporting social inclusion and interaction by creating a sense of place
- Ensuring places are designed to feel safe
- The provision of new infrastructure, new facilities and new services in strengthening the sense of identity of places and supporting the creation of healthy communities
- A variety of open spaces should be utilised including informal green space, orchards, parks, community gardens, children's play areas, amenity spaces, MUGAs, sports pitches and local nature habitats across both residential and other development sites
- Ensuring that settlements which are distinctive and different from each other, are both perceived to be and remain physically separated

## What is this about?

The NPPF explains that local plans should set clear design visions and expectations.

The Huntingdonshire Local Plan to 2036 has several design policies that strive to create and shape high quality places and building design, these are policies 'LP11 Design Context', 'LP12 Design Implementation', 'LP13 Placemaking' and 'LP14 Amenity'. These policies require development proposals to utilise the [Huntingdonshire Design Guide \(2017\)](#) as well as [conservation area character statements](#) and the [Huntingdonshire Landscape and Townscape SPD \(2022\)](#) to shape proposals.

These policies alongside 'LP4 Contributing to Infrastructure Delivery' and 'LP32 Protection of Open Space' require developers to provide or financially contribute to the provision of open spaces, guide the design of new developments and also protect against the loss of open space, outdoor recreation facilities, allotments and areas of garden land that provide amenity value. The Design Guide provides guidance on the design and layout of public and open spaces and the [Developer Contributions SPD \(2011\)](#) provides more detailed information on the requirements for new developments including the quantity of required for parks and gardens, natural and semi-natural green space, children's play space, allotments and community gardens etc.

Two 'journeys' of the Huntingdonshire Futures Place Strategy are particularly relevant to the issues of achieving well-designed and beautiful places:

- Pride in Place
- Environmental Innovation

Engagement for the Pride in Place journey showed that local people strongly value the district's rich heritage and landscapes; the market towns and villages, the wide open fens and parklands, rolling claylands, and the Ouse Valley all contribute to Huntingdonshire being thought of as a beautiful place. Raising our ambition for better design was promoted by many people as important through local guidance and standards, particularly for new homes. There is now a much greater awareness

of the importance of open space and the benefits it can provide not only to the physical and mental well being of people but to wildlife and to mitigating the impacts of climate change. The Council produced in 2020 a [Healthy Open Spaces Strategy](#) to ensure that Huntingdonshire's open spaces continue to be used and valued by communities and to explore how they can support wider positive change.

Rewilding and nature based infrastructure schemes were advocated through the Environmental Innovation journey. Our varied natural landscape, with river valleys, woodlands, meadows and fenlands were highlighted as being greatly valued. Achieving well-designed and beautiful places is an essential way of maintaining and enhancing aspects of our landscape that people value. Projects can vary from the landscape scale of the Great Fen rewetting of peatland and establishment of a 3,700 ha wildlife haven to sustainable drainage systems within new developments which are a feature that can provide both a technical solution to drainage issues and aid rainwater in infiltrating soils and slow the rate of surface water run off as mentioned in 11 'Tackling Flooding and Water'. Other possible design features reflected in the Environmental Innovation journey which we might explore include rainwater harvesting which is the process of collecting and filtering rainfall from the roofs of residential and commercial buildings.

Since the adoption of the Local Plan, there is now greater emphasis on development that is beautiful with this requirement found throughout the NPPF. In 2021, the [National Model Design Guide](#) and [National Model Design Code](#) were published which illustrate how well-designed places that are beautiful, healthy, greener, enduring and successful can be achieved in practice and form part of the Government's collection of planning practice guidance. The NPPF highlights that local planning authorities should prepare design guides or codes consistent with the principles set out in these documents. To ensure that the Huntingdonshire's Design Guide SPD 2017 meets the new criteria set out in the NPPF 2021, we undertook a [compatibility check](#) of the SPD against the requirements set out in the National Model Design Guide and National Model Design Code's, both of which incorporate 10 characteristics for a well-designed place. The compatibility check confirms that our Design Guide meet the requirements of both these documents.

## 7 Achieving Well Designed Places

The ten characteristics of well-designed places

Sport England have also developed 10 principles of active design that can apply to our built and natural environments to encourage people to be active through their daily lives. It recognises that well designed places can have a positive impact on people’s health and well-being, both physical and mental. Active design has a wide range of other potential benefits too including being socially inclusive, generating lower carbon emissions, supporting better air quality and promoting economic productivity. The following illustrations show the 10 principles of active design.

### FOUNDATIONAL PRINCIPLE

#### Principle 1 – Activity for all

All environments should support physical activity equitably across all ages, ethnicities, genders, and abilities, enabling everyone to be active and build long-term active habits and behaviours. This is essential for the delivery of all the principles of Active Design and is its foundational principle.

### SUPPORTING ACTIVE TRAVEL

#### Principle 2 – Walkable communities

Facilities for daily essentials and recreation should be within easy reach of each other by active travel means, making it more likely that people will make the journey by using active travel modes (defined in Theme 1). Good active travel connections should be provided to extend the range of services that are accessible while remaining physically active.

#### Principle 3 – Providing connected active travel routes

Encourage active travel for all ages and abilities by creating a continuous network of routes connecting places safely and directly. Networks should be easy to use, supported by signage and landmarks to help people find their way.

#### Principle 4 – Mixing uses and co-locating facilities

People are more likely to combine trips and use active travel to get to destinations with multiple reasons to visit. Places with more variety, higher densities, and a mix of uses also reduce the perception of distance when travelling through spaces. They also generate the critical mass of travel demand to better support public transport services.

**ACTIVE HIGH-QUALITY PLACES AND SPACES****Principle 5 – Network of multi-functional open spaces**

Accessible and high quality open space should be promoted across cities, towns and villages to provide opportunities for sport and physical activity, as well as active travel connections and natural or civic space for people to congregate in and enjoy.

**Principle 6 – High-quality streets and spaces**

Streets and outdoor public spaces should be Active Environments in their own right. They should be safe, attractive, functional, prioritise people and able to host a mix of uses, with durable, high quality materials, street furniture in the right places and easy-to-use signage. High quality streets and spaces encourage activity, whereas poor quality streets and spaces are much less likely to be used to the same degree.

**Principle 7 – Providing activity infrastructure**

Infrastructure to enable sport, recreation and physical activity to take place should be provided across all contexts including workplaces, sports facilities and public space, to facilitate activity for all.

**Principle 8 – Active buildings, inside and out**

Buildings we occupy shape our everyday lives, both when users are inside and outside. Buildings should be designed with providing opportunities for physical activity at the forefront, considering the arrival experience, internal circulation, opportunities to get up and move about, and making the building an active destination.

**CREATING AND MAINTAINING ACTIVITY****Principle 9 – Maintaining high-quality flexible spaces**

Spaces and facilities should be effectively maintained and managed to support physical activity. These places should be monitored to understand how they are used, and flexible so that they can be adapted as needed.

**Principle 10 – Activating spaces**

The provision of spaces and facilities which can help to improve physical activity should be supported by a commitment to activate them, encouraging people to be more physically active and increasing the awareness of activity opportunities within a community.

These options focus on higher level design issues rather than detailed policies such as those set out in Section C of Huntingdonshire's Local Plan to 2036. This is because there is a strong likelihood of national development management policies being introduced. Once there is more certainty on these we will look to develop locally based policies to complement them if necessary. If they do not come forward we will look to update and revise our current development management policies to reflect changes in national policy and in local priorities since they were approved in 2019.

**What should we do?**

We are now asking you to input how the updated Local Plan can plan well-designed and beautiful places across the district.

## 7 Achieving Well Designed Places

### Question - Design Characteristics

We will be using the [National Design Code](#) to shape what aspects of design we will include in our future design policies. Are there any specific design characteristics that are important to you and that you think we should include in the Local Plan Update?

### Question - Active Design

Would you support use of the 10 principles of active design through future Local Plan policies? Are there any in particular that you think are more important than others?

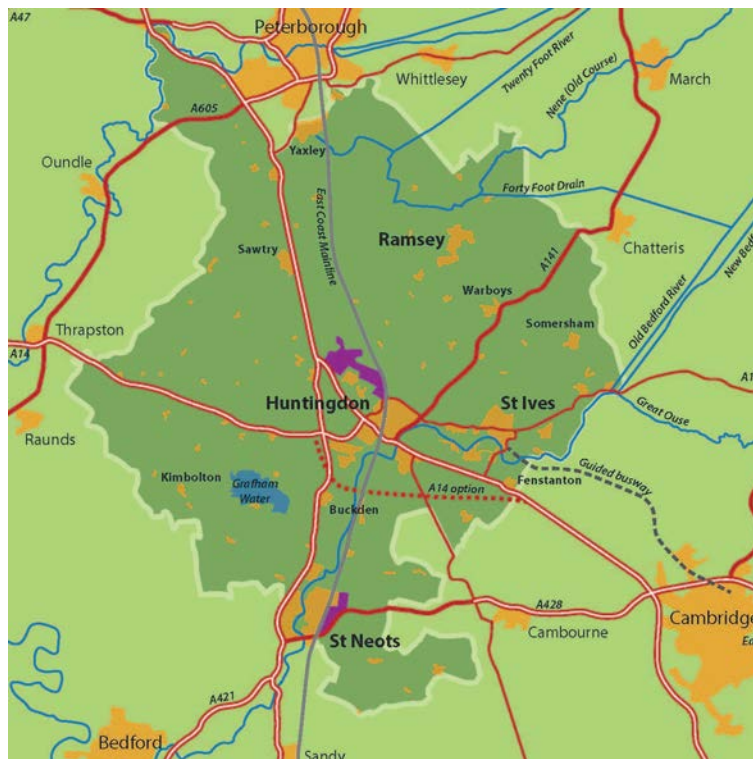

### Question - Updating current Development Management Policies

If national development management policies do not come forward while we are preparing this Local Plan Update do you have any suggestions for changes that you would wish to see to any of our current development management policies? If so, please specify the current policy number.

## 8 Growth Strategy Options

### Introduction

In this section we will be looking at how and where our district may grow to meet our housing and employment needs in the future. The Local Plan is not just concerned with delivering housing. The National Planning Policy Framework (December 2023) (paragraph 20) requires that Local Plans must set out an overall strategy for the pattern, scale and design quality of places, and make sufficient provision for housing, employment, retail, leisure, other commercial development.

### What you told us

In our Issues consultations held between April and July 2023 we asked for your thoughts on where growth should be focussed. Suggestions were for:

- Proportionate growth of existing settlements/ sustainable villages / providing small to medium sites.
- Densification of and focus around existing market towns.
- In sustainable locations which have lots of services and facilities, and existing infrastructure to support growth.
- Densification or expansion of existing urban areas and urban extensions where there is more employment.
- Putting development near or along public transport corridors.
- Continuation of current development strategy in our Local Plan.
- A combination of the identified development scenarios in the [Issues Engagement Paper](#) (chapter 9).
- Providing proportionate growth of Key Service Centres or places where growth could help retain services.
- Regenerating existing sites and previously developed land outside of settlement boundaries.
- Providing new settlements.
- Allocating specific locations put forward in the Call for Sites.
- No new settlements, no satellite settlements without adequate facilities, and no over-reliance on large settlements.
- Avoiding unsustainable locations or settlements in rural areas and avoiding overwhelming small villages and the countryside (even if near major roads).
- Avoid scenarios that increase congestion, noise, air and pollution impacts and put pressure on local infrastructure.
- Not promoting dispersed development regardless of the sustainability.
- Not continuing or providing more growth focussed on Alconbury Weald and St Neots East.

## 8 Growth Strategy Options

### What is this about?

We have listened to what you suggested and provided a set of growth options which broadly indicate where new development could be focussed. Six options are shown below as alternative approaches to shape our future growth strategy. Each represents a slight extreme to highlight the focus of the approach. You may like part of one option and part of another and think that a combination of several would actually be your preferred choice. If this is so, please tell us what combination of options you think would be best.

The number of new homes, amount of employment land and quantity of development for other uses could be delivered in each growth strategy option depending on the outcomes of the options in chapter '5 'Approach to Employment and Economy' and chapter '6 'Housing Figures and Requirement'. It should also be noted that paragraph 70 of the NPPF (December 2023) states that 10% of the housing requirement be identified on sites no larger than one hectare. Using the 2024 standard method calculation as a minimum figure this would mean that 2,185 homes will need to be found on sites of this size and using the proposed revised standard method would mean 3,007 new homes will need to be found on sites of this size. To not do this, national policy states that we would require robust evidence to demonstrate that this cannot be achieved.

Each growth strategy option is shown as an image followed by some of the pros and cons that the option may have.

The growth options are:

**Option A - *Continue with the existing growth strategy*** set out in our current Local Plan (Policy LP2 Strategy for Development). This currently focusses on 75% growth in Spatial Planning Areas and 25% elsewhere e.g. Key Service Centres and Small Settlements.

**Option B - Focus on *strategic expansions to existing towns***

**Option C - Focus growth on *public transport corridors*.** This corridors would be located around the A428/A421, the guided bus route and future ambitions to provide East West Rail, the proposal to reroute the A141, a a public transport corridor from Cambridge to Alconbury Weald and a possible railway station at Alconbury Weald.

**Option D - Concentrate development around the *strategic road network*** i.e. the A1, A14 and A428

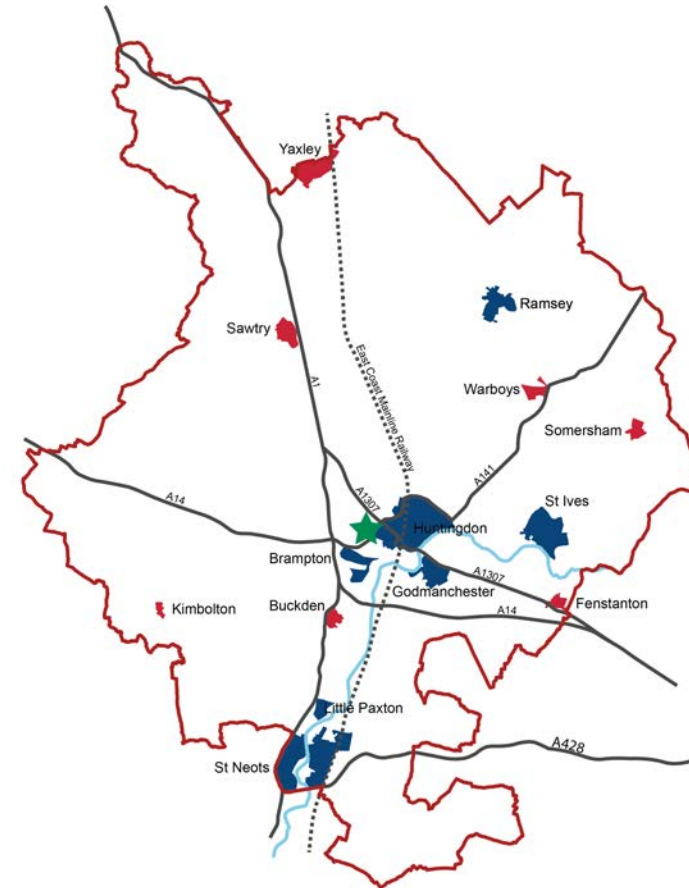

**Option E - Distribute growth across many settlements in Huntingdonshire and limit growth in our towns creating *dispersed growth*.**

**Option F - Provide 1 *one or more new community/ies plus some dispersed growth*.**

**Option A - Continue with the existing growth strategy**

This strategy would mean that we continue to use the same approach as in our current Local Plan (Policy LP2 Strategy for Development). This would mean 75% growth would be focussed in our Spatial Planning Areas and 25% elsewhere e.g. Key Service Centres and Small Settlements.

-  Administrative Boundary
-  Roads
-  River Great Ouse
-  East Coast Mainline Railway
-  Spatial Planning Areas
-  Key Service Centres
-  Large Scale Employment Sites

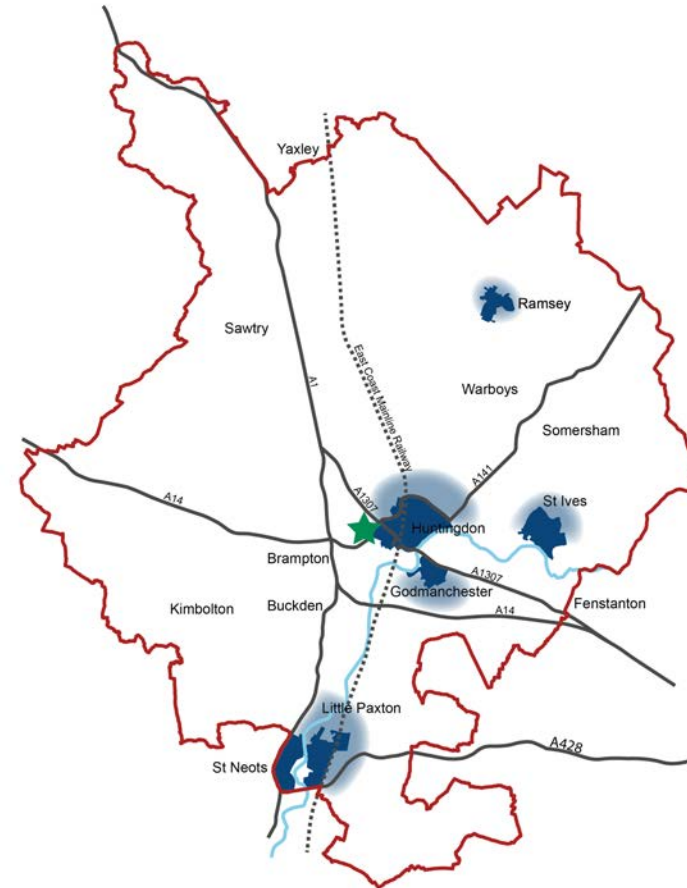

## 8 Growth Strategy Options

Pros	Cons
<ul style="list-style-type: none"> <li>• Sustainably located development, reducing the need to travel.</li> <li>• Existing infrastructure in place.</li> <li>• Close to employment opportunities.</li> <li>• Protects rural locations and the countryside / sense of identity of the district.</li> <li>• Provides consistent growth patterns proving ongoing certainty for investment.</li> <li>• Could provide opportunities for higher and lower density development.</li> <li>• Could increase opportunities for active travel and public transport usage.</li> <li>• Supports existing town centres through greater catchment population.</li> <li>• Could help maintain existing services and facilities in Key Service Centres.</li> <li>• Opportunities for brownfield development in existing centres.</li> </ul>	<ul style="list-style-type: none"> <li>• Some existing areas may now not be able to support future growth.</li> <li>• Relies on existing settlement hierarchy, there may be some other settlements that may now be more sustainable that could provide opportunities for sustainable growth.</li> <li>• Spatial Planning Areas may be at capacity already and require more infrastructure and services.</li> <li>• Population of smaller villages will decline over time potentially putting existing services and facilities at risk.</li> <li>• Developments in larger settlements may be focussed on peripheries with longer distances to reach services and facilities.</li> <li>• Over development in existing locations could impact on congestion, pollution and demand for services.</li> <li>• Would limit provision of affordable housing in villages.</li> </ul>

**Option B - Strategic expansions to existing towns**

This strategy would focus on providing new growth predominantly around our existing towns, Huntingdon, St Ives, St Neots and Ramsey.

-  Administrative Boundary
-  Roads
-  River Great Ouse
-  East Coast Mainline Railway
-  Expansion of Existing Towns
-  Large Scale Employment Sites

## Growth Strategy Options

Pros	Cons
<ul style="list-style-type: none"> <li>• Sustainably located development, reducing the need to travel.</li> <li>• Existing infrastructure in place.</li> <li>• Close to employment opportunities.</li> <li>• Concentration of future employees for new employment developments.</li> <li>• Opportunities for networking and local supply chain inputs for business development.</li> <li>• Protects rural locations and the countryside sense of identity of the district.</li> <li>• Could provide opportunities for higher density development meaning less land required.</li> <li>• Could increase opportunities for active travel and public transport usage.</li> <li>• Could support a very diverse range of housing types and tenures.</li> <li>• Supports existing town centres through greater catchment population.</li> <li>• Opportunities for brownfield development in existing centres.</li> <li>• All infrastructure and services e.g. primary school, local shops,</li> </ul>	<ul style="list-style-type: none"> <li>• May lead to pressure on existing infrastructure and services.</li> <li>• Developments in larger settlements may be focussed on peripheries with longer distances to reach services and facilities.</li> <li>• Over development in existing locations could impact on congestion, pollution and demand for services.</li> <li>• Potential for deterioration all villages through loss of services and facilities due to population decline/stagnation.</li> <li>• Lack of choice and availability of new homes in villages.</li> <li>• Potential increase in house prices in all villages due to lack of supply.</li> <li>• Large scale sites can be slow to deliver and may require phasing and infrastructure.</li> <li>• May limit opportunities for small scale housebuilders.</li> <li>• Could create a lack of local distinctiveness and character / 'anywhere development'.</li> <li>• Some towns have physical constraints to where growth may</li> </ul>

Pros	Cons
<ul style="list-style-type: none"> <li>• services could be provided as part of the scheme.</li> <li>• Could provide enhanced green infrastructure and comprehensive masterplan for development.</li> <li>• Creates new communities and social opportunities.</li> <li>• Could protect the character of existing villages and their settings.</li> <li>• Concentrated development has greater potential to bid for funding for largescale supporting infrastructure.</li> </ul>	<ul style="list-style-type: none"> <li>• go for example, strategic road barriers and flood risk.</li> <li>• Potential for some coalescence with neighbouring villages.</li> <li>• No support for the rural economy and expansion of rural businesses.</li> </ul>

**Option C - Public transport corridors.**

This strategy would look to focus new growth around public transport corridors. These would be located around the A428/A421 and the guided bus route. They could also focus on future ambitions to provide East West Rail, the proposal to reroute the A141, a public transport corridor from Cambridge to Alconbury Weald (Guided Busway extension) and a possible railway station at Alconbury Weald.

-  Administrative Boundary
-  Roads
-  River Great Ouse
-  East Coast Mainline Railway
-  East - West Rail
-  Existing Bus Routes
-  Proposed Bus Routes
-  Large Scale Employment Sites
-  Expansion along Public Transport Corridor

## Growth Strategy Options

Pros	Cons
<ul style="list-style-type: none"> <li>• Potential for sustainable travel options to employment locations offering wider employment opportunities (inclusive economy).</li> <li>• Wider access for employers to potential employees.</li> <li>• Sustainably located development, reducing the need to travel.</li> <li>• Would contribute to reaching net zero.</li> <li>• Has the potential to minimise increases in pollution and congestion.</li> <li>• Could encourage and sustain a shift towards increase public transport availability and use.</li> <li>• Could support the case for investment in a new station at Alconbury Weald.</li> <li>• Opportunities for distributing growth to a mixture of towns and villages.</li> <li>• Could support a diverse range of site types and sizes.</li> <li>• Opportunities to support public transport nodes and facilitate longer distance connections.</li> <li>• Could help maintain or enhance existing services and facilities in</li> </ul>	<ul style="list-style-type: none"> <li>• Proposed future public transport corridors such as Guided Busway extensions and East West Rail are currently uncertain.</li> <li>• Timings of proposed future public transport corridors such as Guided Busway extensions and East West Rail dependant on external organisations which may impact delivery of homes in related locations.</li> <li>• Inhibits growth in the west of Huntingdonshire.</li> <li>• Potential for deterioration villages not associated with public transport corridors through loss of services and facilities due to population decline/stagnation.</li> <li>• Cannot guarantee continued frequency and availability of public transport and use.</li> <li>• Would require behavioural change.</li> </ul>

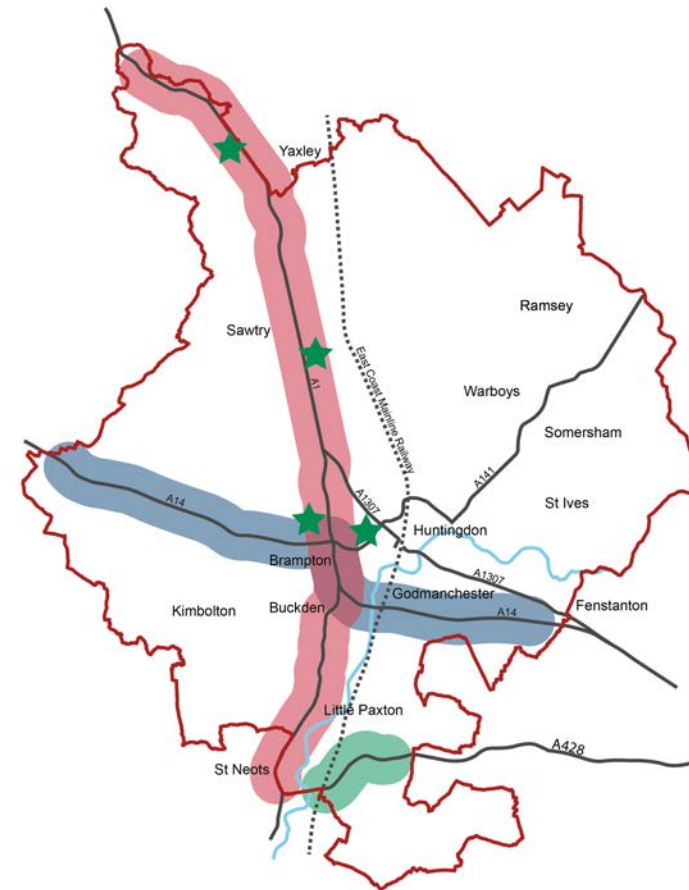

Pros	Cons
<p>towns and villages along public transport corridors.</p> <ul style="list-style-type: none"> <li>• Could support behavioural change in villages creating potential public transport hubs.</li> </ul>	

**Option D - Strategic road network**

This strategy would look to focus growth along the strategic road networks that run through the district, this would include areas along or near to the A1, A14 and A428/A421.

-  Administrative Boundary
-  Roads
-  River Great Ouse
-  East Coast Mainline Railway
-  A1 Road Corridor
-  A14 Road Corridor
-  A428 Road Corridor
-  Large Scale Employment Sites

Page 95 of 3488

## Growth Strategy Options

Pros	Cons
<ul style="list-style-type: none"> <li>• Could benefit from links to the proposed East West Rail.</li> <li>• Disrupts current settlement pattern moving growth away from 3 of the 4 market towns, protecting their character and setting.</li> <li>• Accessible locations for employment and logistics.</li> <li>• Opportunities for co-location of employment and housing.</li> <li>• Opportunity to provide some growth in western Huntingdonshire to help support, provide or maintain local services and facilities.</li> <li>• Takes advantage of existing road infrastructure and proposed improvements to the A428/421.</li> <li>• Presents the opportunity for stand-alone new settlements/communities.</li> <li>• Could contribute towards delivery of the Ox-Cam Arc aspirations for housing employment and green infrastructure.</li> <li>• Has potential to enhance public transport availability along more heavily populated routes.</li> </ul>	<ul style="list-style-type: none"> <li>• Proposed future East West Rail are currently uncertain.</li> <li>• Disrupts current settlement pattern moving growth away from 3 of the 4 market towns.</li> <li>• Encourages car use with the potential to increase congestion, carbon emissions and pollution.</li> <li>• Increase in local traffic usage of strategic highways and potential congestion of strategic road network.</li> <li>• Limited accessibility to existing services, facilities and infrastructure.</li> <li>• Would impede growth in areas remote from the strategic growth network such as the north east of the district.</li> <li>• Could establish continuous development along the A1 and A14 east of the A1.</li> <li>• Population of towns and villages outside of the strategic road corridors will decline over time potentially putting existing services and facilities at risk.</li> <li>• Would inhibit reaching net zero.</li> </ul>

**Option E - Dispersed Growth**

This option would distribute growth across many settlements in Huntingdonshire and limit growth in our towns

-  Administrative Boundary
-  Roads
-  River Great Ouse
-  East Coast Mainline Railway
-  Existing Settlements
-  Large Scale Employment Sites

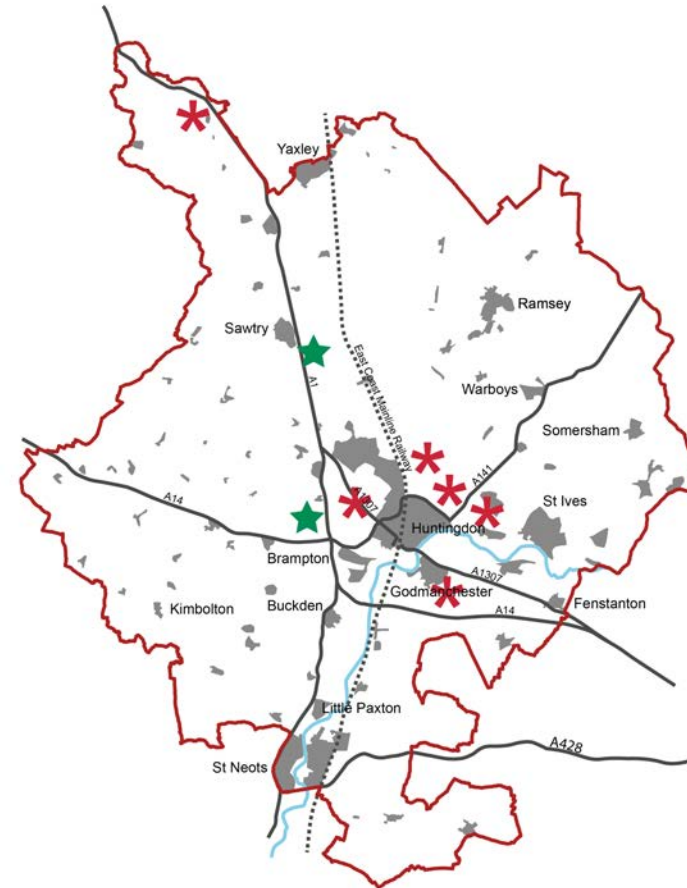

## Growth Strategy Options

Pros	Cons
<ul style="list-style-type: none"> <li>• Will allow villages to maintain and potentially enhance the population to support the retention of existing services and facilities.</li> <li>• Would increase the choice and availability of new homes in villages.</li> <li>• Smaller sites may be quicker to deliver allowing a steady flow of homes.</li> <li>• Could maximise our contribution towards government aspirations for 10% of our housing requirement to be on sites no larger than one hectare.</li> <li>• May provide opportunities for small scale housebuilders.</li> <li>• Sites across Huntingdonshire could support more local employment growth.</li> <li>• Potential to deliver affordable housing across a wide range of villages.</li> <li>• Could allow young people and older people to remain in their existing communities.</li> <li>• Benefits of growth are evenly distributed across the district.</li> </ul>	<ul style="list-style-type: none"> <li>• Encourages car use with the potential to increase congestion, carbon emissions and pollution.</li> <li>• Could inhibit reaching net zero.</li> <li>• Would be challenging to achieve new infrastructure provision.</li> <li>• Could impact on the character of existing village and their settings.</li> <li>• May take time for developments and their residents to integrate with the existing community.</li> <li>• There may not be enough sites to fulfil the level of housing need required.</li> <li>• May impact on the vitality and viability of our town centres.</li> <li>• Would use higher amount of agricultural land with potential impacts on food security.</li> <li>• Would result in lower density development.</li> <li>• People would be further away from high concentrations of employment and opportunities.</li> <li>• Difficult to provide active travel benefits.</li> <li>• Could increase harm to designated nature conservation and heritage assets.</li> </ul>

**Option F - One or more new communities plus some dispersed growth**

This option would involve the allocation of one or two new settlements creating a new community. The remainder of the growth required will then be picked from a range of large and small sites across Huntingdonshire. Due to the size of the new communities each would include a mix of uses including housing, substantial employment, some retail and supporting infrastructure such as schools, community centres or health uses etc.

-  Administrative Boundary
-  Roads
-  River Great Ouse
-  East Coast Mainline Railway
-  Existing Settlements
-  Large Scale Employment Sites
-  Potential New Communities

## Growth Strategy Options

Pros / Advantages	Cons / Disadvantages
<ul style="list-style-type: none"> <li>Will allow some villages to maintain and potentially enhance the population to support the retention of existing services and facilities.</li> <li>Opportunities to provide new employment clusters based around new communities.</li> <li>Delivery of some smaller sites in the short term allow for lead in time to establish the masterplan for the new community/ies.</li> <li>Allows selection of the most sustainable dispersed sites.</li> <li>Gives opportunity to design an innovative, resilient, well designed places with the potential to contribute towards enhanced green infrastructure and net zero ambitions through district heat networks and renewable energy generation.</li> <li>Provides a mix of opportunities for small and medium scale house builders and volume house builders.</li> <li>Concentrated development in one new community provides a single point of focus for funding towards large scale supporting infrastructure.</li> </ul>	<ul style="list-style-type: none"> <li>May require significant and costly infrastructure investment which may impact affordable housing delivery.</li> <li>Limited growth elsewhere restricting market choice.</li> <li>No support for the rural economy and expansion of rural businesses.</li> <li>May impact on the vitality and viability of our current town centres shifting demand elsewhere.</li> <li>Some proposed sites could benefit from further land assembly to provide the best possible settlement layout.</li> <li>Depending on location it could increase harm to designated nature conservation and heritage assets.</li> <li>Depending on location it could encourage car use with the potential to increase congestion, carbon emissions and pollution.</li> <li>Depending on the location some new communities may have limited access to public transport connections.</li> <li>Risk of delivery failure leaving a part built community with reduced</li> </ul>

Pros / Advantages	Cons / Disadvantages
<ul style="list-style-type: none"> <li>Could provide employment uses integrated into the new community as well as community services and facilities.</li> <li>New communities/ settlements can provide a steady stream of housing and flexibility in delivery of housing supply in response to market demand.</li> <li>Could provide opportunities for higher density development meaning less land required.</li> <li>Can provide high and low density housing and a diverse range of housing types and tenures.</li> <li>Sites across Huntingdonshire could support some local employment growth.</li> <li>Could increase opportunities for active travel and public transport usage in limited locations.</li> </ul>	<ul style="list-style-type: none"> <li>services and facilities to those promised.</li> <li>Depending on location it could use higher amount of agricultural land with potential impacts on food security.</li> <li>Employment growth alongside new communities may not respond to market demand depending on the location.</li> <li>Risk of encouragement of commuting to other employment destinations.</li> </ul>

## What should we do?

We are now asking you to input into our growth strategy for the next local plan. We have set some options below and would like to know what you think.

### Options - Approach to Strategic Growth

#### **Should we...**

*(You may pick a combination of options or parts of options)*

**Option A - Continue with the existing growth strategy** set out in our current Local Plan (Policy LP2 Strategy for Development). This currently focusses on 75% growth in Spatial Planning Areas and 25% elsewhere e.g. Key Service Centres and Small Settlements.

**Option B** - Focus on **strategic expansions to existing towns**

**Option C** - Focus growth on **public transport corridors**. This corridors would be located around the A428/A421, the guided bus route and future ambitions to provide East West Rail, the proposal to reroute the A141, a a public transport corridor from Cambridge to Alconbury Weald and a possible railway station at Alconbury Weald.

**Option D** - Concentrate development around the **strategic road network** i.e. The A1, A14, A428

**Option E** - Distribute growth across many settlements in Huntingdonshire and limit growth in our towns creating **dispersed growth**.

**Option F** - Provide 1 **one or more new community/ies plus some dispersed growth**.

**Option G** - Consider an alternative option. Please let us know.

## 9 Our Green and Blue Infrastructure

### 9 Our Green and Blue Infrastructure

#### Introduction

Green and blue infrastructure is a key land use which serves to balance built development. It supports a range of functions, including recreation and wildlife as well as landscape enhancement. Green infrastructure includes areas such as parks, green space and woodland while blue infrastructure refers to watercourses, rivers, ponds and lakes.

Green infrastructure is essential to enhancing biodiversity by creating and reinforcing habitats and helping to protect against habitat fragmentation. It aids mitigation and adaptation to climate change and provides multiple benefits for human health.

Access to green and blue infrastructure is also important for people's physical and mental health as well as a place for social activity and local tourism.

#### What you told us

In our Issues consultations held between April and July 2023 we asked you how much you valued green and blue infrastructure and how it could be enhanced and planned for within the updated Local Plan. Suggestions were for:

- A clear strategy for the enhancement of existing green infrastructure, creation of new infrastructure and the long-term management of both
- Green and blue infrastructure were considered very important by 75% of respondents to the Easy Read survey
- Green infrastructure to be managed strategically reflecting nature recovery networks and corridors
- A clear green and blue infrastructure framework to inform design across the district with positive opportunities at all scales being encouraged
- Current deficiencies by area be identified along with opportunities where they can be addressed through future development proposals
- The amount of green infrastructure within new developments not to be eroded at the expense of a general approach to biodiversity net gain, sustainable drainage and open space
- Collaboration with neighbouring authorities and partners to deliver cross boundary green infrastructure
- The existing approach in LP30 of the Local Plan to 2036 be retained subject to updating to reflect the statutory requirement for biodiversity net gain and also reflect Local Nature Recovery Strategies and Nature Recovery Networks
- Specify a minimum area of green infrastructure for new developments
- The open space standards by Natural England and the Fields Trust be utilised within policies
- The Ouse Valley be designated as a National Landscape (formerly area of outstanding natural beauty), an application was submitted to Natural England in 2013

## What is this about?

Policy '[LP3 Green Infrastructure](#)' of Huntingdonshire's Local Plan to 2036 designated four Green Infrastructure Priority Areas (GIPAs) and sets out the strategic approach for the creation, protection, enhancement and management of networks of biodiversity and green infrastructure. The policy is supported by policy 'LP30 Biodiversity and Geodiversity'. These GIPAs are the following and shown as green in the next map:

- Great Ouse Valley,
- Great Fen,
- Nene Valley, and
- Grafham Water

These are not only areas of biodiversity and habitat richness but also areas for recreation and enjoyment of the natural environment.

## 9 Our Green and Blue Infrastructure

Huntingdonshire also benefits from a network of nature conservation sites ranging from sites of European significance (Portholme Meadow, Ouse Washes, Woodwalton Fen) to SSSIs, ancient woodland, and then to locally significant sites in the form of County Wildlife Sites. There are also sites that are not designated at any level that still provide benefits. These areas can also face pressure from recreation and with new development this pressure is likely to increase, therefore managing existing areas of green infrastructure and creating new ones is an important planning consideration.

Engagement on the Environmental Innovation and Pride In Place journeys of the Huntingdonshire Futures Place Strategy demonstrated the passion local residents have for our landscape and our blue and green infrastructure. Opportunities exist to work with nature rather than against it; to optimise use of nature based solutions to create resilient built and natural environments. Many opportunities crossover between blue and green infrastructure, our approach to climate change and tackling flooding and water.

Green and blue infrastructure should be accessible to all. Natural England promote this through publication of [Access to Natural Greenspace Standards \(ANGSt\) \(revised 2023\)](#) to indicate the scale of space they consider should be available to people within certain distances of their homes. These are:

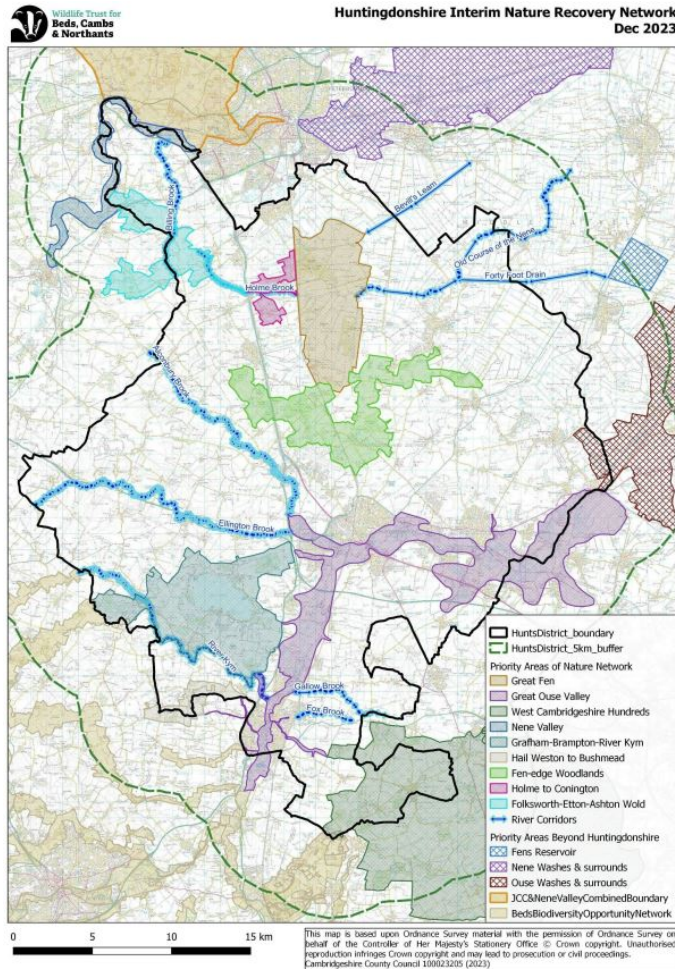

- Doorstep standard where homes are within 200m of 0.5ha natural greenspace
- Local Standard where homes are within 300m of 2ha natural greenspace
- Neighbourhood Standard where homes are within 1km of 10ha natural greenspace

The public rights of way network is an important way for many people not only to enjoy Huntingdonshire's countryside but also our diverse and extensive green and blue infrastructure by walking, cycling, wheeling or horse-riding. Therefore, maintaining and where possible enhancing access via these networks is also important.

Since our engagement on the Issues Paper, the interim Huntingdonshire Nature Recovery Network Report (December 2023) was made available. This identifies the following priority areas (also shown in the following map <sup>(3)</sup>):

- Fen-edge Woodlands
- Folksworth-Elton-Ashton Wold
- Grafham-Brampton-River Kym
- Great Fen
- Great Ouse Valley
- Hail Weston-Bushmead
- Holme-Conington
- West Cambridgeshire Hundreds
- Nene Valley
- River Corridors (Kym, Alconbury Brook, Ellington Brook & Fen Rivers)

This interim Nature Recovery Network will provide an evidence base to help inform the county-wide Local Nature Recovery Strategy for Cambridgeshire and Peterborough.

### What should we do?

We are now asking you to input how the updated Local Plan can plan for green and blue infrastructure across the district. We have set some options below and would like to know what you think.

#### Options - Green and Blue Infrastructure

**Should we...**  
(You may pick multiple options)

- Option A - Retain the existing four Green Infrastructure Priority Areas**
- Option B - Retain the existing Green Infrastructure Priority Areas and also designate additional areas identified within the Interim Huntingdonshire Nature Recovery Network**
- Option C - Allocate sites for new green and blue infrastructure and/or additional land for existing green and blue infrastructure to expand**
- Option D - Consider an alternative option. Please let us know.**

## 10 The Approach to Climate Change

### 10 The Approach to Climate Change

#### Introduction

Climate change and responding to the climate crisis is one of the greatest challenges facing our society and is now a much bigger priority than ever before.

The UK government has committed to the target of being net zero carbon by the year 2050 compared to the 1990 baseline. In December 2021, HDC adopted the aspiration of a net carbon zero Huntingdonshire by 2040.

#### What you told us

In our Issues consultations held between April and July 2023 we asked you how the updated Local Plan can help address climate change and reduce carbon emissions. Suggestions were for:

- Working towards a net zero carbon future
- A holistic approach between new development and the retrofitting of the existing building stock, utilising recycled materials and integration of renewable energy
- Flexibility within policies to reflect changing and advancing technology and champion best practices in green technologies
- Locating growth so that communities can live in areas close to employment and daily services via public transport and other more sustainable modes of transport
- The Local Plan be informed by the Climate Strategy and Place Strategy as well as an appropriate technical evidence base
- Maintaining existing carbon sinks by including policies that ensure their protection, conservation and restoration
- Creating new opportunities to store carbon within the natural environment through policies and site allocations
- A flexible approach towards carbon offsetting where there was a clear need and evidence to do so
- Allocating sites for renewable energy and low carbon energy including support for community and/or district heating
- Stipulating policy requirements on the integration of renewable energy and low carbon technologies within developments
- Assessing areas of potential for wind and solar generation which will have the least impact upon communities, the environment and landscape
- Setting higher energy efficiency targets than those set nationally
- Supporting tackling fuel poverty with policies adopting a 'fabric first' approach to ensure that the dwellings are as energy efficient as possible

## What is this about?

Huntingdonshire's Local Plan to 2036 contains a range of policies aimed at helping to reduce carbon emissions.

Its strategy for development focuses 75% of its housing requirement to spatial planning areas due to their more comprehensive range of services and facilities and access to public and sustainable travel modes. 'LP16 Sustainable Travel' expects new developments to contribute to an enhanced transport network that supports an increasing proportion of journeys being undertaken by sustainable travel modes. 'LP12 Design Implementation' seeks high standards of design including sustainable design and construction methods and is supported by the [Huntingdonshire Design Guide \(2017\)](#). 'LP35 Renewable and Low Carbon Energy' sets out the approach to reducing reliance on fossil fuels and transitioning to a cleaner energy infrastructure network powering Huntingdonshire's homes, businesses and infrastructure. This is supported by the [Wind Energy Development in Huntingdonshire SPD \(2014\)](#), [Wind Turbine Developments: A Guidance Note for Applicants and Agents](#) and the [Huntingdonshire Landscape and Townscape SPD \(2022\)](#).

It doesn't have any policies that directly relate to carbon sequestration and offsetting but policies 'LP3 Green Infrastructure', 'LP30 Biodiversity and Geodiversity' and 'LP31 Trees, Woodland, Hedges and Hedgerows' recognise the importance of trees, woodlands, hedgerows, and areas of green infrastructure in storing carbon alongside their ecological, recreational and conservation value.

The Climate Change Act (2008) requires us to consider how Local Plan policies can deliver on reducing emissions. Since the adoption of the Local Plan to 2036, there is a much greater emphasis on tackling climate change not just within planning but across all aspects of life. Therefore, the updated Local Plan provides us with an opportunity for Huntingdonshire to play its part. The updated Local Plan can build upon these existing policies and include new policies which require new developments to be as net carbon zero as possible as well as adapting and mitigating the impacts of climate change.

By 2025, the Government plans to introduce the Future Homes and Building Standards which will increase the energy efficiency and reducing the carbon emissions of new homes and non-domestic buildings by between 75-80% on current standards. This will be set through building control regulations. These standards will take a fabric first approach of reducing heating and energy demand to a very low level. By building future buildings to this standard, the Government anticipates that no further energy efficiency retrofit work will be necessary to enable these buildings to become zero-carbon. Therefore, there are changes nationally which development will be required to meet as standard. An option for the Local Plan update is whether we can set higher standards than those set nationally.

Since our Issues Engagement consultation, the NPPF was updated in December 2023 whereby paragraph 164 now requires local authorities, in determining planning applications, to give "significant weight" to the need to support "energy efficiency and low carbon heating improvements" through adaptation of buildings. This represents strong in-principle policy support for energy efficiency.

However, also in December 2023 the Government published a Written Ministerial Statement called [Planning – Local Energy Efficiency Standards Update](#). This sets out that any planning policies that propose local energy efficiency standards for buildings that go beyond current or planned buildings regulation should be rejected at examination if they do not have a well-reasoned and robustly costed rationale. It is uncertain whether this statement will be overturned as a legal challenge against it has been made; once an outcome on this challenge has been made we will have a clearer picture on how we should tackle energy efficiency in the local plan.

The implications of the extra costs involved in constructing homes to higher energy efficiency standards and also being supported by appropriate technical assessments relating to the carbon and energy implications of development would be reviewed to assess their impact on the viability of differing scales of development within Huntingdonshire.

## 10 The Approach to Climate Change

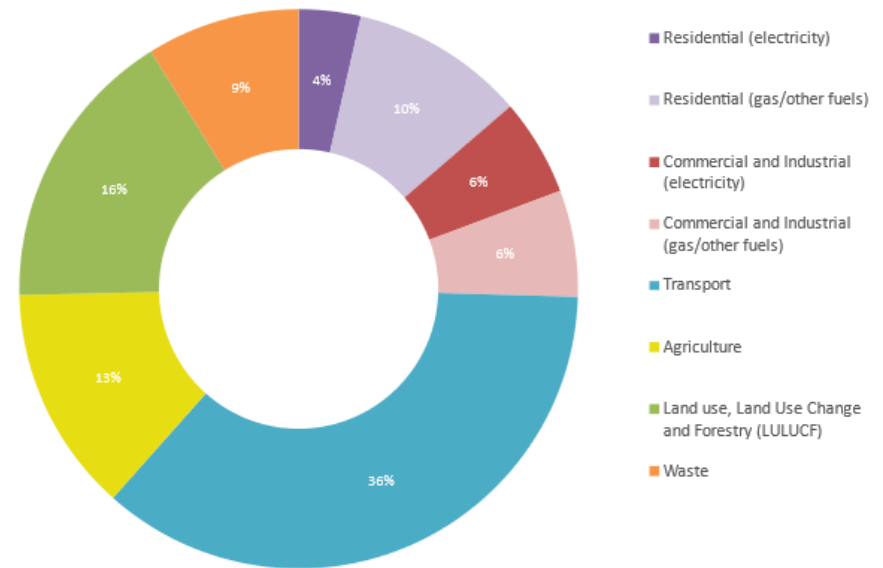

To support the updated Local Plan, we have commissioned climate change evidence. The purpose of this evidence is to shape new development in the district in ways that mitigate and adapt to climate change and will support our transition to a low and eventually net zero carbon future whilst building in local resilience. This evidence will consist of six documents:

- Document A: The role of the Local Plan Update in responding to climate change
- Document B: Position statement and analysis of baseline and forecast future emissions
- Document C: The contribution of sustainable design to achieving net zero carbon
- Document D: Assessment of spatial strategy options
- Document E: Infrastructure and renewable energy
- Document F: Offsetting and sequestering emissions

The aspects considered in this document focus on the more strategic elements of responding to the climate emergency through decarbonisation ambitions and renewable energy generation aspirations. Aspects relating directly to other topics such as green infrastructure are covered in their relevant chapter to avoid duplication. Many of the aspects raised during last year's Issues engagement relate to more detailed approaches to responding to climate change these will be shaped through detailed development management policies, whether these are national or locally prepared.

### Decarbonisation

Greenhouse gas (GHG) emissions in Huntingdonshire as of 2021 are estimated to be 1,805 kt CO<sub>2</sub>e (kilotonnes of carbon dioxide equivalent). The breakdown of these emissions is shown in the following chart:

The above chart shows that some 36% of the district's emissions are from transport (1% from buses and rail; 21% from cars, large goods vehicles and motorbikes; and 15% from heavy goods vehicles). This largely as a result from the presence of several strategic road routes that run through the district such as the A1 and A14. Of these emissions, 60% are from A roads, 21% from motorway traffic and 19% from minor roads.

By 2050, if no further changes were made to decrease emissions above those already in the pipeline nationally, our emissions would decrease only by approximately 17%. Therefore, in order to reach net zero carbon more action needs to be taken. Using 2021 as a starting point, district-wide GHG emissions have been projected forward to evaluate potential future pathways towards net zero emissions.

Document B of our climate change evidence sets out three potential decarbonisation scenarios which will help us move more substantially towards a lower carbon future. For all scenarios, it should also be noted that all scenarios assume that grid electricity will be largely decarbonised by the mid-2030s.

**Scenario 1 - Low ambition decarbonisation scenario**

This scenario largely mirrors the Department for Energy Security and Net Zero's Energy and Emissions Projections, but assumes that all cars and vans are replaced with electric vehicles by 2050. This reflects the Government's intention to prohibit the sale of petrol and diesel cars and vans after 2035.

In this scenario, GHG emissions would reduce by approximately 28% by 2050. The additional reduction compared with the BAU scenario is entirely attributable to the uptake of electric cars and vans.

**Scenario 2 - High ambition decarbonisation scenario**

This scenario aims to achieve maximum GHG reductions by 2040 using currently available technologies and practices. Those would need to be adopted quickly to meet a target date 10 years in advance of the national 2050 target, and from that standpoint it is a more ambitious scenario.

This scenario assumes that progress in reducing Land Use, Land-Use Change and Forestry emissions is slower because this relies on re-wetting a significant amount of peatland that is currently used to grow crops. However, scenario 2 excludes technologies that are not yet commercially available, such as green hydrogen-powered HGVs or carbon capture and storage (CCS). This puts a cap on the scale of reduction that can be achieved.

In this scenario, emissions decrease by roughly 53% by 2040.

# 10 The Approach to Climate Change

## Scenario 3 - Moderate ambition decarbonisation scenario

This scenario is intended to broadly align with the Climate Change Committee's 'Balanced Pathway' for decarbonisation, both in terms of the measures that are adopted and the timeframes when these take place.

It includes all of the same measures as in Scenario 2, but spreads them out over a longer timeframe (to 2050). It also allows for decarbonising HGVs and use of carbon capture and storage to mitigate residual emissions.

In this scenario, GHG emissions reduce by 76% by 2050 but a net zero is achieved through the use of carbon capture/ removal technologies. As shown in the below these technologies are only factored in after 2040 once they are more established.

## Renewable Energy

Our evidence base looks at the different types of renewable and low carbon energy technologies that may be suitable within the district. Renewable energy comes from sources that are not depleted when used such as wind and solar. Low carbon

energy sources are those which produce power with substantially lower amounts of carbon dioxide emission than are emitted from conventional oil and gas power generation such as heat pumps. Promotion of renewable energy generation is a key way the Local Plan can play a role in responding to climate change and reduce future greenhouse gas emissions.

As of July 2024 operational and consented renewable energy installations in Huntingdonshire are capable of generating almost 325,000 MWh/year of electricity. Within our evidence base Document E: Infrastructure and renewable energy looks at the technical capacity of the district for a range of renewable energy technologies identifying ground-mounted solar PV modules as having the largest technical potential energy output in Huntingdonshire, wind turbines as the second largest potential and roof-mounted solar PV as the third highest potential source. There are significant differences though between the amount of technical capacity and the technology mix that could actually be deployed in the district to deliver renewable and low carbon energy generation. The deployability of wind turbines and ground-mounted solar PV is often affected by complex site specific constraints. Document E looks at two potential deployment scenarios for Huntingdonshire to help us move towards local generation of much of the electricity we will need in the future. Along with the rest of the UK our electricity system will need to undergo significant transformation on the path to net zero and there will be a significant increase in electricity demand. Our evidence suggests that our total energy demand in the district will be 1,549 GWh/year by 2046.

## Scenario 1 - Business as Usual

The anticipated level of deployment of renewable and low carbon energy technologies under this scenario would reflect their recent and existing deployment within Huntingdonshire and the wider UK. This would support renewable and low carbon energy meeting 39% of expected demand by 2046 and 41% by 2050.

## Wind Turbines

Electricity generation per year	Existing situation	2046	2050
Installed capacity	73 MW	133 MW	143 MW
Equivalent scale of technology	29 x 2.5 MW turbines	53 x 2.5 MW turbines	57 x 2.5 MW turbines
Potential CO2 savings	16,940 tonnes/year	31,067 tonnes/year	33,327 tonnes/year
Percentage of identified technical capacity required			2.9%

## Ground-mounted Solar PV

Electricity generation per year	Existing situation	2046	2050
Installed capacity	143 MW	308 MW	335 MW
Equivalent scale of technology	14 x 10 MW solar farms	31 x 10 MW solar farms	33 x 10 MW solar farms
Potential CO2 savings	16,873 tonnes/year	36,260 tonnes/year	39,362 tonnes/year
Percentage of identified technical capacity required			0.9%

## Roof-mounted Solar PV

Electricity generation per year	Existing situation	2046	2050
Installed capacity	25 MW	95 MW	106 MW
Equivalent scale of technology	4,879 detached dwelling solar installations	18,223 detached dwelling solar installations	20,334 detached dwelling solar installations
Potential CO2 savings	2,986 tonnes/year	11,151 tonnes/year	12,442 tonnes/year
Percentage of identified technical capacity required			8.5%

## 10 The Approach to Climate Change

### Scenario 2 - Ambitious approach meeting national targets

This scenario is based on achieving a rate of renewable and low carbon energy development that would be needed for Huntingdonshire to meet our share of renewable energy generation in line with the Climate Change Committee's 6th Carbon Budget. This assumes that 80% of Huntingdonshire's energy demand will be met by renewable energy by 2050. This would support renewable and low carbon energy meeting 79% of expected demand by 2046 and 80% by 2050.

#### Wind Turbines

Electricity generation per year	Existing situation	2046	2050
Installed capacity	73 MW	207 MW	214 MW
Equivalent scale of technology	29 x 2.5 MW turbines	83 x 2.5 MW turbines	86 x 2.5 MW turbines
Potential CO2 savings	16,940 tonnes/year	48,285 tonnes/year	50,072 tonnes/year
Percentage of identified technical capacity required			4.3%

#### Ground-mounted Solar PV

Electricity generation per year	Existing situation	2046	2050
Installed capacity	143 MW	409 MW	424 MW
Equivalent scale of technology	14 x 10 MW solar farms	41 x 10 MW solar farms	42 x 10 MW solar farms

Electricity generation per year	Existing situation	2046	2050
Potential CO2 savings	16,873 tonnes/year	48,093 tonnes/year	49,873 tonnes/year
Percentage of identified technical capacity required			1.2%

#### Roof-mounted Solar PV

Electricity generation per year	Existing situation	2046	2050
Installed capacity	25 MW	453 MW	477 MW
Equivalent scale of technology	4,879 detached dwelling solar installations	87,057 detached dwelling solar installations	91,742 detached dwelling solar installations
Potential CO2 savings	2,986 tonnes/year	53,270 tonnes/year	56,137 tonnes/year
Percentage of identified technical capacity required			38.1%

## What should we do?

We are now asking you to input how the updated Local Plan can plan to help reduce Huntingdonshire's carbon emission and plan for low and net zero carbon development across the district. We have set some options below and would like to know what you think.

### Decarbonisation scenarios

Our Climate Change evidence puts forward three possible decarbonisation scenarios that we might take going forward in the Local Plan Update.

#### Options - Decarbonisation Scenarios

##### Should we....

*(Please pick one option.)*

**Option A - Business as usual** with electric vehicle uptake reflecting recent trends

**Option B - Maximise reductions by 2040** using current technologies

**Option C** - Follow the national **Climate Change Commission's 'Balanced pathway'** approach

### Renewable Energy

Our Climate Change evidence puts forward three possible deployable renewable energy (level of renewable energy that could be delivered) scenarios that we might take going forward in the Local Plan Update.

#### Options - Renewable Energy

##### Should we....

*(Please pick one option.)*

**Option A** - Business as usual with renewable and low carbon energy meeting 39% of expected demand by 2046 and 41% by 2050

**Option B** - Ambitious approach meeting national targets with renewable and low carbon energy meeting 79% of expected demand by 2046 and 80% by 2050

# 11 Tackling Flooding and Water

## 11 Tackling Flooding and Water

### Introduction

Huntingdonshire sits within the driest region in the country, the Rivers Great Ouse, Nene and Kym run through the district and Grafham Water Reservoir plays an important role in the supply of water to our district and the surrounding areas. Some areas of Huntingdonshire located in the Fens are below sea level. With these key issues and the effects of climate change it is important that we understand the impact of flooding, water supply, water quality and wastewater treatment in our district. Some of these issues will be addressed to a certain extent by external organisations such as water companies however the Local Plan can and should also look at what it can do by creating policies to address these issues - where able - which then can then be used to identify suitable locations for growth and be used to assess planning applications.

### What you told us

In our Issues consultations held between April and July 2023 we asked for your thoughts on flooding, water supply and water pollution. Suggestions were for:

- Avoiding development in high-risk flood areas, prioritising brownfield development.
- Requiring flood resilient buildings and flood resistant construction.
- Implementing sustainable drainage systems (SUDs), multifunctional greenspace, nature-based strategies and natural filtration to reduce pollutants.
- Avoiding sites that are reliant on flood defences or ensuring that they are sufficiently resilient to remain safe.
- Ensuring developments provide betterment on site and downstream.
- Considering catchment based, up and down-stream impacts and cumulative impacts of development for flooding and water issues.
- Ensuring adequate long-term ownership, funding, management and maintenance of flood risk management systems.
- Requiring rainwater/storm water harvesting, enabling smart water communities and water efficiency measures, promoting water neutrality.
- Using building regulations for water use, efficiency and pollution control.
- Ensuring wastewater treatment capacity, drains, sewerage system and water supply can support new growth without increasing risk.
- Avoiding negative impact on waterbodies and water quality, approaches to surface run-off should be considered.
- Considering the whole water cycle process and integrated water management approach for developments.
- Ensuring policies are flexible to adapt to future changes in technology, identify evidence required for planning applications and programmes that support community resilience.
- Accounting for the impact of climate change and extreme weather events.

## What is this about?

The [Huntingdonshire Futures Place Strategy 2050](#) sets out two water related objectives (pathways) within their Environmental Innovation chapter (journey). These look specifically at reducing water consumption and retrofitting sustainable drainage systems. These are important actions that can help to support our communities and were developed through public and stakeholder engagement, reflecting what is important to our residents, businesses and the district.

Our current [Local Plan](#) includes specific policies on flooding and water, specifically LP5 Flood Risk, LP6 Waste Water Management and LP 15 Surface Water. These policies look at acceptable locations for development, flood management and mitigation, flood risk assessments, waste water capacity in terms of the sewer network and water treatment and the sustainable management of surface water.

We recently published an update of our [Strategic Flood Risk Assessment \(Level 1\) and Water Cycle Study \(stage 1\)](#) for Huntingdonshire. These documents took an integrated approach to flooding and water issues and took into account the impacts from the wider area. We will be using both of these documents to help us decide what we will ask for in new developments and also where these developments should be.

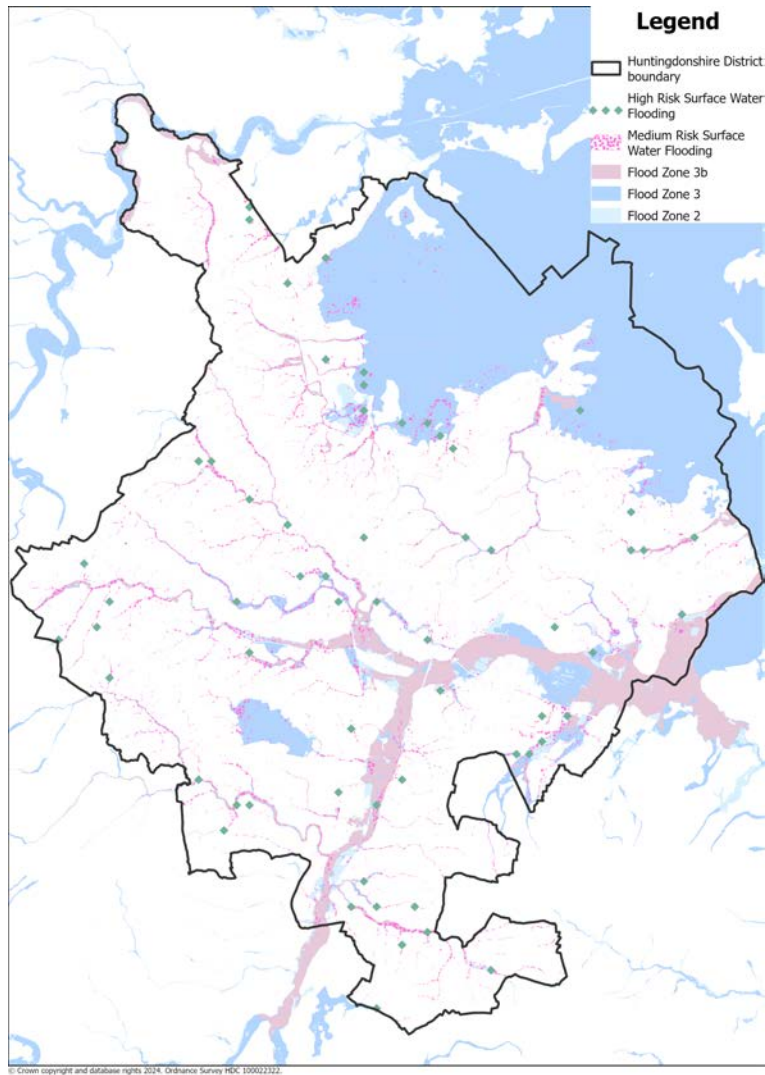

The Strategic Flood Risk Assessment (SFRA) provided a high-level assessment of sites that were submitted to us in the Call for Sites and provided high level screening on their status and relative flood risk. It also provided maps showing flood risk in Huntingdonshire, taking into account all sources of flooding including but not limited to surface water, groundwater, rivers etc. It also made the following recommendations:

- No development within the functional floodplain, unless development is water compatible;
- Surface water flood risk should be considered with equal importance as fluvial risk;
- The sequential approach must be followed in terms of site allocation and site layout;

- Ensure site-specific flood risk assessments are carried out to a suitable standard, where required, with full consultation with the Lead Local Flood Authority, the Environment Agency, Anglian Water and Cambridge Water;
- Appropriate investigation and use of sustainable drainage systems (SuDS);
- Natural flood management techniques must be considered for mitigation;
- Phasing of development must be carried out to avoid possible cumulative impacts; and
- Planning permission for at risk sites can only be granted following an acceptable site-specific flood risk assessments being submitted, in line with the local plan, SFRA and National Planning Policy Framework.

The impact of climate change on our district is an important consideration with numerous reports that the risk to life from flooding could increase significantly, whilst also limiting sustainable locations for growth. The map below shows flood risk from rivers and surface water. With flood zone 2 represents a medium probability of flooding from rivers and the sea, Flood zone 3a a high probability and flood zone 3b is land where water has to be stored in times of flood. More information can be found here on [fluvial](#) (rivers and sea) and [surface water flood risk](#).

## 11 Tackling Flooding and Water

The Water Cycle Study set out a baseline for Huntingdonshire presenting information on the status of water resources, wastewater infrastructure and water quality including the environmental status and water balance/supply. It also provided an analysis of potential integrated water management approaches that could be used and how beneficial they would be. These approaches included: green infrastructure, blue infrastructure, diversifying water resources, leakage reduction, efficient fixtures and fittings, education, rainwater harvesting, greywater recycling and sustainable drainage systems.

Water supply is provided to Huntingdonshire by Anglian Water and Cambridge Water. The availability of water, and the impact of new water demand on the environment, has led to restrictions/delays on granting planning permission and a requirement to demonstrate water-neutral development in the Cambridge Water area, specifically in Cambridge itself. However, this is also important to Huntingdonshire as some of our towns and villages fall within the Cambridge Water area including, St Ives, Ramsey, Warboys, Bluntisham, Somersham and other villages in the east of the district. The Government published [guidance in March 2024](#) setting out how it would address this challenge in the Greater Cambridge area. This included long and short term responses ranging from the provision of new infrastructure such as the Grafham pipeline transfer and the [Fens and Lincolnshire Reservoirs](#) to piloting schemes such as water positive development by reducing water use in new buildings; reusing more water; and offsetting water use. The guidance also noted that water reuse systems can typically lower drinking water consumption from 144 down to 80 litres per person per day, a significant reduction below that of the current Building Regulations requirements.

In December 2023, the Government also published a [Written Ministerial Statement](#) saying that in areas of serious water stress and where water scarcity is inhibiting the adoption of Local Plans or the granting of planning permission for homes, local planning authorities are encouraged to work with the Environment Agency and delivery partners to agree standards tighter than the 110 litres per day that is set out in current guidance.

Our Water Cycle Study notes that Huntingdonshire is in an area of serious water stress and there is sufficient justification for the tighter water efficiency target currently allowed for under building regulations of 110l/p/d (usage based on litres, per person, per day).

There are 33 Water Recycling Centres (WRC) within or serving in Huntingdonshire. Of these, 29 are expected to meet the needs of growth anticipated within the period of the adopted Local Plan (up to 2036). Ten WRCs are predicted to exceed their permit limit once committed growth is taken into account meaning that upgrades may be required to support any future growth in these areas. We will need to understand the future capacity of areas and may need to consider the phasing of some developments to allow for capacity to be available.

Our Water Cycle Study also notes that growth during the local plan period will also increase the discharge of treated wastewater from WRCs in Huntingdonshire. There is a potential for this to cause a deterioration in water quality in watercourses and this must be carefully considered. A significant deterioration in water quality is not acceptable under the Water Framework Directive. The sensitivity analysis suggests that ammonia concentrations in watercourses within Huntingdonshire may be most sensitive to increases in the discharge of treated wastewater.

### What should we do?

Our findings from the Strategic Flood Risk Assessment and Water Cycle Study strongly reflect the concerns you raised with us. Together these provide a focus on what our local plan policies should include. We will be using and building on the options and recommendations presented to us in the Strategic Flood Risk Assessment (Level 1) and Water Cycle Study (Stage 1) documents by producing Level 2 and Stage 2 assessments. These will provide us with more detailed information and help inform what we may ask for in new developments and also where these developments should be. Some requirements are already required through national policy and guidance, for example requiring major developments to "incorporate sustainable drainage systems unless there is clear evidence that

this would be inappropriate" and that there are clear maintenance and adoption arrangements in place for the lifetime of the development. Therefore we have only set out some additional options below and would like to know what you think.

### Integrated Flood and Water Management

National Planning Practice Guidance sets out some potential approaches to natural flood management. [Natural flood management techniques](#) use natural processes to manage flooding, they also can assist in providing additional benefits to people, the environment and wildlife. Techniques proposed include measures such as land management e.g. tree planting, making green space to allow flood water to flow or collect and removing impermeable surfaces to allow water to soak away. River restoration is another technique that could be used, this could include removing culverts and physical restraints, increasing the river capacity by reintroducing meanders or even using natural techniques to slow the flow of the river.

#### Options - Integrated Flood and Water Management 1

##### Should we....

*(You may pick multiple options)*

**Option A - Meet national requirements only.**

**Option B - Require natural flood management techniques as part of an integrated approach** to flood risk management and impact on water quality **on all developments** (excluding extensions).

**Option C - Require natural flood management techniques as part of an integrated approach** to flood risk management and water quality **on all developments in high and medium risk areas** (excluding extensions).

**Option D - Consider an alternative option.** Please let us know.

## 11 Tackling Flooding and Water

### Options - Integrated Flood and Water Management 2

#### Should we...

*(You may pick multiple options)*

**Option A - Ask that developments do not increase flood risk elsewhere**

**Option B - Ask that all developments seek a betterment of existing flood risk** both within the site and in surrounding areas.

**Option C - Ask that developments** (excluding minor extensions) **in high or medium risk areas seek betterment of existing flood risk** both within the site and in surrounding areas.

**Option D - Require developments to provide surface water management plans** where applicable, addressing run off rates.

**Option E - Consider an alternative option.** Please let us know.

### Options - Water Efficiency in Residential Development

#### Should we...

*(You may pick multiple options)*

**Option A - Have no policy, meaning that all development would meet existing and future Building Regulations Standards of 125 litres per person per day** (possible future equivalent of 105 l/p/d) for residential buildings.

**Option B - Ask that all residential developments meet Building Regulations optional standards or future equivalent and require 110 l/p/d** (possible future equivalent of 100 l/p/d) as in the current Local Plan.

**Option C - Ask that all residential developments go above current/future Building Regulations standards and require up to 80 l/p/d** if practicable, investigating opportunities for efficient fixtures and fittings, rainwater harvesting and greywater recycling <sup>(4)</sup>

**Option D - Consider an alternative option.** Please let us know.

### Water Efficiency - Residential Development

Building regulations currently ask for residential developments to either require buildings to meet water efficiency targets of 125 litres per person per day; or an optional requirement of 110 litres per person per day which should be set out in a Local Plan. Our current Local Plan asks for 110 litres per person per day. A Thames Water study of customers with smart meters showed that households did not achieve the intended performance levels. The Government are considering amending building regulations to require 105 litres per person per day (l/p/d) and 100 l/p/d where there is a clear local need in the future.

<sup>4</sup> Government published [guidance in March 2024](#) noted that water reuse systems can typically lower drinking water consumption from 144 down to 80 litres per person per day, a significant reduction below that of the current Building Regulations requirements.

### Water Efficiency - Non-Household Development

Non-household developments such as businesses currently have no national requirement for water efficiency. Our current Local Plan asks that these developments address water issues by meeting Building Research Establishment Environmental Assessment Method (BREEAM) standard 'Good' as a minimum. BREEAM is widely accepted as the best way to improve standards for non-residential buildings moving towards a zero-carbon target. The [BREEAM](#) New Construction Standard scores developments across nine categories, four of which are related to water: water consumption (called WAT01), water monitoring (WAT02), leak detection (WAT03) and water efficient equipment (WAT04). The score/credits are based on what a development includes e.g. providing certain fixtures, fittings or systems, which then produces a percentage score and a rating from "Pass" to "Outstanding":

1. Outstanding: Less than the top 1% of UK new non-domestic buildings (innovator)
2. Excellent: Top 10% of UK new non-domestic buildings (best practice)
3. Very Good: Top 25% of UK new non-domestic buildings (advanced good practice)
4. Good: Top 50% of UK new non-domestic buildings (intermediate good practice)
5. Pass: Top 75% of UK new non-domestic buildings (standard good practice)

WAT01 specifically looks at reducing the demand for potable water through the provision of efficient sanitary fittings, rainwater collection and water recycling systems, WAT02 at monitoring water use, WAT 03 looks at appropriate technologies designed into buildings to control flow and actively detect leaks and WAT04 reducing water consumption for non-sanitary water uses by using efficient systems for water-using processes.

### Options - Water Efficiency in Non-Household Development

#### **Should we....**

*(You may pick multiple options)*

#### **Option A - Have no policy.**

**Option B - Ask that all 'non-household' development be required to achieve 'outstanding'** for category Wat 01 of BREEAM unless demonstrated impracticable

**Option C - Ask that all 'non-household' development be required to achieve 'excellent'** for category Wat 01 of BREEAM unless demonstrated impracticable

**Option D - For larger employment developments, ask that all 'non-household' developments achieve 'excellent' or 'very good' for WAT 03 on water leak detection and prevention** unless demonstrated impracticable.

**Option E - Consider an alternative option.** Please let us know.

### The Cambridge Water Area

Some of our towns and villages fall within the Cambridge Water area including, St Ives, Ramsey, Warboys, Bluntisham, Somersham and other villages in the east of the district. Here the availability of water, and the impact of new water demand on the environment is having an even more immediate impact.

## 11 Tackling Flooding and Water

### Question - The Cambridge Water Area

Would you support even stricter restrictions on water efficiency standards for residential and non-residential buildings for settlements that fall within the Cambridge Water Area? What would they be? Or would you suggest a different approach?

## 12 Housing Tenures and Housing Mix

### Introduction

Housing tenures refer to the legal arrangements by which people occupy their homes. They are broadly split into market housing tenures and affordable housing tenures. Owner occupation is the most common market tenure in Huntingdonshire which is where people own their homes either outright or with a mortgage. The private rented tenure is where people have an agreement with landlord (an individual or company) to rent their home at full market value. Affordable housing is defined by the government in the National Planning Policy Framework (2023) as 'Housing for sale or rent, for those whose needs are not met by the market (including housing that provides a subsidised route to homes ownership and/ or is for essential local workers'. This can include homes for rent at levels fixed below private market rates, designated 'first homes' sold at significant discounts below market rates specifically for first time buyers and other discounted routes to home ownership such as shared equity where people partly buy and partly rent their home.

Housing mix looks at the type and size of homes that might be built and the need for homes to meet the requirements of different types and sizes of households. For instance, it considers whether homes should be built as houses, apartments or bungalows, and whether they should be detached, semi-detached or terraced. The size of homes in this case refers to the number of bedrooms rather than the amount of space in each room. It also involves provision of housing specifically to meet the needs of older people, such as retirement housing and provision of residential homes. National policy encourages people to build their own homes, known as self and custom build, which is also considered in this section.

### What you told us

In our Issues consultations held between April and July 2023 we asked you what your priorities were for provision of affordable housing and the mix of sizes and types of new homes that should be built. Suggestions were for:

- Concentration of affordable housing in locations with access to services, employment and public transport
- New homes should be designed to be low cost to run
- Requirements for affordable housing to respond to local evidence
- Provision of a choice of affordable housing tenures including those for sale
- Additional sites to be allocated to make up for any shortfall of affordable housing provision on sites where a reduced proportion is agreed
- Encouragement of rural exceptions housing in small communities to meet local residents' needs only
- A flexible approach to be taken to housing mix to reflect individual site circumstances and market changes
- A mix of new housing to cater for changing demographics and local needs
- Provision of specialist housing to meet older people's needs; preferably within active town and village communities
- Homes that are flexible enough to cope with modern lifestyles
- Flexibility for self and custom build housing to be built on the edges of settlements to meet market demand

## 12 Housing Tenures and Housing Mix

### What is this about?

#### Affordable Housing and Housing Mix

The most recent evidence on the types of homes that we need in Huntingdonshire can be found in the [Housing Needs of Specific Groups for Cambridgeshire and West Suffolk](#) which was completed in October 2021. This provides a base to look at for options now but we intend to get updated evidence to help us decide what sort of housing the Local Plan Update should aim to deliver before it is finished to make sure our future policies are up-to-date.

In Huntingdonshire's Local Plan to 2036 policy '[LP24 Affordable Housing Provision](#)' sets a target to include 40% affordable housing when a development scheme includes 11 or more homes or 1,001m<sup>2</sup> or more of residential floorspace. Of this 40% affordable housing around 70% should be for social rent with the rest as other affordable tenures. The policy also allows for the viability of a proposed development site to be taken into account to help make it deliverable; the first adjustment is to the mix of tenures, for example to include a higher proportion of shared equity housing than normal and only if this can't make a site deliverable is consideration given to lowering the percentage of affordable housing below the 40% target. It does not specify the types of places in which affordable housing may be supported but does expect the housing to meet the requirements of the local community.

Since the Local Plan to 2036 was adopted there have been several national changes. The 2023 NPPF requires affordable housing within any 'major' housing scheme which means where 10 or more homes are to be built or if the site is over 0.5ha. As the national target is newer than the adopted Local Plan this has to be applied to planning applications. In 2021 a 'First Homes' scheme was introduced to help first time buyers get into the housing market. This expects 25% of all affordable housing within a development to be made available for sale under this scheme at a discount of at least 30% below the market price for the property.

The Housing Needs of Specific Groups for Cambridgeshire and West Suffolk suggests that just over 40% of all new homes would need to be built as affordable housing to rent to meet the expected level of need. A small amount of extra need

for affordable homes to buy takes the total affordable housing requirement to around 44%. This level may change slightly when new evidence is prepared looking at the most up-to-date levels of need.

Policy '[LP25 Housing Mix](#)' of Huntingdonshire's Local Plan to 2036 promotes an evidence led approach to the mix of homes to be provided in new developments using assessments for the Cambridge and Peterborough housing market areas supplemented with any local assessments of housing need and demand such as those which may be done by or for Town and Parish Councils to support preparation of Neighbourhood Plans.

People's choice of market housing to buy or privately rent is usually shaped by a combination of the size of home they need, what they aspire to and what they can afford. Size choices for 'First homes' and shared ownership properties are shaped by eligibility criteria focussed on what people can afford but developments tend to include more 1 to 3 bedroom homes than many market housing schemes. In contrast, the size of affordable housing to rent that people live in is shaped mainly by the number and ages of people who will live in the home and homes tend to be fully occupied rather than having any spare rooms. The size mix of affordable housing is usually shaped by known need from the Housing Register at the time. The Housing Needs of Specific Groups for Cambridgeshire and West Suffolk suggests that the greatest demand for market housing is for new 3 bedroom homes with 2 bedroom homes being most needed for affordable housing both to rent or to buy. Just over 70% of new market homes built over the last few years have had 3 or 4 bedrooms. In contrast, just over 50% of all affordable homes have had 2 bedrooms and 25% have had 3.

#### Specialist and Supported Housing

The Housing Needs of Specific Groups for Cambridgeshire and West Suffolk also considered the need for a range of supported and specialist housing uses. Within Huntingdonshire the main categories for this are the need for homes designed to meet the additional needs of older people with limited mobility or additional care requirements, residential care homes and nursing homes and plots of land for people wishing to self or custom build their own homes.

As required by government we keep a register of people who are looking for land on which to build their own home. Self and custom build housing varies significantly from people who literally want to build their home themselves to those looking to commission an architect to design a home to their own requirements and then pay for it to be built with many combinations in between. The most frequent reason people give for wanting to build their own home is for it to be built to higher environmental standards than are generally available, the second most common reason is the wish for a larger property and the third most common is that people want to improve or learn building and construction skills. The majority of people on the self and custom build register want to build a 4 bedroom detached house. The [register](#) allows people to select multiple locations where they might like to live. Around 55% of those registered state they are very flexible about where they would like to live selecting the 'anywhere in Huntingdonshire' option. Around 45% would like a home in the countryside outside any settlement and around 40% would prefer to be in a village rather than any of the market towns.

Policy 'LP26 Specialist Housing' guides provision of self-contained specialist housing and residential institutions for people with particular support needs. The proportion of people over the age of 75 living in Huntingdonshire is expected to nearly double through the next two decades. Many will find ordinary market or affordable homes meet their needs. However, some will need more specialised places to live such as housing with support, housing with care and residential care homes or nursing homes due to additional mobility, care or medical needs. Around 1,700 homes with support are expected to be needed, 1,000 homes with care and around 1,800 new bedspaces in residential care or nursing homes. Housing with support is generally described as being self-contained where the property has its own individual front door and adequate kitchen facilities for the resident(s) to prepare meals. Sometimes such housing may be clustered together into retirement communities, variously known as retirement living, retirement villages, continuing care communities or integrated retirement communities. These are characterised by self-contained properties supported by a range of communal facilities, often a restaurant, organised social activities and provision of support services including an amount of care where needed. Residential care homes may be occupied by any group of individuals in need of specialist support which can include people with profound multiple learning disabilities, short-term medical needs or homes for looked after children.

### **Gypsy, Traveller, and Boat-dweller Accommodation**

Gypsies, Travellers and Travelling Showpeople are recognised as ethnic groups and are protected from discrimination by the Equality Act 2010. Through the national [Planning Policy for Traveller Sites](#) we are required to assess and plan for the needs for culturally appropriate accommodation for these communities. Boat-dwellers include those for whom it is a lifestyle or financial choice and bargee travellers. An accommodation needs assessment of boat dwellers is a statutory duty under the Housing and Planning Act 2016.

In Huntingdonshire's Local Plan to 2036 policies '[LP27 Gypsies, Travellers and Travelling Showpeople](#)' and '[LP38 Water Related Development](#)' provide guidance on where proposals for these specialist accommodation types will be supported. The national [Planning Policy for Traveller Sites](#) was updated in December 2023. This reverted the definition of Gypsies and Travellers to the pre-2015 definition as being all those of travelling background, not just those who are currently travelling. This was to recognise the Gypsy and Traveller status of those who have given up travelling due to old age or disability and allow for stability for educational needs. It has made a significant change to our updated evidence Gypsy, Traveller, Travelling

## 12 Housing Tenures and Housing Mix

Showpeople and Boat-dwellers Accommodation Assessment 2024 as this no longer excludes Gypsies and Travellers who no longer travel due to disability, acting as carers or the elderly from those whose accommodation needs are to be considered through the Local Plan Update. The assessment indicates that there are 51 Gypsy and Traveller sites in the district including permanently authorised, temporarily authorised, unauthorised and sites with planning applications where no decision has yet been issued. In total these contain 144 pitches of which 36 are currently vacant. The assessment indicates that the need for Gypsy and Traveller pitches is an average of 6 new pitches a year from 2023/24 to 2045/46, weighted towards need in the earlier part with a shortfall of 60 authorised pitches in the first 5 years and 54 in the remainder of the period. The assessment indicates a potential available supply of up to 104 pitches through regularising existing unauthorised ones and expansion and/or intensification of existing sites. The assessment indicated there is no current need for plots for Travelling Showpeople.

Huntingdonshire has many long established marinas which focus primarily on leisure use. However, residential houseboats are established in several with the greatest concentration being at Hartford Marina on the eastern edge of Huntingdon. Information from the owners/ managers of marinas has identified limited need for additional residential moorings.

### What should we do?

We are now asking you to tell us what the Local Plan Update's priorities should be for the mix and tenures of homes to be built over the next couple of decades. We have set some options below and would like to know what you think.

#### Affordable Housing and Housing Mix

##### Options - Affordable Housing Proportion

###### **Should we...**

*(You may pick multiple options)*

**Option A - Try to maximise the proportion of affordable housing within each site of 10 or more new homes**

**Option B - Ask for the same proportion of affordable housing in all schemes for 10 or more new homes**

**Option C - Ask for a lower proportion of affordable housing in very large schemes which need to provide substantial infrastructure such as a new bridge or major road improvements**

**Option D - Ask for for a lower percentage than we do now in all schemes, accepting that this may mean we have to build more homes overall to meet the level of need for affordable housing**

**Option E - Consider an alternative option.** Please let us know.

### Options - Affordable Housing Location

#### Should we...

*(Please pick one option)*

**Option A - Only allow affordable housing to be built in towns and villages with existing services**, such as a shop, primary school or village hall, as appropriate to the likely needs of expected occupiers

**Option B - Allow affordable housing to be built in all towns and villages** to support existing communities

**Option C - Consider an alternative option.** Please let us know.

Note: Any policy relating to housing size would focus on shaping new market homes as the mix of affordable homes provided in any new development would be expected to respond to the need at the time.

### Options - Size and Type of Housing

#### Should we...

*(Please pick one option)*

**Option A - Allow the market to entirely decide what size and type of housing to build** reflecting what there is most demand for at the time

**Option B - Allow a flexible approach as long as the site promoter can show how the mix of homes they want to build will contribute towards a mixed and inclusive local community**

**Option C - Specify percentage ranges for each number of bedrooms that a mix might comprise on any scheme to allow limited flexibility**, accepting the mix might date as new evidence comes forward

**Option D - Require all schemes of 10 or more homes to show how they will widen the range of housing types and sizes available** reflecting our latest evidence on housing need and demand supplemented by any local assessments of need and demand

**Option E - Consider an alternative option.** Please let us know.

### Specialist and Supported Housing

### Options - Supported and Specialist Housing

#### Should we...

*(You may pick multiple options)*

**Option A - Only allow self-contained supported and specialist housing to be built in towns and villages with existing services**, such as a shop, village hall, and regular public transport services as appropriate to the expected occupiers

**Option B - Support provision of one or more larger scale integrated retirement communities** to include purpose designed homes supported by a range of communal facilities and support services

**Option C - Allow schemes for up to 20 self-contained retirement homes to be built in any town and village**

**Option D - Consider an alternative option.** Please let us know.

## 12 Housing Tenures and Housing Mix

Page 126 of 3488

### Options - Residential Care and Nursing Homes

**Should we...**

*(Please pick one option)*

**Option A - Expect that all residential care and nursing homes be built in towns and villages with regular public transport services** to provide access to the wider community for residents able to travel with or without support, and to make sure people working in the homes have a choice or means of transport

**Option B - Allow residential care and nursing homes to be built in all towns and villages, and in countryside locations where this would benefit the specific care needs of intended residents**

**Option C - Consider an alternative option.** Please let us know.

### Options - Self and Custom Build Homes

**Should we...**

*(You may pick multiple options)*

**Option A - Allocate small sites for groups of less than 10 self and custom build homes within and on the edges of towns and villages**

**Option B - Expect all developments for 50 or more homes to include 5% of plots for self and custom build at a fair market price** with a mechanism included to allow any plots which no self or custom builder is interested in buying after at least one year of marketing to revert to being built by a housebuilder

**Option C - Treat proposals for self and custom build homes exactly the same as we would any other housing proposal in the same type of location**

**Option D - Support community led group self and custom build projects in locations where other housing might not be supported** provided that there is clear evidence of community support for the scheme

**Option E - Consider an alternative option.** Please let us know.

### Gypsy, Traveller, and Boat-dweller Accommodation

#### Options - Gypsy and Traveller Accommodation Needs

##### **Should we...**

*(You may pick multiple options)*

**Option A - Look for additional sites to allocate to meet needs** for private and/ or social rented pitches

**Option B - Allow for extensions to existing sites which already have permanent planning permission**

**Option C - Allow existing temporarily permitted sites to remain permanently** subject to adequate flood management

**Option D - Continue to rely on a criteria-based policy approach** specifying elements such as proximity to primary schools and GP surgeries to indicate what land may be suitable

**Option E - Consider an alternative option.** Please let us know.

#### Options - Boat Dwellers Accommodation

##### **Should we...**

*(You may pick multiple options)*

**Option A - Look for sites to allocate for new permanent residential moorings with access to basic facilities** including water provision, waste disposal and electric hook-ups as well as being close to a safe walking or cycling route to local shops and services

**Option B - Allow a proportion of moorings within existing leisure marinas to be used as permanent residential moorings**

**Option C - Work with partners to ensure access to basic facilities for boat dwellers** who prefer to continuously cruise

**Option D - Consider an alternative option.** Please let us know.

## 13 Transport and Connectivity

### 13 Transport and Connectivity

#### Introduction

Huntingdonshire benefits from extensive transport and connectivity networks. The East Coast mainline railway runs directly through the centre of the district with stations at St Neots and Huntingdon. We have access to the strategic road network through the A1, A1(M), A14, A428 and A47. The district is also served by the A141, A1123, A1096 and A605; parts of the district have limited highway accessibility, particularly the north eastern area. An extensive network of public footpaths, cycleways, bridleways and byways provide active travel opportunities. Waterways provide boat and barge travel opportunities although these are almost entirely leisure focussed rather than serving as a means of day-to-day travel. Technology is expected to continue to evolve and change the way we travel and connect with each other and with employment, retail, education and service providers.

#### What you told us

In our Issues consultations held between April and July 2023 we asked you how the updated Local Plan can respond to transport and connectivity challenges and opportunities in the district. Suggestions were for:

- The Local Plan should actively manage patterns of growth to reduce the need to travel and support non-car transport choices.
- New strategic sites should be close to existing residential and economic growth areas to support provision of sustainable travel and reduce the need to travel.
- A141 upgrade between Huntingdon and St Ives is needed to reduce congestion, open opportunities for further sustainable growth, and improve connectivity into the Fens.
- Should build on excellent connections to the strategic road network to maximise benefits of these.
- Both that development should be focused in the most sustainable locations and that opportunities related to future rail services should be taken.
- Access to railway stations and other key facilities by sustainable travel modes should be improved.
- Future development sites should be accessible by or capable of supporting public transport services.
- Provision of more and more frequent local buses serving villages is needed facilitating connections to larger places and current and planned main public transport hubs.
- Future allocations should be supported by existing walking and cycling routes and prioritise provision of high quality active travel infrastructure.
- Green infrastructure networks should be integrated into new development to facilitate active travel options.
- The public right of way network should be protected and enhanced.
- The Local Plan should require a design-led approach to car parking with flexible policies to respond to changing vehicle technologies and people's

needs and to reflect the location's accessibility by alternative transport modes.

- HGV parking should include provision of toilets, showers and food facilities to be safe and healthy.

### What is this about?

The Council has a limited role in planning for transport and travel infrastructure as most is done by higher level organisations including National Highways, Network Rail, Cambridgeshire and Peterborough Combined Authority and Cambridgeshire County Council. However, we can contribute to achieving higher level ambitions such as reducing the need to travel and promoting access to active travel infrastructure.

Since Huntingdonshire's Local Plan to 2036 was adopted in 2019 there have been significant changes to national planning policy with greater emphasis now being placed on provision for attractive walking and cycling routes and provision of infrastructure for electric vehicle charging. However, we recognise the rural nature of large areas of the district and the challenges faced by residents and businesses within them where public transport and active travel opportunities are limited and reliance on private car usage remains high.

The Cambridgeshire and Peterborough Combined Authority sets the overall transport strategy covering Huntingdonshire and aims to promote a sustainable transport network that is affordable and accessible for all. They also encourage greater numbers of journeys to be made by walking or cycling through establishment of safe connected pedestrian routes between key destinations within settlements and establishment of

safe connected cycling links within and between settlements. This is reinforced by the Cambridgeshire Local Cycling and Walking Infrastructure Plan (2022) which forms part of a long-term vision to improve the County's walking and cycling networks to increase the number of residents travelling on foot and by cycle. We can contribute to these ambitions through influencing the location, design and layout of new development and securing contributions from developers to provide new infrastructure where required to support development schemes they are proposing.

Several major transport infrastructure improvements may come forward during the lifetime of the Local Plan update. Most immediate is the upgrade to the A428 (to be A421) connecting the A1 Black Cat roundabout to the A428/ A1198 Caxton Gibbet junction improving travel options for St Neots and nearby villages in particular. Land has been set aside for a new railway station at Alconbury Weald although delivery is still uncertain. The East West Rail consortium is proposing a new rail route connecting Oxford to Cambridge via Bedford. If this is delivered new stations are anticipated south of St Neots at Tempsford and to the east at Cambourne.

The National Planning Policy Framework urges us to limit the need to travel and offer a genuine choice of transport modes but it also acknowledges that the opportunities to do so will vary between urban and rural areas. Plan-making is advised to identify and pursue opportunities to promote walking, cycling and public transport use. Digital connectivity is playing an increasing role in many people's lives and in many businesses. The Combined Authority's Digital Infrastructure Programme is maintaining an agile approach to be able to react flexibly to rapidly changing government and commercial priorities to take advantage of all opportunities to promote inclusive growth across the area.

Policy LP16 'Sustainable Travel' of Huntingdonshire's Local Plan to 2036 looks for new development to support an increasing proportion of journeys being undertaken by active travel and public transport. It also requires assessment and mitigation of the transport impacts of proposed development. Policy LP17 'Parking Provision and Vehicle Movement' focuses on more detailed aspects but includes accessibility to services and facilities which is increasingly recognised as important, particularly

# 13 Transport and Connectivity

by active travel modes, and so is likely to need enhancing. It also sets minimum requirements for cycle parking provision for new developments. Car parking levels are expected to be responsive to the location and nature of the proposed development rather than numeric requirements being set.

Huntingdonshire Futures Place Strategy's fifth journey is that of Travel Transformed. This explores what travel could be like if the car wasn't the first choice of transport; if effective public transport, on-demand travel options, and an attractive cycling and walking network were realistic options for people wanting to get around. The Local Plan cannot deliver this by itself but it can work collaboratively supporting the approaches of infrastructure and service providers and influence provision within new developments. The Travel Transformed journey links closely to our approach to climate change as it will influence how we can help to provide zero-carbon travel options accessible and reliable across our communities. The Strategy explores the possibility of mobility hubs which have been promoted within several of the new communities put forward for consideration. These concentrate complementary transport modes in one place to minimise or eliminate the need for car usage. They can co-locate bus stops, cycle hire, sheltered cycle parking, real time bus information and electric bike charging points.

The Royal Town Planning Institute's 'Net Zero Transport' research (2021) explored how a place-based approach could deliver net zero transport emissions and be a catalyst for better place-making to deliver healthier, happier and more resilient communities. The illustration to the right shows options that might help to substitute trips, shift modes and switch fuels. The feasibility of the approaches varies in different types of location, for instance what might work in a town centre or a new settlement might be very different to the approaches that might work in a village setting.

Page 130 of 3488

East West Rail is proposing a new railway line connecting Oxford to Cambridge with the nearest suggested stations to Huntingdonshire being at Tempsford and Cambourne. This could open up public transport options to Cambridge and west to Bedford and beyond that are not currently available helping people to reach jobs, shopping, education and leisure opportunities by public transport that they might otherwise not be able to get to.

### What should we do?

We would like to know what you think about transport issues and options.

#### Options - Approach to Individual Developments

**Option A - Change transport provision within new developments to focus on high quality and plentiful infrastructure for active travel and public transport rather than prioritising road users.** To help deliver this, a high proportion of developer contributions to transport and travel issues would be spent on active travel and public transport infrastructure.

**Option B - Continue with the current approach of encouraging active travel and public transport through some provision of infrastructure within new developments but carry on trying to limit the impact of cars and lorries from them by building roads and upgrading junctions.** To help deliver this, a high proportion of developer contributions to transport and travel issues would be spent on road and junction upgrades.

**Option C - Consider an alternative option.** Please let us know.

#### Question - Place based Approach to Net Zero Transport

##### Place based approach to net zero transport

Using the previous illustration for reference - which of the suggestions for substituting trips, shifting modes and switching fuels do you think could work either where you live at the moment or in new developments that might be built during the next 25 years?

#### Options - East West Rail

**Option A - Rely on the prospect of East West Rail coming forward** and plan for new growth nearby to be delivered in the late 2030s and 2040s that could connect well with this.

**Option B - Wait until there is greater certainty about the timing of delivery for East West Rail** before planning for growth that might benefit from being nearby even if this means the growth is delivered some years after the railway.

## 14 Appendix 1 - Detailed Objectives

### 14 Appendix 1 - Detailed Objectives

#### Current Objectives

Huntingdonshire's Local Plan to 2036 has 25 objectives across 5 themes which are listed below to help you with suggesting possible objectives for the Local Plan update.

#### Cross-cutting objectives:

Objective C1 - To maintain a good supply of suitable land for growth in sustainable locations and focusing on previously developed land, offering sites of a variety of sizes and types to meet a range of market demands.

Objective C2 - To promote high quality, well designed, locally distinctive, sustainable development that is adaptable to climate change resilient to extreme weather.

Objective C3 - To provide better job opportunities and more affordable homes to help create a more balanced and diverse local population and encourage more young people to stay or move here.

Objective C4 - To facilitate opportunities for people to pursue a healthy lifestyle, actively participate in their community and have a high quality of life.

#### Supporting a diverse, thriving economy:

Objective C5 - To promote economic growth and resilience and diversify the range of businesses active across the district that can add greater value to the the local economy.

Objective C6 - To maximise the benefits for Huntingdonshire of the Alconbury Enterprise Zone.

Objective C7 - To maximise the advantages offered by Huntingdonshire's strategic location to develop sector specialisms, supply chains and business accommodation that complement existing local growth sectors.

Objective C8 - To increase the proportion of economically active residents in the district and promote education and skills to meet the future needs of the local economy.

Objective C9 - To enhance the role of Huntingdon, St Neots, St Ives and Ramsey's town centres helping them to adapt to modern retail trends and focusing commercial developments towards the most accessible locations.

Objective C10 - To support agriculture, farm diversification, estate management and rural tourism that will sustain the function and character of the countryside and its communities.

Objective C11 - To protect the best and most versatile agricultural land from built development.

#### Providing sufficient infrastructure to support healthy communities:

Objective C12 - To maintain an up-to-date Infrastructure Delivery Plan to identify the infrastructure needs of proposed developments and to prioritise investment to be provided by developers contributions and other identifiable sources.

Objective C13 - To focus investment on improving access in strategic expansion locations to make optimum use of available resources.

Objective C14 - To facilitate sustainable modes of travel and give high priority to providing access to public transport and provision of segregated routes for walking and cycling.

Objective C15 - To provide for adequate infrastructure to meet the needs of new growth and facilitate active, cohesive communities and sustainable lifestyles.

## Appendix 1 - Detailed Objectives

14

Objective C16 - To ensure inclusive and accessible provision for community needs including education, health, social care, policing, sports, libraries, play and open space, green infrastructure and integrated community facilities.

### Meeting the needs of a changing population:

Objective C17 - To provide for a quantity and quality of housing growth to support the economic aspirations of the district while contributing to sustainable patterns of growth.

Objective C18 - To provide a range of market and affordable homes that enables choice between types, sizes and tenures as well as over lifetimes and within individual communities.

Objective C19 - To provide opportunities for vulnerable people to live independent lives with support to meet their needs.

Objective C20 - To promote attractive, safe and distinctive residential neighbourhoods in which people can meet their day-to-day social, health, educational, recreational and convenience shopping requirements with access to sustainable transport to meet other needs.

### Working with our climate, landscape and heritage:

Objective C21 - To maintain, enhance and conserve Huntingdonshire's historic environment, characteristic landscapes, natural habitats and biodiversity.

Objective C22 - To utilise sustainable design and construction techniques; as a minimum to meet national standards for building performance as they evolve and to exceed them where feasible and viable to do so.

Objective C23 - To take advantage of opportunities for minimising energy and water use and securing carbon emissions reductions in all new development and transport choices.

Objective C24 - To encourage waste management and pollution control practices which minimise and reduce contributions to climate change and avoid adverse impacts on the local environment or human health.

Objective C25 - To conserve and enhance Huntingdonshire's strategic green infrastructure and to promote a balance between conservation and public access to and enjoyment of these assets.

### Suggested Objectives

#### Options A - The objectives build on Vision Option A and are shaped by the key 'pathways' that support the Huntingdonshire Futures Place Strategy journeys

Objective A1 - All new homes are well-designed and provide the sizes, types and tenures of new homes that meet local needs

Objective A2 - Our communities are actively involved in supporting each other with physical and digital infrastructure available to help them achieve this.

Objective A3 - Our high streets are vibrant, diverse places that attract and retain locals and visitors throughout the daytime and evenings.

Objective A4 - Both existing and new businesses are flourishing as they are operating in the right space for them so they support local investment and provide stimulating, diverse job opportunities.

## 14 Appendix 1 - Detailed Objectives

Objective A5 - Investment in new or improved healthcare, public open spaces and active travel infrastructure makes healthier lifestyles achievable by all residents.

Objective A6 - Community buildings, town and village centres and public open spaces are designed as places where children and young people feel safe and can participate in projects and events that help them fulfil their potential.

Objective A7 - A rapid transition to net zero is achieved through investment in net zero and carbon negative infrastructure projects and creation of a physical environment that supports use of active travel and public transport.

Objective A8 - An extensive network of nature-based infrastructure exists, contributing to resilient towns, villages and countryside areas with enhanced biodiversity.

Objective A9 - Renewable energy generation is embedded through all new developments and innovative community and wider renewable energy production schemes are supported where they are complementary to agricultural practices.

Objective A10 - Active travel and public transport infrastructure support genuine choices of travel reducing car dependency.

### Options B - The objectives build on Vision Option B and aim to help achieve a better future through a just transition towards ambitious climate action

Objective B1 - Deliver new developments and infrastructure that minimise and are resilient to the impacts of climate change including extreme weather events such as flooding, drought and heatwaves.

Objective B2 - Support a prosperous, resilient and sustainable economy contributing positively to the wider Cambridgeshire economy.

Objective B3 - New development works towards creating sustainable, well-designed, distinctive places which facilitate improving health, wellbeing, and social interaction to reduce inequalities, promote inclusivity and support a sense of community.

Objective B4 - The need to travel is reduced and travel behaviour is changed to reduce dependency on private cars and encourage walking, cycling, wheeling and use of public transport to support the transition to a net zero carbon transport network.

Objective B5 - Maintain and improve the natural and built environment including biodiversity, landscape, green Infrastructure and waterways by ensuring new development achieves high-quality design standards and conserves and enhances the natural, historic, cultural and landscape assets of Huntingdonshire.

Objective B6 - Support a local zero-carbon energy system that reduces Huntingdonshire's reliance on global fossil fuels and prioritises community energy generation and usage.

Objective B7 - Make efficient use of local natural resources, particularly water.

### Options C - Minor amendments to the current list of 25 objectives

Cross-cutting objectives:

Objective C1 - To maintain a good supply of suitable land for growth in sustainable locations, offering sites of a variety of sizes and types to meet a range of market demands.

Objective C2 - To promote high quality, well designed, locally distinctive, sustainable development that is adaptable and resilient to climate change and minimise further impacts on climate change.

Supporting a diverse, thriving economy:

Objective C6 - To maximise the benefits for Huntingdonshire of new employment development and the network of established employment areas.

Objective C7 - To maximise the advantages offered by Huntingdonshire's strategic location to develop sector specialisms and supply chains that complement local growth sectors.

Objective C8 - To increase the proportion of economically active residents in the district to meet the future needs of the local economy.

Objective C9 - To enhance the role of our town centres helping them to adapt to changing expectations of the high street.

Objective C11 - To support local agriculture protect the best and most versatile agricultural land from irreversible harm.

Providing sufficient infrastructure to support healthy communities

Objective C12 and 13 (merged) - To identify the infrastructure needs of proposed developments and focus investment in areas of substantial new growth.

Objective C16 - To support provision for community needs including education, health, social care, policing, sports, libraries, play and open space, green infrastructure and integrated community facilities.

Meeting the needs of a changing population

Objective C18 - To provide a range of market and affordable homes that enables choice between types, sizes and tenures for all residents.

Objective C19 - To provide opportunities for older and vulnerable people to live independent lives with support to meet their needs.

Objective C20 - To promote attractive, safe and distinctive residential neighbourhoods in which people can meet their basic needs.

Working with our climate, landscape and heritage

Objective C23 - To promote minimisation of energy and water use and secure carbon emissions reductions in all new development and transport choices.

Objective C25 - To conserve and enhance Huntingdonshire's strategic green infrastructure and to promote a balance between conservation and public access to and enjoyment of these assets.

## 14 Appendix 1 - Detailed Objectives

### Options D - The objectives build on Vision Option D and are focused on the three strands of economic, social and environmental sustainability

Objective D1 - New development will be high quality, designed to minimise impact on the environment through greater energy and resource efficiency and adapted to climate change.

Objective D2 - The creation of high value, more diverse job opportunities at existing and new businesses will be encouraged and supported through provision of additional land and facilitating expansion of the local employment skills base.

Objective D3 - Deliver high quality sustainable new homes that meet the needs of all sectors of our community and enhance the well-being of residents.

Objective D4 - The retail, community, cultural and leisure opportunities in our town centres will be improved through working to attract investment, diversify activities and encourage the evening economy to make them attractive destinations for residents and visitors.

Objective D5 - Sustain and create places that encourage healthy lifestyles and support strong active communities through the provision of recreation and open space, leisure and cultural facilities, and opportunity to walk, cycle and wheel safely to key destinations within local communities.

Objective D6 - Ensure new development is of high quality, responds to local character, contributes to a sense of place, and integrates into existing communities.

Objective D7 - Facilitate provision of infrastructure to meet the needs arising from new development and facilitate its provision at appropriate points alongside development to meet the changing needs of communities.

Objective D8 - Protect, maintain and enhance the distinct character and identity of each of our towns and villages and countryside areas.

Objective D9 - Facilitate the generation of clean, secure energy through low carbon development, integration of heat networks and support for well-located renewable energy generation projects.

Objective D10 - Protect and enhance strategic green infrastructure, green corridors, wildlife habitats and open spaces enhancing connections to increase their value for people and wildlife.

### Options E - Consider alternative objectives

Please suggest any that you think would be appropriate.

**Public (Part 2)**  
**Key Decision - Yes**

## HUNTINGDONSHIRE DISTRICT COUNCIL

**Title/Subject Matter:** Land Availability Assessments

**Meeting/Date:** Overview & Scrutiny (Performance and Growth)  
– 4<sup>th</sup> September 2024

**Executive Portfolio:** Executive Councillor for Planning

**Report by:** Chief Planning Officer

**Ward(s) affected:** All Wards

---

### RECOMMENDATION

The Overview and Scrutiny Panel is invited to comment on the Land Availability Assessments from the Cabinet report attached at Appendix 1.

**Public**  
**Key Decision - Yes**

## **HUNTINGDONSHIRE DISTRICT COUNCIL**

**Title/Subject Matter:** Land Availability Assessments

**Meeting/Date:** Overview & Scrutiny (Performance and Growth)  
– 4<sup>th</sup> September 2024  
Cabinet – 10 September 2024

**Executive Portfolio:** Executive Councillor for Planning

**Report by:** Chief Planning Officer

**Ward(s) affected:** All Wards

---

### **Executive Summary:**

When developing local plans, the Council must adhere to Government legislation and policy such as the National Planning Policy Framework and National Planning Practice Guidance. Paragraph 23 of the National Planning Policy Framework requires that strategic policies in plans should provide a clear strategy for bringing sufficient land forward, to address objectively assessed needs over the plan period “This should include planning for and allocating sufficient sites to deliver the strategic priorities of the area.”

Between 29 March to 7 June 2023 the Council issued a Call for Sites. This is a process where people, including but not limited to, developers, landowners and agents could submit sites that could have the potential to be allocated in the next Local Plan. The sites submitted could be for a variety of uses such as housing, employment, renewable energy, biodiversity, and mixed uses. An ongoing Call for Sites is also still running for those who may have missed the initial Call.

The Council has assessed the sites submitted through a Land Availability Assessment and a Sustainability Appraisal (of which more information can be found in the main body of this report). The results of these assessments do not guarantee that a site will be allocated in the next local plan, but instead provide a selection of sites that have potential. The final selection of sites will be based on a number of additional factors such as a chosen growth strategy, a final settlement hierarchy and evidence-based documents such as transport studies, strategic flood risk assessments, water cycle studies, employment land studies, climate change reports etc. Many of these topics are covered within the Further Issues and Options Consultation document to join up this process and provide opportunity for the public to comment on the way forward, choose their preferred options and provide additional information.

It is now proposed that these assessments are consulted upon alongside the Further Issues and Options consultation document and the Sustainability Appraisal to allow members of the public, statutory consultees, landowners, developers and interested parties to see the results of the Land Availability Assessments and to provide comments. The consultation is proposed to be held over 10 weeks between 18 September and 27 November 2024.

**Recommendation(s):**

The Cabinet/Committee is

**RECOMMENDED**

- To approve the contents of the Land Availability Assessments
- To agree that the Land Availability Assessments be published for public consultation for ten weeks between 18 September and 27 November 2024.
- To grant delegated authority to the Chief Planning Officer, in consultation with the Executive Councillor for Planning to make any necessary typographical or other minor changes to the document prior to its publication for consultation.

## **1. PURPOSE OF THE REPORT**

- 1.1 This report sets out the purpose and content of the Land Availability Assessments and asks that Cabinet approve the contents of the Land Availability Assessments and agree that it can be published for public engagement for ten weeks between 18 September and 27 November 2024.

## **2. WHY IS THIS REPORT NECESSARY?**

- 2.1 The production of a local plan is enforced and guided by Statutory Instruments (Orders, Rules and Regulations) and Acts of Parliament (Acts). Section 19 of the Planning and Compulsory Purchase Act 2004 specifically identifies matters that must be taken into account when preparing a local plan. This includes national policies and advice contained in guidance issued by the Secretary of State such as the National Planning Policy Framework (NPPF) and National Planning Practice Guidance (NPPG).

- 2.2 The NPPF requires that local plans should plan for and allocate sufficient sites to deliver the strategic priorities of the area (paragraph 23). More specifically paragraph 69 asks that:

“Strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of a strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.”

- 2.3 To do this the Council issued a Call for Sites. This is a process where people, including but not limited to, developers, landowners and agents could submit sites that could have the potential to be allocated in the next Local Plan. These sites were then assessed through the Land Availability Assessments presented alongside this report to fulfil this obligation.

## **3. Land Availability Assessments - Sites and Documents**

- 3.1 Between 29 March to 7 June 2023 the Council issued a Call for Sites. This is a process where people, including but not limited to, developers, landowners and agents could submit sites that could have the potential to be allocated in the next Local Plan. The sites submitted could be for a variety of uses such as housing, employment, renewable energy, biodiversity, and mixed uses. 354 sites were submitted during the initial Call and have been assessed. An ongoing Call for Sites is also still running for those who may have missed the initial Call; 15 sites submitted through this process have been assessed. Any sites submitted after 15 August 2024 will be assessed at a later date.

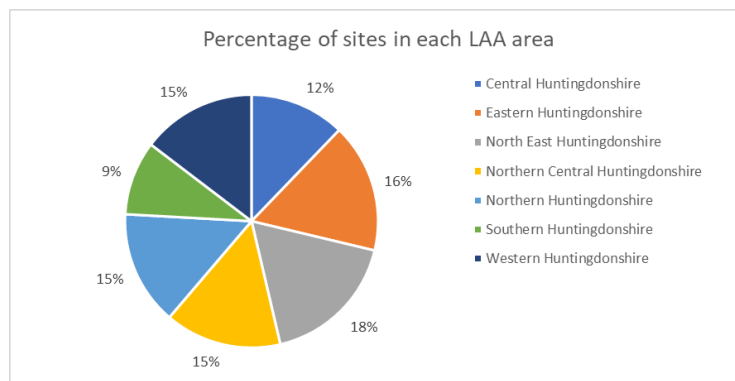

- 3.2 The total number of sites that have been assessed are 369 sites. The sites submitted included a variety of uses:
- 235 were for residential uses
  - 49 were for commercial uses
  - 74 were for mixed uses including, but not limited to, housing, employment and some infrastructure provision
  - 2 were for renewable energy
  - 7 were for natural / open space or biodiversity net gain
  - 2 were for infrastructure
  - 12 of the above were strategic sites which is defined as mixed or residential uses on sites capable of providing over 3,000 homes hectares or commercial uses capable of providing over 120,000sqm of commercial floorspace
  - 83 of the above sites were 1 hectare or less in size
- 3.3 These sites have been assessed using the Land Availability Assessment Methodology. The draft methodology was presented to Overview & Scrutiny (Performance and Growth) on 1st March 2023 and Cabinet on 21st March 2023. Public consultation was undertaken on the draft methodology between the 29 March and 20 May 2023. Following this the responses were assessed and final amendments made to the methodology. This methodology is published as a background document on the Local Plan Update [evidence library](#) webpages for transparency. The council's response to comments made can be found in the Statement of Consultation which will also be published alongside the consultation and uploaded to the evidence library.
- 3.4 Each site assessment has been presented to the Local Plans Advisory Group, discussion of which took place between April and August 2024.
- 3.5 Due to the number of sites submitted and assessed, the Land Availability Assessments were not able to be displayed in one comprehensive document. Instead the assessments were broken down into a suite of documents. This also allows for easier navigation for those who may only be interested in sites in their nearby area of work or residence. The documents were divided as follows:
1. *Northern Huntingdonshire* – which includes sites from the Stilton, Folksworth & Washingley; Yaxley wards
  2. *North Eastern Huntingdonshire* - which includes sites from the Ramsey; Somersham; Warboys wards
  3. *Northern Central Huntingdonshire* - which includes sites from the Alconbury; Sawtry; the Stukeleys wards
  4. *Western Huntingdonshire* - which includes sites from the Great Staughton; Kimbolton wards
  5. *Central Huntingdonshire* - which includes sites from the Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
  6. *Eastern Huntingdonshire* - which includes sites from the Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards

7. *Southern Huntingdonshire* - which includes sites from the Buckden; Great Paxton; St Neots wards

3.6 The number of sites were distributed relatively evenly across these areas:

#### 4. LAND AVAILABILITY ASSESSMENTS – CONTENT

4.1 The NPPF requires that local plans should plan for and allocate sufficient sites to deliver the strategic priorities of the area (paragraph 23). More specifically paragraph 69 asks that:

“Strategic policy-making authorities should have a clear understanding of the land available in their area through the preparation of a strategic housing land availability assessment. From this, planning policies should identify a sufficient supply and mix of sites, taking into account their availability, suitability and likely economic viability.”

- 4.2 In addition National Planning Practice Guidance sets out further detail on this within the [Housing and economic land availability assessment](#) section.
- 4.3 To adhere to the NPPF and NPPG the first stage for each site within the Land Availability Assessments was to see if they have any fundamental constraints which would render the site undeliverable, for example, if it is located within flood zone 3b. This information can be found within the site's assessment under the title 'Fundamental Constraints'. Any sites that do not pass the fundamental constraints are assessed no further.
- 4.4 Secondly if the site passes the fundamental constraints the site is more comprehensively assessed within the 'Assessment of Site Potential Table'. The assessment is in line with the national requirements based on the following defined criteria:
- **Suitable** – a high-level assumption on whether a site would provide an appropriate location for development when considered against relevant constraints and their potential to be mitigated (*found under the heading 'Context, constraints and potential suitability'*). This is a local plan 'policy-off' assessment meaning that the site is not assessed against the policies within Huntingdonshire's Local Plan to 2036.
  - **Available** – no legal or ownership impediments exist to inhibit development which can come forward in the short term (*found under the heading 'Availability'*)
  - **Achievable** - there is a reasonable prospect that viable development could be built on the site at a particular point in time (*found under the heading 'Achievability'*)
  - **Deliverable** – a housing site should be available, in a suitable location and have a realistic prospect of homes being built within 5 years (*found under the heading 'Deliverability/ Developability'*)
  - **Developable** – a housing site should be suitable and have a reasonable prospect of being built at a specified time (*found under the heading 'Deliverability/ Developability'*)
- 4.5 If the site passes this assessment a sustainability appraisal is conducted which can be found in the Sustainability Appraisal document (presented at [Cabinet 10 September 2024](#) and [Overview and Scrutiny Panel - Performance and Growth 4 September 2024](#)). The Council has an obligation through the Planning and Compulsory Purchase Act 2004 to carry out a sustainability appraisal. This must look at how plans and programmes, and more specifically in this instance, our sites, contribute to the achievement of sustainable development. In combination with other regulatory requirements such as the Environment Assessment of Plans and Programmes 2004, this allows the sites to be assessed on their contribution towards environmental, social and economic issues. To tie in this assessment with the Land Availability Assessments a summary box is provided within each site's assessment which reports on 'The impact of the Sustainability Appraisal on the Assessment'

- 4.6 If the site is still considered potentially suitable after considering the sustainability appraisal a capacity calculation is undertaken to indicate the potential capacity of the site, for example the potential number of homes, commercial floorspace, when the site could be delivered and how long it may take to be delivered.
- 4.7 A diagram is provided below to illustrate the process which has been outlined above.

## 5. RESULTS AND CONSULTATION

- 5.1 Of the 369 sites assessed:
- 39 did not pass the fundamental constraints
  - 34 did not pass the detailed LAA assessment (found in the 'Assessment of Site Potential Table' in the LAA for each site) and therefore did not progress to a sustainability appraisal

- 104 sites were considered unsuitable after the results of the sustainability appraisal were taken into account and therefore did not progress further
  - 192 were ultimately considered potentially suitable for development and a capacity calculation was undertaken
- 5.2 In combination, the sites considered potentially suitable for allocation would generate approximately:
- 53,134 homes
  - 2,900,145.23 sqm of commercial floorspace plus an additional 109.26ha of employment land with no floorspace capacity calculated.
  - 134.436 hectares of land for renewables
  - 69.367ha of land for infrastructure
  - 1,158.861 hectares of land for open space/biodiversity net gain
- 5.3 This leaves a substantial 'package' of sites which could be considered potentially suitable for allocation within the local plan, to allow us to choose the most sustainable growth strategy.
- 5.4 The results of these assessments do not guarantee that a site will be allocated in the next local plan, but instead provide a selection of sites that have potential. The final selection of sites will be based on a number of additional factors such as a chosen growth strategy, a final settlement hierarchy and evidence-based documents such as transport studies, strategic flood risk assessments, water cycle studies, employment land studies, climate change reports etc. Many of these topics are covered within the Further Issues and Options Consultation document to join up this process and provide opportunity for the public to comment on the way forward, choose their preferred options and provide additional information.
- 5.5 It is now proposed that these assessments are consulted upon alongside the Further Issues and Options consultation document and the Sustainability Appraisal to allow members of the public, statutory consultees, landowners, developers and interested parties to see the results of the Land Availability Assessments and to provide comments. The consultation is proposed to be held over 10 weeks between 18 September and 27 November 2024.

## **6. COMMENTS OF OVERVIEW & SCRUTINY**

- 6.1 The comments of the relevant Overview and Scrutiny Panel will be forwarded to Cabinet prior to its consideration of this report.

## **7. TIMETABLE FOR IMPLEMENTATION AND WHAT ACTIONS WILL BE TAKEN**

- 7.1 Public engagement on the Land Availability Assessments is proposed to be held over 10 weeks between 18 September and 27 November 2024.
- 7.2 At the close of consultation, the comments made will be assessed and changes made, or further investigations undertaken where considered appropriate. Any changes made will be documented in the Land Availability Assessment documents for the appropriate site under the title 'Updates after the Initial Assessment'.
- 7.3 The results of these assessments do not guarantee that a site will be allocated in the next local plan, but instead provide a selection of sites that have potential. The final selection of sites will be based on a number of additional factors such as a chosen growth strategy, a final settlement hierarchy and evidence-based documents such as transport studies, strategic flood risk assessments, water cycle studies, employment land studies, climate change reports etc. Many of these topics are covered within the Further Issues and Options Consultation document to join up this process and provide opportunity for the public to comment on the way forward, choose their preferred options and provide additional information.

## **8. LINK TO THE CORPORATE PLAN, STRATEGIC PRIORITIES AND/OR CORPORATE OBJECTIVES**

- 8.1 The production of the Land Availability Assessments aligns with Priority 2: Creating a better Huntingdonshire for future generations set out in the Corporate Plan 2023 to 2028, a key action of which is:

“Continue the update to the Local plan, including updating evidence bases in line with National Planning Policy, particularly where it relates to Economy, Environment and Housing.”

## **9. LEGAL IMPLICATIONS**

- 9.1 To be effective Local Plans need to be kept up to date. As set out in Regulation 10a of The Town and Country Planning (Local Planning) (England) Regulations 2012. Plans should be reviewed to assess whether they need updating. Approval was received from Cabinet on 24<sup>th</sup> January 2023:

'To agree to the commencement of work to compile an updated local evidence base to inform and support preparation of the full update to the adopted Local Plan, working with partners and consultants as necessary'

- 9.2 The assessment of sites through the Land Availability Assessment is part of this process.

- 9.3 Providing a comprehensive assessment of sites will also ensure that the Council can justify their decisions when the Local Plan is independently examined by the Planning Inspectorate on behalf of the Secretary of State.
- 9.4 The Government recently published a consultation on a revised NPPF [Proposed reforms to the National Planning Policy Framework and other changes to the planning system - GOV.UK \(www.gov.uk\)](https://www.gov.uk/government/consultations/proposed-reforms-to-the-national-planning-policy-framework-and-other-changes-to-the-planning-system), in addition an Planning and Infrastructure Bill is proposed. These proposed changes may alter the requirements of the Local Plan. However, the assessment of suitable sites and the availability of land required to meet growth is considered to remain a priority.

## 10. HEALTH, ENVIRONMENT AND CLIMATE CHANGE IMPLICATIONS

10.1 Paragraph 9 of the National Planning Policy Framework requires that 'planning policies and decisions should play an active role in guiding development towards sustainable solutions, but in doing so should take local circumstances into account, to reflect the character, needs and opportunities of each area.' This includes ensuring that the Local Plan and its policies meet the principles of sustainable development; achieving net gains from an economic, social and environmental perspective defined in NPPF paragraph 8 as follows:

- a) 'an economic objective – to help build a strong, responsive and competitive economy, by ensuring that sufficient land of the right types is available in the right places and at the right time to support growth, innovation and improved productivity; and by identifying and coordinating the provision of infrastructure;
- b) a social objective – to support strong, vibrant and healthy communities, by ensuring that a sufficient number and range of homes can be provided to meet the needs of present and future generations; and by fostering well-designed, beautiful and safe places, with accessible services and open spaces that reflect current and future needs and support communities' health, social and cultural well-being; and
- c) an environmental objective – to protect and enhance our natural, built and historic environment; including making effective use of land, improving biodiversity, using natural resources prudently, minimising waste and pollution, and mitigating and adapting to climate change, including moving to a low carbon economy.'

(NPPF, paragraph 8)

10.2 The review of the sites through the LAA and Sustainability Appraisal is part of this process. The choice of sites suitable for allocation (identified in combination with other evidence), will contribute towards identify the most sustainable and achievable way to plan development sustainably, creating positive impacts on health, the environment and climate change.

## 11. REASONS FOR THE RECOMMENDED DECISIONS

- 11.1 Engagement on the Land Availability Assessments is considered beneficial in meeting the Council’s Corporate Plan objectives. In particular it meets the required key action “Continue the update to the Local plan, including updating evidence bases in line with National Planning Policy, particularly where it relates to Economy, Environment and Housing.” The details of the engagement proposals are set out in the report on the Further Issues and Options Engagement Paper.
- 11.2 It is a key first step towards the development of an evidence base to support preparation of a full update to the Local Plan as approved at Cabinet on 24<sup>th</sup> January 2023.
- 11.3 Engagement on the Land Availability Assessment also adheres to the Corporate Plan’s central approach which notes that “Our role is to help residents and businesses thrive, but that is not something we can do to people. Only by working with people can we make sure Huntingdonshire is a place where you and your family can have a good life and take advantage of the options that benefit you” The consultation will allow people and organisations to feed into the site assessment process and provide comment and additional information which may be of benefit.
- 11.4 The choice of sites suitable for allocation (identified in combination with other evidence), will contribute towards realising the ambition to work towards the most sustainable and achievable way to plan development, creating positive impacts on health, the environment and climate change. This in turn will help the Local Plan to demonstrate that it can achieve the principles of sustainable development as set out in paragraph 8 of the National Planning Policy Framework by taking into account social, economic and environmental considerations.
- 11.5 The recommendations are therefore:
- To approve the contents of the Land Availability Assessments
  - To agree that the Land Availability Assessments be published for public consultation for ten weeks between 18 September and 27 November 2024.
  - To grant delegated authority to the Chief Planning Officer, in consultation with the Executive Councillor for Planning to make any necessary typographical or other minor changes to the document prior to its publication for consultation.

## 12. LIST OF APPENDICES INCLUDED

**Appendices:** Land Availability Assessments –

- **Appendix 1:** Northern Huntingdonshire – which includes sites from the Stilton, Folksworth & Washingley; Yaxley wards
- **Appendix 2:** North Eastern Huntingdonshire - which includes sites from the Ramsey; Somersham; Warboys wards

- **Appendix 3:** Northern Central Huntingdonshire - which includes sites from the Alconbury; Sawtry; the Stukeleys wards
- **Appendix 4:** Western Huntingdonshire - which includes sites from the Great Staughton; Kimbolton wards
- **Appendix 5:** Central Huntingdonshire - which includes sites from the Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
- **Appendix 6:** Eastern Huntingdonshire - which includes sites from the Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
- **Appendix 7:** Southern Huntingdonshire - which includes sites from the Buckden; Great Paxton; St Neots wards

## Document Information

**Title:** Northern Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Northern Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 Northern Huntingdonshire Area

**1.1** To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

**Map 1.1 Huntingdonshire site assessment groupings**

**1.2** This document sets out the site assessments for the sites located within 'Northern Huntingdonshire'. This grouping consists of Stilton, Folksworth & Washingley; Yaxley wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Alwalton - 1 site
- Chesterton - 2 sites
- Conington - 5 sites
- Denton and Calecote - 1 site
- Elton - 5 sites
- Farcet - 5 sites
- Folksworth and Washingley- 4 sites
- Glatton - 1 site
- Great Gidding - 4 sites
- Haddon - 6 sites
- Holme - 6 sites
- Little Gidding - 0 sites
- Morborne - 0 sites - two sites partially fall within Morborne parish but both have been counted under Haddon as most of the sites fall within that parish area
- Sibson-cum-Stibbington - 1 sites - this site also partially falls within Water Newton parish.
- Stilton - 6 sites
- Water Newton - site that partially falls within this parish has been counted under Sibson-cum-Stibbington as most of the site area falls within that parish area.
- Yaxley - 7 sites

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal to obtain a complete picture of the Council's initial consideration of the site.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites.

#### 3.4 Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next 5 years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or was occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape or been revegetated
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

- **CfS** - Call for Sites
- **Dph** - Dwelling per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.5 The assessment of each site consists of several sections, each is detailed below:

**Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.

**Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.

**Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.

**Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.

**Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a local green space, having a nature conservation designation, within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.

**Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.

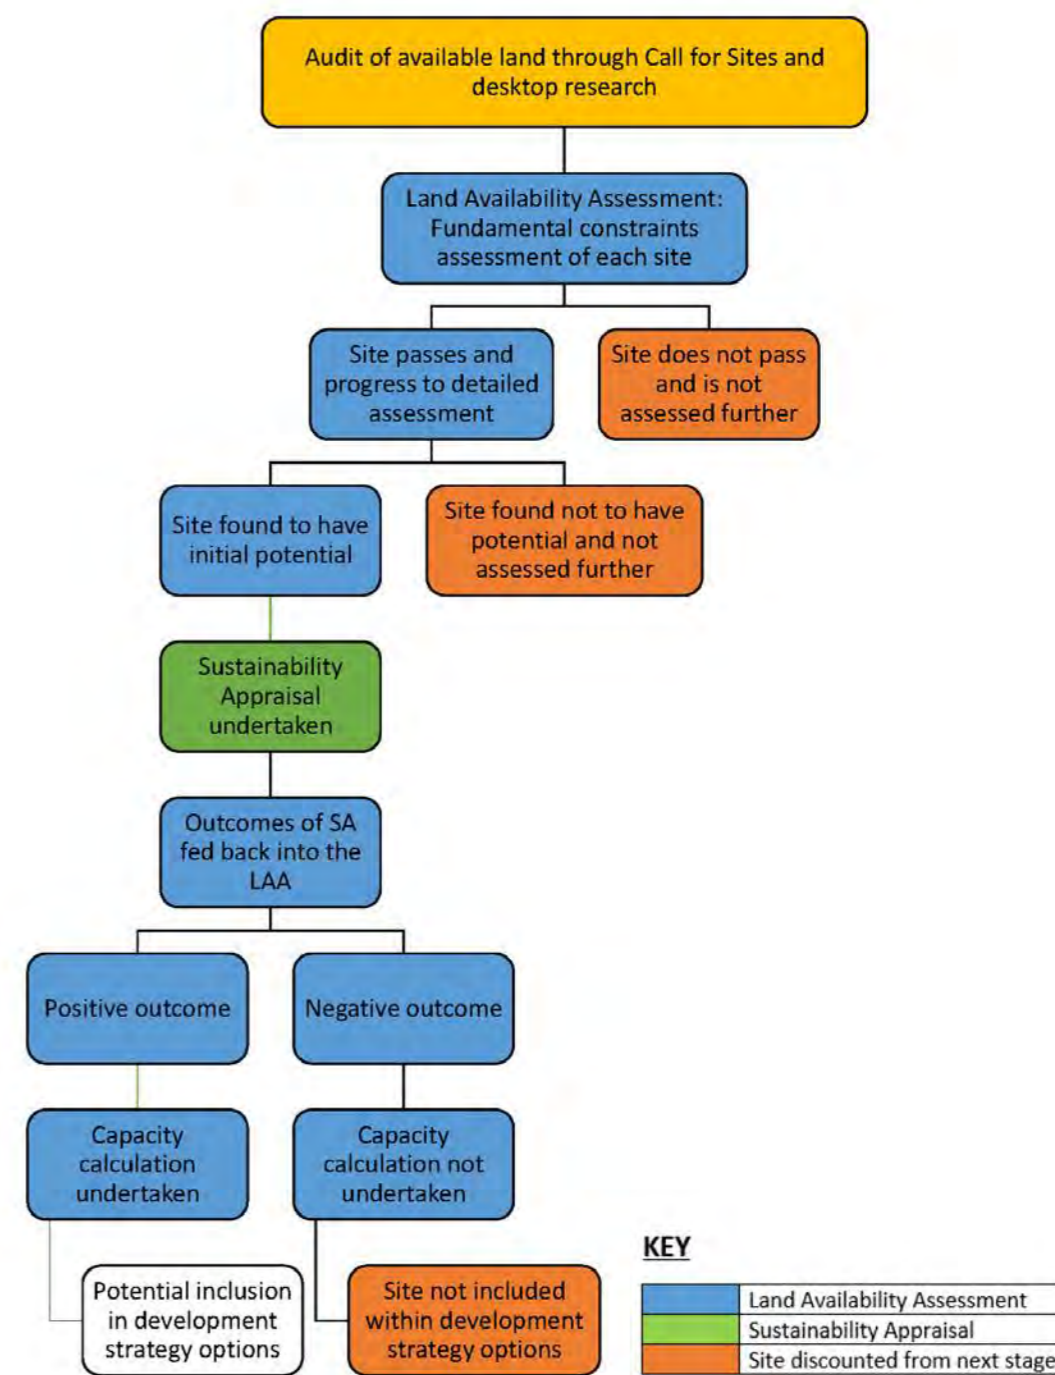

**Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.

**Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.

**HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, we will calculate an indicative capacity for the site and uses. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.

**Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

### Site Assessment Process

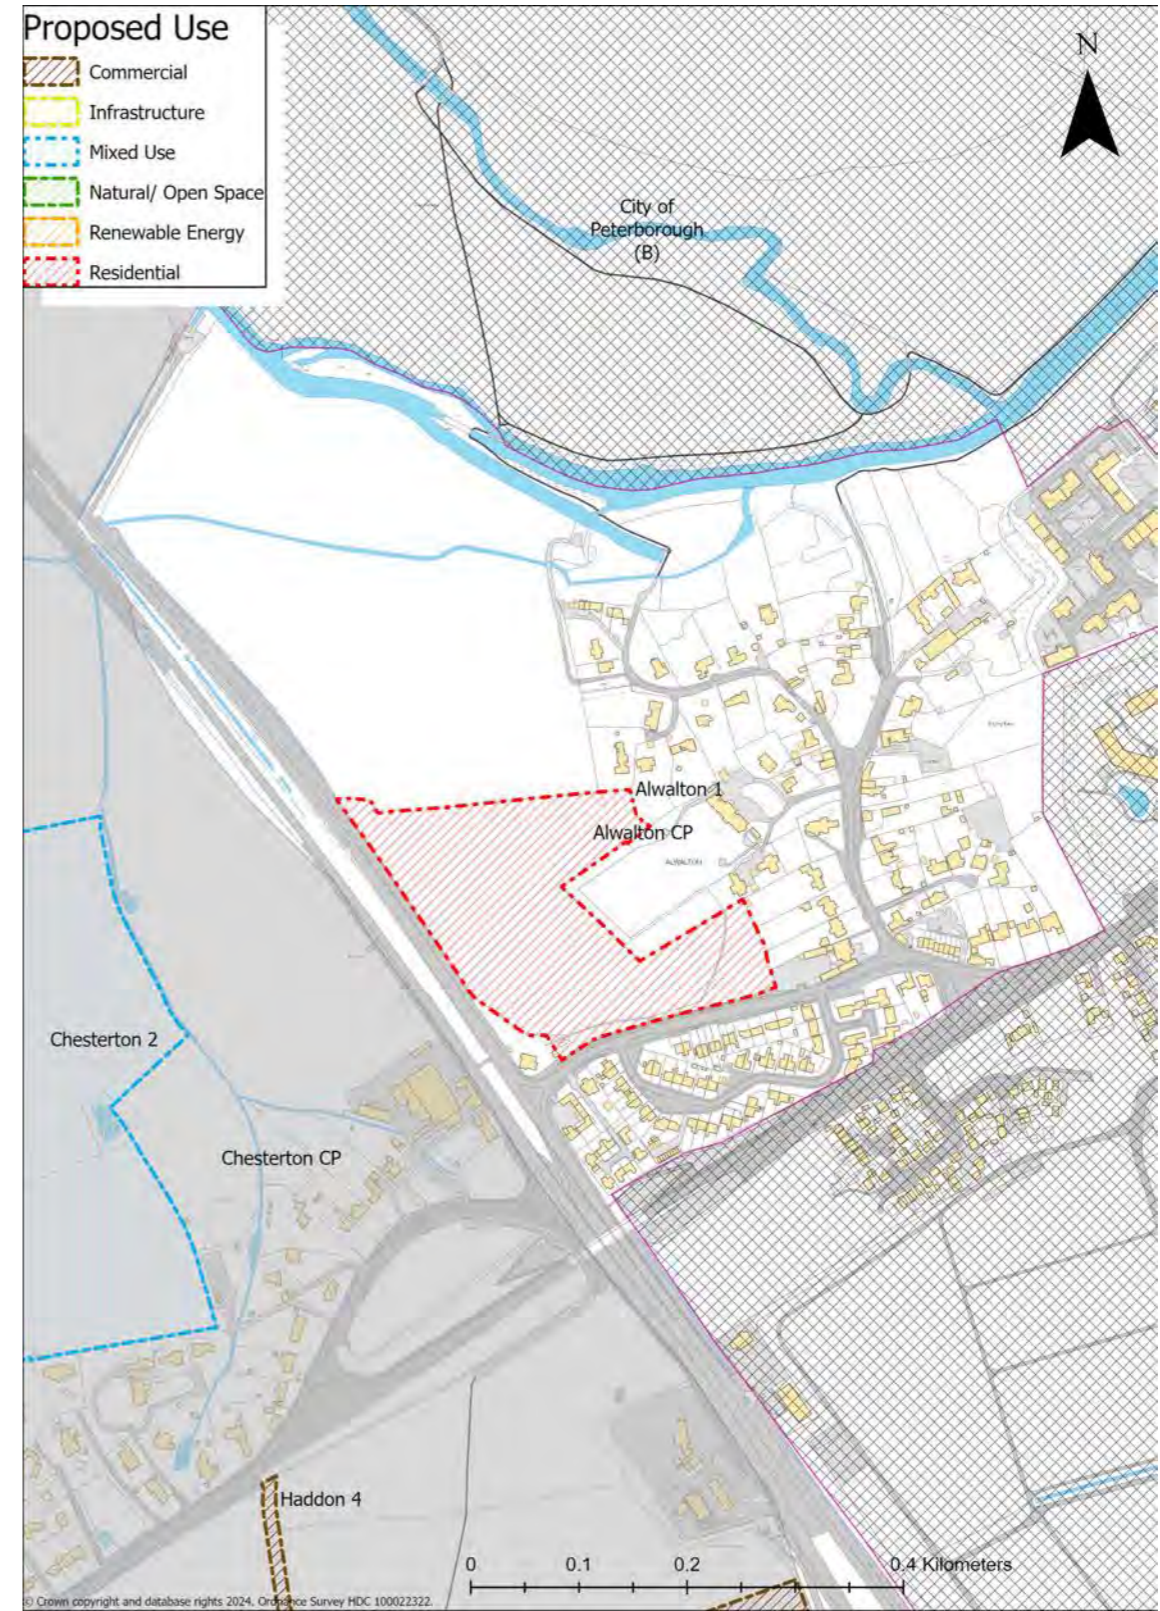

### 1 Alwalton

1.1 A total of 1 site has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Alwalton 1: Land North of 23 to 33 Oundle Road, Alwalton

1.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Up to 10 homes	Available 2023 Build out over 2 - 4 years

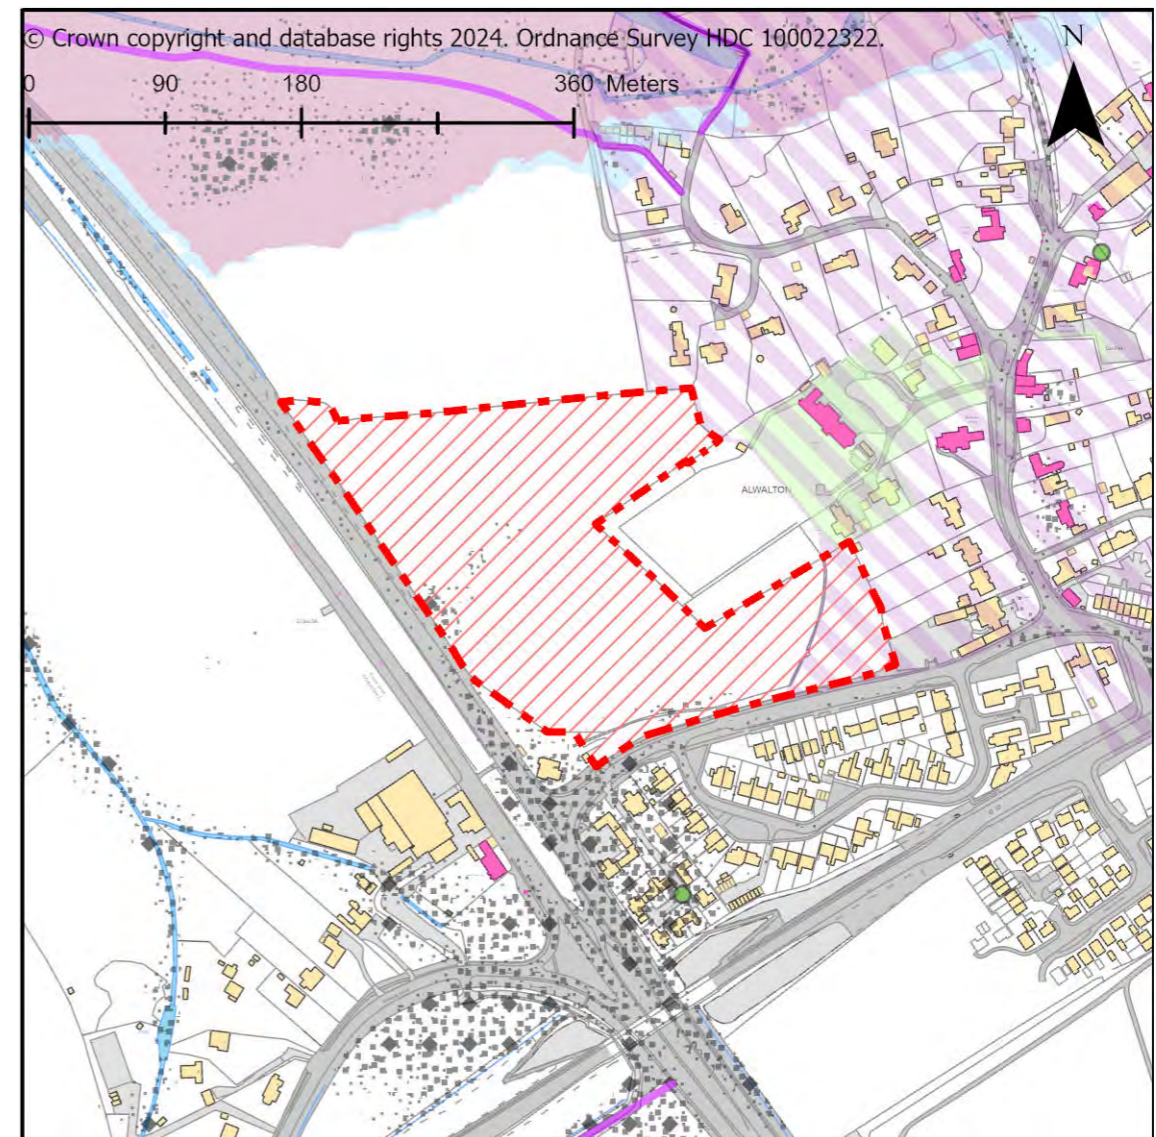

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:154
Relevant planning history	19/00125/OUT for development for up to 6 houses on the south eastern corner part of the site. This was refused in February 2020.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Illustrative Zoning Plan</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly within flood zone 1 with some surface water flood risk within the site. The site is wholly classified as grade 3 agricultural land. The site is broadly level, it has a strong western edge where it is adjacent to the A1. Along its southern edge the site is obscured from view due to dense established vegetation. Established vegetation is also present along its eastern edge and to the west along the A1. The site is most open on its northern edge with views across the open countryside. To the east the site adjoins residential development and Alwalton Hall which is used as luxury spa retreat.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to the A1 could give rise to increased levels of air, light and noise pollution which will require mitigation. There are no nature conservation designations on site. The conservation area partially falls within the south eastern corner of the site where there are established trees. The rest of the site adjoins the conservation area. Alwalton Hall is a grade II listed building. There is an existing farm access into the site from Oundle Road. The submitted illustrative zoning plan shows that it is intended to development only along the site's frontage along Oundle Road (excluding land within the conservation area) leaving the farm access in place so that the wider site within the red plan can be accessed still. Development along the site's frontage would also result in the likely removal of most or all the established vegetation.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The vast majority of the site is situated in an extensive mineral safeguarding area for brickclay with the north western corner being in a mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is unknown at this stage how the site will be delivered. The site promoter suggests the land is available now and could complete within 2 to 4 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There is an existing farm access into the site from Oundle Road and it is broadly flat meaning there are no major topographical challenges to development. However, there are cumulative constraints within the site that impact its achievability namely its proximity to the A1, heritage assets, existing vegetation and landscape impact that must be successfully overcome. The site promoter seeks to retain the farm access so that the remaining 4ha of the site.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no structures on site to clear but there are several constraints on site to mitigate. Proximity to the strategic road network (the A1), landscaping, trees and the impact on heritage assets are key development considerations when masterplanning the site. It is unknown at this stage how the site will be delivered, as such the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land consisting of grade 3 agricultural land
- Within flood zone 1 with some surface water flood risk
- In walking distance to services, shops and employment opportunities within Alwalton
- Good accessibility to public transport options that link the site to services and employment within Peterborough
- Not accessible to natural green space
- It is within the Nene Valley Green Infrastructure Priority Area
- Partially within the conservation area and also within the setting of a listed building
- Located adjacent to the A1 so is at risk from increased levels of air, light and noise pollution
- Located on the western edge of the built form of Alwalton village, development would link it up to the A1 on the northern side of Oundle Road. The site is largely obscured from view by established trees which may be removed to enable a frontage development as proposed

In combination the outcomes of the LAA and SA indicate that the site:

- Is not appropriate for development due to the potential adverse impact on the character of the area including the rural approach into Alwalton as well as the impact on designated heritage assets.

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
The site is considered inappropriate for development so no capacity calculation has been undertaken	N/A	N/A

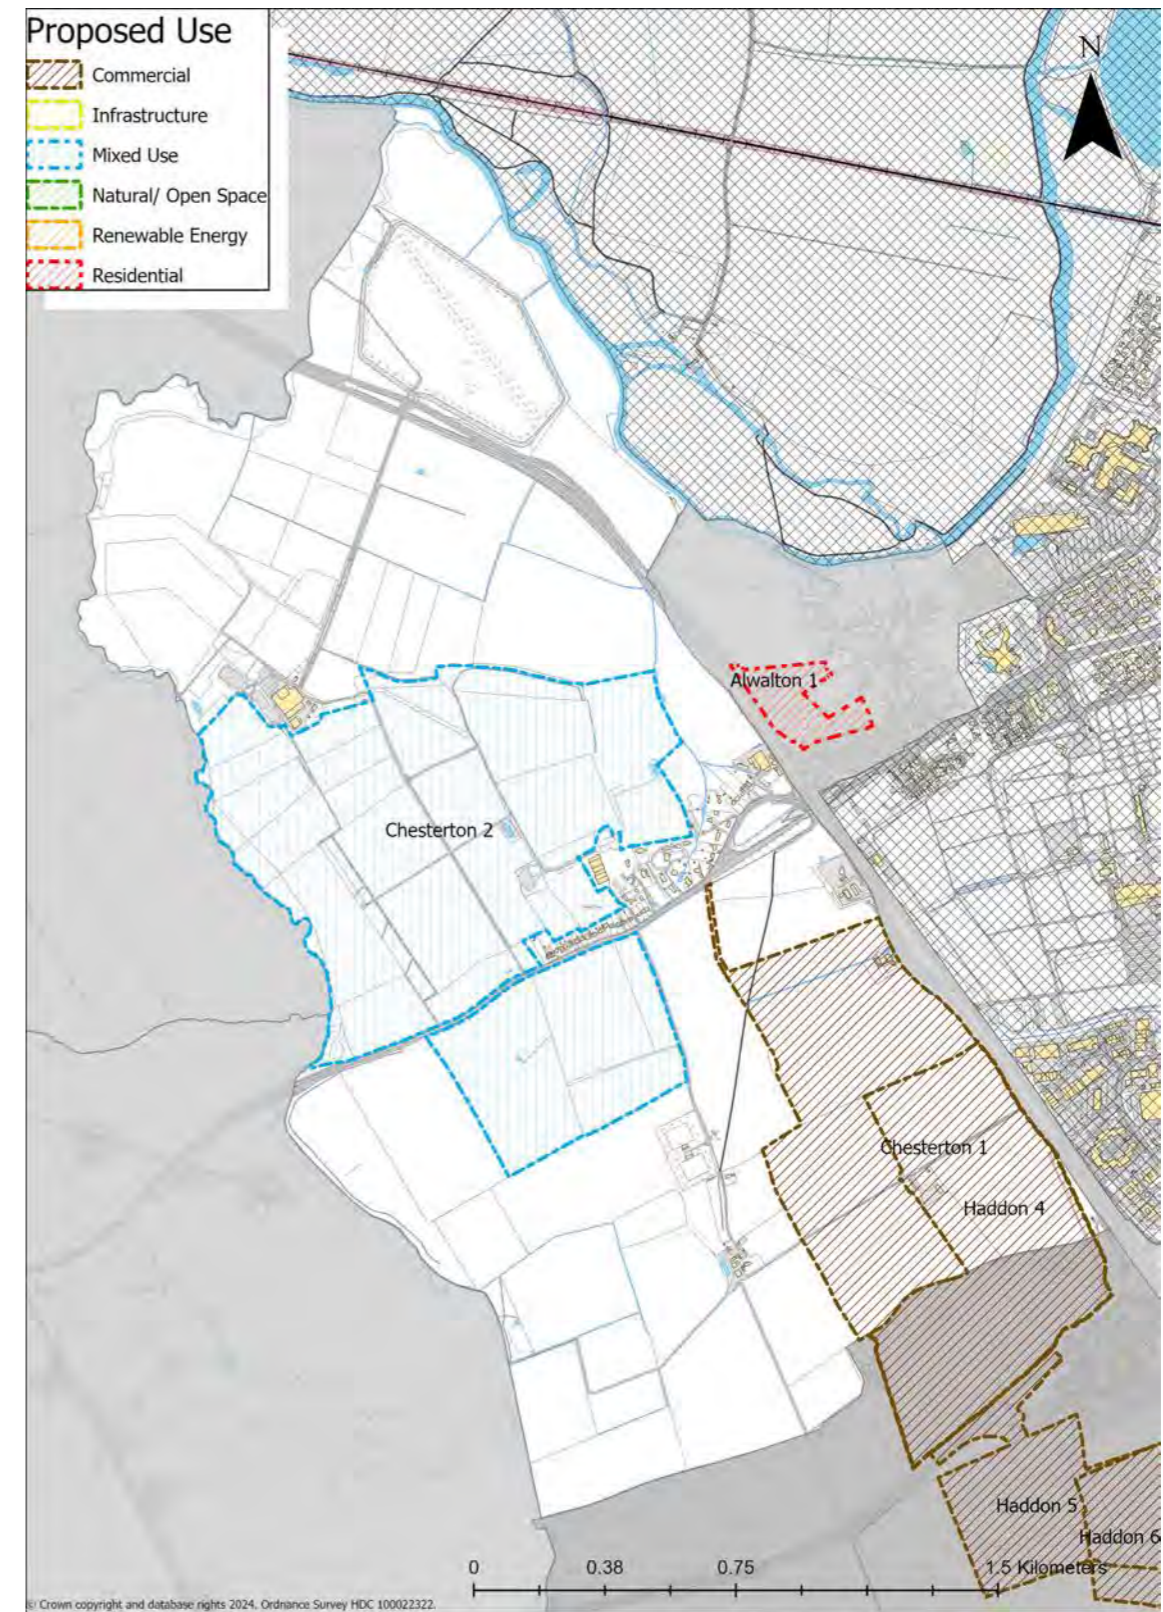

**Updates after the Initial Assessment**

--

### 2 Chesterton

2.1 Two sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Chesterton 1: Land West of A1 (North of Peterborough Motorway Services) - Option A (larger site), Haddon (Chesterton) - note that this site also partially falls within Haddon parish, but it has been included under Chesterton as most of the site lies within that parish area.
- Chesterton 2: Chesterton Garden Village

2.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 169 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	~
--	---

<p>The site lies between the A605 Oundle Road to the north and the A605 and Peterborough Motorway Services to the south, it is also west of the A1(M). The south eastern corner of the site has also been submitted again as part of a smaller site under CfS:206 (Haddon 4). It is located on the north eastern edge of Huntingdonshire district with Peterborough City Council being on the other side of the A1(M). The site is immediately to the north of another site being promoted at A1 West (South) (see site Haddon 3 for site assessment).</p> <p>The site is wholly within flood zone 1 with some surface water flood risk within the site. It is wholly classified as grade 3 agricultural land and is currently in agricultural use. There are a number of agricultural buildings and farmhouses on site which would be demolished.</p> <p>The site predominantly comprises a number of medium to large arable fields. The eastern part towards the A1(M) is relatively flat with some parts gently sloping and the western part rises towards the ridgeline and higher ground beyond the site to the west. The existing fields within the site are generally divided by hedgerows with some drainage ditches. Development on the higher ground would result in a significant landscape impact. The A1(M) forms a landscape buffer to the east but generally, the site is very open. There are farm buildings within the site and Chesterton to the north and Peterborough Motorway Services to the south. The site has a public right of way that cuts through the north western corner of the site so development will be visible form a public vantage point.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run through the site. The site's proximity to the strategic road network mean that development is at greater risk form air, light and noise pollution, additionally the proposed development could increase levels of pollution. There are no nature conservation or heritage designations on site. Access is proposed from the A605, with pedestrian, cycle and bus access provided from Oundle Road. From the A605, there are connections to the A1(M). Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. The site is beyond 400m of a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership with all landowners supporting its development. The land has been promoted on behalf of a developer who part owns the site, the site promoter states that the remainder of the site is controlled by way of an option agreement. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and take 2 years to complete.</p>	+

<p><b>Achievability</b></p> <p>The site promoter identifies that the public highway and digital and telecommunications infrastructure are accessible from the site boundary, with gas supply and electricity supply not being immediately accessible, and mains water supply being accessible within the site. The site has good connections to the strategic road network but engagement with Cambridgeshire County Council will be required to determine if the proposed scale and type of development can be accommodated. The impact on the landscape and surrounding land uses are also key constraints to consider. It is noted that the surrounding wider area particularly to the east of the site within Peterborough City Council is rapidly evolving with largescale logistics and warehousing development at Peterborough Gateway and Great Haddon.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with some buildings on site to clear. There are several constraints impacting the site which cumulatively make developing the site challenging, most notably relating to landscape and access/traffic flows. The site promoter seeks to deliver the site via a master developer and will be available between 2024 and 2028 with the site having an options agreement already in place. The proposal is currently not supported under current local policy so an allocation status would be required. Considering this the site is categorised as being developable.</p>	~

<ul style="list-style-type: none"> <li>• May be subject to higher levels of air, light and noise pollution arising from its proximity to the A1(M) and be of a scale that could result in additional pollution</li> <li>• Is largely contained by the road network to the south and east and by rising land levels to the west. The site has a closer relationship with the countryside rather than to a settlement so detailed masterplanning will be required to address landscape impact and ensure effective integration</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for an employment scheme. Landscaping is a key consideration in the masterplanning of any scheme.</li> <li>• Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development, particularly the main point of access being an additional turning from the roundabout on the A605 before junction 16 of the A1(M)</li> <li>• Telegraph poles running through the larger parcel which will impact the masterplanning of the site</li> <li>• Sustainable drainage will be required to mitigate the surface water flood risk</li> <li>• Masterplan will need to incorporate existing public rights of way</li> <li>• There is potential to integrate the development with the proposal at Chesterton 2 for a Garden Village Community</li> </ul>
---

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is greenfield land consisting of grade 3 agricultural land</li> <li>• Is within flood zone 1 but there are areas at risk from surface water flooding</li> <li>• Is remote from natural greenspace</li> <li>• It has very limited accessibility to a local shop and local services and facilities</li> <li>• Has some potential to connect to existing public transport options and is of a scale to provide an enhanced provision as well as enhanced connections for footpath and cycle paths, potentially utilising existing public rights of way</li> <li>• Connections to the road network could incentivise car usage if improvements were not made to the public transport and active transport network</li> <li>• It could provide employment development that could support job creation</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 89.05 ha</p> <p>Usually for employment development, the gross site area will be used to calculate capacity but considering the constraints on the site relating to the land levels and need for landscaping, some flood attenuation, incorporation of public rights of way and access route and connection off the roundabout from the A605, the net developable area will be used. Accounting for this the net developable area of 60% will be used.</p> <p>89.05 ha x 60% = <b>53.43 ha</b></p>	<p>Commercial - employment and logistics / distribution</p> <p>The site promoter states that the site could provide a mix of offices, B2 (industrial) and B8 (warehousing) uses, with B2 capped at 30% of the floorspace.</p> <p>The 0.4 plot ratio is most appropriate to use to calculate an indicative capacity for B2 and B8 uses:</p>	<p>Available post 2028, subject to allocation status.</p> <p>Build out over more than 5 years (site promoter anticipates 2 years)</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<p>0.40 plot ratio x 53.43 ha = 21.372 ha of land for employment uses</p> <p>equating to <b>213,720 sqm.</b></p> <p>Using the split provided by the site promoter between B2 and B8 use this could provide:</p> <ul style="list-style-type: none"> <li>● 64,116 sqm for B2 use</li> <li>● 149,604 sqm for B8 use</li> </ul>	

Updates after the Initial Assessment

**Chesterton 2: Chesterton Garden Village**

<b>Site reference</b>	Chesterton 2
<b>Site name</b>	Chesterton Garden Village

Site address	Parish(es)	Site area (ha)
Land north and south of Oundle Road (A605), Chesterton	Chesterton	128.13

**Promoter's Intentions**

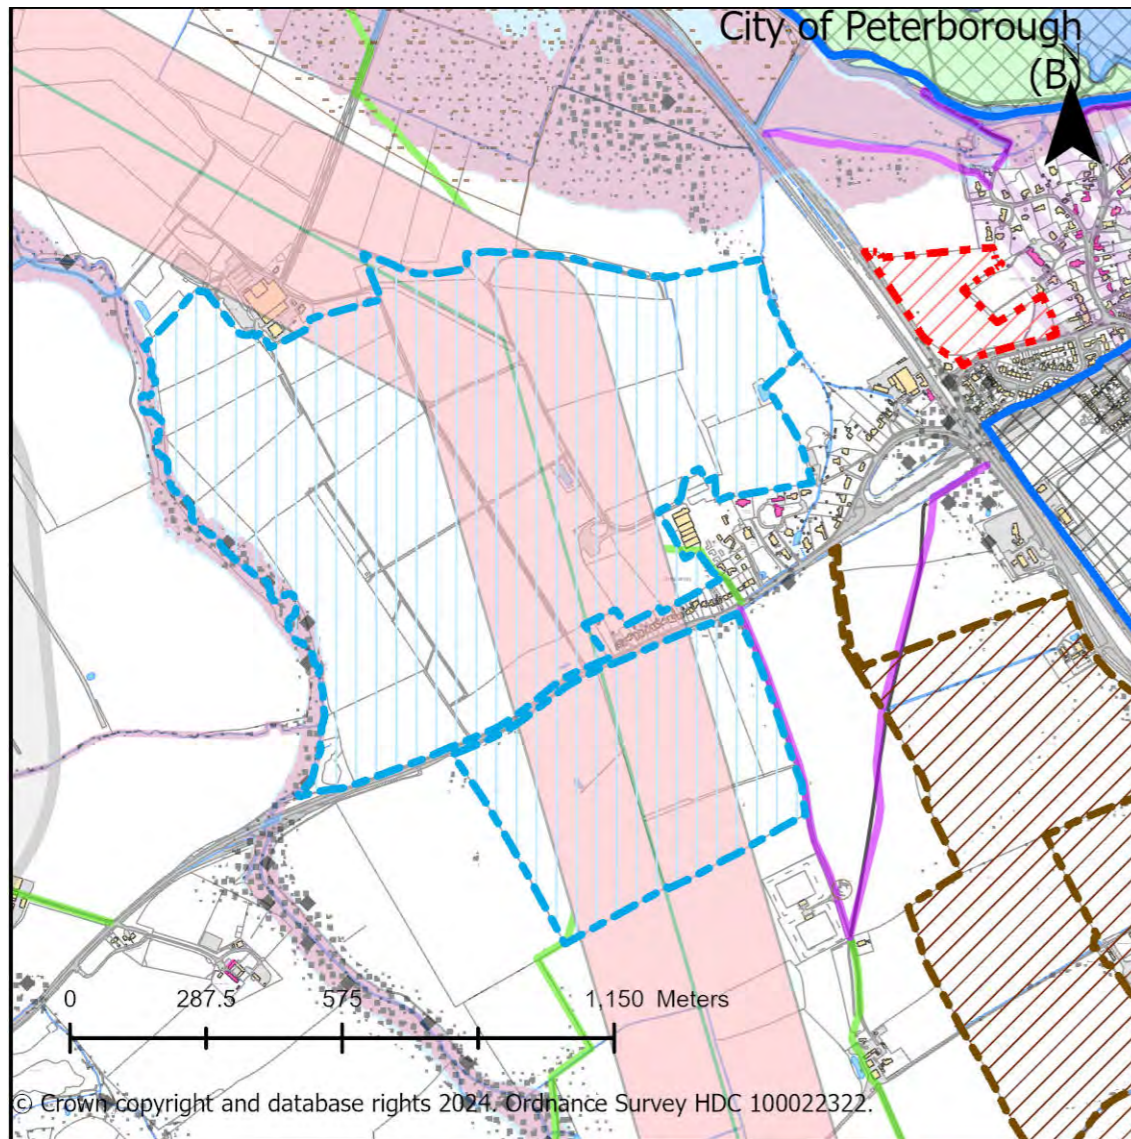

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Supporting infrastructure</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> <li>Land to safeguard against flooding</li> </ul>	Up to 1,000 homes  Primary school, community building, supporting retail (e.g. local shop), mobility hub, sports pitches  70ha of natural, green or open spaces  Land for biodiversity net gain and to safeguard against flooding TBC	Available 2024 - 2028  Build out over 10 years

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-2414
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Vision Document for Chesterton Garden Village (April 2024)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	A small amount of the western edge of the site is within flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

impacted by some surface water flood risk across the site. The site is wholly classified as being grade 3 agricultural land. The site is broadly level and is comprised of several fields marked out by field boundary features such as hedgerows. The site promoter has used these to underpin a grid concept whereby the existing landform and features are used to shape the layout of the scheme. To the north, the wider landscape gently slopes downwards towards the River Nene and to the west it gently slopes downwards towards Chesterton village and the A1(M). To the east the landscape gently rises, it rises to the gently to the south as well up to Chesterton Hill where the landform elevates significantly. As such, the site is fairly well contained within the wider landscape to the south and east but is more visible to the north and west. Two public rights of way run through the site, one through each parcel providing connections northwards towards the Nene Valley and southwards towards Haddon. There is also a right of way running along the eastern edge of the southern parcel. To the north is Chesterton Lodge and Horse Close Spinney, to the west and south of the site is open countryside, to the east is Chesterton village and the A1(M), further east is Peterborough. The proposal will fundamentally alter the character of Chesterton expanding it substantially and by extension the character of the surrounding landscape, successful integration will require detailed masterplanning.

There is no known contamination on the site. There are no gas pipelines running through the site, however an oil pipeline runs through the centre of the site with its buffer zone covering a large portion of the site. The A1(M) may give rise to increased levels pollution which may impact the development and require some mitigation. There are no nature conservation designations within the site, however within the southern parcel there is a an rea of trees in its south western corner that are protected by an area Tree Preservation Order. The masterplan shows that no built development is proposed here. There are no heritage designations within the site, however to the east of the site there are several listed buildings within Chesterton whose setting will be impacted by proposals. These includes the grade I listed St Michael's Church. Vehicular access is proposed to both parcels from Oundle Road with a new junction proposed along Oundle Road. There is an existing access to the dairy farm located to the north of the site which is proposed to provide an additional emergency access. Engagement with the County Council will be required to determine if the proposed access arrangements are suitable and can be achieved in order to serve the proposed scale of development.

The site is greenfield so its development will not contribute to the reuse of previously developed land nor provide some regeneration. The northern and western edges of the site are situated in an extensive mineral safeguarding area for sand and gravel with the entirety of the southern parcel being within a mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m from a water recycling site.

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site consists of two parcels, the larger parcel is north of Oundle Road with a second smaller parcel south of this road.

The site is within flood zone 1 apart from its western edge which is constrained by some fluvial and surface water flooding being within flood zones 2 and 3a and 3b, this increased flood risk is associated with Billing Brook which runs along the site's western edge. In their masterplan for the site, the site promoter is proposing to the western edge of the site to be used for open space and landscaping entitled 'Billing Common' so no built development is proposed within areas at higher risk of flooding. There are pockets of land that are

~

**Availability**

+

<p>The site is controlled by a single individual/company who supports its development. There are no known legal restrictions affecting the site. The site promoter has stated that it is yet to be confirmed how the site will be delivered. The promoter suggests the land would be available between 2024 and 2028 and could take about 10 years to build out once development has commenced.</p>	
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. The site has some physical constraints and some topographical challenges to overcome with its position within the wider landscape and relationship with Chesterton village. The submitted masterplan for the site has proposed a layout which seeks to overcome these. Further technical work will be required to support the proposal including details on access arrangements, traffic flows, landscape appraisal, potential impacts on trees and flood risk. The capacity of the road network to accommodate the proposed scale and mix of uses is a key matter which will require engagement with the County Council. Additionally, the presence of the oil pipeline is a potential constraint to development and will require further investigation. Enhanced or new infrastructure to serve the development is also likely to be required to accommodate the scale of development which may impact the feasibility and viability of proposals.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear, a vision document and masterplan have been compiled for the site but a suite of further technical information will be required to support any future planning application. While it is noted that the site promoter is unsure how the site will be delivered at this time, the site would require an allocation status. Therefore, the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 3 agricultural land</li> <li>• Largely within flood zone 1 apart from its eastern edge which is constrained by fluvial flood risk arising from Billing Brook</li> <li>• Not constrained by designated nature conservation designations</li> </ul>
--

<ul style="list-style-type: none"> <li>• Part of the site falls within the Nene Valley Green Infrastructure Priority Area and the scale of the site could contribute towards strategically to enhanced green infrastructure and habitat connectivity</li> <li>• Is adjacent to several listed buildings within Chesterton including the grade 1 listed St Michaels Church</li> <li>• The scale of the proposed development will fundamentally alter the landscape and village setting of Chesterton as well as the surrounding landscape</li> <li>• Currently has limited accessibility to employment opportunities, primary education and local services and facilities within the village itself relying on nearby settlements for these but the scale of the proposal will provide a primary school sports facilities, community building and a local shop</li> <li>• There are bus stops which provide a public transport connection into Peterborough</li> <li>• Of a scale to provide a mix of housing types, sizes and tenures</li> <li>• There will likely be some modest job creation within the development arising from the non-residential uses, but no employment development is currently proposed by the site promoter - the proximity to the site to Chesterton 1 (which proposed a largescale employment development) offers an opportunity to integrate this development with Chesterton 1</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially suitable as largescale village extension to Chesterton providing new and enhanced community facilities, primary school, green infrastructure, employment and footpath, cycle path and public transport connectivity, therefore making the settlement more self sufficient and sustainable reducing reliance on nearby settlements including Elton, Alwalton, Yaxley and Peterborough.</li> <li>• Access and impact on the local and strategic highways network will need to be further scoped and assessed, engagement with the County Council will be required</li> <li>• Detailed masterplanning will be required to mitigate landscape impacts as well as impacts on heritage assets and to ensure successful integration with the existing settlement and community as well as successful integration of existing public rights of way</li> <li>• An oil pipeline and its buffer zone runs through the centre of both parcels which may impact the layout of the development and the location of uses across the site</li> <li>• Consultation will also be required with utilities and other infrastructure providers to ensure the development has adequate infrastructure to serve it</li> </ul>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 128.13ha</p> <p>43% net developable area allowed following the exclusion of:</p>	<p><b>10ha is deducted for a community building, supporting retail (e.g. local</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 10 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<ul style="list-style-type: none"> <li>70ha of land for natural, green and open space</li> <li>3ha of land for a primary school</li> </ul> <p>128.13ha x 43% = 55.13 ha</p>	<p><b>shop), mobility hub and sports pitches</b>, this leaves 45.13ha.</p> <p><b>45.13ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments, however considering the rural nature of the site and its intention to not bring about a freestanding new settlement, the highest density categories are not appropriate to use.</p> <p>10% of land at moderate density 50dph. 4.5ha x 50dph = 225 homes</p> <p>40% of land at low density 35dph. 18ha x 35dph = 630 homes</p> <p>50% of land at very low density 25dph. 22.6ha x 25dph = 565 homes</p> <p><b>1,420 total homes</b></p>	

Updates after the Initial Assessment

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:379
Relevant planning history	Various planning history relating to the current use of the site as an airfield
Land type	Partly previously developed/ partly greenfield land
Current use of the site	Active air strip
Supporting information	<ul style="list-style-type: none"> <li>• Call for Sites Supporting Letter (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	A strip of the site's northern boundary falls within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	A small amount of the site's eastern edge falls within 400m of a water recycling area.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located to the north east of Conington village and just to the south of the B660 Glatton Lane. It comprises the Former RAF Glatton airfield, which now operates as a private airfield with a landing strip, hangars and workshops.</p> <p>The majority of the site falls within flood zone 1, however a linear strip along the northern boundary falls within flood zone 3a and 3b. There is some risk form surface water flood risk. The site is wholly classified as grade 3 agricultural land. The site is broadly level and is located in the Great Fen Landscape and Visual Setting Boundary. The site is located within the open countryside and is largely open with fencing along the site and only some</p>	
--	--

<p>vegetation and trees along Glatton Lane which partially obscures the site from view. There is a public right of way running across the southern edge of the site. Largescale development across the site is likely to be visible and could have an adverse impact on the landscape.</p> <p>There is no known contamination on site, however this may require further investigation considering the use of the site as an airfield. There are no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Few structures from when it was formerly RAF Glatton remain. There is an existing access to the site is from Pingle Bank and Church Road to the east. The site promoter states that there is an option to explore access from the north east off Glatton Lane (B660). The site could accommodate substantial development which may not be supported on the local transport network, engagement with Cambridgeshire County Council would be required.</p> <p>The site is partly previously developed, so its redevelopment will contribute to the reuse of some previously developed land provide some regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. Most of the site is beyond 400m from a water recycling site apart from a small amount of the site's eastern edge.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership and its development is supported by the landowner. The site promoter does not know if there are legal restrictions impacting the site. It is unknown at this stage how the site will be delivered at this stage. The site promoter suggests the land will be available between 2029 and 2034. The promoter has not provided capacities for potential employment, infrastructure and renewable energy development and that it is unknown how long the build out may be.</p>	
<p><b>Achievability</b></p> <p>The site promoter states that the site's accessibility to services and access are all unknown. The site promoter is also uncertain if there are any additional issues to the site's development. There is an existing access from Pingle Bank and Church Road but it would need to be investigated if a further access could be provided and if the local transport network could accommodate a development of this potential scale. Significant infrastructure would likely be required to serve the development. Substantial landscaping would be required through the design process to limit and mitigate landscape impact.</p> <p>Additionally, a letter from the Department for Transport dated 17 September 2019 identified the key role that aerodromes and airfields play in both business and leisure aviation and are part of the General Aviation (GA) industry which covers all non-scheduled civil aviation operations. The letter states that GA is a high priority area for the Department and the</p>	

<p>Government wants to encourage GA and the benefits it brings to the economy, as well as ensuring appropriate and proportionate protection for aerodromes forming our strategic network across the UK.</p> <p>These factors cumulatively significantly question the achievability of development on the site.</p>	
<p><b>Deliverability / developability</b></p> <p>Limited information has been provided on the nature of employment/transport/renewable energy development that could be provided on site. It is also unknown how the development may be delivered at this stage. The site is due to be available between 2029 and 2034. The uncertainty of the proposals and the resistance from the Department of Transport on the lose of airfields are also key constraints to delivering the site. Considering these factors, the site is considered not to be deliverable or developable at this point in time.</p>	-

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No as there is a preference from national Government to retain airfields and the likely significant amount of infrastructure and transport improvements required to serve the development making the proposed development potentially unachievable. Additionally, there are very limited details form the site promoter to scope the potential for the site in depth at this time.
--	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

### 3 Conington

#### Conington 2: Land North of Conington Airfield

<b>Site reference</b>	Conington 2
<b>Site name</b>	Land North of Conington Airfield

Site address	Parish(es)	Site area (ha)
Land North of Conington Airfield	Conington	2.03

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: <ul style="list-style-type: none"> <li>• Employment</li> <li>• Logistics and distribution</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>• Transport and parking/lorry parking</li> <li>• Renewable energy</li> </ul>	No capacities provided	Available 2024 - 2028  Build out over 5 years

#### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:378
Relevant planning history	None relevant
Land type	Mostly greenfield/some previously developed land
Current use of the site	Mostly agricultural land with two residential properties
Supporting information	<ul style="list-style-type: none"> <li>• Call for Sites Supporting Letter (June 2023)</li> </ul>

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	Only a strip of its northern edge is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site is completely within 400m of a water recycling area. The site promoter has not submitted an odour assessment so at this time the site is discounted from further assessment.	Fail
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development as it is entirely within 400m of a water recycling area.	N/A	N/A

**Updates after the Initial Assessment**

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No because the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity.

**Assessment of Site Potential**

Page 185 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located to the west of Conington airfield and consists primarily of woodland categorised as Priority Habitat – Deciduous Woodland with a pond and several internal tracks within the site. The site is wholly located within flood zone 1, there is some risk from surface water flooding arising from the pond within the site. The site is wholly classified as grade 3 agricultural land. The site gently slopes from its southern boundary to its northern boundary by some 5m or so. The site is located adjacent to the Great Fen Landscape and Visual Setting Boundary. The site is located within the open countryside and is densely populated with woodland. To the east is Conington Airfield and a residential property. There is a public right of way to the east of the site.</p> <p>There is no known contamination on site and there are no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. While there are no designations on site, the woodland is a valuable feature within the landscape and its loss or partial loss would result in an adverse impact. As such, the site is not considered to be suitable for any built development but is potentially suitable for biodiversity net gain opportunities. Access could be achieved from Glatton Lane or Church Road.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in the ownership of a Trust who supports its development. The site promoter does not if there are any legal restrictions impacting the site. It is unknown at this stage how the site will be delivered at this stage. The site promoter suggests the land will be available between 2024 and 2028. The promoter has not provided capacities for potential commercial leisure, open space and biodiversity net gain uses and that it is unknown how long the build out may be.</p>	~
<p><b>Achievability</b></p> <p>The site promoter states that the site's accessibility to services and access are all unknown. The site promoter is also uncertain if there are any additional issues to the site's development. The site is promoted for commercial leisure, open space and biodiversity net gain uses, however the extensive woodland cover makes built development unsuitable as this would result in the loss or partial loss of a landscape features as well as priority habitat. The site is potentially suitable for biodiversity net gain opportunities. Further assessment</p>	~

<p>such as ecological and arboricultural assessments will likely be required to assess the quality of the habitat on site and what opportunities there are to enhance biodiversity and what open space uses can be successfully integrated on the site.</p>	
<p><b>Deliverability / developability</b></p> <p>As highlighted, the site is considered to be potentially suitable for biodiversity net gain opportunities and open space uses. Limited information has been provided on the nature of potential proposals though. It is also unknown how the development may be delivered at this stage. The site is due to be available between 2024 and 2028. Until further assessment is undertaken to ascertain the potential for biodiversity enhancement, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>The site will progress to the sustainability appraisal stage but it will only be appraised for biodiversity net gain opportunities. The presence of the woodland makes the site unsuitable for built development.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land consisting of primarily of woodland categorised as Priority Habitat – Deciduous Woodland</li> <li>• Is within flood zone 1 with some surface water flood risk</li> <li>• Is adjacent to the landscape and visual setting boundary of the Great Fen</li> <li>• Is not constrained by heritage or nature conservation designations</li> <li>• Could provide opportunities for enhanced biodiversity net gain</li> <li>• Very limited accessibility via public transport options and is not easily accessible on foot or cycle</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development as it would not support sustainable place-making</li> <li>• May be appropriate for biodiversity net gain opportunities providing linkages into the wider Fenland landscape and support the retention of the existing habitat on site</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The gross site area is 9.63ha	Biodiversity net gain opportunities 9.63ha of land for such uses	Available 2024 - 2028 Complete over 5 years

**Updates after the Initial Assessment**

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 188 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, there is surface water flood risk along the site's eastern edge. Two thirds of the site is classified as grade 3 agricultural land with the remaining third being classified as grade 2 agricultural land. This site consists of an agricultural field located just to the east of the Woolpack Farm. It is located on broadly level ground within relatively open countryside/agricultural fields. It is clearly defined by low hedging on three sides with it being open on its northern boundary. There is a pond in the site's north eastern corner and a drain along its southern boundary. Development could result in an adverse impact on the landscape. There are agricultural buildings and hardstanding located to the west of the site associated with Woolpack Farm.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to to the A1 could give rise to increased levels of air, light and noise pollution which will require mitigation. There are no nature conservation designations on site. There are no heritage designations on site, however there are two grade II listed buildings to the west of the site that form part of Woolpack Farm. The site is accessed from the B1043 immediately to the west. An access track meets the north west corner of the site which links up to the agricultural buildings and travels north to the B660.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in the ownership of a Trust who supports its development. The site does not know if there are legal restrictions impacting the site. It is unknown at this stage how the site will be delivered at this stage. The site promoter suggests the land will be available between 2024 and 2028. The promoter has not provided capacities for potential employment, infrastructure and renewable energy development and that it is unknown how long the build out may be.</p>	~
<p><b>Achievability</b></p> <p>The site promoter states that the site's accessibility to services and access are all unknown. The site promoter is also uncertain if there are any additional issues to the site's development. There is an existing access track which connects to the B660. Substantial landscaping would be required through the design process to limit and mitigate landscape impact as well the potential impact on the setting of listed buildings. Noise mitigation will also likely need to masterplanned due to its proximity to the A1.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are structures on site to clear and some constraints to resolve. Limited information has been provided on the nature of employment/transport/renewable energy development that could be provided on site. It is also unknown how the development may be delivered at this stage. The site is due to be available between 2024 and 2028. The site is considered to be developable.</p>	~
--	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land consisting of grade 2 and grade 3 agricultural land</li> <li>• Is within flood zone 1 with some surface water flood risk</li> <li>• Is in close proximity to the A1(M) increasing the risk of pollution</li> <li>• Is not constrained by nature conservation designations but is within the setting of listed buildings associated with Woolpack Farm</li> <li>• Could provide land for approximately 2ha of employment land</li> <li>• Very limited accessibility via public transport options</li> <li>• The site relates much more closely with the open countryside and could result in adverse landscape impact</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for development as it would not support sustainable place-making due to the likely need to access the site via car and its potential impacts on the wider landscape</li> </ul>
---

**HDC's Delivery Calculations**

Available 2024 - 2028  Build out over 10 - 15 years

Page 189 of 3488

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
uses having regard for landowner interests.		

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:94
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Some of the eastern edge and centre of the site is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is located within flood zone 1, however, parts of the eastern edge of the site and the centre of the site are within flood zone 2, 3a and 3b. This increased flood risk is associated with drains running through the site. There is risk from surface water flooding across the site too. The vast majority of the site is classified as grade 3 agricultural land with only a very small amount of the north eastern corner being classified as grade 2 agricultural land.</p>	~
---	---

The site consists of several agricultural fields. It is broadly level with land levels only reducing by some 5m from its northern edge to its southern edge. It is located within the countryside with the A1(M) forming a clear eastern edge to the site and where vegetation is more prevalent helping to obscure the site from view. The site is much more open to the north, west and south where there are low hedges forming the site boundaries as well as internally within the site marking out various field plots. The site is located to the north of Sawtry and would have a considerably impact on the landscape character of the area and rural setting of Sawtry to the north. It is also located to the south of Glatton and would have a considerable impact on the character of the village. Development at this scale is likely to result in the coalescence of these settlements and fundamentally adversely impact the landscape character of the area. Public rights of way runs along the northern and eastern edges of the site and also through the centre of the site meaning that development will impact views from public vantage points.

There is no known contamination on site. No gas pipelines run through the site, however an oil pipeline and its buffer zone runs through the majority of the western half of the site. Its proximity to to the A1(M) is likely to give rise to increased levels of air, light and noise pollution which will require mitigation. There are no nature conservation or heritage designations on site. Access may be possible from Sawtry Road, however engagement with Cambridgeshire County Council will be required to ascertain if this is feasible and also if the road network can accommodate such a scale of development.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

<p><b>Availability</b></p> <p>The site is controlled by a single individual/ company who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and could take 10 - 15 years to complete.</p>	+
---	---

<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are unknown apart from the public highway which is accessible from the site boundary. There are several constraints to overcome which cumulatively impact the achievability of development of the whole site, these include the considerable landscape impact of development, the site's proximity to the A1(M), flood risk and the oil pipeline that runs through the site. The site promoter has not provided any details on the initial masterplanning or quantum of potential uses. They consider that the site could deliver a ' freestanding new community inclusive of a range of commercial uses, the exact quantum of which will be determined by masterplanning</p>	-
--	---

following the receipt of evidence.' In reality the site will relate very closely to Sawtry due to its proximity to it and is likely not of a scale large enough to provide all the necessary infrastructure in which to make it completely self sufficient.	
<b>Deliverability / developability</b>	
The site is greenfield agricultural land so there minimal structures to clear across the site apart form some agricultural buildings. As highlighted there are constraints to overcome which cumulatively are significant and the lack of details at this stage on the potential scale of the development. As such the site is not considered to be deliverable or developable at this time.	

**Progression of Site through to Sustainability Appraisal**

Page 191 of 3488

<b>Should the site progress to the sustainability stage?</b>	No due to the likely significant amount of infrastructure and transport improvements required to serve the development making the proposed development potentially unachievable. Additionally, there are very limited details form the site promoter to scope the potential for the site in depth at this time.
--	---

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:119
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Context, constraints and potential suitability
The site is wholly within flood zone 1 with substantial surface water flood risk running through the site. The site is largely classified as grade 3 agricultural land with the south eastern third of the site being grade 2. The site is broadly level, it very gently rises from south to north. It has a strong eastern edge where it adjoins the A1. The site's edges are

<p>defined by hedgerows but generally the landscape is fairly open. Slightly denser vegetation is found on its eastern edge largely, however, the slightly elevated ground of the road means that there are still views into the site. There is also a hedgerow running through the centre of the site. The site is located within the open countryside with no built development nearby, fields surround the site to the west and south, to the north is Stilton Golf Course and to the east where there is the A1. It is remote from a settlement which undermines the sustainability of the potential development.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to the A1 could give rise to increased levels of air, light and noise pollution which will require mitigation. There are no nature conservation or heritage designations on site. There is a public right of way that runs along the site's western edge. There is an existing private single lane track that leads to the site from Denton. Engagement with Cambridgeshire County Council will be required to investigate if this track can serve the proposed development or enhanced to do so.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver the site via master developer. The site promoter suggests the land will be available between 2029 and 2034 and could complete within 5 to 10 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are not immediately accessible from the site boundary. In their site submission, the site promoter states that 'Other land ownerships to be included - separate representations anticipated through the call for sites process'. No other adjoining sites have been submitted to the Call for Sites, therefore it is uncertain if this development is achievable in isolation and whether working with adjoining landowners is possible at this time. The existing track route to the site is also unsuitable for the scale of development and significant infrastructure will be required to upgrade this and potentially provide a connection to and form the A1(M), equally the levels of increased traffic through Denton and Caldecote would also result in significant harm on the local transport network and tranquillity of these areas.</p>	-
<p><b>Deliverability / developability</b></p>	-

There are no structures on site to clear but there are significant constraints on site to mitigate. Proximity to the A1, landscaping, sustainable drainage and the achievability of a viable access to serve the development are key development considerations for the future masterplanning of the site. It is intended to deliver the site via master developer. The site is remote from a settlement with few accessible connections. The site is expected to become available between 2029 and 2034. These issues mean that the site is categorised as not being deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No as the existing access is unsuitable for the scale of development and is very unlikely capable of being upgraded sufficiently. Infrastructure requirements to enable suitable access is likely to make the development unachievable.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

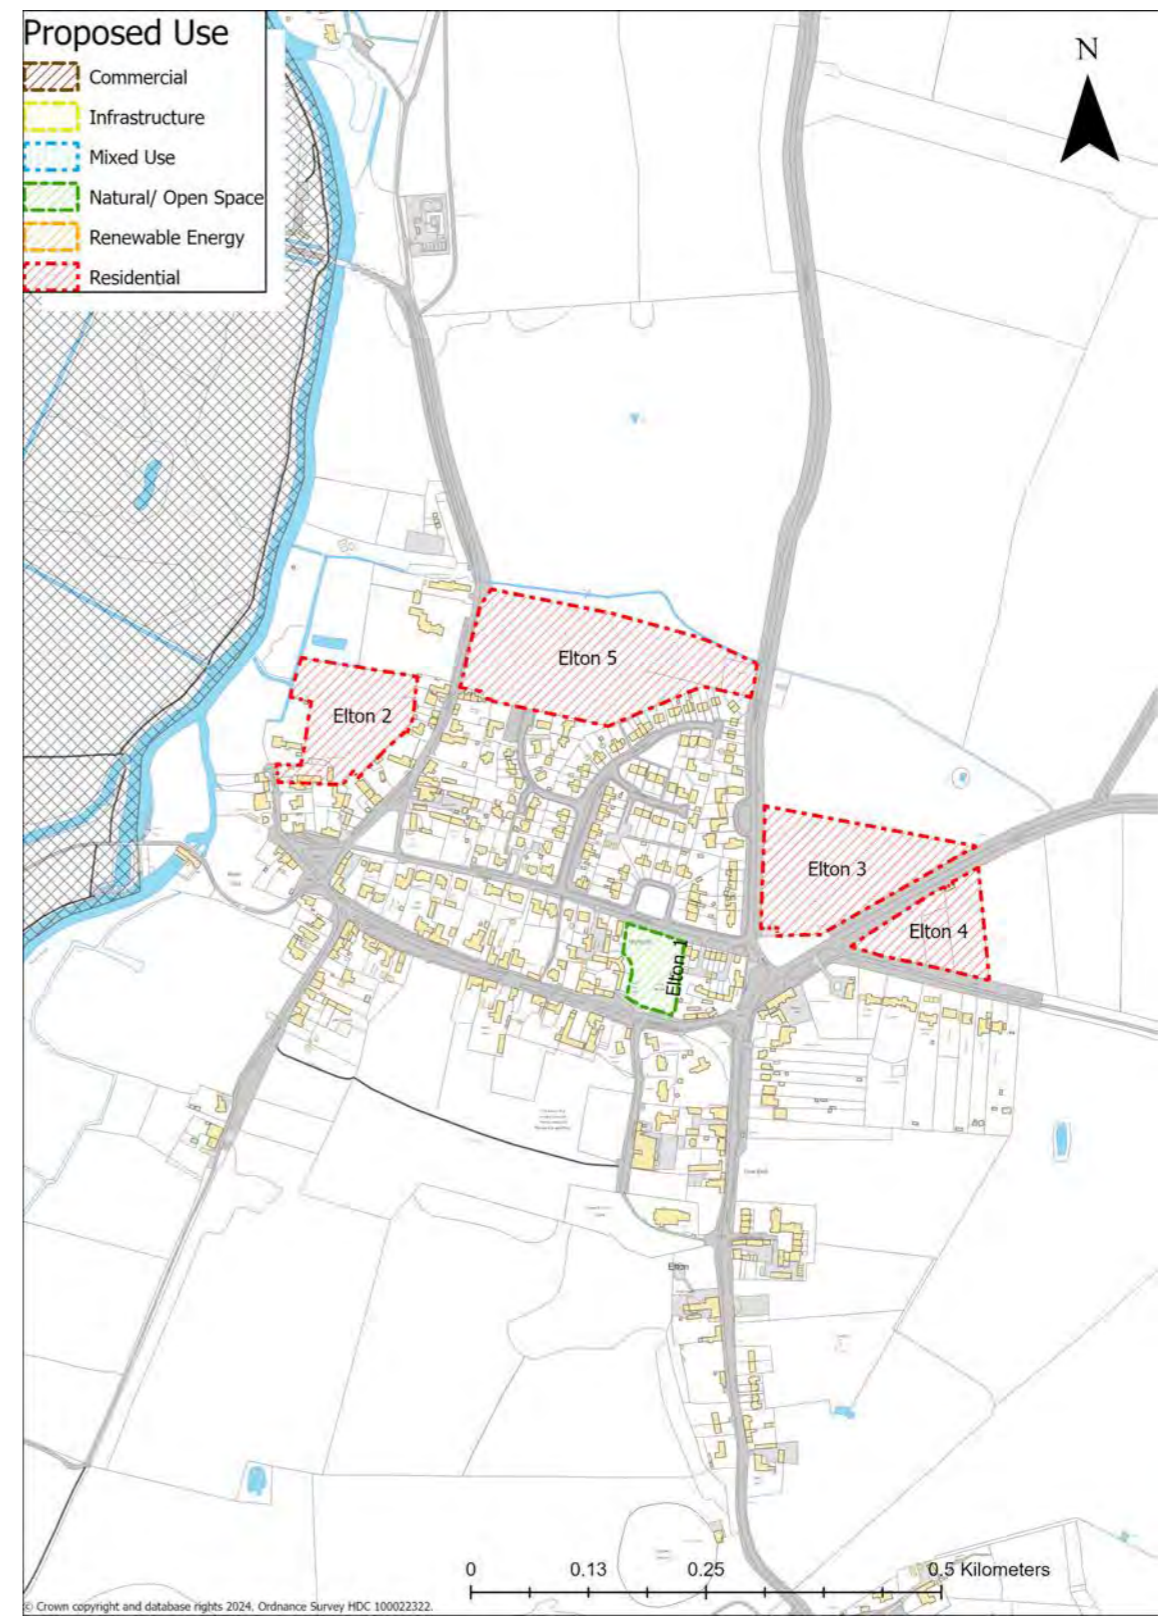

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Open space uses: Natural, green or open space	0.5ha	Available 2023 N/A

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:58
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA (2017) (site reference 090 - Between Middle Street and Highgate Green, Elton) for residential development but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Paddock/equestrian land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with minimal recorded risk from surface water. It is located to the northern side of Middle Street within the village of Elton. The site is greenfield and classified as urban land. It is bound on each side by residential development. The site features substantial hedging along the southern boundary. The land forms an area of open space within the built up area, and affords views from Highgate Green to the south towards the church tower, albeit that there is substantial screening on the southern boundary.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run along the southern edge of the site. There are no nature conservation designations on site. It is situated within a conservation area and immediately west of the site is a courtyard of Grade II Listed Buildings. The site is being promoted for open space so there will be no built development so there will likely be no impact on heritage assets and will serve to reinforce the character of the area. The site can be accessed from Highgate Green.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver the site directly via the landowner. The site promoter suggests the land is available now and is already in use for open space.</p>	+
<p><b>Achievability</b></p> <p>The site is being promoted for open space uses, retaining the existing uses on site. Built development on the site is not proposed so access to services is not relevant. The site is accessible from Highgate Green.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site is currently open space and it is proposed to retain this land use. The site promoter states it will be delivered directly by the landowner and is available now.</p>	+

Page 199 of 3488

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land</li> <li>• Is wholly within flood zone 1 with minimal surface water flood risk</li> <li>• Is located within the built environment of Elton between residential properties</li> <li>• It is adjacent to a listed building and is within a conservation area</li> <li>• The Nene Valley Green Infrastructure Priority area is adjacent to the site</li> <li>• The site is being promoted for nature green or open space uses so there will be no built development. This will reinforce the character of the village and the conservation area</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for natural green and open space uses as this will reinforce the character of the area.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 0.5ha	Natural, green and open space uses totally <b>0.5ha</b>	Available from 2024

**Elton 2: Land North of Chestnuts Farm and River Lane, Elton**

<b>Site reference</b>	Elton 2
<b>Site name</b>	Land North of Chestnuts Farm and River Lane, Elton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land North of Chestnuts Farm and River Lane, Elton	Elton	1.3

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	15 - 20 homes	Available 2023 Build out over 3 - 5 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:62
Relevant planning history	<ul style="list-style-type: none"> <li>20/00469/FUL and 20/00470/LBC on part of the site for the 'erection of 3 dwellings and the conversion of a agricultural barn to 1 dwelling and improvements to existing field access from River Lane'. The full application was refused in December 2022 and is currently at appeal.</li> <li>The site was assessed in the HELAA (2017) (site reference 091 - North of Chestnuts Farm and River Lane, Elton) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036</li> </ul>
Land type	Greenfield land with several agricultural structures on site
Current use of the site	Partly pasture land and partly redundant building(s)

Supporting information	None submitted
------------------------	----------------

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	21.5% of the site is within flood zone 3b, there is more than 0.25ha of the site remaining which could accommodate built development.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Just over half of the land is classed as flood zone 1, however, about 20% of the north-west corner and along the northern boundary is classed as flood zone 2. Within the north-west corner, about 21.5% classed as flood zone 3b. There is also risk from surface water flooding along the site's northern and western edges. The site is wholly classified as grade 3 agricultural land. It is situated to the eastern side of River Lane on the western edge of Elton. It is broadly level, only a small part of the site is visible from River Lane, but it is partially visible from the public footpath on the west bank of the River Nene. The site is bound by residential development to the south and east, with a domestic curtilage situated to the north. To the west is the River Nene, beyond which is open countryside.</p>	~
---	---

<p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. The site is within the conservation area and Number 19 Duck Street (The Old Bakehouse (Grade II listed)) is nearby to the east. Due to the 45 metre separation distance and existing built form between the site and Number 2 Stocks Green (Chestnuts Farmhouse (Grade II Listed)), development of the site would likely have a negligible impact upon the setting of this heritage asset. The site can be accessed from River Lane.</p> <p>The site is greenfield land, so its development will only minimally contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter details that the delivery of the site is dependent on whether an allocation status for the site is achieved, if so, the landowner may opt to enter into an agreement with a suitable developer or housebuilder. The site promoter suggests the land is available now.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart form gas supply which is not immediately accessible and mains water supply which is available within the site. There are no major topographical constraints to overcome and there are minimal buildings on site that may need to be cleared. There are however quite considerable cumulative constraints to address including landscape and heritage impacts arising form the site's very sensitive location and context. Also the north western corner of the site is at a higher risk of flooding with some being in flood zone 3b which will reduce any potential net developable area and require sustainable drainage and mitigation.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are minimal structures on site to clear but there are significant constraints on site to mitigate. Some of the site is not appropriate for development due to it being within flood zone 3b. Sustainable drainage will be required to mitigate surface water flooding, appropriate landscaping to mitigate adverse impacts of development on the landscape arising from its sensitive context on the edge of Elton and its relationship to the countryside and heritage assets. It appears that an allocation status is sought for the site, therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land with some redundant agricultural structures on site
- Is classified as grade 3 agricultural land
- Is constrained by fluvial flood risk with 42% of the site within flood zones 2 and 3b
- Good access to a local convenience shop, primary education and services within Elton
- Limited accessibility to employment opportunities and public transport beyond a bus stop
- Is within the conservation area and near to several listed buildings
- Located within the Nene Valley Green Infrastructure Priority Area
- Reasonable accessibility to natural greenspace
- Development in this location would introduce back land development uncharacteristic of the this part of the village

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to its physical constraints arising from fluvial flood risk, heritage and landscape considerations which reduce the developable area of this site and would result in development that would not reinforce the character of the area

Page 202 of 3488

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:60
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA (2017) (site reference 089 - Between Wansford Road and Oundle Road, Elton) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with surface water flood risk along its northern/eastern boundary. There is a pond within the site towards its north eastern corner. The site is wholly classified as grade 3 agricultural land. The site is located to the east of Wansford Road and north of Oundle Road on the north-eastern edge of Elton. Hedgerows outline the site but it is very open. The site slopes to the north, making it highly visible from Wansford Road to the north in particular. There is open countryside situated to the north, east and immediately south of the site. To the opposite side of Wansford Road is residential development.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. A conservation area is situated immediately south of the site and along the southern boundary, a small part of the site falls within it. The Smithy, situated approximately 85 metres south of the site, is Grade II Listed. As such, development could negatively impact on heritage assets. The site can be accessed from Wansford Road and/or Oundle Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. A small proportion of the site's north western corner falls within the 400m zone of a water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter details that the delivery of the site is dependent on whether an allocation status for the site is achieved, if so, the landowner may opt to enter into an agreement with a suitable developer or housebuilder. The site promoter suggests the land will be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is not immediately accessible. The land slopes to the north which will impact the layout of development on the site. There are no buildings on site so no clearance work would be required, there are however quite considerable cumulative constraints to address including landscape and heritage impacts arising from the site's very sensitive location and context.</p>	~
<p><b>Deliverability / developability</b></p>	~

Page 204 of 3488

There are no structures on site to clear but there are significant constraints on site to mitigate. Sustainable drainage will be required to mitigate surface water flooding, appropriate landscaping to mitigate adverse impacts of development on the landscape arising from its sensitive context on the edge of Elton and its relationship to the countryside and heritage assets. It appears that an allocation status is sought for the site, therefore, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 3 agricultural land
- Is within flood zone 1 with surface water flood risk along its northern/eastern boundary
- Good access to a local convenience shop, primary education and services within Elton
- Limited accessibility to employment opportunities and public transport beyond a bus stop
- Is constrained by heritage assets
- Reasonable accessibility to natural greenspace
- Development would extend the built form of the village eastwards which would not reinforce or retain the character of the village and would result in adverse landscape impact

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development as it would not reinforce the character of the area and would result in significant landscape impact

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site is inappropriate for development	N/A	N/A

Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with over half of the site being at risk from surface water flooding with the most risk being along its frontage along Oundle Road. The site is wholly classified as grade 3 agricultural land. The site is located to south of Oundle Road and north of Greenhill Road on the eastern edge of Elton. The site is broadly level but does gently slope from west to east. The site currently contains mature trees and thick hedgerows, and is opposite a row of very low density residential properties. Development would be visible from Oundle Road and Greenhill Road, although not from long distance. Development at this site would affect the rural character of this location. Open countryside extends to the north and east of the site, whilst to the west and south of the site is residential development.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. There are no heritage designations on site but it is adjacent to a conservation area and is some 220m east from part of Elton Hall Gardens (Grade II* Listed Park and Gardens). Development of the site may also have a detrimental impact upon the setting of The Smithy (Grade II Listed). As such, development could negatively impact on heritage assets. Access could be achieved from Oundle Road and/or Greenhill Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter details that the delivery of the site is dependent on whether an allocation status for the site is achieved, if so, the landowner may opt to enter into an agreement with a suitable developer or housebuilder. The site promoter suggests the land will be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is not immediately accessible. The land slopes gently to the east and there are no buildings on site so no clearance work would be required, there are however quite considerable cumulative constraints to address including landscape and heritage impacts arising from the site's very sensitive location and context. The site promoter states in their submission that the site could accommodate 10-12 homes utilising</p>	~

Page 206 of 3488

<p>the frontage of the site along Greenhill Road and partially Oundle Road, therefore it appears that a frontage development is sought. There is substantial risk from surface water flooding along Oundle Road and also Greenhill Road which may impact these aspirations.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear but there are significant constraints on site to mitigate. Sustainable drainage will be required to mitigate surface water flooding, appropriate landscaping to mitigate adverse impacts of development on the landscape arising from its sensitive context on the edge of Elton and its relationship to the countryside and heritage assets. It appears that an allocation status is sought for the site, therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land classified as grade 3 agricultural land</li> <li>● Is within flood zone 1 with substantial risk from surface water flooding which poses a substantial constraint</li> <li>● Good access to a local convenience shop, primary education and services within Elton</li> <li>● Limited accessibility to employment opportunities and public transport beyond a bus stop</li> <li>● Is constrained by heritage assets</li> <li>● Reasonable accessibility to natural greenspace</li> <li>● Development would extend the built form of the village eastwards which would not reinforce or retain the character of the village and would result in adverse landscape impact</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is inappropriate for built development as it would not reinforce the character of the area and would result in significant landscape impact.</li> <li>● Additionally, to mitigate surface water flood risk development would likely be placed in a way uncharacteristic of the area making integration and reflecting the character of the area further challenging</li> </ul>

Residential: Market and/or affordable housing	40 homes	Available 2024 - 2028 Build out over 3 - 7 years

**Core information**

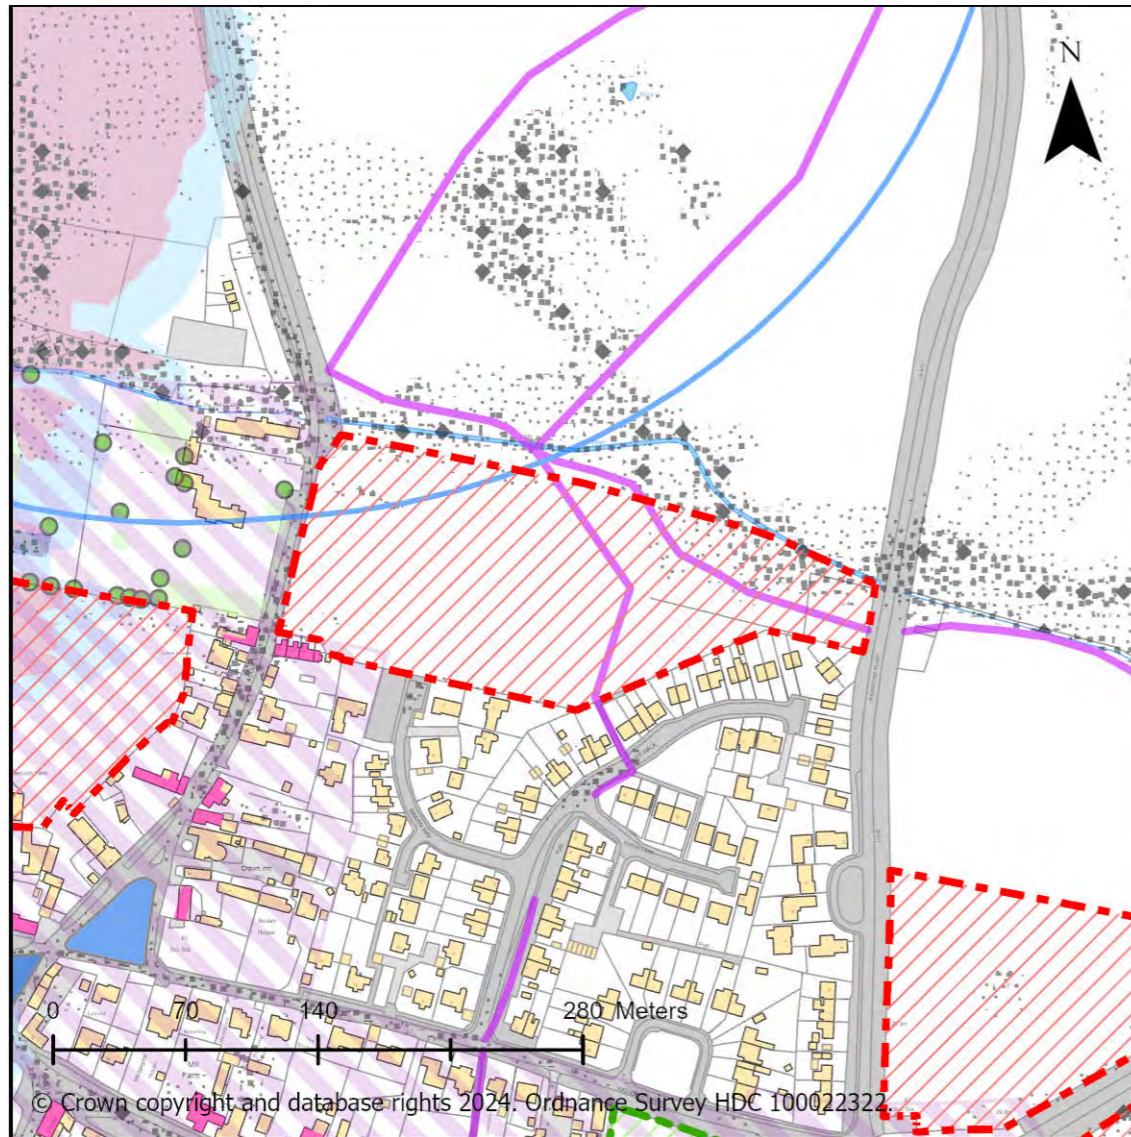

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:59
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA (2017) (site reference 088 - Between Duck Street and Wansford Road, Elton) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	A small proportion of the site's north western corner falls within the 400m zone of a water recycling area, however more than 0.25ha of the site is not within this zone.	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 but there is substantial risk from surface water flooding along its northern edge where a drain forms a boundary to the site. The site is wholly classified as grade 3 agricultural land and is situated on the northern edge of Elton and is bound by Duck Street to the west and Wansford Road to the east. To the south of the site is residential development. To the north of the site is open countryside. The site rises gently from west to east and is very open in character with limited vegetation along its boundaries. It forms a part of a substantial green open space at the northern edge of</p>	~
---	---

<p>Elton. Development would change the character of this part of Duck Street, and would be visible from Wansford Road to the north which slopes down towards the village. There are two public rights of way running through the site.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run along the western edge of the site. There are no nature conservation designations on site. The conservation area is situated immediately west and south of the site. Along the southern boundary, a small part of the site is situated within the conservation area. There are several listed buildings along Duck Lane, situated immediately south of the site that could be negatively impacted by development. The site can be accessed from Duck Street and/or Wansford Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. A small proportion of the site's north western corner falls within the 400m zone of a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter details that the delivery of the site is dependent on whether an allocation status for the site is achieved, if so, the landowner may opt to enter into an agreement with a suitable developer or housebuilder. The site promoter suggests the land will be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is not immediately accessible. There are no major topographical challenges to overcome and there are no buildings on site so no clearance work would be required, there are however quite considerable cumulative constraints to address including landscape and heritage impacts arising from the site's very sensitive location and context. The site promoter states that the public rights of way could be incorporated into a masterplan for the site or could be re-routed.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear but there are significant constraints on site to mitigate. Sustainable drainage will be required to mitigate surface water flooding, appropriate landscaping to mitigate the impact of the water recycling area and also to address the sensitivity of the site's context on the edge of Elton and its relationship to the countryside and heritage assets. It appears that an allocation status is sought for the site, therefore, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes

**Assessment of Site Potential**

**Context, constraints and potential suitability**

Most of the land is classed as flood zone 1 but very limited areas along the western boundary are classed as flood zones 2 and 3a. There is some surface water flood risk along its eastern edge. A drain runs through the site and splits the site into two sections, the northern section consisting of land with more overgrown vegetation and the southern section being an agricultural field. The northern section is proposed to be retained as open space, playing fields and a meadow. The site is classified as grade 3 agricultural land. The land slopes down to the west and north adjacent to the footpath by some 10m, therefore the areas of higher land would be visible. However these views would be mainly from the east and north (from the commercial and residential areas of Stanground respectively).

The site adjoins residential development on its eastern edge, the A605 forms a strong northern edge to the site, Stanground Lode forms a natural edge to the western side of the site and forms buffer between it and Stanham Way and Peterborough South Logistics Park beyond it.

There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles from along Peterborough Road and over the site. The site's proximity to the road network and to the largescale Amazon warehousing facility to the west could result in increased levels of air, light and noise pollution on the development. There are no nature conservation or heritage designations on site. Access could be achieved from Peterborough Road (the B1091), the framework masterplan proposes that the vehicular access will be on the northern most connection to Peterborough Road with the southern access being for pedestrian and cyclists. The site promoter also states in their submission that the submitted Framework Masterplan shows an existing residential area is zoned for a potential link for vehicular access. They state that the landowners of this site are currently determining the precise location for primary vehicular access through engagement with existing landowners. If access is proposed within this zone then one or several properties along Peterborough Road will need to be purchased to enable development. Engagement with Cambridgeshire County Council will be required to ascertain which option is the most appropriate.

The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m zone of a water recycling area.

**Availability**

The site is in multiple ownership, it is jointly owned by two developers who both support its development. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the land owners who include a housebuilder. They state that the site is available now and could take up to 5 years to build out.

**Achievability**

The site promoter has identified that all access and services are accessible from the site boundary. The land slopes quite considerably so there are topographical challenges to address within the masterplanning of the site as well as constraints arising from landscape impact, flood risk and noise pollution. Additionally, there is some uncertainty over the potential access to the site, the framework masterplan proposes several options for vehicular access but consultation with Cambridgeshire County Council will be required to ascertain which option is the most appropriate. If it is proposed to deliver an access further south then land will may need to be purchased form one or more other property owners or an agreement reached in order to make the development achievable.

<b>Deliverability / developability</b>	~
<p>There are no structures on site to clear but there are several constraints on site to mitigate. Noise mitigation will be required due to its proximity to the road network and warehousing facilities, sustainable drainage and landscaping are required to address flood risk and to soften the potential landscape impact of development. The site promoter does not appear to seek an allocation status for the site but its development is currently contrary to current adopted planning policy so allocation status would be necessary to support its development. As such the site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 3 agricultural land</li> <li>• Vast majority of the site is within flood zone 1 with some surface water flood risk</li> <li>• In walking distance to services, shops and employment opportunities within Farcet, Yaxley and Peterborough</li> <li>• Good accessibility to public transport options that link the site to services and employment within Peterborough</li> <li>• Not accessible to natural green space</li> <li>• Not constrained by heritage or nature conservation designations</li> <li>• Located adjacent to the A605 and Peterborough South Logistics Park so is at risk from increased levels of air, light and noise pollution</li> <li>• Located on the north western edge of the built form of Farcet village, development could further erode the sense of separation between Farcet and Peterborough</li> <li>• The site is not prominent in the landscape so development will have a minimal impact on landscape character</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development incorporating natural open space and flood mitigation measures</li> <li>• Additionally, good levels of landscaping will be required to mitigate the impact of nearby industrial uses and the road network</li> <li>• Engagement with the County Council will be required to determine if the proposed points of access and the road network can accommodate a development of this potential scale</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area is 8.74</p> <p>Minus 2.28ha for natural, green or open spaces, minus 0.78ha for biodiversity net gain and minus 0.30ha for land to safeguard against flooding.</p> <p>This leaves 5.38ha.</p> <p>75% net developable area to accommodate further landscaping.</p> <p>5.38 ha x standard proportion of 75% = <b>4ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 4 ha x 25 dph = <b>100 homes</b></p>	<p>Available post 2028 subject to allocation status</p> <p>Build out over 5 years</p>

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Open Space uses: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> </ul>	Circa 150 homes  1ha for natural, green or open space	Available 2029 - 2034  Build out over 3 - 4 years

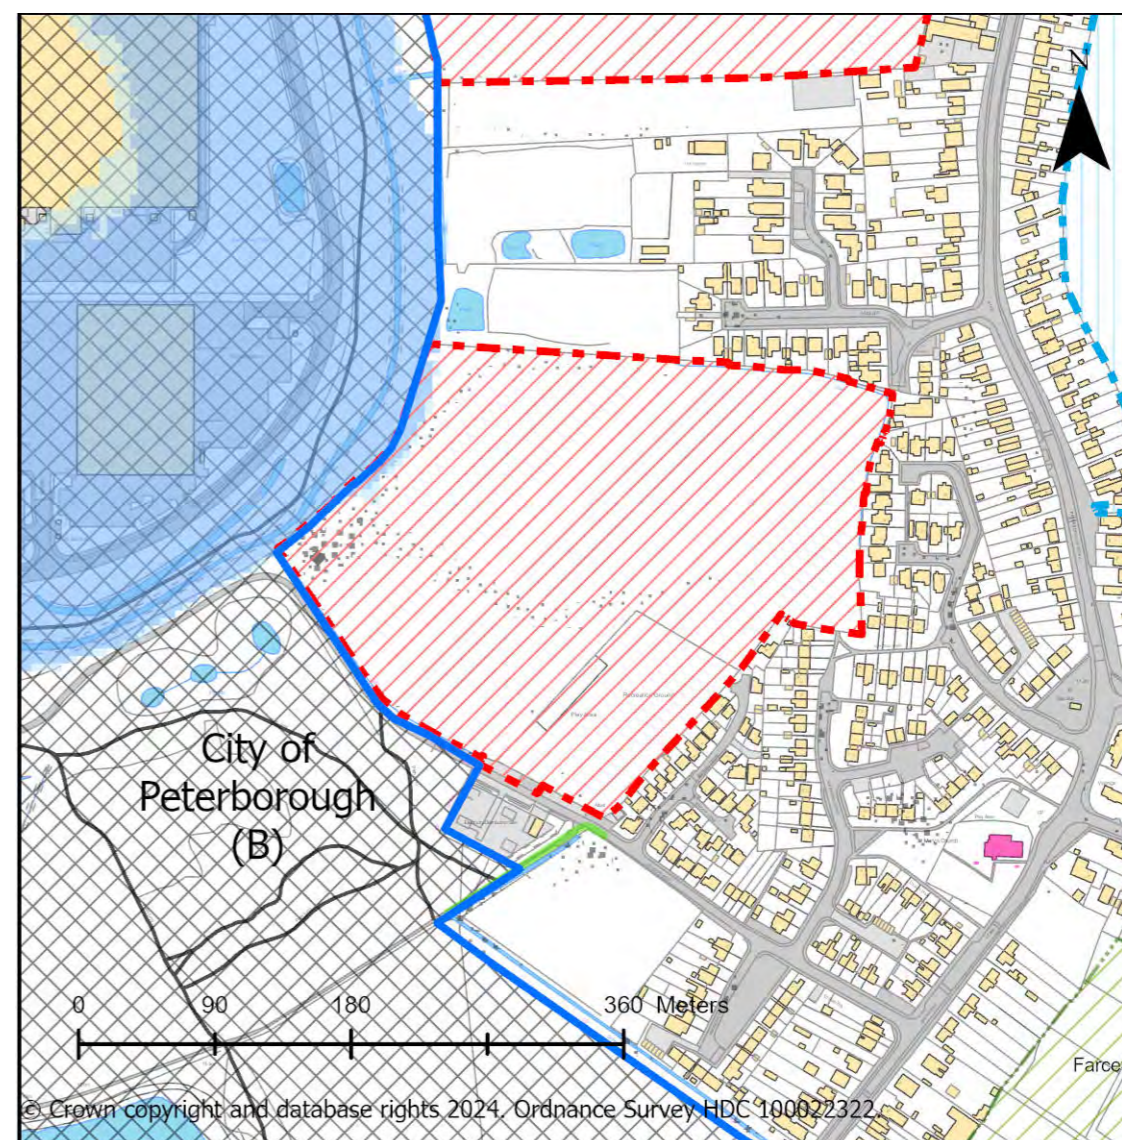

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:108
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Mostly agricultural land and a recreation ground
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 217 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The vast majority of the site is within flood zone 1, however a small strip of its western edge is within flood zones 2 and 3a. There is also some surface water flood risk on the site's western and northern edges as well as a channel of surface water flood risk running towards the centre of the site. The site is mostly classified as grade 3 agricultural land with some also classified as non-agricultural. It consists of two parcels of land, in the south east corner is a recreation and play ground leased to Farcet Parish Council, the remainder of the site is an agricultural field. The site promoter states that 'O&amp;H would also begin early discussions with Farcet Parish Council to re-negotiate the current lease to them (expires in 2029) to re-provide an enhanced and expanded play area / sports pitch for the new and existing communities.' The site slopes from west to east with 8-10m difference in land levels. The site is bounded by thicker vegetation on its western edge where it adjoins Stanground Lode, there is also vegetation along its northern and southern edges. The site is bounded by residential development to the east and north of the site, to the south west is Crown Lakes Country Park and to the west is Stanground Lode and beyond that Peterborough South Logistics Park. Its western edge adjoins the boundary with Peterborough City Council.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are overhead power lines that run through the centre of the site above the ground. There are no nature conservation or heritage designations on site. The site does adjoin to the south west Crown Lakes Country Park (County Wildlife Site). There is an existing field access into the site from Haddon Way. The site promoter identifies that there is a ransom strip with some of this land being owned by other parties.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m zone of a water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single company who supports its development. The site promoter states that there are no known legal restrictions impacting the site, however, the play area is currently leased to Farcet Parish Council over a 20 year term which is due to end in 6 years time. The site promoter states that it is intended to acquire planning permission for the site and then sell it to a third party for development. Taking into account the end of the current lease, the site is due to available between 2029 and 2034.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter identifies that gas supply, mains water supply and digital and telecommunications infrastructure are accessible from the site boundary. Electricity supply is available within the site and the public highway is not immediately accessible. There are several constraints to overcome including the overhead lines which the site promoter states will need to be placed underground. This could potentially be very costly to do and impact the development's viability and consequently its achievability. Engagement with utility providers will be required to ascertain if putting these cables underground is feasible and if so how costly.</p> <p>The site promoter states that 'whilst O&amp;H Land own the track that leads to the main access point, there is land between the adopted highway and the access that is controlled by Winchester Property Holdings Limited and Places for People Living + Limited.' O&amp;H Land wish to work with these parties to enable vehicular access to the site. The presence of a ransom strip is potential barrier to development but this could potentially be overcome.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures to clear, there are some topographical constraints with the sloping land levels and constraints to overcome. The presence of overhead power lines and a ransom strip are key barriers to the achievability of the site. The site is not due to be available until after 2029 when the current lease of part of the site to the Parish Council as a recreation/ playing fields expires. If constraints can be successfully mitigated, the site can be considered to be developable</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land largely consisting of grade 3 agricultural land</li> <li>• Vast majority of the site is within flood zone 1 with some surface water flood risk</li> <li>• In walking distance to services, shops and employment opportunities within Farcet, Yaxley and Peterborough</li> <li>• Good accessibility to public transport options that link the site to services and employment within Peterborough</li> <li>• Accessible to natural green space</li> <li>• Not constrained by heritage designations but it adjacent to Crown Lakes County Wildlife Site</li> <li>• Located adjacent to the A605 and Peterborough South Logistics Park so is at risk from increased levels of air, light and noise pollution</li> </ul>
---

- Located on the south western edge of the built form of Farcet village, development could further erode the sense of separation between Farcet and Peterborough
  - The site is not prominent in the wider landscape so development will have a minimal impact on landscape character
- In combination the outcomes of the LAA and SA indicate that the site:
- Is potentially appropriate for development incorporating natural open space and flood mitigation measures including retaining land for a recreation ground
  - Additionally, good levels of landscaping will be required to mitigate the impact of nearby industrial uses and the road network
  - There is a ransom strip, engagement with other landowners will be required to overcome this constraint, equally, engagement with the County Council will be required to determine if the proposed points of access and the road network can accommodate a development of this potential scale
  - The overhead lines present may need to be placed underground, engagement with utility providers will be required to ascertain if putting these cables underground is feasible and if so how costly

Page 218 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 8.3 Minus 1ha for natural, green or open spaces This leaves 7.3ha. 75% net developable area to accommodate further landscaping, flood mitigation and sustainable drainage. 7.3 ha x standard proportion of 75% = <b>5.475ha</b>	Residential - market and/or affordable houses Very low density of 25 dph anticipated due to the edge of village location. Capacity = 5.475 ha x 25 dph = <b>137 homes</b>	Available post 2028 subject to allocation status and current lease of the recreation ground expiring Build out over 3-4 years

**Updates after the Initial Assessment**

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:149
Relevant planning history	<ul style="list-style-type: none"> <li>18/01417/OUT on the southern edge of the site for an outline planning application for the demolition of two existing dwellings and erection of up to 185</li> </ul>

	dwellings with public open space, landscaping and sustainable drainage system (SuDS) and vehicular access point and separate pedestrian access from Peterborough Road and St Mary's Street. All matters reserved except for means of access. This was refused in February 2019. <ul style="list-style-type: none"> <li>The site was assessed in the HELAA (2017) (site reference 155 - East of Peterborough Road (includes land in Peterborough CC boundary)) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Call for Sites Statement</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is situated to the east of Peterborough Road on the north-eastern edge of Farcet. It is located at the edge of the settlement and covers a significant area which currently acts a distinct separation from the smaller settlement of Farcet to the denser development north at Stanground within Peterborough City.</p> <p>The site is predominately located within flood zone 1 but some of the site's eastern edge is located within flood zones 2 and 3a arising from the site's eastern boundary being adjacent to the old River Nene. There is some surface water flood risk within the site. The site is classified as grade 3 agricultural land. The site is greenfield but is bound to the south</p>	~
--	---

<p>and west by residential development. To the north of the site is the A605 beyond which is the city of Peterborough. The River Nene is situated to the east of the site beyond which is open countryside. The site slopes down eastwards towards the old river Nene with land levels being some 10-15m lower along the site's eastern edge. The site is open with few substantial boundary markers meaning that development is likely to have a more significant impact on the landscape, there is a public right of way located along the south eastern corner of the site. Considering the slope of the land, the openness of the site and the public right of way, development is likely to be highly visible.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. The site's proximity to the A605 gives rise to the increased risk of air, noise and light pollution. There are no nature conservation or heritage designations on site. The site promoter is proposes two vehicular access points:, one off Peterborough Road and the other off the existing roundabout to the north east.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m zone of a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership and there is no legal agreement currently in place between these owners but development is supported by all. The site promoter states that there are no known legal restrictions impacting the site. The site promoter states that it is intended to deliver the site via housebuilder and that the site is available now. A planning application has previously been submitted in 2018 on the southern portion of the site.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is in a sensitive location forming a key settlement break between Farcet and Stanground. This and the extent of the site and the potential adverse landscape impacts that development could create are fundamental development constraints. There is some flood risk and there is risk from increased levels of air, noise and light pollution. Landscape breaks, sustainable drainage and noise mitigation will be required and will reduce the net developable area to address these as well as retain separation between settlements. The potential amount of homes that could be provided and the additional levels of traffic this could leased to are also constraints that may impact the scheme's achievability. This is a cross boundary site so engagement and work with Peterborough City Council will be required.</p>	~
<p><b>Deliverability / developability</b></p>	

There are no structures to clear but there are cumulative constraints to overcome. The site promoter states that the site will be delivered directly by a housebuilder. The site crosses over into Peterborough City Council which adds further complexity to developing the site. They state the site is available now, however, an allocation status would be required as its development is currently contrary to current adopted planning policy. As such the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land consisting of grade 3 agricultural land
- Vast majority of the site is within flood zone 1 with some surface water flood risk
- In walking distance to services, shops and employment opportunities within Farcet, Yaxley and Peterborough
- Good accessibility to public transport options that link the site to services and employment within Peterborough
- Is accessible to natural green space
- Not constrained by heritage or nature conservation designations
- Located south of the A605 so is at risk from increased levels of air, light and noise pollution
- Located on the northern edge of the built form of Farcet village, development would further erode the sense of separation between Farcet and Peterborough
- The site is prominent in the landscape, particularly to the east so development will have an adverse impact on landscape character
- Development across the whole site would over double the size of Farcet village in terms of housing numbers which would detrimentally impact its rural character

In combination the outcomes of the LAA and SA indicate that the site:

- Is not appropriate for development across whole of the submitted site area as it forms a landscape buffer between Farcet and the more dense development of Peterborough to the north and is visible in the landscape from the east including from the River Nene (Old course). The scale of the potential development would also overwhelm Farcet and fundamentally alter its character.
- Development could be considered appropriate on a much reduced site area in line with the previous outline application made on the site subject to appropriate access, landscaping and design. This would represent a more proportionate level of growth for the village and retain the sense of and physically separation from Peterborough.

Page 221 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The gross site area is 47.87 ha  Reducing the site area to the part of the site previously considered under the outline application would reduce this to 11 ha.  60% net developable area to accommodate landscaping.  11 ha x standard proportion of 60% = <b>6.6 ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 6.6 ha x 25 dph = <b>165 homes</b>	Available post 2028 subject to allocation status  Build out over 5 years

**Updates after the Initial Assessment**

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 but there is risk from surface water flooding across the site. It is wholly classified as grade 3 agricultural land but it is previously developed consisting of the former PH Plant Hire site and the residential property 9 Cross Street. In their Call for Site Statement, the site promoter states that it is intended to demolish all existing buildings on the site apart from the dwelling. The site is level and contains a dilapidated steel portal frame building centrally located within the site together with small derelict outbuildings and portacabins, hardstanding and buildings. The submitted Contamination report recommends that an asbestos survey is conducted prior to any</p>	+
---	---

demolition or building works. The site lies to the west of the former Black Swan Public House, to the north, west and south of the site are residential properties. To the north is also the a Working Men's Club.

As previously highlighted, the site is previously developed and there is the potential for ground contamination and pollution across the site. A Contamination report has been undertaken with recommendations on further work to be undertaken as well as recommendations on how addressing contamination should be taken into account when masterplanning the site. There are no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. There are however two trees protected by Tree Preservation Orders and a Tree Preservation Order Area within the site. The submitted Arboricultural Implications Assessment states that the trees within the site are in varying conditions and states of health. It concludes that the proposed development will result in the loss of several trees that are in poor health or condition but recommends that several are retained and incorporated into the landscaping and masterplanning of the site. The site promoter states that it is intended access will be provided off Main Street at the southern end of the site, whilst dwellings facing Cross Street will be provide within individual accesses and driveway parking, including No 9.

The site is previously developed, so its redevelopment will contribute to the reuse of previously developed land and regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m zone of a water recycling area.

<p><b>Availability</b></p> <p>The site is controlled by a single individual/ company who supports its development. There are no known legal restrictions impacting the site. The site promoter details that the site will be delivered directly by landowner. The site promoter states that the site is available now. There is a current planning application on site for the site's redevelopment.</p>	+
--	---

<p><b>Achievability</b></p> <p>The site promoter has stated that access to all main services are not immediately accessible apart form gas supply which is unknown. The site is previously developed so offers an opportunity for regeneration within the built form of Farcet. There are constraints to overcome relating to contamination and remediation of the site as well as protected trees on the site. There is a live full planning application on site with several detailed technical studies and plan already undertaken shaping the design and masterplanning of the proposed development. Access can be achieved from Main Street and/or Cross Street.</p>	+
---	---

<p><b>Deliverability / developability</b></p>	+
---	---

There are structures on site to clear and constraints to resolve. These constraints include the removal of existing structures, the remediation of the site, the removal and incorporation of existing trees and successfully integration with the surrounding land uses. There is an active full planning application on site with detailed assessments and technical studies already undertaken. It is intended to deliver the site directly via the landowner and it is stated that the site is available now. Considering all of these factors the site is considered to be deliverable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is previously developed land
- Is within flood zone 1 with some surface water flood risk
- In walking distance to services, shops and employment opportunities within Farcet, Yaxley and Peterborough
- Good accessibility to public transport options that link the site to services and employment within Peterborough
- Accessible to natural green space
- Not constrained by heritage or nature conservation designations
- Located within the built form of Farcet providing an opportunity to regenerate a former commercial site and enhance the street scene and character of the village
- Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for development subject to appropriate masterplanning to ensure successful integration with the street scene, sustainable drainage to mitigate surface water flood risk and full decontamination of the site following its commercial use
- Retention where possible of protected trees

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 0.63ha  95% net developable area to accommodate landscaping, protected trees and sustainable drainage  0.63 ha x standard proportion of 90% = <b>0.6ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 0.6 ha x 25 dph = <b>15 homes</b>	Available 2024  Build out over 1 -2 years

**Updates after the Initial Assessment**

Commercial: Employment	30,000 sqm	Available 2023 Build out over 10 years

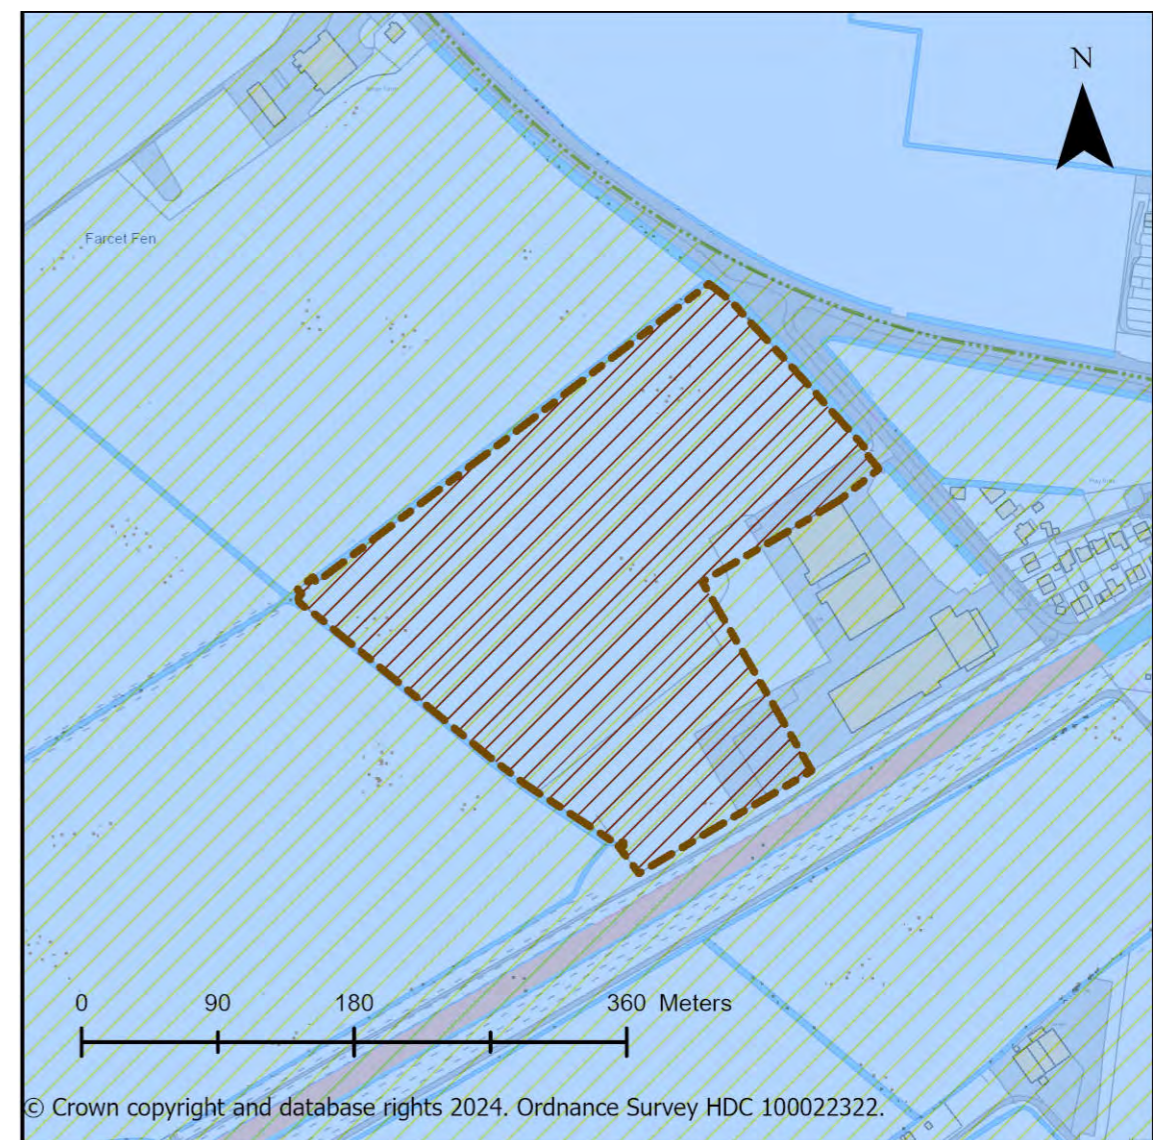

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:175
Relevant planning history	Various planning history relating to commercial vegetable packing facilities
Land type	Wholly greenfield land
Current use of the site	Agricultural land/ commercial use
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	The site completely comprises of land classified as grade 1 agricultural land	Fail
Flood zone 3b	None but the site is wholly located within flood zone 3a.	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No as the site is wholly classified as grade 1 agricultural land. Grade 1 is the highest quality agricultural land.
--	---

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.
--

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Capacity calculation not undertaken, the site is inappropriate for development as the entirety of site is classified as grade 1 agricultural land. In addition it is also entirely within flood zone 3a.	N/A	N/A

**Updates after the Initial Assessment**

--

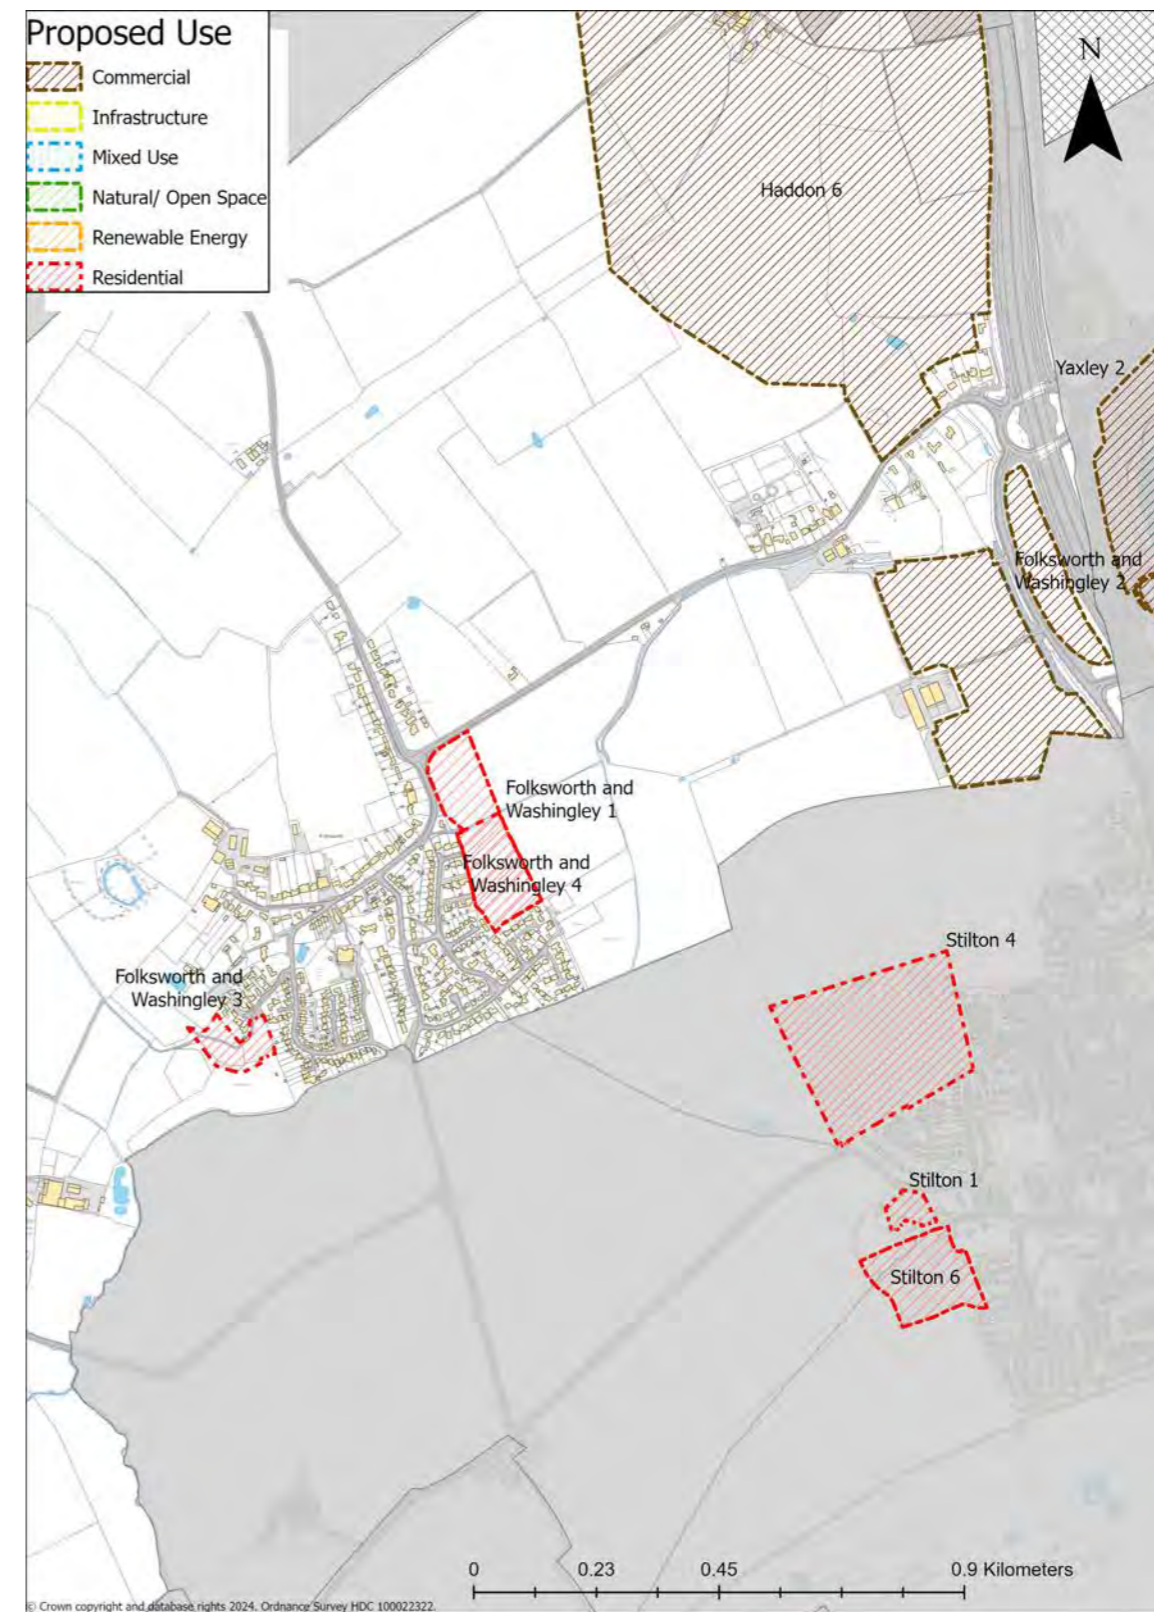

## 7 Folksworth and Washingley

7.1 A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Folksworth and Washingley 1: Land off Hawthorn Road, Folksworth (smaller site)
- Folksworth and Washingley 2: Land adjacent A1 at Norman Cross, Folksworth
- Folksworth and Washingley 3: Land South of The Paddocks, Folksworth
- Folksworth and Washingley 4: Hawthorn/Manor Road, Folksworth (larger site)

7.2 Please note that 'Haddon 6: Land West of A1(M) between junctions 16 and 17, and South of Haddon Road' also partially falls within Folksworth & Washingley and Morborne parishes, but it has been included under Haddon as most of the site lies within that parish area.

7.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Residential: Market and/or affordable housing	20 - 30 homes	Available 2024 - 2028 Build out over 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:132
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
The site has also been submitted as part of a larger site area under Folksworth and Washingley 4.	

<p>The site is wholly flood zone 1 with some surface water flood risk. The site is wholly classified as grade 3 agricultural land. The site is situated on the eastern edge of Folksworth and is surrounded by residential areas to the south and west and agricultural fields to north and east. The boundaries of the site are predominantly characterised by trees and hedgerows except in the east where the boundary is completely open allowing views into the site from the surrounding countryside.</p> <p>There is no known contamination on site but a small area, in the south, is within an oil pipeline buffer zone. There are no known heritage assets or nature conservation designations within the site. Highway access to the site may be achieved from Hawthorn Road or an existing track that leads off Manor Road to the north.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m of a water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who support its development. There are no known legal restrictions impacting the site. The site promoter intends to acquire planning permission and sell the site to a third party for development once an allocation status has been acquired and has stated that the land will become available for development between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are no major topographical constraints to overcome. Highway access could be achieved via Manor or Hawthorn Road, consultation with Cambridgeshire County Council will be required to determine the most appropriate access to the site. The site has no major constraints to development. However, the layout and developable area of the site may be impacted due to being partly within an oil pipeline buffer zone. To minimise landscape impact, the south eastern boundary may require some screening, but this impact is likely to be small due no public right of ways to the east and being well integrated to the built form in Folksworth. The A1(M) is situated to the east and therefore the site may be subject to noise pollution.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures. The site promoter intends to acquire planning permission and sell the site to a third party for development once an allocation status has been acquired and therefore the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• The site is in flood zone 1 with some surface water flooding risk</li> <li>• Wholly grade 3 agricultural land</li> <li>• Limited accessibility to shops, employment and facilities</li> <li>• Low public transport provision but active travel is encouraged due to a pavement along the frontage.</li> <li>• A primary school and natural green space is in close proximity to the site.</li> <li>• Sufficiently remote from the designated nature and heritage assets.</li> <li>• The site relates closely to the settlement and is of a scale that would be in context with the village. Therefore, it could be integrated into the place and community with effective masterplanning.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development subject to effective masterplanning to ensure successful integration with the oil pipeline buffer zone, sustainable drainage to mitigate surface water flooding and wider landscape/ context of the village.</li> <li>• The scale and location of the site provides an opportunity for growth in a village location whilst potentially conserving the form and character of Folksworth.</li> </ul>
--

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
<p>Gross site area of 1.87 ha</p> <p>80% net developable area to accommodate landscaping, oil pipeline buffer zone and sustainable drainage.</p> <p>1.87 ha x 80% = <b>1.496 ha</b></p>	<p>Residential - market and/ or affordable houses.</p> <p>Very low density of 25dph anticipated due to the edge of the village location.</p> <p>Capacity = 1.496 x 25 = <b>37 homes</b></p>	<p>Available 2024-2028</p> <p>Build out over 2 years</p>

**Updates after the Initial Assessment**

**Folksworth and Washingley 2: Land adjacent A1 at Norman Cross, Folksworth**

<b>Site reference</b>	Folksworth and Washingley 2
<b>Site name</b>	Land adjacent A1 at Norman Cross, Folksworth

Site address	Parish(es)	Site area (ha)
Land adjacent A1 at Norman Cross, Folksworth	Folksworth and Washingley	11.47

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: <ul style="list-style-type: none"> <li>• Employment</li> <li>• Logistics and distribution</li> </ul>	30,000 sqm if solely office/light industry/ roadside uses or 40,000 sqm is solely logistics/distribution	Available 2024 - 2028  Build out over 2 - 5 years depending on the mix of uses

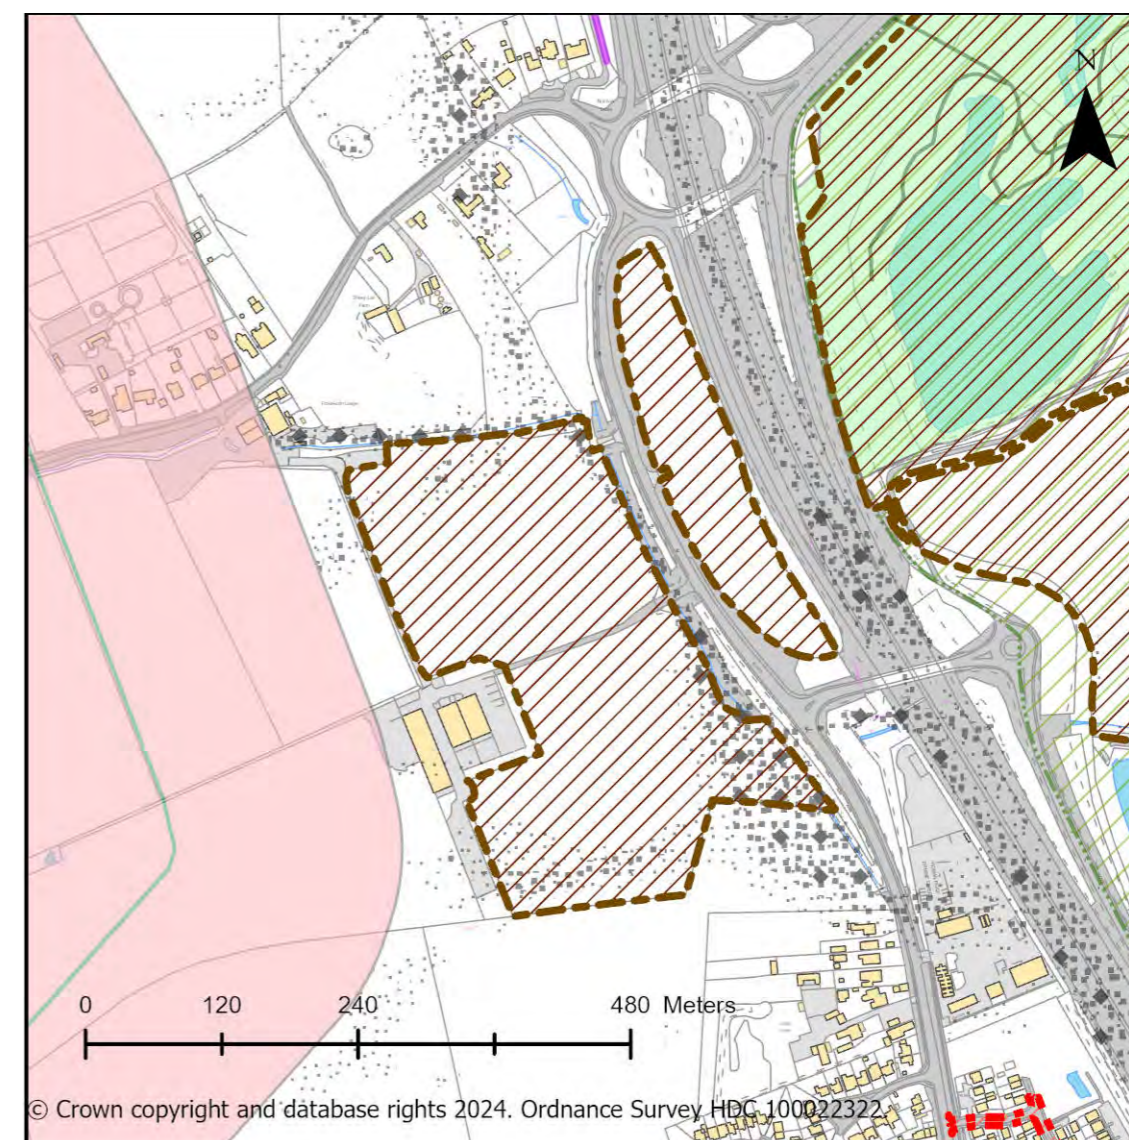

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:130
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 232 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site consists of two parcels, one an oval shaped site located between to the B1043 and A1(M), the other larger parcel is located to the west of the B1043 consisting of agricultural fields.</p> <p>The site is wholly located within flood zone 1 but there is surface waterflood risk along the main parcel's eastern and northern edges. The site is wholly classified as grade 3 agricultural land. The site is generally level but does very gently slope form its northern edge to its southern edge. The B0143 and A1(M) form strong edges to the larger parcel on its side. The oval parcel is completely surrounded by the road network. The larger site has some vegetation and hedging around is southern and eastern edges but is generally quite open, most notably to the west and north with views across the wider agricultural landscape. To the west and north are agricultural buildings and a small clustering of residential properties. The oval parcel to the east is open on is western side with more substantial hedging and trees along its eastern side where it meets the A1(M), even with this landscaping development is still likely to be quite visible.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run through the larger parcel. The site's proximity to the strategic road network mean that development is at greater risk form air, light and noise pollution, additionally the proposed development could increase levels of pollution. There are no nature conservation or heritage designations on site. There is an existing access into the larger parcel from the B1043. An existing access form the B1043 also serves the smaller oval shaped parcel. Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. The site is beyond 400m of a water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and take between 2 and 5 years to built depending on the mix of uses.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that all access and services are accessible from the site boundary. Development could have an adverse landscape impact. The site is well connected to the strategic road network but it needs to be determined if the proposed development can be accommodated in transport terms. The site is in two parcels and it will need to be considered how the proposed employment development can be masterplanned to ensure a holistic approach. There are telegraph poles running through the larger parcel which will impact the masterplanning of the site.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield so there are no structures to clear but there are constraints to overcome which impact the potential achievability of developing the site. The site promoter seeks to deliver the site via a master developer and considered the site will be available between 2024 and 2028. Development of the site is contrary to current policy so an allocation status would be required in order to develop the site. Considering this the site is categorised as being developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● The site is greenfield land consisting of grade 3 agricultural land</li> <li>● Is within flood zone 1 but there area areas at risk from surface water flooding</li> <li>● Is remote form natural greenspace</li> <li>● Has very limited accessibility to a local shop and local services and facilities</li> <li>● Is served by a bus route with a frequent service</li> <li>● Could provide employment development that could support job creation</li> <li>● May be subject to higher levels of air, light and noise pollution arising form its proximity to the A1(M)</li> <li>● Is largely contained by the road network and by established vegetation, the site has a closer relationship with the countryside rather than to a settlement so detailed masterplanning will be required to address landscape impact</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is potentially appropriate for an employment scheme. Development should be concentrated on the larger parcel as this has potentially greater opportunity to provide a well laid out employment scheme utilising an existing access and footpath connection to the B1043.</li> </ul>
--

- Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development
- Telegraph poles running through the larger parcel which will impact the masterplanning of the site
- Sustainable drainage will be required to mitigate the surface water flood risk

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 11.47 ha</p> <p>The smaller oval parcel accounts for about 2.3ha of this. This parcel is not considered appropriate for built development. This leaves 9.17ha of the site remaining (the larger western parcel the site).</p> <p>Usually for employment development, the gross site area will be used to calculate capacity but considering the constraints on the site relating to telegraph poles and surface water flood risk which could impact the layout and capacity of the site, a net developable area will be used. Accounting for this the net developable area of 80% will be used.</p> <p>9.17 ha x 80% = 7.34 ha</p>	<p>Commercial - employment and logistics/distribution</p> <p>The site promoter states that the site could provide a mix of offices, B2 (industrial) and B8 (warehousing) uses, the 0.4 plot ratio is most appropriate to use to calculate an indicative capacity:</p> <p>0.40 plot ratio x 7.34 ha = 2.94 ha of land for employment uses</p> <p>equating to <b>29,400 sqm.</b></p>	<p>Available post 2028, subject to allocation status.</p> <p>Build out over 2 - 5 years depending on the mix of uses</p>

**Updates after the Initial Assessment**

**Folksworth and Washingley 3: Land South of The Paddocks, Folksworth**

<b>Site reference</b>	Folksworth and Washingley 3
<b>Site name</b>	Land South of the Paddocks, Folksworth

Site address	Parish(es)	Site area (ha)
Land South of the Paddocks, Folksworth	Folksworth and Washingley	0.87

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	26 homes	Available 2024 - 2028 Build out over 2 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS: 220
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Vehicle use for adjacent agricultural land and a public right of way
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within Flood Zone 1 with no recorded risk of surface water flooding. The site is wholly classified grade 3 agricultural land.</p> <p>The site is located west of Elm Road and south of The Paddocks, on the south western edge of Folksworth. The site is irregular in shape but is broadly level, sloping gently up from the northern boundary. The northern and eastern edge adjoins to the curtilage of residential properties along Elm Road and The Paddocks. There are a few trees along the eastern boundary, providing screening to some properties but the boundary is more open to the north. Greenfield land surrounds the southern and western boundary, screened by a large and dense patch of trees which forms part of a Tree Preservation Order Area (TPOA), Folksworth Spinney. There is open countryside immediately to the north west with only a few trees and a gap where a track is used for vehicles to access neighbouring agricultural fields. In general, the site is largely screened, by residential properties to the north and east, and dense tree line to the south, minimising the landscape impact. However, the development would be clearly seen by a bridleway which runs through the middle of the site, negatively impacting the public view of the TPOA. Views into the site would be visible from public footpaths to the west but this impact would be less significant due to the existing residential area.</p> <p>Approximately half of the site is within the TPOA which could serve as a significant constraint to development. There is a relatively thin strip of dense tree line inside the southern boundary but there are only a few trees in the rest of the TPOA of the site. There is no known contamination on site or gas pipelines running through the site. There are no known heritage assets or nature conservation designations within the site.</p> <p>Highway access may be achieved from The Paddocks road and the bridleway serves as an established track within the site which would need to be integrated and enhanced by the development.</p> <p>The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration or reuse of previously developed land. Approximately three quarters of the site is within a mineral safeguarding area for Bricklay and Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that might constrain development. The site is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who support its development. There are no known legal restrictions impacting the site. A supporting document showing the ownership of the land has been provided. The site promoter intends to sell the land to a third party once the allocation status has been acquired and has stated that the land will become available for development between 2024 - 2028.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that all services are accessible from the site boundary and access to the site may be achieved from The Paddocks. Consultation with Cambridgeshire Council will be required to ensure that access from The Paddocks can accommodate the increase in traffic flow from the development. There are no topographical constraints to overcome. The TPOA of the site, other than the dense tree line marginally within the southern boundary, is characterised with only a few, sporadically placed trees. Therefore, with effective masterplanning and appropriate tree assessments development could be feasible within this area of the site. However, the cumulative impact of the bridleway, site shape and TPOA could lead to difficulties in the layout of the site, placing even more importance on the design process. The public view from the bridleway would be negatively impacted by the development, however the landscape impact would be small due to the existing tree line to the south which screens the surrounding countryside. The site is in close proximity to the A1(M) and therefore may be subject to noise pollution.</p>	
<p><b>Deliverability / developability</b></p> <p>There are constraints that would need to be overcome. The site promoter intends on acquiring allocation status and therefore the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● The site is within flood zone 1 with no recorded risk of surface water flooding.</li> <li>● Wholly classified as grade 3 agricultural land.</li> <li>● Limited accessibility to shops, employment, facilities and natural greenspace</li> <li>● Not impacted by designated nature or heritage assets.</li> <li>● Access to a primary school.</li> <li>● Pavement immediately outside frontage encouraging active travel.</li> <li>● Potential adverse impact on protected trees.</li> <li>● The combination of site shape, location and key constraints would make it difficult to integrate the site with the settlement, conserve the character of Folksworth and achieve the promoter's anticipated capacity.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p>
---

- Is not appropriate for development due to key constraints impacting the layout, capacity and integration into the settlement.
- Potential damage to protected trees and therefore the character and form of this area of the village.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site is inappropriate for development	N/A	N/A

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site has also been submitted as part of a smaller site area under Folksworth and Washingley 1.</p> <p>The site is wholly flood zone 1 with some surface water flood risk within the site. The site is wholly classified as grade 3 agricultural land. The site is situated on the eastern edge of Folksworth and is surrounded by residential areas to the south, west and north with agricultural fields to the east. The site consists of two agricultural fields and is broadly level and its boundaries are predominantly characterised by trees and hedgerows except its eastern boundary which is completely open allowing views into the site from the surrounding countryside. There is a line of trees separates the two fields.</p> <p>There is no known contamination on site but the south eastern corner of the site is within an oil pipeline buffer zone. There are no nature conservation or heritage assets designations within the site. Highway access to the site may be achieved from Manor Road or Folksworth Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m of a water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who support its development. There are no known legal restrictions impacting the site. The site promoter intends to deliver the site by a housebuilder and will be available between 2024 and 2028 and take between 18 months and 2 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all access and services are accessible from the site boundary apart form gas supply which is unknown. There are no major topographical constraints to overcome. Highway access could be achieved via Manor Road or Folksworth Road, consultation with Cambridgeshire County Council will be required to determine the most appropriate access to the site. The site has no major constraints to development. However, the layout and developable area of the site would be impacted due to being partly within an oil pipeline buffer zone and surface water flood risk. To minimise landscape impact, the eastern boundary may require some screening.</p>	+
<p><b>Deliverability / developability</b></p> <p>There and no structures on site to clear and there are no major constraints to overcome. The site promoter intends to deliver the site by a housebuilder and will be available between 2024 and 2028. As the site promoter does not intend the scheme to be</p>	~

a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. Considering this the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as grade 3 agricultural land
- Is within flood zone 1 with some surface water flood risk
- Is accessible to natural greenspace
- Not constrained by nature conservation or heritage designations
- Remote from a town centre and a local convenience shop and supermarket and employment opportunities
- Accessible to the limited services and facilities within Folksworth
- Limited public transport options available
- Located on the eastern edge of the built form of Folksworth providing an opportunity for some growth within the village that can reflect the pattern of built development in the immediate vicinity
- Trees are present within the site and most notably along the site's frontage, some may need to be removed to accommodate development

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for development subject to appropriate masterplanning to ensure successful integration with the settlement
- Retention where possible of trees and hedgerows as these provide established landscaping and are sustainable drainage to mitigate surface water flood risk and full decontamination of the site following its commercial use Retention whereby possible of protected trees
- There should not be any built development along the southern edge and south eastern corner of the site where it is constrained by an oil pipeline buffer zone

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Gross site area 3.26ha	Residential - market and/or affordable houses	Available post 2028, subject to allocations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>80% net developable area to allow sufficient landscaping and removing the part of the site impacted by a oil pipeline buffer zone.</p> <p>3.26ha x standard proportion of 80% = <b>2.6 ha</b></p>	<p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 2.6 ha x 25 dph = <b>65 homes</b></p>	<p>Build out over 18 months to 2 years</p>

Updates after the Initial Assessment

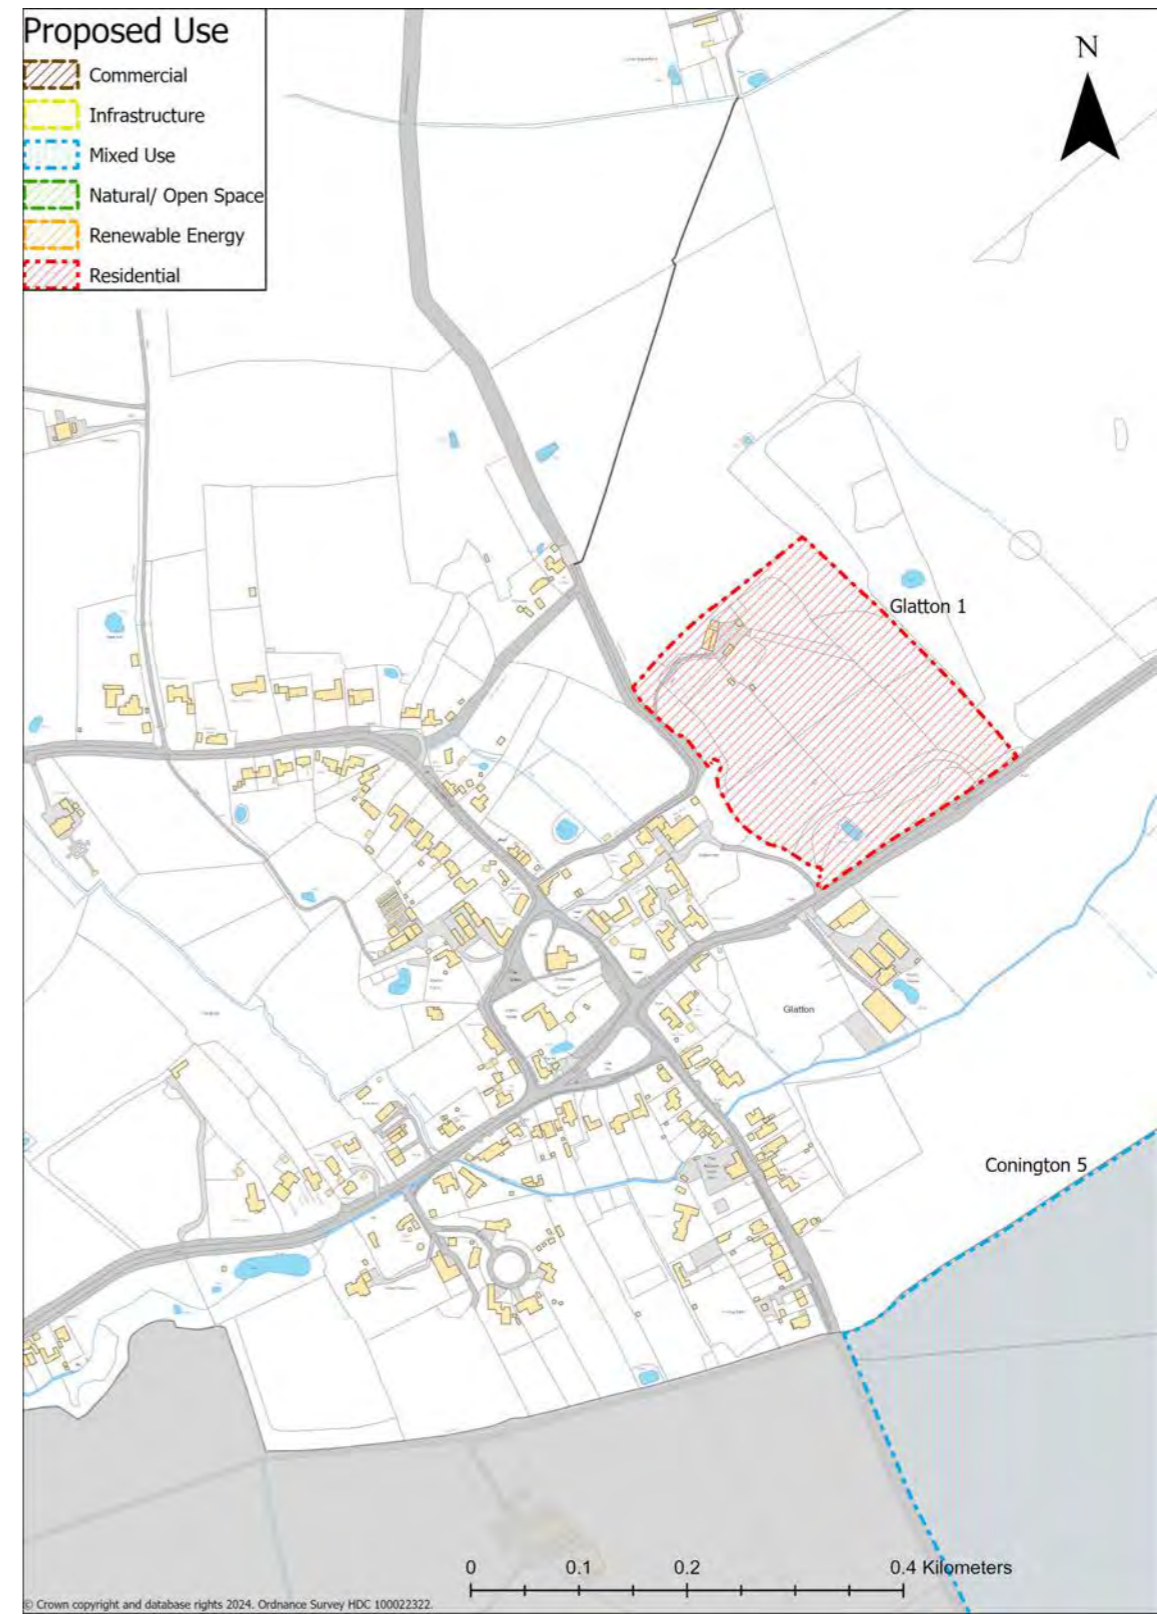

--

### 8 Glatton

8.1 A total of 1 site has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Glatton 1: Land North of Glatton Ways and East of Glatton Hall, Glatton

8.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Glatton 1: Land North of Glatton Ways and East of Glatton Hall, Glatton**

<b>Site reference</b>	Glatton 1
<b>Site name</b>	Land North of Glatton Ways and East of Glatton Hall, Glatton

Site address	Parish(es)	Site area (ha)
Land North of Glatton Ways and East of Glatton Hall, Glatton	Glatton	5.93

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	60 homes including area for Biodiversity Net Gain	2-3 years

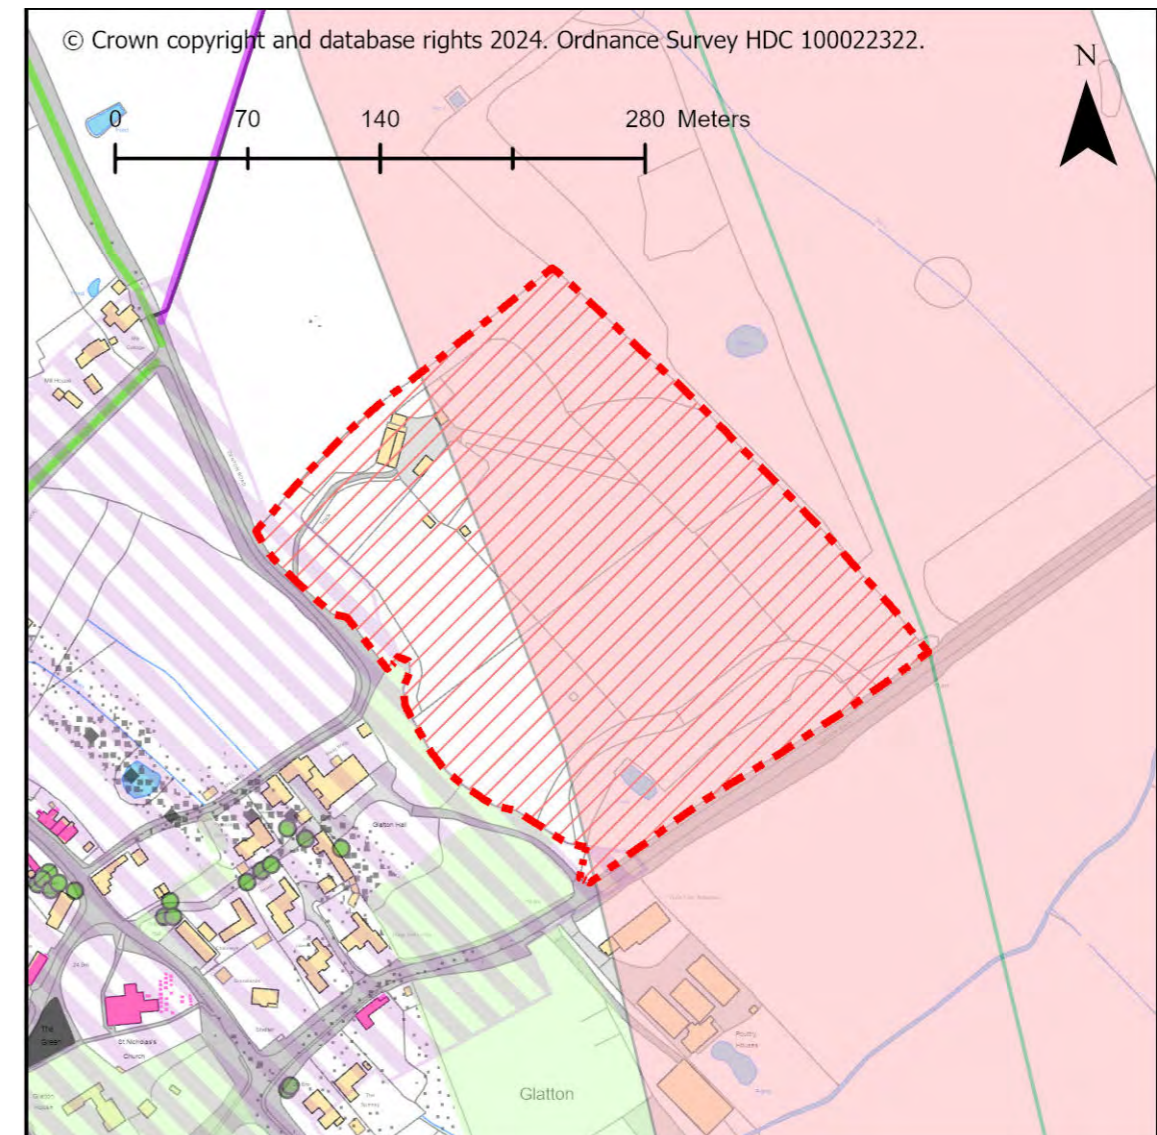

**Core information**

How was the site identified?	Call for Sites Submission: site reference - CfS 117
Relevant planning history	None relevant Mention of agricultural pole barn within call for sites
Land type	Part previously developed land and part greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 244 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 and is at low risk from surface water flooding. The site is wholly classified as grade 3 agricultural land.</p> <p>The site is located on the north eastern edge of Glatton and broadly diamond in shape. From the north western to south eastern corner of the site, the land slopes steeply down. This aligns in a broader sense with the downward sloping topography of Glatton village and the Northern Wolds landscape character area, where the land to the east of the site descends towards the Fens and Central Claylands. There are buildings used for agricultural purposes in the north western edge of the site.</p> <p>Residential areas in Glatton are located to the south west of the site but is predominately surrounded by agricultural fields. The site is wholly bounded by well established trees, largely screening residential areas to the south west and countryside to the north. However, the development would be visible from the south and east especially from nearby public right of ways due to the steep topography of the site and therefore would negatively impact the public view of the landscape.</p> <p>There is no known contamination on site but approximately three quarters of the site is within a oil pipeline buffer zone, serving as a significant constraint to development. There are no known heritage assets or nature conservation designations within the site but it does adjoin to Glatton Conservation Area to the south west.</p> <p>Denton Road and Glatton Ways serve as potential access but are of low quality and would need to be upgraded significantly to accommodate the development. Potential access points are also within or adjacent to Glatton Conservation Area and would likely require the removal of trees.</p> <p>The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration or reuse of previously developed land. Approximately half of the site is within a mineral safeguarding area for Bricklay and Cambridgeshire County Council will need to be consulted to ascertain if this is a workable resource that might constrain development. The site is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who support it's development. There are no known legal restrictions impacting the site. The site promoter intends to sell the land to a third party once the allocation status has been acquired and has stated that the land will become available for development between 2029 - 2034.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that water, electricity and public highway access is available from the site boundary. Gas is not immediately available and access to digital and telecommunication infrastructure is unknown.</p> <p>There would be issues with the layout and capacity of the development due to the land sloping steeply from west to east. The location of the site within the oil pipeline buffer zone is unlikely to impact development on the site.</p> <p>Public highway access is constrained by Glatton Conservation area, the removal of trees and poor road quality. Access from Glatton Ways may also be restrained by a private track and a strip of land comprising of trees which seperates the site boundary from the track which may form a ransom strip impeding achievability of access. Consultation with Cambridgeshire County Council would be required to determine whether there is a feasible access point. The A1(M) is located to the east of the site ad therefore the development could be impacted by noise pollution.</p> <p>The cumulative impact of the constraints outlined significantly impact the achievability of the site.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are significant constraints to development. The site is categorised as greenfield land, agricultural buildings to the north west of the site would need to be cleared. The site promoter intends on acquiring allocation status and therefore the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is in flood zone 1 with minimal risk of surface water flooding</li> <li>• Wholly classified as grade 3 agricultural land</li> <li>• There a significant structures/ agricultural buildings which could be reused or recycled.</li> <li>• Education facilities, shops and natural green space are remote from the site</li> <li>• There are culture and leisure facilities in Glatton and it is within 5km of employment opportunities situated in Sawtry.</li> <li>• It is sufficiently remote from all of the designated nature assets but the development could cause adverse impact to adjoining Glatton Conservation Area.</li> </ul>
--

- The site would negatively impact the character of the local area due to its location, scale and landscape impact.
  - Key constraints would reduce the developable area and therefore make it even more difficult to integrate the site into the settlement.
- In combination, the outcomes of the LAA and SA indicate that the site:
- Would not be appropriate for development due to the steep topography of the site and potential adverse upon the character of the village and conservation area.
  - Highway access may require the removal of protected trees.

**HDC's Delivery Calculations**

**Great Gidding 1: Land adjacent to 52 Main Street, Great Gidding**

<b>Site reference</b>	Great Gidding 1
<b>Site name</b>	Land Adjacent to 52 Main Street, Great Gidding

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
The site is located off main street and is in the centre of Great Gidding	Great Gidding	Approximately 0.074

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Market and/or affordable housing	2 dwellings	Up to 2 years

**Core information**

How was the site identified?	Call for site submission: site reference - CfS 194
Relevant planning history	Application Number: 03/020771/FUL Proposed development: Rebuilding of a front boundary wall Outcome: Approved Application number: 20/01132/TRCA Proposed development: Fell all trees to ground level Approved
Land type	Garden land
Current use of the site	Residential, garden land only
Supporting information	None Submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	No	Fail

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is below the required minimum site threshold required for detailed assessment.	N/A	N/A

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No because the site has failed fundamental constraints by being below the site threshold.
---	---

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.
--

**Great Gidding 2: Land South of Great Gidding village hall, Great Gidding**

<b>Site reference</b>	Great Gidding 2
<b>Site name</b>	Land South of Great Gidding Village Hall, Great Gidding

Site address	Parish(es)	Site area (ha)
Land South of Great Gidding Village Hall, Great Gidding	Great Gidding	0.667 ha

Current use of the site	Agricultural land and community uses
Supporting information	None Submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 251 of 3488

<p>The site is within flood zone 1 but is at some risk from surface water flooding due to a drain that runs along the eastern edge of the site. The site is wholly classified as grade 3 agricultural land.</p> <p>Great Gidding is broadly linear in shape with a large proportion of the houses in this settlement, including the site proposal, fronting onto Main Street. The land within the site slopes gently down from west to east up to the eastern boundaries from which the land slopes gently upwards to Chapel End road. Surrounding the site, there are agricultural fields to the east, properties and associated land immediately to the north and south and Main Street to the north west. The boundaries of the site are characterised by trees and hedgerows but public views into the site from a public right of way to the east are likely due to the topography of the site and adjacent land causing some landscape impact.</p> <p>There is no no known contamination or pollution on site and there are no oil pipelines or buffer zones within the site. There are electricity lines within the site running in two directions, north west to south east and south west to north east, which could constrain development. The site promoter has stated the power lines will be incorporated into the design process, potentially using the effected land for Biodiversity Net Gain (BNG). There are no designated nature assets within the site. The site is wholly within Great Gidding Conservation Area. Highway access could be achieved from Main Street.</p> <p>The site is predominantly greenfield land. In the north western part of the site there is an overflow car park serving the Village Hall, the site promoter has stated they intend to retain and enhance his area of the site potentially contributing to the reuse and improvement of previously developed land. The site is outside a mineral safeguarding and water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single company who support its development. There are no known legal restrictions impacting the site. The site promoter has stated that the site is available for development and will be delivered by a house builder. There is a car park associated with the village hall that the site promoter has stated will be enhanced by the development.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all services, except gas are immediately accessible from the site boundary. Highway access to the site could be achieved from Main Street.</p> <p>There are no topographical challenges to overcome within the site which would impact viability. There would be some landscape impact due to the site being visible from the east and the potential number of homes being out of line with the current built form along Main</p>	~

<p>Street. This constraint could be overcome by proposed BNG on the eastern side helping to screen the development. The site promoter has stated the development would not impact the location of the power lines which would therefore reduce the developable area and potentially the capacity. The proposal would require sensitive design to ensure the character of Great Gidding Conservation Area is maintained. The eastern side of the site is at risk of some surface water flooding, proposed BNG on this side of the site would help overcome constraint and a sustainable drainage system would need to be implemented.</p> <p>The overflow car park currently used by the village hall is intended to be enhanced by the development.</p> <p>Constraints outlined relating to landscape, electricity lines and surface water flooding risk, reside on the eastern side of the site may be overcome by the BNG proposal. To this end, the capacity of the site may need to be reduced to consider the reduction in developable area and to align with the existing built form on Main Street.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are constraints that may be overcome. The site promoter seeks to deliver the site via a housebuilder and has stated the land will become available between 2024 and 2028. Development of the site is contrary to current policy so an allocation status would be required in order to develop the site. Consequently, the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is flood zone 1 with minimal surface water flooding</li> <li>• The site is predominantly greenfield, classified as grade 3 agricultural land.</li> <li>• Limited access to natural green space, employment concentrations and education facilities.</li> <li>• There is a shop and multiple culture and leisure facilities in close proximity to the site.</li> <li>• Sufficiently remote from all of the designated nature assets except a County Wildlife Site.</li> <li>• Wholly within Great Gidding Conservation Area and highway access could cause the removal of protected vegetation.</li> </ul>
--

- Development provides an infill opportunity but should be located towards the site frontage to preserve the character and form of Great Gidding and minimise landscape.
  - Wider benefit to the community offered through the enhancement of the existing car park to the north of the site serving the village hall.
- In combination, the outcomes of the LAA and SA indicate that the site:
- May be appropriate for development if located towards the site frontage to minimise impact upon the landscape and character of Great Gidding whilst avoiding the electricity lines on the eastern side of the site.
  - Needs to conserve Great Gidding conservation area.
  - Supports national aspirations for residential development on sites of less than 1 ha.
  - Provides an opportunity for infill development and growth in a village location.

**HDC's Delivery Calculations**

Page 252 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.667 ha 40% net developable area to minimise landscape and settlement character impact, avoid electricity lines and accommodate village hall car park. 0.667 ha x 40% = <b>0.267 ha</b>	Residential - market and/ or affordable houses. Very low density of 25 dph anticipated due to rural village location. Capacity = 0.267 ha x 25 = <b>7 homes</b>	Available 2024 - 2028 Build out 2 years

**Updates after the Initial Assessment**

--

**Great Gidding 3: Land adjacent to Chapel Lane, Great Gidding**

<b>Site reference</b>	Great Gidding 3
<b>Site name</b>	Land Adjacent to Chapel Lane, Great Gidding

Site address	Parish(es)	Site area (ha)
Land adjacent to Chapel Lane, Great Gidding	Great Gidding	5.535

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Public space and amenity provision	Up to 110 dwellings	Approximately 2 years

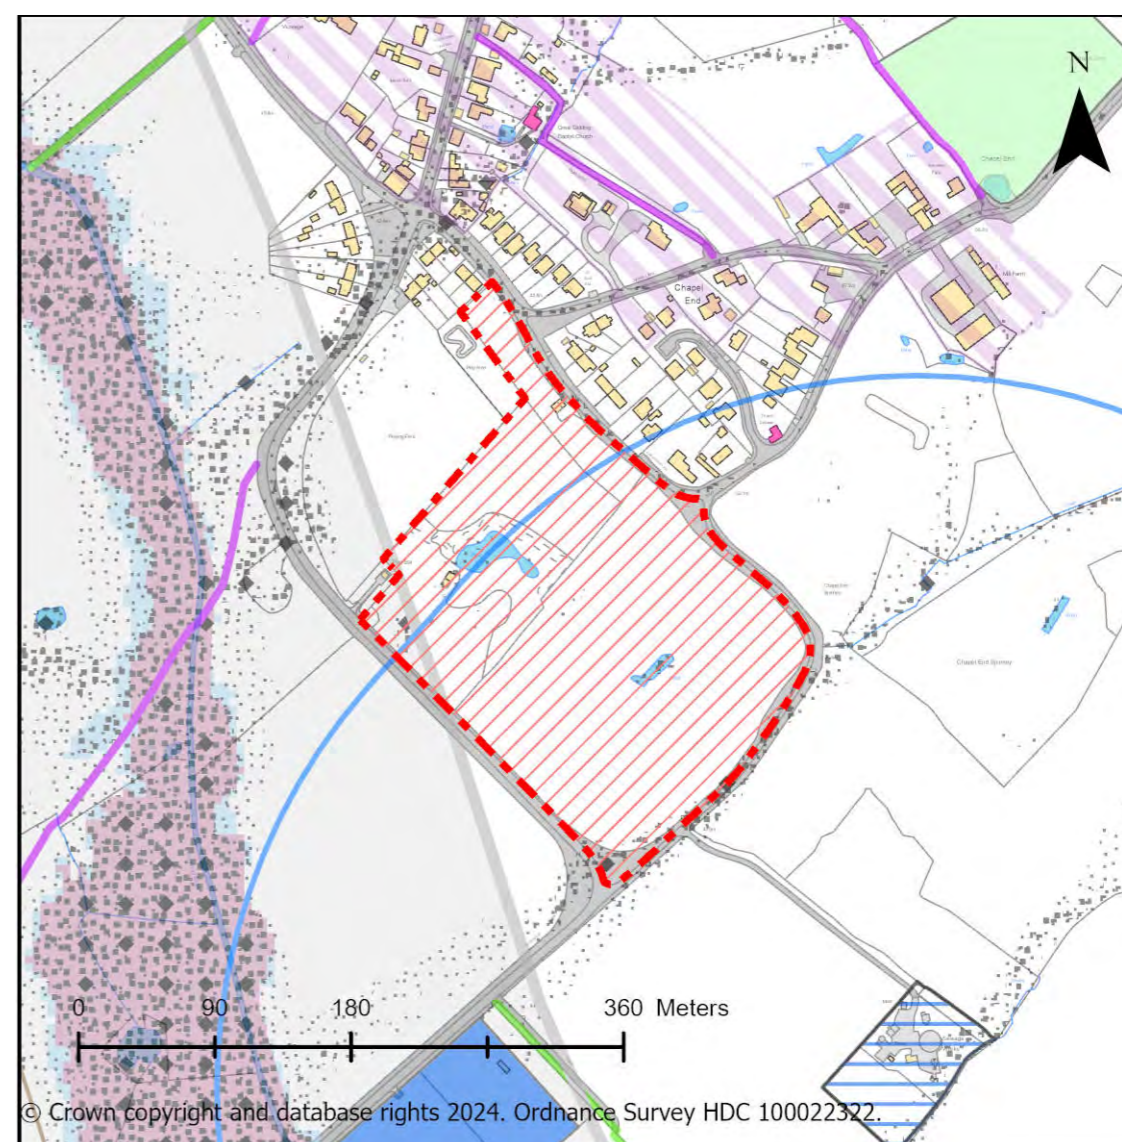

**Core information**

How was the site identified?	Call for sites submission 2023: site reference - CfS 192
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly classified as grade 3 agricultural land. The site is within flood zone 1 but is at some risk from surface water flooding within the middle of the site and along the eastern boundary. The site is located in the south of Great Gidding and predominantly enclosed by surrounding roads, namely Chapel End, Back Lane and Winwick Road except an adjoining public park to the north west. From the north west to the south east, the land slopes up and then gently down. The boundaries of the site are characterised by well established trees and hedgerows but due to the topography of the site there could be some landscape impact looking into the site from surrounding areas. There is no known pollution or contamination impacting the site and there are no oil pipelines or buffer zones within the site. However, there are electricity lines traversing the site in two directions, from north east to south east and south east to north west which would cause a reduction in the developable area or need to be redirected; the site promoter has confirmed that the power line running on the eastern edge (north east to south east) would need to be diverted. There are no known heritage or conservation assets within the site, but the site is adjacent to Great Gidding Conservation Area to the north. Highway access could be achieved from the encompassing roads, consultation with Cambridgeshire County Council is required to inform the most suitable access point.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The majority of the site, except a very small area in the eastern corner is within a mineral and safeguarding area for sand and gravel. In addition, approximately 4.3ha of the site is within a water recycling a buffer zone serving as a significant constraint to development.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single company who support its development. There are no known legal restrictions impacting the site. The site promoter has stated that the site is available for development and will be delivered by a house builder.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all utilities and digital infrastructure are available from the site boundary. There are no significant topographical constraints within the site impacting the scope of development but there would be some landscape impact. Consultation with Cambridgeshire County Council is required to ascertain the most suitable access point from encompassing roads. The site is predominantly within a mineral safeguarding area and WRA which could significantly impact the capacity and layout of the site and therefore consultation and necessary assessments will be required prior to development to assess whether the impacted land is developable. The proposal would require sensitive design to ensure the character of Great Gidding Conservation Area, to the north of the site, is maintained. The electricity lines, as suggested by the site promoter, would need to be diverted, raising costs for the developer.</p>	~

<p>The cumulative impact of the constraints outlined are significant, negatively impacting the achievability of the proposal.</p>	
<p><b>Deliverability / developability</b></p> <p>There are significant constraints that would need to be overcome. There are no built structures to clear but there is a pond and trees within the middle of the site which will need to be considered in the design process. The site promoter seeks to deliver the site via a housebuilder and has stated the land will become available between 2024 and 2028. Development of the site is contrary to current policy so an allocation status would be required in order to develop the site.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is within flood zone 1 with minimal risk of surface water flooding</li> <li>• Wholly classified as grade 3 agricultural land</li> <li>• Limited access to schools, employment opportunities and public transport</li> <li>• In close proximity to multiple culture and leisure facilities, natural green space and a local convenience store.</li> <li>• The scale and location of the site would likely fail to conserve the character and form of Great Gidding.</li> <li>• It is sufficiently remote from all of the designated nature assets but development in this location would need to be sensitive to Great Gidding Conservation Area to the north, a designated heritage asset.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for development due to key constraints arising from predominantly being in a WRC impacting the layout and capacity and potential for the scale and location of development causing significant landscape impact eroding the rural feel and character of Great Gidding.</li> </ul>
--

**HDC's Delivery Calculations**

### 10 Haddon

10.1 A total of 6 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Haddon 1: Manor Farm Yard, Haddon Road, Haddon
- Haddon 2: Orchard Field Allotment, Haddon Road, Haddon
- Haddon 3: Land West of A1 and South of Haddon House, Haddon
- Haddon 4: Land West of A1 (North of Peterborough Motorway Services) - Option B (smaller site), Haddon - note that this site also partially falls within Chesterton parish, but it has been included under Haddon as most of the site lies within that parish area.
- Haddon 5: Land at A1 West (South) - South of Peterborough Motorway Services, Haddon
- Haddon 6: Land West of A1(M) between junctions 16 and 17, and South of Haddon Road - note that this site also partially falls within Morborne and Folksworth & Washingely parishes, but it has been included under Haddon as most of the site lies within that parish area.

10.2 Please note that 'Chesterton 1: Land West of A1 (North of Peterborough Motorway Services) - Option A (larger site), Haddon (Chesterton)' also partially falls within Haddon parish, but it has been included under Chesterton as most of the site lies within that parish area.

10.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Relevant planning history	Application number: 1100256FUL Proposal: Erection of dwelling Outcome: Refused
Land type	Wholly greenfield land
Current use of the site	Agricultural Land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	No	Fail

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No because the site has failed the fundamental constraints by being below the site size and number of homes threshold.
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is below the required minimum site threshold required for detailed assessment.	N/A	N/A

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Custom and self-build housing	2 plots	2-3 years

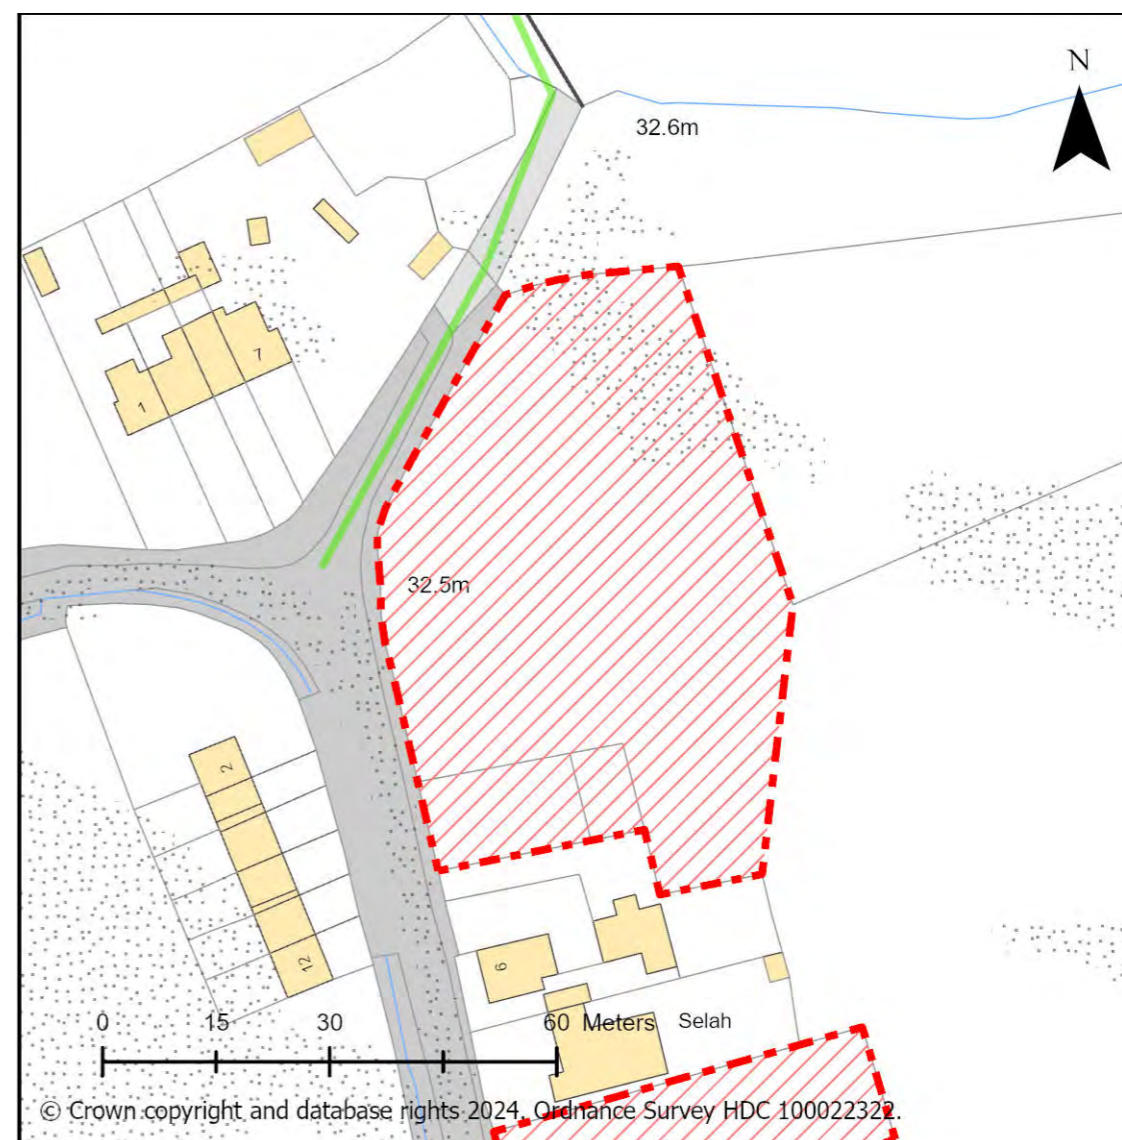

**Core information**

How was the site identified?	Call for sites submission 2023 - CfS 307
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural and garden land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly classified as grade 3 agricultural land. The site is wholly within flood zone 1 with no recorded risk of surface water flooding.</p> <p>The site is located in the north of Haddon. The topography within the site and surrounding land is broadly level, sloping gently down from west to east. There are no built structures within the site. The eastern and southern boundary is characterised by well established trees and hedgerow but is completely open to the east allowing views into the site from adjoining agricultural fields. Residential properties adjoin the site in the south and is opposite a row of houses to the west along Haddon Road.</p> <p>There is no known contamination on site or gas pipelines running through the site. There are electricity lines traversing the middle of the site from west to east and along the western boundary which could significantly constrain development. There are no designated heritage or nature assets within the site. Highway access could be achieved from Haddon Road.</p> <p>The site is wholly greenfield land and therefore offers no opportunity for the reuse or regeneration of previously developed land. The site is wholly within the mineral safeguarding area for bricklay, consultation with Cambridgeshire County Council will be required to ascertain whether it is a workable resource that might constrain development.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single individual/ company who supports it's development. There are no known legal restrictions impacting the site. The site will be directly delivered by the land owner.</p>	+
<p><b>Achievability</b></p> <p>The landowner has stated that utility and digital infrastructure is available from the site boundary except gas. Public highway access could be achieved via Haddon Road. There are no topographical constraints to overcome. The achievability of development is constrained by the electricity lines that run from west to east and along the western boundary which would impact the layout and capacity of the site but could be mitigated through effective design. However, mitigation could effect the viability of the site, particularly if the electricity line needs to be diverted. The site is in close proximity to the A1(M) and therefore may be subject to noise pollution.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no buildings that need to be cleared prior to development but to access the site it will likely require the removal of a dense treeline along the western boundary. The site is contrary to current planning policies and therefore is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• The site is wholly flood zone 1 with no recorded risk of surface water flooding</li> <li>• Wholly classified as grade 3 agricultural land.</li> <li>• Sufficiently remote from all of the designated nature and heritage assets.</li> <li>• The development is of a scale and location that could conserve the character of Haddon and be effectively integrated into the existing place and community.</li> <li>• Very limited access to services, amenities and key infrastructure such as public transport.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate the site is:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development requiring the impact of constraints arising from the electricity lines and potential removal of mature trees and hedgerow are fully understood, mitigated and viable.</li> <li>• Opportunity for small scale development in village location potentially conserving the character of Haddon.</li> </ul>
--

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
<p>Gross site area 0.32</p> <p>70% net developable area to allow sufficient landscaping along eastern boundary, retention of mature trees and removing part of the site impacted by the electricity lines.</p> <p>0.32ha x 70% = <b>0.224 ha</b></p>	<p>Custom/ self-build housing</p> <p>Very low density of 25dph anticipated due to rural village location.</p> <p>Capacity = 0.224 ha x 25 dph = <b>6 homes</b></p>	<p>Land available 2024-2028</p> <p>Build out 2-3 years</p>

**Updates after the Initial Assessment**

**Haddon 3: Land West of A1 and South of Haddon House, Haddon**

<b>Site reference</b>	Haddon 3
<b>Site name</b>	Land West of A1 and South of Haddon House, Haddon

Site address	Parish(es)	Site area (ha)
Land West of A1 and South of Haddon House, Haddon	Haddon	27.71

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: • Logistics and distribution	45,000 sqm to 90,000 sqm	Available 2024 - 2028 Build out over 5 years

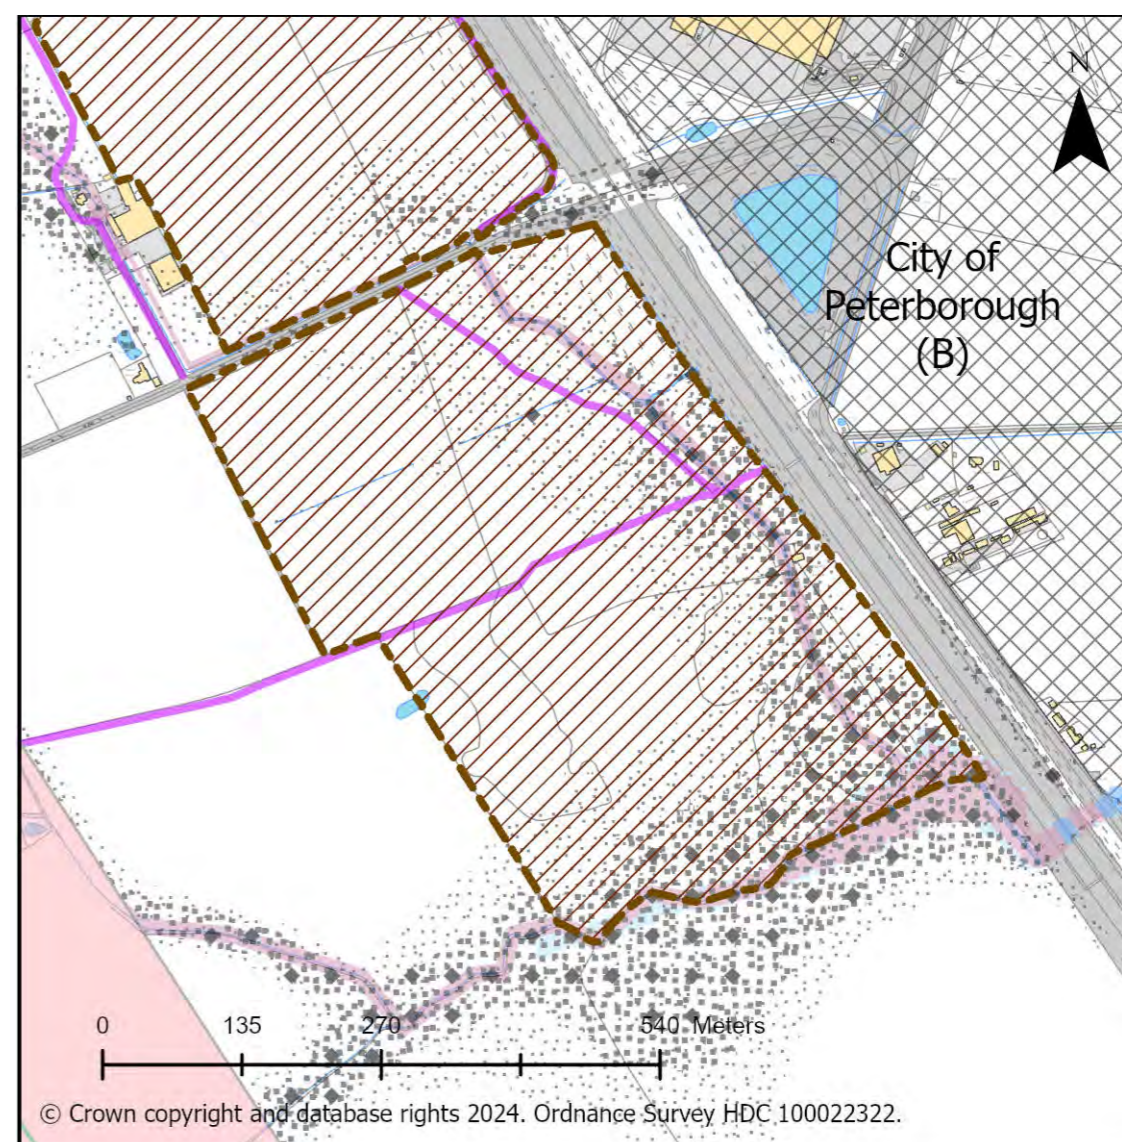

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:115
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Some of the south eastern corner and eastern edge is within flood zone 3b	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The majority of the site is located within flood zone 1 but its southern edge and a channel along its eastern side is within flood zone 3b. This flood risk is associated with a drain that runs through the site. The site is significantly constrained by surface water flood risk covering over two thirds of the site. The site is wholly classified as grade 3 agricultural land. The site is broadly level and open with minimal vegetation along its western, eastern and northern boundaries. The elevated A1(M) provides views into the site. The site is more obscured on its southern edge from views. Haddon Nursery consists of various mature trees and vegetation within the southern half of the site, the removal of these trees would significantly alter the landscape by removing a local landscape feature. There are two public rights of way running the the site, one runs through the centre of the site. Therefore development would be visible form public vantage points. To the east is the A1(M) and Shark's Lodge and to the north, south and west is open countryside with some agricultural buildings and farmhouses nearby including Toon's Lodge.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Some telegraph poles run along Haddon Road and into the site. The site's proximity to the strategic road network mean that development is at greater risk form air, light and noise pollution, additionally the proposed development could increase levels of pollution. There are no nature conservation or heritage designations on site. Access to the site could be achieved from Haddon Road however this is a single lane road which would require significant upgrades in order to accommodate large logistics vehicles. Additionally, to connect onto the A1(M), vehicles currently need to travel along Haddon Road underneath the A1(M) and carry on for some 2 miles along New Road to connect onto the A1(M) at junction 16. Engagement with Cambridgeshire County Council will be required to further assess the impact of this on the local road network and the feasibility of access but this is a key constraint to the achievability of developing this site.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m of a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and take 5 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart form gas supply which is not immediately accessible. The site is broadly level but there are public rights of way and Haddon Nursery within the site as well as</p>	-

<p>channels of land within flood zone 3b and telegraph poles which will impact the layout and potential achievability of developing the site. Additionally, there is likely to be significant impacts on the landscape arising form development. There is also potentially limited vehicular access appropriate to he nature and scale of the proposed development which will require engagement with Cambridgeshire County Council. The scale of the proposed development is also in isolation likely to be an insufficient scale in order to fund a new access or junction from the A1(M).</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with several constraints impacting the site which cumulatively make developing the site very challenging. The site promoter seeks to deliver the site via a master developer and will be available between 2024 and 2028. The proposal is currently not supported under current local policy so an allocation status would be required. Considering this and the cumulative constraints on the site, the site is not categorised as being either deliverable or developable at this time.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to the cumulative constraints relating to landscape, trees, flood risk, public rights of way and telegraph poles on the site making the potential developable area of the site very small for the proposed development. Also access is very constrained from Haddon Road and connection onto the A1(M) to serve a logistics development with largescale vehicles is currently inadequate without substantial upgrades.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>

Page 268 of 3488

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

The site lies between the A605 Oundle Road to the north and the A605 and Peterborough Motorway Services to the south, it is also west of the A1(M). The site has also been submitted under CfS:209 (see Chesterton 1 for site assessment) as part of a larger scheme. It is located on the north eastern edge of Huntingdonshire district with Peterborough City Council being on the other side of the A1(M). The site is immediately to the north of another site being promoted at A1 West (South) (see site Haddon 3 for site assessment).

The site is wholly within flood zone 1 with some surface water flood risk within the site. It is wholly classified as grade 3 agricultural land and is currently in agricultural use. There are a number of agricultural buildings and farmhouses on site which would be demolished.

The site predominantly comprises a number of medium to large arable fields. The eastern part towards the A1(M) and Junction 17 is relatively flat with some parts gently sloping and the south western part rises towards the ridgeline and highest ground beyond the site to the west. The existing fields within the Site are generally divided by hedgerows with some drainage ditches. A cluster of buildings at Bottom Lodge Farm are located on the western side of the site, accessed via a track from the A1. A fishing pond, contained within existing trees is located close to the south-east corner of the site. The western side of the site is contained by the ridge of high ground that lies and the eastern side of the site is contained by the A1(M) road corridor, with the existing developed edge of Peterborough, immediately beyond.

There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run through the site and a communications mast is positioned close to the south-western corner of the site. The site's proximity to the strategic road network mean that development is at greater risk form air, light and noise pollution, additionally the proposed development could increase levels of pollution. There are no nature conservation or heritage designations on site. Access is proposed from the A605, with pedestrian, cycle and bus access provided from Oundle Road. From the A605, there are connections to the A1(M). Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. The site is beyond 400m of a water recycling area.

**Availability**

The site is in multiple ownership with all landowners supporting its development. The land has been promoted on behalf of a developer who part owns the site, the site promoter states that the remainder of the site is controlled by way of an option agreement. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and take 2 years to complete.

+

<p><b>Achievability</b></p> <p>The site promoter identifies that the public highway and digital and telecommunications infrastructure are accessible from the site boundary, with gas supply and electricity supply not being immediately accessible, and mains water supply being accessible within the site. The site has good connections to the strategic road network but engagement with Cambridgeshire County Council will be required to determine if the proposed scale and type of development can be accommodated. The impact on the landscape and surrounding land uses are also key constraints to consider. It is noted that the surrounding wider area particularly to the east of the site within Peterborough City Council is rapidly evolving with largescale logistics and warehousing development at Peterborough Gateway and Great Haddon.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with some buildings on site to clear. There are several constraints impacting the site which cumulatively make developing the site challenging, most notably relating to landscape and access/traffic flows. The site promoter seeks to deliver the site via a master developer and will be available between 2024 and 2028 with the site having an options agreement already in place. The proposal is currently not supported under current local policy so an allocation status would be required. Considering this the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is greenfield land consisting of grade 3 agricultural land</li> <li>• Is within flood zone 1 but there area areas at risk from surface water flooding</li> <li>• Is remote from natural greenspace</li> <li>• It has very limited accessibility to a local shop and local services and facilities</li> <li>• It is remote from public transport options so could incentivise car usage if improvements were not made or if adequate footpath and cycle path connections were not made</li> <li>• It could provide employment development that could support job creation</li> <li>• May be subject to higher levels of air, light and noise pollution arising from its proximity to the A1(M) and be of a scale that could result in additional pollution</li> <li>• Is largely contained by the road network to the south and east and by rising land levels to the west. The site has a closer relationship with the countryside rather than to a settlement so</li> </ul>
---

<p>detailed masterplanning will be required to address landscape impact and ensure effective integration</p> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for an employment scheme. Landscaping is a key consideration in the masterplanning of any scheme.</li> <li>• Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development, particularly the main point of access being an additional turning from the roundabout on the A605 before junction 16 of the A1(M)</li> <li>• Telegraph poles running through the larger parcel which will impact the masterplanning of the site</li> <li>• Sustainable drainage will be required to mitigate the surface water flood risk</li> </ul>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 45.97 ha</p> <p>Usually for employment development, the gross site area will be used to calculate capacity but considering the constraints on the site relating to the land levels and need for landscaping, some flood attenuation and access route and connection off the roundabout from the A605, the net developable area will be used.</p> <p>Accounting for this the net developable area of 50% will be used.</p> <p>45.97 ha x 50% = <b>23 ha</b></p>	<p>Commercial - employment &amp; logistics/distribution</p> <p>The site promoter states that the site could provide a mix of offices, B2 (industrial) and B8 (warehousing) uses, with B2 capped at 30% of the floorspace.</p> <p>The 0.4 plot ratio is most appropriate to use to calculate an indicative capacity for B2 and B8 uses:</p> <p>0.40 plot ratio x 23 ha = 9.2 ha of land for employment uses</p> <p>equating to <b>92,000 sqm.</b></p> <p>Using the split provided by the site promoter between B2 and B8 use this could provide:</p>	<p>Available post 2028, subject to allocation status.</p> <p>Build out over more than 5 years (site promoter anticipates 2 years)</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<ul style="list-style-type: none"> <li>• 30,667 sqm for B2 use</li> <li>• 61,333 sqm for B8 use</li> </ul>

---	--

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

by a combination of the A1, Junction 17, A605 and a service area to the north, east and north east. To the south and west is further farmland, woodland and hedgerows, and a minor watercourse/ wet ditch. The site is not level with the western part of the site comprising rising ground, which continues to rise beyond the boundary to the west. The majority of the site is relatively lower lying sloping down towards in the central and eastern part of the site. Land levels reduce by some 20m or so so development on the higher ground would result in a significant landscape impact. The A1(M) forms a landscape buffer to the east as does the A605 and Peterborough Motorway Services to the north. The site is much more open to the south and west where it adjoins open countryside. There are agricultural buildings and a single dwelling adjacent to the site's south western corner accessed from Haddon Road. The site has a public right of way within its south eastern section so development will be visible from a public vantage point.

There is no known contamination on site and no oil or gas pipelines running through the site. Along some of the site's western boundary, a smaller part of the site falls within the buffer zone of an oil pipeline. Telegraph poles run through the site. The site's proximity to the strategic road network mean that development is at greater risk from air, light and noise pollution, additionally the proposed development could increase levels of pollution. There are no nature conservation or heritage designations on site. However, the site promoter has identified the north western corner of the site as having potentially significant archaeology which will require further investigation. The concept plan for the site shows that no built development is proposed on this part of the site. Access is proposed from the A605, with pedestrian, cycle and bus access provided from Haddon Road. From the A605, there are connections to the A1(M) via Junction 17. Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development.

The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. The site is beyond 400m of a water recycling area.

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site lies between the A605 and Haddon Road, west of the A1(M) Junction 17. It is located on the north eastern edge of Huntingdonshire district with Peterborough City Council being on the other side of the A1(M). The site is immediately to the south of another site being promoted at A1 West (North) (see site Haddon 5 and Chesterton 1 for site assessments).</p> <p>The site is wholly within flood zone 1 with some surface water flood risk within the site. It is wholly classified as grade 3 agricultural land and is currently in agricultural use consisting of several small and medium sized fields. The site is relatively well defined and contained</p>	~
--	---

<p><b>Availability</b></p> <p>The site is controlled by a developer company who supports its development. There is an option agreement in place on the land. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and take 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that mains water supply, the public highway and digital and telecommunications infrastructure are accessible from the site boundary with gas supply and electricity supply not being immediately accessible. The site has good connections to</p>	~

<p>the strategic road network but engagement with Cambridgeshire County Council will be required to determine if the proposed scale and type of development can be accommodated. The impact on the landscape and surrounding land uses are also key constraints to consider as well as the public right of way which runs through the site. It is noted that the surrounding wider area particularly to the east of the site within Peterborough City Council is rapidly evolving with largescale logistics and warehousing development at Peterborough Gateway and Great Haddon.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with several constraints impacting the site which cumulatively make developing the site very challenging. The site promoter seeks to deliver the site via a master developer and will be available between 2024 and 2028 with the site having an options agreement already in place. The proposal is currently not supported under current local policy so an allocation status would be required. Considering this the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is greenfield land consisting of grade 3 agricultural land</li> <li>• Is within flood zone 1 but there area areas at risk from surface water flooding</li> <li>• Is remote from natural greenspace</li> <li>• It has very limited accessibility to a local shop and local services and facilities</li> <li>• Has some potential to connect to existing public transport options and is of a scale to provide an enhanced provision as well as enhanced connections for footpath and cycle paths, potentially utilising exiting public rights of way</li> <li>• Connections to the road network could incentivise car usage if improvements were not made to the public transport and active transport network</li> <li>• It could provide employment development that could support job creation</li> <li>• May be subject to higher levels of air, light and noise pollution arising form its proximity to the A1(M) and be of a scale that could result in additional pollution</li> <li>• Is largely contained by the road network to the south and east and by rising land levels to the west. The site has a closer relationship with the countryside rather than to a settlement so detailed masterplanning will be required to address landscape impact and ensure effective integration</li> <li>• There may be archaeological potential on the site</li> </ul>
--

<p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for an employment scheme. Landscaping is a key consideration in the masterplanning of any scheme.</li> <li>• Engagement with Cambridgeshire County Council will be required to assess whether these accesses and the road network can accommodate the proposed scale of development, particularly the main point of access from the A605</li> <li>• Telegraph poles running through the site which will impact the masterplanning of the site</li> <li>• Sustainable drainage will be required to mitigate the surface water flood risk</li> <li>• Masterplan will need to incorporate existing public rights of way and consider the location of built development in relation to the potential archaeology on the site</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 48.28 ha</p> <p>Usually for employment development, the gross site area will be used to calculate capacity but considering the constraints on the site relating to the land levels and need for landscaping, some flood attenuation, incorporation of public rights of way and access route from the A605, the net developable area will be used. Accounting for this the net developable area of 60% will be used.</p> <p>89.05 ha x 60% = <b>28.97 ha</b></p>	<p>Commercial - employment and logistics/ distribution</p> <p>The site promoter states that the site could provide a mix of offices, B2 (industrial) and B8 (warehousing) uses, with B2 capped at 30% of the floorspace.</p> <p>The 0.4 plot ratio is most appropriate to use to calculate an indicative capacity for B2 and B8 uses:</p> <p>0.40 plot ratio x 28.97 ha = 11.588 ha of land for employment uses</p> <p>equating to <b>115,880 sqm.</b></p> <p>Using the split provided by the site promoter between B2 and B8 use this could provide:</p> <ul style="list-style-type: none"> <li>• 34,764 sqm for B2 use</li> <li>• 81,116 sqm for B8 use</li> </ul>	<p>Available post 2028, subject to allocation status.</p> <p>Build out over more than 5 years (site promoter anticipates 2 years)</p>

Updates after the Initial Assessment

**Promoter's Intentions**

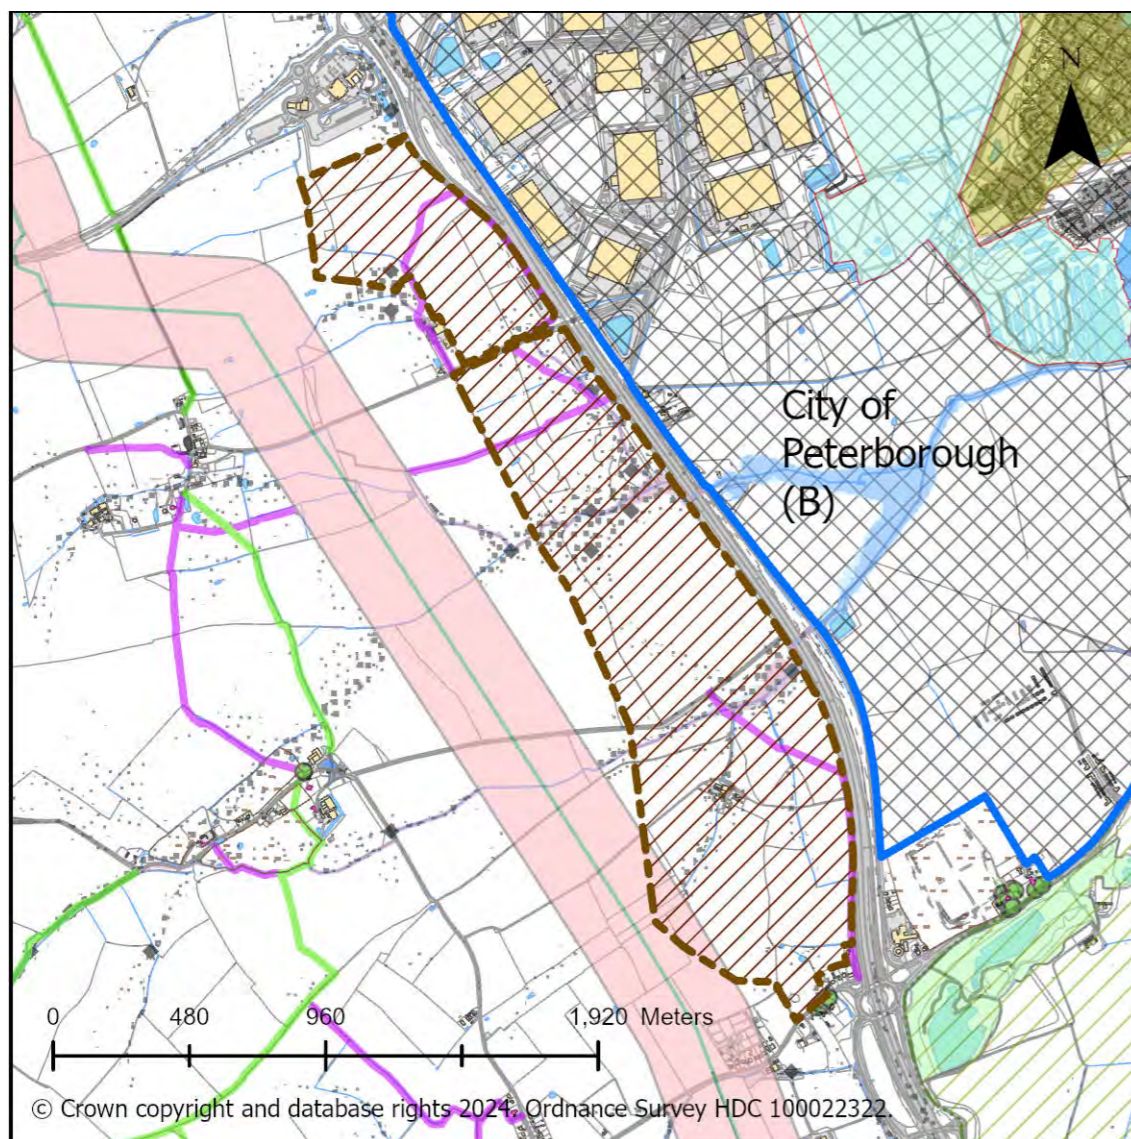

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: <ul style="list-style-type: none"> <li>• Employment</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>• Transport and parking/lorry parking</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>• Natural green or open space</li> <li>• Biodiversity net gain opportunities</li> <li>• Land to safeguard against flooding</li> </ul>	418,100sqm of industrial floorspace, split between B2/B8 to be confirmed  Capacities for other land uses not provided	Available 2024 - 2028  Build out over 5-10 years

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-2415
Relevant planning history	None relevant
Land type	Greenfield land with a small amount of previously developed land
Current use of the site	Agricultural land with an existing dwelling within the site
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Channels of flood zone 3b across the site but this accounts for less than 10% of the site area	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>This is a large site consisting of two parcels of land. The larger extended between Folksworth Road and Haddon Road, the smaller northern parcel is between Haddon Road and the A605 south of Peterborough Services. The site includes land also submitted under Haddon 3 (Land West of A1 and South of Haddon House, Haddon), Haddon 4 (Land at A1 West (South) - South of Peterborough Motorway Services, Haddon) and Folksworth and Washingley 2 (Land adjacent A1 at Norman Cross, Folksworth).</p>	-
---	---

The majority of the site is located within flood zone 1 but there are channels of water running through the site which fall within flood zone 3b. This accounts for less than 10% of the total site area. These areas at higher risk of fluvial flood risk are also at greater risk from surface water flood risk. Pockets of surface water flood risk are found throughout the site, some are at quite high risk. The site is wholly classified as grade 3 agricultural land. The site is broadly level but gently elevates up to its western edge. It is generally open with minimal vegetation along its western, southern and northern boundaries. The elevated A1(M) provides views into the site but there is vegetation along it to screen the site from view. Haddon Nursery and Morborne Thorns consists of various mature trees and vegetation within the site, the removal of these trees would significantly alter the landscape by removing a local landscape feature. There are several public rights of way running through both parcels of the site, including through the centre of the site. Therefore, development would be visible from public vantage points. To the east is the A1(M), it largely consists of agricultural fields but there are some proptiers and farms within the site such as Venetian Lodge and Shark's Lodge. The site is very large and would have a substantial urbanising effect on the landscape fundamentally altering the character of the landscape and the setting of several villages.

There is no known contamination on site and no oil or gas pipelines running through the site. The site's south western corner does fall within the buffer zone of an oil pipeline. Some telegraph poles run along Haddon Road and into the site. The site's proximity to the strategic road network mean that development is at greater risk from air, light and noise pollution, additionally the proposed development could increase levels of pollution. There are no nature conservation or heritage designations on site. There are however some trees protected by a Tree Preservation Orders adjacent to the site's southern boundary. There are several areas of densely wooded areas (Haddon Nursery and Morborne Thorns) which will not benefiting from statutory protection from important landscape features. Access to both parcels could be possible from Haddon Road however this is a single lane road which would require significant upgrades in order to accommodate large logistics vehicles and development of this scale. Additionally, to connect onto the A1(M), vehicles currently need to travel along Haddon Road underneath the A1(M) and carry on for some 2 miles along New Road to connect onto the A1(M) at junction 16. Engagement with Cambridgeshire County Council will be required to further assess the impact of this on the local road network and the feasibility of access but this is a key constraint to the achievability of developing this site.

The site is predominately greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m of a water recycling area.

<p><b>Availability</b></p>	+
----------------------------	---

<p>The site is controlled by multiple owners with legal land control agreements being finalised. Development is supported by all owners. There are no known legal restrictions impacting the site. It is intended to deliver the site via a master developer. The site promoter suggests the land will be available between 2024 and 2028 and take 5 to 10 years to complete. The site promoter states that technical work is ongoing and further details will be provided in due course.</p>	
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is broadly level but there are public rights of way and areas of established woodland within the site as well as channels of land within flood zone 3b and telegraph poles which will impact the layout and potential achievability of developing the site. The scale of the site is substantial and will fundamentally urbanise the landscape along the A1(M) to a scale that would detrimentally impact the landscape and the character of the northern part of the district. Additionally, there is likely to be significant impacts on the landscape arising from development. There is also potentially limited vehicular access appropriate for the nature and scale of the proposed development which will require engagement with Cambridgeshire County Council. The scale of the proposed development is also in isolation likely to be an insufficient scale in order to fund a new access or junction from the A1(M).</p>	-
<p><b>Deliverability / developability</b></p> <p>The site is largely greenfield with several constraints impacting the site which cumulatively make developing the site very challenging. The site promoter seeks to deliver the site via a master developer and will be available between 2024 and 2028. The proposal is currently not supported under current local policy so an allocation status would be required. Considering this and the cumulative constraints on the site, the site is not categorised as being either deliverable or developable at this time.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to the cumulative constraints relating to landscape, trees, flood risk, public rights of way and telegraph poles. The scale of the site is fundamentally unacceptable due to the urbanising impact it would have on the landscape. Also, access is very constrained from Haddon Road and connection onto the A1(M) to serve a</p>
---	---

	<p>logistics development with largescale vehicles is currently inadequate without substantial upgrades.</p>

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	
<p>The site is wholly within flood zone 1 with no recorded risk of surface water flooding. The site is wholly classified as grade 2 agricultural land. The site is located north of Station Road on the eastern edge of Holme, separate from the main residential area by a relatively greenfield land to the west. The land within and surrounding the site is broadly</p>	

<p>level reflecting the flat nature of Holme. In the south of the site there is an existing, in use, residential property, the remaining land being greenfield/ garden land. The eastern boundary adjoins to the curtilage of residential properties along Station and Yaxley Road but is well screened by the well established trees and hedgerow that wholly border the site, also shielding the greenfield land beyond the northern and western boundary. However, the site is wholly within the Great Fen Landscape and Visual Setting.</p> <p>There is no known contamination on site or gas pipelines running through the site. There are no known heritage assets or nature conservation designations within the site.</p> <p>Highway access may be achieved via Station Road, using the existing driveway for the residential property within the site as a route to access the remaining part of the site. Consultation with Cambridgeshire County will be required to understand the most feasible access point.</p> <p>The site offers no opportunity to contribute to regeneration or reuse of previously developed land. All of the site is within a mineral safeguarding area for Brickley, consultation with Cambridgeshire County Council will be required to ascertain if this is a workable resource that might constrain development.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who support its development. There are no known legal restrictions impacting the site. Current residential use will need to be incorporated into the scheme. The site promoter intends to sell the land to a third party once the allocation status has been acquired and has stated that the land will become available for development between 2024 - 2028.</p>	+
<p><b>Achievability</b></p> <p>The landowner has stated that all utilities, except gas, and digital infrastructure are available from the site boundary. Highway access into the site could be achieved from Station Road, however the existing driveway/ track for current residential use will need to be upgraded to ensure appropriate highway access to the northern part of the site. Clarification on whether garden land/ driveway could act as feasible access in terms of size and impact on residential amenity of the current residence would be required prior to development. Without this information this is a significant constraint to the achievability of the site. The site is approximately 150m (as the crow flies) from a railway line potentially exposing the site to noise pollution. There are no significant topographical constraints to overcome. The site promoter has stated there will be no demolition of the in-use residential property which could potentially limit the capacity of the site and would need to be incorporated into the design process.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no built structures to clear as the site promoter has stated there will be no demolition on site. The landowner seeks allocation status and therefore the site is considered to be developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:

- The site is mostly greenfield, classified as grade 2 agricultural land.
- Part of the site is previously developed, there is an existing residential property which will not be impacted by the development.
- The site is wholly within flood zone 1 with no recorded risk of surface water flooding.
- Access to natural green space and some culture and leisure facilities
- Very limited access to shops, employment and public transport.
- Limited relationship to the main concentration of residential development.
- Limited landscape impact if trees and hedgerow retained.
- In close proximity to designated nature assets, namely Holme Fen and the Great fen Project Area. It is sufficiently remote from designated heritage assets.

In combination, the outcomes of the LAA and SA indicate that the site is:

- Not appropriate for development due to the constraints arising from the achievability of highway access given the retention of existing residential property and amenity impact on said property.
- Would create an extension to the village with limited relationship to the main concentration of residential development within the village and therefore infrastructure and services.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site is inappropriate for development due to uncertainty of access,	N/A	N/A

**Updates after the Initial Assessment**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	10-15	2 years

**Core information**

How was the site identified?	Call for Sites Submission 2023 - CfS 157
Relevant planning history	<p>Application number: 18/01819/OUT</p> <p>Proposed development: Residential development of up to 10 dwellings</p> <p>Outcome: Refused</p> <p>Application number: 19/00819/PIP</p> <p>Proposed development: Residential development of up to 10 dwellings</p> <p>Outcome: Refused.</p> <p>Application number: 24/00568/PMBPA</p> <p>Proposed development: Existing agricultural building to proposed single storey accommodation of three x two bedroom dwellings each 75sqm</p>

	Status: Pending Consideration
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is wholly classified as grade 3 agricultural land. The site is within flood zone 1 but is at risk of surface water flooding on the northern half of the site.

The site is located on the north eastern edge of the built up area within Holme. The land within and surrounding the site is broadly level. There is an agricultural building located to the south of the site. The boundaries of the site are predominantly open, allowing long distance views into the site from adjoining roads (Church Street and Short Drove) and

countryside, except to the north where there is a dense tree line. There could be significant landscape impact due to the flat topography of the site and surrounding land and the open boundaries. In addition, the site is within the Great Fen Visual and Landscape Setting.

There may be odour issues due to the sewage filter beds neighbouring the site to the east. Highway access may be achieved from Short Drove or Church Street. There is no known contamination on site or gas pipelines running through the site. An electricity line runs along the western boundary. There are no known heritage assets or nature conservation designations within the site. However, there is a TPO for a tree on the western side of the site which could constrain development.

The site is wholly greenfield land and therefore offers no opportunities for regeneration or use of previously developed land.

The site is wholly within a mineral safeguarding area for sand and gravel, consultation with Cambridgeshire County Council will be required to ascertain whether this is a workable resource that might constrain development.

**Availability**

The site is owned by a single family/ company who support it's development. The land is controlled by the developer. There are no legal constraints to overcome. The development was expected to become available by 2023, the site promoter stating that the site is available immediately for development.

**Achievability**

The site promoter has stated that electricity and water is available within the site and digital infrastructure is accessible from the site boundary. Gas is not immediately available.

Highway access could be achieved from Short Drove, consultation with Cambridgeshire County Council will be required to ascertain the most feasible access point. There are no significant topographical challenges to overcome. The electricity line may impact the layout of the site and suggests Short Drove would be more appropriate for highway access. Agricultural buildings to the south of the site would need to be cleared and an odour assessment may be required to understand the impact of the sewage filter beds to the north. The TPO will need to be incorporated into the design process to protect the tree. There will likely be significant adverse landscape from the development but appropriate screening aligning to the vegetation typical of the area may overcome constraint. It may also be contrary to the aims of the Great Fen.

The constraints outlined have the potential to be mitigated following the necessary through appropriate assessments, consultations and sufficient design and therefore the site is considered to be achievable.

<b>Deliverability / developability</b> The site is contrary to current policy and therefore allocation status would be required.	~
---	---

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• The site is within flood zone 1 but at some risk of surface water flooding</li> <li>• It is greenfield, classified as grade 3 agricultural land with significant built structures that could be reused or recycled</li> <li>• Natural green space is very accessible.</li> <li>• Limited access to employment, shops and public transport</li> <li>• Multiple culture and leisure facilities and a school are nearby to the site</li> <li>• The site relates closely to the existing settlement but there could be significant landscape impact at detriment to the form and character of Holme and the Great Fen.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development subject to substantial landscape mitigation to conserve the character of Holme and the Great Fen, the preservation of the TPO oak tree and sustainable drainage to account for fluvial flooding.</li> </ul>	
--	--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.1 ha  80% net developable area to accommodate significant landscaping, TPO tree and sustainable drainage.  1.1 x standard proportion of 80% = <b>0.88 ha</b>	Market and/or affordable housing  Very low density of 25 dph anticipated due to the rural village location.  Capacity = 0.88 ha x 25dph = <b>22 homes</b>	Available 2024  Build out 2-3 years

**Updates after the Initial Assessment**

--

**Holme 3: Yaxley Road, Holme**

Relevant planning history	Application reference: 20/00208/OUT  Proposed development: Proposed residential development (rural exception site) comprising of 6 affordable units and 4 open market units with approval sought for access, scale, layout and appearance.  Outcome: Permission  Application reference: 20/00208/OUT

	Proposed development: Proposed residential development (rural exception site) comprising of 6 affordable units and 4 open market units with approval sought for access scale, scale, layout and appearance.  Outcome: Permission  Application reference: 22/01951/REM  Proposed development: Application for Approval of Reserved Matters in respect of Landscaping following Outline Approval 20/00208/OUT for Proposed residential development (rural exception site) comprising of 6 affordable units and 4 open market units.  Outcome: Approved
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None Submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Suitability and constraints</b></p> <p>The site is wholly classified as grade 2 agricultural land. The site is predominantly in flood zone 1 but the north eastern corner is within flood zone 2 and 3a and at risk from some surface water flooding. The site is located on the eastern side of Holme quite far removed from the built up area. Within and surrounding the site, the land is broadly level. The eastern boundary is open allowing views into the site from Yaxley Road and surrounding countryside but the remaining boundaries are well vegetated comprising of hedgerows and trees. Residential curtilage adjoins to the south and there is a dense treeline to the west. The site is wholly within Great Fen Landscape and Visual Setting and approximately 170 metres from Great Fen Project Area. There is a railway line approximately 100m to</p>	~
---	---

the east which could act as a key separator between The Great Fen Project Area and the site. However, it is likely there will be some adverse landscape impact due the open eastern boundary and flat nature of surrounding areas. There is no known pollution or contamination within the site. It is outside oil pipeline buffer zone and there are no known electricity lines impacting the site. There are no designated nature or heritage assets within the site. Highway access could be achieved from Yaxley road or Short Drove. A nearby train line to the east may be heard from the site.

The site is wholly greenfield land and therefore offers no opportunities for regeneration or reuse of previously developed land. The site is wholly within a mineral safeguarding area for Bricklay, Cambridgeshire County Council will need to be consulted to ascertain whether this is a workable resource that would constrain development. It is outside a water recycling buffer zone.

**Availability**

The site is owned by a single family/ company who support it's development. The land is controlled by the developer. There are no legal constraints to overcome. The development was expected to become available by 2023 and be delivered by a house builder.

+

**Achievability**

All utilities and digital infrastructure are accessible from the site boundary except gas. There are no topographical constraints to overcome. Highway access could be achieved from adjoining Yaxley Road or Short Drove. Part of the site is within flood zone 3a which could significantly impact achievability. The site promoter has stated the north eastern boundary will remain open to mitigate this impact. The eastern boundary is very open and, as stated by the site promoter, will remain open in the north eastern corner due to being in flood zone 3a. Consequently, the site may be seen from long distances due to the flat nature of surrounding land. In addition, the site may conflict with the aims and objectives of the Great Fen Landscape and Visual Setting and nearby Great Fen Project Area.

~

**Deliverability / developability**

There are constraints to overcome in terms of landscape and especially flooding. The site is expected to take 5 years to deliver and is contrary to current adopted planning policy and therefore the site is considered to be developable.

~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:

- The site is flood zone 1 except in the north which is flood 2 and 3a and is at some risk from surface water flooding.
- Wholly classified as grade 2 agricultural land
- The site is in close proximity to designated nature assets, Holme Fen and the Great Fen Project Area.
- It does have access to some natural green space and a primary school
- Very limited access to public transport, culture and leisure facilities and employment concentrations.
- Sufficiently remote from designated heritage assets.
- Scale and location would be out of character with Holme and therefore may struggle to effectively integrate into the settlement.

In combination, the outcomes of the LAA and SA indicate that the site is:

- Is not appropriate for development due to the potential for significant landscape impact upon the Great Fen and being of a location and scale that could be out of context with Holme.

Residential: Market and/ or affordable housing	Number of homes not specified	2 years

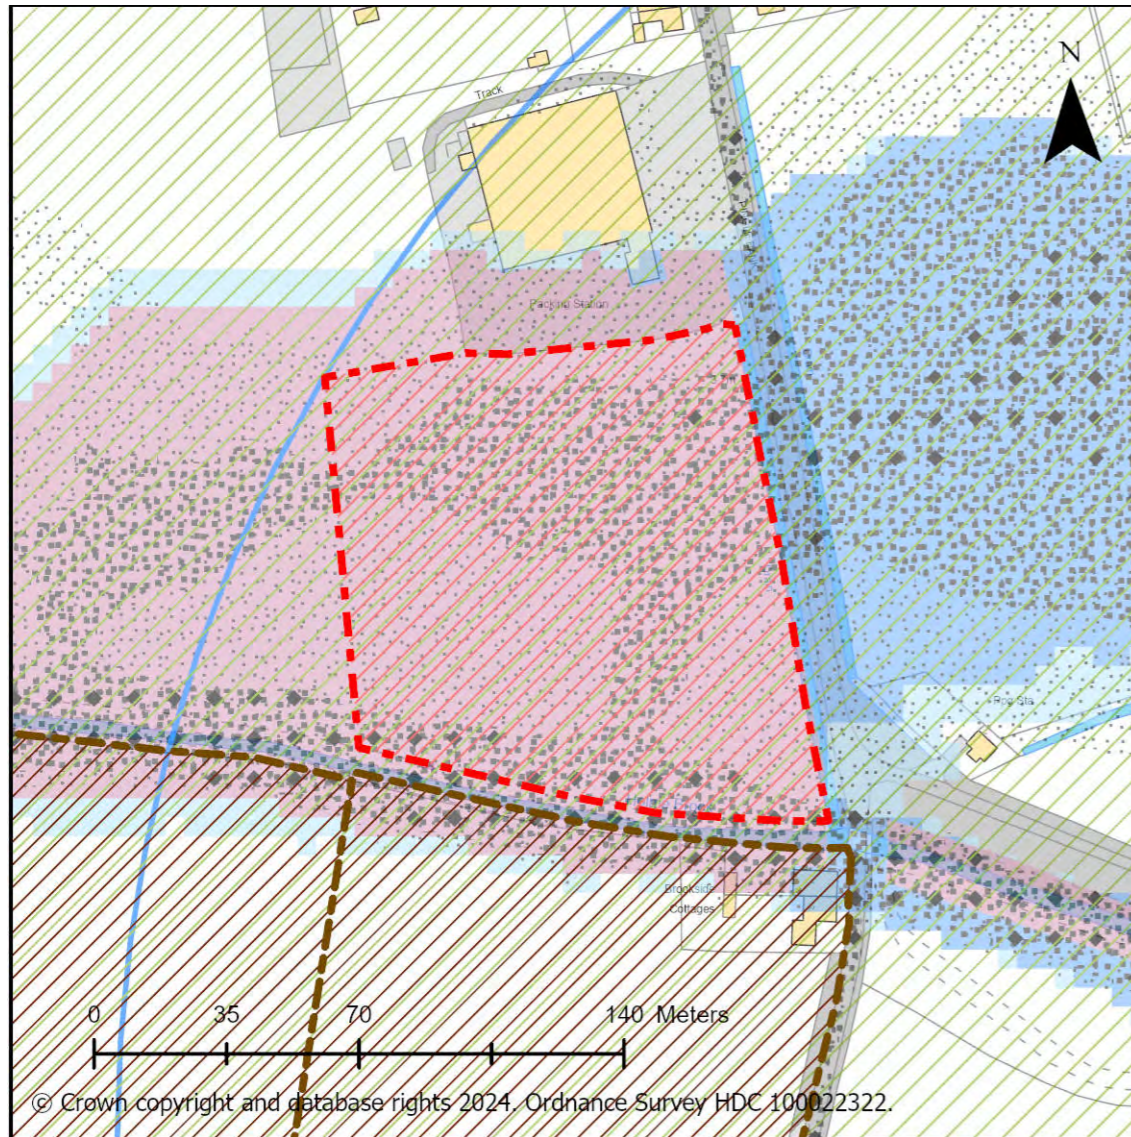

**Core information**

How was the site identified?	Call for Sites Submission 2023 CfS 151
Relevant planning history	<p>Application number: 23/02542/FUL</p> <p>Proposed development: Erection of agricultural building</p> <p>Outcome: Permission</p> <p>Application number: 20/00113/OUT</p> <p>Proposed development: Outline application for three self build plots</p> <p>Outcome: Invalid on receipt</p> <p>Land to the north of site</p> <p>Application number: 17/00101/OUT</p> <p>Proposed development: Proposed residential development of up to 25 dwellings following demolition of existing packing station</p>

	<p>Outcome: Permission</p> <p>Application number: 20/00923/REM</p> <p>Reserved matters application for 25 dwellings for access, appearance, landscaping, layout and scale pursuant to outline planning permission 17/00101/OUT.</p> <p>Outcome: Approved.</p>
Land type	Wholly greenfield land
Current use of the site	Agricultural use
Supporting information	<ul style="list-style-type: none"> <li>Flood Risk Assessment (FRA) for Land North of the Site (2018) - site promoter has stated that the FRA for the site to the north shows it is within flood zone 1 rather than flood zone 2 which includes the site submission. Upon review of the FRA, the assessment shows the site is within flood zone 1 rather than flood zone 3.</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Yes - wholly within flood zone 3b	Fail
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	Yes	Fail - wholly within Water Recycling Area
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

	our evidence proves the site is in flood zone 3b and therefore will not proceed to the next stage of assessments.
--	---

**Impact of the Sustainability Appraisal on the assessment**

The site failed the fundamental constraints stage and therefore did not progress to Sustainability Appraisal.
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to being entirely located within flood zone 3b and a Water Recycling Area	N/A	N/A

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No because the site is within 400m of a water recycling area and wholly within flood zone 3b. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity. Site specific flood risk was submitted for the land north of the site in 2017 however

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-243
Relevant planning history	None relevant
Land type	Part greenfield and partly previously developed land
Current use of the site	Partly residential/ partly agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Justification statement (October 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 with no recorded risk from surface water flooding. The eastern half of the site is classified as grade 2 agricultural land with the western half being grade 3. The site is broadly level, its northern edge has dense trees and vegetation providing an established buffer between the site and the wider landscape. Its remaining boundaries also have established vegetation running along them but they are not so densely populated as its northern edge. A low hedgerow runs along its frontage along Station Road. There are also trees within the site. These trees as well as the hedgerow along its frontage will likely need to be largely cleared to enable develop which may impact the rural feel of this part of the settlement. The site contains two residential properties (Brookfields and</p>	+
--	---

<p>Winsbury). The submitted schematic site plan shows that it is intended to demolish these two properties. The site is broadly surrounded by residential development, the properties (apart from those to the south of the site) have very large curtilages so this development is very low density and as such as a rural feel.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to to the East Coast Mainline railway to the east could give to increased levels of air, light and noise pollution which will require mitigation. There are no nature conservation or heritage designations on site, however the site is located within the landscape and visual setting of the Great Fen. The existing properties within the site have existing accesses from Station Road. The schematic site plan shows that it is intended to provide two points of access from Station Road one towards its south western corner and the other to its south eastern edge.</p> <p>The site is largely greenfield but there are two residential properties also on the site so its development will contribute somewhat to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. It is unknown at this stage how the site will be delivered. The site promoter suggests the land will be available between 2024 and 2028 and could complete within 3 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are existing access into the site serving the existing properties within it. These properties will be demolished to enable a comprehensive development of the site. The site is broadly level meaning there are no major topographical challenges to development. There are also minimal constraints in terms of nature conservations, heritage and flood risk. Key issues may arise form the site's proximity to the East Coast Mainline Railway and its location within the landscape and setting of the Great Fen. Development may adversely impact on the aims and objectives of the Great Fen, masterplanning will be required to to minimise impact and successfully overcome these.</p> <p>The site promoter seeks to deliver a mixed use development providing residential development alongside modest retail development and health care uses alongside open spaces. The schematic site plan provided shows that the non-residential uses are intended to be provided along the northern edge of the site. This would mean that traffic would need</p>	~

to move though the residential element of the site. The feasibility of this and impact on traffic flows and amenity on these residents will need to be further assessed. Additionally, appropriate footpath and cycleway connections should be sought in order to further integrate these retail and health uses with the sider communtiy.	
<b>Deliverability / developability</b>	
There are structures on site to clear and some constraints to mitigate which masterplanning could overcome. Further scope and feasibility of the proposed mix of uses will be required as well as their layout within the site. It is unknown at this stage how the site will be delivered, as such the site is categorised as developable.	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is mostly greenfield, half of the site classified as grade 2 agricultural land</li> <li>• Not constrained by flood risk</li> <li>• Is not constrained by heritage or nature conservation designations</li> <li>• Is located within the landscape and visual setting of the Great Fen</li> <li>• Is accessible to some natural greenspace</li> <li>• Good accessibility to primary education</li> <li>• Limited public transport options and accessibility to employment opportunities and local services and facilities</li> <li>• Could provide a mixed use scheme enhancing the retail and heath uses within the village and therefore making it more sustainable</li> <li>• Located on the eastern side of the village largely surrounded by large residential curtilages so the potential impact on the landscape is minimised</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The site is potentially appropriate for built development, however careful masterplanning is still required to mitigate this further and to ensure the layout of the potential uses can be integrated and well designed</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 3ha</p> <p>The site promoter is promoting that 0.16ha of the site be used for natural, green or open space. This leaves a potential 2.84ha of the site for other uses.</p> <p>80% net developable area to allow sufficient landscaping.</p> <p>2.84 ha x standard proportion of 80% = <b>2.27 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Commercial - retail</p> <p>Infrastructure - health uses</p> <p>0.3ha of the site for non-residential uses</p> <p>This leaves 1.97 ha of the site for residential development</p> <p>Very low density of 25 dph anticipated due to the village location.</p> <p>Capacity = 1.97 ha x 25 dph = <b>50 homes</b></p>	<p>Available post 2028 subject to allocation status</p> <p>Build out over 3 years</p>

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-244
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 with no recorded risk from surface water flooding. The site is wholly classified as grade 3 agricultural land. The site is broadly level, its northern edge along Station Road has a continuous hedgerow running along it, its southern edge is completely open as the site forms part of a larger agricultural field. As such, development could be quite prominent within the landscape particularly when viewed from the south. To the north the site is adjacent to residential development, its eastern and western edges are also adjacent to a cluster of residential development. To the south is the open countryside.</p>	~
--	---

<p>There is no known contamination on site and no oil or gas pipelines running through the site. There are overhead power lines running through the site. Its proximity to the East Coast Mainline railway to the east could give to increased levels of air, light and noise pollution which will require mitigation. There are no nature conservation designations on site, however the site is located within the landscape and visual setting of the Great Fen. There are no heritage designations on site, however the site's far western edge is approximately 40m from the grade II listed 2 Church Street so development on this part of the site may impact the setting of this heritage asset particularly if existing vegetation is removed. The site can be accessed from Station Road, there is a lay-by along its frontage on Station Road.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter seeks to secure an allocation status for the site and then sell to a third party for obtaining planning permission and development. The site promoter suggests the land will be available between 2024 and 2028 and could complete within 2 to 3 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that electricity supply is available within the site, mains water supply and the public highway are accessible from the site boundary while gas supply and digital and telecommunications infrastructure are unknown. The site can be accessed from Station Road. The site is broadly level meaning there are no major topographical challenges to development. There are however constraints in terms of landscape impact and potential impact on a heritage asset. Other key issues may arise from the site's proximity to the East Coast Mainline Railway and its location within the landscape and setting of the Great Fen. Development may adversely impact on the aims and objectives of the Great Fen. Also there are overhead power lines that run through the site. The site promoter states that any masterplan or site layout will need to design the overhead power lines in, either as a constraint or they could be relocated around the boundary as necessary.</p> <p>The site promoter seeks to deliver a mixed use development providing residential development alongside modest retail development. No masterplan has been provided to date so the feasibility of these mix of uses and their layout will need to be further assessed.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no structures on site to clear. There are some constraints to mitigate including landscape and heritage impacts. Further scope and feasibility of the proposed mix of uses will be required as well as their layout within the site. The site promoter seeks to secure an allocation status for the site, therefore the site is categorised as being developable.

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is greenfield, half of the site classified as grade 3 agricultural land
- Not constrained by flood risk
- Is not constrained by nature conservation designations
- Is located within the landscape and visual setting of the Great Fen
- Potential impact on a designated heritage asset
- Is accessible to some natural greenspace
- Good accessibility to primary education
- Limited public transport options and accessibility to employment opportunities and local services and facilities
- Could provide a mixed use scheme enhancing the retail uses within the village
- Located on the southern edge of the village, adjacent to resident development on three sides but the southern edge of the site is completely open as it forms part of a larger agricultural field which in combination with the very flat landscape could result in significant adverse landscape impact. Also development along this side of Station Road would result in a significant change to the street scene and rural character of the settlement.

In combination the outcomes of the LAA and SA indicate that the site:

- The site is not considered to be appropriate for development due to the potential adverse impact on the landscape and village character of Holme

Page 296 of 3488

**HDC's Delivery Calculations**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
	<ul style="list-style-type: none"> <li>Realignment of A1 and new junction (11.37 ha), parking areas within the town centre</li> <li>Renewable energy park, principally solar, part standalone at circa 20 ha</li> <li>Minimum of 41.5 ha of formal open space plus 51.5 ha of additional informal open space</li> <li>92 ha of formal and informal open space to achieve 15% biodiversity net gain</li> <li>0.4 ha required for specific attenuation features plus additional land within 92 ha of open space</li> </ul>	
	After the site promoter submitted the site, they revised the site area and reduced the capacities for some of these uses. In summary, these changes are: <ul style="list-style-type: none"> <li>The total site area reduced from 350.90 to 260.9 ha</li> <li>Total number of homes reduced from c.5,000 to c.4,500 homes. This is based on an average net residential density of 38.79dph, up from 34dph</li> <li>The Eco Dynamo employment area has been reduced from 25 ha to 20 ha resulting in a reduction from c.110,600sqm to between c.87,000-100,000sqm employment floorspace,</li> </ul>	

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
	depending on the specific composition of uses <ul style="list-style-type: none"> <li>Proposed school provision is being reviewed but is not likely to be significantly affected</li> </ul>	

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

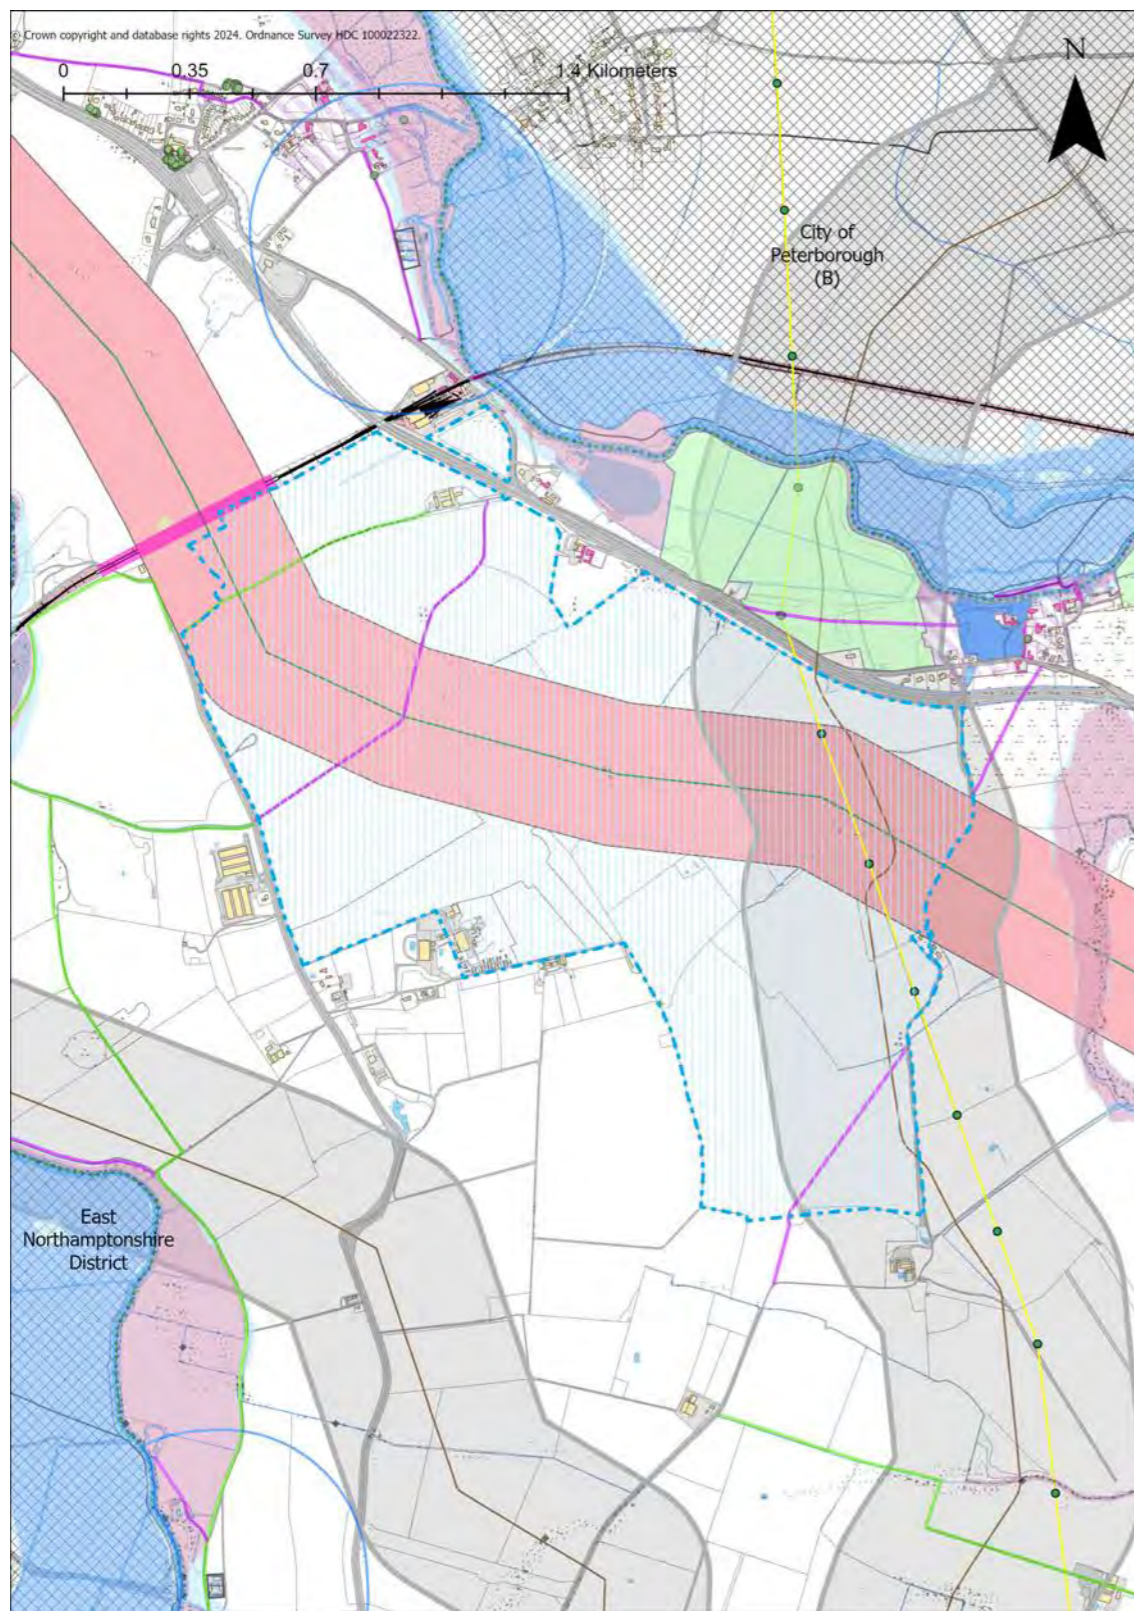

### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:348
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA (2017) (site reference 201 - Sibson Aerodrome, Sibson) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> <li>The site was submitted as an Expression of Interest to the Garden Villages programme in July 2016.</li> </ul>
Land type	Partly greenfield land/ partly previously developed land
Current use of the site	Agricultural land and part of the site is Sibson Aerodrome
Supporting information	None submitted

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	1.75% of the site is within flood zone 3b which equates to about 6ha of the site. 98% of the site is within flood zone 1.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

### Assessment of Site Potential

#### Context, constraints and potential suitability

The site is located within the open countryside between the A1 and Elton Road. The site consists of a combination of largely agricultural arable fields and land at Sibson Aerodrome. The facility of the Sibson Aerodrome has local significance having been used in the past for RAF training and is currently used for leisure and training flights. Most of the site abuts open countryside, however along part of the western site boundary is residential development. Along part of the western boundary are the buildings associated with Sibson Aerodrome. Part of the site, to the east of the A1, is adjacent to the Nene Valley Railway.

The site vast majority (98%) of the site is located within flood zone 1, with the remaining elements being in flood zones 2, 3a and 3b. This covers about 6.5ha of the site. There is some minimal surface water flood risk across the site. It is primarily grade 3 agricultural land with some of the northern part classified as grade 2 agricultural land. Land levels vary across the site with the highest part of the site being where the Aerodrome is located. This part of the site is some 30m higher than the northern edge of the site adjacent to the A1. These varying land levels means development would be visible from some distance from a number of different directions and very significantly alter the landscape character of the area. The site is generally very open with little vegetation, and is located on high ground. There are several landscape features including watercourses, woodland copses and hedgerows which could be retained and incorporated within the masterplanning of the site. The north eastern part slopes east towards the A1(M), and the western part slopes west towards the Nene Valley. Development at the site would be highly visible from Elton Road, and from longer distance views. There are public rights of way running along the sites boundaries and also within the site meaning that development would be visible from public vantage points.

There is no known contamination on the site, however this may require further investigation considering art of the site's use as an aerodrome. There are no gas pipelines running through the site, however an oil pipeline and its buffer zone runs through the centre of the site. Along its eastern edge are overhead power lines. A proportion of the north eastern boundary is adjacent to the A1, and so could be impacted by noise pollution. In addition, development would create additional light pollution in an area that is currently open countryside. There are no nature conservation designations on site but it is around 100m from Sibson Flood Meadows and Water Newton Flood Meadows County Wildlife Sites, although the A1(M) lies in between. There are no heritage designations on the site, however, Wansford Railway Tunnel immediately north of the site is grade II listed. Sibson House Hotel and its associated Barns situated to the east of the site are also grade II listed. Other heritage assets that could be impacted by proposals include Sibson Manor House, Sibson Manor Cottage and The Granary south of Sibson Manor House but due to the presence of the A1 between the site and these, development is likely to have a negligible impact.

<p>The site promoter seeks to deliver a realigned section of the A1 access with connections from it providing vehicular access into the site as well as active travel connections across and into the site.</p> <p>The site is partly greenfield and partly previously developed, so its development will contribute to the reuse of some previously developed land provide some regeneration. The northern edge of the site is situated in an extensive mineral safeguarding area for limestone with some of its eastern edge within an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. The site is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership with all landowners supporting the site's development. There is a developer company involved with the site and the site has been optioned. The site comprises two land ownerships for which signed option agreements are in place covering the full land extent. There are no known legal restrictions impacting the site. It is intended to deliver the site via master developer. The site promoter seeks an allocation status for the site. The site promoter suggests the land will be available between 2024 and 2028 and could build out over 15 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are are within the site and also accessible form the site boundary. There are constraints to overcome but considering the scale of proposals and the opportunity for effective masterplanning across the site, it is considered that some of these can be overcome. Key constraints relate to the presence of the oil pipeline and overhead power lines which will require input form utility providers to assess how they can be overcome. Additionally, the feasibility of realigning part of the A1 is another key constraint in the achievability of this site. The site promoter seeks to deliver a realigned section of the A1 between Wansford Station overbridge and Elton Road (Water Newton). It is anticipated that the realignment of the A1 and the energy park will both be delivered at the beginning of the development alongside the first parcels of residential and employment development. This is a considerable infrastructure task and will likely impact the viability of proposals. Engagement with Cambridgeshire County Council and National Highways will be required to ascertain if this is feasible.</p> <p>A letter from the Department for Transport dated 17 September 2019 identified the key role that aerodromes and airfields play in both business and leisure aviation and are part of the General Aviation (GA) industry which covers all non-scheduled civil aviation operations. The letter states that GA is a high priority area for the Department and the Government wants to encourage GA and the benefits it brings to the economy, as well as ensuring appropriate and proportionate protection for aerodromes forming our strategic network across the UK.</p>	

<p><b>Deliverability / developability</b></p> <p>The site has constraints to overcome which the site promoter have scoped out and factored into the masterplan for the site. Some technical studies have been undertaken with others underway.</p> <p>It is intended to deliver the site via master developer and seeks and an allocation status for the site. If an allocation status is acquired, the site promoter intends to start on site two years later. They state that the development will have multiple outlets to operate at the same time with three outlets being in operation concurrently but Phoenix Sustainable Investments will act as the lead developer. Residential development parcels of between 65 and 400 homes are expected to be brought forwards on a phased basis. It is likely that parcels will be sold to other developers to deliver in accordance with a strict set of design principles. The site promoter considers that this could provide an indicative annual delivery of up to 300 homes, and a total build period of around 15 years from first sale. They state that discussions have progressed with a social housing provider partner regarding the delivery of the affordable housing, which they consider will accelerate the overall pace of delivery. They state that the realignment of the A1 and the energy park will constitute first phase delivery infrastructure alongside the first residential and employment parcels and a section of the town centre. Schools, shops, community facilities and open space will be delivered in parallel with the homes and workplaces as part of a coordinated phasing strategy.</p>	
--	--

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is largely greenfield land consisting of grade 3 and grade 2 agricultural land, also includes Sibson Aerodrome</li> <li>• Largely within flood zone 1 apart from a very small amount of the site being within flood zones 2, 3a and 3b</li> <li>• Not heavily constrained by designated nature conservation designations, Sibson Flood Meadows and Water Newton Flood Meadows County Wildlife Sites is about 100m from the site but the A1(M) separates them</li> <li>• Part of the site falls within the Nene Valley Green Infrastructure Priority Area and the scale of the site could contribute towards strategically to enhanced green infrastructure and habitat connectivity</li> <li>• Is adjacent to several designated heritage assets</li> </ul>
---

- Currently has very limited accessibility to employment opportunities, primary education and local services and facilities within the village itself relying on nearby settlements for these but the scale of the proposal will provide new education facilities, employment opportunities, sports facilities and a local 'town centre'
  - No frequent bus service currently form the site to nearby settlements and very limited connectivity via sustainable modes of transport to a railway station - the scale of the development should seek to incorporate active and sustainable modes of transport and connectivity to surrounding areas
  - Of a scale to provide a mix of housing types, sizes and tenures
  - Provide a mix of housing in the north of Huntingdonshire and assist in balancing development away from the established towns within the central and southern parts of the district
  - The scale of the proposed development will fundamentally alter the landscape of the Northern Wolds providing a new settlement in an area characteristic by undulating landscape and very small historic settlements
  - The scale and nature of the proposal means there are opportunities for detailed masterplanning and placemaking which can frame a new settlement and provide it with a sense of identity
- In combination the outcomes of the LAA and SA indicate that the site:
- Is potentially suitable as a freestanding new settlement providing new community facilities, retail facilities, education facilities, green infrastructure, employment opportunities, and footpath, cycle path and public transport connectivity, therefore creating a largely self sufficient and sustainable community.
  - Access and impact on the local and strategic highways network will need to be further scoped and assessed, engagement with the County Council will be required - the potential new junction from the A1 is likely to be very costly
  - Detailed masterplanning will be required to mitigate landscape impacts particularly the varying land levels within the site as well as impacts on heritage assets and to ensure successful integration with its immediate and wider context
  - An oil pipeline and its buffer zone runs through the centre of the site and overhead power lines on the eastern side of the site - these may impact the layout of the development and the location of uses across the site
  - Consultation will also be required with utilities and other infrastructure providers to ensure the development has adequate infrastructure to serve it

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 260.9 ha.</p> <p>Given the scale of the site the starting point for calculating the net developable area is 50% of the land area which gives 130.45 ha.</p> <p>Further specific exclusions are:</p> <p>20ha for a solar park, 11.4ha for a realigned A1 and new junction and 10ha for a secondary school and up to three primary schools.</p> <p>The net developable area for built development is (260.9 ha x 50%) = 130.45 - 41.4 ha = <b>89.05 ha</b></p>	<p><b>130.45 ha for open space, sports facilities, biodiversity and other planting and sustainable drainage.</b></p> <p><b>11.4 ha for the A1 realignment</b></p> <p><b>10ha for a secondary school and up to three primary schools</b></p> <p><b>The net developable area for other built development is 89.05 ha.</b></p> <p><b>4.5 ha for local centre</b> (this includes retail/ leisure/ community/ health uses)</p> <p><b>20 ha for employment uses</b> (uplifted from standard proportion to reflect the site promoter's proposals)</p> <p><b>64.55ha residential development area</b> for a variety of market and affordable homes.</p> <p>Mixed densities to reflect a range of densities reflective of large developments:</p> <ul style="list-style-type: none"> <li>• 3% of land at very high density 145dph. 1.9ha x 145dph = 276 homes</li> <li>• 7% of land at high density 85dph. 4.5ha x 85dph = 383 homes</li> </ul>	<p>Available post 2028 subject to allocation</p> <p>Build out over 15 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	<ul style="list-style-type: none"> <li>• 25% of land at moderate density 50dph. 16.2ha x 50dph = 810 homes</li> <li>• 55% of land at low density 35dph. 35.5ha x 35dph = 1,243 homes</li> <li>• 10% of land at very low density 25dph. 6.5ha x 25dph = 163 homes</li> </ul> <p><b>2,875 total homes</b></p>	

Updates after the Initial Assessment

### 13 Stilton

13.1 A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Stilton 1: Goldthorns, Stilton
- Stilton 2: Land to the rear of The Stilton Cheese Inn, Stilton
- Stilton 3: Land off High Street, Stilton
- Stilton 4: Land off Caldecote Road, Stilton
- Stilton 5: Land rear of 16 to 58 North Street, Stilton
- Stilton 6: Land to the South and West of 61 Church Street, Stilton

13.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Site reference</b>	Stilton 1
<b>Site name</b>	Goldthorns, Stilton

Site address	Parish(es)	Site area (ha)
Goldthorns, Caldecote Road, Stilton PE7 3RH	Stilton	0.48

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing or self and custom build housing	1 - 4 homes/ plots	Available 2024 - 2028 Build out over 2 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:51
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Grassland/ paddock land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly located within flood zone 1 with over half of the site being at risk from surface water flooding with the most risk being along its frontage along Caldecote Road. The site is wholly classified as urban land. The site is broadly level and is lined with vegetation along three of its sides, the most open edge is its western edge where it adjoins Goldthorns. Vegetation is quite substantial and established along its frontage obscuring the site from view. It is bounded by residential properties on its eastern, western and southern boundaries and there is further residential development opposite along Caldecote Road.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run along the site's frontage. There are no nature conservation or heritage designations on site. The site can be accessed from Caldecote Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. The site promoter states there is a legal restriction impacting the site, this being that 'any more than a single dwelling will require the agreement of a neighbour'. It is intended to secure a planning permission on the site promoter before selling to a third party for development. The site promoter suggests the land will be available between 2024 and 2028 and take about 2 years to build out.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that the public highway and digital and telecommunications infrastructure are accessible from the site boundary with gas supply, electricity supply and mains water supply being unknown. There are limited physical constraints to the site apart from surface water flood risk along the northern half of the site, it would have to be established whether sustainable drainage can overcome this and that safe access and exit into and out of the site can be achieved. There are no major topographical challenges to overcome. The likely removal or part removal of the established vegetation along Caldecote Road may impact the character of the area and the street scene.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear and has few constraints, the most notable being the risk from surface water flooding and the presence of telegraph poles along its frontage along Caldecote Road. This and the likely removal of vegetation along its frontage could be overcome through masterplanning and the design process. It doesn't appear that that</p>	~

an allocation status is sought for the site, the site could deliver a minor scale infill development on the edge of Stilton. There is no planning application yet on site. This could be as a traditional market scheme or as self and custom build plots. Delivery may take longer if self and custom build plots are pursued over market housing, as there is uncertainty on the type of housing product to be delivered, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land consisting of land classified as urban land
- Within flood zone 1 with some surface water flood risk towards Caldecote Road
- In walking distance to services, shops and primary education within Stilton
- Remote from employment concentrations but has good accessibility to the bus network linking the village to Peterborough and Huntingdon
- Not accessible to natural green space
- Located on the western edge of the built form of Stilton village, providing an infill opportunity that would be of a scale that would retain the character of the area
- Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for development of a modest scale that reflects the surrounding residential form.
- Development will need to incorporate appropriate sustainable drainage.
- Successful development will require consultation with the neighbouring property who also has a legal interest on the site, this may result in a slightly amended red line area for the site

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Gross site area 0.48ha	Residential - market and/or affordable houses	Available post 2024-2028

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
60% net developable area to allow sufficient landscaping and to take into account the irregular shape of the site.  0.48 ha x standard proportion of 60% = <b>0.288 ha</b>	Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 0.288 ha x 25 dph = <b>7 homes</b>	Build out over 2 years

Updates after the Initial Assessment

**Stilton 2: Land to the rear of The Stilton Cheese Inn, Stilton**

<b>Site reference</b>	Stilton 2
<b>Site name</b>	Land to the rear of The Stilton Cheese, Inn, Stilton

Site address	Parish(es)	Site area (ha)
Land to the rear of The Stilton Cheese Inn, 24 North Street, Stilton, PE7 3RP	Stilton	0.44

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	5 - 7 homes	Available 2023 Build out over 1 year

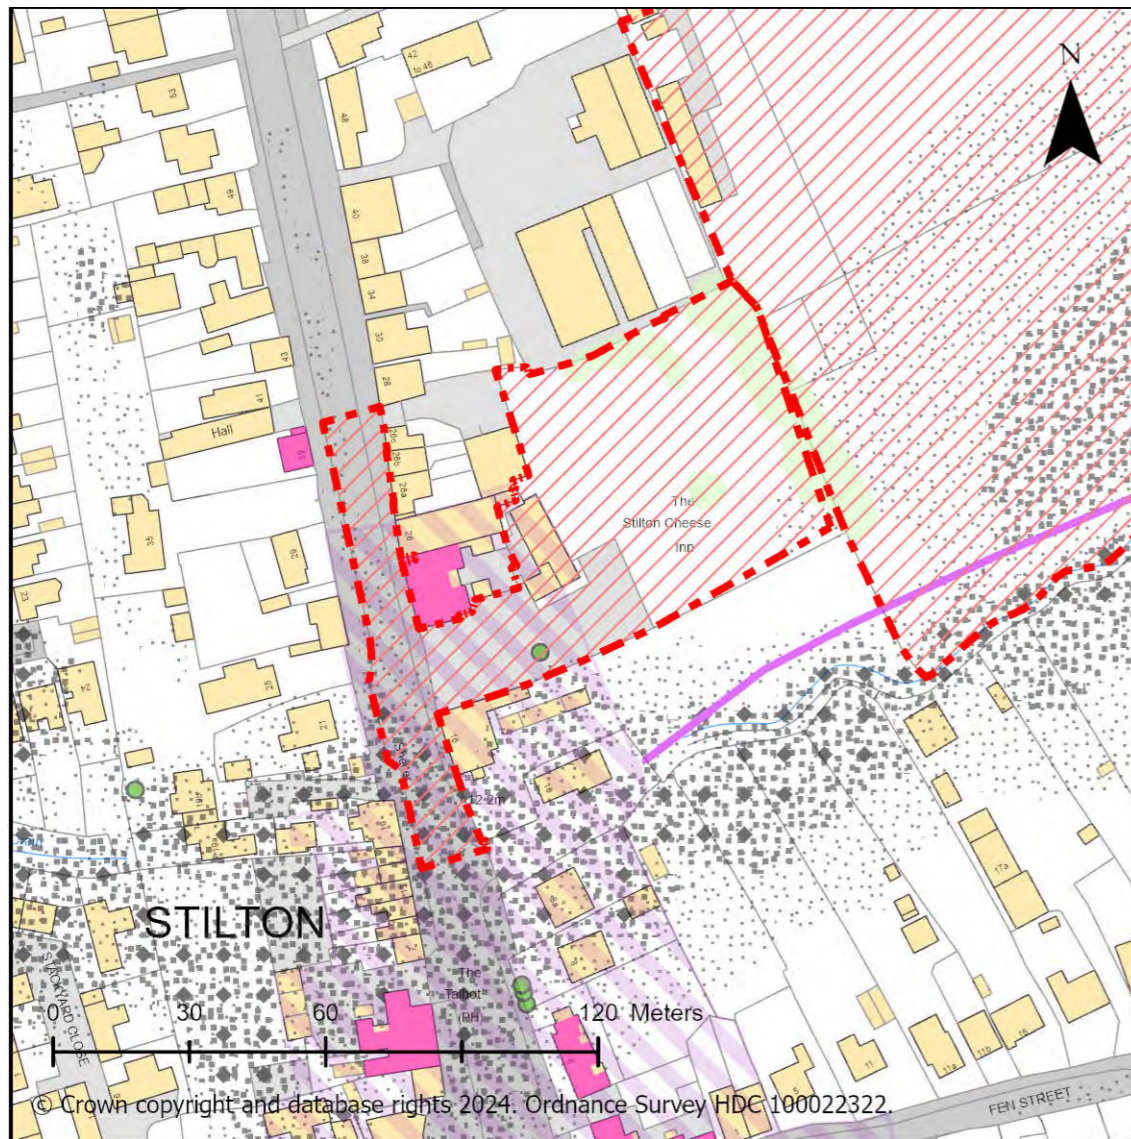

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:165
Relevant planning history	<p>Application number: 21/02874/FUL</p> <p>Proposed development: Redevelopment of land to the rear of The Stilton Cheese Inn for ten 3-bedroom houses with associated parking, change of use of ancillary accommodation to the rear of The Stilton Cheese Inn to office/community use, reconfiguration of car parking serving the pub and office/community use, alteration of access from North Street, together with landscaping and associated works.</p> <p>Outcome: Withdrawn in June 2023.</p> <p>Application numbers: 24/00238/FUL and 24/00239/LBC</p>

	<p>Proposed Development: Redevelopment of land to the rear of The Stilton Cheese Inn to form 7no. 3 and 4 bedroom houses with associated parking. Change of use of the existing Public House to commercial use as a dentist at ground floor and private residential accommodation on the upper floors creating 3no. 1 and 2 bedroom apartments, with associated parking. Alteration of access from North Street, together with landscaping and associated works.</p> <p>Outcome: Revised application received in February 2024 and pending consideration</p>
Land type	Partly previously developed/ partly greenfield land
Current use of the site	Outbuildings formerly used as visitor accommodation, parking and open space formerly associated with public house
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with a small amount of surface water flood risk in the south eastern corner of the site. The site is wholly classified as urban land. The site is located to the rear of the former Stilton Cheese Inn located along North Street. The site is broadly level and consists of some hard standing, there are several large trees located along the far eastern and its northern boundaries some of which are protected by a Tree Preservation Order. There is also a TPO protected tree on its southern edge. The removal of any of these trees adversely</p>	~
--	---

<p>impact the conservation area and the character of the streetscene. The site is bounded by residential development to the south, north and west with grazing land to the east. Beyond this grazing land is the A1(M).</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site apart from some TPO protected trees. The western half of the site is located within the conservation area and it adjoins the grade II listed 24 North Street (Stilton Cheese Inn). There is an existing access into the site from North Street. The site includes the curtilage of The Stilton Cheese Inn - a grade II listed building from the late 17th early 18th century. Within the site sits associated outbuildings associated with the former coaching inn use. Development on this site could impact the setting of the listed building. However, due to the significant hardstanding fronting North Street and the current state and setting of the listed building and associated buildings, there is opportunity to provide benefit by enhancing the setting of these buildings.</p> <p>The site is partially previously developed so its development will contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions impacting the site. The site promoter details that the development will be delivered directly by the landowner and states that the land is available now.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There several constraints to overcome including the impact on heritage assets. A full planning application has been submitted to the Council for this land which also includes the former Inn building. The outcome of this will assess whether these constraints can be overcome and mitigated. There is an existing access into the site from North Street. It is unclear why the road has been included within the boundary plan, this would require further information.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are structures and hardstanding on site to clear and/or repurpose which may impact the delivery of the site. Additionally, the various constraints on site will require masterplanning and a well thought through design. A full planning application has</p>	+

been submitted following the withdrawal of previous application on the site. An allocation status on the site is not sought and it is intended to deliver the site directly by the landowner. Considering the planning status on site, the site is categorised as deliverable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is partly previously developed land consisting of land used in association with the former Stilton Cheese Inn
- Within flood zone 1 with some surface water flood risk
- In walking distance to services, shops and primary education within Stilton
- Remote from employment concentrations but has good accessibility to the bus network linking the village to Peterborough and Huntingdon
- Not accessible to natural green space
- Located centrally within the built form of Stilton village, providing an infill opportunity that would be of a scale that would retain the character of the area
- Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha
- There is potential for harm to designated heritage assets which would require consideration and mitigation, these assets being the conservation area and the grade II listed 24 North Street (Stilton Cheese Inn).
- There is opportunity to provide benefit by enhancing the setting of these buildings. Development would be required to mitigate the impact on the setting of the existing listed building, this would include the renovation of the associated outbuildings where necessary.

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for development of a modest scale that reflects the surrounding residential form and provide a gentle densification within the existing built form
- Impact on heritage assets and their setting will need to be carefully considered and mitigated through masterplanning, this would include the renovation of the associated outbuildings where necessary.
- Landscaping and noise mitigation as well as the retention of the existing TPO protected tree on site will also be required

Page 313 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 0.44ha  75% net developable area to allow sufficient landscaping and appropriate layout to minimise and mitigate impacts on designated heritage assets.  0.44 ha x standard proportion of 75% = <b>0.33 ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 0.33 ha x 25 dph = <b>8homes</b>	Available post 2024-2028  Build out over 1 years

**Updates after the Initial Assessment**

--

**Stilton 3: Land off High Street, Stilton**

<b>Site reference</b>	Stilton 3
<b>Site name</b>	Land off High Street, Stilton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land off High Street, Stilton	Stilton	2.6

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	55 homes	Available 2024 - 2028 Build out over 2 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:131
Relevant planning history	<ul style="list-style-type: none"> <li>20/00796/FUL for the change of use of land to dog training exercise area, erection of welfare/reception building and creation of car parking area was granted permission in May 2021.</li> <li>The site was assessed in the HELAA (2017) (site reference 017 - South of 53 High Street, Stilton) for residential development but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Dog training area
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located on the southern edge of Stilton and is currently in use as a dog training area known as the 'Stilton Dog Field'.</p> <p>The site is wholly located within flood zone 1, there is some minimal risk from surface water flooding in the site's north western corner along High Street. Approximately two thirds of the land is classed as grade 3 agricultural land, the remaining third of the land immediately south of 53 High Street, is classed as urban land. The site is broadly level but does gently rise towards its southern edge. The site features substantial hedging and a belt of mature trees along the eastern boundary where it is adjacent to the A1(M). There is hedging on</p>	+
--	---

<p>its remaining boundaries. As such, the site has limited visibility largely screened from view. To the north is residential development, immediately east of the site is the A1(M) whilst to the opposite side of the High Street is a Golf Course.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are telegraph poles towards the north western corner of the site. The site is adjacent to the A1(M) so there is an increased likelihood of air, noise and light pollution. There are no nature conservation or heritage designations on site. The site can be accessed from High Street where there is an existing access into the site.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. However, the site is currently in use as a dog training area. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m zone of a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states it is intended to acquire planning permission and then sell the site to a third party for development. The site promoter suggests the land will be available between 2024 and 2028. The site is currently in use as an established dog training area. The site promoter has made no reference to this existing land use in their submission.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is well contained by existing vegetation which also provides a buffer from the A1(M). Noise mitigation will still be a key requirement in a future development of the site. There are few other constraints to the site and there is an existing access form High Street into the site. Also there is uncertainty over when the existing business may relocate or leave the site.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no existing structures to clear. There are no major topographical challenges to overcome and there are already extensive established planting along its boundaries, particularly its eastern edge adjacent to the A1(M), to mitigate noise, air and light pollution. Even so masterplanning and design mitigation will still be required to ensure a high quality living environment. There is an existing business using the site and no planning application has been made for residential development on the site. The site is intended to be available between 2024 and 2028 and it doesn't appear that an allocation status is sought. Considering these factors, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of land classified mostly as grade 3 agricultural land</li> <li>• Within flood zone 1 with some surface water flood risk</li> <li>• In walking distance to services, shops and primary education within Stilton</li> <li>• Remote from employment concentrations but has good accessibility to the bus network linking the village to Peterborough and Huntingdon</li> <li>• Accessible to natural green space</li> <li>• Located on the southern edge of the built form of Stilton village, providing an opportunity for a modest village extension of a scale that would retain the character of the area</li> <li>• Is adjacent to the A1(M) giving rise to additional risk from higher levels of pollution</li> <li>• The site is relatively well contained in the landscape due to the A1(M)</li> <li>• There are mature trees along the site's frontage along High Street, some may need to be removed to accommodate development</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development of a modest scale that reflects the surrounding residential form but this would require noise mitigation from the nearby A1(M)</li> <li>• Potential relocation of the existing dog training business may be required</li> </ul>
---

Page 316 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 2.6ha</p> <p>70% net developable area to allow sufficient landscaping to provide a soft village edge and mitigation from the A1(M).</p> <p>2.6 ha x standard proportion of 70% = <b>1.82 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 1.82 ha x 25 dph = <b>46 homes</b></p>	<p>Available post 2024-2028</p> <p>Build out over 2 years</p>

**Stilton 4: Land off Caldecote Road, Stilton**

<b>Site reference</b>	Stilton 4
<b>Site name</b>	Land off Caldecote Road, Stilton

Site address	Parish(es)	Site area (ha)
Land off Caldecote Road, Stilton	Stilton	7.80ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	150 - 190 homes	Available 2023 Build out over 4 - 5 years

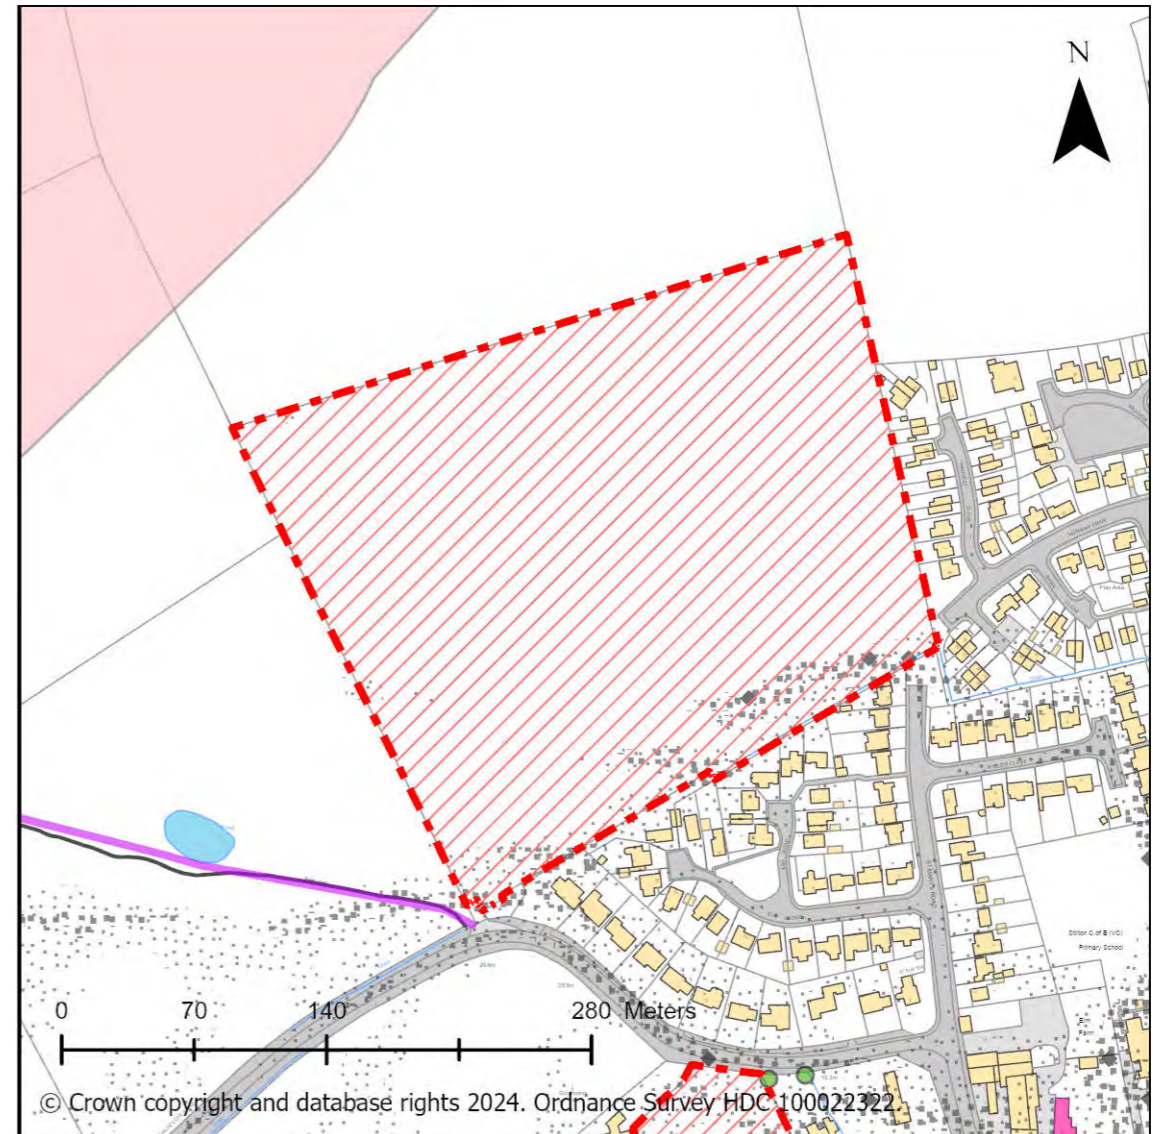

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:142
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA (2017) (site reference 110 -North of Elm Close, West of Harvest Close, Stilton) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1, there is risk form surface water flooding along its southern edge where it adjoins residential development at Ash Road. Most of the land is classed as grade 3 agricultural land with the south-east corner of the site abutting dwellings at Harvest Close is classed as 'urban' land. The site is situated to the north of Elm Close on the north-western edge of Stilton. To the south and along part of the eastern site boundary is residential development. To the north and west of the site is open countryside. The site adjoins open countryside, although it is relatively well contained in the landscape: the land slopes south east towards Stilton village. Development at the north western edge of this site would be visible from Folksworth and also to the north east. The site currently includes mature hedgerows and trees which provide some screening.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. The site promoter states it is intended to secure vehicular and pedestrian access from Norman Drive/St Mary's Road. Engagement with the County Council will be required to ascertain if these are an appropriate point of access for the proposed quantum of development. There is also a small parcel of land between the site and the highway which the site promoter identifies is a ransom strip which may impede development.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. Although the site promoter identifies that there is a ransom strip impacting the site. The site promoter details that the site will be delivered directly by a house builder. The site promoter suggests the land is available now.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. They state that it is intended to secure vehicular and pedestrian access from Norman Drive/St Mary's Road. It is identified in the call for sites submission that there is a ransom strip impacting the site which will require an agreement from the landowner of this land in order to secure access.</p>	~

Page 318 of 3488

<p>There are few physical constraints to development, there is some surface water flood risk to overcome and landscaping will required. The promoter states that it is intended to deliver residential development in the southern and eastern parts of the site with structural landscaping, open space and biodiversity net gain to the north and west to mitigate these constraints.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures to clear and there are minimal physical constraints to development which could not be mitigated through sensitive design and masterplanning. There is however a ransom strip impacting the site which could impact the achievability of its development. The promoter states that an agreement will be required with the landowner of the ransom strip to overcome this. Even though it is stated that the site is available now, until the issue with the ransom strip is resolved the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is greenfield land consisting of land classified mostly as grade 3 agricultural land</li> <li>● Within flood zone 1 with some surface water flood risk</li> <li>● In walking distance to services, shops and primary education within Stilton</li> <li>● Remote from employment concentrations but has good accessibility to the bus network linking the village to Peterborough and Huntingdon</li> <li>● Not accessible to natural green space</li> <li>● Located on the western edge of the built form of Stilton village, providing an opportunity for a modest village extension of a scale that would retain the character of the area</li> <li>● The site is relatively well contained in the landscape as the land slopes south east towards Stilton village</li> <li>● Development at the north western edge of this site would be visible from Folksworth and also to the north east. Therefore, retaining development within the south and east of the site would be preferable as the natural land form will assist in screening the site from significant landscape impact.</li> <li>● The site proposal is of a density similar to the surrounding residential area, but disproportionate in nature in comparison to the existing settlement.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is potentially appropriate for development of a modest scale that reflects the surrounding residential form. Reducing the developable area of the site will also shape the development so that the potential scale of development can more successfully integrate and reflect the character of the landscape and townscape.
- Successful development will require resolution to the ransom strip between the site and St Marys Road.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 7.80ha 30% net developable area to focus development towards the existing built form and reduce encroachment into the countryside. 7.80ha x 30% = <b>2.34 ha</b>	Net developable area of 2.34ha Residential - market and/or affordable houses Very low density of 25 dph anticipated due to the edge of village location. Capacity = 2.34ha x 25 dph = <b>59 homes</b>	Available post 2028 subject to successful allocation status and resolution of ransom strip Build out over 4-5 years

Page 319 of 3488

**Updates after the Initial Assessment**

**Stilton 5: Land rear of 16 to 58 North Street, Stilton**

<b>Site reference</b>	Stilton 5
<b>Site name</b>	Land rear of 16 to 58 North Street, Stilton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land rear of 16 to 58 North Street, Stilton	Stilton	2.98

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	70 homes	Available 2023  Build out over 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:186
Relevant planning history	<ul style="list-style-type: none"> <li>22/02275/FUL for erection of 70 dwellings including access, parking, amenity, open space, play space, SuDS scheme, landscaping and tree protection measures. Received in November 2022 and pending consideration.</li> </ul>
Land type	Predominately greenfield land
Current use of the site	Open grazing land with a tennis court within the site
Supporting information	<ul style="list-style-type: none"> <li>Arboricultural Impact Assessment (October 2022) (document reference: 11361_AIA.001 Rev A)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 but is constrained by surface water flood risk on over 50% of the site. It is wholly classified as urban land. The site is broadly level and consists of several fields separated by hedgerows. Its contain extensive vegetation and hedgerows along most of its boundaries, the most extensive being along its eastern edge where it is adjacent to the A1(M). The site is bounded by residential properties on its southern, western and most recently northern edges with the A1(M) forming a strong eastern edge. It is located to the rear of the North Street infilling the gap between the it and the A1(M). This is a phase 2 development of the site to the north which started to infill this gap. There is a public right of way along its southern edge.</p>	~
---	---

<p>There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to the A1(M) is likely to increase the risk form noise, air and light pollution. There are no nature conservation designations on site. On its western edge were the site adjoins the former Stilton Cheese Inn, there are a collection of trees that are protected under a blanket Tree Preservation Order. There are no heritage designations within the site. It is within 60m of a conservation area and listed buildings which built development and any removal of trees within the site could impact the setting of. Vehicular access is proposed from Houghton Way which runs through the recent development to the north of the site. An additional pedestrian/ cycle route is proposed via an existing access route between 58 and 60 North Street.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in multiple ownership with development supported by all owners. A housebuilder is involved with the site. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the housebuilder. The site promoter states that the land is available now and take 3 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There a several constraints to overcome including the level of surface water flood risk on site, the proximity to the A1(M), impact on trees and potentially the setting of heritage assets. This is second phase of development to the rear of North Street with phase 1 completing in 2024, as such it is proposed to provide an access route through to this site from the phase 1 development. A full planning application has been submitted whereby the details of how to overcome and mitigate these are being considered.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear on site but as highlighted there are several constraints to overcome. A full planning application for 70 homes has been submitted to the Council on behalf of Bellway Homes and includes technical studies including ecological appraisals, flood risk and drainage strategy, geo-environmental studies and lighting assessment as well as detailed layout plans. Considering that a full planning application is in progress and detailed design work to overcome constraints, the site is categorised as deliverable.</p>	+

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Updates after the Initial Assessment**

--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of land classified as urban</li> <li>• Within flood zone 1 with surface water flood risk on about 50% of the site</li> <li>• In walking distance to services, shops and primary education within Stilton</li> <li>• Remote from employment concentrations but has good accessibility to the bus network linking the village to Peterborough and Huntingdon</li> <li>• Not accessible to natural green space</li> <li>• Located on the eastern edge of Stilton between North Street and the A1(M)</li> <li>• Development would be a second phase of residential in depth development which would continue this pattern of development completely infilling the gap between the village and the A1(M)</li> <li>• Proposed pedestrian/ cycle route from North Street would aid permeability and accessibility to village services</li> <li>• Adjacent to the conservation area and the listed former Stilton Cheese Inn</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development of a modest scale that reflects the surrounding residential form and provide a gentle densification within the existing built form</li> <li>• Impact on heritage assets and their setting will need to be carefully considered and mitigated through masterplanning</li> <li>• Landscaping and noise mitigation as well as sustainable drainage will be required</li> </ul>
--

Page 322 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 2.98ha  75% net developable area to allow sufficient landscaping and appropriate layout to address surface water flood risk, provide noise mitigation and harm to designated heritage assets.  2.98 ha x standard proportion of 75% = <b>2.235 ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 2.235 ha x 25 dph = <b>56 homes</b>	Available post 2024-2028  Build out over 3 years

**Stilton 6: Land to the South and West of 61 Church Street, Stilton**

<b>Site reference</b>	Stilton 6	
<b>Site name</b>	Land to the South and West of 61 Church Street, Stilton	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land to the South and West of 61 Church Street, Stilton	Stilton	2.43

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	40 - 50 homes	Available 2024 - 2028 Buildout over 1 - 2 years

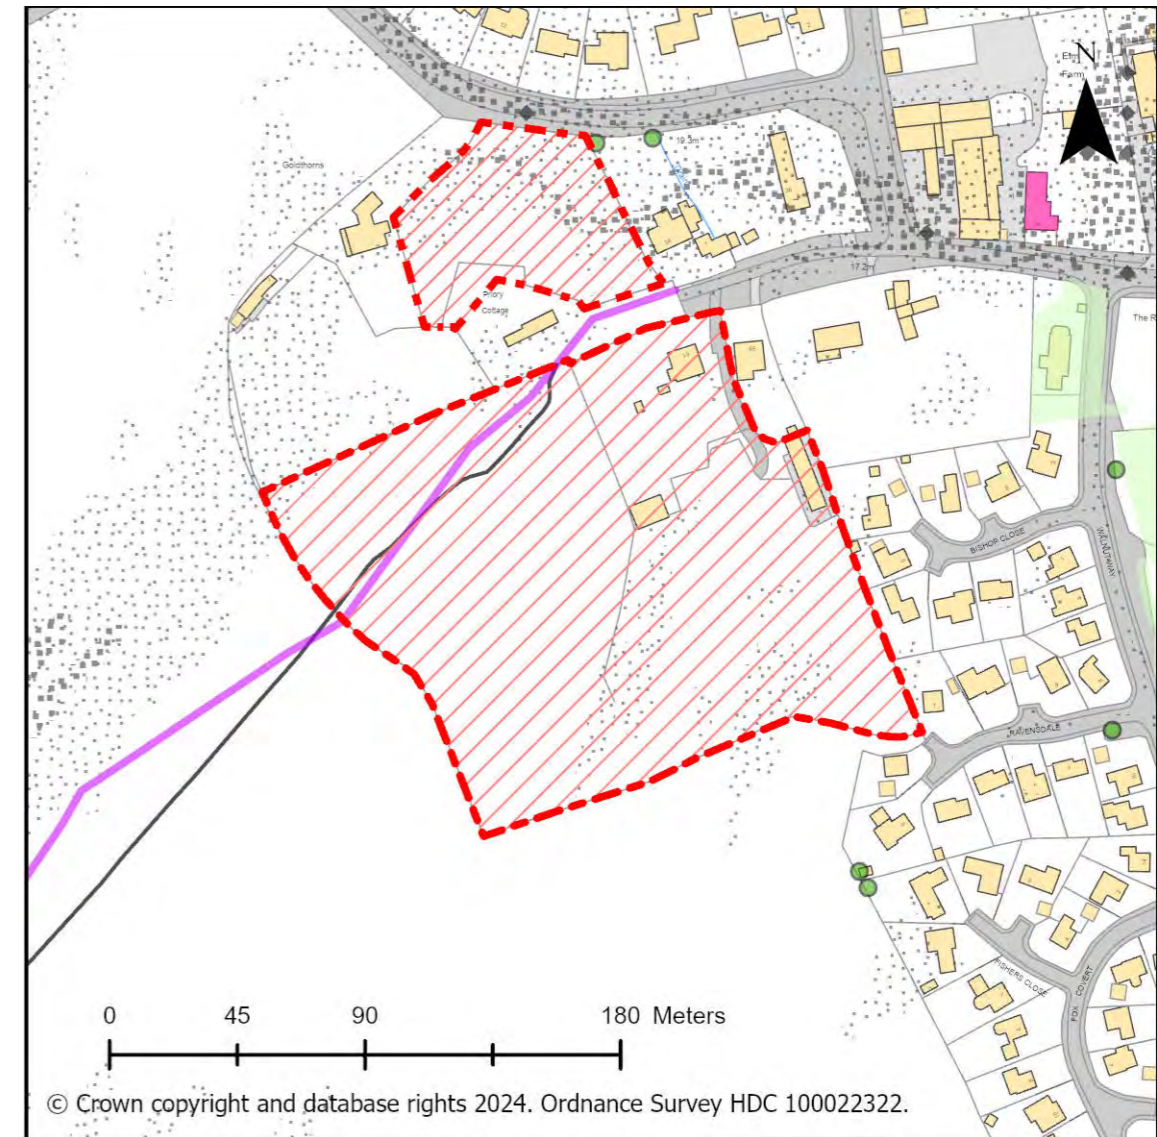

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-2412
Relevant planning history	None relevant
Land type	Partly greenfield land and partly previously developed land
Current use of the site	Partly agricultural land and partly residential
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is located within flood zone 1 but is constrained by surface water flood risk across a third of the site. Approximately a third of the site is classified as being grade 3 agricultural land with the remain two thirds being urban land. The site consists of a residential property (61 Church Street) which is a single storey property with the rest of the site forming a large curtilage to it. There are some established trees within the site but these are not protected. It is unclear from the submission if the property is to be retained within proposals or to be demolished and the site completely redeveloped. The site slopes from its western to eastern edge down by some 10m. The site's western and southern edges also have fairly thick vegetation running along them which screen the site from view and encloses it. The combination of this established screening and the land levels means that the site is not very visible in longer range views. There is a public right of way that runs through the north western corner of the site which connects from Church Street through the site to the open countryside to Denton. To the east and north of the site are residential properties and to the south and west is the open countryside.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site although there are some telegraph poles along the site's frontage on Church Street. There are no nature conservation or heritage designations within the site. There is an existing access to the property (61 Church Street) into the site from Church Street.</p> <p>The site is mostly greenfield but is partly previously developed as there is an existing residential property on site meaning that the development will minimally contribute to the reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it the intention of the landowner to acquire an allocation status for the site before selling the site to a third party for obtaining planning permission and development. The promoter suggests the land would be available between 2024 and 2028 and take between 1 and 2 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are within the site boundary apart from the public highway which is accessible from the site boundary. The site has some constraints to overcome including surface water flood risk along its northern edge and the incorporation of the public right of way within design proposals. There is an existing access from Church Street into the site.</p>	+
<p><b>Deliverability / developability</b></p>	~

There may be structures to clear on site if it is proposed to remove the dwelling on site. The site promoter states that it the intention of the landowner to acquire an allocation status for the site before selling the site to a third party for obtaining planning permission and development. The promoter suggests the land would be available between 2024 and 2028. Therefore, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of land mostly classified as urban land and a third classified as grade 3</li> <li>• Within flood zone 1 with some surface water flood risk</li> <li>• In walking distance to services, shops and primary education within Stilton</li> <li>• Remote from employment concentrations but has good accessibility to the bus network linking the village to Peterborough and Huntingdon</li> <li>• Not accessible to natural green space</li> <li>• Located on the south western edge of the built form of Stilton village, providing a rounding off opportunity that would be of a scale that could be integrated into the village without adversely impacting the character of the area</li> <li>• Development should be focused to wards the eastern half of the site following the land form of the site and minimise longer range landscape impact</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development of a modest scale that reflects the surrounding residential form.</li> <li>• Successfully development will require integration of the existing public right of way within a masterplan for the site</li> <li>• Confirmation whether the existing dwelling on the site is to retained and integrated with proposals or demolished</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 2.43ha (the existing dwelling makes up 0.25ha of this)</p> <p>60% net developable area to focus development towards the eastern half of the site so that appropriate landscaping can be incorporated into the scheme and reduce the amount of built development extending into the countryside.</p> <p>If the existing dwelling was to be demolished, the following may apply: 2.43 ha x standard proportion of 60% = <b>1.49 ha</b></p> <p>If the existing dwelling were to be retained, this would reduce the site area to the following: 2.43 - 0.25 = 2.18ha x standard proportion of 60% = <b>1.3 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>If the dwelling were to be demolished scenario: capacity = 1.49 ha x 25 dph = <b>36 homes</b></p> <p>If the existing dwelling was to be retained scenario: capacity = 1.3 ha x 25 dph = <b>33 homes</b></p>	<p>Available post 2028 subject to successful allocation status</p> <p>Build out over 1-2 years</p>

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: • Employment	35,000 sqm	Available 2024 - 2028 Build out over 5 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:18
Relevant planning history	<ul style="list-style-type: none"> <li>23/00973/OUT for the provision of an extension to Eagle Business Park to (Phase 3) to provide 35,000 sq. m. of commercial floor space (Use Classes E (g) (i-iii), B2 &amp; B8). This was submitted in May 2023 and is pending consideration.</li> <li>The site was assessed in the HELAA (2017) (site reference: South of Eagle Business Park) - this was a slightly smaller site area of 13ha. The site was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Supporting Statement (June 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	Approximately 50% of the site is classified as grade 1 agricultural land, the western and northern parts of the site are classified as grade 2 and 3.	Pass
Flood zone 3b	None although some of the site's eastern/southern edge is within flood zone 3a	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site adjoins the Eagle Business Park and seeks to provide a third phase to the employment area.</p> <p>The majority of the site is located within flood zone 1 but its southern/eastern edge falls within flood zones 2 and 3a. This flooding is associated with the Pig Water drain which adjoins the southern/eastern edge of the site. There is some surface water flood risk across the site. Approximately 50% of the site is classified as grade 1 agricultural land, the western and northern parts of the site are classified as grade 2 and 3. The site is broadly level and open with some trees along the site's southern/eastern edge where it adjoins the Pig Water</p>	~
--	---

<p>drain. The site is highly visible from the south and east due to flat fenland landscape but is less visible from the west due to railway and existing development. The site is currently visible from the north due to the gently falling landscape, and landscaping is not established at the intervening Eagle Park. Development would have a significant landscape impact. There is also a public right of way running through the site.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to the East Coast Mainline Railway is likely to increase the risk form noise, air and light pollution. There are no nature conservation designations on site, however the site is located within the landscape and visual setting of the Great Fen. There are no heritage designations on the site. Vehicular access is proposed from Falcon Way.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in single ownership and its development is supported by the landowner. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the landowner. The site promoter states that the site will be available between 2024 and 2028 and take 5 years to build out. There is currently a planning application for employment development.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site's location on the south eastern edge of Yaxley means that landscape impact is a significant development constraint. The site is highly visible in longer views from the south due to the generally open Fenland landscape; in particular, the land lies within the landscape and visual setting of the Great Fen, and development may adversely impact on the aims and objectives of the Great Fen. There is a public right of way running through the site which may require diversion. Access can be achieved by extending Falcon Way.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear. As highlighted there are considerable constraints to overcome including flood risk but most notably the impact on the landscape and the setting of the Great Fen. It is intended to deliver the site directly by the landowner. The site promoter states that the site will be available between 2024 and 2028 and a planning application has been submitted to the Council for employment development. As this is an outline application and not yet determined, the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is greenfield, approximately half of the site is classified as grade 1 agricultural land
- Increased risk of flooding along its eastern and southern edge
- Has the potential to provide a third phase to an established employment area located on the edge of one of Huntingdonshire's larger villages
- Subject to masterplanning, the site could be integrated into the existing employment area
- Has the potential to provide further employment opportunities to people within Yaxley and surrounding settlements
- Good accessibility to public transport options
- Proximity to East Coast Mainline railway may give rise to increased levels of pollution
- Is not constrained by designated heritage assets
- Is sensitively located within the landscape being within the landscape and visual setting of the Great Fen
- Would further extend the built form of Yaxley into the Fenland landscape
- More landscaping will be required along its eastern and southern edges to mitigate landscape, flooding and noise impacts which will reduce the net developable for the site

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for employment development to compliment the adjoining employment area
- The net developable area should be reduced to provide significant levels of landscaping and sustainable drainage to mitigate landscape impact on the Great Fen and address the risk of flooding
- Landscaping plan should also seek to incorporate noise mitigation measures as well as opportunities for biodiversity net gain
- The public right of way within the site will need to be incorporate into proposals or diverted

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 16ha.	Commercial - employment	Available 2024 - 2028 Build out over 5 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>As this is a large scale employment site in a sensitive location in terms of landscape and also the risk from flooding, the net developable area will be used to calculate a indicative capacity. To account for these constraints, a 50% net developable area will be applied.</p> <p>16 ha x standard proportion of 50% = 8 ha</p>	<p>The site promoter states that the site could provide a mix of offices, B2 (industrial) and B8 (warehousing) uses, the 0.4 plot ratio is most appropriate to use to calculate an indicative capacity:</p> <p>0.40 plot ratio x 8 ha = 3.2 ha of land for employment uses equating to <b>32,000 sqm.</b></p>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	The northern part of the site contains the Norman Cross Brickpits County Wildlife Site.	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is located immediately south of the A15, adjacent to Peterborough City Council and the Great Haddon development. To the west is the A1 and the B1043, and to the east is Yaxley. There is open countryside to the south. It is proposed to provide big-box warehousing units used for logistics and distribution development.

The site is wholly located within flood zone 1 with some surface water flood risk within the site, mostly within the former brickworks where there are two large water bodies. The site is wholly classified as grade 3 agricultural land which is currently farmed and approximately 21ha comprising a local wildlife site and fishing lakes. The site slopes from its northern

edge to southern edge by some 10-15m. The site is bounded by various hedgerows and tree lined boundaries some of which are quite mature, albeit around the perimeter of the site. Whilst in agricultural use now, the site historically comprised the Normans Cross brickworks with over 50% of the site being subject to mineral workings, extracting brick clay from the site which has subsequently, in part, been filled with inert fill. The nature of the site and its former workings makes it a visually contained site from the west and north due to the escarpment. The site is much more visible from the south and east with views across the Fenland landscape and also Yaxley. Considering these factors development could have a significant landscape with the greatest impact being experienced to the south and east.

There is no known contamination on site and no oil or gas pipelines running through the site. The site's proximity to the strategic road network mean that development is at greater risk form air, light and noise pollution, additionally the proposed development could increase levels of pollution. The northern part of the site contains the Norman Cross Brickpits County Wildlife Site. The site is also within the Landscape and Visual Setting of the Great Fen. The proposed masterplan for the site shows that the area of the site falling within the County Wildlife Site will be used for biodiversity net gain or will not be developed on at all. There are no heritage designations on site, however, it is adjacent to two grade 2 listed buildings along London Road (Norman House and the Former Governor's House. It is also adjacent to the scheduled monument of the site of the Norman Cross Depot for Prisoners of War. Further to the east the site is within the setting of the grade 1 listed St Peter's Church in Yaxley and the conservation area. The site can be accessed from the A15 (London Road). The submitted planning statement outlines the following access arrangements for the proposed development which will require engagement with Cambridgeshire County Council:

- A spine road between the B1403 and the A15. This is likely to feature a signal-controlled T-junction on the A15 and a fourth arm on the existing roundabout at B1403 / Yards End Lane.
- A segregated footway and cycleway along the full length of the spine road.
- Connectivity to the external Public Rights of Way and National Cycle Network.
- Re-route and extend existing bus services through the site.

The site is predominantly greenfield with a small amount of previously developed land where the former brickworks were which have largely already been restored to nature, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; the site promoter has provided documentation detailing correspondence with Cambridgeshire County Council to date on the viability of the site for brickclay extraction. The planning statement submitted states that over 50% of the site has already been worked for minerals and a scope of work for a full Mineral Resource Assessment will be undertaken which will include intrusive surveys to establish the extent of Lower Oxford Clay within the remainder of the site. The site promoter states that once the assessment has been completed it will be shared with the Huntingdonshire's Local Plans team. The site is beyond 400m of a water recycling area.

<p><b>Availability</b></p> <p>The site is controlled by a single individual/ company who supports its development. There are no known legal restrictions impacting the site. It is intended to acquire planning permission and then sell the site to a third party for development. The site promoter suggests the land will be available between 2029 and 2034.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. Cumulatively, the site has several significant constraints relating to its topography, its sensitive location in the landscape particularly to the east and south with its relationship the Fenland landscape and to Yaxley. Additionally, the status of mineral extraction on site will need to be fully assessed and scoped. There are likely to be impacts on designated conservation and heritage designations. Access arrangements and the impact of the proposed development on the local and strategic highways network will need to be fully assessed with engagement with relevant stakeholders.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is largely greenfield. There are substantial topographical and landscape constraints which will need to be overcome. There are also nature conservation and heritage designations which any proposed development will need to consider. The site promoter states the site will be available between 2029 and 2034, as such the site is categorised as being developable.</p>	~

- Potential to support job creation within Yaxley which is rated as being one of the most deprived wards in Huntingdonshire, however the number of potential full time jobs is unclear at this time. The proposed development of the site for big-box warehousing units used for logistics and distribution may result in a lower dense density across the site.
  - Strategically located in terms of accessibility to the strategic highways network and is of a scale that could provide enhancements to the local public transport network
  - Located to the west of Yaxley with the potential to significantly adversely impact the landscape and townscape character and setting of the settlement. This impact is furthered by the urbanising impact of the development at Great Haddon in Peterborough to the north which is will have an urbanising impact on Yaxley.
  - Is within the landscape and visual setting of the Great Fen, development at this scale could have a fundamental adverse impact on the the Great Fen and wider fenland landscape
- In combination the outcomes of the LAA and SA indicate that the site:
- The site is not considered to be appropriate for development due to the likely significant adverse impacts on the fenland landscape and the setting of the Great Fen. It will also fundamentally and detrimentally impact the character and setting of Yaxley.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

- The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:
- Is partially greenfield land and partially previously developed land consisting of land formerly used for mineral extraction
  - Classified as grade 3 agricultural land in current agricultural use
  - Is within flood zone 1 but has some surface water flood risk
  - Part of the site contains the Norman Cross Brickpits County Wildlife Site and within 2km of the Orton Pit SSSI and SAC
  - Is somewhat constrained by designated heritage assets

**Yaxley 3: Land South of Main Street, Yaxley**

<b>Site reference</b>	Yaxley 3
<b>Site name</b>	Land South of Main Street, Yaxley

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land South of Main Street, Yaxley	Yaxley	3.52

**Promoter's Intentions**

Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul>	90 homes	Available 2023 Build out over 2 years

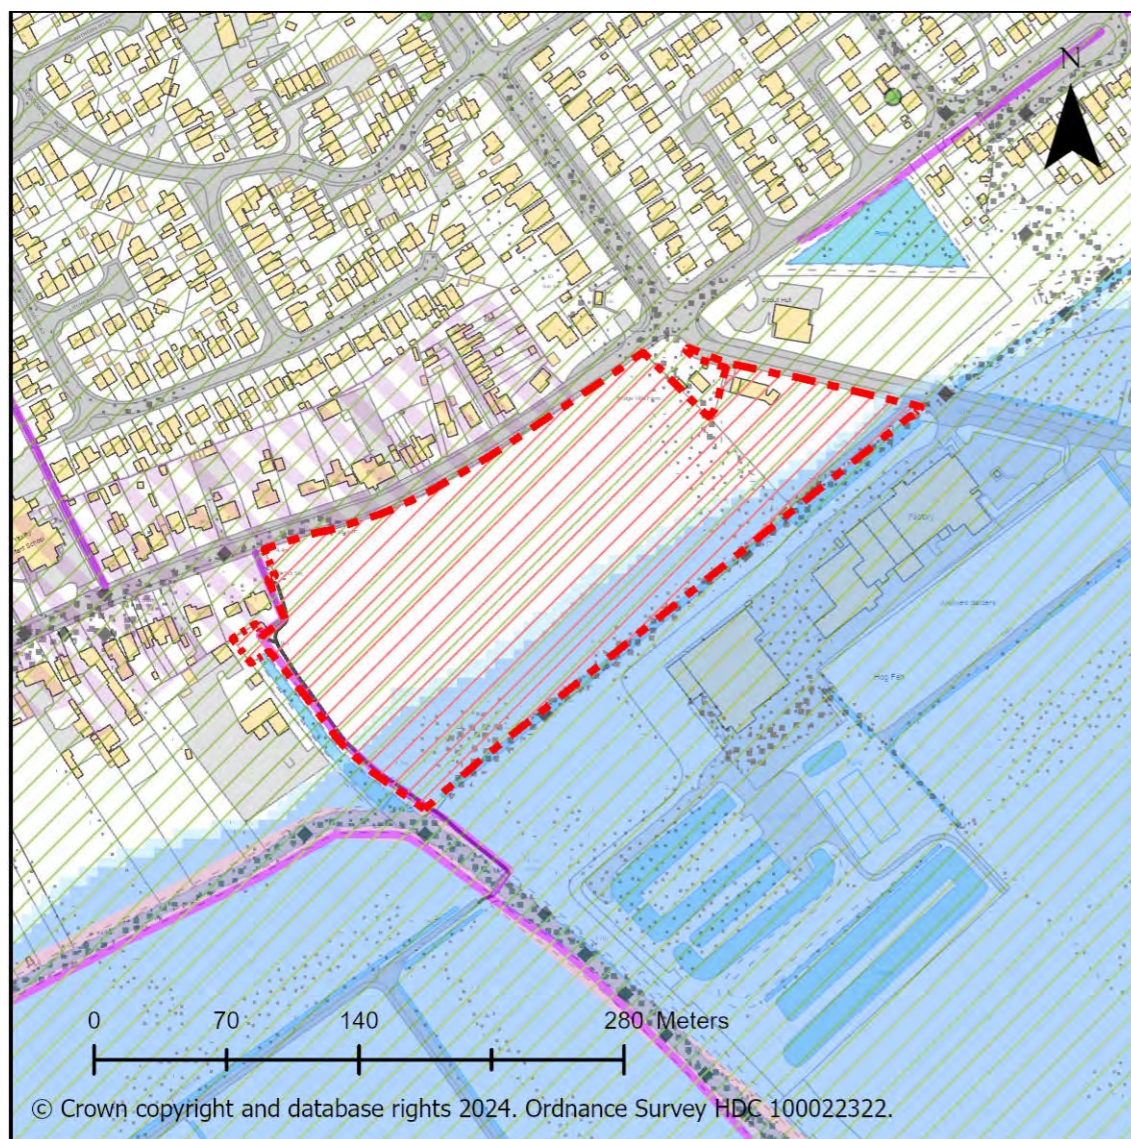

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:273
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>The site was assessed in the HELAA (2017) (site reference: Main Street) - this was a slightly larger site area. The site was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Concept Masterplan (plan reference: 61604-MCB-ZZ-ZZ-PP-A-S3-0001-P1) (June 2023)</li> <li>Heritage and Townscape Assessment (May 2021)</li> <li>Landscape and Visual Impact Assessment (June 2021)</li> <li>Site Justification (June 2023)</li> </ul>

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	A small part of the site's north eastern corner is classified as grade 1 agricultural land but the vast majority of the site is classified as urban	Pass
Flood zone 3b	None but some of the site's southern edge is within flood zone 3a	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is located within flood zone 1, with a proportion of the site's southern edge being located within flood zones 2 and 3a (about 34% of the site), this flood risk is associated with Pig Water drain which adjoins the site's boundary on this site. There is also some surface water flood risk along the site's southern and eastern edges. The submitted concept masterplan shows that largely no built development is proposed in parts of the site at an increased risk of flooding and that this land will provide open space and landscaping. The site is largely classified as being urban land apart from a small part of the site's north eastern corner which is classified as grade 1 agricultural land. The site is broadly level but it does very gently slope towards the south. There is vegetation along the</p>	~
---	---

<p>site's frontage. There are currently long views from Main Street across this site onto the fens. Long views into the site from the south are mostly prevented by RB Organic Fruit Ltd and Produce World Yaxley and by trees. The site is within the landscape and visual setting of the Great Fen. There is a public right of way running along the site's western edge which means that development would be visible from this public vantage point. To the north along Main Street are residential properties and the Duck &amp; Drake Public House. To the west and east are further residential properties. To the south are large agricultural buildings associated with RB Organic Fruit Ltd and Produce World Yaxley.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site, it is however within the landscape and visual setting of the Great Fen. There are no heritage designations on site but it does adjoin a conservation area on its northern and part of its western boundary. Access to the site may be possible from Main Street. The submitted concept masterplan shows that two vehicular access points are proposed from Main Street.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a family who supports its development. The site is optioned with the site being promoted by a developer. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the housebuilder. The site promoter states that the land is available now and will take 2 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are several cumulative constraints to including flood risk, and the site's location on the edge of Yaxley means that townscape and landscape impact is a significant development constraint. While the site is not particularly visible in longer views from the south, the land lies within the landscape and visual setting of the Great Fen, and development may adversely impact on the aims and objectives of the Great Fen. Additionally, development would significantly alter the character of this part of Yaxley. The design of any development proposal and its landscaping scheme will have to demonstrate how it will mitigate and minimise the impact of development on the surrounding townscape and landscape, and on the visual setting of the Great Fen.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no structures on site to clear but the site is in a sensitive location within the fenland landscape. In combination with flood risk and the impact on the conservation area, there are several constraints to overcome. There is a housebuilder involved with the site and the site promoter states that the site is available now. A concept masterplan and some technical studies relating to heritage and landscape have been undertaken. There is no active planning application on site, considering this and the constraints to overcome, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is greenfield land mostly classified as urban land but there is a small amount of grade 1 agricultural land
- About a third of the site is constrained by fluvial flood risk
- Fairly remote from natural greenspace
- Remote from designated nature conservation designations but within the landscape and visual setting of the Great Fen
- Adjoins a conservation area on its northern and western boundaries
- Located on the southern edge of Yaxley accessed from Main Street, this part of the village typically has a more rural feel and is more sensitive to development
- In depth development in this location is generally uncharacteristic of the historic development of the village, however some recent infills and redevelopment proposals have started to integrate some in depth development along Main Street
- Has good accessibility to employment opportunities within Yaxley and Peterborough
- Has good accessibility to leisure and cultural facilities, primary education and public transport

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for built development if development were focused on land within flood zone 1 and that appropriate landscape and heritage constraints overcome.

Page 337 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 3.52ha  50% net developable area to focus development on land at the lowest risk of flooding and to retain development towards the built form of the village reducing wider landscape impact.  3.52 ha x standard proportion of 50% = <b>1.76ha</b>	Residential - market and/or affordable houses  Very low density of 35 dph years anticipated due to the edge of village location.  Capacity = 1.76 ha x 35 dph = <b>62 homes</b>	Available post 2024-2028  Build out over 2 years

**Updates after the Initial Assessment**

This application was submitted in February 2024 and is pending consideration.</li> <li>The eastern edge of the site was assessed in the HELAA (2017) (site reference: Folly Close). The site was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land (agricultural structures on site)
Current use of the site	Agricultural land/ equestrian use

Supporting information	<ul style="list-style-type: none"> <li>Great Haddon Phase One Development Brief extracts (August 2022)</li> </ul>
------------------------	---

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located to the west of London Road and on the very eastern edge of Yaxley and of Huntingdonshire district. It is encompassed on its north, west and southern boundaries by land falling with Peterborough City Council.</p> <p>The site is wholly located within flood zone 1 with some surface water flood risk across the site. The site is wholly classified as grade 3 agricultural land. The site broadly level with a public right of way running through the centre of the site from London Road. The boundaries of the site are clearly defined by hedgerows with particularly dense trees and vegetation along its northern edge. To the east is linear residential development which beyond that</p>	
--	--

is the main built form of Yaxley. To the south, north and west are currently agricultural fields (this land has approval for development as part of the Great Haddon). The surrounding context to the site is rapidly evolving with Great Haddon being approved in 2018 to the west and building works now underway. The concept masterplan for Great Haddon shows that it is proposed that Folly Farm will adjoin the Haddon Common community woodland and a sports park. To support these proposed neighbouring land uses and to reduce coalescence between Yaxley and Great Haddon, it would not be appropriate to build on the Folly Farm site. The site could however be appropriate for open spaces or biodiversity net gain opportunities which could tie in with proposed land uses.

There is no known contamination on site and no oil or gas pipelines running through the site. Its proximity to the A15 may result in an increased risk from noise, air and light pollution. There are no nature conservation or heritage designations on site. The submitted site layout plan proposes to provide vehicular access from London Road. Engagement would be required with Cambridgeshire County to ascertain if this is an appropriate point of access for the quantum of housing proposed. Difficulty in securing a safe access to the site for a residential scheme also further justifies pursuing the site for open space and biodiversity net gain opportunities.

The site is greenfield with some agricultural structures on site, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.

**Availability**

The site is in multiple ownership with development supported by all owners. The site promoter states that there is a legal agreement in place on the site. There are no known legal restrictions impacting the site. It is intended to acquire planning permission for the site and then sell it to a third party for development. The site promoter states that the existing business will need to relocate, but consider that this can occur within 3 to 6 months if planning approval is acquired. The site promoter states that the land will be available between 2024 and 2028 and could take 4 years to build out.

**Achievability**

The site promoter has identified that all access and services are accessible from the site boundary. There are no topographical challenges to overcome but there are considerable constraints to development resulting in its sensitive location being a physical separator between Yaxley and the ongoing Great Haddon development to the west within Peterborough. There is a public right of way that runs through the centre of the site which would need to be retained and could provide a connection through to open and natural open spaces within the site and within Great Haddon.

<p><b>Deliverability / developability</b></p> <p>There are some agricultural structures on site to clear. The site promoter is seeking to acquire planning permission for the site and then sell it to a third party for development. Following that the business that currently is open on the site will need to relocate. It is anticipated the site will be available between 2024 and 2028 and a planning application has been submitted on the site for residential development. However, as raised within the suitability and constraints section, the site is in a sensitive location and its development would result in furthering the sense of coalescence between Yaxley and Great Haddon/Peterborough. As such, the site is not considered suitable for built development but could potentially deliver some open space or biodiversity net gain opportunities which could tie in with the proposed adjoining land uses within the Great Haddon illustrative masterplan.</p>		
--	--	--

- Incorporate the public right of way running through the site
- Engagement with the site promoter required as potentially suitable land uses differ from those of the site promoter

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The gross site area is 4.6ha	Open space uses and biodiversity net gain opportunities  4.6ha of land for such uses	Available 2024 - 2028  Complete over 4 years

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	The site will progress to the sustainability appraisal stage but it will only be appraised for biodiversity net gain opportunities. This is to support the proposed neighbouring land uses and to reduce coalescence between Yaxley and Great Haddon.
--	---

**Updates after the Initial Assessment**

--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is greenfield grade 3 agricultural land and consists of an equestrian centre with some existing structures on site</li> <li>• The site is not constrained by fluvial flood risk but there is some surface water flood risk</li> <li>• Built development is not considered suitable as this would further urbanising effect and would likely result in furthering the potential for coalescence between Yaxley and the evolving new community at Great Haddon within Peterborough</li> <li>• The site could be developed for open space and biodiversity net gain</li> <li>• The site is not constrained by heritage assets</li> <li>• It is within 1km of Orton Pits SSSI so there is potential to provide linkages between habitats</li> <li>• Good accessibility to public transport options</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially suitable for open space and biodiversity net gain uses to retain a sense of separation between Yaxley and Great Haddon</li> </ul>

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with a significant amount of surface water flood risk through the centre of the site. The majority of the site is classified as urban land with the south western corner being classified as grade 3 agricultural land. It is located to the rear of properties along Wykes Road on the western edge of Yaxley. The site gently down slopes from its northern edge to its southern edge with land levels being some 5m lower at its southern edge. There are trees and vegetation along all of its boundaries enclosing the site. To the west, south and north the site adjoins open countryside, to the east it adjoins the rear gardens of properties along Wykes Road. There is a public right of way adjacent to the southern boundary of the site meaning that development will be viewable form a public vantage point.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site but it is located within the landscape and visual setting of the Great Fen. There are no heritage designations within the site but the northern third of the site is within 40m of a conservation area and also within 75m of the grade I listed St Peter's Church. Considering the higher land levels within the northern part of the site, development is likely to be viewable from these designated heritage assets. There is currently no vehicular access to the site, there is a potential ransom strip between the site and West End, it is unclear whether access can be extended to serve this site and whether there has been agreement from the adjoining landowners to do this.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	-
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. An allocation status is sought for the site after which it will be sold to a third part for obtaining planning permission an development. The site promoter states that the site will be available between 2024 and 2028 and take 1 to 2 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are unknown apart form the public highway is not immediately accessible. However, as highlighted previously there is no direct vehicular access from the public highway. There appears to be a ransom strip between the site and West End, no information has been provided by the site promoter on</p>	-

Page 342 of 3488

<p>how this issue can be overcome and whether the owner of this land will be willing to enable access through their land. Therefore, the achievability of vehicular access is very unlikely. In addition to the location of the development forming back land development, there are considerable design and integration constraints to overcome.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site is located in a sensitive location in terms of being on the western edge of Yaxley within view of the heritage assets and being within the landscape and visual setting of the Great Fen. Also, achieving an access to the site is a key issue to the site's deliverability. It is intended to acquire planning permission and then sell the site to a third party for obtaining planning permission and development. As such the site is categorised as not being deliverable or developable at this time.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to the cumulative constraints impacting the site and the uncertainty of the achievability of access to the site, it is considered unsuitable for development and therefore not deliverable.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

<p>The site did not progress to Sustainability Appraisal.</p>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Yaxley 6: Land to the rear of St Peter's Church, Yaxley**

<b>Site reference</b>	Yaxley 6
<b>Site name</b>	Land to the rear of St Peter's Church, Yaxley

Site address	Parish(es)	Site area (ha)
Land to the rear of St Peter's Church, Yaxley	Yaxley	2.47

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> <li>Self and custom build plots</li> </ul> Open space uses <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> <li>Land to safeguard against flooding</li> </ul>	Total 30 houses (2 self and custom build plots, 16 market and 12 affordable dwellings)  0.50ha for natural, green or open spaces  0.50 ha for biodiversity net gain  0.47 ha for land to safeguard against flooding	Available 2024 - 2028  Build out over 1 - 2 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:301
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with some surface water flood risk through the eastern edge of the site. About 60% of the site is classified as urban land with the remaining part of the site being classified as grade 3 agricultural land. It is located to the rear of Haddon House and the grade 1 listed St Peter's Church on the western edge of Yaxley. The site is broadly level with trees and vegetation along its northern, western and southern boundaries largely enclosing the site. The site is open with minimal vegetation along its eastern edge where it adjoins St Peter's Church and the land levels drop by a couple of metres from the church to the site meaning that cumulatively development is</p>	~
---	---

<p>likely to have a greater impact on the setting of this heritage asset. To the west, south and north the site adjoins open countryside, to the east it adjoins Haddon House and St Peter's Church.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site but it is located within the landscape and visual setting of the Great Fen. There are no heritage designations within the site but the northern edge of the site adjoins the conservation area and is within 15m of the grade I listed St Peter's Church. Development is likely to be viewable from these designated heritage assets. There is currently a vehicle access into the site from Pound Lane which connects onto Church Street.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. An allocation status is sought for the site after which it will be sold to a third part for obtaining planning permission an development. The site promoter states that the site will be available between 2024 and 2028 and take 1 to 2 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are unknown apart form the public highway and electricity supply which are accessible from the site boundary. There are few topographical challenges to overcome and the site is relatively well contained from the wider landscape but is very visible from designated heritage assets. The site has considerable constraints to overcome relating to its location in relation to designated heritage assets and the landscape setting of Yaxley.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear but the site is located in a sensitive location in terms of being on the western edge of Yaxley within view of the heritage assets and being within the landscape and visual setting of the Great Fen. It is intended to acquire planning permission and then sell the site to a third party for obtaining planning permission and development. The site is expected to be available between 2024 and 2028. As such the site is categorised as being potentially developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is greenfield land mostly classified as urban land</li> <li>• Is not constrained by fluvial flood risk but there is some surface water flood risk</li> <li>• Remote from natural greenspace</li> <li>• Is nearby to the A15 which could give rise to increased levels of pollution</li> <li>• Remote from designated nature conservation designations but within the landscape and visual setting of the Great Fen</li> <li>• Is adjacent to the grade 1 listed St Peter's Church and is adjacent to the conservation area</li> <li>• Located on the western edge of Yaxley which typically has a more rural feel and is more sensitive to development</li> <li>• In depth development in this location is uncharacteristic and would fundamentally have an urbanising impact on the landscape</li> <li>• Has good accessibility to employment opportunities within Yaxley and Peterborough</li> <li>• Has good accessibility to leisure and cultural facilities, primary education and public transport</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development due to the likely significant impact on heritage assets and on the landscape which would fundamentally impact the character by having an urbanising effect on Yaxley on its western side.</li> </ul>

**Yaxley 7: Land South of 25 West End, Yaxley**

<b>Site reference</b>	Yaxley 7	
<b>Site name</b>	Land South of 25 West End, Yaxley	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land South of 25 West End, Yaxley	Yaxley	6.15

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	100 homes	Available 2023 Build out over 2 to 3 years

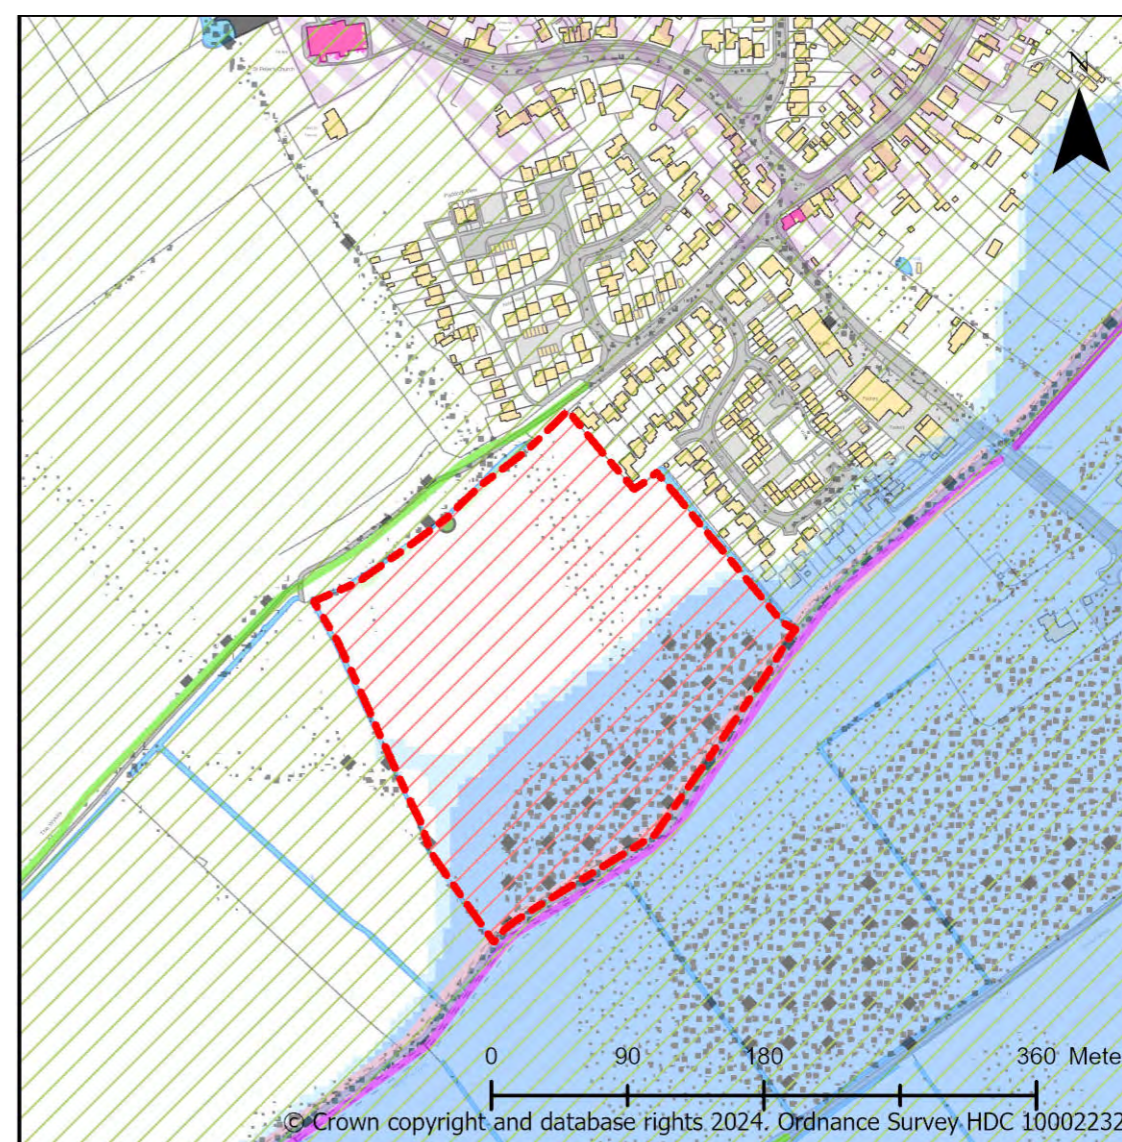

**Core information**

How was the site identified?	Ongoing Call for sites 2023- 2024 submission: site reference – CfS:23-241
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Call for Sites Supporting Statement (October 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	A small portion of the site's southern edge is classified as grade 1 agricultural land but the vast majority is grade 3.	Pass
Flood zone 3b	None but about half of the site is within flood zones 2 and 3a.	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 347 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The southern half of the site is constrained by fluvial flood risk being located within flood zones 2 and 3a. There is substantial risk of surface water flooding in this part of the site too as well as surface water risk through the centre of the site. This flood risk is associated with Yards End Dyke which runs along the site's southern boundary. A small portion of the site's southern edge is classified as grade 1 agricultural land and a portion of its eastern edge is classified as urban land but the vast majority of the site is classified as being grade 3 agricultural land. The site's northern boundary has a hedgerow and a public right of way running along it. The remaining boundaries are more open affording views out across the fenland landscape, this is accentuated by the land levels gently sloping downwards to its southern boundary with land levels reducing by some 6m. The site adjoins residential properties along Cookson Close on its eastern boundary. There is the open countryside to the north, south and west.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site but it is located within the landscape and visual setting of the Great Fen. There are no heritage designations on site or within its immediate vicinity but views from St Peter's Church may be impacted by proposals. Access could potentially be achieved from West End but this would need to be scoped out further.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. The site has been optioned and a housebuilder is involved with the site. There are no known legal restrictions affecting the site. The site promoter states that it the intention to deliver the site directly by a housebuilder. The promoter suggests the land is available now and could take between 2 and 3 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site's location on the south south western edge of Yaxley means that landscape impact is a significant development constraint. The site is highly visible in longer views from the south and east due to the generally open Fenland landscape; in particular, the land lies within the landscape and visual setting of the Great Fen, and development may adversely impact on the aims and objectives of the Great Fen. The site is highly</p>	~

<p>constrained by flood risk with half of it being within flood zones 2 and 3a, development may be placed within flood zone 1 but this is also where land levels are higher meaning there will likely be an increased landscape impact as well as additional design challenges with integrating with the existing character of the area. Access could potentially be achieved from West End.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear. As highlighted there are considerable constraints to overcome including flood risk but most notably the impact on the landscape and the setting of the Great Fen. It is intended to deliver the site directly by a housebuilder who is already involved with the site. The site promoter states that the site is available now but no planning application has yet been submitted. Considering these factors, the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is greenfield land mostly classified as being grade 3 agricultural land, although there is some grade 1 land along its southern edge</li> <li>• It is constrained by fluvial flood risk on just under half (flood zones 2 and 3a) of the site and by surface water flood risk</li> <li>• Remote from natural greenspace</li> <li>• Is nearby to the A15 which could give rise to increased levels of pollution</li> <li>• Remote from designated nature conservation designations but within the landscape and visual setting of the Great Fen</li> <li>• Development may have an impact on the setting of the grade 1 listed St Peter's Church</li> <li>• Located on south western edge of Yaxley which typically has a more rural feel and is more sensitive to development</li> <li>• The site extends into the countryside away from the built form so built development across the whole of the site would result in an urbanising impact on the landscape and adversely impact landscape and townscape character of the settlement</li> <li>• Has good accessibility to employment opportunities within Yaxley and Peterborough</li> <li>• Has good accessibility to leisure and cultural facilities, primary education and public transport</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is potentially appropriate for built development if it were focused on within the north eastern corner of the site. This is to ensure that development is not placed on land at higher risk of flooding and reduce the potential impact on the landscape by focusing development where it already adjoins the built form. It would also assist in mitigating the potential harm to the setting of St Peter's Church.
- Vehicular access from West End will require further scoping

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 6.15ha  20% net developable area to place built development on land at the lowest risk of flooding and to retain development on the north eastern corner of the site closest to the existing built form to mitigate landscape, heritage and flooding constraints.  6.15 ha x standard proportion of 20% = <b>1.23ha</b>	Residential - market and/or affordable houses  Very low density of 35 dph anticipated due to the edge of village location.  Capacity = 1.23 ha x 35 dph = <b>43 homes</b>	Available post 2024-2028  Build out over 2 years to 3 years

## Document Information

**Title:** North East Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** North East Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 North East Huntingdonshire Area

1.1 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

1.2 This document sets out the site assessments for the sites located within 'North East Huntingdonshire'. This grouping consists of Ramsey; Somersham; Warboys wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Broughton - 1 site
- Bury - 7 sites
- Old Hurst - 0 sites
- Pidley-cum-Fenton - 6 sites
- Ramsey - 17 sites
- Somersham - 14 sites
- Upwood and The Raveleys - 3 sites
- Warboys - 12 sites
- Wistow - 4 sites
- Woodhurst - 0 sites

Map 1.1 Huntingdonshire site assessment groupings

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal to obtain a complete picture of the Council's initial consideration of the site.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites.

#### 3.4 Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next 5 years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or was occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape or been revegetated
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

- **CfS** - Call for Sites
- **Dph** - Dwelling per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.5 The assessment of each site consists of several sections, each is detailed below:

**Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.

**Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.

**Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.

**Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.

**Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a local green space, having a nature conservation designation, within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.

**Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.

**Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.

**Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.

**HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, we will calculate an indicative capacity for the site and uses. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.

**Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

### Site Assessment Process

### 1 Broughton

- 1.1 A total of 1 site has been identified/ put forward through the desktop review or Call for Sites process. These are:
  - Broughton 1: Land off Causeway Road, Broughton
- 1.2 Please note that Wyton on the Hill 2: Hungary Hall, West of A141, Wyton on the Hill does largely fall within Broughton parish but has been assessed within the Eastern LAA document under Wyton on the Hill 2 due to its close relationship with Wyton on the Hill 1.

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Assessment of Site Potential

Page 364 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1 apart from a small portion of the site that adjoins Causeway Road which falls within flood zone 2 and 3a (about 1%). This part of the site is also at some risk from surface water flooding. Consultation will be required with the Environment Agency to ensure that safe entry and exit to the site can be achieved with flood mitigation in place. The site is wholly classified as grade 2 agricultural land. The site slopes gently down from north western edge towards its frontage along Causeway Road. The land slopes by approximately 5m across the site. Within the site there is a small cluster of trees towards the centre of the site. The site is largely contained by residential development on three of its sides apart from its north western edge which is completely open and has no vegetation along it meaning there are views across the open countryside. Additionally, there are two public rights of way that run through the site, one along the north western edge connecting to Bull Lane via School Road, and the other right of way runs diagonally through the site to Causeway Road from School Road. The presence of these public rights of way and the openness of the site mean that built development will be viewable from public vantage points.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run along the site's frontage along Causeway Road. There are no nature conservation designations on site. It is however in a very sensitive location in terms of heritage assets as it is wholly located within the conservation area and is adjacent to several listed buildings: Brooklands Cottage, Manor Farm and the Baptist Chapel, all of which are grade II designated. There is an existing access into the site from Causeway Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter seeks to planning permission for the site and then sell it to a third party for development. The site promoter suggests the land will be available between 2024 and 2028 and take 1 year to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary apart from gas supply which is unknown. There is an existing access into the site from Causeway Road. The site is located in a very sensitive location in terms of being within a conservation area and adjacent to several listed buildings. Therefore, careful</p>	~

<p>design and consultation with heritage specialists will be required to overcome these challenges and design a scheme of high quality reflective of local character. There are also public rights of way across the site which will impact the layout of development and may require rerouting. The openness of the site to the north west will also require mitigation with appropriate landscaping and the flood risk along Causeway Road will need to be properly assessed and mitigated.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures to clear. It is heavily constrained by heritage assets and by public rights of way which will likely heavily shape the design and layout the site as well as the potential developable area of the site. The site promoter seeks to planning permission for the site and then sell it to a third party for development. No planning application has yet been submitted and as it is not intended to deliver a rural exceptions scheme on the site, it is contrary to current policy so an allocation status would be required. Therefore, the site is categorised as being developable.</p>	

Progression of Site through to Sustainability Appraisal

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

Impact of the Sustainability Appraisal on the assessment

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is greenfield land consisting of grade 2 agricultural land</li> <li>● Largely within flood zone 1</li> <li>● In walking distance to several local leisure and cultural facilities</li> <li>● Limited accessibility to shops and employment opportunities</li> <li>● Primary education is located within the neighbouring village of Abbots Ripton</li> <li>● Not accessible to natural green space</li> <li>● Not constrained by nature conservation designations</li> <li>● Wholly located within the conservation area and is adjacent to several listed buildings: Brooklands Cottage, Manor Farm and the Baptist Chapel, all of which are grade II designated.</li> <li>● Located fairly centrally within Broughton, of a scale that would retain the character of the area subject to overcoming heritage constraints</li> <li>● Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- Is potentially appropriate for development of a modest scale that reflects the surrounding residential form.
- Development will need to incorporate appropriate landscaping and mitigation against adversely impacting heritage assets and their setting.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 0.75ha 50% net developable area to allow sufficient landscaping and a mitigation against impacts on heritage assets. 0.75 ha x standard proportion of 50% = <b>0.375 ha</b>	Residential - market and/or affordable houses Very low density of 25 dph anticipated as this is most closest to surrounding densities within the village. Capacity = 0.375 ha x 25 dph = <b>9 homes.</b>	Available post 2028, subject to allocation status Build out over 1 year

**Updates after the Initial Assessment**

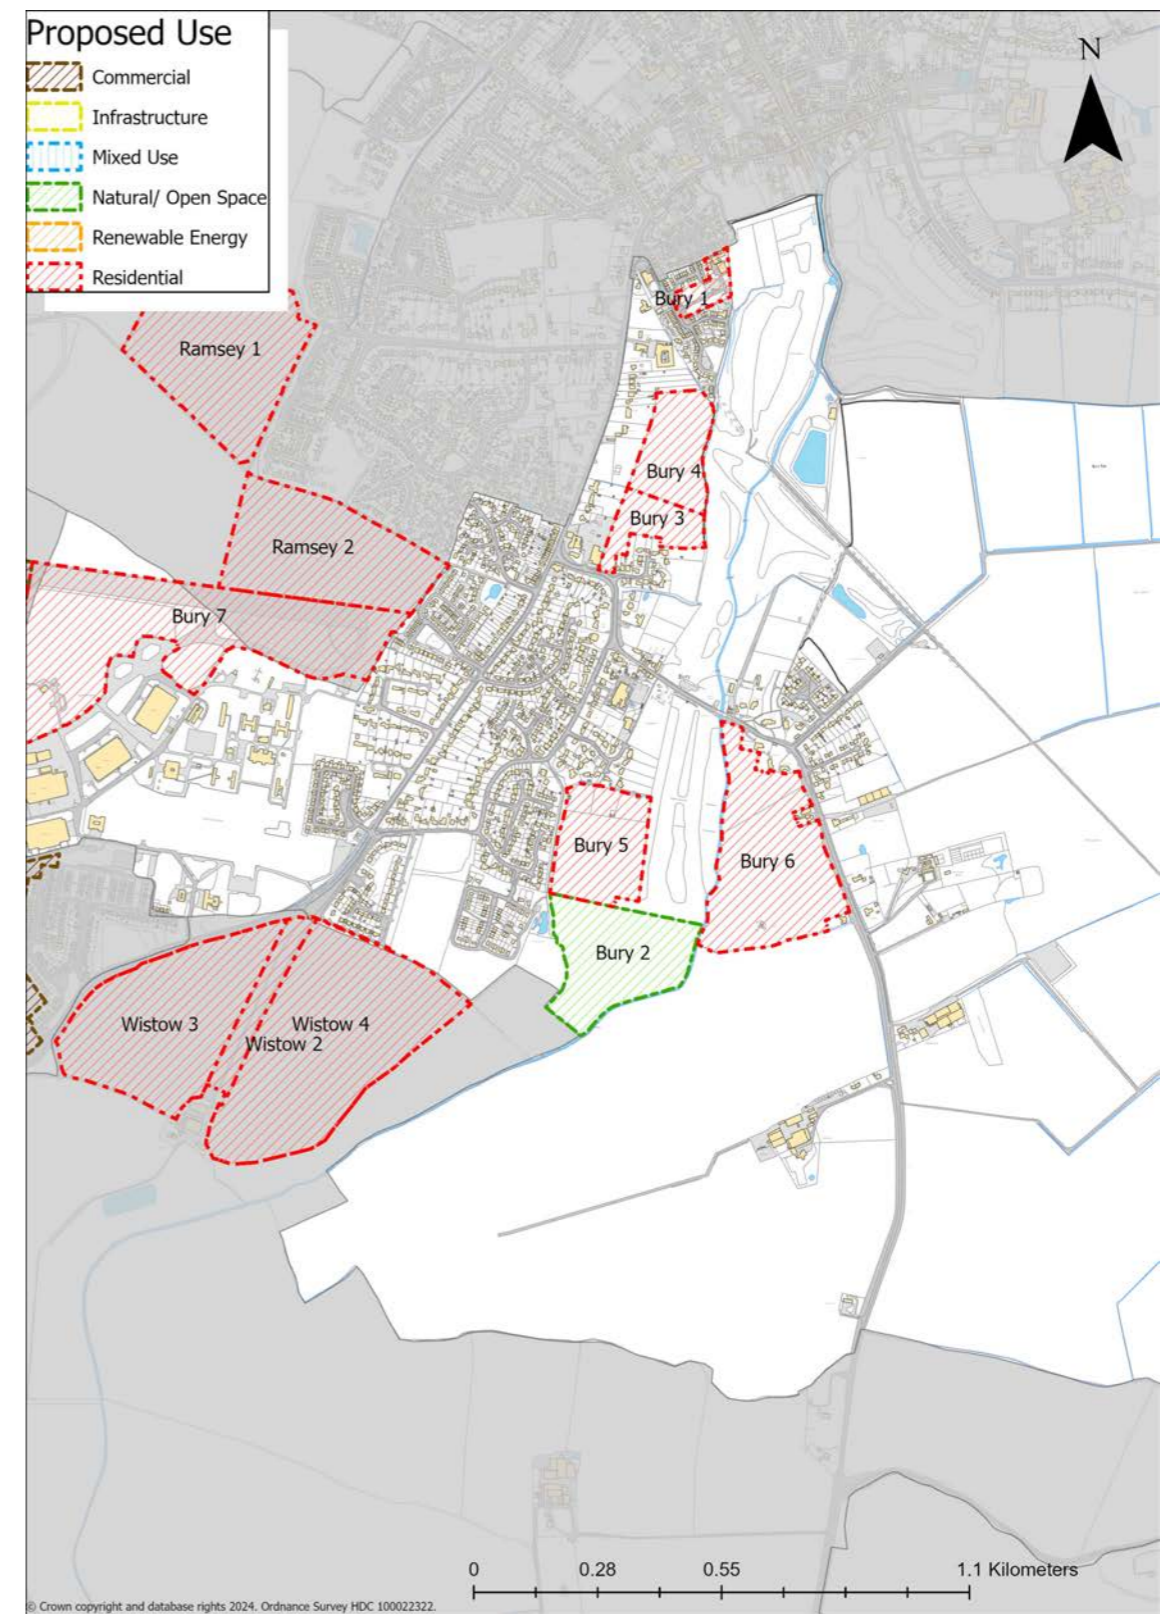

--

### 2 Bury

2.1 A total of 7 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Bury 1: Bury Industrial Estate, Old Station Road, Bury
- Bury 2: Land off Cheveril Lane, Bury
- Bury 3: Land North of High Street and East of Bury Road, Bury
- Bury 4: Land East of Bury Road, Bury
- Bury 5: Land off Brookfield Way, Bury
- Bury 6: Land West of Warboys Road, Bury
- Bury 7: RAF Upwood - Phase 3, Bury - this site partially falls within Ramsey parish. As the majority of the site falls within Bury parish, the site has been assessed here instead.

2.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Bury 1: Bury Industrial Estate, Old Station Road, Bury**

<b>Site reference</b>	Bury 1	
<b>Site name</b>	Bury Industrial Estate, Old Station Road, Bury	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Bury Industrial Estate, Old Station Road, Bury	Bury	0.96

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	24+ homes	Available 2024 - 2028 Build out over 1- 2 years

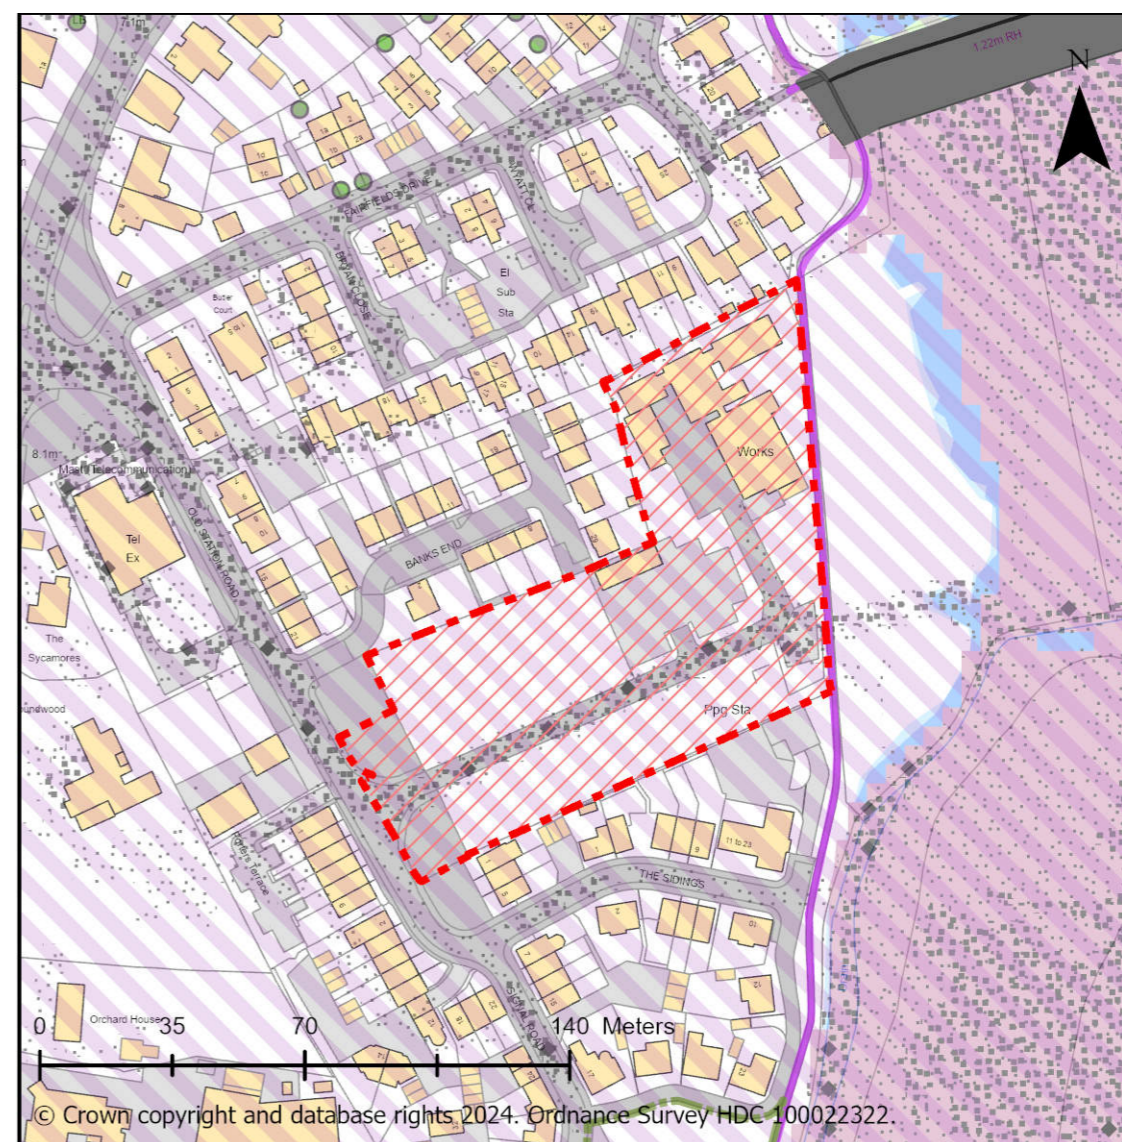

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:141
Relevant planning history	None relevant
Land type	Mostly previously developed land with some greenfield land
Current use of the site	Commercial/industrial
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly located within flood zone 1. There is some surface water flood risk within the site, this is focused along the access road which runs from Old Station Road to the back of the site where the commercial buildings are located. Consultation will be required with the Environment Agency to ensure that safe entry and exit to the site can be achieved with flood mitigation in place. The site is wholly classified as being urban land. The site is broadly level and largely contained by established trees and hedges. When viewing the site from Old Station Road, the commercial buildings on the site are not clearly visible behind trees and are set back from the street scene. The site is largely contained by residential development on three of its sides apart from its eastern edge which adjoins Ramsey golf club. Within the site the existing buildings are contained to the back of the site with western half of the site being open and undeveloped.</p> <p>There is no known contamination on site, although this may require further investigation considering the current use of the site. No oil or gas pipelines running through the site. There are no nature conservation designations on site. It is however located within a conservation area, redeveloping the site and potentially building on the aspects of the site that are currently undeveloped will impact the conservation area, masterplanning will be required to mitigate this and incorporate existing trees and vegetation within the landscaping scheme where possible. There is an existing access into the site from Old Station Road.</p> <p>The site is mostly previously developed but there is some greenfield land towards the Old Station Road, so its redevelopment will contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single individual/ company who supports its redevelopment. There are no known legal restrictions impacting the site. The site promoter states that Optical Activity has ceased trading and therefore has no use for the existing buildings on site. They state that they have reviewed the prospects of renting the existing buildings to third parties but it was found that the buildings on site are no longer fit for the commercial/industrial market without significantly altering or redeveloping the buildings. They intend to acquire planning permission and then sell the site to a third party for development. They anticipate it could build out over 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that mains water supply, electricity supply and digital and telecommunications infrastructure are available within the site. The public highway is accessible from the site boundary and gas supply to the site is unknown. There are limited topographical challenges to overcome but there established trees and vegetation which</p>	~

<p>are protected by the conservation area designation and risk from surface water flooding. Masterplanning will be required to ensure a high quality scheme that integrates with its context.</p> <p>There is an existing access into the site from Old Station Road. The site promoter has stated in their submission that a third party owns a strip of land between the site and the public highway and that they are liaising with this third party to overcome this. They do not consider this to impact the delivery of the site.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is mostly previously developed with commercial buildings to be removed as part of a potential residential development. There are some site constraints to overcome and the site promoter has highlighted a third party owns some of the land between the site and the public highway. While it does not appear that an allocation status is sought for the site, the potential issue with access means that the site will be categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is partly previously developed land and partly greenfield land consisting of land classified as being urban land</li> <li>• Is within flood zone 1 with some surface water flood risk</li> <li>• In walking distance to services, shops and employment opportunities within Bury and Ramsey</li> <li>• Good accessibility to public transport via bus</li> <li>• Accessible to natural green space</li> <li>• Not constrained nature conservation designations</li> <li>• Is located within a conservation area so sensitive design and masterplanning will be required to ensure successful integration and harmonisation with the character of the area</li> <li>• Located within the built form of Bury neighbouring Ramsey, it provides an opportunity to regenerate a former commercial site and utilise land for infill development within a sustainable location</li> <li>• Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is potentially appropriate for development subject to appropriate masterplanning to ensure successful integration with the street scene, sustainable drainage to mitigate surface water flood risk and full decontamination of the site following its commercial use
- A third party owns a strip of land between the site and the public highway, the site promoter states that they are liaising with this third party to overcome this

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 0.96ha  90% net developable area to accommodate landscaping and sustainable drainage  0.96 ha x standard proportion of 90% = <b>0.86ha</b>	Residential - market and/or affordable houses  Low density of 35 dph anticipated due to the site's location on the northern edge of Bury neighbouring Ramsey so a slightly higher density than very low could be accommodated.  Capacity = 0.86 ha x 35 dph = <b>30 homes</b>	Available 2024-2028  Build out over 1 -2 years

Page 370 of 3488

**Updates after the Initial Assessment**

--

**Bury 2: Land off Cheveril Lane, Bury**

<b>Site reference</b>	Bury 2
<b>Site name</b>	Land off Cheveril Lane, Bury

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land off Cheveril Lane, Bury	Bury	6.42

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Open space uses: Biodiversity net gain opportunities	6.42 ha	Available 2024 - 2028 No completion date provided

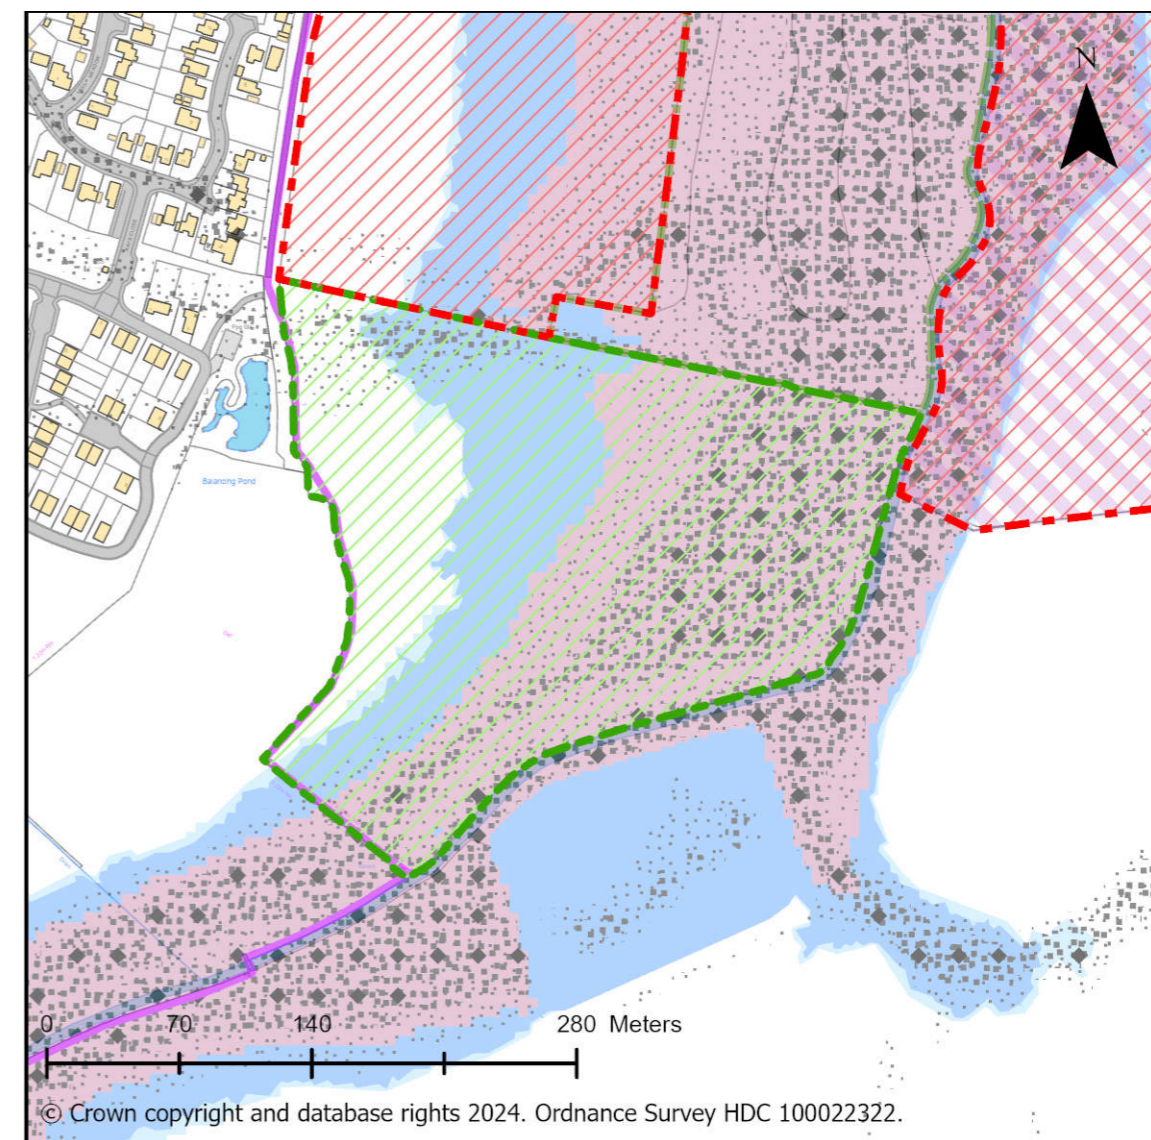

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:188
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	About 50% of the site is within flood zone 3b, however it is being promoted for biodiversity net gain opportunities so there will be no built development.	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Approximately 51% of the site is within flood zone 3b, 27% is within flood zone 3a, 2% is in flood zone 2 leaving some 20% in flood zone 1. There is also significant flood risk within the site particularly towards the eastern side of the site where the fluvial flood risk is greatest. The majority of the site is classified as grade 3 agricultural land with some of the western side of the site being grade 2. The site is broadly level with established trees and vegetation along its borders enclosing the site. The site is adjacent to development along Buryfield and Crabtree Way to the west and north west. There is an agricultural field adjoining the site to the north and open countryside to the south and east. There is a public right of way running along its western edge.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are overhead 11kV (HV) cables within the site, which the site promoter states would be retained. There are no nature conservation or heritage designations on site. The site promoter states that there is an existing access into the site from Cheveril Lane.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports it use as a site for biodiversity net gain opportunities. The site promoter states the site will be delivered by a housebuilder and is expected to be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all services and infrastructure are unknown apart from the public highway which is accessible from the site boundary. Considering that the site is being promoted for biodiversity net gain, the need to access essential services and infrastructure is less important. Engagement will be required with ecologists and wildlife specialists to ascertain the habitats and types of biodiversity gains that could be made on the site considering that it is constrained by flood risk so encouraging some habitats may be less favourable other more water resilient habitats and species.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site is heavily constrained by fluvial flood risk and has a close relationship to the open countryside with a public right of way running along its eastern edge. There are established trees and vegetation on the site's borders and also within the site. These factors support the site being used for biodiversity net gain opportunities. There are also several residential</p>	+

Page 372 of 3488

<p>led developments underway and committed in Bury who may be able to benefit from buying credits on the site. This approach should only be considered if the required levels of biodiversity net gain cannot be met on site first. Considering these factors, the site potentially more deliverable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land consisting of mainly grade 3 agricultural land
- The site is heavily constrained by fluvial flood risk with 51% of the site being within flood zone 3b
- Is located on the south eastern edge of Bury adjacent to the golf course and the wider countryside so could help to enhance a soft rural edge to the village
- Is not constrained by heritage or nature conservation designations
- Could provide opportunities for enhanced biodiversity net gain
- Public right of way connects the site through to the built form of Bury

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for biodiversity net gain opportunities providing enhancing the rural edge and character of this part of Bury as well as providing some linkages to other habitats enhancing connectivity
- Although the flood risk on the site will shape the types of habitats that could be supported and maintained on the site

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The gross site area is 6.42ha</p>	<p>Biodiversity net gain opportunities 6.42ha of land for such uses</p>	<p>Available 2024 - 2028 Complete over 5 years</p>

**Updates after the Initial Assessment**

<p> </p>
----------

**Bury 3: Land North of High Street and East of Bury Road, Bury**

<b>Site reference</b>	Bury 3
<b>Site name</b>	Land North of High Street and East of Bury Road, Bury

Site address	Parish(es)	Site area (ha)
Land North of High Street and East of Bury Road, Bury	Bury	1.9

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	55 homes	Available 2024 - 2028 Build out over 2 - 3 years

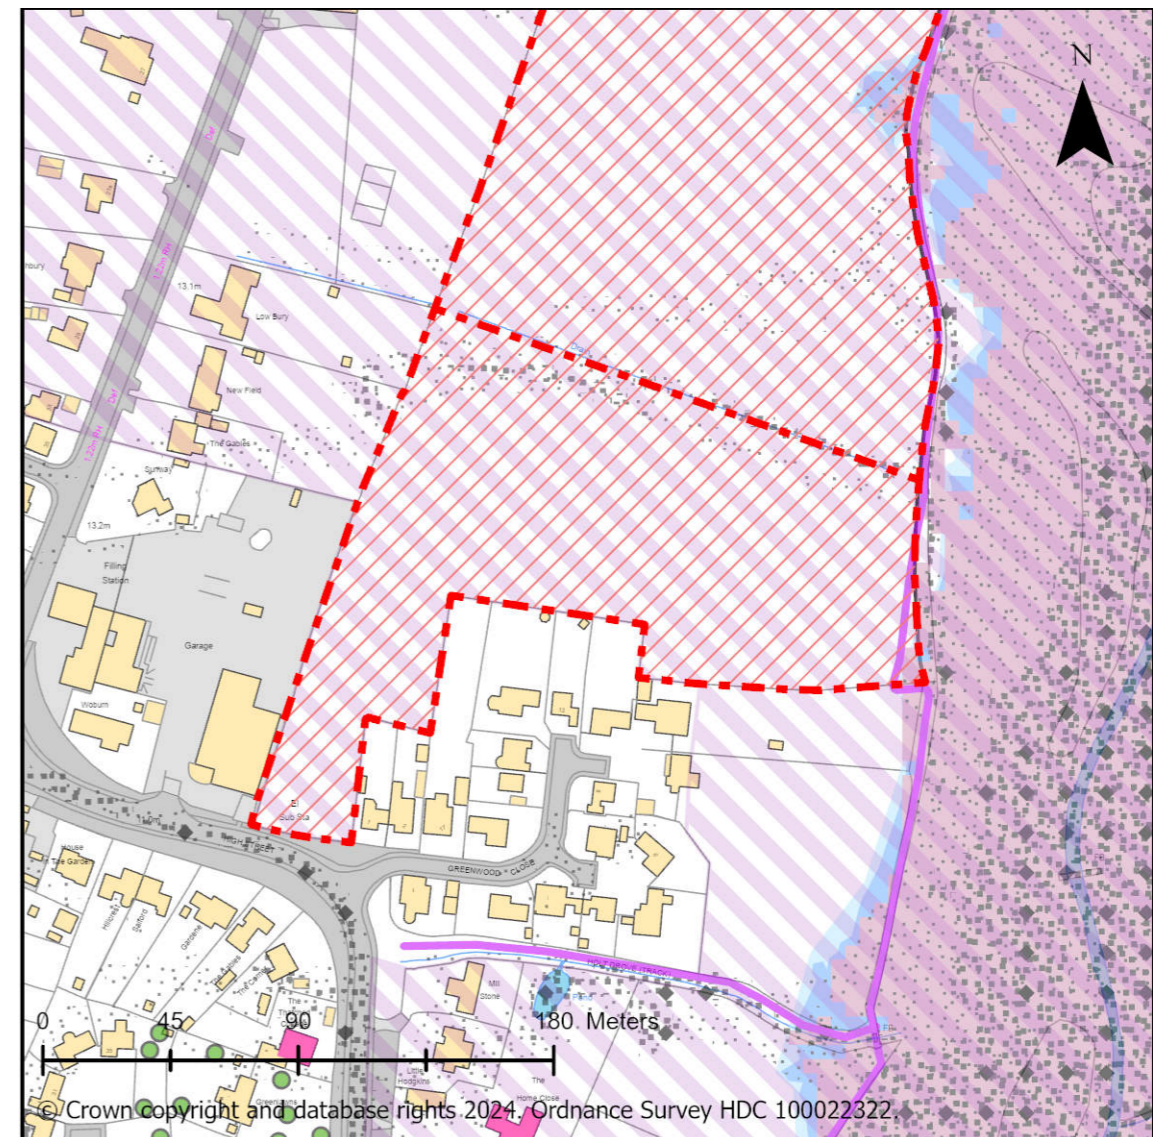

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:162
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>• Concept Document (May 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Less than 1% of the site is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The majority of the site is within flood zone 1 apart from a small portion of its eastern edge which falls within flood zone 2, 3a and 3b (about 1%). There is also some risk from surface water flooding. The majority of the site is classified as grade 3 agricultural land, however the western third of the site is classified as being grade 2. The site is broadly level but there is a gently change in gradient with its southern most edge along the High Street being some 5m higher than its northern edge. The site has established hedgerows and mature trees along its borders, which along with existing development help to form a sense of enclosure around the land parcel, however these are quite loose and low meaning that there are longer range views out across Ramsey golf course. There is also a public right of way that runs along the site's eastern edge, which provides views into the site. The presence of the public right of way and the somewhat openness of the site mean that built development will be viewable from public vantage points. To the north is agricultural land to the north, Ramsey golf club is to the east, with residential development to south and west of the site. Policy NE2 of the Bury Neighbourhood Plan identifies this site as a protected settlement break to prevent the coalescence of Bury with Ramsey. While the site forms the southern third of this protected settlement break and is inline with existing building line to the west and south of the site, it would erode the protected settlement break and be in direct conflict with the neighbourhood plan policy.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. The site is wholly located within a conservation area. Access to the site may be achievable the High Street but there is established vegetation here which would need to be cleared which may adversely impact the conservation area.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a company who supports its development. It has been optioned and a housebuilder is involved in bringing forward the site. There are no known legal restrictions impacting the site. The site promoter intends to bring forward the site directly by the housebuilder. They suggest the land will be available between 2024 and 2028 and take 2 to 3 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is located in a very sensitive location in terms of being within a conservation area and also within the landscape and relationship between Bury and Ramsey. The site forms part of a protected settlement break in neighbourhood plan policy</p>	-

<p>and its development would be in direct conflict with it. The achievability of designing a scheme that does not undermine this and sites comfortably within the landscape is a key challenge to overcome.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is categorised as being neither deliverable or developable as its development would directly conflict with made neighbourhood plan policy and would further erode the physical separation between Bury and Ramsey impacting landscape character and designated heritage assets.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No as the site forms the southern third of the protected settlement break designated in the Bury Neighbourhood Plan. The purpose of this is to prevent the spatial, physical and visual coalescence of Bury with Ramsey. The site while not extending beyond the existing building line on its western and southern sides would detrimentally start to erode the settlement break and would further the sense of coalescence between the two settlements and therefore be in direct conflict with the neighbourhood plan policy.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

<p>The site did not progress to Sustainability Appraisal.</p>

Land East of Bury Road, Bury	Bury	3.3

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	80 homes	Available 2024 - 2028 Build out over 2 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:277
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>• Concept Document (May 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Less than 1% of the site is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The majority of the site is within flood zone 1 apart from a small portion of its eastern edge which falls within flood zone 2, 3a and 3b (about 1%). There is also some risk from surface water flooding. The majority of the site is classified as grade 3 agricultural land apart from its north western and north eastern corner which are classified as being grade 2. The site is broadly level but there is a gently change in gradient with its southern most edge along the High Street being some 5 to 7m higher than its northern edge. The site has established hedgerows and mature trees along its borders, these are quite loose and low meaning that there are longer range views out across Ramsey golf course. There is also a public right of way that runs along the site's eastern edge, which provides views into the site. The presence of the public right of way and the somewhat openness of the site mean that built development will be viewable from public vantage points. To the east is Ramsey golf club, residential development is to the north and west of the site and to the south is an agricultural field which separates it from further residential development along the High Street. Policy NE2 of the Bury Neighbourhood Plan identifies this site as a protected settlement break to prevent the coalescence of Bury with Ramsey. The scale of the site with its edges adjoining built development on three sites would further the sense of coalescence between the two settlements even with landscaping measures, therefore the site would fundamentally erode the protected settlement break and be in direct conflict with the neighbourhood plan policy.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. The site is wholly located within a conservation area. There is no direct access to the site from its boundary, however the site promoter also owns the land to the south of the site (submitted under CfS:162 -Bury 3), which they state in their concept document will provide an access to the site connecting through to the High Street. Access to the site would also require further scoping and engagement with the County Council. There are established vegetation here which would need to be cleared which may adversely impact the conservation area.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a company who supports its development. It has been optioned and a housebuilder is involved in bringing forward the site. There are no known legal restrictions impacting the site. The site promoter intends to bring forward the site directly by the housebuilder. They suggest the land will be available between 2024 and 2028 and take 2 to 3 years to build out.</p>	+
<p><b>Achievability</b></p>	-

<p>The site promoter has identified that all access and services are accessible from the site boundary. The site is located in a very sensitive location in terms of being within a conservation area and also within the landscape and relationship between Bury and Ramsey. The site is a protected settlement break in neighbourhood plan policy and its development would be in direct conflict with it. Access to the site would also require further scoping and engagement with the County Council.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is categorised as being neither deliverable or developable as its development would directly conflict with made neighbourhood plan policy and would further erode the physical separation between Bury and Ramsey impacting landscape character and designated heritage assets.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No as the site is identified in the Bury Neighbourhood Plan as a protected settlement break to prevent the coalescence of Bury with Ramsey. The scale of the site with its edges adjoining built development on three sites would further the sense of coalescence between the two settlements and therefore be in direct conflict with the neighbourhood plan policy.</p>

Land off Brookfield Way, Bury	Bury	4.86

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	45 homes	Available 2024 - 2028 Build out over 2 - 3 years

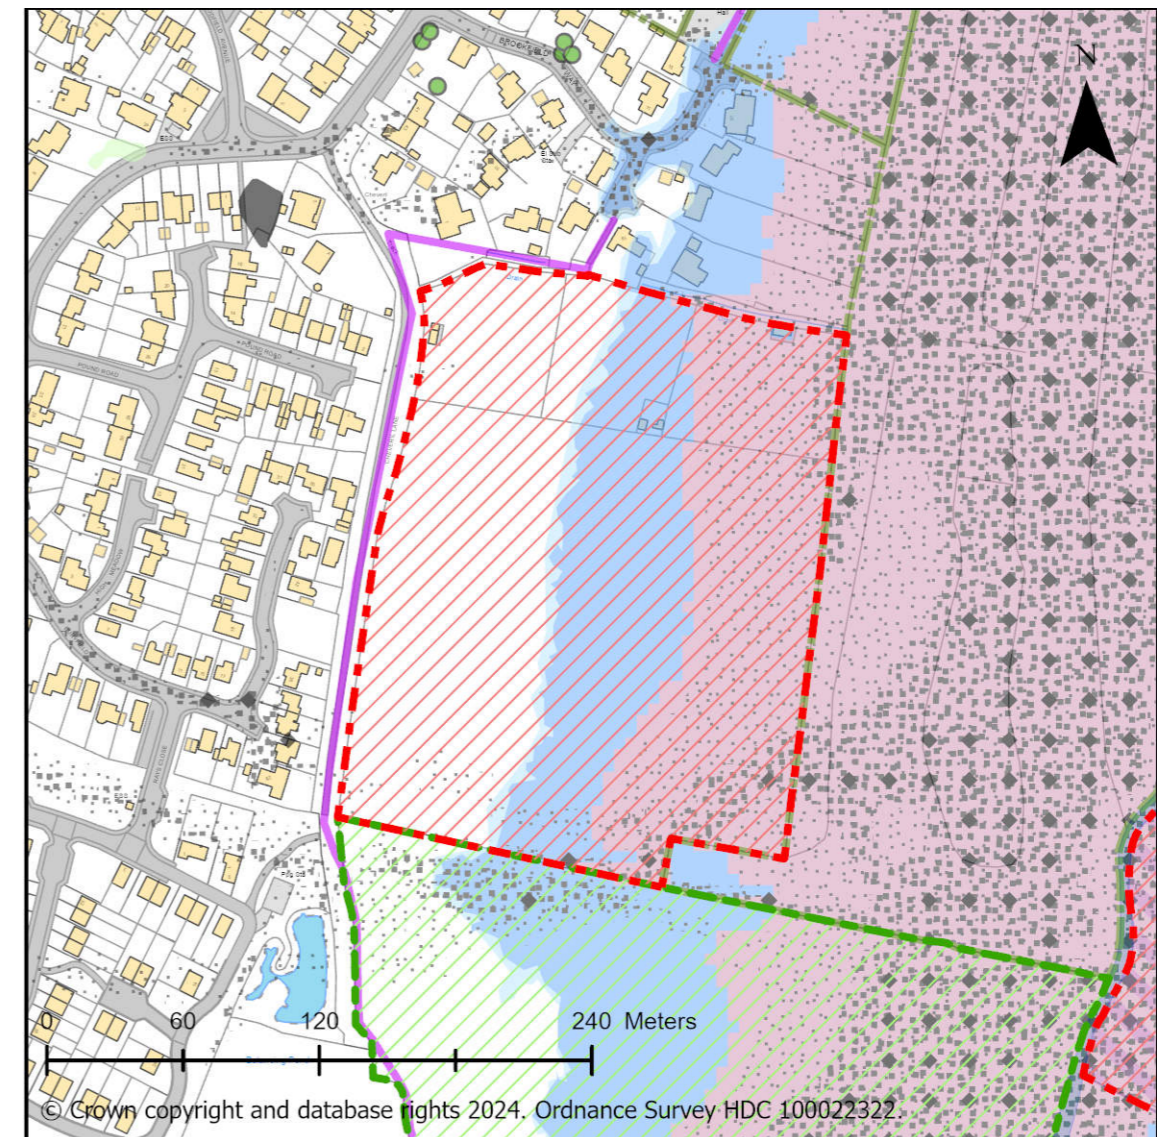

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 279
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None supported

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	30% of the site is within flood zone 3b with a further 28% in flood zone 3a.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is approximately 30% in flood zone 3b with a further 28% in flood zone 3a and 3% in flood zone 2. This increased risk of fluvial flooding is focused on the eastern half of the site. The remaining 39% of the site is within flood zone 1. The site is also constrained by some surface water flood risk, particularly on its eastern side. The majority of the site is classified as grade 2 agricultural land apart from about a third of the site along its eastern side which is classified as grade 3. The site is broadly level with some minor storage structures within the northern third of the site which has been in equestrian use. Established trees and vegetation run along the majority of the site's boundary apart from its north western corner which provides views into the site. This vegetation is more intermittent along its eastern edge where it adjoins Ramsey golf club. A line of vegetation also runs through the site which separates the northern third off from the larger site. A public right of way runs adjacent to the site's western edge along Cheveril Lane and its northern edge which connects into Brookfield Way. The site is adjacent to residential development to the north and west with Ramsey golf course to the west and the open countryside to the south.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Electricity poles run through the site. There are no nature conservation or heritage designations on site. There is an existing access into the site from Cheveril Lane which is a narrow track. An access may also be possible from Brookfields Way, however, there is a ransom strip of land which separates the access to the site.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single company with it being optioned for development. Development is supported by all landowners. There are no known legal restrictions impacting the site. The site promoter anticipates that the site will be delivered directly by a housebuilder. It is anticipated that the site will be available between 2024 and 2028 and take 2 to 3 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all access and servicing to the site are accessible from the site boundary. The site promoter states that there are no issues to resolve before development and that there are no constraints that would restrict the developable area of the site. However, as highlighted above, the site is heavily constrained by fluvial flood risk which covers over half of the site and makes potential built development within these areas unsuitable. There is still some 39% of the site within flood zone 1 which could accommodate some built development. Access into the site is also a constraint to developing the site. Electricity poles run through the site which may impact the layout of development, however this is over land constrained by flood risk largely. Established existing vegetation</p>	~

<p>and trees largely screen the site, however this is intermittent on its eastern edge and limited on its northern edge so some enhanced landscaping will be required to mitigate landscape impact.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield and has been optioned with a housebuilder involved with the site and deliver the development. As highlighted above the site is heavily constrained by flood risk challenges and access may not be possible. It does not appear that the site promoter is seeking an allocation status for the site, even though a housebuilder is involved with the site considering the scale of the constraints the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of land largely classified as grade 2 agricultural land</li> <li>• Is heavily constrained by fluvial flood risk with 30% being within flood zone 3b and only 30% of the site being within flood zone 1, this flood risk is likely to worsen with climate change</li> <li>• In walking distance to services, primary education, shops and employment opportunities within Bury and Ramsey</li> <li>• Good accessibility to public transport via bus</li> <li>• Accessible to natural green space</li> <li>• Not constrained nature conservation or by heritage designations</li> <li>• Located adjacent to the built form of Bury with countryside to the south and Ramsey golf course to the east. The site has a rural character, there is also a public right of way to the west of the site extending into the countryside. There are opportunities for integration of built development with the surrounding area as a result and residential development would be compatible with neighbouring land uses. However, the risk of flooding severely impacts the masterplanning of the site particularly when considering the risk with climate change.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not considered to be appropriate for development due to the substantial risk of flood risk now and in the future accounting for climate change. Development would also further erode the rural edge of Bury.</li> </ul>

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 381 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is constrained by fluvial and surface water flood risk along its western edge which is attributed to its proximity to Bury Brook. This part of the site falls within flood zone 3b and 3a making built development on this side of the site unsuitable. The site is wholly classified as grade 3 agricultural land. Land levels within the site vary with higher points</p>	~
--	---

<p>being found along Warboys Road on the northern and western edges of the site and the highest point being towards the southern edge of the site. The land dips towards its centre which is some 5-10m lower than land to the north, west and south. The highest point of the site also contains a historic feature called Mill Mound which could historically have been the location of a windmill. This is not designation as a heritage asset but is a feature of local interest and should be retained. The site has established vegetation and trees along its boundaries and there is also a line of vegetation running through the site. The site is located to the east of the main built form of Bury being to the west of the site is Ramsey golf club and focused around the Holy Cross. To the south is the open countryside. Residential development adjoins its northern edge, there are sum residential properties along its eastern edge on Warboys Road which adjoin and punctuate into the site.</p> <p>There is no known contamination on the site and it is not impacted by oil or gas pipelines. There are no nature conservation designations on site. It is wholly located within the conservation area and it is adjacent to several listed buildings: The Manor House, Bury Bridge, Hall Farm and Holy Cross Church. All of these are grade II listed apart from the Church which is grade I listed. There are existing access points into the site from Warboys Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states that it is intended to secure an allocation status for the site and then sell it to a third party for obtaining planning permission and development. They state that the site is available between 2024 and 2028 and take between 3 and 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all access and services are accessible from the site's boundary. There are cumulative constraints and topographical challenges impacting development of the site. The site is heavily constrained by fluvial and surface water flood risk on its western edge, this is mostly flood zone 3b which means that built development is unsuitable in this area. A large proportion of the site is within flood zone 1 which could potentially accommodate development. Heritage assets constrain the whole of the site as it is within the conservation area and there are also several listed buildings adjacent to the site, the setting of these will be impacted by development including the grade I listed Holy Cross Church. This impact is more notable due to its higher grade but also because the Church is located on higher ground.</p>	~

<p><b>Deliverability / developability</b></p> <p>The site is greenfield but as highlighted above the site is heavily constrained making development particularly challenging, these may be overcome through detailed masterplanning and reducing the developable area of the site however detailed work will be required to do this. An allocation status is sought for the site. The site promoter also states in their submission that following allocation a development brief would be agreed with the planning authority and local community. Considering these, if constraints can be overcome the site can be categorised as being developable.</p>	~	
--	---	--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of land classified as grade 3 agricultural land</li> <li>• Is heavily constrained by fluvial flood risk along its western edge, this flood risk is likely to worsen with climate change</li> <li>• In walking distance to services, primary education, shops and employment opportunities within Bury and Ramsey</li> <li>• Good accessibility to public transport via bus</li> <li>• Accessible to natural green space</li> <li>• Not constrained nature conservation designations</li> <li>• Is located within a conservation area and within the setting of several listed buildings including the grade I listed Holy Cross Church. There may be some non-designated heritage assets within the site notably Mill Mound in the southern part of the site</li> <li>• Located to the east of the main built form of Bury separated by Ramsey golf course. This part of the settlement has a much more established rural character and therefore development at the potential scale proposed by the site promoter would result in significant impact.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not considered to be appropriate for development due to the substantial risk of flood risk now and in the future accounting for climate change. Development would also likely harm the character and rural nature of this part of the settlement as well as adversely impact heritage assets.</li> </ul>

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 384 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>This site proposes a third phase to the current redevelopment of RAF Upwood. It is located to the north of Phase Two. A Phase Four site has also been submitted (see Upwood and The Raveleys 1 for the assessment of this site).</p>	+
--	---

<p>The site is wholly located within flood zone 1 and there is no recorded risk from surface water flooding. It is wholly classified as non-agricultural land. The site is generally flat but falls gently from the south to the northern edge. There are areas of existing hardstanding which once formed the runway of RAF Upwood stretches along the northern boundary of the site with spurs connecting to the existing hangars. The Vision Document submitted states that part of the existing runway will be converted into a linear nature corridor with multi-functional attenuation basins and swales. The site is fairly open with limited vegetation along its boundaries providing views out across agricultural fields to the north and west. There is a public right of way to the north east outside the site providing views from a public vantage point into the site. To the east is residential development and to the south is phase two of the RAF Upwood redevelopment and also Upwood Air Park which contains several hangars which are to be retained in operation by the lease on the land and is therefore outside the area of redevelopment. To the north and west is open countryside. Considering the wider redevelopment works going on within RAF Upwood, the site's immediate context to the south in particular is continuing to evolve.</p> <p>There is no known contamination on site, although this may require further investigation considering the current use of the site. No oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. The Vision Document details that access to the site is proposed through the Phase Two development which is yet to be determined. An existing access to the south west will also be retained for vehicles to access the existing hangars that are remaining in commercial operation. The site promoter has submitted two access plans detailing the connection between the site and the Phase Two development site. These plans are supported by a Transport Technical Note for Phases Three and Four. Engagement with Cambridgeshire County Council will be required to assess this further and ensure effective integration and access between these parcels.</p> <p>The site is previously developed, so its redevelopment will contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single developer company who supports its development. There are no known legal restrictions impacting the site. The site promoter states that they intend to acquire planning approval on the site and then sell it to a third party for development. They states that it will be available between 2029 and 2034 and take 3 to 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that gas supply, electricity supply and digital and telecommunications infrastructure are accessible from the site boundary. They identify that mains water supply and the public highway is not immediately accessible. There are limited</p>	~

<p>physical constraints to developing the site and masterplanning is already underway in bringing forward an integrated scheme with the wider site. The achievability of development is however dependent on the delivery of Phase Two to the south which has an active planning application on it. That site is however allocated in the Huntingdonshire Local Plan to 2036 so development is in principle supported.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is previously developed with existing hardstanding to remove. There are limited topographical challenges to the site and limited constraints to overcome. The site forms an extension to an existing development site. The site promoter anticipates the site to be available between 2029 and 2034, this provides time for an outcome of Phase Two to be reached. Considering these factors, the site is categorised as being developable.</p>	

- While it could form a future phase, the additional pressure and demand on services will need to be assessed to determine if additional infrastructure including social and cultural facilities are required to serve this site and the wider redevelopment as a whole.
- It will require landscaping along its northern and western edges in particular to provide a soft development edge and retain a sense of visual separation between the site and Bury

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area is 17.69ha</p> <p>Minus 11.53ha of the site for natural, green or open spaces in line with the developer's aspirations. This leaves 6.16ha of the site area remaining.</p> <p>80% net developable area to accommodate landscaping on its northern edge</p> <p>6.16 ha x standard proportion of 80% = <b>4.9ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Low density of 35 dph anticipated due to the site's location being in a larger settlement so a slightly higher density than very low could be accommodated.</p> <p>Capacity = 4.9 ha x 35 dph = <b>172 homes</b></p>	<p>Available post 2028 subject to the delivery of phase two</p> <p>Build out over 3 - 4 years</p>

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is previously developed consisting of land classified as being non-agricultural land</li> <li>• Is not constrained by flood risk</li> <li>• In walking distance to services, primary education, shops and employment opportunities within Upwood, Bury and Ramsey</li> <li>• Good accessibility to public transport via bus</li> <li>• Not accessible to natural green space but some natural open space is proposed as part of the development</li> <li>• Not constrained nature conservation or by heritage designations</li> <li>• It can be effectively masterplanned to become part of the evolving place and community as part of the ongoing redevelopment and the growing community at the former RAF Upwood.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is considered to be potentially appropriate for development. This is dependent on successful integration and physical connections being made from phase two. This is also dependent on the preceding phases being delivered.</li> </ul>
--

**Updates after the Initial Assessment**

## 3 Pidley-cum-Fenton

### 3 Pidley-cum-Fenton

3.1 A total of 6 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Pidley-cum-Fenton 1: Land South at Manor Farm, Fenton Road, Fenton
- Pidley-cum-Fenton 2: Land End Farm, Pidley
- Pidley-cum-Fenton 3: Old Football Field, Warboys Road, Pidley
- Pidley-cum-Fenton 4: Bittens Field, North of Warboys Road, Pidley
- Pidley-cum-Fenton 5: Land North of Oldhurst Road, Pidley
- Pidley-cum-Fenton 6: Gloucester Barn, Fen Road, Pidley

3.2 Please note that 'Warboys 12: Land off Fenton Road, Warboys' also partially falls within Pidley-cum-Fenton parish, but it has been included under Warboys as most of the site lies within that parish area.

3.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

### 3 Pidley-cum-Fenton

#### Pidley-cum-Fenton 1: Land South at Manor Farm, Fenton Road, Fenton

<b>Site reference</b>	Pidley-cum-Fenton
<b>Site name</b>	Land South at Manor Farm, Fenton Road, Fenton

Site address	Parish(es)	Site area (ha)
Land South at Manor Farm, Fenton Road, Fenton	Pidley-cum-Fenton	0.14

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	5 homes	Available 2023 Build out over 18 months

#### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:65
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
-------------------------	--------	---------

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	The site is less than 0.25ha being only 0.14ha. The site promoter states that the site could accommodate five dwellings, however considering the form of the adjoining developments and the very rural location of the site, it is unlikely that five dwellings could be accommodated on the site. A site plan to demonstrate how five dwellings could potentially be accommodated has not been provided at this stage.	Fail

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site has failed the minimum site threshold for detailed assessment.	N/A	N/A

Updates after the Initial Assessment

--

**Pidley-cum-Fenton 2: Land End Farm, Pidley**

<b>Site reference</b>	Pidley-cum Fenton 2
<b>Site name</b>	Land End Farm, Pidley

Site address	Parish(es)	Site area (ha)
Farm Buildings and land at Lane End Farm, Warboys Road, Pidley, PE8 3DA	Pidley-cum Fenton	1.01ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	25 homes	Available 2024 to 2028 Build out 1 to 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 189
Relevant planning history	Application number: 23/00468/AGDET  Proposed development: Steel frame lean-to, bolted to existing cattle barn for feed storage. Steelwork frame and roof to match existing construction.  Outcome: Decision not required
Land type	Wholly greenfield land
Current use of the site	Agricultural
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, limited surface water flood risk is present. The site is greenfield land and classified as grade 2 agricultural land.</p> <p>The site is relatively flat and sits within a small ridgeway which runs throughout the village. The site fronts Warboys Road and sits on a bend in the road, which is open with very few trees or hedgerow, meaning views into the site from here can be clearly seen. On the northern boundary sits residential properties, fencing and trees. On the south eastern corner sits four residential properties and access for agricultural vehicles associated with the use of the site which also acts as a public right of way runs along the eastern boundary heading north. Landscape impact of the proposed development would be minimal. The site promoter notes the site is in use for grazing and is home to a number of farm buildings.</p> <p>No known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines, however some telegraph lines are nearby. There are no known nature conservation, heritage assets or tree preservation orders affecting it. The site is greenfield land and therefore offers no opportunities to contribute to regeneration. The use of the site means that there is the potential for contamination on site which may require assessment and mitigation. The site is not within a mineral safeguarding area, or a water recycling area or buffer zone.</p>	+
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028. Planning permission would be acquired before being sold to a third party for development. Build out is estimated at one to two years.</p>	+
<p><b>Achievability</b></p> <p>Mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. Gas supply is noted as not immediately accessible.</p> <p>No known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines, however some telegraph lines are nearby. The use of the site means that there is the potential for contamination on site which may require assessment and mitigation. There are no known nature conservation, heritage assets or tree preservation orders affecting it. As the site is situated on a bend access directly from Warboys Road may be an issue, there is the potential for access along the eastern edge of the site, however this has not been confirmed, it is therefore unclear if there may be issues with ransom strips which could impact the viability of the site, thus affecting delivery</p>	~

<p>The site promoter describes the site as unsightly due to self built farm buildings and offers the opportunity to enhance the the village with a housing scheme centred around a new village green. Farming activities would be relocated outside of the village centre.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. Constraints to be resolved include access and contamination, which may affect the viability of the site. The site is available from 2024 to 2028. If constraints can be resolved the site could be classified as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk some surface water flood risk is present</li> <li>• The site is greenfield land with some existing farm buildings which are not classified as previously developed land. The site is classified as wholly grade 2 agricultural land.</li> <li>• The site has limited access to community services (church, public park and village hall) and no immediate access to convenience store primary school or employment opportunities.</li> <li>• The site is within 800m of a bus stop with below average frequency.</li> <li>• No heritage assets would be affected.</li> <li>• The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.</li> <li>• The use of the site means that there is the potential for contamination</li> <li>• The site is well located within the existing settlement</li> <li>• Would have limited landscape impact.</li> <li>• A public right of way runs along the eastern edge</li> <li>• The density proposed is low in keeping with the nature of the settlement, that being a small village.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is located such that it has the potential to be effectively masterplanned to become part of the existing area.</li> <li>• Is approximately 1ha in size which contributes to the governments aspiration to promote sites suitable for SME builders.</li> </ul>
---

- Requires flood mitigation.
- Requires assessment for potential land contamination and mitigation if applicable
- Would need to consider integration and retention of the public right of way
- Proposes a village green as part of the development
- Would need to resolve access due to the location of the site on a bend and potential land ownership issues.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.01ha 60% net developable area to allow space for small village green and flood mitigation. $1.01\text{ha} \times 70\% = 0.707\text{ha}$	Net developable area 0.707ha Residential - Market and/or affordable housing Very low density of 25dph to reflect site's location within small village. Capacity = $0.707\text{ha} \times 25\text{dph} = 18 \text{ homes}$	Available 2024 to 2028 Build out 1 to 2 years

Page 393 of 3488

**Updates after the Initial Assessment**

### 3 Pidley-cum-Fenton

#### Pidley-cum-Fenton 3: Old Football Field, Warboys Road, Pidley

<b>Site reference</b>	Pidley-cum Fenton 3
<b>Site name</b>	Old Football Field, Warboys Road, Pidley

Site address	Parish(es)	Site area (ha)
The Old Football Field, on Warboys Road adjacent to Pond Close, opposite Pidley Village Hall	Pidley-cum Fenton	1.20ha

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	6 homes	Available 2023 Build out 2 years

#### Core information

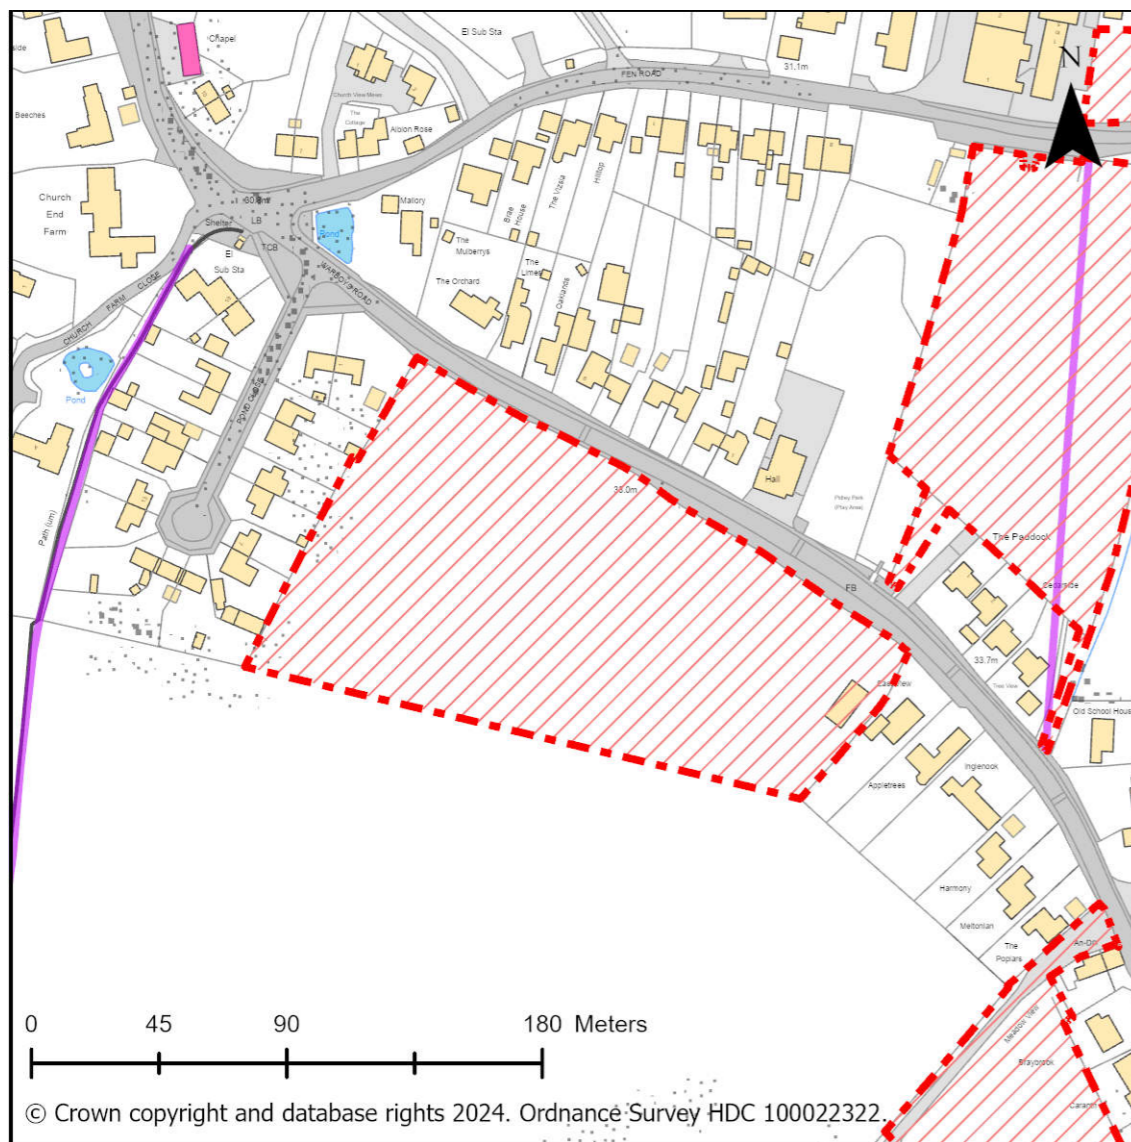

How was the site identified?	Call for sites 2023 submission: site reference - CfS:190
Relevant planning history	Application number: 19/02574/PIP Proposed development: Permission in principle for up to 4 dwellings Outcome: Refused Application number: 18/00269/FUL Proposed development: Erection of stables and hardstanding Outcome: Approved
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, limited surface water flood risk is present. The site is greenfield land and classified as grade 2 agricultural land.</p>	+
--	---

<p>The site is relatively flat and sits within a small ridgeway which runs throughout the village. The site fronts Warboys Road, hedgerow and some trees line the northern boundary, although views can be seen into the site. To the east and west of the site sit residential properties and a small barn/stables sits within the site. The site is in arable agricultural use. The southern boundary of the site looks out across open countryside and although some trees and hedgerow are present, further landscaping or mitigation may be required to allow the site to transition to the open countryside.</p> <p>No known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines. There are no known nature conservation, heritage assets or tree preservation orders affecting it. The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area, or a water recycling area or buffer zone.</p>	+
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2023. The site would be delivered directly by the land owner. Build out is estimated at two years.</p>	+
<p><b>Achievability</b></p> <p>Mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. Gas supply is noted as not immediately accessible.</p> <p>No known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines. Access to the site can be achieved via an exiting access point off Warboys Road, which would assist with the logistics of construction. There are no significant constraints.</p> <p>The site promoter proposes 6 homes to be built over 2 years. No further information has been provided</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions or significant constraints. The site is available now and build out is estimated to take 2 years, directly delivered by the landowner. The site is classified as deliverable.</p>	+

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk some surface water flood risk is present
- The site is greenfield land with an existing barn/stables which are not classified as previously developed land. The site is classified as wholly grade 2 agricultural land.
- The site has limited access to community services (church, public park and village hall) and no immediate access to convenience store primary school or employment opportunities.
- The site is within 800m of a bus stop with below average frequency.
- No heritage assets would be affected.
- The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.
- The site is well located within the existing settlement
- No footpath adjoins the site frontage, however there is a footpath opposite the site
- The southern boundary of the site looks out across open countryside meaning it may have landscape impact
- The density proposed is extremely low and may not make the best use of land.

In combination the outcomes of the LAA and SA indicate that the site:

- Is located such that it has the potential to be effectively masterplanned to become part of the existing area.
- Is of a size that could contribute to the housing needs of the district.
- Requires flood mitigation.
- Should consider safety of residents and active travel access to the site.
- Would require landscape mitigation to transition to open countryside
- Should look at revising the density to make the best use of land

Page 396 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.20ha  80% net developable area to allow for landscaping.  1.20ha x 80% = 0.96ha	Net developable area 0.96ha  Residential - Market and/or affordable housing  Very low density of 25dph to reflect site's location within small village.	Available 2024 to 2028  Build out 1 to 2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Capacity = 0.96ha x 25dph = <b>24 homes</b>	

**Updates after the Initial Assessment**

**Pidley-cum-Fenton 4: Bittens Field, North of Warboys Road, Pidely**

<b>Site reference</b>	Pidley-cum Fenton 3
<b>Site name</b>	North of Warboys Road, Pidley

Site address	Parish(es)	Site area (ha)
North of Warboys Road, located between Fen Road and Warboys Road, adjacent to the Pidley Playpark and Village Hall, Pidley	Pidley-cum Fenton	1.20ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Specialist housing	10 homes	Available 2023 Build out 2 years

**Core information**

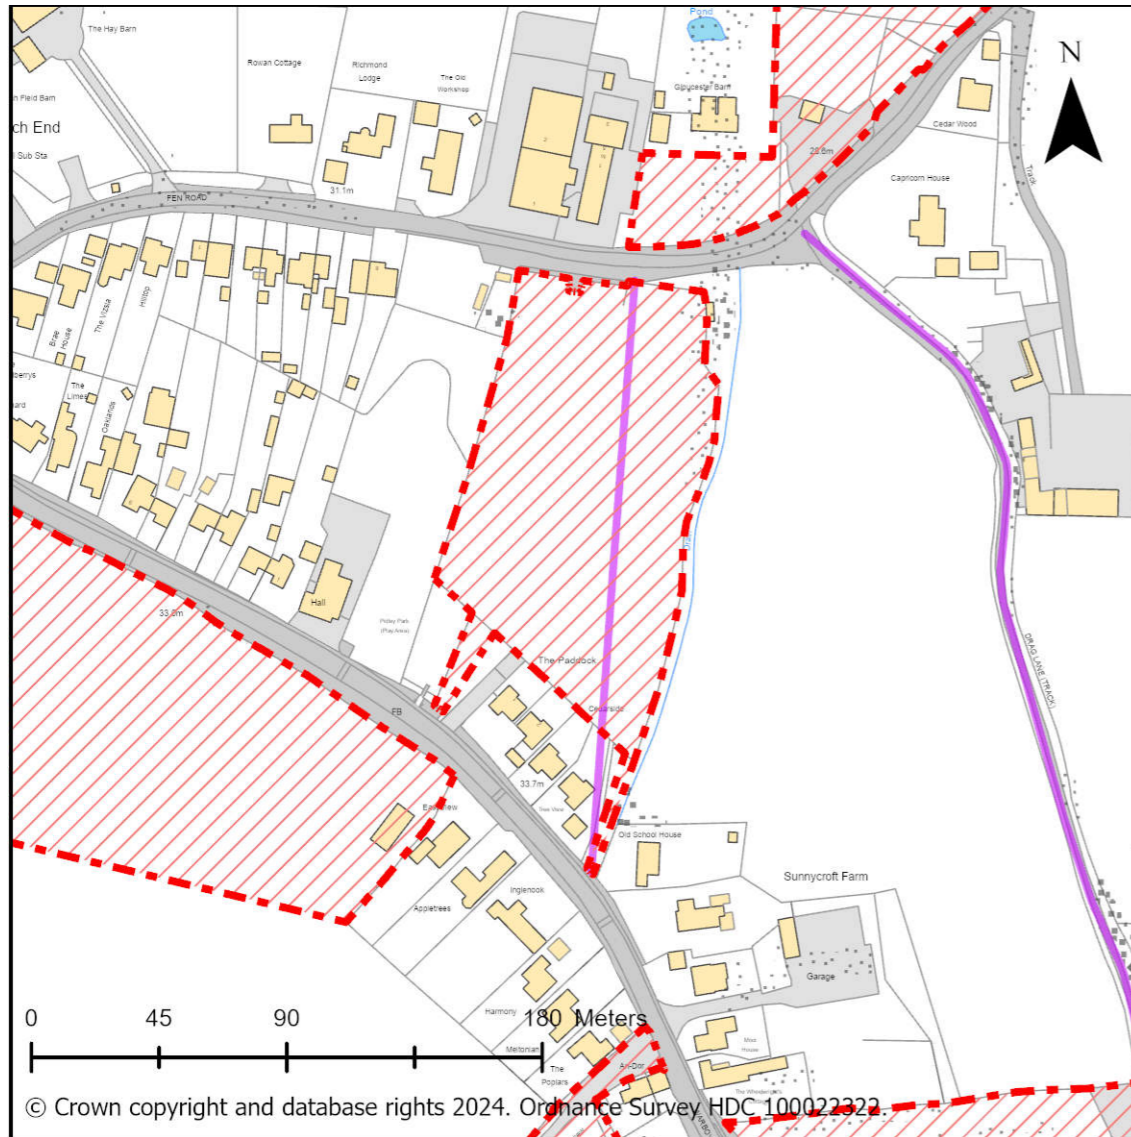

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 217
Relevant planning history	<p>Application number: 19/00731/PIP</p> <p>Proposed development: Permission in Principle for up to 2 dwellings</p> <p>Outcome: Refused</p> <p>Application number: 19/00110/PIP</p> <p>Proposed development: Permission in Principle for up to 4 dwellings</p> <p>Outcome: Refused</p> <p>Application number: 0802167FUL</p> <p>Proposed development: Use of land for the keeping of horses</p>

	Outcome: Approved
Land type	Wholly greenfield land
Current use of the site	Agricultural
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present. The site is greenfield land and classified as grade 2 agricultural land.</p> <p>The site is relatively flat and sits within a small ridgeway which runs throughout the village. The site is sandwiched between Warboys Road and Fen Road, on the southern boundary site 4 residential properties. The site is screened to the east by trees and hedgerow and Pidley park sits to the west and is relatively well screened. To the north the site is somewhat screened by some trees and hedgerow. A public right of way dissects the site. A few trees</p>	+
---	---

can be seen within the site. Due to the location and screening of the site, it would have minimal landscape impact if trees and hedgerow were to be retained. The site provides to opportunities for access from Warboys Road and Fen Road.

No known gas or oil pipelines or buffer zones cross the site, but overhead electricity powerlines do. There are no known nature conservation, heritage assets or tree preservation orders affecting it. The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area, or a water recycling area or buffer zone.

**Availability**

The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2023. The site would be delivered directly by the land owner. Build out is estimated at two years.

**Achievability**

Mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. Gas supply is noted as not immediately accessible.

No known gas or oil pipelines or buffer zones cross the site, but overhead electricity powerlines do which would require mitigation or integration.

The site provides to opportunities for access from Warboys Road and Fen Road, which would assist with the logistics of construction. There are no significant constraints.

The site promoter proposes retirement bungalows/storey and a half properties specially designed for elderly and infirm residents of the village. They propose that the properties would be zero carbon with communal ground source heating and extremely disabled friendly. The houses would have a covenant on them to guarantee that they always remain in use by elderly/infirm residents. Development of the site take into consideration a public footpath that runs along the eastern side of the site.

**Deliverability / developability**

There are no known legal restrictions or significant constraints. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it.

Build out is estimated to take 2 years, directly delivered by the landowner. The site is classified as developable.

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk some surface water flood risk is present</li> <li>• The site is wholly greenfield land with no existing structures. The site is classified as wholly grade 2 agricultural land.</li> <li>• The site has limited access to community services (church, public park and village hall) and no immediate access to convenience store primary school or employment opportunities.</li> <li>• The site is within 800m of a bus stop with below average frequency.</li> <li>• No heritage assets would be affected.</li> <li>• The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.</li> <li>• The site is well located within the existing settlement</li> <li>• The site proposes zero carbon properties with communal ground source heating which would assist with meeting net zero carbon targets</li> <li>• A footpath runs along the opposite side of the site.</li> <li>• Pidley park sits to the west</li> <li>• It is relatively well screened and would have minimal landscape or townscape impact if trees and hedgerow were retained</li> <li>• The density proposed is extremely low and may not make the best use of land.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is located such that it has the potential to be effectively masterplanned to become part of the existing area.</li> <li>• Could provide retirement housing and contribute to net zero ambitions</li> <li>• Is of a size that could contribute to the housing needs of the district.</li> <li>• Requires flood mitigation.</li> <li>• Should consider safety of residents and active travel access to the site.</li> <li>• Assessment would be required to ensure integration and mitigation where necessary to ensure complimentary integration of the park and proposed development.</li> <li>• Should consider retention of trees and hedgerow</li> <li>• Requires integration of public right of way.</li> <li>• Should look at revising the density to make the best use of land</li> </ul>
--

Page 399 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 1.20ha</p> <p>60% net developable area to allow for separation from park and retention of public right of way.</p> <p>1.20ha x 60% = 0.96ha</p>	<p>Net developable area 0.96ha</p> <p>Residential - Specialist housing</p> <p>Very low density of 25dph to reflect site's location within small village.</p> <p>Capacity = 0.96ha x 25dph = <b>18 homes</b></p>	<p>Available 2024 to 2028</p> <p>Build out 1 to 2 years</p>

The site is classified as developable.</p>	

Progression of Site through to Sustainability Appraisal

Should the site progress to the sustainability stage?	Yes
---	-----

Impact of the Sustainability Appraisal on the assessment

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk some surface water flood risk is present
- The site is greenfield land with a existing barn present which is not classified as previously developed land. The site is classified as wholly grade 2 agricultural land.
- The site has limited access to community services (church, public park and village hall) and no immediate access to convenience store primary school or employment opportunities.
- The site is within 800m of a bus stop with below average frequency.
- No heritage assets would be affected.
- The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.
- The site is well located within the existing settlement
- The site is exposed to the wider landscape to the west a established tree line dissects the site
- A residential building sits just outside the north western corner
- There are two potential access options to the site for vehicles, with a footpath available from Warboys Road to allow active travel linkages to the existing residential community.
- The density proposed is extremely low and may not make the best use of land.

In combination the outcomes of the LAA and SA indicate that the site:

- Is located such that it has the potential to be effectively masterplanned to become part of the existing area.
- Is of a size that could contribute to the housing needs of the district.
- Requires flood mitigation.
- Assessment would be required to ensure integration and mitigation where necessary of existing residential building just outside the site
- Would require landscape mitigation and consideration of exiting trees within the site
- Should look at revising the density to make the best use of land
- Would contribute to the requirement to provide custom and self build plots

Page 402 of 3488

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.62ha 80% net developable area to allow for landscaping. $1.62\text{ha} \times 80\% = 1.296\text{ha}$	Net developable area 1.296ha Residential - Custom and self-build housing Very low density of 25dph to reflect site's location within small village. Capacity = $1.296\text{ha} \times 25\text{dph} = 32 \text{ plots}$	Available post 2028 to allow for allocation Build out 2 to 5 years

Residential: Custom and self-build housing	4 plots	Available 2024-2028 Build out 3 years

**Core information**

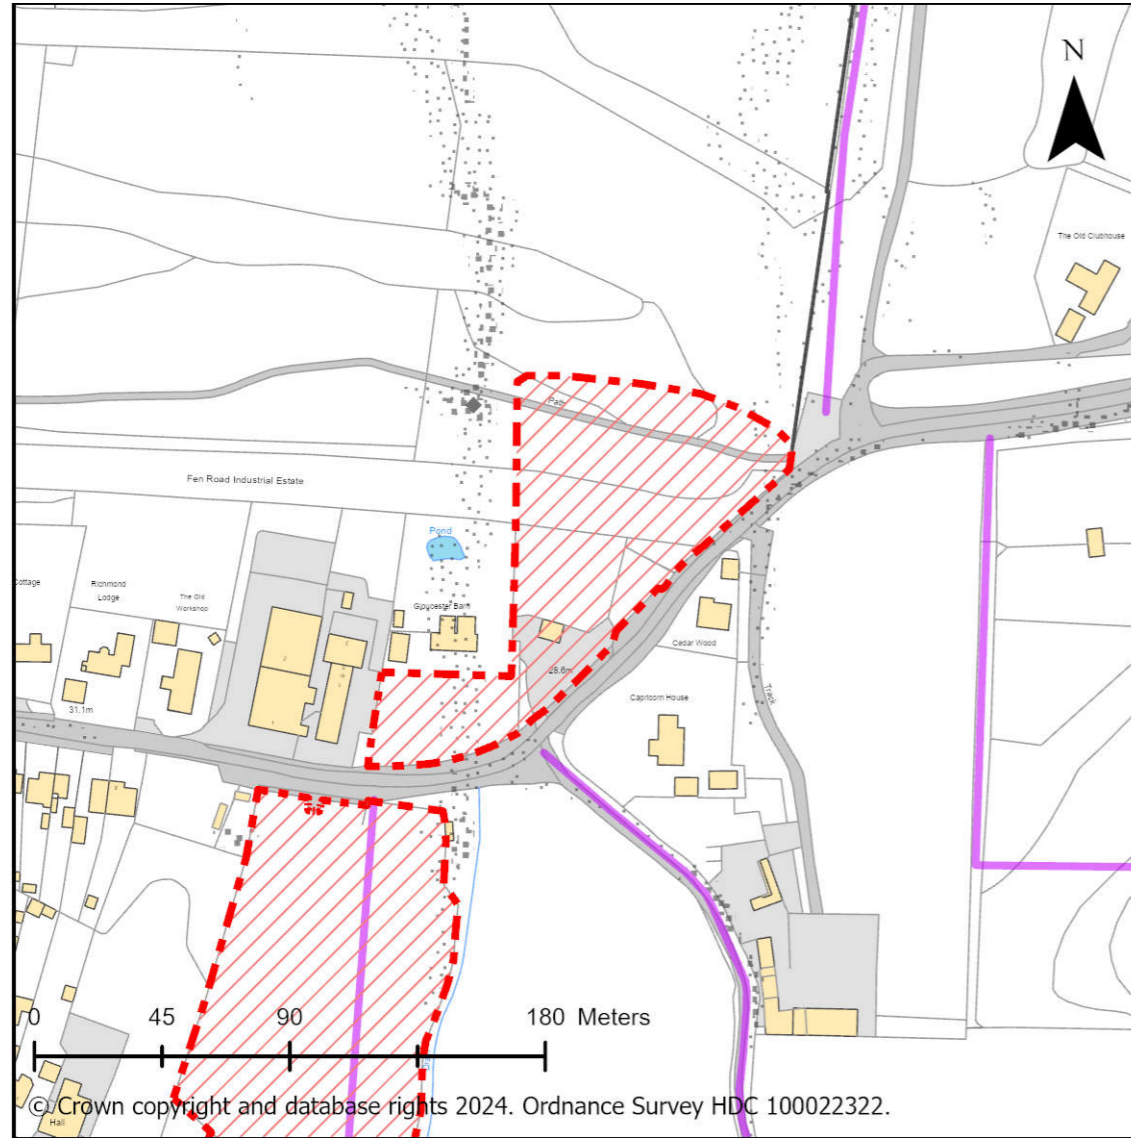

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 254
Relevant planning history	<p>Application number: 21/01979/AGDET</p> <p>Proposed development: Steel framed agricultural barn: timber clad on three sides for storage of hay and farm machinery. See enclosed Agricultural Appraisal.</p> <p>Outcome: Not required</p> <p>Application number: 19/00732/PIP</p> <p>Proposed development: Permission in Principle for up to 2 dwellings.</p> <p>Outcome: Refused</p> <p>Application number: 19/00115/PIP</p> <p>Proposed development: Permission in Principle for up to 3 Dwellings</p>

	Outcome: Refused
Land type	Mostly greenfield land, with garden land and some land used for commercial (storage use) with no permanent structures.
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 404 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, limited surface water flood risk is present. The site is greenfield land and classified as grade 2 agricultural land.</p>	~
--	---

<p>The site appears to slope gently down south east to north west, with a land variation of approximately 7 meters. The southern boundary abuts Fen Road. The south western corner of the land is comprised of garden land, adjacent to the east is land used for commercial (storage use) with no visible permanent structures, but with a potential for contamination. A strong band of established trees traverse the site east to west with another forming the northern edge. This dissects the site into distinct parcels of land. Trees are also dispersed throughout the site. the removal of these trees could have significant ecological or biodiversity impact. Some of the northern extent of the site appears to form part of the golf complex, but further investigation would be required. A public footpath is just outside the site to the east. The footpath is outside the north eastern corner.</p> <p>No known gas or oil pipelines or buffer zones cross the site, or overhead electricity powerlines. There are no known nature conservation, heritage assets or tree preservation orders affecting it. The site is predominantly greenfield or garden land and therefore offers little opportunity to contribute to regeneration. The site is not within a mineral safeguarding area, or a water recycling area or buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028. The site would be self build plots intended to be delivered by individual plot/home owners. Build out is estimated at three years.</p>	+
<p><b>Achievability</b></p> <p>Mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. Gas supply is noted as not immediately accessible.</p> <p>No known gas or oil pipelines or buffer zones cross the site, or overhead electricity powerlines. The site is separated into distinct parcels comprising garden land, land used for commercial (storage use) and is dissected and bound on the northern edge with established trees, with further trees dispersed within the site. The site promoter notes that the site is within single family ownership which would assist with land assembly, however impact on biodiversity and ecology and potential for contamination on site as a result of an existing use would require further mitigation, assessment. The site could be accessed from Fen Road which could assist with the logistics of construction. Removal of the trees could affect the landscape features within this area.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal restrictions. There are some constraints which would require further assessment including impact on biodiversity, ecology and potential contamination. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Build out is estimated to take 3 years, intended to be delivered by individual plot/home owners. The site is classified as developable.

- Would create an extension to the village with limited relationship to the main concentration of residential development within the village.
- Has the ability to substantially impact the landscape and biodiversity and ecology through the removal of extensive tree coverage
- Would require the assembly of land in multiple uses (garden land, employment and greenfield), however the site promoter notes this is in single ownership.

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk some surface water flood risk is present
- The site is mostly greenfield land, with garden land and some land used for commercial (storage use) with no permanent structures on site meaning prioritisation of previously developed land is negligible at best
- The site has limited access to community services (church, public park and village hall) and no immediate access to convenience store primary school or employment opportunities.
- The site is within 800m of a bus stop with below average frequency.
- No heritage assets would be affected.
- The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution. Contamination may be present as part of the commercial (storage) use.
- The density proposed is extremely low and may not make the best use of land.
- The is more related to the countryside.
- The site would extend development further north, this is not in keeping with the limited development in this area.
- The site has the ability to also impact the landscape and biodiversity and ecology of the area if existing extensive tree coverage were to be removed.
- The site would require the assembly of land in multiple uses (garden land, employment and greenfield).

In combination the outcomes of the LAA and SA indicate that the site:

- Is in a location that could not be effectively masterplanned to become part of the existing community.

Page 405 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken due to landscape, ecology, biodiversity impact and lack of relationship to the existing settlement.	N/A	N/A

**Updates after the Initial Assessment**

4 Ramsey

4.1 A total of 17 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Ramsey 1: Land South of Biggin Lane, Ramsey
- Ramsey 2: Land to the West of Longland Crescent, Ramsey
- Ramsey 3: Land North of Hollow Lane, Ramsey
- Ramsey 4: Land East of Wood Lane, Ramsey
- Ramsey 5: Land at Newtown Road, Ramsey
- Ramsey 6: Land East of Stocking Fen Road, Ramsey
- Ramsey 7: Ramsey Gateway, St Mary's Road, Ramsey
- Ramsey 8: Peppers yard, Stocking Fen, Ramsey
- Ramsey 9: School Farm, Stocking Fen Road, Ramsey
- Ramsey 10: Land off Ugg Mere Court Road, Ramsey Heights
- Ramsey 11: Land off Middlemoor Road, Ramsey St Mary
- Ramsey 12: Chestnut Farm, Ramsey Mereside
- Ramsey 13: Land on Oillmills Road, Ramsey Mereside
- Ramsey 14: Ramsey Forty Foot Village rural mooring, Ramsey Forty Foot
- Ramsey 15: Land at Bridge Farm, Ramsey Forty Foot
- Ramsey 16: Forty Foot Field, North of Mill Lane, Ramsey Forty Foot
- Ramsey 17: Woodlane Farm, West of Ramsey Road, Ramsey Forty Foot, Ramsey

Please note that 'Bury 7: RAF Upwood - Phase 3, Bury' also partially falls within Ramsey parish, but it has been included under Bury as most of the site lies within that parish area.

4.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Context, constraints and potential suitability
It is wholly located within flood zone 1 with no recorded risk from surface water flooding. The site is classified as being non- agricultural land. The site consists of an agricultural field with limited trees and hedgerows along its eastern, western and southern edges but there is more established trees along its northern edge along Biggin Lane. As highlighted,

<p>Biggin Lane runs along its northern edge with Rose Street running along its eastern and southern/ south western edges (this is also a public right of way). The topography of the site gently slopes from its higher western edge to its eastern edge, this gently slopes by some 5 to 6m. This makes development on its western edge more likely to have an impact on the landscape and also on nearby development. Also this part of Ramsey is undergoing an significant amount of development which is further urbanising the adjoining countryside. To the immediate north, west and south of the site are agricultural fields, to the east the site adjoins new residential development. Further to the south is the redevelopment of RAF Upwood and further westwards is a small solar farm.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Access may be achievable from Biggin Lane and Rose Street. Biggin Lane is arrow so engagement will be required if the quantum of development can be accommodate on this road partivuarly considering the amount of new development within the site's immediate vicinity. The site promoter states that highway improvements to Biggin Lane will be required to facilitate access.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter seeks to acquire planning permission and then sell the site to a third party for development. They expect the site to be available between 2024 and 2028 and take 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are few physical constraints to overcome in developing the site, its landscape setting and topography provide some challenges, particularly locating development within its western half where the land is highest and also extending the the built form of Ramsey further into the countryside. Masterplanning and considerate design may be able to overcome these. There are established trees along its northern boundary along Biggin Lane which provide a rural feel to the entry into the site, there is an access adjacent to the north eastern of the site from Rose Street which connects onto Biggin Lane but some additional trees may need to be removed to provide sufficient access. Additionally, the site promoter states that highway improvements to Biggin Lane will be required to facilitate access.</p>	~
<p><b>Deliverability / developability</b></p>	~

The site is greenfield with no structures on site to clear. As highlighted there are minimal constraints to overcome but careful masterplanning and design will be required to ensure a sympathetic development can be achieved that harmonises and is integrated with the evolving context of the site. The site promoter doe snot appear to be seeking an allocation status for the site and expects the site to be available between 2024 and 2028. However, considering that there is no planning application on site, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as being non-agricultural land
- Is not constrained by fluvial or surface water flood risk
- In walking distance to Ramsey town centre being about 1.4km from the town centre
- In a sustainable location to access services, shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey
- Good accessibility to public transport via bus but remote from a train station
- Not accessible to natural green space but is within walking distances to local parks and play areas
- Not constrained nature conservation or heritage designations
- Is of a scale that could provide a wide range of types, sizes and tenures
- It is located on the western side of Ramsey in an area where the town has expanded considerably. The site extends into the countryside making landscape impact greater and would continue to urbanise the western side of the town and countryside.
- Integration is also a challenge and accessibility from Biggin Lane will require upgrades to facilitate development

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered not to be potentially appropriate for development due to the likely adverse impact on the landscape and townscape character of Ramsey

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	220 homes	Available 2023 Build out over 3 years

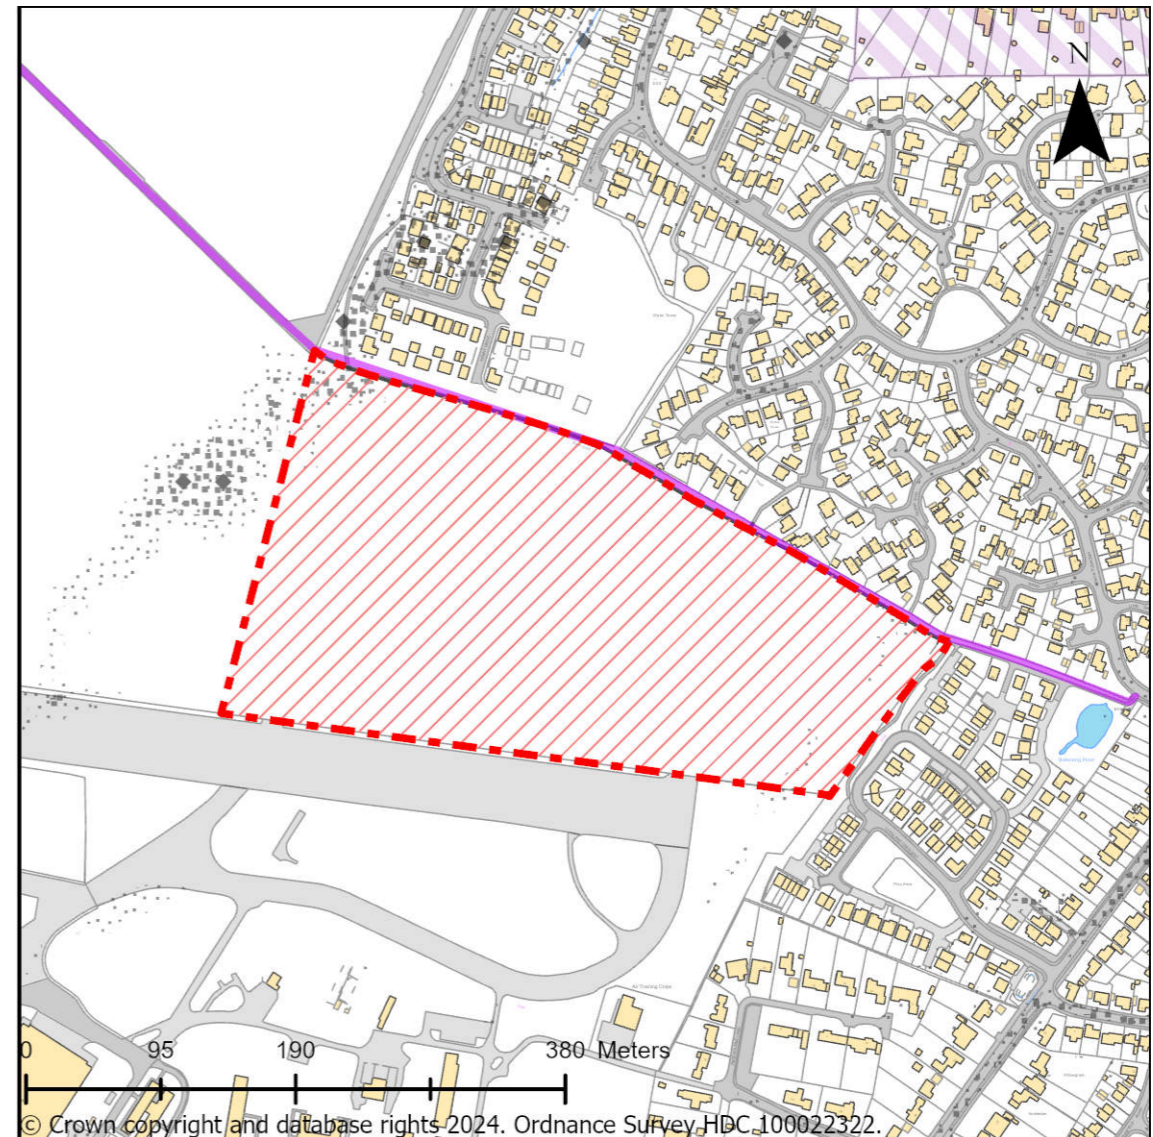

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:286
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>It is wholly located within flood zone 1 with some recorded risk from surface water flooding within its north western corner. The site is classified as being non- agricultural land. The site consists of an agricultural field with limited trees and hedgerows along its northern and eastern edges, there are some intermittent trees and fencing along its southern boundary with RAF Upwood. The site is almost completely open on its western side apart from a small amount of trees named Johns Wood. A public right of way runs along the site's northern edge. The site is broadly level, the land immediately around the site is also of a very similar elevation. To the west of the site is open countryside, to the south is RAF Upwood which is under going redevelopment. To the north and east are residential developments which have expanded the built form of Ramsey further westwards into the countryside. Therefore, this part of Ramsey is undergoing a significant amount of development which is further urbanising the adjoining countryside and as such the site's immediate context is evolving. Additionally, within the context of Ramsey and Bury, the site is win a sensitive location in terms of furthering coalescence between these two settlements.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. It is unclear from the information submitted where access may be provided to the site, considering the surrounding context of the site it is understood that access would be sought from a neighbouring development site, potentially the one to the north via Stoneman Way if a connection could be made or from the north west corner of the site form Rose Street where there is an existing farm access into the site.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is within the ownership of a single company and has been optioned. A housebuilder is involved with the site. There are no known legal restrictions impacting the site. The site promoter states that it is intended to deliver the site directly by a housebuilder and that the site is available now for development. It could take approximately 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are few physical constraints to overcome in developing the site, its landscape setting and relationship with its surrounding context are challenges, particularly the potential further coalescence between Ramsey and Bury. The achievability of access is also a constraint that needs to be scoped out further.</p>	~
<p><b>Deliverability / developability</b></p>	~

The site is greenfield with no structures on site to clear. There are minimal constraints to overcome in developing the site, however careful design and masterplanning will be required to ensure a sympathetic and sensitive development. Access also needs to be scoped further. Even though the site promoter states that the site is available now and that a housebuilder is involved with the site, no planning application has yet been received, therefore it is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as being non-agricultural land
- Is not constrained by fluvial or surface water flood risk
- In walking distance to Ramsey town centre being about 1.5km from the town centre
- In a sustainable location to access services, shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey
- Good accessibility to public transport via bus but remote from a train station
- Not accessible to natural green space but is within walking distances to local parks and play areas
- Not constrained nature conservation or heritage designations
- Is of a scale that could provide a wide range of types, sizes and tenures
- Is located on the south western side of Ramsey in an area where the town has expanded considerably. The site has a close relationship with Bury and Upwood forming a key landscape break between these settlements and also Ramsey.

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered not to be potentially appropriate for development as development of the site would continue the urbanising impact of development on this part of the countryside and risk the further sense of coalescence between these settlements and therefor adversely impacting landscape ad townscape character.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 415 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with no recorded risk of surface water flooding. It is classified as being urban land. The site consists of a field associated with Abbey College which forms part of their sports and playing fields. Engagement with the College will be required to ascertain if these playing fields are no longer needed by them or if an alternative provision can be made. The site is broadly level, the surrounding topography is generally very flat and in keeping with the elevation of the site, however the land to the north gently rises meaning that the land gently falls into the countryside. A public right of way runs along its eastern boundary. There are established trees and vegetation along its eastern, western and southern boundaries. It is completely open on its northern boundary as it adjoins further playing/ school grounds. To the south and east of the site is open countryside. Development would be visible in long distance views from the south and north. There is one residential property opposite the site. To the north are further playing/school grounds and to the east the site adjoins residential properties. The main school buildings that form Abbey College and Ramsey Leisure Centre are located to the north west of the site.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. It is wholly located within a conservation area. There is an existing access into the site from Hollow Lane.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states that the site will be delivered in collaboration with the landowner and developer. This is because the landowner would like to keep some form of control with the developer, ensuring development aligns with community and Estate values. The site promoter states that the site will be available between 2024 and 2028 and will complete within 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is located in a sensitive location in landscape and heritage terms being within a conservation area and also where the landscape gently falls and transitions into the open countryside. There are established trees and vegetation which provide screening</p>	~

<p>already and the potential land uses proposed are compatible with surrounding development. As highlighted, engagement with the College will be required to ascertain if these playing fields are no longer needed by them or if an alternative provision can be made.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures to clear. There are some constraints to overcome and the site will require detailed masterplanning. The site promoter states the site will be available between 2024 and 2028 and that the site owner is seeking to enter into an agreement with a developer and retain some interest in the land. Considering these factors and that a planning application has not yet been submitted, the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is greenfield land classified as being urban land consisting of a field associated with Abbey College which forms part of their sports and playing fields</li> <li>● Is not constrained by fluvial or surface water flood risk</li> <li>● In walking distance to Ramsey town centre being about 1.1km from the town centre although there is no footpath along Hollow Lane</li> <li>● In a sustainable location to access services, shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey</li> <li>● Good accessibility to public transport via bus but remote from a train station</li> <li>● Not accessible to natural green space but is within walking distances to local parks and play areas</li> <li>● Not constrained by nature conservation designations</li> <li>● Is wholly located within a conservation area</li> <li>● Is located on the eastern side of the built form of Ramsey accessed from Hollow Lane, as such, in depth higher density development could have an urbanising impact on the this part of Ramsey which has a much more rural character as it extends into the countryside</li> <li>● There is already established vegetation on its eastern side which will help to soften the impact of built development but development will likely be more visible from the south</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- Is considered to be potentially appropriate for development subject to masterplanning to overcome heritage and landscape constraints and utilising existing vegetation to soften the impact of development
- Engagement with the College will be required to ascertain if these playing fields are no longer needed by them or if an alternative provision can be made

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 1.17ha  75% net developable area to accommodate landscaping with a substantial buffer on its eastern side to further soften the impact of built development and provide an enhanced rural edge to the development  1.17 ha x standard proportion of 75% = <b>0.88ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the site's edge of town location being much more rural in nature.  Capacity = 0.88 ha x 25 dph = <b>22 homes</b>	Available post 2028, subject to allocation status  Build out over 2 years

**Updates after the Initial Assessment**

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with some recorded risk of surface water flooding towards its south eastern edge. The south western third of the site (closest to the built form of Ramsey) is classified as being urban land with the remaining two thirds being classified as grade 2 agricultural land. The site is broadly level, the surrounding topography</p>	~
---	---

<p>is generally very flat and in keeping with the elevation of the site. A public right of way runs the western half of its southern edge which connects through to Ramsey Rural Museum. There are established trees and vegetation along its northern, western and southern edges with the most dense being along its northern edge. The south eastern boundary of the site is completely open. There are a few trees located within the site. Adjacent to the site to the north west are cemetery grounds, to the south are residential properties and Ramsey Rural Museum, to the north east is a farm complex where local historical events are held. To the east and south eastern is open countryside. Development would be visible in long distance views from the south and east.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation designations on site. It is wholly located within a conservation area, it is located adjacent to two grade II listed buildings: Chapel And Mortuary within the cemetery and also 23 Wood Lane. There is an existing access into the site from Wood Lane. The planning history for the site states that a re-routed path to the museum would be provided through the centre of the site, it does not appear that this has taken place.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is within the ownership of a single individual who supports its development. There are no known legal restrictions impacting the site. The site promoter states that the site will be delivered in collaboration with the landowner and developer. This is because the landowner would like to keep some form of control with the developer, ensuring development aligns with community and Estate values. The site promoter states that the site will be available between 2024 and 2028 and will complete within 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are some constraints to overcome in particular landscape and heritage impacts, careful design and masterplanning may be able to overcome these. There are also considerations around integration and scale of development. The site is fairly large in comparison to the number of homes that the site promoter expects to be provided meaning that there is greater scope for open space provision and landscaping. Additionally, connections to important local assets such as Ramsey Rural Museum should be taken advantage of to support these. Engagement with Museum should be undertaken to achieve this and could shape the masterplanning of the site.</p>	~
<p><b>Deliverability / developability</b></p>	~

The site is greenfield with no structures to clear. There are some constraints to overcome and the site will require detailed masterplanning. The site promoter states the site will be available between 2024 and 2028 and that the site owner is seeking to enter into an agreement with a developer and retain some interest in the land. Considering these factors and that a planning application has not yet been submitted, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land, two thirds of the site is classified as being grade 2 agricultural land and the south western third of the being classified as urban land
- Is not constrained by fluvial or surface water flood risk
- In walking distance to Ramsey town centre being about 0.9km from the town centre
- In a sustainable location to access services, shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey
- Limited accessibility to public transport
- Not accessible to natural green space but is within walking distances to local parks and play areas
- Not constrained by nature conservation designations
- Is wholly located within a conservation area and is within the setting of two grade II listed buildings
- Is located on the north eastern edge of the built form of Ramsey accessed from Wood Lane means the site has a close relationship not only to the town but also to the countryside.
- Development across the whole of the site could have an urbanising impact on the this part of Ramsey which has a much more rural character as it extends into the countryside, however, the site promoter seeks a very modest number of homes on a site of this size meaning there is scope for much of the site to be used for landscaping and open space being let undeveloped
- There is already established vegetation on its south western side which will help to soften the impact of built development

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered to be potentially appropriate for built development on its south western corner (totalling dome 0.6ha) where it relates most closely to the built form of Ramsey and also utilising land classified as being urban land. Successful development and integration will be subject to masterplanning to overcome heritage and landscape constraints and utilising existing vegetation to soften the impact of development

Page 419 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 8.3ha  Reduce built development to its south western corner (0.6ha of the site) with a net developable area of 90%. Utilise the remainder of the site for open space an biodiversity net gain opportunities  0.6 ha x standard proportion of 90% = <b>0.54ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the site's edge of town location being much more rural in nature.  Capacity = 0.54 ha x 25 dph = <b>14 homes</b>  Open space uses - <b>up to 7.7ha</b>	Available post 2028, subject to allocation status  Build out over 2 years

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 421 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site is heavily constrained by fluvial flood risk with 97.3% of the site being within flood zone 3a and 2.7% is in flood zone 2. There is also risk from surface water flooding. It is classified as being urban land. It is previously developed consisting of a commercial warehouse and an access drive. The site promoter has put the site forward for residential	~

<p>uses which are classes as being more vulnerable in the NPPF. Considering that the site is previously developed site there is potential in line with the NPPF that wider sustainable development objectives could be taken into account when assessing the site's potential suitability for development, however in principle, development should be steered towards areas at the lowest risk of flooding. The site promoter has submitted a Flood Risk Assessment alongside their proposal which on page 16 concludes based on their research 'that the proposed site and access is expected to remain dry in all but the most extreme flood events'. It notes that development could increase surface water runoff without adequate sustainable drainage. It also makes recommendations for the proposed development. Engagement with the Environment Agency and LLFA will be required to assess these conclusions and recommendations. The ability of redeveloping the site will also require the outcomes of the level 2 SFRA. Careful design and mitigation of the site has the opportunity to reduce hardstanding and provide betterment to the site and the surrounding area in relation to flood risk, this would be a consideration in the determination of the acceptability of the site.</p> <p>The site is broadly level and well screened from view with the commercial buildings being located towards the back of the site and the rear of existing residential properties on Newtown Road. There are established trees and vegetation along its northern, eastern and western edges which also screen the buildings from view. To the west of the site is B&amp;M store, to the south the site adjoins two residential properties, to the east is another redevelopment site which has planning approval for 10 new homes. To the north is the open countryside.</p> <p>There is no known contamination or pollution on site but this may require further investigation considering the current commercial use of the site. There are no gas or oil pipelines running through the site. Electricity poles and wires run through the site. There are no nature conservation designations or heritage designations on site. There is an existing access into the site from Newtown Road.</p> <p>The site is previously developed, so its redevelopment will contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single individual who supports its development. There are no known legal restrictions impacting the site. The site promoter states that it is intended to secure an allocation status for the site and then sell to a third party for obtaining planning permission and development or sell after obtaining planning permission themselves. They state that the site will be available between 2024 and 2028 and take 1 to 2 years to complete.</p>	+
<p><b>Achievability</b></p>	~

<p>The site promoter has identified that mains water supply and electricity supply are available within the site while the public highway is accessible from the site boundary. Gas supply and digital and telecommunications infrastructure are unknown.</p> <p>There is an existing access into the site from Newtown Road. Flood risk is the main constraint to redeveloping the site, the entirety of the site means that development cannot be located in a part of the site at lower flood risk. This includes the access which may impact safe entry and exit into and out of the site during flood events. As highlighted, considering that the site is previously developed site there is potential in line with the NPPF that wider sustainable development objectives could be taken into account when assessing the site's potential suitability for development. Detailed masterplanning and engagement with specialists on this is required to ascertain if these can be overcome. An indicative site layout has been submitted which will also need to be reviewed to assess how it aligns with flood risk advice.</p> <p>The site has relatively few other constraints to its redevelopment with established trees and vegetation providing screening. There are electricity poles and wires over the site which may impact the layout of a scheme.</p>		
<p><b>Deliverability / developability</b></p> <p>The site is previously developed being of former commercial use. There are structures on site to clear. The site promoter is seeking an allocation status for the site, therefore it is categorised as being developable subject to the flood risk being overcome and the details within the submitted Flood Risk Assessment being further reviewed by the Environment Agency and LLFA.</p>		

<ul style="list-style-type: none"> <li>• Not accessible to natural green space but is within walking distances to local parks and play areas</li> <li>• Not constrained nature conservation or heritage designations</li> <li>• Provides an opportunity to regenerate a commercial site and utilise land for infill development within a sustainable location, it is unclear if the existing business on the site will relocate so this redevelopment could result in the loss of some local employment</li> <li>• Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development subject to appropriate masterplanning to ensure successful integration with the street scene and also where to locate development in relation to existing electricity infrastructure across the site</li> <li>• The ability of redevelopment the site and ensuring that properties are safe and resilient to flooding and climate change will require more detailed assessment following the outcomes of the level 2 SFRA and engagement with the Environment Agency and LLFA.</li> <li>• Careful design and mitigation of the site has the opportunity to reduce hardstanding and provide betterment to the site and the surrounding area in relation to flood risk, this would be a consideration in the determination of the acceptability of the site.</li> <li>• Full decontamination of the site following its commercial use will also be required</li> </ul>
--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is previously developed land located on the northern edge of the built form of Ramsey</li> <li>• Is heavily constrained by flood risk with 97.3% of the site in flood zone 3a and the rest in flood zone 2, there is also surface water flood risk. This risk is likely to worsen with climate change</li> <li>• In walking distance to Ramsey town centre being about 0.6km from the town centre</li> <li>• In a sustainable location to access services, shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey</li> <li>• Good accessibility to public transport via bus but remote from a train station</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area is 0.3ha</p> <p>90% net developable area to accommodate landscaping and sustainable drainage</p> <p>0.3 ha x standard proportion of 90% = <b>0.27ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Low density of 35 dph anticipated due to the site's location on the northern edge of Ramsey.</p> <p>Capacity = 0.27 ha x 35 dph = <b>9 homes</b></p>	<p>Available 2024-2028</p> <p>Build out over 1 -2 years</p>

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:53
Relevant planning history	None relevant
Land type	Wholly greenfield land with Forty Foot/ Vermuden's Drain running through the site
Current use of the site	Community uses
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	38% of the site is within flood zone 3b, 28% in flood zone 3a, 3% in flood zone 2 and	Pass

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
	31% in flood zone 1. The proposed land use is water compatible development.	
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>38% of the site is within flood zone 3b, 28% in flood zone 3a, 3% in flood zone 2 and 31% in flood zone 1. There is also risk from surface water flooding. The proposed land use is water compatible development as it proposes moorings. The site consists of open land either side of the Forty Foot/ Vermuden's Drain located to the east of Forty Foot Bridge. It</p>	+
---	---

<p>is classified as being grade 2 agricultural land. There are some trees found along the banks of the water course. The site gently slopes from its highest point on its western side eastwards where land levels are some 3m less. This provides the site with a transitional nature between the settlement and the fenland landscape in that direction. To the south of the site are residential properties along Hollow Road, there are some further properties to the west alongside Forty Foot Bridge. To the north of the site are a few intermittent houses along Forty Foot Bank but to the north east and east of the site is open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run along the site's northern edge along Forty Foot Bank. There are no nature conservation designations on site. There are no heritage designations on site but it is adjacent to Bridge House which is a grade II listed building. The site can be accessed from Hollow Road to the south and Forty Foot Bank to the north.</p> <p>The site is greenfield so its development will not contribute to the reuse of previously developed land or regeneration. Only the very eastern edge of the site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in individual organisation ownership and control who have promoted this site and supports its development. There are no known legal restrictions impacting the site. They wish to explore the possibility of installing permanent moorings, in collaboration with HDC. They anticipate delivering the site directly themselves and expect the site to be available between 2024 and 2028 and 1 year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that electricity supply and the public highway are accessible from the site's boundary. Mains water supply is accessible within the site while gas supply and digital and telecommunications infrastructure are unknown. The potential achievability of the development will need to ensure that it does not overload the environmental, navigational or flood conveyance capacity of the watercourse or water body. Assessment will require engagement with the relevant water bodies and organisations to assess this.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no structures on site to clear. There are constraints on site that will need to be overcome such as flood risk, potential landscape impact and heritage impacts. The site promoter states that is intended to deliver development on site directly by the landowner (the Middle Level Commissioners) and that the site will available between 2024 and 2028. The site has however been promoted for moorings and land to safeguard against flooding,</p>	~

the quantum has not been specified but the land owner wishes to explore the possibility of installing permanent moorings, in collaboration with HDC. At this time development is categorised as being developable until further technical work has been carried out and further assessment of the feasibility of moorings in this location with other specialist water bodies and organisations have

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Consists of open land either side of the Forty Foot/ Vermuden's Drain located to the east of Forty Foot Bridge
- Is heavily constrained by fluvial flood risk with 38% of the site being flood zone 3b, it is being proposed for water compatible development
- Has good access to services within Ramsey Forty Foot and also those within Ramsey but due it is more likely that these will be accessed via private car due to the distance and limited public transport options
- Some accessibility to public transport via bus but remote from a train station
- Accessible to natural green space
- Not constrained by nature conservation designations
- There are no heritage designations within the site but it is within the setting a listed building which may be impacted by developing the site
- Is located on the northern edge of Ramsey Forty Foot such that it could be successfully integrated with the existing place and community to provide additional open space and leisure opportunities

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered to be potentially appropriate for development subject to masterplanning to ensure that development can be successfully integrated with the existing place and community and that flood risk can be mitigated within the site
- Further engagement with the Middle Level Commissioners will be required to develop potential proposals further

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the river and the physical layout of open space and leisure moorings.	Open space uses and leisure moorings	Post 2028 Complete over 1 year

**Updates after the Initial Assessment**

--

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 444 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with no recorded risk of surface water flooding. It is classified as being grade 2 agricultural land. The site is broadly level and is in agricultural use with agricultural barns located on the western side of the site. It is unclear at this stage if these will be retained or not as they benefit from prior approval for their conversion to</p>	+
---	---

<p>residential properties. Its southern and eastern edges are clearly defined by hedgerows and a fence clearly marks the site's northern boundary. To the north and west of the site are residential properties and to the south and east is the open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Some 50m from the site's western boundary is 15 Ramsey Road which is a grade II listed building whose setting could be impacted by the development of this site. There is an existing access into the site from Hollow Road which could be utilised and enhanced to serve the proposed development.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states that the site will be delivered in collaboration with the landowner and developer. This is because the landowner would like to keep some form of control with the developer, ensuring development aligns with community and Estate values. The site promoter states that the site will be available between 2024 and 2028 and will complete within 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. There are minimal constraints impacting the site, there is a listed building within 50m of the site and built development could have an adverse impact. Masterplanning could potentially overcome these. The site contains several agricultural barns which benefit from prior approvals to convert them to a cumulative five new homes. There is an existing access into the site from Hollow Road and the potential land uses proposed are compatible with surrounding development.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with potentially some agricultural structures to clear, although it is unclear from the call for site submission whether the existing structures are to be retained and converted in line with their prior approval or whether they will be removed to enable a comprehensive development.</p>	~

There are minimal constraints impacting the site and few topographical challenges. The site promoter states the site will be available between 2024 and 2028 and that the site owner is seeking to enter into an agreement with a developer and retain some interest in the land. Considering these factors and that a planning application has not yet been submitted, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as being grade 2 agricultural land
- Is not constrained by fluvial or surface water flood risk
- Has good access to services within Ramsey Forty Foot and also to shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey but due it is more likely that these will be accessed via private car due to the distance and limited public transport options
- Some accessibility to public transport via bus but remote from a train station
- Accessible to natural green space
- Not constrained by nature conservation designations
- There are no heritage designations within the site but it is within 50m of a listed building which may be impacted by developing the site
- Is located on the eastern edge of Ramsey Forty Foot such that it could be successfully integrated with the existing place and community

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered to be potentially appropriate for development subject to masterplanning to ensure that development can be successfully integrated with the existing place and community and reflective of local character.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 1.17ha	Residential - market and/or affordable houses	Available post 2028, subject to allocation status

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
80% net developable area to accommodate landscaping and open space uses  1.17 ha x standard proportion of 80% = <b>0.94ha</b>	Low density of 25 dph anticipated due to the site's location on the edge of Ramsey Forty Foot.  Capacity = 0.94 ha x 25 dph = <b>23 homes</b> (this number may include the conversion of the existing barns into five dwellings with 18 on the rest of the site, or a holistic development across the whole site of 23 dwellings)	Build out over 2 years

**Updates after the Initial Assessment**

**Ramsey 16: Forty Foot Field, North of Mill Lane, Ramsey Forty Foot**

<b>Site reference</b>	Ramsey 16
<b>Site name</b>	Forty Foot Field, North of Mill Lane, Ramsey Forty Foot

Site address	Parish(es)	Site area (ha)
Forty Foot Field, North of Mill Lane, Ramsey Forty Foot	Ramsey	1.47

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	None provided	Available 2024 - 2028 Build out over 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:251
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	0.5% of the site is within flood zone 3b, 46.2% in 3a and 7.2% in flood zone 2.	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The site is heavily constrained by fluvial flood risk with some 0.5% of the site is within flood zone 3b, 46.2% in 3a and 7.2% in flood zone 2. The remainder of the site within flood zone 1 forms a strip of land along its eastern edge immediately adjoining the built form. There is also risk from surface water flooding. The site promoter has put the site forward for residential uses which are classes as being more vulnerable in the NPPF. The site is wholly classified as grade 2 agricultural land. The site gently rises upwards from west to east with the western edge of the site being at 0m and the eastern edge being between 3 and 4m. To the north there is the Forty Foot Drain, to the east and south are residential properties and to to the west is the open countryside. The sloping land levels towards the west and the very open nature of the countryside and lack of established boundary features means that development is likely to be more prominent on the landscape.</p> <p>There is no known contamination or pollution on site. There are no gas or oil pipelines running through the site. There are no nature conservation designations or heritage designations on site. Access could potentially be achieved from Mill Lane.</p> <p>The site is mostly greenfield so its development will not contribute to the reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p> <p>Considering the very high flooding risk within the site and the more location of food zone 1 land being more challenging to develop as a result, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single organisation with multiple control with legal agreement in place. Development is supported by all all owners. There are no known legal restrictions impacting the site. The site promoter states that it is intended to acquire an allocation status for the site and then sell it to a third party for obtaining planning permission and development. The promoter suggests the land will be available between 2024 and 2028 and could take up to 3 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that accessibility to all access and services are unknown and they are uncertain. There site is heavily constrained by fluvial flood risk with 54% of the site in flood zone 2, 3a and 3b. The site could be accessed from Mill Lane.</p>	-
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but there is very significant risk from flooding across 54% of the site and with the elements within flood zone 1 forming a narrow strip on the eastern/southern edge of the site makes it less practical to deliver good quality</p>	-

development on the land at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. An allocation status is sought for the site. The site promoter states the site will be available between 2024 and 2028, but considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No due to the majority of the site being located within flood zones 2, 3a and 3b and the proposed residential uses being classed as a more vulnerable use.</p>
---	---

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

## 4 Ramsey

### Ramsey 17: Woodlane Farm, West of Ramsey Road, Ramsey Forty Foot, Ramsey

<b>Site reference</b>	Ramsey 17
<b>Site name</b>	Woodlane Farm, West of Ramsey Road, Ramsey Forty Foot, Ramsey

Site address	Parish(es)	Site area (ha)
Woodlane Farm, West of Ramsey Road, Ramsey Forty Foot, Ramsey	Ramsey	1.34

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable homes</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain opportunities</li> <li>Land to safeguard against flooding</li> </ul>	Approximately 30 homes  Open space uses to be confirmed as subject to masterplanning	Available 2024 - 2028  Build out over 2 years

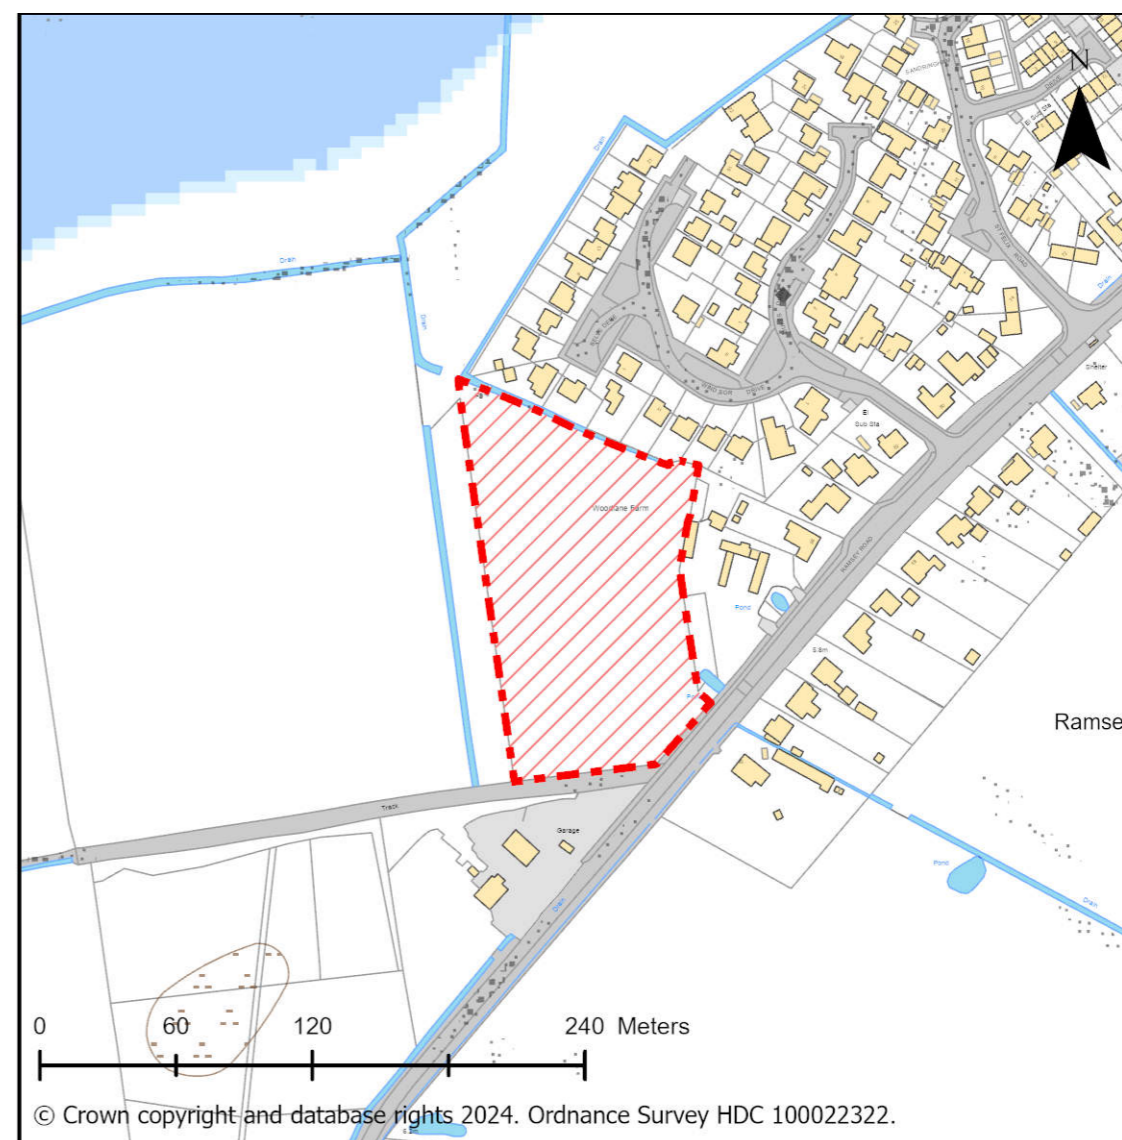

#### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:271
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with no recorded risk of surface water flooding. It is classified as being grade 2 agricultural land. The site is broadly level and in keeping with the elevation of the settlement itself but the surrounding topography gently falls away into the fenland landscape. The potential impact of built development on the edge of the settlement is softened by the presence of established trees and vegetation along its edges, most notably its western and southern edges. There are a few trees within the site near to its southern edge. To the north of the site, it adjoins residential development, to the east is a farm complex and to the south is a car dealership. To the west of the site is open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Access may be achieved from Ramsey Road (B1096).</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	+
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states that the site will be delivered in collaboration with the landowner and developer. This is because the landowner would like to keep some form of control with the developer, ensuring development aligns with community and Estate values. The site promoter states that the site will be available between 2024 and 2028 and will complete within 2 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services are accessible from the site boundary. The site is located in a sensitive location in landscape terms as the surrounding landscape gently falls and transitions into the fenland countryside but the existing established trees and vegetation provide screening already. These should largely be retained within the development to soften the impact of development. It is noted that some may need to be removed along the southern boundary of the site to enable access from Ramsey Road. The potential land uses proposed are compatible with surrounding development.</p>	+
<p><b>Deliverability / developability</b></p>	~

The site is greenfield with no structures to clear. There are minimal constraints impacting the site, it is in a sensitive location in terms of landscape even though the site itself is broadly flat, the surrounding landscape gently falls away. This will require masterplanning to soften the impact of development and overcome this. The site promoter states the site will be available between 2024 and 2028 and that the site owner is seeking to enter into an agreement with a developer and retain some interest in the land. Considering these factors and that a planning application has not yet been submitted, the site is categorised as being developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land classified as being grade 2 agricultural land
- Is not constrained by fluvial or surface water flood risk
- Has good access to services within Ramsey Forty Foot and also to shops, employment opportunities, primary education and leisure and cultural facilities within Ramsey but due it is more likely that these will be accessed via private car due to the distance and limited public transport options
- Some accessibility to public transport via bus but remote from a train station
- Not accessible to natural green space
- Not constrained by nature conservation or heritage designations
- Is located on the south western edge of Ramsey Forty Foot such that it could be successfully integrated with the existing place and community

In combination the outcomes of the LAA and SA indicate that the site:

- Is considered to be potentially appropriate for development subject to masterplanning to ensure that development can be successfully integrated with the existing place and community and reflective of local character. The established tree belt on its western side can be utilised as part of a wider landscape and open space scheme within the site.

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area is 1.34ha  80% net developable area to accommodate landscaping and open space uses  1.34 ha x standard proportion of 80% = <b>1ha</b>	Residential - market and/or affordable houses  Low density of 25 dph anticipated due to the site's location on the edge of Ramsey Forty Foot.  Capacity = 1 ha x 25 dph = <b>27 homes</b>	Available post 2028, subject to allocation status  Build out over 2 years

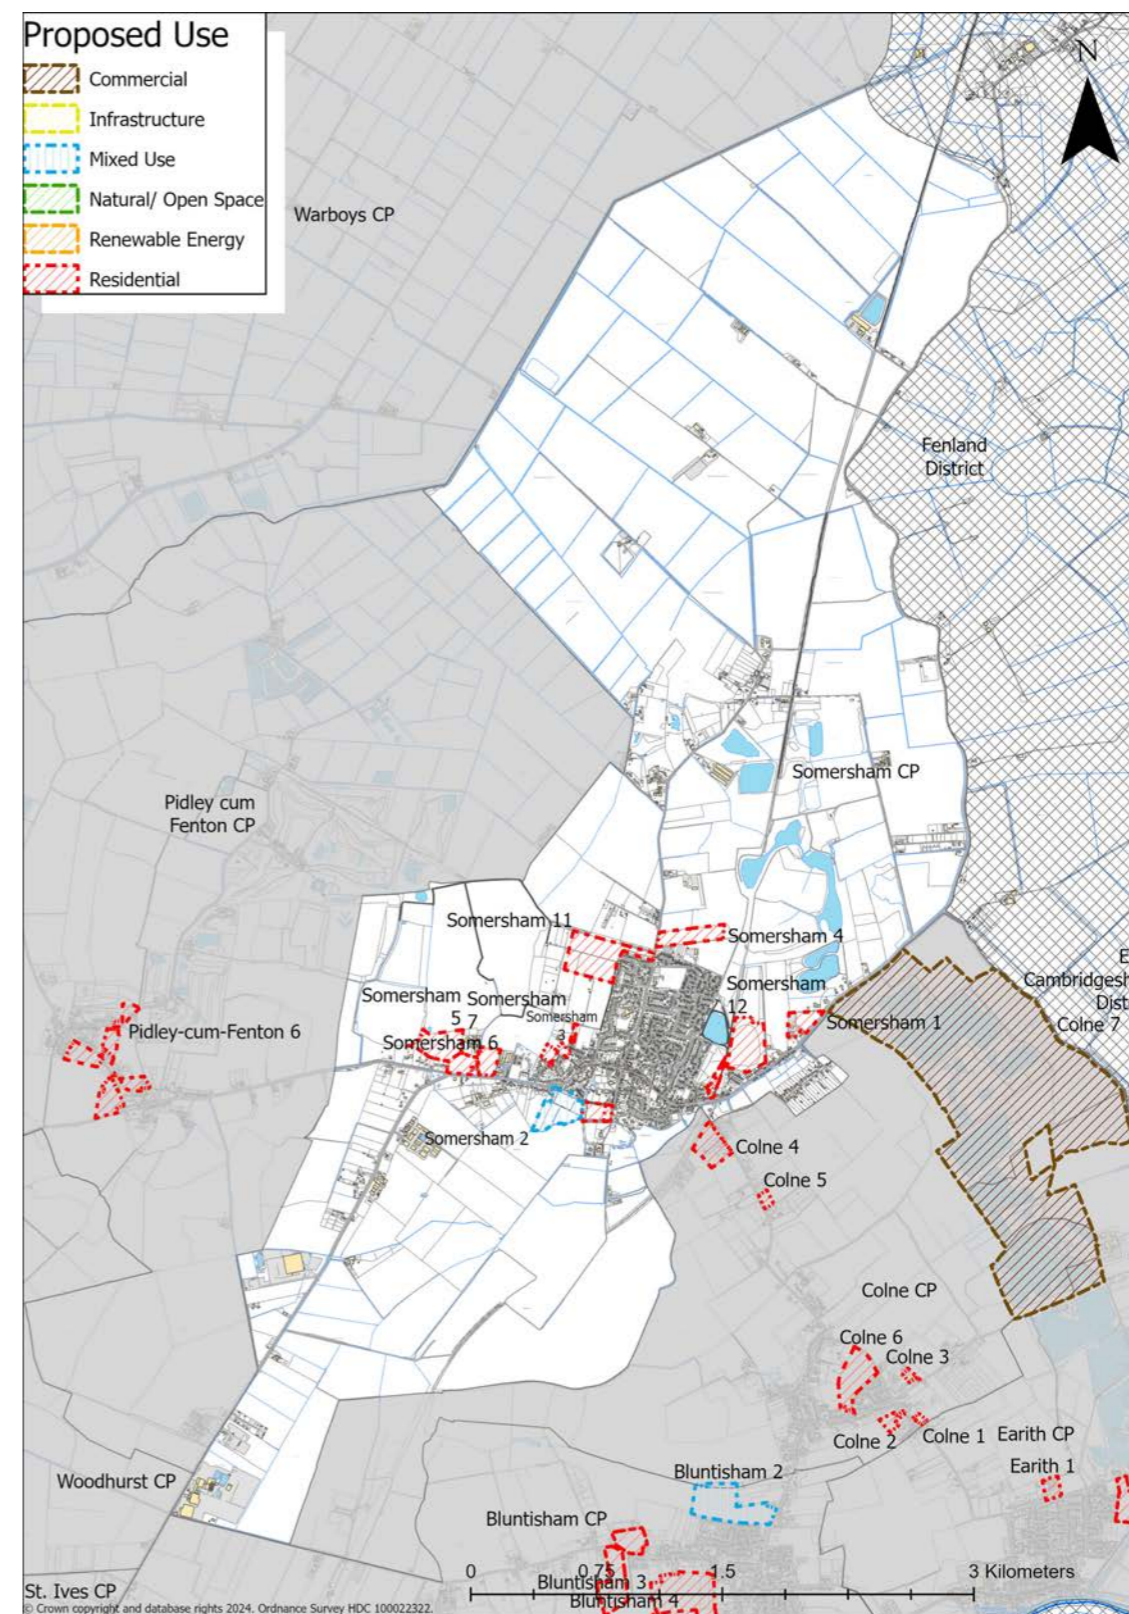

Updates after the Initial Assessment

## 5 Somersham

5.1 A total of 14 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Somersham 1: Dews Bus and Coach Depot, Chatteris Road, Somersham
- Somersham 2: Somersham Town Football Club and land to the south of the Football Club, Somersham
- Somersham 3: Land North of The Pasture and South of Rectory Lane, Somersham
- Somersham 4: Land East of Parkhall Road, Somersham
- Somersham 5: Land to West of College Farm, Somersham
- Somersham 6: Land to South of College Farm, Somersham
- Somersham 7: Land to South-West of College Farm (larger site), Somersham
- Somersham 8: College Farm, West of Newlands Industrial Estate, Somersham
- Somersham 9: Land South of 35 Church Street (smaller site), Somersham
- Somersham 10: Land South of 35 Church Street (larger site), Somersham
- Somersham 11: College Farm, Somersham
- Somersham 12: Land North of Chatteris Road, Somersham
- Somersham 13: Land East of Chapel Field Lane, Somersham
- Somersham 14: Somersham Telephone Exchange

5.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Land type	Part previously developed land and part greenfield
Current use of the site	Commercial
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is predominantly within flood zone 1 99.96%, flood zone 2 is present on less than 0.001ha of the site. The site is part previously developed land and part greenfield land and classified as grade 2 agricultural land.</p> <p>The land is flat and in keeping with the surrounding area. The site fronts Chatteris Road with existing access associated with the site's current use as a bus and coach depot. The southern boundary is mostly screened from Chatteris Road by trees and hedgerow, as is the western and northern boundaries. The site is well contained. Within the site, the western third is dominated by hardstanding and buildings in association with the operation of the</p>	+
---	---

<p>site. The eastern portion is greenfield. on the south western corner sits a residential building. The site is well screened and would have negligible impact on the surrounding countryside if trees and hedgerow were retained. The site would need to consider the integration of the existing residential building on the south west corner.</p> <p>currently used as a bus and coach depot.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines. There are no known nature conservation, heritage assets or tree preservation orders affecting it. The site is part previously developed and part greenfield land and therefore offers some opportunities to contribute to regeneration. The site is currently in use as a coach and bus depot and therefore there is the potential for contamination on site which may require resolution. The site is within a sand and gravel mineral safeguarding area, but not within or a water recycling area or buffer zone.</p>	~
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024 to 2028 and build out expected to take 2 years. The redevelopment of the site will requires the relocation of an existing depot, the landowners are actively working to secure a suitable replacement site and would be looking to relocate as soon as this land is secured.</p>	~
<p><b>Achievability</b></p> <p>Mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. Access to gas supply is unknown.</p> <p>Contamination has been identified as an issue which would require resolution. There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines.</p> <p>The landowner notes that the site is well managed, that there is no known significant contamination present and that contamination is not expected to be a significant constraint. A desk study ground investigation report and risk assessment would be prepared to support any planning application for residential development on the site assisting with investigation and remediation.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. There are minimal constraints. The site is available from 2024 to 2028, but would require relocation of the existing use which may delay development. The site is therefore as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The majority of the site is not constrained by fluvial flood risk (99.96%). Flood zone 2 is present on 0.038% of the site, with some surface water flood risk
- The site is wholly greenfield grade 2 agricultural land.
- The site has no immediate access to services, facilities, primary school or employment opportunities, although there is a primary school within the village.
- The site is part previously developed land and is well screened from the surrounding countryside meaning landscape impact would be minimal.
- The site is somewhat removed from the main residential centre of Somersham, however has the opportunity to be integrated with the community once housing allocation 'SM5 North of the Bank, Somersham' has been completed or is underway.
- The proposed density of the development would be in keeping with the density approved for allocation SM5.
- No footpaths are present on the site frontage.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to be integrated with the existing community once housing allocation 'SM5 North of the Bank, Somersham' has been completed or is underway
- Proposes 50 homes which would contribute to the housing needs of the district.
- Would require pedestrian footpaths to facilitate safe active travel routes into the centre of Somersham to access services and facilities.
- Would require retention of trees and hedgerows where possible.
- Requires flood mitigation.
- Is part previously developed and part greenfield land and therefore offers some opportunities to contribute to regeneration.
- Will requires the relocation of an existing depot, before redevelopment could commence.
- Would require relocation of the existing use which may delay development.

Page 455 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 2.15ha  70% net developable area to allow for retention of trees and hedgerow and flood mitigation.  $2.15\text{ha} \times 70\% = 1.505\text{ha}$	Net developable area of 1.505ha  Residential - Market and/or affordable housing  Low density of 35dph to reflect site's location within a larger village and the lower density context of the surrounding housing.  Capacity = $1.505\text{ha} \times 35\text{dph} = 53 \text{ homes}$	Available post 2027 to allow for allocation of site and commencement of adjacent housing allocation SM5.  Build out 2 to 3 years

Page 457 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly located within flood zone 1 with substantial risk from surface water flood risk across the whole of the site. The whole of the site is classified as grade 3 agricultural land. The site is not considered to be previously developed land as it is in recreational use. It is broadly level with hedgerows and vegetation clearly defining its edges and enclosing</p>	~
--	---

<p>the site, there are also tree lines running through the site. Development on the site could have a significant impact on the landscape particularly long views from the south unless appropriately mitigated. To the north of the site is High Street and residential development, to the west of the site is an area of established dense trees providing a rural character to the area, to the east is Pond Closes and to the south is the open countryside. Several drains run through the site and also along its southern boundary.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph and electricity poles run through the site. There are no nature conservation designations on site. There are no heritage designations on site, it is however in a very sensitive location in terms of heritage assets as it is adjacent to the conservation area to the east and also adjacent to a scheduled monument Pond Closes, the site of the former residence of the Bishop of Ely's Palace with fishponds and a later moated site. Therefore, impact on these heritage assets is a development constraint but the existing established vegetation provides some mitigation to potential impact already which should be utilised in a future masterplan for the site. The site promoter has submitted within their planning statement an illustrative masterplan for the site which shows that the eastern edge of the site will be left undeveloped to address concerns regarding impact on heritage assets, it also shows that existing tree belts will be retained along the site's edges as well as within the site. There is an existing access into the site from High Street which serves the current football club.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. Only the eastern edge of the site is located within an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will be required to determine if this is a viable resource. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by multiple individuals, there is a legal agreement in place on the site though between these owners. The development of the site is supported by all land owners. There are no known legal restrictions impacting the site. The site promoter states that it is intended to deliver the site directly by a housebuilder who is now involved with the site. It is stated that the site will be available between 2024 and 2028 and it will take 1 year to establish the new football pitch and 2-3 year build.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that all access and services are accessible from the site boundary. They also identify that a gas main easement located along the northern site boundary. The site is in a sensitive location in terms of its relationship with the landscape setting and also regarding heritage assets. As highlighted, the site promoter has submitted an illustrative masterplan which seeks to address these constraints. Surface water flooding</p>	~

<p>is another key constraint which needs to be overcome, the outcomes of the level 2 SFRA and engagement with the LLFA will determine if this risk can successfully be overcome with the appropriate sustainable drainage solutions.</p>	
<p><b>Deliverability / developability</b></p> <p>Part of the site which contains the existing football club and grounds is allocated in the current Local Plan, the site promoter has highlighted that a constraint to the site's delivery has been the relocation of the football ground. This site submission includes additional land to the south of the football ground which is proposed as the relocation site for the football club as well as providing an second pitch. The site promoter anticipates this to overcome the relocation constraint to delivering the site and a housebuilder is now involved with the site. No planning application has yet been submitted. Considering these factors, the site is categorised as being developable.</p>	~

- Development will need to retain and incorporate appropriate landscaping and mitigation against adversely impacting heritage assets and their setting as well as minimise the sense of encroachment into the countryside.
- Masterplan may be impacted by the presence of overhead electricity cables.
- Incorporate appropriate sustainable drainage solutions to address surface water flood risk and ensure homes are resilient and resistant to flooding.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 4.4ha</p> <p>50% net developable area to allow land for the football pitches, sufficient landscaping and sustainable drainage.</p> <p>4.4 ha x standard proportion of 50% = <b>2.2 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 35 dph anticipated in keeping with surrounding densities within the village.</p> <p>Capacity = 2.2 ha x 35 dph = <b>77 homes.</b></p>	<p>Available post 2028, subject to allocation status</p> <p>Build out over 3 years</p>

Page 458 of 3488

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 3 agricultural land but part of the site is in use as a football ground</li> <li>• Within flood zone 1 but there is substantial risk from surface water flooding across the site</li> <li>• In walking distance to several local leisure and cultural facilities, a local shop and primary education</li> <li>• Limited accessibility to a range of employment opportunities</li> <li>• Proposal includes relocating the existing football pitch within the site and provision of an additional pitch alongside residential development</li> <li>• Not constrained by nature conservation designations</li> <li>• It is adjacent to the conservation area and scheduled monument</li> <li>• Located on the western edge of Somersham accessible via a footpath connection into the village. The site does extend into the countryside to the south but it is largely enclosed by existing hedgrows and vegetation.</li> <li>• The proposed uses are compatible with surrounding land uses</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for a mixed use development of new homes alongside enhanced sports provision utilising the existing access into the site from High Street.</li> </ul>

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 460 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site is wholly located within flood zone 1 with some risk from surface water flooding along its southern edge near to The Pasture. It is wholly classified as grade 2 agricultural land. The site is broadly level but rises gently up towards the northern boundary by some 2m. There is existing established hedging along each boundary. Some of the trees on its	~

<p>northern edge are protected by an area Tree Preservation Order, a Tree Preservation Area is also present where access may be required to connect the two sites. This has the potential to impact on biodiversity and ecology and prevent integration of the two parcels. To the south and east of the site are residential properties, to the north is Somersham House and its large grounds (some of the development site includes land within this building's curtilage), and to the west is open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph and electricity poles run through the site. There are no nature conservation designations on site. The eastern parcel of the site is within the conservation area. To the north is the grade II listed Somersham House, development could have a significant impact on heritage assets by, removing some of the historic setting of the house and by virtue of obstructing views through or physically detracting from the character of the conservation area. Access to the site may be achieved from The Pasture as demonstrated through the approved outline permission. However access to the eastern parcel is more challenging as Rectory Lane is a very narrow road and may require upgrading which would require further investigation. It is unclear if masterplanning could successfully integrate the parcels to provide a comprehensive development or provide access running through the site from western parcel to the eastern parcel. As previously mentioned impact on the tree preservation areas and setting of Somersham House could be significant.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within a mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is owned by multiple individuals, there is a legal agreement in place on the site though between these owners. The development of the site is supported by all land owners. There are no known legal restrictions impacting the site. The site promoter states that it is intended to acquire planning permission and then sell the site to a third party for development. It is stated that the site is available now and will take 1 year to build.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that all access and services are accessible from the site boundary. The site is sensitively located in terms of heritage assets with the proposed site removing part of the historic setting of Somersham house a grade II listed building. The presence of protected trees is also a constraint, removal of which has the potential to impact on biodiversity and ecology and may prevent integration of the two parcels. Access from Rectory Lane may be a restriction due to its narrow nature and may require upgrading which would require further investigation. It is unclear whether masterplanning could</p>	~

<p>successfully integrate the parcels to provide a comprehensive development and may need to be developed in isolation. Further evidence would be required. There is also some surface water flood risk which would require mitigation.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures to clear. The western parcel is already allocated in the current Local Plan for residential development and benefits from outline planning approval. The additional eastern parcel is not allocated and poses additional design challenges because of constraints relating to heritage impact, access and protected trees. The site is also in multiple ownership but there is a legal agreement in place. The site promoter intends to acquire planning permission and then sell the site to a third party for development. Considering these factors, and even though part of the site is allocated for development in the current Local Plan and for the whole of the site to be comprehensively masterplanned and brought forward beyond an outline planning approval, the site is categorised as being developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 2 agricultural land</li> <li>• Within flood zone 1 with some risk from surface water flooding</li> <li>• In walking distance to several local leisure and cultural facilities, a local shop and primary education</li> <li>• Limited accessibility to a range of employment opportunities and natural greenspace</li> <li>• Connection between the two parcels of land is impeded by impact on the setting of a listed building and tree preservation areas</li> <li>• The eastern parcel is within the conservation area and within the setting of a listed building</li> <li>• The eastern parcel presents issues relating to access, especially from Rectory Lane which is very narrow with substantial parking impeding movement.</li> <li>• Located on the western edge of Somersham accessible via a footpath connection from The Pasture</li> <li>• There are protected trees which will need to be retained</li> <li>• Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Is significantly constrained by the presence of protected trees which have the potential to impact on biodiversity and ecology and impact on the curtilage and setting of a grade II listed building preventing integration of the two parcels.
- Would require access from The Pasture and Rectory Lane for the respective parcels of land to prevent significant impact on heritage assets and tree preservation orders.
- The western parcel is potentially appropriate for residential development subject to appropriate masterplanning to overcome heritage, landscaping, and tree constraints.
- The eastern parcel presents issues relating to access, especially from Rectory Lane which is very narrow with substantial parking impeding movement. This and would require significant consideration of the impact on transport movements, the conservation area, tree preservation areas and the setting of the grade II listed building. Additional parking for residents on Rectory lane within the western parcel has the opportunity to alleviate some pressure on the Lane.
- Requires flood mitigation

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 0.95ha</p> <p>Development of the whole site as one parcel is not considered achievable due to the impact on tree preservation orders and listed building.</p> <p>The proposed site has been split as follows:</p> <ul style="list-style-type: none"> <li>• Western parcel - Gross site area 0.6ha</li> <li>• Eastern Parcel - Gross site area 0.35ha</li> </ul>		<p>Available post 2028, subject to allocation status</p> <p>Build out over 2 to 3 years</p>
<p><b>Western Parcel</b></p> <p>Gross site area 0.6ha</p> <p>70% net developable area to allow land for mitigation on heritage, trees and flooding.</p> <p>0.6 ha x 70% = <b>0.42 ha</b></p>	<p>Net developable area of 0.42ha</p> <p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated in keeping with surrounding densities within</p>	<p>Available now - outline planning permission approved</p> <p>Build out over 2 to 3 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	the village and minimise impact on hertiage and protected trees.  Capacity = 0.42 ha x 25 dph = <b>11 homes.</b>	
<b>Eastern Parcel</b>  Gross site area 0.35ha  Removal of 0.10ha to allow for provision of 5-6 parking spaces for residents of Rectory Lane to alleviate congestion (subject to confirmation)  Remaining site area = 0.25ha  70% net developable area to allow land for mitigation on heritage, trees and flooding.  0.25 ha x 70% = <b>0.175 ha</b>	Net developable area of 0.175ha  Residential - market and/or affordable houses  Very low density of 25 dph anticipated in keeping with surrounding densities within the village and minimise impact on heritage and landscape.  Capacity = 0.175 ha x 25 dph = <b>4 homes</b>	Available post 2028  Build out over 2 to 3 years  However the site capacity is below 5 homes and therefore may not meet the criteria for allocation.

Capacity calculation not undertaken as the site adjoins a Mineral Development Area.	N/A	N/A

**Updates after the Initial Assessment**

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No as the whole site falls within the consultation area for a Mineral Development Area. No assessment has been made by the site promoter on the impact of the proposed development on the MWA.

**Somersham 5: Land to West of College Farm, Somersham**

<b>Site reference</b>	Somersham 5
<b>Site name</b>	Land to the West College Farm, Somersham

Site address	Parish(es)	Site area (ha)
Land to the West College Farm, Somersham	Somersham	3.92ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	85 homes	Available 2024 to 2028 Build out 2 to 3 years

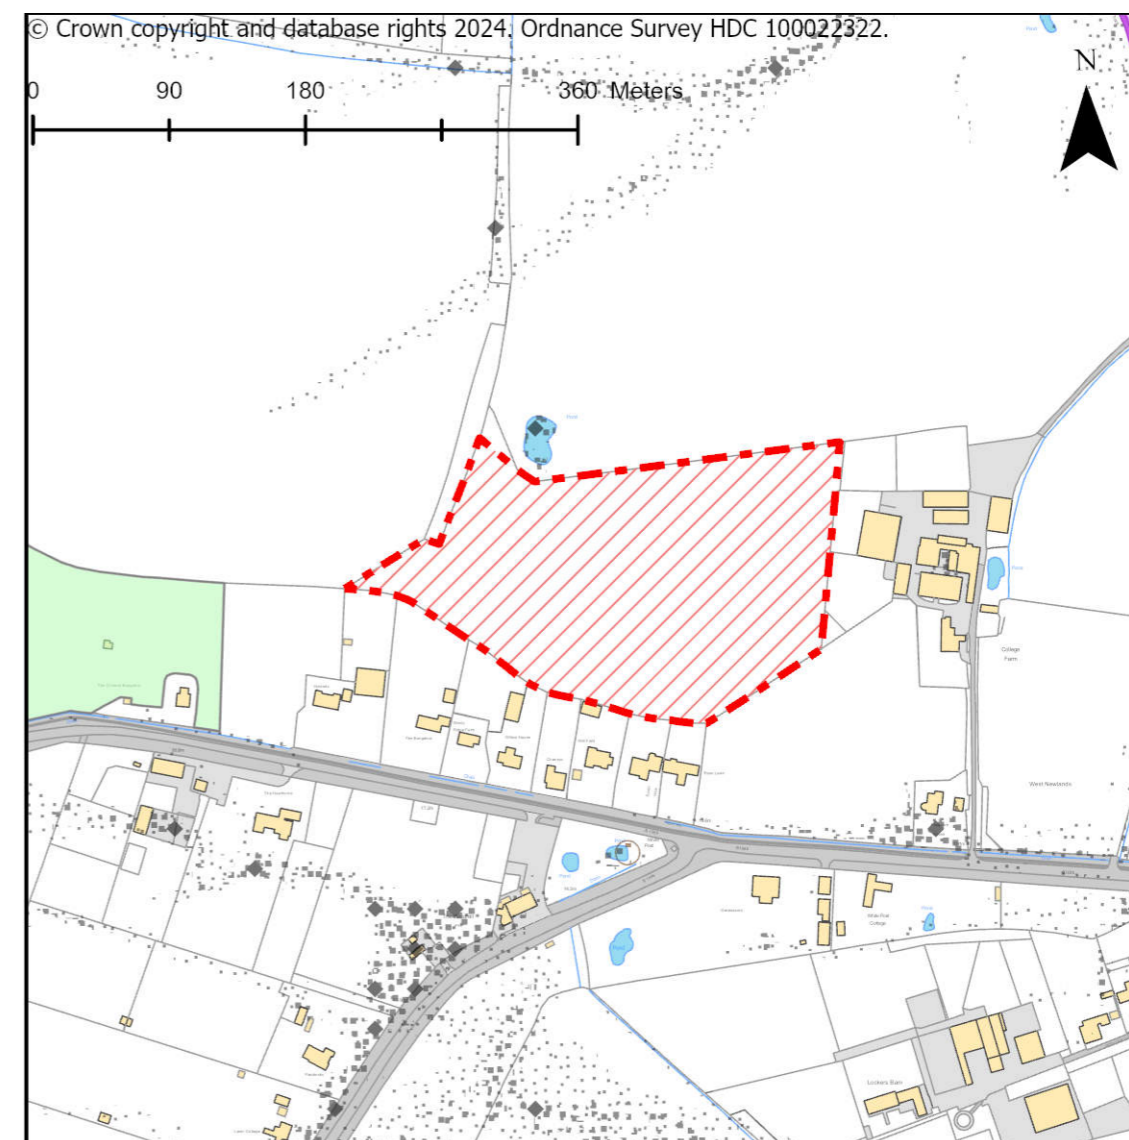

**Core information**

How was the site identified?	Call for sites 2023 site submission: site reference - CfS: 57
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The site is not constrained by fluvial or surface water flood risk. The site is wholly greenfield grade 2 agricultural land.</p> <p>The site is flat agricultural land. The site is north of the B1089 and set back from the road with residential properties bounding the southern edge, employment uses the western edge and greenspace the south eastern corner. The northern boundary of the site is exposed to the wider countryside and landscaping may be required to mitigate the impact on the landscape. Development would be required to demonstrate how it can integrate with the surrounding uses. There is no access to the proposed site and it is detached from the B1089 by a field.</p> <p>There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in individual/ individual company ownership and control, the development of the site is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028 and build out expected to take 2 to 3 years. It is intended that allocation status is acquired before selling to a third party for obtaining planning permission and development.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. No access has been identified for the site. Access would be required through adjacent land which could cause issues with ransom strips and viability of the site, thus affecting delivery. The site is detached from the B1089 by a field. Further information would be required to establish the deliverability of the site.</p> <p>The site promoter notes that access from the nearest public highway (St. Ives Road) would be required to go through the adjacent parcel of land to the south-east. The aforementioned land has also been submitted for consideration as part of this Call for Sites consultation.</p>	-
<p><b>Deliverability / developability</b></p>	-

There are no known legal restrictions. The site is available from 2024 to 2028, but would require relocation of the existing use which may delay development. Access is a significant constraint and would be required through adjacent land which could cause issues with ransom strips and viability of the site, thus affecting delivery, meaning further information would be required to establish the deliverability of the site. The site is classified as undeliverable.

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No, due to constraints to the site regarding access and the detached nature of the site.</p> <p>An alternative development proposal including this site is set out in Somersham 7: Land to the West of College Farm (larger site), Somersham.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site was considered inappropriate for development due to constraints to the site regarding access and the detached nature of the site.	N/A	N/A

**Updates after the Initial Assessment**

**Somersham 6: Land to South of College Farm, Somersham (smaller site)**

<b>Site reference</b>	Somersham 6
<b>Site name</b>	Land to the South of College Farm, Somersham (smaller site)

Site address	Parish(es)	Site area (ha)
Land to the South of College Farm, Somersham	Somersham	1.70ha

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is not constrained by fluvial flood risk, some surface water flood risk is present on the southern edge of the site. The site is wholly greenfield grade 2 agricultural land.</p> <p>The site is flat and the southern boundary sits on the B1089, allowing for potential access to the site. Residential properties bound the western edge of the site and the south eastern corner, a residential property sits outside the north eastern corner with employment uses to the north east. Low hedgerow and some trees bounds the southern edge and a footpath. Trees and hedgerow bound the north western edge with some tree planting within the site. Landscape impact may be minimal if hedgerow is to be retained, consideration of retention of existing trees should be considered. Development would be required to demonstrate how it can integrate with the surrounding uses.</p> <p>There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in individual/ individual company ownership and control, the development of the site is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028 and build out expected to take 2 to 3 years. It is intended that allocation status is acquired before selling to a third party for obtaining planning permission and development. The site promoter notes that interest has been shown from a national house builder.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site sits on the B1089 which would assist with the logistics of construction, access would be required from here. There are no known issues of significance to be resolved.</p> <p>The site promoter states that the site would be directly accessed off St Ives Road.</p>	+
<p><b>Deliverability / developability</b></p>	~

<p>There are no known legal restrictions or known significant issues to be resolved. The site is available from 2024 to 2028 and build out is expect to take 2 to 3 years. It is intended that allocation status is acquired before selling to a third party for obtaining planning permission and development. The site is therefore classified as developable.</p>	
--	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p>
<ul style="list-style-type: none"> <li>• Is not constrained by fluvial flood risk, some surface water flood risk is present</li> <li>• The site is wholly greenfield grade 2 agricultural land.</li> <li>• The site has limited access to services, facilities and employment opportunities with a public house and football ground within 800m. The site is within 300m of West Newlands Industrial Estate, which could provide some limited employment opportunities.</li> <li>• A scheduled monument is within 40m of the site</li> <li>• The location of the proposed site is somewhat remote and has no substantial community with which to integrate with.</li> <li>• Housing allocation SM2, St Ives Road Somersham is 350m away, closer to the main residential area of Somersham. This site is currently under construction and will comprise housing and residential care home.</li> <li>• The site links to the village of Somersham via a footpath.</li> <li>• Trees and hedgerow bound the north western boundary meaning that landscape impact would be minimal if they were to be retained.</li> </ul>
<p>In combination the outcomes of the LAA and SA indicate that the site:</p>
<ul style="list-style-type: none"> <li>• Is well connected via active travel but currently remote from the main residential area of Somersham, which could present disadvantages when considering sustainable locations for development.</li> <li>• Could contribute to the housing needs of the district.</li> <li>• Would require retention of trees and hedgerows where possible.</li> <li>• Requires flood mitigation.</li> <li>• Is wholly greenfield and offers no opportunity for the redevelopment of previously developed land.</li> </ul>

- The proposed density is very low which would reflect the site's location.
- May require heritage impact assessment.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.70ha  70% net developable area to allow for retention of trees and hedgerow and flood mitigation.  $1.70 \times 70\% = 1.19\text{ha}$	Net developable area 1.19ha  Residential - Market and/or affordable housing  Low density of 35dph to reflect site's location within a larger village and the lower density context of such areas.  Capacity = $1.19\text{ha} \times 35\text{dph}$ = <b>42 homes</b>	Available post 2027 to allow for allocation of site and build out of nearby housing allocation SM2. With reassessment of sustainability at this stage.  Build out 2 to 3 years

Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present in the southern and eastern extents of the site. The site is wholly greenfield grade 2 agricultural land.</p> <p>The site is flat and the southern boundary sits on the B1089, allowing for potential access to the site. A residential property sits outside the south western corner and residential property and employment uses outside the north western corner. Newlands Industrial Estate bounds the eastern edge. The southern boundary is interspersed with trees and some hedgerow line the northern boundary, however there are clear views into the open countryside to the north. The site can also be seen from a public footpath further north. Some trees line parts of the eastern and western boundaries. Some landscaping may be required to the north to minimise impact on the countryside, this could also be minimised through the retention of existing trees and hedgerow. Development is well related to the built area but would be required to demonstrate how it can integrate with the surrounding uses. Development would be required to demonstrate how it can integrate and be compatible with the surrounding uses, especially in relation to the industrial estate to the east. The impact on noise air and light pollution to potential future occupiers of the site as a result of the operational use of the industrial estate would require assessment.</p> <p>There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	+
<p><b>Availability</b></p> <p>The site is in individual/ individual company ownership and control, the development of the site is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028 and build out expected to take 2 to 3 years. The site is allocated in the current local plan as housing allocation SM1 College Farm, West of Newlands Industrial Estate for 55 homes. It is intended that allocation status is acquired/retained before selling to a third party for obtaining planning permission and development.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site sits on the B1089 which would assist with</p>	+

Page 474 of 3488

<p>the logistics of construction, access would be required from here. There are no known issues of significance to be resolved and the site is currently allocated within the local plan meaning that upon the approval of planning permission, development could commence.</p> <p>The site promoter notes that although no planning application has been submitted on the site since its original allocation, the site is still available and deliverable. The landowners are currently negotiating with a national housebuilder for the purchase of the land to bring about its delivery. This submission of the land by the landowners is to demonstrate the continued intention to develop the site, justifying its continued allocation.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions or known significant issues to be resolved. The site is available from 2024 to 2028 and build out is expect to take 2 to 3 years. The site is currently allocated within the local plan meaning that upon the approval of planning permission, development could commence. The site is therefore classified as deliverable.</p>	+

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is not constrained by fluvial flood risk, some surface water flood risk is present</li> <li>● The site is wholly greenfield grade 2 agricultural land.</li> <li>● The site has limited access to services, facilities and employment opportunities with a public house and football ground within 800m. The site is adjacent to West Newlands Industrial Estate, which could provide some employment opportunities.</li> <li>● A scheduled monument is within 250m of the site</li> <li>● The eastern edge of the site is adjacent to Newlands Industrial Estate, housing allocation SM2, St Ives Road Somersham is within 200m</li> <li>● The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution, but may be impacted by the adjacent industrial estate.</li> <li>● The site links to the village of Somersham via a footpath.</li> <li>● Clear views into the site from the open countryside and existing public rights of way</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- Has the potential to be integrated into the existing community to the east. To enable the development to be effectively masterplanned the development would have to consider Newlands Industrial Estate and the impact of this would have on future occupiers of the site including mitigation where necessary.
- Would contribute to the housing needs of the district
- Requires flood mitigation.
- Is wholly greenfield and offers no opportunity for the redevelopment of previously developed land.
- The proposed density is very low which would reflect its relationship with the countryside to the north
- May require mitigation measures to minimise the impact on the landscape and transition to open countryside and consider retention of existing trees and hedgerow
- May require heritage impact assessment.

**HDC's Delivery Calculations**

Page 475 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.80ha  70% net developable area to allow for retention of trees and hedgerow, landscape and flood mitigation and impact from industrial estate.  1.80ha x 70% = 1.44ha	Net developable area 1.26ha  Residential - Market and/or affordable housing  Low density of 35dph to reflect site's location within a larger village and the lower density context of such areas.  Capacity = 1.26ha x 35dph = <b>44 homes</b>	Available post 2027 to allow for allocation of site.  Build out 2 to 3 years

Residential: Market and/or affordable housing	14 affordable/ starter homes	Available 2024 - 2028 Build out over 3 years

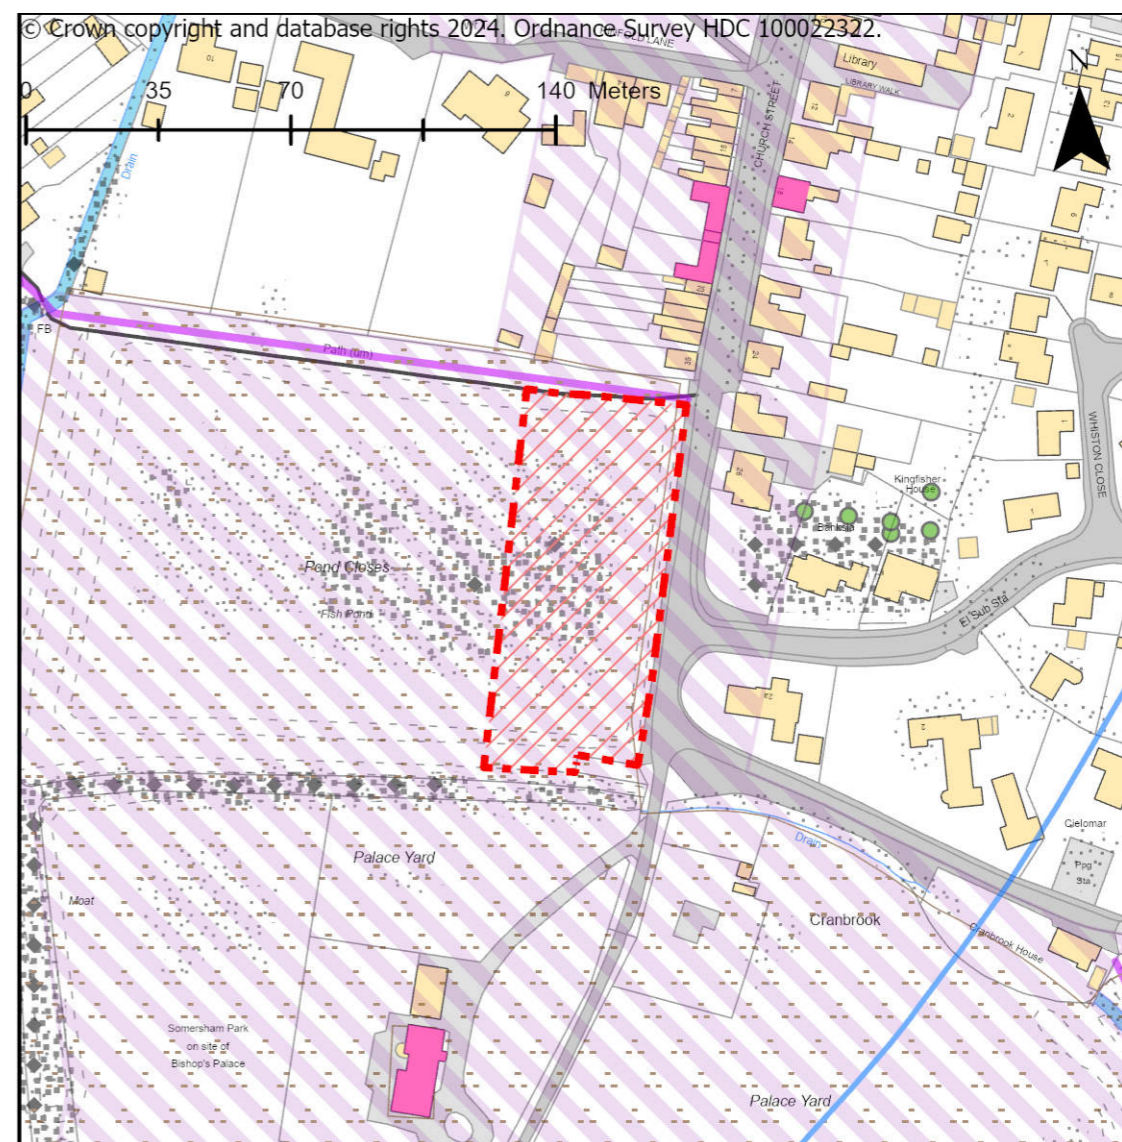

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:173
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site has also been submitted as part of a larger development proposal assessed under Somersham 10 (CfS: 184).</p> <p>The site is wholly located within flood zone 1, there is risk from surface water flooding across the site with this risk being focused towards the centre of the site. It is wholly classified as grade 3 agricultural land. The site is broadly level with established hedging along all of the site's boundaries part form its western edge. This largely serves to enclose the site, retention of this vegetation would minimise the impact of built development. However considering the form of neighbouring development and the size of the site, a frontage style development could result in the loss of a large number of trees along its frontage which could disrupt the character of the area. To the north and east is residential development, to the south is Park Farm and to the west is the larger field parcel and beyond that the open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run across the site. There are no nature conservation designations on site. The southern edge of the site is within a designated scheduled monument called Pond Closes (this forms land historically used as the home of the Bishop of Ely) and the whole of the site is within a conservation area. There are also several listed buildings to the north and south of the site. While heritage is a constraint, given the enclosed nature of the site, development of the land is less less likely have a significant impact on the setting of heritage assets, particularly if large amounts of the existing vegetation is retained, however as highlighted this may not be possible if a frontage development is pursued. The site can be accessed from Church Street.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is located within an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will be required to determine if this is a viable resource. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who supports development. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the landowner and that the site will be available between 2024 and 2028. The site promoter anticipates that the site could take about 3 years to build.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that all access and servicing are accessible from the site's boundary. The site is constrained, most notably by heritage, landscaping and surface water flooding. Masterplanning and careful design as well as engagement with necessary</p>	~

<p>specialists will be required to ensure these can be adequately overcome. As highlighted the proposed mix of uses could potentially assist in overcoming these constraints by locating built development in areas of the site less at risk.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with some constraints to overcome. The site promoter identifies that it is intended to deliver the site directly by the landowner and that the site will be available between 2024 and 2028. Considering that no planning application has yet been received, the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is greenfield land consisting of grade 3 agricultural land</li> <li>● Within flood zone 1 but there is risk from surface water flooding across the site</li> <li>● In walking distance to several local leisure and cultural facilities, a local shop and primary education</li> <li>● Limited accessibility to a range of employment opportunities</li> <li>● Accessible to natural greenspace</li> <li>● Not constrained by nature conservation designations</li> <li>● It is within the conservation area, the southern edge of the site includes a scheduled monument and there are listed buildings to the north</li> <li>● Located on the southern edge of Somersham accessible via a footpath connection into the village. The site has a more rural feel as the village transitions into the countryside to the south, it is largely enclosed by existing hedgerows and vegetation apart form its western edge.</li> <li>● Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is potentially appropriate for development accessed from Church Street. The site promoter seeks to provide affordable/ starter homes on the site.</li> <li>● Development will need to retain and incorporate appropriate landscaping and mitigation against adversely impacting heritage assets and their setting as well as minimise the sense of encroachment into the countryside.</li> </ul>
---

- Land included within the scheduled monument designation should not be built.
- Incorporate appropriate sustainable drainage solutions to address surface water flood risk and ensure homes are resilient and resistant to flooding.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 0.44ha 90% net developable area to allow for sufficient landscaping on its western side and sustainable drainage. 0.44 ha x standard proportion of 90% = <b>0.37 ha</b>	Residential - market and/or affordable houses Very low density of 35 dph anticipated in keeping with surrounding densities within the village. Capacity = 0.37 ha x 35 dph = <b>14 homes.</b>	Available post 2028, subject to allocation status Build out over 3 years

**Updates after the Initial Assessment**

--

**Somersham 10: Land South of 35 Church Street (larger site), Somersham**

<b>Site reference</b>	Somersham 10
<b>Site name</b>	Land South of 35 Church Street (larger site), Somersham

Site address	Parish(es)	Site area (ha)
Land South of 35 Church Street (larger site), Somersham	Somersham	1.65

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Open space uses: <ul style="list-style-type: none"> <li>Natural green or open space uses</li> <li>Biodiversity net gain opportunities</li> </ul>	30+ starter/ affordable homes  0.8ha of the site to be used for public open space and biodiversity net gain	Available 2024 - 2028  Build out over 3 - 4 years

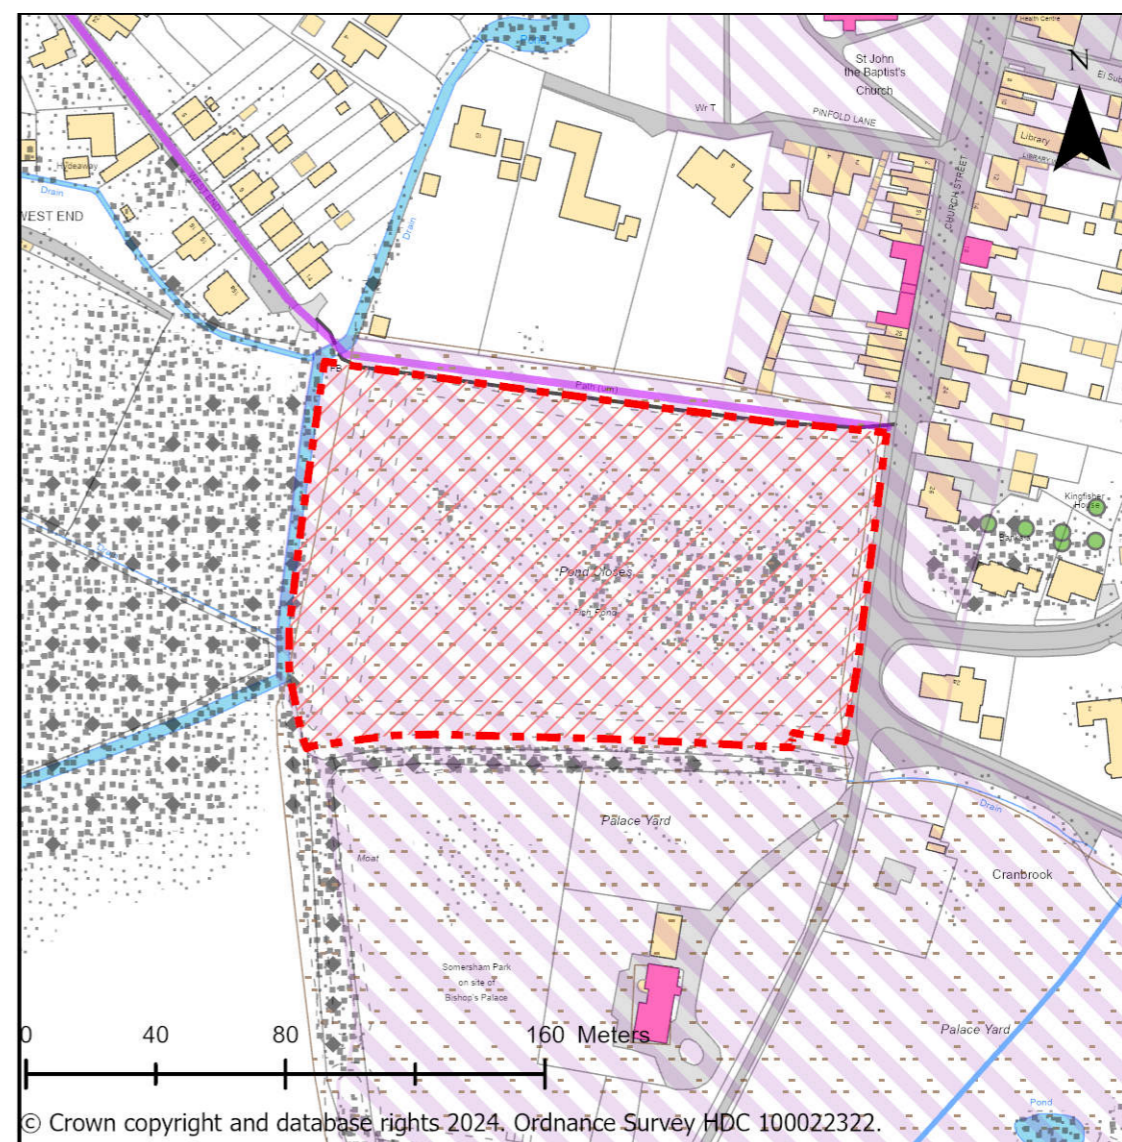

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference - Cfs:184
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The eastern edge of the site has also been submitted under Somersham 9 (CfS: 173).</p> <p>The site is wholly located within flood zone 1, there is risk from surface water flooding across the site with this risk being focused towards the centre of the site. It is wholly classified as grade 3 agricultural land. The site is broadly level with established hedging along each of the site's boundary which clearly enclose the site, retention of this vegetation would minimise the impact of built development. To the north and east is residential development, to the south is Park Farm and to the west is the open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run across the site. There are no nature conservation designations on site. The southern edge of the site is within a designated scheduled monument called Pond Closes (this forms land historically used as the home of the Bishop of Ely) and the whole of the site is within a conservation area. There are also several listed buildings to the north east and south of the site. While heritage is a constraint, given the enclosed nature of the site, development of the land is less less likely have a significant impact on the setting of heritage assets, particularly if large amounts of the existing vegetation is retained. Additionally, the site promoter seeks about half of the site to be used for natural open space which could be masterplanned to include the land protected for it archaeological value. The site can be accessed from Church Street.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is located within an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will be required to determine if this is a viable resource. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in single ownership who supports development. There are no known legal restrictions impacting the site. It is intended to deliver the site directly by the landowner and that the site will be available between 2024 and 2028. The site promoter anticipates that the site could take between 3 and 4 years to build.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that gas supply and mains water supply are accessible within the site, whereas electricity supply, public highway and digital and telecommunications infrastructure are accessible from the site's boundary. The site is constrained, most notably by heritage, landscaping and surface water flooding. Masterplanning and careful design</p>	~

<p>as well as engagement with necessary specialists will be required to ensure these can be adequately overcome. As highlighted the proposed mix of uses could potentially assist in overcoming these constraints by locating built development in areas of the site less at risk.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with some constraints to overcome. The site promoter identifies that it is intended to deliver the site directly by the landowner and that the site will be available between 2024 and 2028. Considering that no planning application has yet been received, the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is greenfield land consisting of grade 3 agricultural land</li> <li>● Within flood zone 1 but there is risk from surface water flooding across the site</li> <li>● In walking distance to several local leisure and cultural facilities, a local shop and primary education</li> <li>● Limited accessibility to a range of employment opportunities</li> <li>● Accessible to natural greenspace</li> <li>● Not constrained by nature conservation designations</li> <li>● It is within the conservation area, the southern edge of the site includes a scheduled monument and there are listed buildings to the north</li> <li>● Located on the southern edge of Somersham accessible via a footpath connection into the village. The site has a more rural feel as the village transitions into the countryside to the south, it is largely enclosed by existing hedgrows and vegetation.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is potentially appropriate for development accessed from Church Street. The site promoter seeks to provide affordable/ starter homes on the site.</li> <li>● Development will need to retain and incorporate appropriate landscaping and mitigation against adversely impacting heritage assets and their setting as well as minimise the sense of encroachment into the countryside.</li> </ul>
--

- Land included within the scheduled monument designation should not be built upon but could be included within the open space provision on the site
- Incorporate appropriate sustainable drainage solutions to address surface water flood risk and ensure homes are resilient and resistant to flooding.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 1.65ha</p> <p>Remove 0.8ha of land for open space provision in accordance with the intention of the site promoter. This leaves 0.85 ha. Of this, 90% net developable area to allow for sufficient landscaping and sustainable drainage.</p> <p>0.85 ha x standard proportion of 90% = <b>0.77 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 35 dph anticipated in keeping with surrounding densities within the village.</p> <p>Capacity = 0.77 ha x 35 dph = <b>27 homes.</b></p>	<p>Available post 2028, subject to allocation status</p> <p>Build out over 3 to 4 years</p>

**Updates after the Initial Assessment**

**Somersham 11: Land to the west of Parkhall Road, College Farm, Somersham**

<b>Site reference</b>	Somersham 11
<b>Site name</b>	Land to the west of Parkhall Road, College Farm, Somersham

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land to the west of Parkhall Road, College Farm, Somersham	Somersham	6.33ha

**Promoter's Intentions**

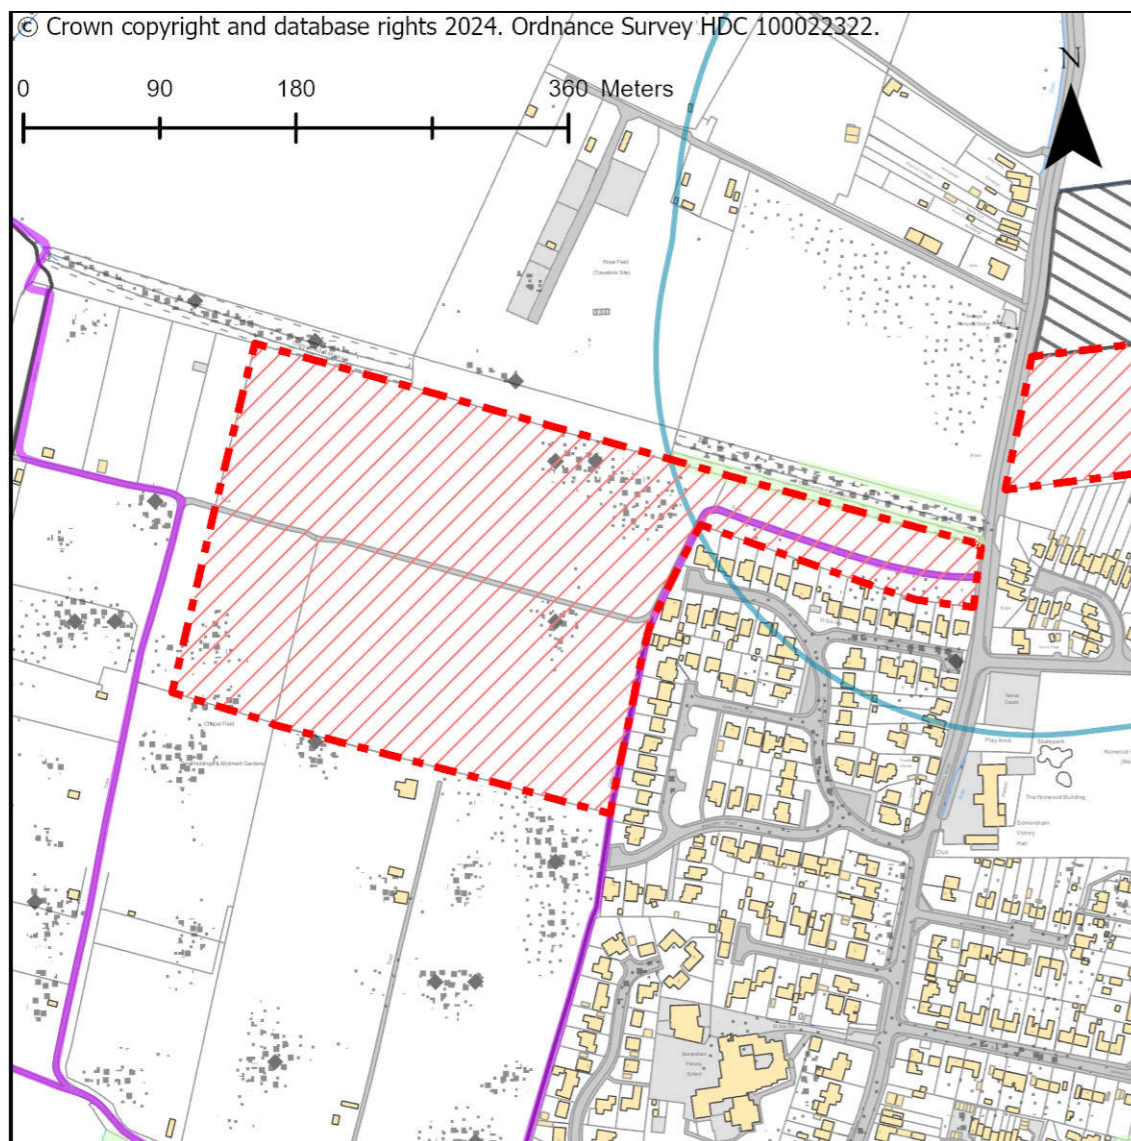

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Open Space: Natural, green or open spaces Biodiversity net gain opportunities	112 homes 2.93ha open spaces	Available 2024 to 2028 Build out 3 to 4 years

**Core information**

How was the site identified?	Call for sites 2023 site submission: site reference - CfS: 339
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Concept Plan Location plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present within the site. The site is wholly greenfield grade 2 agricultural land.</p> <p>The site is relatively flat greenfield land. Access to the site is via Parkhall Road. The site is lined on the northern boundary by trees and a disused railway line, screening the site from the northern approach. Residential properties back onto the eastern boundary and the southern aspect of the entrance way. To the south is Somersham and District smallholdings and allotments which wrap around the site to the west. A public footpath runs from the entrance into the site before heading south along the eastern edge. A network</p>	+
--	---

<p>of footpaths are present west of the site. A tree preservation order spans the north eastern boundary. Development of the site would have limited landscape impact but integration with residential properties and existing allotments and smallholdings should be considered. The entrance and main approach to the site may only be sufficient space for vehicle movements.</p> <p>There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. Part of the eastern entrance of the site is within a sand and gravel mineral safeguarding area and water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in individual organisational ownership and control, the development of the site is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028 and build out expected to take 3 to 4 years. It is intended that Planning permission is acquired and then the land sold to a third party for development</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains water and electricity supply and digital telecommunications infrastructure are noted as being unknown. This would require resolution. There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site is located on Parkhall Road which could assist with the logistics of construction, a traffic impact assessment may be required to assess the impact of the development on the local road network.</p> <p>The site promoter proposes a new footpath to link up the site with the wider footpath network to the west, vehicle access from Parkhall Road, a LAP/LEAP facility, some attenuation ponds and open space. They note that Greater Cambridge Partnership has sustainable transport projects that are relevant to Somersham, the Making Connections/Future Bus Strategy Project proposes a bus corridor between Somersham and St Ives.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. There are no significant issues, however access to gas, mains water and electricity supply and digital telecommunications infrastructure would require resolution. The site is available from 2024 to 2028 and build out is expect to take 3 to 4 years. It is intended that planning permission is acquired and then the land sold to a third party for development. The site is therefore classified as developable</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is not constrained by fluvial flood risk, some surface water flood risk is present</li> <li>• The site is wholly greenfield grade 2 agricultural land.</li> <li>• The site is well located with access to a number of services and facilities including a primary school and multiple convenience stores.</li> <li>• The site within 1.5km of West Newlands Industrial Estate, which could provide some employment opportunities.</li> <li>• The site is with 200m of 0.5ha of greenspace according to Natural England's 'Access to Natural Greenspace Standards. There are no heritage within or in the nearby vicinity of the site.</li> <li>• Development of the site would have limited landscape impact, but a tree preservation order is located on the northern aspect of the site.</li> <li>• Has no footpath to access the site, but includes public rights of way within it.</li> <li>• To the south is Somersham and District smallholdings and allotments which wrap around the site to the west.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is well related to the existing settlement with housing to the south and east of the site and a park, sports pitch and Victory Hall and school nearby.</li> <li>• The site is located as such that it has the potential to be effectively masterplanned to become part of the existing community, the site would require careful consideration of integration of existing uses and assessment of impact and mitigation where necessary.</li> <li>• Is of a size that could include a wide range of types, sizes and tenures</li> <li>• Requires flood mitigation.</li> <li>• The entrance and main approach to the site may only be sufficient space for vehicle movements.</li> <li>• Is wholly greenfield and offers no opportunity for the redevelopment of previously developed land.</li> <li>• The density proposed is in keeping with the surrounding area.</li> <li>• May require mitigation measures to minimise the impact tree preservation order.</li> <li>• Provides opportunities exist to link to existing public rights of way to enhance active travel opportunities.</li> </ul>
--

Page 484 of 3488

- Would require extension of the footpath link to the site to assist with safe pedestrian access to the proposed development.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 6.33ha</p> <p>Removal of 0.70ha of land to be reserved for vehicular approach to main body of the site.</p> <p>6.33ha - 0.70ha = Gross site area of 5.63ha</p> <p>60% net developable area to allow for careful masterplanning to integrate existing uses with the site, retention of footpath, opportunities to link public rights of way and flood mitigation.</p> <p>5.63ha x 60% = 3.378ha</p>	<p>Net developable area 3.378ha</p> <p>Residential - Market and/or affordable housing</p> <p>Low density of 35dph to reflect site's location within a larger village and the lower density context provided by nearby residential development.</p> <p>Capacity = 3.378ha x 35dph = <b>118 homes</b></p>	<p>Available 2024 to 2028</p> <p>Build out 3 to 5 years</p>

**Updates after the Initial Assessment**

**Somersham 12: Land North of Chatteris Road, Somersham**

<b>Site reference</b>	Somersham 12
<b>Site name</b>	Land North of Chatteris Road, Somersham

Site address	Parish(es)	Site area (ha)
Land North of Chatteris Road, Somersham	Somersham	3.78ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Spaces: Natural, green or open spaces Biodiversity net gain	60 to 75 homes  Open space to be decided	Available 2024 to 2028  Build out 3 years.

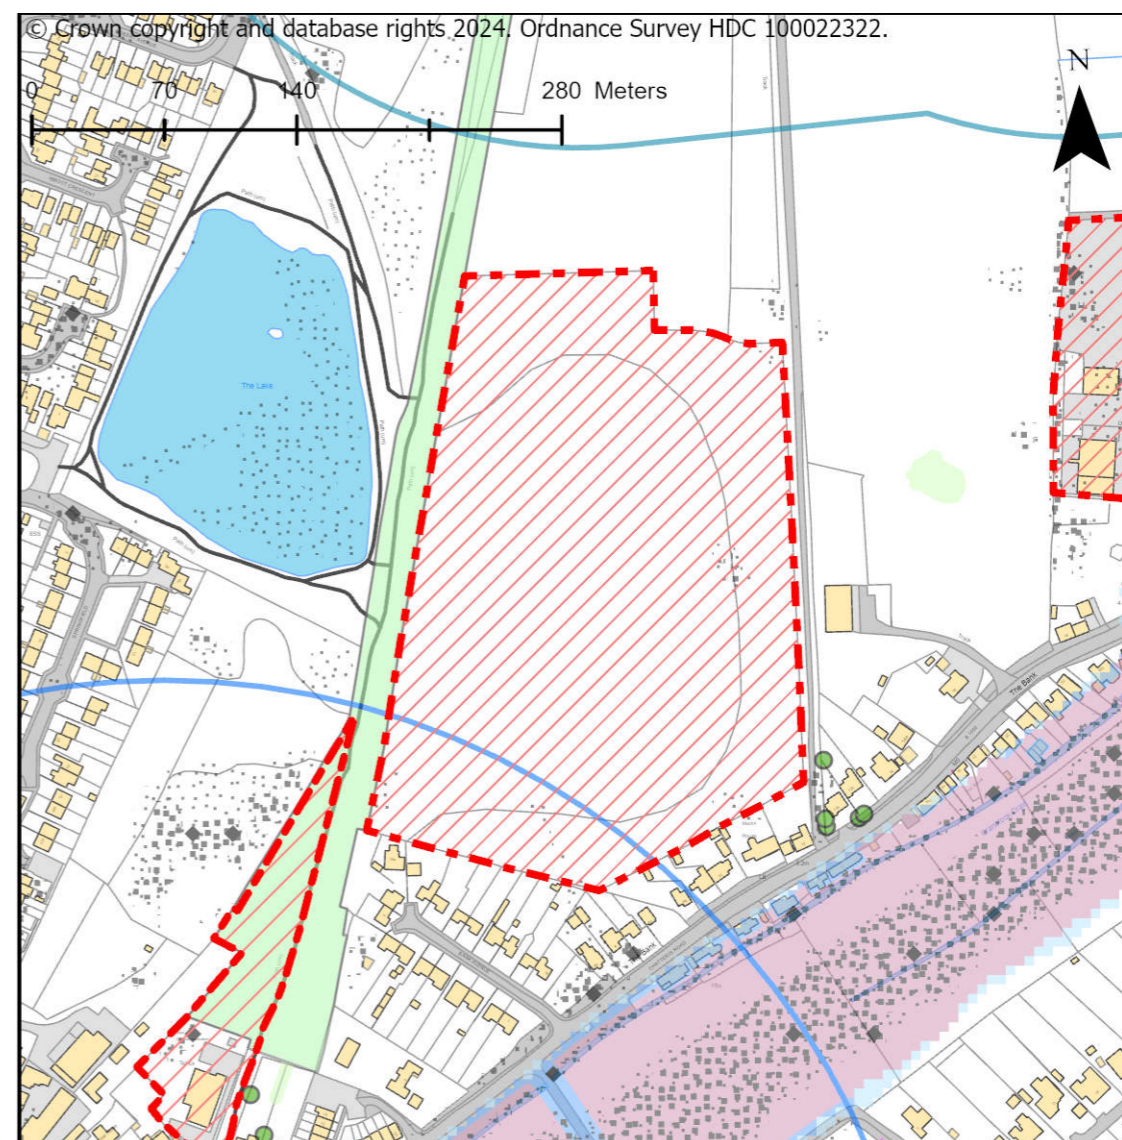

**Core information**

How was the site identified?	Call for sites 2023 site submission: site reference - Cfs: 350
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 486 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present, but this is minimal. The site is predominantly grade 2 agricultural land with an extremely small portion of site grade three in south.</p> <p>The site is relatively flat. The site is wholly greenfield and surrounded by mature trees. Residential properties and back gardens bound the southern edge. Residential housing allocation SM5 North of The Bank, Somersham sits east of the site with access proposed off Chatteris Road. To the immediate west sits Somersham Local Nature Reserve a species rich site which is also used for local recreation. St Ives - March Disused Railway (Somersham) County Wildlife Site also runs along the western boundary. Development in this area has the potential to significantly negatively impact the ecology and biodiversity of the area.</p> <p>The Bank (a narrow track) runs from Chatteris Road along the eastern edge of the site towards the Somersham Community Orchard and forms part of a wider network of active travel leisure routes connected to the Local Nature Reserve. Pedestrian access is provided to the Local Nature Reserve from Station Approach, with this route continuing along the western edge of the site. Potential access to the site has not been provided.</p> <p>There is no known pollution or contamination and no known oil or gas pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site, three tree preservation orders are located on the approach to the site on The Bank. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area and the south western corner is within a water recycling area.</p>	-
<p><b>Availability</b></p> <p>The site is in individual organisational ownership and control, the development of the site is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028 and build out expected to take 3 years. It is intended that Planning permission is acquired and then the land sold to a third party for development</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains water and electricity supply and digital telecommunications infrastructure are noted as being unknown. This would require resolution. Potential access to the site has not been provided. Access may be required through adjacent land or land not within ownership of the landowner which could cause issues with ransom strips and viability of the site, thus affecting delivery. The Bank (a narrow track) runs from Chatteris Road along the eastern edge of the site, however this is flanked by residential properties</p>	-

<p>and tree preservation orders, meaning substantial access for motorised vehicles may prove unachievable. A traffic impact assessment may be required to assess the impact of the development on the access proposals and local road network. Alternative potential access could be from Station Approach, currently used as pedestrian access to Somersham Local Nature Reserve, vehicular access from this approach could have a significant detrimental impact on the ecology and biodiversity of the site. Both access options has the potential to restrict pedestrian movement and active travel opportunities within the locality and impact on the safety of users. No evidence has been provided to address this issue. Residential development and the potential removal of some trees surrounding the site also have the potential to detrimentally impact the ecology and biodiversity of the site and disturb the wider ecological corridor formed with the Local Nature Reserve.</p> <p>The site promoter notes that an ecological assessment would be carried out with relevant surveys undertaken to ensure there is no harm incurred upon the existing habitats and wildlife that may be present in the site, with any recommended mitigation measures to be undertaken if required. They note that Greater Cambridge Partnership has sustainable transport projects that are relevant to Somersham, the Making Connections/Future Bus Strategy Project proposes a bus corridor between Somersham and St Ives.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. Significant constraints include access to the site, impact on active travel routes, the Local Nature Reserve and ecology and biodiversity within the wider green network/corridor. Access to gas, mains water and electricity supply and digital telecommunications infrastructure are noted as being unknown. This would require resolution. The site is classified as not developable.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No, due to significant constraints including access, impact on active travel routes, the Local Nature Reserve and ecology and biodiversity within the wider green network/corridor, lack of access to gas, mains water and electricity supply and digital telecommunications.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the site was considered inappropriate for development due to significant constraints including access, impact on active travel routes, the Local Nature Reserve and ecology and biodiversity within the wider green network/corridor, lack of access to gas, mains water and electricity supply and digital telecommunications.	N/A	N/A

**Updates after the Initial Assessment**

<b>Site reference</b>	Somersham 13	
<b>Site name</b>	Land East of Chapel Field Lane, Somersham	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land East of Chapel Field Lane, Somersham	Somersham	0.2

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Between 2 and 8 homes	Available 2024 - 2028 Build out over 1 year

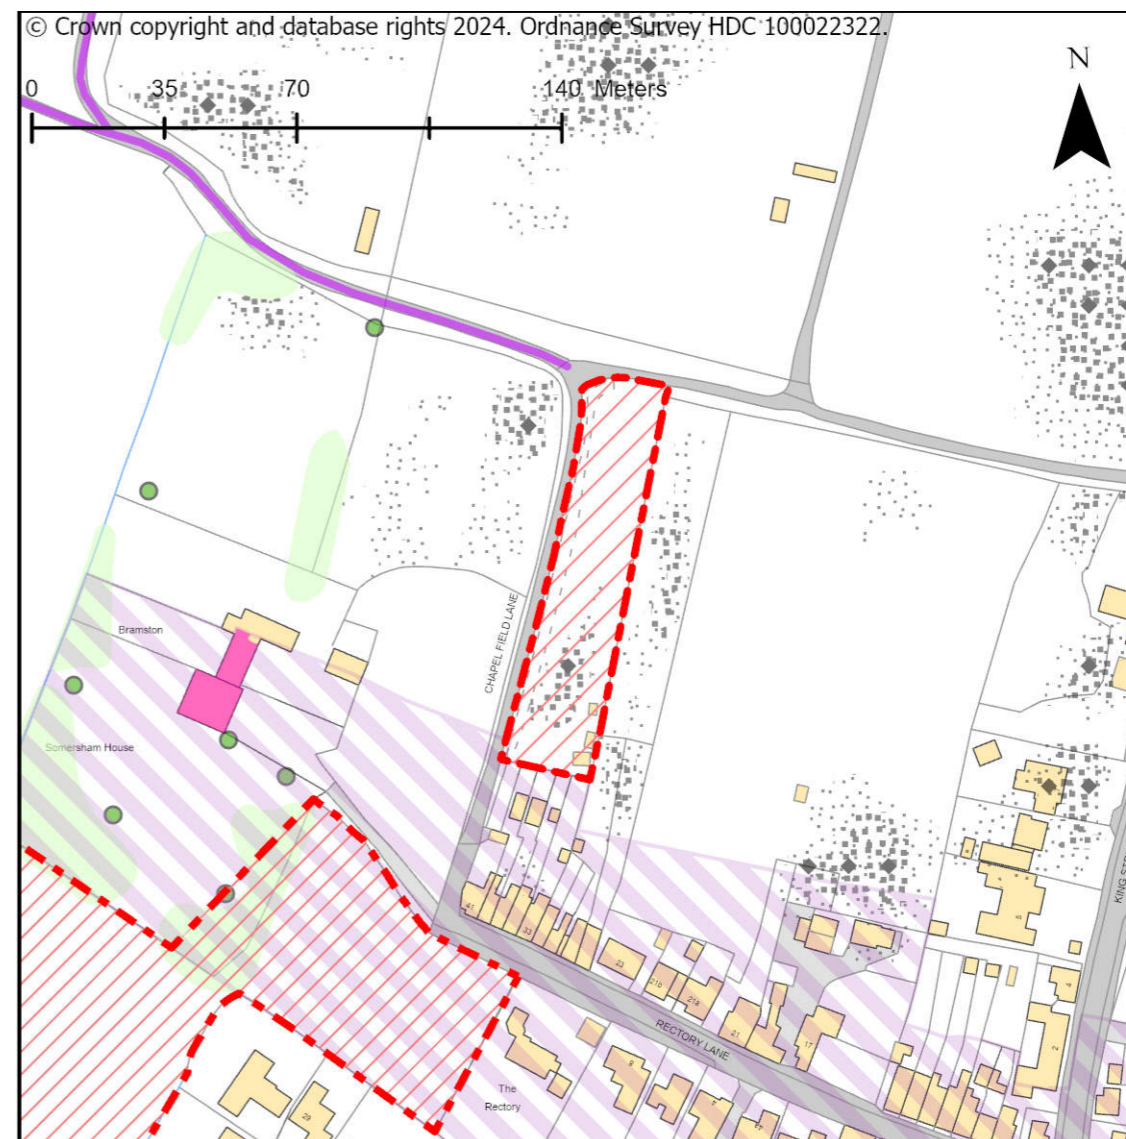

**Core information**

How was the site identified?	Ongoing Call for Sites 2023 submission - site reference - CfS:23-2417
Relevant planning history	<ul style="list-style-type: none"> <li>None relevant</li> <li>Part of the site was assessed in the HELAA (2017) (site reference: 032 - East of Chapel Field Lane, Somersham). The site was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.</li> </ul>
Land type	Wholly greenfield land
Current use of the site	Garden land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	While the site is below 0.25ha, the site promoter states that between 2 and 8 homes could be accommodated on the site.	Pass

**Assessment of Site Potential**

<p><b>Suitability and constraints</b></p> <p>The site is wholly located within flood zone 1 with some risk from surface water flooding in the southern part of the site. It is wholly classified as grade 2 agricultural land. The site is broadly level</p> <p>There is established hedging along each of the site's boundary which clearly enclose the site, retention of this vegetation would minimise the impact of built development. There are also trees within the site as well as some sheds. The site is located to the east of Chapel Field Lane on the western edge of Somersham. To the south is residential development and to the north is allotments. East of the site is a field, beyond which is residential development. To the west of the site is open countryside.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Its southern boundary does however adjoin the conservation area and it is some 70m east of the grade II listed Somersham House. While heritage is a constraint, given the enclosed nature of the site, development of the land is less likely have a significant impact on the setting of heritage assets, particularly if large amounts of the existing vegetation is retained. The site can be accessed from Chapel Field Lane, however this is a narrow single lane route with no footpath connection.</p> <p>The site is greenfield with some existing sheds on site, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site has multiple owners being within the ownership of a family. Development of the site is supported by all landowners. There are no known legal restrictions impacting the site. The site promoter states that is intended to acquire planning permission and then sell the site to a third party for development. They state the site will be available between 2024 and 2028 and take about 1 year to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all access and services are accessible from the site boundary. As highlighted, constraints relating to heritage could largely be overcome by retaining the existing established vegetation on the site. Access is however a key constraint with Chapel Field Lane being a narrow lane. The site is also long and narrow which makes development in design terms more challenging.</p>	~
<p><b>Deliverability / developability</b></p>	~

Page 489 of 3488

<p>The site is greenfield with some constraints to overcome relating to heritage, landscaping and access. The site promoter states that is intended to acquire planning permission and then sell the site to a third party for development with the site being available for development between 2024 and 2028. The site is categorised as being developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 2 agricultural land</li> <li>• Within flood zone 1 but there is some risk from surface water flooding</li> <li>• In walking distance to several local leisure and cultural facilities, a local shop and primary education</li> <li>• Limited accessibility to a range of employment opportunities and natural greenspace</li> <li>• Not constrained by nature conservation designations</li> <li>• It is adjacent to the conservation area and a listed building</li> <li>• Located on the western edge of Somersham with very limited accessibility via suitable vehicle and pedestrian routes into the village. The site has a more rural feel as the village transitions into the countryside to the west, it is largely enclosed by existing hedgrows and vegetation. The site is narrow making designing a scheme in keeping of local character challenging and likely to adversely impact the village character and erode the rural edge of the settlement.</li> <li>• Successful integration and effective integration of built development into the existing place and community is challenging</li> <li>• Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is considered not appropriate for development due to its potential harm to the character of the village and landscape.</li> </ul>

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 492 of 3488

	and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity.
--	---

**Impact of the Sustainability Appraisal on the assessment**

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as the entirety of the site is located within 400m of a water recycling area. In addition, part of the site includes St Ives - March Disused Railway (Somersham) County Wildlife Sites.	N/A	N/A

**Updates after the Initial Assessment**

--

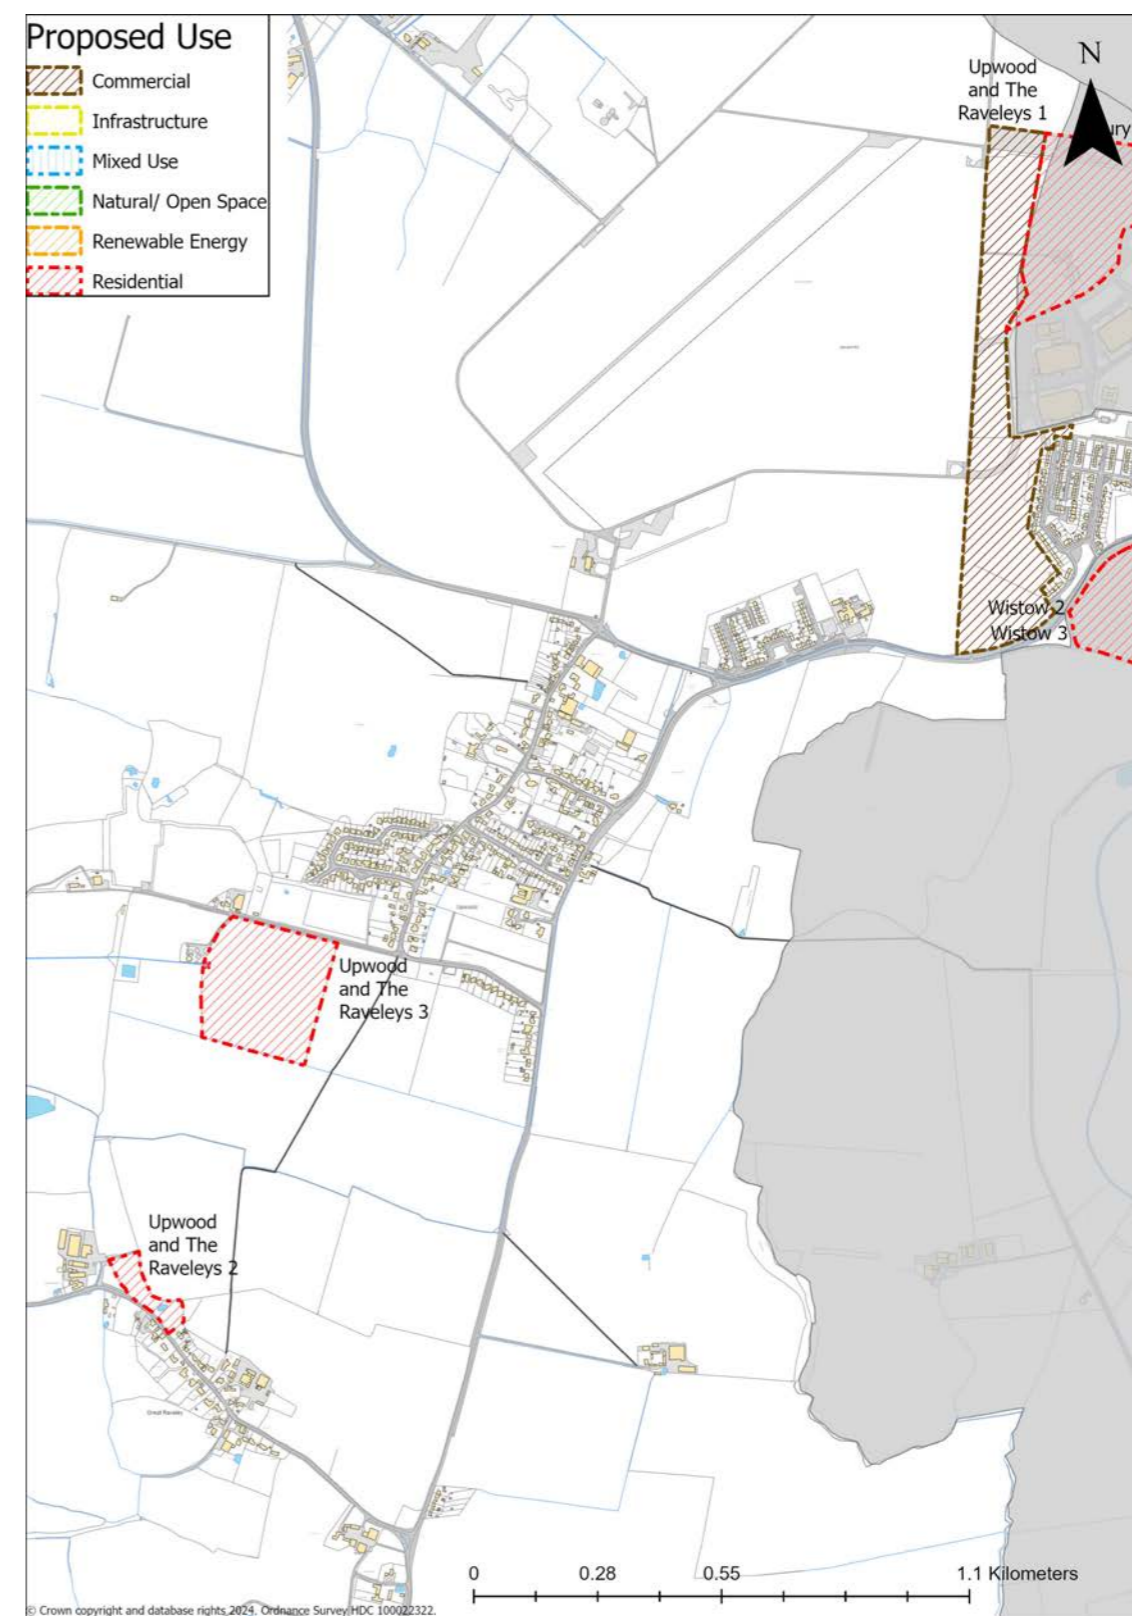

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No because the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development
---	---

## 6 Upwood and The Raveleys

6.1 A total of 3 sites has been identified/ put forward through the desktop review or Call for Sites process. These are:

- Upwood and The Raveleys 1: RAF Upwood - Phase 4, Upwood
- Upwood and The Raveleys 2: Village Field, Raveley Road, Great Raveley
- Upwood and The Raveleys 3: Upwood Field, Meadow Road, Upwood

6.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 496 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>This site proposes a fourth phase to the current redevelopment of RAF Upwood. It is located to the west of Phases One and Two. A Phase Three site has also been submitted (see Bury 7 for the assessment of this site).</p>	+
---	---

<p>The site is wholly located within flood zone 1 and there is no recorded risk from surface water flooding. It is wholly classified as non-agricultural land. The site forms the western edge of RAF Upwood and is fairly narrow north of Rose Lane which runs through the site and provides a vehicular connection to Upwood Air Park from Ramsey Road. Land levels within the site slope by some 10m from the highest points of the site in the north of the site to its lowest in the south along Ramsey Road. Development in the north of the site compared to the south would be much more visible in the landscape. There are existing trees and vegetation along the site's eastern edge and also a hedgerow that runs diagonally through the southern part of the site. There are intermittent trees along its southern edge on Ramsey Road as well as security fencing. The submitted Vision Document details how built development is not proposed in the north part of the site but will instead be concentrated to the south of Rose Street and that the existing vegetation will be retained. To the east of the site is Upwood Air Park an area of land in commercial use and which will remain so under the lease of the land, also east of the site is residential development. To the north and west is open countryside. To the south is Ramsey Road and beyond that further countryside.</p> <p>There is no known contamination on site, although this may require further investigation considering the current use of the site. No oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. The Vision Document details that access to the site is proposed from Ramsey Road with the access via Rose Lane retained as this serves Upwood Air Park. The site promoter has submitted an access arrangements plan detailing the connection from Ramsey Road into the site. This plan is supported by a Transport Technical Note for Phases Three and Four. Engagement with Cambridgeshire County Council will be required to assess this further and ensure effective integration of the site.</p> <p>While the site forms part of the former airfield, it is greenfield itself, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single developer company who supports its development. There are no known legal restrictions impacting the site. The site promoter intends the site to be delivered by a master developer. The site is expected to be available between 2024 and 2028 and take 3 to 4 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that all access and services are accessible from the site boundary apart from mains water supply which is unknown. The site has some topographical challenges to overcome but the submitted Vision Document shows how the site promoter</p>	+

<p>anticipates to overcome these. There are very few physical constraints to also overcome. The site promoter has submitted the site for a commercial use which would could be integrated to the Upwood Air Park utilising an existing access. It would also provide employment development that could be integrated with the wider redevelopment of the RAF site. However, the point of access is from Ramsey Road and it is not proposed to provide a link to the adjoining residential development to the east of the site. Opportunities to provide connections and therefore aid integration with the wider site should be explored further. It is noted that the site promoter also states that the site could provide residential development alongside employment development or instead of depending on 'the needs of the council'.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures to clear and there are few major constraints to overcome. The site promoter seeks to deliver the site via a master developer and anticipates that the site will be available between 2024 and 2028. It adjoins an existing site allocation in the Huntingdonshire Local Plan to 2036. Considering that there is no live planning application on the site and the need for further technical work and engagement, the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield consisting of land classified as being non-agricultural land</li> <li>• Is not constrained by flood risk</li> <li>• In walking distance to services, shops and employment opportunities within Upwood, Bury and Ramsey</li> <li>• Good accessibility to public transport via bus</li> <li>• Not accessible to natural green space</li> <li>• Not constrained by heritage designations but is about 200m from Rolts Wood CWS and about 1km from Upwood Meadows National Nature Reserve</li> <li>• Could provide local employment opportunities and support the vitality of Upwood Air Park and provide complimentary employment to the adjoining redevelopment of former RAF Upwood which is residential led</li> <li>• It can be effectively masterplanned to become part of the evolving place and community as part of the ongoing redevelopment and the growing community at the former RAF Upwood and is compatible with nearby uses.</li> </ul>
--

<p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is considered to be potentially appropriate for development. This is dependent on successful integration and physical connections being made with the wider site including Upwood Air Park.</li> <li>• Development should be focused on its southern half with the site north of Rose Lane being used for green infrastructure and landscaping</li> <li>• Has its own access from Ramsey Road meaning that development is not dependent on other phases of the wider ongoing redevelopment</li> </ul>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area is 14ha but 9.2ha of the site is proposed for natural green or open space. This leaves 4.8ha of the site for employment uses.</p> <p>For solely employment developments, the gross site area is used as there is usually being minimal differences between net and gross site areas in schemes providing purely employment uses due to the need for large amounts of hardstanding for parking, manoeuvring and deliveries and more incidental landscaping.</p>	<p>Commercial - employment</p> <p>The site promoter has not specified the type of employment that could be delivered on the site, the 0.4 plot ratio is most appropriate to use to calculate an indicative capacity:</p> <p>0.40 plot ratio x 4.8 ha = 1.92 ha of land for employment uses</p> <p>equating to <b>19,200 sqm.</b></p>	<p>Available 2028, subject to allocation</p> <p>Build out over 3 - 4 years</p>

**Updates after the Initial Assessment**

<p> </p>

## 6 Upwood and The Raveleys

### Upwood and The Raveleys 2: Village Field, Raveley Road, Great Raveley

<b>Site reference</b>	Upwood and The Raveleys 2
<b>Site name</b>	Village Field, Raveley Road, Great Raveley

Site address	Parish(es)	Site area (ha)
Village Field, Raveley Road, Upwood	Upwood and The Raveleys	0.99

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable homes	5 - 7 homes	Available 2023 Build out over 1 year

#### Core information

How was the site identified?	Call for Sites 2023 submission - site reference - CfS:287
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The whole of the site is within flood zone 1, there is some surface water flood risk across the site. There is also a pond within the site. The site is wholly classified as grade 3 agricultural land. The site slopes gently down from its northern edge towards Raveley Road. The land slopes by approximately 5m across the site. Its lowest point is its north western edge which is some 5m or so lower than its south eastern edge. A low hedgerow runs along its northern edge and also along its frontage on Raveley Road, these provide clear boundaries to the site but as they are low there are still longer landscape views. There is a cluster of trees to the west of the site which adds to the rural nature of the site and also provides some screening to the adjacent farm. There is loosely knit residential development to the south and east of the site with the open countryside to the north and west.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are telegraph poles running along the site's frontage and also electricity poles running through the site. There are no nature conservation designations or heritage assets on site. It is however within the landscape and visual setting of the Great Fen. The site could be accessed from Raveley Road.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. It is not located within an extensive mineral safeguarding area and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions impacting the site. The site promoter seeks to planning permission for the site and then sell it to a third party for development. The site promoter suggests the land is available now and take 1 year to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that electricity supply, the public highway and digital and telecommunications infrastructure are accessible from the site boundary. They identify that mains water supply is accessible within the site but that gas supply unknown but considered to not be immediately accessible. There are telegraph poles running along the site's frontage and also electricity poles running through the site. This will impact the layout of development within the site but the site promoter states that the electricity supply could be put underground. It is unclear at this stage how viable this will be to do, engagement with utility providers will also be required on this aspect. There are some topographical considerations to consider relating to the slope of the land, relationship with the landscape and the Great Fen as well as surface water flood risk present. Masterplanning and careful design may be able to overcome these.</p>	~
<p><b>Deliverability / developability</b></p>	~

<p>The site is greenfield with no structures on site to clear however the presence of telegraph and electricity poles constrain development which may impact the viability of proposals to overcome. The site promoter seeks to planning permission for the site and then sell it to a third party for development. Even though the site promoter states the site is available now, the proposal being not a rural exceptions scheme is contrary to current policy so an allocation status would be required. Therefore, the site site is categorised as being developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is greenfield land consisting of grade 3 agricultural land</li> <li>● Within flood zone 1 with some risk from surface water flooding</li> <li>● Very limited accessibility to local leisure and cultural facilities, shops and employment opportunities</li> <li>● Primary education is located within the neighbouring village of Upwood</li> <li>● Accessible to natural green space</li> <li>● Not constrained by heritage designations but it is about 1km from Upwood Meadows National Nature Reserve and is within the landscape and visual setting of the Great Fen</li> <li>● Located on the northern edge of the linear built form of Great Raveley, development along the frontage would be of a scale that would retain the character of the area. In depth development on the part of the site that starts to extend into the countryside would result in greater impact. It also has a close relationship to the countryside so landscaping will be required to soften to impact of development.</li> <li>● Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is potentially appropriate for development of a modest scale that reflects the surrounding residential form.</li> <li>● Development will need to incorporate appropriate landscaping.</li> <li>● There are telegraph poles running along the site's frontage and also electricity poles running through the site. This will impact the layout of development within the site but the site promoter states that the electricity supply could be put underground. It is will need to be further scoped if this is possible and viable to do.</li> </ul>
--

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 0.99ha</p> <p>50% net developable area to focus development along the frontage of Raveley Road and to allow sufficient landscaping and accommodating the pond and utilities within the site.</p> <p>0.99 ha x standard proportion of 75% = <b>0.495 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 0.74 ha x 25 dph = 12 homes but considering that development should be linear in form in order to reflect the existing character of the site's immediate environs, this brings the capacity down to <b>7 homes</b>.</p>	<p>Available post 2028, subject to allocation status</p> <p>Build out over 1 year</p>

Updates after the Initial Assessment

Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
The site is wholly classified as grade 3 agricultural land. The site is wholly flood zone 1 with some risk of surface water flooding.	

<p>The site is located in the north-eastern edge of Warboys, with greenfield land immediately to the north and east, Heath Road along the southern boundary and a residential area in Warboys to the south west. Moving from west to east the land slopes down by approximately 6 metres and this decline continues beyond the eastern boundary. The western and southern boundary comprises of well-established trees and hedgerow but the northern boundary is completely open meaning the site would be clearly visible from the north, from multiple fields of arable farmland with a traversing public right of way. There is a dense patch of trees on the eastern side of the site partially filtering views into the site from the east. Therefore, considering the topography of the land and public vantage points, significant landscaping could be required particularly on the northern boundary to mitigate adverse landscape impact.</p> <p>The site is not impacted by oil/ gas pipelines but it is adjacent to the A141 meaning noise and air pollution could be an issue. There are no designated heritage or nature assets within the site. Highway access could be achieved from Heath Road, consultation with Cambridgeshire County Council will be required to ascertain the most feasible and safest access point. Neighbouring the site immediately to the south east is a dense patch of trees and a pond, which may be home to protected species and require assessment.</p> <p>In addition, there is a sewage pumping station adjoining the eastern boundary.</p> <p>The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration or reuse of previously developed land. The site is outside a mineral safeguarding area and water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single company who support the proposal and is available for development now. The site promoter has stated there are no legal restrictions or issues to resolve prior to development.</p>	+
<p><b>Achievability</b></p> <p>The site promoter identifies that mains water supply, electricity and digital and telecommunications is available from the site boundary. Access to gas supply is unknown. A transport assessment will be required to demonstrate safe and appropriate access to the site could be achieved from Heath Road. The topography of the land could constrain development sloping downwards by 6 metres from western to eastern boundary potentially affecting the layout and capacity. An ecological survey should be undertake to avoid disrupting and mitigating the impact on habitats on the eastern side of the site. Retention of the woodland may impact the layout of the site which could be resolved through the design process. The location and topography of the site would cause significant landscape impact which would need to be mitigated through appropriate landscaping/ screening.</p>	

<p><b>Deliverability / developability</b></p> <p>The site is wholly greenfield with no built structures to clear. The site promoter has stated the site was available from 2023, would take 2-3 years to build and will be built directly by the landowner. There are constraints to overcome prior to development.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly classified as grade agricultural land.</li> <li>• In flood zone with some, but low, risk of surface water flooding.</li> <li>• Shops, culture and leisure facilities, employment opportunities and a primary school are accessible from the site.</li> <li>• It is sufficiently remote from all of the designated nature and heritage assets.</li> <li>• The location of the site could arise difficulties with place and community integration.</li> <li>• It has some relationship with the built form but it has a close relationship with the countryside</li> <li>• Capacity would translate to a low density development but is in line with surrounding built form.</li> <li>• Substantial landscape buffering along the northern boundary would contribute to preserving the character of the wider landscape.</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not appropriate for development as it would be out of context with the settlement/ built form.</li> <li>• There may be difficulties in terms of highway safety in a village location being a adjacent to a significant junction onto the A141 and with achievability given the sloping topography of the land within the site.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>The LAA and SA indicate that the site is not appropriate for development and therefore a capacity calculation has not been undertaken.</p>	<p>N/A</p>	<p>N/A</p>

**Updates after the Initial Assessment**

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/ or affordable housing	160 homes	Available from 2023 4-5 years

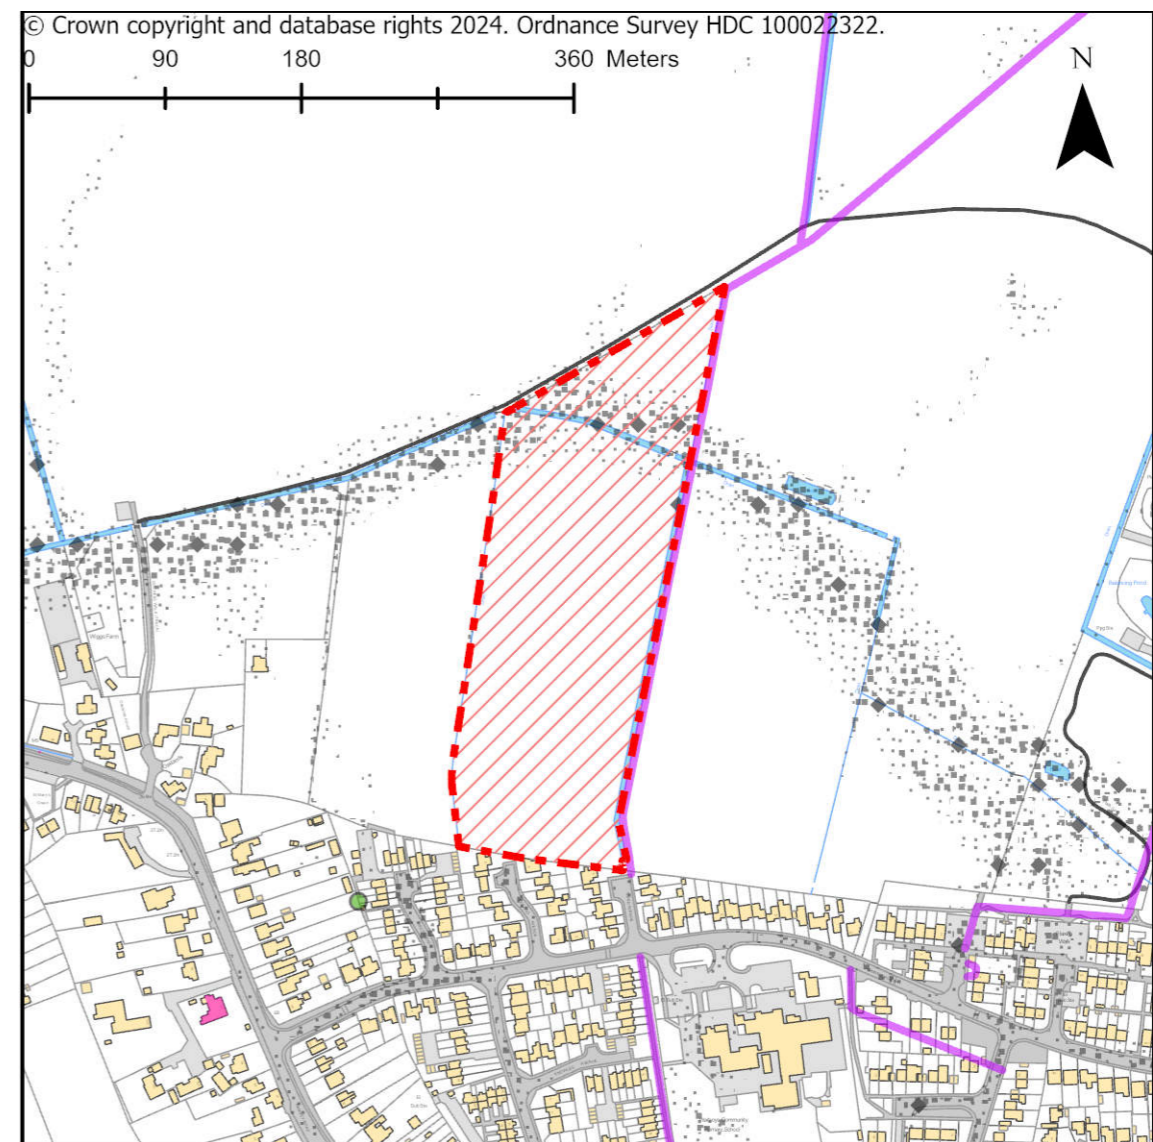

**Core information**

How was the site identified?	Call for Sites 2023 submission: site reference - CfS: 104
Relevant planning history	No known planning history
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly classified as grade 2 agricultural land. The site is in flood zone 1 with some risk of surface water flooding. The site is located in the north of Warboys surrounded by agricultural fields to the north, east and west but adjoins a built up area to the south. The topography of this area of Warboys is broadly level, the land within the site sloping gently down from south to north. There would be adverse landscape impact due to the flat nature of the land and boundaries of the site being predominantly open meaning the development would be visible from the north for long distances and from public right of ways to the east and north east, particularly from a path which runs along the eastern boundary. Mitigation to screen the development and reduce adverse landscape impact will likely be required. The site is not impacted by oil/ gas pipelines. There are no designated nature or heritage assets within the site. The site fronts onto Second and Third Avenue which could provide potential road access to the site but achievability is unclear due to a strip of land between the site boundary and the road potentially constraining development. Consultation with Cambridgeshire County Council will be required to understand whether highway access is achievable to the site.</p> <p>The site is wholly greenfield and therefore offers no opportunities for the regeneration or reuse of previously developed land. The site is outside a mineral safeguarding area and water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single company who support it's development and is available for development now. The site promoter has stated there are no legal restrictions or issues to resolve prior to development. How the site will be delivered is unknown but will take 4-5 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that utilities, digital infrastructure and highway access to the site are all accessible from the site boundary. However, as identified, there is a strip of land in between the site boundary and road access for both of the potential access points on Second and Third Avenue which may form a ransom strip and significantly constrain the achievability of access. In addition, Second and Third Avenue are small residential closes and which would require upgrading to accommodate the scale of development and it is uncertain if this is achievable. The land to the east of the site has been submitted by the same promoter and therefore the site may have potential to come forward as a cohesive scheme. The flat nature of the land would unlikely constrain the physical development of the proposal but there could be significant adverse landscape impact due to the existing boundaries adjoining agricultural fields being completely open, enhanced by existing public right of ways. Therefore, significant screening may be required to ensure mitigation and should be incorporated into the early stages of the design process.</p>	~
<p><b>Deliverability / developability</b></p>	~

The site is wholly greenfield with no built structures to clear. There are constraints to overcome relating to access and landscape impact which would need to be resolved. As stated by the site promoter, how the site will be delivered is unknown but the build out is expected to take 4-5 years. The proposal may be incorporated as a joint scheme with the land neighbouring the site to the east which may involve phased development over a longer period. As a result, the site is considered to be developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Within flood zone 1 with minimal recorded risk of surface water flooding
- Classified as grade 2 agricultural land
- Limited access to natural green space
- Within 1km of Warboys Wood SSSI but sufficiently remote from all of the designated nature assets
- Within 800m of a primary school, local convenience store and a regular bus service and is in close proximity to employment opportunities.
- The location of development would be completely out of context with the existing built form and has a very close relationship with the countryside with completely open boundaries and therefore there could be significant adverse landscape impact.
- It would be difficult to integrate the site with the existing place and community
- A capacity of 160 homes could provide a range of types, tenures and sizes.

In combination, the LAA and SA indicate that the site:

- Is deemed inappropriate for development due to the location of the site being out of context with the existing built form, potential for significant adverse landscape impact and highway access to the site being potentially unachievable as a result of the presence of ransom strips and ability of Second and Third avenue to accommodate the scale of development.
- However, it must be noted, in conjunction with the site submission to the east which has been put forward by the same site promoter, the site could come forward as a cohesive scheme.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is deemed inappropriate for development and therefore a capacity calculation has not been undertaken.	N/A	N/A

Page 511 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly classified as grade 3 agricultural land. It is in flood zone 1 with minimal risk of surface water flooding.</p>	~
--	---

<p>The site is located in the south west of Warboys with Church road parallel to/ along the western boundary. The topography of the land within the site and further to the east is broadly flat whilst the land slopes gently down beyond the western boundary. The land is currently associated with the residential property adjoining the north western boundary, consisting of a high population of mature trees which is particularly dense on the western side. Adjoining the site to the south is an employment site. There would unlikely be adverse landscape impact due to the site being wholly screened by heavily vegetated boundaries, reinforced by hedging immediately opposite the site along Church Road and relatively large buildings for business use to the south.</p> <p>Oil/ gas pipeline buffer zones do not impact the site. The adjoining transport business would be less compatible with the proposed residential use due to potentially imposing noise and air pollution and therefore could negatively impact residential amenity. Therefore, the site may be more appropriate for employment use. There are no designated nature assets within the site. The site is wholly located within Warboys Conservation Area and therefore the development should be sensitive to it's character and form. The removal of mature trees within the site could negatively impact the rural/ vegetated feel to the south western edge of Warboys and the conservation area. The site could be accessed from Church Road but may require the removal or damage to protected trees in Warboys Coservation Area.</p> <p>There is a small area in the south of the site which is previously developed, offering some opportunity for the recycling of materials. The site is outside a mineral safeguarding area and water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single family who support the proposal. There are no legal restrictions or issues to resolve prior to development. The site has been available for development since 2023 and it's anticipated the build out phase will last 2-3 years. How the development will be delivered is unknown.</p>	+
<p><b>Achievability</b></p> <p>Mains water and electricity supply is available within the site and so is digital infrastructure. Gas supply is available from the site boundary. There are no topographical challenges to overcome that would hinder development on the site. There would be minimal landscape impact due to substantial screening along the boundaries and from adjoining uses, limiting the views into the site from surrounding land. There are a number of access points along Church Road that could be used to enter the site, Cambridgeshire County Council will need to be consulted to understand which one would be most appropriate. In order for the site to be developed and highway access to be achieved mature trees which are in Warboys Conservation Area will likely need to be removed. Assessment to understand the severity</p>	~

of the negative impact upon the CA and existing habitats will be required prior to development. The site promoter intention with the site is unclear as a range of uses have been put with no clarification on their scale and nature.	
<b>Deliverability / developability</b> A significant number of trees will likely need to be cleared prior to development. There are constraints to overcome relating to preserving the character and form of Warboys Conservation Area and habitats. How the site will be delivered is unknown but it is expected to build out over 2-3 years. As a result, the site is considered to be developable.	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is within flood zone 1 with minimal recorded risk of surface flooding</li> <li>• Classified as grade 3 agricultural land</li> <li>• In close proximity to shops, culture and leisure facilities, a regular bus service and a primary school.</li> <li>• Within 1.5km of an Established Employment Area (EEA)</li> <li>• Potential to significant harm to Warboys Conservation Area due to the likely removal of established trees to accommodate the development.</li> <li>• Difficult to integrate all of the proposed uses with the existing place and community</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not appropriate for development for all of the proposed uses due to the site being wholly within Warboys Conservation Area and the potential for significant adverse impact to this designated heritage asset due the removal of established trees situated within the site to accommodate the development.</li> </ul>

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly classified as grade 2 agricultural land. The site is wholly within flood zone 1 with some risk of surface water flooding.</p> <p>The site is located on the south western edge of Warboys, east of Church Road (B1040). The topography within and immediately surrounding the site is broadly level, with agricultural fields wholly adjoining the southern, eastern and partly the western boundary and the built up area in the south west of Warboys to the north. The remaining part of the western boundary adjoins to the land owned by a residential property and also a transport business.</p> <p>The northern part of the site is screened from surrounding viewpoints due to being wholly bound by established vegetation which includes a hedgerow that traverses the middle of the site (from west to east) acting as a separator between the northern and southern part of the site. The southern portion of the site would be visible for long distances due the boundaries being completely open. If the existing hedgerow within the middle of the site is cleared the whole of the site would be visible from the east and south and need to mitigated through appropriate landscaping. There are no designated nature assets within the site. However, approximately half of the site is within Warboys Conservation Area; the development would need to be sensitive to it's character, setting and form and conserve/mitigate impact on trees situated within the site. There is also a listed building to the north but this is heavily screened by dense vegetation along the northern boundary minimising adverse impact. There are multiple TPO trees immediately outside the north eastern boundary associated with residential properties which would need to be conserved. Highway access could be achieved from Church Road. The site is not impacted by oil/gas pipelines but it does neighbour a business within the transport sector and therefore it may be subject to noise and air pollution.</p> <p>The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration or reuse of previously developed land. The site is outside a mineral safeguarding area and a water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single company who support it's development. There are no legal restrictions and issues to resolve prior to development. The promoter has stated the site is available development now and is intended to be sold to a third party once allocation status has been acquired.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that water mains, electricity and broadband infrastructure is available from the site boundary, accessibility to gas supply is unknown. Highway access could be achieved from Church road but could involve the removal of protected trees within Warboys Conservation Area. There are multiple constraints to overcome relating landscape</p>	~

<p>and heritage but could be overcome through effective and sensitive design and landscaping. The land within and surrounding the site is broadly level meaning there are no topographical constraints to overcome that would limit the achievability of the proposal.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is wholly greenfield with no built structures to clear. However, there are significant constraints to overcome. As stated, the site promoter seeks allocation status to sell the site to a third party for development. Therefore, the site is considered developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• The site is in flood zone 1 with some risk of surface water flooding</li> <li>• Is wholly classified as grade 3 agricultural land</li> <li>• In within 800m of multiple culture and leisure facilities, a local convenience store and a regular bus service</li> <li>• In close proximity to employment opportunities and education facilities</li> <li>• Pavement available immediately opposite the frontage</li> <li>• Sufficiently remote from all of the designated nature assets.</li> <li>• Part of the site is within Warboys Conservation Area</li> <li>• Close relationship with the built form and countryside; development to the north would improve integration with landscape and townscape.</li> <li>• Preservation of TPOs along the northern boundary, Warboys CA and the listed building to the north is essential in determining the success of the scheme.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development subject to effective masterplanning to ensure effective integration with the built form and preservation of Warboys Conservation Area, the landscape, TPOs and listed building to the north of the site.</li> </ul>

Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is predominantly grade 3 agricultural land, the remaining portion being grade 2. The site is wholly in flood zone 1 with no recorded risk of surface water flooding.</p> <p>The site is located on the north-eastern edge of Warboys behind residential houses and associated curtilages along Station Road. Moving from west to east, the site slopes downwards by approximately 12m and this decline continues beyond the eastern boundary. The site is triangular in shape, broadly consisting of three, relatively long boundaries of which the eastern and southern boundary are very open meaning the site would be visible from agricultural fields. However, the landscape impact looking into the site is made smaller due to some hedging along the northern boundary and large warehouse development approximately 200m east of the site and substantial screening along Heath road to the south. There is a public right of way running along the northern boundary and therefore the development could negatively impact the public view from the path.</p> <p>The site is not impacted by oil/ gas pipelines or pollution. There are no designated heritage or nature assets within the site. There is a very thin strip of land/ track within the site boundary joining Station road potentially allowing highway access to the site, consultation with Cambridgeshire County Council will be required to understand whether this could accommodate the development.</p> <p>The site is wholly greenfield land and therefore offers no opportunities to contribute to regeneration or reuse of previously developed land and is outside a mineral safeguarding area and water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single family who support the proposal and has been available for development since 2023. The site promoter has stated there are no legal restrictions or issues to resolve prior to development.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all utilities and digital infrastructure is available from the site boundary. Highway access could be achieved from Station Road, the narrow track connecting to Station Road within the site will need to be assessed to understand if it could support the development. The combination of the narrow track alongside limited potentially for expansion with residential properties either side could make access to the the site difficult. The relatively steep topography of the land could impact the layout and achievability of the capacity as well as potentially enhancing adverse landscape impact by being visible from surrounding land. There could be also be significant adverse landscape due to the scale and location of the site which would require mitigation via appropriate landscaping/ screening.</p>	~
<p><b>Deliverability / developability</b></p>	~

<p>The site is greenfield with no structures to clear. There are significant barriers to the site relating to highway access and landscape impact that would need to be overcome. The land has been available for development since 2023 and is expected to be delivered within 4 years. How the site will be delivered is unknown. Consequently, it is categorised as developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly classified as grade agricultural land.</li> <li>• In flood zone with some, but low, risk of surface water flooding.</li> <li>• Shops, culture and leisure facilities, employment opportunities and a primary school are accessible from the site.</li> <li>• It is remote from all of the designated nature except a SSSI to the north and heritage assets.</li> <li>• The location and scale of the site could cause difficulties with place and community integration.</li> <li>• The proposed capacity is too high given it's context.</li> <li>• The development would be highly prominent in the countryside despite some association with built form.</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is deemed to be not appropriate for development due to the scale and location of the site being out of context with the settlement/ built form, the steep topography of the land and intrusion into the countryside.</li> <li>• Would have highway access difficulties given the existing track and limited scope to upgrade.</li> </ul>

Land north of Humberdale Way, adjacent to First, Second and Third Avenue Accessed off Humberdale Way, Warboys	Warboys	12.3

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market/ affordable housing	500 homes	Available from 2023 4-5 years

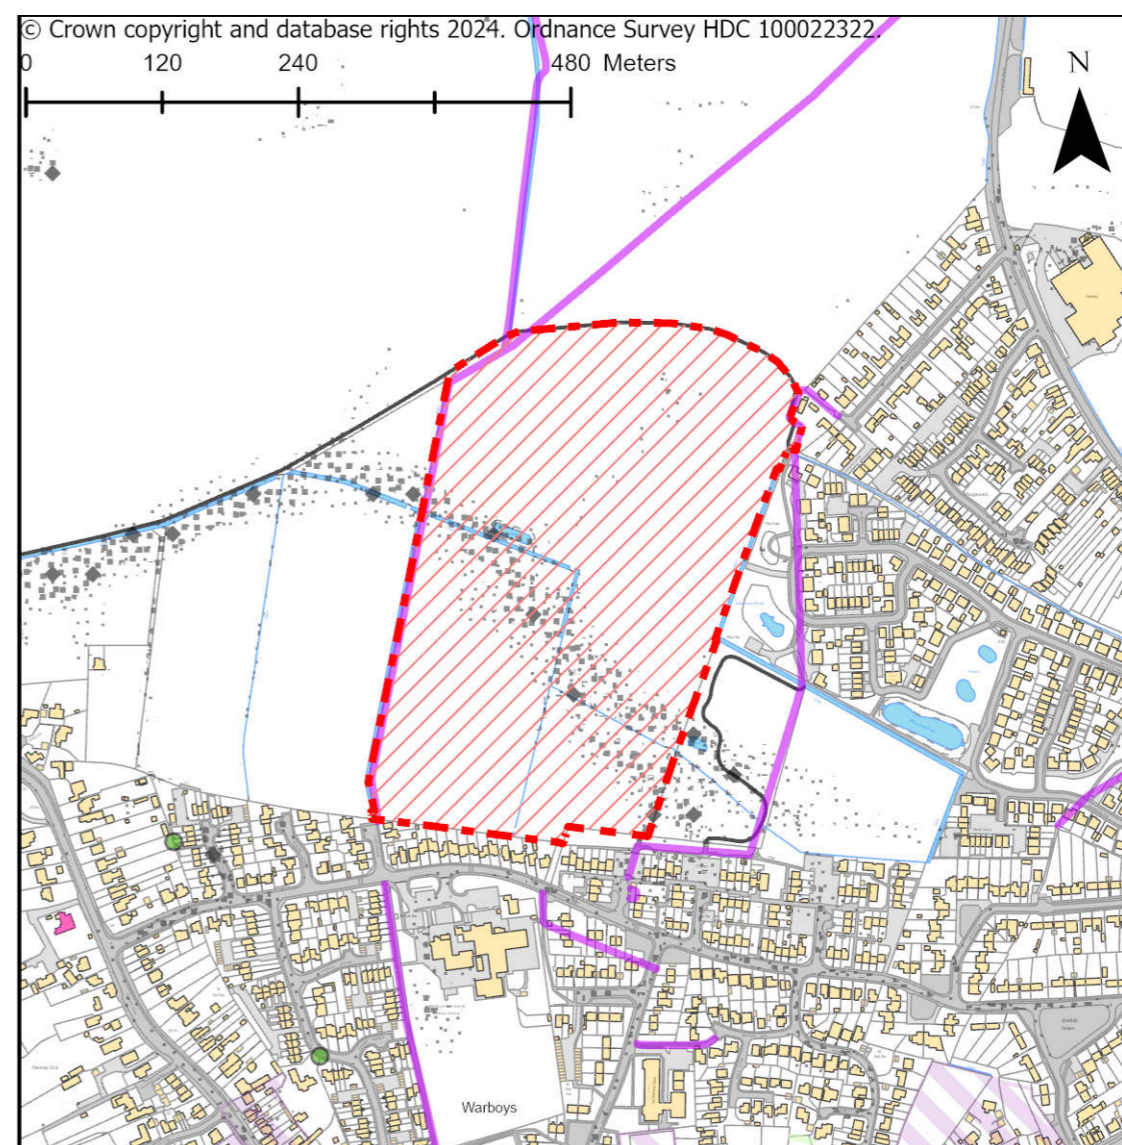

**Core information**

How was the site identified?	Call for Sites Submission 2023 CfS 148
Relevant planning history	No known planning history
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is predominantly classified as grade 3 agricultural land, the remaining being grade 2. The site is within flood zone 1 with some risk of surface water flooding. The site is located in the north of Warboys, adjoining agricultural arable farmland to the north and west and the built up residential area to the south. The upper part of the eastern boundary is adjacent to a relatively large area of residential properties in the North East of Warboys which includes an allocation in the existing Local Plan. The lower part of this boundary adjoins to greenfield land. The topography of the site is broadly level, sloping gently down into the middle of the site and then back up to the northern boundary, reflecting the flat nature of this area of Warboys. The western and northern boundaries are completely open meaning the development would be clearly visible from long distances looking into the site from the north particularly due to multiple public right ways along the western boundary and to the north of the site. Mitigation could be achieved through landscaping buffers to help screen the development.</p> <p>The site is not impacted oil/ gas pipelines. There are no designated nature or heritage assets within the site. Potential highway access may be achieved from Third Avenue which comes off Humberdale Way but achievability would be constrained by a strip of land that is located in between between the site boundary and the road. The promoter has identified that access could be achieved from Humberdale Way via First, Second or Third Avenues but First and Second Avenue are quite far removed from the site significantly reducing achievability. Consultation with Cambridgeshire County Council will be required to understand whether highway access can be achieved to accommodate the development. There are is a electricity line that runs through the middle of the site (south to north) and then east to the eastern boundary which, as stated by the site promoter, will be diverted. / redirected.</p> <p>The site is wholly greenfield land and therefore offers no opportunities for the regeneration or reuse of previously developed land. The site outside a mineral safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single company who support it's development and is available for development now. The site promoter has stated there are no legal restrictions or issues to resolve prior to development. How the site will be delivered is unknown but will take approximately 4-5 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that utilities, digital infrastructure and highway access to the site are all accessible from the site boundary. However, as identified, there is a strip of land in between the site boundary and Third Avenue which may form a ransom strip and significantly constrain the achievability of access. In addition, Third Avenue is a small residential close and therefore will likely need upgrading to accommodate the scale of development. The flat nature of the land would unlikely constrain the physical development</p>	~

<p>of the proposal but there could be significant adverse landscape impact enhanced by the boundaries adjoining the agricultural fields being completely open with public right of ways. Therefore, as part of the masterplan for the proposal significant screening may be required to ensure mitigation.</p> <p>There are electricity lines within the site that would need to be redirected, impacting viability by raising costs to the developer.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is wholly greenfield land with no built structures to clear prior to development. There are a few constraints to overcome and there is a pond in the middle of the site which will need to be incorporated into the design process. As stated by the site promoter, how the site will be delivered is unknown but the build out is expected to take 4-5 years. Therefore, the site considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Within flood zone 1 with minimal recorded risk of surface water flooding</li> <li>• Classified as grade 2 agricultural land</li> <li>• Limited access to natural green space</li> <li>• Within 1km of Warboys Wood SSSI but sufficiently remote from all of the designated nature assets</li> <li>• Within 800m of a primary school, local convenience store and a regular bus service and is in close proximity to employment opportunities.</li> <li>• A capacity of 500 homes could provide a range of types, tenures and sizes.</li> <li>• The site has a close relationship with the built form situated relatively central in Warboys and is adjacent to two large residential areas to the east and south</li> <li>• Sufficient landscaping is essential to ensure any adverse landscape impact is mitigated</li> <li>• It could be effectively masterplanned to integrate with the place and community but issues over highway access could limit integration</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development subject to effective masterplanning to ensure integration with the townscape, place and community and mitigate adverse landscape impact.</li> </ul>
--

- However, achievability of highway access is uncertain due to the presence of ransom strips between the site boundary and Third Avenue. This is a key development constraint and would need to be resolved prior to development.
- The presence of electricity lines may also limit the viability of the site.
- It must be noted, in conjunction with the site submission to the east (CfS 104) which has been put forward by the same site promoter, the site could come forward as a cohesive scheme.
- 500 could provide a significant housing growth opportunity

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 12.3 ha  70% net developable area to incorporate significant landscape buffers, sustainable drainage and infrastructure.  70% x 12.3 ha = <b>8.47 ha</b> (net developable area)	Net developable area of 8.47 ha.  35 dph to reflect connection with the countryside and built form within a large village location of Warboys.  8.47 ha x 35dph = <b>296 homes</b>	From 2024  Delivery expectation of 4-5 years

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is wholly classified as grade 2 agricultural land. The site is within flood zone 1 with no known risk of surface water flooding.</p> <p>The site is located to the south of Warboys surrounded by greenfield land except to the north east where there is an allocated site in the existing Local Plan for residential development which has been completed. There is also an allocated site to the west but a planning application has not been submitted and therefore is unimplemented. The northern boundary and part of the western boundary adjoins to a playing field whilst to the south there is arable farmland. The topography within and immediately surrounding the site is broadly level and the landscape impact will likely be negligible to the proposal being solely for natural, green or open spaces. The site is not impacted oil/ gas pipelines. There are no designated nature or heritage assets within the site. As stated by the site promoter, the site is intended to support the expansion of Warboys Sports and Social Club and therefore access to the site could be achieved through the existing playing field.</p> <p>The site is wholly greenfield land and therefore offers no opportunities for the regeneration and reuse of previously developed land. The site is outside a mineral safeguarding area and water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site has been submitted by a third party who does not own the land. They identify the site is owned by a single family who do not intend to sell the land for the proposed use/ extension of the sports field/ natural, green or open spaces at less than housing value which makes the purchase of the land currently unaffordable to the site promoter. Therefore, this shows the proposal unavailable for development</p> <p>The promoter suggests the land would be available 2024-2028 and the landowner seeks to obtain an allocation before selling the site to a third party for development.</p>	-
<p><b>Achievability</b></p> <p>The site promoter has identified that access to gas, mains and electricity supply is unknown, as is access to digital and telecommunications infrastructure although the proposed use would generate limited if any demand for utility services. They have also stated that highway access to the site could be achieved from the site boundary, if the land is acquired by the site promoter the site will become part of Warboys Sports and Social Club which has car parking/ road access. There are no topographical challenges to overcome.</p> <p>The achievability of the site is dependent on the landowners willingness to sell the land to the site promoter for the intended use. Through the Call for Sites Submission of the site, the site promoter identifies that through a designation/ allocation in the new Local Plan the land may become a more affordable value. Given the site has been put forward by a third party and the landowner does not support the proposal, it is considered unachievable.</p>	-

<p><b>Deliverability / developability</b></p> <p>As identified there are constraints to overcome relating to the landowners willingness to sell the land to the site promoter for the intended use and therefore the proposal is considered to be unachievable and cannot be delivered.</p>	-
---	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No, as the site is unavailable for development.</p>
---	--

**Impact of the Sustainability Appraisal on the assessment**

<p>The site did not progress to Sustainability Appraisal as the site is unavailable for development.</p>

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly classified as grade 2 agricultural land. The site is within flood zone 1 with no recorded risk of surface water flooding. The site is situated in the south east of Warboys and is a relatively long and thin strip of land extending to southwards in a linear fashion, adjoining a row of houses to the north along New Road and a Water Tower to the south. Understanding of the compatibility of the site with the adjoining Water Tower may be required. The whole of the eastern boundary fronts onto New Road whilst beyond the western border there is predominantly arable farmland except to the north west where there is a larger residential development which is an existing allocation in the Local Plan to 2036. The land within and beyond the eastern boundary is broadly level but the land to the west of the site slopes downwards and then up Church Road. The boundaries of the site predominantly comprise of established vegetation screening the site to some extent from surrounding land. There would likely be significant adverse landscape impact due to the site's context/ edge of village location and shape.</p> <p>The site is not impacted by oil and gas pipelines. There are no designated nature or heritage assets within the site. The site fronts onto New Road (A141) which could provide access to the site. The national speed limit of 70mph applies to this road meaning safe access to the site could be an issue.</p> <p>The site is wholly greenfield land and therefore offers no opportunity for the reuse or regeneration of previously developed land. The site is not impacted by an oil/ gas pipeline and is outside a mineral safeguarding area and water recycling buffer zone.</p>	~
<p><b>Availability</b></p> <p>The site is owned by single company who support the proposal and there are no legal restrictions or issues to resolve prior to development. The site is intended to be delivered by a house builder and is expected to become available between 2024-2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that gas, water and electricity supply and digital and telecommunications infrastructure is available from the site boundary. Highway access could be achieved from New Road (A141), consultation with Cambridgeshire County Council will be required to understand the most appropriate access point and whether safe access from the A141 can be achieved. There are no topographical constraints to overcome but given the site's location and shape there is the potential for significant landscape impact which would need to be mitigated. Understanding the compatibility of the site with the adjoining Water Tower to the south would be required and could potentially affect the layout and capacity.</p>	~

Page 524 of 3488

<p><b>Deliverability / developability</b></p> <p>There are no built structures to clear prior to development. The site promoter expects the proposal to be delivered in approximately 2 years and the land will become available for development between 2024-2028. There are no significant constraints to overcome that would inhibit the achievability of the proposal. The site would be be contrary to existing policy and therefore allocation status will need to be acquired.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It is flood zone 1 with no recorded risk of surface water flooding.</li> <li>• Wholly classified as grade 2 agricultural land.</li> <li>• Remote from natural green space and designated nature assets.</li> <li>• High provision of culture and leisure facilities within 800m from the site. A shop, primary school, bus service and employment opportunities are in close proximity to the site.</li> <li>• Scale and location means development on the whole site would be highly prominent in the countryside significantly impacting the landscape character and rural feel of the local area.</li> <li>• The long and narrow shape of the site would extend linear development into the countryside with little relationship to the existing settlement of Warboys.</li> <li>• Development in this location would alter the rural feel on approach to this area of Warboys.</li> <li>• The site is remote from active travel infrastructure.</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is in a location that could not be effectively masterplanned to become part of the existing community.</li> <li>• Would create an extension to the village with limited relationship to the main concentration of residential development within the village.</li> <li>• Has a very close relationship with the countryside the impact of which would be significant.</li> </ul>

Page 527 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is predominantly classified as grade 2 agricultural land with a significant proportion of the site being grade 3. The vast majority of the site is within flood zone 1, the remaining area being within flood zone 3b. Broadly, the land within the site is level. A higher topography can be found at the south western corner circa 5-10m compared to the rest of the site but</p>	~
---	---

<p>this will unlikely constrain physical development/ developable area on site. The land beyond the western boundary slopes gently down to towards Wistow. Adjoining the site boundaries are arable agricultural fields except to the east where residential properties along Jubilee Ave and Ramsey Road are sited. The development would be highly prominent within the landscape due to the western/ south western boundary being largely open, comprising of intermittent trees and hedgerow. Some screening is provided on the northern boundary along Ramsey Road and the southern boundary. However, the site will likely be visible from public right of ways to the north and south. It would also be visible from residential buildings and curtilages to the east despite some hedging along the eastern boundary. The cumulative impact of the scale, surrounding topography and existing make up of the western/ south western boundaries could result in the development generating substantial adverse impact upon the landscape which would need to be mitigated.</p> <p>There is no pollution or contamination on site and it is no impacted by oil/ gas pipeline buffer zones. There are no designated heritage or nature assets within the site. Highway access could be achieved from Ramsey Road. There is an electricity line that runs along the site frontage, highway access would need to ensure no adverse impact.</p> <p>The site is wholly greenfield and therefore offers no opportunity for the reuse or regeneration of previously used buildings. The site is outside a mineral safeguarding area and water recycling buffer zone.</p> <p>- bridleway and public right of way.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single landowner who support the development. There is a promotion agreement between the landowner and a land promoter for the site. There are no legal restrictions or issues to resolve prior to development. The land is expected to be available between 2024-2028 and build out between 4-6 years for 200 dwellings and 10-15 years for 500 dwellings.</p>	+
<p><b>Achievability</b></p> <p>Water mains and electricity supply is available within the site, gas supply and digital infrastructure is accessible from the site boundary. Highway access could be achieved from Ramsey Road but may require the removal of established trees and hedgerow; an ecological survey may be required to understand whether there are existing protected species and habitats. It is unlikely the topography of the land within the site would effect the developable area. As mentioned the site would generate substantial adverse landscape impact that would need to be mitigated. The promoter has identified 'a green buffer between the settlement and adjacent agricultural land' will be created and the site will be 'sensitively designed'.</p>	~

<b>Deliverability / developability</b>	
<p>The site is wholly greenfield so there are no built structures to clear prior to development. The proposal would generate significant landscape impact and mitigation may limit the achievability of the site. The site promoter has stated that once allocation status has been gained the site will be sold off to a third party for development. Therefore the proposal is considered to be developable.</p>	

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Majority of the site within flood zone 1 with no recorded risk of surface water flooding</li> <li>• Predominantly classified as grade 2 agricultural land</li> <li>• Beyond 800m from key services in Warboys including a local convenience store and culture and leisure facilities</li> <li>• Close proximity to employment opportunities and could provide a modest amount of employment on site.</li> <li>• Close relationship with the countryside with potential for significant landscape impact that would be difficult to mitigate</li> <li>• Scale and location of the site means it may be difficult to integrate with the existing place and community.</li> <li>• Could provide a wide range of tenures, types and sizes of housing</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is deemed not appropriate for development due to the potential for significant adverse impact upon the local landscape and potential difficulties integrating the site with the existing place and community.</li> </ul>

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	10 homes	Available 2024-2028 1-2 years

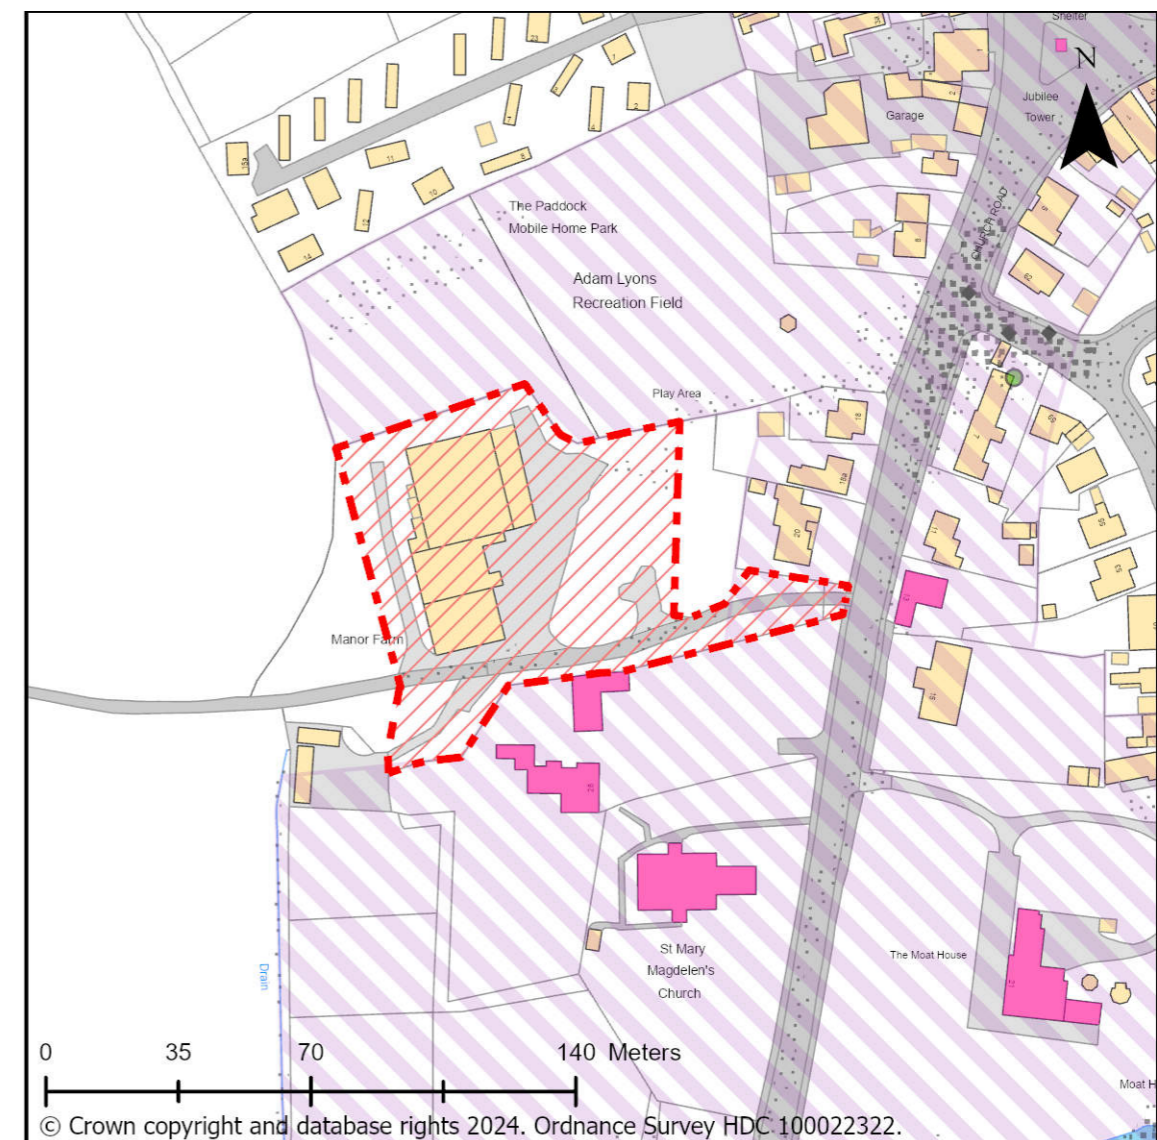

**Core information**

How was the site identified?	Call for sites 2023 submission - CfS 314
Relevant planning history	HLP2036 site allocation: Manor Farm Buildings (WB2)
Land type	Part previously developed land and part greenfield land
Current use of the site	Greenfield
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The submitted site area is 0.68 ha which is 0.07 ha greater than the site allocation for Manor Farm Buildings within the existing Local Plan.</p> <p>The site is wholly classified as grade 2 agricultural land. The site is in flood zone 1 with no risk of surface water flooding.</p> <p>The site is located on the western edge of Warboys, situated between a playground/ recreational field to the north and residential properties adjoining the eastern and southern boundaries. The land within the site is generally flat, sloping gently downwards beyond the western boundary where there is open countryside/ arable farmland. There are substantial agricultural built structures in the site that would need to be cleared. The site is screened from adjoining uses by established vegetation bounding the site except to the west which is completely open and therefore the site would be highly visible from lower land to the west. Landscaping on the western side may be required to soften views looking into the site but the potential adverse landscape impact will likely be minimal due to the site being well integrated into the built form and of a low scale (10 homes). It would also be replacing large, generally unsightly agricultural buildings. The site is not impacted by gas/ oil pipelines or electricity lines and there is no pollution or contamination on site. There are no designated heritage and nature assets within the site. However, the site is immediately adjacent to Warboys conservation area and there are several listed buildings to the south and east. Therefore, the development would need to be highly sensitive to the character, form and setting of adjoining high value designated heritage assets. Highway access could be achieved from Church Road, but it is not clear whether the existing track/ road to access the site could accommodate the development and would need to ensure minimal impact to/ preserve Warboys Conservation Area.</p> <p>The site is part previously developed with large agricultural buildings on site which could offer opportunities for the reuse or regeneration of previously used buildings. The site is outside a mineral safeguarding area and water recycling buffer zone.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single company who support the proposal. Legal restrictions to the site are unknown. There are issues to resolve relating to the acquisition of new farm buildings/ land to replace and relocate the in use agricultural buildings on site which are intended to be demolished prior to development. The promoter has stated the land will become available between 2024-2028 and intends to acquire allocation status and then sell the land to a third party for development.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has stated electricity is available from the site boundary and water supply is available within the site. Access to gas supply and digital and telecommunication infrastructure is unknown. There are no topographical constraints to overcome that would</p>	~

<p>impact viability. Highway access could be achieved from Church Road, consultation with Cambrdgeshire County Council would be required to understand it's feasibility and safety. The combination of the open western boundary and downward sloping land beyond the western boundary could levy a degree of adverse landscape impact and therefore screening/ landscaping may be required on this side. High quality design sensitive to the character, form and setting of the immediate area is essential to ensure heritage assets adjacent to the site are not negatively impacted; this is a key consideration determining the achievability of the proposal.</p>	
<p><b>Deliverability / developability</b></p> <p>There are large agricultural buildings that would need to be cleared prior to development. There are constraints to overcome relating to the acquisition of new agricultural buildings to replace the existing buildings on site that will be cleared, highway access and designated heritage assets that would need to be resolved prior to development. The site promoter seeks to sell the site to a third party once allocation status has been acquired. Therefore, the site is considered developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• It is in flood zone 1 with no recorded risk of surface water flooding</li> <li>• Open space immediately accessible with a public park to the north</li> <li>• Greenfield, classified as grade 2 agricultural land but the site predominantly comprises of large agricultural buildings that would need to be removed prior to development.</li> <li>• Scope to reuse or recycle materials from the agricultural buildings</li> <li>• Sustainably located; employment opportunities, culture and leisure facilities, a local convenience store, a primary school and a regular bus service which can be accessed via public footpaths.</li> <li>• Close relationship with built form and amount of development proposed is appropriate considering the nature of surrounding built form.</li> <li>• Designated heritage assets within or in the immediate setting of the site including Warboys Conservation Area and several listed building; sensitive design essential to mitigate adverse impact to townscape and wider community.</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p>
--

- Is potentially appropriate for development subject to effective masterplanning and building design to ensure the character and form of designated heritage assets in the vicinity of the site is maintained and mitigate potential landscape impact.
- It is an existing allocation in the Local Plan 2036, the site size of this submission is marginally bigger
- There are deliverability issues relating to the acquisition of new agricultural buildings for the existing farm on site which would need to be resolved prior to development

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.68 ha 80% net developable area to allow for landscaping and highway access to developable area. 0.68 ha x 80% = <b>0.54 ha</b>	Residential - market/affordable housing 35 dph to reflect the sites association with designated heritage assets. 0.54 ha x 25 = <b>14 homes</b>	Allocation status required Build out over 2 years

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 533 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site is predominantly classified as grade 3 agricultural land, the remaining being grade 2. The site is within flood zone 1 with some surface water flooding risk (13.3%).	~

The site is situated in the north east of Warboys surrounded by greenfield land/ agricultural farmland except to the south west where there are residential properties opposite and adjoining the site frontage. From south to north, the land within the site slopes downwards by approximately 8 metres and this downward topography continues beyond the north eastern boundaries. The level of the land immediately to the east and west is higher than the site. The boundaries of the site are predominantly made up well established mature hedgerow and trees except to the west which is completely open meaning the site is highly visible on approach to Warboys from the north and from residential properties fronting onto Station Road. Consequently, the proposal would benefit from the implementation and reinforcement of vegetation/ hedgerows along the northern and western boundary to help screen the development from surrounding views and mitigate potential adverse landscape impact. However, due to the low topography of the site compared to the higher topography of surrounding land particularly from the west it would be difficult to avoid some adverse landscape impact and therefore this questions the suitability of the site for development. The site is not impacted by gas/ oil pipelines and there is no pollution or contamination within the site.

There are no designated heritage or nature assets within the site.

Highway accessed is proposed to the south east of the site along Station Road using an existing residential garden leading to the back of the site/ main development area.

There are built structures on site associated with the existing equestrian use which could offer opportunities for the reuse of materials. The site is outside a mineral safeguarding area and a water recycling buffer zone.

**Availability**

The site is owned and control by a number of parties with no legal agreement but is supported by all of the landowners. There are no legal constraints or issues to resolve prior to development. The site promoter expects the land to become available between 2024-2028 and intends to sell the land to a third party once allocation status has been acquired.

**Achievability**

The site promoter has identified that all utilities and broadband infrastructure is available within the site. Highway access may achieved from Station Road using an existing residential plot (74 Station Road) to access the back of the site and, as stated in the submission, could incorporate a junction to meet highway standards . Consultation with Cambridgeshire County Council will be to understand whether this point of access could accommodate/ be appropriate for the site will be required. However, the promoter has stated there are ransom strips which may limit the achievability of development. The site submission has included an indicative masterplan illustrating the scale and nature of development envisaged. Whilst the topography of the land in the site would unlikely require leveling, it's downward sloping

~
~

<p>nature may lead to significant adverse landscape impact particularly from surrounding public vantage points, on approach to the village from Station Road and from lower land to the north east. This could be mitigated to some degree, as shown by the site/ masterplan plan, by significant hedging along the western boundary. The site is in close proximity to a sewage pumping station which may require assessment.</p>	
<p><b>Deliverability / developability</b></p> <p>There are built structures to clear in the south western area of the site that could be overcome through effective design. There are constraints to overcome relating to landownership, landscape impact and a water recycling buffer zone. As mentioned, the promoter seeks to sell the land to a third party once allocation status has been acquired and therefore the site is considered to be developable.</p>	

- Is deemed to be not appropriate for development due to the scale and location of the site being out of context with the settlement/ built form and the potential for significant landscape impact which would be hard to avoid given the downward sloping gradient of the land within the site.
- There are multiple landowners with no legal agreement.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is deemed inappropriate for development and therefore a capacity calculation has not been undertaken.	N/A	N/A

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is predominantly classified as grade 2 agricultural land, the remaining being grade 3. It is within flood zone 1 with no recorded risk of surface water flooding. The site is located in the south eastern edge of Warboys, south of Fenton Road and east of the A141 (New Road) and forms part of a larger agricultural field which extends beyond the site boundary to the south and east and is under the same land ownership (stated by the site promoter). Most of the northern boundary adjoins to the curtilage of residential properties which are linear in form, the remaining part of this boundary fronting onto Fenton Road. The western boundary wholly fronts onto New Road (A141). The majority of the land within and surrounding the site is broadly level but slopes relatively steeply downwards (approx 10m) from the middle of the site to the north eastern corner which continues downwards beyond the boundary. As mentioned the site forms part of a larger agricultural field, and the southern and eastern boundaries are completely open. The northern boundary is screened by residential properties to the north. The western boundary along the A141 is open but is relatively well screened from Warboys Conservation Area due to the established vegetation bounding the agricultural field directly opposite the site. There would be significant adverse landscape impact looking into the site from the south and east including a bridleway (Padgett's Lane) and would require mitigation through appropriate landscaping which has been addressed via the concept masterplan within the submitted Vision Document.</p> <p>The site is not impacted by oil or gas pipelines. There are no nature or heritage designations within the site but it is opposite Grade II Listed Building, The Laurals. The site promoter intends for highway access to the site to be achieved along New Road where there is an existing entrance used to access the agricultural field.</p> <p>The site is wholly greenfield offering no opportunities for the regeneration or reuse of previously developed land. The site is not impacted by water recycling buffer zones or a mineral safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single family who support the proposal. The land is controlled under a promotional agreement and is intended to be sold to a housebuilder following the grant of planning permission. There are no legal restrictions or issues to resolve prior to development. The land is expected to become available between 2024 -2028 and be built in approximately 4-5 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that gas and digital and telecommunications are available from the site boundary. Access to a water supply is unknown and electricity supply is not immediately accessible.</p>	~

<p>Highway access to the site could be achieved, as identified in the Vision Document, along the western boundary on New Road (A141) using an existing entrance to the site. The national limit applies to this road, Cambridgeshire County Council will need to be consulted to understand whether safe access can be achieved and if it could, what safety measures should be implemented.</p> <p>As mentioned, the north eastern corner of the site is at a lower topography, potentially reducing the developable area and therefore the layout. The outline design shows that this area of the site is intended to be used as an attenuation basin and not for built development. The proposal would cause significant landscape impact which would need to be mitigated. The Vision Document provides recommendations on how the proposal could mitigate adverse landscape impact including significant 'buffer' planting along the southern and eastern boundaries.</p> <p>It also identifies that the development will be situated behind the existing built line on Fenton Road which helps to shield the development from the listed building.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no structures to clear. There are constraints to overcome but they could be mitigated through effective design. The promoter intends to sell the site to a third party for development once allocation status has been acquired. Therefore, the site is considered to be developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Flood zone 1 with no recorded risk of surface water flooding</li> <li>● Wholly greenfield, classified as grade 2 agricultural land.</li> <li>● Limited access to natural green space</li> <li>● Sufficiently remote from the designated nature assets</li> <li>● It is close proximity to an abundance of culture and leisure facilities within Warboys.</li> <li>● Access to employment opportunities, Warboys Airfield Industrial Estate is situated approximately 2km from the site</li> <li>● A local convenience store, primary school and regular bus service are also nearby</li> <li>● The development, given it's scale and location has the potential to impose significant landscape impact and may be out of context with the built form. However, through effective masterplanning,</li> </ul>
---

by limiting development to the north of the site and significant landscape buffers this could be mitigated.

- A pavement would need to be created along the frontage to link the site with a footpath to the north and allow access to services within Warboys by foot
- It would need to be sensitive to the setting of designated heritage assets to the north east, a listed building, and Warboys Conservation Area, the the north west/ west

In combination, the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for development subject to effective masterplanning to ensure preservation of the local landscape, designated heritage assets and integration with the built form and wider community.
- The downward sloping topography of the land in the north east of the site is a key development consideration.

Page 537 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 10.57 ha 50% net developable area to allow for significant landscape buffers and improve integration with the built form by limiting development to the north of the site. 10.57 ha x 50% = <b>5.26 ha</b>	Residential - Market/ affordable housing. Net developable area of 5.26 ha Low density of 25dph to reflect it's edge of village/ rural location in a large village location. Capacity = 25ha x 5.26 ha = <b>132 homes</b>	Subject to allocation 4 - 5 years to build

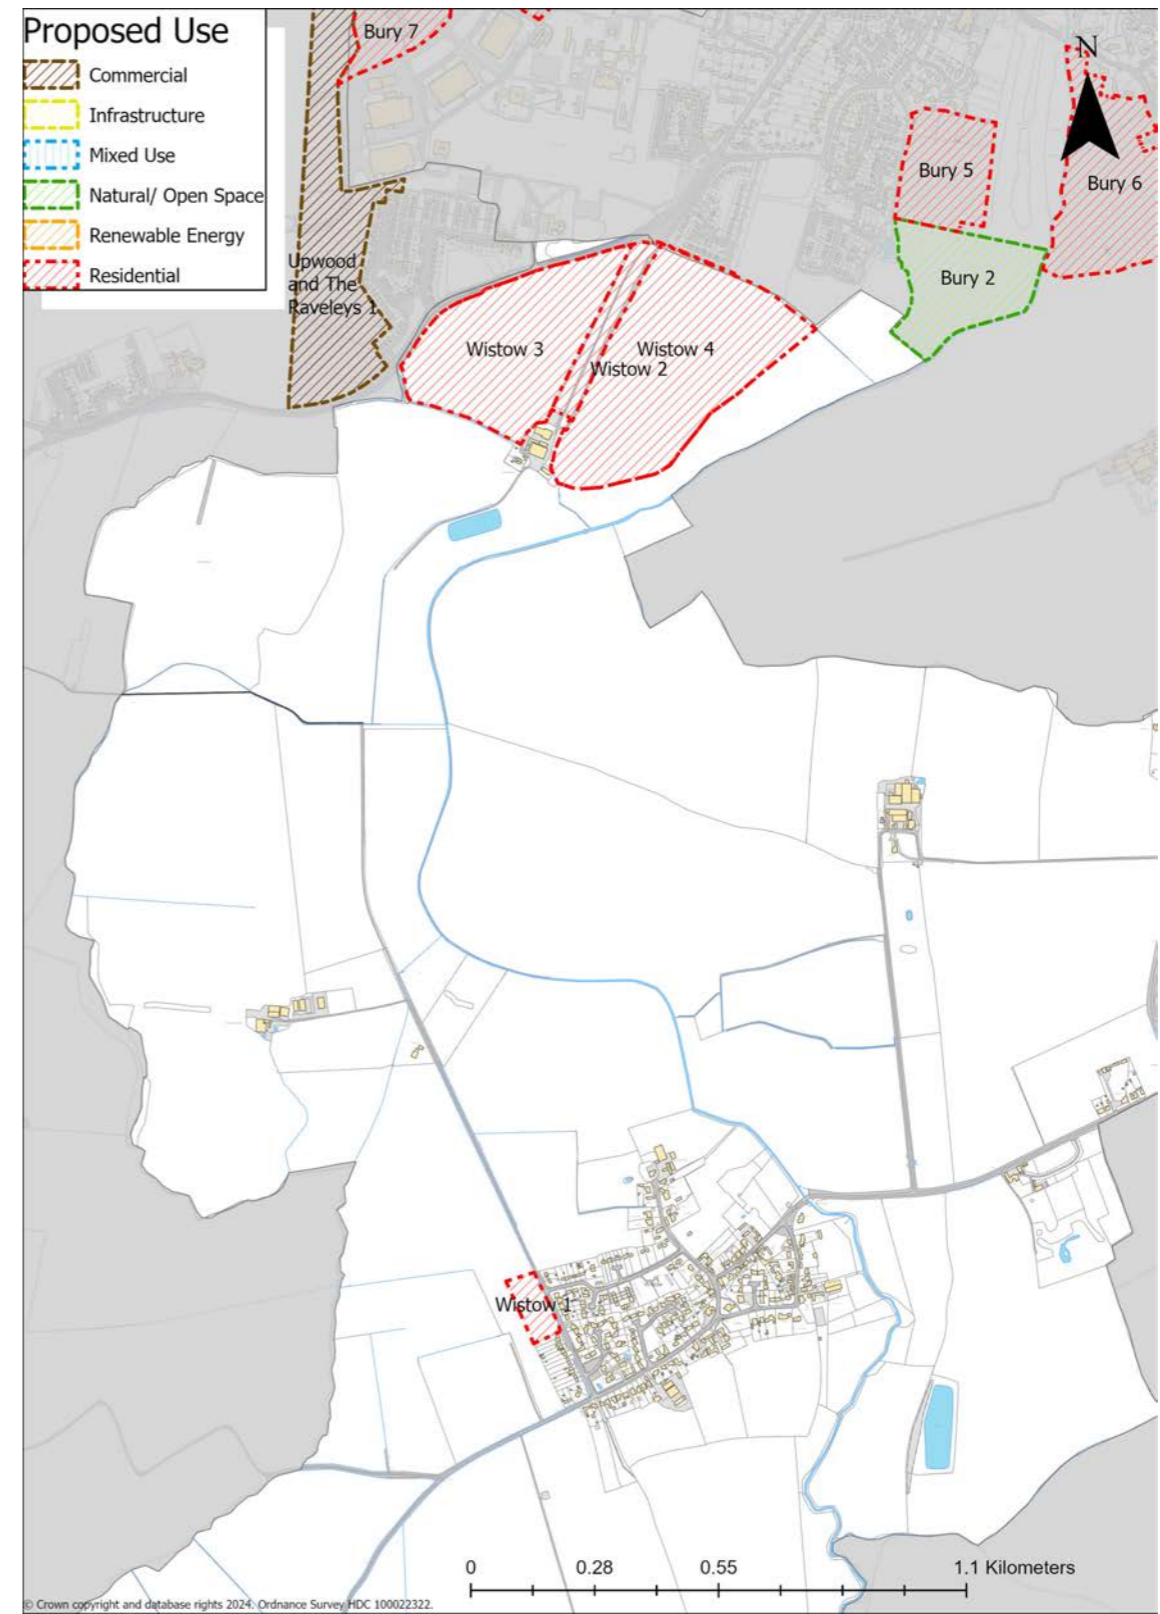

**Updates after the Initial Assessment**

Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
<p>The site is wholly located within flood zone 1 with limited known surface water flood risk. The site is wholly classified as being grade 2 agricultural land. The site is broadly level and completely open being part of a larger agricultural field. There are some trees along its frontage along Harris Lane. There is a narrow drain which runs between the site and Harris</p>	

<p>Lane which may impact access and flood risk. The site's southern edge adjoins linear residential development, to the east is further linear residential development. To the north and west of the site is the open countryside. The openness of the site and the generally flat landscape means built development could have a greater impact but landscaping and masterplanning could likely overcome this.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are telegraph poles running along the site's frontage. There are no nature conservation or heritage designations on site. Access may be achievable from Harris Lane but this is a narrow single lane road. The adjacent properties have access onto Harris Lane but engagement with Cambridgeshire County Council will be required to ascertain if safe access can be provided.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions impacting the site. The site promoter states that it is intended to acquire planning permission and then sell the site to a third part for development. They anticipate it will take 1 year to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter states that all access and services are accessible from the site boundary apart from gas supply which is unknown. There are several constraints which will need to be overcome particularly around access and landscape impact. While the site is rural in nature forming part of a larger agricultural field, it relates well to the settlement and to residential development.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site is greenfield with no structures on site to clear. There are some constraints that could be overcome through the design process. The site is currently not supported under current policy as it does not appear to be the intention to deliver a rural exceptions scheme. Therefore an allocation status would be necessary, as such the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 2 agricultural land</li> <li>• Within flood zone 1 with limited risk from surface water flooding</li> <li>• In walking distance to several local leisure and cultural facilities</li> <li>• Limited accessibility to shops and employment opportunities</li> <li>• Primary education is located within the neighbouring village of Upwood</li> <li>• Accessible to natural green space</li> <li>• Not constrained by nature conservation or heritage designations</li> <li>• Located on the western edge of the built form of Wistow village, of a scale that would retain the character of the area. Harris Lane is categorised by linear development. It also has a close relationship to the countryside so landscaping will be required to soften to impact of development.</li> <li>• Would contribute to national objectives to diversify the housing supply by encouraging sites of less than 1 ha</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for development of a modest scale that reflects the surrounding residential form.</li> <li>• Development will need to incorporate appropriate landscaping.</li> <li>• Successful development will require consultation with the Highways Authority as Harris Lane is a single lane narrow road. Properties along here are linear in form and each have their own access direct onto Harris Lane</li> <li>• Telegraph poles run along the site's frontage which may impact the layout of development</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 1ha</p> <p>90% net developable area to allow sufficient landscaping.</p> <p>1 ha x standard proportion of 90% = <b>0.9 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 0.9 ha x 25 dph = 23 homes but considering that development should be linear in form in order to reflect the existing character</p>	<p>Available post 2028, subject to allocation status</p> <p>Build out over 1 year</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	of the site's immediate environs, this brings the capacity down to <b>12 homes</b> .	

Updates after the Initial Assessment

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 544 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability
Two smaller site submissions have been made which consist of the western and eastern half of this site (see Wistow 3 and Wistow 4), this submission includes both of these as one site.

It is wholly located within flood zone 1 with some recorded risk from surface water flooding within the western half of the site. The majority of the site is classified as grade 2 agricultural land with only its northern/western edge being classified as non-agricultural. The site has established trees and hedgerows along its northern and western edges, the south and east are much more open with very limited intermittent vegetation. There is also an access track to Kingsland Farm that runs along apart of the site's southern boundary. Kingsland farm punctuates the southern edge of the site. The site slopes from its highest point along its northern edge by some 12m to its southern edge. This makes development within the site more likely to have an impact on the landscape and be prominent in longer range landscape views. As highlighted within the planning history of the site, within the north western half of the site there is planning approval, which has been implemented, for a bat barn and also an attenuation pond which serves as an off site drainage pond for the adjacent Phase One and Two development at RAF Upwood. The site promoter highlights that this could be incorporated into the landscaping scheme for the site. Engagement will be required with the Environment Agency and Local Lead Flood Authority on whether additional development in such close proximity will undermine this drainage solution and whether additional work will be required for it to accommodate further development. To the south of the site is Kingsland Farm and the open countryside, there is open countryside to the east too. Ramsey Road follows its northern and western sides with the former RAF Upwood beyond that which is undergoing redevelopment for a residential led scheme.

There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Access may be achievable from Ramsey Road and the access track which runs from it to the adjoining farm. This would require engagement with Cambridgeshire County Council to ascertain if the local road network can accommodate the potential scale of development and whether safe access can be achieved, particularly considering the wider changing context of the site in relation to the major redevelopment of RAF Upwood.

The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.

**Availability**

The site is in single ownership with development being supported by the land owner. The site promoter identifies that although the whole of the site is in individual control, some of the western parcel (Wistow 3) is subject to some third party rights in place over the land with regard to the formation of an attenuation pond approved under 20/00650/FUL which was required to support Phase One and Phase Two development at RAF Upwood. Even though there are third party interest and rights within the site, the site promoter states that there are no known legal restrictions impacting the site.

<p>The site promoter seeks an allocation status for the site with the intention to sell the site to a third party for obtaining planning permission and development. They anticipate the site to become available between 2024 and 2028. They anticipate works to start within 2 to 5 years, following commencement they expect development to take between 12 and 14 years to build out.</p>	
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services to the site are unknown apart from the public highway which is accessible from the site boundary. The site has few physical constraints to overcome, however there are topographical challenges that could result in built development leading to more significant landscape impact if not adequately mitigated. Additionally, the approved attenuation pond in the north west of the site and the bat barn needs further investigation, particularly regarding the impact that further built development could have on drainage and ecology. Access to the site from Ramsey Road will also require further scoping for the potential scale of development.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site is greenfield and there are no structures on site to clear. The site promoter seeks an allocation status for the site with the intention to sell the site to a third party for obtaining planning permission and development. Considering this, the site is categorised as being developable.</p>	~

the countryside and the topography of the site with land levels sloping towards the southern side of the mean development will result in greater long range landscape impact

- Successful integration with the existing place and community is also challenging
- Could provide a variety of housing types, tenures and sizes

In combination the outcomes of the LAA and SA indicate that the site:

- Is not considered to be appropriate for development as it would result in significant adverse landscape impact and adversely impact the character of the area and is also of a scale that would further stress local facilities.
- Development could adversely impact the permitted attenuation pond within the site which was approved to accommodate off site drainage for the redevelopment of RAF Upwood

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken	N/A	N/A

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land consisting of grade 2 agricultural land
- Within flood zone 1 with limited risk from surface water flooding
- Limited immediate accessibility local leisure and cultural facilities in Bury and Ramsey
- Good accessibility to shops, employment opportunities and primary education
- Not accessible to natural green space
- Not constrained by nature conservation or heritage designations although it is some 350m from Rolts Wood CWS
- Located within Wistow parish but adjacent to the built form of Bury, of a scale that would not protect or enhance the character of the area. It also has a close relationship to the countryside so landscaping will be required to soften to impact of development. The site also extends into

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site has also been submitted as part of a larger site (see Wistow 2).	~

It is wholly located within flood zone 1 with some recorded risk from surface water flooding. The majority of the site is classified as grade 2 agricultural land with only its northern/western edge being classified as non-agricultural. The site consists of an agricultural field with trees and hedgerows along its edges apart from its southern edge which is defined by an access track to Kingsland Farm. The site slopes from its highest point in the north of the site by some 12m to its southern edge. This makes development within the site more likely to have an impact on the landscape and be prominent in longer range landscape views. As highlighted within the planning history of the site, the northern half of the site has planning approval, which has been implemented, for a bat barn and also an attenuation pond which serves as an off site drainage pond for the adjacent Phase One and Two development at RAF Upwood. The site promoter highlights that this could be incorporated into the landscaping scheme for when developing the southern half of the site. Engagement will be required with the Environment Agency and Local Lead Flood Authority on whether additional development in such close proximity will undermine this drainage solution and whether additional work will be required for it to accommodate further development. To the south of the site is the open countryside, to the east are several agricultural structures associated with Kingsland Farm. Ramsey Road follows its northern and western sides with the former RAF Upwood beyond that which is undergoing redevelopment for a residential led scheme.

There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Access may be achievable from Ramsey Road and the access track which runs from it to the adjoining farm.

The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.

**Availability**

The site is in single ownership with development being supported by the land owner. The site promoter identifies that although the site is in individual control, there are some third party rights in place over the land with regard to the formation of an attenuation pond approved under 20/00650/FUL which was required to support Phase One and Phase Two development at RAF Upwood. Even though there are third party interest and rights within the site, the site promoter states that there are no known legal restrictions impacting the site. Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site has also been submitted as part of a larger site (see Wistow 2).</p> <p>It is wholly located within flood zone 1 with no recorded risk from surface water flooding. The majority of the site is classified as grade 2 agricultural land with only its northern edge being classified as non-agricultural. The site consists of an agricultural field with trees and hedgerows along its western and northern/eastern edges, it is however completely open along its southern/eastern edge. The site slopes from its highest point in the north of the site by some 10m to its southern edge. This makes development within the site more likely to have an impact on the landscape and be prominent in longer range landscape views. This impact may be more apparent as a public right of way runs parallel to its southern/eastern edge making this impact more prominent from public vantage points. To the south of the site is the open countryside, to the south west are several agricultural structures associated with Kingsland Farm. There is residential development to the north and north east of the site. To the west the site is adjacent to a further agricultural field which has been submitted for development. Ramsey Road lies to the north west of the site, beyond this is the former RAF Upwood which is undergoing redevelopment for a residential led scheme.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. There are no nature conservation or heritage designations on site. Access may be achievable from Ramsey Road.</p> <p>The site is greenfield, so its development will not contribute to the reuse of previously developed land and regeneration. It is not located within an extensive mineral safeguarding and it is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in single ownership with development being supported by the land owner. There are no known legal restrictions impacting the site. The site promoter seeks an allocation status for the site with the intention to sell the site to a third party for obtaining planning permission and development. They anticipate the site to become available between 2024 and 2028. They anticipate works to start within 2 to 5 years, following commencement they expect development to take between 6 and 8 years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all access and services to the site are unknown apart from the public highway which is accessible from the site boundary. The site has few physical constraints to overcome, however there are topographical challenges that could</p>	~

Page 550 of 3488

<p>result in built development leading to more significant landscape impact if not adequately mitigated. Access to the site from Ramsey Road will also require further scoping for the potential scale of development.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is greenfield and there are no structures on site to clear. The site promoter seeks an allocation status for the site with the intention to sell the site to a third party for obtaining planning permission and development. Considering this, the site is categorised as being developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is greenfield land consisting of grade 2 agricultural land</li> <li>• Within flood zone 1 with limited risk from surface water flooding</li> <li>• Limited immediate accessibility local leisure and cultural facilities in Bury and Ramsey</li> <li>• Good accessibility to shops, employment opportunities and primary education</li> <li>• Not accessible to natural green space</li> <li>• Not constrained by nature conservation or heritage designations although it is some 350m from Rolts Wood CWS</li> <li>• Located within Wistow parish but adjacent to the built form of Bury, of a scale that would not protect or enhance the character of the area. It also has a close relationship to the countryside so landscaping will be required to soften to impact of development. The site also extends into the countryside and the topography of the site with land levels sloping towards the southern side of the mean development will result in greater long range landscape impact</li> <li>• Successful integration with the existing place and community is also challenging</li> <li>• Could provide a variety of housing types, tenures and sizes</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not considered to be appropriate for development as it would result in significant adverse landscape impact and adversely impact the character of the area and is also of a scale that would further stress local facilities.</li> <li>• Development could adversely impact the permitted attenuation pond within the site which was approved to accommodate off site drainage for the redevelopment of RAF Upwood</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
The site is considered inappropriate for development so no capacity calculation has been undertaken	N/A	N/A

**Updates after the Initial Assessment**

## Document Information

**Title:** Northern Central Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Northern Central Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 Northern Central Huntingdonshire Area

1.1 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

Map 1.1 Huntingdonshire site assessment groupings

1.2 This document sets out the site assessments for the sites located within 'Northern Central Huntingdonshire'. This grouping consists of Alconbury; Sawtry; the Stukeleys wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Abbots Ripton - 6 sites
- Alconbury - 10 sites
- Alconbury Weston - 9 sites
- Barham and Woolley - 0 sites
- Buckworth - 0 sites
- Easton - 0 sites
- Hamerton and Steeple Gidding - 0 sites
- Kings Ripton - site that partially falls within this parish has been counted under Abbots Ripton as most of the site area falls within that parish area.
- Sawtry - 16 sites
- Spaldwick - 4 sites
- The Stukeleys - 6 sites
- Upton and Conington - 2 sites
- Winwick - 1 site
- Woodwalton - 0 sites

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal to obtain a complete picture of the Council's initial consideration of the site.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites.

#### 3.4 Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next 5 years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or was occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have blended into the landscape or been revegetated
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

- **CfS** - Call for Sites
- **Dph** - Dwelling per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.5 The assessment of each site consists of several sections, each is detailed below:

**Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.

**Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.

**Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.

**Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.

**Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a local green space, having a nature conservation designation, within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.

**Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.

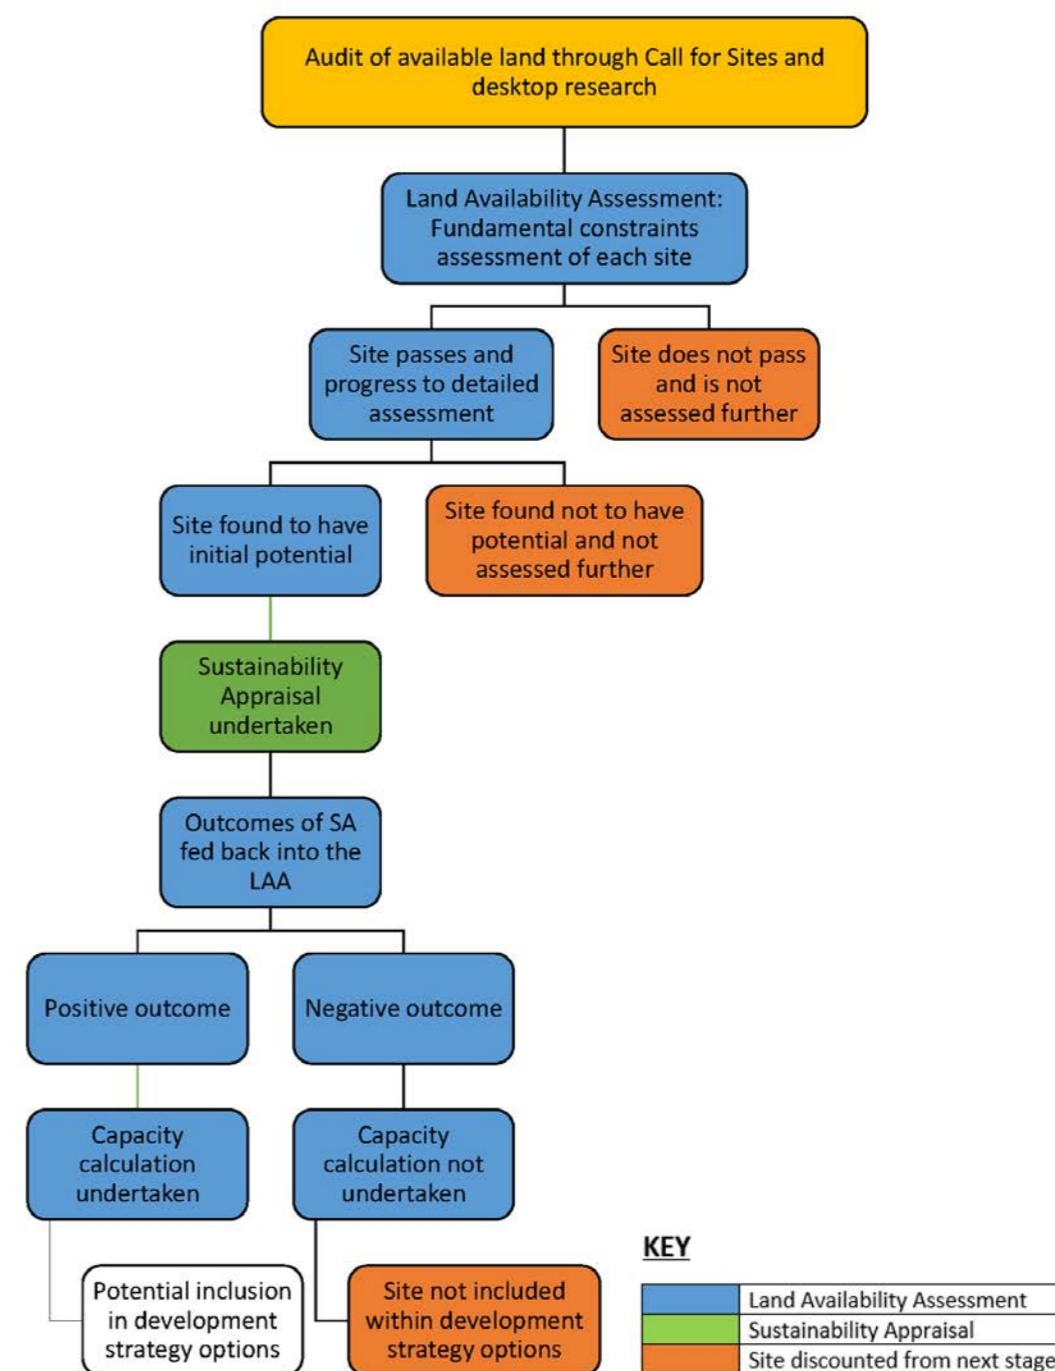

**Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.

**Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.

**HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, we will calculate an indicative capacity for the site and uses. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.

**Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

### Site Assessments Process

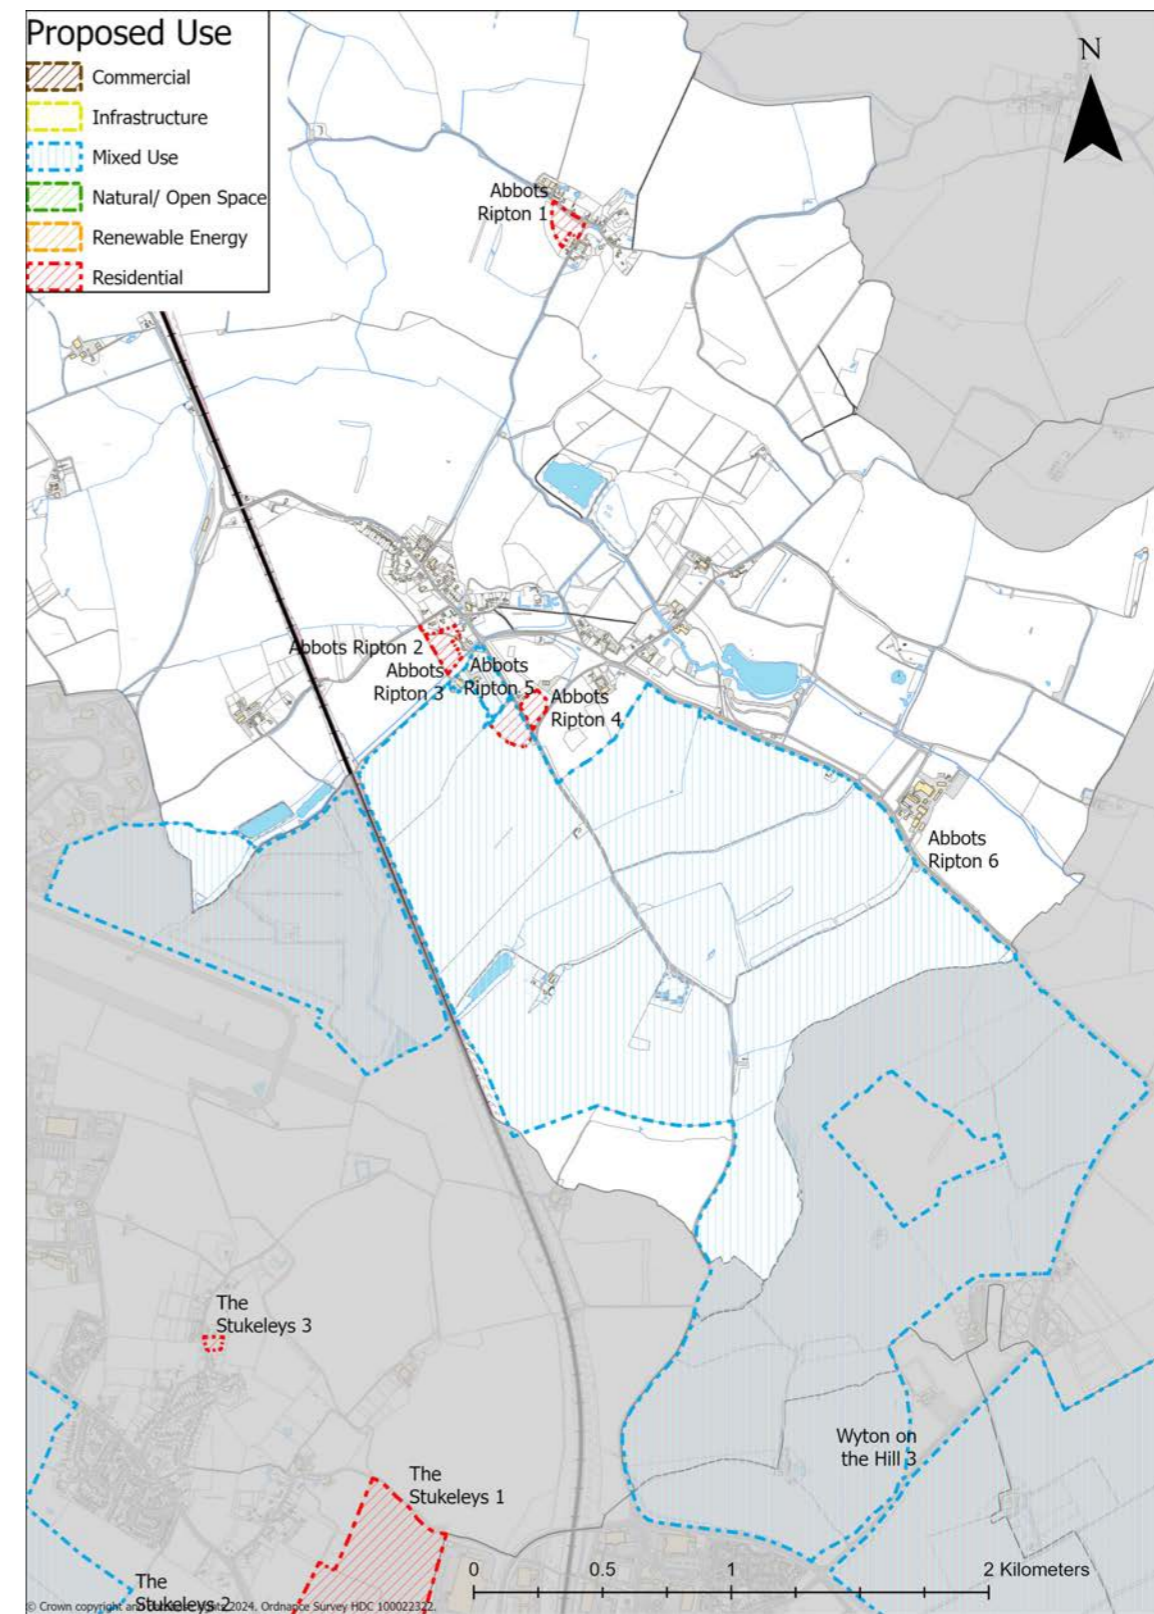

## 1 Abbots Ripton

1.1 A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Abbots Ripton 1: West of Wennington Road Wennington, Abbots Ripton
- Abbots Ripton 2: Home Farm North, Abbots Ripton
- Abbots Ripton 3: Home Farm South, Abbots Ripton
- Abbots Ripton 4: Penny Green, Abbots Ripton
- Abbots Ripton 5: Land South of Station Road, Abbots Ripton
- Abbots Ripton 6: Sapley Park Garden Village - note that this site also partially falls within Huntingdon, Kings Ripton and The Stukeleys parishes, but it has been included under Abbots Ripton as most of the site lies within that parish area.

1.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Legend	
	Commercial sites
	Infrastructure sites
	Mixed Use sites
	Natural/ Open Space sites

<b>Site reference</b>	Abbots Ripton 1
<b>Site name</b>	West of Wennington Road, Wennington, Abbots Ripton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
West and South of Wennington Road, Wennington, Abbots Ripton	Abbots Ripton	1.22ha

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and / or affordable housing Open Space Uses: Natural green or open spaces Biodiversity net gain Land to safeguard against flooding	15 homes  Open spaces to be confirmed subject to masterplanning	Available 2024-2028  Build out 2 years

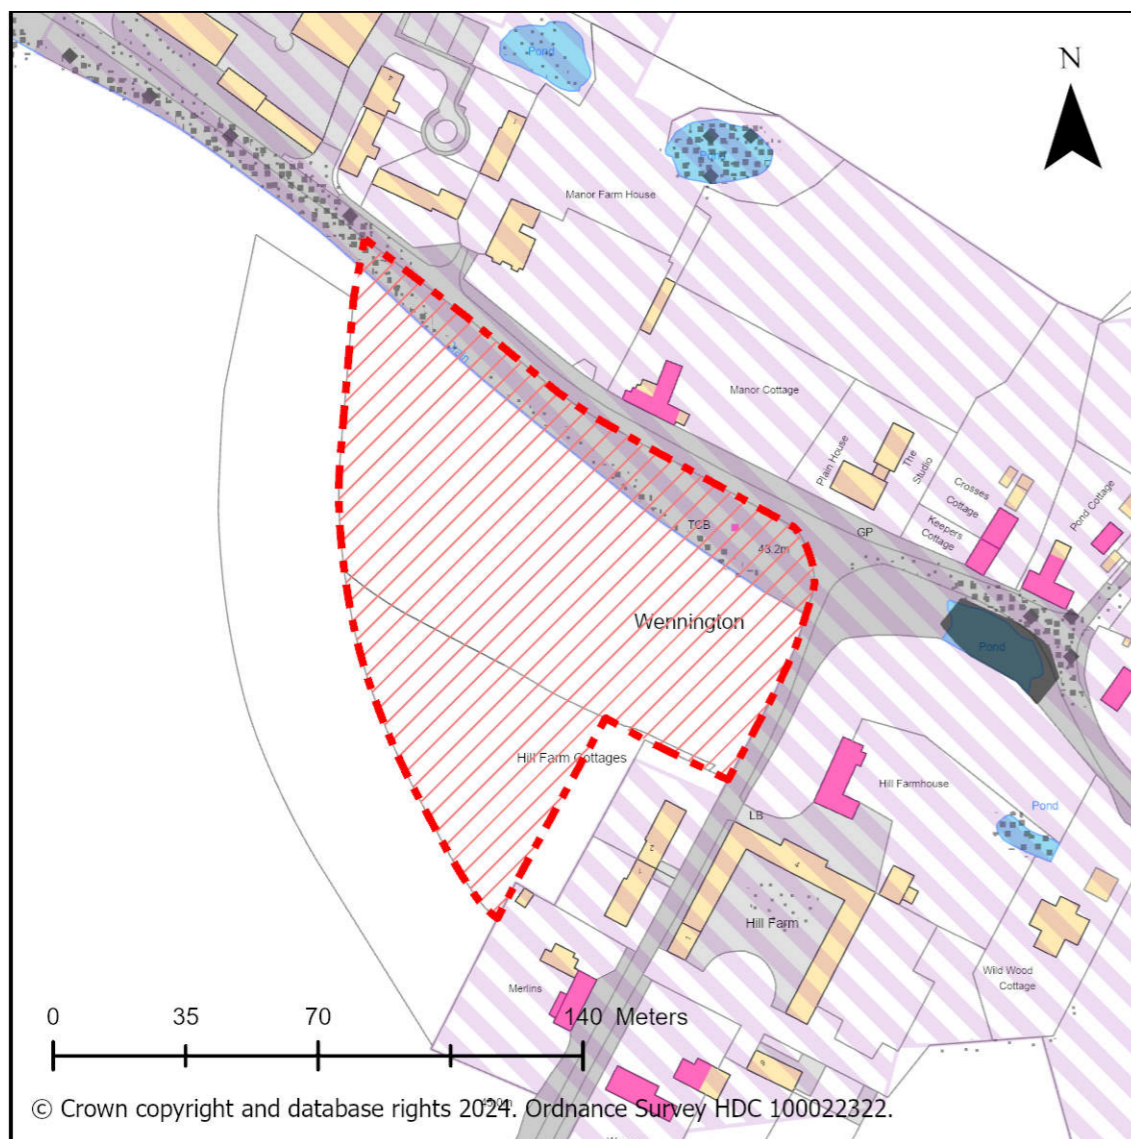

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 106
Relevant planning history	None
Land type	Greenfield land and garden land
Current use of the site	Agricultural land and
Supporting information	Landscape sensitivity study  Location plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by flood risk but has some surface water flood risk along the northern edge in association with a drainage ditch. The site is classified as grade 2 agricultural land.</p> <p>The site is flat and within the hamlet of Wennington which sits within an elevated ridgeway and the Central Claylands Sub Area of Extensive Woodland. The site is highly exposed on the eastern boundary from the small rural road, where the agricultural (arable) field can be seen and the residential back garden which forms part of the site to the south. An established treeline bounds the western edge screening the site from the wider</p>	+
--	---

<p>countryside, whilst the northern edge is bounded by trees showing glimpses into the site, especially as travelling east. The northern edge of the site comprises a conservation area and a Grade II Listed building (telephone kiosk). The character of the area is distinct in the fact that no footpaths are present. Landscape impact would be limited if trees were retained and masterplanning would need to consider the design and layout of the site in keeping with the conservation area and identity of the village. Access could be achieved from Wennington Road to the east of the site, a traffic impact assessment would be required due to the nature of the rural roads including consideration of pedestrian safety due to the lack of pavements.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. There are no known nature conservation assets or tree preservation orders affecting it. The site is greenfield land and garden land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area, but not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, the site would be developed in collaboration with the landowner and a promotor or developer, the landowner would like to keep some form of control with the Developer, ensuring development aligns with community and Estate values. There is an ongoing consultation between the landowner and the local community. Build out is expected to take 2 years.</p>	+
<p><b>Achievability</b></p> <p>There is no access to gas supply. Mains water and electricity supply are noted as being accessible from the site boundary, as are digital and telecommunications infrastructure. Access could be achieved from the east via Wennington road, the site is removed from A and B roads and is situated in a village with no pavements making the logistics of construction more challenging.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. A traffic impact assessment would be required due to the nature of the rural roads including consideration of pedestrian safety due to the lack of pavements. Masterplanning would need to consider the design and layout of the site in keeping with the conservation area and identity of the village.</p> <p>The site promoter had provided a landscape sensitivity analysis which proposes residential development fronting an extended village green. It notes that development should reflect character of existing settlement and respect character the Conservation Area by containing</p>	+

groups of vernacular cottages at village core density not exceeding heights of existing buildings and would retain mature hedgerows and trees. The landowner also proposes new right of way links.	
<b>Deliverability / developability</b>  There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Safe access would be required to the site during and post construction and development sensitive to the character of the area. The site is categorised as developable.	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk and surface water flood risk is minimal.</li> <li>• The site is grade 2 agricultural land, is part greenfield and part garden land in use as an arable field.</li> <li>• Landscape impact would be minimal if trees and hedgerow are retained.</li> <li>• The site is not close to local services and facilities is rural in nature and employment opportunities are 4km away.</li> <li>• Its relationship with the conservation area, listed buildings, and townscape character would require significant consideration in terms of design, layout.</li> <li>• The village is characterised by linear development based around a cross roads and is dominated by cottages at extremely low density</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential to provide development of a scale that could be integrated into the existing place and community</li> <li>• Listed building telephone kiosk within the site and trees and hedgerows to the north and west would require retention so as not to detrimentally impact the character of the area.</li> <li>• Design and layout would require sensitive design and layout to ensure the townscape, and listed buildings are not detrimentally impacted.</li> <li>• Number of properties would need to be reduced so as to ensure safety of residents due to lack of footpaths.</li> <li>• A traffic impact assessment during and post construction would be required due to the nature of the rural roads including consideration of pedestrian safety due to the lack of pavements.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.22ha  50% net developable area to mitigate against conservation area, trees and hedgerow and reflect current townscape.  1.22ha x 50% = <b>0.61ha</b>	The net developable area is 0.61ha  Residential - market and/or affordable homes.  Extremely low density of 10 dph anticipated to reflect current townscape.  Capacity = 0.61ha x 10 dph = <b>6 homes</b>	Available 2024-2028  Build out 2 years

**Updates after the Initial Assessment**

## Abbots Ripton 2: Home Farm North, Abbots Ripton

<b>Site reference</b>	Abbots Ripton 2
<b>Site name</b>	Home Farm North, Abbots Ripton

Site address	Parish(es)	Site area (ha)
Home Farm, Abbots Ripton, PE28 2LD	Abbots Ripton	1.38ha

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Space Uses: Natural green or open spaces Biodiversity net gain Land to safeguard against flooding	15 dwellings  Open spaces to be confirmed subject to masterplanning	Available 2024-2028  Build out 2 years

### Core information

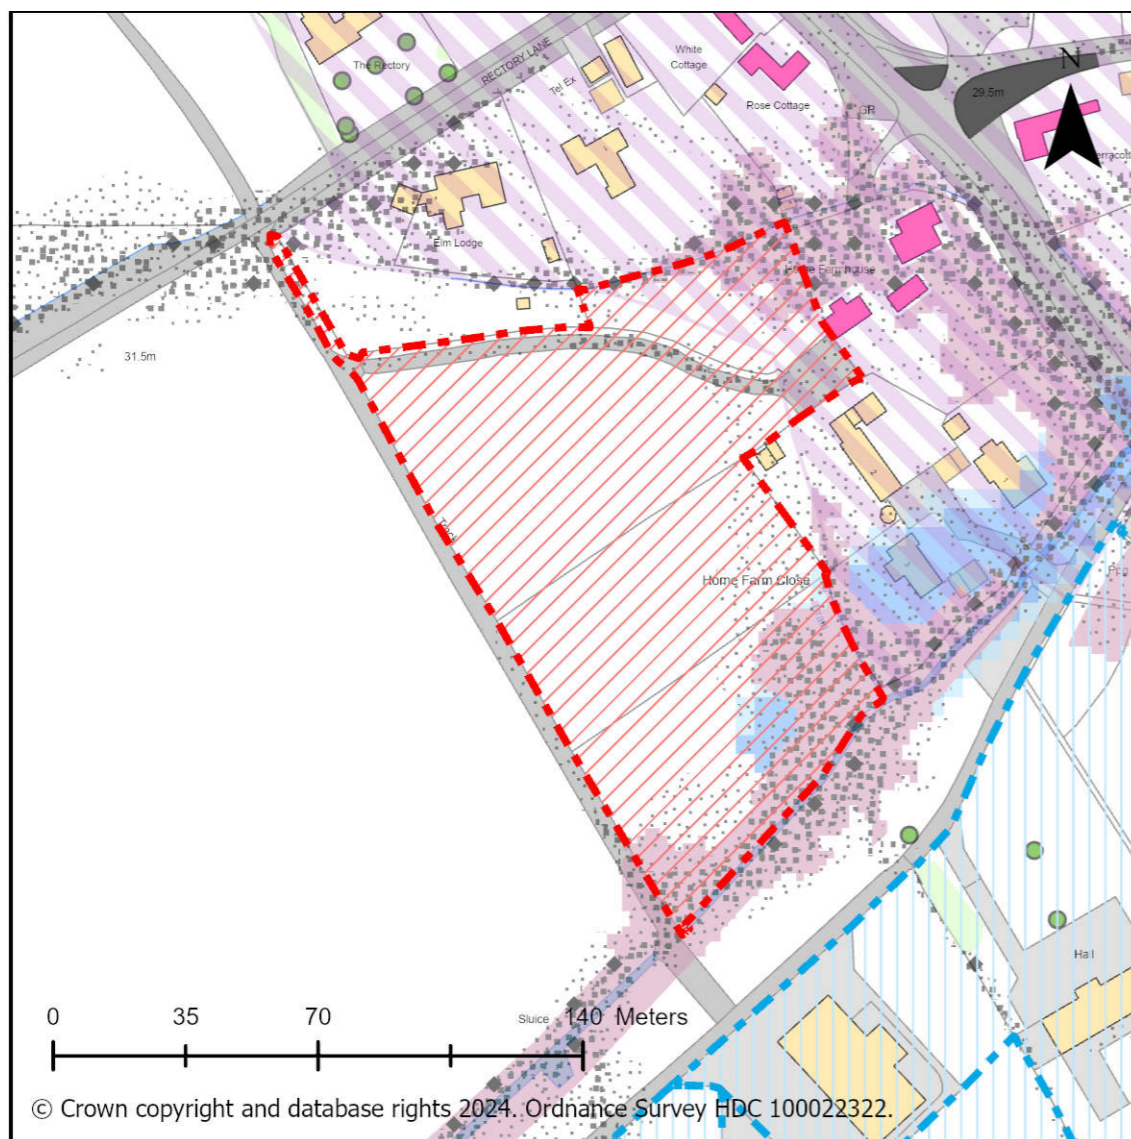

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 260
Relevant planning history	Application number: 23/01847/TRCA  Proposed development: 5 small/medium elms - fell dead (in the south of the site).  Outcome: Approved
Land type	Greenfield land and garden land
Current use of the site	Agricultural and garden land

Supporting information	Landscape sensitivity study  Location Plan
------------------------	--

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	14.92% of the site is within flood zone 3b (0.21ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1, flood zone 2, 3 and 3b are also present on the site in the south in association with an ordinary watercourse and in the north eastern corner. Surface water flood risk is also present within similar locations. The majority of the site is grade 3 agricultural land with the north western quarter grade 2.</p>	~
---	---

The site is relatively flat and sits on the south western edge of the village of Abbots Ripton. The western boundary is screened by high hedgerow. The eastern and northern boundaries are contained by residential properties, some of which are listed and substantial domestic gardens are included within the site. An ordinary watercourse runs along the southern boundary and is screened by dense trees.

Access is proposed via the narrow Rectory Lane. Part of the north eastern corner falls within a conservation area, which is also present immediately east and north of the site. Established hedgerow separates the northern quarter of the site. As the site is well contained it is not considered that there would be any landscape impact if trees and hedgerow were retained. Masterplanning would need to consider the design and layout of the site in keeping with the conservation area and identity of the village. The eastern boundary abuts a collection of three Grade II listed buildings (Barn, Outbuilding and Home Farm at Home Farm, The Green), development of the site would result in the loss of garden land and could significantly impact the setting of listed buildings.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. There are no known nature conservation assets or tree preservation orders affecting it. The site is agricultural land and garden land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.

**Availability**

The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, the site would be developed in collaboration with the landowner and a promotor or developer, the landowner would like to keep some form of control with the Developer, ensuring development aligns with community and Estate values. There is an ongoing consultation between the landowner and the local community. Build out is expected to take 2 years.

**Achievability**

Gas, mains water and electricity supply are noted as being accessible from the site boundary, as are digital and telecommunications infrastructure. Access could be achieved from the north via Rectory Lane, the site is near to the B1090 which could assist with the logistics of construction.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. A traffic impact assessment would be required including consideration of pedestrian safety due to the lack of pavements on Rectory Lane.

+
~

<p>Masterplanning would need to consider the design and layout of the site in keeping with the conservation area and setting of the listed buildings. Impact of the development on the setting of the listed buildings may impede deliverability on the site due to layout constraints.</p> <p>The site promoter had provided a landscape sensitivity analysis which proposes clusters of houses along with "farmsteads" on larger plots at a combined density of 15 dph additional SuDS and orchard planting. It notes that development should reflect the character of existing village core and respect the setting of vista from St Ives Road by containing groups of vernacular cottages at village core density. It should not include a height that would obstruct or compete with the view of the tower of the Church of St Andrew.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Safe access would be required to the site during and post construction and development sensitive to the character of the area. Delivery of the site could be impeded if it impacts the setting of the listed buildings to the east. If these constraints could be overcome the site could be categorised as developable.</p>	~

- Could create transport and safety impact for pedestrians as a result of access via Rectory Lane
- Could have negative ecological impact.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to, heritage, conservation area, townscape and transport/safety impacts.	N/A	N/A

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by fluvial flood risk and surface water flood risk.</li> <li>• The site majority of the site is grade 3 agricultural land, with the northern quarter grade 2. It is part greenfield and part garden land.</li> <li>• Landscape impact would be minimal if trees and hedgerow are retained.</li> <li>• Removal of hedgerow dissecting the site would affect the setting of the listed building and have a possible ecological impact.</li> <li>• The site is close to some local services and facilities and employment opportunities are 2.5km away.</li> <li>• Development of the site would have a fundamental impact on a listed building and setting of the conservation area.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as it:</p> <ul style="list-style-type: none"> <li>• Would have a fundamental impact on the setting of listed buildings, conservation area, townscape, character of the area and residential garden settings.</li> </ul>

**Abbots Ripton 3: Home Farm South, Abbots Ripton**

<b>Site reference</b>	Abbots Ripton 3
<b>Site name</b>	Home Farm South, Abbots Ripton

Site address	Parish(es)	Site area (ha)
Home Farm South, Abbots Ripton, PE28 2LD	Abbots Ripton	2.83ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Employment</li> </ul> Open Space Uses: <ul style="list-style-type: none"> <li>Natural green or open spaces</li> <li>Biodiversity net gain</li> <li>Land to safeguard against flooding</li> </ul>	15 homes  A commercial unit of approximately 340sqm exists on the site; the proposal is to add approximately 510sqm  Gross floorspace in square metres of additional flexible commercial space onto the site by developing units of between 110sqm and 270 sqm in size.  Open spaces to be confirmed subject to masterplanning	Available 2024-2028  Build out 2 years

**Core information**

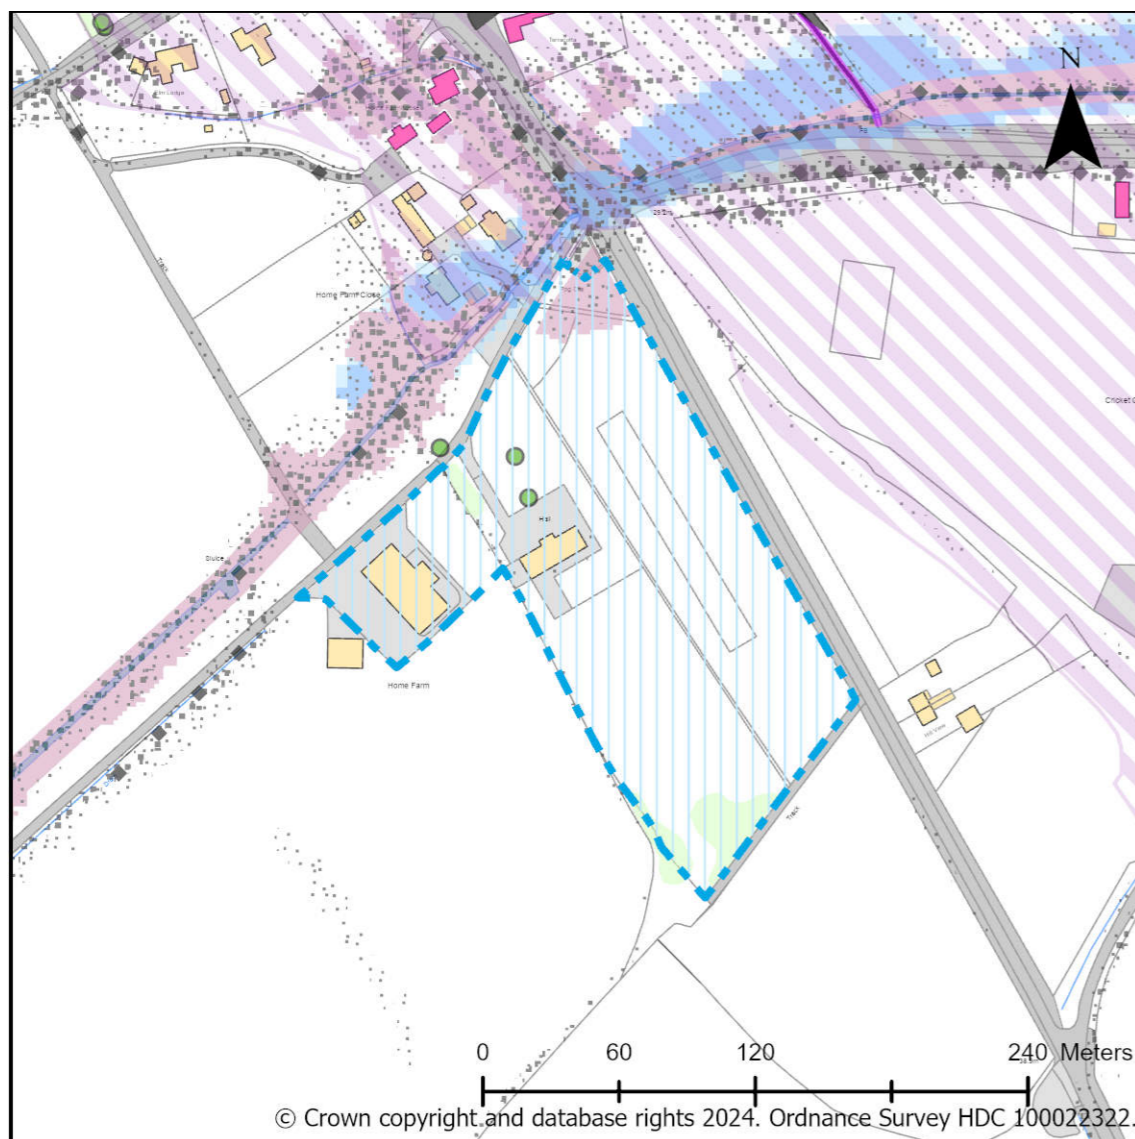

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 259
Relevant planning history	Application number: 23/01847/TRCA  Proposed development: 9. 1 Large Elm - Fell dead  Outcome: Approved

	Application number: 18/01670/TREE  Proposed development: T2 (Elm) Felling at The Haunches  Outcome: Approved  Application number: 17/02430/FUL  Proposed Development: Proposed change of use of former girl guides headquarters building to B1 - offices and meeting rooms  Outcome: Approved
Land type	Part previously developed land and part greenfield land
Current use of the site	Agricultural land and commercial
Supporting information	Landscape sensitivity study  Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	2.90% of the site is within flood zone 3b (0.08ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1, with some flood zone 2 and 3b within the north eastern corner, some surface water flood risk is also present in a similar location. The site is grade 3 agricultural land.</p> <p>The site comprises three distinct but contiguous parcels of land, a long strip of land (named parcel CA by the site promoters) fronting the B1090 enclosed by trees, including a line of established Elm trees running through the middle. The land slopes by at least 7m north to south. Views into the north can be seen from the private road. The south western quarter (parcel CB) consists of fairly steeply sloping field enclosed by some hedgerow and trees</p>	~
---	---

<p>on 3 sides with a patch of woodland on the southern boundary with views looking out towards the west. The north western quadrant (parcel CC) comprises a single storey commercial building with car parking and a large agricultural building, young trees have been planted to the western boundary. Two TPOs are located in parcel CC and a tree preservation area and two tree preservation areas in the south/ parcel CB (Tree Preservation order L/TPO/2018/007). Access to the site has not been established, but the B1090 fronts the eastern edge and a private access road the northern. Development would have limited external landscape impact however the presence of TPOs and established trees may mean that development could impact the ecology and biodiversity value of parts of the site.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. There are no known nature conservation assets affecting it. The site is pastoral agricultural land and commercial land and therefore offers some opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, the site would be developed in collaboration with the landowner and a promotor or developer, the landowner would like to keep some form of control with the Developer, ensuring development aligns with community and Estate values. There is an ongoing consultation between the landowner and the local community. Build out is expected to take 2 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from within the site, digital and telecommunications infrastructure is accessible from the site boundary. Access could be achieved from the B1090 or private access road to the north which could assist with the logistics of construction. However access from the B1090 would impact an existing tree line and access from the private road to the north could impede delivery and viability if there are ownership issues.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. Topographical variation and TPOs present challenges in some areas of the site and the design and layout of the site could impact the ecology and biodiversity value of parts of the site limiting the achievability of residential development, however established elements of previously developed land present the opportunity for some development if landscaping transition is provided to the west and into the countryside.</p>	~

<p>The site promoter had provided a landscape sensitivity analysis which proposes commercial units between 110sqm and 270 sqm in size and dwellings at a density of 13 dph with a landscape buffer around edges adjoining open countryside. It notes that parcel CA could be limited due to the presence of trees, which would be retained with a few vernacular cottages proposed; Parcel CB proposes a group of vernacular cottages at village core density with mature hedgerows and trees retained. Parcel CC would provide single storey commercial buildings with groups of vernacular cottages on edge of development.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no ownership constraints, means of access would require resolution and development may be restricted in areas with TPOs, topographical issues and established trees. Established elements of previously developed land present the opportunity for some development if landscaping transition is provided to the west and into the countryside, therefore some of the site could be categorised as developable. The proposed development is contrary to current adopted planning policy so allocation status would be required.</p>	

- Has potential to provide development of a scale that could be integrated into the existing place and community.
- Would need to avoid detrimental impact on tree preservation areas and orders
- Could be accessed from an existing road (currently private)
- Should avoid development on the eastern parcel of land enclosed by trees.
- Would require landscaping on the western boundary and mitigation from the EastCoast Mainline
- The south western quarter (parcel CB) consists of fairly steeply sloping field meaning elevations of building would require consideration to avoid over exposure within the wider townscape/skyline.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 2.83ha</p> <p>1.2ha removed to retain species rich grass land and veteran trees within the east of the site.</p> <p>Remaining land = 1.63ha</p> <p>70% net developable area to avoid impact to tree preservation areas and orders.</p> <p>1.63ha x 70% = <b>1.141ha</b></p>	<p>The net developable area is 1.141ha split 60/40 between residential and employment respectively.</p> <p>Residential - market and/or affordable homes on 0.6846ha (1.141 x 60%)</p> <p>Very low density of 25dph to reflect edge of settlement location.</p> <p>Capacity = 0.6846ha x 25 = <b>17 homes</b></p> <p>Commercial - Employment on 0.4564ha (1.141 x 40%) at 0.25 plot ratio to reflect edge of settlement location</p> <p>Capacity = (0.456ha x 0.25)*10,000= <b>1,141 sqm</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 2-3 years.</p>

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by fluvial flood risk and surface water flood risk.</li> <li>• The site is grade 3 agricultural land, is part greenfield and part previously developed land providing some opportunities for redevelopment and enhancement of employment opportunities within the village.</li> <li>• Tree preservation areas and orders are present on the site.</li> <li>• The site is close to local services and facilities and employment opportunities are 2.5km away.</li> <li>• No heritage designations are affected.</li> <li>• Landscaping and mitigation would be required to address the impact of the EastCoast Mainline and agricultural works.</li> <li>• It is recommended that the parcel of land enclosed by trees, including a line of veteran Elm trees running through the middle and species rich grassland should be retained due to its uniqueness which contributes to the character of the area.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>

Land Parcel North of Huntingdon Road, Abbots Ripton, PE28 2LD	Abbots Ripton	0.90ha

### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Commercial: Employment Open Space Uses: Natural green or open spaces Biodiversity net gain Land to safeguard against flooding	9 homes  Open spaces to be confirmed subject to masterplanning	Available 2024-2028  Build out 2 years

### Core information

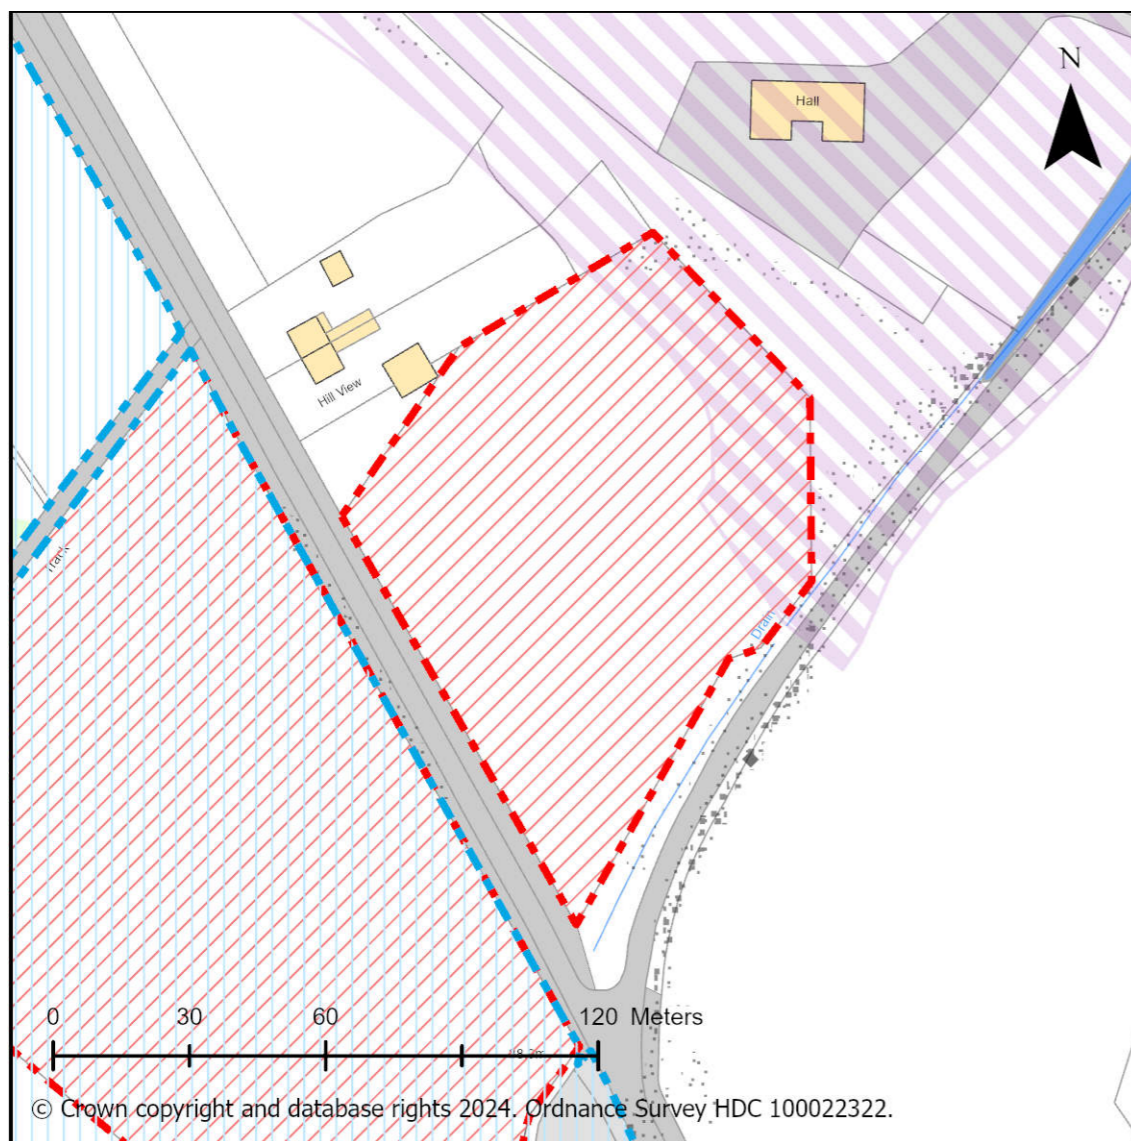

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 241
Relevant planning history	Application number: 23/01847/TRCA Proposed development: 13 - 3 Small Elms - Fell, Dead Outcome: Approved
Land type	Wholly greenfield land

Current use of the site	Agricultural land
Supporting information	Landscape sensitivity study Location plan

### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial or surface water flood risk and is grade 3 agricultural land. The site is relatively flat and situated outside of the main residential area of Abbots Ripton, but close to the village hall which is immediately east of the site, the site is enclosed by dense trees and hedgerow. The eastern edge of the site also includes established trees and forms part of the village conservation area. A drain runs just outside the southern boundary and a five bar gate provides access to the site, the site is a pastoral agricultural field. To the north of the site are residential properties which are screened by trees and</p>	+
---	---

<p>hedgerow and the village hall lies to the east (also predominantly screened). If all trees and hedgerow were to be retained and elevations carefully considered there would be little or no landscape impact from development.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. There are no known nature conservation assets or tree preservation orders affecting it. The site is pastoral agricultural land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, the site would be developed in collaboration with the landowner and a promotor or developer, the landowner would like to keep some form of control with the Developer, ensuring development aligns with community and Estate values. There is an ongoing consultation between the landowner and the local community. Build out is expected to take 2 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from the site boundary as is digital and telecommunications infrastructure. There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. The site has existing field access via a five bar gate, however direct access from 'The Green' has not been included within the site boundary making it unclear if this may impede delivery and viability if there are ownership issues. Proximity to the B1090 could assist with the logistics of construction, however this may be more obstructive when accessing the site from The Green which is a narrow road with no pavements. A transport assessment would be required to understand the impact of residential uses in this area, especially safe access for residents.</p> <p>The site promoter had provided a landscape sensitivity analysis which proposes residential development of "farmsteads" at 9 dph and provision of pond or SuDS to manage drainage. It notes that development would reflect the edge of settlement location by providing a loose groups of dwellings, reflecting the conservation area and be interspersed with lower units reading as outbuildings; mature hedgerows and trees would be retained and or reinforced.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. Safe access would be required to the site during and post construction and development sensitive to the character of the area. The proposed development is contrary to current adopted planning policy so allocation status would be required. The site is categorised as developable.

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk or medium surface water flood risk.
- The site is wholly greenfield and grade 3 agricultural land.
- Landscape impact would be minimal if trees and hedgerow are retained.
- The site is close to local services and facilities and employment opportunities are 3km away.
- The site has with little relationship to the established village and more with the open countryside.
- There are significant constraints to integrate the site with the exiting community due to lack of footpaths requiring pedestrians to travel along the B1090 or 'The Green' a narrow lane.
- Vehicular access which would require assessment of transport impacts and safety of access.

In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as it:

- Would create transport and safety impact for pedestrians and vehicles as a result of access via 'The Green' and lack of pedestrian connections to the main village and services
- Direct access from 'The Green' has not been included within the site boundary making it unclear if this may impede delivery and viability or if there are ownership issues.
- It is removed from the main village of Abbots Ripton having little relationship to the village creating isolated developed in the countryside.

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
	200ha productive landscape (note supporting documentation refers to 192ha).	

**1.3** Within the Masterplan document submitted by the site promoter a number of smaller scale development options were presented ranging from a site of 81ha and 1,800 dwellings immediately north of Huntingdon to 113ha and 2,700 dwellings from Huntingdon to Abbots Ripton and finally 2 further options including the whole site. As the site promoter specifically references the whole site in their submission this is the area that has been assessed.

**Core information**

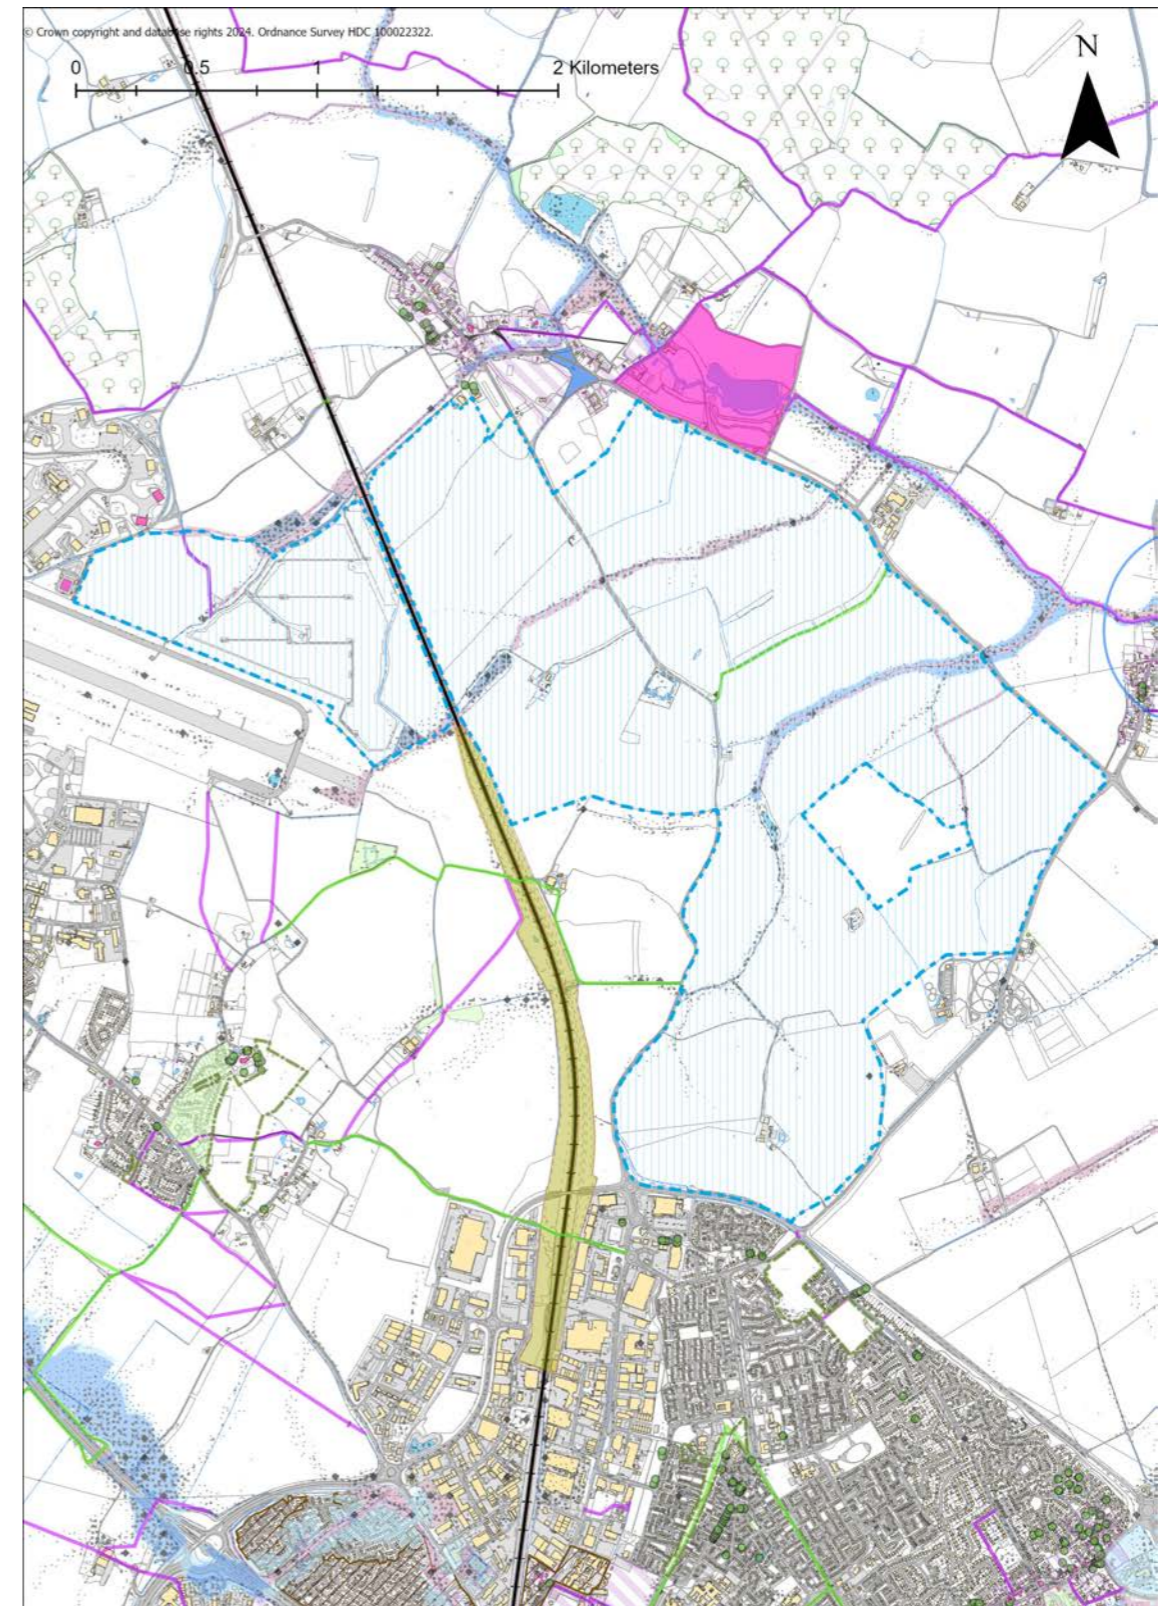

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 197
Relevant planning history	Application: 19/02438/S73  Proposed development: Variation of condition 2 of 1301218FUL to provide for a 10 year extension in the planning permission period of the life of the Solar Farm  Status: Approved  Application number: 1301218FUL  Proposed development: Development of a renewable energy solar farm, to include the installation of solar panels, transformer rooms and plant, access and on-site tracks, security fencing and cameras, landscaping and other associated works.  Status: Approved  HELAA (December 2017): North East of Alconbury Airfield  HELAA (December 2017): Sapley Park Farm  HELAA (December 2017): North East of Alconbury Weald (part of the submitted site falls within this HELAA site)
Land type	Majority greenfield land and some garden land

Current use of the site	Majority agricultural land and some garden land
Supporting information	Illustrative Masterplan Location Plan Sapley Park Farm Vision Sapley Park Garden Village Call for Sites Submission Sapley Park Garden Village Issues Engagement Submission Sapley Park Garden Village Landscape and Visual Impact Assessment Sapley Park Garden Village Masterplan Opportunities Document

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	1.81% of the site is within floodzone 3b (10.47ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Assessment of Site Potential

**Context, constraints and potential suitability**

The majority of the site is within flood zone 1 (approximately 564ha), flood zones 2, 3a and 3b are present running along two drainage channels running east to west, one within the northern quarter of the site leading to a reservoir and one along the middle of the site, there is some risk from surface water flooding on the site with approximately 2.88% at medium risk in similar locations and following drainage. The majority of the site is classified as grade 2 agricultural land with a negligible portion to the west (associated with the former Alconbury Airfield) non agricultural land.

The site is situated within the Central Claylands characterised by gently undulating farmland and airfields such as at Alconbury which is in the process of mixed-use residential led redevelopment. Large scale field patterns with few hedgerows or hedgerow trees, gives rise to a predominantly open landscape.

The submitted site comprises two parcels of land. The western parcel is approximately 84 hectares and falls predominantly within the Parish of The Stukeleys and a smaller extent within Abbots Ripton, it is situated west of the East Coast Mainline railway line which separates the site from the remaining proposed parcel of land. The site connects to the north eastern boundary of strategic allocation *SEL 1.1 Former Alconbury Airfield and Grange Farm*, construction is currently underway south west of the proposed parcel; an outline application for residential development on Grange Farm to the south of the site is pending consideration (19/01341/OUT). The western boundary abuts land currently masterplanned for residential development with a 'heritage area' immediately adjoining the western boundary, which includes three Grade II\* listed buildings, and a sports hub to the south west. Development would have to provide mitigation measure so as not to detrimentally impact the heritage area to the west and integrate the new community with existing facilities. The site promoter identifies an underground railway crossing point within the site, which joins Rectory Lane heading towards Abbots Ripton which could join the entire proposed development, however this is currently best suited for active travel uses and occasional farm related movements, this may require significant upgrades. The ability to connect the proposed residential development to the strategic allocation at present offers no current opportunities meaning that integration with residential development - once built - would be extremely difficult to achieve. The site includes a large solar farm, associated infrastructure and secure fencing which takes up approximately two thirds of the land, with the remaining land arable farmland; one field to the east and two to the west. Overhead powerlines cross the site and tributary streams and ditches within and around the site, some connecting to reservoirs north and south of the site. The site can be clearly seen from public rights of way to the north and from glimpses from the East Coast Mainline. A tree belt screens the northern boundary of the solar farm and a Great Stukeley Railway cutting SSSI abuts the south eastern corner. Some strategic landscaping may be required to transition the site into the wider countryside to the north and impact on sites of ecology

and biodiversity value would require assessment. Noise air and light pollution (including vibrational) will impact the eastern edge of the site and require mitigation. There are no tree preservation orders affecting the site.

The eastern parcel is more sizeable stretching from Huntingdon to Abbots Ripton, sandwiched between the East Coast Mainline to the west and the B1090 to the east. The A141 forms the southern boundary and Sapley Road / Kings Ripton Road the south eastern boundary. Huntingdon Road / Abbots Ripton Road runs through the centre of the northern half of the site continuing south to form the south western boundary of the site. The eastern parcel falls within the parishes of Abbots Ripton, Huntingdon, Kings Ripton and The Stukeleys. Just over 14.5 hectares of land located just south of the centre of the site has not been included within the site submission creating a pocket of land that would remain outside the influence of the landowner/developer.

The southern boundary is screened intermittently by trees and hedgerow, however views can be seen into the site and into the distance. Views from Sapley Road are screened by trees until just past Jubilee Park (Huntingdon's multiuse sports facilities) after which views can be seen clearly into the wider site and open countryside. Jubilee Park Huntingdon Crematorium and a rally centre sit just outside the site boundary. The boundary of the site with the B1090 includes intermittent planting and hedgerow however the site can be clearly seen from here at various locations. The site cannot be seen from 'The Green' (a lane) in Abbots Ripton, but could be clearly seen from a private access road which forms the north western edge and further afield from Rectory Lane through the uniformly spaced tree line. Although trees and hedgerow are present in locations along Huntingdon Road / Abbots Ripton Road views into the site and from within the site demonstrate a clear countryside setting, glimpses of the site can also be seen from the East Coast Mainline. A public right of way dissects the eastern parcel of land running east to west from the B1090 to Huntingdon Road / Abbots Ripton Road a dense tree belt predominantly screens the northern part of the site, however long distance views can be seen from here across the central and southern parts of the site.

The land is undulating ranging in heights of around 48m AOD to 25m in general with valley features running east to west through the north centre and south of the site and entering the south eastern boundary, the southern eastern point reflects its proximity to the River Great Ouse and respective valley. The undulating nature of the site would mean development could have a significant impact on the wider landscape meaning mitigation would be required and consideration of building elevations within its context to minimise detrimental impact. Many landscape features are present within the site including small wooded areas, tree belts, farm drainage and a reservoir (near the railway line and Wild Goose Leys) the site is split into multiple arable fields. Two TPOs and three tree preservation areas are located in the north of the site (Tree Preservation order L/TPO/2018/007). Great Stukeley Railway cutting SSSI abuts part of the north western edge of the site. Development could impact the ecology and biodiversity value of parts of the site. Strategic landscaping would be required to transition the site into the wider countryside and impact on the village

<p>of Abbots Ripton to the north and Kings Ripton to the east. Integration with the existing residential community of Huntingdon would require safe crossing points across the busy A141.</p> <p>Heritage and residential and agricultural buildings are present within and adjacent to the site, these include a Grade II listed building and Registered Park and Garden on north eastern edge (Abbots Ripton Hall) across the road (B1090) and a listed building Grade II Wild Goose Leys, a house with associated agricultural buildings, within the site itself which is situated towards the north western area. Just south of this is Bellamy's Grove a scheduled monument - a moated site. Towards the southern quarter of the site is another scheduled monument, The Moat, a motte and bailey castle. Sapley Park Farm (residential and agricultural buildings sits within the southern extent of the site. Mount Pleasant, a residential property is also within the northern extent of the site situated on Huntingdon Road and further north near Home Farm a single storey commercial building with car parking and a large agricultural building are present. Grange Cottage a residential sits within the north eastern boundary on the B1090. The site proposal would be required assessment of, mitigation and integration of existing buildings and heritage assets. Presence of the East Coast Mainline means that noise air and light pollution (including vibrational) will impact the western edge of the site and require mitigation as would the presence of the crematorium to the east and overhead powerlines are present on site</p> <p>In general across both parcels of land no known oil pipelines or buffer zones cross the site and the site is not within a mineral safeguarding area or a water recycling area. A high pressure gas main runs north to south, close to the eastern side of the railway line. The site is predominantly greenfield agricultural land and offers no opportunities to contribute to regeneration.</p>		<p>vibrational and pollution mitigation measures to ensure a high quality residential environment. The impact of the crematorium to the east would also require mitigation within the development.</p> <p>Access to the site could be achieved from multiple locations. Access to A and B road networks would provide good long term road connectivity and assist with the logistics of construction.</p> <p>Transport impacts due to the size of the site would require potential major infrastructure requirements to enable the current roads to accommodate the increase in traffic as a result of the development. The proposed rerouting of the A141 will dissect the site and integration of residential parcels of land would require additional infrastructure to compensate.</p> <p>Major infrastructure would be required to support development, such as schools, local services and green spaces/infrastructure. The presence of major roads would require further measures to safely integrate the community from the proposed site with the existing residential area of Huntingdon - for example foot and cycle bridges as there is no segregated footway or cycleway along the A141 to allow connectivity into Huntingdon. Integration of the western Parcel with <i>SEL 1.1 Former Alconbury Airfield and Grange Farm</i> would be difficult to achieve as layout of these sites may already be set meaning there is no opportunity for through routes into these developments. Additionally integration with these sites could not be achieved until build out on these are achieved.</p> <p>Careful masterplanning and strategic landscaping would be required to integrate heritage, natural assets, residential buildings and uses such as Jubilee park and the crematorium into the wider site and minimise impact on the villages of Abbots Ripton and Kings Ripton, the undulating nature of the site would mean development could have a significant impact on the wider landscape meaning mitigation would be required and consideration of building elevations within its context to minimise detrimental impact.</p>	
<p><b>Availability</b></p> <p>The site is within single family control and ownership and development is supported by all landowners. It is unclear whether there are any legal restrictions on the site. The site is available from 2024-2028, delivery of the site will be controlled by the Abbots Ripton Estate, the precise mechanism is yet to be determined. Build out is estimate to take around 25 years depending on phasing.</p>	+	<p>The site promoter proposes accessible network of streets, paths and cycleways, a high quality bus corridor and note that a proposed railway station at Alconbury Weald would provide additional public transport options for residents. four local centres are proposed and additional facilities to supplement Jubilee Park. Landscape solutions are proposed to mitigate the impact on the conservation Areas of Abbots Ripton and Kings Ripton including strategic 'productive landscape' (glamping, orchards, grazing/ arable pasture land, community gardens, woodland blocks, wildflower meadow etc.) in the north and along the B1090. Valley features would be incorporated into the development. Landscaping and set back of development is also proposed to mitigate against the impacts of the railway. Country parks would be provided in western parcel and one separating southern and western communities in the eastern parcel. Current woodland blocks would be retained and the SSSI and heritage assets would be incorporated into the design of the development. Advice has been taken address the location of residential development in relation to the gas pipeline. Schools and four local centres are proposed to meet the needs of the new development.</p>	
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from within the site and digital and telecommunications infrastructure from the site boundary. Overhead powerline routes traverse the site, mitigation would be required to relocate the powerlines underground, or mitigate their presence, which could impact viability of the site. Presence of a high pressure gas would require careful consideration of the layout of the site, but due to its size is not anticipated to affect its achievability. The presence of proposed residential development near to the East Coast mainline railway would require substantial noise,</p>	~		

<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Major infrastructure would be required to facilitate development. Significant mitigation would also be required including from the railway, crematorium, heritage and natural assets, existing buildings etc. The site is available from 2024-2028, delivery of the site will be controlled by the Abbots Ripton Estate, the precise mechanism is yet to be determined. It is considered that the western parcel would be difficult to achieve due to issues with integration with proposed allocated development.</p> <p>The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	
--	--

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is wholly greenfield and predominantly grade 2 agricultural land</li> <li>• The majority of the site is within flood zone 1 (approximately 564ha), flood zones 2, 3a and 3b are present, there is some risk from surface water flooding.</li> <li>• There is potential for enhanced public transport connections via the Guided Busway and Alconbury railway station, however these schemes are not confirmed without this private transport could dominate.</li> <li>• The site may impact on SSSI, heritage assets (listed buildings and scheduled monuments) and is close to conservation areas in Abbots Ripton and Kings Ripton.</li> <li>• There are opportunities for active travel and significant open spaces with opportunities for blue/green corridors.</li> <li>• There are opportunities to address the impacts of climate change, including flood risk, buildings and energy storage.</li> <li>• The proposal would create four new communities changing the landscape from what is predominantly what is currently open farmed countryside.</li> <li>• Presence of the East Coast Mainline, proximity to the crematorium current A141 and proposed rerouting of the A141 will present issues with noise, air, vibrational and light pollution.</li> <li>• Proposals for 192ha of greenspace, green and blue networks, employment, local centres provide some foundation for sustainable place-making however, health and community centres are to be confirmed.</li> <li>• Integration of the western parcel with Alconbury Weald and across to the main site may be difficult to achieve</li> </ul>	
---	--

<p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for development in the long term contributing to the housing needs of the district and supporting sustainable placemaking.</li> <li>• The achievability of the development in the western parcel and links to Alconbury Weald is unclear and therefore should be removed from the proposal unless further evidence is provided.</li> <li>• Noise, air, vibrational and light pollution in association with East Coast Mainline, the crematorium current A141 and proposed rerouting of the A141 will require mitigation.</li> <li>• The proposed rerouting of the A141 will dissect the site and integration of residential parcels of land would require additional infrastructure to compensate.</li> <li>• Flood mitigation would be required.</li> <li>• Impact on SSSI, heritage assets (listed buildings and scheduled monuments), TPOs, Tree Preservation Areas and conservation areas in Abbots Ripton and Kings Ripton would require assessment and mitigation.</li> <li>• Landscaping and separation from Abbots Ripton and Kings Ripton would be required to prevent coalescence and retain character of the small villages.</li> <li>• Safe integration and crossing points across the A141 to Huntingdon should be investigated to minimise car travel.</li> <li>• Mitigation of overhead powerlines and high pressure gas would require careful consideration and may influence the layout of the site, but due to its size is not anticipated to affect its achievability.</li> <li>• Major infrastructure would be required to support development, such as schools, local services and green spaces/infrastructure.</li> <li>• Transport impacts due to the size of the site would require assessment.</li> </ul>	
---	--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 579.66ha.	The net developable area is 259.66ha	Available post 2028 subject to allocation
Removal of approximately 83ha to represent the western parcel of land which is currently considered unachievable.	21ha is deducted for 3 two form entry primary schools and an all through school.	Build out over 25 years
Proposed site area minus western parcel	4.5ha is deducted for 3 local centres and a community centre 20ha is deducted for employment land	

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>579.66ha - 83ha = <b>Gross site area =496.66ha</b></p> <p>Removal of the following land informed by the submitted documentation (with amendments):</p> <ul style="list-style-type: none"> <li>Removal of 45ha for proposed country park (reduced from 60ha to discount country park outlined within the western parcel).</li> <li>Removal of 192ha of productive landscape to provide separation from Abbots Ripton and Kings Ripton and to provide multiple health, ecology, social and biodiversity benefits.</li> </ul> <p>Net developable area = <b>259.66ha</b> (496.66ha - 45ha - 192ha)</p>	<p>11.5ha is deducted for a sports hub</p> <p>0.5ha is deducted for a community centre</p> <p>Remaining land for residential = <b>202.16ha</b> (259.66ha -21ha - 4.5ha- 20ha -11.5ha - 0.5ha)</p> <p>Mixed densities to reflect a range of densities reflective of large developments.</p> <ul style="list-style-type: none"> <li>3% of land at very high density 145dph. 6.0648ha x 145dph = 879 homes</li> <li>7% of land at high density 85dph. 14.1512ha x 85dph = 1,203 homes</li> <li>25% of land at moderate density 50dph. 50.54ha x 50dph = 2,527 homes</li> <li>55% of land at low density 35dph. 111.188ha x 35dph = 3,892 homes</li> <li>10% of land at very low density 25dph. 20.216ha x 25dph = 505 homes</li> </ul> <p><b>9,006 total homes</b></p> <p><b>Note:</b> this calculation is indicative and may be subject to review if there is further certainty on the prospects of A141 coming forward and dissecting some of the site, it is not taken into account in the above.</p>	

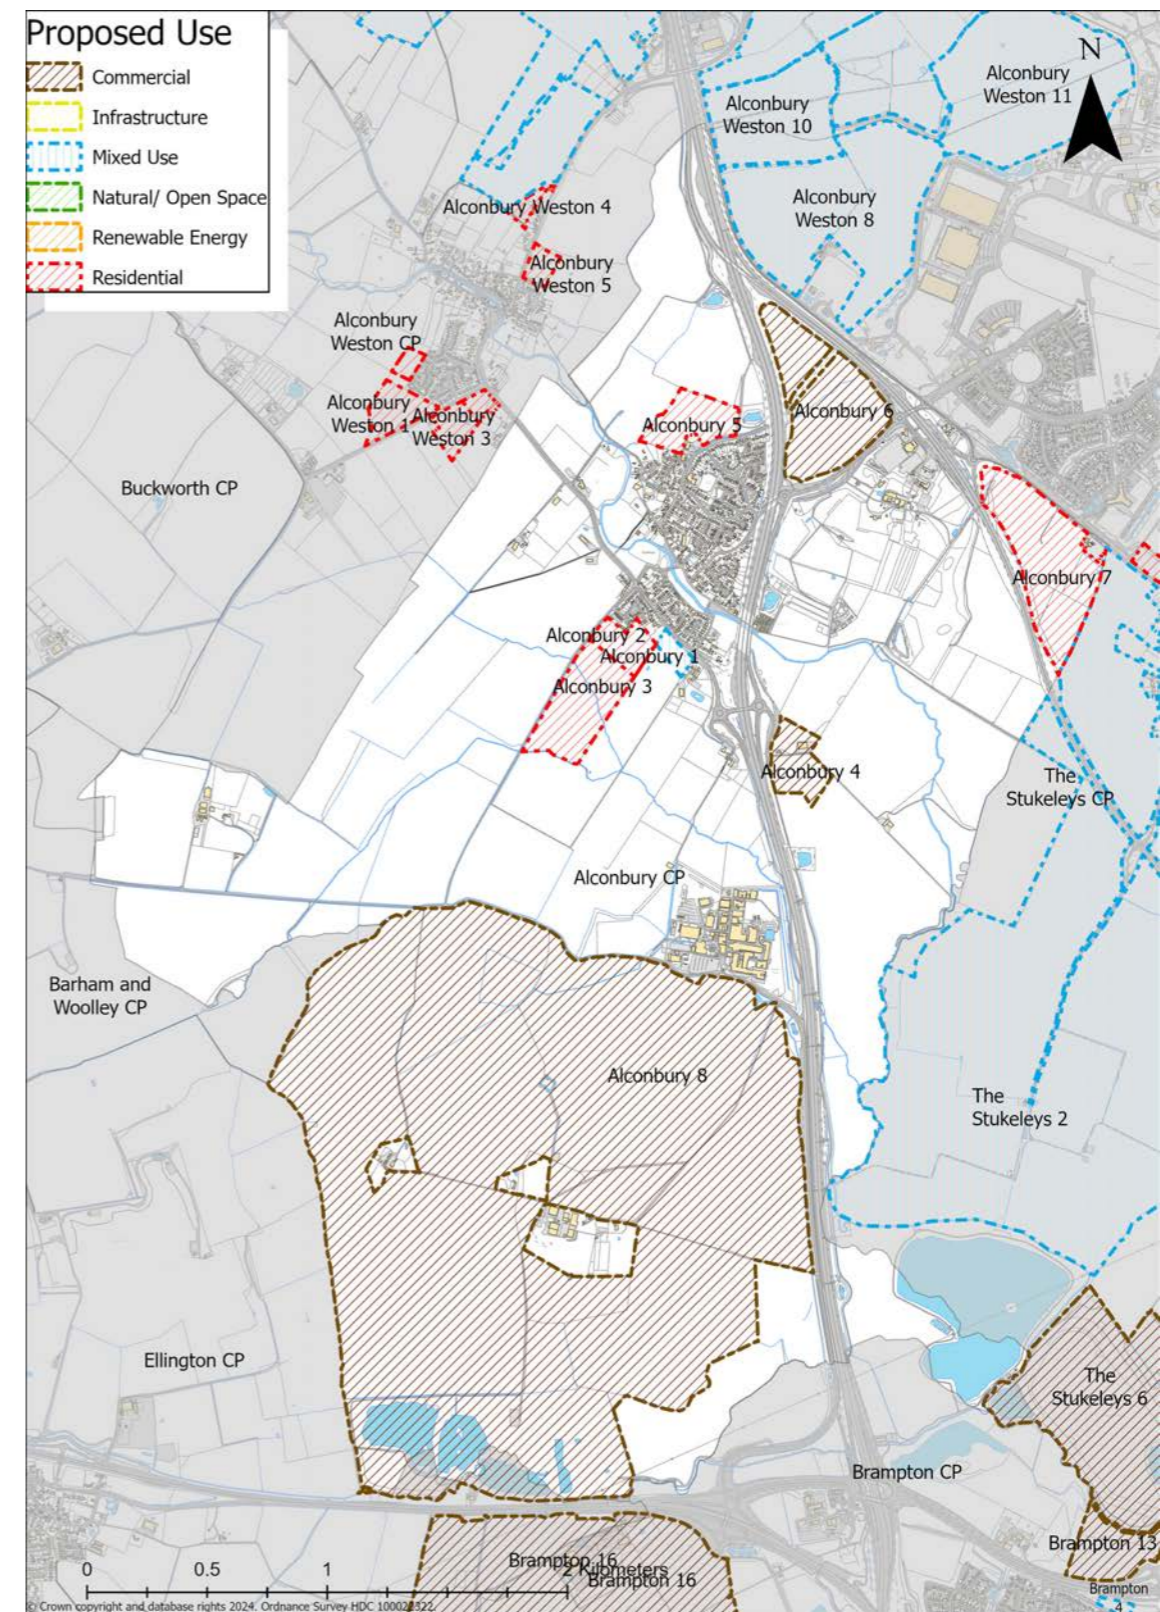

Updates after the Initial Assessment

### 2 Alconbury

2.1 A total of 8 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Alconbury 1: Land South of Great North Road, Alconbury
- Alconbury 2: Land to the East of Globe Lane (smaller site), Alconbury
- Alconbury 3: Land to the East of Globe Lane (larger site), Alconbury
- Alconbury 4: Brooklands Farm, land to the East of A1 junction 13, Alconbury
- Alconbury 5: Land to the North of School Lane, Alconbury
- Alconbury 6: Land North of B1043 and East of Alconbury, Alconbury
- Alconbury 7: Fifty Acres, Land adjacent to Ermine Street and A1304, Alconbury
- Alconbury 8: Land at Weybridge Farm (Brampton Cross) - this site also partially falls within Ellington parish. As the majority of the site falls within Alconbury parish, the site has been assessed here instead. A link to the site can also be found within the Ellington section of the Western Huntingdonshire LAA document.

2.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Page 587 of 3488

**Legend**

- Commercial sites
- Infrastructure sites
- Mixed Use sites
- Natural/ Open Space sites
- Renewable Energy sites
- Residential sites

**Policy**

### Alconbury 1: Land South of Great North Road, Alconbury

<b>Site reference</b>	Alconbury 1
<b>Site name</b>	Land South of Great North Road, Alconbury

Site address	Parish(es)	Site area (ha)
Land to the south of Great North Road and north of Homefield Farm, Alconbury	Alconbury	1.40ha

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Commercial: Employment Logistics, distribution	Up to 40 homes  Regarding commercial uses the site promoter notes that given the location near to the A1M junction the site may be suitable for some employment or even logistics use which may form part of a mixed use development.	Available 2023  Build out over 1 year

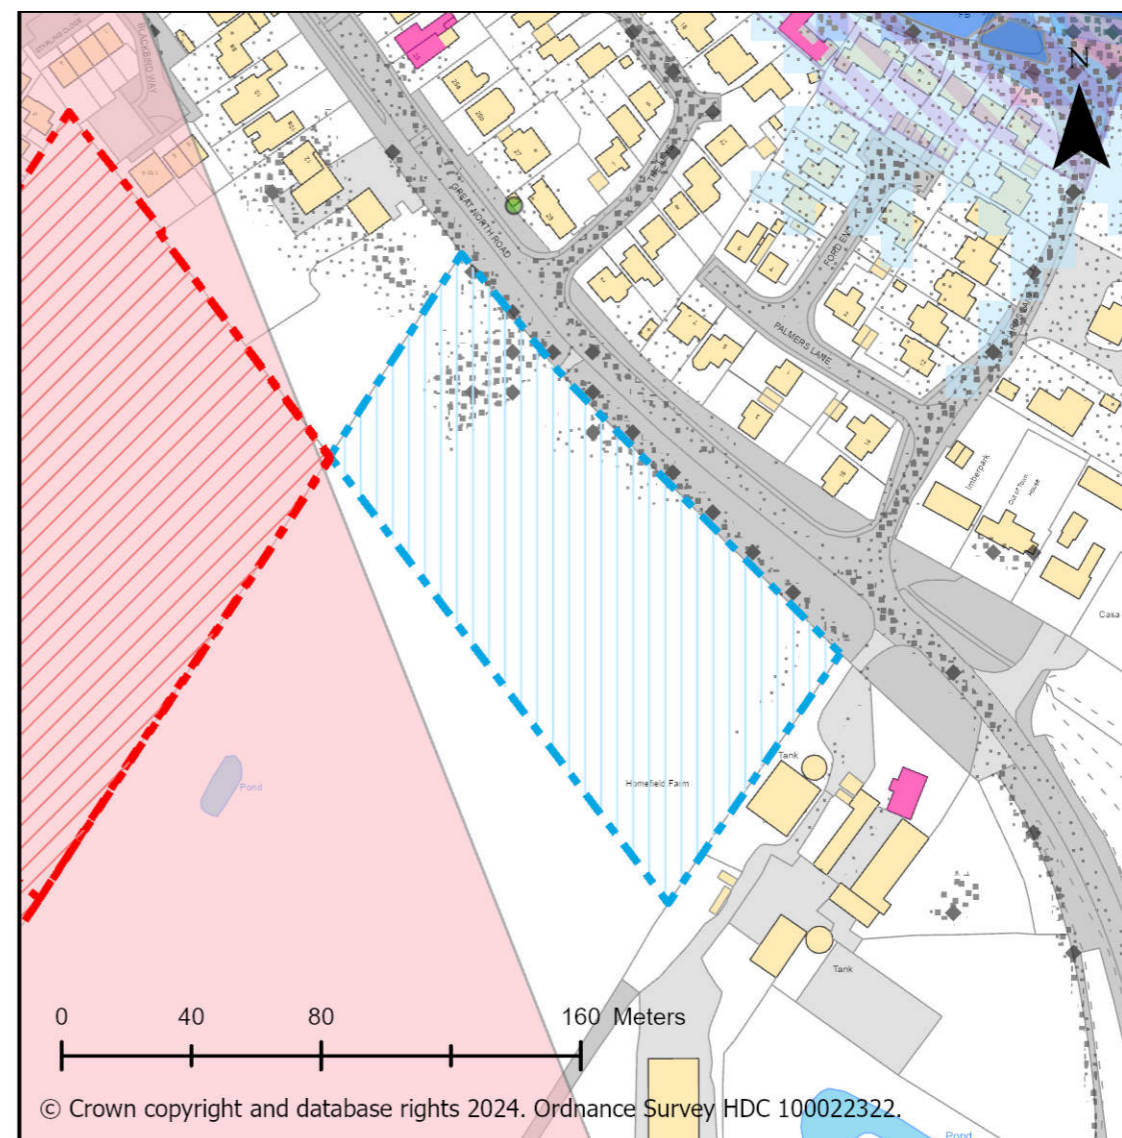

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:164
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1, risk of surface water flooding is present on a small portion of the site. It is located on the southern edge of Alconbury village and is classified as urban land meaning the best and most versatile agricultural land will not be affected. The land slopes gently down the south eastern edge of the site towards Homefield farm but is of similar elevation to the surrounding land. It has no built structures within it. Aside from a few trees forming a circular like feature located at the northwestern side of the site, the site contains no features. The site is bounded by trees and hedges on the northern, eastern and western borders which provides screening from the adjoining road to the north and Homefield Farm to the east. About a 30 m belt of non-coniferous trees separates the site from residential development to west. The site is exposed to the countryside which adjoins the site to the south requiring some landscaping, in keeping with other residential properties to the west.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. However, the site is in close proximity to a listed building located to the east of the site. The site can potentially be accessed from Great North Road adjoining the site to the north which connects to the A1 (M) motorway less than 500 m east of the site.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site. It sits entirely within a sand and gravel minerals safeguarding area.</p>	+
<p><b>Availability</b></p> <p>The site is in single company control and ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development. Build out is estimated to take 1 year.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water, electricity supply and digital telecommunications infrastructure are all notes as being accessible from the site boundary. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be accessed from the Great North Road and is situated less than 500 m east of the A1 (M) motorway. There are no built structures on the site that require clearance. The site promoter seeks residential uses of up to 40 homes or mixed used development comprising residential development</p>	+

<p>and employment uses given the site is located near the A1(M) junction. Landscaping will be required to mitigate the impact of the site on the countryside. Also, the site being within the setting of a listed building (Home Field Farm) to the east means that any future development will need to be sensitive to its impact the setting of the listed building.</p> <p>The site promoter notes that the site's location next to the A1 would minimise traffic impacts upon the village.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping and the impact on the setting of a listed building should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk, some surface water flood risk is present.</li> <li>• The site is greenfield urban land.</li> <li>• Landscape impact would be minimal but has the ability to impact the wider landscape to the south</li> <li>• The site is close to local services and facilities and employment opportunities, with the potential for further onsite employment opportunities.</li> <li>• The site is near to some listed buildings which would require consideration in terms of design, layout.</li> <li>• The presence of the A1 has the potential to cause light, noise odour or visual pollution as may potential proposed employment uses</li> <li>• The site promoter proposes 40 homes and the potential for mixed use, the density of homes is higher than the surrounding area.</li> <li>• It is not considered that logistics/distribution would be a compatible use with a small scale residential due to impact of noise, light and vibrational impact, employment use would have a lesser impact.</li> </ul>
--

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place for residential or mixed use employment/residential.
- Would require retention of trees and hedgerows and mitigate landscape impact to the south.
- Requires flood mitigation.
- Would require sensitive design and layout to ensure the townscape and listed buildings are not detrimentally impacted.
- May require a heritage impact assessment.
- May need assessment and mitigation of pollution from the A1.

Page 590 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.40ha 90% net developable area to mitigate against landscape impact and flood risk. 1.40ha x 90% = 1.26ha	<b>Option 1:</b> Net developable area of 1.26ha Residential - Market and/or affordable housing Very low density of 25 dph to reflect development to the north. Capacity = 1.26ha x 25dph = <b>32 homes</b>	Available post 2028 subject to allocation Build out 1-3 years
	<b>Option 2:</b> Net developable area of 1.26ha Commercial/ Residential split of 40/60% Commercial - Employment.	

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Land area of 40%: 1.26ha x 40% = 0.504ha Employment on 0.504ha at 0.35 plot ratio Capacity = (0.504ha x 0.35) x 10,000 = <b>1,764 sqm</b> Residential - Market and/or affordable housing. Land area of 60%: 1.26ha x 60% = 0.756ha Very low density of 25 dph to reflect development to the north. Capacity = 1.26ha x 25dph = <b>20 homes</b>	

**Updates after the Initial Assessment**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Open Space Uses: Natural, green or open spaces	74 homes  Whilst the site promoter is not proposing a standalone open space use, the development would include the provision of open space and play and sport provision to support the local community.	Available 2023  Build out over 2 to 3 years

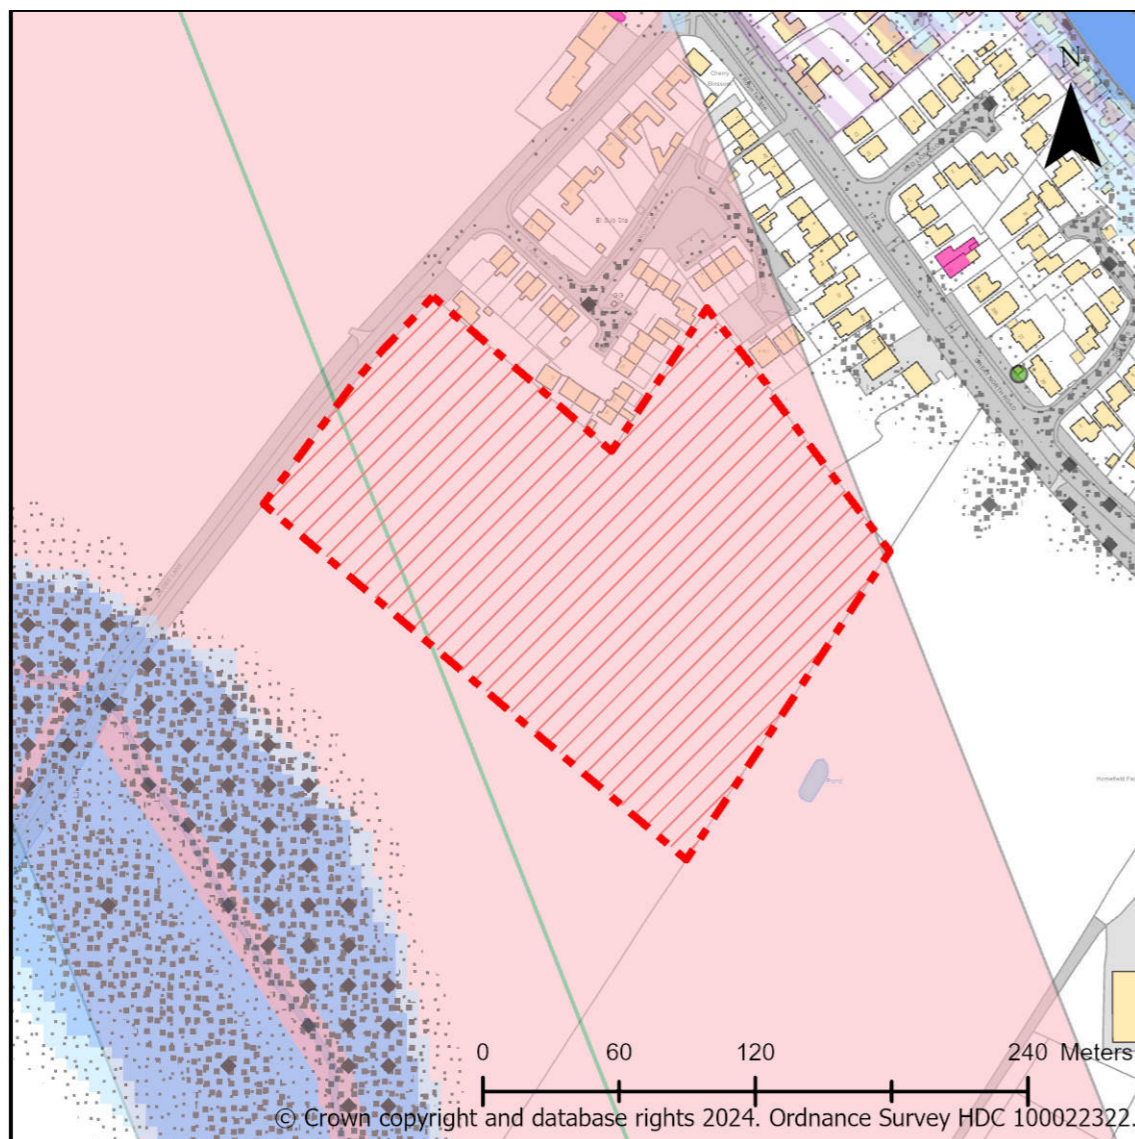

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:359
Relevant planning history	HELAA (December 2017 ): East of Globe Lane, Alconbury (064)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Design and Principles Concept (July 2023)

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 592 of 3488

**Assessment of Site Potential**

Context, constraints and potential suitability	
The site is wholly within flood zone 1 and has no risk of surface water flooding. The site is mostly classified as urban land; however, a small portion of the western edge of the site is classified as grade 2 agricultural land. The site is in arable use. The site is within an area of undulating countryside and contains no built structures or features. The northern boundary	~

<p>comprises trees and hedging which provides screening from the adjoining residential properties. The southern has very few hedging which makes the site visible from the road and countryside. Although the site is visible from the adjoining agricultural land which to the south and in long views from the open countryside, 15 ha of adjoining land to south has been put forward for potential allocation and development (Alconbury 3). The site is exposed to agricultural land to the east, with the built development of Homefield Farm beyond to the east. The proposed development may be compatible with the neighbouring residential use, but development may impact the surrounding landscape.</p> <p>There are no known pollution or contamination constraints affecting the site. Although no gas pipeline infrastructure affects the site, an oil pipeline runs through the south western corner of the site with a buffer zone covering the entire site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site can potentially be accessed from Globe Lane adjoining the site to the west which connects to the Great North Road about than 200 m north of the site. A transport assessment and an enhancement of the Globe Lane (a narrow lane) may be required to ensure appropriate access can be achieved from Globe Lane without any adverse transport impact.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site. It sits entirely within a sand and gravel minerals safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is in single company control and ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development. The site is available now and build out is expected to take 2-3 years based on one housebuilder developing the site at a rate of 35 dwellings per annum</p>	+
<p><b>Achievability</b></p> <p>Accessibility to electricity, gas, water and digital and telecommunications infrastructure from the site boundary is noted as unknown. The site comprises broadly level ground and there are no known topological challenges. No gas pipeline infrastructure crosses the site, and no overhead power lines are present. An oil pipeline infrastructure crosses the site which could impact the achievability of site or affect design, layout and location of properties, this would require further investigation. The site can potentially be accessed from Globe Lane adjoining the site to the west which connects to the Great North Road about than 200 m north of the site, further evidence would be required to establish safety of access from Globe Lane and and that any adverse offsite transport impacts can be adequately</p>	~

<p>mitigated. There are no built structures on the site that require clearance. The site promoter seeks residential uses of 74 homes. Landscaping will be required to mitigate the impact of any future development on the countryside.</p> <p>The site promoter notes that The site would have access from Globe Lane and technical work is underway to demonstrate that safe, appropriate access can be provided from Globe Lane, and that any adverse offsite transport impacts can be adequately mitigated. The Design and Principles Concept document proposed 140 homes (in contrast to the 74 proposed with the site submission), a 1ha multifunctional community park with community gardens, orchard and play areas. Landscape treatment on the southern edge of the development is proposed and a low-speed, pedestrian friendly environment.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping, transport impacts and impact on oil pipeline infrastructure and buffer zone should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial or surface water flood risk.</li> <li>• The site is predominantly classified as urban land with the remainder of the land on the western side being grade 2.</li> <li>• The site is close to local services and facilities and employment opportunities.</li> <li>• The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.</li> <li>• The site relates well to the existing area, sitting south residential properties at Lark Way.</li> <li>• The site would need to address landscape impact to the south, east and west.</li> <li>• Access would be from Globe Road, a narrow lane, safety and transport impact may be an issue.</li> <li>• The site promoter proposes 74 homes at a density similar to the surrounding area.</li> </ul>
---

<p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The site has the potential to be suitable for development. The site is located as such that it could be effectively masterplanned to become part of the existing community.</li> <li>• Would require landscaping to address the impact on the surrounding countryside</li> <li>• Access from Globe Road would require confirmation, as a narrow lane, safety and transport impact would require assessment.</li> <li>• An oil pipeline infrastructure crosses the site which could impact the achievability of site or affect design, layout and location of properties, this would require further investigation.</li> </ul>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area 3.50 ha</p> <p>70% net developable area to compensate for presence of oil pipeline and open space as set out in Design and Concept document.</p> <p>3.50ha x 80% = <b>2.45ha</b></p>	<p>Net developable area of 2.45ha</p> <p>Residential - market and/or affordable homes.</p> <p>Very low density of 25dph to reflect edge of settlement location.</p> <p>Capacity = 2.45ha x 25dph = <b>61 homes</b></p> <p><b>Note:</b> Capacity subject to change based on results of impact of oil pipeline.</p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 2 to 3 years</p>

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 595 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is predominately within flood zone 1, however, approximately 35% of site is within flood zone 2, 3a and 3b. The site has a risk of surface water flooding as it has a drainage running through it and it also adjoining the southern boundary. Approximately two thirds of the site is grade 3 agricultural land; with a small portion of the north eastern edge grade</p>	~
---	---

<p>2 and the remainder urban land. The site is within an area of undulating countryside and contains no built structures. It contains a narrow belt of trees and hedging that borders drainage running through the site from the northwest to the east. The western and southern boundaries comprise some trees and hedging providing very limited screening from the adjoining agricultural land and the open countryside. The site is exposed to the open countryside on east. The proposed development may be compatible with the neighbouring residential uses and development may impact the surrounding landscape.</p> <p>There are no known pollution or contamination constraints affecting the site. Although no gas pipeline infrastructure affects the site, an oil pipeline and buffer zone runs through the northeastern area of the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site can potentially be accessed from Globe Lane adjoining the site to the west which connects to the Great North Road less than 500 m north of the site. A transport assessment and an enhancement of the Globe Lane (a narrow lane) may be required to ensure appropriate access can be achieved from Globe Lane without any adverse transport impact</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site. It sits entirely within a sand and gravel minerals safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is in single company control and ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and it is anticipated that planning permission would be acquired by the landowner following an allocation and the site sold to a housebuilder. Build out is expected to take 3 to 5 years</p>	+
<p><b>Achievability</b></p> <p>Accessibility to electricity, gas, water and digital and telecommunications infrastructure from the site boundary is unknown. The site comprises broadly level ground and there are no known topological challenges. No gas pipeline infrastructure crosses the site, and no overhead power lines are present. An oil pipeline infrastructure crosses the site which could impact the achievability of site or affect design, layout and location of properties, this would require further investigation. The site can potentially be accessed from Globe Lane adjoining the site to the west which connects to the Great North Road about less than 500 m north of the site, , further evidence would be required to establish safety of access from Globe Lane and and that any adverse offsite transport impacts can be adequately mitigated. There are no built structures on the site that require clearance. Landscaping will be required to mitigate the impact of the development of site on the countryside. Also, flood risk assessment would be required to access and mitigate the impact of flooding on development.</p>	~

<p>The site promoter seeks residential uses of 262 homes. The site promoter is not proposing a standalone open space use, the development would include the provision of open space and play and sport provision to support the needs of future residents and benefit the local community. No Design and Concept document has been provided as it was for the smaller site - Alconbury 2. They propose that access into the site is being designed by a highways consultant and technical evidence will be undertaken to advise on the design of the development and to demonstrate that the site is developable. It is proposed that residential development is located away from flood risk in the centre of the site and include drainage and biodiversity improvements. A masterplan would be provided.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping, flood risk and transport impacts should be development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by fluvial and surface water flood risk.</li> <li>• Approximately two thirds of the site is grade 3 agricultural land; with a small portion of the north eastern edge grade 2 and the remainder urban land.</li> <li>• The site is close to local services and facilities and employment opportunities.</li> <li>• The site is of a size that could that could include a wide variety of types, sizes and tenures.</li> <li>• The site is of a size which may cause light, noise or visual pollution.</li> <li>• The site relates well to the existing area, sitting south residential properties at Lark Way.</li> <li>• The site is of a size that is likely to have a significant impact on the landscape or townscape representing a significant extension to the settlement (40%).</li> </ul>
--

<ul style="list-style-type: none"> <li>• Consideration of a smaller number of residential units would assist in integration of the proposed development.</li> <li>• The site would need to address landscape impact to the south, east and west.</li> <li>• Access would be from Globe Road, a narrow lane, safety and transport impact may be an issue as would future transport movements through the village.</li> <li>• The site promoter proposes 262 homes at a density similar to the surrounding area.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as:</p> <ul style="list-style-type: none"> <li>• Due to its scale this may provide challenges in effectively masterplanning a large disproportionate residential expansion to become part of the existing community.</li> <li>• The site is of a size that is likely to have a significant impact on the landscape or townscape representing a significant extension to the settlement (40%).</li> <li>• Access would be from Globe Road, a narrow lane may present safety and transport impacts and significantly increase transport movements through the village, which would require further assessment and mitigation.</li> <li>• An oil pipeline infrastructure crosses the site which could impact the achievability of site or affect design, layout and location of properties, this would require further investigation.</li> </ul>

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 598 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1, there is risk of surface water flooding within the east of the site. The site is approximately half grade 2 agricultural land (in the east) and half grade 3. The site is within an area of mostly flat land but is a bit lower in elevation to the surrounding land. It contains a track that splits the site into two parts; the northern part</p>	
--	--

<p>contains two built structures a residential property and an agricultural building. It lies to the east of the A1(M) junction and is separated from the A1(M) junction by about a 40m tree belt which gets narrower and more sparse southwest of the site making the southern portion of the site visible from the A1(M). It comprises some hedging on its western boundary and is exposed to the adjoining agricultural land and open countryside on the north, east and south. The site is highly exposed in both the local landscape and in longer distance views from the north, significant landscaping would be required to mitigate impact of the development. The proposed development may be compatible with the neighbouring agricultural use, but development would impact the surrounding landscape.</p> <p>There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site can potentially be accessed from a track road connects to the A1(M) west of the site.</p> <p>The site is partly previously developed land (a residential property), contribution to the reuse of previously developed land or regeneration is therefore negligible. Approximately 0.82 ha of the site is within the 400m buffer around a water recycling site, which may present odour issues and sits entirely within a sand and gravel minerals safeguarding area.</p>	
<p><b>Availability</b></p> <p>The site is in single family control and ownership who support its development. There are no known legal restrictions affecting the site and is currently in agricultural use may require relocated. The land promoter suggests the land is available from 2024-2028 and is likely to be delivered by a master developer either in isolation or in conjunction with a more extensive development. Build out is expected to take 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>Mains water and electricity supply and digital telecommunications infrastructure are accessible from the site boundary access to gas supply is unknown. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be accessed from an existing farm access only arm of the junction roundabout providing connections to the A1(M) less than 500m northwest of the site. There are two built structures on the site that require clearance. The site promoter seeks commercial uses of 25,000 sqm and open space use of 0.65 ha. Landscaping will be required to mitigate the impact of the development of site on the countryside and the wider landscape and townscape. An appropriate assessment would be required to assess and address the impact of the development on the Alconbury Water Recycling Centre.</p>	
<p><b>Deliverability / developability</b></p>	

There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping and impact of the water recycling centre should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial, but surface water flood risk is present.
- The site is approximately half grade 2 agricultural land (in the east) and half grade 3.
- The majority of the site is greenfield land. One residential property sits on the site making the prioritisation of previously developed land negligible.
- The site is of a size that could provide open space within the site.
- The site is not sustainably located close to local services and facilities or other employment uses.
- Proximity of the A1 could subject future occupiers light, noise, odour or visual pollution. The site is not of a scale likely to cause substantial pollution.
- The site sits within a water recycling area which means that the site may be susceptible to odour pollution.
- The site is well located for employment uses with separate segregated access and close links to the A1.
- It highly exposed in the wider landscape and more related to the countryside and agricultural uses. There is a large scale tree preservation area directly north of the site.
- The site promoter proposes 25,000sqm of employment use or logistics / distribution which has the potential to provide high or low density employment uses.

In combination the outcomes of the LAA and SA indicate that the site:

- Is well located for employment uses with separate segregated access and close links to the A1. However the site is not in proximity to other compatible or complimentary uses and would therefore form a standalone employment site providing little opportunity for agglomeration or expansion of existing business uses.
- Would require flood mitigation
- May need to consider integration and compatibility of the residential property within the site .
- Effective masterplanning of the site would be contingent on the assessment and impact on and of: the landscape, tree preservation order to the north, the water recycling area buffer zone.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 5.68ha  70% net developable area to mitigate against landscape impact, flooding, northern edge of site within water recycling area buffer zone and tree preservation area.  $5.68ha \times 70\% = 3.976ha$	<b>Option 1</b>  Net developable area of 3.976 ha.  Commercial - Employment on 3.976ha at 0.35 plot ratio  Capacity = $(3.976ha \times 0.35) \times 10,000 = 13,916 sqm$	Available post 2028 subject to allocation  Build out 1 to 3 years
	<b>Option 2</b>  Net developable area of 3.976 ha.  Commercial - Logistics/distribution 3.976ha at 0.40 plot ratio  Capacity = $(3.976ha \times 0.40) \times 10,000 = 15,904 sqm$	

**Updates after the Initial Assessment**

**Alconbury 5: Land to the North of School Lane, Alconbury**

<b>Site reference</b>	Alconbury 5
<b>Site name</b>	Land to the North of School Lane, Alconbury

Site address	Parish(es)	Site area (ha)
Land north of School Lane, west of A1(M)	Alconbury	6.30ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Open Space: Natural, green or open spaces	95 homes  Open space provision not identified.	Available 2023  Build out over 3 to 4 years

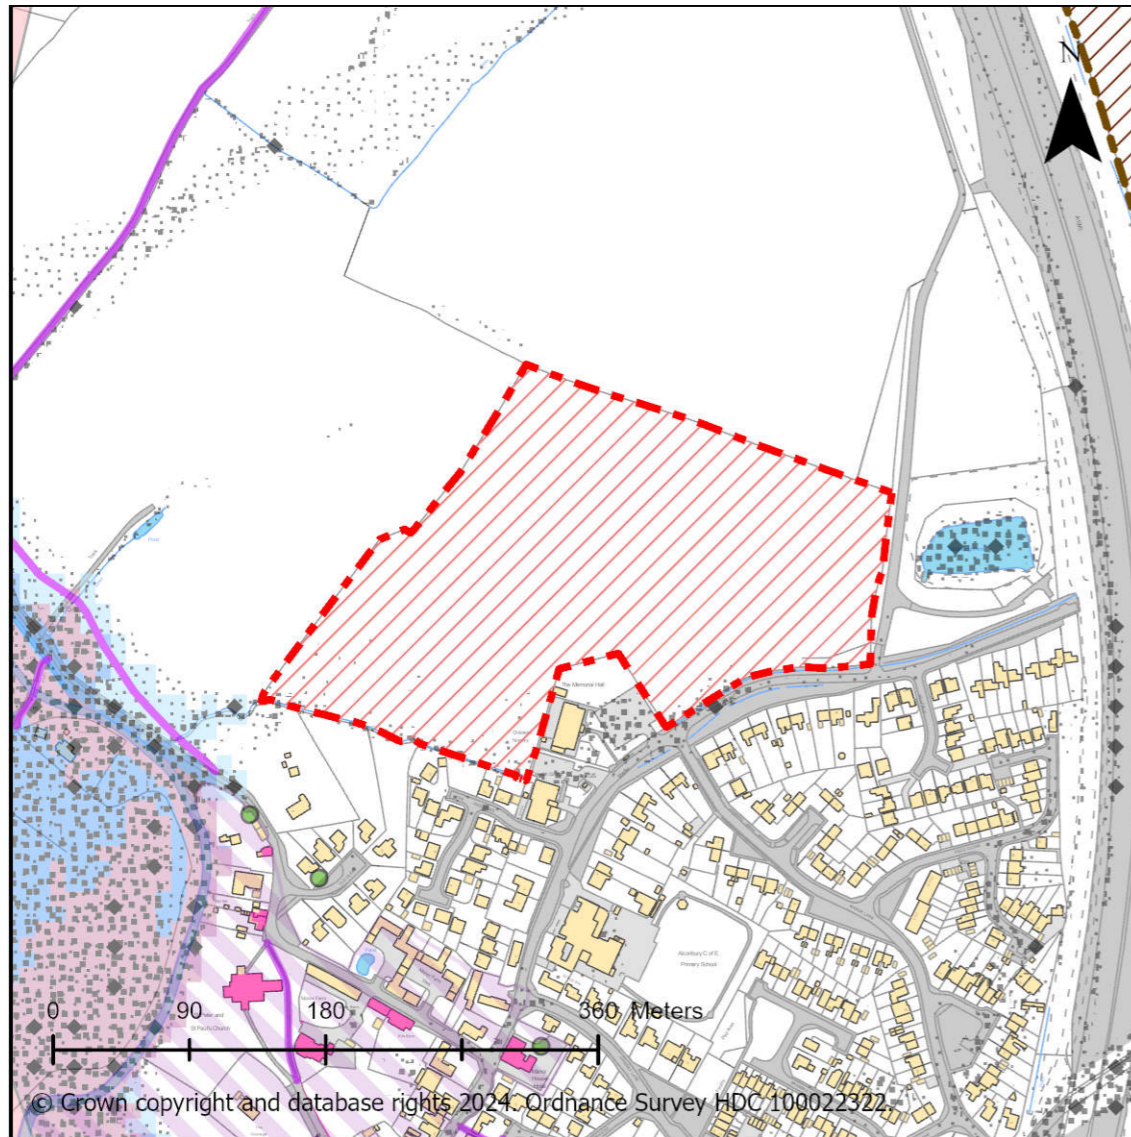

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:346
Relevant planning history	Application number: 18/70074/SCRE  Proposed development: Screening Opinion - development of up to 140 residential units, open space, access and associated infrastructure.  Outcome: Issued  HELAA (December 2017 ): North of School Lane, Alconbury (059)
Land type	Wholly greenfield land
Current use of the site	Agricultural land

Supporting information	<ul style="list-style-type: none"> <li>Location Plan</li> <li>Illustrative Masterplan (drawing number: SP-01/F) (September 2018)</li> </ul>
------------------------	---

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>Although the site is wholly within flood zone 1, the western part of the site is at risk of surface water flooding due to proximity to the Alconbury Brook which lies 200m west of the site. The site is wholly classified as grade 3 agricultural land. It contains no built structures. It rises gently from the southern boundary towards the northern boundary meaning that proposed buildings have the potential to be clearly seen in the wider landscape depending on elevation and location. It is exposed to the open countryside on the northern and the western boundaries and forms a prominent landscape feature. Development on this site could have a significant impact on the landscape and setting of Alconbury. A small area of the north eastern boundary comprises a narrow belt of trees and hedging that</p>	~
---	---

extends out of the site. The site adjoins a track on its eastern boundary but mature trees surrounding a pond next to the road limits further visibility from the A1(M) east of the site and wider landscape. The southwestern boundary of the site comprises trees and hedging that provides screening from the adjoining residential uses and the Memorial Hall adjoining the site on the south. However, the site is exposed to the adjoining road and residential uses on its southeastern boundary. The proposed development is compatible with the neighbouring residential use. The proposed use for 95 homes would represent a disproportionate development on the edge of the settlement.

This site was previously put forward as an allocation in Huntingdonshire's Local Plan to 2036 (AL1 North of School Lane). The site was removed through the Local Plan examination process as it was included within the Local Service Centres category. This category was considered not to be required at the time. Residents noted current flood incidents, if taken forward a detailed flood risk assessment would be required to understand if this could be mitigated.

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site or tree preservation orders affecting it. The site can potentially be accessed from School Lane which lies south of the site.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site. The western third of the site sits within a sand and gravel mineral safeguarding area.

**Availability**

The site is in single individual/company control and ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development. Build out is estimated to take 3 to 4 years.

+
---

**Achievability**

Access to water, electricity and gas supply are unknown as is digital and telecommunications infrastructure. The site comprises broadly sloping land meaning that proposed buildings could be clearly seen in the wider landscape depending on elevation and location. Landscape impact may be significant. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can potentially be accessed from School Lane which connects to the A1(M) about 500m south of the site. There are no structures on site that would require clearance. The site promoter seeks residential uses of 95 homes.

~
---

<p>Landscaping will be required to mitigate the impact of the development of site on the countryside and flood risk assessment will be necessary to address the potential risk of surface water flooding.</p> <p>The illustrative masterplan submitted for the site indicates adequate hard and soft landscaping has been considered to address the impact of development on the open countryside to the north and the risk of surface water flooding. They also note that development of the site would provide an opportunity to extend cycle and footpath links through the site.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. It is intended to acquire an allocation status for the site and that it is delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial, but surface water flood risk is present.</li> <li>• The site is wholly greenfield grade 3 agricultural land.</li> <li>• The site is sustainably located close to local services and facilities and employment uses.</li> <li>• Proximity of the A1 could subject future occupiers light, noise, odour or visual pollution. The site is not of a scale likely to cause substantial pollution.</li> <li>• It is exposed to the open countryside on the northern and the western boundaries and forms a prominent landscape feature.</li> <li>• The sloping nature of the site may make development exposed to the wider countryside.</li> <li>• The site promoter proposes 95 homes. The site proposal is of a density similar to the surrounding residential area, but disproportionate in nature in comparison to the existing settlement.</li> </ul>
---

<p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not considered appropriate for development.</li> <li>• Is located such it would have a significant landscape impact.</li> <li>• Development would be highly exposed within the wider landscape due to the sloping nature of the site</li> <li>• Would require flood mitigation</li> </ul>
--

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Capacity calculation not undertaken due to significant landscape impact.	N/A	N/A

**Updates after the Initial Assessment**

**Alconbury 6: Land North of B1043 and East of Alconbury, Alconbury**

<b>Site reference</b>	Alconbury 6
<b>Site name</b>	Land North of B1043 and East of Alconbury, Alconbury

Site address	Parish(es)	Site area (ha)
North of B1043 and to the east of the A1(M) Alconbury	Alconbury	20ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Commercial leisure Employment Logistics, distribution	60,000sqm	Available 2024 - 2028  Build out depends on market interest

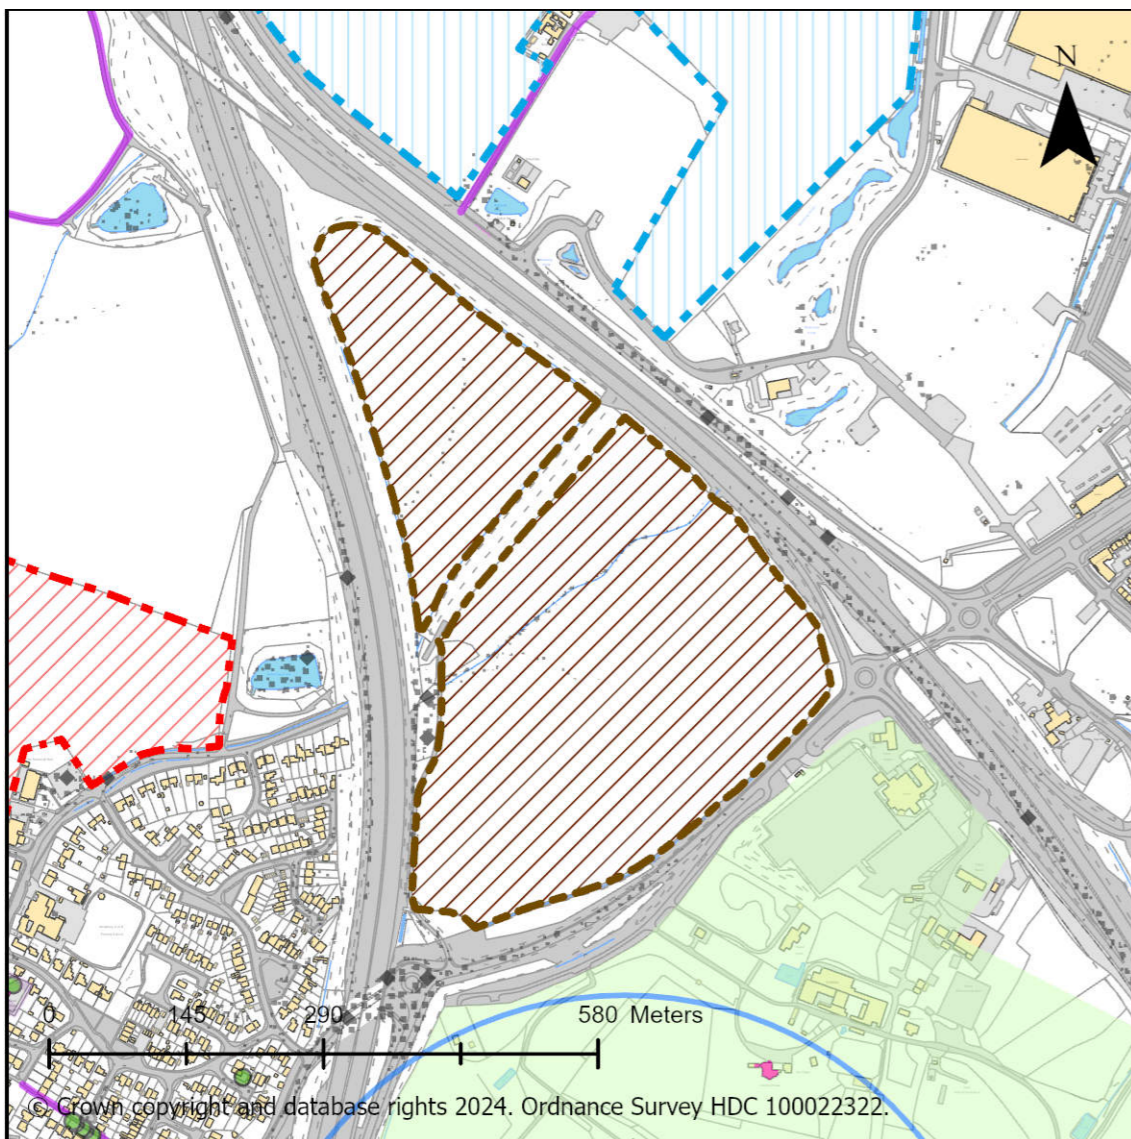

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:321
Relevant planning history	HELAA (December 2017): North of B1043 and to the east of the A1(M) Alconbury (061)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location Plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 and at small risk from surface water flooding. The site is mostly classified as urban land; however, the majority of northern portion of the site is classified as grade 3 agricultural land. The site lies between the A1(M) and the A1307 and it contains no built structures. It contains about 40m belt of trees and hedging that divides the site into two halves. The site is within a region of land with a slightly higher elevation compared to surrounding land west and south to the site but has a similar topography to the surrounding land to the north and east. The middle part has an elevation of about 37m and the land rises gently towards the south and north with an elevation of about 47m. The eastern and western, southern boundaries comprise mature trees and</p>	+
--	---

hedging the provides screening from the adjoining A1(M) to the west, the adjoining A1307 to the east and the adjoining B1043 and commercial uses to the southeast. The north boundary comprises a thick belt of mature trees that extends further north of the site which reduces visibility of the site from the intersection between the two motorways north of the site. However, much of the site is high ground and is exposed in both the local landscape and in longer distance views from the western and south boundaries. The proposed development would have to consider building elevations and the retention of existing mature trees and hedges. To the south of the site across the road from the B1043 sits an employment area (Rusts Lane) and Alconbury Enterprise Zone is east across the A1307. Air, light and noise pollution could potentially be issues that need to be addressed due to proximity of the site to the A1(M) and A14(M)

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site or tree preservation areas affecting it. The site can potentially be accessed from a track connecting to the B1043 which lies south of the site.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.

**Availability**

The site is in single individual ownership and control who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development. Build out would depend on market interest.

**Achievability**

Access to water, gas and electricity supply and digital and telecommunications infrastructure is unknown. The site comprises level ground and steep ground which would require levelling before development can be achieved. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can potentially be accessed from a track which connects to the B1043 which lies south to the site. There are not structures on site that would require clearance. The site promoter seeks commercial uses of 60,000 sqm. To address the potential air pollution, light and noise issues, air quality, noise impact and lighting impact assessments will be required, and development should ensure that any impacts will be mitigated through appropriate measures. Due to the presence of trees and hedgerows on the boundary, there may be protected species existing on the site. An ecological survey would be required to demonstrate that any impacts on protected species are avoided, mitigated, or compensated for, and that opportunities are taken to enhance

+

<p>biodiversity. Also, a proportionate transport assessment will be required to demonstrate that safe, appropriate access can be provided from the B1043, and that any adverse offsite transport impacts can be adequately mitigated.</p> <p>The site promoter notes that a masterplan suite of technical work will be undertaken to support the promotion of the site building upon existing desk top research.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping, impact on existing trees and species, air pollution, noise, light and transport issues should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial, but surface water flood risk is present.</li> <li>• The site is mostly classified as urban land; however, the majority of northern portion of the site is classified as grade 3 agricultural land.</li> <li>• The site is not sustainably located close to local services, cultural or leisure facilities.</li> <li>• Proximity to the A1 and A1307 means future occupiers may be subjected to light, noise, odour or visual pollution, but could assist with the operation of the site. The site is of a scale which has the potential to cause visual, light, noise and vibrational pollution as a result of the proposed use.</li> <li>• The topography of the site - which is elevated in the north and south sloping downwards towards the centre - would require assessment of the impact on building heights/elevations on the surrounding area.</li> <li>• The site is largely screened as a result of its location, meaning impact on the countryside would be negligible.</li> </ul>
--

<ul style="list-style-type: none"> <li>• An extensive tree preservation area sits south of the site and tree belts surround and are within the site.</li> <li>• The site is approximately 250 from a grade II listed building.</li> <li>• The site promoter proposes employment and/or logistics and distribution uses on site to the amount of 60,000sqm providing substantial high or low density employment opportunities.</li> <li>• The site is in proximity to existing employment uses to the south and Alconbury Enterprise Zone to the East which could provide opportunities for cluster development, business expansion and/or agglomeration of businesses</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is located such that it has the potential to be effectively masterplanned to become part of the existing business cluster.</li> <li>• Would require flood mitigation</li> <li>• Would need to assess and mitigate against air, noise and light pollution where relevant and transport impact and potential road enhancements.</li> <li>• Would need to consider retention of trees and hedgerow and assessment of biodiversity and ecological impact.</li> <li>• Would require consideration of building elevations and impact on the wider area.</li> <li>• Would require assessment of impact on tree preservation area and heritage asset.</li> </ul>
---

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
<p>Gross site area 20ha</p> <p>80% net developable area to allow for enhanced infrastructure, retention of trees and hedgerow, landscaping and mitigation against pollution and flooding.</p>	<p><b>Option 1</b></p> <p>Net developable area of 16 ha</p> <p>Commercial - Employment on 16ha at 0.35 plot ratio</p>	<p>Available post 2028 subject to allocation</p> <p>Build out 2 to 5 years</p>

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
20ha x 0.80ha = <b>16ha</b>	Capacity = (1ha x 0.35)*10,000 = <b>56,000 sqm</b>	
	<p><b>Option 2</b></p> <p>Net developable area of 16 ha.</p> <p>Commercial - Logistics/distribution 16ha at 0.40 plot ratio</p> <p>Capacity = (16ha x 0.40)*10,000 = <b>64,000 sqm</b></p>	

Updates after the Initial Assessment

--	--

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1, some surface water flood risk is present in the southern and the northern parcels. It is classified as grade 3 agricultural land. The site slopes towards the southwestern boundary. The southwestern parcel is lower with an elevation of about 37m and has a similar topography to the surrounding land whilst the northern and eastern parcels are on much higher ground with an elevation of about 49m which is similar to the surrounding land. It contains no built structures; but contains boundary trees and hedging that divides the site into five parcels and contains a small pond located in the south eastern parcel. The northern boundary comprises mature trees and hedging and a wooded fence which provides limited screening from the adjoining roundabout for</p>	~
---	---

access to the A1(M) from the Ermine Street and residential development. A nursery and car sales forecourt and building are just outside the northern boundary and would require consideration of the integration of these uses into the proposed development. The eastern boundary comprises of some trees and hedging which exposes the site to the adjoining road and residential development east of Ermine Street. The western boundary comprises a substantial number of mature trees and hedging providing screening from the A1307. The site is exposed to the adjoining agricultural land on its southern boundary and the public right of way running within the southern corner and heading towards Little Stukeley. The nature of the site makes it potentially visible in longer distance views and open countryside south of the site and from built development in Little Stukeley which lies southeast of the site. The landscape impact of development on the site would be very significant and appropriate landscaping be required as well as the retention of existing trees and hedges on the boundaries. The proposed use is compatible with residential and commercial development in Alconbury Weald north of the site. However, air quality and noise pollution could potentially be issues that would need to be addressed due to the close proximity of the site to the A1307, A1M and the roundabout.

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. There are no designated nature conservation assets within the site. The site can potentially be accessed from Ermine Street.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.

**Availability**

The site is owned by a single individual/company and controlled by a developer company. Development is supported by the landowner. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available from 2024-2028 and seeks to obtain planning permission and be delivered by a master developer. Build out is estimated to take approximately 5 years.

+

**Achievability**

Water, electricity and gas supply is noted as being accessible from the site boundary as is digital and telecommunications infrastructure. The site comprises level ground and steep ground which would require levelling before development can be achieved. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can potentially be accessed from Ermine Street and connects to the A1307. There are no structures on site that would require clearance. The site promoter seeks residential uses of 425 homes. To address the potential air pollution and noise issues resulting from proximity of the site to the A1(M), noise impact and air quality assessments will be required, and development should ensure that any impacts will be mitigated through appropriate measures.

~

<p>Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development. Also, a proportionate transport assessment will be required to demonstrate that safe, appropriate access can be provided from Ermine Street, and that any adverse offsite transport impacts can be adequately mitigated.</p> <p>The site promoter proposes a range of residential densities with lower densities to the east and southeast to respond to open countryside and village setting of Little Stukeley. A perimeter linear park and two green corridors with active travel connections to Alconbury Weald and retention of existing watercourses. Trees would screen the site from the A1307 to buffer any noise and light impacts and to protect the identity of Little Stukeley and their views of the open countryside. A preliminary acoustic assessment identifies existing measures to address noise including building layout, size and location of windows, noise barriers etc. The air quality site appraisal notes that significant air quality impacts would be unlikely, but a detailed assessment would be conducted. Travel plans and electric vehicle charging would be sought.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping, surface water flooding, air pollution, noise and transport issues should be key development considerations within a future masterplanning of the site as would integration of uses on the northern boundary. The site is categorised as developable.</p>	

<ul style="list-style-type: none"> <li>• The site is well related to existing development and sits south of recent housing development of Alconbury Weald,</li> <li>• Sits on the boundary of an existing nursery, car forecourt and associated building.</li> <li>• Could impact on the wider countryside setting and setting of Little Stukeley.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is:</p> <ul style="list-style-type: none"> <li>• Located as such that it has the potential to be effectively masterplanned to become part of the existing place and community</li> <li>• Would require flood mitigation</li> <li>• Consideration should be given to the existing nursery, car forecourt and associated building and how these can be effectively integrated into the development.</li> <li>• Landscape mitigation would be required to ensure the continued separation from Little Stukeley in order to protect the character and setting of the village and wider countryside setting.</li> <li>• Would require assessment of noise, light and visual pollution.</li> </ul>
--

**Progression of Site through to Sustainability Appraisal**

<p>Should the site progress to the sustainability stage?</p>	<p>Yes</p>
--	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial, but surface water flood risk is present.</li> <li>• The site is wholly greenfield grade 3 agricultural land.</li> <li>• The site is sustainably located close to local services, cultural and leisure facilities and employment opportunities at Alconbury Weald</li> <li>• Proximity to the A1307 means future occupiers may be subjected to light, noise, odour or visual pollution. The site is of a size which may cause light, and or visual pollution to future to the residents of Little Stukeley.</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 20ha</p> <p>60% net developable area to provide mitigation against pollution, landscape impact and setting of Little Stukeley and open spaces.</p> <p>20ha x 60% = <b>12ha</b></p>	<p>Net developable area of 12ha</p> <p>Residential - Market and/or affordable housing.</p> <p>Low density of 35dph to reflect edge of town development, mixture of housing types and visual impact on Little Stukeley.</p> <p>12ha x 35dph = <b>350 homes</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out over 5 to 7 years</p>

**Updates after the Initial Assessment**

**Alconbury 8: Land at Weybridge Farm (Brampton Cross)**

<b>Site reference</b>	Alconbury 10
<b>Site name</b>	Land at Weybridge Farm

Site address	Parish(es)	Site area (ha)
Land to the north west of A1/A14 Brampton Hut Interchange, west and south of Woolley Road. Nearest Post Code PE28 4HN	Alconbury Ellington	378.76ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment Commercial leisure uses - hotels, gyms, cinemas etc. Open space: Natural, green and open space biodiversity net gain	Up to 765,453sqm employment floorspace  Up to 12,000sqm commercial leisure uses including on site supporting services and facilities only, including Skills and Training Hub  Up to 147ha open space uses	Available 2024 - 2028  Build out over 10 to 15 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:232
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural
Supporting information	Brampton Cross Vision Document (21-023-000)(June 2023)

	Red Line Boundary (Drawing No. 21-023-00 SGP STE XX DR A 000008)(May 2023)
--	--

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 11% of the site (44ha) is within flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site lies northwest of the Brampton Hut Roundabout, west of the A1(M) and north of the A14. It is predominately within flood zone 1 (85%) , however, approximately 15% of the northern part of the site is within flood zone 2, 3a and 3b. The site has some risk of surface water flooding. Approximately 60% of the site is classified as grade 3 agricultural land; part of the central and northern portions of the site is classified as grade 2 agricultural land. The site contains no built structures, but surrounds a number of residential and agricultural buildings associated with Weybridge Farm, Weybridge Valley House and Weybridge Lodge.</p>	~
--	---

The site contains several mature trees, a moat north of Weybridge Farm and water bodies located in the south western corner of the site. The site comprises contrasting terrain which reflects the topography of the wider region. It is characterised by a ridge that extends west to east starting in the centre of the western boundary of the site which falls away and the rises and falls again in the centre of site. Topographical variation here is significant with highest point at an elevation of about 47m dropping to around 18m AOD around the southern eastern and northern boundaries.

The northern boundary comprises several trees and hedgerow which provides limited screening from the adjoining road. An existing use sits outside the north eastern edge across the road. The site is exposed to agricultural land and is visible in longer distance views across open countryside along its northern boundary and from the public right of way running along the north eastern edge. The eastern boundary comprises no trees or hedgerow leaving the site exposed to the adjoining Woolley Road which separates the site from the A1. Fencing along the A1 provides very limited screening making the elevated areas of the site visible from the road. The site has some mature trees along its western boundary and is exposed to the adjoining open countryside and from the public rights of way along and adjoining the western edge. A large part of the southern boundary comprises mature trees that prevents visibility into some of the site from the adjoining road. However, a significant part of the southern boundary closest to Brampton Hut comprises very few trees creating clear views into the site. Impact of development on the site would be very significant on the existing landscape and appropriate landscaping will be required as well as the retention of existing trees and hedges on the boundaries to minimise the impact. Air quality and noise pollution could potentially be issues that need to be addressed due to the site's proximity to major road networks such as the A1 and A14.

There are no known pollution or contamination constraints affecting the site. No gas infrastructure affects the site. An oil pipeline and buffer zone crosses the eastern edge of the site. Overhead power lines traverse the south eastern corner of the and from the south to the centre of the site. It contains no listed buildings or other known heritage assets. There are no designated nature conservation assets within the site or tree preservation orders. The site can currently be accessed via a track connecting Weybridge Farm to Woolley Road north of the site and track south east of the site connecting to Woolley Road.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. The south eastern corner of the site is within the 400m buffer zone for a water recycling site. The southern and eastern extents of the site sits within a sand and gravel minerals safeguarding area.

<p><b>Availability</b></p>	+
----------------------------	---

<p>The site is in single individual/company control who support its development, the land is optioned to a development company. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available from 2024 to 2028 and would be delivered by a master developer. Build out is estimated to take 10 to 15 years.</p>	
<p><b>Achievability</b></p> <p>Mains water, electricity and gas supply and digital and telecommunications infrastructure are noted as being accessible from the site boundary. The topography of the site means that buildings could be prominent in the wider landscape and careful design to integrate development within the setting would be required. No gas pipeline infrastructure crosses the site. An oil pipeline and associated buffer zone crosses the eastern part of the site and overhead electricity lines and infrastructure are present, both of which may require mitigation or affect the layout of the site, with the potential to limit development in specific areas. Two accesses exist to the site but these are farm tracks which would require significant upgrades to ensure safe access and exit due to significant increases in traffic that would be associated with the proposed commercial uses. There are no structures on site that would require clearance, however development would need to consider the integration of the existing buildings (which have been excluded from the proposed site boundary lines). The site promoter seeks employment uses of up to 777,453sqm, commercial leisure uses of up to 12,000sqm and open space uses of up to 147ha. Any future development will need to be sensitive to its impact on the adjoining open countryside, existing trees and features within the site and that opportunities are taken to enhance biodiversity. A flood risk assessment would be required to assess and mitigate the impact of flooding. A transport assessment will be required to demonstrate that the wider road network can absorb additional traffic created by the development. To address the potential air pollution and noise issues resulting from proximity of the site to major road networks, noise impact and air quality assessments will be required, and development should ensure that any impacts will be mitigated through appropriate measures.</p> <p>The site promoter proposes a centre for net zero enterprise, a net-zero carbon development and environmental gains in biodiversity. It proposes the integration of educational institutions onto the site. Technical surveys have been completed, assessments and masterplanning is underway. Active travel routes are proposed including incorporating public rights of way, enhancing active travel around the Brampton Hut and reallocating underutilised road space and verge to facilitate a segregated foot/cycleway along the A141 to connect to Huntingdon. Mobility hubs are proposed to coordinate public transport with active travel. Vehicle access is proposed via two points off Woolley Road. The implementation of water sensitive design including rainwater harvesting and natural flood management have been put forward. The site promoter notes the incorporation of the gravel lakes into the design of the development to support species. The retention of the ridgeway as a landscape feature is proposed to provide a green infrastructure feature.</p>	

<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there many constraints on site to mitigate. Landscaping, topographical challenges, flooding, transport issues, integration of existing properties, oil pipeline and electricity infrastructure, noise, access and air quality should be key development considerations within a future masterplanning of the site. The proposed development is contrary to current adopted planning policy so allocation status would be required. If constraints could be overcome then the site could be categorised as developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is wholly greenfield and grade 2 &amp; 3 agricultural land</li> <li>• The majority of the site is within flood zone 1 (approximately 336.8ha), flood zones 2, 3a and 3b are present, there is some risk from surface water flooding.</li> <li>• Proposed flood mitigation measures include discharge into existing watercourses, attenuation basins, wetlands and SUDs</li> <li>• There is potential for enhanced active travel and public transport connections, however these schemes are not confirmed without this private transport could dominate.</li> <li>• The site may impact on Brampton Wood and Brampton Racecourse SSSI,</li> <li>• The site promoter has identified protected and rare species of flora and fauna associated, some of regional importance.</li> <li>• 147ha of open space is provided which could enhance biodiversity of the area.</li> <li>• There are opportunities to address the impacts of climate change, including flood risk, net zero enterprise and development..</li> <li>• Presence of the A1 and A14 will present issues with noise, air, vibrational and light pollution.</li> <li>• Active travel and public transport opportunities have been proposed which would create sustainable links to communities if implemented</li> <li>• The scale of the site and proposed commercial uses has the potential to increase traffic on the strategic road network increasing air pollution.</li> <li>• The scale of the site may impact on the wider landscape and the nearby village of Ellington in terms of air, light, noise and visual pollution.</li> </ul>
--

- Development would fundamentally alter the landscape setting and any scheme would need to create a wholly new sense of place. Prominent topographical features if removed could impact on the sense of place.
  - The site contains no built structures, but surrounds a number of residential and agricultural buildings .
- In combination the outcomes of the LAA and SA indicate that the site:
- The site is a strategic scale employment site which would contribute to economic opportunities in the district.
  - An existing employment use sits to the north, which could provide opportunities for integration as part of the wider scheme.
  - The site has strong connections to the strategic road network A1 and A14 which would assist in the daily operation of the site.
  - Ambition of net zero enterprise and development could create a more positive impact on net zero ambitions
  - Flood mitigation would be required
  - Noise, air, vibrational, light and visual pollution would require assessment and mitigation require mitigation.
  - Impact on SSSI, and conservation areas in Ellington would require assessment and mitigation.
  - Compatibility with and impact on rare species of flora and fauna associated, some of regional importance requires assessment and mitigation and biodiversity and ecology assessments undertaken.
  - Sustainable transport links for employees would be reliant on successful application of active travel, public transport and mobility hubs.
  - Transport impacts due to the size of the site would require assessment and access to the site established.
  - A landscape assessment would be required, retention of ridgeway could assist with integration of the site into the wider countryside. Significant masterplanning would be required to demonstrate that the site could create a sense of place due to the standalone nature of the site and to demonstrate, accessibility and integration of properties that are surrounded by the site avoiding detrimental impacts.
  - Oil pipeline and electricity infrastructure crosses the site which could impact the achievability of site or affect design, layout and location of units, this would require further investigation.
  - The scale of the site means that there may be archaeological value within the site, but further assessment would be required to confirm or deny this.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross Site area of 378.76ha	Net developable area of 227.256ha	Available post 2028 to allow for allocation of site

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>60% net developable area to allow for retention of ridgeway and gravel lakes, separation from existing residential properties, reduced impact on nature conservation assets(flora and fauna), impact on the wider countryside and flood mitigation.</p> <p>378.76ha x 60% = <b>227.256 ha</b></p>	<p>95% /5% split of employment land and commercial leisure/educational uses respectively to allow for proportionate integration of social, economic and skills creation as indicated by the site vision.</p> <p><b>Commercial - employment</b></p> <p>95% x 227.256ha = 215.8932 ha net developable area.</p> <p>0.35 plot ratio to represent business park employment uses= (215.8932ha x 0.35)*10,000= <b>755,626.20sqm</b></p> <p><b>Commercial - commercial leisure uses including on site supporting services and facilities only, including Skills and Training Hub (educational use)</b></p> <p>5% x 204.5304ha = 11.3628ha net developable area.</p> <p>0.20 plot ratio to reflect density akin to retail park = (11.3628ha x 0.20)*10,000= <b>22,725.60sqm</b></p> <p><b>Total Commercial - 755,626.20sqm + 22,725.60sqm = 778,351.80sqm</b></p>	<p>Build out over 3 to 8 years</p>

### 3 Alconbury Weston

3.1 A total of 11 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Alconbury Weston 1: Land North West of Buckworth Road, Alconbury Weston
- Alconbury Weston 2: Land East of High Gables, Buckworth Road, Alconbury Weston
- Alconbury Weston 3: 48 Old Great North Road, Alconbury Weston
- Alconbury Weston 4: Land West of 41 Vinegar Hill, Alconbury Weston
- Alconbury Weston 5: Land East of Vinegar Hill, Alconbury Weston
- Alconbury Weston 6: Land to the North of the Crossways Distribution Centre, Alconbury Hill
- Alconbury Weston 7: Land East of the B1043 and North of Wheatsheaf Cottages, Alconbury Weston
- Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield - note that this site also partially falls within The Stukeleys and Upton and Coppingford parishes, but it has been included under Alconbury Weston as most of the site lies within that parish area.
- Alconbury Weston 9: Land Northwest of Chequers Close, Alconbury Weston
- Alconbury Weston 10: Land East of B1043 and South of Alconbury Hill, Alconbury - note that this site also partially falls within The Stukeleys parishes, but it has been included under Alconbury Weston as most of the site lies within that parish area.
- Alconbury Weston 11: Land adjacent to Alconbury Weald Development and South of Safefield Farm, Alconbury - note that this site also partially falls within The Stukeleys parishes, but it has been included under Alconbury Weston as most of the site lies within that parish area.

Land north west of Buckworth Road Alconbury Weston	Alconbury Weston	3.66

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Specialist Housing	Up to 35 homes	Available 2024 - 2028 Built out over 2 years

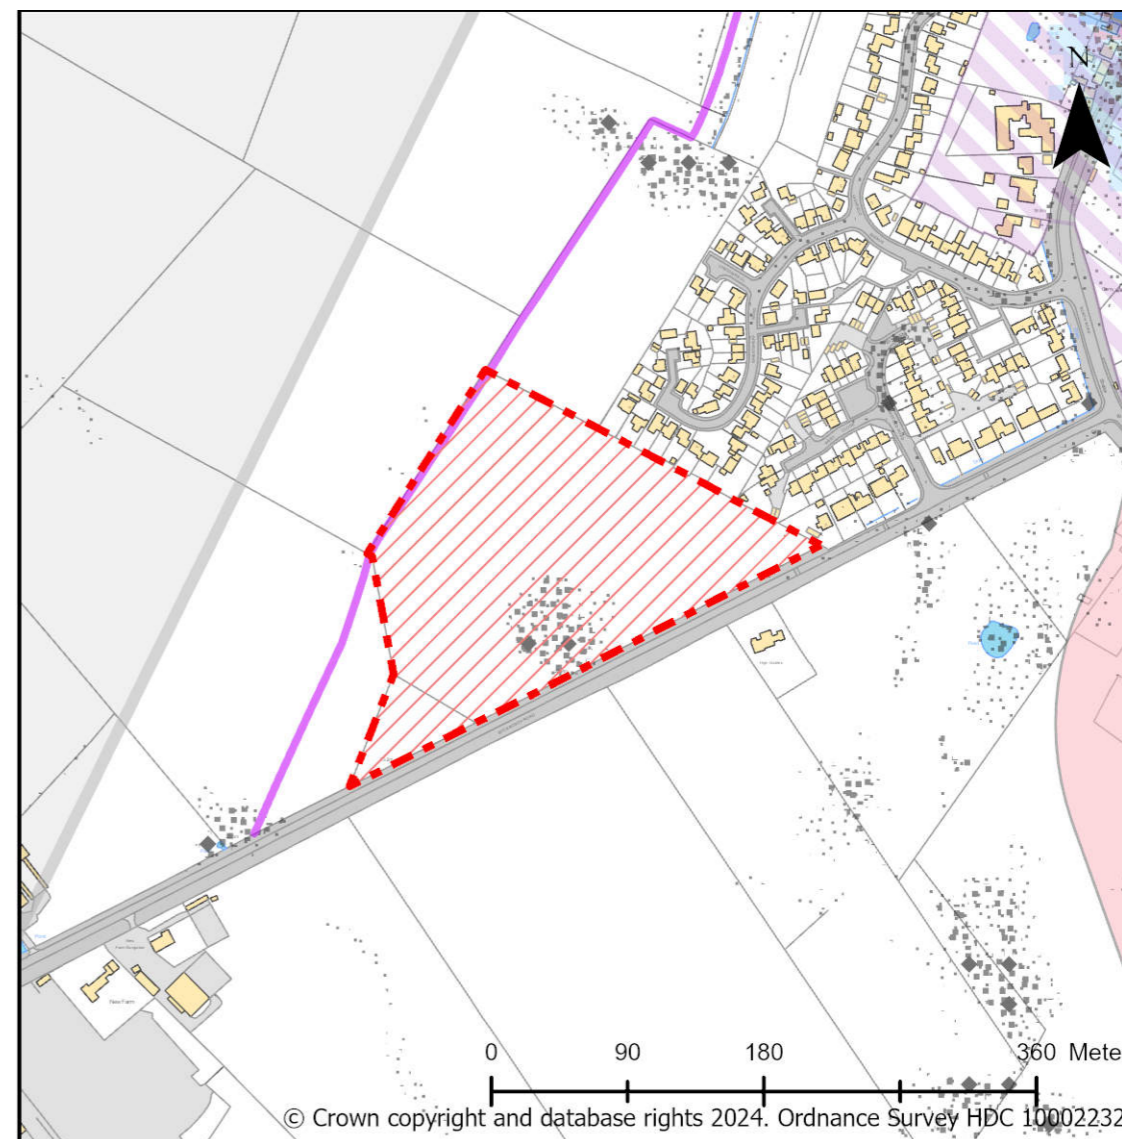

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:13
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Pre-application submission (Ref. V1 280121)(January 2021)

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
The site is within flood zone 1 and has some risk of surface water flooding in the southern part of the site. It is classified as grade 3 agricultural land and is in agricultural use. The site is situated at the southwestern edge of Alconbury Weston, is mainly flat and has similar topography to the surrounding land. It contains no built structures and has no nature	

<p>designations on it or immediately adjoining it which will impact development. It has trees and hedging on the eastern boundary which provides limited screening to the adjoining back gardens of residential development and agricultural land. There is a public footpath along the north western boundary and a substantial group of large mature trees next to footpath on the north western boundary. Part of the western boundary comprises sparse trees/hedging exposing the site to the adjoining agricultural land. The north western boundary comprises of trees and hedging which provides screening from the adjoining open countryside. The southern boundary comprises trees and hedging site which provides screening from the adjoining Buckworth Road. The landscape impact of development would be limited given the extensive boundary trees and hedging around most of the site.</p> <p>There is no known contamination or pollution on site. No gas/ oil pipelines and buffer zones cross the site. Also, there are no heritage and conservation assets existing within or immediately adjoining the site so there are no constraints from these. This site can be accessed from the Buckworth Road.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The entire site is within a mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who support its development and are in partnership with a planning consultant to bring the site forward. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary. The topography of the site is broadly level and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. The site can be potentially be accessed from the Buckworth Road and is situated 1.53kms west of the A1(M). There are no built structures on the site that require clearance. The site promoter seeks residential uses of up to 35 homes. Any future development will need to be sensitive to its impact on the open countryside and existing trees and that opportunities are taken to enhance biodiversity. Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development. Also, a transport assessment will be required to demonstrate that the wider road network with Alconbury Weston can absorb additional traffic created by the development.</p>	+
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. There are no structures on site to clear but there are significant constraints on site to mitigate. Surface water flooding, transport issues and landscaping should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party after planning permission is obtained. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is in flood zone 1 with minimal risk of surface water flooding.
- It is classified as grade 3 agricultural land
- The site is sufficiently remote from all of the designated nature and heritage assets
- Limited access to education facilities, shops, culture and leisure facilities
- Nearby to concentrations of employment including Alconbury Weald Enterprise Zone and Crossways Distribution Centre
- Active travel infrastructure available but pavement needs to be created outside the frontage on Buckworth Road
- Residential care home use has potential for benefits to the wider community through integration of public spaces
- Could be masterplanned to effectively integrate into the existing place and community; particularly if development occurs on the eastern side of the site where there is a stronger relationship with the built form and potentially lowering adverse landscape impact
- The density of development could be similar to surrounding residential areas

In combination, the outcomes of the LAA and SA indicate that the site:

- Is potentially suitable for development subject to effective master planning to ensure effective integration with the built form and wider landscape.
- The scale and location of the site provides an opportunity for growth in a village location

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 3.66 ha  50% net developable area to ensure effective integration with built form and to allow for appropriate landscaping.  3.66 ha x 50% = <b>1.83ha</b>	Residential - specialist housing  Very low density of 25 dph anticipated due to edge of village location  Capacity = 1.83 x 25 = 46 homes	Available post 2028 subject to allocation  Build out 2 years

**Updates after the Initial Assessment**

### 3 Alconbury Weston

#### Alconbury Weston 2: Land East of High Gables, Buckworth Road, Alconbury Weston

<b>Site reference</b>	Alconbury Weston 2	
<b>Site name</b>	Land East of High Gables, Buckworth Road, Alconbury Weston	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
The land is situated on the eastern side of High Gables, Buckworth Road, Alconbury Weston, PE28 4JX and on the southern side of Buckworth Road.	Alconbury Weston	2.65

#### Promoter's Intentions

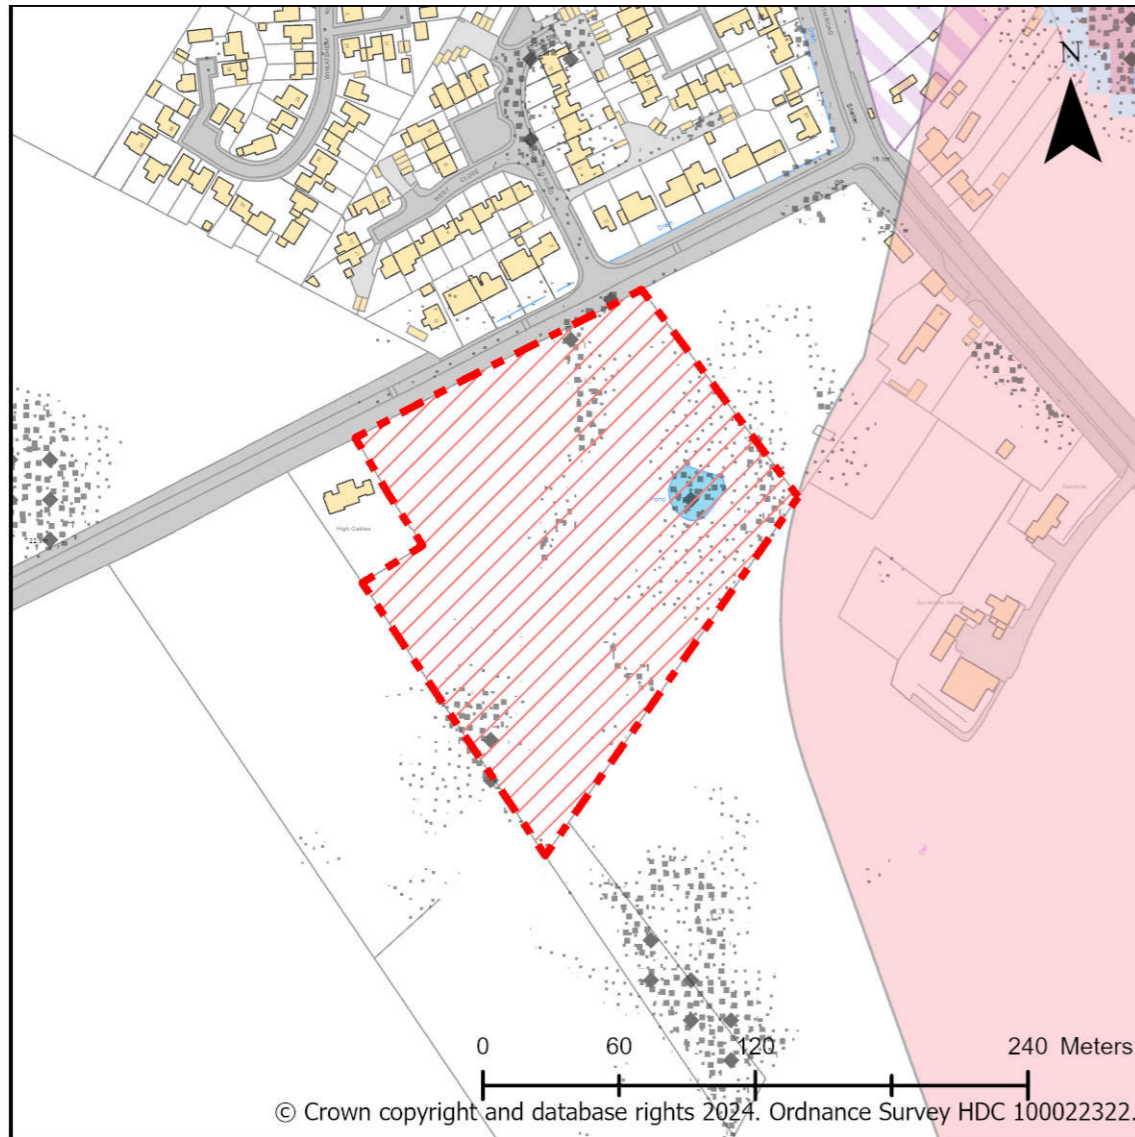

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential:	9 homes	Available 2024 - 2028
Market and/or affordable housing	1.50ha for open spaces	Built out over 1 - 2 years
Open space:	0.38ha for flooding safeguarding	
Natural, green and open space		
Flooding safeguarding		

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:298
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Infographic leaflet (June 2023)

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is within flood zone 1 and has some risk of surface water flooding. It is classified as grade 3 agricultural land and is in agricultural use. The site is situated at the southern edge of Alconbury Weston, is mainly flat and has similar topography to the surrounding land. It contains no built structures and has a pond within it. There are no designated nature assets within or immediately adjoining the site. It has trees and hedging on the northern boundary which provides limited screening to the adjoining Buckworth Road and residential development on the other side of the road. There is a little metal gate on the northern boundary which serves as an entrance into the site. The southern boundary comprises of trees and hedging which provides screening from the adjoining agricultural land and the</p>	+
--	---

<p>open countryside. Although the western boundary comprises some hedging, it is exposed to the adjoining open countryside and residential building situated at the northwestern edge of the site. The site adjoins an area of mature trees and scrubs on its eastern boundary which prevents visibility of the from North Road which is situated about 115m to the east of site. This adjoining site (Alconbury Weston 3) has been submitted for allocation for potential future development. The landscape impact of development would be limited given the extensive boundary trees and hedging around most of the site. Further landscaping will be required especially along the western boundary to minimize impact any future development would have on the open countryside.</p> <p>There is no known contamination or pollution on site. No gas/ oil pipelines and buffer zones cross the site. There are no heritage and conservation assets existing within or immediately adjoining the site so there are no constraints from these. This site could be potentially accessed from Buckworth Road.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The entire site is within a mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who support its development and are in partnership with a planning consultant to bring the site forward. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available in 2024-2028 and seeks to obtain an allocation before selling it to a third party for development after obtaining planning permission.</p>	+
<p><b>Achievability</b></p> <p>Access to gas supply, water supply and digital and telecommunications infrastructure from the site boundary is unknown except access to electricity supply. The topography of the site is broadly level and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead power lines are present. However, the site is next to an oil pipeline buffer zone. The site can be accessed from the Buckworth Road and is situated 1.30 kms west of the A1(M). There are no built structures on the site that require clearance. The site promoter seeks residential uses of up to 9 homes and open space uses of about 1.88ha. Any future development will need to be sensitive to its impact on the open countryside and existing trees and that opportunities are taken to enhance biodiversity. Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development.</p>	+
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. There are no structures on site to clear but there are significant constraints on site to mitigate. Surface water flooding and landscaping should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party after planning permission is obtained. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:

- The site is flood zone 1 with minimal risk of surface water flooding
- It is greenfield, classified a grade 3 agricultural land
- The site does not meet Natural England's Standards for accessing greenspace but has capacity to provide a small amount of natural, green, or open spaces on site.
- There is limited access to culture and leisure facilities, shops, public transport and education facilities within Alconbury Weston
- The site could be effectively masterplanned to integrate into the existing place and community.
- The site has a relationship with the built form, opposite a residential area on the frontage.
- The density is very low but frontage would conserve the character and form of the townscape and landscape.

In combination, the outcomes of the LAA and SA indicate that the site:

- Is potentially suitable for development subject to effective masterplanning to ensure integration with the built form and wider landscape.
- Frontage development has the potential to better integrate the site with the built form and also allows for open space and flood mitigation.
- Access to the site should be achieved via a single track road to conserve the extensive existing vegetation on the north western boundary/ frontage.
- The impact of the oil pipeline buffer zone and A1(M) may need assessment

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 2.65 ha	Residential - market and/or affordable houses	Available post 2028 subject to allocation

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
20% net developable area to accommodate for open space, flood mitigation and frontage development.  2.65 ha x 20% = <b>0.53 ha</b>	Very low density of 25dph anticipated due to small village location  Capacity = 0.53ha x 25 = <b>13 homes</b>	Build out 1-2 years

**Updates after the Initial Assessment**

--

**Alconbury Weston 3: 48 Old Great North Road, Alconbury Weston**

<b>Site reference</b>	Alconbury Weston 3
<b>Site name</b>	48 Old Great North Road, Alconbury Weston

Site address	Parish(es)	Site area (ha)
48 Old Great North Road, Alconbury Weston, PE28 4JU	Alconbury Weston	1.00

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Proposed use submitted under CfS:137: Residential: Nursing and care homes	130 bedspaces	Available 2024 - 2028  Built out over 2 years and 6 months
Proposed use submitted under CfS:178 Residential: Market and/or affordable housing	20 homes	Available 2024 - 2028  Built out over 2 - 3 years

**Core information**

How was the site identified?	Call for Sites 2023 submissions: <ul style="list-style-type: none"> <li>Call for sites 2023 submission: site reference – CfS:137</li> <li>Call for sites 2023 submission: site reference – CfS:178</li> </ul>
Relevant planning history	None
Land type	Part previously developed land and part greenfield land
Current use of the site	Commercial and Residential
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

trees and hedging which provides screening to the adjoining North Road. There is a metal gate on the eastern boundary which provides access to the residential/commercial property within the site. It has trees and hedging on the northern boundary which provides limited screening to the adjoining Buckworth Road and residential development on the other side of the road. The site adjoins a proposed residential development site (Alconbury Western 2) on its western boundary. The site adjoins mature trees and scrubs on its southern boundary which prevents visibility of the site from open countryside and residential development south of the site. The landscape impact of development on the site would be very limited due to the existing trees and hedges on the boundaries which should be predominantly retained.

There is no known contamination or pollution on site. Although no gas/ oil pipelines zones cross the site, an oil buffer zone crosses the site. There are no heritage and conservation assets existing within or immediately adjoining the site; but it is in close proximity to the Alconbury Weston conservation area. The site could be potentially accessed from North Road.

The site is a mixture of greenfield and previously developed land, so its development will somewhat contribute to the reuse of previously developed land or regeneration if the existing residential/commercial structures are included in the development site. The entire site is within a mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling centre.

**Availability**

The site is in single ownership who support its development and are in partnership with a land promoter to bring the site forward. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available in 2024-2028 and seeks to obtain an allocation before selling it to a third party for development after obtaining planning permission.

**Achievability**

All main services are accessible from the site boundary except access to gas supply. The topography of the site is broadly level. No gas pipeline infrastructure crosses the site, and no overhead power lines are present. However, an oil pipeline buffer crosses the site; an appropriate assessment would be required to assess and mitigate the impact of future development on the oil pipeline infrastructure. The site can be accessed from the North Road and is situated 1.15 kms west of the A1(M). There are built structures on the site that may require clearance. The site promoter seeks residential uses (market or affordable homes) of 20 homes or a nursing and care homes with a capacity of 130 bedspaces. Existing trees and scrub within the site would be impacted by the proposed development. As such, an Aboricultural Impact Assessment or an Ecological Assessment may be

**Assessment of Site Potential**

<b>Call for Sites Reference Number:</b>	<b>137</b>	<b>178</b>
<b>Context, constraints and potential suitability</b>		
The site is within flood zone 1 and has some risk of surface water flooding within the northern part the site. It is classified as grade 3 agricultural land and is situated at the southern edge of Alconbury Weston. It is mainly flat and has similar topography to the surrounding land. It contains built structures used for residential and commercial purposes situated in the southeastern part of the site; it also contains a disused shed close to its eastern boundary. The remaining site is covered with trees and scrubs which will likely be impacted by any future development. It has no nature designations on it or immediately adjoining it which will impact development. Its eastern boundary comprises of mature	~	~

	+	+
	~	~

required to assess and minimize the impact of the proposed development on the existing trees. Also, any future development will need to be sensitive to its impact on the setting of the conversation area. Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development.		
<b>Deliverability / developability</b>  There are no known legal or ownership constraints. Built structures may need to be cleared prior to development taking place. There are significant constraints on site to mitigate. Surface water flooding, impact on existing trees and on the setting of the conservation area should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party after planning permission is obtained. As such, the site is categorised as developable.	~	~

Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is within flood zone 1 and has no risk of surface water flooding. It is classified as grade 3 agricultural land and is situated at the northeastern edge of Alconbury Weston. The land within the site rises relatively steeply from the centre to north eastern corner. The site comprises of contrasting terrain with a low elevation of about 29m and a high elevation about 43m. This reflects the topography of the wider region. It contains built structures (stables) for the keeping of horses. A public right of ways runs along the western and southern boundary. The site has no trees or hedging on its north western boundary; it is therefore highly exposed to the adjoining open countryside to the north west. The southern and eastern boundary comprise of trees and hedging which provides limited screening from the the back gardens of residential properties immediately to the east and further south. The site is highly exposed in both the local landscape and in longer distance views from the north, significant landscaping buffers would be required to mitigate impact of the development.</p> <p>There is no known contamination or pollution on site. Although no gas pipelines cross the site, an oil buffer zone crosses the eastern part of the site. There are no heritage and conservation assets existing within or immediately adjoining the site. This site can potentially be accessed from the Vinegar Hill Road.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available in 2024-2028 and seeks to obtain planning permission before selling it to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary except access to gas supply. There are topographical constraints to overcome which could impact layout, capacity and achievability. No gas pipeline infrastructure crosses the site, and no overhead power lines are present. However, an oil pipeline buffer crosses the site; an appropriate assessment would be required to assess and mitigate the impact of future development on the oil pipeline infrastructure. Due to the positioning of the site within the buffer zone it is unlikely that it will have a significant constraint to development. The site can be accessed from the Vinegar Hill Road and is situated less than 1 km west of the A1(M). There are built structures on the site that may require clearance. The site promoter seeks residential uses (market or affordable homes) of 20 homes. The development could levy significant adverse landscape impact and therefore substantial screening on along the north western boundary will be required.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are built structures on site to clear and there are significant constraint that needs to be mitigated. Landscaping should be a key development consideration within future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party after planning permission is obtained. As such, the site is categorised as developable.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is flood zone 1 with no risk of surface water flooding</li> <li>• It is classified as grade 3 agricultural land</li> <li>• The site is remote from natural greenspace but is sufficiently remote from all of the designated nature assets</li> <li>• Could be subject to pollution from major highway (A1) nearby.</li> <li>• There is limited access to culture and leisure facilities public transport and shops</li> <li>• Employment opportunities are in close proximity to the site</li> <li>• The development could lead to adverse impact upon the setting of Alconbury Weston Conservation Area</li> <li>• The location of the site would be out of place with the existing built form situated behind a linear development</li> <li>• It would be difficult to integrate the site with the existing place and community.</li> <li>• Due to the positioning of the site within the buffer zone it is unlikely that it will have a significant constraint to development.</li> </ul> <p>In combination, the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is not be appropriate for development due to key constraints arising the location of the development being out of context with the built form.</li> <li>• The topography of the land would significantly constrain the achievability of development.</li> </ul>

<b>Site reference</b>	Alconbury Weston 5
<b>Site name</b>	Land East of Vinegar Hill, Alconbury Weston

Site address	Parish(es)	Site area (ha)
Land East of Vinegar Hill, Alconbury Weston, PE28 4JA Title Number: CB260839	Alconbury Weston	1.60

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Up to 48 homes	Available 2024 - 2028 Built out over 2 - 3 years

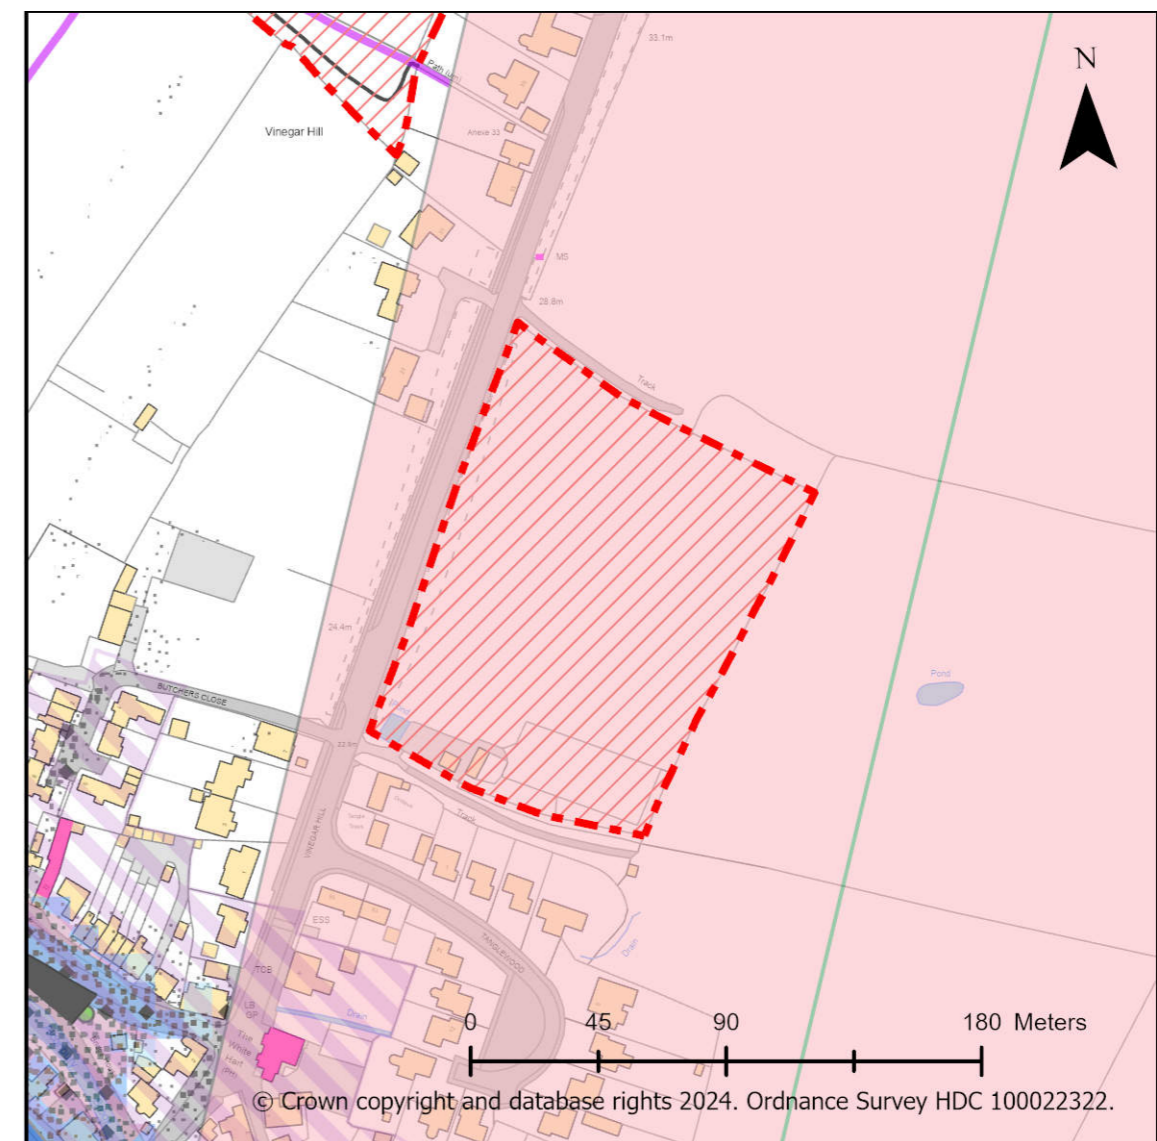

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:195
Relevant planning history	None
Land type	Part previously developed land and part greenfield land
Current use of the site	Agricultural land
Supporting information	<ul style="list-style-type: none"> <li>Location Plan</li> <li>Submission Cover Letter (June 2023)</li> </ul>

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is within flood zone 1 and has some risk of surface water flooding along its western boundary. It is classified as grade 3 agricultural land and is situated at the northeastern edge of Alconbury Weston. The land rises from the west which has the lowest elevation of about 23m up to the east of the site which has the highest elevation about 33m. This reflects the topography of the wider region. It contains two built stables for the keeping of horses and a small pond situated in the northeastern corner. It has no nature designations on it or immediately adjoining it which will impact development. A public footpath runs along its northern and southern boundaries. The site has trees and hedging on all its boundaries which provides screening from the adjoining uses. It is bounded by; Vinegar Hill Road and residential properties on its western boundary; residential properties on its southern boundary; and open countryside on its eastern and northern boundaries. The land to the east of the site has a higher topography and therefore the development will likely be visible for long distances from open countryside. Therefore, significant landscape buffers would likely be required to mitigate adverse landscape impact from the development.</p> <p>There is no known contamination or pollution on site. Although no gas pipelines zones cross the site, the entire site is within an oil buffer zone. There are no heritage and conservation assets existing within or immediately adjoining the site. This site could be potentially accessed from the Vinegar Hill Road.</p> <p>The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. The large proportion of the site is within a mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond the 400m buffer around a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available in 2024-2028 and seeks to obtain planning permission before selling it to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary. The site slopes upwards from west to east which may impact the capacity and layout of the site. No gas pipeline infrastructure crosses the site, and no overhead power lines are present. However, the site is within an oil pipeline buffer; an appropriate assessment would be required to assess and mitigate the impact of future development on the oil pipeline infrastructure. Due to the positioning of the site within the buffer zone it is unlikely that it will have a significant constraint to development. The site can be accessed from the Vinegar Hill Road and is situated less than 1 km west of the A1(M). There are built structures on the site that may require clearance. The site promoter seeks residential uses (market or affordable homes)</p>	~

<p>of 48 homes. Further landscaping will be required to mitigate the impact of the development of site on the countryside and opportunities should be taken to enhance biodiversity. Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are structures on site that may require clearance and there are significant constraints on site to mitigate. Landscaping, surface water flooding impact on the oil pipeline infrastructure should be key development considerations within future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Within flood zone 1 with minimal recorded risk of surface water flooding</li> <li>• It predominantly greenfield grade 3 agricultural land, the remaining being previously developed.</li> <li>• It has limited accessibility from natural greenspace, shops, a primary school, public transport and culture and leisure facilities.</li> <li>• There are employment opportunities nearby to the site namely Alconbury Weald Enterprise Zone and an Established Employment Area.</li> <li>• There is a pavement along the frontage promoting active travel.</li> <li>• Development could cause adverse impact upon Alconbury Weston Conservation Area</li> <li>• Relates closely to built form and density is similar to surrounding townscape.</li> <li>• Potential for significant landscape impact due to topography within and surrounding the site.</li> <li>• The site could effectively integrate into the surrounding community and place.</li> <li>• Due to the positioning of the site within the buffer zone it is unlikely that it will have a significant constraint to development</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is appropriate for development subject to engagement with utility providers that placing development within an oil pipeline buffer zone is acceptable.</li> <li>• The site will likely be visible from higher land to the east from public right of ways and therefore significant landscape buffering to mitigate impact will be required.</li> </ul>
--

- Could be subject to pollution due to major highways requiring further assessment.
- There may be topographical constraints to overcome that could impact the capacity of the proposal.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.6 ha  80% net developable area to accommodate significant landscape buffering and consider topographical constraints.  1.6ha x 80% = <b>1.28 ha</b>	Residential - market and/or affordable housing  Very low density of 25dph due to village context  Capacity = 1.28 ha x 25 dph = <b>32 homes</b>	Available post 2028 to allow for allocation  Build out 2-3 years

**Updates after the Initial Assessment**

#### Promoter's Intentions

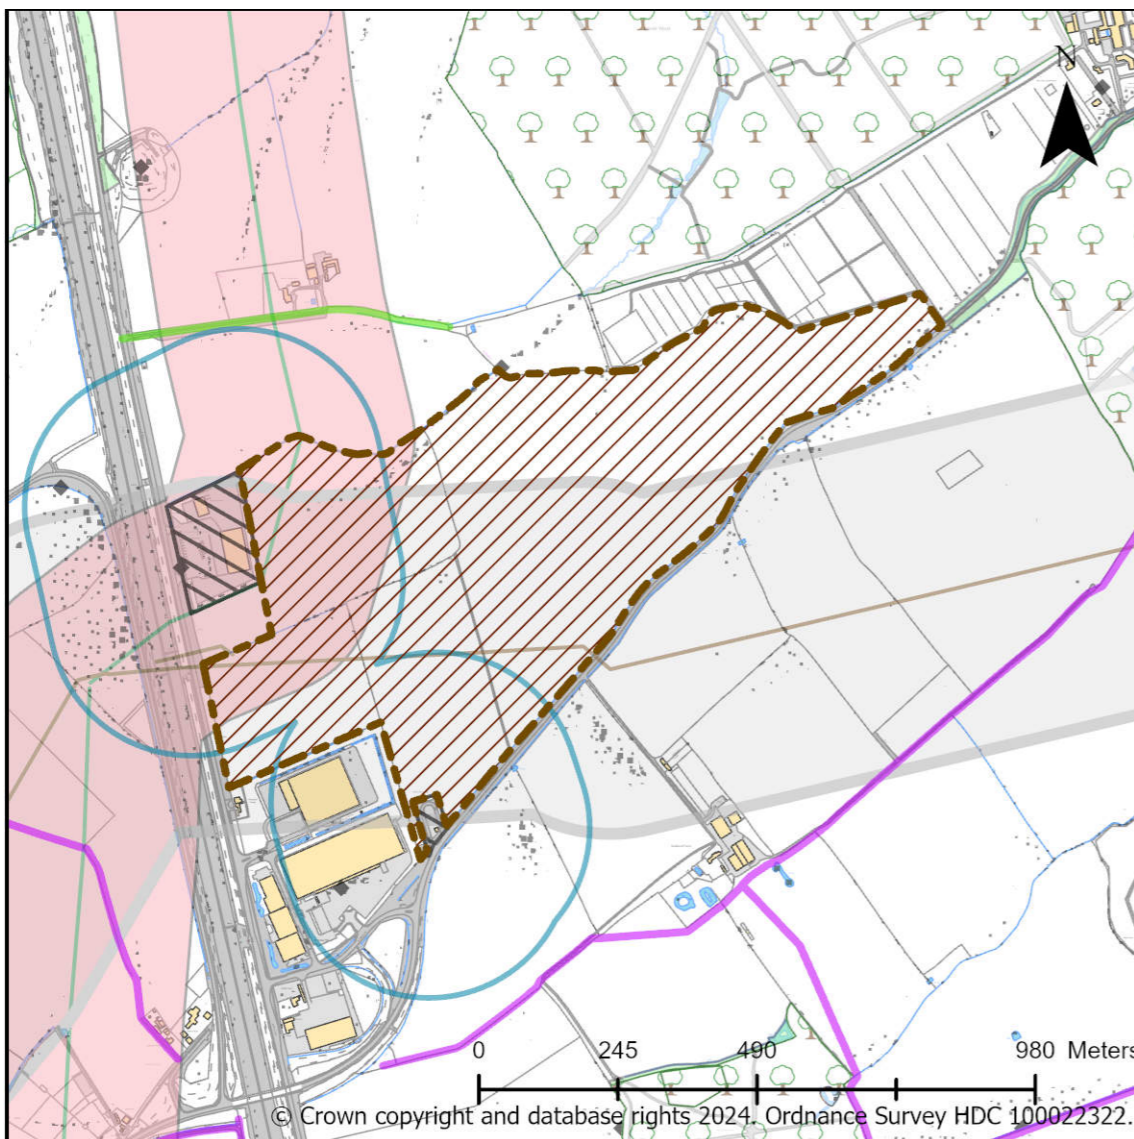

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment Logistics, distribution Open space: Biodiversity net gain opportunities Flooding safeguarding	250,000 sqm for either employment/distribution  1ha for biodiversity net gain opportunities  0.5ha for flooding safeguarding	Available 2024 - 2028  Built out over 5 - 10 years

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:327
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location Plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	Yes (More than 0.25 ha sit outside a Waste Management Area)	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is within flood zone 1 and has some risk of surface water flooding. It is classified as grade 3 agricultural land. The site is situated about 1.5kms northeast of the Alconbury Weston village; about 1.5kms north of Alconbury Weald development and lies to the east of A1(M). The land sits in a region of higher terrain compared to the rest of Alconbury Weston. The site slopes gently from the southwestern corner towards the northeastern corner. It has no nature designations on it, but it is within the immediate setting of a SSSI (Monks Wood National Nature Reserve) which will impact development. It contains no built structures and comprises of arable agricultural land. The northern boundary comprises of trees and hedging which provides screening from the adjoining agricultural land and built</p>	~
--	---

structures associated with Monks Wood Farm. The site is separated from Monks Wood National Nature Reserve situated north of the site by 7ha of experimental plots. The western boundary comprises of trees or hedging which provides screening from the adjoining Ermine Street Road and a Waste Recycling Centre and a Waste Transfer Station. In addition, 10m belt of trees and hedging separates Ermine Street and the A1(M) prevents any form of visibility of the site from the A1(M). There is intermittent trees on the eastern boundary, the site would be exposed to the open countryside to the east. The site adjoins commercial buildings associated Crossways Distribution Centre and Alconbury Household Recycling Centre on its southern boundary. Mature trees and hedging along the site boundary prevent visibility of the site from these uses. However, most of the southern boundary has few trees and hedging which makes the site visible from an adjoining unnamed road and the open countryside. The site is exposed in both the local landscape and in longer distance views from the south, east and north and therefore significant landscaping buffers would be required to mitigate impact of the development. Air quality could potentially be an issue that need to be addressed due to western part of the site being within a Waste Management Area.

There is no known contamination or pollution on site. Oil and gas pipelines cross the site and most of the site lies within an oil and gas pipelines buffer zones. Appropriate consultations and assessment would be necessary to ensure development does not impact any oil and gas infrastructure. There are no heritage and conservation assets existing within or immediately adjoining the site. This site could be potentially be accessed from the Vinegar Hill Road.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.

**Availability**

The site is in single ownership who support its development are in partnership with a planning consultant to bring the site forward. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available in 2024-2028 and it is likely to be delivered by a master developer either in isolation or in conjunction with a more extensive development.

**Achievability**

All main services are accessible from the site boundary. The site elevation is broadly level meaning there will unlikely be topological challenges. An oil and gas pipeline infrastructure crosses the site, but overhead power lines are present. An appropriate assessment would be required to assess and mitigate the impact of future development on the oil pipeline infrastructure. The site can be accessed from an unnamed road which connects to Ermine Street. The site promoter seeks commercial uses (either employment or distribution) of 250,000 sqm. Landscaping will be required to mitigate the impact of the development of

--

+
---

~
---

<p>site on the countryside. An ecological survey would be required to demonstrate that any impacts on protected species within the SSSI are avoided, mitigated, or compensated for, and that opportunities are taken to enhance biodiversity. To address the potential air pollution, air quality assessments will be required, and development should ensure that any impacts will be mitigated through appropriate measures. Also, Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no built structures to clear prior to development but there are significant constraints that need to be addressed. Impact on the SSSI, impact on the oil pipeline infrastructure, air quality issues, surface water flooding and landscaping should be key considerations within future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by a master developer. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward the site:</p> <ul style="list-style-type: none"> <li>• The site is in flood zone 1 with minimal recorded risk of surface water flooding</li> <li>• Meets all of Natural England's Standards for accessing greenspace</li> <li>• Monks Wood SSI and National Nature Reserve adjoins the site to the north east which could be adversely impacted by the development.</li> <li>• The scale and location of the proposal could offer substantial employment growth and business clustering opportunities. It is close to employment concentrations to the south and is strategically located, adjacent to the A1(M)</li> <li>• Development on the whole site could levy significant adverse impact upon the countryside/ designated nature assets.</li> <li>• Logistics use would support low density employment land. The density is higher than adjoining uses.</li> <li>• Development on the western of the site could improve integration with adjoining uses and minimise landscape impact. Therefore, with effective masterplanning the site could be integrated with the the local environment.</li> <li>• There are no heritage assets that would be adversely impacted by the development</li> </ul>
--

<ul style="list-style-type: none"> <li>• There is a frequent bus service nearby but active travel infrastructure from the bus stop to the site is not available.</li> <li>• The scale and nature of the proposal could levy substantial pollution.</li> </ul> <p>In combination, the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially suitable for employment land development subject to effective masterplanning to ensure adverse impact to a designated nature asset and the countryside is minimised and successful integration with adjoining road infrastructure and existing businesses and the oil pipeline buffer zone is achieved.</li> <li>• An ecological survey will be required to understand impact upon Monks Wood SSSI</li> <li>• Substantial landscape buffering will be required to screen the development from open countryside.</li> <li>• To address the potential air pollution, air quality assessments will need to undertaken</li> </ul>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area 52.88 ha</p> <p>50% net developable area to ensure effective integration with local environment and oil pipeline buffer zone and to mitigate adverse landscape impact.</p> <p>52.88 ha x 50% = <b>26.44 ha</b></p>	<p>Net developable area of 26.44 ha</p> <p>Commercial - Logistics on 26.44ha at 0.40 plot ratio</p> <p>Capacity = (26.44 x 0.4)*10,000 = <b>105,760 sqm</b></p>	<p>Available post 2028 to allow for allocation</p> <p>Build out 5-10 years</p>

**Updates after the Initial Assessment**

<p> </p>

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 638 of 3488

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is not constrained by fluvial flood risk. Surface water flood risk is present on the site at high risk (2.44ha), medium risk (3.10ha) and low risk (21.79ha). The site is predominantly grade 3 agricultural land with the exception of 0.60ha.

The site is made up of four parcels of land two east of the A1M and 2 west of the A1M. All parcels sit within the slightly undulating elevated land of the Central Claylands and is agricultural farmland. There are no heritage assets within the site.

The south western parcel sits between the village of Upton to the west and the A1M to the east. Clear views into the site can be seen from Hamerton Road, Vinegar Hill and Nora Wood Way, but is more screened to from Main Street in Upton by trees and hedgerow. Two public rights of way cross the parcel and can be accessed from Upton at Main Street (heading towards Alconbury Hill) and from Pig Market End (heading towards Alconbury Weston). No heritage or nature conservation are present within the site. An oil pipeline and buffer zone covers just under half of the site starting at the A1M and stretching west.

In the north western parcel a public right of way runs along/within the western edge. Lee Wood Business Park and residential properties also immediately abut the western edge. Immediately north of the parcel is Upton Wood Ancient Woodland and County Wildlife site. The eastern boundary abuts the A1 M and the parcel is separated from south western parcel by Main Street/Nora Wood Way clear view into the site can be seen from the roads and public right of way.

Due to the size and nature of the eastern parcels of land landscape impact would be significant and development would be clearly seen from Upton and Alconbury Weston. Presence of an oil pipeline and buffer zone has the potential to affect the layout of the site and could limit development within this area. Presence of the A1M could present noise air and light pollution for future occupants and would require assessment and mitigation. The Central Claylands is characterised by regularly spaced traditional villages, often clustered around village greens strategic landscaping would be required to retain the built form of the distinctive nucleated villages of Upton and Alconbury Weston. Impact on Upton Wood Ancient Woodland may also be a significant constraint in the north western parcel. Integration of residential properties and business park would also be required.

The north eastern parcel of land sits west of the A1M; outside north west corner sits Crossways Distribution Centre an established employment area. The western edge is screened with trees and hedgerow and the northern boundary contains some trees and hedgerow but can be clearly seen within the wider landscape. On the eastern boundary sits Bevill's Wood Ancient woodland and 'Hill Wood and Long Coppice' County Wildlife site and ancient & semi-natural woodland. Within the south of the site Hermitage wood County Wildlife Site and Ancient and semi-ancient woodland is located (approximately 12.50ha), the site also includes a Scheduled Monument. Two public rights of way are present within the site one traversing the site and one linking towards Hermitage Wood. Safefield farm residential properties and agricultural buildings are present within the site and are accessed from Monks Wood Road that bounds northern edge. A gas pipeline and buffer zone runs through north eastern third of the site. The south eastern corner bounds strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm and Alconbury Enterprise Zone, where existing businesses are present. The south eastern parcel wraps around SEL1.1 Former Alconbury Airfield and Grange Farm and Alconbury Enterprise Zone, where existing businesses, MAGPAS and some residential properties are present. A public right of way within the site heads west to east towards hermitage wood and the northern edge of Alconbury Airfield and Enterprise Zone.

Due to the size and nature of the eastern parcels of land landscape impact would be significant and development would be clearly seen from Monks Wood Road and public rights of ways. Presence of an oil pipeline and buffer zone has the potential to affect the layout of the site and could limit development within this area. Presence of the A1M could present noise air and light pollution for future occupants and would require assessment and mitigation. The sites include and abut a number of ancient woodland sites which are a key characteristic of the Central Claylands where the protection and management of such areas would be a key priority. The ecological and biodiversity impact on these sites and from potential increases in footfall has the potential to be significant and assessment of and mitigation would be required. Integration of residential properties and business park would also be required. The site has potential to provide expansion for established employment uses.

The site is greenfield agricultural land and offers no opportunities to contribute to regeneration. The site is not within mineral safeguarding area, part of the eastern (8.9ha) and western (5.4ha) parcels are within a water recycling area, which could limit development or require further assessment.

**Availability**

The site is owned by a single company ownership and control, development is supported by the owners. The site is available from 2023 and would be delivered by a master developer. Build out is estimated to take 15 years plus.

**Achievability**

Gas, mains water and electricity supply are noted as being accessible from the site boundary as are digital and telecommunications infrastructure. The site is in proximity to the A1 which would assist with the logistics of construction. Due to the scale and proposed nature of the site significant infrastructure would be required such as primary and secondary schools, community services and facilities and new junctions to the A1 may be necessary and transport impact assessed and mitigated. Noise air and light pollution from the A1M would require mitigation for future occupants. Gas and oil pipelines and buffer zones and the presence of water recycling areas may affect the layout and achievability of development. Development would require significant landscaping to minimise impact on nearby villages and nature conservation assets.

The site promoter proposes a detailed landscape visual impact assessment to address landscape impact. They note that the setting of Hermitage Wood, open countryside context and views are identified as key constraints and that Safefield Farm East is more suited to development, particularly commercial, due to proximity to Alconbury Weald and Sawfield Business Centre. They note that it is the desire of the landowner to create an exemplar development and new direct access to the infrastructure of the wider Huntingdon region via A14 / A1(M) could be achieved which will help to manage traffic flows in and out of the

<p>development and minimise impact on the local highway network. They believe the site would also support the delivery of a sustainable rapid transit/busway network which would link to Alconbury Weald, Huntingdon and beyond.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Development would need to demonstrate that it could overcome, mitigate against or demonstrate integration or positive impact on a number of constraints. These include, but are not limited to transport access and impact, impact on nature conservation assets and nearby villages, provision of substantial infrastructure and design and layout of the site. There are no known legal or ownership constraints. The site is contrary to policy so an allocation status would be required. If constraints could be overcome the site could be categorised as developable.</p>	

<ul style="list-style-type: none"> <li>• Development would fundamentally alter the landscape setting and any scheme would need to create a wholly new sense of place.</li> <li>• The scale of the site means that there may be archaeological value within the it</li> <li>• The eastern and western parcels do not relate well to each other (being separated by the A1) and integration of the two may require significant infrastructure.</li> <li>• The scale of the site and the proximity the A1 will present issues with noise, air, vibrational and light pollution and has the potential to impact upon the strategic and local road network through increase vehicle movements.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Would require significant masterplanning to demonstrate that the site could create a sense of place in relation to accessibility, townscape impacts on Upton and Alconbury Weston and the affect on ancient woodlands, alongside the integration of properties that are within the north eastern parcel</li> <li>• Could achieve integration with Alconbury Enterprise Zone once completed.</li> <li>• The north western parcel relates well to existing employment use and could provide opportunity for local business expansion</li> <li>• May face issues regarding integration of the northern and southern eastern parcels of land which may be unachievable do to the dissection of the sites by a public footpath.</li> <li>• Could fundamentally alter the nature of Alconbury Weston and Upton, community services, facilities and infrastructure would be required. Landscaping and separation from Upton and Alconbury Weston would be required to prevent coalescence and retain character of the small villages.</li> <li>• May impact on nature, ecology, biodiversity, archaeological and heritage assets would require assessment and mitigation.</li> <li>• May require new junctions to the A1 and transport impact assessment and mitigation.</li> <li>• May be subject to noise air and light pollution from the A1M which would require mitigation for future occupants.</li> <li>• Has gas and oil pipelines and buffer zones and a water recycling area which may affect the layout and achievability of development. The south western parcel is covered with gas and oil pipelines which may make development unachievable.</li> <li>• Would require significant landscaping to minimise impact on nearby villages and nature conservation assets.</li> <li>• Would require flood mitigation</li> <li>• Requires assessment of active travel and sustainable transport solutions</li> <li>• Will need significant infrastructure to support development, such as schools, local services and green spaces/infrastructure.</li> <li>• Transport impacts due to the size of the site would require assessment.</li> <li>• The A1 dissects the site and integration of parcels of land would require additional infrastructure to compensate.</li> </ul>
--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is open countryside and the reuse of previously developed land is negligible. The site is predominantly grade 3 agricultural land with the exception of 0.60ha.</li> <li>• The site is not constrained by fluvial flood risk some surface water flood risk is present.</li> <li>• There is potential for enhanced public transport connections via sustainable rapid transit/busway network and Alconbury railway station, however these schemes are not confirmed without this private transport could dominate.</li> <li>• The site may impact on ancient woodland, county wildlife sites and scheduled monument and is close to conservation areas in Alconbury Weston.</li> <li>• There are opportunities for active travel and significant open spaces with opportunities for green corridors, however these are not specified.</li> <li>• The site is of a size that could provide opportunities to address the impacts of climate change however this is not specified.</li> <li>• If developed the western parcels may not provide a sustainable location for development without significant intervention.</li> <li>• Development would require substantial supporting community infrastructure and services to support the new community.</li> <li>• The site has potential to improve employment opportunities for residents, integration with existing uses could be achieved after the completion of the Enterprise Zone</li> <li>• The land currently has a wholly agricultural character with its sense of place being that of the open countryside. A strong landscaping scheme would be required.</li> </ul>
--

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 267.55ha	<b>North western parcel</b> Net developable area of 7.62ha Commercial - employment 0.35 plot ratio to represent employment uses= (7.62ha x 0.35)*10,000= <b>26,670sqm</b>	Available post 2028 subject to allocation Build out 2 to 5 years
<b>North western parcel</b> Gross site area approximately 12.7ha 60% net developable area to mitigate against impact on Upwood Wood. 12.7ha x 60% = <b>7.62ha</b>		
<b>South western parcel</b> Gross site area approximately 81ha Classified as undevelopable unless it can be demonstrated otherwise due to landscape and townscape impact on Upton and Alconbury Weston, and coverage of oil and gas pipelines. Significant infrastructure may be required to provide access to the A1.		
<b>North eastern parcel</b> Gross site area approximately 131.12ha 50% net developable area to mitigate against impact on Hermitage Wood, Bevills Wood, Hill Wood and Long Coppice and provide openspace/landscape corridors. 131.12 ha x 50% = <b>65.56ha</b>	<b>North eastern parcel</b> Net developable area of 131.12ha Commercial - employment/ logistics/distribution 0.35 plot ratio to represent a mix of commercial uses= (131.12ha x 0.35)*10,000= <b>458,920sqm</b>	Available post 2032 to allow for allocation and build out of Alconbury Enterprise Zone Build out 10 to 15 years

Page 641 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<b>South eastern parcel</b> Gross site area approximately 42.73ha 60% net developable area to mitigate against impact on Hermitage Wood and provide openspace/landscape corridors. 42.73ha x 60% = <b>25.638ha</b>	<b>South eastern parcel</b> Net developable area of 42.73ha Commercial - employment/ logistics/distribution 0.35 plot ratio to represent a mix of commercial uses= (42.73ha x 0.35)*10,000= <b>149,555sqm</b> Total capacity = 26,670 + 149,555 + 635,145 = <b>811,370sqm</b>	Available post 2032 to allow for allocation and build out of Alconbury Enterprise Zone Build out 5 to 10 years

Updates after the Initial Assessment

### 3 Alconbury Weston

#### Alconbury Weston 9: Land Northwest of Chequers Close, Alconbury Weston

<b>Site reference</b>	Alconbury Weston 9
<b>Site name</b>	Land Northwest of Chequers Close, Alconbury Weston

Site address	Parish(es)	Site area (ha)
Land Northwest of Chequers Close, Alconbury Weston	Alconbury Weston	1.60ha

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential:	15 homes	Available 2024-2028
Market and/or affordable homes	15 plots	Build out 1 to 2 years
Custom and self-build housing	0.30ha biodiversity net gain	
Open space:	0.3ha land to safeguard against flooding.	
Biodiversity net gain		
Land to safeguard against flooding		

#### Core information

How was the site identified?	Ongoing call for sites submission: site reference - CfS23-249
Relevant planning history	Appeal reference: APP/H0520/W/23/3327277, Proposed development: Residential development for up to 15 dwellings with all matters reserved except access and layout (22/01350/OUT/ 21/01343/OUT) Outcome: Refused Application number: 22/01350/OUT

	Proposed development: Proposed Rural Exceptions Residential Development for up to 15 Dwellings with all matters reserved except access and layout (re-submission of 21/01343/OUT) Outcome: Refused Application number: 21/01343/OUT Proposed development: Outline permission for the erection of up to 15 Dwellings. All matters reserved except access. Outcome: Refused Application number: 0402833OUT Proposed development: Residential development (1.62 hectares) Outcome: Refused
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Appeal decision: Appeal Ref: APP/H0520/W/23/3327277 Land Northwest of Chequers Close, Alconbury Weston, PE28 4LE Site location plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 643 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present in the north of the site. The site is grade 3 agricultural land.</p>	+
--	---

<p>The site is flat and situated on the western edge of Alconbury Weston. Residential properties at Wheatshap Road and Chequers Close line the eastern edge of the site and residential back gardens the northern boundary, with trees and hedgerow bounding all edges. A public right of way runs along the western edge within the site (which can be accessed from the High Street in the village) meaning views into the site can be seen from those using the public right of way. The site is screened from the wider countryside and landscape impact would be minimal. There is no current access to the site from existing roads. The land is agricultural land, however the site promoter says that the land is not used for agricultural purposes.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. There are no known heritage or nature conservation assets or tree preservation orders affecting it. The site is greenfield land agricultural land and offers no opportunities to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area, but not within a water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is owned by multiple owners and is in multiple control with a legal agreement in place, development is supported by all landowners. There are no known legal restrictions. The site is available from 2024 to 2028. The site promoter notes that the site would be delivered by working with an affordable housing provider, or another developer, to progress any application for that provider or developer to build in conjunction with the District Council. Build out is estimated to take 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply is noted as being accessible from the site boundary as is digital and telecommunications infrastructure. There is no current access to the site via road. The site promoter proposes access via chequers close, meaning there could be issues with ransom strips to access the site, which could impact viability or deliverability. Suitable access would need to be identified.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. Alconbury Weston is near to the A1M which could assist with the logistics of construction.</p> <p>The site promoter provided the dismissed appeal decision for the site which proposed 3 parking spaces for existing residents of Chequers Close to compensate for the loss of the turning head which would provide access to the proposed site.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. Development would need to demonstrate if access could be achieved. If this constraints could be overcome the site could be categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk, surface water flood risk is present
- The site is wholly greenfield grade 3 agricultural land
- The site is well related to the existing place and community.
- The site is close to limited local services and facilities and employment opportunities are 5km away.
- The amount of development proposed is small enough to not affect the character of the area.
- The site is screened from the wider countryside and landscape impact would be minimal if trees/hedgerow were to be retained.
- Safe access to the site via Chequers Close, which would require careful consideration of the residential amenity of existing residents.
- Incorporation of the public right of way should be included to facilitate active travel opportunities.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place and community
- Would have minimal landscape impact if trees and hedgerow were retained
- Would require incorporation of public right of way
- Would require assessment of residential amenity of existing residents on Chequers Court if access is obtained from here.
- Site access requires resolution, ransom strips may be present inhibiting development.
- Surface water mitigation would be required.

Page 644 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.60ha  75% net developable area to allow for flood mitigation and incorporation of public right of way and access.  $1.60h \times 75\% = 1.20ha$	Net developable area of 1.20ha  Residential - market and or affordable homes and/or custom and self build homes.  Low density of 35 dph to reflect the lower density context of larger villages.  Capacity = $1.20ha \times 35dph = 42$ homes	Available post 2028 subject to allocation  Build out 2 to 3 years

**Updates after the Initial Assessment**

--

**Alconbury Weston 10: Land East of B1043 and South of Alconbury Hill, Alconbury**

<b>Site reference</b>	Alconbury Weston 10
<b>Site name</b>	Land East of B1043 and South of Alconbury Hill, Alconbury

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land east of B1043, west of Hermitage Wood and north of Alconbury village.	Alconbury Weston; The Stukeleys	20ha

**Promoter's Intentions**

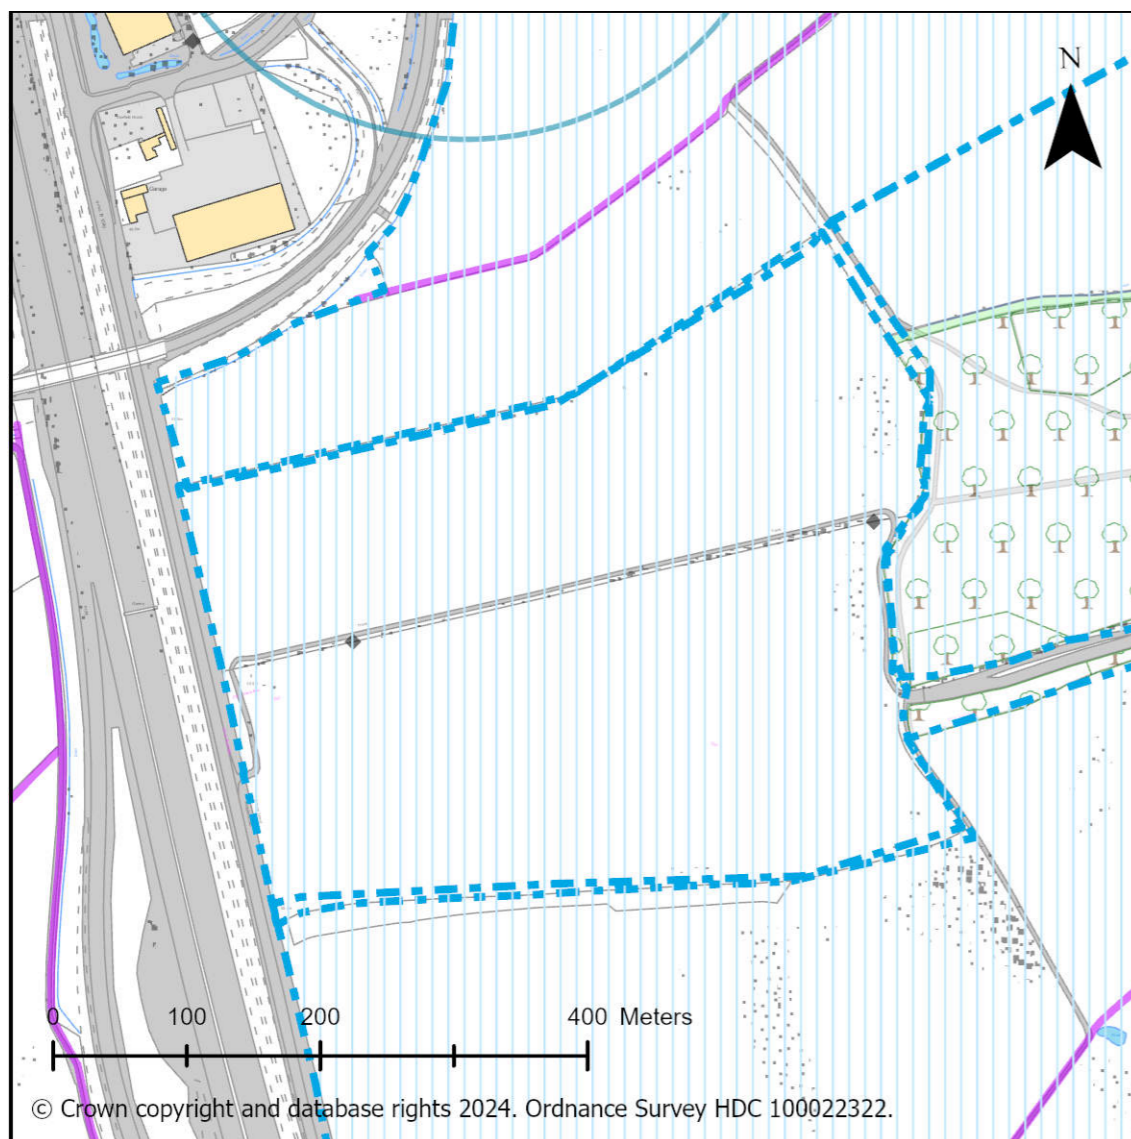

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Infrastructure: Supporting infrastructure e.g. schools, community uses Open space: Natural, green and open space	400 homes  Supporting infrastructure and open space area/capacity not specified.	Available 2023  Build out over 6 to 8 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:324
Relevant planning history	HELAA (December 2017): East of B1043, Alconbury (062)
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location Plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is wholly within flood zone 1 and has some risk of surface water flooding. The site is classified as grade 3 agricultural land. The land is generally uniform with an elevation of about 50m. It contains no built structures but contains a few trees and a track that runs through the site from the west to the east dividing the site into two halves. Although it has a similar topography to the surrounding land, it is within a region of land with a much higher elevation compared to land further to the west and south west of site which includes built development in Alconbury and Alconbury Weston (which are separated from this site by the A1). The northern and western boundaries comprise limited trees and hedging which makes the site visible from the adjoining agricultural land to the north and B1043 and A1(M)

which lies to the west of the site. The southern boundary comprises a narrow belt of trees and hedging which gets narrower towards the east; this provides screening from the adjoining agricultural land. The eastern boundary comprises trees and hedgerow and bounds 14ha of County Wildlife Site and Ancient Woodland (Hermitage Wood) which contains a Scheduled Monument. Due to site being on higher ground and in a countryside location, if developed it would potentially be visible in longer distance views from the west to south and would be visible from public rights of way located further north and south of the site. Air quality and noise pollution could potentially be issues that need to be addressed due to proximity of the site to the A1(M) and B1043.

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site can potentially be accessed from B1043 road which lies west of the site.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.

**Availability**

The site is in single company control and ownership who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development. The site promoter suggests build out is estimated to take 6 to 8 years based on two housebuilders building out a combined rate of 70 dwellings per annum.

**Achievability**

Access to water, gas and electricity supply and digital and telecommunications infrastructure is unknown. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure cross the site, and no overhead powerlines are present. The site can potentially be accessed from B1043 which lies west of the site and connects to the A1(M). There are no structures on site that would require clearance. The site promoter seeks residential uses of 400 homes and open space uses. To address the potential air pollution and noise issues resulting from proximity of the site to the A1(M), noise impact and air quality assessments will be required, and development should ensure that any impacts will be mitigated through appropriate measures. Any future development will need to be sensitive to its impact on the adjoining County Wildlife Site and ancient woodland. An ecological survey would be required to demonstrate that any impacts on protected species within the County Wildlife Site are avoided, mitigated, or compensated for, and that opportunities are taken to enhance biodiversity. Also, a proportionate transport assessment will be required to demonstrate that safe, appropriate access can be provided from the B1043, and that any adverse offsite transport impacts can be adequately mitigated.

<p>The site promoter proposes high-quality public space which could extend the Hermitage Wood green infrastructure network across the site, increasing biodiversity and that site would be designed to have consideration for the Hermitage Wood County Wildlife Site and the enhancement and protection of wildlife ensuring light; noise or other pollutants are mitigated. Mitigation of pollution as a result from the A1M would be implemented and sustainable transport routes extended from Alconbury Weald, including exploration of bus services. Technical evidence and a masterplan would be developed.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping, impact on County Wildlife Site, air pollution, noise and transport issues are key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial, but surface water flood risk is present.</li> <li>• The site is wholly greenfield grade 3 agricultural land.</li> <li>• The site is not sustainably located close to local services, cultural or leisure facilities, but is near to employment opportunities at Crossways Distribution Centre and Alconbury Weald.</li> <li>• Proximity to the A1 and A1307 means future occupiers may be subjected to light, noise, odour or visual pollution, but could assist with the operation of the site.</li> <li>• The site proposal could also affect the ancient woodlands in terms of light and noise and visual pollution, with the potential to detrimentally impact existing habitats and species.</li> <li>• The site has a greater relationship to the open countryside than the nearby uses.</li> <li>• The proposed development has the potential to adversely impact the adjacent and nearby ancient woodlands, specifically Hermitage Wood which also contains a scheduled monument.</li> </ul>
--

<ul style="list-style-type: none"> <li>• The site is south of Crossways Distribution Centre, which would require assessment as to the compatibility of these sites in terms of amenity.</li> <li>• The site forms part of a green break between Crossways Distribution Centre and Alconbury Weald/ Alconbury Enterprise Zone.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as:</p> <ul style="list-style-type: none"> <li>• Due to its separation from Alconbury Weald it is currently unclear how the site could be masterplanned to become part of this community, without further completion of the Alconbury Weald development and/or compilation of potential intervening land to create a more comprehensive development, additional information would be required.</li> <li>• The site forms part of a green break between Crossways Distribution Centre and Alconbury Weald/ Alconbury Enterprise Zone.</li> <li>• The site has a greater relationship to the open countryside than the nearby uses.</li> <li>• The site proposal could also impact a significant concentration of ancient woodlands in terms of light and noise, with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument.</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Capacity calculation not undertaken as site is inappropriate for development due to landscape and ancient woodland impact, lack of demonstrable integration with nearby development.</p>	<p>N/A</p>	<p>N/A</p>

**Updates after the Initial Assessment**

<p> </p>
----------

#### Alconbury Weston 11: Land adjacent to Alconbury Weald Development and South of Safefield Farm, Alconbury

<b>Site reference</b>	Alconbury Weston 11
<b>Site name</b>	Land adjacent to Alconbury Weald Development and South of Safefield Farm, Alconbury

Site address	Parish(es)	Site area (ha)
Land adjacent to the north-west of the Alconbury Weald Development, east of Hermitage Wood and north of Alconbury village.	Alconbury Weston; The Stukeleys	42ha

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Infrastructure: Supporting Infrastructure e.g. schools, community uses Open space: Natural, green and open space	840 homes Whilst subject to masterplanning, the site promoter anticipates that the site would include a local centre to support the daily needs of the community. No standalone open space proposed but would provide open space and play and sport provision to support the local community.	Available 2023 Build out over 12 to 15 years

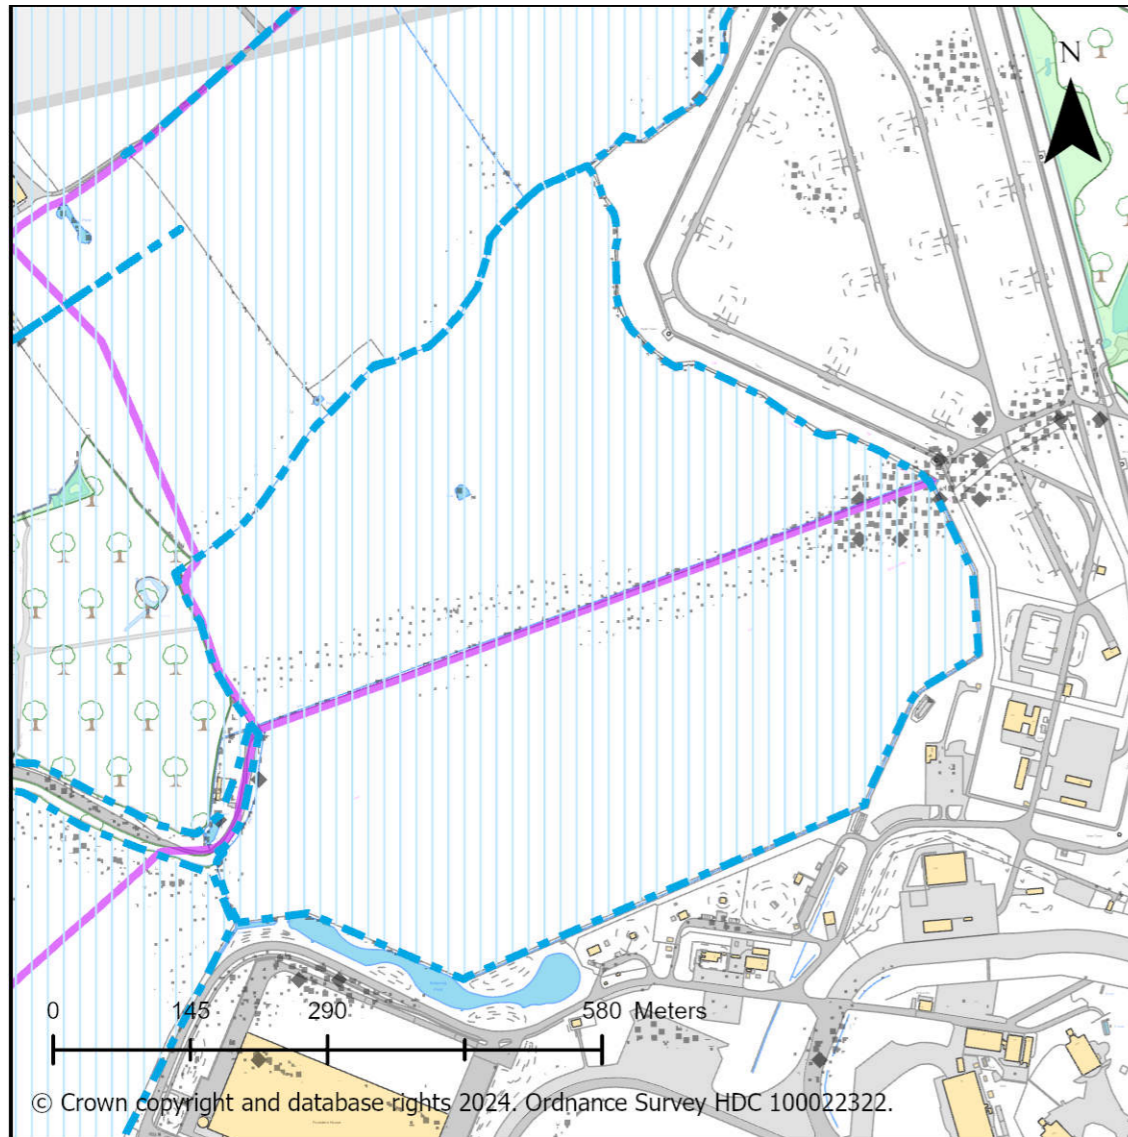

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:360
------------------------------	--

Relevant planning history	HELAA (December 2017): Farmland North of Alconbury Weald, East of Hermitage Wood, Alconbury (063) but was not taken forward as an allocation in the Huntingdonshire Local Plan to 2036.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location Plan

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	No	Pass
Flood zone 3b	No	Pass
Designated local green space	No	Pass
Nature conservation designation	No	Pass
Within mineral development area or water recycling area	No	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly within flood zone 1 but has some risk of surface water flooding. It is mostly classified as grade 3 agricultural land; however, part of the eastern portion of the site is classified as non agricultural land. The site has a uniform surface and has a similar topography to the surrounding land. It has no built structures within it; it contains a small pond located in the northern half of the site and a public footpath runs across the site connecting areas to the west of site (including Hermitage Wood) to areas to the east of the site (towards Alconbury Enterprise Zone). The boundary of the entire site comprises some trees and hedging which provides very limited screening from the adjoining uses. It is bounded by agricultural land on the northern and north eastern boundary. There is a</p>	~
--	---

footpath along the western boundary which separates the site from the adjoining County Wildlife Site (Hermitage Wood) which contains a Scheduled Monument. The site lies north of the Alconbury Weald and Alconbury Enterprise Zone. This makes the site removed from residential development. There could be an opportunity for integration of the site with Alconbury Weald, yet the practicalities of this are yet to be confirmed. Impact of development on the site would be very significant on the existing landscape and appropriate landscaping will be required as well as the retention of existing trees and hedges on the boundaries to minimise the impact. Future development will need to be sensitive to its impact on the adjoining County Wildlife Site.

There are no known pollution or contamination constraints affecting the site. No gas or oil pipeline infrastructure affects the site. It contains no listed buildings or other known heritage assets. Also, there are no designated nature conservation assets within the site. The site has very limited access to the public highway via a public right of way which passes through the County Wildlife Site and connects to Ermine Street over 1km west of the site. Access to the site through the Hermitage Wood may be harmful to the existing species and trees.

The site is wholly greenfield land so would not contribute to reuse of previously developed land or regeneration. It is beyond the 400m buffer around a water recycling site.

--

**Availability**

The site is in single company ownership and control who support its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and seeks to obtain planning permission before selling it to a third party for development following allocation of the site. Build out is expected to take 12 to 15 years.

+
---

**Achievability**

Access to gas, mains water and digital and telecommunications infrastructure are unknown. No oil or gas pipeline infrastructure crosses the site, and no overhead powerlines are present. There are no structures on site that would require clearance. The site promoter seeks residential uses of 840 homes. An ecological survey would be required to demonstrate that any impacts on protected species within the County Wildlife Site are avoided, mitigated, or compensated for, and that opportunities are taken to enhance biodiversity. Surface Water Flood risk assessment would be required to access and mitigate the impact of surface water flooding on development. The site has very limited access to the public highway via a public right of way which passes through the County Wildlife Site and connects to Ermine Street over 1km west of the site. However, development at this site will generate a significant amount of traffic which will impact the County Wildlife Site and Scheduled Monument. Impact on heritage would require assessment. A transport assessment will be required to demonstrate that safe, appropriate access can be provided without negatively impacting County Wildlife Site. It will also need to demonstrate that the wider road network

~
---

<p>can absorb additional traffic created by the development. Access to the site is currently officially unconfirmed and integration to the wider Alconbury Enterprise Zone may present viability issues if landownership is involved.</p> <p>The promoter notes that the site would be designed to have consideration for the Hermitage Wood County Wildlife Site and the enhancement and protection of wildlife currently through careful design. Light; noise or other pollutants will also be mitigated to protect from any impact on the CWS. Cycle and footpath links will be extended through the site, and the public right of way will be retained improving links between the site and Alconbury Weald. They note that the site is currently not immediately accessible from the highway however the development of the site may be undertaken in conjunction with the site to the east of Hermitage Wood [Alconbury 7] which is also under the control of the same landowner. It is also mentioned that the site borders a northern area of the Alconbury Weald development which is</p> <p>shown on a Key Phase 3 plan to have a proposed commercial service route running along the adjoining boundary. It is proposed that this road could be extended into the site to provide an additional route of access and future development here could provide additional access opportunities across the developments. A masterplan would be produced.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There are no structures on site to clear but there are constraints on site to mitigate. Landscaping, surface water flooding, and transport issues should be key development considerations within a future masterplanning of the site. It is intended to acquire an allocation status for the site and delivered by third party developer after planning permission is obtained. As such, the site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial, but surface water flood risk is present.</li> <li>• The site is wholly greenfield and predominantly grade 3 agricultural land with some urban land.</li> <li>• The site is not sustainably located close to local services, cultural or leisure facilities, but is near to employment opportunities at Crossways Distribution Centre and Alconbury Weald</li> </ul>
---

<ul style="list-style-type: none"> <li>• The proximity Alconbury Enterprise Zone mean that future occupiers may be subjected to light, noise, odour or visual pollution</li> <li>• The site proposal could also affect the ancient woodlands in terms of light and noise and visual pollution, with the potential to detrimentally impact existing habitats and species</li> <li>• The site has a greater relationship to the open countryside than the nearby uses.</li> <li>• The proposed development has the potential to adversely impact the adjacent and nearby ancient woodlands, specifically Hermitage Wood which also contains a scheduled monument.</li> <li>• The site is north and west of Alconbury Enterprise Zone which would require assessment as to the compatibility of these sites in terms of amenity.</li> <li>• There is a current lack of access from the B1043 and Alconbury Weald the site is isolated regarding means of access.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as:</p> <ul style="list-style-type: none"> <li>• It is currently unclear how the site could be masterplanned to become part of this community without further completion of the Alconbury Weald development, coordination of access arrangements which could present land ownership issues and/or compilation of potential intervening land to create a more comprehensive development, additional information would be required.</li> <li>• The site has a greater relationship to the open countryside than the nearby uses.</li> <li>• The site proposal could also impact a significant concentration of ancient woodlands in terms of light and noise and visual pollution with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument.</li> <li>• The site is north and west of Alconbury Enterprise Zone which would require assessment as to the compatibility of these sites in terms of amenity.</li> <li>• Current lack of access from the B1043 and Alconbury Weald means the site is isolated regarding means of access and could present viability issues.</li> </ul>

### 4 Sawtry

4.1 A total of 16 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Sawtry 1: Green End Field, Sawtry
- Sawtry 2: Land at St Andrews Way, Sawtry
- Sawtry 3: Land to the West of Glatton Road, Sawtry
- Sawtry 4: Land East of Glatton Road and North of Brookside Industrial Estate, Sawtry
- Sawtry 5: Land to the North East of the Brookside Industrial Estate, Sawtry
- Sawtry 6: Glebe Farm, Sawtry
- Sawtry 7: Land at Little Common Farm, Sawtry
- Sawtry 8: Land North of Black Horse Industrial Estate (larger site), Sawtry
- Sawtry 9: Land North of Black Horse Industrial Estate (smaller site), Sawtry
- Sawtry 10: Land to the East of St Judith's Lane and west of Toll Bar Way and Green End Road (larger site), Sawtry
- Sawtry 11: Land to the West of Toll Bar Way and Green End Road (smaller site), Sawtry
- Sawtry 12: Land to the West of Toll Bar Way and North of Whitehall Farm, Sawtry
- Sawtry 13: Land Southwest of B1090 and East of Stangate Hill B1043 (larger site), Sawtry
- Sawtry 14: Land Southwest of B1090 and East of Stangate Hill B1043 (smaller site), Sawtry
- Sawtry 15: Land East of B1043 and East of Keeper's Cottage, Sawtry
- Sawtry 16: Land at Brickyard Farm, Sawtry

4.2 Please note that Conington 5: Land At, Middlemarsh Farm Glatton Road, Sawtry also partially falls within Sawtry parish, but it has been included under Conington as most of the site lies within that parish area.

4.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and or affordable homes Custom and self build homes	5 minimum, 10 maximum market and or affordable homes  5 minimum, 10 maximum custom and self build homes	Available 2023  Build out 1 to 2 years

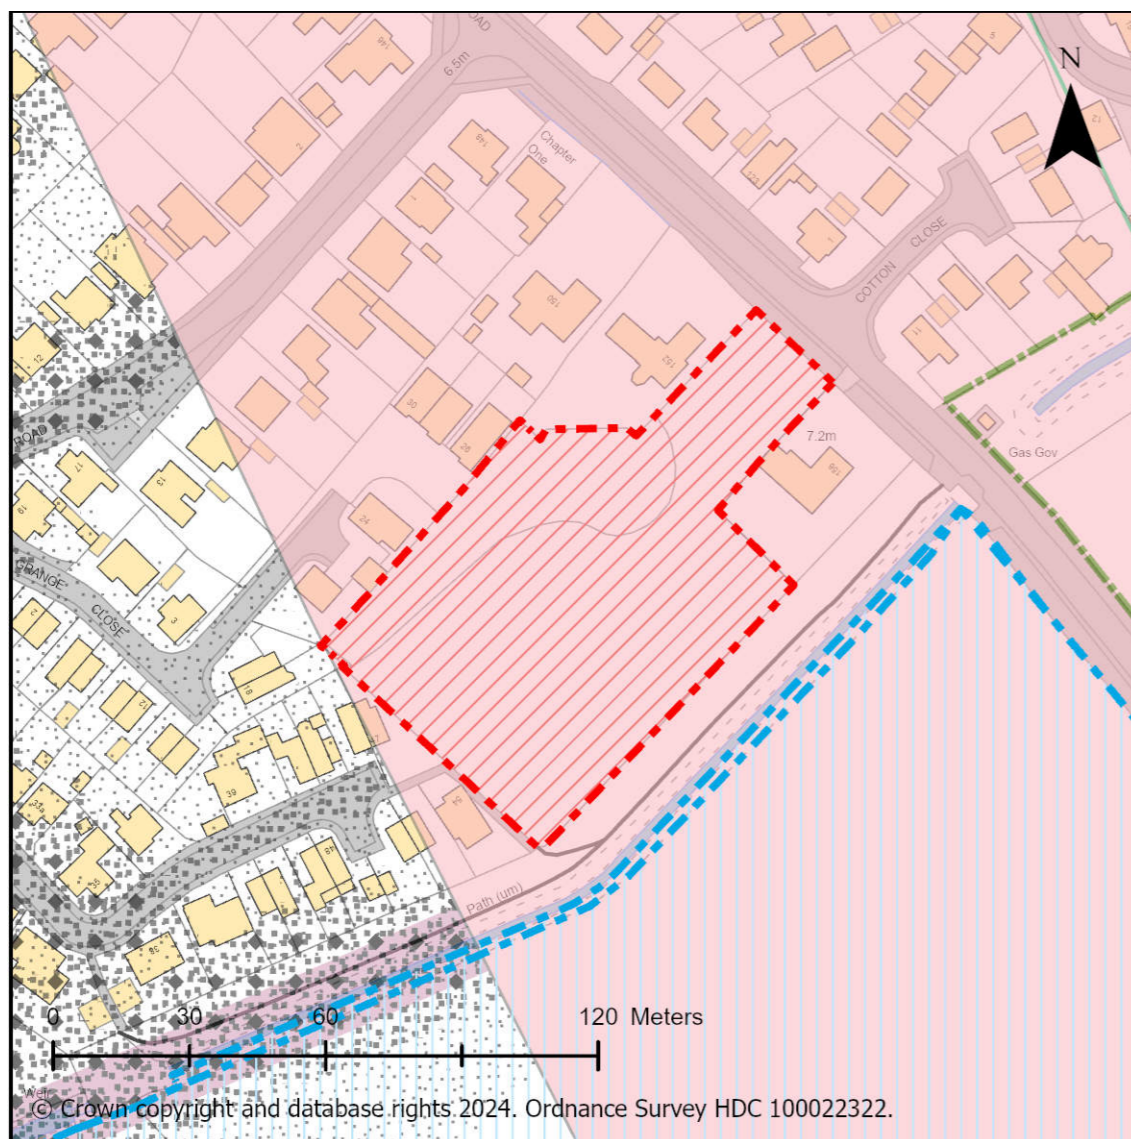

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 11
Relevant planning history	Application number: 8601187OUT Proposed development: Residential development (0.39ha) Outcome: Refused
Land type	Wholly greenfield land
Current use of the site	Agricultural
Supporting information	Flood map for planning Highway information

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk but surface water flood risk is present across the site. The agricultural land class of the site is urban.</p> <p>The site is flat agricultural land, two residential properties fronted by established trees and hedgerow sit either side of the north eastern boundary. The site can be clearly seen from Green End road, Aversley Road and from public right of way that runs along the south eastern boundary connecting with Aversley Road. Residential development bounds the south western and western boundary. The site is highly exposed in long distance views to the south from Toll Bar Way and St Judiths Lane which may require landscaping mitigation,</p>	<p>+</p>
--	----------

<p>however existing properties either side of the site and to the north can also be clearly seen. The impact on the landscape would be determinant on site density and elevation. Access to the site could be achieved off Green End Road or Aversley Road.</p> <p>There is no known pollution or contamination and no known gas pipelines and buffer zones cross the site. Overhead powerlines run just outside the south eastern boundary. The site sits within an oil pipeline buffer zone, as do the properties either side of the site, development would have to identify if development in this location is acceptable. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, development is supported by all landowners. There are no known legal restrictions. The site is available from 2023, planning permission would be acquired and the land sold to a third party for development, build out was estimated to take 1 to 2 years.</p>	<p>+</p>
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. There is no known pollution or contamination and no known gas pipelines and buffer zones cross the site. Overhead powerlines run just outside the south eastern boundary. The site sits within an oil pipeline buffer zone, as do the properties either side of the site, development would have to identify if development in this location is acceptable. The site is in proximity to the A1 which would assist with the logistics of construction.</p> <p>The site promoter notes that there is a potential ransom strip at the southwest boundary if access were to be from Aversley Road. The site promoter notes that access may be an issue and that there is a possibility to use 156 Green End Road as part of the development land, which could assist with access to the site. It is not known if a ransom strip also applies to the access at Green End Road, but purchase of further land here to improve access could present viability issues.</p>	<p>~</p>
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. There are a number of constraints which require resolution including landscape impact, impact on the oil pipeline buffer and</p>	<p>~</p>

access issues. The site is available from 2023, once planning permission is acquired the land will be sold to a third party for development. The site is therefore classified as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood risk, or surface water flood risk.
- The site is wholly greenfield and classified as urban land meaning development will not impact on the best and most versatile agricultural land.
- The site is well related to the existing place and community.
- The site is close to local services and facilities and employment opportunities are 2km away.
- The southern aspect looks out onto open countryside which would require landscape mitigation, but is of a size that would not significantly impact the landscape.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place and community
- Would require landscape mitigation to the south
- The impact on the landscape would be determinant on site density and elevation
- The oil pipeline buffer zone within the site may limit development and requires further assurance.
- Presence of overhead powerlines just outside the south eastern boundary may require consideration
- Site access requires resolution, ransom strips may be present inhibiting development.
- Surface water mitigation would be required.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.22ha  75% net developable area to allow for landscape mitigation and oil pipeline bufferzone.	The net developable area is 0.915ha	Available 2024

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
1.22ha x 75% = <b>0.915ha</b>	Residential - Market and/or affordable homes, or custom and self build homes  Low density of 35 dph to reflect the lower density context of larger villages.  Capacity = 0.915 ha x 35 dph = <b>32 homes</b>	Build out 2 to 3 years

**Updates after the Initial Assessment**

--

**Sawtry 2: Land at St Andrews Way, Sawtry**

<b>Site reference</b>	Sawtry 2
<b>Site name</b>	Land at St Andrews Way, Sawtry

Site address	Parish(es)	Site area (ha)
Land to the East of St Andrews Way, Sawtry	Sawtry	1.42 ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and affordable homes Custom and self build homes Nursing and care homes	circa 40 Market and affordable homes (subject to masterplanning)  Element of Custom and self build homes proposed  Nursing and care homes capacity to be confirmed - potentially provision of a care home and retirement dwellings.	Available 2024-2028  Build out 2 to 3 years.

**Core information**

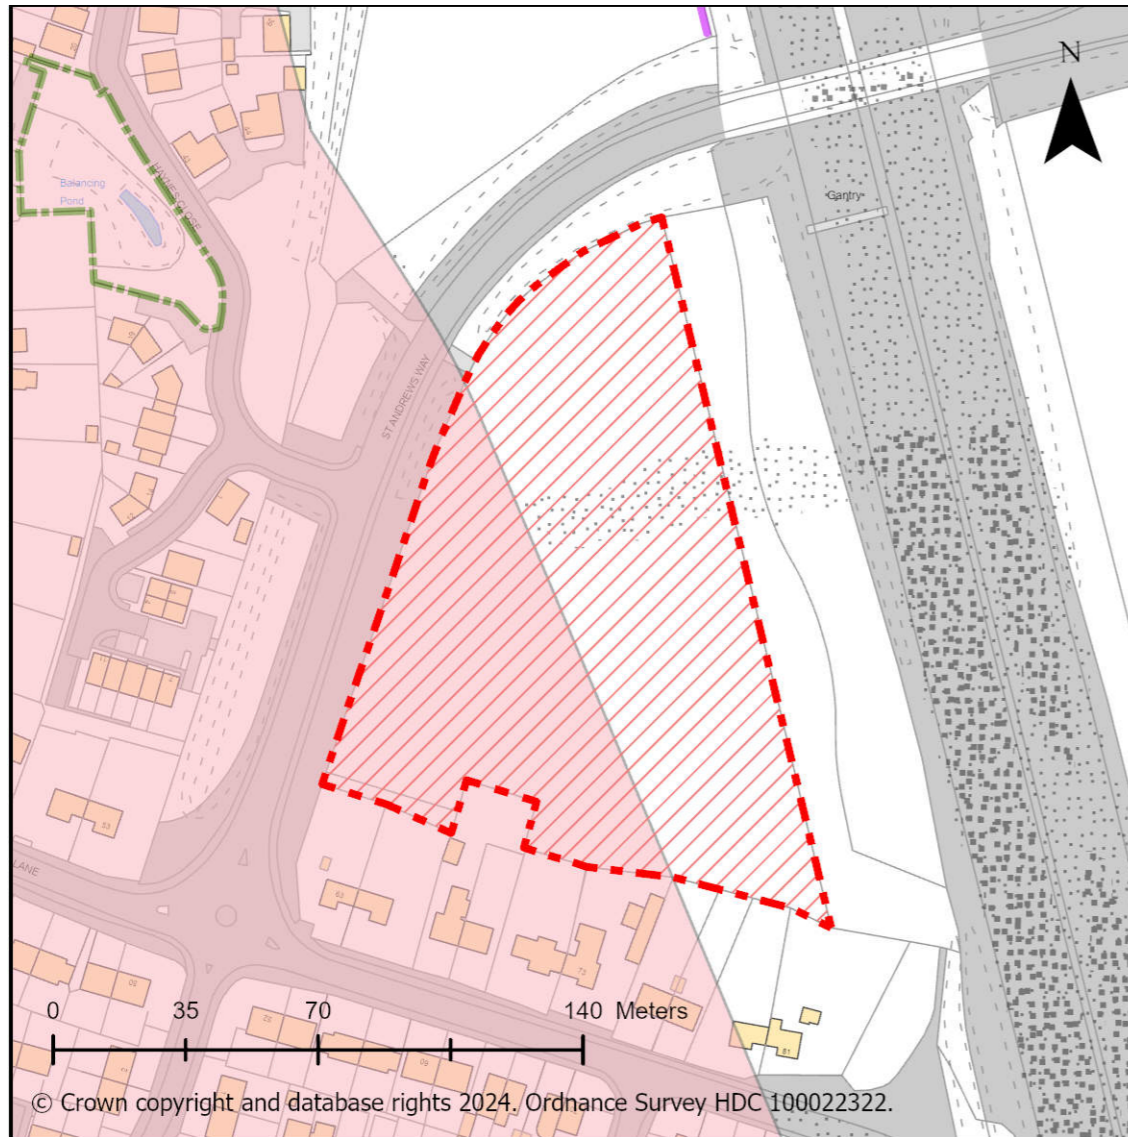

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 81
Relevant planning history	HELAA (December 2017) St Andrew's Way
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Access Appraisal Air Quality Baseline Study Location Plan

	Technical Note - Residential Use Preliminary Noise Assessment
--	---

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk but a small percentage of low risk surface water flood risk is present. The site is a mix of grade 3 agricultural land and urban land.</p> <p>Residential properties sit on the southern boundary of the site (Fen Lane) and the A1 bounds the eastern boundary. St Andrews Way abuts the western boundary, this road crosses the A1 and is therefore elevated above ground level north of the site gradually sloping as it continues south. The western edge is screened by mature trees and hedgerow,</p>	~
---	---

<p>with an access available off St Andrews Way. The eastern boundary houses a significant and established tree line screening the site from the A1. Landscape impact would be negligible and the retention of trees and hedgerow would screen the site.</p> <p>The presence of the A1 and St Andrews Way means that the site will be susceptible to substantial noise light and air pollution, some of which may be from an elevated level above the site.</p> <p>There is no known pollution or contamination and no known gas pipelines and buffer zones cross the site nor overhead powerlines. The south western corner of the site sits within an oil pipeline buffer zone, as do the properties to the south and west of the site, development would have to identify if development in this location is acceptable. No known heritage assets are located within the site or nature conservation assets and no tree preservation orders affect it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in individual ownership, it is in individual control however there is housebuilder interest with no legal agreement. Development is supported by the landowner. There are no known legal restrictions. The site is available from 2024-2028, planning permission would be acquired and then land sold to a third party for development. There is potential for a housebuilder to take up promotion subject to acceptable builder and offer, build out is anticipated to take 2 to 3 years.</p>	+
<p><b>Achievability</b></p> <p>Access to gas supply is unknown and water mains supply is not immediately accessible from the site boundary. Electricity supply and digital and telecommunications infrastructure is accessible from the site boundary. Access could be achieved from St Andrews Way, however consideration would be required of safe access and exit to the site due to the access point being located on a bend subject to single carriage way national speed limits potentially creating safety issues. Proximity to the A1 could assist with the logistics of construction.</p> <p>There is no known pollution or contamination and no known gas pipelines and buffer zones cross the site nor overhead powerlines. The south western corner of the site sits within an oil pipeline buffer zone, as do the properties to the south and west of the site, development would have to identify if development in this location is acceptable. The presence of the A1 and St Andrews Way means that the site will be susceptible to noise light and air pollution, some of which may be from an elevated level above the site.</p>	~

<p>The site promoter notes that an easement crosses the site but would be incorporated into the developments road layout to safeguard future access. A preliminary noise and vibrational assessment has been undertaken outlining how development should be possible and a transport access appraisal conducted including sustainable travel options alongside proposals for a priority T-Junction on St Andrews Way.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Constraints which require resolution include impact on the oil pipeline buffer, access, safety and pollution issues and impacts. The site is available from 2024, once planning permission is acquired the land will be sold to a third party for development. The site is therefore classified as developable.</p>	

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to, landscape impact, pollution and safety.	N/A	N/A

**Updates after the Initial Assessment**

**Progression of Site through to Sustainability Appraisal**

--	--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk, but has surface water flood risk.</li> <li>• The site is wholly greenfield and mix of grade 3 agricultural land (approximately 1 third) and urban land (approximately 2 thirds) meaning development would have a limited impact on the best and most versatile agricultural land.</li> <li>• The site has little relationship to the existing place and community and contributes to the approach to the village.</li> <li>• The site is close to local services and facilities and employment opportunities are 800m away.</li> <li>• The site is subject to significant light, noise and air pollution due to proximity to the A1 and the presence of flyover on the northern boundary.</li> <li>• There are safety issues regarding entrance and exit to the site.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as it:</p> <ul style="list-style-type: none"> <li>• Has little relationship to the existing place and community and contributes to the approach to the village.</li> <li>• Would be susceptible to substantial noise light, vibrational and air pollution, some of which may be from an elevated level above the site.</li> <li>• Is impacted by an oil pipeline buffer zone which could impact development.</li> <li>• Has safety concerns for access and exit to and from the site.</li> </ul>
---

**Sawtry 3: Land to the West of Glatton Road, Sawtry**

<b>Site reference</b>	Sawtry 3
<b>Site name</b>	Land to the West of Glatton Road, Sawtry

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land to the north west of Sawtry and to the west of Glatton Road	Sawtry	12.48ha

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable homes Open space: Natural Green or open space Biodiversity net gain Land to safeguard against flooding	circa 300 homes  1.50ha Natural Green or open space  1.60ha Biodiversity net gain  0.90ha Land to safeguard against flooding	Available 2029-2034  Build out 7 years

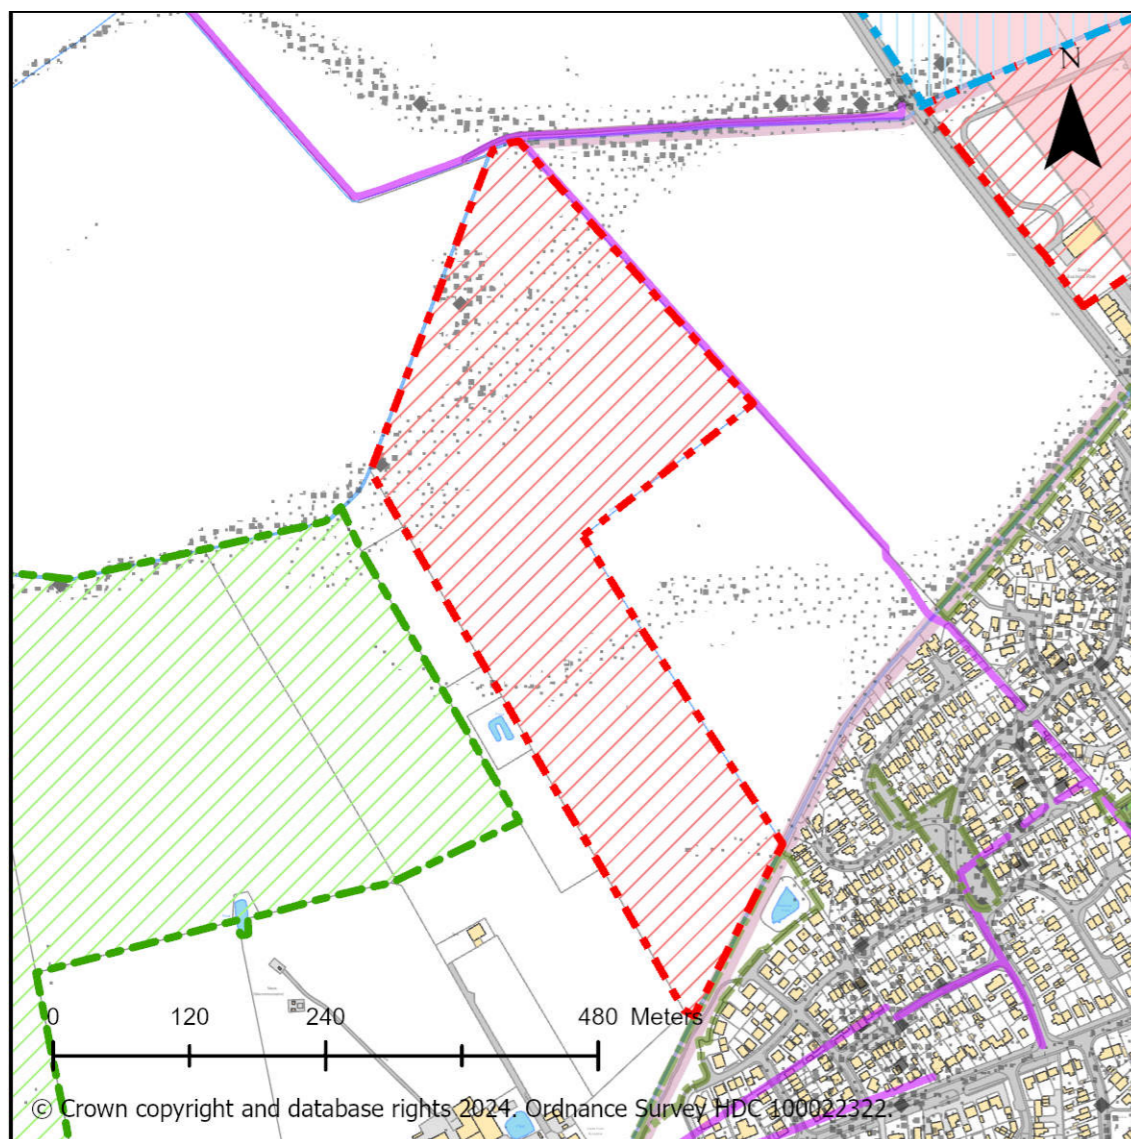

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 88
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location Plan  Vision document

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	0.43% in flood zone 3b (0.05ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1 with a small portion in flood zone 3b, surface water flood risk is present on site. The site is wholly grade 3 agricultural land. The land slopes north west to south east and sits within an area of open countryside at the base of a hill. The eastern, northern and southern edges of the site are bounded by Sawtry Brook, with tree and hedgerow along the southern boundary. The built area of Sawtry is south of the site and a public right of way runs by the northern boundary and alongside the north eastern boundary, meaning views can be clearly seen into the site from multiple locations and also currently from Glatton Road which is exposed to open countryside providing long distance viewpoints. There are no buildings within the site, however a</p>	~
---	---

<p>permitted outline application (20/01407/OUT - Allison Homes site) for 340 dwellings is extant immediately east of the site, but has not commenced. At present the landscape impact of development would be high requiring strategic landscaping. The site is currently removed from residential development and more related to the countryside, meaning integration with the existing community may be difficult to achieve. Access to the site is a significant constraint at present with no direct link to road infrastructure meaning there may be issues regarding viability or ransom strips.</p> <p>There is therefore potential for contaminants to be present, such as from agrochemicals from previous use, which would require mitigation. No known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single individual / company with a promotion agreement in place, development is supported by the landowners. There are no known legal restrictions. The land is available from 2029 - 2034, the site would be delivered by a housebuilder and build out is expected to take 7 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted not being immediately accessible from the site boundary nor are digital and telecommunications infrastructure. Access to the site access is currently unavailable via road meaning access for construction and for residents presents a significant restriction to the achievability of the site and presents potential financial and viability impediments. There is a possibility that access could be achieved from the east if development of site 20/01407/OUT (currently without reserved matters permission) were to come forward, although access through the site presents similar issues and integration of these sites would require confirmation from all parties. At present the landscape impact of development would be high requiring strategic landscaping. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. The site promoter notes that there may be potential contamination due to the site's current use.</p> <p>Evidence submitted by the site promoter notes that the primary access route to the site for vehicles, will be from the neighbouring site (which is currently has outline permission), which itself is accessed via Glatton Road creating an integrated development, secondary access for pedestrians, cyclists and emergency vehicles is proposed from to the south. It also notes that existing vegetation along existing hedgerows, would need careful consideration and incorporation into the scheme and lower densities on the outskirts of the development could help integrate development with the built form within the village and the wider countryside.</p>	

<b>Deliverability / developability</b>		
<p>There are significant constraints regarding access and rights to access the site. The site's location within a mineral safeguarding area may limit the possibility of residential uses on site. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Subject to overcoming the constraints the site could be categorised as developable.</p>		

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by some 3b fluvial flood risk, and surface water flood risk.</li> <li>• The site is wholly greenfield grade 3 agricultural land. The site is of a size that could include a wide range of types, sizes and tenures.</li> <li>• The site has little relationship to the existing place and community and is in an isolated countryside location.</li> <li>• The site is close to a convenience store and Sawtry Village where there is a primary school; an unimplemented site to the east plans for provision of a primary school, however the site to date remains undeveloped. It is removed from other local services and facilities and cultural and leisure facilities, employment opportunities are 500m and 2km away.</li> <li>• Development on the site would have significant landscape impact</li> <li>• There are fundamental issues regarding access to the site.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is at present not appropriate for development as it has little relationship to the existing place and community and is in an isolated countryside location.</li> <li>• Would require flood mitigation</li> <li>• Investigation and mitigation from potential land contaminants may be required.</li> <li>• Would require strategic landscape mitigation</li> </ul>	
---	--

<ul style="list-style-type: none"> <li>• Access is unachievable at present via road meaning access for construction and for residents presents a significant restriction to the achievability of the site and presents the possibility of ransom strips creating potential financial and viability impediments.</li> <li>• Development could only be integrated into the existing community once development to the east is complete.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 12.48ha</p> <p>75% net developable area to allow for landscape mitigation, open space and flood mitigation.</p> <p>12.48ha x 75% = <b>9.36ha</b></p>	<p>The net developable area is 9.36ha</p> <p>Residential - Market and/or affordable homes</p> <p>Low density of 35 dph to reflect the lower density context of larger villages.</p> <p>Capacity = 9.36ha x 35 dph = <b>328 homes</b></p>	<p>Available post 2032 after completion of approved residential outline application to the east.</p> <p>Build out 7 years</p>

Page 665 of 3488

The site slopes down west to east in the direction towards the A1 and forms part of the wider open countryside to the north. The southern boundary is bounded by Sawtry Brook and an established employment area - Brookside Industrial Estate - which is screened by trees, buildings and hedgerow creating a landscape barrier to the wider countryside and the site to the north. The eastern and northern boundaries look out into interrupted open countryside. A public right of way just outside the eastern boundary facilitates uninterrupted views into the site and wider countryside. The site is also clearly visible from Glatton Road (on the western edge) which is bounded by hedgerow. The site is agricultural land and contains two agricultural buildings, roadways, hard standing and access to Glatton Road. Current access is provided off Glatton Road making the site accessible. The site is highly exposed in both the local landscape and longer distance views, significant landscaping would be required to mitigate the impact of development.

The site is removed from current residential development and separated by an industrial estate, however a permitted outline application (20/01407/OUT) for 340 dwellings is extant immediately east of the site, but has not commenced. Integration with the wider residential area could be achieved if this site were to come forward for development.

There is no known pollution or contamination, but may be present due to its current use and no known gas pipelines and buffer zone cross the site nor overhead powerlines. An oil pipeline and buffer zone crosses the site and some electricity infrastructure is present within the western edge of the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is part previously developed land and part greenfield land offering some opportunity to contribute to regeneration. The site is within a brickclay mineral safeguarding area and is not within a water recycling area.

**Availability**

The site is in single company ownership and in family control, development is supported by all landowners. Legal restrictions include development overage on site which expires in 2027. Internal Drainage Board drainage easements along northern and eastern (Sawtry Brook) boundary. The site is available from 2029-2034 and would be delivered through acquiring allocation status and then selling the land to a third party for obtaining planning permission and development. It is noted that it is unknown how long build out would take.

**Achievability**

Gas supply to the site is unknown. Mains water and electricity supply and digital and telecommunications infrastructure are accessible from within the site. The public highway is accessible from the boundary. There are legal restrictions on the site including overage and easement which would require addressing. The strategic oil pipeline and electricity infrastructure may also limit the layout or achievability of development. At present the landscape impact of development would be high requiring strategic landscaping. Proximity

**Assessment of Site Potential**

Context, constraints and potential suitability	
The majority of the site is within flood zone 1, flood zone 2 and 3b are also present on site following the north, east and southern boundary, some of the site is at risk of surface water flooding within the same locations. The site is grade 3 agricultural land.	~

<p>to the A1 and direct access from Glatton Road would provide good long term road connectivity and assist with the logistics of construction. Demolition of existing structures would be required and contamination may be present and require remediation. Integration with residential development to the west could be achieved once development is completed / under construction.</p> <p>The site promoter says - The masterplan/ final layout will need to take all physical environmental and ecological constraints into account and would be demonstrated via a masterplan.</p>	
<p><b>Deliverability / developability</b></p> <p>There are legal and physical constraints such as overage, easement, a strategic oil pipeline and electricity infrastructure which would require mitigation. The site's location within a mineral safeguarding area may limit the possibility of residential uses on site. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Subject to overcoming the constraints the site could be categorised as developable</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by some 2 and 3b fluvial flood risk, and surface water flood risk.</li> <li>• The site is wholly greenfield grade 3 agricultural land. There are two agricultural buildings on the site meaning that reuse of materials or buildings would be minimal</li> <li>• The site is of a size that could include a wide range of types, sizes and tenures.</li> <li>• The site forms part of the wider open countryside. It is exposed in both the local landscape and longer distance views, significant landscaping would be required.</li> <li>• The site is close to some local services and facilities and employment opportunities are 2km away.</li> <li>• Currently the site has little relationship to the built area of Sawtry meaning integration with the existing community at this point in time is not achievable.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is at present not appropriate for development as it has little relationship to the existing place and community and is exposed within the wider countryside setting.</li> </ul>
---

<ul style="list-style-type: none"> <li>• Would require flood mitigation</li> <li>• Investigation and mitigation from potential land contaminants may be required.</li> <li>• Would require strategic landscape mitigation</li> <li>• The oil pipeline buffer zone within the site may limit development and requires further assurance.</li> <li>• Electricity infrastructure within the western edge of the site may require mitigation</li> <li>• There are legal restrictions on the site including overage and easement which would require addressing.</li> <li>• Development could only be integrated into the existing community once development to the west is complete.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 6.50ha</p> <p>75% net developable area to allow for landscape mitigation, open space and flood mitigation.</p> <p>6.50ha x 75% = <b>4.875ha</b></p>	<p>The net developable area is 4.875ha</p> <p>Residential - Market and/or affordable homes and custom and self-build housing</p> <p>Low density of 35 dph to reflect the lower density context of larger villages.</p> <p>Capacity = 4.875ha x 35 dph = <b>170 homes</b></p>	<p>Available 2029-2024</p> <p>Build out 3 to 4 years</p>

**Sawtry 5: Land to the North East of the Brookside Industrial Estate, Sawtry**

<b>Site reference</b>	Sawtry 5
<b>Site name</b>	Land to the North East of the Brookside Industrial Estate, Sawtry

Site address	Parish(es)	Site area (ha)
Land to the north east of Sawtry, off Tort Hill	Sawtry	9.2ha (Google MyMaps)

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment Logistics, distribution	25,000 sqm split to be determined	Available 2024-2028 Build out 2 to 3 years

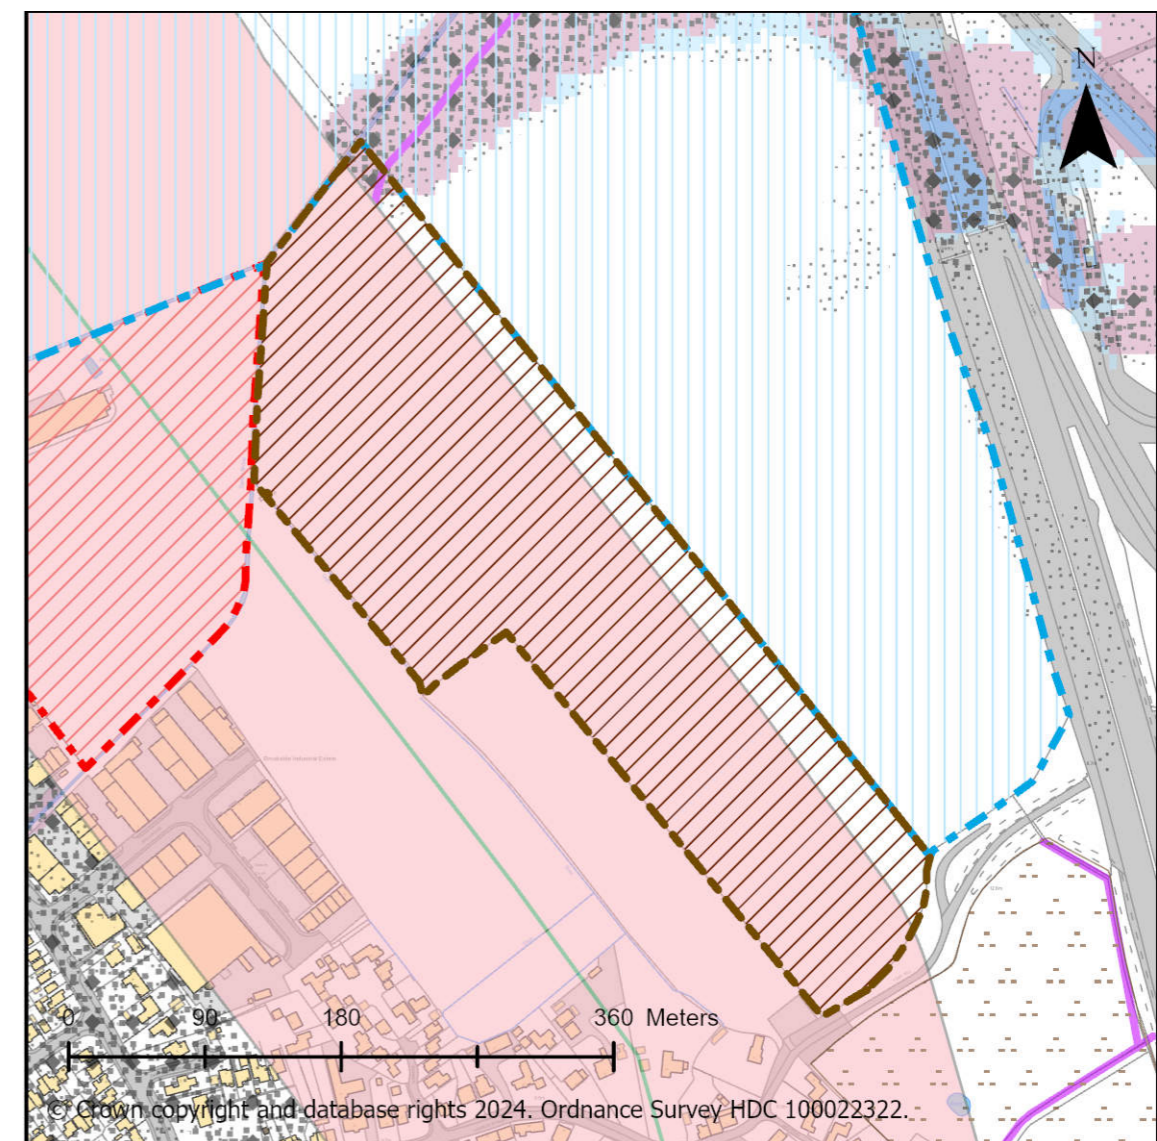

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 169
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	6.86% of the site is in flood zone 3b (0.63ha)	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The majority of the site is within flood zone 1, with flood zones 2 and 3 present along the northern boundary. Surface water flood risk is present within a similar location. The site is grade 3 agricultural land.</p> <p>The site is in open countryside and comprises relatively flat agricultural field with hedgerow outlining the boundaries. The eastern and northern boundaries look out into interrupted open countryside. The northern boundary is bounded by Sawtry Brook. The site can be clearly seen from Tort Hill, a narrow lane which extends along the southern boundary of the site transitioning from residential area to countryside accessible for walking and active travel. A public right of way also traverses the northern section of the site facilitating uninterrupted views into the site and wider countryside. The site is also clearly visible from Glatton Road to the west. Current access is provided off Tort Hill. The site is highly exposed in both the local landscape and longer distance views , significant landscaping would be required to mitigate the impact of development.</p> <p>There is no known pollution or contamination, and no known gas pipelines and buffer zone cross the site nor overhead powerlines. An oil pipeline buffer zone crosses the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is single organisational control, development is supported by the landowners. The site is available from 2024-2028, planning permission would be acquired and then sold to a third party for development, build out is expected to take 2 to 3 years.</p>	+
<p><b>Achievability</b></p> <p>The site promoter notes that access to gas supply is unknown but mains water, electricity supply and digital and telecommunications infrastructure are accessible from the site boundary. Access to the site is currently from Tort Hill a narrow lane making access for construction or operational purposes difficult to achieve. The site promoter notes that access is a significant constraint at present, but proposes that comprehensive development could be achieved in conjunction with the neighbouring land, this may pose significant issues regarding viability or ransom strips affecting viability and/or achievability. The landscape impact of development would be high requiring strategic landscaping.</p> <p>The site promoter proposes employment and distribution uses, the transport impact as a result of the proposed use with potential for heavy goods vehicles would require investigation.</p>	-
<p><b>Deliverability / developability</b></p>	~

<p>There are significant constraints regarding access and rights to access the site via alternative means. The site's location within a mineral safeguarding area may limit the possibility of residential uses on site. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Subject to overcoming the constraints the site could be categorised as developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by fluvial flood and surface water flood risk.</li> <li>• The site is wholly greenfield grade 3 agricultural land.</li> <li>• The site is more related to the countryside and forms part of the countryside approach to the village.</li> <li>• The proposed use of the site could impact the character and form of the extremely low density residential area (where access would be required) and village in general and increase large goods vehicle and transport movements through the village.</li> <li>• The site is close to a church and public house, but is beyond 800m from other cultural and leisure facilities. The site is adjacent to Brookside Industrial Estate which could provide additional employment opportunities and opportunities for expansion.</li> <li>• The proposed use of the site could cause light, noise, odour, air or visual pollution dependent on the final use.</li> <li>• There are safety issues regarding entrance and exit to the site.</li> <li>• This would support a mix of new high and low density employment within the district.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site is inappropriate for development as it:</p> <ul style="list-style-type: none"> <li>• Has little relationship to the existing place and community and contributes to the approach to the village.</li> <li>• Would cause light, noise, odour, air or visual pollution dependent on the final use.</li> <li>• The proposed use of the site could impact the character and form of the extremely low density residential area (where access would be required) and village in general and increase large goods vehicle and transport movements through the village.</li> <li>• Has safety concerns for access and exit to and from the site.</li> </ul>
--

- An oil pipeline buffer zone could impact the layout and proposed use of the site.
- The site promoter notes that access is a significant constraint potential access from neighbouring land, may pose significant issues regarding viability or ransom strips affecting viability and/or achievability.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to, landscape impact, impact on character and form of nearby residential area and the village in general, pollution and safety.	N/A	N/A

**Sawtry 6: Glebe Farm, Sawtry**

<b>Site reference</b>	Sawtry 6
<b>Site name</b>	Glebe Farm, Sawtry

Site address	Parish(es)	Site area (ha)
Glebe Farm, Gidding Road, Sawtry, PE28 5UJ	Sawtry	48.87ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Open space uses:	48.87ha	Available 2023
Biodiversity net gain		Build out N/A

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 330
Relevant planning history	None
Land type	Wholly greenfield
Current use of the site	Agricultural land
Supporting information	Location plan Technical Note - Biodiversity Net Gain Assessment Summary

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk and has minimal surface water flood risk. The site is wholly greenfield, arable agricultural land categorised as grade 3.</p> <p>The site is within open countryside sloping west to east by over 20 metres. It forms part of the wider undulating countryside, the hills of which form prominent landscape features and can be seen from long distance views and public rights of way. The southern edge of the site is bounded by established hedgerow and Gidding Road. Drainage ditches are present with and around the site.</p> <p>Due to the proposed use of the site it is unlikely that any adverse landscape or ecological impact would occur. The proposed use of the site for biodiversity net gain would be considered complementary to active agricultural use and has the potential to enhance the surrounding sites of nature conservation importance.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or their associated buffer zones cross the site, nor do any overhead electricity powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers the potential to contribute towards biodiversity improvements. The site is not within a mineral safeguarding or water recycling area.</p>	+
<p><b>Availability</b></p> <p>The site is in single individual ownership and control, the proposal for biodiversity net gain is supported by the landowner. There are no known legal restrictions. The site is proposed to be delivered through a combination of the biodiversity net gain representative and credit broker with the landowner establishing and managing the site for the 30 year period. The site is available from 2023.</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains and electricity supply are unknown, as is access to digital and telecommunications infrastructure although the proposed use would generate limited if any demand for utility services. No gas or oil pipelines and buffer zones, nor overhead electricity lines cross the site. There is no known pollution or contamination. The proposal to create biodiversity net gain would enhance the biodiversity and ecological profile of the area.</p> <p>Access has not been established within the submission, however as the site is proposed to be managed by the landowners and due to the nature of the proposal it is not considered that this would affect the achievability of the site given the landowner actively farms the land.</p>	+

Page 671 of 3488

<p>The site promoter provides further information on the biodiversity status of the land and potential enhancements that could be achieved.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is deliverable. There are no known legal or ownership constraints. The site would be delivered by the landowner and the biodiversity net gain representative, who would act as a planning authority liaison and facilitate credit brokerage and managing the sale process. The landowner would be responsible for establishing the habitats and managing the site for the nationally required minimum period of 30 years.</p>	+

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk, surface water flood risk is present. Biodiversity Net Gain sites are classified as water compatible development and can contribute to improved drainage and water storage.</li> <li>• It can contribute to increasing resilience to the impacts of climate change, through planting and habitat restoration</li> <li>• Public right of way along the frontage could provide opportunities for active travel and leisure uses.</li> <li>• The site would have a positive impact on the surrounding landscape and ecology.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for biodiversity net gain</li> <li>• Is proposed to be delivered through a combination of the biodiversity net gain representative and credit broker with the landowner establishing and managing the site for the 30 year period.</li> <li>• The site promoter provides further information on the biodiversity status of the land and potential enhancements that could be achieved.</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 48.87ha  100% net developable area due to proposed use of site.	48.87ha for biodiversity net gain.	Available from 2024  Build out and retention - 30 years minimum

**Updates after the Initial Assessment**

**Sawtry 7: Land at Little Common Farm, Sawtry**

<b>Site reference</b>	Sawtry 7
<b>Site name</b>	Land at Little Common Farm, Sawtry

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land at Little Common Farm, Cooks Lane, Sawtry, PE28 5XN	Sawtry	14.56 ha

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Commercial: Employment Commercial leisure uses Infrastructure: Transport and parking/lorry parking Renewable energy	Not specified	Available 2024 to 2028 Build out 5 years

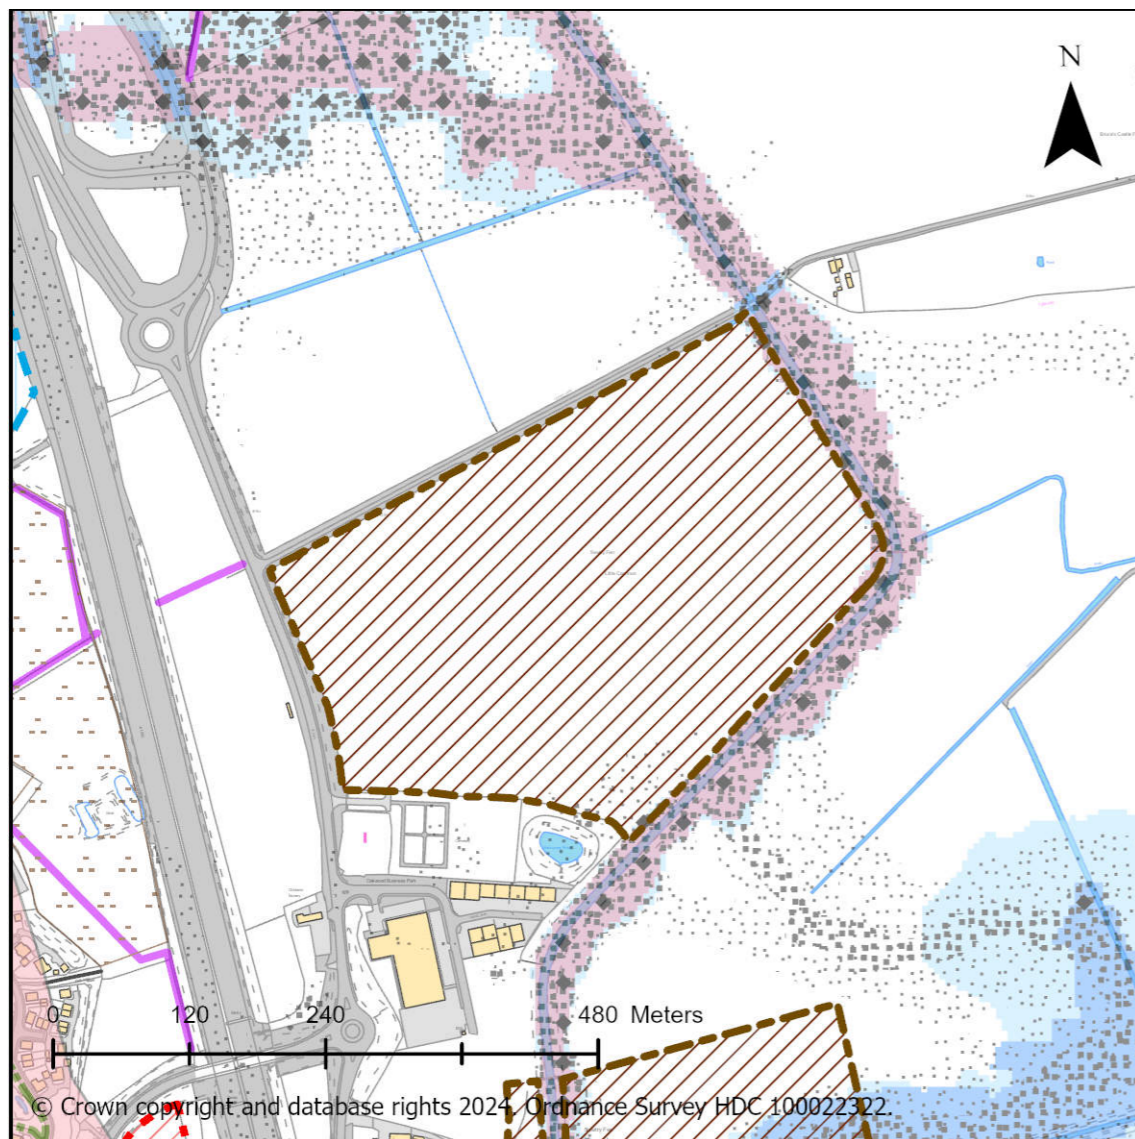

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 380
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Covering letter Site boundaries

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	1.12 % (0.16ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1 with elements of flood zone 2, 3a and 3b present associated with drainage that bounds the south and east. Some surface water is also present in a similar location. The site is a combination of grade 3 and 2 agricultural land.</p> <p>The site slopes slightly down from west to east and is surrounded by countryside and in agricultural use. The site is bounded by Old Great North Road (B1043) to the west and Cooks Lane to the north; immediately south is St Andrew's Cemetery and grade II listed building along with land allocated in the Sawtry Village Neighbourhood Plan for new or</p>	+
--	---

<p>enhanced cemetery facilities. Hedgerow is present along the northern boundary and some sparse tree planting along the western edge. Long distance views can be seen into the site from the roads and cemetery and public rights of way further south meaning the site is highly exposed in the wider landscape, strategic landscaping would be required to address this.</p> <p>The site is removed from the main residential development of the settlement which is east of the A1, and more related to the countryside, although wider industrial uses are present to the south.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single / individual company control, the land/property is owned by a registered charity as part of its investment property portfolio. supported by landowners. No known legal restrictions. How will the site be delivered - unknown, build out over 5 years</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains water and electricity supply are unknown as is digital and telecommunications infrastructure. Site access could be achieved from the Old Great North Road or Cooks Lane, proximity to the A1 would assist with the logistics of construction and operation of the site. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. There are no other known constraints, however evidence of how the site could be delivered is not provided.</p> <p>The evidence submitted by the site promoter suggests that access could be achieved from either the B1043 or Cooks Lane. Perimeter planting would screen development minimising landscape impact.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site and landscape impact would require addressing. The proposed development is contrary to current adopted planning policy so allocation status would be required. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is constrained by some fluvial and surface water flood risk.</li> <li>• The site is wholly greenfield just over half of the site is grade 3 agricultural land and the remaining land is grade 2</li> <li>• The site is well related to the existing employment cluster</li> <li>• Has the potential to support high or low density employment within the district.</li> <li>• The prospect of causing widespread light, noise, odour or visual pollution will be dependent on the final use. The site is near the A1 which could cause noise odour or visual pollution.</li> <li>• The site is exposed in the wider landscape setting and would require landscape mitigation.</li> <li>• Proposed uses could impact on the tranquillity and setting of the cemetery and grade II listed building.</li> <li>• The site is distant from local services and facilities, with only a pavilion within 800m. The site will provide 14.56ha of employment land is within 1.5km of Brookside Industrial Estate and Old Great North Road Industrial Estate which could provide additional employment opportunities to compliment current uses.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential to provide development of a scale that could be integrated into the existing business cluster</li> <li>• Access to the A1 could assist with the operation of the proposed use(s)</li> <li>• Would require strategic landscape mitigation and flood mitigation</li> <li>• Would need to mitigate impact on the cemetery and grade II listed building</li> <li>• Would require investigation into noise, odour, air and visual pollution.</li> <li>• Delivery of the site would have to be demonstrated including achievability of access to mains water, electricity supply and digital and telecommunications infrastructure.</li> </ul>
--

**Sawtry 8: Land North of Black Horse Industrial Estate (larger site), Sawtry**

<b>Site reference</b>	Sawtry 8
<b>Site name</b>	Land North of Black Horse Industrial Estate (larger site), Sawtry

Site address	Parish(es)	Site area (ha)
Land east of Old Great North Road, south of Sawtry Motors and North of Black Horse Industrial Estate	Sawtry	5.97ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment	Undefined	Available 2024-2024, Build out 3-4 years.

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 83
Relevant planning history	HELAA (December 2017): North of Black Horse Industrial Estate  Western parcel of proposed site only.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	4.90% of the site is within flood zone 3b (0.29ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 676 of 3488

**Assessment of Site Potential**

Page 677 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>Just over two thirds of the site is within flood zone 1, with flood zone 2 (and some flood zone 3a &amp; 3b) prominent in association with a drainage that runs through the site and focussing also on the south and south eastern area of the site, surface water food risk follows a similar pattern. The site is grade 3 agricultural land and is relatively flat sloping gently down west to east.</p> <p>The site is separated by Middle Level Catchwater Drain, which would require mitigation to allow for safe crossing. The eastern parcel of land has been allocated in the Sawtry Village Neighbourhood Plan - Proposed Allocation for Sport and Recreation (Greenfields Extension) - meaning that the land has been identified for community use and proposals to create new or enhanced community facilities for recreation and leisure. It is therefore considered that the western parcel is unsuitable for development as it undermines the Neighbourhood Plan.</p> <p>Immediately south of the western parcel lies Old Great North Road Industrial estate an established employment area, to the north is Sawtry Motors a nursery and some residential properties. Development in this location could join up existing business and industrial uses allowing room for commercial expansion of the industrial estate. The site is relatively enclosed but could be seen from the east from Greenfields (sports and leisure fields and facilities) and Sawtry Fishing Lake.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and is not within a water recycling area.</p>	-
<p><b>Availability</b></p> <p>The site is in single individual / company ownership and in individual control, development is supported by the landowner. There are no known legal restrictions. The site is available from 2024-2024, the site would be delivered by acquiring allocation status acquired and then would be sold to a third party to obtain planning permission and develop. Build out is estimated to take 3 to 4 years.</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains water and electricity supply are noted as being unknown, as are digital and telecommunications infrastructure. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. Access could be achieved from the B1043 (Old Great North</p>	-

<p>Road) and is in proximity to the A1 which could assist with the logistics of construction and day to day operation of the site. The site is separated by Middle Level Catchwater Drain, which would require mitigation to allow for safe crossing.</p> <p>The site promoter notes that a bridge or culvert may be required to cross Middle Level Catchwater Drain which separates two parcels, but access is not an issue for western parcel. They also note that the site could be subdivided.</p>	-
<p><b>Deliverability / developability</b></p> <p>The western parcel of the site is classified as not deliverable, there are significant constraints to overcome including crossing of the Middle Level Catchwater Drain and the land's status as a Neighbourhood Plan allocation for sports and recreation uses.</p> <p>The western parcel of this site has been assessed separately as Sawtry 9 - Land North of Black Horse Industrial Estate (smaller site), Sawtry</p>	-

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No
---	----

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1 with a negligible amount of land within flood zone 2, 3a &amp; 3b associated with the Middle Level Catchwater Drain on the eastern edge of the site. Surface water food risk follows a similar pattern. The site is grade 3 agricultural land and is relatively flat. Trees and hedgerow line the west and south of the site and some of the north. Immediately south of the western parcel lies Old Great North Road Industrial estate an established employment area, to the north is Sawtry Motors a nursery and some residential properties. Development in this location could join up existing business and industrial uses allowing room for commercial expansion of the industrial estate. The sites location near to further industrial uses such as Old Great North Road Industrial Estate could provide opportunity for enhanced employment opportunities within the area. An ambition which is also set out in the Sawtry Village Neighbourhood Plan which favours businesses proposals the east the A1 thus limiting the impact of HGVs on the streets within the village. The site is relatively enclosed but could be seen from the east from Greenfields (sports and leisure fields and facilities) and Sawtry Fishing Lake, landscape mitigation would be required.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and is not within a water recycling area.</p>	+
<p><b>Availability</b></p> <p>The site was submitted for consideration by two different parties one proposing commercial leisure uses - hotels, gyms, cinemas and the other employment. Availability status of the site has been taken from the planning agent submission which was submitted on behalf of the landowner for site Sawtry 8: Land North of Black Horse Industrial Estate (larger site), Sawtry.</p> <p>The site is in single individual / company ownership and in individual control, development is supported by the landowner. There are no known legal restrictions. The site is available from 2024-2024, the site would be delivered by acquiring allocation status acquired and then would be sold to a third party to obtain planning permission and develop. Build out is estimated to take 3 to 4 years.</p>	+
<p><b>Achievability</b></p>	+

Page 679 of 3488

<p>Access to gas, mains water and electricity supply are noted as being unknown, as are digital and telecommunications infrastructure. No gas or oil pipelines and buffer zones nor overhead electricity lines cross the site. Access could be achieved from the B1043 (Old Great North Road) and is in proximity to the A1 which could assist with the logistics of construction and day to day operation of the site. Flood mitigation measures associated with the Middle Level Catchwater Drain, would require mitigation as would landscape impact from the east.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no significant constraints to development, flooding and landscape impact would require mitigation. The site is considered deliverable.</p>	+

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● The site is constrained by some fluvial and surface water flood risk.</li> <li>● The site is wholly greenfield grade 3 agricultural land.</li> <li>● The site is well related to Old Great North Industrial Estate</li> <li>● Has the potential to support high or low density employment within the district.</li> <li>● The prospect of causing widespread light, noise, odour or visual pollution will be dependent on the final use, proximity to the A1 could cause noise odour or visual pollution.</li> <li>● Landscape impact would not be significant if existing trees and hedgerow were retained</li> <li>● The site is distant from local services and facilities, with only a pavilion within 800m.</li> <li>● The site relates well to the existing area with Old Great North Road Industrial estate immediately south of the site and Sawtry Motors, a nursery and some residential properties to the north . It has the potential to be effectively masterplanned to integrate with the current business cluster and provide opportunity for expansion.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Has potential to provide development of a scale that could be integrated into the existing industrial estate</li> <li>● Would require flood mitigation</li> <li>● Retention of trees and hedgerow would minimise landscape impact</li> <li>● Access to the A1 could assist with the operation of the proposed use(s)</li> <li>● Would require investigation into noise, odour, air and visual pollution.</li> </ul>
--

- Some mitigation may be required to integrate the development with nearby residential units.
- Delivery of the site would have to be demonstrated including achievability of access to mains water, electricity supply and digital and telecommunications infrastructure.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.35 ha 75% net developable area to facilitate retention of trees and hedgerow and flood mitigation. 1.35ha x 75% = <b>1.0125ha</b>	The net developable area is 1.0125ha Commercial - Employment at 0.35 plot ratio to reflect a combination of predominantly offices with some industrial use = $(1.0125\text{ha} \times 0.35) \times 10,000 =$ <b>3,543sqm</b> or Commercial - Commercial leisure uses at 0.25 plot ratio to reflect stand alone large units with associated smaller associated uses and extensive complimentary parking = $(1.0125\text{ha} \times 0.25) \times 10,000 =$ <b>2,531.25 sqm</b>	Available post 2028 subject to allocation Build out 2 to 5 years

Site address	Parish(es)	Site area (ha)
Land to the east of St Judith's Lane and west of Toll Bar Way and Green End Road, Sawtry	Sawtry	34.67ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and / or affordable housing</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Retail</li> </ul> Infrastructure: <ul style="list-style-type: none"> <li>Supporting infrastructure - schools, community centres</li> <li>Health uses</li> </ul> Open spaces: <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain</li> <li>Land to safeguard against flooding</li> </ul>	Up to 500 dwellings Retail floorspace to be confirmed Infrastructure floorspace (schools, community centre, health uses) to be confirmed Circa 18ha open space	Available 2024-2028 Build out over 10 years

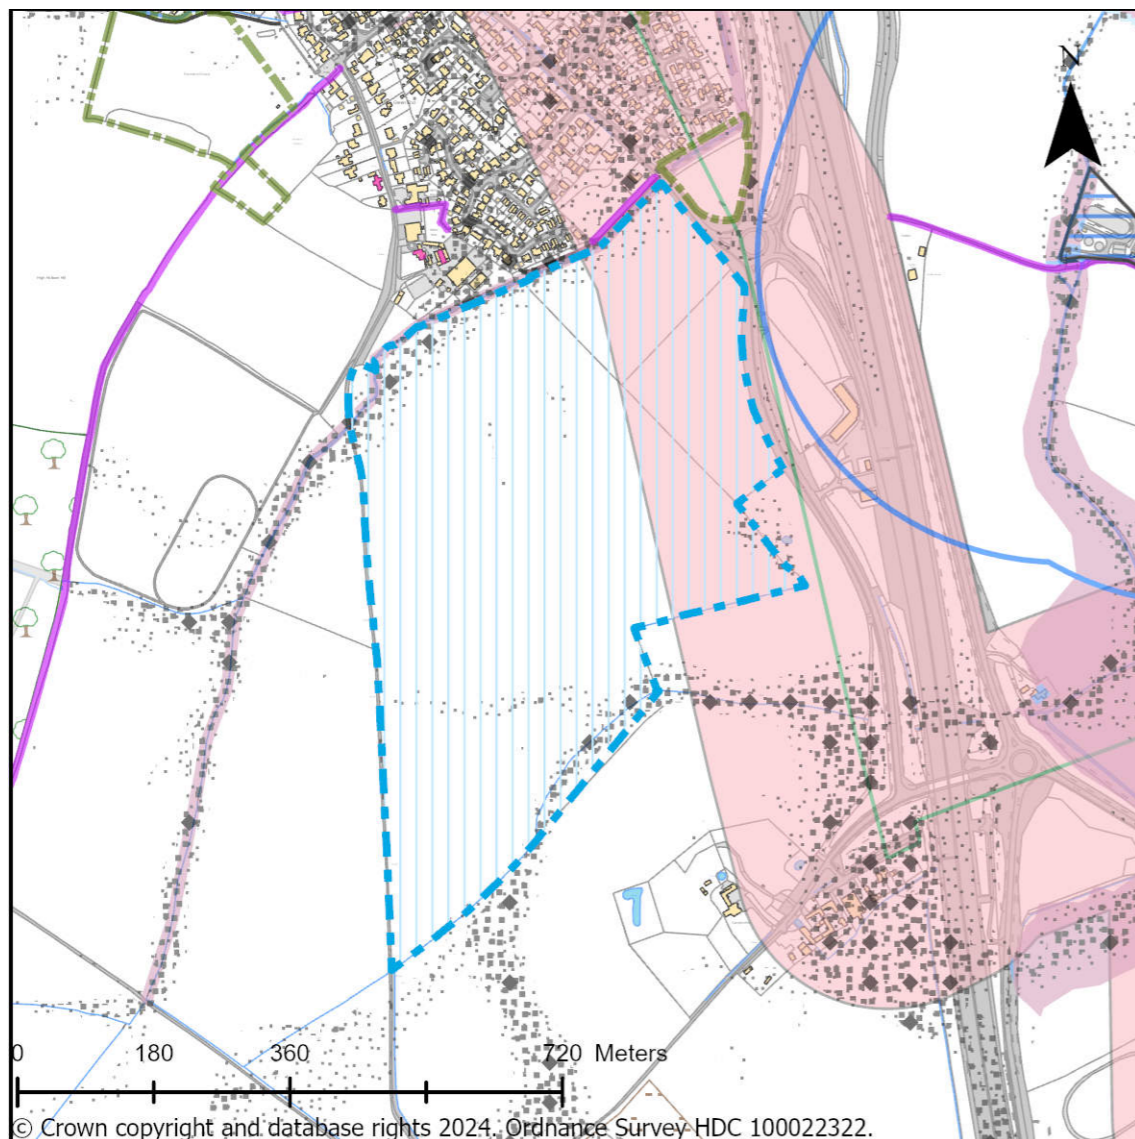

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 161
Relevant planning history	None

Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Cambridgeshire County Council preapplication advice - education and libraries Location Plan Supporting Planning Statement Vision Document

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 1% of the site is within flood zone 3b (0.39ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1, a small portion in of flood zone 3b is present in association with the ordinary watercourse which runs along the northern boundary, some surface water flood risk is also present on the site, towards the southern edge and and also in similar locations to fluvial flood risk. The majority of the site is grade 3 agricultural land with a very small portion of the south eastern corners of the site contained within grade 2 agricultural land (less that 0.1ha)</p>	~
--	---

The site contains part of a ridge which descends south west to north east. The site is agricultural land. Toll Bar Way bounds the eastern edge and St Judith's Lane the western. Trees and hedgerow line the eastern edge with the site highly exposed in the wider landscape from St Judith's Lane, which has minimal hedgerow. An ordinary watercourse runs along the northern boundary and ditches are located on the southern boundary. The site can also be clearly seen from elevated public vantage points such as High Holbourn Hill and from public rights of way outside the site. The northern edge abuts a dispersed pattern of development of garden land, homes and back gardens and farm building that provide a steady transition from built development to countryside. The site is highly exposed and would require significant strategic landscaping to ensure it integrates with the existing countryside. The site is of a size that would constitute disproportionate development in comparison to the size of the existing settlement. Transport impact from the increase in residential properties would require assessment.

Access to the site could be via Toll Bar Way. An oil pipeline and a buffer zone is present within the eastern third of site. The site promoter notes that three underground utility pipelines run north to south, through the eastern parcel of the site: an abandoned Ministry of Defence (MoD) underground pipeline runs close to the site's eastern boundary and enters the northeast corner of the site, to the west of the MoD pipeline, lies a CLH fuel pipeline. and the most western pipeline is a medium pressure Cadent gas main.

Presence of pollution or contamination is unknown and overhead powerlines cross the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay safeguarding area and is not within a water recycling area.

**Availability**

The site is in single individual ownership and control, the land is optioned and a hybrid promotion agreement has been entered into with the landowner who supports the development. There are no known legal restrictions. The site is available from 2024 -2028, planning permission would be acquired and then the land sold to a third party for development. The site promoter estimates that the site could be completed within 10 years from the last relevant grant of planning permission (Reserved Matters or discharge of condition).

**Achievability**

Gas supply is accessible from within the site and mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. Access to the site could be via Toll Bar Way and proximity of the A1 would assist in the logistics of construction.

--

+
---

~
---

<p>Presence of pollution or contamination is unknown. Three underground utility pipelines run north to south, two of which have easements, the presence of which would constrain development on the eastern edge. Overhead powerlines on the site mean that mitigation would be required to relocate the powerlines underground, or mitigate the presence of the powerlines. The site's prominence within the countryside and would require significant strategic landscaping. Some services and facilities may be required to support the new community.</p> <p>Site promoter has provided supporting information and a vision document which notes that design constraints due to the pipelines and easements could be mitigated with careful design and that overhead electricity lines can be grounded and re-routed as part of the development proposals. The character of St Judith's lane is proposed to be retained and buffered, acting as a transition to the wider landscape and higher ground to the west and connected green infrastructure provided and reinforced. Access proposal are provided from Green End Road and Toll Bar Way.</p>		
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Constraints which require resolution the presence of pipelines and easements and landscape impact. Transport impact from the increase in residential properties would require assessment. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is available from 2024, once planning permission is acquired the land will be sold to a third party for development. The site is therefore classified as developable.</p>		

<ul style="list-style-type: none"> <li>● Proximity to the A1 could cause some odour, noise, or visual pollution</li> <li>● The site is of a size which would be a significant extension to the village.</li> <li>● The site is close to some local services and facilities and employment opportunities are within 2km.</li> <li>● The site is approximately 300m from Aversley Wood SSSI meaning it could impact on the biodiversity and ecological significance of the site.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Has potential to be integrated into the existing place and community, but may be disproportionate in size to the existing village.</li> <li>● Would require flood mitigation</li> <li>● Would require strategic landscaping and sensitive design to transition to the countryside and integrate with the more dispersed pattern of development to the north.</li> <li>● Would need to respect the rural nature and use of St Judith's Lane</li> <li>● Access to the A1 could assist with the operation of the proposed use(s), would require transport impact assessment</li> <li>● Would need to address potential impact on Aversley Wood SSSI especially in relation to potential increased footfall resulting from increase in population, ecological and biodiversity impact.</li> <li>● Would require investigation into noise, odour, air and visual pollution.</li> <li>● Mitigation would be required to address multiple underground pipelines which may affect the layout of development and the presence of overhead powerlines addressed</li> <li>● Some services and facilities may be required to support the new community.</li> </ul>

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 338
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Local plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 689 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, surface water flood risk is present in the south eastern quarter of the site and heading towards the north western corner associated with a drainage ditch. The eastern third of the site is grade 2 agricultural land with the remainder grade 3.</p> <p>The site contains part of a ridge which slopes slowly to the east. The site is agricultural land. Toll Bar Way bounds the eastern edge and Coppingford Hall (residential properties) sits outside the south western corner. Trees and hedgerow line the eastern edge with the site highly exposed in the wider landscape from St Judith's Lane, which has minimal hedgerow. A ditch runs through the middle of the site and trees and hedgerow screen the road on the southern boundary. The northern edge is set within the wider countryside landscape meaning that the site is in an isolated location removed from extensive built development, although some residential and agricultural properties are present across Coppingford Road to the south. The site is highly exposed to the North and east and would require significant strategic landscaping to ensure it integrates with the existing countryside. The is close to the A1, with the potential for access to the site from Coppingford Road, however the road gradually descends as a result of it's elevated level starting above the A1. Due to the proposed use of the site, the impact of increased transport and safety of access to the site may need investigation and or mitigation. Its location close to the A1 could complement the operation of the site.</p> <p>An oil pipeline and a buffer zone is present across the majority of the site. Presence of pollution or contamination is unknown and overhead powerlines cross the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay safeguarding area and is not within a water recycling area.</p>	~
<p><b>Availability</b></p> <p>The site is within single individual ownership and control and development is supported by the landowner. There are no identified legal restrictions from the site promoter. The site is available from 2023 and allocation status would be acquired before the land was sold to a third part for obtaining planning permission and developing. Estimated build out of the site is unknown.</p>	~
<p><b>Achievability</b></p> <p>Access to gas, mains water and electricity supply and digital and telecommunications infrastructure are noted as being unknown. Access to the site could be via Coppingford Road and proximity of the A1 would assist in the logistics of construction and operation of</p>	-

<p>the site. However the site boundary does not include the access from the road to the site meaning that there may be issues with landownership and / or ransom strips which may affect the achievability or viability of the site.</p> <p>Presence of pollution or contamination is unknown. Underground pipelines and buffer zones run north to south across the majority of the site, the presence of which may constrain development. Overhead powerlines on the site mean that mitigation would be required to relocate the powerlines underground, or mitigate the presence of the powerlines. The site's prominence within the countryside and would require significant strategic landscaping.</p> <p>Site promoter notes that a detailed assessment of the possible surface water flood risk, and necessary site specific mitigation measures would be identified.</p>	
<p><b>Deliverability / developability</b></p> <p>The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. Constraints which require resolution include the presence of pipelines and landscape impact which could limit the achievability and layout of development. Transport impact as a result of the proposed use would require assessment. The site is available from 2023 and allocation status would be acquired before the land was sold to a third part for obtaining planning permission and developing. Estimated build out of the site is unknown making deliverability uncertain. The site is therefore classified as potentially developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● The site is not constrained by fluvial flood risk but would require surface water flood risk mitigation.</li> <li>● The site is wholly greenfield land with the eastern third of the site grade 2 agricultural land and the remainder grade 3.</li> <li>● The site is an isolated location removed from extensive built development and highly exposed within the wider landscape. To minimise impact on the hamlet and landscape, employment uses could be reduced to reflect development density to the south of Coppingford Road.</li> <li>● Proximity to the A1 could cause some odour, noise, or visual pollution, as could the proposed uses of the site.</li> <li>● Distance to the A1 may make roadside service use unpractical due to distance required to travel to access to the services.</li> </ul>
--

- The site is approximately 750m from Aversley Wood SSSI meaning it could impact on the biodiversity and ecological significance of the site.
  - The site is distant from local services and facilities , the site proposes employment and/or roadside services on the site which could provide additional high or low density employment.
- In combination the outcomes of the LAA and SA indicate that the site:
- May be better suited to employment development
  - Has potential to be integrated into the existing place and community if the size of the site is reduced to reflect development density to the south of Coppingford Road.
  - Would require landscape mitigation
  - Would need to address potential impact on Aversley Wood SSSI especially in relation to potential increased footfall resulting from increase in population, ecological and biodiversity impact.
  - Would require surface flood risk mitigation
  - Would require investigation into noise, odour, air and visual pollution.
  - Mitigation would be required to address oil pipeline buffer zone which may affect the layout of development and the presence of overhead powerlines addressed
  - Achievability of access to mains water and electricity supply and digital and telecommunications infrastructure would require confirmation.
  - Site access from Coppingford Road would require confirmation that there are no issues with landownership and / or ransom strips which may affect the achievability or viability of the site.

Page 690 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 9.04ha Site reduction by 50% to reflect development density on Coppingford Road. $9.04\text{ha} \times 50\% = 4.52\text{ha}$ 60% net developable area to provide landscape mitigation. $4.52\text{ha} \times 60\% = \mathbf{2.712\text{ha}}$	The net developable area is 2.712ha Commercial - Employment at 0.35 plot ratio to reflect a combination of predominantly offices with some industrial use = $(2.712\text{ha} \times 0.35) \times 10,000 = \mathbf{9,492\text{sqm}}$	Available post 2028 subject to allocation Build out 1-3 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 15
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Covering letter and further information Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass

Fundamental constraints	Status	Outcome
Flood zone 3b	3.34% of the site is within flood zone 3b (0.41ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 692 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site is within flood zone 1, flood zones 2, 3a and 3b are present along the south eastern and northern boundary, surface water flood risk is also present within the site along the northern and eastern boundaries in association with the Middle Level Catchment Drain to the north and field drainage on the east. The site is grade 3 agricultural land.</p> <p>The site is split into two parcels a smaller site to the west of the B1043 (1.26ha) and the other to the east of the B1043.</p> <p>The western parcel (1.26ha) is in use for motocross, so although relatively flat it has been sculpted specifically to match its current use. It is bounded by the A1 to the west and the B1043 to the east, it is well screened by established trees and hedgerow, with the exception of the area around the access point off the B1043, which provides a clear view into the site. Development on this site would have minimal landscape impact. Transport safety and movement for uses such as employment and leisure would require assessment due to its location in proximity to the roundabout to the north. The shape of the site makes it unclear if built development could be accommodated on the site and elevation of buildings would require careful consideration.</p> <p>The eastern parcel (11.05ha) is relatively flat agricultural land. Parts of the eastern and southern site boundaries are screened by mature trees and hedgerow, however clear views into the site can still be seen from parts of the B1043 (although transient in nature). A public right of way runs along southern boundary and two further to the north outside of the site (Red Drove and Straight Drove) where the site can be clearly seen sitting within the wider countryside landscape meaning strategic landscaping would be required to mitigate the impact of development. The south eastern boundary abuts a water recycling area, which is screened by trees and hedgerow. The south western boundary has Toll Bar residential property just outside. There is no current vehicular access to the site. The sites location near to further industrial uses such as Old Great North Road Industrial Estate could provide opportunity for enhanced employment opportunities within the area. An ambition which is also set out in the Sawtry Village Neighbourhood Plan which favours businesses proposals the east the A1 thus limiting the impact of HGVs on the streets within the village. The eastern parcel of land could be considered more suitable for commercial development if vehicle access can be achieved.</p> <p>Parts of the site (especially the western parcel) may be impacted by noise, light and air pollution due to proximity to the A1 and land pollution and contamination due to its existing use. No oil or gas pipelines buffer zones or overhead powerlines cross the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay safeguarding area and approximately 0.9ha is outside the water recycling area buffer zone leaving around 93%</p>	
--	--

<p>of the site within the area and a water recycling centre on the south eastern boundary, meaning odour issues will require mitigation. Suitability of the proposed uses in this area would require confirmation.</p> <p>The site promoter's odour risk assessment notes that it could be used for industrial purposes and the large majority could alternatively (even) be used for high sensitivity receptors e.g. residential. However residential use is not listed as a proposed use in the site submission and due to the sites location being removed from substantial residential development and services, residential development would be considered unsuitable.</p>	
<p><b>Availability</b></p> <p>The site is in single company ownership and control and development is supported by the landowners. There are no known legal restrictions. The site is available from 2024-2028 and allocation status would be acquired and then sold to a third party for obtaining planning permission to be developed. Build out would be estimated to take 10 years.</p>	+
<p><b>Achievability</b></p> <p>Access to gas, mains water, electricity supply and digital and telecommunications infrastructure is unknown. Access could be achieved from the western parcel from the B1043, although upgrades to access would be required potentially taking a large portion of the site out of the developable area, as could remediation for noise air and light pollution as a result of the A1 and associated parking. Access to the eastern parcel would require further confirmation. Proximity to the A1 and B1043 would assist with the logistics of construction and operation of the site. The impact of odour on the site would require assessment and mitigation as would the impact of the site on the wider landscape. Assessment on the impact on the operation or expansion of the water recycling centre would be required</p> <p>One of the site promoters notes that an odour risk assessment demonstrates that the whole of the site could be used for industrial purposes, that there are options to secure a suitable vehicle access(es) into the site, and the site could be linked in with the existing cycle/footway extending north into the village from Straight Drove. The promoter also mentions development could support training and apprenticeship schemes</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. There are a number of constraints which require resolution including land pollution &amp; contamination, air, light and noise pollution, odour and landscape mitigation, access and parking issues. The site is available from 2024-2028 and allocation status would be acquired and then sold to a third party for</p>	~

obtaining planning permission and to be developed. Build out of the site is estimated to take 10 years. The site is classified as potentially developable, if constraints could be overcome.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The majority of the site is within flood zone 1, flood zones 2, 3a are present as is surface water flood risk which would require mitigation.
- The site is wholly greenfield grade 3 agricultural land.
- The site is well related to existing employment uses and the A1 making access and operation of the uses achievable
- The eastern parcel is exposed in the wider landscape require strategic landscaping
- The shape of the western parcel makes it unclear whether development could be accommodated on site.
- Proximity to the A1 and B1043 could cause some odour, noise, or visual pollution, as could the proposed use of the site.
- The site is distant from most to local services and facilities, with the exception of the playing fields and sports pavilion.
- The site is well related to existing employment development and in a location that could be effectively masterplanned to become part of the cluster of employment uses in the area and provide opportunities for local business expansion.

In combination the outcomes of the LAA and SA indicate that the site:

- The site has the potential to be effectively masterplanned to become part of the cluster of employment uses in the area and provide opportunities for local business expansion
- Flood risk mitigation would be required
- Would require strategic landscaping on the eastern parcel
- Would require investigation into noise, odour, air and visual pollution.
- Further masterplanning would be required to justify if the western parcel could be developed.
- Transport safety and movement for uses such as employment and leisure would require assessment due to its location in proximity to the roundabout to the north.
- Odour assessments and compatibility of use with water recycling centre and location within the buffer zone would be required.
- Would have to address impact on residential property on the south western boundary
- Would need to identify means of access to eastern parcel.

- Achievability of access to mains water and electricity supply and digital and telecommunications infrastructure would require confirmation.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p><b>Western Parcel</b></p> <p>Gross site area 1.26ha</p> <p>75% net developable area to allow for retention of trees and hedgerow and tapered southern extent.</p> <p>1.26ha x 75% = 0.945ha</p>	<p>Net developable area 0.945ha</p> <p>Commercial - Employment at 0.35 plot ratio to reflect a combination of predominantly offices with some industrial use = (0.945ha x 0.35) x 10,000= <b>3,307.5sqm</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out 1 to 3 years</p>
<p><b>Eastern Parcel</b></p> <p>Gross site area 11.05ha</p> <p>60% net developable area to allow strategic landscaping, mitigation of impact on water recycling centre and residential property.</p> <p>11.05ha x 60% = 6.63ha</p>	<p>Net developable area 6.63ha</p> <p>Commercial - Employment at 0.35 plot ratio to reflect a combination of predominantly offices with some industrial use = (6.63ha x 0.35) x 10,000= <b>23,205sqm</b></p>	<p>Available post 2028 subject to allocation</p> <p>Build out 10 years</p>
<p><b>Total</b></p>	<p><b>26,512.5 sqm</b></p>	<p><b>Available post 2028 subject to allocation</b></p> <p><b>Build out 10 years</b></p>

Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial or surface water flood risk and is grade 3 agricultural land. The site is in use for motocross, so although relatively flat it has been sculpted specifically to match its current use. The site is south of and established employment area Black Horse Business Park and separated from this by a roundabout. It is bounded by the A1 to the west and the B1043 to the east, it is well screened by established trees and hedgerow, with the exception of the area around the access point off the B1043, which provides a clear view into the site. Development on this site would have minimal landscape impact. Transport safety and movement for uses such as employment and leisure would</p>	~
---	---

<p>require assessment due to its location in proximity to the roundabout to the north. The shape of the site makes it unclear if built development could be accommodated on the site and elevation of buildings would require careful consideration.</p> <p>Pollution and contamination may be present on site due to its current use, the site may be impacted by noise, light and air pollution due to its proximity to the A1. No oil or gas pipelines buffer zones or overhead powerlines cross the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay safeguarding area and approximately 0.34ha of the site is within a water recycling area buffer zone leaving around 73% of the site within the area, meaning odour issues will require mitigation. Suitability of the proposed uses in this area would require confirmation.</p>	
<p><b>Availability</b></p> <p>The site was submitted for consideration by two different parties one proposing commercial leisure uses - hotels, gyms, cinemas and the other employment on a larger footprint of land. Availability status of the site has been taken from the planning agent submission which was submitted on behalf of the landowner for site Sawtry 13: Land South of Old Great North Road Industrial Estate (larger site), Sawtry.</p> <p>The site is in single company ownership and control and development is supported by the landowners. There are no known legal restrictions. The site is available from 2024-2028 and allocation status would be acquired and then sold to a third party for obtaining planning permission and to be developed. Build out of this smaller site is unknown.</p>	~
<p><b>Achievability</b></p> <p>Access to gas, mains water, electricity supply and digital and telecommunications infrastructure is unknown. Access could be achieved from the B1043, although upgrades to access would be required potentially taking a large portion of the site out of the developable area, as could remediation for noise air and light pollution as a result of the A1 and associated parking. Proximity to the A1 and B1043 would assist with the logistics of construction and operation of the site and the impact of odour would require mitigation.</p> <p>One of the site promoters notes that an odour risk assessment demonstrates that the whole of the site could be used for industrial purposes, that there are options to secure a suitable vehicle access into the site, and the site could be linked in with the existing cycle/footway extending north into the village from Straight Drove. The promoter also mentions development could support training and apprenticeship schemes</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal restrictions. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. There are a number of constraints which require resolution including pollution & contamination mitigation, access and parking issues which could make the site unachievable. Odour mitigation would be required. The site is available from 2024-2028 and allocation status would be acquired and then sold to a third party for obtaining planning permission and to be developed. Build out of this smaller site is unknown. The site is classified as potentially developable, if constraints could be overcome.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial or surface water flood risk.
- The site is wholly greenfield grade 3 agricultural land.
- The site is well related to existing employment uses and the A1 making access and operation of the uses achievable
- Landscape impact would be minimal.
- The shape of the site makes it unclear if built development and associated parking could be accommodated on the site and elevation of buildings would require careful consideration.
- Proximity to the A1 and B1043 could cause some odour, noise, or visual pollution, as could the proposed use of the site.
- The site is distant from most to local services and facilities, with the exception of the playing fields and sports pavilion.
- The site is well related to existing employment development and in a location that could be effectively masterplanned to become part of the cluster of employment uses in the area and provide opportunities for local business expansion.

In combination the outcomes of the LAA and SA indicate that the site:

- The site has the potential to be effectively masterplanned to become part of the cluster of employment uses in the area and provide opportunities for local business expansion
- Would require investigation into noise, odour, air and visual pollution.
- Further masterplanning would be required to justify if development and associated infrastructure is achievable.
- Transport safety and movement for uses such as employment and leisure would require assessment due to its location in proximity to the roundabout to the north.
- Ground pollution and contamination would require assessment and mitigation.

- Odour assessments and compatibility of use due to location within water recycling buffer zone would be required.
- Achievability of access to mains water and electricity supply and digital and telecommunications infrastructure would require confirmation.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.26ha  75% net developable area to allow for retention of trees and hedgerow and tapered southern extent.  $1.26ha \times 75\% = 0.945ha$	Net developable area 0.945ha  Commercial - Commercial leisure uses at 0.25 plot ratio stand alone large units with associated smaller associated uses and extensive complimentary parking = <b>(0.945ha x 0.25) x 10,000= 2,362.5sqm</b>  or  Commercial - Employment at 0.35 plot ratio to reflect a combination of predominantly offices with some industrial use = <b>(0.945ha x 0.35) x 10,000= 3,307.5sqm</b>	Available post 2028 subject to allocation  Build out 1 to 3 years

**Updates after the Initial Assessment**

**Sawtry 15: Land East of B1043 and East of Keeper's Cottage, Sawtry**

<b>Site reference</b>	Sawtry 15
<b>Site name</b>	Land East of B1043 and East of Keeper's Cottage, Sawtry

Site address	Parish(es)	Site area (ha)
Land east of B1043 and Keeper's Cottage and north of the B1090, Sawtry	Sawtry	25.64ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial:	floorspace to be confirmed	Available 2023
Employment		Build out unknown

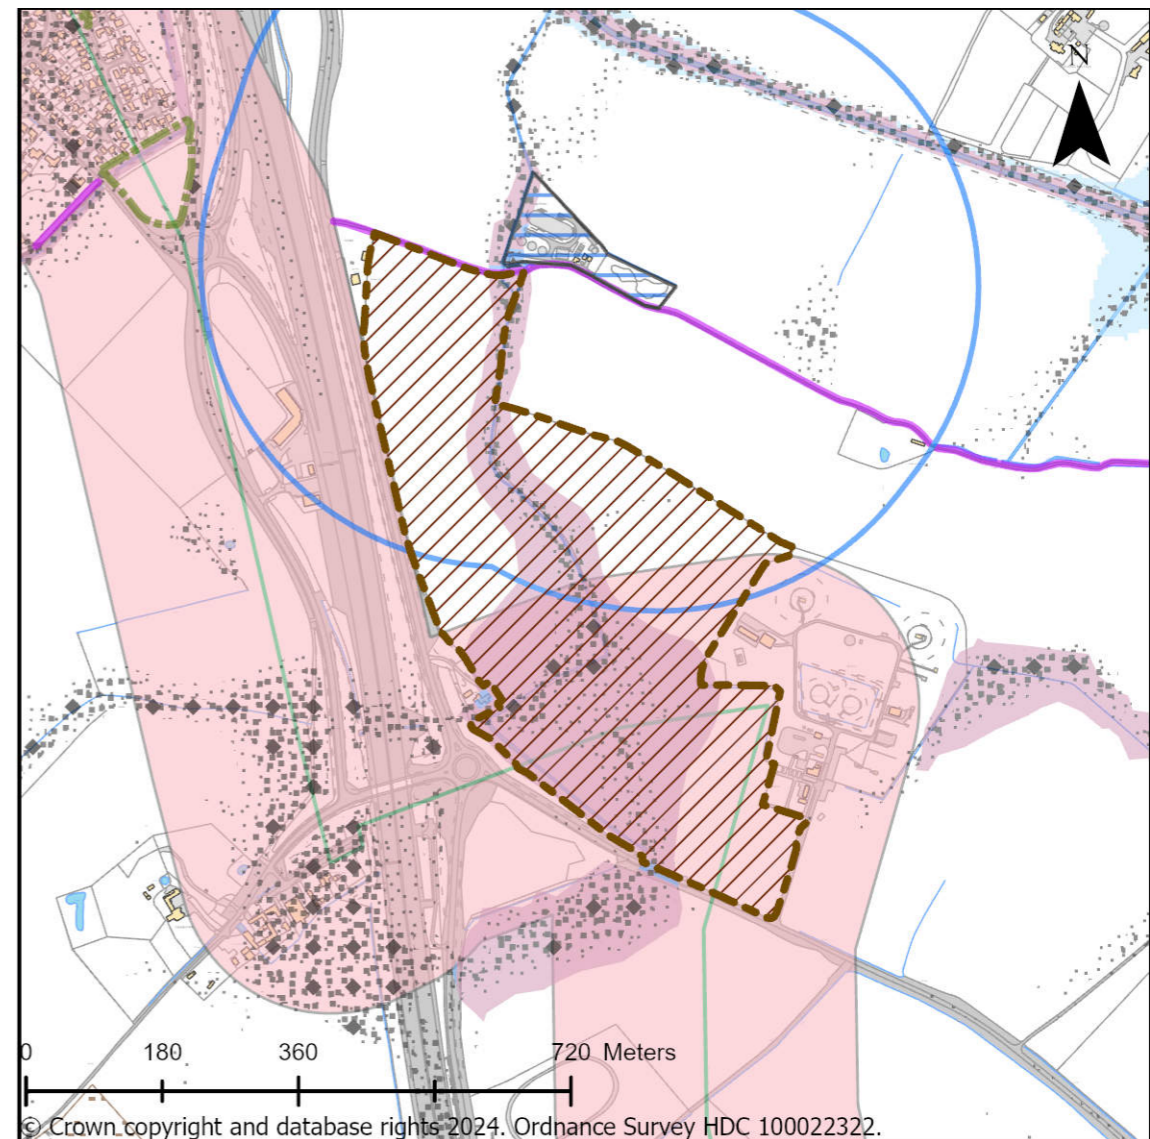

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 335
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	41% of the site is within flood zone 3b (10.55ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>Flood zone 3a runs through centre of site leaving separated portions of the north eastern, north western and south western outside, this amounts to approximately 59% of the site. Surface water flood risk is present stretching from south west corner towards centre and north travelling along north eastern boundary. Just under half of the eastern portion of the site is grade 3 agricultural land whilst the rest is grade 2.</p> <p>The site is relatively flat. The western boundary with the B1043 is heavily screened by trees and hedgerow, the southern boundary with the B1090 less so and views can clearly be seen across the site from here. A public right of way also follows the northern boundary enabling long distance views into the site and possibly from droves further to the north/north east. The site forms part of the wider landscape and is isolated from any other major built development. Toll Bar House sits outside the north western corner of the site and Keepers Cottage the south western. On the south east boundary sits a development former oil depot and road haulage site, the compatibility of the proposed site with this development would require further assessment. Landscaping would be required to the east to screen development. There is no identified access to the site.</p> <p>There is no known pollution or contamination and no known gas pipelines or buffer zone crosses the site. Overhead powerlines cross the site and an oil pipe and buffer zone lies within southern half of the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area and just over half of the northern portion of the site is within a water recycling area buffer zone meaning odour may impact the area.</p>	
<p><b>Availability</b></p> <p>The site is in individual ownership and control, development is supported by the landowner. There are no known legal restrictions. The site is available from 2023, allocation status would be acquired before land is sold to a third party for obtaining planning permission and developing. Build out of the site is unknown.</p>	
<p><b>Achievability</b></p> <p>Access to gas, mains water and electricity supply are noted as being unknown, as are digital and telecommunications infrastructure. Access could be achieved off the B1043 or B1090, but has yet to be determined. Proximity to the A1, B1090 and B1043 would assist with the logistics of construction and operation of the site. The impact of odour on the site would require assessment and mitigation as would the impact of the site on the wider landscape. The presence of an oil pipeline and buffer zone may impact the what could be achieved on site. Further work would required to ascertain if the site could mitigate against flooding as comprehensive development of the site is currently uncertain.</p>	

<p>The site promoter proposes detailed modelling of the potential flood risk, together with site specific mitigation measures, to address flood risk issues.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. The sites location within a mineral safeguarding area may limit the possibility of residential uses on site. There are a number of constraints which require resolution including access, odour and landscape mitigation and presence of an oil pipeline. All of which could limit the deliverability of the site. The site is available from 2023 and allocation status would be required. Build out of the site is unknown, making deliverability difficult to asses. The site is classified as potentially developable, if constraints could be overcome.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• A substantial proportion of the site is within flood zone 3 (11ha) and surface water flood risk is present.</li> <li>• The site is wholly greenfield land with just under half of the eastern portion of the site is grade 3 agricultural land and the rest is grade 2.</li> <li>• The site is more related to the countryside and would be isolated from existing employment related development meaning integration with existing business development would be difficult to achieve.</li> <li>• Development would have a significant landscape impact</li> <li>• Development could impact isolated residential properties</li> <li>• Proximity to the A1 and B1043 and B1090 could cause some odour, noise, or visual pollution, as could the proposed use of the site.</li> <li>• Proximity to road networks could assist in the operation of the site</li> <li>• The site is distant from local services and facilities.</li> <li>• Capacity of site would need to be established to identify if the site would constitute an efficient use of land.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• There are substantial challenges to overcome, further masterplanning would be required to justify if development could be integrated with existing employment related development. The</li> </ul>
--

- site is currently more related to the countryside. Proximity to road networks could assist in the operation of the site.
- Substantial flood mitigation would be required and evidence of developable area after flood mitigation, flood zone 3 currently runs through the centre of the site leaving isolated parcels of flood zone 1.
  - The site could provide high density employment further south of Old Great North Industrial Estate and could provide opportunities for business expansion
  - Strategic landscape mitigation to the east would be required including assessment and mitigation regarding impact on isolated residential properties and integration of public right of way.
  - Would require investigation into noise, odour, air and visual pollution.
  - Transport impact as a result of proposed use would be required and proposed access to the site
  - Mitigation would be required to address oil pipeline buffer zone which may affect the layout of development and the presence of overhead powerlines.
  - Odour assessments and compatibility of use due to location within water recycling buffer zone would be required.
  - Achievability of access to mains water and electricity supply and digital and telecommunications infrastructure would require confirmation.
  - On the south east boundary sits a former oil depot and road haulage site, the compatibility of the proposed site with this development would require further assessment, a contamination risk assessment would be required.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 25.64ha  Site reduction to 15ha to represent development in flood zone 1 only.  60% net developable area to provide strategic landscape mitigation.  15ha x 60% = 9ha	Net developable area 9ha  Commercial - Employment at 0.35 plot ratio to reflect a combination of predominantly offices with some industrial use = (9ha x 0.35) x 10,000= <b>31,500sqm</b>	Available post 2028 subject to allocation  Build out 2 to 5 years

Land east of the B1043, at Brickyard Farm and south of the B1090, Sawtry	Sawtry	51.20ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Logistics, distribution	170,000 sqm	Available 2023 Build out 5 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 76
Relevant planning history	None
Land type	Wholly greenfield
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	7.38% of the site is within flood zone 3b (3.78ha)	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The majority of the site is within flood zone 1, flood zone 3b is present within the northern quarter of the site, surface water flood risk is also present. The northern quarter of the site is grade two agricultural land with the remainder grade 3.</p> <p>The site is relatively flat with slight elevations to the west. The western boundary with the B1043 is heavily screened by trees and hedgerow, the northern boundary with the B1090 less so and views can clearly be seen across the site from here. The site forms part of the wider landscape and is isolated from any other major built development. The Southern boundary abuts ancient woodland and SSSI 'The Odd Quarter' and a service station with complimentary facilities such as hotel and restaurant sit just outside the south western corner. Impact on the SSSI would require landscape mitigation. Residential properties and agricultural buildings associated with Brickyard Farm sit outside the north western boundary and Green Acres residential property also sits just outside the western boundary. Landscaping may be required to the east to screen development. There is no identified access to the site.</p> <p>There is no known pollution or contamination and no known gas pipelines or buffer zone crosses the site. Overhead powerlines cross the site and an oil pipe and buffer zone covers the majority of the site. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is within a brickclay mineral safeguarding area not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, development is supported by all landowners. There are no known legal restrictions. The site is available from 2023, allocation status would be acquired before the land would be sold to a third party for obtaining planning permission and developing. Build out is estimated to take 5 years.</p>	+
<p><b>Achievability</b></p> <p>Access to gas is unknown. Access to mains water and electricity supply are noted as being accessible from the site boundary, as are digital and telecommunications infrastructure.</p> <p>Access could be achieved off the B1043 or B1090, but has yet to be determined. Proximity to the A1, B1090 and B1043 would assist with the logistics of construction and operation of the site. The impact of the site on the wider landscape and SSSI/ancient woodland would require assessment and mitigation. The presence of an oil pipeline and buffer zone and brickclay safeguarding area may impact what could be achieved on site, mitigation would be required to relocate the powerlines underground, or mitigate their presence, all of which could impact viability of the site. The site would need to consider whether the site</p>	~

<p>could integrate with residential properties or minimise impact of development through appropriate landscaping. Further work would be required to ascertain if the site could mitigate against flooding.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal restrictions. The sites location within a mineral safeguarding and an oil pipeline and buffer zone may limit the deliverability of residential uses on site. There are a number of constraints which require resolution including access, relocation or integration of overhas powerlines and impact on SSSI all of which could limit the deliverability of the site. ,The site is available from 2023 and allocation status would be required. Build out of the site is estimated to take 5 years. The site is classified as potentially developable, if constraints could be overcome.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The majority of the is within flood zone 1, however flood zone 3 present on approximately 7% located predominantly within the north and also through the centre in association with a drain and surface water flood risk.</li> <li>• The site is wholly greenfield land with the northern quarter grade two agricultural land with the remainder grade 3.</li> <li>• The site is more related to the countryside and significantly isolated from existing employment related development meaning there is no prospect of integration with existing business development.</li> <li>• Development could have a significant landscape impact.</li> <li>• Proximity to SSSI 'The Odd Quarter' means that landscape setting, ecological and biodiversity impact could be significant and not sensitive to the character of the local environment.</li> <li>• Development could impact isolated residential properties</li> <li>• Proximity to the A1 and B1043 and B1090 could cause some odour, noise, or visual pollution, as could the proposed use of the site.</li> <li>• Proximity to road networks could assist in the operation of the site, but require assessment of impact of increased presence of HGVs.</li> <li>• The site is distant from local services and facilities.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

- The site proposes employment uses which could provide additional high density employment south of Old Great North Industrial Estate and could provide opportunities for business expansion.
- Benefits from links to the A1 which could compliment the proposed use of the site, however distance to A1 linkages would require a transport impact assessment to ascertain if substantial HGV movements could be accommodated on the B1043.
- Would need to identify access to the site.
- Would require flood mitigation, development could be focussed away from flood zone 3 with the northern aspect of the site reserved for flood mitigation.
- The site is more related to the countryside and significantly isolated from large scale existing employment, however a service station with complimentary facilities such as hotel and restaurant sit just outside the south western corner. This would extensively extend the employment uses within this area.
- Could have significant impact on ancient woodland and SSSI 'The Odd Quarter' and thus landscape setting, ecological and biodiversity and is not sensitive to the character of the local environment. Mitigation measures such as landscaping and separation of development may be required.

Page 702 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 51.20ha 10ha of land to the north removed for flood mitigation 8ha of land removed from south to provide separation from SSSI Remaining land = 51.20ha - 10ha - 8ha = 33.20ha 80% developable area to allow for landscaping, flood mitigation and access. 33.20ha x 80% = 26.56ha	Net developable area of 26.56ha Commercial - Logistics, distribution at 0.40 plot ratio = ( 26.56ha x 0.40) x 10,000 = <b>106,240sqm</b>	Available post 2028 subject to allocation Build out Build out 5 to 7 years

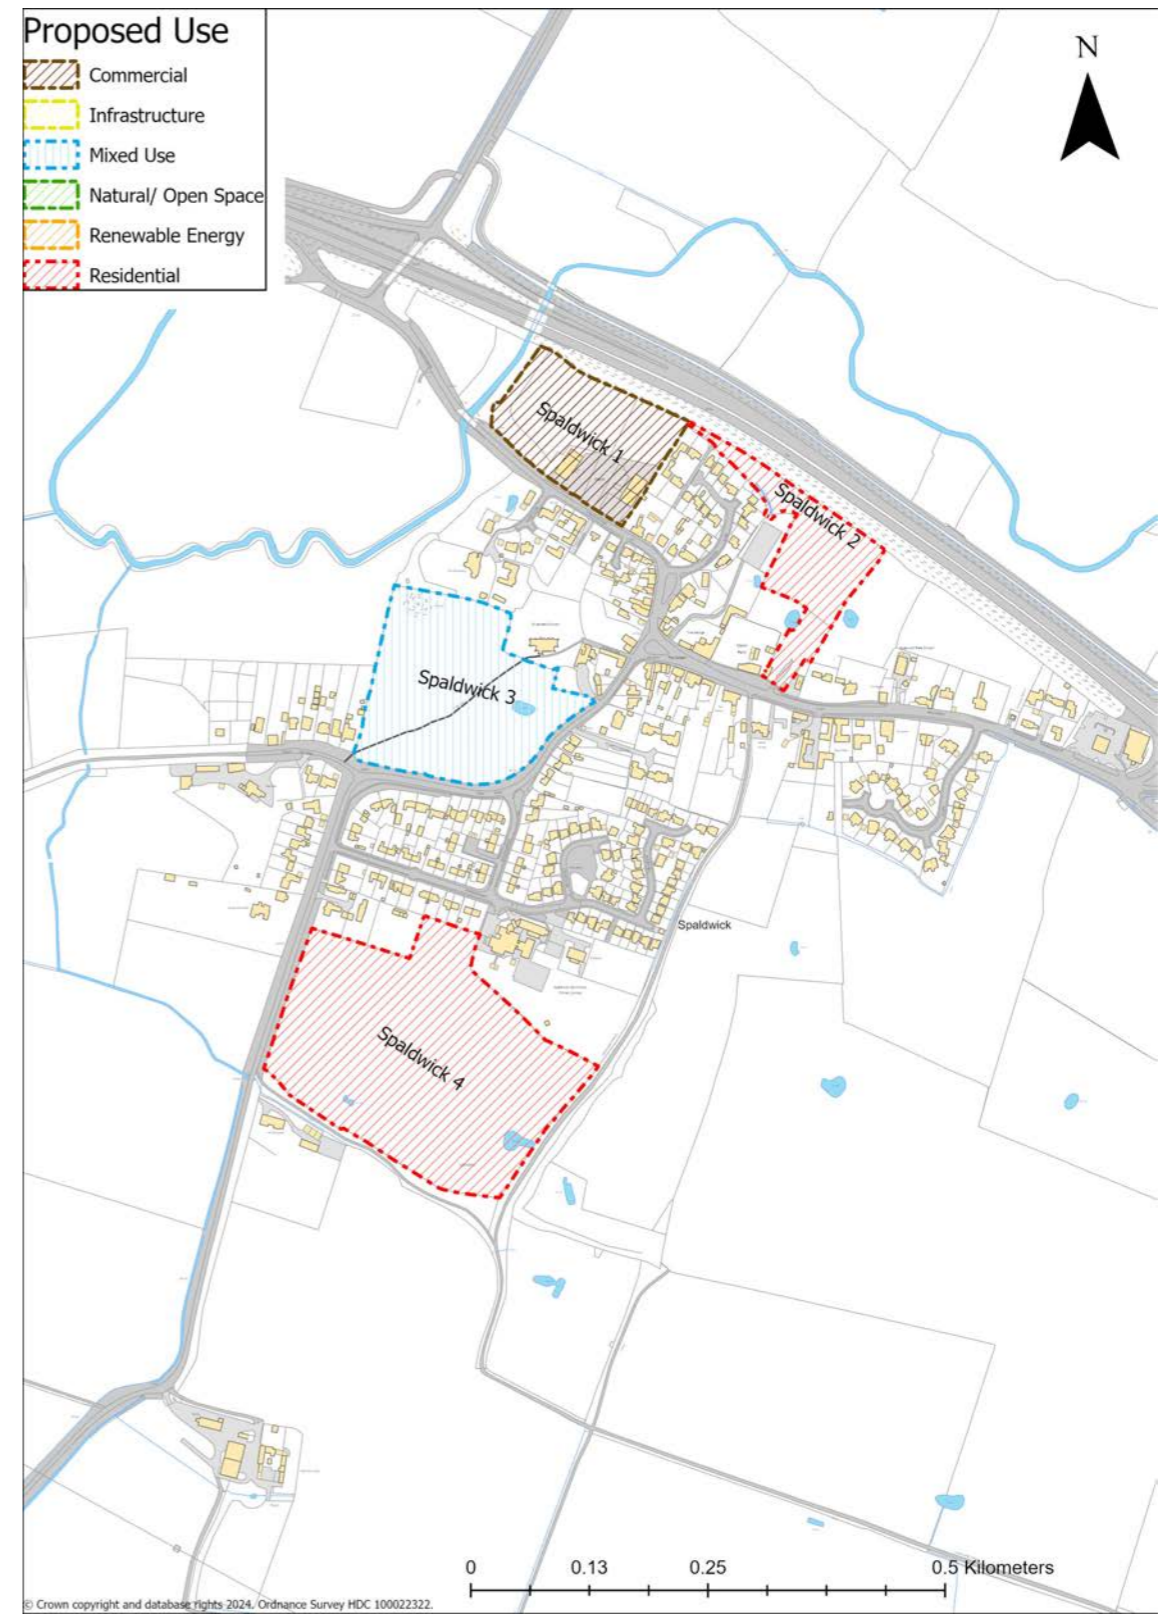

**Updates after the Initial Assessment**

<b>Site reference</b>	Spaldwick 1
<b>Site name</b>	Land at Thrapston Road, Spaldwick

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land at Thrapston Road, Spaldwick	Spaldwick	2.83ha

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Commercial: Employment Infrastructure: Transport and parking/lorry parking Open Spaces: Biodiversity net gain Land to safeguard against flooding	2,500 to 3,000sqm  Transport and parking/lorry parking, biodiversity net gain and land to safeguard against flooding in conjunction with proposed development and relevant adopted parking standards	Available 2024-2028  Build out 2 to 5 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS 86
Relevant planning history	Application number: 0701739FUL  Proposed development: Erection of building (B1) following demolition of existing  Outcome: Approved  Application number: 0603313FUL  Proposed development: Erection of building following demolition of existing

	Outcome: Refused  Application number: 0503290FUL  Proposed development: Alterations and extension to embankment to form a flood defence  Outcome: Approved  Application number: 0505023CCM  Proposed development: Extraction of clays for the off-site construction of a flood defence embankment. [Note - the application boundary for extraction is west of the site]
Land type	Part previously developed part greenfield
Current use of the site	Commercial and greenfield
Supporting information	Proposed development layout  Site location plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	0.5851% of the site (0.12ha) is within flood zone 3b.	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 706 of 3488

**Assessment of Site Potential**

**Context, constraints and potential suitability**

56% of the site is within flood zone 1, flood zone 2 is present on approximately 22% of the site with 3a slightly less. Surface water is also present. The site is grade 3 agricultural land.

The site is flat, the southern boundary runs along Thrapston Road and the northern edge bounds the A14 and, both of which are lined with trees and hedgerow. Views into the site can be seen from the A14, however due to the contained nature of the site landscape impact would be minimal if trees and hedgerow were retained. Ellington Brook runs is just outside the western boundary. Gated access to the site is available from Thrapston Road for both the existing business and the greenfield land to the west.

The site is part previously developed land (approximately 0.51ha) with an existing business and hardstanding on site, the remaining land to the west is greenfield land. Residential properties lie to the south and east which also fall within the conservation area. Grade II listed building sits west of the site, the boundary of which meets the current business use on the site. The south eastern corner sits just outside the grade II listed Spaldwick Bridge which is also a Scheduled Monument. Increases in transport and movement in association with the proposed use would have to assess the impact on this heritage asset. Ellington Brook runs is just outside the western boundary, which once past Thrapston road to the south is designated as 'Ellington Brook Pollard Willows' County Wildlife Site which supports mature pollard willows and other semi-natural habitat. Any associated run-off from uses on the proposed site has the potential to detrimentally impact this site.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site, nor overhead powerlines. There are no known tree preservation orders affecting it. The site is part previously developed land which offers the opportunity for some regeneration. The site is within a sand and gravel mineral safeguarding area, but not a water recycling area.

**Availability**

The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028 and build out expected to take 2 to 5 years. It is currently unknown how the site will be delivered.

**Achievability**

Mains water and electricity supply and digital telecommunications infrastructure are notes as being accessible from within the site. Gas supply is not accessible. Access can be achieved via Thrapston Road from two locations. The site is in proximity to the A14 which would assist with the logistics of construction and the operation of the site as a business.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. Impact on heritage assets such as the Grade II listed bridge would require assessment especially in relation to the type and frequency of traffic. Any site proposal would also have to assess the impact of the proposed uses on 'Ellington Brook Pollard Willows' County Wildlife Site.

<p>The site promoter notes that the land benefits from flood defences which were granted planning permission in 2005 and has been effective since, the flood defences sit within the site area. A tree landscape belt is proposed in the north east of the site between residential units on Littlecotes Close and access to the site moved further west.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Development would need to consider the impacts on nearby heritage and nature conservation assets. Delivery of the site is currently unknown. If these constraints could be overcome the site could be categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Flood zone 2 and surface water flood risk is present.</li> <li>• The site is grade 3 agricultural land, is part greenfield and part garden land with an existing business use on site.</li> <li>• Landscape impact would be minimal if trees and hedgerow are retained.</li> <li>• The site is close to some local services and facilities, additional employment opportunities are not immediately accessible.</li> <li>• The site is within 200 m of Ellington Brook Pollard Willows a County Wildlife site meaning the site may be impacted by the proposed use of the site.</li> <li>• Its relationship with the conservation area, listed building, bridge and townscape character would require consideration in terms of design, layout.</li> <li>• The proposed use has the potential to impact upon the grade II listed bridge through increased transport movements in association with the proposed employment use.</li> <li>• The presence of the A14 has the potential to cause light, noise odour or visual pollution.</li> <li>• The proposed development allow for local business expansion or small scale local business opportunities.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential to provide development of a scale that could be integrated into the existing place and allow for local business expansion or small scale local business opportunities</li> </ul>
--

<ul style="list-style-type: none"> <li>• Would require retention of trees and hedgerows would minimise landscape impact.</li> <li>• Requires flood mitigation.</li> <li>• Would require sensitive design and layout to ensure the townscape, listed buildings and conservation area are not detrimentally impacted.</li> <li>• May require a traffic impact assessment and heritage impact assessment.</li> <li>• May need assessment and mitigation of pollution from the A14.</li> <li>• Would require ecological impact assessment on Ellington Brook Pollard Willows a County Wildlife site</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 2.83ha</p> <p>60% net developable area to mitigate against conservation area and flooding.</p> <p>2.83ha x 60% = <b>1.698ha</b></p>	<p>Net developable area of 1.698 ha.</p> <p>Commercial - Employment on 1.698ha at 0.35 plot ratio</p> <p>Capacity = (1.698ha x 0.35)*10,000 = 5,943 sqm</p>	<p>Available from 2024</p> <p>Build out 2 to 5 years</p>

**Updates after the Initial Assessment**

<p> </p>
----------

**Spaldwick 2: Rear of Manor Farmyard, Spaldwick**

<b>Site reference</b>	Spaldwick 2
<b>Site name</b>	Rear of Manor Farmyard, Spaldwick

Site address	Parish(es)	Site area (ha)
Rear of Manor Farmyard, High Street, Spaldwick, PE28 0TD	Spaldwick	1.50ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	15 to 20 homes	Available 2024 - 2028 Build out circa 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS 351
Relevant planning history	None relevant
Land type	Part previously developed land and part greenfield land
Current use of the site	Agricultural land
Supporting information	Call for sites covering letter Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>60% of the site is within flood zone 1 (0.90ha), with the remainder within flood zone 2, risk of flooding from surface water is also present. The site is grade 3 agricultural land.</p> <p>The site is flat in keeping with the surrounding area. The entrance is from Thrapston Road. The site lined to the west and east with listed buildings. Most of the proposed site sits further north from Thrapston road. The A14 bounds the northern edge, which is lined with trees, showing some glimpses into the site. Littlecotes Close sits to the west and a public house, residential properties and associated back gardens line most of the southern boundary. Within the site sits a Grade II listed barn (south western corner), a small derelict agricultural shed is in the south eastern corner. Development of the site could impact the setting of the Grade II listed barn, but also may offer opportunity to enhance the setting if masterplanned correctly. The southern portion of the site sits within the village conservation area. The site promoter notes that until recently the site has been used for low intensity storage of agricultural implements. The site is predominantly greenfield land. Development of the site is unlikely to have a detrimental impact upon the landscape due to the enclosed nature of the site, however consideration of the impact of nearby residential properties and listed buildings outside and within the site and the conservation area would require assessment.</p> <p>Proximity to the A14 could present noise air and light pollution on potential future residents which would require mitigation.</p> <p>There is a potential that land contamination may be present due to the storage of agricultural equipment which would require further investigation. No known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. There are no known nature conservation assets or tree preservation orders affecting it. The site is predominantly greenfield land offering little opportunity to contribute to regeneration. The site is within a sand and gravel mineral safeguarding area, but not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is single individual control and ownership, development is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028, allocation status and planning permission would be acquired before the land is sold to a third party for development. Build out is expected to take circa 2 years.</p>	+
<p><b>Achievability</b></p> <p>There is no access to gas supply. Mains water and electricity supply are noted as being accessible from the site boundary, as are digital and telecommunications infrastructure. Access could be achieved from Thrapston Road. The site in proximity to the A14 which would assist with the logistics of construction.</p>	~

<p>Noise and air pollution from the A14 and land contamination would require investigation and mitigation. No known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. Impact on heritage assets within and outside the site and the conservation area would require assessment.</p> <p>The site promoter notes that there will be an opportunity to restore and potentially repurpose the building barn on the site and that given the heritage sensitives of the site, very careful consideration will need to be made to the design of the site.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Development would require mitigation from land, noise, air and light pollution and consideration of the impact of heritage assets carefully masterplanned. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Flood zone 2 and surface water flood risk is present.</li> <li>• The site is grade 3 agricultural land, is part greenfield and part garden land.</li> <li>• Landscape impact would be minimal if trees and hedgerow are retained.</li> <li>• The site is close to some local services and facilities, additional employment opportunities are not immediately accessible.</li> <li>• Its relationship with the conservation area, listed buildings and townscape character would require consideration in terms of design, layout.</li> <li>• The site could impact the Grade II listed barn but also presents the opportunity to improve the site frontage and setting of the listed building, which currently contains derelict agricultural units.</li> <li>• The presence of the A14 has the potential to cause light, noise odour or visual pollution.</li> <li>• The site promoter proposes 15 to 20 homes, which is reflective of development immediately west of the site.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Has potential to provide development of a scale that could be integrated into the existing place.</li> <li>• Would require retention of trees and hedgerows would minimise landscape impact.</li> <li>• Requires flood mitigation.</li> </ul>
---

- Would require sensitive design and layout to ensure the townscape, listed buildings and conservation area are not detrimentally impacted.
- May require a heritage impact assessment.
- May need assessment and mitigation of pollution from the A14.
- Has the potential to include land contamination which would require further investigation.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 1.50ha 60% net developable area to mitigate against conservation area and flooding. 1.50ha x 60% = <b>0.90ha</b>	Net developable area of 0.90ha Residential – market and/or affordable homes. Very low density of 20 dph to reflect density to the west at Littlecote Close Capacity = 0.90ha x 20dph = <b>18 homes</b>	Available 2024 to 2028 Build out 1 to 3 years

Page 710 of 3488

**Updates after the Initial Assessment**

--

**Spaldwick 3: Church Field, Spaldwick**

<b>Site reference</b>	Spaldwick 3
<b>Site name</b>	Church Field, Spaldwick

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Church Field, Stow Road, Spaldwick, PE28 0TE	Spaldwick	3.40ha

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Open spaces: Natural, green or open spaces for a variety of uses. Other: Car parking area for the church which is due to provide a function as a community hall.	10 to 15 homes circa 1.50 hectares of public open space space for car parking to be determined.	Available 2024 to 2028 Build out circa 2 years.

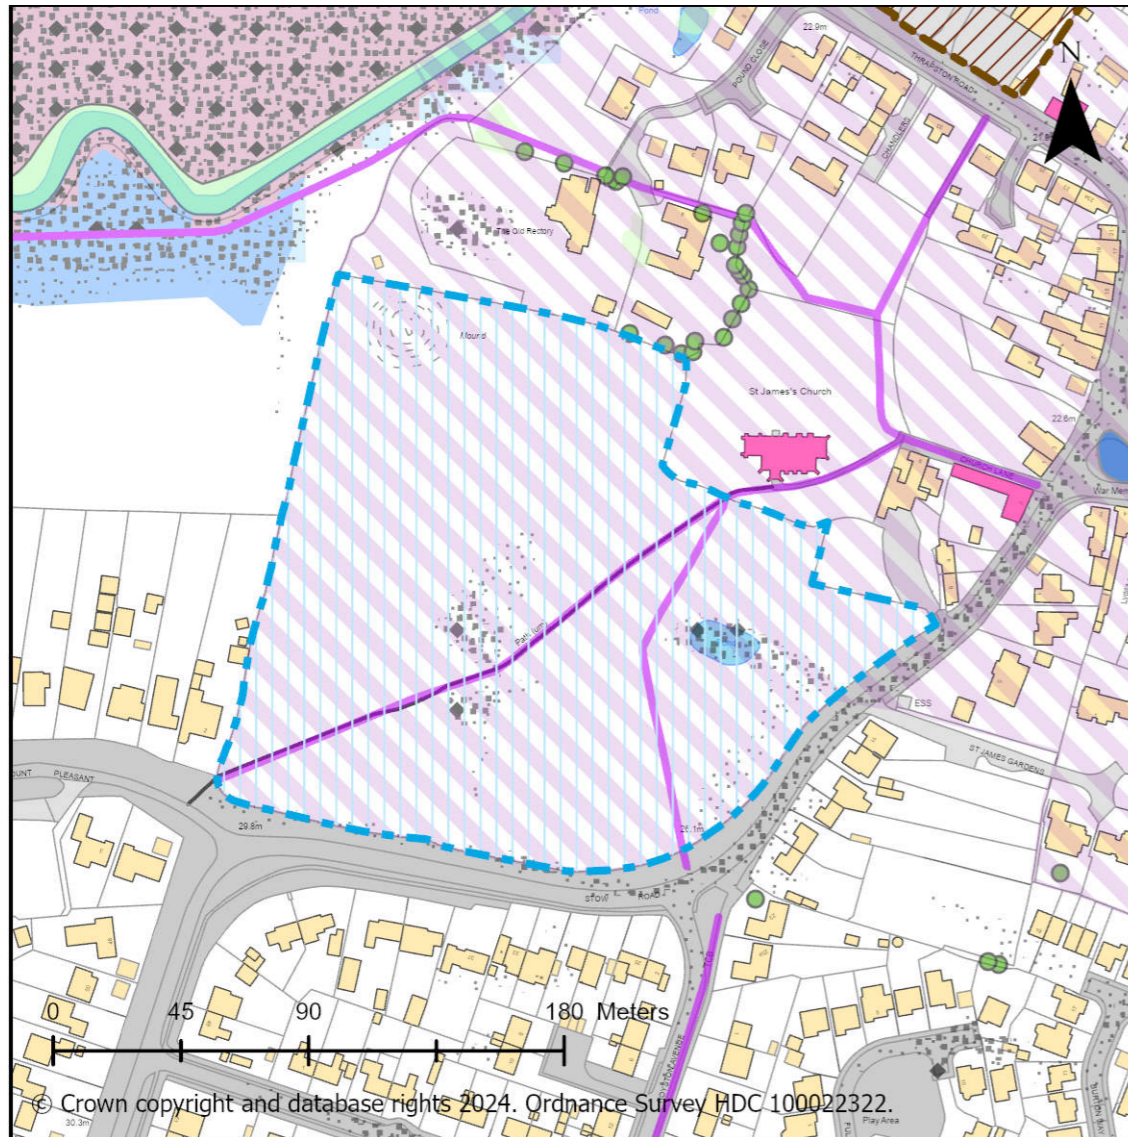

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS 353
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Site location plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 712 of 3488

The site is relatively flat agricultural grazing land. Along Stow Road the site is lined with low hedgerow and some tree planting and the site can be clearly seen from the road and from the residential properties across the road. Similar planting continues on the western and northern boundaries. The north eastern corner of the site bounds the Church of St James and cemetery (a Grade I listed building) and some residential properties. Public rights of way traverse the site meaning that the site can be clearly seen from within. A cluster of established trees and a pond are a key feature within the site. The site sits within a prominent location within the village providing a green break. The site provides a clear setting establishing a clear view and context of Church of St James. The site is highly exposed forming an integral part of the village identity. The proposal is for 10 to 15 homes, public open space and car parking. As no layout proposals have been provided it is unclear to what extent the proposal would impact upon, heritage, landscape and village setting. Further evidence would be required to justify the provision of car parking in association with increased church usage as the site promoter notes that it is their understanding that the church going to be partially repurposed to provide the functions of a community hall, in the absence of a village hall. It is unclear whether the church would require land for future cemetery expansion, land may be required to be set aside for future use.

Tree Preservation Orders are present on the northern boundary and further north a cluster of tree preservation orders and areas are present.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. Ellington Brook sits to the north west, designated as 'Ellington Brook Pollard Willows' County Wildlife Site which supports mature pollard willows and other semi-natural habitat. Any associated run-off from uses on the proposed site has the potential to detrimentally impact this site. The site sits within the village conservation area. The site is greenfield land and offers no opportunities to contribute to regeneration. The majority of the site is within a sand and gravel mineral safeguarding area, but not within a water recycling area.

**Availability**

The site is single individual control and ownership, development is supported by the landowner. There are no known legal restrictions. The site is available from 2024 to 2028, allocation status and planning permission would be acquired before the land is sold to a third party for development. Build out is expected to take circa 2 years.

**Achievability**

There is no access to gas supply. Mains water and electricity supply are noted as being accessible from the site boundary, as are digital and telecommunications infrastructure. Site access has not been established, access from Stow road would require consultation with the highways authority to establish safe access and exit. The site is near to the A14 which could assist with the logistics of construction.

**Assessment of Site Potential**

**Context, constraints and potential suitability**

The site is not constrained by fluvial flood risk, some surface water flood risk is present on site some of which is associated with a pond located on site. The site is grade 3 agricultural land.

~

<p>No known gas or oil pipelines or buffer zones cross the site nor overhead powerlines. Impact on heritage assets, the conservation area, setting of the church and would require assessment and design and layout would require careful consideration to determine if the site proposal is achievable.</p> <p>The site promoter proposes housing, public open space (with potential playing field, children's play and /or other amenity uses) for the village and a car parking area for the Church, which is due to provide a function as a community hall. Housing would assist in delivery of the open space provision.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Development would require consideration of the impact of heritage and nature conservation assets and setting of the church, wider landscape and village. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p><b>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</b></p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk, but surface water flood risk is present.</li> <li>• The site is wholly greenfield grade 3 agricultural land.</li> <li>• The site is close to some local services and facilities, additional employment opportunities are not immediately accessible.</li> <li>• The site provides a distinct setting, establishing a clear view of Church of St James (a grade I listed building). The site is highly exposed forming an integral part of the village identity. Development of the site may affect the setting of the church and longevity of use in terms of potential cemetery expansion requirements.</li> <li>• Its relationship with the conservation area, listed buildings and townscape character would require consideration in terms of design, layout.</li> <li>• The site is within 200 m of Ellington Brook Pollard Willows a County Wildlife site meaning the site may be impacted by the proposed use of the site.</li> <li>• The site relates well to the existing settlement with residential properties to the north south and west of the site.</li> </ul>
---

<p><b>In combination the outcomes of the LAA and SA indicate that the site:</b></p> <ul style="list-style-type: none"> <li>• The site has the potential to be integrated into the existing community however this may not outweigh the impact on the church and the character of the area.</li> <li>• Requires flood mitigation and potential retention of pond.</li> <li>• Elevation and layout of the buildings would be an important consideration in terms of views of the Church.</li> <li>• Would need to consider integration of existing public rights of way and active travel routes</li> <li>• Would require sensitive design, elevations and layout to ensure the townscape, listed building and conservation area are not detrimentally impacted.</li> <li>• Would need to demonstrate need for car parking and access to avoid impact on heritage assets and Church Lane.</li> <li>• May require assessment to ensure continued operation of the church in terms of future cemetery requirements.</li> <li>• Would require ecological impact assessment on Ellington Brook Pollard Willows a County Wildlife site</li> <li>• Trees and hedgerows would require retention so as not to detrimentally impact the character of the area.</li> </ul>
--

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area 3.40ha</p> <p>30% net developable area to mitigate against church setting, conservation area and flooding and provision of open space.</p> <p>3.40ha x 30% = <b>1.02ha</b></p>	<p>Net developable area of 1.02ha</p> <p>Residential – market and/or affordable homes.</p> <p>Very low density of 20 dph minimise impact of church setting and reflect nearby residential density</p> <p>Capacity = 1.02ha x 25dph = <b>26 homes</b></p>	<p>Available 2024 to 2028</p> <p>Build out 1 to 3 years</p>

**Spaldwick 4: Land to East of Stow Road, Spaldwick**

<b>Site reference</b>	Spaldwick 4
<b>Site name</b>	Land to East of Stow Road, Spaldwick

Site address	Parish(es)	Site area (ha)
Land to East of Stow Road, Spaldwick	Spaldwick	6.10ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	80 to 100 homes	Available 2024-2028 Build 1 to 2 years.

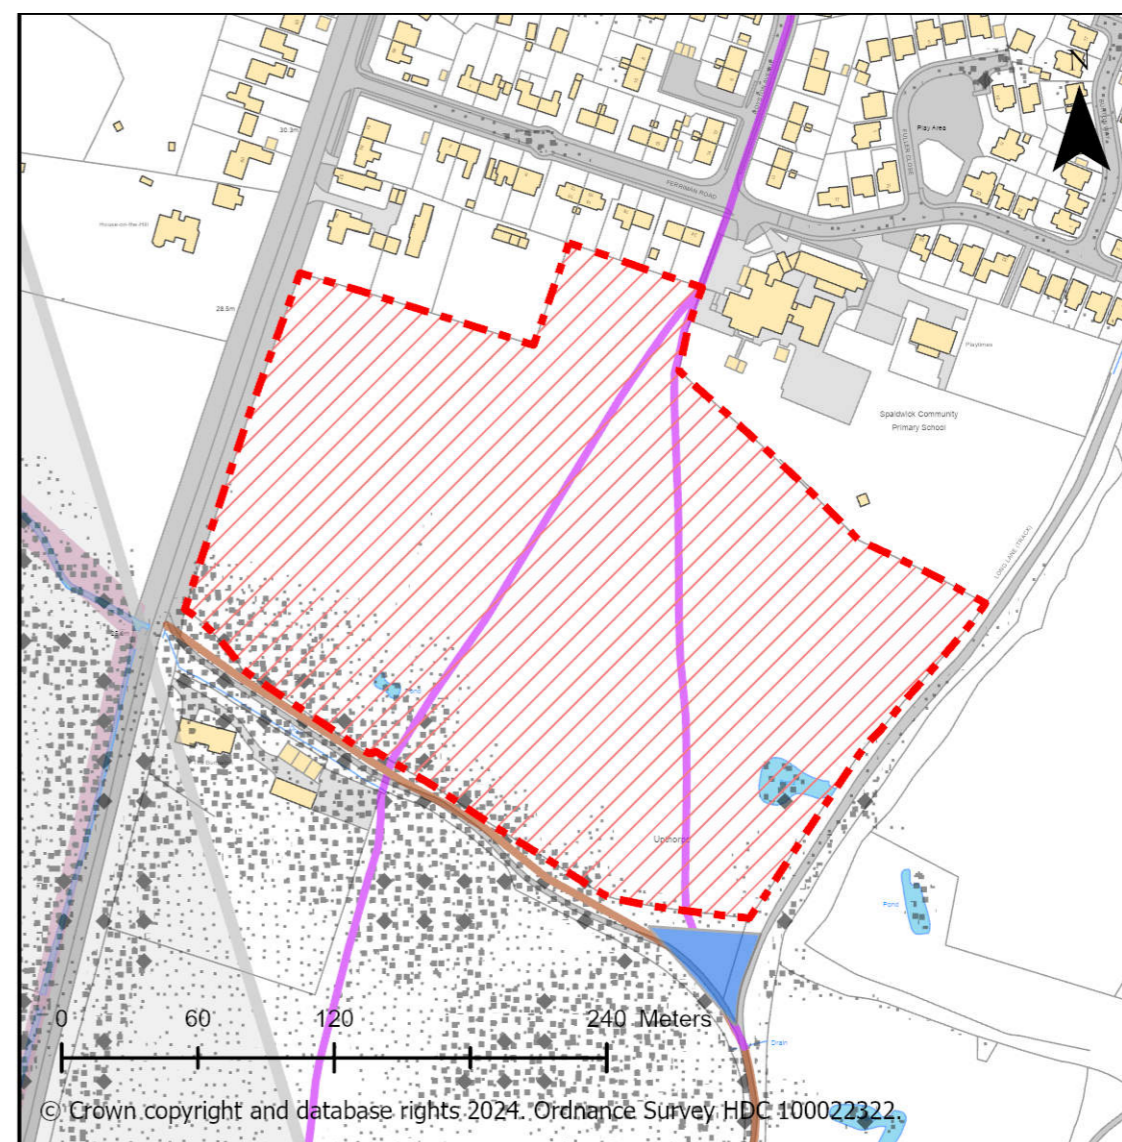

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS 305
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is not constrained by fluvial flood risk, some surface water flood risk is present in alignment with a drain which runs along the southern edge. The site is grade 3 agricultural land.</p> <p>The site is flat agricultural land. The western, southern and eastern boundaries are screened by trees and hedgerow. Residential properties and a primary school bound the northern edge and a residential property sits just outside the south western corner.</p> <p>Two public rights of way traverse the site providing views from within the site, another runs along the southern edge and Long Lane runs alongside the eastern boundary. These public rights of way provide links to Ferriman Road, Stow Road and the High Street, into open countryside and the nearby village of Easton. Access could be provided from Stow Road. Due to the screened nature of the site, it would have negligible landscape impact from Stow Road and to residential properties to north if trees and hedgerow were retained. However the site would require integration or mitigation of public rights of way and could significantly impact the setting and access to Upthorpe Green (a registered village green - H-VG15), which sits just outside the south eastern corner.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site. An overhead electricity powerline runs along the western boundary of the site. There are no known tree preservation orders affecting it. The site is greenfield land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028, planning permission would be acquired and then sold to a third party for development. There is an ongoing consultation between the landowner and the local community. Build out is expected to take 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>There is no access to gas supply. Mains water and electricity supply are noted as being accessible from the site boundary, as are digital and telecommunications infrastructure. Access could be achieved from Stow Road. The site is near to the A14 which could assist with the logistics of construction.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site. An overhead electricity powerline runs along the western boundary of the site, which may require mitigation. Works on a village green are heavily restricted and mitigation would be required to ensure no detrimental impact.</p>	+

<p>The site promoter notes that the area at risk of surface water flooding could be set aside as part of the development of the site and a detailed drainage strategy would accompany any future planning application</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Development would be required to address public rights of way and impact and setting of Upthorpe Green. As it is not intended to bring forward a rural exceptions scheme on site, the site is still contrary to policy so an allocation status would be required. The site is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is not constrained by fluvial flood risk, but surface water flood risk is present.</li> <li>• The site is wholly greenfield grade 3 agricultural land.</li> <li>• The site is close to some local services and facilities, additional employment opportunities are not immediately accessible.</li> <li>• The site is well located on Stow Road with a school and residential properties bounding the northern edge with public rights of way linking to the village and nearby services and facilities.</li> <li>• Landscape impact from the west, south and east would be minimal if trees and hedgerow were to be retained.</li> <li>• Development has the potential to impact the setting and access to Upthorpe Green (a registered village green), which sits just outside the south eastern corner.</li> <li>• The site proposes 80 to 100 homes which would represent a significant extension representing over a third of the current number of homes within the village. Due to its scale this may provide challenges in effectively masterplanning a large disproportionate residential expansion to become part of the existing community.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
---

- Should consider a smaller number of residential units to would assist in integration of the proposed development, integration of public rights of way and setting and impact upon the village green.
- Requires flood mitigation.
- Would need to consider integration of existing public rights of way and provision of active travel routes.
- Trees and hedgerows would require retention so as not to detrimentally impact the character of the area.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 6.10ha  Site reduced by 50% to provide more proportionate development in comparison to the size of the existing settlement and retain setting of village green.  $50\% \times 6.10 = 3.05\text{ha}$ net developable area.  70% net developable area to allow for integration of public rights of way and setting of village green  $3.05\text{ha} \times 70\% = \mathbf{2.135\text{ha}}$	Net developable area of 2.135ha  Residential – market and/or affordable homes.  Very low density of 20 dph to reflect nearby residential density  Capacity = $2.135\text{ha} \times 20\text{dph} = \mathbf{43 \text{ homes}}$	Available post 2028 subject to allocation  Build out 1 to 3 years

Page 716 of 3488

**Updates after the Initial Assessment**

## 6 The Stukeleys

6.1 A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- The Stukeleys 1: Land North East of Ermine Street (adjoining Huntingdon)
- The Stukeleys 2: Nook Farm, Little Stukeley
- The Stukeleys 3: Land between 76 and 86 Owl End, Great Stukeley
- The Stukeleys 4: Land North of Ermine Street, Little Stukeley
- The Stukeleys 5: Land North of A141, between Huntingdon Racecourse and A1307
- The Stukeleys 6: Huntingdon Racecourse - this site also partially falls within Brampton parish. As the majority of the site falls within The Stukeleys parish, the site has been assessed here instead. A link to the site can also be found within the Brampton section of the Central Huntingdonshire LAA document.

6.2 Please note that the following sites also partially fall within The Stukeleys:

- 'Abbots Ripton 6: Sapley Park Garden Village' also partially falls within The Stukeleys parish as well as Huntingdon and Kings Ripton parishes, but it has been included under Abbots Ripton as most of the site lies within that parish area.
- 'Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield' also partially falls within The Stukeleys parish as well as Upton and Coppingford parish, but it has been included under Alconbury Weston as most of the site lies within that parish area.
- 'Alconbury Weston 10: Land East of B1043 and South of Alconbury Hill, Alconbury' - note that this site also partially falls within The Stukeleys parishes, but it has been included under Alconbury Weston as most of the site lies within that parish area.
- 'Alconbury Weston 11: Land adjacent to Alconbury Weald Development and South of Safefield Farm, Alconbury' - note that this site also partially falls within The Stukeleys parishes, but it has been included under Alconbury Weston as most of the site lies within that parish area.

6.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Open Spaces: Natural, green or open spaces Biodiversity net gain	648 homes  Land for open space not defined site promoter states "part of development".	Available from 2024-2028  Build out over 7 years.

**Core information**

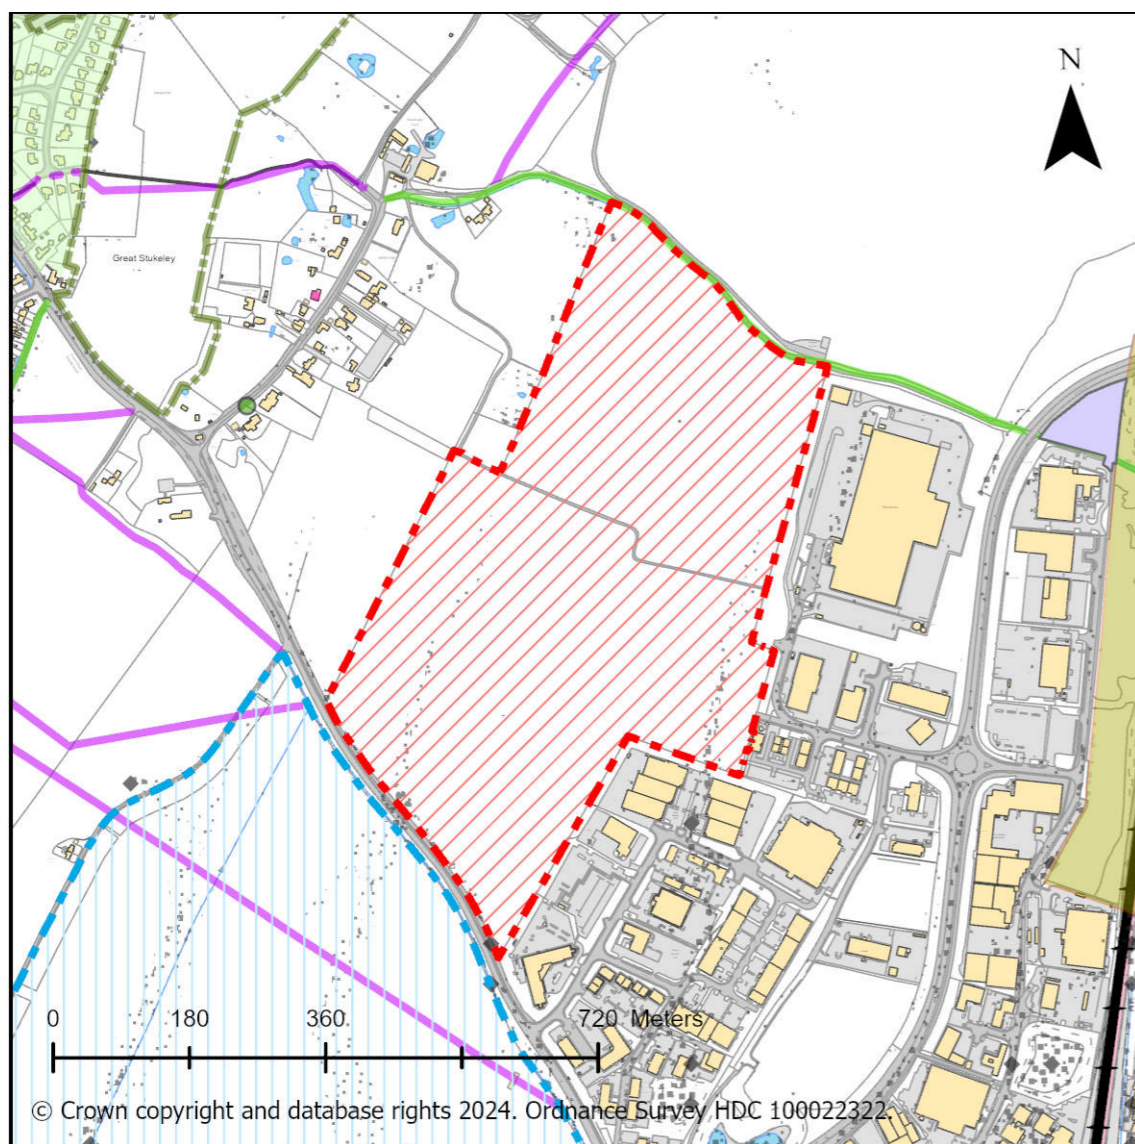

How was the site identified?	Call for Sites 2023 Submission: site reference - CfS: 77
Relevant planning history	Application number: 20/00847/OUT  Proposed development: Outline planning application for the phased development of up to 648 dwellings with associated public open space, services and other ancillary infrastructure with all matters reserved except for the means of access.  Outcome: Pending Consideration  Application number: 18/70210/SCOP

	Proposed development: EIA Scoping Opinion: Up to 550 dwellings, highways access from Ermine Street and Washingley Road, pedestrian and cycle links, formal and informal green space, and landscaping.  Application number: 1300730OUT  Proposed development: Business park comprising of 36,246 sqm of B1 business uses (comprising of 12,096 sqm B1a office use, 2,700 sqm of B1a office/B1b research and development, 5,600 sqm of B1b research and development/B1c light industrial and 15,850 sqm of B1c light industrial), 5,000 sqm of B2 general industrial and 34,850 sqm of B8 storage and distribution with all matters reserved apart from means of access  Outcome: Approved and lapsed.  Part of HLP2036 site allocation : HU1 Ermine Street  HELAA (December 2017): Washingley Farm
Land type	Wholly Greenfield Land
Current use of the site	Agricultural Land
Supporting information	Location Plan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 720 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk is present on site. The majority of the site is grade 2 agricultural land with a negligible portion the southern corner within grade 3, the site is wholly greenfield and in agricultural use.</p>	+
---	---

<p>The land slopes upward south to north by approximately 15m. The Southern edge is mostly bounded by trees and hedgerow and Ermine Street. The eastern boundary of the site adjoins Ermine Business Park and a protected settlement break designated in The Stukeleys Neighbourhood Plan bounds the western boundary highlighting the importance of the retention of the character and setting of Great Stukeley through its separation with other built development at Huntingdon and Alconbury Weald, some trees and hedgerow are also present. The site is well related to strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm which sits on the northern boundary of the site. There is a public right of way which runs along the northern boundary long distance views into the site can be seen from here and Green End. Development may adversely affect the surrounding countryside to the north due to its elevated nature and long distance views into the site and would require effective masterplanning to address this and landscape impact. Access to the site could be achieved from Ermine Street.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site not within a mineral safeguarding area nor a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site owned and controlled by a single company, development is supported by the landowner. There are no known legal restrictions. The site is available from 2024-2028, it is proposed that planning permission would be acquired before the land is sold to a third party for development, build out is expected to take 7 years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure.</p> <p>The layout and capacity of the site may be impacted on the western edge by the proposed realignment of the A141. Land in this vicinity will need to be safeguarded to allow for the future construction of the a new road.</p> <p>Access to A and B road networks would assist with long term access to the site and the logistics of construction, current access is from the Ermine Street. The presence of major roads may require further measures to safely integrate the community from proposed site with the existing residential area of Huntingdon (currently separated by the A141). Due to the proposed capacity of the site major infrastructure such as revised junctions, retail, social and community facilities may be required.</p>	

<p>The site promoter notes that the site has been submitted to reiterate the commitment to deliver the site within the current plan period, with progress having now been made to identify the required safeguarding of land to facilitate a potential realignment route for the A141.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is allocated in Huntingdonshire's Local Plan to 2036. There are no known legal restrictions and a planning application has been submitted to demonstrate how constraints can be overcome which includes the issue of requiring land to be safeguarded for the re-routing of the A141. Once planning permission is acquired the land will be sold to a third party for development. The site is therefore classified as deliverable.</p>	

- Is of a size that could include a wide range of types, sizes and tenures.
- Would require strategic landscaping, integration of public rights of way and surface water flood risk mitigation
- Would need to address impact on settlement break and visual and light pollution to residential properties to the north.
- Requires land to be safeguarded for the re-routing of the A141.
- Would need to demonstrate how it can be safely integrated with Huntingdon and strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 33.96ha</p> <p>50% net developable area to provide strategic landscape mitigation and safeguarding of land for re-routing of A141.</p> <p>33.96ha x 50% = <b>16.98ha</b></p>	<p>Net developable area of 16.98ha</p> <p>Residential - Market and/or affordable housing.</p> <p>Low density of 35dph to reflect edge of town development, mixture of housing types and visual impact on The Stukeleys due to elevated nature of site.</p> <p>16.96ha x 35dph = <b>594 homes</b></p>	<p>Available from 2024</p> <p>Build out 6 to 8 years</p>

**Updates after the Initial Assessment**

--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Surface water flood risk is present.</li> <li>• The site is wholly greenfield land with the majority grade 2 agricultural land and a negligible portion the southern corner within grade 3.</li> <li>• The site is well related to Ermine Business Park to the south and strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm</li> <li>• Due to the site's elevated nature, the site's visibility within the wider landscape and location next to a protected settlement break, strategic landscaping would be required.</li> <li>• Masterplanning should consider how the site can integrate safely with Huntingdon and strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm</li> <li>• Proximity to Ermine Business Park may expose the site to light, noise and odour pollution, the proposed use may impact residential development north of the site.</li> <li>• Land would be required to be safeguarded for the re-routing of the A141, which may affect the layout and capacity of the site.</li> <li>• The site is distant from local services and facilities but Huntingdon town centre is 2km away.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is allocated in the Huntingdonshire's Local Plan to 2036 forming part of allocation HU1 Ermine Street.</li> <li>• Has the potential to be integrated with the existing community and strategic allocation SEL1.1 Former Alconbury Airfield and Grange Farm</li> </ul>

**The Stukeleys 2: Nook Farm, Little Stukeley**

<b>Site reference</b>	The Stukeleys 2
<b>Site name</b>	Nook Farm, Little Stukeley

Site address	Parish(es)	Site area (ha)
Nook Farm, Land south of Little Stukeley & Great Stukeley and south of the A1307.	The Stukeleys	375.77ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
<p>Residential:</p> <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> <li>Specialist housing</li> <li>Custom and self-build housing</li> </ul> <p>Commercial:</p> <ul style="list-style-type: none"> <li>Employment</li> <li>Retail</li> <li>Logistics, distribution</li> </ul> <p>Infrastructure:</p> <ul style="list-style-type: none"> <li>Supporting infrastructure e.g. schools, community centres</li> <li>Health uses</li> <li>Transport and parking / lorry parking</li> <li>Renewable energy</li> </ul> <p>Open spaces</p> <ul style="list-style-type: none"> <li>Natural, green or open spaces</li> <li>Biodiversity net gain</li> <li>Land to be safeguarded against flooding</li> </ul>	<p>3,000 homes including market and/or affordable, specialist and custom and self-build housing.</p> <p>Commercial element to be determined.</p> <p>Infrastructure element to be confirmed.</p> <p>Open spaces to be determined.</p>	<p>Available 2023</p> <p>Build out 15 or more years</p>

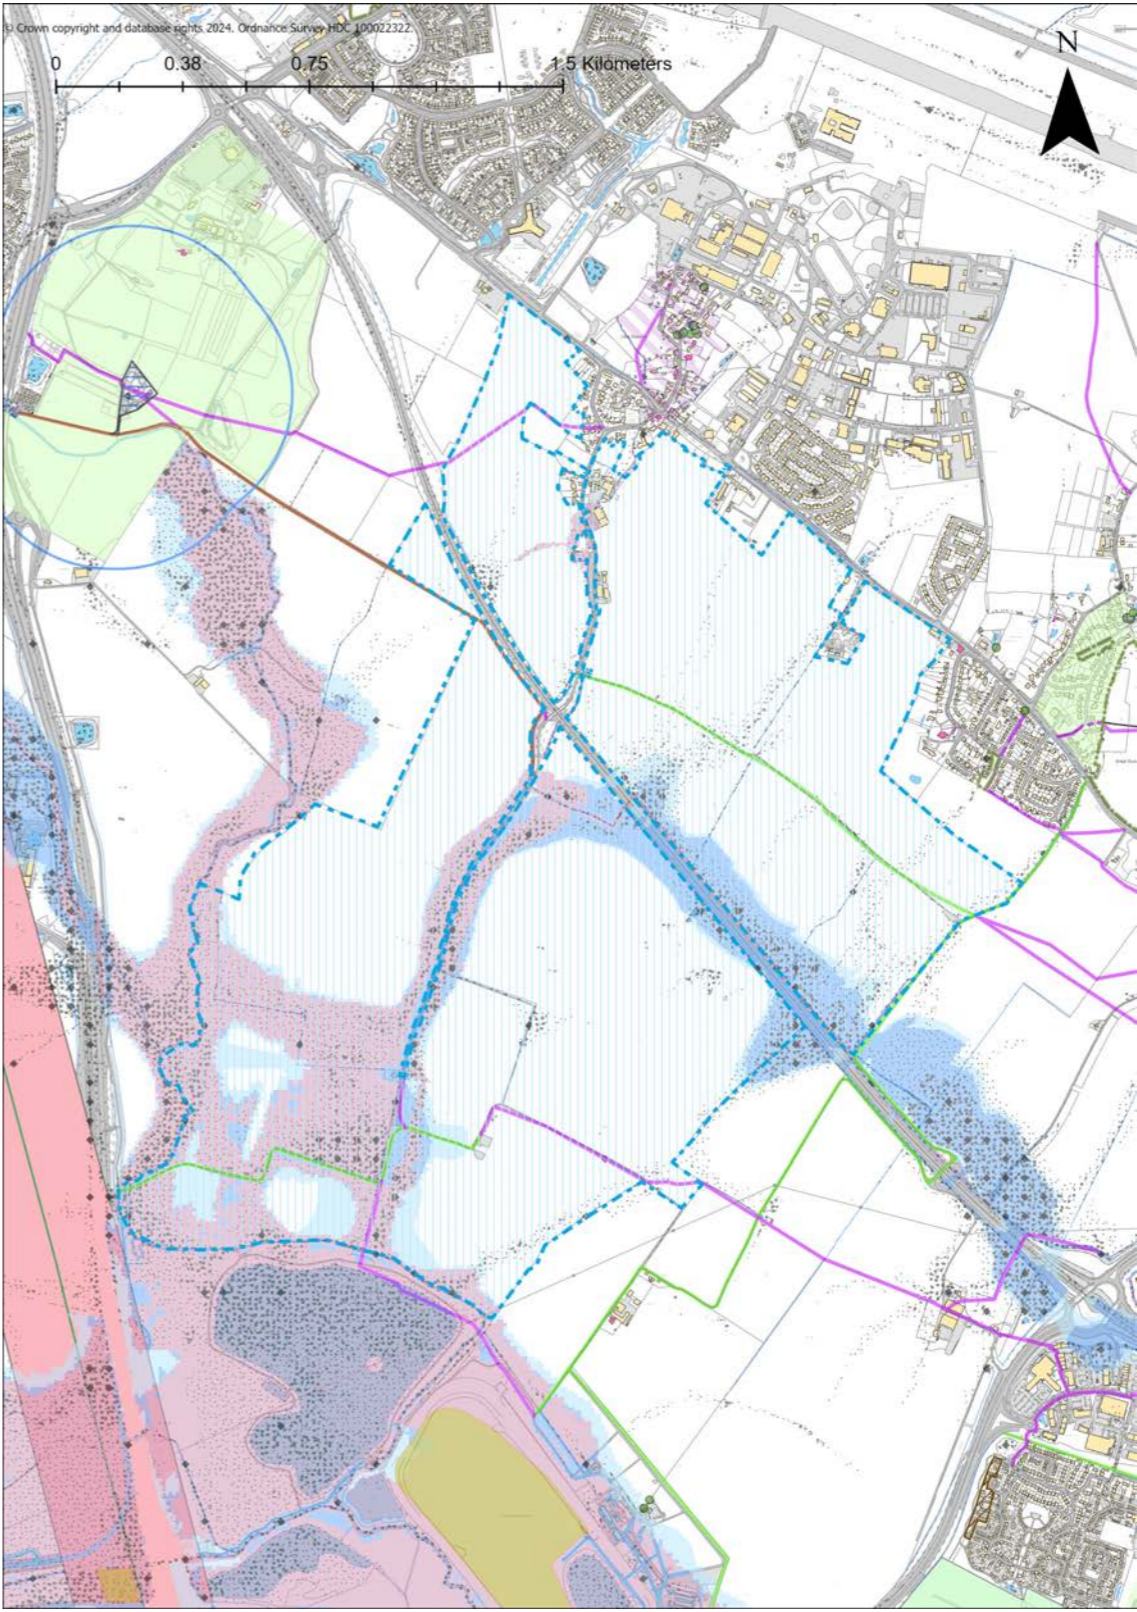

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 36
Relevant planning history	<p>Application number: 18/01391/FUL</p> <p>Proposed development: Retrospective application for the erection of a two storey dwelling replacing a former dwelling (new design to replace two previously approved schemes) and associated works.</p> <p>Outcome: Approved</p>
Land type	Wholly greenfield land
Current use of the site	Agricultural
Supporting information	Location Plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	Approximately 14% of the site is within flood zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Assessment of Site Potential

Page 724 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>Approximately 14% of the site is within flood zone 3b, Flood zone 3a and 2 are also present in the south east and along the A1307 and Low Road with approximately 74% in flood zone 1. Surface Water flood risk is also present in similar locations. The site is wholly greenfield agricultural land and grade 3 and 2 agricultural land; grade 2 is mostly located within southern parcel.</p> <p>In the northern parcels the land slopes significantly from north to south in excess of 20m and undulates east to west, creating a distinctive landscape character and separation of the villages of Great Stukeley and Little Stukeley and the A1307. This is reflective of its location within the Central Claylands. The southern most parcel (south of the A1307) slopes more gently with less significant topographic variation. The northern parcels of land about the villages of Great Stukeley and Little Stukeley, which have a distinctive identities and village characters. Regularly spaced traditional villages, are also a feature of the Central Claylands. The large field sizes within the proposed site create a strong sense of openness which is enhanced by the lack of trees and hedgerows across much of the area, prompting a sense of remoteness and tranquillity. The limited hedgerow and tree coverage facilitate long distance views in many places and from multiple public rights of way, where large structures are highly visible in the landscape.</p> <p>The Northern boundary at points tightly bounds residential properties in the Stukeleys. The site includes protected settlement breaks as set out in The Stukeleys Neighbourhood Plan, which demonstrate the local importance of the separation of the villages and their relationship with the wider countryside. Nook Farm and associated buildings sit within the north eastern edge of the site. The Former Three Horseshoes opportunity site is also included within the site on the northern boundary. Local Greenspace <i>Land at West View</i> associated with Great Stukeley also abuts the northern edge, which is valued for its ecological potential, recreational value and important contribution to the character and appearance of the local area. The Great Ouse Green Infrastructure Strategic area which is also a Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley) abuts the southern boundary of the site as does Local Plan allocation HU 9 - Huntingdon Racecourse.</p> <p>Development in this area has the potential to fundamentally impact the landscape and townscape character around and within Great Stukeley and Little Stukeley. Development would create harsh intrusive edges to the countryside setting and would be clearly seen from all around. Significant strategic landscaping would be required and the achievability of this is uncertain.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines however, oil pipeline buffer zone sits outside the south west boundary and and overhead powerline just outside the south eastern boundary. No known heritage assets are located within the site or nature conservation assets and there are no tree preservation orders affecting it. The site is predominantly</p>	
---	--

<p>greenfield land, opportunities to contribute to regeneration are negligible. The southern parcel of the site includes a mineral safeguarding area, it is not within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site owned and control by a single company, development is supported by the landowner. There are no known legal restrictions. The site is available from 2023, it is proposed that the site would be delivered by a master developer build out is expected to take 15 or more years.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. The site promoter proposes a new junction off the A1 to access the site, without further information it is unclear if there are any issues regarding land ownership to facilitate this and the viability and practicality of achieving such access. Safe active travel connections particularly across the A1307 to link the northern and southern parcel would be required and opportunities to integrate with nearby communities, the southern parcel is removed from residential development and could therefore represent an isolated pocket of development in the countryside.</p> <p>The northern parcels of the site have significant topographical distinctiveness and challenges, significant strategic landscaping would be required and the achievability of this is uncertain.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. Some of the site is close to the A1 and A1307 meaning that noise and pollution mitigation measures may be required. However, access to the A1 and A1307 road network would assist with the logistics of construction. Major infrastructure would be required to support development, such as primary schools and a secondary school (or major extension to an existing school), local services and facilities and green spaces/infrastructure.</p> <p>The site promoter noted that the area falling within Flood zone 3, can be used to help deliver a biodiversity net gain, improve the existing drainage situation and provide noise attenuation (if required) and that masterplanning would demonstrate how an offset can be created to enable the Stukeleys to maintain village identities. It is proposed that the quantum of development could help finance a new junction off the A1 and that the site can improve connections and sharing facilities with Alconbury Weald / the western side of Huntingdon whilst offering opportunities to better link Nook Farm to existing development as well as to provide improved pedestrian and cycle routes. It is also proposed that a rapid transit/busway network could connect to Alconbury Weald and Huntingdon.</p>	

<b>Deliverability / developability</b>	
<p>The site is allocated in Huntingdonshire's Local Plan to 2036. There are no known legal restrictions. There are significant constraints to overcome including access and impact on The Stukeleys. Significant infrastructure would be required. It is proposed that the site would be delivered by a master developer build out is expected to take 15 or more years. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is wholly greenfield and predominantly grade 2 agricultural land</li> <li>• Three quarters of the site is within flood zone 1 (approximately 564ha), flood zones 2 and 3a present, there is some risk from surface water flooding.</li> <li>• There is potential for enhanced public transport connections via a rapid transit/busway network, however this scheme is not confirmed without this private transport could dominate.</li> <li>• The site may impact on SSSIs, heritage assets, (listed buildings) and is close to conservation areas in Great Stukeley and Little Stukeley.</li> <li>• The proposal would create a new community changing the landscape from what is predominantly what is currently open farmed countryside.</li> <li>• The northern parcels form the setting for the villages of Great and Little Stukeley and provide the distinct countryside setting to these rural villages development in the northern parcels would fundamentally alter the setting. It is considered that development in these northern parcels should be avoided.</li> <li>• The size of the site has the potential to increase traffic on the local and strategic road network (A1 and A1307) creating air and noise pollution with the potential to affect future residents.</li> <li>• Strategic infrastructure would be required to access the site and impact on the highway network would require assesment.</li> <li>• Integration of the site with Huntingdon would require may be difficult to achieve and require safe active travel connections.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• The southern parcel may be appropriate for development in the long term contributing to the housing needs of the district and supporting sustainable placemaking.</li> </ul>
--

<ul style="list-style-type: none"> <li>• Development in the northern parcel should be avoided to prevent significant impact on the landscape impact and the setting of Great Stukeley and Little Stukeley.</li> <li>• Noise, air, and light pollution and transport impact would require mitigation.</li> <li>• Flood mitigation would be required.</li> <li>• The site would require major infrastructure to support development including community services and facilities, local retail, employment, active travel and green infrastructure and integration with the wider network</li> <li>• Impact on SSSIs, heritage assets and conservation areas in Great Stukeley and Little Stukeley would require assessment and mitigation.</li> <li>• Safe integration and crossing points across the A141 to Huntingdon should be investigated to minimise car travel.</li> </ul>
--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area 375.77ha.</p> <p>Removal of approximately 153ha to represent the northern parcels of land which would have a significant impact on the landscape and setting of Great Stukeley and Little Stukeley.</p> <p>Proposed site area minus northern parcels</p> <p><b>375.77ha - 153ha = Gross site area = 222.77ha</b></p> <p>80% net developable area to provide for strategic landscaping.</p> <p><b>222.77ha x 80% = 178.216ha</b></p>	<p>Net developable area of 178.216ha</p> <p>4ha deducted to 2 2FE Primary schools</p> <p>1.5ha deducted for 2 local centres</p> <p>20ha deducted for employment</p> <p>0.5ha deducted for community/health uses</p> <p>60ha deducted for strategic open space</p> <p>92.216ha for residential uses</p> <p>Remaining land for residential = <b>92.216ha</b> (178.216ha -4ha - 1.5ha- 20ha - 0.5ha - 60ha)</p>	<p>Available post 2028 subject to allocation</p> <p>Build out 15 to 20 years</p>

<b>Site name</b>	Land between 76 and 86 Owl End, Great Stukeley

Site address	Parish(es)	Site area (ha)
Land between 76 and 86 Owl End, Great Stukeley PE28 4AQ	The Stukeleys	0.30ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	2 to 3 homes	Available 2024-2028 Build out 1 year

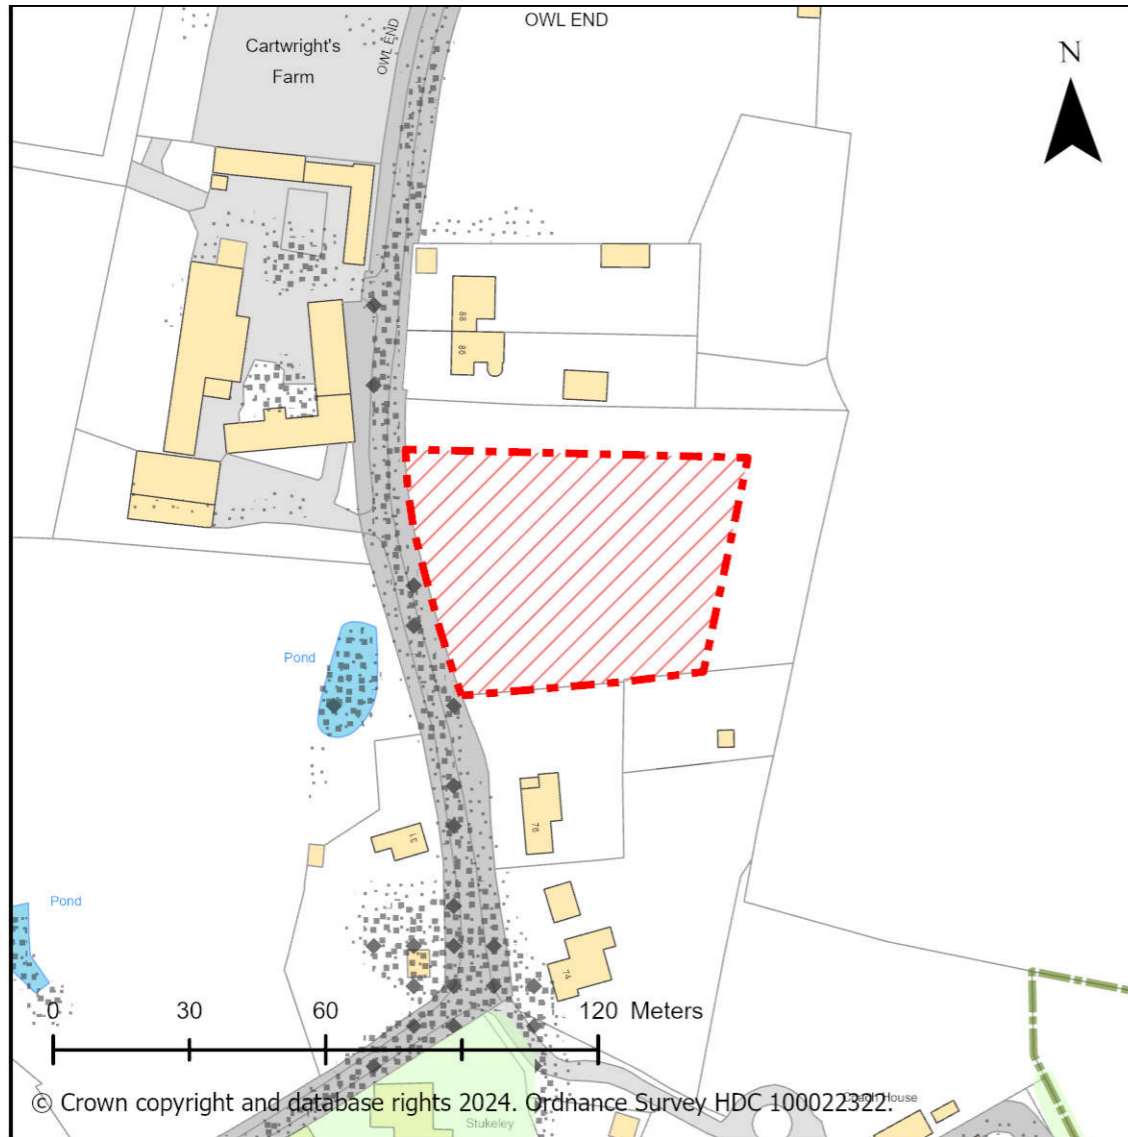

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 28
Relevant planning history	Application number: 1300883FUL. Proposed development: Creation of new entrance to paddock including engineering operations to culvert ditch. Outcome: Approved.
Land type	Wholly greenfield land
Current use of the site	Paddock associated with residential garden
Supporting information	Ecological assessment Location plan

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial or surface water flood risk. The majority of the site is classified as grade 3 agricultural land with the north western corner grade 2.</p> <p>The land is relatively flat and located on Owl End, one of three 'Ends', it is a distinctive contiguous extension to the village of Great Stukeley. The site is located in the northern extent of Owl End where development is more dispersed and interrupted with green breaks. The western boundary of the site is bounded with trees and hedgerow and separated from the road by a drainage ditch. Trees are also present around the remaining boundaries but are not contiguous. A small wooded area sits northeast of the site. Residential properties</p>	+
---	---

<p>sit north and south of the site. The eastern edge of the site looks out over open countryside. The site cannot be seen from any public rights of way. Landscape impact would be limited but transition to the countryside to the east would require consideration.</p> <p>Development would have to consider the retention of trees and hedgerow and integration of the site with existing character and from of this distinctive area through careful masterplanning. Access issues would require resolution.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site, overhead powerlines run along the eastern edge. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is not within a sand and gravel mineral safeguarding area nor a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site owned by a single family in individual control, development is supported by the landowners. There are no known legal restrictions. The site is available from 2024-2028, it is proposed that the site would be delivered directly by the landowner build out is expected to take 1 year.</p>	+
<p><b>Achievability</b></p> <p>Gas, mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure. Access to the site would be via Owl End, a narrow road. Access to the site would be required across a drainage ditch and would require resolution.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site. Overhead powerlines run along the eastern edge which may need addressing regarding access for construction vehicles.</p> <p>The site promoter has provided a location plan and an ecologic survey which notes that there is no ecological impact to developing the site. They note that land to the north and east would be planted with trees</p> <p>to extend existing woodland to the north to improving biodiversity and wildlife habitat. The site proposes 2 to 3 homes.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no known legal or ownership constraints. Constraints such as access to the site, and compatibility with the character of owl end would be required. It is proposed that the site would be delivered by the land owner and build out would be expected over 1 year. The site is classified as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is not constrained by fluvial flood or surface water flood.
- The site is wholly greenfield land with the majority of the site grade 3 agricultural land and the north western corner grade 2.
- The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution.
- The retention of trees and hedgerow along the western boundary would help to minimise ecological impact, retain the character of the area.
- Consideration landscaping required to transition to or screen the wider countryside to the east and limit impact of wooded area to the north.
- Appropriate access to the site over a drainage ditch would require establishing.
- Density would be required to be low and frontage only in order to be in keeping with the surrounding character, form and vernacular of the area.
- The site is close to some local services and facilities and employment opportunities are 5km away.

In combination the outcomes of the LAA and SA indicate that the site:

- Has the potential to be effectively masterplanned to become part of the existing community
- Is less than 1 hectare and contributes to the government's aspiration to promote sites suitable for SME builders.
- Would require landscape mitigation to the east and retention of trees and hedgerow where possible
- Should deliver low density housing in keeping with the existing character and vernacular of the area.

- Would be required to demonstrate suitable access.
- Mitigation may be required to address overhead powerlines

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.30ha  Given the more linear character of residential development along the northern extent of Owl End rather than calculate a net developable area the calculation is based on typical frontage widths of properties in the immediate area. Landscaping or screening would be required on the eastern boundary which could be contained within larger gardens recognising the character of the immediate locality.  Net developable area of approximately 56m frontage x 20m width per plot.	Residential use - market and/or affordable housing  56m frontage x 20m width per plot  Capacity = 56/20 = <b>3 homes</b>	Available post 2028 subject to allocation  Build out 1 to 2 years.

**Updates after the Initial Assessment**

**The Stukeleys 4: Land North of Ermine Street, Little Stukeley**

<b>Site reference</b>	The Stukeleys 4
<b>Site name</b>	Land north of Ermine Street, Little Stukeley

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land north of Ermine Street, Little Stukeley, PE28 4XL	The Stukeleys	1.20ha

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Open space: Natural, green of open space Biodiversity net gain	circa 28 homes  Public open space including a LAP and biodiversity net gain, land area not provided.	Available 2024-2028  Build out over 18 months.

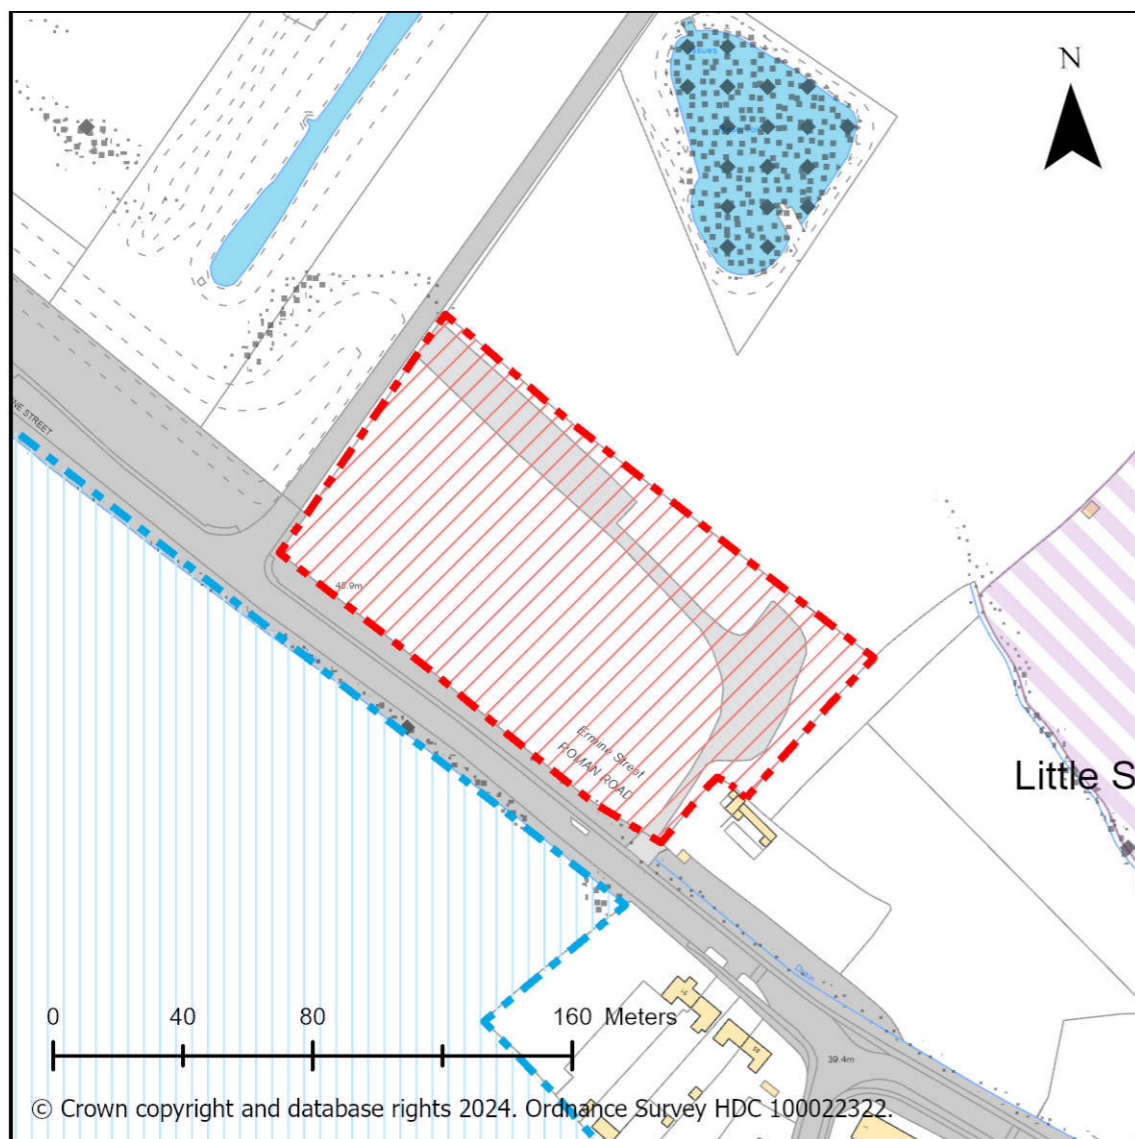

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 355
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Location plan Masterplan

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, low risk surface flood is present but negligible. The south eastern half of the site is grade 3 agricultural land whilst the north western is non agricultural land.</p> <p>The site slopes gently down from west to east. The southern and western boundary is screened by mature trees and hedgerow. The western edge is bounded by an access road to RAF Alconbury. Access to the site is available on the south east boundary off Ermine Street. The northern edge of the site looks out onto further open greenspace. Some hardstanding is present as part of the access to and within the site. The site and further</p>	-
---	---

<p>greenspace to the north forms part of a protected settlement break designated in The Stukeleys Neighbourhood Plan highlighting the importance of the retention of the character and setting of Little Stukeley through its separation with other built development in Huntingdon, RAF Alconbury and Alconbury Weald. The proposed site forms a distinctive green break between the village of Little Stukeley and RAF Alconbury. Proposals on this land are not supported in the Neighbourhood Plan where this would individually or cumulatively lead to a reduction in the openness between settlements. The site is therefore not suitable for built development, but would be suitable for enhanced green infrastructure. A conservation area sits to the east.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is wholly greenfield land and offers no opportunities to contribute to regeneration. The site is not within a sand and gravel mineral safeguarding area nor a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single / individual company control and land control arrangements in place with a developer. Development is supported by the landowners. There are no known legal restrictions. The site is available 2024-2028 and would be delivered by a house builder, build out is estimated to take 18 months.</p>	+
<p><b>Achievability</b></p> <p>Mains water and electricity supply are noted as being accessible from site boundary as are digital and telecommunications infrastructure, access to gas supply is unknown. Access to the site would be via the south east boundary off Ermine Street, however the boundary of the site does not include this access meaning there could be issues with intervening land that may be outside the landowners control which could impede delivery and/or viability. However, access to Ermine Street would assist with the logistics of construction. There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines.</p> <p>The proposed site forms a distinctive green break between the village of Little Stukeley and RAF Alconbury. Proposals on this land are not supported in the Neighbourhood Plan where this would individually or cumulatively lead to a reduction in the openness between settlements. The site is therefore not achievable.</p> <p>The site promoter has noted that safe vehicular and pedestrian access can be introduced onto Ermine Street and it is proposed that a new access is introduced onto Ermine Street and this would connect in with the existing footway that runs along the site frontage. The existing trees and hedgerow present along the boundaries would be retained</p>	

and enhanced as part of the proposal as would trees onsite. A significant buffer would be provided between the site and the the airfield. Dwellings would be set back from the development boundaries and a LAP provided.	
<b>Deliverability / developability</b>	
The sites designation as a protected settlement break in The Stukeleys Neighbourhood Plan mean that the site is not suitable or achievable and as such is un deliverable and undevelopable.	

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No
	The sites designation as a protected settlement break in The Stukeleys Neighbourhood Plan means that the site is not suitable or achievable and as such is undeliverable and undevelopable.

**Impact of the Sustainability Appraisal on the assessment**

The site did not progress to Sustainability Appraisal
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to the site's designation as a protected settlement break in The Stukeleys Neighbourhood Plan meaning that the site is not suitable or achievable, and as such is undeliverable and undevelopable.	N/A	N/A

**The Stukeleys 5: Land North of A141, between Huntingdon Racecourse and A1307**

<b>Site reference</b>	The Stukeleys 5
<b>Site name</b>	Land to the north west of the A141, between Huntingdon Racecourse and A1307

Site address	Parish(es)	Site area (ha)
Land to the north west of the A141, between Huntingdon Racecourse and A1307.	The Stukeleys	103.58ha

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment Logistics, distribution	55,741 sqm B2 uses  130,065sqm B8 use (total of 185,806sqm with 30% capped at B2)	Available 2024-2028  Build out over 2 to 3 years.

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS: 221
Relevant planning history	HELAA (December 2017): Brook Field Farm
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Construction phase social value framework  Call for Sites Submission Letter  Location plan  Logistics in Huntingdonshire - Call for Sites Opportunity Document

	Logistics in Huntingdonshire - Call for Sites Technical Promotion Document including appendices on Site Location Plan, Constraints and Opportunities Plan, Concept Plan, Landscape Framework Plan, Landscape and Visual Appraisal, Built Heritage , Archaeology, Technical Note, Transport, Air Quality, Drainage, Ecology, Arboriculture, Lighting, Ground Conditions and Utilities.  Representations to Huntingdonshire Local Plan Issues Consultation - July 2023
--	--

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	5% approximately 4.8 ha in Flood Zone 3b	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The majority of the site sits within flood zone 1 however flood zone 2, 3 and 3b are present in the south eastern corner, surface water flood risk is present on the site. The majority of the site is grade 2 agricultural land, sandwiched by small strips of grade 3 agricultural land on the northern and southern boundaries.</p> <p>The land rises quite significantly towards the centre of the site with a minimum variation of 10m, this undulation is reflective of its location within the Central Claylands. The eastern edge of the site is bounded by the A141, with the majority of the edge screened by mature trees and hedgerow, views into the site can be seen clearly however from the southern third of the eastern edge showing the prominent landscape features. The southern boundary</p>	~
--	---

<p>abuts Local Plan allocation HU9 Huntingdon Racecourse which is substantially screened by trees and hedgerow and the northern boundary also screened by substantial trees and hedgerow.</p> <p>Views into the site are in general transient in nature from those travelling along the A141 and A1307, however elevation of buildings in relation to the rising nature of the land could mean that the impact of development on the wider landscape and from the Racecourse could be significant without careful masterplanning.</p> <p>The site has multiple access points including from off the A141, A1302 and via a bridge crossing which provides agricultural access to the fields separated by the A1307. Local Plan allocation HU1 Ermine Street sits across the road to the north. Brookfield farm sits within site, which includes residential properties and associated farm buildings. A public right of way traverses the northern half of the site, another runs along the southern boundary and one is located outside, but close to the north western boundary (between 200-400m away) meaning views of the landscape can be seen from within, both the public right of way in the north of the site and on the southern edge provide connections to residential properties and Hinchingsbrooke Country Park respectively. The Southern most corner also connects and includes the edge of the Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley).</p> <p>The site is near to other business and industrial uses which cluster around the north of Huntingdon, meaning that the compatibility of this site and use could be beneficial to the existing sector.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site. Overhead power line cross the north western corner. No known heritage assets are located within the site or nature conservation assets, there are no tree preservation orders affecting it. The site is predominantly greenfield land, opportunities to contribute to regeneration are negligible. A small portion of the south end of the site sits within a sand and gravel mineral safeguarding area. The site does not sit within a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and is optioned, development is supported by all landowners. There are no known legal restrictions. The site is available 2024-2028 and would be delivered by a master developer, build out is estimated to take 2 to 3 years.</p>	+
<p><b>Achievability</b></p> <p>Digital and telecommunications infrastructure is accessible from the site boundary however, gas, mains water and electricity supply are not immediately accessible. Existing access to the site is available via the A141 or A1307 and close to the A1, access via these roads would assist with the logistics of construction and operation of the site. There is no known</p>	~

<p>pollution or contamination and no known gas or oil pipelines and buffer zones cross the site, overhead power line crosses the north eastern corner, which may require mitigation depending on the layout of the site. The site has significant topographical challenges due to the elevation of the land meaning the elevation of buildings may have an adverse impact on the landscape setting, this would have to be investigated through the masterplanning process. The increase in traffic generated by the site could increase noise, air and light pollution and impact the road network, a transport impact assessment would be required. The presence of major roads may require further measures to safely integrate the proposed site with the existing residential area of Huntingdon (currently separated by the A141)</p> <p>The site promoter has provided a number of documents which note that the site will provide of structural landscaping around the development to provide a green backdrop in key views from the north of the site, including the provision of landscape corridors to break up development areas; create connections between the existing Hinchingsbrooke Country Park and the site, provide a green infrastructure corridor and habitat, pedestrian, cycle connectivity between Hinchingsbrooke and the allocations to the north of the site, provide a significant buffer to the Grade II Listed Waterloo Farm (to the north west); and contribute towards achieving at least 10% biodiversity net gain, with a target of 15%. It is envisaged that the electricity infrastructure on the northern edge of the site would not have any impact on the development of the site and access provided from the A141, by a new all movement junction connecting to Kingfisher Way, safe crossings would be provided across the A141 for active travel routes.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Constraints such as landscape impact as a result of topographical challenges would require careful consideration. It is proposed that the site would be delivered by a master builder and build out would be expected over 2 to 3 years. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. The site is categorised as developable.</p>	

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>The site is greenfield agricultural land and predominantly grade 3 agricultural land</li> </ul>
---

<ul style="list-style-type: none"> <li>The majority of the site is flood zone 1 (approximately 94ha/91%), flood zones 2 , 3a and 3b present, there is some risk from surface water flooding.</li> <li>The site may impact on SSSIs, heritage assets, (listed buildings) and nature conservation assets.</li> <li>Elevation of the proposed buildings in relation to the rising nature of the land could mean that the impact of development on the wider landscape and from adjacent Huntingdon Racecourse could be significant.</li> <li>Impact on water resources is unknown and would be dependant on the industries that occupy the site and their need for water to undertake their operations.</li> <li>The size and use of the site has the potential to increase traffic on the local and strategic road network (A1, A141 and A1307) creating air and noise pollution.</li> <li>Light pollution from the proposed uses may impact upon the wider countryside setting, nature conservation assets and the wider countryside.</li> <li>Safe crossing of A141 and active travel routes would assist in the integration of the site with the wider community.</li> <li>The site has the opportunity to support retention and growth of indigenous companies and provide opportunities for new investment to enhance the local economy</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>The site presents the opportunity for economic benefits to the community through increased jobs and economic linkages and opportunities for local business or new investment.</li> <li>Elevation of buildings and impact on wider countryside would require assessment and mitigation.</li> <li>Noise, air, and light pollution and transport impact would require mitigation.</li> <li>Flood mitigation would be required.</li> <li>Mitigation and assessment of the impact on SSSIs, heritage assets, (listed buildings) and nature conservation assets would be required.</li> <li>Safe integration and crossing points across the A141 to Huntingdon should be investigated to minimise car travel.</li> <li>Overhead power line crosses the north eastern corner, which may require mitigation depending on the layout of the site.</li> <li>The site has the opportunity to contribute towards habitat connectivity.</li> </ul>
---

Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

	Commercial Use	Logistics/ Distribution
<p><b>Context, constraints and potential suitability</b></p> <p>72% of the site is in flood zone 3b (50 ha), just over 5ha is within Flood zone 1, with the remainder is in flood zone 2 and 3. Over half of the site is susceptible to high risk surface water flooding. The site is grade 3 agricultural land.</p> <p>The site is flat and contains a number of uses associated with the operation of the racecourse including stables, bar, stands, parking etc. An hotel sits just outside the south eastern corner of the site. The majority</p>	+	-

<p>of the site is open greenspace including the race track which contains Brampton Racecourse SSSI which supports an extensive area of unimproved neutral grassland. The site sits within the Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley) and a public right of way runs along the north eastern boundary, some of the site can be seen from vantage points such as the A1 and A141 and a public right of way. Any proposed uses on the site would have to provide suitable flood mitigation and be of a use that would not detrimentally impact the SSSI. Access to the site is via a roundabout off the A141.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead powerlines. No known heritage assets are located within the site and there are no tree preservation orders affecting it. The site is within a sand and gravel mineral safeguarding area, however the site appears to have been quarried and refilled meaning this status should not affect the site. The site is not a water recycling area. The site is previously developed and part greenfield, due to the nature of the site the compatibility of uses is an important determinant in the suitability of uses on the site. The site is allocated in Huntingdonshire's Local Plan to 2036 for a mix of uses which would facilitate the continued use of site for a racecourse, including complementary conference and events facilities, this suitability is substantiated by the approved applications noted above.</p> <p>However, uses such as logistics / distribution and or lorry parking could detrimentally impact the nature conservation value of the site biology and ecology, the uses could increase light, air and noise pollution.</p>		
<p><b>Availability</b></p> <p>The site owned and controlled by a single company and development is supported by the landowners. There are no known legal restrictions. The site is available from 2023 development would be delivered directly by the landowner, build out is currently unknown.</p>	+	
<p><b>Achievability</b></p> <p>The site promoter notes that gas supply is accessible from the site boundary and mains water and electricity supply and digital and telecommunications infrastructure are accessible within the site. The racecourse is accessible from a roundabout off the A141 which would assist in the logistics of construction and provides suitable access to those using the racecourse and associated facilities.</p>	+	-

<p>There is no known pollution or contamination and no known gas or oil pipelines and buffer zones cross the site nor overhead power lines. The site is within a sand and gravel mineral safeguarding area, however the site appears to have been quarried and refilled meaning this status should not affect the site. The site is not in a water recycling area.</p> <p>The presence of a SSSI within the site and flood zone 3b mean that development would have to be carefully masterplanned to avoid detrimental impact on these areas and prevention of the increase of flood risk or surface water run off, an ecological survey and flood risk assessment would be required. Some uses have been demonstrated through approved planning permissions to be suitable with mitigation. The site is partly previously developed land and partly greenfield land, redevelopment of previously developed land could provide opportunities for regeneration and continued use of the site. The increase in traffic generated by the site, especially through logistics and distribution uses could increase noise, air and light pollution and impact the road network, a transport impact assessment would be required.</p> <p>The site promoter proposes development on previously developed land and an area (circa 2.2ha) along the north eastern boundary which is outside Flood Zone 2 and 3 for a wide range of development opportunities including commercial, employment, storage and parking.</p>		
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Other constraints such as transport impact, flooding and impact on nature conservation designations would require resolution. The site is allocated with suitable criteria in Huntingdonshire's Local Plan to 2036 and is available from 2023. The site is categorised as developable for a mix of uses which would facilitate the continued use of site for a racecourse, including complementary conference and events facilities. However, uses such as logistics / distribution and or lorry parking could detrimentally impact the Nature conservation value of the site biology and ecology. The site could be considered developable for employment, commercial leisure uses, outdoor sports and leisure and facilities for leisure events..</p>	+	~

	<p>Uses such as logistics / distribution and or lorry parking could detrimentally impact the Nature conservation value of the site biology and ecology and will therefore will not be assessed. A sustainability appraisal will be undertaken for employment, commercial leisure uses, outdoor sports and leisure and facilities for leisure events.</p>
--	--

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• The site is heavily constrained by fluvial flood risk, risk of flooding with climate change at 1 in 100 (Design Flood) and surface water flood risk is also present.</li> <li>• The site is part previously developed land, some of which is located within flood zones 2 and 3 and part greenfield land and is grade 3 agricultural land.</li> <li>• Development should prioritise previously developed land reducing flood risk where possible and limit further new development to flood zone 1 in the north east of the site.</li> <li>• The site would provide opportunity for high and low density employment and retention of the Racecourse as a unique visitor attraction in the district.</li> <li>• The proposed uses have the potential to adversely affect the surrounding countryside as a result of their visibility in the wider landscape and increases in light and noise pollution.</li> <li>• Additional traffic generated could be mitigated by the existing dedicated junction from the A141.</li> <li>• The proposal would not reinforce the role of the town or nearby villages.</li> <li>• The site is within the Natural Cambridgeshire Priority Landscape Area (Great Ouse Valley) and contains Brampton Racecourse SSSI. Extensive development in this area could have a significant impact on the landscape, ecology and biodiversity of the area and wider countryside setting.</li> <li>• There is a listed building approximately 200m north of the site that could be adversely impacted by the development.</li> <li>• The site is currently home to Huntingdon &amp; District Rugby Football club which is exploring opportunities to relocate to within the Alconbury Weald development, if this does not come to fruition any proposal would need to ensure the retention of this facility.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p>
--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

- Could be appropriate for development if it is sequentially focussed on existing previously developed land, then within flood zone 1 in the north east of the site.
- Should ensure that development relates to the existing uses and operation of the site to avoid negative impacts on Huntingdon town centre.
- Will need to demonstrated flood risk mitigation or betterment especially on previously developed land.
- Would require any development to be sensitive to the natural landscape and incorporate carefully designed and located development sensitive to the greenspace uses and value of the site and wider landscape.
- Should demonstrate no detrimental impact on nature conservation designations within and nearby the site, its setting and the ecology and biodiversity of the site and impact upon nearby listed building.
- Should ensure retention of the Rugby Club if required.

**HDC's Delivery Calculations**

Page 741 of 3488

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gorss site area of 66.90ha  Net developable area of 10ha taking into account land in flood zone 1 and previously developed land to allow for more comprehensive redevelopment if required.  70% net developable area to allow for landscaping and flood risk mitigation  10ha x 70% = 7ha	Developable area of 7ha  Employment - Commercial leisure uses, outdoor sports and leisure (racing and non racing) and essential facilities, facilities for leisure events and conferencing at x 0.20 plot ratio to reflect sensitivity to local landscape and setting of SSSI  Capacity = 7ha * 0.20 = 14,000 sqm	Available 2024  Build out 2 to 5 years

## 7 Upton and Coppingford

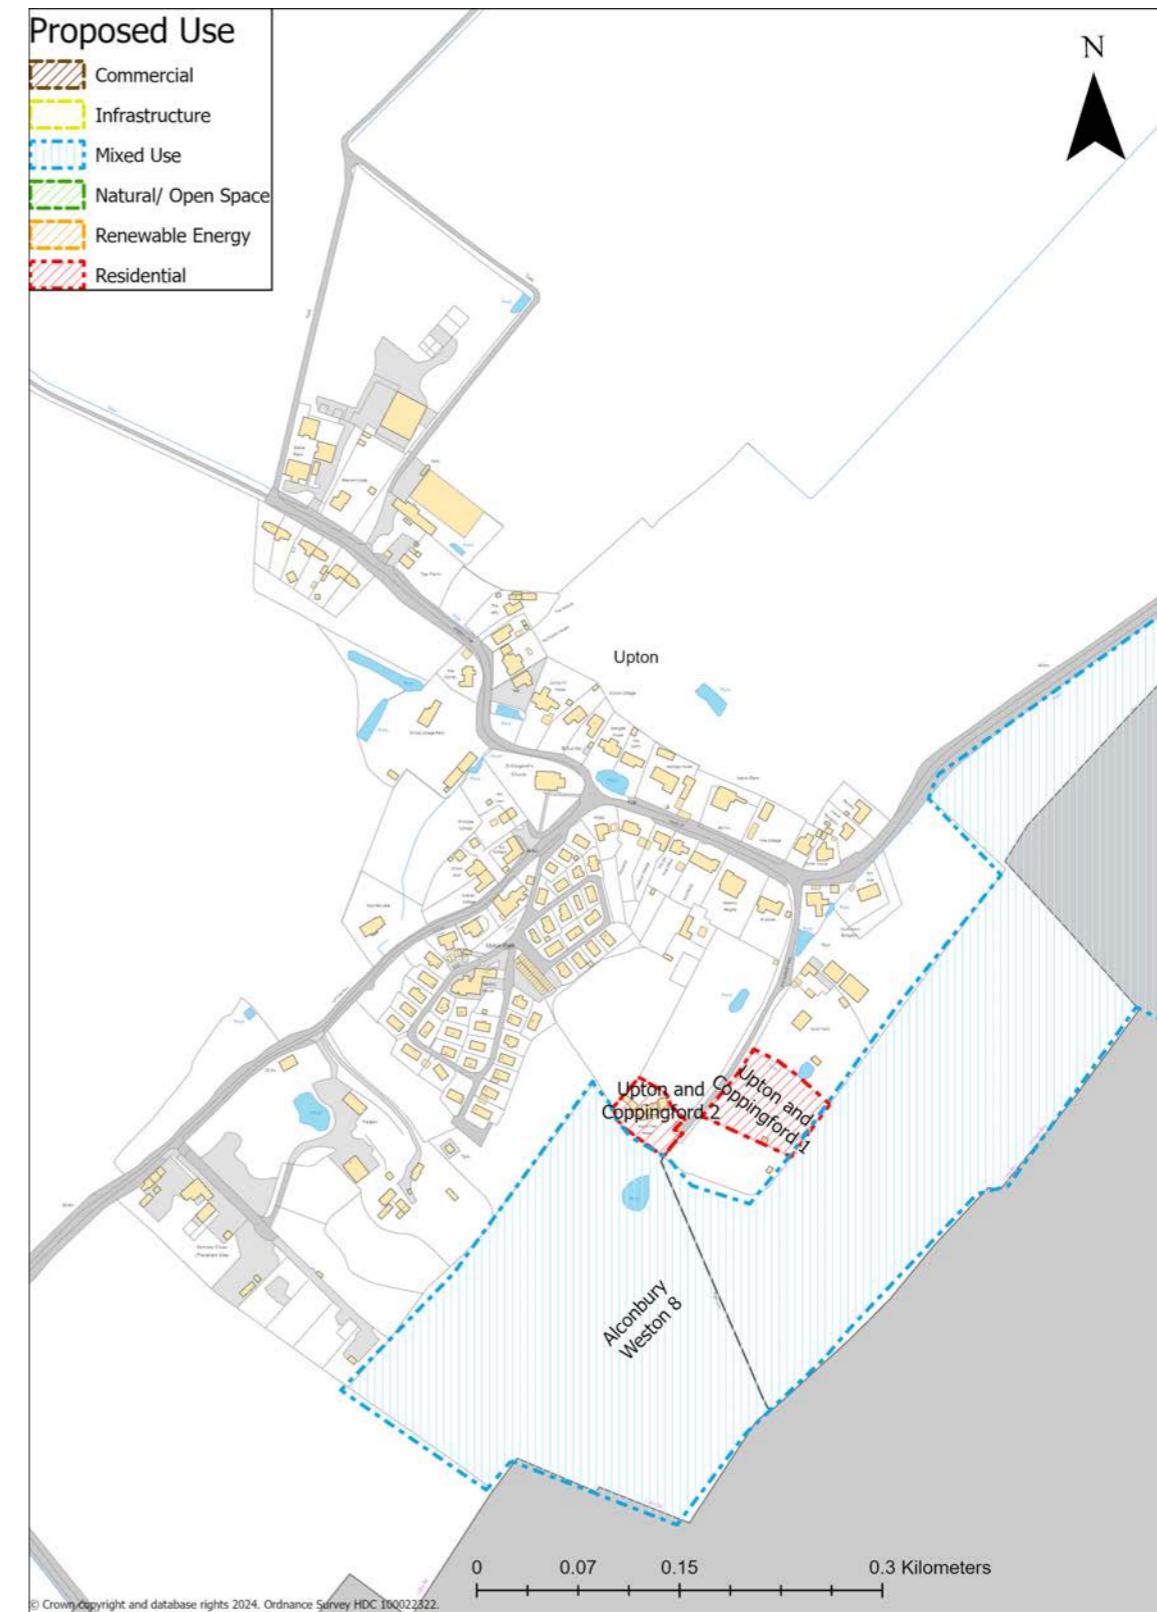

Huntingdonshire District Council | Northern Central Huntingdonshire Land Availability Assessment

### 7 Upton and Coppingford

**7.1** A total of two sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Upton and Coppingford 1: Land to South West of South Farm, Upton
- Upton and Coppingford 2: Land to East/South East of Maple Tree House, off Pig Market End, Upton

**7.2** Please note that 'Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield' also partially falls within Upton and Coppingford parish as well as The Stukeleys, but it has been included under Alconbury Weston as most of the site lies within that parish area.

7.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Site reference</b>	Upton and Coppingford 1
<b>Site name</b>	Land to South West of South Farm, Upton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land to South/South West of South Farm, off Pig Market End, Upton, PE28 5YY	Upton and Coppingford	0.39

**Promoter's Intentions**

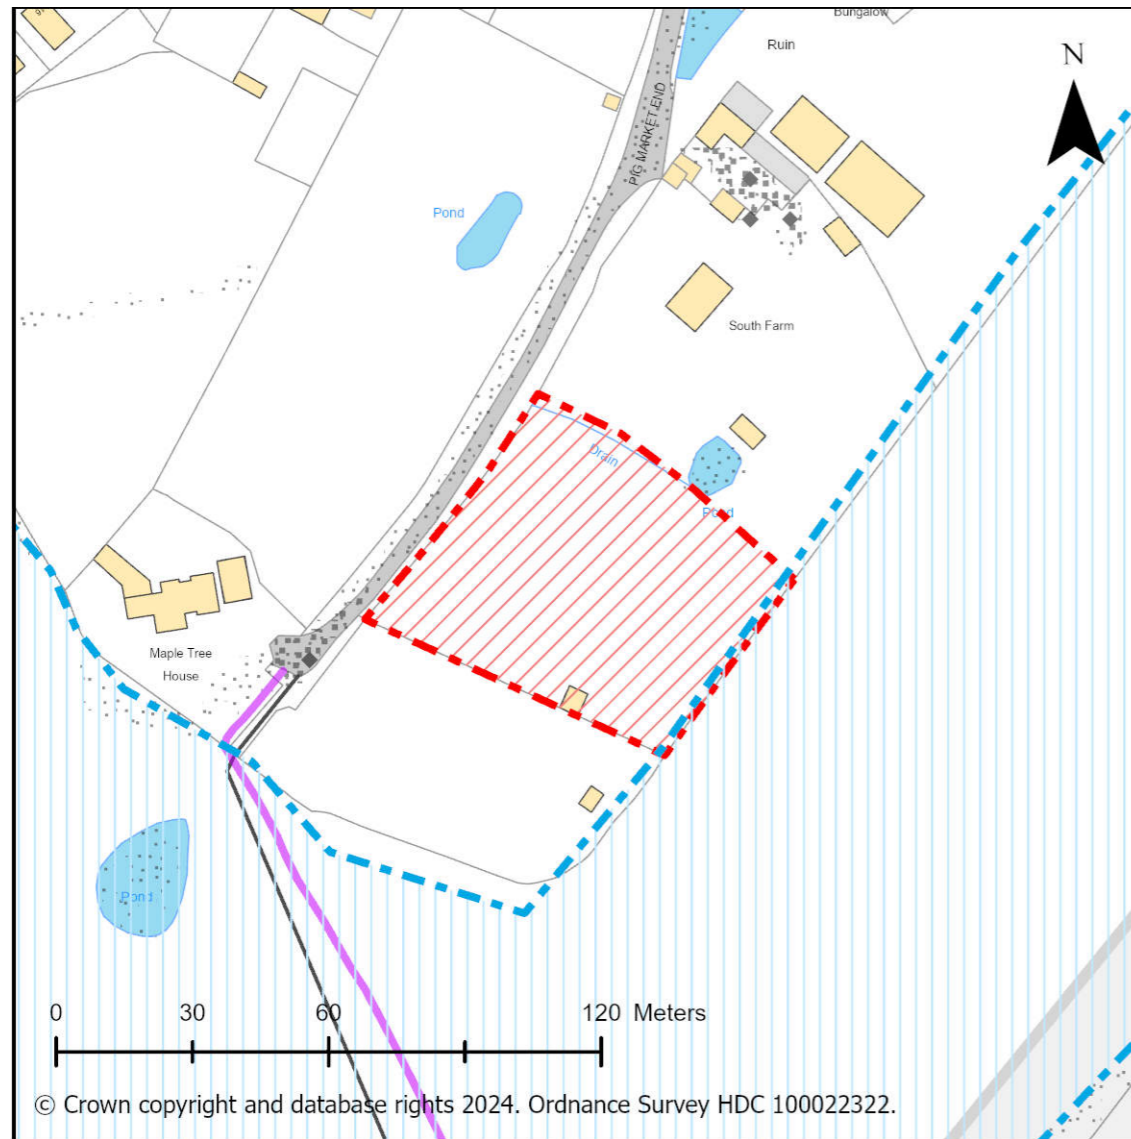

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Custom and self-build housing	5 plots	Available 2023  Build out over 1 to 2 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:34
Relevant planning history	Application Number: 1402070FUL  Proposed development: Replacement dwelling, car port and associated works  Outcome: Refused
Land type	Wholly greenfield land
Current use of the site	Garden land
Supporting information	Location Plan & Existing Site Plan (Drawing Number: 8253-PA01)(Date: February 2019)

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, the site is at risk of low risk surface water flooding on 0.12% of the site only. The site is grade 3 agricultural land.</p> <p>The site is flat and sits within a ridgeway within the Central Claylands landscape character area. The site is located in Upton a small village set within the countryside and surrounded by agricultural land. The village is predominantly characterised by linear development and associated agricultural uses and buildings. The proposed site is located on Pig Market End where built development becomes more dispersed with only three residential properties attributed to the 'End' which has a greater relationship with the wider countryside than the</p>	+
---	---

more residential area of the village. South farm residential property is located north of the site and can be clearly seen from within the site. The eastern edge looks out across open countryside, whilst the western and southern lined with trees and hedgerow. The site would require some landscaping address the relationship with the open countryside and proposed residential uses. Access to the site could be via Pig Market End a narrow lane, however the number of proposed plots on the site would not significantly increase traffic generation in the area.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines. There are no known nature conservation, heritage assets or tree preservation orders affecting it. The site is greenfield land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.

**Availability**

The site is in single family ownership and individual control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2023, with individual plots sold for self-build opportunities. Build out expected to take 1 to 2 years.

**Achievability**

Mains water and electricity supply and digital telecommunications infrastructure are noted as being accessible from within the site. Gas supply is not accessible.

The boundary plan is set back from Pig Market End meaning that it is unclear if access to the site is achievable or whether there may be issues with ownership or ransom strips. Further information would be required to establish achievability of access. The site is near the A1 which has the potential to assist with the logistics of construction, however Pig Market End is a narrow lane which may present minor issues.

There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines.

**Deliverability / developability**

There are no known legal or ownership constraints. Development would be required to address landscape impact and access. The site is contrary to policy so an allocation status would be required. The site is categorised as developable.

+
~
~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is not constrained by fluvial flood risk and has minimum surface water flood risk.
- The site is wholly greenfield grade 3 agricultural land.
- The site has limited access to services, facilities and employment opportunities with a village hall and church within 800m.
- The site is has a greater relationship with the countryside than the residential area of the village.
- The proposed density of the site would be in keeping with the village.
- The site would require some landscaping to address the relationship to the open countryside and residential property to the north.
- The site is not of a size or scale that would impact the form or character of the local area.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place.
- The site is less than 1ha and contributes to the government’s aspiration to promote sites suitable for SME builders.
- Would require retention of trees and hedgerows where possible.
- Requires flood mitigation.
- The site would require some landscaping to address the relationship to the open countryside and residential property to the north.

Page 746 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 0.39ha  70% net developable area to address the relationship to the open countryside and residential property to the north.  0.39ha x 70% = <b>0.273ha</b>	Net developable area of 0.273ha  Residential – custom and self-build housing  Very low density of 25 dph to reflect edge of settlement location	Available post 2028 subject to allocation  Build out 1 to 3 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Capacity = 0.273ha x 25dph = <b>7 homes</b>	

**Updates after the Initial Assessment**

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

Page 753 of 3488

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is not constrained by fluvial flood risk, some surface water flood risk in association with a pond within the site. The site is grade 3 agricultural land.</p>	+
---	---

<p>The site frontage is located on Thurning Road, the land is flat and sits within the edge of a ridgeway, a feature of the Central Claylands landscape character. Winwick Village Hall sits on the eastern edge and a residential property in the south eastern corner whose back garden runs along the southern boundary and lined with established trees. Trees and hedgerow line the northern and eastern boundary. Landscape impact would be minimal if trees and hedgerow were retained. Some trees are present in the north eastern corner in the location of the pond and a tree preservation order sits on the south eastern boundary, which would require integration with the site.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines. A telegraph pole and lines run along the northern boundary. There are no known conservation or heritage assets within the site. The site is greenfield land and offers no opportunities to contribute to regeneration. The site is not within a mineral safeguarding area or a water recycling area.</p>	
<p><b>Availability</b></p> <p>The site is in single family ownership and control, the development of the site is supported by all landowners. There are no known legal restrictions. The site is available from 2024-2028 the site promoter proposes that allocation status would be acquired before the land is sold to a third party for obtaining planning permission. Build out is expected to take 1 to 2 years.</p>	+
<p><b>Achievability</b></p> <p>Access to gas and mains water supply is unknown as is digital and telecommunications infrastructure. Electricity supply is accessible from the site boundary. Access to the site can be achieved via Thurning Road.</p> <p>There is no known pollution or contamination and no known gas or oil pipelines or buffer zones cross the site nor overhead electricity powerlines. A telegraph pole and lines run along the northern boundary. There are no known conservation or heritage assets within the site.</p> <p>The site promoter proposes 0.04 hectares of open space to retain the pond. The site promoter looks to the wider area identifying nearby heritage assets such as listed buildings, a scheduled monument, SSSIs, SPAs. The proposal to retain trees and hedgerow is proposed to minimise impact on the setting of heritage assets and ecological and archaeological surveys conducted if required.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. Development would need to address surface water flood risk. The site is available from 2024 and categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is not constrained by fluvial flood risk and has minimum surface water flood risk.
- The site is wholly greenfield grade 3 agricultural land.
- The site has limited access to services, facilities and employment opportunities with a village hall and church within 800m.
- The site is well related to the existing settlement.
- The proposed density of the site would be in keeping with the village.
- Trees and hedgerow bound the northern and western boundaries. A residential back garden runs along the southern boundary.
- The village is characterised as having very few footpaths and the site is in proximity to heritage assets including a scheduled monument.
- The site is not of a size or scale that would impact the form or character of the local area.

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide development of a scale that could be integrated into the existing place.
- The site is less than 1ha and contributes to the government’s aspiration to promote sites suitable for SME builders.
- Would require retention of trees and hedgerows where possible.
- Requires flood mitigation.
- Would require an assessment to determine impact on nearby heritage assets.
- The development has the potential to be effectively masterplanned into the existing community by considering the wider townscape. Key considerations would be retention a pond, trees and hedgerow and impact on nearby residential properties.

Page 754 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.60ha  70% net developable area to enable retention of pond trees and hedgerow.  0.60 x 70% = 0.42ha	Net developable area of 0.42ha  Residential -  Market and/or affordable homes.	Available from 2024-2028.  Build out 1 to 2 years.

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Extremely low density of 15dph to reflect surrounding village density.  Capacity = 0.42ha x 15dph = <b>6 homes</b>	

**Updates after the Initial Assessment**

## Document Information

**Title:** Western Huntingdonshire Land Availability Assessment

**Status:** Draft for Consultation

**Date of approval for consultation:** Overview and Scrutiny (Performance and Growth) Panel, 4 September 2024. Cabinet, 10 September 2024.

**Document availability:** Western Huntingdonshire Land Availability Assessment can be found on the Council's [consultation portal](#). Copies can be downloaded from the portal and responses to the consultation may be entered directly into the portal. A hard copy can be viewed at Customer Services Reception, Huntingdonshire District Council, Pathfinder House, St Mary's Street, Huntingdon. This office is open from 8:45 to 17:00 Mondays to Thursdays and 8:45 to 16:30 on Fridays.

**Please note:** This document may be available in alternative formats on request.

**Maps:** All maps are reproduced from the Ordnance Survey Mapping with the permission of the Controller of Her Majesty's Stationery Office. © Crown copyright and database rights 2024. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Ordnance Survey HDC 100022322.

## 1 Western Huntingdonshire Area

1.1 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

Map 1.1 Huntingdonshire site assessment groupings

1.2 This document sets out the site assessments for the sites located within 'Western Huntingdonshire'. This grouping consists of Great Staughton and Kimbolton wards. The following bullet points list all the parishes that fall within this area and the number of sites assessed:

- Brington and Molesworth - 3 sites
- Bythorn and Keyston - 6 sites
- Catworth - 7 sites
- Covington - 0 sites
- Ellington - 3 sites
- Grafham - 3 sites
- Great Staughton - 4 sites
- Hail Weston - 7 sites
- Kimbolton - 11 sites
- Leighton Bromwsold - 1 site
- Old Weston - 3 sites
- Perry - 0 sites
- Stow Longa - 3 sites
- Tilbrook - 1 site

### 2 Important Notice on Site Status

- 2.1 The National Planning Policy Framework requires local planning authorities to identify the future supply of land that is suitable, available and achievable for development. The purpose of this is to identify sites with potential for development, estimate the amount of development they could provide, assess whether the sites are suitable, available and achievable for particular uses and to identify timescales over which that development could be delivered.
- 2.2 The methodology for this Land Availability Assessment is strongly shaped by national guidance. The approach used for the assessments closely follows that set out in the National Planning Practice Guidance on [Housing and Economic Land Availability Assessment](#). To ensure a fair process is used to assess sites, the policies from Huntingdonshire's Local Plan to 2036 are not taken into account. This is to allow for full exploration of future development strategy options. This approach affects the assessment of a site's suitability which focuses only on the constraints which directly affect it and their ability to be mitigated and does not take account of its location. The sustainability of each site's location will be considered in the Sustainability Appraisal. Outcomes of both the Land Availability Assessment and the Sustainability Appraisal will be used to inform development strategy options.
- 2.3 The Land Availability Assessment (LAA) is an evidence base document that informs preparation of the Local Plan Update. It does not allocate sites to be developed; this is the role of the Local Plan Update. Far more sites with potential for development are identified as appropriate to progress through to a more detailed sustainability appraisal than are expected to be needed for the Local Plan Update. This provides choices over the development strategy that may be followed in the Local Plan Update.
- 2.4 **There will be multiple opportunities for people to provide comments on the sites included in this LAA. There will also be multiple opportunities for people to provide comments on the Sustainability Appraisal and any future development strategy and site allocations put forward through the Local Plan Update.**

#### Status of submitted sites

The inclusion of a site in this LAA does not in any way imply that planning permission would be granted for any form of development on it.

The assessment of suitability is a high level consideration of basic constraints affecting a site and the potential for mitigation to be put in place to overcome them. Suitability does not take into account any policies within Huntingdonshire's Local Plan to 2036 as national guidance does not support use of existing local policies in the assessment.

Sites are assessed using the boundaries submitted by the site promoter. Site boundaries may extend or reduce during consideration for allocation or within any future planning application. The Council's assessment of the capacity of a site to accommodate development is based on standard formulae set out within the Land Availability Assessment Methodology which reflect the nature of the proposed use and the appropriate density in the location. This is to allow for comparison of sites on a consistent basis and may differ from the site promoter's anticipated capacity.

The complexity of constraints affecting a site may vary over time, constraints may be resolved or additional constraints may arise. All of these may affect the potential suitability, achievability and capacity of a site.

#### Relationship with the Sustainability Appraisal and other evidence

Site assessments in the LAA should be read in conjunction with their relevant Sustainability Appraisal (SA) to obtain a complete picture of the Council's initial consideration of the site as only a summary of the SA outcomes is incorporated in this document.

Consideration of sites for proposed allocation for development will be supplemented by technical evidence including, but not limited to, that on flood risk, water supply, highway access and capacity, availability of public transport and active travel infrastructure, health, social and community infrastructure capacity and viability.

Outcomes of the Sustainability Appraisal and other relevant evidence will be taken into account alongside the outcomes of the Land Availability Assessment when considering sites for potential allocation.

### 3 How to read the site assessments

- 3.1** This page provides a short guide to the format of the site assessments to help with understanding their purpose. It breaks down each of the key elements of the assessments and explains key definitions and acronyms. The [full methodology](#) is available in a separate document.
- 3.2** Many of the terms used in the assessment are based on definitions and approaches set out in the [National Planning Policy Framework](#). However, as the first version of the Land Availability Assessment is being completed before any Viability Assessment of the sites has been done the definitions of deliverability and developability have been adapted to reflect this. The definition of suitability has also been adapted to only reflect direct constraints and their ability to be mitigated and does not take account of locational issues in terms of the appropriateness for further development of either the individual site or the settlement which it is in or near to.
- 3.3** The document is split into chapters based on parish areas. Each parish (or chapter) contains the assessments for all sites identified to the Council either through the call for sites consultation or through the desktop review of sites. Where sites cross over into more than one parish the assessment can be found in the chapter for the parish where the majority of the site is situated.

#### Key definitions

- **Availability** - has the site been put forward for development by a willing landowner and is it free from known legal constraints that might stop it being developed
- **Achievability** - is there a reasonable prospect that the particular type(s) of development proposed will be developed on the site
- **Capacity** - the amount of development that can be accommodated on a piece of land
- **Deliverability** - is the proposed development suitable, available and achievable and can development start to be delivered within five years
- **Density** - a calculation of the number of dwellings or building floor space divided by the net developable area of land that they occupy
- **Developability** - is there a reasonable prospect of the site being available and achievable at a known time beyond the next five years
- **Greenfield land** - a site that has not been previously built on
- **Gross developable area** - the whole site area
- **Net developable area** - the area which will be used for housing, employment, retail and other built development and directly related uses that serve the development
- **Previously developed land** (also referred to as brownfield land) - land which is or has been occupied by a permanent structure. It excludes land used for: residential gardens, agricultural or forestry buildings, for minerals extraction or waste disposal. It also excludes land that was previously developed but where the remains of the permanent structure or fixed surface structure have substantially blended back into the landscape
- **Suitability** - can the site be physically developed for the proposed use(s) in terms of constraints affecting the site and the possibility of overcoming them

#### Key acronyms

- **CfS** - Call for Sites
- **Dph** - Dwellings per hectare
- **HA** - hectares
- **LAA** - Land Availability Assessment
- **PDL** - Previously Developed Land
- **SA** - Sustainability Appraisal

### 3 How to read the site assessments

3.4 The assessment of each site consists of several sections, each is detailed below:

**Site details** - includes the site reference and site name, its address, parish(es) that the site is located within and the size of the site in hectares.

**Promoter's intentions** - includes the promoter's stated development uses, capacity and delivery timeframes - this information is taken from the Call for Sites form.

**Core information** - includes the call for site reference number, the type of land the site is and what it is currently used for. It also identifies any relevant planning history and any supporting documentation submitted through the Call for Sites.

**Location plan** - each site will have a location plan which serves to locate the site within its immediate environs and identifies any constraints impacting the site. The colour outline of the site will be based on the uses it has been promoted for. A key (or legend) will be provided at the beginning of each parish chapter so that the constraints can be identified.

**Fundamental constraints** - this is the first step in assessing all sites. It assesses whether the site is affected by any of the key fundamental constraints of being grade 1 agricultural land, being in flood zone 3b, being a designated local green space, having a nature conservation designation, being within a mineral development area or water recycling area, or is under the site threshold (over 0.25ha or large enough for at least 5 homes). If any of these apply to the site then it does not progress to a detailed assessment.

**Assessment of site potential** - if the site passes the fundamental constraints, it will then be assessed in detail looking at the suitability, availability, achievability and deliverability/ developability of the site. It utilises information from the Call for Sites submission as well as an assessment of constraints.

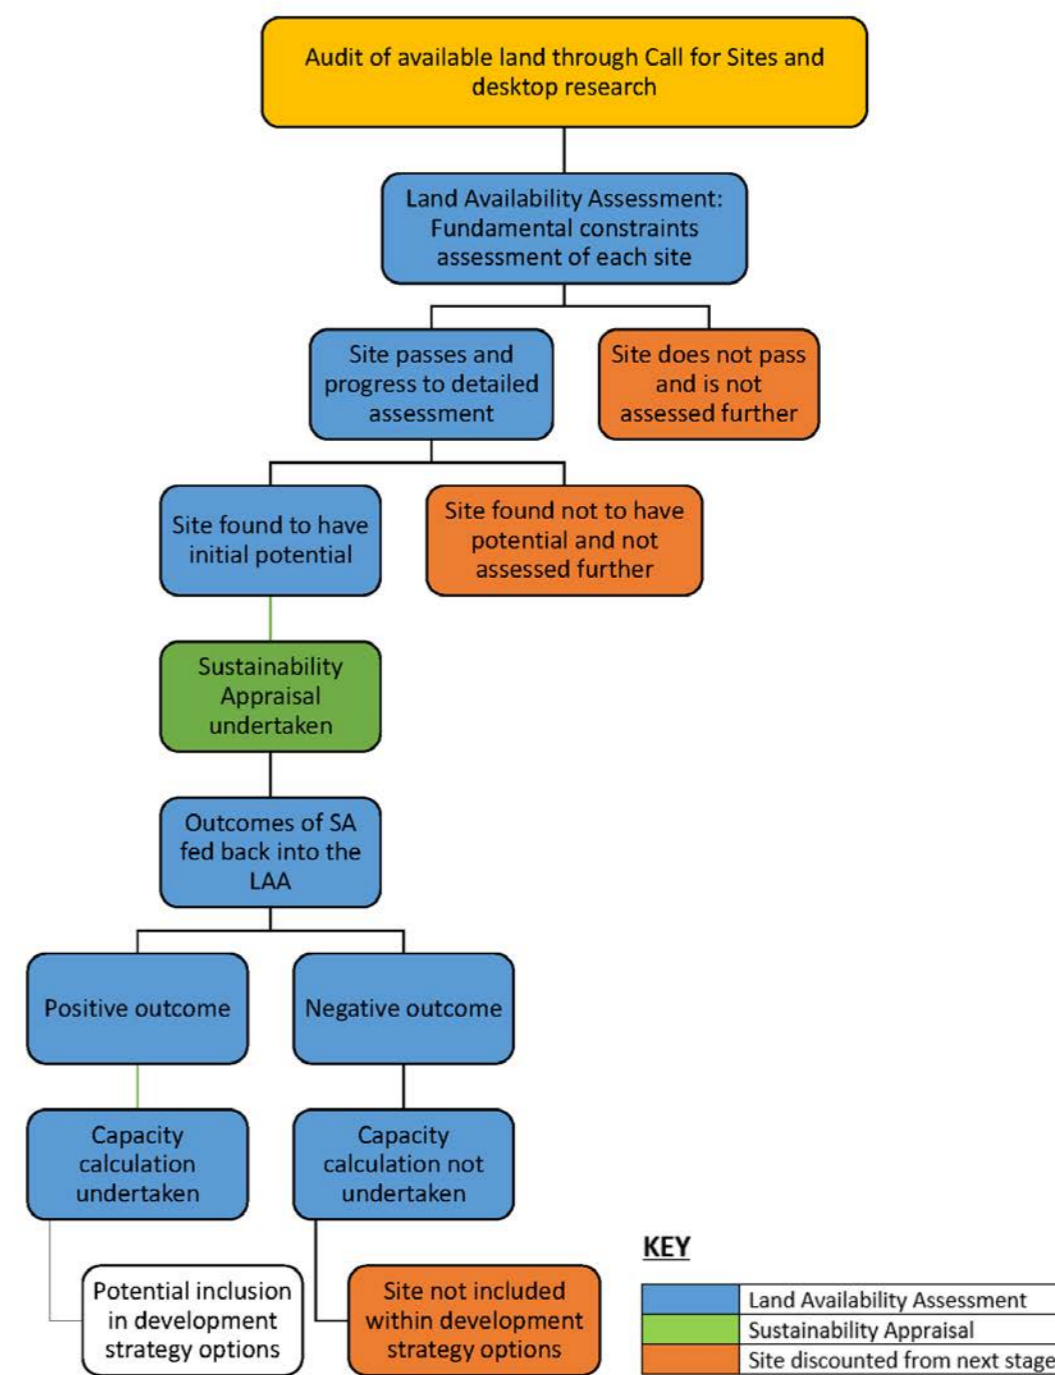

**Progression of site to SA** - this will either be a yes or no. If the site is not progressing to SA a short explanation will be provided. A site that is found to be unsuitable will not progress to SA.

**Impact of SA on assessment** - the site will then be appraised against the sites decision aiding questions set out in the SA scoping report - against each question, the site will acquire a score and a commentary explaining the score. The SA assessment will be presented in the SA but a summary of it will also be provided in the LAA.

**HDC delivery calculations** - taking into account the LAA assessment and the SA of the site, an indicative capacity for the site and its potential uses will be calculated. This will be based on the methodology for net developable areas and density categories provided in the LAA methodology.

**Updates after initial assessment** - this is where any updates since the initial assessment will be included such as revised information from the site promoter or additional information which has become available that may impact the assessment.

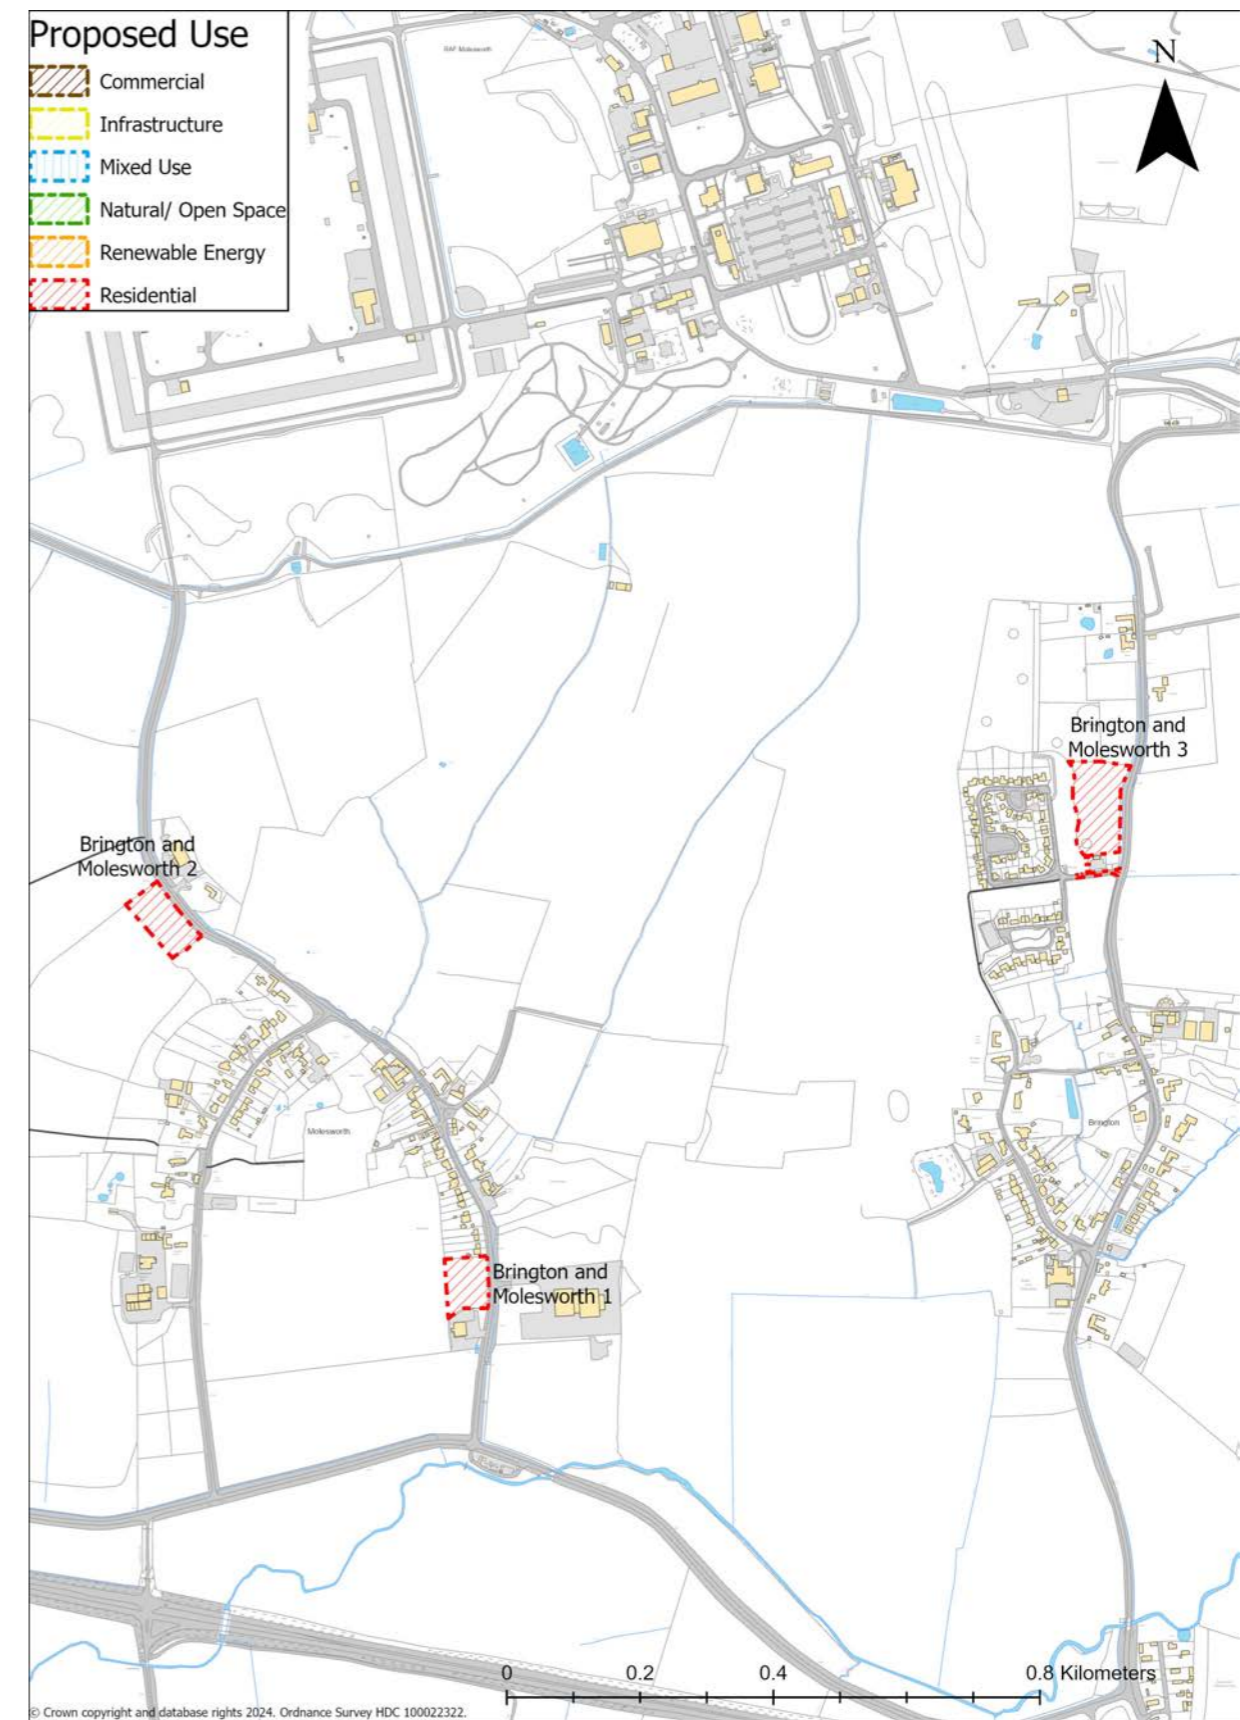

### Site Assessment Process

## 1 Brington and Molesworth

1.1 A total of 3 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Brington and Molesworth 1: Land West of Brookside, Molesworth
- Brington and Molesworth 2: Land opposite Jolly Hills Farm, Molesworth
- Brington and Molesworth 3: Land North and East of Hill Place, Brington

1.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Brington and Molesworth 1: Land West of Brookside, Molesworth**

<b>Site reference</b>	Brington and Molesworth 1
<b>Site name</b>	Land West of Brookside, Molesworth

Site address	Parish(es)	Site area (ha)
Land West of Brookside, Molesworth	Brington and Molesworth	0.5

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	5 homes	Available 2024 - 2028 Build out over 1 year

**Core information**

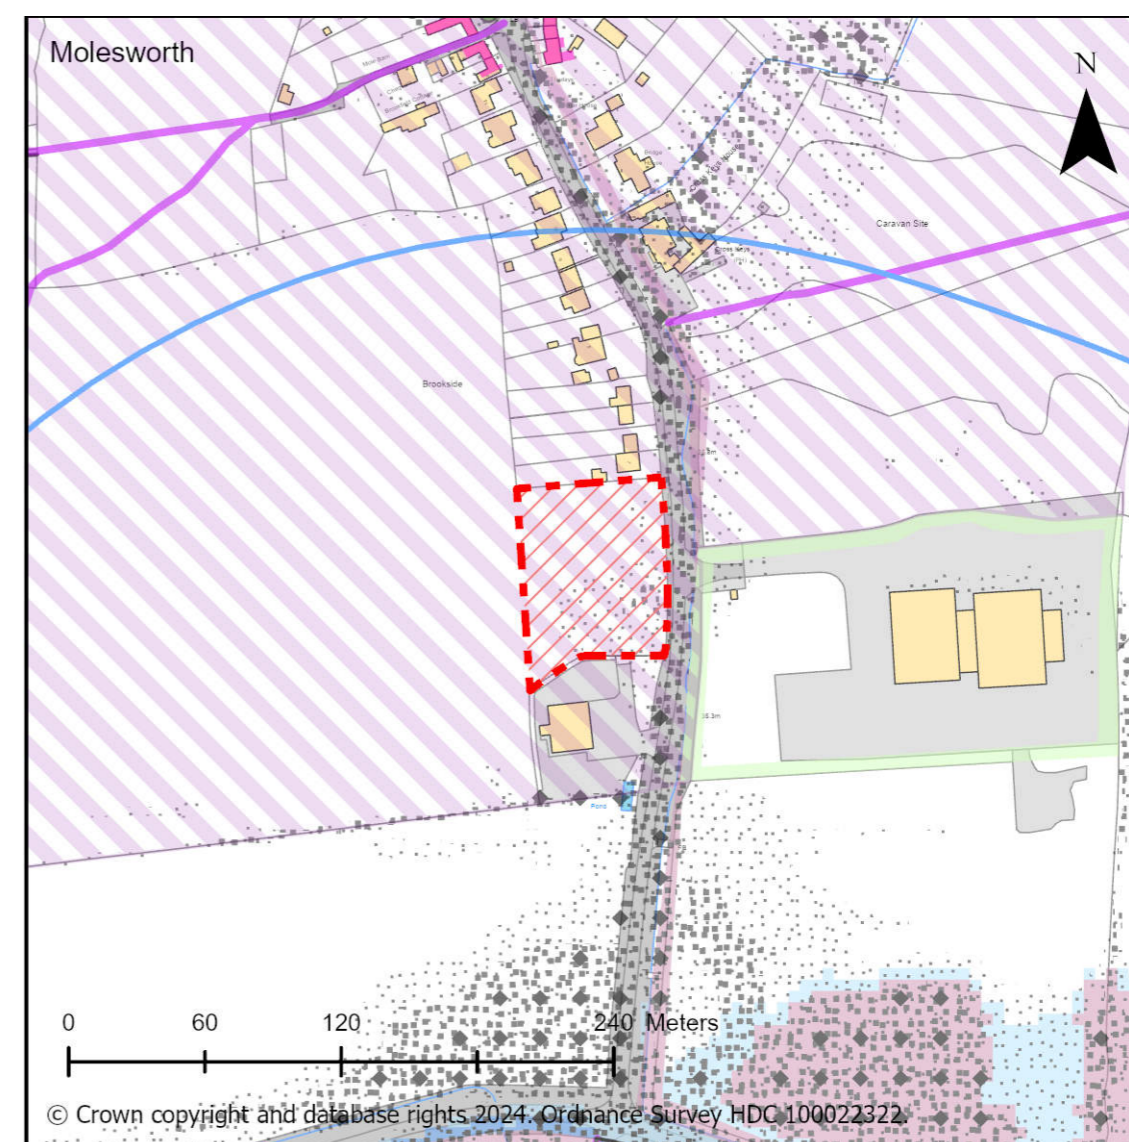

How was the site identified?	Call for sites 2023 submission: site reference – CfS:99
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	The site completely falls within 400m of a Water Recycling Area. The site	Fail

Fundamental constraints	Status	Outcome
	promoter has not submitted an odour assessment so at this time the site is discounted from further assessment.	
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

Page 765 of 3488

## Progression of Site through to Sustainability Appraisal

Should the site progress to the sustainability stage?	No because the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.
---	---

## Impact of the Sustainability Appraisal on the assessment

The site failed a fundamental constraint and therefore did not progress to Sustainability Appraisal.

## HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development as it completely falls within 400m of a Water Recycling Area	N/A	N/A

## Updates after the Initial Assessment

**Brington and Molesworth 2: Land opposite Jolly Hills Farm, Molesworth**

<b>Site reference</b>	Brington and Molesworth 2
<b>Site name</b>	Land opposite Jolly Hills Farm Molesworth

Site address	Parish(es)	Site area (ha)
Land opposite Jolly Hills Farm, Oundle Road, Molesworth	Brington and Molesworth	0.6

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	5+ homes	Available 2024 - 2028 Build out over 1 year

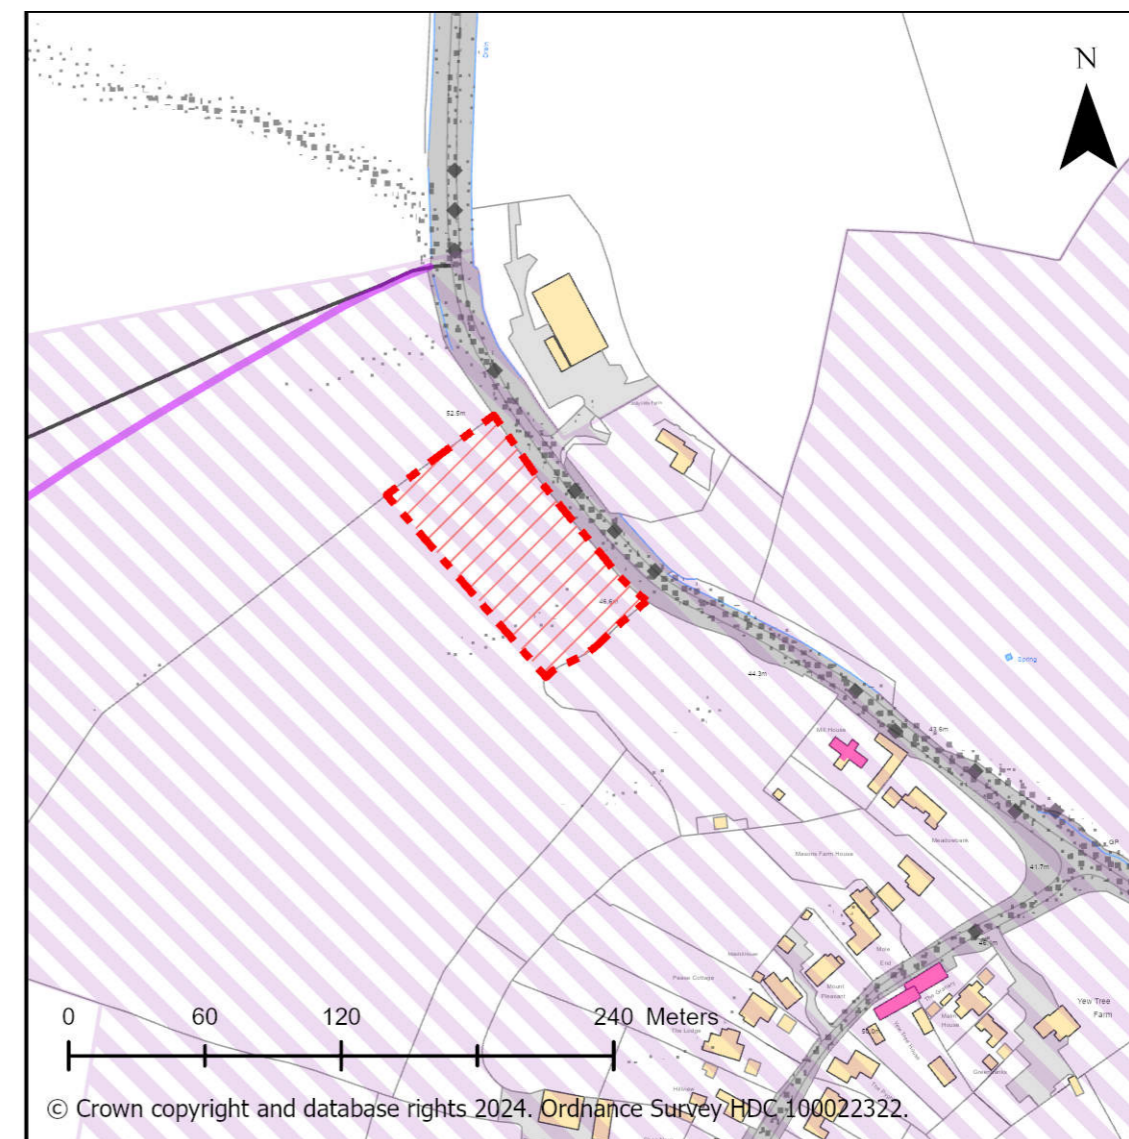

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:160
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is in flood zone 1, but within the southern half of the site there is some risk of flooding from surface water. Surface water is also a particular risk along Oundle Road. The site is wholly classified as grade 2 agricultural land with no existing structures on site. The site is largely flat set within a slight dip in the landscape where land is typically elevated.</p>	
---	--

<p>Along Oundle Road, the site is largely obscured from views due to trees and hedgerows. This vegetation is found along Oundle Road on both sides which creates an enclosed narrow access route to the site and adds to the very rural character of the area. To the west and north there is open countryside with no or limited boundary lines meaning the site is visible in longer distance views so development could have a significant impact. A public right of way runs to the north west of the site. There is open countryside to the west, large spacious residential properties to the south and a farm to the east on the other side of Oundle Road. Further north along Oundle Road is RAF Molesworth.</p> <p>There are no existing structures on site. There is no known contamination or pollution on site. No gas or oil pipelines run through the site. It is located within a conservation area with a grade II listed building (Mill House) to the south east. There are no nature conservation designations on site. Access may be achievable from Oundle Road, although as previously highlighted this is a narrow road which is predominantly single lane.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. The site comprises broadly level ground with few physical boundary lines to the north and west. The impact of any development will need to be sensitive to the wider countryside as well as the conservation area and nearby listed building as well as provide sustainable drainage to address risks of surface water flooding. There are no buildings on site so no clearance work would be required. The access to the site from Oundle Road is narrow so access will need careful consideration.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the impact on the immediate setting of the conservation area will need careful consideration in design and landscape mitigation. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As the site promoter does not intend the</p>	~

scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land classified as grade 2 agricultural land
- Limited access to a local convenience shop, primary education and employment opportunities
- Limited public transport access
- The impact on the conservation area and listed Mill House
- Development of the whole site would be out of character due to its location in relation to the existing village
- Very low potential to integrate built development into the existing community so it would not support sustainable place-making

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to its limitations in successfully integrating development with the existing place and community and impact on the character of the area

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development due to low potential for integration with the village.	N/A	N/A

**Updates after the Initial Assessment**

--

**Brington and Molesworth 3: Land North and East of Hill Place, Brington**

<b>Site reference</b>	Brington and Molesworth 3
<b>Site name</b>	Land west of Brington Road, and north and east of Hill Place, Brington

Site address	Parish(es)	Site area (ha)
Land west of Brington Road, and north and east of Hill Place, Brington	Brington and Molesworth	0.98

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	8 market and 5 affordable dwellings	Available 2024 - 2028 Build out over 1 to 2 years

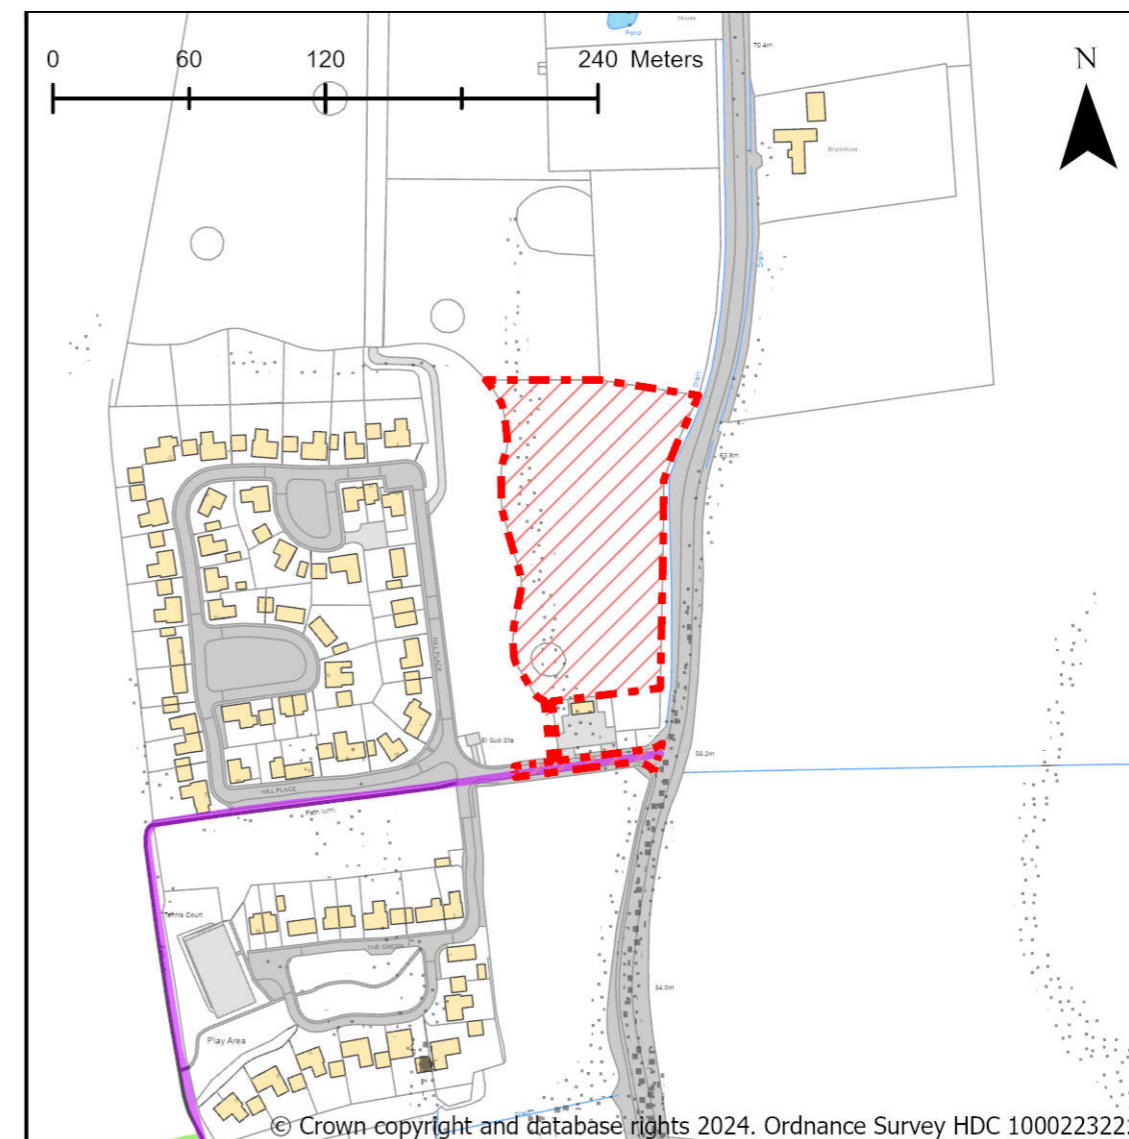

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:310
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	
The site is wholly within flood zone 1 but along the western edge of the site there is risk of flooding from surface water. To the east of the site along Brington Road there is also risk of surface water flooding. The site is wholly classified as grade 3 agricultural land. The site slopes downwards in a southerly direction. At its highest point, the site lies quite prominently	+

<p>in longer views across the landscape. Its eastern and northern boundaries are defined by a low fence and a line of trees and hedges with gaps in between providing views into the site. Immediately adjoining the site along its western side is an orchard, beyond that is Hill Place, a residential cluster on the site of former MoD housing. To the south, the site adjoins a residential property and to the north and east is open countryside. The plan submitted during the Call for Sites shows that access will be provided to the west of this site leading onto Hill Place and adjoining where there is a public of right way.</p> <p>There are no existing structures on site. There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets or nature conservation designations on site. Access can be achieved from Brington Road which then leads into Hill Place.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it the intention of the landowner to deliver the development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. The site is prominent in the landscape with the northernmost part of the site being located on high ground, the site then slopes down southwards. The site is clearly defined by fences and vegetation but these are not substantial enough to completely obscure the site from view. The impact of any development will need to be sensitive to the wider countryside as well as provide sustainable drainage to address risks of surface water flooding. There are no buildings on site so no clearance work would be required.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear. The site promoter does not seek an allocation before acquiring planning permission. Instead, it is anticipated the development will be delivered directly by the landowner. As the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Progression of Site through to Sustainability Appraisal**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Is not constrained by fluvial flood risk but there is some surface water flood risk</li> <li>• Remote from natural greenspace</li> <li>• Limited public transport access</li> <li>• Accessible to some local services but limited access to employment opportunities</li> <li>• There is the potential to integrate the development within the exiting place and community</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for residential development that would relate well to the existing place and community</li> <li>• Should incorporate appropriate sustainable drainage to mitigate surface water flood risk</li> <li>• Supports residential development on sites of less than 1ha</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.976 ha</p> <p>80% net developable area allowed due to need for landscaping and sustainable drainage solutions to address surface water issues.</p> <p>0.98 ha x standard proportion of 80% = <b>0.78 ha</b></p>	<p>Residential - market and/or affordable houses</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Capacity = 0.78 ha x 25 dph = <b>20 homes</b></p>	<p>Available post 2028 subject to successful allocation status</p> <p>Build out over 1 - 2 years</p>

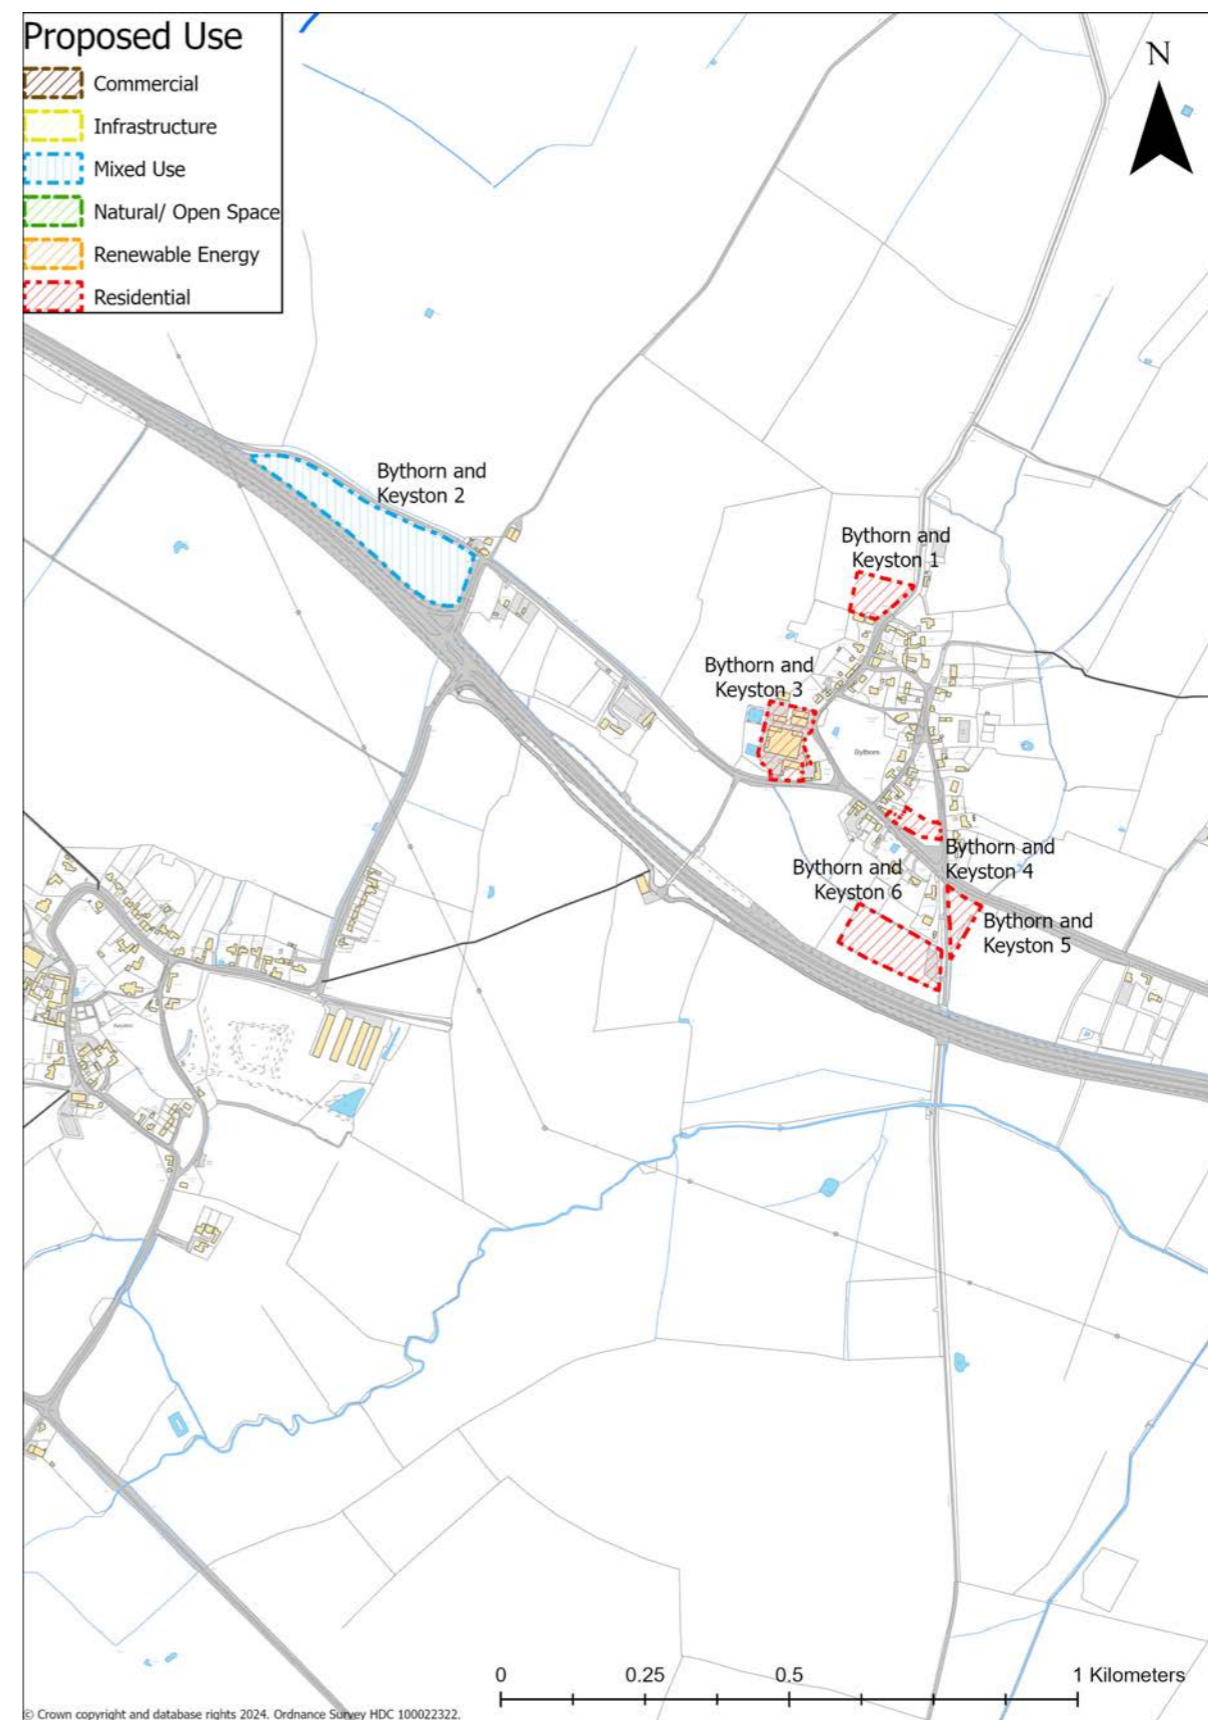

**Updates after the Sustainability Appraisal on the assessment**

--

## 2 Bythorn and Keyston

2.1 A total of 6 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Bythorn and Keyston 1: Land West of Warren Lane, Bythorn
- Bythorn and Keyston 2: Land South West of Old Toll Bar House, Toll Bar Lane, Keyston
- Bythorn and Keyston 3: Home Farm, Bythorn
- Bythorn and Keyston 4: Land off Main Street, Bythorn
- Bythorn and Keyston 5: Land East of Clack Lane, Bythorn
- Bythorn and Keyston 6: Land West of Clack Lane, Bythorn

2.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Land West of Warren Lane, Bythorn	Bythorn and Keyston	0.5

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	5+ homes	Available 2024 - 2028 Build out over 1 year

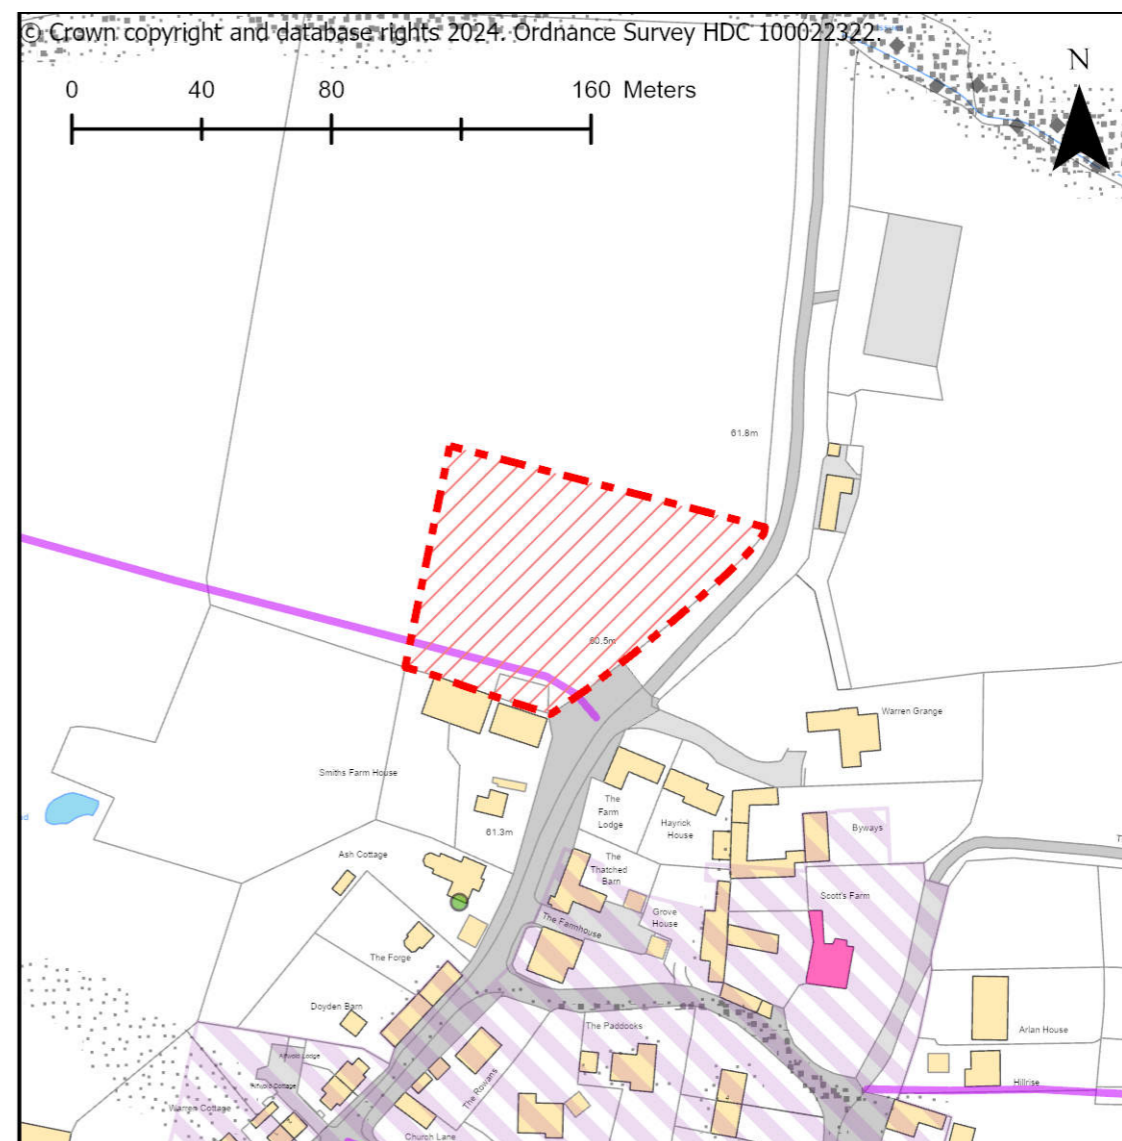

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:98
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
The site is wholly located within flood zone 1 and there is no recorded risk from surface water flooding. The site is classified as grade 3 agricultural land with no existing structures on site. The site is broadly level although the wider field rises to the west within the gently undulating countryside of the area. Along Warren Lane there is dense vegetation obscuring	

<p>much of the site from public view. The site is part of a larger field which is clearly defined with hedgerows and trees, there are no tree lines or vegetation belts within the site so the subdivision of this larger field would require landscaping to form a clear edge to the development. A public right of way cuts through the southern part of the site emerging onto Warren Lane. Residential properties adjoin the site to the south and east. To the north and west is countryside, predominantly in arable farming usage.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets within the site although a conservation area is located some 75m to the south of the site. Development within this site may have a minimal impact on the setting of the conservation area. There are no nature conservation designations on site. Access may be achievable from Warren Lane, although this a narrow lane and access would require upgrading.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. The site is broadly level and there are no buildings on site so no clearance work would be required. The access to the site is from Warren Lane is narrow so the achievability of safe access will need careful consideration.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the impact on the immediate setting of the conservation area will need careful consideration in design and landscape mitigation. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As it appears that the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site is wholly greenfield land classified as grade 3 agricultural land
- It is remote from local services and employment
- No public transport access
- It is remote from natural greenspace
- The site is located on the edge of the village and provides an opportunity for small scale organic growth on a site of less than 1ha
- It is not constrained by flood risk or by nature conservation designations, the conservation area is located within 100m of the site
- There is a public right of way through the site

In combination the outcomes of the LAA and SA indicate that the site:

- Has potential to provide built development of a scale that will not harm the character of the area
- Support residential development on sites of less than 1ha
- Should incorporate the existing public right of way and provide landscaping to minimise the visual impact of development

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.5 ha  80% net developable area allowed due to need for landscaping and incorporation of existing public right of way.  0.5 ha x 80% = <b>0.4 ha</b>	Residential - market and/or affordable houses  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 0.4 ha x 25 dph = <b>10 homes</b>	Available post 2028 subject to successful allocation status  Build out over 1 year

**Updates after the Initial Assessment**

Within mineral development area or water recycling area	None	Pass
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 776 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located wholly within flood zone 1 and there are no recorded areas of risk from surface water within the site. The whole of the site is classified as grade 2 agricultural land. The site is broadly oval shaped located between the A14 and Thrapston Road and entirely surrounded by roads. The site is level and located on elevated ground in a prominent position. The landscape bunds along the A14 assist in obscuring the site from view from the south. To the north is extensive arable land, which may require landscape mitigation to transition to the wider countryside. The site is bounded by Thrapston Road on its northern boundary and by the A14 to the south which provides a connection to the strategic road network via Toll Bar Lane. While potentially useful for commercial and employment uses due to the highway accessibility, this proximity to noise, air and visual pollution makes the location unsuitable for residential uses due to poor amenity levels. Additionally, its remoteness from a settlement makes it less suitable for residential uses particularly as there are no footpaths along Thrapston Road towards Bythorn. Adjacent to the site are a couple of houses and mobile homes.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site although electricity powerlines are located in the easterly corner of the site. There are no heritage assets and no nature conservation designations on site. Access can be achieved from Thrapston Road, although it will be important to seek the views of Cambridgeshire County Council whether safe access can be achieved to serve the scale of development proposed by the site promoter.</p> <p>The site is wholly greenfield so will not contribute to the reuse of previously developed land or regeneration. It is situated in a mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. The site is broadly level and there are no buildings on site so no clearance work would be required. The site can be accessed from Thrapston Road and is also bounded by the A14 to the south which provides a connection to the strategic road network via Toll Bar Lane. Its location means there is likely to be significant impacts on</p>	~

<p>future users of the site from air, noise and visual sources of pollution. It also needs to be assessed whether the likely level of additional vehicle movements arising from development is safe and practical.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to consider, minimise and mitigate any impacts arising from its proximity to the A14 including noise, air and visual forms of pollution. Its location means that the site is only considered to be potentially suitable for employment development, not residential. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. From the information provided within the Call for Sites, it is unclear if the landowner is seeking a farm diversification project or not, and/or a rural exceptions scheme. However, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Remote from local services</li> <li>● Is wholly greenfield land classified as grade 2 agricultural land</li> <li>● No public transport access</li> <li>● Very low potential to integrate built development into the existing community</li> <li>● Has the potential to provide some employment development</li> <li>● Is at risk from increased levels of air, noise and light pollution arising from its location to the strategic road network</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Has the potential to be suitable for commercial uses</li> <li>● Is in proximity to the A14 which would assist in the operation of the site</li> <li>● The proposed employment use at 10,000 sqm floorspace would make efficient use of land.</li> <li>● Would require appropriate infrastructure to facilitate efficient use of the site.</li> <li>● Would require landscape mitigation to transition to the wider countryside.</li> </ul>
--

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area 3.00ha  90% net developable area to allow for landscaping and associated infrastructure.  Net developable area of 3.00ha x 80% = <b>2.70ha</b>	Net developable area of 2.70ha  Commercial - Employment at 0.35 plot ratio to reflect business park density = $(2.70\text{ha} \times 0.35) \times 10,000 =$ <b>9,450sqm</b>	Available post 2028 to allow for allocation  Build out 2 to 5 years

## 2 Bythorn and Keyston

Huntingdonshire District Council | Western Huntingdonshire Land Availability Assessment

### Bythorn and Keyston 3: Home Farm, Bythorn

<b>Site reference</b>	Bythorn and Keyston 3
<b>Site name</b>	Home Farm, Bythorn

Site address	Parish(es)	Site area (ha)
Home Farm, Bythorn	Bythorn and Keyston	0.98

#### Promoter's Intentions

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable homes	15 - 20 homes	Available 2024 - 2028 Build out over 18 months

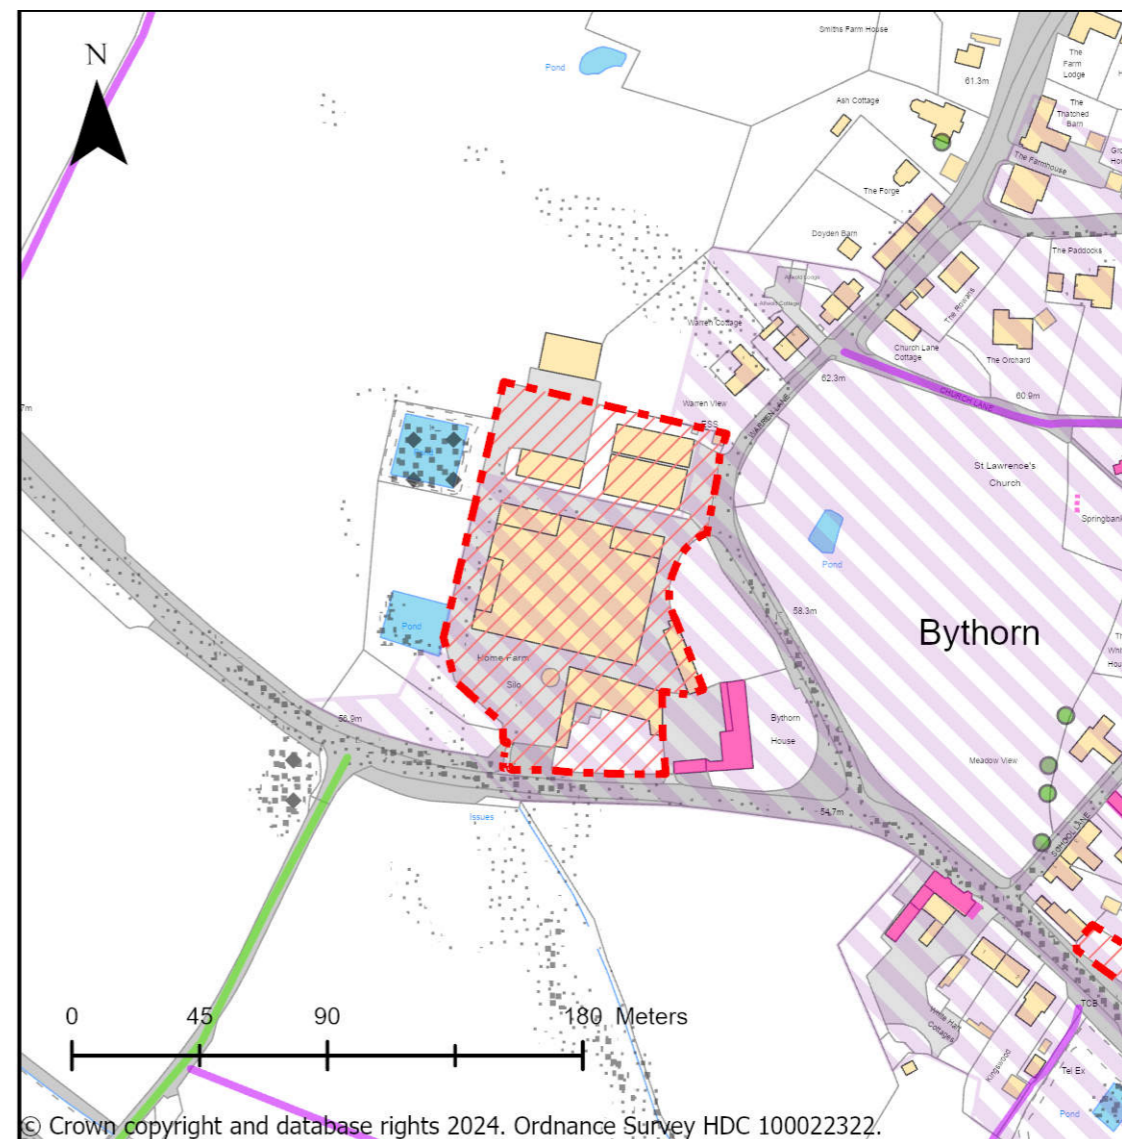

#### Core information

How was the site identified?	Call for sites 2023 submission: site reference – CfS:111
Relevant planning history	None relevant
Land type	Part previously developed land / part greenfield land (agricultural buildings)
Current use of the site	Agricultural land / yard
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

Context, constraints and potential suitability	
The site is located within flood zone 1 but there is some risk of surface water flooding on the western part of the site. On land adjoining the site, there are two water bodies which may contribute to this increased risk. The site is wholly classified as grade 3 agricultural land. There are several existing large structures and hardstanding on the site associated	

<p>with its current agricultural use. These are substantial buildings predominantly made of brick with structures towards the rear of the site constructed from metal corrugated materials. The site as a whole is set on fairly elevated ground and slopes down in a south easterly direction so the northern part of the site is more prominent in longer landscape views. Its boundaries are clearly defined by a brick wall that encompasses the site. To the south, east and northeast the site is surrounded by residential properties with open countryside to the west and north.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Electricity cables run along the site's western boundary. The majority of the site is within a conservation area and is adjacent to a listed building (Bythorn House). Further investigations may be required to ascertain if any of the agricultural buildings within this site are curtilage listed or not and an assessment as to whether their demolition would lead to substantial harm to a heritage asset or its setting. Rather than demolition, conversion of these structures could also be explored; it is not clear from the Call for Sites submission whether the landowner intends to demolish all structures on site or will look to convert some. There are no nature conservation designations on site. Highways access can be achieved from Thrapston Road, an access point may also be achievable from Warren Lane, although this a narrower route.</p> <p>The site is classified as greenfield despite the agricultural buildings so development would not technically contribute to reuse of previously developed land or regeneration despite its appearance given that much of the site contains buildings. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who support its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. There are many existing buildings on site so clearance work would be required. These are substantial buildings mostly made of brick which may take longer to demolish and clear and/or convert if this was pursued, however some of the materials could be reused within a future scheme. There could be contamination requiring remediation arising from the current agricultural use of the site. Electricity cables run along the western edge of the site.</p>	

<p><b>Deliverability / developability</b></p> <p>There are several substantial existing structures to clear and some remediation works may be necessary. Additionally, if development were to take place, it would need to be sensitive to the conservation area and the setting of the nearby listed building and reflect local character. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As the site can be considered to fall within the built up area of Bythorn, this site may offer an opportunity for organic growth of the village providing that all criteria are met and mitigations are in place. As it appears that a housebuilder is not involved with the site and a planning application has not yet been made, the site is categorised as developable.</p>	
--	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Contains existing agricultural structures associated with Home Farm</li> <li>● Some surface water flood risk</li> <li>● Remote from nature conservation designations</li> <li>● Remote from local services and employment</li> <li>● No public transport access</li> <li>● Is within a conservation area and within the setting of the listed Bythorn House, some structures may be curtilage listed.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Is potentially appropriate for residential development and has potential to provide built development of a scale that will not harm the character of the area</li> <li>● Supports residential development on sites of less than 1ha</li> <li>● Heritage impacts will need to be assessed, to mitigate these the conversion of some of the existing structures should be considered in order to retain the existing character of the site and surrounding area</li> <li>● Has potential to accommodate development that could be integrated well into the existing place and community</li> </ul>
---

### HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.98 ha</p> <p>70% net developable area allowed for incorporation of SuDS and landscaping to address surface water flood risk and to be sensitive to the heritage designations that constrain the site.</p> <p>0.98 ha x 70% = <b>0.69 ha</b></p>	<p>Residential - market and/or affordable homes</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Very low density of 25 dph = 0.69 x 25 = <b>17 homes</b></p>	<p>Available post 2028 subject to successful allocation status</p> <p>Build out over 2 years</p>

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable homes	5 homes	Available 2023 Build out over 18 months

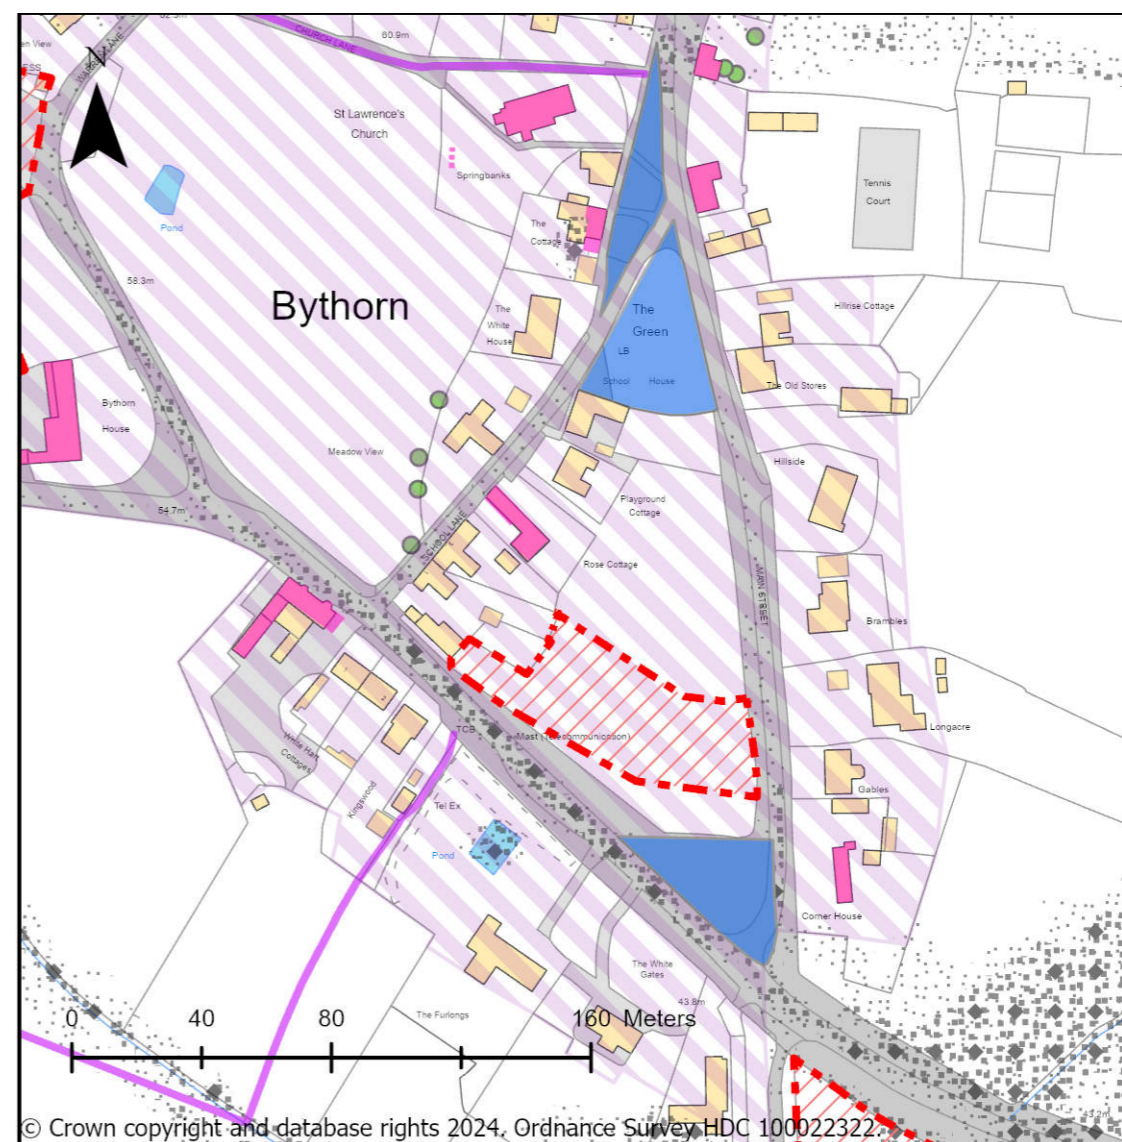

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:112
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is wholly located within flood zone 1 and there is no recorded risk from surface water flooding. The site is classified as grade 3 agricultural land with no existing structures on site. The site slopes downwards in an easterly direction towards Main Street with properties along School Lane visible from the Main Street edge of the site. The site's southern, eastern and western boundaries comprise hedgerows with some trees which serve to partially obscure it from view. The site is part of a larger triangular piece of land which does not contain any tree or vegetation belts within the site, as such the northern edge of the site does not have boundary features. Therefore, the subdivision of this larger field would require substantial landscaping to form a distinct edge to the development. It is located within the main built environment of Bythorn with residential properties on all sides.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Cables running between telecommunication masts do run over the site. The site is located within a conservation area and there are several listed buildings near the site and development would need to take account of the impact on their setting. There are no nature conservation designations on site. Access could potentially be achieved from Main Street.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available in 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply. There are no buildings on site so no clearance work would be required. Cables running between telecommunication masts do run over the site which may need to be diverted or incorporated into any development scheme. The access to the site is from Main Street which does allow two way traffic but is narrow so access would need careful consideration.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the location means that any future development will need to be sensitive to the conservation area and the setting of nearby listed buildings. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As the site is within the built up area of Bythorn this site may offer an opportunity for small scale organic growth within the village providing that all criteria are met and mitigations are in place. As it appears that a housebuilder is not involved with the site and a planning application has not yet been made, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Development of the whole site would be out of character due to its sensitive location within the village
- Remote from local services and employment
- No public transport access
- Remote from nature conservation designations
- Not at risk from flooding

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to the sensitivity of the location and and lack of reflection of the linear nature of development in Bythorn

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	5 - 6 homes	Available 2023 Build out over 1 year

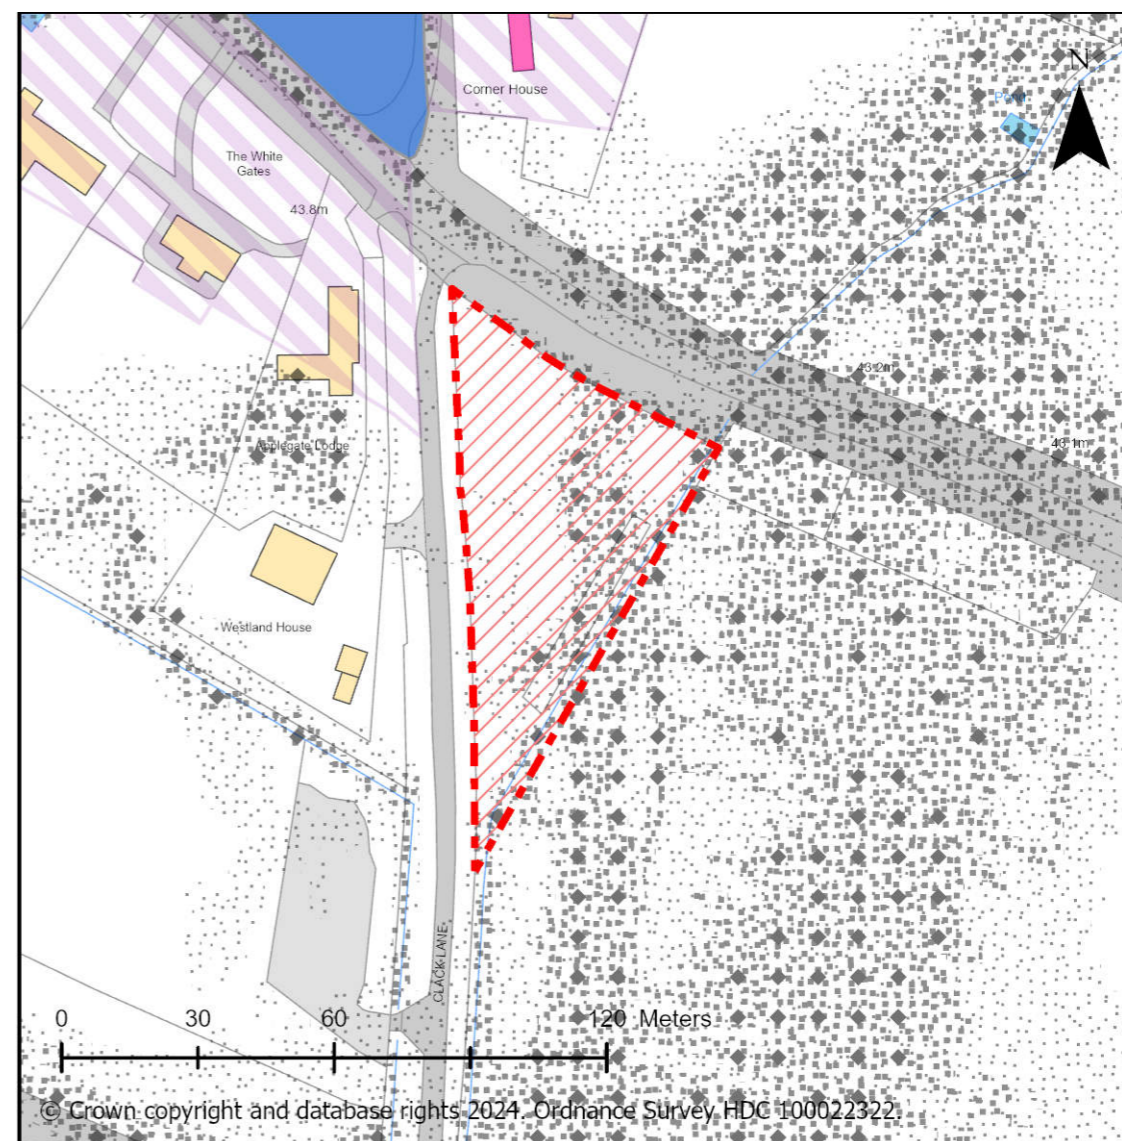

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:113
Relevant planning history	None relevant
Land type	Wholly greenfield
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	
<p>The site is wholly within flood zone 1, more than 50% of the site is however at risk from surface water flooding particularly on the eastern side of the site. The site is classified as grade 3 agricultural land with no existing structures on site. The site is triangular in shape and is broadly level and contained by fairly strong boundary features. Running along the</p>	

<p>western boundary of the site is Clack Lane. The site's three boundaries have vegetation, hedgerows and trees that largely obscure it from public view although there is a gap in this vegetation along Thrapston Road where a sewage pumping station is located. A substantial band of trees is located within the south eastern edge of the site. There are residential properties across roads to the north and west with open countryside to the east and the A14 just to the south. The site's proximity to the A14 may give rise to some amenity issues for any future residents arising from noise, air and visual pollution.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Immediately adjoining the site along Thrapston Road is a sewage pumping station which was approved under 18/02335/FUL. This pumping station incorporates a chemical dosing unit to avoid septicity and odour. The presence of underground sewage pipes and any impacts (amenity and/or instances of sewage overflow) from placing development next to this will need careful consideration. The site is adjacent to a conservation area and opposite a listed building so will need to consider its setting. There are no nature conservation designations on site. Access could potentially be achieved from Thrapston Road.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available from 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply which is identified as not being immediately accessible. There are no buildings on site so no clearance work would be required. The site does adjoin a small sewage pumping station so consideration will need to be had so that any development does not compromise this. Additionally, surface water is a significant risk on the site particularly on its eastern half.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to the adjacent conservation area and listed building as well as adjoining sewage pumping station and incorporation of SuDS to address surface water</p>	~

<p>flood risk. Whether it will be possible to develop the site and provide adequate mitigation against this flood risk is uncertain as the site promoter has not provided any flood risk information in support of their site. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As it appears that the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land</li> <li>● Significant surface water flood risk</li> <li>● Is located in very close proximity to the A14</li> <li>● Remote from local services and employment</li> <li>● No public transport access</li> <li>● Well related to the existing place and community and has potential to provide built development of a scale that will not harm the character of the area</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● May be appropriate for residential development and has potential to provide built development of a scale that will not harm the character of the area</li> <li>● Supports residential development on sites of less than 1ha</li> <li>● Landscaping and sustainable drainage will be required</li> </ul>
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.33 ha  60% net developable area allowed due to need for SuDs to address surface water flood risk and landscaping.  Net developable area of 0.33 ha x 60% = <b>0.20ha</b>	Residential - market and/or affordable homes  Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 0.20 ha x 25 dph = <b>5 homes</b>	Available post 2028 subject to successful allocation status  Build out over 1 year

Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

#### Assessment of Site Potential

Context, constraints and potential suitability
The site is located wholly within flood zone 1, there is some surface water flood risk along its western boundary and in the eastern part of the site along Clack Lane. The site is classified as grade 3 agricultural land with no existing structures on site, although there is some hardstanding within the eastern portion. The site is broadly level with a strong northern

<p>boundary line formed by a row of trees which would reduce the impact on adjoining properties along Clack Lane and Thrapston Road. Equally along its southern boundary, landscaping from the A14 provides a strong edge to the site. Vegetation and hedgerows also largely obscure the site from view when seen from Clack Lane. The lack of boundary features on its western edge means the site is more prominent in views from this side although these are mostly at a greater distance with the nearest public vantage point being from the public right of way to the north west of the site and then the link road from the stretch of Clack Lane south of the A14 to Thrapston Road. To the south of the site is the A14 which is within 40m of its southern boundary. There could be considerable amenity impacts placing development this close to the A14 arising from noise, air and visual pollution. To the north of the site are residential properties with countryside to the west and east.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. The site is adjacent to a conservation area. There are no nature conservation designations on site. Access could potentially be achieved from Clack Lane, this is a single lane track which would require proper surfacing to meet highway requirements. Clack Lane connects onto Thrapston Road. Advice from Cambridgeshire County Council would need to be sought to determine if safe access can be provided for the amount of development proposed by the site promoter.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available from 2023.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply which is identified as not being immediately accessible. There are no buildings on site so no clearance work would be required. Surface water flooding is a risk on the site. Its proximity to the A14 means there may be amenity impacts on future users of the site from air, noise and visual sources of pollution. It also needs to be assessed whether the likely additional vehicle movements arising from development is safe and practical.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no existing structures to clear but the location means that any future development will need to be sensitive to its landscape impact and proximity to the A14. The site promoter does not seek an allocation before acquiring planning permission and then selling the site to a third party for development. As it appears that the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Is located in very close proximity to the A14
- Remote from local services and employment
- No public transport access
- Development of the whole site would be out of character due to its location in relation to the existing village
- Very low potential to integrate built development into the existing community so it would not support sustainable place-making

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development due to its impact on the character of the local area and challenges in integration both impacting on the ability to achieve successful place-making

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

## 3 Catworth

### 3 Catworth

3.1 A total of 7 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Catworth 1: Fruit Field opposite Victory Playing Field, Catworth
- Catworth 2: Land West of Catworth, Catworth
- Catworth 3: Land South of A14, Catworth
- Catworth 4: Land East of Fox Road, Catworth
- Catworth 5: Land West of Fox Road, Catworth
- Catworth 6: Triangular Field South of Church End, Catworth
- Catworth 7: Land East of Church Road, Catworth

3.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference: CfS:12
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
<p>The site is within flood zone 1 and is not subject to surface water flooding. It is classified as grade 2 agricultural land. The site is wholly greenfield and in use for arable agriculture. The site is situated at the southern edge of Catworth adjoining an extensive plot to the north which is strongly landscaped with trees. It is mainly flat with a slight decline starting</p>	

<p>on the western edge leading into lower land to the north west. It has trees and hedging on the northern boundary which provide some screening to the adjoining residential development. It has very sparse trees and low hedgerows on all other boundaries. These leave the site highly exposed to the adjoining agricultural land to the south and west and the B660 and Victory playing field to the east.</p> <p>There is no known contamination or pollution on site. No gas/ oil pipelines or their buffer zones cross the site. It has no nature designations on it or immediately adjoining it which would impact development. Also, there are no heritage and conservation assets existing within or immediately adjoining the site so there are no constraints from these. This site can be accessed from the B660.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. It is about 100m away from a mineral safeguarding area for brickclay and is beyond 400m from a water recycling centre.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single family which supports its development. There are no known legal restrictions affecting the site. There are no current uses that need to be relocated. The promoter suggests the land would be available 2024 - 2028 and seeks to obtain planning permission before selling to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>All main services are accessible from the site boundary except for gas supply. The site comprises broadly level ground and there are no known topographical challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead electricity lines are present. The site can potentially be accessed from a track at the southern edge of the site which connects to Station Road (B660) although pedestrian connectivity from the north eastern corner of the site would be desirable. There is a small built structure on the site that may require clearance. The site promoter seeks residential uses of 40 homes. Landscaping will be required to mitigate the impact of the site on the open countryside and provide screening from the other adjoining uses.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no known legal or ownership constraints. There is an existing shed at the southern boundary of the site which may require clearance. Landscaping is a key development consideration within future layout of the site. The proposed development is contrary to current adopted planning policy other than as a rural exception site so allocation status would be necessary to support this development. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land that is predominantly classified as grade 2 agricultural land</li> <li>• Has very limited accessibility to local services and employment</li> <li>• Good connectivity to the strategic road network</li> <li>• Small scale development could be integrated into the existing place and community</li> <li>• The site is highly exposed to the surrounding countryside</li> <li>• The site is highly exposed within the wider landscape with clear views extending across to more undulating countryside to the east. It is proposed that the number of homes is reduced to ensure development would be proportionate and not have a detrimental effect on the character of the area and landscape.</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for built development</li> <li>• Would contribute to the housing needs of the district and provide some residential opportunity for local residents and families.</li> <li>• Could support place-making and sustainable lifestyles</li> <li>• Would require strategic landscaping to mitigate impact on the open countryside</li> </ul>
--

**HDC's Delivery Calculations**

<b>HDC's net developable area calculation</b>	<b>HDC's anticipated uses and capacity</b>	<b>HDC's delivery estimate</b>
<p>Gross site area of 2.12 ha</p> <p>50% net developable area to provide substantial landscaping</p> <p>Net developable area of 2.12 ha x 50% = <b>1.06ha</b></p>	<p>Net developable area of 1.06ha</p> <p>Residential use - market and/ or affordable housing</p> <p>Very low density of 25 dph anticipated due to the edge of village location.</p> <p>Very low density of 25 dph = 1.06ha x 25dph = <b>26 homes</b></p>	<p>Available post 2028 to allow for allocation</p> <p>Build out over 1 to 2 years</p>

Updates after the Initial Assessment

<b>Site name</b>	Land West of Catworth

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land West of Catworth, opposite Home Farm, Brook End, Catworth	Catworth	0.83

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing Infrastructure: Parking Open space: Natural, green or open spaces Biodiversity net gain	5 homes  Capacity for parking and natural open space uses have not been confirmed by the site promoter and left as to be confirmed on the Call for Sites form.	Available 2024 - 2028  Build out over 3 to 6 years

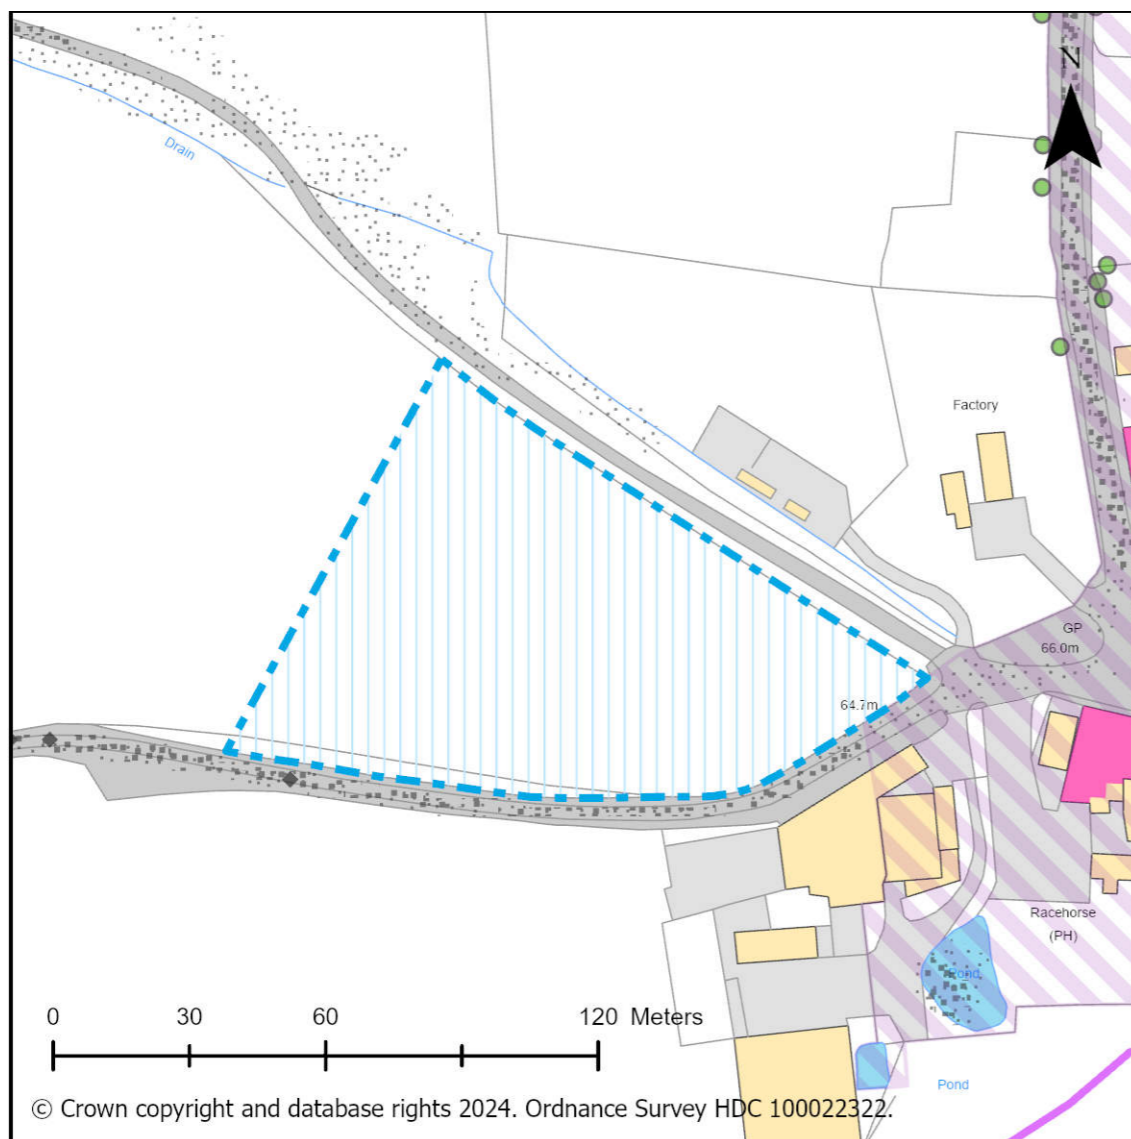

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference: CfS:64
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for 5 or more homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located wholly within flood zone 1 and there is no recorded surface water flood risk within the site. The majority of the site is classified as grade 2 agricultural land, however a proportion of the southwestern corner is classified as grade 3. There are no existing structures on the site. The site is higher on its eastern side and dips down, reflective of the undulating countryside of the Huntingdonshire Wolds. Along the site's northern boundary is a track that leads to Grange End Farm. Along the majority of the site's southern and eastern boundary along Brook End, there are established hedgerows which obscure the</p>	~
--	---

<p>site from view. The site's western boundary is however open and looks into undulating arable open countryside. The site is surrounded largely by agricultural uses and farms, with the Racehorse public house within the immediate vicinity too.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Overhead power lines run along the site's southern and eastern edges and also through the site. At its eastern end, the site adjoins a conservation area and is adjacent to several listed buildings. There are no nature conservation designations on site. Access can be achieved from Brook End which connects onto High Street.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is owned by a single individual / company who supports its development, the land is controlled by a charitable trust. There are no known legal restrictions affecting the site. The site promoter states that the method in which the site will be delivered will be dependant upon whether allocation status is achieved. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply which is not immediately accessible. The presence of overhead power lines may require some mitigation. The site is higher on its eastern side and dips down and any development layout would need to take varying heights into account. There are no buildings on site so no clearance work would be required. The access to the site is from Brook End, accessed from High Street. The High Street and Brook End are fairly narrow so it may be more challenging to create a safe access, this will need careful consideration.</p>	~
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its landscape impact, proximity to heritage assets and impact of additional vehicular movements. The site promoter has not clarified the preferred route in which to deliver development on the site, instead stating that this will be dependent on whether allocation status is achieved. As it appears that the site promoter does not intend the scheme to be a rural exception scheme and it is unclear at this time how much parking is being sought and whether this will be for a parking available for any resident in Catworth or associated with a particular business/ activity, the site's development is contrary to</p>	~

current adopted planning policy so allocation status would be necessary to support its development. Additionally, the site promoter proposes a fairly long delivery period for a scheme of this potential size. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Is predominantly classified as grade 2 agricultural land
- Is not accessible to natural green space
- Has very limited accessibility to local services and employment
- The site extends into the countryside but small scale development in the eastern part of the site could be integrated into the existing place and community.

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for built development in the eastern corner of the site as this relates most closely to the settlement
- Would support residential development on sites of less than 1ha
- Would provide some small scale parking for the village

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.83 ha  Of this, it is considered that only the eastern 0.2ha of the site is potentially suitable for built development.	Residential - market and/or affordable housing  Infrastructure - local parking to serve the village of Catworth  Natural, green or open spaces and biodiversity net gain	Available post 2028 subject to successful allocation status  Build out over 2 - 3 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
	Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 0.18 x 25 = <b>5 homes</b>  Parking provision - <b>0.2 ha</b>	

**Updates after the Initial Assessment**

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: <ul style="list-style-type: none"> <li>• Employment</li> <li>• Retail</li> <li>• Logistics and distribution</li> </ul>	26,880 sqm overall commercial involving any of employment, retail or logistics development	Available 2024 - 2028 Build out over 3 - 5 years

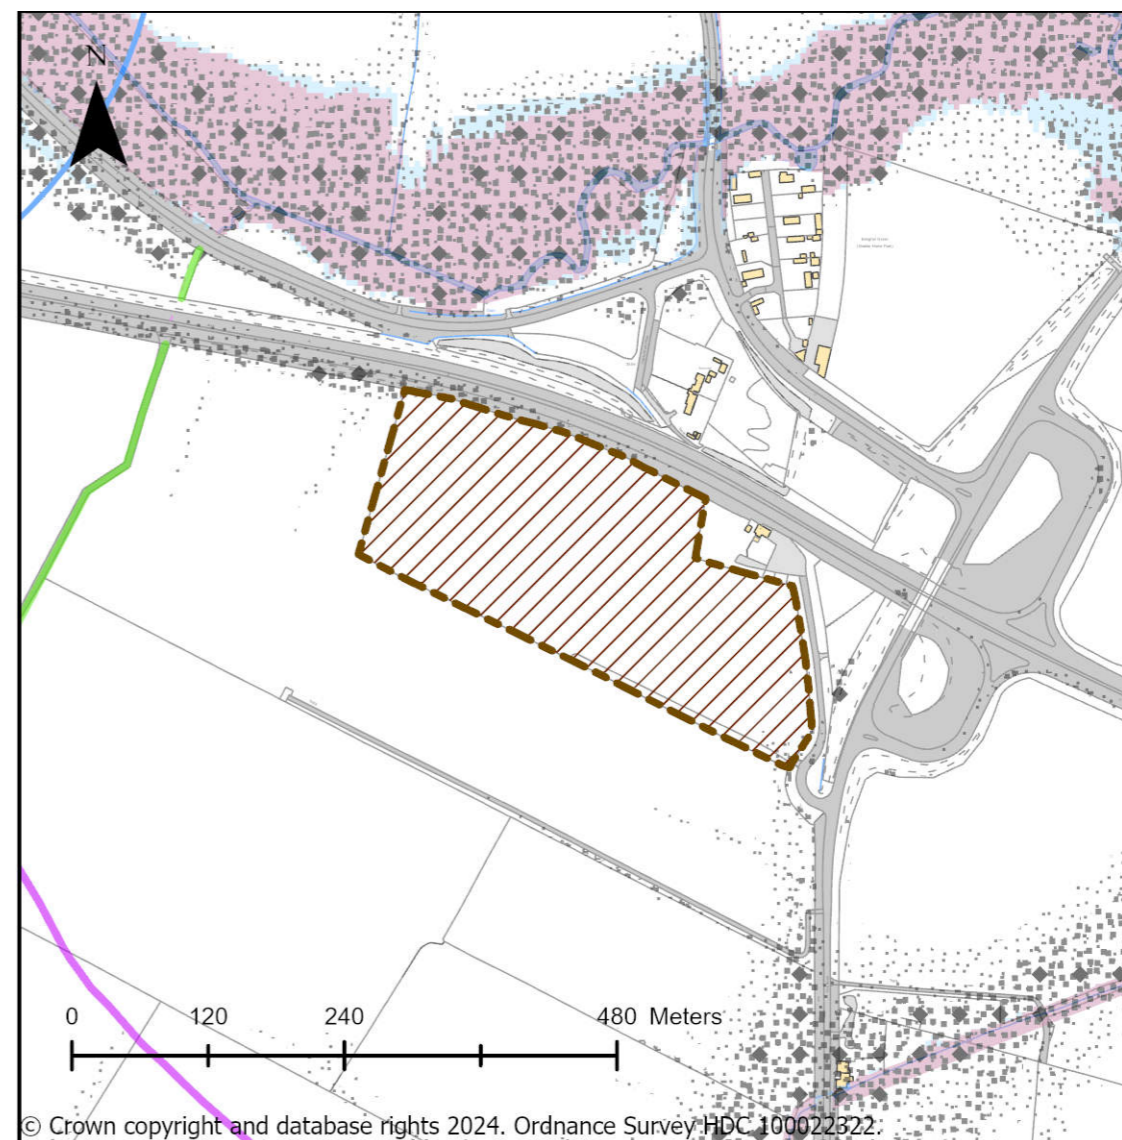

**Core information**

How was the site identified?	Call for Sites 2023 submission - site reference: CfS:63
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is located wholly within flood zone 1, there is some risk from surface water flooding particularly in the south-eastern part of the site near to the access to the site. The site is wholly classified as grade 3 agricultural land and there are no existing structures on the site. The site is broadly level but does elevate gradually some 10m on its western side which does assist in reducing the site's visibility in the wider landscape. The site is still visible in the landscape as there are limited amounts of vegetation along the site's boundaries so development could have some landscape impact without appropriate screening. To the north, the A14 forms a strong feature in the landscape which obscures the site from this side. The site is predominantly surrounded by agricultural land and a former public house adjoins the site on its north western corner which is somewhat screened from the site via hedgerows.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site but overhead power lines run through the site. There are no heritage or nature conservation designations on site or within its immediate vicinity. Access can be achieved via an existing entrance that the site promoter highlights could be improved to allow for HGV access. The site is in close proximity to junction 16 of the A14 with a very short length of the B660 leading to the site's existing access. The site promoter acknowledges that the existing entrance road to the site would need upgrading for use by HGVs. Its close proximity and accessibility to the A14 makes the site potentially suitable for employment uses, however, the impact of increased levels of noise, air and visual pollution on future users may require mitigation.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single individual / company who supports its development, the land is controlled by a charitable trust. There are no known legal restrictions affecting the site. The site promoter states that the method in which the site will be delivered will be dependant upon whether allocation status is achieved. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply which is not immediately accessible. The site is crossed by electricity power lines which may require some mitigation. The site rises slightly on its western side so building heights would need to be carefully considered within any development layout.</p>	+

<p>There are no buildings on site so no clearance work would be required. The site is accessible via an existing entrance that the site promoter highlights could be improved to allow for HGV access. The site is accessible from vehicles exiting the A14 at junction 16.</p>	
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development may need to minimise and mitigate impacts arising from the site's proximity to the A14 including noise, air and visual forms of pollution. The site promoter has not clarified the preferred approach to delivering development on the site, instead stating that this will be dependent on whether allocation status is achieved. The promoter has stated that the site will be available between 2024 and 2028 but has retained flexibility over the proposed use. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Good connectivity to the strategic road network which would support a modest scale logistics and employment development</li> <li>• Remote from public transport</li> <li>• Detached from a main settlement being located in the open countryside</li> <li>• Only standard broadband available in the vicinity which may require upgrading to support employment development</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is potentially appropriate for built development for logistics and employment development due to the site's good location and access onto the A14</li> <li>• Will need to provide appropriate landscaping to mitigate landscape impact</li> <li>• Overhead power lines through the site may need to be rerouted or impact the layout of development</li> </ul>
--

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area is 6.73ha</p> <p>For solely employment developments, the gross site area is used as there is usually being minimal differences between net and gross site areas in schemes providing purely employment uses due to the need for large amounts of hardstanding for parking, manoeuvring and deliveries and more incidental landscaping.</p>	<p>Commercial - employment</p> <p>0.40 plot ratio x 6.73 ha = <b>2.7 ha</b> of land for employment uses</p>	<p>Available 2028 subject to successful allocation status</p> <p>Build out over 3 - 5 years</p>

**Core information**

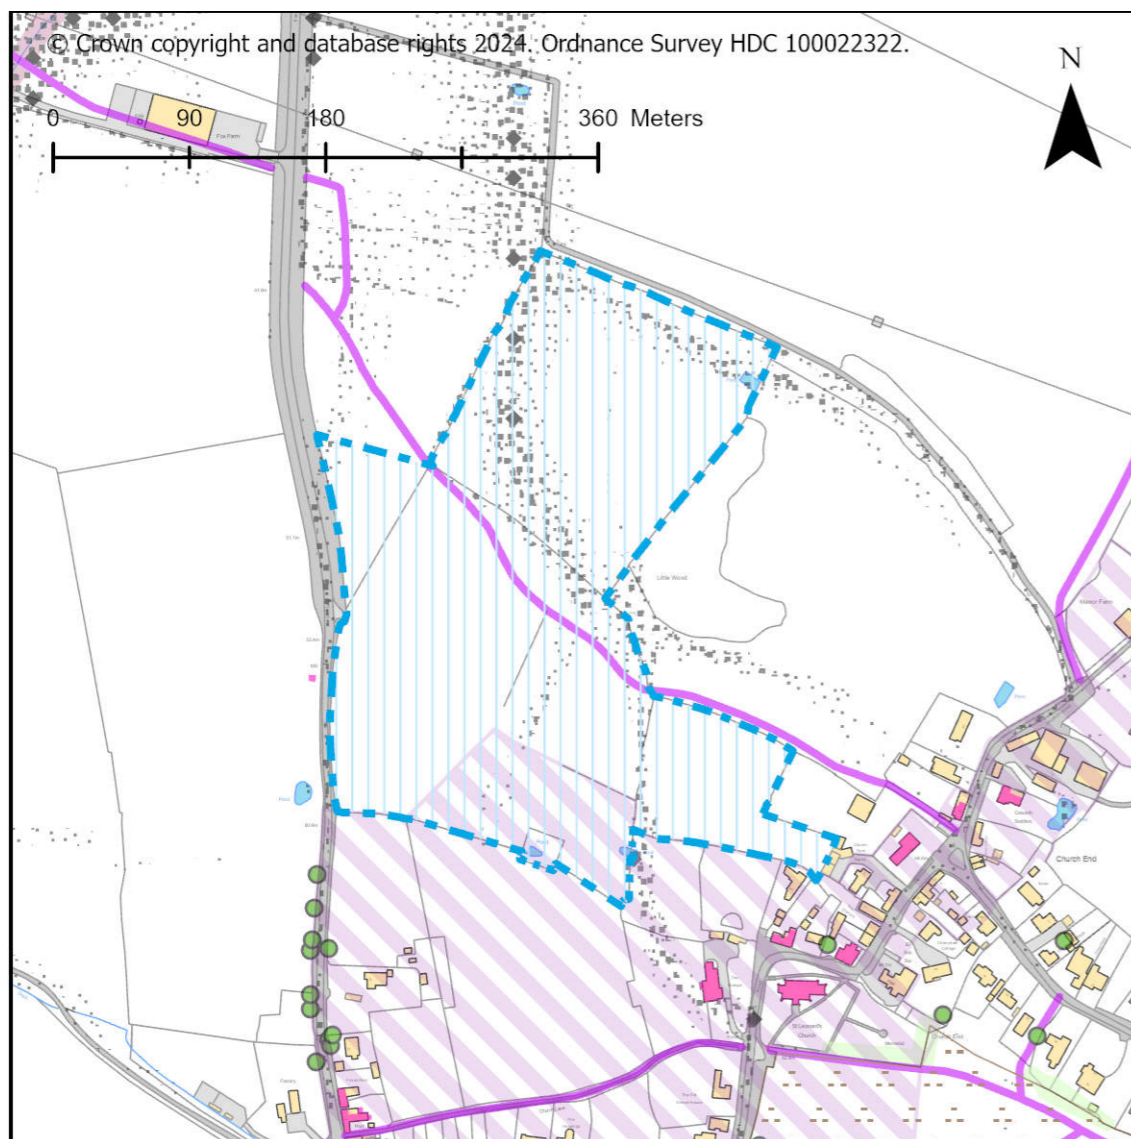

How was the site identified?	Call for sites 2023 submission: site reference - CfS:17
Relevant planning history	None
Land type	Wholly greenfield land

Current use of the site	Agricultural land
Supporting information	Covering letter

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area	None	Pass
Site size threshold	Sufficient to accommodate 5 or more homes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 but around 20% is vulnerable to surface water flood risk, particularly in the north western part of the site and along the northern boundary. The land is predominantly classified as agricultural grade 3 land with the southernmost section classified as grade 2. The land rises briefly from the southern edge and then slopes down through the majority of the site to the northern edge. The south eastern corner of the site adjoins a small number of existing buildings on Church Road several of which are listed buildings. Mature garden trees provide screening in the vicinity but development could have a local impact on these properties. The layout and boundary landscaping of any development would need to mitigate any impact on these. The eastern edge parallels the</p>	~
--	---

<p>boundary of Little Wood which provides effective screening from the wider landscape to the east. The northern and western boundaries contain a mixture of low hedging and intermittent trees and the site is relatively exposed to views from Fox Road and the track which connects this to Church Road and adjoins the northern boundary of the site. Careful boundary landscaping would be required to reduce the visual impact of any development on the surrounding countryside. A public right of way crosses the centre of the site from west to east; this would need to be retained in any development layout.</p> <p>There is no known contamination or pollution within the site. No oil or gas pipeline infrastructure crosses the site and no overhead power lines are present although they do cross close to the northern boundary.</p> <p>The southern section of the site is situated within the Catworth conservation area although there are no specific heritage assets within the site itself. There are no designated nature conservation assets within the site but any development would need to be sensitive to the ecological assets at Little Wood. The site adjoins Fox Road from which there is currently a field access gate.</p> <p>The site is wholly greenfield so development would not contribute to reuse of previously developed land or regeneration. The site is within a minerals safeguarding area for brickclay engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site is available for development from 2024-2028. The promoter's expectation is that planning permission would be secured and the site sold on to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>The site is already served by electricity and water with digital and telecommunications infrastructure accessible from the site boundary. There is no local access to mains gas. The site is sloping but this could be incorporated into the layout of any development. Overhead powerlines cross close to the northern boundary and form a constraint to development in this end of the site. The site is just under 1km from junction 16 on the A14. Noise from this may compound constraints to development in the northern part of the site. No known major infrastructure would be required to serve development of the site although further investigation of infrastructure capacity will be required. No buildings currently exist on site so no clearance work would be required. There is a lack of clarity over the proposals for the site at present as it has been submitted as one of a cluster of 4 sites with a range of uses promoted across them as a whole.</p>	~

<b>Deliverability / developability</b>	
The site has few physical constraints to development although the northern portion of the site is limited by proximity to overhead power lines. Impact on the immediate setting would need substantial landscape mitigation. It is contrary to current adopted planning policy so allocation status would be necessary to support the development. Therefore, it is categorised as developable.	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bring forward this site:</p> <ul style="list-style-type: none"> <li>• Wholly comprises greenfield agricultural land with the portion nearest the village being classified as grade 2 agricultural land</li> <li>• Does not relate well to the built form of Catworth and effective integration would be very challenging</li> <li>• Built development of the whole site would be out of character with Catworth due to its scale</li> <li>• It is remote from most services</li> <li>• There is no public transport</li> <li>• Development would impact on the conservation area and its wider setting</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development as it would not support sustainable place-making</li> <li>• Has limited potential for open space uses such as biodiversity net gain in the south eastern and northern portions of the site in conjunction with existing areas of trees at The Grange and Little Wood</li> </ul>	
---	--

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 8.2 ha  No net developable area suitable for built development.	Biodiversity net gain on approximately 3.7 ha	Subject to allocation  From 2028

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Potential for biodiversity net gain on approximately 3.7 ha to eastern and northern sides.		

**Updates after the Initial Assessment**

**Catworth 5: Land West of Fox Road, Catworth**

<b>Site reference</b>	Catworth 5
<b>Site name</b>	Land West of Fox Road, Catworth

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land west of Fox Road, Catworth	Catworth	5.80

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
<p>Note: this site is one of a cluster of 4 sites comprising Catworth 4, 5, 6 and 7 in the same ownership promoted for development of complementary uses across some or all of the sites.</p> <p>Residential: Market and/ or affordable homes</p> <p>Infrastructure: Land for village hall or cemetery across the cluster of sites</p> <p>Open spaces uses: Natural, green or open space; and biodiversity net gain</p>	No capacity figures put forward; amount of all uses identified as to be confirmed	<p>Available 2024-2028</p> <p>Delivery rates to be determined</p>

**Core information**

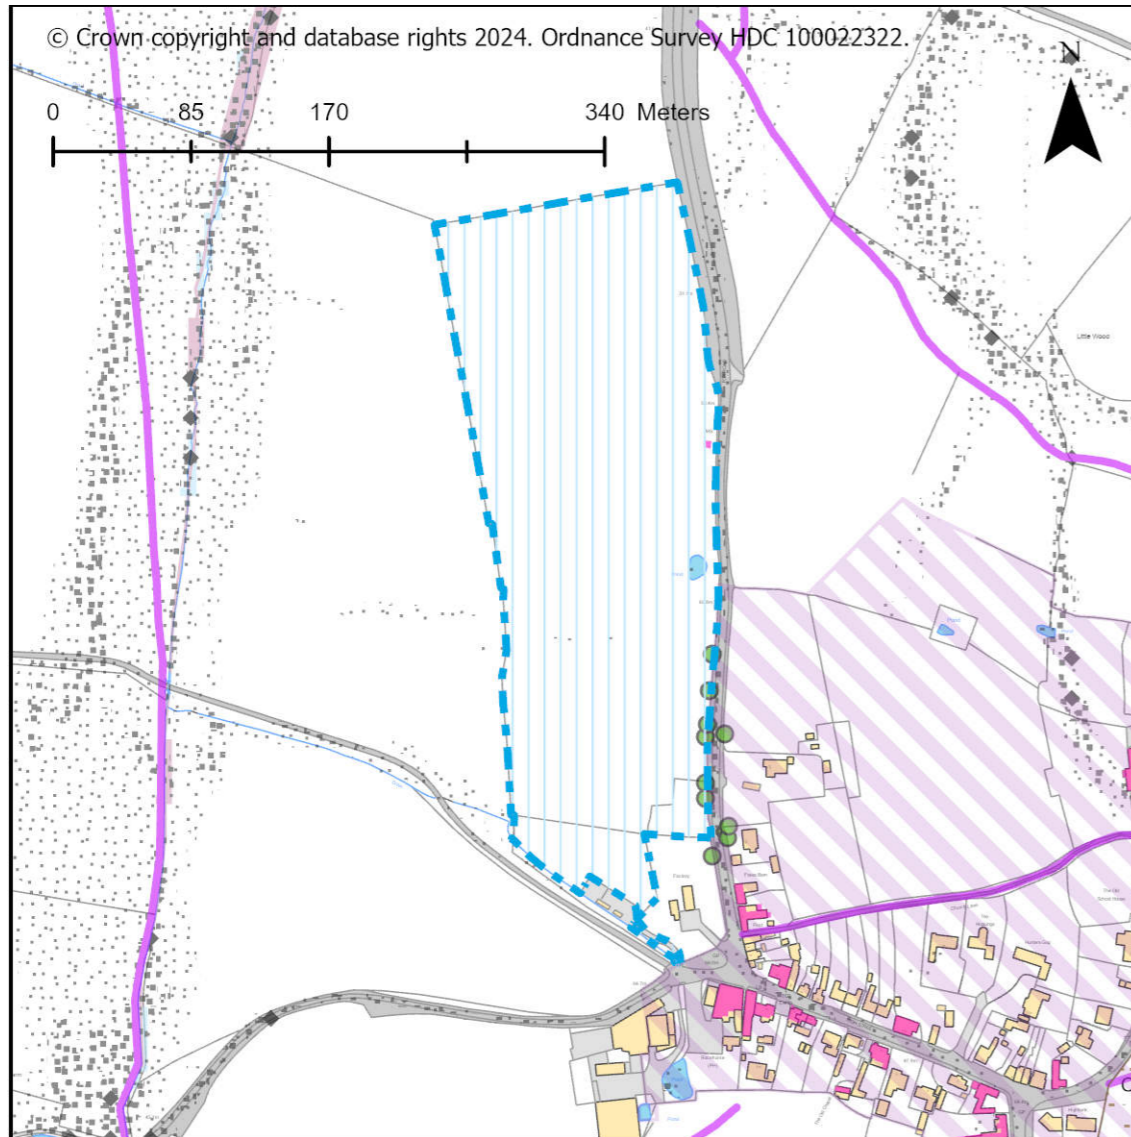

How was the site identified?	Call for sites 2023 submission - site reference - Cfs:356
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land

Supporting information	Covering letter
------------------------	-----------------

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 but with a very narrow band of surface water flood risk running across the centre. The majority of the site is classified as grade 2 agricultural land although the northern third is classed as grade 3. The land slopes down from Fox Road to the west and north with land beyond continuing to fall away gently with the A14 being at about a 10m lower elevation than the edge of the site. The southern and western boundaries are lined with trees providing some screening from the surrounding agricultural land, the access to Grange Farm and the public right of way situated to the west. The eastern boundary to Fox Road comprises hedging providing only low screening with the northern edge being entirely open. The site extends significantly into open countryside.</p>	~
--	---

<p>Any built development would need substantial landscaping to mitigate its impact on views from Fox Road and the adjoining countryside. The only built development directly adjoining the site is some semi-derelict works buildings at the south east corner with just two homes directly overlooking the site from Fox Road. All other surrounding uses are agricultural.</p> <p>There is no known pollution or contamination within the sites. No oil or gas pipeline infrastructures crosses the site and no overhead powerlines are present.</p> <p>A listed milestone is present approximately halfway along the eastern boundary of the site. The conservation area adjoins the south and eastern edges of the site and development would need to be sensitive to the local character of the area. There are no designated nature conservation assets within the site. The land adjoins Fox Road and is served by a field access gate.</p> <p>The site is wholly greenfield agricultural land so development would not contribute to reuse of previously developed land or regeneration. The site is within a minerals safeguarding area for brickclay, engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site is available for development from 2024 - 2028. The promoter's expectation is that planning permission would be secured and the site sold on to a third party for development.</p>	+
<p><b>Achievability</b></p> <p>The site is already served by electricity and water with digital and telecommunications infrastructure accessible from the site boundary. There is no local access to mains gas. The site is sloping but this could be incorporated into the layout of any development. The site is just under 1km from junction 16 on the A14. No known major infrastructure would be required to serve development of the site although further investigation of infrastructure capacity will be required. No buildings currently exist on site so no clearance work would be required. There is a lack of clarity over the proposals for the site at present as it has been submitted as one of a cluster of 4 sites with a range of uses promoted across them as a whole.</p>	~
<p><b>Deliverability / developability</b></p> <p>The site has very few physical constraints to development. Impact on the immediate setting would need substantial landscape mitigation on the northern and western boundaries. It is contrary to current adopted planning policy so allocation status would be necessary to support the development. Therefore, it is categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	Yes
---	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Remote from local services and employment</li> <li>• No public transport access</li> <li>• Wholly comprises greenfield land predominantly of agricultural grade 2</li> <li>• Development of the whole site would be out of character due to its scale relative to the existing village</li> <li>• Very low potential to integrate built development into the existing community so it would not support sustainable place-making</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for built development</li> <li>• Has potential to accommodate a variety of open space uses and biodiversity net gain</li> <li>• Should be restricted to the southern portion which could be laid out to relate to the physical form of the existing village</li> </ul>
---

Page 804 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 5.8 ha</p> <p>No net developable area suitable for built development</p> <p>Potential for natural, green and open space and for biodiversity net gain on southern portion of 2.2 ha to form a northern boundary corresponding with the existing field boundary to the east.</p>	<p>Open space - sports, recreation or allotments</p> <p>Open space - natural or green uses</p> <p>Biodiversity net gain</p> <p>Total potential area 2.2 ha</p>	<p>Subject to allocation</p> <p>Delivery of formal open space uses across 3 to 5 years with potentially longer for others to establish.</p>

**Updates after the Initial Assessment**

**Catworth 6: Triangular Field South of Church End, Catworth**

<b>Site reference</b>	Catworth 6
<b>Site name</b>	Triangular field south of Church End, Catworth

Site address	Parish(es)	Site area (ha)
Triangular field south of Church End, Catworth	Catworth	2.90

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
<p>Note: this site is one of a cluster of 4 sites comprising Catworth 4, 5, 6 and 7 in the same ownership promoted for development of complementary uses across some or all of the sites with the following specifically identified for this site.</p> <p>Open space: Natural, green and open space Biodiversity net gain</p>	No capacity figures put forward; amount of all uses identified as to be confirmed	<p>Available 2024 - 2028</p> <p>Delivery rates to be determined</p>

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:17
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Covering letter

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1 although a corridor of surface water flood risk runs along the northern edge of the site by the road frontage. The site is entirely classified as grade 2 agricultural land used as pasture. The site slopes down from the south west to the north east as part of an area of land falling away to the east of the village reducing its visual impact on properties in Church End. The northern boundary fronting onto Church End is contained by a low hedgerow with intermittent trees; the site is highly visible from the road which is set lower. All other boundaries also comprise low hedgerows with a public right of way inside the southern boundary from which clear views can be obtained across the site. The public right of way should be retained in any proposed scheme. There are no</p>	+
--	---

<p>buildings in the immediate vicinity of the site that would be impacted by development for the proposed use. The site is highly exposed to the surrounding area so use for non-agricultural purposes would have an impact on the surrounding landscape; however, as this is proposed to be for biodiversity net gain the use could be successfully accommodated subject to an appropriate form of planting being provided. The site has an existing field gate access from Church End.</p> <p>There is no known contamination or pollution within the sites. No oil or gas pipeline infrastructure crosses the site and no electricity overhead power lines are present.</p> <p>There are no designated heritage or nature conservation assets within the site.</p> <p>The site is wholly greenfield which is not a constraint given the proposed use. The eastern half lies within a mineral safeguarding area for brickclay; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site is available for development from 2024 - 2028. The promoter's expectation is that this parcel of land would be most suited to biodiversity net gain and offsetting use which may be delivered over a long timeframe.</p>	+
<p><b>Achievability</b></p> <p>The site is already served by electricity and water with digital and telecommunications infrastructure accessible from the site boundary. The site slopes down from south west to north east; this could be accommodated within the proposed uses. No buildings currently exist on site so no clearance work would be required. Of the cluster of sites this is the one with greatest clarity over the site promoter's intentions.</p>	+
<p><b>Deliverability / developability</b></p> <p>The site has minimal physical constraints to its use for biodiversity net gain or natural open space subject to selection of appropriate species and consideration of their impact on the public right of way</p>	+

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues in bringing forward the site:

- Potential to contribute towards resilience to climate change through proposed use for biodiversity net gain
- No public transport access
- Poor access to services and facilities
- Is remote from the current village
- It is wholly grade 2 agricultural land but the proposed use is reversible/ compatible with this
- It is not well connected to strategic green infrastructure but could aid connections to Little Catworth SSSI

In combination the outcomes of the LAA and SA indicate that the site:

- Is unsuitable for built development
- Has potential for the proposed use for biodiversity net gain

Page 807 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 2.9 ha  95% net developable area allowed given the proposed use for biodiversity net gain and need to retain the public right of way through the southern part of the site.  <b>Net developable area of 2.9 ha x 95% = 2.76 ha</b>	Open space - biodiversity net gain or other natural open space uses such as woodland.  The capacity would be 2.76 ha	Subject to allocation  Delivery across 30 year minimum term for monitoring of formal biodiversity net gain site

**Updates after the Initial Assessment**

**Catworth 7: Land East of Church Road, Catworth**

<b>Site reference</b>	Catworth 7
<b>Site name</b>	Land East of Church Road, Catworth

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land east of Church Road, Catworth	Catworth	11.10

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
<p>Note: this site is one of a cluster of 4 sites comprising Catworth 4, 5, 6 and 7 in the same ownership promoted for development of complementary uses across some or all of the sites. This site is specifically promoted as including residential development among other possible uses.</p> <p>Residential:</p> <p>Market and/ or affordable homes</p> <p>Infrastructure:</p> <p>Land for village hall or cemetery across the cluster of sites</p> <p>Open spaces uses:</p> <p>Natural, green or open space; and biodiversity net gain</p>	No capacity figures put forward; amount of all uses identified as to be confirmed	<p>Available 2024-2028</p> <p>Delivery rates to be determined</p>

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:357
Relevant planning history	None

Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Covering letter submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is wholly in flood zone 1. However, there are several areas of surface water flood risk. The largest extends eastwards from the site boundary level with 17 Church Road culminating in a pond, with a smaller southern extend from the same point. There is also a band of surface water flood risk running south east from the village hall. These all coincide with the lines of trees running through the northern part of the site. The land is all classified as agricultural grade 2.</p>	-
--	---

Land on the western edge of the site slopes up fairly steeply from Church Road with the majority of the site forming relatively flat high land which extends beyond the eastern edge of the site before dropping away towards Little Catworth. The Church Road boundary comprises a medium height hedgerow with very occasional trees providing limited screening of the rising land in the site. The Station Road edge of the southern portion of the site is wholly screened from the road by existing buildings with trees and hedging typically forming the boundary. The northern boundary of the site is the most complex comprising the boundaries and trees of properties along Church End and around St Leonard's Church. The eastern edge of the site is largely open with low hedgerows and very occasional trees with the small southern boundary being wholly formed of the trees related to 41 Station Road and the small copse immediately east of this. Four public rights of way cross the site which form a significant constraint that would need to be accommodated within any development scheme. Development would also impact on views from public rights of way extends eastwards. Due to the rising and elevated nature of this land and exposure to public view from multiple rights of way development of the site is significantly constrained in terms of its ability to be effectively integrated into its immediate setting.

There is no known contamination or pollution within the site. No oil or gas pipeline infrastructure crosses the site and no overhead powerlines are present.

The north western quarter of the site is situated within the Catworth conservation area and immediately adjoins the grade I listed St Leonard's Church.. A scheduled monument for Catworth moated manor complex with associated ridge and furrow was designated within the site in December 2023 which forms a very significant constraint. There are no designated nature conservation assets within the site. Field accesses serve the site from both Church Road and Church End.

The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is outside any minerals, waste or water safeguarding areas.

**Availability**

The site is controlled by a single individual who supports its development. There are no known legal restrictions affecting the site. The site is available for development from 2024 - 2028. The promoter's expectation is that planning permission would be secured and the site sold on to a third party for development.

+

**Achievability**

The site is already served by electricity and water with digital and telecommunications infrastructure accessible from the site boundary. There is no local access to mains gas. The site slopes up from the village and would have a notable visual impact on on existing buildings. Careful layout and landscaping would be needed for any development to mitigate this impact. The site is approximately 1km from junction 16 on the A14. No known major

-

<p>infrastructure would be required to serve development of the site although further investigation of infrastructure capacity will be required. No buildings currently exist on site so no clearance work would be required. Of the cluster of four sites the promoter suggests this one is particularly suitable for residential-led development.</p>	
<p><b>Deliverability / developability</b></p> <p>The site has significant landscape, visual impact and heritage impact constraints which will affect its ability to accommodate development and require substantial mitigation. The proposed development is contrary to current adopted planning policy so allocation status would be necessary to support it. Therefore, it is categorised as developable.</p>	-

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>No</p>
---	-----------

**Impact of the Sustainability Appraisal on the assessment**

<p>The site has not progressed through to sustainability appraisal due to the extensive area designated as a scheduled monument in December 2023 which would impede development of the residential and community uses sought on the site.</p>
---

**HDC's Delivery Calculations**

<p><b>HDC's net developable area calculation</b></p>	<p><b>HDC's anticipated uses and capacity</b></p>	<p><b>HDC's delivery estimate</b></p>
<p>Gross site area of 11.1 ha</p> <p>Capacity calculation not undertaken as the site is inappropriate for development.</p>	<p>N/A</p>	<p>N/A</p>

**Updates after the Initial Assessment**

### 4 Ellington

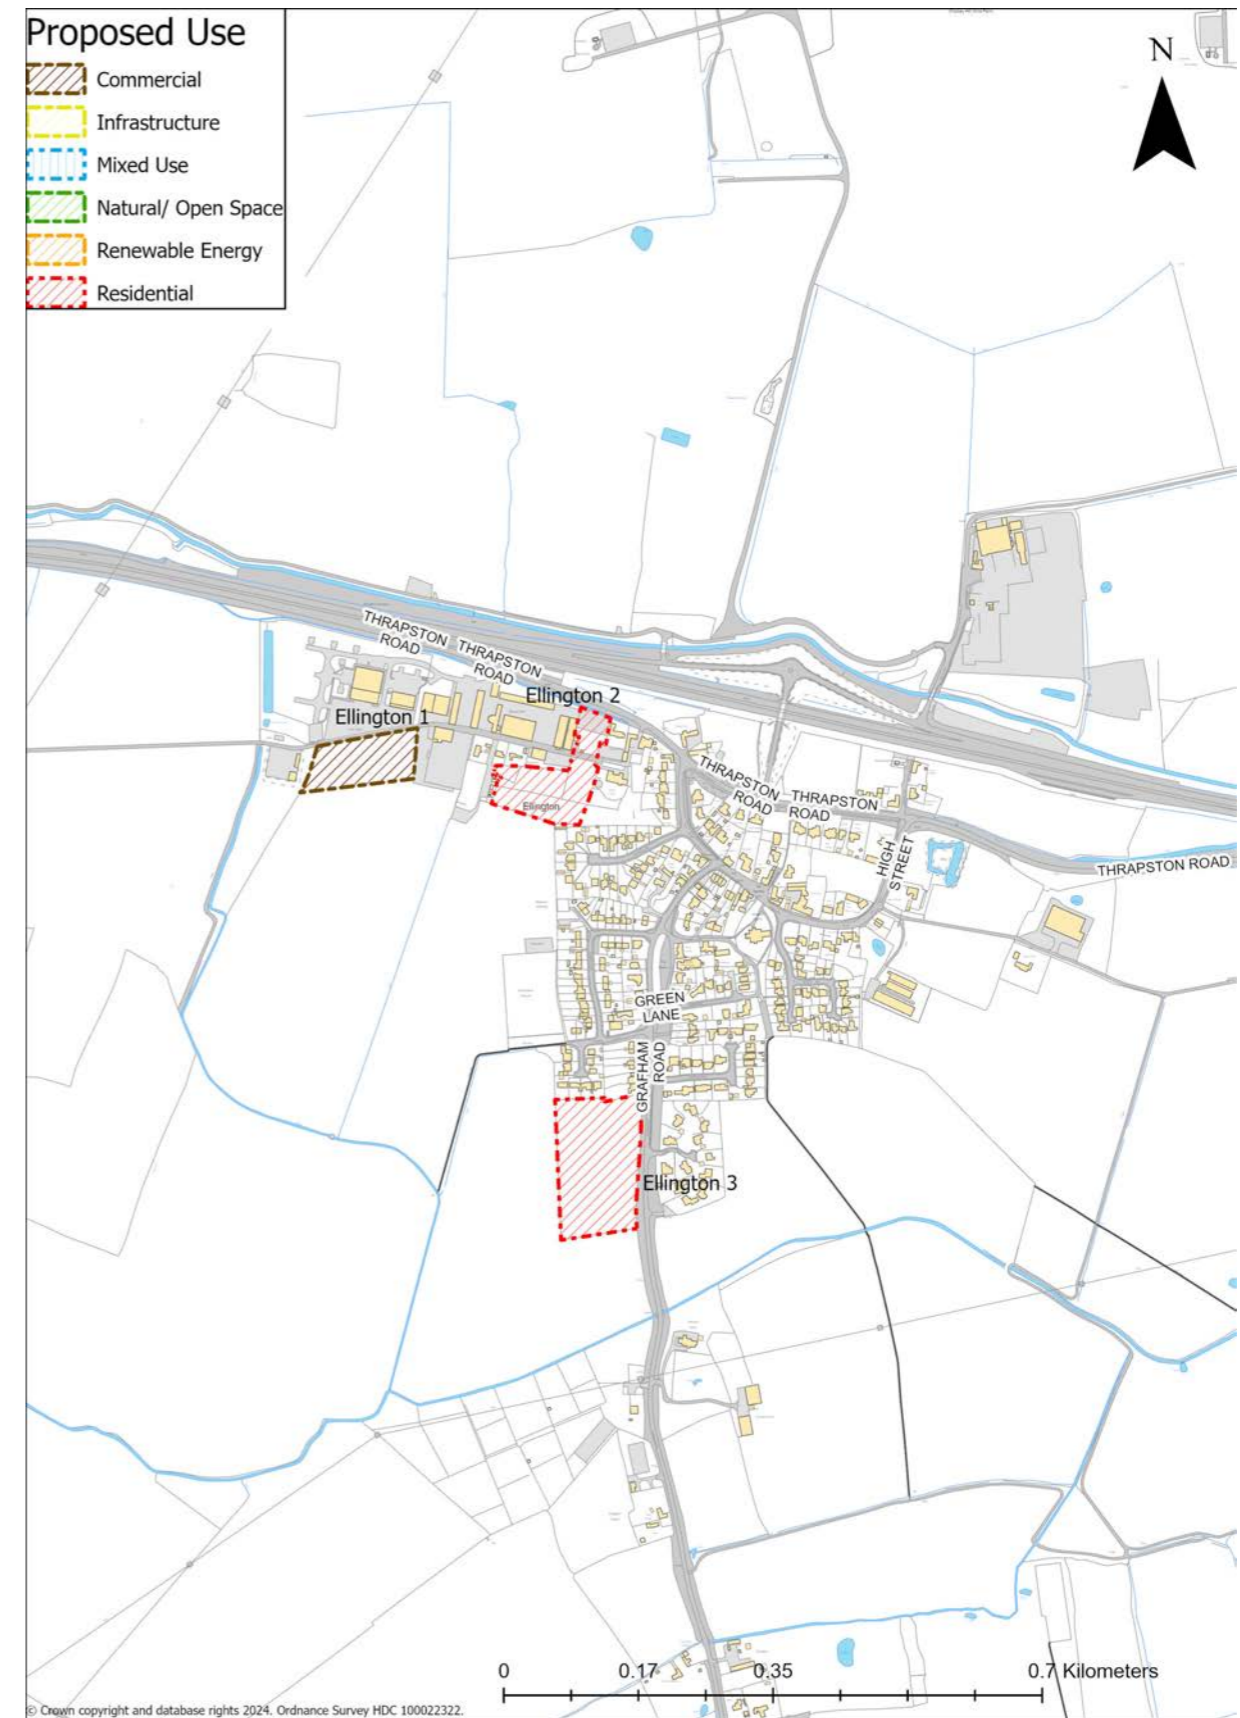

4.1 A total of 3 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Ellington 1: Land South of Ben Burgess, Ellington
- Ellington 2: Land South East of Brook Farm, Ellington
- Ellington 3: Land West of Grafham Road, Ellington

4.2 Please note the following sites partially fall within Ellington parish:

- Alconbury 10: Land at Weybridge Farm - note that this site crosses over Ellington and Alconbury parishes and is predominantly within Alconbury parish so the site assessment has been included within Alconbury parish of the Northern Central Huntingdonshire LAA document.
- Brampton 16: Land at Low Harthay and Woodhatch Farms, Brampton - note that this site crosses over Ellington and Brampton parishes and is predominantly within Brampton parish so the site assessment has been included within Brampton parish of the Central Huntingdonshire LAA document.

Page 811 of 3488

4.3 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Site name</b>	Land South of Ben Burgess, Ellington

Site address	Parish(es)	Site area (ha)
North west of Ellington, to the south of the A14 and south of the existing commercial buildings (primarily the Ben Burgess building)	Ellington	0.86

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Commercial: Employment	3,400 sqm	2024 - 2028 Build out over 2 to 5 years

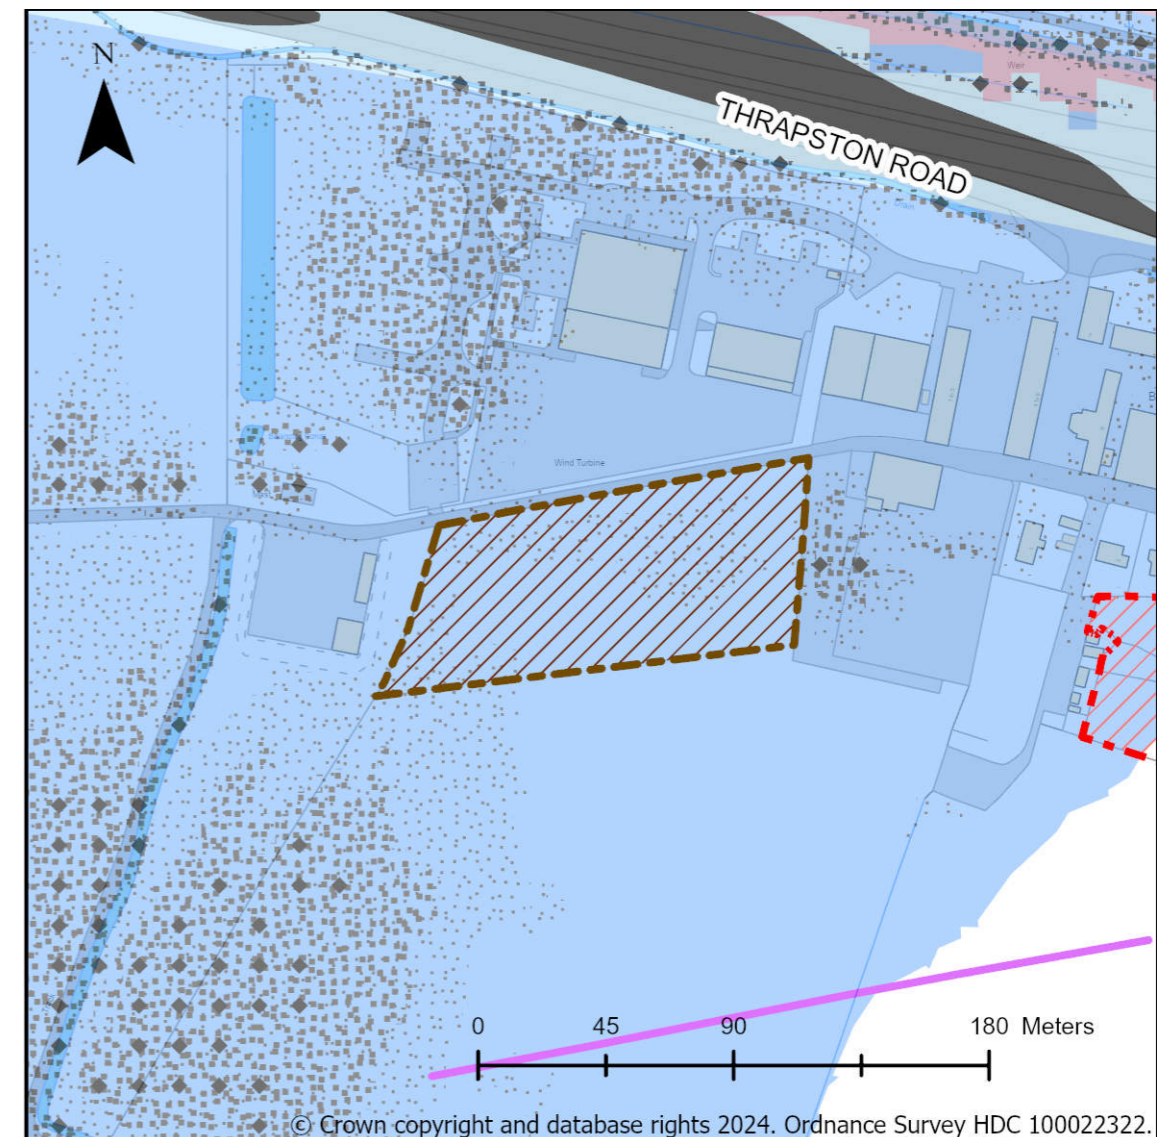

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:33
Relevant planning history	None
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass

Fundamental constraints	Status	Outcome
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	-
---	---

<p>The entire site is within flood zone 3a and is classified as grade 2 agricultural land. The site is wholly greenfield and is agricultural land. It is made up of an entirely flat land and has a similar topography to the surrounding land. It has no nature designations on it or immediately adjoining it which will impact its development. It has a few trees and hedging along its western boundary providing limited screening from the adjoining countryside. It is exposed to agricultural land and the open countryside to the south and east. Commercial buildings adjoin the site to the north. The site is in proximity to the Brook Farm Local Employment Area. This makes it compatible with neighbouring uses.</p> <p>There is no known contamination or pollution on site. No gas/ oil pipelines and buffer zones cross the site. There are no heritage assets existing within or immediately adjoining the site so there is no constraint from this. A large proportion of the site has been classified as a habitat for important species by CPERC. The site can potentially be accessed from a track that connects it to Easton Road.</p> <p>The site is wholly greenfield land and offers no opportunities to contribute to regeneration. It does not lie within a mineral safeguarding area and is beyond 400m from a water recycling centre.</p> <p>Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.</p>	
<p><b>Availability</b></p> <p>The site is owned and controlled by a single individual who supports its development. There are no known legal restrictions affecting the site and there are no current uses to be relocated. The land promoter suggests the land is available now and it is currently unknown how the site will be delivered.</p>	+
<p><b>Achievability</b></p> <p>Accessibility to main services from the site boundary is unknown. The site comprises broadly level ground and there are no known topological challenges. No oil or gas pipeline infrastructure crosses the site, and no overhead powerlines are present. There is a track road from the site to Easton Road; highway access can be achieved from the A14. The site promoter seeks employment uses of 3,400 sqm. There are no built structures on the site that would require clearance. Considering the site is within completely within flood zone 3a and there is no land within a lower flood zone, the achievability of built development is uncertain. Ecological Assessment may be required to assess and mitigate the impact of the proposed development on the important species within the area.</p>	-
<p><b>Deliverability / developability</b></p>	-

There are no known legal or ownership constraints. There are no structures on site to clear but there are significant constraints on site to mitigate. Flood risk and landscaping are key development considerations within a future masterplanning of the site. The site has no existing planning application and an allocation status would be necessary to support this development. There is very significant risk from flooding on the site across the entirety of the site means that development cannot be located in a part of the site at lower flood risk. A flood risk assessment or sustainable drainage strategy have not yet been prepared to assess this further at this stage. Considering the significant flooding issues on the site, the site is not considered to be deliverable or developable at this time.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	No due to the site being wholly located within flood zone 3a.
--	---

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
No capacity is calculated as the site is considered to be unsuitable.	N/A	N/A

**Updates after the Initial Assessment**

**Ellington 2: Land South East of Brook Farm, Ellington**

<b>Site reference</b>	Ellington 2
<b>Site name</b>	Land South East of Brook Farm, Ellington

Site address	Parish(es)	Site area (ha)
Land South East of Brook Farm, Ellington	Ellington	1.07

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	20 homes	2024 - 2028 Build out over 4 - 6 years

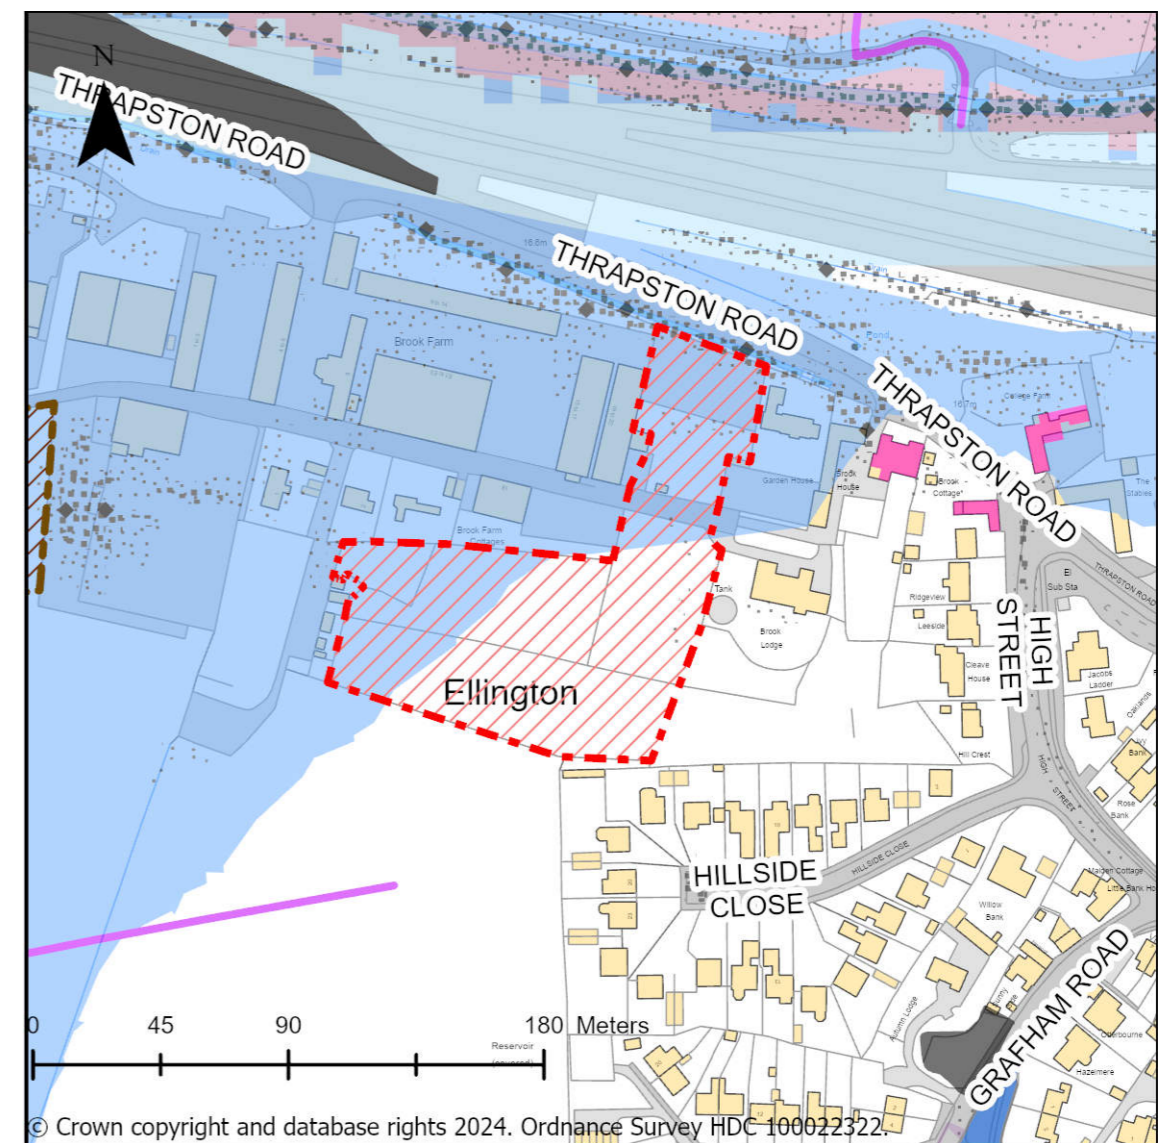

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:32
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Paddock lane used for equestrian purposes
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None of the site is within flood zone 3b although about half of the site is within flood zone 3a.	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for 5 or more homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	~
---	---

<p>The site is located to the south of Thrapston Road. The site is in two parts, a northern and southern parcel separated by an access route that runs through the site and serves several properties. The northern parcel currently has no access and an established tree line obscuring it from view. An in use paddock is located in the south of the site. About half of site is within flood zone 3a, located within the north and south west of the site. The remaining portion of the south eastern part of the site is in flood zone 1 and has some surface water flood risk. The site is wholly classified as grade 3 agricultural land. The site gently rises towards its southern boundary. To the north of the site is Thrapston Road and the A14, to the south, east and west are residential properties.</p> <p>There is no known contamination on site and no oil or gas pipelines running through the site. Telegraph poles run along the site's eastern boundary. There are no nature conservation or heritage designations on site but it is near to the grade II listed Brook House located some 45m from its easternmost edge. Access to the site can be achieved from an existing route that serves several properties.</p> <p>The site is greenfield, so its development will not contribute to reuse of previously developed land or regeneration. The site is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County council will be required to ascertain whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is controlled by a single individual who supports its development. There are no known legal restrictions impacting the site. It is not known how the site will be delivered at this stage. The landowner suggests the land will be available between 2024 and 2028 and take between 4 and 6 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that gas supply is not immediately accessible to the site, but that mains water supply and electricity supply are accessible within the site and that the public highway and digital and telecommunications infrastructure are accessible from the site boundary. About half of the site is constrained by fluvial flood risk including the potential access to the site. Substantial flood mitigation would be required for any scheme as well as a layout that places development in areas at the lowest risk of flooding. The access cuts through the site, it is unclear if this access is also in the ownership of the site.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are no structures to clear but the site is heavily constrained by fluvial flood risk reducing the potential developable area considerably. It is not known at this stage how the site will be delivered but the site is expected to be available between 2024 and 2028. As such, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is greenfield land
- Significant fluvial flood risk on the northern and western edge of the site meaning development would need to be focused to the south and eastern parts of the site if safe access and exit could be achieved
- Good accessibility to natural greenspace and employment opportunities
- Accessible to some local services and but limited in public transport access
- There is limited accessibility to the main village from the site which limits opportunities for integration.
- While adjoining built development, placing development within flood zone 1 would result in a development that does not relate well to the village extending into the countryside and thus not supporting sustainable place making

In combination the outcomes of the LAA and SA indicate that the site:

- Is not appropriate for development as placing development within flood zone 1 would result in development being poorly located which could not be integrated within the existing place and community
- Has significant flood risk
- Has unresolved issues relating to access to the site, which may be restricted due to flood risk
- Has unresolved issues relating to the ownership of access

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Capacity calculation not undertaken as site is inappropriate for development.	N/A	N/A

**Updates after the Initial Assessment**

--	--

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1, there is however some surface water flood risk along the site's frontage along Grafham Road. The site is wholly classified as grade 3 agricultural land with no existing structures on site. The site is broadly level situated on land that is not as prominent on the wider landscape as land levels dip here. Trees, native hedgerow species and ornamental shrubs on the northern boundary and within adjoining gardens provide some visual and physical separation between the site and the residential properties immediately to the north. Mature hedgerow and trees define the eastern boundary alongside Grafham Road. Both hedgerows include occasional gaps which allow partial</p>	+
---	---

<p>views. The western and southern site boundaries are open, being defined by post and wire fencing, with further grassland beyond on both sides. In terms of neighbouring uses, to the north and east are residential properties with agricultural land to the south and west.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets or no nature conservation designations on site. Access can be achieved from Grafham Road.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single individual / company who supports its development, the land is controlled by a developer company. There are no known legal restrictions affecting the site. The site promoter states that the site will be delivered by a housebuilder. The promoter suggests the land would be available between 2024 and 2028 and could take three years to build out depending on market conditions.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from a gas supply which is not immediately accessible. There are no buildings on site so no clearance work would be required.</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its landscape impact. The site promoter has stated that a developer company is involved with the site and clarified that development will be delivered via a housebuilder. Several technical studies and assessments have already been undertaken and a proposed site plan developed in support of the site's development and which have been submitted as part of the Call for Sites. No planning application has yet been made on site however, therefore the site is classified as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is wholly greenfield land
- Accessible to natural green space
- Reasonable accessibility to local services and employment opportunities
- Some accessibility to public transport
- Development can be integrated into the existing place and community being located on the southern edge of the village
- Not constrained by fluvial flood risk or by heritage assets
- Some surface water flood risk along the site's frontage

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for built development which can be integrated into the existing place and community supporting sustainable development
- Should incorporate sustainable drainage to mitigate surface water flood risk and retain existing hedgerows and vegetation which provide established landscaping

Page 820 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.87 ha  80% net developable area allowed for incorporation of landscaping and some SuDs.  1.87 ha x 80% = <b>1.50 ha</b>	Residential - market and/or affordable homes and custom and self build housing  Very low density of 25 dph anticipated due to the edge of village location.  Capacity = 1.5 ha x 25 dph = <b>38 homes</b>	Available post 2028  Build out over 3 years

**Updates after the Initial Assessment**

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:45
Relevant planning history	None recent - historic applications relating to the use of land for the Grafham Water Caravan and Motorhome Club Campsite
Land type	Part previously developed land and part greenfield land
Current use of the site	Commercial

Supporting information	None submitted
------------------------	----------------

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site consists of two parcels of land: one is the campsite, and the other a parcel of land that runs along Church Road. The main parcels of the site are located wholly within flood zone 1 and not at risk from surface water flooding. There is some surface water flood risk along the access to the campsite. The land is wholly classified as grade 3 agricultural land. There are several existing structures on the campsite supporting its current use as a holiday campsite and several private park homes, the other parcel is completely greenfield. There are 60 pitches on the site including 41 with hardstanding. The site is broadly flat and the main campsite is enclosed by thick tree belts and vegetation. The southern and eastern parts of the site are much more open but still largely obscured from view by vegetation. When viewing the site from Church Road, there are no breaks in the vegetation so the site</p>	
--	--

is completely obscured. The borders of the campsite are surrounded by open countryside, to the south is Westwood Lodge, a collection of holiday lets. The easternmost edge of the site adjoins Cedar Close, a residential cul-de-sac (this part of the site has also been submitted under Grafham 2 - CfS:303).

There is no known contamination or pollution on site. No gas or oil pipelines run through the site. Within the campsite there is the grade II listed Old Manor Cottage. There are no nature conservation designations on site. Adjacent to the site along Church Road is a Tree Preservation Order Area. Highways access to the campsite is already established from Church Road, there could be potential to add another access along Church Road to serve the easternmost part of the site although this is a narrow road with no footpath access and there is currently no break in the vegetation along the site's frontage with Church Road to provide an access. Therefore, advice from Cambridgeshire County Council will be sought to determine if an appropriate and safe access could be achieved to serve the site.

The campsite has several structures on site with the other parcel largely being greenfield land. The site promoter is primarily seeking to expand and provide additional leisure facilities and tourist accommodation, but also wishes to explore other uses. They state that whilst it is the intention of Grafham Water Caravan and Motorhome Club Campsite to remain in leisure use at present, the Club would like to secure flexible alternatives that would allow residential development on site either in tandem with the current use, or be solely for residential development subject to an alternative site within the district being found to accommodate the Club's ongoing leisure use. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.

**Availability**

The site is owned by a single individual/ company who supports its development. The site promoter has stated that they do not know if there are legal restrictions affecting the site. The site promoter states that it is not known how the proposed development will be delivered. They suggest the land would be available between 2029 and 2034. However, the eastern parcel of this site has also been submitted by another site promoter solely for residential development (see Grafham 2 - CfS:303) which states that it is understood that the site is owned and controlled by a single family. Therefore, further investigation on who owns this particular parcel of land will be required to ascertain availability, achievability and deliverability of development.

**Achievability**

The site promoter has identified that all services are available within the site apart from the public highway which is accessible from the site boundary. There is existing access to the campsite, but any additional access will need to be determined. As highlighted above, there is some overlap with another site submission with potentially alternative uses on site. It is not clear at this stage the level of overlap there will be between these developments

<p>and if they will be delivered in tandem or not. There is also some further investigation required regarding land ownership and control. It is also unclear at this stage what additional tourist accommodation and leisure facilities the campsite wish to pursue on site as it appears the priority is to retain the existing business with the potential for residential as either an alternative land use or maybe on the secondary parcel along Church Road. Contact has been made with the site promoter to address these but no response has been received to date, as such the site is categorised as being potentially unachievable arising from the levels of uncertainty in the proposals.</p>	
<p><b>Deliverability / developability</b></p> <p>The site is a mixture of previously developed land and greenfield land. Development will need to be sensitive to the site's edge of village location and landscape impact, the impact on the adjoining residential cul-de-sac at Cedar Close and provide safe access from Church Road as well as consider the impact of any intensification of leisure uses on the amenity of residents. Continuing the leisure on site appropriate but this could potentially be undertaken under existing planning policy but the loss of such facilities would be resisted. The site promoter is not sure how the proposed development will be delivered. As outlined above the uncertainties of the proposals means that the site is categorised as not being either deliverable or developable at this time.</p>	

- It also unclear at this stage what use the site submission is proposing and whether the tourist accommodation and leisure facilities are to remain. Contact has been made with the site promoter to address these but no response has been received to date, as such the site is categorised as being potentially unachievable arising from the levels of uncertainty in the proposals.
- Residential development may be appropriate on the eastern parcel. This has been assessed through a separate proposal - Grafham 2 - CfS:303
- Continuing the leisure use on site is considered appropriate, however the loss of such facilities would be resisted.
- Requires further investigation regarding land ownership and control.

**HDC's Delivery Calculations**

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:303
Relevant planning history	None recent - historic applications relating to the use of land for the Grafham Water Caravan and Motorhome Club Campsite
Land type	Wholly greenfield land
Current use of the site	Paddock land associated with Grafham Water Caravan and Motorhome Club Campsite
Supporting information	Infographic leaflet

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located wholly within flood zone 1 and is not at risk from surface water flooding. The land is wholly classified as grade 3 agricultural land with only one existing structure on site. There is also a pond on site located centrally along the site's southern boundary. The site is broadly level, and is largely obscured from view with vegetation along all of its boundaries. A tree line along its western edge provides a clear distinction between the site and the rest of the adjoining land associated with the Grafham Water Caravan and Motorhome Club Campsite. When viewing the site from Church Road, there are no breaks</p>	~
---	---

<p>in the vegetation so the site is completely obscured. To the east is Cedar Close, a residential cul-de-sac. To the north and south is open countryside with the Grafham Water Caravan and Motorhome Club Campsite to the west and north-west.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage or nature conservation designations on site. Adjacent to the site is a Tree Preservation Order Area. Highways access to the site could be achieved from Church Road although this is a narrow road with no footpath access and there is currently no break in the vegetation along the site's frontage with Church Road. Therefore, advice from Cambridgeshire County Council would be needed to determine if an appropriate and safe access can be achieved to serve the site. There are two public rights of way cutting through the site which would need to be retained.</p> <p>The site is greenfield land apart from one existing structure on site so development would not contribute to the reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site promoter states that the land is owned by a single family who supports its development and that there are no known legal restrictions affecting the site. The site promoter states that an allocation status is sought and then the site will be sold to a third party for obtaining planning permission and development. The promoter suggests the land would be available between 2024 and 2028 and could take one to two years to build out. However, this site has also been submitted by another site promoter as part of a wider site area (see Grafham 1 - CfS:45) which states that it is owned and controlled by a single/individual company. Therefore, further investigation on who owns this particular parcel of land will be required to ascertain availability, achievability and deliverability of development.</p>	~
<p><b>Achievability</b></p> <p>The site promoter has identified that only electricity supply and the public highway are accessible from the site boundary with the remaining services (gas supply, mains water supply and digital and telecommunications supply) being unknown. There is only one structure to clear on site. The site promoter identifies that the provision of access from Church Road needs to be scoped. As highlighted above, there is some overlap with another site submission with potentially alternative uses on site. It is not clear at this stage the level of overlap there will be between these developments and if they will be delivered in tandem or not or are mutually exclusive regarding this parcel of land. There is also some further investigation required regarding land ownership and control.</p>	~
<p><b>Deliverability / developability</b></p>	~

The site is greenfield with only one structure to clear. Development will need to be sensitive to the site's edge of village location and landscape impact, the impact on the adjoining residential cul-de-sac at Cedar Close and provide safe access from Church Road. The site promoter identifies that an allocation status is sought before selling the site onto a third party to acquire planning approval. The site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Wholly greenfield land
- No risk from fluvial or surface water flooding
- Good access to local facilities, shops and employment
- Good accessibility to natural greenspace including being within 1km of Grafham Water SSSI
- Limited public transport access
- Relates well to the existing built form of Grafham

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for residential use as it relates well to the immediate surroundings and the scale would integrate well with the established community
- Highways access to the site could be achieved from Church Road but this will need to be investigated further
- Landscaping will be required to provide a soft development edge

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 1.14 ha  90% net developable area allowed for landscaping and reflecting the presence of a pond on site. This can also provide	Residential: market and/or affordable housing; and self-custom build housing	Available post 2028 subject to successful allocation status  Build out over 2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
the diversity net gain identified by the site promoter as well as measures that can be incorporated within plots themselves.  1.14 ha x 90% = <b>1.03 ha</b>	Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 1.03 x 25 = <b>26 homes</b>	

**Updates after the Initial Assessment**

--

**Grafham 3: Sullivans Poultry Farm, Grafham**

<b>Site reference</b>	Grafham 3
<b>Site name</b>	Grafham Poultry Farm, Church Road, Grafham

Grafham Poultry Farm, Church Road, Grafham	Grafham	0.90

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: <ul style="list-style-type: none"> <li>Market and/or affordable housing</li> <li>Custom and self-build housing</li> <li>Care home</li> </ul> Commercial: <ul style="list-style-type: none"> <li>Commercial leisure uses</li> </ul>	18 market and/or affordable homes and/ or 18 custom and self-build plots, or 70 bed care home, or Commercial leisure uses - floorspace to be confirmed	Available 2024 - 2028 Build out over 1 year

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:388
Relevant planning history	0801186OUT - submitted for ten holiday lets, application was withdrawn.
Land type	Partly previously developed and partially greenfield land (agricultural uses)
Current use of the site	The site is an existing intensive poultry farm comprising of four large poultry sheds and associated hardstanding
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1, there is some recorded risk of surface water flooding within a small portion of the site and along Church Road. The land is classified wholly as grade 3 agricultural land. There are four large poultry sheds on site used for intensive poultry farm and associated hardstanding. The site is broadly level, and is largely obscured from view with vegetation along all of its boundaries. When viewing the site from Church Road, there are breaks in the vegetation for access which also allow for some views into the site. To the west is a residential property, to the north on the other side of Church Road is Westwood Lodge which is used for holiday lets. To the east is a small field and to the south is open countryside.</p>	
---	--

The site promoter has not identified there being known contamination or pollution on site, however, it is likely this will require further investigation considering the current use of the site. No gas or oil pipelines run through the site. There are no heritage or nature conservation designations on site or within its immediate vicinity. Highways access to the site can be achieved from Church Road although this is a narrow road with no footpath access. Advice from Cambridgeshire County Council will need to be sought to determine if an appropriate and safe access can be achieved at this point. The site promoter states that residential, care uses and leisure uses could be pursued, it is not clear if one use will be chosen or there will be a mixture of uses. The site is not considered to be suitable for a care home given the constraints on safe and sustainable access to the site and its detached location from the village due to the inability to achieve safe pedestrian access. The site could be assessed further for residential and/or leisure uses to complement the adjacent holiday lets .

The site is mostly covered in hardstanding and large sheds so development could contribute to the reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.

**Availability**

The site is owned by a single individual who supports its development. There are no known legal restrictions affecting the site. The site promoter states that the site will be delivered by the landowner. The promoter suggests the land would be available between 2024 and 2028 and could take one year to build out.

**Achievability**

The site promoter has identified that all services are accessible within the site apart from the public highway which is accessible from the site boundary and main gas supply which is unknown. There are several structures and hardstanding to clear on site so there is a substantial amount of work needed to make the site ready for redevelopment. Information has not been provided regarding if the existing business will relocate or be shut down. There will also be the need to assess any level of contamination on the site and remediate it if there is before development can take place. There is uncertainty on what proposed uses will be brought forward on the site, whether a mixture of residential and leisure uses is sought and hence the amount of development.

**Deliverability / developability**

There are several structures and hardstanding to clear on site so there is a substantial amount of work needed to make the site ready for redevelopment. Additionally, the location of the site will need to be sensitive to the wider landscape and look to maintain the level of surrounding vegetation in order to minimise landscape impact. The level of potential contamination on the site would need to be assessed and further clarity gained on the

~
~
~

proposed mix and quantity of uses. It is proposed that the development will be delivered by the landowner so the site will not be sold on. No planning application has yet been made on site however, therefore the site is classified as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- The site consists of four large poultry sheds used for intensive poultry farming thus clearance provides an opportunity to enhance the character of the area and provide an enhanced approach to Grafham
- Remote from a local shop, primary education and local leisure and community facilities
- Very limited public transport access
- Remote from natural greenspace but is within 1km of Grafham Water
- The site does not relate well to the existing settlement. The site is detached from the main built form of the village.
- Access to the main settlement of Grafham would be via a narrow road with with no safe pedestrian/ active travel route.
- Proposals for residential and care home development would not be sustainably located near to accessible services and facilities.

Proposals for commercial leisure uses could present issues relating to active travel/pedestrian safety through increased vehicle movements along what is a narrow road.

In combination the outcomes of the LAA and SA indicate that the site:

- Is inappropriate for built development
- Whilst the demolition of the existing poultry units could enhance the 'gateway' to the village, this does not justify new buildings in such a detached location. This is especially so of uses relating to residential and care home development which would benefit from being sustainably located near to accessible services and facilities.
- Proposals for commercial leisure uses could present issues relating to active travel/pedestrian safety through increased vehicle movements along what is a narrow road.
- Will not support sustainable lifestyles as it is remote from key day to day services, employment and cannot be accessed via sustainable modes of transport
- As a result of the above it is considered that the site could not be effectively masterplanned to become part of the existing community.

## 6 Great Staughton

6.1 A total of 4 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Great Staughton 1: Land East of B661, The Green, Great Staughton
- Great Staughton 2: Land South of 29 The Green, Great Staughton
- Great Staughton 3: Land West of Cages Lane, Great Staughton
- Great Staughton 4: Brook Farmyard, Great Staughton (three permutations put forward reviewed in one assessment)

6.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

<b>Site reference</b>	Great Staughton 1
<b>Site name</b>	Land East of B661, The Green, Great Staughton

Site address	Parish(es)	Site area (ha)
Land East of B661, The Green, Great Staughton	Great Staughton	0.90

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	15 - 20 homes	Available 2024 - 2028 Build out over 1 year

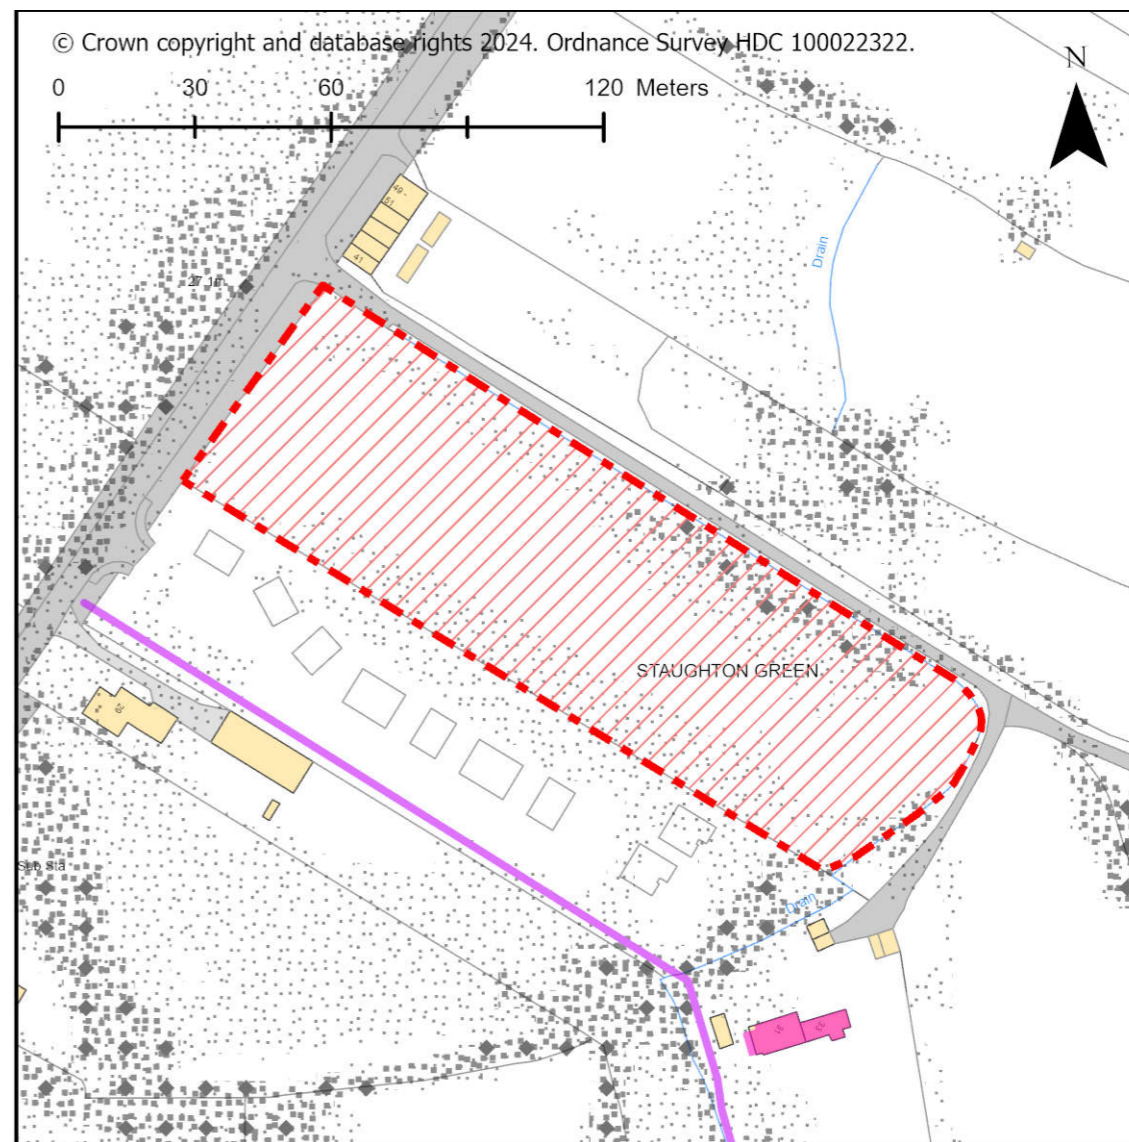

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – Cfs:125
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Supporting statement (June 2023)

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass

Fundamental constraints	Status	Outcome
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	
The site is located within flood zone 1, there is risk of surface water flooding across the site particularly along the site's northern and southern boundaries. The land is classified wholly as grade 3 agricultural land with no existing structures on site. The site is broadly level and is in agricultural use. Its north-west boundary fronts onto The Green where there	+

<p>is vegetation screening it from view. Along the site's northern boundary there is a track that provides access to other agricultural plots and residential properties. Vegetation is present but the site is clearly visible along the track. Along the site's southern and eastern boundary are trees and vegetation but again these are fairly loose so the site is not obscured. To the north and south are residential properties. The properties to the south were completed in 2023.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site but electricity cables run along The Green adjacent to the site's frontage. The site is not within a conservation area but is adjacent to a grade II listed building at its far eastern end. There are no nature conservation designations on site or within its immediate vicinity. Highways access to the site can be achieved from the B661 (The Green).</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by multiple individuals within a single family who all supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary. The presence of electricity cables may require some mitigation. There are no buildings on site so no clearance work would be required and the site is flat so there are no topographical challenges to overcome. The access to the site is from The Green (B661).</p>	+
<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its location and incorporate landscaping measures and SuDs. The site promoter states that it is intended to acquire planning permission then sell to a third party for development. Therefore, it appears that it is intended not to wait for a potential allocation status to deliver the site. As it appears that the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Some surface water flood risk</li> <li>• Well related to the existing place and community and has potential to provide built development of a scale that will not harm the character of the area</li> <li>• Remote from natural greenspace</li> <li>• Limited public transport access</li> <li>• Accessible to some local services and employment opportunities</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• May be appropriate for residential development and has potential to provide built development of a scale that will not harm the character of the area</li> <li>• Support residential development on sites of less than 1ha</li> <li>• Landscaping and sustainable drainage will be required</li> </ul>

**Great Staughton 2: Land South of 29 The Green, Great Staughton**

<b>Site reference</b>	Great Staughton 2
<b>Site name</b>	Land South of 29 The Green, Great Staughton

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land South of 29 The Green, Great Staughton	Great Staughton	0.71

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
Residential: Market and/or affordable housing	20 homes including 8 (40%) affordable units. The site promoter states there is scope for a two bungalows and the potential for two self build plots. It is unclear from the submission if this is in addition to the 20 homes or not.	Available 2024 - 2028  Build out over 1 to 2 years

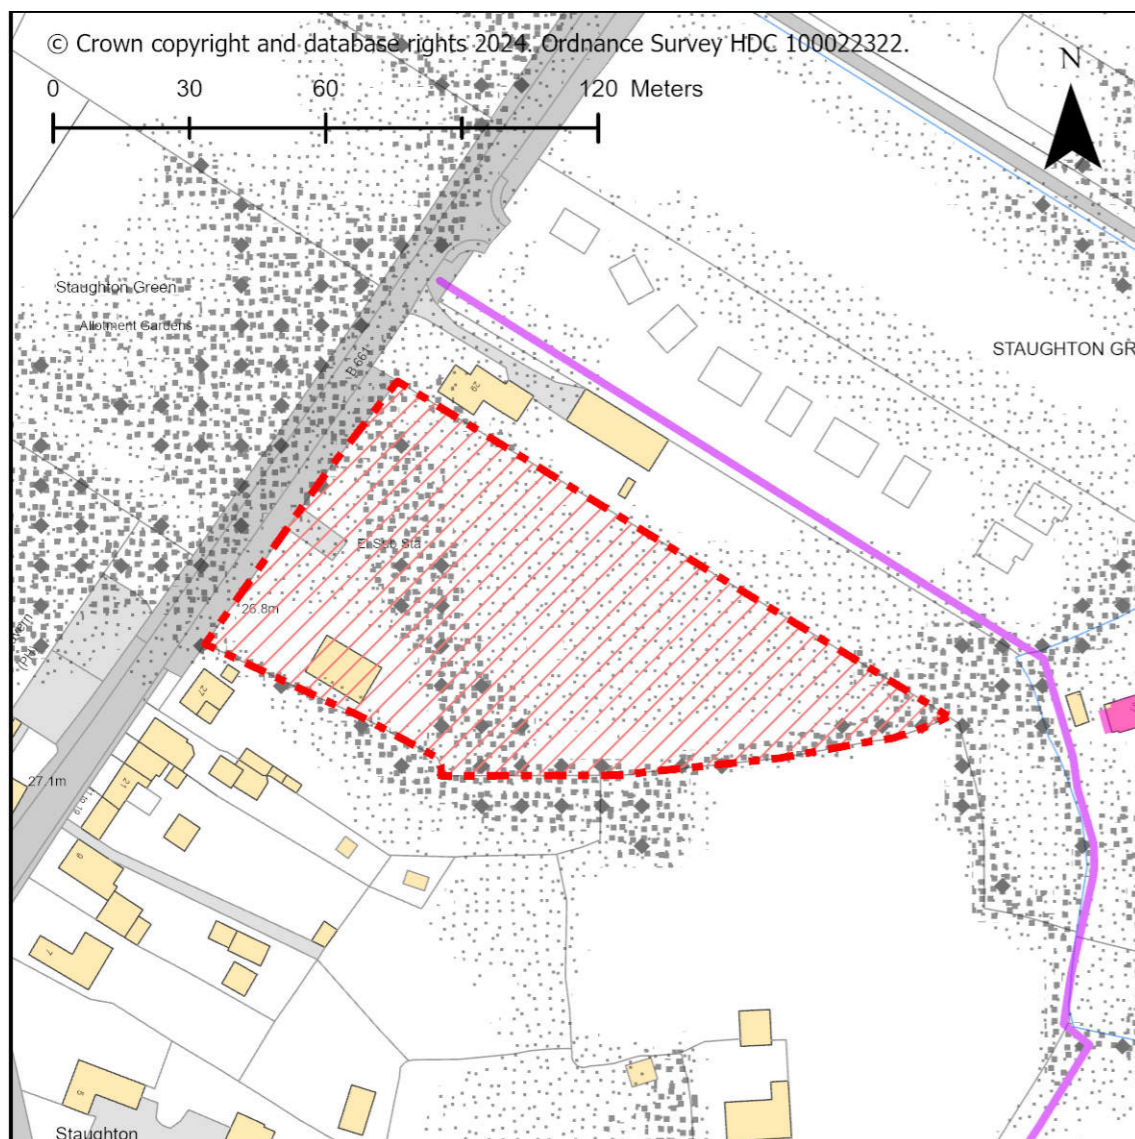

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:150
Relevant planning history	<ul style="list-style-type: none"> <li>19/00576/PIP - residential development of between 5 - 9 dwellings - refused in June 2019</li> <li>20/01087/PIP - residential development of up to 9 dwellings - refused in September 2020</li> <li>The Site was included in the HELAA (2017) (050 - South of 29 The Green, Great Staughton), the site was considered potentially suitable for low density residential development across a net developable area of 85% of the site resulting in an estimated capacity of 20 dwellings. The site was taken forward as a proposed allocation in the Local Plan to 2036 but was deleted under main modification 38. The site was not allocated.</li> </ul>

Land type	Majority is greenfield (a small proration is not where there is a storage building)
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1 but almost the entirety of the site is constrained by low, medium and high risk of surface water flooding. There is an overland flow path traversing the site with a high risk of surface water flooding. The risk of surface water flooding may give rise to access and escape implications because of its extent and location. The site is wholly classified as grade 3 agricultural land. The site is well-screened, flat and covered by rough grass with a storage building on site, but development on the site would be visible from the approach to the village from the northeast. The site is located to the</p>	~
---	---

<p>east of the B661, on the northern edge of Great Staughton surrounded primarily by open countryside. On the opposite side of the B661 are allotments. The site is primarily greenfield however a storage building is situated along the southern boundary.</p> <p>This site was previously put forward as an allocation in Huntingdonshire's Local Plan to 2036 (GS 1 South of 29 The Green). The site was removed through the Local Plan examination process as it was included within the Local Service Centres category. This category was considered not to be required at the time.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site but electricity cables run along the B661 along the site's frontage and a pole mounted transformer is located on the boundary. The site is not within a conservation area but is adjacent to numbers 31 and 33 The Green located to the east of the site, both of which are grade II listed. There are no nature conservation designations on site or within its immediate vicinity. Highways access to the site can be achieved from the B661 (The Green).</p> <p>The site is mostly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in an extensive mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in the ownership of a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to acquire planning permission and then sell the site to a third party for development. The promoter suggests the land would be available between 2024 and 2028 and take 1 to 2 years to complete.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that all main services are accessible from the site boundary apart from gas supply which is unknown. The presence of an electricity transformer may require some mitigation and the site promoter has obtained advice from UK Power Networks indicating that the transformer unit could be relocated or replaced by an electricity substation as part of any development scheme. There is one building on site so some clearance work would be required and the site is flat so there are no topographical challenges to overcome. The access to the site is from The Green (B661). There are however significant levels of surface water flood risk on site which will require assessment to determine if development on the site is possible with appropriate mitigation.</p>	~
<p><b>Deliverability / developability</b></p>	~

There is a structure to clear, the site is located on the edge of Great Staughton. The location means that any future development will need to be sensitive to its location and incorporate landscaping measures and SuDs if it is possible to overcome the surface water flood risk. The site promoter states that it is intended to acquire planning permission then sell to a third party for development. The site is expected to be available between 2024 and 2028. As there is not an active planning application on site, and if the surface water flood risk can be overcome, the site is categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is mostly greenfield land with an existing structure on site
- Significant surface water flood risk
- Remote from natural greenspace
- Accessible to some local services and employment opportunities
- Limited in public transport access
- Well related to the existing place and community and has potential to provide built development of a scale that will not harm the character of the area

In combination the outcomes of the LAA and SA indicate that the site:

- May be appropriate for residential development and has potential to provide built development of a scale that will not harm the character of the area
- Support residential development on sites of less than 1ha
- Landscaping and sustainable drainage will be required

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Gross site area of 0.71 ha  80% net developable area allowed for landscaping and SuDs to mitigate against the identified surface water flood risk.	Residential - market and/or affordable housing	Available 2024 - 2028  Build out over 1 to 2 years

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
0.71 ha x 80% = <b>0.568 ha</b>	Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 0.568 x 25 = <b>14 homes</b>	

**Updates after the Initial Assessment**

**Great Staughton 3: Land West of Cage Lane, Great Staughton**

<b>Site reference</b>	Great Staughton 3
<b>Site name</b>	Cages Lane, Great Staughton

Site address	Parish(es)	Site area (ha)
Cages Lane, Great Staughton	Great Staughton	0.92

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing	Up to 20 homes	Available 2024 - 2028 Built out over 2 years

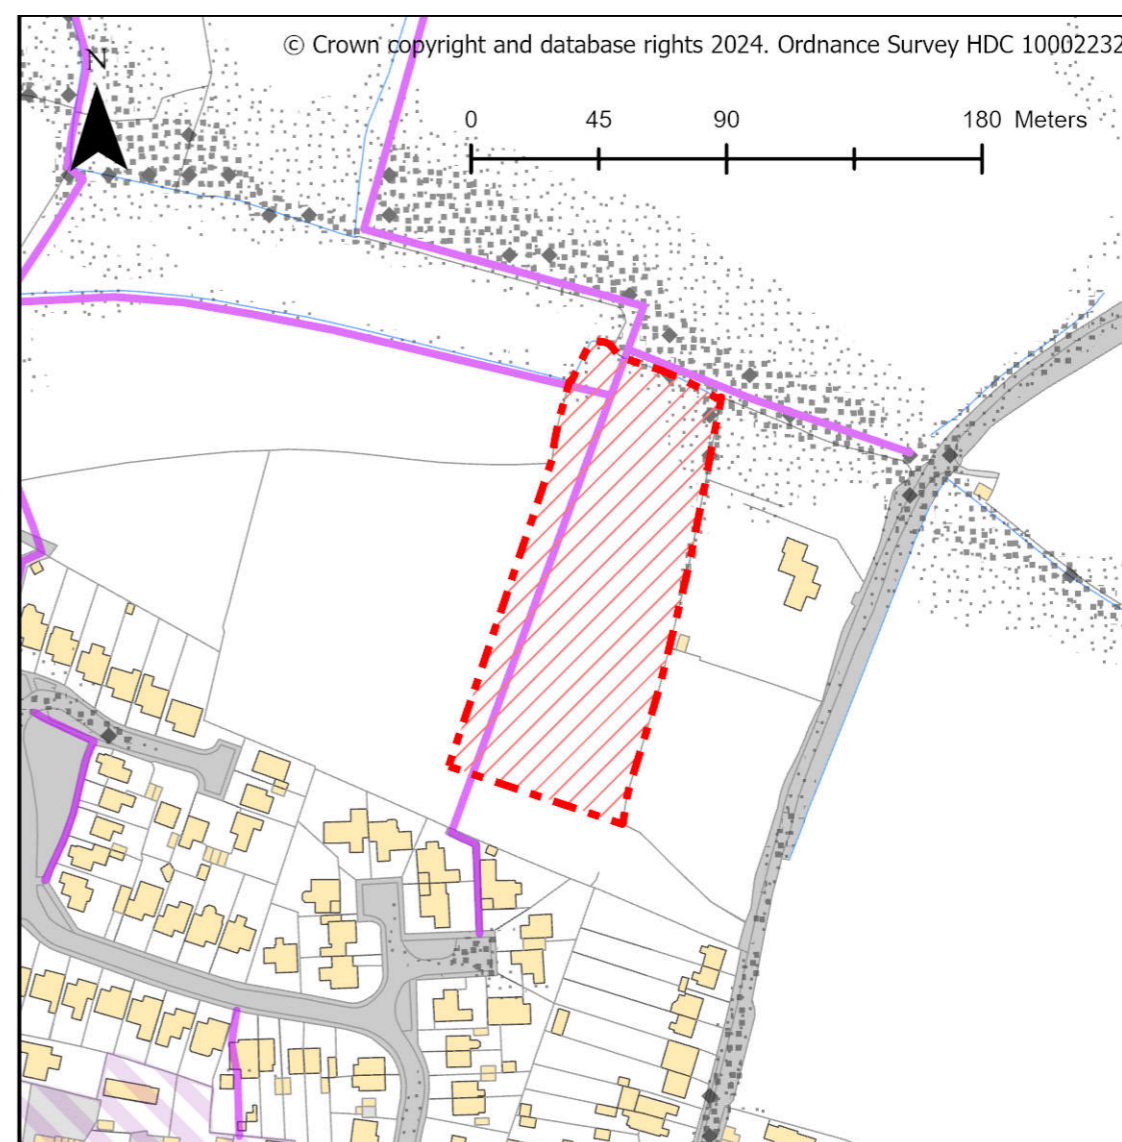

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:377
Relevant planning history	None relevant  The site was included as part of a larger site in the HELAA (2017) (149 - West of Cage Lane & North of Croft Close, Great Staughton), this larger site was not taken forward as an allocation.
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	None submitted

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass

Fundamental constraints	Status	Outcome
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

Page 841 of 3488

<p><b>Context, constraints and potential suitability</b></p> <p>The site is located within flood zone 1, there is risk of surface water flooding in the site's north eastern corner. The land is classified wholly as grade 3 agricultural land with no existing structures on site. The site is broadly level and is in agricultural use. The site is relatively enclosed but more open on its western side where it adjoins agricultural fields. To the east and south, it is adjacent to some residential properties where vegetation is thicker providing a greater degree of separation. There is a public right of way that runs along the western side of the site and two other routes, one that runs along the northern edge of the site and one from the side heading west. These would need to be protected in any development scheme to retain public accessibility. Development would be visible from these public rights of way and from the approach to the village from the northeast.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site. There are no heritage assets or nature conservation designations on site or within its immediate vicinity. The site is not immediately accessible to the public highway, however, there is a track that appears to lead to the site which may have potential for upgrading. It is unclear how much of this land falls within the call for sites submission. If an appropriate connection can be made, the site could be accessed from Cage Lane, otherwise lack of access is a substantial constraint to development.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is not situated in a mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	~
<p><b>Availability</b></p> <p>The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is their intention to deliver the development via the landowner and also a master developer. The promoter suggests the land would be available between 2024 and 2028.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that mains water supply, electricity supply and digital and telecommunications are available within the site. The public highway is identified as being accessible from the site boundary. Accessibility to a gas supply is marked as unknown. There are no buildings on site so no clearance work would be required and the site is flat so there are no topographical challenges to overcome, however access to the site may be challenging and considerable landscaping will be required as well as incorporation of the existing public right of way.</p>	~

<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the location means that any future development will need to be sensitive to its setting and incorporate landscaping measures. SuDs will be necessary to address surface water flood risk and the existing public right of way that runs through the western edge of the site would need to be incorporated. The site promoter states that it is intended to deliver the development directly by the landowner and a master developer. Therefore, it appears that it is intended not to wait for a potential allocation status to deliver the site. As it appears that the site promoter does not intend the scheme to be a rural exception scheme, the site's development is contrary to current adopted planning policy so allocation status would be necessary to support its development. The site is therefore categorised as developable.</p>	~
---	---

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>• Is wholly greenfield land</li> <li>• Is not constrained by fluvial flood risk but there is some surface water flood risk</li> <li>• Remote from natural greenspace</li> <li>• Limited public transport access</li> <li>• Accessible to some local services and employment opportunities</li> <li>• Very low potential to integrate built development into the existing community considering it is physically detached from the main built form of the village</li> <li>• Will require consideration and incorporation of existing public rights of way</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>• Is inappropriate for residential development as there is little opportunity to successfully integrate the site with the existing place and community considering its detachment from the built form and also the potential difficulty in accessing the site</li> </ul>

### Great Staughton 4: Brook Farmyard, Great Staughton

Note: The site promoter has submitted this site three times, each with slightly varying site boundaries and capacities:

- Central site - gross site area of 0.79
- Western extension - gross site area of 1.03
- Eastern extension - gross site area of 0.98

Each permutation has been assessed within this site assessment to avoid duplication.

<b>Site reference</b>	Great Staughton 4
<b>Site name</b>	Brook Farmyard, The Highway, Great Staughton

Site address	Parish(es)	Site area (ha)
Brook Farmyard, The Highway, Great Staughton	Great Staughton	CfS 373: 0.79 (central site) CfS374: 1.03 (central site with western extension) CfS375: 0.98 (central site with eastern extension)

#### Promoter's Intentions

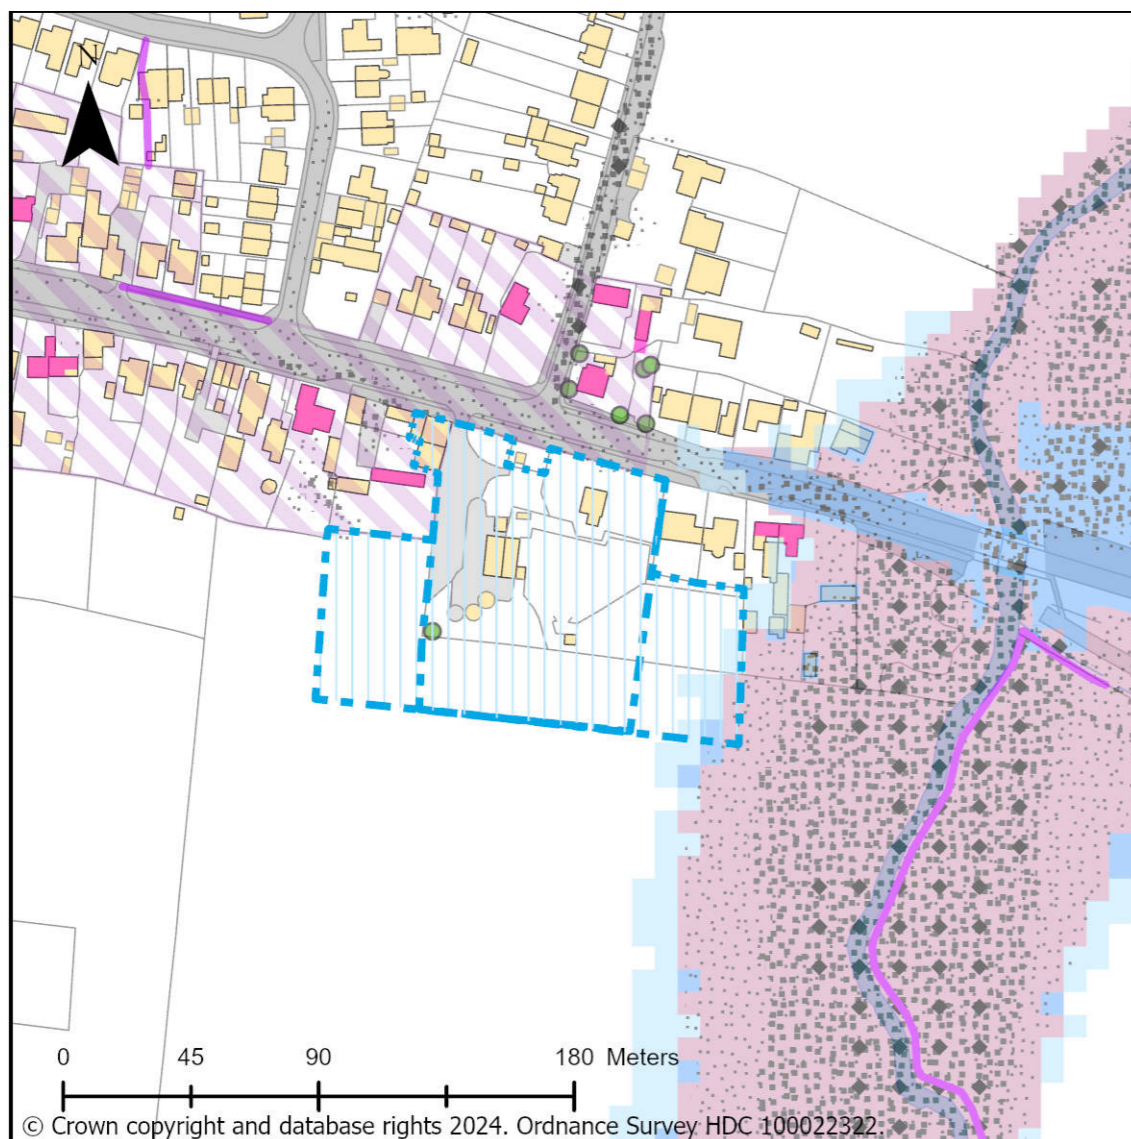

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Commercial: Employment Retail	Between 8 and 12 homes 331.57 sqm of employment 70 sqm of retail The site promoter has stated that 'If appropriate, the landowner would be receptive to discussions regarding the inclusion of a local medical centre within the site'.	Available 2024 - 2028 Build out over 2 years

#### Core information

How was the site identified?	<ul style="list-style-type: none"> <li>• Call for sites 2023 submission: site reference – CfS:373 - central site</li> <li>• Call for sites 2023 submission: site reference – CfS:374 - central site with western extension</li> <li>• Call for sites 2023 submission: site reference – CfS:375 - central site with eastern extension</li> </ul>
Relevant planning history	<p>Within the site 21/00061/PIP for the residential conversion of grain silos to form up to 1 dwelling - approved in December 2021</p> <p>The site was included in the HELAA (2017) (148 - Brook Farm, The Highway, Great Staughton) but was not taken forward as an allocation.</p>
Land type	Part previously developed / part greenfield land
Current use of the site	Agricultural land / commercial
Supporting information	None submitted

#### Fundamental Constraints

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is mostly within flood zone 1, only the south easternmost corner of the potential eastern site is located within flood zone 2, 3a and 3b. There is limited risk from surface water, the most risk being from run off from along The Highway. The land is classified wholly as grade 3 agricultural land with several existing structures on site. The site is in partly commercial and partly agricultural use so is a mix of previously developed land and greenfield land. The site gently rises away from The Highway and is fairly open. A line of vegetation separates the site on its eastern side from the adjoining residential properties but to the south and west the site is open with views out into the wider landscape. There is a tree protected by a Tree Preservation Order within the site. As the land rises here,</p>	~
---	---

<p>views from the nearby public right of way that runs along the River Kym means the site is more visible here. It is more likely that the western and eastern expansion sites will have greater landscape and heritage impacts than the central site, albeit this is still highly constrained.</p> <p>There is no known contamination or pollution on site but this may be possible considering the existing use of the site. No gas or oil pipelines run through the site. It adjoins a conservation area and is adjacent to several listed buildings on three sides. There are no nature conservation designations on site or within its immediate vicinity. The site is accessed via The Highway. Advice from Cambridgeshire County Council will be sought to assess whether this access can accommodate the potential increase in vehicular movements associated with the proposed range of uses</p> <p>The site is partly previously developed and partly greenfield land so its development could contribute to the reuse of previously developed land and regeneration. It is not situated in a mineral safeguarding area. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is in single individual ownership who supports its development. There are no known legal restrictions affecting the site. The site promoter states that it is the intention to deliver the development via the landowner and a master developer. The promoter suggests the land would be available between 2024 and 2028. The landowner has been in discussion with Great Staughton Parish Council about the potential use of the site for the relocation of the current medical facility. Some housing could be provided alongside this to assist with the viability of the scheme. It is understood via the Neighbourhood Plan process that the Parish Council are working with the landowner to allocate the site for a mixed medical facility / residential scheme with the Great Staughton Community Land Trust; funding has been received from the Greater Cambridge Partnership to facilitate the scoping, viability and promotion of a new GP surgery / NHS healthcare facility.</p>	+
<p><b>Achievability</b></p> <p>For all submissions, the site promoter has identified that mains water supply, electricity supply and digital and telecommunications are available within the site. The public highway is identified as being accessible from the site boundary. Accessibility to a gas supply is marked as unknown. There are buildings on site so some clearance work would be required. While funding has been received to scope out the potential for a new medical facility within Great Staughton, there is some uncertainty on the scale of such facility, whether it can be made viable and the proposed mix of uses that may be delivered as part of such a development. It is understood that this will become more certain as the neighbourhood planning process progresses.</p>	~
<p><b>Deliverability / developability</b></p>	~

There are existing structures to clear and the location means that any future development would need to be sensitive to its location relative to several heritage assets. The implication of additional vehicular movements into and out of the site along The Highway also needs careful consideration. It is uncertain at this stage the exact nature of the development and the precise site boundaries. The site promoter states it is intended to deliver the development directly by the landowner and a master developer. It appears that the site may become allocated via the neighbourhood plan process. Due to the uncertainty on the proposals at this stage and the absence of a planning application, the site is therefore categorised as developable.

**Progression of Site through to Sustainability Appraisal**

<b>Should the site progress to the sustainability stage?</b>	Yes
--	-----

**Impact of the Sustainability Appraisal on the assessment**

The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:

- Is partly previously developed land
- Some surface water flood risk and some risk from fluvial flooding particularly on the eastern part of the site making the eastern expansion unsuitable
- Well related to the existing place and community and has potential to provide built development of a scale that will not harm the character of the area
- Remote from natural greenspace
- Limited in public transport access
- Accessible to some local services and employment opportunities with the potential to provide expanded services to the village

In combination the outcomes of the LAA and SA indicate that the site:

- Is potentially appropriate for a mixed development within the central and/or western land areas which have the potential to provide built development of a scale that will not harm the character of the area
- Careful design to mitigate heritage impacts as well as landscaping and sustainable drainage will be required

Page 845 of 3488

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
Central site - gross site area of 0.79 Western extension - gross site area of 1.03 Eastern extension - gross site area of 0.98 - not considered suitable due to the increased risk of fluvial flooding 80% net developable area allowed for sensitive design to address heritage constraints and landscaping. Net developable area for central area of 0.79 ha x 75% = <b>0.59 ha</b> Net developable area of central area with western extension of 1.03 ha x 75% = <b>0.77 ha</b>	Residential - market and/or affordable housing Commercial - employment and retail and/or Community uses - medical centre/ NHS facility To indicate capacity for the site, it is proposed that the non-residential uses will be on 0.15 ha of the site and residential will be on the rest of the net site area. <u>Central site:</u> Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 0.44 x 25 = <b>11 homes</b> Non-residential uses = 0.15ha <u>Central site with Western extension:</u> Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 0.62 x 25 = <b>16 homes</b> Non-residential uses = 0.15 ha	Available post 2028 Build out over 2 years

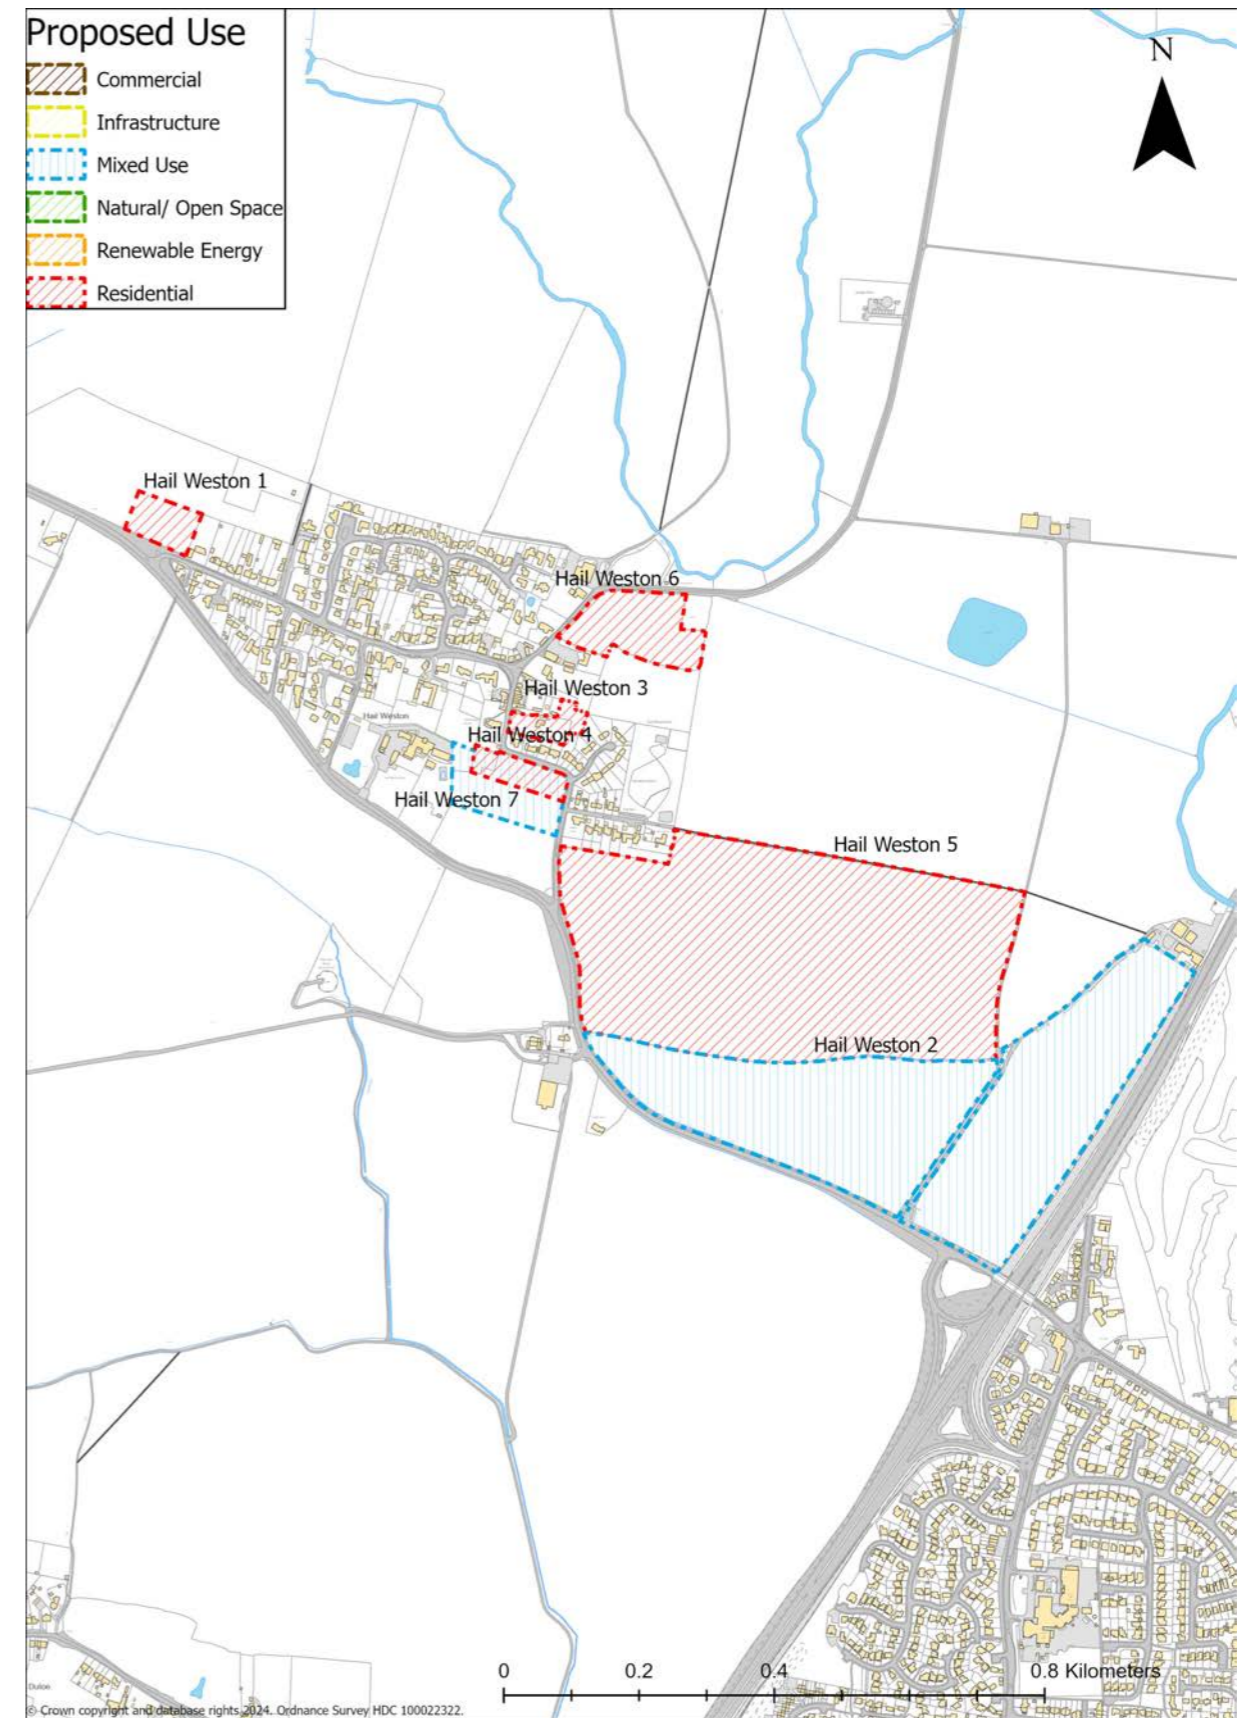

**Updates after the Initial Assessment**

## 7 Hail Weston

7.1 A total of 7 sites have been identified/ put forward through the desktop review or Call for Sites process. These are:

- Hail Weston 1: Land West of 5 High Street, Hail Weston
- Hail Weston 2: Eaton Bank (northern section), north of Kimbolton Road, Hail Weston
- Hail Weston 3: The Walnuts, 113 High Street, Hail Weston
- Hail Weston 4: Land South of High Street, Hail Weston
- Hail Weston 5: Land South of 143 High Street, Hail Weston
- Hail Weston 6: Land opposite Brook End Farm, 17-19 Ford End, Hail Weston
- Hail Weston 7: Land South West of Pound Close, Hail Weston

7.2 Each site plan shows any constraints that impact the site. These constraints are detailed in the opposite legend.

Legend	
	Commercial sites

**Hail Weston 1: Land West of 5 High Street, Hail Weston**

<b>Site reference</b>	Hail Weston 1	
<b>Site name</b>	Land West of 5 High Street, Hail Weston	
<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land West of 5 High Street, Hail Weston	Hail Weston	0.80

**Promoter's Intentions**

Promoter's anticipated uses	Promoter's capacity	Promoter's delivery expectations
Residential: Market and/or affordable housing Custom and self-build housing	5 homes (either market and/or affordable or custom and self-build plots)	Available 2024 - 2028 Build out over 1 - 2 years

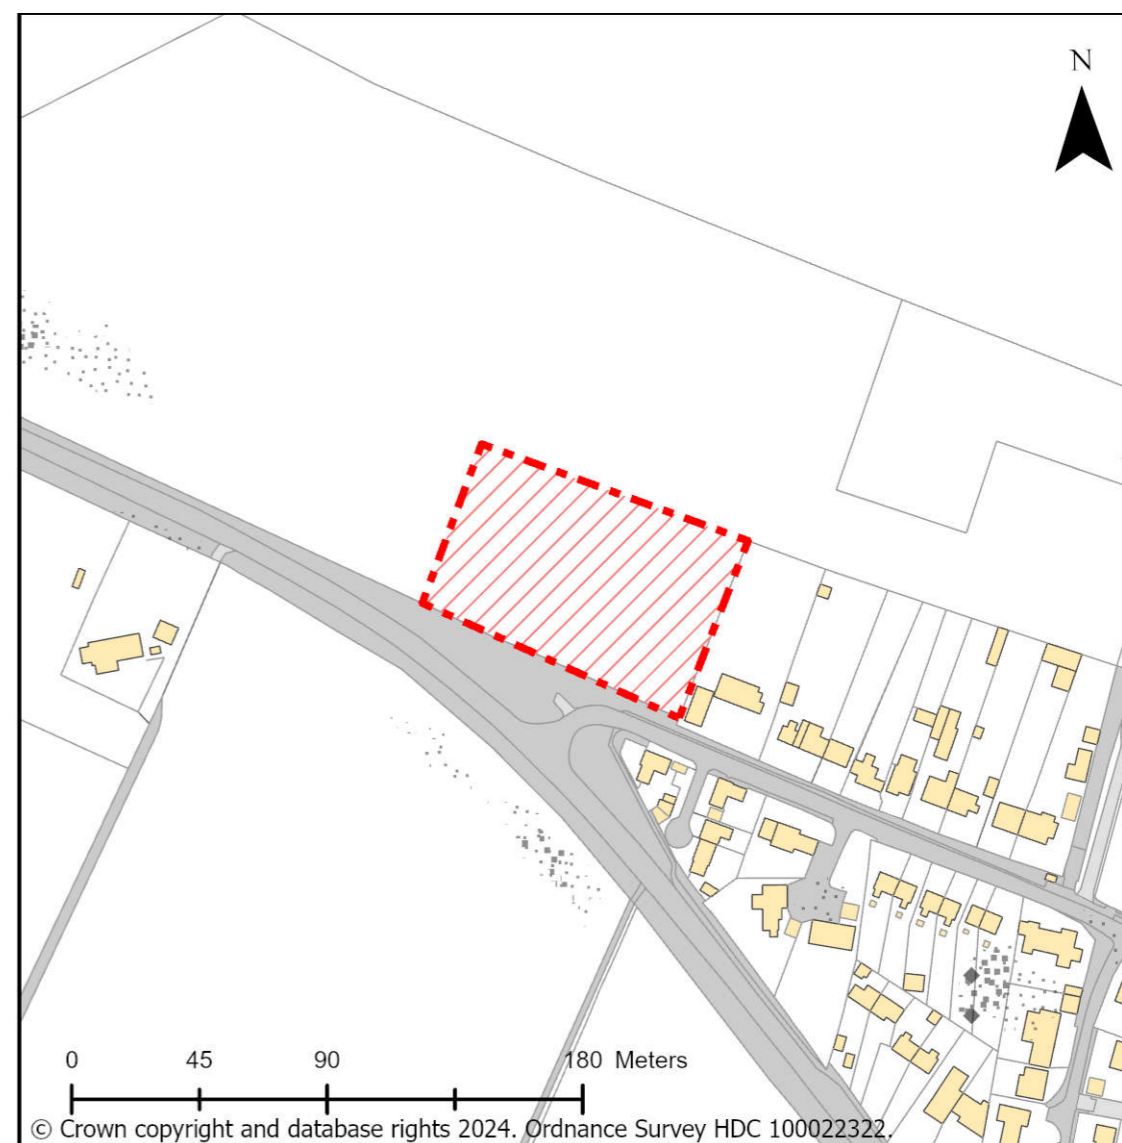

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference – CfS:39
Relevant planning history	None relevant
Land type	Wholly greenfield land
Current use of the site	The site promoter states this is amenity land but it appears to be part of a larger field comprising rough grassland
Supporting information	Schematic block plan (drawing number: 2023.26.101) (May 2023)

**Fundamental Constraints**

Fundamental constraints	Status	Outcome
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass

Fundamental constraints	Status	Outcome
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<b>Context, constraints and potential suitability</b>	+
---	---

<p>The site is located within flood zone 1, there is no recorded risk of surface water flooding. The land is classified wholly as grade 2 agricultural land with no existing structures on site. The site promoter has identified that the land is currently used as amenity land although it appears to form part of a larger field of rough grassland. If there is a formal amenity use of the land this may form a constraint to development. The site is broadly level and open. There are few boundary features obscuring the site from views other than hedging, trees and a fence along the site's eastern edge where it adjoins a residential property so overall the site is very open to view, particularly on the approaches from the B645. To the south west is a single residential property with open countryside in all other directions which is primarily in arable agricultural use. The size of the site, its relationship with existing residential development and its proposed residential use means that it would have minimal landscape impact and could be integrated with the existing built development.</p> <p>There is no known contamination or pollution on site. No gas or oil pipelines run through the site but electricity powerlines run along the frontage of the site along High Street. There are no heritage or nature conservation designations on site or within its immediate vicinity. Highways access to the site may be achievable from High Street which is accessed directly from the B645. Advice from Cambridgeshire County Council would need to be sought to assess if this a safe point to provide an access.</p> <p>The site is wholly greenfield so will not contribute to reuse of previously developed land or regeneration. It is situated in an extensive mineral safeguarding area for sand and gravel; engagement with Cambridgeshire County Council will advise whether this is a viable resource to work. It is beyond 400m from a water recycling site.</p>	
<p><b>Availability</b></p> <p>The site is owned by a single family who supports its development. There are no known legal restrictions affecting the site. The site promoter states that the site will be delivered by the landowner. The site promoter states there are no issues to overcome apart from acquiring planning permission. The promoter suggests the land would be available between 2024 and 2028 and could take one to two years to build out.</p>	+
<p><b>Achievability</b></p> <p>The site promoter has identified that gas supply to the site is not immediately accessible, but mains water supply is available within the site and with electricity supply, public highway and digital and telecommunications being accessible from the site boundary. Electricity powerlines run along the frontage of the site along High Street which may need relocating to accommodate development. There are no buildings on site so no clearance work would be required. The size of the site, its relationship with existing residential development and its proposed residential use means that it would have minimal landscape impact and could be integrated with the existing built development</p>	+

<p><b>Deliverability / developability</b></p> <p>There are no existing structures to clear but the setting means that any future development will need to be sensitive to its landscape impact. It will also need to be assessed whether the proposed access point is safe. A schematic site plan has already been prepared which shows the intention to build five large detached dwellings. It is proposed that the development will be delivered by the landowner so the site will not be sold on. No planning application has yet been made on site however, therefore the site is classified as developable.</p>	
---	--

**Progression of Site through to Sustainability Appraisal**

<p><b>Should the site progress to the sustainability stage?</b></p>	<p>Yes</p>
---	------------

**Impact of the Sustainability Appraisal on the assessment**

<p>The Sustainability Appraisal has identified the following key issues and opportunities in bringing forward this site:</p> <ul style="list-style-type: none"> <li>● Is wholly greenfield land classified as grade 2 agricultural land</li> <li>● The site is located on the edge of the village and provides an opportunity for small scale organic growth on a site of less than 1ha</li> <li>● The size of the site, its relationship with existing residential development and its proposed residential use means that it would have minimal landscape impact and could be integrated with the existing built development</li> <li>● Remote from natural greenspace</li> <li>● Limited in public transport access</li> <li>● Accessible to some local services and employment opportunities</li> </ul> <p>In combination the outcomes of the LAA and SA indicate that the site:</p> <ul style="list-style-type: none"> <li>● Has potential to provide built development of a scale that will not harm the character of the area</li> <li>● Development should be linear in form and not be in depth in order to reflect the character of the area</li> <li>● Should demonstrate that it is not in active amenity use for the community</li> <li>● Support residential development on sites of less than 1ha</li> </ul>
---

HDC's Delivery Calculations

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
<p>Gross site area of 0.8 ha</p> <p>90% net developable area allowed for landscaping.</p> <p>Net developable area of 0.8 ha x 90% = <b>0.72 ha</b></p>	<p>Residential - market and/or affordable homes, or custom and self-build plots</p> <p>Very low density of 25 dph anticipated due to the edge of village location. Very low density of 25 dph = 0.72 x 25 = 18 homes but considering that development should be linear in form in order to reflect the existing character of the site's immediate environs, this brings the capacity down to <b>8 homes</b></p>	<p>Available post 2028 subject to successful allocation status</p> <p>Build out over 2 years</p>

Updates after the Initial Assessment

--

**Hail Weston 2: Eaton Bank (northern section), North of Kimbolton Road, Hail Weston**

<b>Site reference</b>	Hail Weston 2
<b>Site name</b>	Eaton Bank (northern section)

<b>Site address</b>	<b>Parish(es)</b>	<b>Site area (ha)</b>
Land north of Kimbolton Road (B645/B1048)  North west of A1 junction 16 and Eaton Ford	Hail Weston	15.91  The site forms part of a 158.85 ha site the majority of which lies within Bedford Borough

**Promoter's Intentions**

<b>Promoter's anticipated uses</b>	<b>Promoter's capacity</b>	<b>Promoter's delivery expectations</b>
The site forms the northern extent of a large scale proposal described by the promoter as being a sustainable new neighbourhood forming an extension to St Neots.	This site would contain approximately 250 new homes with other uses being integrated across the wider site.	Available 2024 - 2028  Delivery of this element over up to 3 years

**Core information**

How was the site identified?	Call for sites 2023 submission: site reference - CfS:54
Relevant planning history	Bedford Local Plan to 2040
Land type	Wholly greenfield land
Current use of the site	Agricultural land
Supporting information	Eaton Bank Vision Statement

**Fundamental Constraints**

<b>Fundamental constraints</b>	<b>Status</b>	<b>Outcome</b>
Agricultural land grade 1	None	Pass
Flood zone 3b	None	Pass
Designated local green space	None	Pass
Nature conservation designation	None	Pass
Within mineral development area or water recycling area	None	Pass
Site over 0.25 ha or large enough for at least 5 homes	Yes	Pass

**Assessment of Site Potential**

<p><b>Context, constraints and potential suitability</b></p> <p>The site is an integral part of the Eaton Bank sustainable new neighbourhood proposal put forward to Bedford Borough Council for consideration for allocation in the Bedford Local Plan to 2040 which was submitted for examination on 12 January 2023. The site is not a proposed allocation within that Local Plan. Following the examination hearings the Planning Inspector wrote to Bedford Borough Council on 23 November 2023 and expressed 'concerns that raise fundamental soundness issues that are incapable in the present circumstances of being resolved by identifiable main modifications'. on 13 March 2024 a formal pause to the examination was agreed for further work to be undertaken until early 2025.</p>	-
---	---

<p>The site is put forward as an integral part of the large scale Eaton Bank proposal with proposed uses shared across the wider site. As this is not being taken forward at present it is not appropriate to assess the land as a free-standing site because it is not the intention of the site promoter to develop it in this manner.</p> <p>The outcomes of the Bedford Local Plan to 2040 examination will be taken into account in any future consideration of this site. However, at present it is not considered appropriate to undertake a detailed assessment of this portion of the Eaton Bank scheme.</p>	
<p><b>Availability</b></p> <p>The site is in single ownership and a developer has an option agreement on the land. Development is supported by the landowner and there are no known legal restrictions affecting the site. The site is promoted as the northern element of a much larger development the majority of which falls within Bedfordshire. The site is intended to be delivered by the housebuilder holding the option on the site.</p>	+
<p><b>Achievability</b></p> <p>The site promoter notes that all main services are available from the site boundary. The site directly adjoins the B645 to facilitate access. The site does not present any significant topographical challenges for development although the eastern boundary adjoins the A1 and may be susceptible to pollution arising from the traffic levels on this road. An oil pipeline traverses the eastern edge of the site and it is crossed by electricity powerlines. The proposal forms part of a much larger scale scheme which includes a range of infrastructure proposals to meet the needs arising from the development; however, the free-standing provision of this site would not benefit from these wider infrastructure proposals in the absence of the larger development. The site promoter has not submitted a separate proposal just for this site so their intentions of how it could be developed in isolation are unclear.</p>	-
<p><b>Deliverability / developability</b></p> <p>The larger site proposal is not included within the draft Bedford Borough Plan to 2040 so there is no expectation of its delivery although this remains subject to change until the examination is completed and the plan successfully adopted or withdrawn. The specific site within Huntingdonshire is contrary to current adopted planning policy so allocation status would be required to support it. The site is not considered developable at present as the uncertainty over the wider scheme forms a fundamental constraint at present with no apparent prospect of it being overcome in the short-term.</p>	-

**Progression of Site through to Sustainability Appraisal**

Should the site progress to the sustainability stage?	No - as the site is not considered to be suitable or deliverable at this time it should not progress to more detailed appraisal.
---	--

**Impact of the Sustainability Appraisal on the assessment**

Not applicable as the site does not progress to the Sustainability Appraisal stage.
---

**HDC's Delivery Calculations**

HDC's net developable area calculation	HDC's anticipated uses and capacity	HDC's delivery estimate
No capacity is calculated as the site is considered to be unsuitable.
