The site promoter reiterated the site's availability and state they will avoid residential development in the flood-prone southern portion of the site, integrating an existing electricity line, and upgrading Green Lane to a Minor Estate Road to support access for 40 homes. The landowner state that the necessary road improvements are feasible within their ownership and that the Public Rights of Way crossing the site will be preserved and incorporated into the design.

Council Response

This site has not been selected as a draft allocation. The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site did not meet this criteria being 19% within flood zones 2, 3a and 3b with surface water flood risk.

Elton

General comment: Comments raised concern regarding the impact of potential development sites on Elton including a site consulted on previously at Berry Leas. Objections argue that development would cause irreversible harm to Elton's heritage, landscape, biodiversity, and infrastructure, and that more sustainable and policy-compliant alternatives exist within the village.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

4 Further Issues and Options

Elton 6: The Old Dairy, Elton (failed fundamental constraints)

Main Issues Raised (12 responses)

Responses were mixed towards this site but a large proportion were supportive. There was local support for the principle of small-scale commercial development at The Old Dairy although concerns remain about heritage impacts, existing vacancies, and infrastructure. Comments raised that planning policy should more clearly support modest rural employment schemes. The LLFA identified that there is low surface water flood risk and there should be further consideration of surface water management options. The Highways Authority states that there is no connection to the public highway however, it is assumed that this would be via the existing access. An intensification of use of the access would require it to be in accordance with DMRB/MfS requirements respecting local junction spacing and visibility splays. There is a minerals and/or waste constraint impacting the site which will require mitigation.

Council Response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment.

Godmanchester

Godmanchester 12: Land South of West Street, Godmanchester (failed fundamental constraints)

Main Issues Raised (4 responses)

Responses were generally opposed towards developing the site. The LLFA identified the site has a high risk for surface water flood risk which may make the site unsuitable for development. Anglian Water state there is a water main within the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. There is a minerals and/or waste constraint impacting the site which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. However, the site frontage is subject to the National Speed Limit so visibility splays will need to be commensurate with this.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the majority of the site is within flood zone 3b. The site promoter has put the site forward for residential uses which are classes as being more vulnerable in the NPPF. Considering the very high flooding risk within the site and none of it being located within a lower at risk zone, the site is considered unsuitable for development.

Godmanchester 13: Land off Bluegate, Godmanchester (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (12 responses)

Responses to this site were largely opposed to development. Objections were raised by nearby residents an the Town Council citing issues with inadequate and potentially unsafe access, increased flood risk—particularly to Silver Street—strain on local infrastructure including schools and healthcare, and negative impacts on traffic, drainage, biodiversity, and the character of the surrounding area. The LLFA identified that surface water management options may be required on site. There is a minerals and/or waste constraint impacting the site which will require mitigation. The Highway Authority states that on the basis of the red line the connection to the public highway is via an access road off Bluegate. However, it is not clear if it is possible to achieve an access suitable for the scale of development proposed in accordance with MfS, road safety audit, and local junction spacing. Also, capacity assessments would be required. The Education Authority highlight there may be some capacity issues in primary and secondary school places.

Council Response

The site is 100% Flood Zone one and therefore a sequentially preferable site. The site was tested by the council as part of Growth strategy 1,2 and 3. The site was not put forward for allocation as part of the Huntingdonshire's Preferred Options Local Plan due to high and/or medium risk from surface water sources. The site has very limited access which would require demolition of one of the homes to the side of the route to achieve sufficient width for a safe access.

Godmanchester 14: Land East of Cow Lane, Godmanchester (failed fundamental constraints)

Main Issues Raised (4 responses)

Responses to this site were largely opposed to development. The LLFA identified the site has a medium risk for surface water flood risk which will require water management options. Anglian Water identify there is a water main along the western/roadside boundary of the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. There is a minerals and/or waste constraint impacting the site which will require mitigation. The Highway Authority states that on basis of the site boundary there may be inadequate connection to the public highway as the existing access in Cow Lane will need to be improved for use by commercial vehicles. The access will be subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. It may also be possible that improvements to the Cow Lane/Cambridge Road junction are necessary.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site falls within 250m of a waste management area. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of development on the MWA or on the amenity impact of locating development in such close proximity to it.

Godmanchester 15: Land off Berry Lane, Godmanchester (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Responses to this site were largely opposed to development. The LLFA identified the site has a high risk for surface water flood risk which make the site unsuitable for development. Anglian Water identify there is a water main along the western/roadside boundary of the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. Anglian Water does not have a WRC within 400m of this site. There is a minerals and/or waste constraint impacting the site which will require mitigation. The Highway Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Berry Lane is single track road so infrastructure improvements may be required in the form of localised carriageway widening along the development frontage but it is unclear if this can be achieved within the adopted public highway.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the majority of the site is within flood zone 3b and the proposed residential uses being classed as a more vulnerable use. The site's access is also another key constraint making the site unsuitable.

Godmanchester 16: Land West of A1198 (West of Bleakley Farm), Godmanchester (Council conclusion pre-consultation - inappropriate for development as freestanding site would be dependent of Godmanchester 3 and 5)

Main Issues Raised (5 responses)

4 Further Issues and Options

Responses to this site were mixed. The Town Council note that the site on its own has limited potential but in combination with other adjoining land parcels could be integrated within a larger scheme. The LLFA identified that there is high risk from surface water flood risk which may make the site unsuitable for development. Anglian Water identify there is a water main partly within the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space. There are no minerals or waste constraints impacting the site. The Highway Authority states that on the basis of the red line there is no connection to the public highway but if it was integrated into adjacent parcels with access from the A1198 then local facilities/amenities could be available and high quality walking, cycling, and wheeling access from local centres of population could be achievable.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the necessary intervening land to integrate the site into Godmanchester is not all in the site promoter's control and has integration challenges of its own. The potential urban extension land comprises four other parcels of land only two of which adjoin with the southeasternmost one (Godmanchester 8) again being dependent upon delivery of intervening land necessitating six sites in total collectively posing significant design and achievability challenges.

Godmanchester 17: Former Motorway Compound Site, North of A1198 roundabout (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

Responses to this site were mixed but somewhat supportive. The LLFA identified that surface water management options may be required on site. Anglian Water identify there is a water main to the northern boundary of the site and potential connections into the site to the north-west. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. There are no minerals or waste constraints impacting the site. The Highway Authority states the site appears to have sufficient frontage to the A1198 achieve an access/es either directly onto the roundabout or north of it, but highway improvements including modifications to the roundabout may be required in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter reiterated the site's availability and submitted further evidence in support of development in particular its greenfield/brownfield status, loss of agricultural land, access and visibility.

Council Response

This site has been selected as a draft employment allocation (Draft Allocation Godmanchester 3) for commercial, business and industrial uses. Concerns regarding surface water will require mitigation and provision of flood risk assessment, a detailed drainage strategy taking into account further investigation of surface water flood risk including climate change, and residual risk of nearby culverts. Highways improvements must be agreed with the appropriate Highways Authorities to obtain provision of safe and appropriate vehicular, public transport and active travel access to the site

Grafham

Grafham 4: Field south of Village Farm, Grafham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Responses to this site were largely opposed to development. The Parish Council and residents raised objections citing conflicts with the Neighbourhood Plan, unsustainable location, lack of infrastructure and services, flood risk, harm to heritage assets and biodiversity, overdevelopment relative to village scale, and significant concerns about

access, traffic, and environmental impact, with calls to reduce the scale or reject the proposal entirely. There are no minerals or waste constraints. The Highway Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. The site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site along Church Hill and Church Road as road width and junction visibility is poor, connection to the public highway should be restricted to Buckden Road. The Education Authority highlights there may be challenges in primary and secondary provision without some mitigation.

The Parish Council suggested reducing the number of dwellings to no more than 13 in line with the neighbourhood plan.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with low risk of surface water flooding meaning it could meet the criteria for consideration. However, site 'Grafham 2: Land adjacent to 24 Cedar Close, Grafham' also met this criteria. 'Grafham 2: Land adjacent to 24 Cedar Close, Grafham' was selected as a draft residential allocation as it was considered more favourable due to the lack of impact on heritage assets whereas this (Grafham 4) site is within the setting of grade II listed building Village Farm which would require some mitigation.

Great Gransden

General comment: The Parish Council strongly objects to the amount of development proposed emphasising that any proposed development must align with the Neighbourhood Development Plan's vision to maintain the village's rural character and sustainability, taking into account its limited infrastructure, constrained school capacity, minimal public transport, and the established Built-Up Area Boundary beyond which development is resisted. Another comment raised there is limited public transport options available.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. Site have been assessed using a 'policy-off' approach. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Great Gransden 5: Highbury Fields Business Park, Great Gransden (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

Most comments were opposed to the development. Residents and the Parish Council raised concerns regarding its conflict with the Neighbourhood Plan, lack of pedestrian and cycle access, poor public transport, potential harm to village character and biodiversity, and concerns over school capacity and increased car dependency. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway as it already has an access onto Eltisley Road in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council Response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the separation of the site from Great Gransden and close relationship with the countryside. The compatibility with adjoining industrial site to the south east depends on an unimplemented permission for self build/ custom build homes.

Great Gransden 6: Land adjacent to Meadow Road and Hall Farm Road, Great Gransden (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (12 responses)

Most comments were opposed to the development. Residents and the Parish Council raised concerns regarding conflicts with the Neighbourhood Plan, lack of pedestrian and highway access, flood risks, harm to heritage and biodiversity, and unsuitability due to poor infrastructure and transport links. Anglian Water state there is a water main to the Meadow Road boundary of these sites. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway B1046 to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. The Education Authority states there should be sufficient capacity within primary and secondary schools but additional mitigation may be required.

One comment raised that there is a restrictive covenant on the land for it to be retained for agricultural use until 2047.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 1, 2, 3 and 4. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However, during the consultation on additional sites in the Spring of 2025, additional evidence was provided that demonstrated the site is subject to a restrictive covenant which limits the site to agricultural use up to 2047. The site is therefore not immediately available for development without amending this covenant.

Great Gransden 7: Land North of Meadow Road, Great Gransden (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

Most comments were opposed to the development. Residents and the Parish Council raised concerns regarding its conflict with the Neighbourhood Plan, lack of pedestrian and cycle access, poor public transport, potential harm to village character and biodiversity, and concerns over school capacity and increased car dependency. Anglian Water identify there is a water main to the Meadow Road boundary of these sites. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway B1046 Meadow Road to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. However a suitable visibility splay will need to be achieved.

One comment raised that the site should correctly be referenced as adjacent to Meadow Road and Hall Farm Lane and that there is a restrictive covenant on the land for it to be retained for agricultural use until 2047.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the site being largely separate from the main settlement and is highly prominent within the countryside. It would be difficult to integrate the site with the existing place and community. During the consultation on additional sites in the Spring of 2025, additional evidence was provided that demonstrated the site is subject to a restrictive covenant which limits the site to agricultural use up to 2047. The site is therefore not immediately available for development without amending this covenant.

Great Gransden 8: Leycourt Farm, Eltisley Road (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

Most comments were opposed to the development. Residents and the Parish Council raised concerns regarding its conflict with the Neighbourhood Plan, is outside of the built up area, poor public transport, potential harm to village character and challenges in integration with the existing village. Anglian Water state there are no water mains or water recycling networks in proximity to this site. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway Eltisley Road to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. However a suitable visibility splay will need to be achieved and is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to being located in the countryside beyond walking distance from key services and facilities and would therefore fail to achieve sustainable development. It is also located on high quality agricultural land

Great Paxton

General comment: Comments raised objections to the proposed development sites, particularly 6, 7, and 8 in Great Paxton, citing unsustainable infrastructure, poor public transport, flood risk, loss of high-quality agricultural land, harm to rural character and biodiversity, inadequate school and healthcare capacity, and conflict with both local and national planning policies, with calls for smaller-scale, infill or brownfield development instead.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Great Paxton 5: Land Adjacent to 2 High Street, Great Paxton (failed fundamental constraints)

Main Issues Raised (3 responses)

Responses were largely opposed towards this site. The Parish Council agreed with the assessment. Concerns were raised regarding flooding and amenity arising from proximity to industrial area. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway on to the High Street to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

Council Response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment.

4 Further Issues and Options

Great Paxton 6: Land to the South of London Lane, Great Paxton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (15 responses)

Responses were mostly opposed to development. The Parish Council and residents raised concerns about limited infrastructure, inadequate access via narrow roads, environmental and flooding risks, and the disproportionate scale of the proposal relative to the village's character and capacity. Anglian Water note there is a rising main (pressurised sewer) and surface water sewer within the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. If this is not possible a formal application to divert Anglian Water's existing assets may be required. There are minerals and/or waste constraints that require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access onto London Lane, Adam's Lane or Dovecote Lane (Private Road)/High Street in accordance with DMRB/MfS requirements respecting local junction spacing. However proposed carriageway widths and design will have to be confirmed as substantial highway works may be required. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the significant access constraint along London Lane. Additionally, the scale of the potential development would severely impact the existing character of Great Paxton.

Great Paxton 7: Land to the East of Paxton Hill, Great Paxton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (11 responses)

Responses were mostly opposed to development. The Parish Council and residents raised concerns about recurring flooding, poor access, limited infrastructure, ecological and heritage concerns, harm to the character of the village, and incompatibility with local and national planning policies. There are minerals and/or waste constraints that require mitigation. The Highways Authority states the site does not appear to have sufficient frontage to the public highway River Lane to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as due to the fundamental urbanising impact on the landscape and on Great Paxton as well as the challenges in highways capacity and infrastructure provision that would be required to deliver this scale of growth.

Great Paxton 8: Land to the West of Great Paxton (failed fundamental constraints)

Main Issues Raised (11 responses)

Responses were mostly opposed to development. The Parish Council and residents raised concerns about recurring flooding, poor access, limited infrastructure, ecological and heritage concerns, harm to the character of the village, and incompatibility with local and national planning policies. There are minerals and/or waste constraints that require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway B1043 Paxton Hill to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. However a suitable visibility splay will need to be achieved. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is the majority of the site is within flood zone 3b, 3a and 2.

Great Staughton

Great Staughton 5: Land South of The Highway, Great Staughton (failed fundamental constraints)

Main Issues Raised (3 responses)

Responses were mixed towards this site. The Parish Council agreed with the assessment. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway B645 to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. However a suitable visibility splay will need to be achieved.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site has failed the fundamental constraints by being below the site size and number of homes threshold and is almost wholly within flood zone 3b.

Hemingford Grey

Hemingford Grey 14: Land West of 38 Hemingford Road, Hemingford Grey (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Responses were generally opposed towards this site. The Parish Council agreed with the assessment with concerns on flood risk and impact on heritage assets. The LLFA identifies there is low risk from surface water flood risk which may make the site unsuitable for development. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access which may be impacted by prior development of adjacent sites. Hemingford Road includes traffic calming on the site frontage which would need to be incorporated or amended as part of any future access design.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the significant risk of flooding across the whole of the site (flood zone 3a), its potential landscape impact as well as its potential adverse impact on nature conservation and heritage designations

Holywell-cum-Needingworth

General comment: The Parish Council strongly objects to the amount of development proposed with all sites being on agricultural land, areas of flood risk, limited amenities, infrastructure and reduction of buffer between Needingworth and St Ives should these proposals go ahead.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

4 Further Issues and Options

Holywell-cum-Needingworth 8: Orchard Paddock, West of Mill Way, Needingworth (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Responses were generally opposed towards this site. Holywell-cum-Needingworth Parish Council raised concerns regarding wildlife. St Ives Town Council raised objections based on flood risk, limited village amenities and infrastructure, access on the A1123 and impact on the character of the area. Anglian Water identify that there is a considerable overlap with the emerging proposed associated infrastructure (pipeline corridor) for the Fens Reservoir. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The Education Authority highlight there are pressures for primary and secondary education in the area.

Council Response

This site has not been selected as a draft allocation. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, however it is located to the south of Needingworth on the western side of Mill Way which is typically less developed with the potential to create isolated development in the countryside. The site chosen (Holywell-cum-Needingworth 1 & 11) provide better opportunity to integrate with the existing settlement, with active routes to St Ives employment areas and accessible transport links providing connections to market towns and enhanced services and facilities.

Holywell-cum-Needingworth 9: Five Acres Farm, South of Needingworth Road (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Responses were generally opposed towards this site. Holywell-cum-Needingworth Parish Council consider the nearby roundabout a bottleneck which further development will exacerbate and consider the site to be outside the built up area of Needingworth and result in loss of agricultural land. St Ives Town Council raised objections based on flood risk, limited village amenities and infrastructure, access on the A1123 and impact on the character of the area. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and may require a second points of access in emergency form. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter confirmed the site's availability for development.

Council Response

The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres. This site is located away from such locations.

Holywell-cum-Needingworth 10: Land at Conger Lane, Holywell (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Responses were generally opposed towards this site. Holywell-cum-Needingworth Parish Council consider the site to be outside the built up area of Holywell, result in loss of agricultural land and poor access to the site. St Ives Town Council raised objections based on flood risk, limited village amenities and infrastructure, access on the A1123 and impact on the character of the area. Other objections were based on environmental and wildlife impact and harm to heritage assets. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states on the basis of the red line there is no vehicular connection to the public highway, in the event that the red line could be amended to join the public highway, then the site would not be acceptable for

a development without significant improvements to provide safe passage for both vehicular and non-motorised users. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter confirmed the site's availability for development.

Council Response

This site has not been selected as a draft allocation. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal originally found that the site may be appropriate for development, on further assessment there are significant concerns regarding point of access and narrowness of the road restricting access. Therefore the site is now considered inappropriate.

Holywell-cum-Needingworth 11: Land North West of Needingworth, South of the A1123 (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

Responses were generally opposed towards this site. Holywell-cum-Needingworth Parish and St Ives Town Council raised objections based on flood risk, limited village amenities and infrastructure, access on the A1123 and impact on the character of the area. Anglian Water identify that there is a considerable overlap with the emerging proposed associated infrastructure (pipeline corridor) for the Fens Reservoir. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and will require two points of access. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced, dialogue with CCC's Asset Information Definitive Mapping team. The suitability of the approach road network will need to be assessed in relation to the ability to cater for higher volumes of traffic. The Education Authority highlight there are pressures for primary and secondary education in the area.

The site promoter confirmed the site's availability for development.

Council Response

The site has been combined with proposed site 'Holywell-cum-Needingworth 1: Land North of Bluntisham, Needingworth' and has been selected as a draft mixed use allocation (Draft Allocation Needingworth 2) for about 290 homes, community retail facilities to meet any needs arising from the development and land to safeguard against flooding. Concerns regarding impact on the village character are addressed through criteria requiring completion of public engagement and submission of a master plan illustrating use of design that harmonises with the surrounding development to integrate the new homes with their immediate locality and ensure that neighbouring residential amenity is protected. Provision of a safe and suitable means of access from Bluntisham Road and High Street and assessment of transport impacts through a transport assessment will be required to address access and traffic impact. The draft allocation addresses the site's local within a mineral safeguarding area requiring consultation with Cambridgeshire County Council. Flood risk is addressed through the sequential location of development and provision a flood risk assessment and detailed drainage strategy taking into account groundwater and surface water flood risk and residual risk. Land is required to safeguard against flooding and for infrastructure relating to the Fens Reservoir. The retention and enhancement of public rights of way bridleway 129/16 and footpath 129/2 will be required to address concerns regarding public rights of way. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Houghton and Wyton

Houghton and Wyton 6: Ruddles Lane, Wyton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

4 Further Issues and Options

Responses were mixed towards this site. The Parish Council are generally supportive of renewable energy but have concerns relating to the loss of agricultural land, flood risk, topography and visual impact, other sites such as Wyton airfield should be considered for solar. Anglian Water note that this site is for a solar array and therefore should not be a material impact from the encroachment buffer for the Wyton (RAF) WRC to the western boundary. There is a water main to the northern boundary and sewer/final effluent pipes to the western boundary, that the developer should be aware of in terms of constructing accesses to the site. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but may require significant highway improvements in relation to the development proposed. Access via Splash Lane is unlikely to be acceptable without significant improvement which may not be achievable in the public highway or land within then red line alone. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter provided further details of their proposal and plans to support the development.

Council Response

This site has been selected as a draft renewable energy allocation (Draft Allocation Houghton and Wyton 1) for 28 ha of land at Ruddles Lanes is allocated for a ground mounted solar voltaic panels. Concerns relating to landscape impact have been addressed through criteria requiring the retention of boundary features and additional landscaping to mitigate visual impact and an ecological survey to determine the presence of protected species and measures for their protection and biodiversity enhancement. development will be located in flood zone 1 and flood risk mitigated and assessed through provision of a flood risk assessment and detailed drainage strategy taking into account fluvial, surface water, groundwater and residual flood risk including modelling of Back Brook and ordinary watercourse. The development will be required to consider Anglian Water Infrastructure as part of the design of development. public rights of way do not transverse the site.

Houghton and Wyton 7: Land between Garden Centre and Splash Lane, Wyton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Responses were generally opposed to developing this site. The Parish Council agreed with the assessment with concerns on flood risk and impact on the Great Ouse Valley. Anglian Water identify there is a rising main (pressurised sewer) and gravity sewer within the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access onto the A1123, however, it appears unlikely that that it could achieve both acceptable visibility splays and local junction spacing at detailed design and is likely to require significant highway improvements in relation to the scale of development proposed. Access onto Splash Lane is unlikely to be acceptable without significant improvement to the road and footway infrastructure and it is unclear at this stage whether improvements likely to be necessary could be achieved fully within the public highway or land within then red line boundary. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as almost all of the site is located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use. The urbanising impact it would have on the Great Ouse valley and risk of coalescence between settlements are also considered to be a major constraints making the site unsuitable.

Huntingdon

Huntingdon 4: Hinchingbrooke Hospital site, Hinchingbrooke Park Road, Huntingdon (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Responses were generally supportive towards this site. The LLFA identifies there is low risk from surface water flood risk and further consideration of surface water management options should be undertaken. Anglian Water states they have water mains within the site boundary, this existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. Engagement with Anglian Water is recommended to ensure this is planned appropriately for delivery in subsequent Asset Management Periods (AMPs) to align with phasing of the site build out. There are no minerals or waste constraints. The Highways Authority states that any additional development on the site will be subject to road safety audit, local junction spacing and capacity assessments and may require significant highway improvements in relation to the scale of development proposed.

Historic England consider that additional listings should be included within the assessment of the site such as Hinchingbrooke House and walls and the wider historic parkland setting of the estate.

Council Response

This site has been selected as a draft mixed use allocation (Draft Allocation Huntingdon 1) for redevelopment of the hospital, including necessary enabling works, reprovision of the ambulance station, provision of key worker and medical/care student accommodation, car parking, other primary care uses, residential institutions (use class C2) to provide specialist residential accommodation and non-residential educational facilities for healthcare related training. Strategic green infrastructure will also be provided. Concerns relating to flood risk have been addressed through criteria requiring provision of a flood risk assessment and drainage strategy to identify mitigation measure. The development will be required to consult with Anglian Water. Multiple access points will be required with access from both Views Common Road and Hinchingbrooke Park Road to address the need for highways improvements.

Huntingdon 5: Land at the former WATA Site, Hartford (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

Responses were mixed towards this site. The LLFA identifies there is high risk from surface water flood risk which may make the site unsuitable for development. Anglian Water would support the requirement for further assessment with regard to flood risk, as the site is in flood zone 2, to consider whether it is appropriate for redevelopment for residential use, and whether it passes the sequential test for flood risk. There is a minerals and/or waste constraint which would require mitigation. The Highways Authority states the site has two existing accesses and has sufficient frontage to the public highway to adjust these or achieve a new access in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements will be required in the form of a footway on the north east side of Old Houghton Road to connect the site to the bus stop on Main Street and a crossing point to connect it to the footway on the south west side. The Education Authority identify there s some primary and secondary school capacity to accommodate the development. Houghton and Wyton Parish Council raised objections based on flood risk, wastewater capacity, sewage pollution and impacts to the environment.

The site promoter has submitted a flood risk assessment and cites an application on the adjacent site which has permission for residential development. They state given the brownfield nature of the site, the application of Vacant Building Credit (VBC) should be considered.

Council Response

This site has not been selected as a draft allocation as more sequentially preferrable sites are available to avoid locating more vulnerable development in medium risk areas.

4 Further Issues and Options

Kimbolton

General comments: Comments raised concerns of development citing issues relating to overdevelopment, infrastructure pressure, flood risk, loss of heritage, and irreversible damage to the village's character. A petition against a site in Newtown was submitted with over 800 signatures.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Kimbolton 12: Land off B660 at Stonely (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Responses were unsure towards developing this site. The LLFA identified there is low surface water flood risk and further consideration of surface water management options will be required. The Parish Council commented that if this site is to be developed then it should take place after the adjacent site in that area has been developed. There is a minerals and/or waste constraint that requires mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Although this will need to be supported by speed surveys, detailed topographic surveys and in depth boundary searches to establish highway land available. Local infrastructure improvements will be required in the form of walking/cycling connectivity. Dialogue with CCC's Asset Information Definitive Mapping team is encouraged with regard to the existing site access.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the challenges in successfully integrating it with the existing place and community.

Kimbolton 13: Stonely Grange, South of Easton Road - plot 1 (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Responses were mixed towards developing this site. The Parish Council were opposed to development. The LLFA identified there is medium surface water flood risk and further consideration of surface water management options will be required. Anglian Water identified there is a water main to the road frontage of this site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space, if this is not possible a formal application to divert Anglian Water's existing assets may be required. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are

100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as 100% flood zone 1 but with high and medium surface water flood risk and therefore does not meet the criteria for consideration.

Kimbolton 14: Stonely Grange, South of Easton Road - plot 2 (failed fundamental constraints)

Main Issues Raised (4 responses)

Responses were mixed towards developing this site. The Parish Council were opposed to development. The LLFA identified there is some surface water flood risk and further consideration of surface water management options will be required. There is a minerals and/or waste constraints which require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

Council Response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment.

Kings Ripton

Kings Ripton 1: Land at Manor Farm, Kings Ripton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Responses were mixed towards this site. Comments raised concerns based on the site's prominent and sensitive location at the village entrance, its incompatibility with the surrounding rural and historic character, lack of essential services and infrastructure, safety and drainage concerns, and the unrealistic scale of development relative to local constraints and policy, with additional personal objections regarding visual impact and construction disruption. Anglian Water states there are water mains to the road frontage of this site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space, if this is not possible a formal application to divert Anglian Water's existing assets may be required. There are no minerals or waste constraints to overcome. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

The site promoter confirmed the site's availability for development.

Council Response

This site has not been selected as a draft allocation. It was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

4 Further Issues and Options

Old Hurst

Old Hurst 1: Land at St Ives Road, Oldhurst (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

Responses were mixed towards this site but a large proportion were supportive. The LLFA identified that there has been locally reported surface water flood risk which impact developing this site. There are no minerals or waste constraints to overcome. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the site being highly prominent in the countryside and potential for significant landscape impact. It would also result in the loss of high quality agricultural land.

Pidley-cum-Fenton

Pidley-cum-Fenton 7: Orchard of Ashfield House, Warboys Road, Pidley (failed fundamental constraints)

Main Issues Raised (3 responses)

Responses were generally opposed to development. One comment raised concerns regarding the overflow pond, flood risk and impacts on local sewerage. There are no minerals or waste constraints to overcome. The Highways Authority states on the basis of the red line there is no/inadequate connection to the public highway.

Council Response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment.

Ramsey

Ramsey 18: One Acre Stables Middle Drove, Ramsey Heights (failed fundamental constraints)

Main Issues Raised (3 responses)

Responses were generally opposed to development. The LLFA identified the site is at high risk of surface water flood risk which may make the site unsuitable for development. There are no minerals or waste constraints to overcome. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. This will be dependant on existing uses and if this replaces the existing properties / uses or if this is in addition to the existing uses.

Council Response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment. It is also 100% within flood zone 3a making it inappropriate for more vulnerable development.

Ramsey 19: Two Acre Stables, Middle Drove, Ramsey Heights (Council conclusion pre-consultation - may be appropriate depending on evidence from GTAA)

Main Issues Raised (3 responses)

Responses were generally opposed to development. The LLFA identified the site is at low risk of surface water flood risk but may make the site unsuitable for development. There are no minerals or waste constraints to overcome. The Highways Authority states on the basis of the red line there is no/inadequate connection to the public highway.

Council Response

This site has not been selected as a draft allocation. The site is currently in use as Gypsy and Traveller pitches. The assessment noted that the site could be appropriate for the continued use of the site for gypsy and traveller pitches but this is subject to outcomes of the updated GTAA which is being prepared to support the updated Local Plan. The permanent use for this site should be determined through the submission of a planning application. The whole site is within flood zone 3a.

Ramsey 20: Land to the South of Oilmills Road, Ramsey Mereside (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

Responses were generally opposed to development. The LLFA identified the site is at high risk of surface water flood risk which may make the site unsuitable for development. There are no minerals or waste constraints to overcome. The Highways Authority states on the basis of the red line plan, it is not clear if inadequate connection to the public highway to achieve an access in accordance with DMRB/MfS requirements and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the whole site being located within flood zone 3a making it inappropriate for more vulnerable development.

Sawtry

Sawtry 17: Land off Old North Road, Sawtry (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Responses were generally supportive of developing the site. The LFFA highlight the site is at high risk of surface water flood risk. Anglian Water state there is a water main to the northern boundary which may impact the access to the site. There are no links to the sewer network from this site, and further advice would need to be sought for a sustainable point of connection to the wastewater network. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access/es in accordance with DMRB/MfS requirements subject to local junction spacing, visibility, and vertical alignment. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced, dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

The site promoter reiterates the sites' availability for development, submitting a proposed layout plan but wishes to amend the proposed capacity: potential commercial development (North): 0.7ha, potential commercial development (South): 1.73 ha, leisure and recreation Uses - 0.7ha and potential access 0.2ha.

Council Response

4 Further Issues and Options

This site has been selected as a draft mixed use allocation (Draft Allocation Sawtry 4) for about 1.5 ha for Sui generis associated with electric vehicle charging and associated shop and food and drink, about 1ha for industrial use and about 1 ha for open space uses . Flood risk will be mitigated and assessed through provision of a proportionate flood risk assessment and detailed assessment of surface water flood risk. Provision of a safe and suitable means of access from Old North Road and completion of a transport assessment and travel plan to encourage accessibility by active travel modes, this will assist in mitigating any access issues including the Anglian Water water main. The presence of a minerals safeguarding area will require consultation with Cambridgeshire County Council. The development will be required to retain and enhance the Public Right of Way.

Somersham

Somersham 15: Parkhall Nursery & Garden Centre, Somersham (failed fundamental constraints)

Main Issues Raised (4 responses)

Responses were mixed to developing the site. Somersham Parish Council raised objections based on its proximity to a waste management area, limited access via a single-track road with no footpath, lack of integration with existing village amenities, insufficient infrastructure and local employment, and added pressure on inadequate transport routes. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states is unclear whether suitable visibility splays can be achieved but appears to have sufficient frontage to achieve an access which is likely to require significant highway improvements in relation to the scale of development proposed.

The site promoter states that the WMA should be reassessed due to its restoration.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site falls within 250m of a waste management area. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of development on the MWA or on the amenity impact of locating development in such close proximity to it.

Somersham 16: Land off Robert Avenue, Somersham (failed fundamental constraints)

Main Issues Raised (4 responses)

Responses were mixed to developing the site. Somersham Parish Council raised objections based on its proximity to a waste management area, access via the nature reserve, insufficient infrastructure and local employment, and added pressure on inadequate transport routes. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states that based upon the blue line boundary the site appears to have sufficient frontage to achieve an access but may require significant improvements within the highway to make the access acceptable in highway terms.

The site promoter states that in response to the LAA, the site area of the has been reduced to 1.25 hectares removing the part of the site from within the 25m WMA buffer zone.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site falls within 250m of a waste management area and is currently greenfield land. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of development on the MWA or on the amenity impact of locating development in such close proximity to it. In response to the Spring 2025 consultation on additional sites the site promoter sought to address concerns regarding proximity to the WMA by reducing the site area of the site to 1.25ha to only include land for residential development. They recognise the site remains within the consultation area of the WMA. No assessment on impact on the WMA or its restoration have been provided or the potential

impact on residential amenity. As such the site still fails the fundamental constraints. Additionally, the Highways Authority commented that based on the red line boundary there appears to be insufficient access to serve the site. Access arrangements have not been detailed in the site promoter's comments and there appears to be a potential ransom strip between it and Robert Avenue.

Somersham 17: Land on the West Side of Parkhall Road, Somersham (failed fundamental constraints)

Main Issues Raised (4 responses)

Responses were mixed to developing the site. Somersham Parish Council raised objections based on its proximity to a waste management area, access via a single track road, flood risk, insufficient infrastructure and local employment, and added pressure on inadequate transport routes. Anglian Water state there is a rising main pressurised sewer running through the side adjacent to the eastern boundary, which is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing rising main should be located in highways or public open space. In addition, there is a sewer pumping station adjacent to the north eastern corner of the site. A 15m encroachment buffer should be applied to ensure that no sensitive receptors are located within this buffer i.e. residential premises and the domestic curtilage of residential properties. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states that it is unclear whether suitable visibility splays can be achieved but it appears to have sufficient frontage to achieve an access which would likely to require significant highway improvements in relation to the scale of development proposed.

The site promoter provided a rebuttal statement against the site failing the fundamental constraints and also provided further plans.

Council Response

This site was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site wholly lies within the buffer zone around the Somersham Waste Management Area. At its closest point, the site is within 20m of the WMA. No assessment was provided at the time. In response to the Spring 2025 consultation on additional sites, the site promoter submitted a Site Suitability Assessment which includes a review of air quality, odour, amenity and compatibility of the proposed use with the WMA which is currently being restored. Now that this assessment has been provided, the site passes the fundamental constraints and a full LAA and SA of the site has been undertaken. It had previously failed due it being within the consultation area for a WMA and no assessment had been provided. The site promoter also submitted a document setting out example street scenes and house types that could be used for this site. The site is now considered potentially appropriate for development.

This site has not been selected as a draft allocation. This site was assessed as having high and/or medium risk from surface water sources and groundwater risk. More sequentially preferable sites were selected which are 100% flood zone 1 with very low risk of surface water flood risk.

Somersham 18: Pitches 5 - 8 Land of Chatteris Road Somersham (Legacy Park) (Council conclusion pre-consultation - may be appropriate depending on evidence from GTAA)

Main Issues Raised (3 responses)

Responses were mixed. Somersham Parish Council recognised the need for gypsy and traveller pitches but raised concerns based on its proximity to a waste management area, flood risk, insufficient infrastructure and local employment, and added pressure on inadequate transport routes. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states that on the basis of the red line boundary there is no connection to the public highway. If extended, to utilise the existing access it appears likely suitable access could be achieved (subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments as necessary) but may require highway improvements in relation to the scale of development proposed.

Council Response

4 Further Issues and Options

This site has not been selected as a draft allocation. The site is currently in use as Gypsy and Traveller pitches. The assessment noted that the site could be appropriate for the continued use of the site for gypsy and traveller pitches but this is subject to outcomes of the updated GTAA which is being prepared to support the updated Local Plan. The permanent use for this site should be determined through the submission of a planning application. The majority of the site is within flood zone 3a.

Somersham 19: Pitches 9 - 15 Land of Chatteris Road Somersham (Legacy Park) (Council conclusion pre-consultation - may be appropriate depending on evidence from GTAA)

Main Issues Raised (3 responses)

Responses were mixed. Somersham Parish Council recognised the need for gypsy and traveller pitches but raised concerns based on its proximity to a waste management area, flood risk, insufficient infrastructure and local employment, and added pressure on inadequate transport routes. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states that on the basis of the red line boundary there is no connection to the public highway. If extended, to utilise the existing access it appears likely suitable access could be achieved (subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments as necessary) but may require highway improvements in relation to the scale of development proposed.

Council Response

This site has not been selected as a draft allocation. The site is currently in use as Gypsy and Traveller pitches. The assessment noted that the site could be appropriate for the continued use of the site for gypsy and traveller pitches but this is subject to outcomes of the updated GTAA which is being prepared to support the updated Local Plan. The permanent use for this site should be determined through the submission of a planning application. The whole of the site is within flood zone 3a.

Southoe and Midloe

General comment: Comments raised that the village could benefit from a few more social houses but before this happens, there needs to be major infrastructure upgrades to the sewage and drainage network as well as the A1 access road to the village.

Council response:

Southoe and Midloe 3: Land North West of Bell Lane, Southoe (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Responses were generally opposed to developing the site. St Neots Town Council agreed with the assessment citing that high quality agricultural land should be protected from development. Another comment highlighted the limited infrastructure in the village, A1 access and impact on heritage assets. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but linking the site via high quality walking, cycling, wheeling access may be challenging.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site is mostly classified as grade 1 agricultural land. Grade 1 is the highest quality agricultural land.

Southoe and Midloe 4: Land North of Rectory Lane, Southoe (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were generally opposed to developing the site. Comments highlighted the limited infrastructure in the village, A1 access, limited public transport, flood risk and impact on heritage assets. There is a minerals and/or waste constraint present which requires mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but would require significant improvements to the road and footway infrastructure between the site and High Street/ Bell Lane.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 1, 2 and 3. However, due to the settlement's designation as a village the Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater risk meaning it did not meet the criteria for consideration.

Spaldwick

Spaldwick 5: Land South of the A14, Spaldwick (modest employment) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Response were generally unsure about developing the site. Spaldwick Parish Council opposes development based on its potential impact on village character, highway safety, lack of amenities, employment opportunities, and sustainable transport options, making the development unsustainable, flood risk and drainage. They state any new housing should be affordable and prioritised for those with local connections. The LLFA identify the site has high risk form surface water flood risk which may make the site unsuitable for development. Anglian Water state there is a water main to the road frontage of this site and a rising main (pressurised sewer) running through the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required. There is a minerals and/or waste constraint present which may require mitigation. The Highways Authority state that the site appears to have sufficient frontage to achieve an access/es for commercial vehicles however an access from High Street would be subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments due to the proximity of the A14 off/on-slips and the service station. A footway would be required to connect the site to the existing footway in High Street and this may not be feasible within the highway due to the width of the verge, ditch and utility apparatus.

Council Response

This site has not been selected as a draft allocation. Updates to SFRA mapping demonstrate that the risk of flooding has increased since the initial assessment. More that 99% of the site is now at risk of fluvial flooding, and the majority of the site is also at high risk from surface water flooding. More sequentially preferable sites are available.

Spaldwick 6: Land South of the A14, Spaldwick (modest residential) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Response were generally unsure about developing the site. Spaldwick Parish Council opposes development based on its potential impact on village character, highway safety, lack of amenities, employment opportunities, and sustainable transport options, making the development unsustainable, flood risk and drainage. They state any

new housing should be affordable and prioritised for those with local connections. The LLFA identify the site has high risk form surface water flood risk which may make the site unsuitable for development. Anglian Water state there is a water main to the road frontage of this site and a rising main (pressurised sewer) running through the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required. There is a minerals and/or waste constraint present which may require mitigation. The Highways Authority state that the site appears to have sufficient frontage to achieve an access/es for commercial vehicles however an access from High Street would be subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments due to the proximity of the A14 off/on-slips and the service station. A footway would be required to connect the site to the existing footway in High Street and this may not be feasible within the highway due to the width of the verge, ditch and utility apparatus.

Council Response

This site has not been selected as a draft allocation. Updates to SFRA mapping demonstrate that the risk of flooding has increased since the initial assessment. More that 99% of the site is now at risk of fluvial flooding, and the majority of the site is also at high risk from surface water flooding. More sequentially preferable sites are available.

Spaldwick 7: Land South of the A14, Spaldwick (larger scale residential) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Response were generally unsure about developing the site. Spaldwick Parish Council opposes development based on its potential impact on village character, highway safety, lack of amenities, employment opportunities, and sustainable transport options, making the development unsustainable, flood risk and drainage. They state any new housing should be affordable and prioritised for those with local connections. The LLFA identify the site has high risk form surface water flood risk which may make the site unsuitable for development. Anglian Water state there is a water main to the road frontage of this site and a rising main (pressurised sewer) running through the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required but this larger site would provide a greater opportunity to minimise the need for any asset diversions as there will be scope to design site layout to accommodate assets within open space for example. There is a minerals and/or waste constraint present which may require mitigation. The Education Authority states that there is an existing pressure on early years' places, there is likely to be sufficient places for primary education but there may be insufficient secondary places. The Highways Authority state that the site appears to have sufficient frontage to achieve an access/es for commercial vehicles however an access from High Street would be subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments due to the proximity of the A14 off/on-slips and the service station. A footway would be required to connect the site to the existing footway in High Street and this may not be feasible within the highway due to the width of the verge, ditch and utility apparatus.

Council Response

This site has not been selected as a draft allocation. Updates to SFRA mapping demonstrate that the risk of flooding has increased since the initial assessment. More than half of the site is now at risk of fluvial flooding concentrated in the northern half with the potential to make safe access and escape problematic. More sequentially preferable sites are available.

Spaldwick 8: Land to the South of High Street, Spaldwick (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Response were generally unsure about developing the site. Spaldwick Parish Council opposes development based on its potential impact on village character, highway safety, lack of amenities, employment opportunities, and sustainable transport options, making the development unsustainable, flood risk and drainage. They state any new housing should be affordable and prioritised for those with local connections. The LLFA identify the site has high risk form surface water flood risk which may make the site unsuitable for development. There is a minerals and/or waste constraint present which may require mitigation. The Education Authority states that there is an existing pressure on early years' places, there is likely to be sufficient places for primary education but there may be insufficient secondary places. The Highways Authority state that on the basis of the red line there is no connection to the public highway but this can be achieved via the site to the north which has extant permission.

Council Response

This site has not been selected as a draft allocation. Updated level 1 SFRA mapping and site specific level 2 SFRA indicate that site is no longer suitable for development. More sequentially preferable sites are available to avoid locating 'more vulnerable' development in high and medium risk areas. This site is 19% Flood Zone one with the remaining site within flood zones 2 and 3a and surface water risk predominantly high. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to significant flood risk.

St Ives

General comment: A resident proposes that instead of building homes along Old Ramsey Road—where development would harm wildlife corridors, footpaths, and traffic infrastructure—St Ives should expand eastward from the Marley Road/Somersham Road roundabout, creating a new ring road and housing area that would ease congestion, avoid local opposition, support sustainable transport links, and boost the local economy.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

St Ives 8: Land at 34 The Broadway, St Ives (failed fundamental constraints)

Main Issues Raised (5 responses)

Responses were mixed. St Ives Town Council consider the site would be acceptable as it is a brownfield site and could provide community benefit. The LLFA highlights there is low surface water flood risk but it may be unsuitable for development due to previously reported flooding. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that whilst the site has frontage to the public highway via The Broadway and West Street the accesses are extremely limited in width and height and there will be little/no parking availability on the site.

The site promoter states that up to 9 homes could be accommodated on site and should go to SA. They recognise the need to address flood risk and heritage issues.

Council Response

This site has not been selected as a draft allocation. The site was reassessed as it was capable of providing 9 homes. It was considered inappropriate for development through the Council's Land Availability Assessment as approximately half of the site is within flood zone 3a and the remaining site being flood zone 2 and residential uses are a more vulnerable use.

St Neots

St Neots 9: Land at Station Road, St Neots (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

4 Further Issues and Options

Responses were mixed. St Neots Town Council objects to the proposed change of use of this site emphasising its importance as part of the town's industrial area and its role in supporting local employment. The LLFA highlights there is high surface water flood risk but it may be unsuitable for development due to previously reported flooding. Anglian Water identify there are a number of Anglian Water assets within and adjacent to the site including water mains, gravity foul sewers and a large diameter surface water sewer than runs directly east-west through the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required. Early pre-planning engagement with Anglian Water is advised regarding asset protection and sustainable points of connection to our networks. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to the public highway Station Road to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

The site promoter submitted further evidence in support of the site and state the site is within flood zone 1. They intend the site to be delivered between 2029 and 2034, with the proposed 200-home density being indicative and open to refinement with the LPA. They state surface water risk, contamination, and noise can all be mitigated through redevelopment. While the site is within an Existing Employment Area there is precedent from a nearby care home development and Policy LP18 support the potential for non-employment uses if compatibility and viability criteria are met.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would result in the loss of 2ha of employment land in a highly sustainable location. This loss could fundamentally impact the wider established employment area and job opportunities in key industrial and commercial industries. Also residential uses are more vulnerable uses in terms of flood risk.

The Stukeleys

The Stukeleys 7: Millers' Land, Great Stukeley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

Responses were mixed. Anglian Water state there are gravity sewers within the eastern and southern boundaries of the site and a water main runs diagonally through it. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. If this is not possible a formal application to divert Anglian Water's existing assets may be required. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to achieve an access/es (subject to detailed design in accordance with the DMRB/MfS (although visibility in both the vertical and horizontal planes may not be achievable), road safety audit, local junction spacing, capacity assessments and adjustments to the speed reduction feature). It is likely that two points of access will be required at least one in emergency form. A footway and pedestrian crossing facility will be required to connect the development to the footway network on the opposite side of Ermine Street and to the footway in Church Road. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site's designation as a protected settlement break in The Stukeleys Neighbourhood Plan means that the site is not suitable or achievable and as such is undeliverable and undevelopable.

The Stukeleys 8: Heron Shore, Land South of Owl End, Great Stukeley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

Responses were mixed. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. The site would not be acceptable for a development without significant improvements to the road infrastructure in the form of passing bays between the site and Ermine Street and improvements for pedestrians and cyclists, which may not be feasible within the adopted public highway.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as the site relates more to the countryside than Great Stukeley and it cannot be effectively masterplanned to integrate with the existing settlement.

Upton and Coppingford

Upton and Coppingford 3: Land at Christ's College Farm, Upton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were mostly opposed to development. Concerns raised include uncertainty over site access—likely through a wildlife-rich area prone to waterlogging—and the lack of clarity on how privacy and local biodiversity will be protected. Comments highlight the village's limited infrastructure: no street lighting or footpaths, unsafe roads with heavy traffic and subsidence, and no clear plan for how the development would address these issues. Additional objections focus on the potential destruction of historic assets, and the unsuitability of adding another care home in a small village with fewer than 200 residents and no amenities. The cumulative impact on local infrastructure, safety, and community well-being is described as severe, with the development deemed entirely inappropriate for the location. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that on the basis of the red line there is no/inadequate connection to the public highway.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Upwood and The Raveleys

Upwood and The Raveleys 4: Finlays Bridge, Northwest of Great Raveley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

4 Further Issues and Options

Responses were mixed. The Wildlife Trust agreed with the assessment. Objections raised were its proximity to Woodwalton SSSI and The Great Fen, loss of agricultural land, harm to landscape and heritage assets, disruption to wildlife corridors, and negative impacts on local amenity from fencing, CCTV, and industrial traffic. A comment questioned the environmental credentials of solar farms, citing inefficiencies, limited recyclability, and pollution risks from panel materials and lithium battery storage. They advocate for solar development on brownfield or less productive land, emphasising the need for sequential testing and more sustainable, community-sensitive alternatives. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that on the basis of the red line there is no/inadequate connection to the public highway. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced.

The site promoter provided further evidence in support of the site including a site layout plan and various plans showing its relationship to nature, heritage and flood risk constraints and topography. Their response sets out their proposed ecological enhancements, a landscape and visual impact assessment, response to flood risk and technical suitability.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the impact on nationally significant nature conservation and the levels of flood risk on the site. Additionally, the Council's Climate Change evidence document E Renewable Energy Assessment suggests that the site has no technical suitability for renewable energy.

During the consultation on additional sites in the Spring of 2025, the site promoter submitted an additional supporting document and plans in support of their proposal. The Councils' Renewable Energy Assessment has identified the land as having no technical suitability for renewable energy. This assessment used a series of primary constraints relating to physical features and environmental/heritage protection, sites that were constrained by these were removed as not having any technical potential. As highlighted in the LAA the site is in very close proximity to internationally significant nature conservation sites including the Great Fen and is also at risk from flooding. It is noted form the site promoter's supporting document and proposed site plan that solar panels are proposed on land within flood zone 3a. It is therefore still considered inappropriate for development.

Warboys

Warboys 13: Cromwell House, Land north of Heath Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

Responses were mixed. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. It is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to limited relationship with the main settlement of Warboys. It is not sustainably located, is highly prominent in the countryside and would be difficult to integrate the site with the existing place and community.

Waresley-cum-Tetworth

Waresley-cum-Tetworth 1: Land between the West Lodge and Home Farm, Waresley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were mixed. Anglian Water commented that there is a rising main (pressurised sewer) running directly through the site and this existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. If this is not possible a formal application to divert Anglian Water's existing assets may be required, engagement with Anglian Water is encouraged. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing although local infrastructure improvements may be required in the form of passing places.

The site promoter confirms that development will be limited to the grassed area. They propose enhancing the woodland garden with planting, mitigate heritage impacts, using the woodland as accessible natural greenspace, retaining capacity to 5 or 6 homes.

Council Response

This site has been selected as a draft residential allocation (Draft Allocation Waresley 1) for about 10 homes. Concerns regarding Anglian Water Infrastructure have been addressed through criteria requiring integration of existing Anglian Water infrastructure ensuring existing sewers remain available for maintenance and repair. . The site was tested by the Council as part of growth strategies 1, 2, 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). In addition the Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with nominal surface water flood risk now and in the future.

Woodwalton

Woodwalton 1: Land southeast of Monks Wood, Southwest of Woodwalton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

Responses were mixed. The Wildlife Trust agreed with the assessment. Anglian Water commented that there is a water main to the southern boundary which may impact the access and that engagement with Anglian Water is advised. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

The site promoter provided further evidence in support of the site including a site layout plan and various plans showing its relationship to nature, heritage and flood risk constraints and topography. Their response sets out their proposed ecological enhancements, a landscape and visual impact assessment and technical suitability.

Council Response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the close proximity to nationally significant nature conservation sites. Additionally, the Council's Climate Change evidence document E Renewable Energy Assessment suggests that the site has no technical suitability for renewable energy.

Yaxley

Yaxley 8: Land at Wykes Way off West End, Yaxley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (15 responses)

Responses were largely opposed to this site. Objections, including those from the Parish Council, relate to flood risk and drainage, infrastructure capacity of local services, environmental and landscape impact on the Great Fen and village identity, and access. The LLFA identified that there is high surface water flood risk and that it may be unsuitable for development. The Minerals and Waste Authority identified that there are minerals and/ or waste constraints that would require mitigation. The Highways Authority states that the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the likely significant impact on heritage assets and on the landscape which would fundamentally impact the character by having an urbanising effect on Yaxley on its south western side. Also, vehicular access to the site is a key constraint with the existing trackway requiring significant work and scoping to access it suitability to accommodate any development.

Additional Sites Sustainability Appraisal

Consultation Responses Summaries

4.37 The following table outlines a summary of the type of comments received to the Additional Sites Sustainability Appraisal consulted on between 23 April and 4 June 2025:

Responses to the Additional Sites Sustainability Appraisal

	Additional Sites Land Availability Assessments
Number of Comments Made	82
Number of Individuals or Organisations that Responded	29
Number of Supports	3
Number of Objects	24
Number of Observations	55

4.38 People were able to comment on all aspects of the document by section, paragraph, tables and by site. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Additional Sites Sustainability Appraisal consultation responses

4.39 As part of a response to previous consultations on the Statement of Community Involvement and Sustainability Appraisal Scoping Report The Coal Authority noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific comments to make on any stages of your Local Plan process. In the spirit of ensuring efficiency of resources and proportionality, it will not be necessary for the Council to provide the Coal Authority with any future drafts or updates to the emerging Plans."

Summary of Sites consulted on in the Additional Sites Sustainability Appraisal

4.40 The following sections provide a summary of the main issues raised during the consultation on the Additional Sites Sustainability Appraisal and how the Council has taken these into account.

General comments

4.41 The consultation received responses from a number of statutory consultees and Duty to Cooperate bodies, these comments will inform the selection of sites coupled with further evidence as the plan progresses. They will also enable the Council to provide criteria within draft site allocations to shape and mitigate development.

Additional Sites Sustainability Appraisal

Main Issues Raised	Council Response / How the Council has taken this into account
Site Appraisals (82 responses)	
It is noted that almost all comments received on the SAs of individual sites did not actually comment on the appraisals against the SA objectives. Most were more general comments reinforcing those submitted against the land availability assessments of the relevant site.	Reponses are provided to clarify the situation or progress with the site where relevant.
General (2 responses) • Natural England identified that where sites have scored + or ++ to the SA6 question even when the site is close or adjacent to a SSSI (e.g. Woodwalton 1) and impacts are unknown. We recommend that this is reviewed, and scores amended. • Historic England suggests a review of heritage impacts to identify all heritage assets and advise that Heritage Impact Assessments should be undertaken to help inform the selection of sites.	SA objectives and the assessment indicators and their scoring system were subject to consultation and finalised after this in 2023. Scoring has been applied consistently based on a combination of the relative value of the nature conservation site and the proximity of the proposed development scheme. An Ecological Constraints Assessment has been commissioned to test the preferred growth scenario and outcomes will be reviewed and incorporated where necessary into the proposed submission draft of the Local Plan and Sustainablility Appraisal. Identifying all heritage assets is beyond the scope of the draft Local Plan. Undertaking heritage impact assessments on all proposed sites would not be feasible

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
	due to time and cost implications. Where heritage assets are known or suspected on a site a proportionate heritage assessment will be required.
Alwalton (2 responses) • Concerns about overdevelopment near Peterborough, proximity to A1 causing pollution and safety risks. • Site near Castor Floodplain Meadows SSSI; Natural England Impact Risk Zones (IRZs) triggered; recommends reassessment of biodiversity impact	SA objectives and the assessment indicators and their scoring system were subject to consultation and finalised after this in 2023. Scoring has been applied consistently based on a combination of the relative value of the nature conservation site and the proximity of the proposed development scheme. An Ecological Constraints Assessment has been commissioned to test the preferred growth scenario and outcomes will be reviewed and incorporated where necessary into the proposed submission draft of the Local Plan and Sustainablility Appraisal. The site is proposed for allocation and an ecological survey is required.
Bluntisham (2 responses) • Heritage, flooding, biodiversity, traffic, and archaeological concerns • Site near Berry Fen SSSI and Ouse Washes SPA; IRZs triggered; cumulative biodiversity impacts noted	SA objectives and the assessment indicators and their scoring system were subject to consultation and finalised after this in 2023. Scoring has been applied consistently based on a combination of the relative value of the nature conservation site and the proximity of the proposed development scheme. Site proposed for allocation and a heritage assessment required.
Brington and Molesworth (2 responses) • Site exceeds housing quota for parish, infrastructure strain, flooding, inadequate foul water system, lack of amenities	The site has not been taken forward for allocation.
Chesterton (4 responses) • Overdevelopment concerns, infrastructure strain, proximity to A1 and employment mismatch concerns • Cross-boundary recreational pressure, heritage asset proximity and need for greenspace need to be considered	An Infrastructure Delivery Study has been prepared to identify infrastructure needed to support future growth. The site has not been taken forward for allocation.
Easton (3 responses) • One comment supports development but notes flooding and odour issues – another suggests reducing site area due to flood risk and proximity to Water Recycling Area • Road safety, lack of amenities, proximity to conservation area are cited as concerns	SA was not undertaken as the site failed a fundamental constraint. Site promoter suggests reducing the site area to reduce odour risk.
Ellington (5 responses) • Flood risk, infrastructure inadequacy, biodiversity loss, heritage impact, access issues are identified • IRZs triggered; masterplanning needed; footpath integration recommended	Ellington 4 is proposed for allocation with a requirement for a proportionate flood risk assessment and a heritage assessment.

Main Issues Raised	Council Response / How the Council has taken this into account
Elton (1 response) • Conservation area concerns, underused commercial units, traffic impact	The site has not been taken forward for allocation.
Godmanchester (3 responses) • Access issues, flooding, biodiversity, air quality, privacy concerns • IRZs triggered; recreational pressure assessments needed	No sites commented on have been taken forward for allocation.
Grafham (4 responses) • Conflicts with Neighbourhood Plan, infrastructure inadequacy, flooding, heritage impact • Site size and housing density questioned; IRZs triggered	The site has not been taken forward for allocation.
Great Gransden (5 responses) • Heritage, flooding, pedestrian safety, restrictive covenants, electricity infrastructure are raised as concerns and IRZs triggered for multiple nearby woods	None of the sites have been taken forward for allocation.
Great Paxton (7 responses) • One comment supports some development but notes village character loss • Significant concerns regarding overdevelopment, infrastructure strain, drainage issues and IRZs triggered	None of the sites have been taken forward for allocation.
Holywell-cum-Needingworth (5 responses) • Comments raised the sites are outside village boundary, no right of way are listed as concerns and IRZs triggered	Sites 8, 9, and 10 have not been taken forward for allocation. Site 11 has been merged with land to the east and proposed as a single site. A detailed flood risk assessment is required and opportunities are to be explored for incorporation of natural flood management features.
Huntingdon (2 responses) • Heritage assets near Hinchingbrooke Hospital site; IRZs triggered	SA updated for Hinchingbrooke Hospital to include additional heritage assets. Recreational pressure is incorporated within the Habitats Regulations Assessment and a flood risk assessment required.
Kimbolton (6 responses) • Comments raised concerns regarding flooding from field runoff and poor drainage and that local knowledge on these matters need to be included. IRZs triggered	None of the sites have been taken forward for allocation.
Old Hurst (1 response) • Comments raised that there is no village hall, inadequate sewerage and noise pollution from A141	The site has not been taken forward for allocation.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
Ramsey (3 responses) • Deep peat concerns; IRZs triggered; recreational pressure assessments needed	Only one of the three sites went through the SA process as the other two failed the LAA assessment. None of the sites have been taken forward for allocation.
Somersham (6 responses) • Concerns raised concerns regarding infrastructure inadequacy, proximity to waste management, lack of amenities	None of the sites have been taken forward for allocation.
Southoe and Midloe (2 responses) • IRZs triggered for both sites	None of the sites have been taken forward for allocation.
Spaldwick (5 responses) • Flooding, sewerage issues, access constraints, biodiversity loss and IRZs triggered	None of the sites have been taken forward for allocation.
St Ives (1 response) • Comment raised that the site below size threshold but capable of delivering 9 dwellings so should be reassessed	The LAA was reassessed but the site still did not proceed to SA as over half the site is flood zone 3a.
St Neots (4 responses) • Comments supported industrial land preservation and concerns regarding loss of employment • Promoter referred to their flood risk reassessment, infrastructure upgrades, and the site's sustainable location	The SA was reviewed but the outcomes remained unchanged.
The Stukeleys (1 response) • Comments cited concerns over overdevelopment and loss of green buffer zone	The site has not been taken forward for allocation.
Upton and Coppingford (1 response) • IRZs triggered	The site has not been taken forward for allocation.
Upwood and The Raveleys (1 response) • Solar development on peat soil discouraged; fire hazard concerns	The site has not been taken forward for allocation.
Warboys (1 response) • Comments raised that the sewerage system is outdated as well as concerns regarding flood risk and loss of agricultural land	The site has not been taken forward for allocation.
Waresley-cum-Tetworth (2 responses) • Comments stated development would be limited to grassed area; heritage and conservation concerns; IRZs triggered	Recreational pressure is incorporated within the Habitats Regulations Assessment. A heritage assessment is required. The site is proposed as an allocation.

Main Issues Raised	Council Response / How the Council has taken this into account
Woodwalton (1 response) • Adjacent to Monks Wood SSSI; solar development discouraged; IRZs triggered	The site is identified in Climate Change evidence document E as being outside any area with potential for ground mounted solar. The site has not been taken forward for allocation.

5 Preferred Options

Consultation Process

Document Summaries

5.1 This section addresses the following documents:

- **Preferred Options Local Plan to 2046 -** this is the first full draft of the Local Plan. It is based on national policy, evidence and previous feedback from stakeholders. It is our vision for sustainable growth to 2046 and sets out how we will deliver land for new homes, jobs and infrastructure. It looks at how we can protect our natural environment, how we will respond to climate change and provides policies which will be used to assess planning applications outlining what we require from new development in the district.
- **Sustainability Appraisal -** this document assesses how the draft local plan performs against environmental, social and economic objectives.

Document Approval

5.2 The documents above went through the following approval process:

- Cabinet Meeting (21/10/25) - The Committee were asked to approve the contents of the Preferred Options Local Plan to 2046 and Sustainability Appraisal and to agree that they could be published for public consultation commencing in November 2025 and running for 6 weeks. Minutes of the committee and supporting reports can be found at Agenda for Cabinet on Tuesday, 21 October 2025, 7:00 pm - Huntingdonshire.gov.uk

5.3 **Consultation on the Preferred Options Local Plan and Sustainability Appraisal** took place between 5 November and 17 December 2025. This was as scheduled in the Council's Local Development Scheme 2025 (Table 2 Local Plan preparation timetable).

5.4 The consultation was hosted on the Council's online consultation portal. People were able to comment on all aspects of the documents by question, section and tables. Hard copies of the documents were also available to view at the Council's office Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN and in the eleven libraries across the district. Posters were provided in the Mobile Library Services (routes H2, 3, 4, 5, 8, 9, 10, 11, 12, 15, 16, 17, 18, 23, 24, 25). The documentation also included information on the consultation, how to respond and contact details for those who require further assistance or the provision of the document in an alternative format.

5.5 The documents were publicised as follows. Items marked with an * can be found in "Appendix 3 Consultation Material - Preferred Options Phase':

- On the Council's online consultation portal published on 5 November 2025.
- On the Council's Homepage of Huntingdonshire District Council - Huntingdonshire.gov.uk under the heading *Consultations* published on
- On the Council's Huntingdonshire District Council | Huntingdon | Facebook page*, published 05/11/2025, 07/11/2025, 18/11/2025*, 18/11/2025, 25/11/2025, 27/11/2025, 27/11/2025, 04/12/2025, 09/12/2025, 15/12/2025, 18/12/2025
- On the Council's Twitter(X), published on 07/11/2025, 25/11/2025, 09/12/2025, 15/12/2025*

- Within the Council's Economic Development Newsletter*
- 1 article within the Hunts Post (newspaper), published 06/11/2025*
- Press release published on 05/11/2025* and 04/12/2025

- Posters and leaflets were supplied to Town and Parish Councils and District Councillors to distribute within their local areas.*
- 10 advertisement banners were displayed on the sides of HDC refuse freighters which circulate the district.*
- Banners were displayed at local parks including Huntingdon Riverside, Huntingdon Sapley Park, St Neots Priory Park, St Neots Riverside Park, Paxton Pits at Little Paxton, St Ives Hill Rise*
- Banners at the four One Leisure Centre Venues: Ramsey, Huntingdon, St Ives and St Neots along with the provision of posters and leaflets*
- Site notices publicising proposed site allocations*

5.6 As part of the public engagement exercise the council undertook the following:

- Emails were sent to specific Consultation Bodies
- Email notifications were sent to people and organisations who responded to previous consultations and wished to be kept informed and those who had opted in to receive notifications through the online consultation system
- Town and Parish Councils, this included a 'social media package' that could be used to spread the news to their local organisations and residents
- District Councillors, this included a 'social media package' that could be used to spread the news to their local organisations and residents.

Other Methods of engagement included:

- Briefing sessions/ workshops hosted by the council for District (28/10/2025), Parish and Town Councillors (03/11/2025 and 11/11/2025) to inform them about the consultation and to highlight ways they could help spread the word to residents. Information packs including a briefing note, consultation documents, posters and leaflets were distributed to each parish or town in the district.
- Attendance at the Climate Conference (05/11/2025) and Business Breakfast presentation 26/11/2025.
- Hosting eight exhibitions across the district, located in Bluntisham (12/11/2025), Godmanchester (13/11/2025), Ramsey (18/11/2025), Wyton on the Hill (20/11/2025), St Ives (26/11/2025), St Neots (27/11/2025), Sawtry (3/12/2025) and Huntingdon (4/12/2025). Approximate attendance of 750 people including residents, parish and town councillors and landowners.
- Information in Economic Development newsletters distributed in October and November 2025.
- Information and reminders sent to Parish and Town Councils through the Town and Parish Newsletter*in November and December and emails to Clerks and Chairs.
- Information and reminders sent to District Councillors.
- Social media campaign on a range of platforms (see above) posting about exhibition reminders, key topics and issues, reminders to respond and the release of the Local Plan video.
- Videos on the consultation and how to respond to the consultation.
- Alternative options offered on how to respond to the consultation including emails and paper forms.
- Physical copies of the documents, posters and leaflets within all 11 libraries in Huntingdonshire.
- Poster and leaflets provided to the mobile library service which covers the whole of Huntingdonshire.
- Notification on consultation mailing list consisting of over 7,000 consultees and agents.

5.7 The publicity, consultation and engagement were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) , and section 3 of the SCI.

Preferred Options Draft Local Plan

Consultation Responses Summaries

5.8 The following table outlines a summary of the type of comments received to the Preferred Options Local Plan consulted on between 5 November and 17 December 2025:

Responses to the Preferred Options Local Plan

	Preferred Option Local Plan
Number of Comments Made	2,867
Number of Individuals or Organisations that Responded	532
Number of Supports	642
Number of Objects	1,022
Number of Observations	1,203

5.9 People were able to comment on the whole document including paragraphs and tables. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Preferred Options Local Plan to 2046: Consultation Responses

5.10 The Coal Authority noted Huntingdonshire District Council's boundary falls outside of the coalfield area and therefore they have no comments to make.

Summary from the Preferred Options Local Plan

5.11 The following tables provides a summary of the main issues raised during the consultation on the Preferred Options Local Plan and how the Council has taken these into account.

Section A: What is this Local Plan?

Section A: What is this Local Plan?

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (73 comments)	
• Responses to Section A of the Local Plan overall are collated here. Where appropriate issues are also addressed in the relevant policy or site. • Responses are collated into themes raised so that the responses to these can be more clearly identified. • Road infrastructure and traffic congestion was the most frequently raised concern. Aspects highlighted were:	• Road infrastructure and traffic congestion: a further stage of the Strategic Transport Study has been commissioned to inform preparation of the pre-submission Local Plan. This looks at the overall strategy and individual sites and site clusters to analyse their impact on the transport and travel networks and identifies the mitigation or upgrades needed to ensure the transport and travel requirements of the proposed sites can be safely met. It is recognised that it is not the role of the local plan and new site allocations to fix

Main Issues Raised	Council Response / How the Council has taken this into account
• the overloaded nature of the current road network • the need for a full road upgrade before further development is delivered • congestion and safety concerns on major roads and a small number of villages • the anticipated traffic impact of new development • Flooding and water management were the next most frequently raised issues. Concerns related particularly to: • flood risk to existing communities • the need for flood mitigation measures to be installed • flooding impacts on the River Great Ouse and wider drainage capacity • incorporating outcomes of the water cycle studies into the consultation document • Housing numbers and the overall growth strategy were raised repeatedly. Aspects highlighted were: • the scale of proposed housing overall being too much for the district • the suggestion that the local plan should be paused until the outcomes of local government reorganisation are known so that the new area can be planned comprehensively • the impact on settlement character of existing villages • objections were included to strategic sites • preference was expressed for taking a brownfield land first approach • Concerns were expressed over the potential environmental and biodiversity impacts of the draft plan, in particular regarding:	existing infrastructure deficits and traffic congestion issues. However, major schemes such as the A141 upgrade which are being prepared in conjunction with the CPCA are expected to have a significant beneficial impact on existing transport and travel issues as well as provide capacity for additional development. Highway safety aspects will be addressed through detailed assessments in conjunction with planning applications submitted on site allocations once the detail of the scale, nature and type of development are known. • Flooding and water management: these are recognised as a strong challenge to development in Huntingdonshire as three of the district's four market towns are located along the River Great Ouse. All have significant areas of flood meadow around the towns and these dominate the landscape around many of the other settlements in the Ouse Valley. A strong sequential approach has been taken to the selection of site allocations to minimise the risk of all forms of flooding both within the site itself and across nearby communities. Iterative assessments have been made through the Strategic Flood Risk Assessment to inform site assessments, site specific flood risk mitigation criteria and policy development. Publication of the pre-submission draft local plan has been deferred from summer to September 2026 to allow for additional time to consider and integrate the outcomes of the latest elements of the Integrated Water Management Studies. While it is recognised that much of north-eastern part of the district lies within a highly managed drainage system its low lying nature makes it particularly vulnerable to the potential impacts of sea level rise from anticipated climate change. Limited growth has been proposed in this area on carefully selected sites at the lowest level of risk to future-proof development schemes. • Housing numbers and the overall growth strategy: the scale of growth proposed aligns with the government's standard methodology for calculating local housing need which includes a substantial uplift over the baseline figure to try to help address affordability challenges in the district where the 5 year average median house price to earnings ratio (2021-25) is house cost is 9.4 times median average earnings. With initial outcomes of local government reorganisation due to be published in July 2026 the decision was taken in response to this concern to pause publication of

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• the impact on the Ouse Valley corridor • the loss of habitats and green corridors • the pressure on wildlife • The capacity of services and utilities also generated multiple responses with concerns focused on lack of capacity for healthcare, education, water supply and water treatment. • The consultation process itself generated some concerns with the 6 week timescale being considered inadequate and difficulties experienced navigating the document layout and consultation portal. • Concern was expressed over the lack of provision for places of worship and advocates their inclusion as a key element in supporting community cohesion and facilitating social interaction. • Use of traditional architecture design codes was advocated along with a ban on demolition of all pre-1950's buildings to protect non-designated heritage assets. • Central Bedfordshire Council expressed support for the overall strategy and commitment to meeting housing and employment needs in full within the district and welcome ongoing discussions. • Fenland District Council welcomes the overall intention of the Plan to meet Huntingdonshire's identified housing and employment needs in full and support the clarity this brings to wider economic resilience. They encourage consideration of longer term opportunities for strategic transport interventions where they would improve connectivity and support access to strategic assets such as the planned Fens Reservoir. • Sport England state that they are broadly supportive of the proposed strategic direction, particularly where it seeks to prioritise health, wellbeing and sustainable communities.	the pre-submission draft local plan until September 2026 to allow for reflection on the outcome and its potential impact on the development strategy. Assessment of strategic sites and their potential impacts has been ongoing throughout preparation of the local plan which has been strongly shaped by the CPCA's Local Growth Plan to promote a co-ordinated approach to economic and housing growth. Huntingdonshire has limited brownfield land available for redevelopment. The largest brownfield site is Wyton Airfield which is included within the North Huntingdon Growth Corridor; this builds on the approach int he previous local plan of allocating Alconbury Weald as this too was brownfield land. There are limited supplies of smaller brownfield sites across our towns and villages with many of those available also being proposed for allocation or already having planning permission for redevelopment. • Environmental and biodiversity impacts: these are all considered through the Habitats Regulations Assessment which includes consideration of cumulative and individual impacts with recommended changes being incorporated into the local plan. Additional assessment was commissioned to consider the potential impacts on SSSIs as well as higher level nature conservation designations. Only one site was found to have high ecological constraints (Huntingdon Racecourse) where amendments have been made to strengthen the requirements for ecological assessment and mitigation. Biodiversity net gain requirements have been restricted to the nationally set target of 10% following further viability testing. • The Infrastructure Delivery Study is an iterative assessment of the infrastructure needs generated by the proposed development set out within the draft local plan. The IDS accompanying the pre-submission local plan will contain details of the infrastructure requirements across all aspects where concern was addressed at overall strategy level and individual site/ settlement level. Many concerns expressed related to actual or perceived current infrastructure deficits which new development proposals cannot reasonably be expected to rectify. Mitigation requirements of proposed development, responsible delivery partners and costs where known are set out in the IDS. The expectation is that sufficient mitigation will be provided alongside the delivery

Main Issues Raised	Council Response / How the Council has taken this into account
	of each proposed site to ensure that it does not worsen any existing infrastructure deficits. Site specific requirements are set out in proposed allocations for strategic sites where provision is expected to be made with in the site, for example for education and healthcare infrastructure; for others this is addressed though infrastructure delivery policies. • The 6 week timetable was necessitated by the transition arrangements deadline set by government. Hard copies of documents were made available through council offices and public libraries and responses were accepted in email and letter format to support inclusion of comments from those who found use of the online portal challenging. • Inclusion of requirements for places of worship within strategic development sites has been added along with their inclusion in the policy on securing infrastructure provision. • High quality design is sought through policy and site allocation requirements; this recognises that design can be modern as well as traditional with the emphasis being placed on reflecting site specific constraints. Non-designated heritage assets are protected though the policy on Conserving and enhancing our heritage assets but a ban on demolition of all pre-1950s buildings is not considered to be reasonable. • The support of Central Bedfordshire Council and Fenland District Council is appreciated and discussions have been ongoing throughout the local plan's preparation to ensure that strategic issues are fully considered. Co-operation with the CPCA on the A141 upgrade will not only assist with supporting growth around North Huntingdon but also offers potential to improve accessibility into Fenland district. • Sport England's support is appreciated and the prioritisation of health, well-being and sustainable communities aligns well with the Huntingdonshire Futures Place Strategy which is strongly reflected through the pre-submission local plan.

Chapter 1: What is this plan about?

Main Issues Raised	Council Response / How the Council has taken this into account
What is the local plan? (31 comments)	

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Support was expressed that the plan is comprehensive and forward thinking, appropriately supports homes, jobs, infrastructure and recreational space, balances growth and rural protection and provides a clear vision for sustainable development. • Support expressed for inclusion of previous requested amendments. • Clearer graphics were sought in the chapter introduction pages • Suggestion of amending the plan period to 2050 and requests to increase housing targets • Concern that the ageing population is not adequately considered • Concern that the impacts of automation and AI on employment are not addressed • A number of responses were repeated here that are addressed in other sections reflecting concerns over the need for infrastructure improvements, environmental concerns and distribution of growth	• Expressions of support are appreciated. • Graphics in chapter introduction pages have been reviewed and clearer replacements incorporated where an equivalent higher quality image was available. • Earlier consultation on the plan period indicated a clear preference for a 2046 end date so this has been retained. • The needs of the ageing population are particularly addressed through policies on design, housing accessibility and adaptability and health and well-being. • As a land use based plan only limited consideration can be given to the impacts of automation and AI on employment; the policy Enabling key clusters and innovation led growth seeks to support modern employment opportunities and employment and skills strategies are required for these and strategic scale proposals to help evolve local skills.
How have we got to our preferred options? (5 comments)	
• Support expressed, including for changes to reflect previously requested amendments. • Objection to growth proposed around St Ives due to absence of essential infrastructure and environmental safeguards including traffic congestion, need for an additional river crossing; flood risk, sluice gates and sewers to be upgraded, additional water supply provision needed; no funded strategy for expanding schools or GP surgeries to meet population growth, lack of investment in utilities provision; no plan for increased waste and recycling capacity; development threat to habitats and landscape character; specialist housing or care needs of ageing population are ignored (repeated in all elements of the chapter)	• Expressions of support are appreciated. • The Infrastructure Delivery Study is updated at each stage of plan preparation and the pre-submission local plan will be informed by a detailed assessment of needs, mitigation requirements, responsible organisations for delivery and costings where known. Provision of many of the forms of infrastructure identified are not within the direct control of the council and strong partnership working has been ongoing throughout plan preparation to promote the co-ordination of housing and infrastructure delivery. Infrastructure such as school and healthcare provision where there is a shortage of places will be funded through CIL and S106 payments to ensure need arising from the proposed site allocations is met. Utilities provision is within the control of private companies with whom extensive collaboration has taken place to support co-ordination of the anticipated levels of development with long term utility planning. Waste and recycling provision will be made through the County's minerals and waste local plan. The pre-submission local plan is supported by extensive Habitats Regulations Assessments and an Ecological Constraints Assessment the outcomes of which have shaped policies and proposed site allocations where potential exists

Main Issues Raised	Council Response / How the Council has taken this into account
	for impacts; in combination with these landscape and visual impact assessments and masterplans are required at a site specific level for strategic sites to address the potential impacts of development through the planning application process. Policies on Promoting a mix of housing, Ensuring accessible and adaptable homes and Supporting specialist housing have all been updated since the preferred options draft and are intended to specifically help ensure the housing needs of our ageing population are met in ways that help people retain independence and remain within their existing communities.
What evidence do we have? (25 comments)	
• This draft Local plan is happening too quickly before some key infrastructure details are in place; the evidence documents relating to infrastructure need to be aligned. • The interim Water Cycle Study (WCS) highlights notable risks relating to water supply capacity and wastewater treatment capability given the level of planned growth. Stronger policy commitments needed on sustainable water resource provision, development phasing, and support for wastewater treatment improvements. • Stage 2 WCS identifies specific risks in places which should be addressed before development proceeds. Policy safeguards should be strengthened • Insufficient detail in the Integrated Water Management Strategy (IWMS) on the risk to Bury Brook and flooding of Kings Ripton. • Natural England express detailed concerns over aspects of the IWMS included questioning the ability of water recycling centres to upgrade to technically achievable limits. They contend that modelling must robustly assess impacts on protected wetland sites and the understanding of cumulative impact of flooding on them. They stress the importance of catchment wide actions. They advised that they are preparing a Diffuse Water Pollution Plan for the River Great Ouse and may be able to share some of it. • Advised that a River Ouse Protected Sites Strategy is being set up as a key delivery vehicle for Local Nature Recovery Strategy; acknowledged it will not be ready for this plan but collaboration encouraged.	• Many evidence documents are iterative with contents being refined at each stage of plan preparation as it evolves. To ensure all evidence is available to be fully considered and reflected in the pre-submission plan the Reg 19 consultation was deferred from summer to September 2026. • A final iteration of the water cycle study has been completed. A statement of common ground has been prepared with Anglian Water and the Environment Agency regarding water supply and waste water capacity; phasing of sites has taken these infrastructure challenges into account when the housing delivery trajectory has been prepared. • Individual sites will be required to undertake site specific flood risk assessments as part of the planning application process as set out in the allocation criteria; these will include potential impacts arising beyond the site boundaries that might be caused by the proposed development. • MLC infrastructure and operations are included within the site specific SFRAs, site allocation criteria and also in the Stage 2 Infrastructure Delivery Study. • The Viability Assessment has considered all strategic sites in detail and has been updated to support the pre-submission local plan. Water infrastructure upgrades are the responsibility of the water authority and sites have been phased accordingly to allow for infrastructure delivery. • A full Infrastructure Delivery Plan supports the pre-submission local plan. • Additional HRA work has been completed including air quality modelling and impacts on the Ouse Washes.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• The Middle Level Commissioners contend that the IWMS and Level 1 SFRA should include MLC and IDB infrastructure and operations. • The baseline viability work likely over-estimates deliverability and under-estimates cost. It omits realistic allowances for water infrastructure upgrades and phasing jeopardising site deliverability. • A full Infrastructure Delivery Plan should be published setting out costs, phasing, funding and delivery responsibilities • Natural England identify a series of detailed points they wish to see amended in the HRA including impacts on the Ouse Washes, air quality sensitivities and distinction between HRA and water framework directive requirements. • Mitigation requirements identified in the Strategic Transport Study will not resolve all congestion issues on the A14/ A141 or in Leighton Bromswold and should be detailed in the Infrastructure Delivery Plan. • The Strategic Transport Study Phase 2 shows the North Huntingdon Growth Cluster is not deliverable or sustainable as it will generate severe congestion, particularly in the Hinchingbrooke area which will suffer disproportionate impacts. They contend the mitigation proposed in the Strategic Transport Study is inadequate and that the impact on the transport network cannot be cost-effectively mitigated. A cumulative transport assessment of North Huntingdon is required and growth restricted until the A141/ A1307 capacity and safety issues are resolved. • Historic England support provision of a Heritage Note but seek additional details along with a topic paper summarising all heritage evidence and its impact on policy and site choices. • Concern that the Local Growth Plan has been incorporated as if it is established planning policy rather than a political strategy and suggestion that the evidence does not lead to this. Requests that the Brampton Cross proposal be removed due to impacts on Alconbury village. • The Viability Assessment assumptions for testing the Sibson Garden Village proposal are challenged, in particular regarding the need for A1 improvements; suggestion put forward that these would be strategic and also address existing challenges so costs should be shared across other sites.	• The Strategic Transport Study focusses on addressing the transport and travel requirements of additional growth promoted, not resolving existing traffic congestion issues. The A14 is the responsibility of National Highways. Cumulative and site specific traffic modelling of sites in the North Huntingdon area has been carried out and will continue to and the A141 is subject to proposal for extensive improvements. Liaison with the CPCA on this is ongoing and a statement of common ground has been prepared. • A Heritage Impact Assessment has been undertaken on all sites with potential impact on heritage assets and any appropriate mitigation identified added into the site allocation criteria. • The Local Growth Plan is an approved strategy of the CPCA and will inform the Spatial Development Strategy being prepared by the CPCA. • Brampton Cross was never included as a proposed site allocation in the local plan as evidence indicated challenges with its deliverability. • The Viability Assessment has considered all strategic sites in detail and has been updated to support the pre-submission local plan. National Highways have advised that the proposed development of Sibson Garden Village requires realignment of the A1 between Wansford Station overbridge and Elton Road (Water Newton) and that this would not be funded through their Road Investment Strategy. • Sapley Park Garden Village has been reissued for public consultation as a potential reserve site. • Evidence base documents have continued to be published as soon as possible after completion for transparency.

Main Issues Raised	Council Response / How the Council has taken this into account
• Advocacy of Sapley Park Garden Village as an additional strategic growth site with suggestion of a partial allocation of a southern phase to address A141 constraints. Concerns expressed over the analysis of strategic growth options in the Sustainability Appraisal and over the viability conclusions implying the site is less viable than Lodge Farm. Suggestion that market absorption concerns can be overcome by careful promotion of a distinctive product type. • Support for the publication of the evidence base alongside this Regulation 18 consultation as it is considered to be good practice, but is not necessarily common-practice by plan-making authorities. It is well thought through and thorough.	
What's the purpose of the preferred options? (9 comments)	
• The Local Plan must ensure that growth does not undermine the environmental integrity, food security, water resilience or settlement character of Huntingdonshire. • The housing target relates to local government reorganisation aspirations and should be challenged • Opinions expressed that consultation has been both adequate and inadequate • The plan is unsustainable without a detailed Infrastructure Delivery Plan, flood mitigation measures, water resource strategy, and environmental protections. Housing growth must be conditional on these commitments. • This is a good, clear strategy	• The pre-submission local plan contains updates to policies and sites based on the latest evidence available to maximise the sustainability of the development strategy and approaches taken. • The Council has not challenged the housing target. • An Infrastructure Delivery Strategy, flood mitigation requirements, water resource strategy and environmental protection all form part of the local plan insofar as they are within its scope and the council's responsibility.
What happens next? (6 comments)	
• The review has not been completed within 5 years of adoption of the current local plan • More time should have been given for consultation as many people will not realise the implications of only commenting on soundness at the next stage • Support that the Local Plan team have fully engaged at every stage	• A review was completed and presented to Overview and Scrutiny Panel and Cabinet in January 2023 which concluded that it was necessary to update the local plan. This was immediately commenced. • Consultation periods for issues, land availability assessments and further issues and options stages of plan preparation were 10 weeks long; preferred options was 6 weeks. 7 stages of consultation/ engagement have been offered throughout Reg 18. • Support is appreciated.
Strategic policies and neighbourhood plans (19 comments)	

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• This document should help those without neighbourhood plans to formulate their individual plans if they wish • A statement would be welcomed that HDC will assist those with a made neighbourhood plan to update it • Concern expressed by some residents that their parish has not produced a neighbourhood plan • A list of strategic policies should be included	• The text on neighbourhood plans has been amended to clarify the support available. • Strategic policies are identified.
What impact will local government reorganisation have? (9 comments)	
• HDC need to ensure the local plan is aligned with the future Spatial Development Strategy • Support for unitary Huntingdonshire to avoid growth submerging rural communities • Impossible to plan for growth until new unitary authority boundaries are known so plan should be delayed	• Preparation of an up-to-date plan prior to the changes resulting from LGR is considered important to establish a plan-led approach during the initial years of the new unitary authority which will then be required to prepare a replacement plan within the first 5 years.

Chapter 2: How to get involved

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (14 comments)	
• More effort needed to contact every household • Previous comments have been taken on-board • Parish councils and the public have been fully informed	• Leafleting every household was explored but unfortunately had to be ruled out on cost grounds. Posters, information leaflets and copies of relevant documentation were shared with all Town and Parish Councils for display locally and electronic versions supplied for local websites. Extensive social media, local newspaper and parish newsletter communications have been shared throughout. • The chapter has been removed from the pre-submission local plan as it will not be relevant after adoption with relevant material being shared separately.

Section B: Our Strategy for Huntingdonshire to 2046

Section B: Our Strategy for Huntingdonshire to 2046

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (11 comments)	
• Need for coordinated evidence and transport modelling with neighbouring authorities due to major regional projects.	• All neighbouring authorities have been engaged throughout plan preparation on cross-boundary issues.

Main Issues Raised	Council Response / How the Council has taken this into account
• Bedford Borough highlight need for cross boundary working especially due to major projects such as Universal Studios, Tempsford new town, Milton Keynes new town, and East West Rail. • Concerns that housing numbers are too high and insufficiently justified, with calls for smaller scale or alternative spatial approaches. • Transport modelling is seen as incomplete, with strong concerns about infrastructure strain and the need for improved sustainable travel options. • Support for the Plan's emphasis on protecting landscapes and biodiversity, while supporting policies that strengthen water efficiency, flood resilience and climate action. • Concern that evidence is incomplete or not integrated, with calls for clearer phasing and robust infrastructure planning. • Health, water and transport bodies broadly support the strategy but highlight specific amendments needed for policy clarity and delivery. • The Lead Local Flood Authority has previously provided comments on the Strategic Flood Risk Assessment (SFRA) and has provided HDC with extensive site-specific comments for surface water flood risk. • County Council's Transport team supports the plan and ongoing partnership working. Requests wording change for A141 mitigation (replace "dualling" with "improvements") and emphasises active travel and sustainable transport requirements. • One comment seeks plan period to be amended to 2026-2046	• Transport modelling is carried out using the Cambridgeshire and Peterborough Combined Authority's model to ensure the wider impacts are taken into account. It is an iterative process and further modelling and analysis has been carried out to support the pre-submission local plan which includes consideration of active travel and public transport as well as highway provision. • Housing numbers are aligned with the national standard methodology to ensure Huntingdonshire proportionately contributes to national housing targets and assists with uplifting the housing supply to contribute to improving affordability. • Support noted • Infrastructure and its interaction with phasing of development delivery is reflected in the Infrastructure Delivery Study and will be reflected in the Local Plan housing trajectory. • Comments on detailed policies are reflected within the relevant chapters. • The plan period has been left as commencing at 2021 as this is the baseline for much of the evidence commenced in 2023/4.

Chapter 3: Our vision and approach to net zero

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (0 comments)	
• No comments	• No comments to address
Our Vision and objectives (98 comments)	
• Many respondents support the overall direction: including the close alignment to the Corporate Plan and Huntingdonshire Futures and balancing environmental, social and economic sustainability; embedding health; prioritising active travel;	• Support is noted and appreciated. • The Vision and Objectives have been amended to provide a succinct vision statement supported by a series of aims and objectives structured around the Place Strategy themes. These include

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
supporting biodiversity; and aiming for net zero by 2050. • A number of developers and land promoters argue that housing delivery is under emphasised, noting only one objective explicitly references housing. They call for clearer, stronger objectives on meeting full housing need, supporting affordability, and aligning with the national pro growth agenda. • Several respondents argue the Vision should extend beyond 2046 – to 2050 or even 2056 – particularly given reliance on large strategic sites whose delivery extends beyond the plan period. • Broad concern that infrastructure—especially highways, education, health, wastewater, and utilities—must be planned, funded and coordinated earlier and more explicitly. Some communities raise specific concerns about capacity and cumulative impacts. • Investment in new infrastructure, such as identified highways improvement schemes, is crucial to the successful implementation of the Local Plan. • Respondents welcome climate objectives but warn against overly onerous requirements, unclear expectations, or reliance on immature technologies. Others want more detail on water quality, flood risk, nature recovery, and valley scale environmental protection. • Some respondents feel the Vision is too long and lacks a direct, logical link to the Objectives. They request a clearer structure connecting Vision to Objectives to Policies. • A number of land promoters note that the Vision does not explicitly reference new communities despite the plan's reliance on them, and argue these should be recognised in the spatial hierarchy and Vision text. • Some parishes request growth that supports rural service centres, improved connectivity, and better local infrastructure and diversification of the rural economy • Protection of agricultural land is urged by some to ensure food security, prevent carbon emissions from development on agricultural land and to protect rural character. • Some respondents want the Vision to explicitly reference Huntingdonshire's strategic economic opportunity, particularly its role within the Oxford	enhanced reference to housing delivery and the growth agenda. • The Vision states that is to '2046 and beyond' with the period to 2046 forming the core of the local plan while recognising that some strategic sites will continue delivering beyond that but recognising that the local plan will have been updated/ replaced by then to provide more up to date guidance for the longer term. • The updated Infrastructure Delivery Study provides enhanced details on planning and funding of infrastructure required to meet the needs generated by the local plan and it in itself forms a basis for infrastructure delivery partners to shape their own longer term investment plans. • The climate aspirations remain but some have been drawn back to national standards due to viability challenges. • New communities are now specifically referenced in the revised aims and objectives and the settlement hierarchy. • Support is maintained for service centres and local service centres including a slight increase in development allocations within them and the villages they support and additional required infrastructure to support this is identified in the Infrastructure Delivery Study. • The strategy focuses a high proportion of development on land in close proximity to existing market towns as was favoured by respondents during earlier phases of consultation. While some of this is agricultural there is insufficient previously developed land available within Huntingdonshire to meet the identified development needs and this approach preserves the more rural agricultural land to support food security and protect its rural character. • Reference to Huntingdonshire's strategic location has been added to the aims and objectives. • Active Travel England focus specifically on walking, wheeling and cycling so this emphasis is retained within the vision, aims and objectives. Reference to other forms of travel have been added to the policy on Facilitating Transport, Travel and Connectivity.

Main Issues Raised	Council Response / How the Council has taken this into account
Cambridge Arc and the ambition to double regional economic output. • There is strong backing for prioritising walking, cycling and public transport—but requests to include equestrians, mobility scooters, and rights of way networks for a more inclusive active travel definition.	
Route to net zero by 2050 (20 comments)	
• General support for the net zero ambition, with small wording fixes and requests for clearer examples of technologies. Suggestions to provide examples of carbon capture/removal technologies. • Broad support for the moderate scenario as realistic and viable, though some object due to site specific concerns or differing views on ambition. Some believe the decarbonisation pathway is unrealistic or, conversely, not ambitious enough to avoid locking in high carbon development. • Concern that additional logistics sites will increase HGV emissions and contradict net zero goals. • Worry that the plan relies too heavily on future, unproven technologies instead of prioritising current, reliable solutions. • Calls for recognition that cars remain essential in rural areas and public transport alone cannot meet local needs. • Desire for higher standards on on-site renewables, water efficiency, and compact growth to support low carbon living. • Need for clearer alignment with national EV transition policy and for new developments to deliver robust EV infrastructure. • Some industry support noting modern logistics parks can contribute positively through design, energy efficiency, and infrastructure. • Highlighting that pumping water in low lying areas has an overlooked carbon cost that should be acknowledged.	• Additional detail has been incorporated regarding carbon capture/ removal technologies. • The balanced pathway approach has been retained reflecting the middle course between the aspirations expressed. • The transport sector is expected to significantly decarbonise due to uptake of alternative fuels and technological developments. • The challenges of reducing car depending in rural areas has been reflecting by amending the ambition to do so where realistic alternatives are available. • Emissions reductions, renewable energy and water efficiency are supported through policies in the Local Plan • The Policy will be refined to align with national requirements and include improved access to charging facilities. • Support noted. • The need to pump water in low lying areas is outside the scope of the local plan; limited growth has been allocated in such areas thought to minimise flood risk.
Key facts about Huntingdonshire (5 comments)	
• Interesting and informative and well laid out • Suggest state the total MW of the turbines and solar farms is confirmed on the picture • The average house price looks wrong • Two comments raised that the A605 is a local single-carriageway road with junctions with small, rural villages and therefore should not be considered a strategic transport connection	• The key facts image has been removed from the Pre-Submission Local Plan as the information within it will continue to date.

5 Preferred Options

Chapter 4: How Huntingdonshire will grow and change

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (38 comments)	
• Many respondents want stronger support for Neighbourhood Plans and a clearer commitment to giving local communities meaningful influence over development decisions. • Some believe the draft plan must focus on creating an environment attractive to major investors if the district is to achieve long term economic ambition. • Respondents note housing figures must reflect national policy while ensuring growth supports affordable housing delivery and does not rely on outdated baseline years. • A portion of respondents support growth in principle, emphasising that residents must recognise the district is a developing area that cannot remain static. • Some highlight that the plan underestimates future job growth and fails to reflect the Combined Authority's ambitions for the North Huntingdonshire cluster. • Many express concern that concentrated growth between Huntingdon, St Ives and surrounding villages risks merging settlements, eroding character, and creating unplanned conurbations. • Parishes ask for mapped landscape buffers to prevent coalescence and protect settlement identity, particularly in the Great Ouse corridor. • The MOD stresses that development must not compromise defence assets, radar, flightpaths or safeguarding zones, especially regarding renewable energy and BNG land. • Some believe the plan relies too heavily on strategic sites and under-allocates growth to sustainable villages that could support local services. Some residents strongly support limiting development in villages to preserve rural identity and landscape qualities. • Stakeholders warn that multiple clustered developments will overstretch infrastructure, harm the Great Ouse landscape, and reduce settlement distinctiveness without a valley-wide strategic approach. • Numerous residents object to further growth proceeding before major road upgrades and flood mitigation measures are secured. • Several respondents support active travel ambitions but state that the plan must better deliver bus improvements and ensure	• The scope of Neighbourhood Plans is set out in national legislation as is the prioritisation hierarchy of neighbourhood plans and local plans depending on order of approval. • A variety of site sizes, types and proposed uses are promoted within the local plan to attract diverse investors. • Housing figures reflect the standard method in place at each point in time with a buffer to provide flexibility and resilience against revisions to the number. • Support for growth is noted and appreciated. • The CPCA's North Huntingdon growth cluster is a longer term economically led plan which this local plan aims to contribute to the delivery of while balancing this with established needs. • Earlier phases of public engagement indicated a preference for major growth to be focused around existing market towns. Specific criteria are included in allocations to avoid coalescence. • A series of priority landscape areas are identified for protection for which the text has been enhanced. • Huntingdonshire DC is strongly supportive of the defence assets in the district and the local plan aims to promote their continued success. The location of airfields and airports was taken into account in the Renewable Energy Assessment in identifying areas of wind energy potential. • Some additional village development sites have been allocated; this is balanced in recognition of the level of opposition to village growth from some. • On-site infrastructure will be provided within the strategic sites to help reduce the need to travel and internalise trips. The Habitats Regulations Assessment considers in combination effects on all high value nature conservation locations. • Housing delivery will be phased to coincide with infrastructure upgrades. The Pre-Submission Local Plan will include a housing trajectory to demonstrate this. Flood mitigation is included within site allocation policies. • Public transport and active travel requirements are reflected throughout policies and strategic site allocations. • Discussions with East West Rail are ongoing but limited site allocations have been included

Main Issues Raised	Council Response / How the Council has taken this into account
development is connected to key public transport nodes. • Respondents note that EWR's confirmed alignment should drive strategic employment and growth planning but is insufficiently integrated into the draft plan. • Several suggest that the plan should explicitly acknowledge the value of the Fens, the Nene Valley and similar landscapes alongside the Ouse Valley.	dependent on this due to its current delivery timetable compared to that for the local plan. • Fen edge woodlands, the Great Fen and Nene Valley are all identified as green infrastructure priority areas.
Policy LP1 - How much development do we expect? (82 comments)	
• Many respondents support using the Government's Standard Method, and several welcome the 10% uplift to provide flexibility and deliver more affordable homes. Some even argue that 32,200 homes should be a baseline, with the Council planning for more to support economic growth, Greater Cambridge spill over, and acute affordable housing need. • Residents and parish councils feel the Government set housing target is too high for a rural district; growth should be limited to what communities "need and want"; expansion should avoid villages; and employment growth seems too low to match housing levels. Other residents support more housing if it helps affordability and provides jobs and infrastructure. • Some state the approach to calculating need is overly complex and unsound, particularly because it: backdates Local Housing Need calculations to 2021 using old affordability ratios, offsets past oversupply, which some argue is not allowed under national policy, applies different standard method figures for different years, causing confusion, uses a plan period starting too early (2021), with some arguing the plan should start 2025 or 2026 when adoption evidence is current. The majority of developers, consultants and planning specialists argue that the minimum requirement should be higher — often in the range of 33,000 to 40,000 homes — depending on plan period and uplift assumptions. The Local Housing Needs Assessment identifies a net need of ~746 affordable homes per year, far more than can be delivered from a 32,200 target calling for the housing target to be uplifted significantly above 10% for this reason alone. • Respondents repeatedly warn that the plan depends too heavily on a few complex sites (e.g., Wyton Airfield, The Lattenburys, Lodge Farm) that	• The housing number is informed by the government's standard methodology with the figure updated to reflect the updated inputs to the methodology published in May 2026. This is treated as a minimum number for which identified allocations should be secured with an amount of flexibility included above this to allow amendments arising from changing circumstances and site specific design. • The standard methodology includes an uplift to address affordability so no further enhancement is made specifically to reflect this. An addendum has been prepared to the Economic and Employment Needs Assessments to ensure that the homes and jobs numbers are aligned. This acknowledges that the jobs target identified in the local plan is only focused on specific sectors with clearly identifiable land requirements and that many other jobs will also be generated. • Inputs to the standard methodology change every year so the approach is considered reasonable in reflecting these variations provided that a reasonable level of flexibility is incorporated to allow for any potential future uplifts during the active lifespan of the plan. The plan period has been left as commencing at 2021 as this is the baseline for much of the evidence commenced in 2023/4. • The strategic approach of including substantial new communities is informed by careful assessment of infrastructure needs and viability assessments while seeking to protect the rural nature of much of the district by allowing for smaller scale growth to maintain existing communities. Locally specific evidence has been prepared analysing the delivery times of sites of various scales. Substantial evidence has been produced and collaboration undertaken with the

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
require extensive infrastructure, face delivery uncertainty, may have long lead-in times (often 8–10 years), and risk early under delivery. • Many emphasise the need for more small–medium sites (50–200 homes) to maintain a five-year supply and sustain delivery throughout the plan period. Some argue this should include more growth in Market Towns, Service Centres, and highly sustainable villages. • Several representations argue that the proposed distribution focuses too much north of Huntingdon and underused sustainable settlements and directs too much development to villages with weak infrastructure, causing travel and sustainability issues. • Some state the strategy is not aligned with the Settlement Hierarchy or Sustainability Appraisal. • A number argue the jobs figure (14,400 jobs) is: not aligned with the Oxford–Cambridge Arc, inconsistent with Combined Authority growth ambitions (doubling/tripling economic output by 2050), based heavily on conservative or "rolled over" assumptions, inadequate to support 32,200+ homes. Some propose increasing the target, particularly to reflect strong demand for strategic logistics, R&D, and technology sectors. Others warn that logistics allocations must be carefully located to avoid transport and environmental impacts. • A repeated issue is the absence of a full housing trajectory at Regulation 18. • Numerous comments highlight that infrastructure evidence is incomplete or insufficient, especially regarding: wastewater treatment capacity, water supply, major transport impacts and cumulative effects of clustered development. • Anglian Water and National Highways both note that thed need for phasing tied to infrastructure availability. • Some respondents — particularly developers on cross boundary sites — argue the plan must consider: unmet need from Bedford (recent plan withdrawal leaves >6,000 home shortfall), economic spill-over from Cambridge, cross-boundary commuting relationships.	site promoters of each new community to ensure they are considered to be deliverable. • Small and medium scale sites have been incorporated where they are considered suitable and deliverable. A small number of additional sites have now been added to assist with the 5 year supply position and the numbers of such sites in the commitments with planning permission has increased through recent application of the tilted balance. • The distribution focuses considerable growth around the north of Huntingdon to support alignment with the CPCA's Local Growth Plan and in recognition that our community's preference was clearly expressed for concentrating growth around existing market towns and sustainable settlements. Limited expansion of St Neots is considered feasible at this time due to the uncertainties remaining over the precise routing and impacts of East West Rail. • The settlement hierarchy has been updated to include the new communities. • The jobs target, including sectoral breakdown, has informed by the Economic and Employment Needs Assessment, an Addendum has now been completed to ensure this figures included in policies are the most appropriate. • A housing trajectory will be completed and incorporated into the local plan reflecting the latest available position and alignment with anticipated infrastructure delivery expectations. • Infrastructure evidence is an iterative process informing and shaping the context of the local plan. An updated Infrastructure Delivery Study has been completed and published and used to inform the Pre-Submission Local Plan and the phasing of housing delivery. • No requests have been received regarding meeting cross-boundary needs. The Statement of Compliance with the Duty to Cooperate indicates the discussions that have taken place with cross-boundary partners throughout preparation of the local plan.
Policy LP2 - Our strategy for change (83 comments)	
• Overall, respondents broadly support the principles of LP2 — focusing development in sustainable, infrastructure served places.	• Support on various topics noted and appreciated. • Support from CPCA noted. • The updated Infrastructure Delivery Study provides enhanced details on planning and

Main Issues Raised	Council Response / How the Council has taken this into account
• The Combined Authority strongly supports the recognition throughout the Draft Local Plan of the ambitions and spatial implications of the Combined Authority's Local Growth Plan. • Comments raise concerns about deliverability, infrastructure capacity, geographic imbalance, over reliance on major strategic sites, and inadequate distribution of growth to other sustainable settlements or smaller sites. • Supporters generally agree with focusing development in sustainable locations and with the hybrid approach of Strategy 2 (transport served sustainable locations). • Support for emphasis on climate change, biodiversity, flood resilience and infrastructure-led growth • Some seek clarification on how much growth each place will take and the exact role of the North Huntingdon Growth Cluster. • Some state transport impacts are under explained and infrastructure evidence needs completing. • Concern that some settlements (e.g., Warboys, Buckden, Brampton, Farcet, Yaxley) receive no growth despite being high order settlements. • Concern that some existing Rights of Way will be converted into inappropriate hard surfaced routes. • Some state there is an over-reliance on the North Huntingdon Growth Cluster, raising delivery and infrastructure concerns as well as market absorption. There needs to be more in other sustainable locations like St Neots. • Some believe the target is too high and others say the plan underprovides and needs a buffer or more flexibility. • Comments that Peterborough Services 1 and The Lattenburys is inconsistent with the strategy • Some believe allocations fail to reflect the settlement hierarchy. • Several representations highlight issues with mis-labelling of use classes (B2 vs E(g)(iii)), overly optimistic assumptions about net developable area and lack of employment land in key service centres.	funding of infrastructure required to meet the needs generated by the local plan and it in itself forms a basis for infrastructure delivery partners to shape their own longer term investment plans. A stepped housing trajectory has been introduced to response to concerns over the need for planning, funding and delivery of essential infrastructure to support growth. A small number of additional sites have been incorporated following the Additional Proposed Site Allocations consultation between May and June 2026. • Support for focus of development noted, this is reflected in the Local Plan Settlement Hierarchy. • Support for climate change, biodiversity, flood resilience and infrastructure-led growth noted. This is reflected through policies relating to climate change, biodiversity, flood resilience and infrastructure. • Exactly 50 sites were assessed and consulted on in the list of higher order settlements where it was observed that no allocations have been made. One site in Brampton is allocated within the North Huntingdon cluster. All others were either less suitable or less deliverable than other sites proposed for allocation. • The Local Plan includes policies for maintaining and enhancing rights of way to be agreed with the County Council. No changes made. • The distribution focuses some growth around the north of Huntingdon to support alignment with the CPCA's Local Growth Plan and in recognition that our community's preference was clearly expressed for concentrating growth around existing market towns. Limited expansion of St Neots is considered feasible at this time due to the uncertainties remaining over the precise routing and impacts of East West Rail. Other elements of growth reflect available sites in sustainable locations based on the sequential flood risk, analysis of other constraints and evidence on infrastructure and viability. • The housing number is informed by the government's standard methodology with the figure updated to reflect the updated inputs to the methodology published in May 2026. This is treated as a minimum number for which identified allocations should be secured with an amount of flexibility included above this to allow amendments arising from changing circumstances and site specific design.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
	• Peterborough Services is well served by infrastructure in terms of the proposal of a logistics park on the A1 close to a major source of employees; The Lattenburys has potential to be well served by public transport using the A1307 and existing services using the A1198 both of which provide linkages into employment and service destinations in Huntingdon and Godmanchester. Thus, each is consistent with the strategy. • Use class references have been checked and revised where needed. The methodology on net developable areas was consulted on in 2023 and revisions made based on responses received at the time. Limited land was put forward for employment uses in key service centres but policy provision is made for expansion of established employment areas into adjoining countryside to consolidate provision.
Policy LP3 - How will infrastructure be provided (56 comments)	
• Many support LP3's intent: ensuring new development provides the on site and off site infrastructure needed, coordinating with service providers, and phasing delivery so infrastructure keeps pace with growth. • A major theme is that key infrastructure evidence (e.g., Water Cycle Study, IDP, WPVA) was incomplete or published late. Parishes and residents request: updated cumulative modelling, re run viability testing and clearer infrastructure delivery schedules before Reg 19. • Respondents highlight that LP3 considers sites individually and does not address cumulative pressures on: A141 / A14 / A1, utilities (water supply, WRC capacity, drainage), flood risk, education, health, emergency services, particularly in the Huntingdon–St Ives–A141 Growth Corridor. Some request a formal Cumulative Impact Zone policy. • Some ask LP3 to require infrastructure before or in step with development, clarify how phasing will work for strategic sites and show confidence in deliverability of major schemes (A141 improvements, new station at Alconbury Weald, education and health provision). • Developers request further clarity on the Viability Study. • Respondents argue LP3 should explicitly cover: rights of way and bridleways, emergency services infrastructure (fire, police, ambulance), community	• LP3 has been relocated into a newly created chapter focusing on how we will enable sustainable growth to ensure sufficient emphasis is placed on how infrastructure in all its relevant forms will be delivered to support the local plan. • The updated Infrastructure Delivery Study provides enhanced details on planning and funding of infrastructure required to meet the needs generated by the local plan and it in itself forms a basis for infrastructure delivery partners to shape their own longer term investment plans. • The updated Infrastructure Delivery Study presents both individual assessments of large sites so that their specific requirements and impact can be seen and the cumulative impact by settlement of sites of less than 550 new homes which may not individually trigger the need for on-site infrastructure provision for a specific element but may do so cumulatively. Large strategic sites will be expected to prepare infrastructure delivery plans to support their delivery (pre-submission policy LP 12). The North Huntingdon chapter introduction specifically promotes a collaborative working approach between developers in the area along with the CPCA, Cambridgeshire County Council and Huntingdonshire District Council (and any successor authorities), and with other statutory partners.

Main Issues Raised	Council Response / How the Council has taken this into account
safety considerations and social infrastructure including community facilities and places of worship. • Anglian Water requests early engagement and explicit references to phasing due to their investment cycles, plus safeguarding of major strategic infrastructure corridors (e.g., Fens and Lincolnshire Reservoir transfer routes). • Many note overlap and duplication between LP3 (provision) and LP4 (securing), suggesting they be merged into one clearer, streamlined infrastructure policy. • Residents highlight that some areas already face traffic congestion, insufficient school and healthcare capacity, flood and drainage limitations and LP3 does not explain how additional growth will be supported. • Developers promoting major allocations (e.g., Wyton Airfield, The Lattenburys, Giffords Park) emphasise their ability to deliver large integrated infrastructure packages but request clearer policy flexibility, exemptions from CIL where they deliver most infrastructure on site and recognition of cross boundary regional funding needs.	• An additional policy has been incorporated on Supporting and Enabling Strategic Infrastructure. • A Stage 2 Whole Plan Viability Assessment has now been completed. • Infrastructure and facilities needed to support new growth are very diverse so a comprehensive list of all forms has not been added to the policy. The following policy does however identify the forms of infrastructure that may be secured through CIL and planning obligations. • Extensive engagement has been undertaken with all utility providers and allocation wording amended to reflect Anglian Water's need for early engagement. • The policies have been kept separate to maximise clarity for Town and Parish Councils regarding CIL asks and proportions. • The local plan is only required to ensure that new growth meets the infrastructure needs that it generated; it is not its role of address existing infrastructure deficits which need to be resolved outside the local plan. • Major allocations have all been subject to viability testing.
Policy LP4 - Securing infrastructure provision (38 comments)	
• Some respondents say LP4 largely duplicates LP3 and should be combined into one clear, streamlined infrastructure policy. • Support for the policy's inclusion of green infrastructure, biodiversity net gain, drainage/flood mitigation, and health infrastructure, stressing the need for adequate long term funding and links to the Local Nature Recovery Strategy. Historic England welcome the inclusion of heritage and archaeology in the list of potential planning obligations. • Developers state LP4 must clearly prevent double counting between Community Infrastructure Levy (CIL) and site specific planning obligations and reference to the three statutory tests (NPPF 58 / CIL Reg 122). Some developers and housebuilders raise concerns that underlying assumptions in the Whole Plan Viability Assessment may be unrealistic—highlighting high per dwelling infrastructure costs, risks undermining affordable housing, and the need for viability review mechanisms. • Several respondents object that the Appendix replacing the 2011 Developer Contributions SPD has not been published, making LP4 unclear.	• The policies have been kept separate to maximise clarity for Town and Parish Councils regarding CIL asks and proportions. • Support noted and appreciated. • The Council will provide a Developer Contributions Appendix to provide clarifications, which will be informed by the Infrastructure Delivery Study and Whole Plan Viability Assessment. • The Viability Assessment has been updated and some policy asks that were previously tested have been removed or reduced to promote viability of key delivery requirements. Consultation with developers and landowners was undertaken during the production of the Assessment to determine reasonable cost assumptions. • The Appendix replacing the 2011 Developer Contributions SPD is being tested and will be informed by the Infrastructure Delivery Study and Viability Assessment. • The updated Infrastructure Delivery Study presents both individual assessments of large sites so that their specific requirements and impact can be seen and the cumulative impact by settlement of sites of less than 550 new homes which may not individually trigger the need for

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
They request that it be released before Regulation 19 and properly tested. • Parishes and residents argue LP4 does not adequately address the cumulative effects of clustered allocations—especially in the Huntingdon–St Ives–A141 corridor—on highways, utilities, water infrastructure, flood risk and social infrastructure. Some propose a formal Cumulative Impact Zone Policy. • Promoters of large strategic allocations (e.g., Wyton Airfield, North Huntingdon Growth Cluster) argue that such sites already deliver most of their infrastructure on site and should not also be subject to CIL. They request clearer acknowledgement that LP4 may not apply in the same way to strategic schemes. • Responses highlight that public rights of way (including bridleways) are not sufficiently recognised in LP4 and should be upgraded and delivered through S106, given their importance for active travel, health, tourism and rural connectivity. • Health bodies request a clear process for calculating healthcare contributions; education teams ask to separate education from other services; and emergency services request explicit recognition of their infrastructure needs. • Suggest the addition of an additional bullet point: Specialist Supported Accommodation for people with care and support needs • Anglian Water asks LP4 to reserve land for the Fens Reservoir and Lincolnshire Reservoir transfer infrastructure corridors running through Huntingdonshire, to ensure future national water resilience.	on-site infrastructure provision for a specific element but may do so cumulatively. Large strategic sites will be expected to prepare infrastructure delivery plans to support their delivery (pre-submission policy LP 12). The North Huntingdon chapter introduction specifically promotes a collaborative working approach between developers in the area along with the CPCA, Cambridgeshire County Council and Huntingdonshire District Council (and any successor authorities), and with other statutory partners. • Rights of way and bridleways are be considered under policies relating to transport and recreation. • Detailed processes will be provided through the Appendix replacing the Developer Contributions SPD in consultation with health and education providers. • Specialist housing is addressed in a separate policy and has not been included as a form of infrastructure. • An additional policy has been incorporated on Supporting and Enabling Strategic Infrastructure with specific reference to the Fens and Lincolnshire reservoirs along with East West Rail and the A141 and St Ives improvement scheme.
Key Diagram (10 comments)	
• General support for the key diagram but some amendments are sought. The Wildlife Trust strongly supports the inclusion of Green and Blue Infrastructure priority areas on the key diagram map, and the use of the Huntingdonshire Nature Network report priority natural landscape areas as the basis for these. • More labelling to help users • All settlements and allocations should be clearly shown on the key diagram • East West Rail safeguarded area should be shown on policies map and also the key diagram	• Support noted. • The Key Diagram has been amended to reflect some of the concerns raised while trying to ensure it is not overly complex. • All market towns, service centres, local service villages and villages have been added to the key diagram, even where no allocations are proposed. • East West Rail safeguarding area has been added to the Policies Map.
Policy LP5 - Settlement hierarchy (76 comments)	

Main Issues Raised	Council Response / How the Council has taken this into account
• Many respondents broadly support the settlement hierarchy as a logical structure for directing sustainable growth. • Several responses highlight inaccuracies or omissions in the Sustainability of Settlements 2023 scoring that they believe undermine correct settlement classification. • Many note that allocated growth does not consistently reflect the hierarchy, with some highly ranked settlements receiving little or no housing. • Respondents argue that a number of settlements—such as Elton, Great Gransden, The Offords, Godmanchester and Alconbury—have been incorrectly categorised. • Some communities object that large nearby allocations (e.g., Alconbury Weald) distort a village's sustainability but are not reflected in the hierarchy. • Many suggest more weight should be given to village clusters or service catchments, where smaller settlements rely on nearby centres. • Numerous representations raise concerns about transport, flooding, drainage and service capacity not being factored into hierarchy expectations. • Responses argue that Market Towns should take a greater share of growth in line with their sustainability ratings and national policy. • Developers generally welcome the new LSV tier, whereas some residents feel the category leads to disproportionate growth pressures. • Some argue that settlements near Peterborough should be ranked higher due to access to major services, employment and transport. • Objections consistently point to an over reliance on strategic sites and insufficient distribution of growth to sustainable villages. • Several responses suggest the hierarchy does not reflect NPPF priorities such as directing growth to transport rich locations or supporting rural vitality. • Some respondents request population and facility based criteria to define what counts as a town, service centre, local service village, village, or hamlet, rather than relying on general descriptions.	• Support noted and appreciated. • Town and Parish Councils were all given the opportunity to check and amend the sustainability of settlement assessments, the assessments are a snapshot in time. • Allocated growth has been informed by a number of evidence base studies and the availability and suitablility of sites submitted to the Council. • Great Gransden has been demoted to a village, no further changes have been made. • Assessments were based on the individual settlements not the wider parish areas, for example Alconbury Weald was assessed separately from Alconbury village. • The hierarchy is designed to reflect the service points with catchment settlements in lower categories. • Transport, drainage etc are addressed through different policies. Allocated growth has been informed by a number of evidence base studies and the availability and suitablility of sites submitted to the Council. • Due to lack of capacity within market towns much growth has been concentrated on sites immediately around them to maximise access to existing infrastructure and services in line with preferences expressed in earlier phases of public engagement. • The Local Plan retains the Local Service Villages Category to reflect the the level of services, facilities and infrastructure they offer and the contribution that they make to their social and economic sustainability and support they provide to nearby villages and hamlets as well as the local economy. • The employment access indicator included an uplift for settlements within 3 miles of higher density employment outside the district, e.g. Peterborough and Wyboston. • Additional sites have been included in village locations following the additional proposed site allocations consultation between May and June 2026. The Growth Strategy applies a small amount of development to help village to maintain the sustainability of their communities which can contribute to their social and economic sustainability and support nearby villages and hamlets as well as the local economy, such as sustaining school provision. This approach is consistent with the NPPF paragraph 83.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
	• Public transport access was included within the sustainability of settlements assessment with higher scores for those with railway station access. • The definition is based on homes rather than including commercial buildings to reflect the resident population using services and community facilities.
How we will decide where a built up area boundary is (22 comments)	
• Many respondents strongly support the built up area definition. • A concern is that the draft plan does not provide mapped boundaries for each settlement. Respondents argue this creates ambiguity and limits the policy's usefulness, particularly where Neighbourhood Plans rely on these boundaries for decision making. • Several technical edits are proposed, including: replacing "30 homes" with "30 homes or commercial buildings" and ensuring boundaries recognise built form across parishes (particularly where neighbouring settlements fall outside Huntingdonshire). • Parishes such as Great Gransden ask that Neighbourhood Plan defined boundaries be carried into the Local Plan, or that HDC work with parishes to align boundaries before Regulation 19. • Developers (e.g., RAF Upwood / Warboys sites) argue the definition may already include their land within the built up area because it relates strongly to adjacent settlements—but they need formal mapping to confirm. • Some respondents particularly support criteria that allow well contained open land or paddocks to be considered part of the built-up area when physically and visually related, enabling modest "rounding off" and organic village growth. • Technical wording improvements suggested, these include: amending "tree belt" to "tree belt and/or hedgerow", fixing typographical issues.	• Support noted and appreciated. • The textual definition approach to settlement boundaries has been retained as it has worked successfully since its introduction in the 2009 Core Strategy; guidance is provided to neighbourhood planning groups wishing to use their local knowledge to define a boundary in their parish. • Additional explanation added of how the categories were informed. • Boundaries within neighbourhood plans form part of the statutory development plan so are not duplicated in the local plan. The boundaries are included on the Local Plan policies map. • Additional text included stating that land allocated for development will form part of the built up area once the scheme is under construction. • Reference to high hedgerows has been added.
Policy LP6 - Market Towns (12 comments)	
• Many respondents welcome the strategy of prioritising Market Towns as the most sustainable locations with strong services, infrastructure, and public transport links. • Several stakeholders argue the plan under allocates development at St Neots, despite its	• Prioritising growth around market towns reflects preferences expressed in earlier phases of public engagement. • Substantial growth is still committed and allocated in St Neots with further included through this local

Main Issues Raised	Council Response / How the Council has taken this into account
strategic location (ECML, A1, A428, Oxford Cambridge corridor) and history as a major growth area. • St Neots Town Council want the town centre boundary extended to reflect modern commercial activity, support investment, and strengthen vitality. • Some developers argue that Market Towns like Ramsey are not given enough growth relative to their sustainability, and propose additional well related edge of town sites. • Several respondents note uncertainty about how LP6 applies to sites adjacent to, or between, Market Towns (e.g., RAF Upwood between Ramsey and Bury), and ask for clearer mapping and definitions, including what counts as an Established Employment Area. • Some respondents ask that LP6 explicitly respect Neighbourhood Plans when development is proposed outside settlement boundaries. • There was some concerns regarding use of prescriptive thresholds and distances such as the 800m walking distance, the 600 sqm impact assessment threshold and requests for more flexible, case by case assessment—especially near transport nodes.	plan; limitations reflect current East West Rail provision and alignments. • St Neots town centre boundary has been reviewed and amended. • Five development sites are proposed around Ramsey and Bury; the area is highly constrained by flood risk and anticipated climate change impacts. • The built up area definition will guide interpretation of the market town policy; land directly adjoining established employment areas is now specifically referenced in the policy. Established Employment Areas are included on the Policies map and defined in the policy 'Protecting and enhancing established employment areas'. • Neighbourhood plans form part of the statutory development plan and will be accorded appropriate weight in decision-making. • The distance and area thresholds are used to ensure clarity.
Policy LP7 - Service Centres (12 comments)	
• Several respondents welcome the role of Service Centres as highly sustainable locations that can support additional housing, employment, and services for their wider rural catchments. • Respondents highlight uncertainty because the built up area boundaries are not published, making it impossible to understand where LP7 applies. • LP7 proposes allowing rural exception schemes up to 50 dwellings. Some developers argue 50 is too restrictive and no upper cap should be imposed. Others argue the cap should be linked to percentage growth (e.g., 15% of settlement size) to maintain proportionality. • A recurring theme is that limiting non allocated development outside built up areas only to rural exception housing is too restrictive. Respondents want the policy to also support: market housing, self/custom build, sustainable windfall sites, where these are well related to Service Centre boundaries and meet other policy criteria. • Some stakeholders want the policy to allow more types of service and employment uses on well	• Support noted and appreciated. • The built up area definition allows for interpretation of where the boundaries are while giving flexibility to reflect changing circumstances across the plan period. • The up to 50 threshold aligns with the medium scale development threshold proposed in the draft NPPF; there is no restriction on the number of schemes that may be proposed subject to demonstrating local need. • Up to 40% of the net developable area of any rural exceptions scheme is allowed for market housing/ self-custom build properties to provide additional flexibility. • Exceptions for employment and other uses are allowed for in a range of other policies and not duplicated here to avoid repetition. Amendments have been made to the class F uses supported. • A sequential test and evidence led approach was taken to site selection. These can be found in the Council's evidence library. • Infrastructure delivery is addressed in the Infrastructure Delivery Study, infrastructure related

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
related land, especially larger or strategic employment schemes, and to align wording with LP34, LP35 and LP36. This includes applying Use Class F consistently and resolving contradictions with other policies. • Questions are raised about why some Service Centres have allocations while others (e.g., Farcet) do not—despite having strong sustainability credentials and developable sites identified in the Land Availability Assessment. Respondents request transparency and evidence on how selection decisions were made. • Respondents request clearer commitments to the timing and delivery of schools, healthcare and community facilities associated with Service Centre growth—particularly for settlements west of the river. • Some representations argue LP7 is overly restrictive and may prevent sites from coming forward even when they are deliverable, sustainable, and needed to maintain land supply. • Within the Use Class Order all those uses fall within Use Class E and change of use within Use Class E is not considered to be development. Policy should explain how the restriction to the sub-uses within Use Class E will be achieved, or altered to reflect the lack of restriction of changing of uses within Use Class E. • Several comments note that wording should be clarified to avoid contradictions across LP6, LP7 and LP8.	policies in the Local Plan and a housing trajectory which is to be included in the Pre-Submission Local Plan which has taken proposed delivery timings of sites into account. • The policy seeks to support a balanced approach to growth with land supply being monitored through the Annual Monitoring Report. • The policy does not prohibit later changes of use but simply states where support will be given. • Wording clarification has been included.
Policy LP8 - Local Service Villages (22 comments)	
• Despite objections to details, several respondents support the concept of Local Service Villages as a sustainable middle tier that can accommodate proportionate development and help maintain rural services. • Some request that settlement boundary maps are published for Local Service Villages arguing the lack of maps makes the policy unclear. • Respondents feel the 30 home cap for rural exception schemes is too high—especially for smaller Local Service Villages—and propose alternatives: reduce to 10 homes; use a percentage cap (e.g., 2% or 5% of existing dwellings); require a size threshold proportionate to village scale. Others argue larger schemes are needed for financial viability but still acknowledge community resistance.	• Support for the concept of adding this category is noted and appreciated. • Settlement boundary map concerns are addressed above. • The cap has been clarified to include a maximum of 1 ha; the number of homes is determined by a local needs survey. • Neighbourhood plans form part of the statutory development plan and decisions will take them into account. • Up to 40% of the net developable area of any rural exceptions scheme is allowed for market housing/ self-custom build properties to provide additional flexibility. • The policy has been amended to allow for growth within the built up area which would reflect the greater sustainability of local service villages and

Main Issues Raised	Council Response / How the Council has taken this into account
• Several respondents urge LP8 to explicitly recognise that, where a settlement has a made Neighbourhood Plan, all development should accord with that plan before LP8 criteria apply. • Developers and planning agents argue LP8 is too restrictive because it only supports rural exception housing on well related land. They want: allowance for market housing, self build/custom build, and modest commercial/employment uses that match settlement scale. They say this would strengthen community vitality and support balanced rural growth. • Request mirroring elements of LP9 (Villages)—particularly the criterion allowing “minor scale” development in certain circumstances—to ensure consistency between village policies. • Some Local Service Villages (e.g., Farcet) question why they have zero allocations, despite strong sustainability credentials (schools, shops, bus routes, links to Peterborough). Respondents argue the plan lacks sufficient evidence to justify treating similar settlements differently. • Examples include Alwalton, where stakeholders argue the village should be reclassified due to proximity to Peterborough and access to higher order facilities. • In Alconbury and other locations near major growth areas, respondents worry LP8 ignores existing development pressures (e.g., Alconbury Weald, North Huntingdon Growth Cluster), leading to fears that Local Service Villages may be asked to absorb more growth than they can manage. • Some respondents note LP8 doesn’t sufficiently address what scale or type of employment, retail, or service development is appropriate in Local Service Villages, and request clearer guidance.	support growth which will maintain population levels to support the retention of these. • A sequential test and evidence led approach was taken to site selection. These can be found in the Council's evidence library. • Classification is broadly based on a consistent methodology, no changes made to Alwalton. • Classification is based on assessment of the individual village not nearby developments,. • Additional guidance on specific uses types added.
Policy LP9 - Villages (10 comments)	
• Some state policy is tightly framed such that most villages would see no meaningful development over 20 years. Settlement boundaries are described as “very constrained,” resulting in little space for growth, and policy criteria are viewed as negative or prohibitive. There is concern this will accelerate the decline of village services, reduce affordability, and prevent young families from staying. • Some say 30 homes is far too large for rural exception schemes in smaller villages, proposing reductions to 10 homes, or tying numbers to	• Settlement boundary concerns are addressed above. • Amendments have been made to the criteria for rural exceptions housing limiting it to an equivalent of 5% growth above the number of homes in the parish to allow for a level of organic growth that reflects the scale of the individual village. • Up to 40% of the net developable area of any rural exceptions scheme is allowed for market housing/ self-custom build properties to provide additional flexibility.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
smaller percentage caps (e.g., 2%). Some call for removing the 30-home option altogether. • Market housing, self-build and custom build should also be allowed on well related land rather than only rural exceptions arguing this would help protect services, address local housing needs, and enable modest, sustainable growth. • Respondents challenge that there should be more allocations in villages. • Several suggest that LP9 should explicitly state that developments in parishes with a made or emerging Neighbourhood Plan must be consistent with that plan, providing local accountability and clarity. • Some respondents praise the recognition that large developments are inappropriate in rural and sensitive areas, expressing support for LP9's restraint where local infrastructure is limited. • Some consider Criterion (c) overly restrictive and want it aligned with the flexible approach for housing—supporting non residential proposals that are well related, small scale, and do not harm countryside character.	• The policy allows for further windfall growth within villages where it is sustainably located and is of a proportionate scale. • Neighbourhood plans form part of the statutory development plan and decisions will take them into account. • The policy is intended to shape growth in all villages, material considerations reflecting individual site circumstances may be presented as part of a planning application. • The approach to development outside the built up area remains limited to the rural exceptions housing approach supported in the NPPF and other countryside uses allowed for in specific policies.
Policy LP10 - Hamlets and Countryside (10 comments)	
• Respondents call for much stronger safeguarding of Best and Most Versatile land—especially Grades 1, 2 and 3a—and ask the council to map these grades clearly, distinguish 3a from 3b, and refuse development unless no reasonable alternative exists. Many also request compensatory soil improvement or food production measures where loss is unavoidable. • Multiple respondents highlight the contradiction between protecting countryside character and allocating major logistics sites, arguing these are inappropriate, harmful to hamlets, unsustainable, and set damaging precedents. Calls include deleting these allocations entirely. • Requests include adding agricultural land grade maps, clarifying landscape designations, and explaining how farmland loss and countryside impacts were assessed. • Anglian Water welcomes recognition that critical water/wastewater assets often lie in the countryside, but they seek clearer, positively framed support for essential infrastructure. • Equine groups argue that requirements for equine use to be "incidental" to a dwelling are unclear, unjustified, and harmful to welfare; that commercial equine uses are inadequately	• Given the very high percentage of land within the district that falls within agricultural grades 1-3 it is not possible to avoid building on this as the only lower grade land is river valleys which are typically at higher flood risk. • Economic evidence indicates a strong need for logistics within the district which need to be located close to the strategic road network, such land by default falls within the countryside. Strong landscaping requirements are imposed on the associated allocations and phasing of sites to minimise impact on the immediately surrounding countryside. • The Predictive Agricultural Land Classification map for England which shows a breakdown of grade 3a and 3 b were first published in October 2025. Agricultural and classification has been added to the Policies Map. • The policy remains framed as 'may support' for a range of uses including essential infrastructure to allow for a balanced planning judgement on the potential impact of a proposal. A new policy supporting and enabling strategic infrastructure has been developed to support essential infrastructure.

Main Issues Raised	Council Response / How the Council has taken this into account
addressed; and that restricting equine activity to settlement edges is unrealistic. • Request to designate agricultural protection zones around key farmland areas (e.g., Needingworth, St Ives gap, A141 corridor) to prevent erosion of settlement separation and protect food production capacity. • Many support LP10's direction but want stronger guarantees on avoiding irreversible countryside harm, including protecting valued landscapes, conserving heritage settings, and resisting inappropriate industrialisation.	• The requirement for equine uses to be incidental to residential property has been removed and the text refocused on requiring adequate land to meet established national welfare practices. • Agricultural protection zones are typically designated as special protection areas on environmental grounds ,such as Portholme, to protect it from intense agricultural practices, as field boundary buffer zones or for pollution control. Multiple proposed allocations include land specially identified to retain settlement gaps to promote the retention of community identity. • Valued landscapes and heritage settings are protected through other policies in the Local Plan to ensure specific guidance is provided.
Policy LP11 - Health and well-being (24 comments)	
• Many respondents welcome the focus on healthy communities, wellbeing, access to nature, and the use of Health Impact Assessments (HIAs) for significant development. • Several respondents say the policy states positive intentions but lacks clarity on how healthy outcomes will be secured—requesting explicit references to social infrastructure, community facilities, and practical mechanisms. • Developers request clear thresholds (e.g., rapid HIA for 50–199 units, full HIA for 200+), criticising the current approach as unclear or unjustified. Others question whether HIAs are needed at all for 100 unit schemes and whether LP11 duplicates national policy. • Some Parishes argue LP11 does not sufficiently address existing high levels of noise, traffic and pollution, pressures on rights of way and already strained health services. They call for stronger protection for communities already under stress. • Respondents highlight that large warehouse sites and HGV activity will negatively affect health through noise, air quality, movement and severance—urging the plan to recognise this explicitly in LP11. • Stakeholders note that "active travel" must include all non motorised users—including equestrians and mobility scooter users—especially in rural areas. • Some call for guaranteed access to high quality green space (e.g., 10 minute access to nature), linking wellbeing to green and blue infrastructure. • Several respondents highlight gaps in local GP capacity and emergency service demand, arguing	• Support noted and appreciated. • Provision of open space, social and community facilities will be secured through the policies on how infrastructure will be provided and securing infrastructure provision; social and cultural facilities have been added to the list of topics that can affect the health and well-being of groups within a community. • The policy has been amended to clarify the thresholds of rapid HIA for 50-199 homes or 2 to 9.99ha of mixed use, commercial or employment uses and a full HIA for 200 or more new homes or 10 ha or more of mixed use, commercial or employment uses; this provides specific local thresholds. • The policy and new development shaped by it are not intended to resolve existing problems but only to mitigate the impact of the proposed development. No change made. • Large warehouse schemes will fall within the requirement to complete a full HIA. • Active Travel England does not include horse-riding within their definition; the policy refers to the HIA demonstrating how the proposal will support and enable active and healthy lifestyles and the supporting text has been supplemented to include opportunities for movement by walking, wheeling, cycling, and horse-riding • The Fields in Trust standards plus a requirement for allotments have been used to inform the Infrastructure Delivery Study and Developer Contributions Appendix; these are significantly enhanced over the previously used standards and

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
LP11 should explicitly link new development to funding or delivery of expanded health services. • Some argue that healthy design is already addressed elsewhere in the plan and in the NPPF, suggesting the policy may be unnecessary unless significantly tightened or refocused.	include open space provision at multiple scales and proximities to new development. • Support for provision of GP surgeries is included within the policies on how infrastructure will be provide and securing infrastructure provision. New communities are required to provide GP surgeries within the scheme. • The policy has been tightened through clarifying more specific thresholds for its application.
Policy LP12 - Green and blue infrastructure (55 comments)	
• Most respondents support LP12's intent, including cross boundary networks, nature recovery areas, and habitat connectivity, including Natural England, The Wildlife Trust and the RSPB. • Many want firmer safeguards for priority landscapes (especially the Great Ouse Valley), nature recovery areas, SSSIs, bat habitats, and long established GI corridors. • North Northamptonshire Council supports the principles of draft Policy LP12 and its intent to make Nene Valley and Folksworth-Elton-Ashton Wold as priority areas as these cross into North Northamptonshire and present an opportunity for cross-boundary enhancements. Greater Cambridge Shared Planning support recognition of and approach to cross-boundary GI initiatives, including Great Ouse Valley and West Cambridgeshire Hundreds which cross the administrative boundary between Huntingdonshire and Greater Cambridge. • Respondents highlight outdated or draft references (e.g., LNRS, Nature Recovery Network maps), missing or insufficient mapping of Priority Areas, PROW networks, river corridors, and strategic gaps. • Developers flag concerns that the policy relies on a future Developer Contributions Appendix/SPD which has not yet been tested for viability, creating uncertainty. • Communities in Alconbury, Ellington, Warboys, and other growth cluster locations feel LP12 lacks clarity on how GI will be protected amid large scale development pressures. • Anglian Water support the policy and request reference to SuDS. • Some comments suggest inclusion of additional GI assets and corridors. Suggestions include adding Ouse Fen, Bury Brook, IDB/MLC waterways, bridleway networks, waterway links	• Support noted. • Policy has now been split into two policies - one policy designating the green and blue priority areas and the second setting out the approach to delivering green and blue infrastructure. • Support and recognition for strategic cross boundary areas of green infrastructure is noted. • References to draft LRNS updated following its adoption in December 2025. • Links to draft Nature Recovery Network updated. • The Developer Contributions Appendix is to be informed by the Infrastructure Delivery Study and Viability Assessment and will be published as part of the proposed submission Local Plan. • Concerns regarding impact on local communities such as those in Ellington, Warboys and Alconbury are noted and policies in the Local Plan seek to address this, either through strategic or development management policies or the relevant nearby strategic site allocation policies. • Reference to SuDs is provided within policies on managing flood risk and managing surface water. • Suggestions for additional green infrastructure corridors are noted, the ones identified in the policy are those from the LRNS and NRN and supported by evidence gathering and stakeholder engagement. • Additional text added to supporting paragraph 4.157 to highlight linkages of green and blue infrastructure to historic environment. • To address Environment Agency, Middle Level Commissioners comments, text added to supporting paragraphs clarifying that a proposal will need to comply with policies LP14 and LP15 regarding water quality, the Water Framework Directive and the Anglian River Basin Management Plan. • Concerns regarding impact of HGVs noted, proposals that result in additional HGV

Main Issues Raised	Council Response / How the Council has taken this into account
to the Great Fen, and ensuring wildlife corridors cross major road and rail barriers. • Historic England and others want GI policy to explicitly safeguard heritage settings and recognise synergies between GI and the historic environment. • Environment Agency state with regards to Point G, the policy must reference the Anglian River Basin Management Plan and Water Framework Directive (WFD) mitigation measures to ensure compliance with statutory requirements under the Water Environment Regulations 2017. • Some highlight risks from HGVs, loss of tranquillity, noise, and landscape change—especially in areas adjoining strategic sites. • Respondents want GI to support varied users: equestrians, mobility scooter users, disabled people; and to include features like benches, wildlife friendly design, and mental health supporting spaces.	movements will be assessed through other policies in the Local Plan. • Criterion g. requires a proposal to maintain and where appropriate enhance the public right of way network. Benefits for physical and mental health highlighted in supporting paragraph 4.157 and additional text added to paragraph 4.158 to identify that access to green and blue infrastructure should be available for all users whether they are accessing these areas by walking, cycling or wheeling.
Policy LP13 - Managing flood risk (43 comments)	
• Concerns raised that site-by-site Flood Risk Assessments are insufficient and fails to address cumulative impacts, particularly where multiple allocations sit within the same catchment. • Objections to the policy wording going beyond or conflicting with the NPPF and PPG, particularly updated PPG (Sept 2025) and lack of clarity about sequential testing and when it applies. • Several representations question whether the Local Plan is supported by a robust and transparent evidence base arguing the plan to be unsound. • Strong support for Sustainable Drainage Systems (SuDS) & Natural Flood Management however calls for stronger wording on performance, long term management and maintenance. • Stakeholders emphasise the need to safeguard vulnerable uses and essential infrastructure, expressing strong opposition to their placement in high-risk flood zones unless comprehensive safety and evacuation measures are assured. • Statutory consultees and technical experts urge clearer land type distinctions, mandatory flood risk assessments in defended areas, and strict standards for floor levels and floodplain compensation to ensure safe, climate-resilient development.	• Cumulative impacts addressed within the policy. No change made. • Policy checked against the NPPF and PPG, minor changes made where applicable. • Policy supported by a Stage 1 and 2 Water Cycle Study and Level 1 and 2 SFRA • Support for SuDS and Natural Flood Management noted, the policy requires applicants to demonstrate ongoing maintenance and management of any necessary flood defences or flood mitigation can be achieved. • The location of vulnerable uses is set out in the NPPF and PPG which will be assessed at planning application stage. • Amendments made to address comments from statutory consultees relating to critical drainage areas, hydraulic modelling, groundwater, water compatible development and land in defended areas • Residual risk will need to be considered as part of a planning application, no change made. • Cumulative impacts of development are addressed in the policy, other issues such as ecology, navigation and water use are covered in separate policies. No change made.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Concerns include drainage, and pumping systems; lack of clear upgrade plans from providers and outdated assets all contributing to flood risk and affecting development viability. • Concerns about the Huntingdon to St Ives Great Ouse corridor regarding floodplain sensitivity and cumulative impacts of development and water use requiring the need for tailored policies taking into consideration navigation, ecology, abstraction, and continuous monitoring	
Policy LP14 - Managing waste water (30 comments)	
• Concerns around Water Recycling Centre capacity and the risk of permit breaches which will effect water quality. Respondents recommend confirming and funding upgrades before approval, and suggest phased development or occupancy limits to prevent sewage flooding and pollution. • Developers highlight Anglian Waters legal responsibility for wastewater infrastructure, and therefore oppose policies requiring them to demonstrate capacity or pay for upgrades. • Objections highlight policy conflicts with national policy and legal standards and could be ruled unsound. Critics particularly urge revision or removal of the requirement to prove wastewater capacity at the application stage. • Calls persist for clearer strategy and coordination, current Water Cycle Studies, a transparent Infrastructure Delivery Schedule with Anglian Water, early stakeholder collaboration, and improved assessment of cumulative and cross-boundary impacts. • Many support strict protection of water, river ecology, and designated sites, raising concerns that more wastewater discharges could lower environmental standards; some suggest delaying housing development if compliance is uncertain. • Respondents request clearer policies, distinctions in wastewater capacities, and stronger guidance for drainage connections. • Stakeholders are concerned wastewater upgrade costs may be underestimated, could hinder site development if passed to developers, and seek more accurate infrastructure cost testing in viability assessments.	• Work is ongoing with Anglian Water and through the Infrastructure Delivery study to identify future measures to ensure growth can be accommodated. Phased development is addressed in the policy and through the housing trajectory. No change made. • Developer response noted. • amendment made to criteria to state "agreement with the Council in liaison with Anglian Water that there is capacity for wastewater treatment and adequate wastewater conveyancing infrastructure a sustainable point of connection to the sewerage network is available to serve the whole development for its lifetime," • The Council has cooperated on an ongoing basis throughout the production of the local plan with Anglian Water and other infrastructure providers to inform evidence to support the local plan and inform the plans of infrastructure providers. • Support noted. The policy includes criteria to address water quality, designated sites and environmental standards. No change required. • Additional criteria included to address non-mains connection and supporting text amended to clarify drains connections and waste water capacity definitions. • Connections to utilities is considered as part of the Local Plan Viability Assessment.
Policy LP15 - Managing surface water (27 comments)	
• Many respondents—including Wildlife Trust, RSPB, Anglian Water, and others—support the	• Support noted.

Main Issues Raised	Council Response / How the Council has taken this into account
inclusion of SuDS, rainwater harvesting, water quality safeguards, and references to designated sites such as Portholme and the Ouse Washes. They welcome the emphasis on not worsening flood risk and ensuring ecological impacts are considered. • Several respondents request clearer definitions or standards, especially regarding: What counts as adequate rainwater harvesting (e.g., water butts vs. large tanks), expectations for SuDS design, infiltration rules, exceedance pathways, groundwater issues, and how to apply the hierarchy in different site conditions • Developers highlight that the National SuDS Standards are currently non statutory and that policy wording should reflect flexibility and align with the NPPF, which allows exceptions where SuDS are inappropriate. They propose amending the policy wording to “have regard to” the standards. • Parish councils and residents emphasise stronger wording to ensure developments do not increase downstream or off site flood risk. Local examples of flooding (e.g., Broughton, Kings Ripton) believed to be worsened by recent development • Multiple comments urge the Council to adopt area wide or catchment based drainage strategies, especially between Huntingdon and St Ives and strategic SuDS networks, Critical Drainage Areas, and blue green infrastructure planning. • Anglian Water request clearer references to their authority where surface water connects to the sewer network, policy clarity that surface water must not discharge to foul or combined sewers, and recognition of the need for developers to demonstrate capacity and fund reinforcement if required. • Some propose a minimum 20–40% reductions in runoff, requirements for SuDS to function during flood events and high groundwater and “No net increase in impermeable area” in key flood zones, EA sign off of drainage strategies before validation of applications, and linking housing occupation to delivery of flood mitigation infrastructure. • Clarify whether the policy applies to all development types. • Correcting references to LLFA roles. • Adding explanations, for example what a Section 19 report is. • More explicit recognition of archaeology impacts from SuDS construction and groundwater change	• Additional supporting text added to address the surface water hierarchy and rainwater harvesting. • The Surface water hierarchy addresses the issue what approach to take when SuDs are inappropriate. Additional supporting text has been added to clarify this. • National guidance specifically notes that development should not increase flood risk elsewhere. No change made. • Reference within the policy and supporting text has now been included to address Critical Drainage Areas if any are designated in Huntingdonshire in the future. • Clarifications in the policy and supporting text have been made to address comments made in relation to combined sewers especially in policy 'Managing Waste Water'. • The policy is guided by the National Standards for Sustainable Drainage systems, applicants will be required to take account standing advice and guidance from statutory organisations such as the Environment Agency and LLFA no change made. • The policy applies to all developments that may impact on surface water, no change made. • Amendments made in reference to comments from the LLFA. • Explanation of Section 19 report now included in the supporting text. • Archaeology is addressed in the Local Plan's Heritage Strategy and policy 'Conserving and enhancing our heritage assets'

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Policy LP16 - Water efficiency (27 comments)	
• Many respondents acknowledge Huntingdonshire is within one of the driest parts of England, there is serious water stress affecting rivers, wetlands, and habitats, and tighter water efficiency standards are justified in principle • Some consultees (e.g., Wildlife Trust, Anglian Water, Greater Cambridge Shared Planning) state 90 l/p/d is appropriate, and in some cases should be lower (85 or even 80 l/p/d). The Shared Standards (2025) show 85–95 l/p/d is viable. Higher savings are required to protect ecosystems. Developers and housebuilders consistently argue 90 l/p/d exceeds Building Regs (110 l/p/d optional, 125 l/p/d baseline), Government consultations suggest 100–105 l/p/d, not 90, 90 l/p/d is not evidenced, not viable, and would make development undeliverable. Some developers ask for a water efficiency range to be applied where robust justification is provided. • Some respondents favour achieving targets via fixtures & fittings, incorporating rainwater and greywater recycling, especially on large sites, providing Water Efficient Design Statements, and requiring higher BREEAM credits for non residential (WAT01–04). Some say rainwater and greywater recycling requires further description. • Suggest the requirement for a separate Water Efficient Design Statement is onerous and could be covered in an holistic Sustainability Statement, which covers a range of sustainability considerations. • Growth should be phased until water supply and wastewater infrastructure is proven • Suggest that the policy applies to all residential proposals • Correct terminology (e.g., “proposed developments” instead of “proposals”) • Make clear the distinction between non domestic and non household • LP16 must link to broader water resource capacity, SuDS, storm overflow risks, and environmental compliance	• Support noted regarding tighter water efficiency measures. • Water efficiency standards have been tested through the whole plan viability report identifying that the policy standards are viable balanced against other policy requirements. • Additional supporting text included to reference how water efficiency can be achieved including fixtures and fittings and greywater recycling. • Supporting text modified to provide flexibility in the requirement for a Water Efficient Design Statement. • Policy applies to new properties only as recommended by the Shared Standards in Water Efficiency for Local plans 2025. No change made. • Phasing of development due to wastewater supply and broader issues regarding SuDs and environmental compliance are addressed through policies on flood risk, managing wastewater and managing surface water. No changes made. • Minor amendments made to the policy for clarity.
Policy LP17 - Approach to renewable energy schemes (14 comments)	
• Support for renewables but concerns about loss of farmland, countryside impact, and effects on residents’ health. • Requests to prioritise solar and battery storage on public buildings before greenfield schemes.	• Support for renewable energy is noted. • Additional sentence added to the introduction to the policy clarifying that energy generation through rooftop solar is addressed in chapter 5 through the design policies.

Main Issues Raised	Council Response / How the Council has taken this into account
• Calls for measurable on site renewable/low carbon heat targets and post occupation performance reporting. • Developers argue the policy should be more positively framed, clarify the planning balance, avoid reliance on Renewable Energy Assessment and clarify that allocated sites are not to be subject of any prioritisation and that the extent of the need for renewable energy generation will not be capable of being delivered through the proposed allocations. • Some ask for removal or clarification of the first bullet point under community led schemes. • Historic England supportive but seeks clearer criteria, stronger caveats regarding heritage, and better mapping limitations explained and references their Advice note 'Commercial Renewable Energy Development Historic Environment'. • Utilities providers and Anglian Water state the policy does not specifically consider renewable energy schemes to provide energy security and resilience for critical infrastructure as well as meeting net zero ambitions. • Natural England state support for excluding deep peat and calls for additional buffers around SSSIs and functionally linked habitats. • Need to account for impacts of turbines and solar on radar, communications, and safeguarded defence installations. • Requests for clearer explanation in the supporting text that mapped areas are starting points, not guarantees, and require site specific impact assessments. • Some seek stronger requirements for on site renewables and water efficiency in all developments. • Respondents highlight missing references to battery storage, the need to support grid capacity improvements and suggestions to utilise heat generated by data centres for district or industrial heating.	• The areas of technical potential are on the policies map; this is stated within the policy and in supporting paragraph 4.251. • Planning balance is identified in the third paragraph of the policy. No change made. The policy provides the Council's strategic approach to renewable and low carbon energy schemes, it does not set out a prioritisation towards allocated sites due to need nationally to decarbonise and reduce carbon emissions so not to undermine any other opportunities for renewable or low carbon energy generation that may arise. • The last sentence and bullet points have been removed from the community led renewable energy and low carbon energy schemes element of the policy. • Criterion b. expanded upon in the supporting text of the policy to include a reference to a list of potential adverse impacts should be considered and addressed. • Reference to Historic England's Commercial Renewable Energy Development Historic Environment Advice Note added to bullet point after supporting paragraph 4.253. Reference to LP53 (Heritage policy) added to clarify that this policy also applies and to avoid duplication of policy requirements. • To address Anglian Water concerns regarding flexibility for renewable energy schemes that can support critical utility infrastructure, an additional paragraph to the policy has been added: 'A proposal for renewable or low carbon energy generating schemes to support critical utilities infrastructure will need to meet criteria b above.' • Natural England support noted, additional bullets added to supporting paragraph 4.253 to require potential adverse impacts be assessed for: protected nature conservation sites; functionally linked land to the Ouse Washes and Nene Washes SPAs; and green and blue infrastructure priority areas as identified in LP12 • Supporting paragraph 4.253 – additional bullet point added to include consideration of impact on aviation safety such as radar, communications equipment, and navigational aids. • The Renewable Energy Assessment is a technical document undertaken by consultants to support the Local Plan and the assessment of proposals, no changes made.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
	• Greater energy and water efficiency are addressed in design policies and in LP16. • No changes made a a result of comments on battery storage, data centres or grid capacity improvements.
Policy LP18 - Transport, travel and connectivity (41 comments)	
• Support for the transport hierarchy, digital connectivity, active travel and reference to key infrastructure schemes including the A141 and East West Rail, enhanced connectivity to rural areas and mitigation to minimise impact on existing areas. • Suggestion that East West Rail should include requirement for active travel connections and aspirations on station design • Suggestions for 'integrating active travel with green space/wildlife corridors; include sustainable links in new development and Transport Assessments to provide specific information, where Habitats Sites and SSSIs are within 200m • Some say more evidence is required on transport, infrastructure, viability and mitigation measures including modelling of growth from surrounding authorities and large developments such as Universal Studios and Tempsford • Concerns that the A141 & St Ives Improvement Plan will not meet the needs of growth resulting from the local plan, impact A1 at Buckden , the A14, A428, St Ives, Huntingdon and existing settlements • Suggestions to split policy into 'Transport and Travel and Connectivity' and 'Strategic Transport Improvements' • Calls for a Travel Plan to be mandatory for significant developments and for rural locations that are not near to services or facilities. • Public Health request to include reference to inclusive and accessible sustainable, active and low impact travel • Comments on whether a site size should be applied to gigabit connectivity whilst others mention this is already covered in Part R volume 1 and volume 2 of the Building Regulations • Suggest including improvements to public transport and A605/A1 crossing, calls for minor amendments on genuine modal options and destinations and sustainable links in new developments • Suggest inclusion of St Ives improvement scheme, Alconbury Weald Railway station in the list of	• Support noted. • The council notes the suggestion of station design, conversations with East West Rail confirm that no station will be located in Huntingdonshire, therefore no action taken. Active travel is addressed in the policy 'Supporting Active and Sustainable Travel' which would be applicable therefore no change made. • Active travel is addressed in policy LP 27 - Supporting active and sustainable travel and multi-functional greenspace in Creating high quality places and spaces (LP 20). No change made to this policy. Impact on Habitats Sites and SSSI addressed through LP 49 Protecting our nature conservation sites. No change made. • Evidence to support the local plan is an iterative process current and forthcoming evidence can, and will, be found on the council's 'Evidence Library for Local Plan Update' webpage. • The Council has completed and is undertaking transport assessments that assesses the impact of growth on the transport network and identifies any mitigation required. • The policy has not been split in two, but a separate policy will be developed to address and enable strategic infrastructure. • The National Planning Policy Framework and Planning Practice Guidance requires Travel Plans for developments that generate significant amounts of traffic to be determined on a site by site basis by the local planning authority, further information on this is provided in the supporting text. No change made. • Amendment made to include reference to inclusive and accessible sustainable, active and low impact travel in criterion • No changes have been made to digital connectivity, the requirement in the policy extends to employment uses to address the rural nature of the district. • Minor amendments made to supporting text to refer to a genuine choice of travel options,

Main Issues Raised	Council Response / How the Council has taken this into account
strategic transport improvements, Safeguarding Direction for EWR. Suggest inclusion of Local Cycling and Walking Infrastructure Plan (LCWIP) 2022 under paragraph 4.265-4.266.	sustainable travel is addressed in LP 27 - Supporting active and sustainable travel. • Policy now includes reference to St Ives Improvement Scheme. A separate policy will be developed to address and enable strategic infrastructure. Reference to LCWIP now included in supporting text.

Section C: Our Development Management Policies

Section C: Our Development Management Policies

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (2 comments)	
• General support for this section with a developer stating their commitment to bring forward sustainable development working alongside the Local Plan.	• Support noted.

Chapter 5: How we will create well designed places

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (16 comments)	
• General support for this chapter and its policies with their focus on good design, place-making, sustainable development, high-quality environments, and adequate infrastructure. • Support for use of traditional architecture in schemes and banning demolition of pre 1950s buildings. • Suggests strengthening policy wording to better address climate resilience, overheating, flood risk, water efficiency, tree planting, and the vulnerabilities of people with care/support needs. • Concerns that some policies are too long and may duplicate national guidance once NDMPs are published; requests clarification on when a Design Code vs a proportionate Design Commitment Statement is needed for major developments. • Recommendations for setting stronger on-site renewable energy/low-carbon heat requirements beyond Building Regulations and mandating post-occupation performance reporting.	• Support noted. • Changes to each policy summarised and recorded in the following rows. • Review of draft NPPF and implications on policies made.
Policy LP19 - Design context and character (34 comments)	

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• General support the design led approach, use of local design guidance, and emphasis on creating high quality, distinctive places. Positive feedback that the Plan draws effectively on community produced documents and local character assessments. • Local design guidance such as HDC's Design Guide should be updated. • Suggestions that LP19 and LP20 should be merged to avoid duplication and form a single definitive design & placemaking policy. • Concerns that LP19 sends users too heavily to SPDs without providing enough detail within the policy itself. • Requests to explicitly reference Neighbourhood Plan design statements in LP19 and ensure schemes respond to them. • Concern that requiring too much detail upfront could create cost and risk barriers. • Requests for clearer guidance that full design codes should not be required at outline stage and should only apply to multi phase or multi developer projects. • Calls to reference national guidance such as Streets for All, Streets for a Healthy Life, Active Travel England guidance, and Cambridgeshire's Active Travel Toolkit. • Requests for lower density development in villages, with larger gardens and more off street parking to maintain character. Developers seek clearer expectations on the level of design detail required at different planning stages, especially at outline stage.	• Support noted. • A compatibility check undertaken in 2021 of the Huntingdonshire Design Guide SPD (2017) against the requirements set out in the National Model Design Guide (NMDG) and National Model Design Code (NMDG), confirmed that the Design Guide SPD meets the requirements of both the NMDG and the NMDC 10 characteristics of a well-defined place and go over and above the minimum requirements. • Policy LP19 sets a general approach to design context and character that all new development must follow and identifies key localised guidance. Policy LP20 provides more detailed design requirements, and only the relevant aspects of this policy would apply. This justifies keeping the policies separate. • Reference to neighbourhood plan design guides/codes have been added to the policy wording. • Aspects of design such as active travel are addressed in other policies within this chapter and references made to appropriate national and regional guidance is made there. • Density of development and design detail required and parking will be determined through policies in the plan. No changes made.
Policy LP20 - Creating high quality places and spaces (23 comments)	
• Broad support for design principles, including Active Design, green infrastructure, water efficiency, accessibility and permeability. • Some recommend combining LP19 and LP20 into one comprehensive place-making policy for clarity and consistency. • Off-street parking provision is currently insufficient; garages are too small for modern cars and new developments are failing to meet parking needs. • Policy should explicitly reference the historic environment, local vernacular, character and materials to strengthen protection and enhance place-specific design. • Requests for low-speed street design, stronger pedestrian/cycle permeability, cycle parking (not	• Support noted. • Policy LP20 provides more detailed design requirements, and only the relevant aspects of this policy would apply. Whereas, policy LP19 sets a general approach to design context and character that all new development must follow and identifies key localised guidance. This justifies keeping the policies separate. • Parking standards and other quantitative standards are not set in policy but instead a design approach is used so proposals can reflect their context and result in the most sustainable approach. Further context is provided in the policy 'Parking provision and vehicle movement'.

Main Issues Raised	Council Response / How the Council has taken this into account
storage), better emergency access provision, and safe refuge spaces. • Clearer phrasing, flexibility (e.g., “feasible / reasonable / viable”). • Calls for lower density edges, height controls, landscape buffers, and avoidance of urbanising features at settlement boundaries. Alconbury PC state policy is too general to address Alconbury’s pressures including cumulative growth effects. • Desire for an updated Design Guide aligned with national design policy; greater community engagement in design; design codes applied at the most appropriate stage. • East of England Ambulance Service request space for helicopter landing. • Typographical corrections identified.	• Policy wording added to address comments, including an addition to criterion a. referring to local vernacular; • Addition to criterion e. requiring cycle permeability between developments; and criterion m. addition of cycle parking as well as storage. • Wording adding to the policy to clarify that only relevant criteria will apply to developments. • Comments made referring to specific locational issues are not addressed specifically, instead these issues can be identified and addressed through the local engagement process that will underpin the development of masterplans. • The Huntingdonshire Design Guide SPD (2017) provides localised guidance which meets requirements of national guidance including both the NMDG and the NMDC 10 characteristics of a well-defined place. • Open spaces which can be used in emergencies would be addressed through open space requirements as a result of development. • Typographical errors corrected.
Policy LP21 - Placemaking for larger scale development (23 comments)	
• General support for the policy’s focus on structured placemaking through masterplans, design codes and parameter plans. • Objections to applying LP21 to 50-unit schemes, with calls for the policy to apply only to developments of 200+ dwellings and for stricter controls on large schemes in villages. Clearer differentiation between outline, hybrid and full applications, and for design requirements to avoid duplicating national Design & Access Statement content. requirements should be proportionate, flexible, and not mandatory at outline stage. • Alconbury PC state policy is too general to address Alconbury’s pressures including cumulative growth effects. Anglian Water supportive of the policy and endorses a requirement to ensure the effective and inclusive consultation has taken place on the preparation of the masterplan including with statutory consultees/statutory undertakers. • Requests that large-scale development prioritises brownfield land, especially in St Neots, before greenfield release. • Concern that development between Huntingdon and St Ives risks settlement joining-up, with suggestions for a green wedge or gap policy.	• Support noted. Policy moved to the strategy section of the Local Plan. • The policy provides flexibility by identifying that the masterplan process be proportionate to the scale and complexity of the site and development proposed and the type of planning application submitted. • Supporting text to the policy identifies that as well as Parish and Town Councils, infrastructure providers and statutory consultees should also be included within local engagement process on masterplans. • Comments made referring to specific locational issues are not addressed in this policy as it provides a general approach, instead these issues can be identified and addressed through the local engagement process that will underpin the development of masterplans.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Policy LP22 - Ensuring amenity for new buildings and neighbours (14 comments)	
• Support for LP22's aim to secure good amenity for new and neighbouring buildings, including daylight, privacy, noise control and environmental comfort. • Respondents say the term "acceptable" is subjective and should be clarified or amended (e.g., "acceptable when taking mitigation into account"). Requests to adjust wording—e.g., "will be, or made, acceptable," "avoiding or mitigating," definition of "notifiable installation," and more flexibility in applying Secure by Design. • Noise/vibration risks should also be referenced in the policy. • Anglian Water requests that the supporting text should include specific reference to wastewater infrastructure facilities such as pumping stations and our water recycling centres where we seek to recommend new development avoids encroachment on these assets for for amenity. • Water pollution and contamination do not belong in a residential amenity policy and should not duplicate other environmental policies. • Suggestions to include pre-commencement delivery plans for energy, drainage, green infrastructure, and phased social infrastructure (schools, healthcare, community facilities).	• Support noted. • Wording unchanged as each proposal will be assessed on their own merits considering their proposed use and context, relevant guidance is referred to in the supporting text. • Noise impacts are addressed in criterion c. of the policy. Vibration added to criterion d. • Text added to identify that wastewater infrastructure facilities such as pumping stations and water recycling centres can impact amenity, so encroachment on these assets should be avoided to ensure high quality of amenity. Reference to the CCC Minerals and Waste Plan has been added. • policy now cross refers to LP14 where water quality is specially addressed. The requirements are not duplicated in LP22. Water pollution is included in the policy for completeness, water policies will apply in applying detailed criteria in meeting water quality standards. • Comment regarding pre commencement conditions are noted, this would likely only apply to larger scale proposals and will be identified and secured through the planning process and in the strategic policies and site allocation policies in this plan.
Policy LP23 - Minimising embodied carbon in new buildings (13 comments)	
• Support for reducing embodied carbon and responding to the climate emergency and net zero ambitions. • Support for presumption against demolition to minimise waste and carbon. • Endorsement of sustainable construction practices. • Typographical corrections identified. • Requests for the policy to remain flexible to accommodate evolving national policy and technology. • Demolition justification should explicitly consider structural soundness. • Risk that overly strict requirements could make conversion schemes unviable. • Desire for clearer emphasis on building reuse, reuse of demolition materials, controlled via conditions or legal agreements. • Calls for including adaptation of historic buildings as part of a low-carbon strategy.	• Support noted. • Detailed requirements regarding demolition have been removed and instead the policy only states a presumption in favour of the re-use of existing buildings with materials being reused or sustainably disposed of where demolition does take place. This is to overcome viability concerns and also reflecting that many forms of demolition are covered under permitted development rights. • Typographical errors corrected. • Policy merged with policy on operational carbon. As such, the requirements for all new homes and buildings to meet at least the national energy efficiency standards at the time. Also, the design principles to maximise energy efficiency have been incorporated into this policy.

Main Issues Raised	Council Response / How the Council has taken this into account
Policy LP24 - Minimising operational energy consumption in new buildings (17 comments)	
• Broad support for reducing operational energy use to address the climate emergency, net-zero ambitions and fabric-first, energy-efficient design approaches. • Endorsement from several respondents for alignment with BREEAM “Very Good” for non-residential buildings but some consider national standards should be used instead. • General agreement that improving building performance is essential and consistent with Future Homes Standard direction. • Future Homes Standard not yet finalised—policy wording may need amendment once details are confirmed. • Concern that criteria applying to all development may be excessive. • Clarification needed on renewable energy “preferably on-plot”, implications for viability and how off-site solutions could be conditioned or secured through S106. • Need to ensure modern construction does not interfere with connectivity (e.g. broadband, phone signal). • Cross-reference with LP16 Water Efficiency suggested to maintain BREEAM water credits. • Clarification needed on where BREEAM applies—non-occupiable buildings may fall outside its scope. • LP24 may become redundant once national Future Homes Standard and Future Building Standard are implemented. • Requests to remove or reword requirements so they only support developments that exceed building regulations, not mandate them. • Emphasis on need for flexibility to adapt to evolving national policy and technology.	• Support and concerns noted. • To ensure compliance with the emerging NPPF regarding energy efficiency standards, reference to BREEAM standards removed and instead national standards will be used to assess energy efficiency on non-residential buildings. • Policy merged with the proceeding policy to provide a single policy that addresses embodied and operational carbon. See changes above also.
Policy LP25 - Making existing buildings more energy efficient (7 comments)	
• General support for measures to make existing buildings more energy efficient to address the climate emergency. • Historic England recommend that reference is made to the new Historic England guidance Adapting Historic Buildings for Energy and Carbon Efficiency. • Policy wording could be strengthened rather than saying 'should'.	• Support noted. • Reference added to supporting text to Historic England guidance note 'Adapting Historic Buildings for Energy and Carbon Efficiency'. • Policy wording amended to require applicants to consider opportunities to improve energy efficiency using the Council's technical advice note for Environmentally Sustainable Design and Construction.
Policy LP26 - Supporting carbon capture through nature (14 comments)	

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• General support for policy and importance of carbon capture through nature and protecting and enhancing natural carbon sinks (e.g., existing woodland, peatland, soils) is essential for long-term sequestration. • Clear definitions of "carbon sinks" within the policy text, not only in supporting text. Mature habitats must be prioritised because carbon benefits take years to accrue. Policy map should show location of carbon sinks, peat soils, and sensitive landscapes to guide decision-making. • Some request the policy be removed entirely due to conflict with viability or other regulatory processes. • Historic England support policy but seek reference is made to archaeology and historic landscapes at the end of the last sentence and in supporting text. • Natural England identify tree planting on peat or species-rich grassland can damage existing carbon stores instead of enhancing them, suggesting wording that peatland tree planting will not be supported unless it protects or enhances the carbon sink. • Anglian Water recommend reference Future Fens: Integrated Adaptation, the local nature recovery strategy, and the Fens Climate Change Risk Assessment for strategic context. • Requests to clarify the final paragraph, particularly distinguishing between species-rich grasslands, floodplain meadows, and species-poor grasslands to avoid inappropriate habitat conversion. • Potential overlap and conflict with BNG, open space, play space and amenity requirements, especially where carbon capture measures require land-take. • Concerns that compulsory inclusion of tree planting, SuDS, and green roofs could become a tick-box exercise and may not be appropriate on all sites.	• Support noted. Policy moved to Chapter 4 How we will enable sustainable growth • Policy amended to identify habitats that are carbon sinks. • Policy shortened and simplified to reduce viability impact on developments and for ease of implementation. • Reference added to archaeology and historic landscapes to the supporting text. • Clarification in supporting text that peatland tree planting will not be supported unless it protects or enhances the carbon sink. • References to Future Fens: Integrated Adaptation and the Fens Climate Change Risk Assessment made within supporting text. • Policy refined to provide clarity and avoid overlap with other policies
Policy LP27 - Supporting active and sustainable travel (22 comments)	
• General support for the principle of improving walking, cycling, public transport and inclusive mobility across all age and ability groups. • Strategic-scale developments are highlighted as well-placed to deliver significant active-travel improvements. • Identify infrastructure requirements, such as secure bike storage and safe, direct active-travel	• Support noted. • This policy sets the detailed aspects of parking and vehicle movement and works alongside strategic policy LP 18 Transport, Travel and Connectivity which sets the strategic approach to transport, travel and connectivity. • Reference to safe routes included within criterion c and care and support needs included in criterion d.

Main Issues Raised	Council Response / How the Council has taken this into account
routes and reference to those with care and support needs • Strong emphasis on ensuring connections to existing pedestrian, cycle and equestrian routes, with clarity about standards, lighting, safety and natural surveillance. • Ensure equestrians are consistently included. • Recognition that in rural areas, car reliance will remain for some trips, but active travel can still form part of multi-stage journeys. • Concerns that the policy does not fully address constraints created by major roads such as the A1(M), A14, and A141, which create barriers to safe movement or does not address cumulative traffic impacts, especially in places like Ramsey, Bury, and Alconbury and Alconbury Weston. • New growth areas (e.g., Brampton Cross, North Huntingdon Growth Cluster) may worsen traffic and reduce active-travel safety unless stronger requirements are imposed. • Some object to requiring formalised rights of way and all routes being built to adoptable standards, arguing this goes beyond what is reasonable or necessary. • Requests for flexibility so developers are not over-burdened by obligations exceeding national policy. • Should consider impacts on protected sites when routing active-travel connections. • Suggestions to reference key guidance documents including Cambridgeshire Active Travel Toolkit, LCWIP, DfT LTN 1/20 and Local Transport & Connectivity Plan • Requests for consistency in definitions of active travel and sustainable transport across the document. • Typographical corrections identified.	• The policy guides the principle of how and what infrastructure may be required. Infrastructure requirements will be identified through the Infrastructure Delivery Study and through the planning process, as well as be identified by Parish and Town Councils. • Design policies such as LP20 Creating high quality places and spaces will also apply to ensure that routes are well designed and safe. • The policy refers to all users, for example criterion b. • The policy maintains the requirement for routes to be provided to an adoptable standard, no change made • Concerns regarding over burdening developers are noted, the policy does state 'as appropriate to the development proposed' which provides flexibility, no changes made. • Concerns regarding protected sites are noted, policy LP49 Protecting our nature conservation sites would also apply where a proposed route may impact one of these sites. • Key supporting documents are referenced in the supporting text to the policy. • Sustainable travel defined in the glossary, expanded to included active travel. • Typographical errors corrected.
Policy LP28 - Parking and vehicle movement (24 comments)	
• General support for the principle of context-specific, evidence-led parking design, including flexibility linked to proximity to sustainable transport. • Support for aligning with the Huntingdonshire Design Guide and national disabled-parking guidance, provided this does not confer undue policy weight on SPD documents. • Recognition that flexible standards can help reduce car dependency in well-connected areas. Should set maximum car-parking standards.	• Support noted. • This policy sets the detailed aspects of parking and vehicle movement and works alongside strategic policy LP 18 Transport, Travel and Connectivity which sets the strategic approach to transport, travel and connectivity. • Parking standards and other quantitative standards are not set in policy but instead a design approach is used so proposals can reflect their context and result in the most sustainable approach.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Cycle parking standards are too high and lack evidence or viability assessment. Provision should accommodate different cycle types, be secure and well designed. • Requests for scooter parking to be included beyond specialist housing. • Concerns that LP28 does not address existing congestion or cumulative pressures on the A1(M), A14, A141, Ramsey and Bury, and Alconbury and Alconbury Weston. Requests for the policy to give stronger protection for communities already experiencing high traffic levels, particularly where large developments may exacerbate conditions. Some call for explicit highway-efficiency considerations, such as avoiding new junctions that degrade traffic flow and supporting grade-separated junctions on key strategic routes. • Policy wording to ensure sufficient width and design for emergency vehicles, refuse vehicles, and frequent health-care and carer visits to specialist housing. • Calls for improved guidance on assessing parking demand using local census data, restricting tandem parking on main roads, specifying parking provision for schools, and for nurseries and apartment blocks.	• Cycle parking standards are informed by the Department for Transport Cycle Infrastructure Design – Local Transport Note 1/20. Additional criteria and supporting text has now been included to reflect different cycle types. • Reference to mobility scooters included in the supporting text. No change made • Reference to safety and movement including impeding vehicle and pedestrian movement included in the supporting text. No change made. • Reference to emergency vehicles included within the supporting text. No change made. • Guidance on parking types and design including for apartment blocks is included in the Huntingdonshire design guide which is referenced in the policy and highway safety is identified in criterion a which is designed to prevent highways issues from tandem parking on main roads. • Additional criteria and supporting text included to address communal parking requirements. No reference has been made to local census data, proposal that do not include minimum cycle parking standards will addressed on a site by site basis as part of the planning application process.
Policy LP29 - Electric vehicle charging points (18 comments)	
• General support for policy and measures to address the climate emergency. • Criterion b and c should only apply to major developments. • Some consider a duplication of national policy. • More information required on how policy applies to provision in shared communal areas. • Consider establishing shared EV charging points for emergency service vehicles and also future technologies. • Historic England supportive of the policy but consider it should also include reference to the need to minimise impacts on heritage assets and their settings. • Cambridgeshire County Council supportive and suggest reference to Cambridgeshire and Peterborough Electric Vehicle Infrastructure Strategy. Provision must be off-street i.e., on driveways or in car ports / garages. • Add ' or successor documents' to policy.	• Support noted. • Requirement for electricity vehicle charging points does not apply only to major developments so therefore this restriction should not apply to the policy. • Further information on electric vehicle charging in shared areas is addressed in Part S of National Building Regulations and supplemented by criteria a to c of the policy. • A proposal for emergency services charging points can be included within a development proposal reference now made also in supporting text to the policy. • Reference to minimising impact on heritage assets and their settings added to policy. • CCC's On-Street Electric Vehicle (EV) Infrastructure Policy document from December 2023 and the Combined Authority's Electric Vehicle Infrastructure Strategy from 2024 added to the supporting text of the policy. • 'Or successor documents' added to the policy so that any changing standards in EV requirements from Building Regulations can still be applied

Main Issues Raised	Council Response / How the Council has taken this into account
	including new or emerging requirements or technologies.
Policy LP30 - Preventing and reducing air pollution (9 comments)	
• General support for the policy and its ambitions. • Criterion d should be more precise and define significant proportion. • Natural England advise adding that proposals which have the potential to increase Annual Average Daily Traffic (AADT) on roads within 200m of protected sites should also be required to submit an Air Quality Assessment. • Current wording is very stringent and will be difficult for practitioners to apply in practice. • Policy states that an assessment should assess how biodiversity could be affected, it should be made clear that this is required specifically where sensitive ecological sites have the potential to be impacted. • Ellington PC consider policy protections are broad and are not specific enough for Ellington. • Warboys PC requests that detailed site proposals for nearby developments include: protection of the Warboys Clay Pit SSSI and surrounding habitats; air quality monitoring and mitigation in accordance; and contributions to local green and blue infrastructure. • Alconbury PC state policy is too general to address Alconbury's pressures including cumulative growth effects.	• Support noted. • No changes made to 'significant proportion' • Additional criterion to include when an air quality assessment will be required to include within 200m of internationally protected nature sites. • Policy worked on with Environmental Health colleagues to ensure a practical policy. • Additional supporting text added to address how biodiversity can be impacted by poor air quality. • Comments made referring to specific locational issues within parishes are not addressed specifically as this policy provides a general approach, more detailed policies on air quality impacting local areas can be addressed through planning applications made and/or in neighbourhood plans.
Policy LP31 - Preventing and reducing ground contamination and groundwater pollution (7 comments)	
• General support for the policy and its ambitions including from Environment Agency. Anglian Water supportive especially regarding ground water. • Define what the relevant applications would be. • Policy should be simplified and reworded in particular the first paragraph should clarify that proposals are not expected to investigate suspected contamination on land outside their ownership/the development site.	• Support noted. • Application of policy is dependent on location of sites and the existing land conditions rather than application types. • Policy worked on with Environmental Health colleagues. It is reasonable to include assessment of surrounding land conditions that may impact sustainable development.

Chapter 6: How we will support a strong local economy

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (13 comments)	

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Strong support for logistics and strategic distribution along strategic road network • Concern over logistics sprawl • Planning agents objecting through supporting documents to overall logistics need suggesting this should be higher and that unit size is increasing • Suggestions for additional sites from planning agents including Buckden 4 Tin Lid, Brampton (as referenced in the LAA). • Transport improvements required to link rural residents with new jobs especially at Wyton and Ramsey • Need to clear definition of large strategic sites and smaller local sites • Support emphasis on supporting rural enterprises, improving economic opportunity and sustainably located sites • Would like flexibility to recognise retail and community hubs that are not designated as local centres	• Support noted • The Local Plan provides Strategic Employment Allocations which are sequentially preferable, further logistics development will be guided by policy LP 36 to prevent sprawl. • Logistics need supported by the Economic and Employment Needs Assessment. • Buckden 4 was considered inappropriate for development as it is wholly within a Minerals Development Area, no further information has been provided to enable additional assessment. • Huntingdonshire's Transport Strategy assesses local plan growth with suggested mitigations where required. • The Council has provided examples of strategic and small logistics sites and unit sizes in supporting text to policy LP 36. • Support noted • Retail and community units that are not in local centres are now addressed in a new policy under the heading Services and facilities outside designated Centres..
Draft Policy LP 32 - Protecting and enhancing Established Employment Areas (18 comments)	
• Broad support for protecting, expanding and intensifying EEAs, including Minerva Business Park. Support from CCC Transport Strategy Team. • EEA expansion should only apply where an existing business is expanding. • Council should identify which EEAs are suitable for growth. • Suggest changing “immediately adjoining” to “well related” to allow for logical extensions. • Support for a brownfield first approach, especially in St Neots. • Need clarity on how existing commitments (e.g., Alconbury Weald) will be considered when new commercial sites are proposed for example as part of the Growth Cluster which may not be necessary. • Concerns about cumulative impacts (traffic, noise, lighting, HGVs, landscape). Policy needs guidance for villages which have major employment areas (e.g., Alconbury) • Need clarity on restricting sub uses within Class E. • Ramsey 1 seeks clarity on classification as expansion vs. separate site.	• Support noted • The NPPF requires local plans to take into account local needs and wider opportunities for development and build on its strengths. Policy LP32 allows for the expansion of EEAs in sustainable locations where the benefits of agglomeration can foster stronger business benefiting the wider workforce. No change made. • EEAs currently suitable for growth are identified in Appendix C of the Economic and Employment Needs Assessment. Some of these sites have been taken forward as employment allocations. This has been clarified within the supporting text. • Agreed, text has been amended from “immediately adjoining” to “well related” to allow for logical extensions. • The policy allows for the redevelopment of intensification of EEAs and policy LP 34 directs new business growth first to EEAs before considering countryside location's. No change made. • See comment above. In addition policy LP 35 'Enabling Key Clusters' points to an allocations and EEA first approach (which includes Alconbury Enterprise Zone) when considering new cluster development. No change made.

Main Issues Raised	Council Response / How the Council has taken this into account
• Objection to removing Meadow Lane Business Park; should remain an EEA or be reassigned. • Proposal to allocate Land north of B1043 (Alconbury 6) which has been positively assessed.	• Cumulative impacts (traffic, noise, lighting, HGVs, landscape) are addressed throughout the Local Plan and will be assessed on submission of a planning application. Policies include but are not limited to those addressing design, amenity and transport. No change made. • The policy does not prohibit later changes of use but simply states where support will be given. • Clarification will be made in the supporting text of the policy to identify that once developed employment allocations adjacent to EEAs will be considered part of that EEA, these would include for example allocations Ramsey 1, Kimbolton 2. • Meadow Lane Business Park has undergone redevelopment to non-employment uses. The EENA found that it is likely not a suitable candidate for the promotion of additional or new employment space. As brownfield land alternative uses can be assessed through other policies in the Local Plan. • Alconbury 6 (in the LAA) was considered inappropriate by the Highways Authority and is therefore considered inappropriate for development. No change made.
Draft Policy LP 33 - Expansion and diversification of rural businesses (4 comments)	
• Should cross refer to Draft Policy LP17 as renewable energy projects as part of farm diversification. • Needs clear evidence of existence of a rural/farm business to prevent conversion of farm buildings to residential. • The Transport Strategy Team request sustainable connections to key towns and adjacent villages. • Need extra text to ensure that it does not have harmful effects on residential communities – roads, water, electricity	• The plan should be read as a whole and renewable energy is addressed through LP 17 which would include development on farmland. No change made. • The requirement for evidence is covered in the supporting text. No change made. • The requirement for sustainable connections is addressed through policy LP 18 Transport, Travel and Connectivity. No change made. • Impact on residential communities is addressed in the final paragraph of the policy and through additional policies in the local plan relating to transport, water and infrastructure. No change made.
Draft Policy LP 34 - Shaping new businesses in the countryside (7 comments)	
• Amend criterion a to include suitable and viable alongside available land • The policy restricts B8 uses and should address strategic employment sites and only allows for specific uses	• The policy provides opportunity for specific opportunities for new businesses in the countryside where justified whilst ensuring that more sustainable locations are considered in the first instance whilst enabling access to an active workforce and population. No change made.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Need clarity on restricting sub uses within Class E. • Transport impact should be considered	• Supporting text acknowledges that alternative policies were considered for logistics development in the countryside. No change made. • This policy addresses new development in the countryside and not change of use. No change made. • Impact on residential communities is addressed in the final paragraph of the policy and through additional policies in the local plan relating to transport. No change made.
Draft Policy LP 35 - Enabling key clusters and innovation-led growth (18 comments)	
• Clearer alignment with the Local Growth Plan and how existing commitments (such as Alconbury Weald) are factored into assessments of new commercial sites. • Support from Defence Infrastructure Organisation • More permissive support for strategic employment development, especially in rural areas, with requests to define “appropriate locations” more clearly. • Removal or reconsideration of terms such as “exceptional circumstances,” which are seen as inappropriate given their association with Green Belt policy. • Greater flexibility in criteria (particularly c–n), which some consider too rigid and likely to constrain national defence–related development or large-scale schemes such as Brampton Cross that can generate their own workforce demand. • Recommendations include adding reference to available water supply for non-domestic use, providing more detail on Employment and Skills Statement requirements, and ensuring sufficient provision for SMEs. • Some responders also question whether large mixed use allocations must comply with this policy. • Several sites have been proposed for reconsideration or inclusion—such as Former RAF Upwood—and concerns raised about the deliverability of allocations like North Huntingdon 2 and Peterborough Services 1, with alternative LAA sites suggested e.g. Buckden 4, Park Farm, Brampton 7–10 (as identified in the LAA)	• Additional supporting text added to reference Alconbury Weald and the Local Growth Plan. Criteria clarified to refer to the Local Growth Plan or future Spatial Development Strategy • Appropriate locations are identified in the policy and supporting text referring to a sequential approach, brownfield first and location near local population centres. No change made. • Criterion amended to remove reference to exceptional circumstances. • Minor amendments made to some criteria and supporting text. • Reference to water supply added to the supporting text. Detail regarding Employment and Skills Statements is included within the supporting text, no change made. Provision for SMEs is addressed in the supporting text and also through other employment policies in the plan, no change made. • Clarification provided in introduction to note that Strategic mixed use allocations are addressed in Section D Our Development Sites. • RAF Upwood is addressed through LP 32 Protecting and Enhancing Established Employment Areas and allocation policies. Delivery of the strategic employment allocations is confirmed by the landowners and their agents. Outline permission for North Huntingdon 2 was granted on 23 March 2026. Sites Brampton 7-10 were assessed as inappropriate for development in the Council's Land Availability Assessment, as was Buckden 4.
Draft Policy LP 36 - Enabling logistics and distribution (38 comments)	
• Support for dedicated logistics policy to reflect market need and requirements around utilities, sustainability and design. Anglian Water	• Support noted. • Added additional text in the policy and supporting text to refer to ancillary uses.

Main Issues Raised	Council Response / How the Council has taken this into account
specifically reference criteria g and Public Health (CC) accessible workforce. • Mixed views on the policy's flexibility: some say it is too permissive, others that it is not flexible enough and should allow more employment land, B2 uses, and additional sites. • Objections to specific allocations (e.g., Peterborough Services) and calls to add or reconsider sites: Fenstanton Galley Hill (for last mile logistics), Buckden, Brampton, RAF Upwood, Hungary Hall Farm, Park Farm (for allocation). • Concerns that the sequential and EEA-based "last mile" approach is unsupported, inflexible, and undermines deliverability. Request for cargo bikes to be included (CCC). • Desire for clearer policy definitions, including around unacceptable impacts, utilities, net zero and criteria wording (notably e, g, h and i). • Objection to anchor-tenant requirement as too restrictive and challenge sequential and brownfield first approach • Disagree with last mile definition, suggest requirement for annual monitoring, and recognition of Alconbury Weald's capacity. • Criticism that prioritising SRN access biases site selection toward countryside locations. Others think it should be defined as within a short distance to A1(M), A14 & A428" ideally 10 minutes and other question impact on HGVs in rural areas. • Request requirement for alternative evidence to justify additional development if a Spatial Development Strategy is not completed within 24 months. • Should make clear that sites should not be disaggregated	• Responses to allocation Peterborough Services is addressed in the table 'Villages' under 'Haddon 1/ Peterborough Services'. Delivery of the strategic employment allocations is confirmed by the landowners and their agents. Sites Brampton 7-10 were assessed as inappropriate for development in the Council's Land Availability Assessment, as was Buckden 4. Hungary Hall Farm was put forward as a residential-led mixed use development and therefore was not considered as a strategic logistics and distribution site. Fenstanton Galley Hill has now been included within criterion a and supporting text. • Last mile logistics is a permissible policy to allow for more sustainable delivery options within the District's larger population areas and meet the requirements of the NPPF paragraph 86 e by providing a diverse portfolio to ensure resilience as noted in the evidence base. Reference to cargo bikes and other methods of delivery have now been included within the policy to reduce emissions and encourage sustainability. • Clarification of policy criteria has been added to the supporting text to address comments on utilities (g). Clarification on adverse impact regarding criterion e is present within the supporting text. No change has been made to the net zero requirement, viability evidence indicates scope for seeking higher environmental requirements within the distribution sector and employment evidence recommends robust mitigation measures including on-site measures for carbon reduction. • No change made to requirement for an anchor tenant, employment evidence justifies this requirement to limit logistics sprawl, location and accessibility . • Last mile definition supported by the Economic and Employment Needs Assessment, monitoring requirements are set out at the end of the policy and Alconbury Weald is taken under consideration in policy LP35 and 32. No change made. • The policy provides a balance for new strategic development and accessible employment opportunities as noted in the employment evidence. Additional requirement included for a HGV routing plan to reduce transport impact on surrounding areas.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
	• Supporting text of the policy outlines supporting evidence required to justify development, no change made. • A definition of sites of national and regional scale now included in supporting text for clarity to address disaggregation.
Draft Policy LP 37 - Helping tourism and recreation in the countryside (4 comments)	
• Support for inclusion of cycling and walking, heritage (from Natural England), not adversely impact designated sites (Natural England). • Requested that references to a 'regional park' in paragraph 6.100 are replaced with 'nature and recreational destination' to reflect the Fens Reservoir.	• Support noted • Paragraph 6.100 amended as requested.
Draft Policy LP 38 - Defining our Retail Hierarchy (5 comments)	
• No shops provided in new developments in Ramsey and no new shopfronts • Suggest changing the floorspace threshold of 600sqm for new Local Centres • Larger supermarkets in excess of 600 m2 could be appropriate at a local centre to help make settlements more sustainable. Suggest that these are allowed if they result in no adverse impact elsewhere to any other market town or local service centre	• The purpose of this policy is to set out our retail hierarchy as required in NPPF paragraph 90 to assist with promoting the concentration of retail and other main town centre uses within existing town centres in preference to edge or out of centre locations. No change made. • The policy allows for other main town centre uses exceeding 600m2 in new local centres if it is justified by a comprehensive retail impact assessment. No change made. • The Council evidence supports the retention of the 600sqm threshold to minimise the impact on the vitality and viability of market towns. No change made.
Draft Policy LP 39 - Promoting Town Centre Vitality (5 comments)	
• Request enlargement of St Neots Town Centre Boundary to allow for growth • Reconsider 600 sqm floorspace threshold as some centres include units larger • Should reference retention of historic shop fronts (Historic England) • Support for limiting hot food takeaways, or disallowing them completely (Public Health) • Remove criterion n 'is within a defined Local Centre of a Market Town' and add to preceding paragraph • Paragraph 6.121 text infers that the sequential test would apply outside of a PSA. That is incorrect	• The Council have reviewed the Town Centre boundaries as part of the update to the local plan and amended the St Neots boundary. • The Council evidence supports the retention of the 600sqm threshold to minimise the impact on the vitality and viability of market towns. No change made. • Historic shop fronts are covered in the Local Plans Heritage Strategy and Policies, no change made • Support noted • Amended to remove criterion 'n' and revise preceding paragraph. • This is correct if the development is for retail, no change made.

Main Issues Raised	Council Response / How the Council has taken this into account
Draft Policy LP 40 - Supporting Local Services and Facilities (11 comments)	
• Suggest class E(a) and possibly class E(c) should be allowed in a local service village or village • Support for limiting hot food takeaways, or disallowing them completely, suggest a supplementary planning document to support this (Public Health). • Sui Generis uses such as theatres, cinemas, music venues and pubs should be included and protected uniformly in both Local Centres and other areas. • The loss of facilities should be a standalone policy • The policy should also apply to new Local Centres within strategic allocations • 600sqm too restrictive further expansion could be justified by an impact assessment • Education services recommend strengthening supporting text to emphasise that schools should in most cases be located near the communities they serve, not only where large land parcels exist. – clarification provided in supporting text • NHS bodies argue that policies preventing loss or change of use of healthcare facilities can hinder estate transformation and reinvestment – supporting text amended to reflect	• The policy does not prohibit these uses but applies a sequential approach to their location. This has been moved into a standalone policy for clarity • Support noted. • The approach to Sui Generis uses within the main town centre use category has been clarified in the supporting text, it is also in policy LP 38 Defining our retail hierarchy. • The loss of facilities outside designated areas is now addressed as a separate policy to distinguish between the loss of facilities in areas with no defined town or local centre. • Reference new local centres provided in LP 38 Defining our retail hierarchy additional supporting text added to this policy to provide clarity. • Policy LP 39 allows for sequential test and impact assessment for development over 600sqm elsewhere in a market town to protect and enhance the vitality and viability of market towns • Clarification provided in supporting text to address Education concerns • Clarification provided in supporting text to address NHS concerns

Chapter 7: How we will support homes for all

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (4 comments)	
• Respondents emphasise the need for a diverse range of housing types to support community growth and meet local needs in both urban and rural settings. • Feedback emphasises the need for new housing to enhance local character and identity, avoiding large, uniform developments similar to post-war estates. • Natural England states housing development must respect environmental, heritage, flood risk, and agricultural protection policies, but does not address the exact language of housing policy. • Concerns include lengthy, repetitive, and rigid housing policies. Recommendations are to increase flexibility in housing mix requirements, eliminate overlapping national standards, and make policies adaptable to future regulations.	• Support and concerns are noted. • Changes to each policy summarised and recorded in the following rows. • Review of draft NPPF and implications on policies made.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
LP41 - Affordable homes (28 Comments)	
• Support for affordable housing target and can be delivered faster than the previous. However, concerns remain about the viability and deliverability of affordable housing policies, especially for brownfield and older persons sites, with calls for more flexibility and clearer reassessment processes. • Responses call for greater flexibility to adapt to local needs, changing evidence, and site-specific viability challenges in tenure mix prescribed by the policy. • Concern about the ambiguity and viability challenges of requiring affordable homes to meet the “more generous” space standard (NDSS vs M4(2)/M4(3)), with calls for clarification, greater flexibility, and evidence-based application of standard, particularly around the costly M4(3) requirement. • Respondents generally support clustering guidance for affordable housing, but request clearer definitions, broader rule application, more flexible viability reviews, and better S106 mechanisms for handling overage clauses and RP uptake issues. • Response emphasise the importance of addressing affordable housing needs for NHS and health sector staff. • Representations stress that affordable housing in rural villages should meet the specific needs of local parishes and avoid excessive development where public transport and job opportunities are limited. • Respondents call for clearer and more precise policy wording, including the removal of vague terms, better definitions for key concepts, and references to specific evidence documents to ensure policies remain robust as evidence evolves.	• Support for affordable housing policy noted. • Requirement for affordable housing within specialist older persons housing schemes has been removed. • Reference to the nationally described space standards and M4(2)/M4(3) standards has been deleted to remove confusion and overlap with draft policy LP43 Ensuring accessible and adaptable homes. • Additional policy wording on overage clauses has been added. • Clustering guidance has been added to reflect different levels according to the overall scale of development. • An exception for military affordable housing has been included. • Affordable housing in villages to meet local needs is addressed in draft policy LP 47 Promoting rural exceptions housing. • Wording clarified in multiple places and clearer specification of terms added.
LP42 - Promoting a mix of housing (26 Comments)	
• Support for policy that delivers a mix of house sizes, types and tenures tailored to local needs, with flexibility guided by HNA and recognition of differing market characteristics. • Concerns housing mix table is overly rigid, lacks reference in policy wording, fails to reflect local variations and market conditions, and should instead present ranges while clearly stating its influence on decision-making.	• Support and concerns noted. • Table showing suggested mix of housing by tenure removed as this could change overtime and the policy requires the most up to date evidence be used. Additional text added to supporting paragraph 7.187 to reflect this. • Policy text updated to require housing mix to have regard to the evidence to provide a more flexible approach in meeting site specific needs.

Main Issues Raised	Council Response / How the Council has taken this into account
• A more flexible approach is favoured allowing for updated evidence, local context, market demand, and site constraints, preferring policies to “have regard to” rather than strictly “align with” existing evidence. • Responses recommend that housing policies explicitly address the diverse needs of groups such as older people, those with care requirements, and varying local demands, as identified in the LHNA. • Concerns around viability and inflexibility of higher housing densities in accessible locations, particularly for flats, and potential for conflict with heritage, ecology, and local character. • Clearer guidance on prioritising evidence, resolving conflicting information, addressing local and borough-wide requirements, and handling evidence dates is needed.	• Supporting text updated to specifically refer to needs of older people, those wishing to downsize and looked after children and adults. Policy LP45 Supporting specialist housing provides further policy and guidance on addressing these needs. • Supporting paragraph 7.177 updated to include consideration of the physical characteristics of the site’s location when setting an appropriate mix of housing. • Wording added to policy to clarify that some of the documents listed in the policy may only apply based on the location of a development site, for example the Peterborough SHMA which is applicable to developments in the northern part of Huntingdonshire and any local assessment of housing need demand within a relevant town or parish council to the proposed scheme.
LP43 - Accessible Homes (21 Comments)	
• Support for higher accessibility standards in housing, with arguments emphasising improved independence, cost savings in care, enhanced inclusion, and better provision for wheelchair users. • Concerns the policy's accessibility requirements, especially when combined with other standards, are too stringent and could threaten viability, calling for greater flexibility and reduced targets based on site-specific conditions. • Concerns policy may require more wheelchair-accessible (M4(3)) homes than needed, potentially leading to over-provision, unsold properties, and homes remaining vacant or being altered due to lack of demand. • Policy is unclear about the 5% M4(3) accessible housing requirement, particularly its application to affordable versus market housing, distinctions between M4(3)a and M4(3)b, and its relationship with other policies, leading to calls for clearer, more flexible policy wording and clarification on compliance with government guidance. • Contrasting responses on higher accessibility standards required universally in smaller rural communities or focused only in well-serviced, sustainable areas. • Some responses seek a stronger focus on providing bungalows and specialist housing for older people, along with improved monitoring of accessible housing delivery by site and phase.	• Support noted and concerns noted. • The policy has been restructured to address concerns regarding its clarity. It provides policy criteria regarding developments of 50 or more homes, 20-49 homes and less than 20 homes to reflect what may be more viable at these scales of development. • The revised policy clearly sets out requirements for M4(3(2)(a) and M43(2)(b) for market and affordable homes with remaining homes being built to M4(2). • The policy is aligned with the findings of the Huntingdonshire Local Housing Needs Assessment and viability assessments. • Comments regarding location of accessible and adaptable homes are noted. • Specialist housing for older people are addressed in LP45 Specialist Housing. Monitoring of policy is proposed and building regulations will also monitor the delivery of M492) and M4(3) properties. • The policy sets M4(2) as the minimum for development unless there are site specific factors making this impractical or unviable.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Concerns that M4(2) may soon become a national requirement, which could make the policy redundant, while others caution against basing local policy on speculation about future changes to Building Regulations in the absence of official government announcements. • General support for the aim of accessible and adaptable homes but want policies to be clearly aligned with evidence from the Local Housing Needs Assessment, viability studies, and realistic expectations for delivery.	
LP44 - Self and custom build homes (23 Comments)	
• Justification of the 5% self/custom build plot requirement is questioned, noting oversupply, declining demand, and suggesting policy should reflect actual need or encourage provision rather than mandate a fixed percentage. • Preference among self-builders for small, dedicated sites in rural or village locations, rather than plots within large urban developments, with many advocating for specific allocations on village edges instead of integrating self-build plots into major schemes. • Concerns relating to practicality and viability of integrating self-build plots on large sites, and recommend adopting a sliding scale with reduced requirements for bigger developments. • 15-month marketing period for self-build plots is excessive, preferring a shorter timeframe and automatic reversion to market housing to avoid prolonged unsightly empty plots. • Objection to design codes for 5 or more self/custom build plots, viewing it as burdensome and unclear, and suggest using plot passports and raising the threshold to 20 or more plots instead. • Call for greater flexibility, advocating for site-specific custom-build requirements, allowing developer discretion. • Proposal to recognise developer-built shells as custom builds and encourage partnerships with organisations such as Homes England, community groups, and housing associations to deliver specialist or community-led self-build projects.	• Requirement for 5% of homes on proposals over 100 homes removed. • Policy amended to state a support for self and custom build home(s) where the building(s) respect local character and complies with other relevant policies in this plan and any relevant neighbourhood plan. • 15 month marketing strategy requirement removed and instead where a marketing strategy is required, the point at which it should begin in the site's development will be secured through a S106 agreement or condition. Supporting text amended to reflect this. • Plot passports added to the policy so that that or a design code can be used. • Requirement that these apply to schemes over 5 homes retained as developments to provide cohesion especially in the smallest of settlements where impact on character could be greatest. This is important as most self and custom build plots proposals in the district have been on the edge of small settlements or in the countryside. • Supporting text on affordable self/ custom build homes added.
LP45 - Specialist Housing (9 Comments)	
• Support for prioritising specialist housing in accessible locations close to essential services,	• Support noted for location-based criteria.

Main Issues Raised	Council Response / How the Council has taken this into account
with recognition from Public Health of its positive impact on health, wellbeing, and social inclusion. • Support policy's location-based criteria for specialist housing, emphasising the value of proximity to essential amenities and transport, and noting that backing specific sites would help ensure needs are met throughout the plan period. • More flexibility required, allowing specialist housing in both existing settlements and proposed sites to better enable delivery and adapt to evolving needs. • Concerns raised around the requirement of affordable housing in larger specialist housing schemes due to viability issues • Adult Social Care representations call for the policy to address a wider range of specialist housing needs, including those of care leavers, individuals with learning disabilities, mental health requirements, and people unable to live independently, alongside older people. • Clearer guidance needed on the various types of specialist housing, their classification within Use Classes, and emphasise the value of pre-application advice due to the complexity and overlapping nature of such schemes. • Adult Social Care highlights policy needs to better align with wider health and social care priorities, emphasising independent living and collaborative planning with health authorities, councils, and developers for future specialist housing provision.	• Supporting paragraph added stating that 'a proposal for specialist provision for a residential home for looked after children or young adults will be supported where it is well-located in relation to relevant services and facilities.' This reflects the criteria in the policy whereby proposals are required to be located to existing services and public transport. • Concern regarding viability noted with respect to the requirement for affordable housing on 10 or more self-contained homes. This requirement has been increased to 50 to align with the emerging national definition for medium scale developments. • To address CCC Adult Social Care comments, additional supporting text provided to detail types of support available to enable people to live independently and also additional text provided to identify people with a learning disability and mental health care and support needs are also covered by this policy. • Use classes are identified within the policy. No changes made.
LP46 - Supporting HMO's (1 Comment)	
• Response suggests adding HMOs should only be permitted if it can be shown they will not have a significant negative impact on nearby residents.	• Concerns noted, policy unchanged as amenity issues will be addressed through application of other policies in the Local Plan. • Supporting paragraph 7.54 updated with more detail on HMOs.
LP47 - Rural Exception Housing (4 Comments)	
• Support for permitting some market housing in rural exception schemes to enhance scheme viability, provided this aligns with national policy and does not impose overly restrictive caps that could hinder affordable housing delivery. • Requires further alignment with national guidelines, facilitates affordable homes in rural locations, and includes provisions for first homes and community-led sites. • Concerns about consistency between policies LP47 and LP41, with respondents highlighting the	• Support for policy noted. • Criterion e. states that the rest of the site area that is not providing affordable housing can be made available for building open market housing or as plots for self-build or custom build homes. This is expanded upon in supporting paragraph 7.63. No changes required. • Text added to policy to address emerging national policy which allows for Gypsy and Traveller pitches on rural exception sites. Supporting text added.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
need for clearer wording to avoid confusion over whether market housing is permitted in rural exception schemes and to ensure coherent policy application. • Mixed response on 5% housing cap for rural exception schemes , some consider it too high for small communities and others finding it overly restrictive for scheme viability. • Policy wording unclear regarding site location and call for more precise definitions to confirm that development sites need not be physically within settlement boundaries to be considered acceptable.	• To address concerns regarding the 5% cap on rural exception sites, policy has been amended to state that the total number of homes proposed be proportionate to the number of homes within the built-up area of a settlement. Supporting text added. • Policy updated to state on land well-related to a settlement rather than within built-up area.
LP48 - Gypsies, Travellers and Showpeople (3 Comments)	
• Support for policy's focus on delivering adequate pitches and sites for Gypsies, Travellers and Travelling Showpeople, stressing the need for equal access to education, health services, and safe living conditions, as well as the importance of site proximity to schools and GP surgeries, health and safety protection, and mitigation of environmental risks. • Concern that poorly designed sites could negatively affect both residents and surrounding communities. • Concerns regarding the strain sites place on existing drainage and flood management infrastructure, emphasising the importance of assessing capacity and ensuring ongoing maintenance to mitigate flood risks. • Concerns were expressed about insufficient engagement with key stakeholders during the assessment of sites for Gypsies, Travellers and Boat Dwellers.	• Supported noted. • Concerns regarding design and impact noted, criteria within the policy addresses these issues. No changes made. • Additional criterion added stating 'the site will not adversely impact on the safe and effective operation of existing infrastructure' to address concerns regarding infrastructure including flood management. • Considerable engagement was undertaken in preparing the Gypsy and Traveller, Travelling Showperson, boat dwellers and other caravan dwellers Accommodation Assessment and statutory stakeholders and members of the public were consulted at Preferred Options stage where comments could be made.

Chapter 8: How we will conserve and enhance the environment

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (8 comments)	
• Respondents generally support the conservation-led approach of the draft policies, valuing the protection of Huntingdonshire's natural and historic assets, with some support being conditional on safeguarding specific areas such as Tree Areas and habitats for rare species. • Objectors argue that the plan's approach to development undermines environmental	• Support and concerns are noted. • Changes to each policy summarised and recorded in the following rows. • Review of draft NPPF and implications on policies made.

Main Issues Raised	Council Response / How the Council has taken this into account
conservation, citing ongoing construction in key areas as detrimental to wildlife habitats and criticising the lack of measures such as strategic nature recovery zones, blue-green infrastructure, and long-term ecological stewardship. • Concerns are also raised about the proposed 20% Biodiversity Net Gain (BNG) target, with claims that it exceeds national requirements without sufficient justification and may render the policy unsound. • General comments urge alignment with national policy on species protection (e.g., swift bricks), explicit recognition of key habitats like wet woodland, and clarity in policies to avoid overlap or contradiction with forthcoming national planning reforms.	
Policy LP49 - Protecting our nature sites (16 Comments)	
• Comments urge the policy to strengthen legal accuracy by directly referencing current Habitats Regulations and ensuring clear alignment with national policy frameworks such as the NPPF, rather than relying on oversimplified summaries. • Reference to the Ouse Washes Goose & Swan Impact Risk Zone (IRZ) and other priority ecological areas in the plan is recommended, highlighting the need for cross-boundary coordination with neighbouring districts due to shared ecological assets. • Importance of greater recognition and proactive recovery of small but ecologically valuable habitats and biodiversity networks is stressed; such as ponds, hedgerows, and elm trees across Huntingdonshire, highlighting their cumulative significance for local biodiversity. • Comments recommend more explicit and strategic integration of green and blue infrastructure, emphasising habitat connectivity, accessible greenspace, and linking Green Infrastructure delivery to biodiversity net gain. • Recommendations focus on improving technical accuracy and local relevance of the draft policy wording, including typographical corrections, removing unsuitable habitat references, adding Local Nature Reserves, and recognising priority habitats under the NERC Act (2006). • There is widespread organisational support for prioritising the protection of nature conservation sites, with key stakeholders endorsing the proposed policy.	• Policy amended to refer to Habitat Regulations rather than Directive. • Reference made within supporting text to internationally protected sites in neighbouring authority areas that may be impacted by proposals within Huntingdonshire with links to relevant guidance. These are the Swan and Goose IRZ, Upper Nene Valley Gravel Pits and Eversden and Wimpole Woods. • Policy sets out the council's approach to protecting sites that are protected under international, national and local conservation designations. It works alongside other policies such as LP12 Promoting Green and Blue Infrastructure, LP50 Enhancing Biodiversity and Geodiversity and LP51 Protecting our trees, woodlands, hedges and hedgerows. No changes made. • Policy amended to separate out the specific mitigation hierarchy for internationally protected sites which differs from nationally and locally designated sites. • Removed references to habitats that are not found in Huntingdonshire from paragraph 8.10. • Added reference to priority habitats under the NERC Act (2006) to paragraph 8.11. • Local Nature Reserves have been added to the policy and those formally designated on Natural England's Magic Map added to the policies map. • Additional responsible agencies added to the supporting text.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Some believe the policy unnecessarily repeats existing national legislation and recommend streamlining by referencing current laws rather than restating them. • Emphasise the need to recognise key statutory and operational agencies, such as the Environment Agency and Internal Drainage Boards, in partnership lists.	
Policy LP50 - Enhancing biodiversity and geodiversity (55 Comments)	
• Responses, including developers, oppose the proposed 20% Biodiversity Net Gain requirement, citing lack of evidence, misalignment with national policy, insufficient habitat banks, and a preference for the statutory 10%. They warn that a higher target could reduce site viability, development capacity, affordable housing, infrastructure contributions, and plan deliverability. • Supporters like the RSPB, Wildlife Trust, Greater Cambridge Shared Planning, some land promoters, and members of the public back the 20% BNG requirement for effective nature restoration. They call for stronger policies on ecological corridors, long-term management, monitoring, and mapped recovery zones. • Several responses, including community groups and environmental consultees, support a hybrid BNG policy with higher targets (20%) for sensitive areas like the Great Ouse Valley and LNRS priority zones, plus stricter requirements for habitat connectivity, mapped recovery zones, and long-term monitoring. • Comments recommend clearer policy guidance on definitions, assessment, exemptions, off-site biodiversity delivery, legal agreements, and ecological requirements, with strong wording and flexibility to avoid overlap with regulations. • Infrastructure providers warn that achieving on-site BNG for linear projects is challenging, higher targets could raise costs and delays, and request exemptions and formal recognition of their constraints. • Environmental NGOs, parish councils, and community groups call for stronger nature recovery by mapping key zones, requiring habitat connectivity in major developments, securing long-term management with legal agreements,	• Taking into considerations concerns regarding viability and the emerging stance in the NPPF regarding setting standards above national requirements, the policy has been amended to align with the Environment Act and seek 10% BNG. • Support for the policy noted. The supporting text to the policy now states support will be given to a proposal where it seeks to provide more than the mandatory 10%. • Amendments have been made to the policy to align with national requirements and simplify the policy for ease of application. • Concern regarding habitat loss and fragmentation are noted, the policy cross refers to the LRNS and Green and Blue Infrastructure Priority Areas.

Main Issues Raised	Council Response / How the Council has taken this into account
and keeping a biodiversity net gain register for the district. • Concerns include habitat fragmentation and cumulative development in the Alconbury / North Huntingdon Growth Cluster.	
Policy LP51 - Protecting our trees, woodlands, hedges and hedgerows (16 Comments)	
• Support for policy intent, particularly its alignment with national objectives and contribution to biodiversity protection within SAC zones. • Objections relating to the protection of "all" trees, suggesting a distinction should be made between trees of different ecological and arboricultural value, in line with the NPPF's value-based approach. • Concerns raised that the policy does not fully align with the NPPF, especially regarding the distinction between ancient or veteran trees, compensatory planting requirements before development, and a clearer definition of requirements within a "major scale development." • Advocacy for robust monitoring, enforcement, and lasting management of tree and biodiversity outcomes through regular checks. • Recommended that suitable native species for compensatory planting and clear policies to protect and manage veteran trees, including those not directly impacted by development. • Concern that the policy does not sufficiently account for local pressures and cumulative environmental impacts, focusing too narrowly on individual sites and risking gradual erosion of rural character. • Concerns the policy duplicates existing requirements, suggesting possible merger with related policies • Concerns increased tree planting and green infrastructure may limit development land, affecting project viability, site design, and housing supply, highlighting the need to balance environmental goals with provision of jobs and homes. • Other recommendations include specific mention of orchards, extending tree protection to established settlements, and safeguarding landscape corridors and rural areas.	• Support noted and concerns noted. • To address objections that the policy currently captures all trees, woodlands, hedges and hedgerows and that this may be unreasonable, the distinction that these have to arboricultural, ecological and landscape value (including ancient or veteran trees) has been added to the policy. • Proposals for major development require new tree planting, a set figure is not provided to enable site specific factors to be taken account so this can be negotiated at a planning application stage. • Policy includes trees on site and those immediately adjacent to the site so that harm to surrounding trees from development is assessed, avoided and mitigated. • Compensatory measures are not set to enable site specific factors to be taken account so this can be negotiated at a planning application stage. • Orchards added to the policy and supporting text.
LP52 - Protecting our open spaces (9 Comments)	
• Sport England and others seek clearer policy aligned with NPPF, separate outdoor sports	• The policy has been reworded to include open spaces, outdoor sport and recreational facilities.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
criteria, mandatory assessments for playing fields, and assurance of replacement before any loss. • Clearer guidance needed on Local Green Space designation, especially for communities facing development. • Policy is widely supported for conserving open spaces, with reference to health, recreation, community identity, Neighbourhood Plan evidence, and surveys. • Need for clearer criteria, definitions, and mechanisms, including harm assessment, benchmarks, and measures to improve open space quality and accessibility. • Alconbury PC criticised policy for not addressing local conditions, cumulative impacts, harm limits, or village character, making it unsuitable for rural areas.	• Reduced policy to ensure criteria does not overlap regarding loss of such facilities to make it easier to implement. • Reduced overlap with national policy criteria by deleting criterion b. • Concerns raised by Alconbury Parish Council do not sit against this policy, instead their concerns are addressed under the countryside policies in the Local Plan.
Heritage Strategy (4 comments)	
• Responses advocate for a stronger emphasis on heritage within the Local Plan, including its integration into the Plan's Vision and elevating the Heritage Strategy to a strategic policy for greater influence in decision-making. • There is a strong support for the addition of proactive measures to identify, monitor, and restore historic buildings at risk, including enhanced policy tools and updates to the Buildings at Risk Register to ensure effective preservation and reuse of vulnerable heritage assets. • Calls for clearer, more comprehensive heritage policy wording, including explicit references to designated assets, improved readability, practical examples for consistent application, and updated terminology aligned with current records. • Concerns raised over outdated or insufficient Conservation Area Appraisals, urging a prioritised programme to update and expand these assessments, especially in unappraised settlements, areas with pre-2000 appraisals, and locations facing development pressures, to ensure robust and policy-aligned decision-making and to retain local character.	• Amendments made splitting up paragraph 3 of the Heritage Strategy as it covers two different aspects of heritage. • The vision for the Local Plan has been updated and more clearly refers to the historic environment. • Have added heritage at risk to the strategy. • The Heritage Strategy has been moved to the strategic chapter 4 on how we will enable strategic growth as, although it is not a policy, it works to set the Council's overarching approach to the historic environment, it works alongside LP53 and design policies. These provide detailed policy on conserving and enhancing the historic environment and securing high quality design. • The strategy states that the Council will work to ensure that the effective conservation and enhancement of conservation areas and is enabled through a programme of review and updating of conservation area character statements.
L**P53 - Heritage Assets and their Settings (16 Comments)**	
• Several responses, including those from major organisations and developers, generally endorse the policy, noting its clarity, alignment with national planning guidelines, and thoughtful approach to	• Support noted, the vision for the Local Plan has been updated and more clearly refers to the historic environment.

Main Issues Raised	Council Response / How the Council has taken this into account
heritage and archaeology. Some comments suggest heritage should be made more prominent in the vision for the Local Plan • Concern raised the policy duplicates national heritage policy, and needs clearer differentiation between designated and non-designated assets, and reference specific NPPF paragraphs regarding harm, significance, and justification. • Objections to the requirement of archaeological fieldwork before planning determination, preferring initial desk-based assessments and more flexible, proportionate approaches to investigative timing. • Concern the policy fails to address the unique heritage and rural character of individual villages, prompting calls for clearer guidance and protection of local views and landscapes, especially in areas facing large-scale development. • Need for clearer guidance on how development in Conservation Areas should preserve or enhance important features such as townscape, roofscape, skyline, street patterns, historic building lines, and architectural details. • Responses suggest replacing outdated references to parks and gardens and recommend consulting the County Council's Historic Environment Team for heritage evaluations.	• Definition of non-designated heritage assets added to supporting text for clarity. • NPPF paragraph references to considering potential heritage harm added to the supporting text. • Amendments made to archaeology aspect of the policy to align with national policy and to clarify that where a development proposal involves land with archaeological interest, a proportionate desk-based assessment will be required, if archaeology of significant interest found then fieldwork evaluation will be required. • The policy provides a district wide approach to conserving and enhancing heritage assets building on national policy. It is not possible or practical to reflect local circumstances at a parish level in Local Plan policy. This would be best addressed in neighbourhood plans where localised policies can be written and also supported by design guides, codes and character statements could be produced. • The policy refers to further guidance such as Conservation Area Character Statements which is where detailed design guidance can be found to support the implementation of the policy. • Updated terminology from historic parks and gardens to registered parks and gardens • Added Cambridgeshire County Council's Historic Environment Team to list of relevant agencies
LP54 - Water related development (10 Comments)	
• Concerns about water quality and sewage capacity in the River Great Ouse catchment, including frequent storm discharges, insufficient wastewater treatment, limited evidence, and Fenland Reservoir abstraction impacts. Concerns were raised about increased impermeable surfaces, heightened stormwater runoff and pollution, loss of natural floodplain functions, and the lack of a comprehensive valley-scale drainage and flood-risk management strategy. • Stakeholders supported strong policy wording for protecting biodiversity and riparian corridors and recommended clearer application of the statutory BNG watercourse metric within 10 metres of watercourses, alongside explicit buffer zone retention policies. • Key stakeholders, including Anglian Water, support policies ensuring adequate servicing and recognising Grafham Water as critical infrastructure, while requesting clearer wording	• Concerns noted, the policy requires a proposal to address water quality and quantity alongside other policies in the Local Plan regarding flooding and water. • Text added to the supporting text regarding watercourses metric. • Support for inclusion of Grafham Water noted. Criterion l. amended to recognise the role of Grafham Water in providing a resilient water supply to support growth across the region as well as the need to safeguard it from potential deterioration or pollution • Supporting text regarding settlement boundaries and residential moorings simplified. Criterion added stating support where for berths outside of a built up area, and the need to demonstrate that the location has sustainable access to services. • Middle Level Commissioners added to the list of responsible agencies.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
on operational development and alignment with minerals and waste plans. • Feedback on residential moorings noted confusion about settlement boundaries, removal of conversion limits, and requests from marina operators for more flexibility and case-by-case sustainability assessments. Some marinas also want a higher share of residential moorings. • Feedback indicates the draft policy is too restrictive and stakeholders request a more positive approach that incorporates current accommodation assessments, acknowledges residential moorings' role in housing supply, and aligns with the NPPF's support for rural economic growth. • Navigation authorities, including the Middle Level Commissioners, stressed the need for their involvement in residential use of boats and moorings and for policy to clearly identify their legal responsibilities regarding residential moorings.	

Section D: Our Development Sites

Section D: Our Development Sites

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (44 comments)	
• The plan depends too heavily on a few major allocations that carry significant delivery and infrastructure risks. Housing trajectory should be published as soon as possible. • The plan assesses sites individually but fails to evaluate combined effects on transport, flooding, water quality, biodiversity and landscape. • Growth is proposed without demonstrated capacity in highways, public transport, utilities, schools, healthcare or wastewater. • Several allocations lack robust evidence on flood risk, drainage, nutrient neutrality and wastewater treatment capacity. • Site assessments and policies lack detailed heritage evidence and do not secure appropriate mitigation for sensitive locations. • Growth is overly concentrated in North Huntingdon while more sustainable or well connected settlements (e.g. St Neots) are under utilised. • Call for more small and medium sized site allocations to improve deliverability and flexibility.	• The Preferred Options Plan proposes allocations of varying scales across various settlements in the district. The Council is working proactively with the CPCA and infrastructure partners to ensure infrastructure and growth are aligned. The Local Plan is also supported by an Infrastructure Delivery Study which assesses the cumulative impacts of growth. • A housing trajectory will be published at the next stage of Plan preparation. • The Local Plan is supported by various technical studies and assessments including a Habitats Regulation Assessment, Strategic Flood Risk Assessment, climate change evidence, Housing Needs Assessment, Employment Study, Strategic Transport Study and an Infrastructure Delivery Study - these have shaped the preferred strategy and site criteria set out in the Preferred Options Local Plan. • In the Land Availability Assessment and the Sustainability Appraisal, heritage has been

Main Issues Raised	Council Response / How the Council has taken this into account

• Proposed growth threatens valued landscapes, biodiversity, ecological corridors, and tranquil rural character, especially in the Ouse Valley.
• Policies should require proactive enhancement of active travel networks and green infrastructure, not just retention.
• Numerous site promoters provide evidence that their sites are suitable, available and deliverable, arguing for their inclusion in the plan. Site put forward are:
  • Land East of Peterborough Road, Farcet (CfS:149) for 185 homes submitting a Vision document.
  • Land at West of Peterborough Road and North of Gazeley Gardens, Farcet (CfS:30) for 185 dwellings submitting a supporting document.
  • East of Stow Road, Kimbolton (CfS:31) for between 100 and 200 dwellings submitting a supporting document.
  • Land west of Cage Lane, Great Staughton for up to 9 dwellings - new site with a layout plan submitted.
  • Land south of Bluntisham Heath Road/Wood End, Bluntisham (CfS:23-2411) for 35 homes submitting a revised Vision document.
  • Land North of Station Road, Bluntisham (CfS:230) for 140 homes.
  • Land South of New Road, Offord Cluny (CfS:74) for about 80 homes.
  • Land South of Folksworth Road, Folksworth (CfS:23-245) for up to 200 homes submitting a Vision document.
  • Land at Folly Farm, London Road, Yaxley (CfS:228) for 115 dwellings submitting an appeal decision and layout plans.
  • Land adjacent A1 at Norman Cross, Folksworth (CfS:130) for commercial development submitting a Vision document.
  • Sapley Park Garden Village (CfS:197) for a large-scale mixed-use community submitting a vision document.
  • Land west of the B1050, Earith Road, Colne (CfS:316) for 75 homes submitting a vision document.
  • Hungary Hall Farm, Wyton on the Hill (CfS:47) for a large-scale mixed-use community submitting further documents
	considered and where these have been most significant, sites have been discounted based on potential heritage impact. Where there are known heritage impacts on draft site policies, proportionate heritage wording and reference to draft policy LP53 has been made. A Heritage Impact Assessment of all draft allocations will be undertaken to further strengthen the heritage evidence of the Local Plan.
	• Some growth is located north of Huntingdon inline with the CPCA Local Growth Plan. Some sites to the east of St Neots were considered but discounted from allocation based on the uncertainty of the location of East West Rail. Once there is more certainty, these sites could be included in a future Local Plan.
	• Additional small and medium sized sites have been identified to add to the 5YHLS and will be consulted upon through May to June 2026.
	• Concern regarding the Ouse Valley is noted, the Plan makes many references to the LRNS and NRN recognising the importance of the Ouse Valley.
	• The Plan incudes LP27 Supporting active and sustainable travel and seeks where appropriate enhancement to active travel networks, particularly in larger and strategic developments where new networks could be delivered.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Land East of Peterborough Road, Farcet (CfS:149) for 185 homes submitting a Vision document - concerns remain regarding coalescence between Farcet and Peterborough.
	  • Land at West of Peterborough Road and North of Gazeley Gardens, Farcet (CfS:30) for 185 dwellings submitting a supporting document concerns remain regarding coalescence between Farcet and Peterborough.
	  • East of Stow Road, Kimbolton (CfS:31) for between 100 and 200 dwellings submitting a supporting document - no substantive new evidence. Vision document no longer includes land for primary school expansion.
	  • Land west of Cage Lane, Great Staughton for up to 9 dwellings - new site with a layout

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
including a Vision Strategy, Employment Statement and A141 response • Land east of Bluntisham Road and north of Overcote Lane, Needingworth (CfS:291) for 240 dwellings submitting a Vision document. • Land at Colne Road, Somersham (CfS:159) for 64 homes submitting supporting plans and odour assessment. • Land East of Parkhall Road, Somersham (CfS:102) for 60 homes providing further information. • Land at Marley Road, St Ives (CfS:292) for up to 600 homes providing further information. • Land at Ramsey Road, Ramsey (CfS:250), for residential development providing further information. • Land at Ramsey Road, Warboys (CfS:293) for 210 homes providing further information. • Land at Mill Road, Buckden (CfS:294) for 195 homes providing further information. • Colne Fen Farm and Fishery (CfS:22) for water-based commercial leisure site.	plan submitted -concerns regarding integration challenges. • Land south of Bluntisham Heath Road/Wood End, Bluntisham (CfS:23-2411) for 35 homes submitting a revised Vision document - no substantive new evidence, concerns remain. • Land North of Station Road, Bluntisham (CfS:230) for 140 homes - no substantive new evidence, concerns remain. • Land South of New Road, Offord Cluny (CfS:74) for about 80 homes - no substantive new evidence. Flood risk and permission in principle application granted. • Land South of Folksworth Road, Folksworth (CfS:23-245) for up to 200 homes submitting a Vision document - the vision document also includes more land to the east, this is disproportionate to the size of Folksworth. • Land at Folly Farm, London Road, Yaxley (CfS:228) for 115 dwellings. Went to planning appeal decision - the site now has outline planning permission so is already accounted for in the Council's housing commitments. • Land adjacent A1 at Norman Cross, Folksworth (CfS:130) for commercial development submitting a Vision document - concerns remain regarding transport impact on the A1 and around impacts on A1 and A15 junction at Norman Cross at this time. • Sapley Park Garden Village (CfS:197) for a large-scale mixed-use community submitting a vision document - potential for phase 1 to be reserved site to further support delivery of the A141. Wording will be drafted and then be consulted upon through May to June 2026. • Land west of the B1050, Earith Road, Colne (CfS:316) for 75 homes submitting a vision document - no substantive new evidence, concerns remain and there are more sequentially preferrable sites. • Hungary Hall Farm, Wyton on the Hill (CfS:47) for a large-scale mixed-use community submitting further documents including a Vision Strategy, Employment Statement and A141 response - no substantive new evidence.

Main Issues Raised	Council Response / How the Council has taken this into account
	• Land east of Bluntisham Road and north of Overcote Lane, Needingworth (CfS:291) for 240 dwellings submitting a Vision document - concerns remain regarding flood risk and cumulative impact on Needingworth. • Land at Colne Road, Somersham (CfS:159) for 64 homes submitting supporting plans and odour assessment - a full LAA and SA has now been undertaken. There are still concerns on cumulative impact on Somersham, landscaping and odour. • Land East of Parkhall Road, Somersham (CfS:102) for 60 homes providing further information - no substantive new evidence, concerns remain and there are more sequentially preferrable sites. • Land at Marley Road, St Ives (CfS:292) for up to 600 homes providing further information - would need to be part of a wider development as in isolation the site would sit uncomfortably. Need more certainty on road improvement works. Have chosen a more sustainably located site and direct access to services and facilities including town centre. • Land at Ramsey Road, Ramsey (CfS:250), for residential development providing further information - no substantive new evidence, concerns remain including cumulative impacts on Ramsey and Bury. • Land at Ramsey Road, Warboys (CfS:293) for 210 homes providing further information - no substantive new evidence, concerns remain. • Land at Mill Road, Buckden (CfS:294) for 195 homes providing further information - no substantive new evidence, concerns remain. • Colne Fen Farm and Fishery (CfS:22) for water-based commercial leisure site - no substantive new evidence, concerns remain.

North Huntingdon Growth Cluster Opportunity Zone

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (65 comments) • Concern that A1, A14, A141 and local roads are already over capacity with local residents	• Comments and concerns regarding the capacity of strategic roads is noted. HDC are working with CCC and the CPCA on the delivery of strategic road enhancements. The Local Plan is also

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
opposing development until major road upgrades are in place. • Economic need for businesses from north Cambridgeshire to have improved access along A141 and to the east via a new river crossing to the A1307. • Flood risk is a strong focus of concern, especially in Broughton, Kings Ripton, Brampton, and areas draining into Bury Brook due to recent floods and concerns about inadequate mitigation. • Independent modelling sought for traffic, water and flooding including identification of long-term drainage solutions, and funding for protective measures. • Landscape change, coalescence of villages, landscape harm in the Great Ouse valley and increased pollution were all points of concern arising from the potential scale of development. • Greater clarity was sought over the status of Brampton Cross and other 'pale blue' sites given implied support as they lack a sound evidence base, especially on transport and environmental impact. • National Highways expressed concern over the proposed Brampton Cross development, advising that the early modelling is showing significant impact on the strategic road network, and that significant improvements would likely be required to accommodate the development. • A detailed case was put forward by the promoters of the Brampton Cross scheme over its ability to attract international investors and support priority sectors including advanced manufacturing, agri-tech, clean energy and life sciences. • Rapid expansion will overwhelm existing community infrastructure and there is a lack of planned provision for GP and dental services, emergency services, wastewater and utilities capacity and secondary school places. • Pausing local plan preparation was sought until A141 scheme details are confirmed, local government reorganisation is settled, and CPCA strategies are clearer. • National Highways are concerned the appropriate level of mitigation might not be achieved and secured through the local plan process. • Anglian Water highlight wastewater capacity constraints at Huntingdon WRC with no upgrades planned before 2030. • Kings Ripton Parish Council consider the scale of development in the local plan as a whole to be	supported by a Strategic Transport Study and Infrastructure Delivery Study. • Flood risk concerns are noted and the Local Plan is supported by a Strategic Flood Risk Assessment. • To support the Local Plan, consultants have been working alongside the Council and delivery partners to provide modelling on traffic, water capacity and flooding to support the Strategic Transport Study and Integrated Water Management Strategy (Water Cycle Study and SFRA). These are also informing the Infrastructure Delivery Study. • Concerns regarding landscape change and coalescence of villages is noted and policies in the Local Plan seek to minimise this and mitigate as far as possible through sustainable placemaking whilst accommodating the nationally required scale of growth. • Brampton Cross is not a proposed allocated site in this Local Plan. The supporting text has been amended to note that it is not allocated due to the inability to demonstrate its deliverability at this time. • New development will be required to contribute directly and/or financially to provision of additional infrastructure where needed, housing delivery will be phased to allow for infrastructure provision. • The 2025 Local Development Scheme included pre-submission consultation in summer 2026. To allow for greater certainty this has been replaced with the 2026 LDS delaying pre-submission consultation until September 2036. This allows for greater certainty over delivery of the A141 as the outline business case is scheduled for presentation to the CPCA's Board in September 2026. • National Highways response was submitted prior to them reviewing the detailed transport modelling published within the Strategic Transport Study which addresses many of their concerns over mitigation needs. They have since reviewed this material. • The Council continue to work with Anglian Water and the Environment Agency through preparation of the Integrated Water Management Study and a Statement of Common Ground to resolve the challenge of waste water capacity issues around Huntingdon. • Strategic scale aspirations and guidance for growth across the North Huntingdon area are/ are

Main Issues Raised	Council Response / How the Council has taken this into account
equivalent to a major now town or city needing expert planning with clear, firm proposals. They suggest that previously this has been coordinated with funding from sources such as a development corporation. • Urban & Civic requested that Alconbury Weald be allocated again as it will continue to play a crucial role in supporting growth ambitions in North Huntingdon..	expected to be established through the CPCA's Local Growth Plan and Spatial Development Strategy with the Local Plan providing allocations to support an initial phase of growth within the opportunity zone. • Alconbury Weald has been reincluded in the local plan reflecting the most up-to-date position for the development. For consistency purposes, the Ermine Street allocation (HU1 in the Local Plan to 2036) and St Neots East allocation (SEL2 in the Local Plan to 2036) have also been included.
North Huntingdon 1 (5 comments) • The site's suitability, deliverability, and the importance of enabling long-term viability of Huntingdon Racecourse through mixed-use development was noted by supporters. • Flood risk management is strongly highlighted, with support for directing development to areas of lower risk and preparing comprehensive flood risk and drainage strategies. • Cambridgeshire County Council requests amendments to reflect mineral safeguarding requirements and encourage mineral resource assessment and mitigation. • Anglian Water notes potential wastewater constraints and the need for early engagement if a public sewer connection is sought. • Historic England raised concerns due to proximity to two nearby heritage assets. A Heritage Impact Assessment is requested.	• Support for the allocation is noted. • Criterion h amended to state 'make best use of minerals (sand and gravel) located within the site' to address Minerals and Waste Authority comments. • Anglian Water comments are noted and are already reflected in the allocation policy. No changes made. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan.
North Huntingdon 2 (13 comments) • Concern over existing congestion on the A141, Hinchingbrooke Park Road, and Brampton Road and additional B8 / HGV traffic which could worsen congestion and road safety risks; design must prioritise free-flow on the A141. • Transport assessments must use school term-time data to ensure realistic picture. • Suggestions were put forward for alternative uses including B2, offices, laboratories and SME development which were thought to have greater local jobs benefits than B8. • Concerns raised over impact on nearby green assets including the Great Ouse Valley and Hinchingbrooke Country Park with requests for strong landscape buffers and biodiversity enhancement.	• Outline planning application 25/01922/OUT has been approved. • Road improvements associated with the A141 are part of a larger proposal being supported through the CPCA; • The planning application scheme itself proposes a new roundabout connecting the site to the Hinchingbrooke Business Park and a series of improvements to existing junctions in the vicinity. • The EENA indicates a need for additional logistics space • The proposed allocation has been amended to include the requirement for an assessment of impact on Brampton Racecourse SSSI, Brampton Meadow SSSI, Great Stukeley Railway Cutting SSSI and Portholme SSSI as the site falls within their Impact Risk Zone

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Concerns over the potential impacts on tranquillity, community identity and well-being • Anglian Water raised wastewater capacity concerns; some developers propose private on-site treatment. • Need for robust flood risk assessment, including groundwater and surface water modelling followed by detailed flood and drainage strategies. • Historic England support the required heritage impact assessment to guide the allocation and mitigation measures. • Concern expressed that "Hungry Hall/Brookfield Farm" is not a non-designated heritage asset and should be removed as a constraint. • The site promoter strongly supports the proposed allocation but requests some amendments including a minor revision to the site area, greater flexibility of uses and close alignment with the already submitted outline planning application. They note the alignment with the CPCA growth Plan, National Industrial Strategy and emphasise their sustainability credentials and commitment to Net Zero Carbon, BREEAM Excellent, EV charging, solar PV, and sustainable transport. They note the site will offer a wide range of skilled job types apprenticeships, training and school engagement and that they will provide local employment and local supply chain spending. • Brampton Road, Buckden (CfS:281) was promoted as an alternative or additional allocation; the promoter contended that the site is more sustainably located with better deliverability and suitability for SME units and of lower agricultural value.	• An amendment has been included to support the provision of a private on-site waste water treatment facility if needed. • Amendments include a requirement for the sequential location of development within flood zone 1 and provision of a flood risk assessment and detailed drainage strategy taking into account groundwater and surface water flood risk, modelling of ordinary watercourses and assessment of residual risk including climate change. • Reference to Hungry Hall/ Brookfield Farm as a non-designated heritage asset has been removed. • Minor amendments have been made to the proposed uses to better align with the planning application to support the allocations' deliverability. • At 2.8ha the alternative site promoted is not considered a reasonable alternative and has limited accessibility by active travel modes so is not considered a sustainable addition.
North Huntingdon 3 (30 comments) • Concern that 4,900 homes is excessive, with long lead-in times meaning many homes will not be delivered within the plan period. • Concerns expressed that the allocation is not deliverable due to reliance on major, unfunded A141 corridor upgrades and objections that the A141 is already over capacity, with fears the development would function as a freestanding settlement unless early crossings, public transport and active travel routes are secured. • Environmental concerns were raised regarding loss of best and most versatile agricultural land, landscape impacts, and risks to the Great Ouse Valley and Bury Brook catchment with requests for detailed modelling of the potential impacts on	• The proposed allocation has been retained at 4,900 to provide critical mass for provision of services and infrastructure; the housing delivery trajectory acknowledges that this will involve delivery beyond the plan period but this helps to provide certainty over long term supply. • Discussions are progressing with the CPCA on provision of the A141 and St Ives Improvements Scheme to delivery the necessary transport upgrades. • Highways Authority advice has emphasised the need for active travel routes and connections to Hartford as part of the early site provision to ensure direct connections into Huntingdon. • Upgraded agricultural land mapping has been added to the Policies Map which shows the very

Main Issues Raised	Council Response / How the Council has taken this into account

Bury Brook catchment and robust runoff management.
• Substantial strategic green infrastructure was sought to mitigate pressures on nature sites including the Great Ouse Valley.
• Integration with Huntingdon was advocated to support accessibility to the town centre and promotion of place-making for the expanded community.
• Historic England requested a Heritage Impact Assessment to assess effects on nearby conservation areas and listed buildings.
• Utility providers seek foul drainage strategies aligned with wastewater capacity and phased delivery.
• The site promoter requests greater flexibility and highlight viability concerns over infrastructure costs and some policy requirements. Particular concern is expressed over education requirements suggesting that pupil yield assumptions are unrealistic.
• The site promoter requests minor alterations to the site boundaries.
• Alternative sites were promoted as additional or alternative options contending they have less transport and delivery challenges. These included:
  • Brampton Road, Buckden CfS:281 (2.8ha employment)
  • Land east of Bluntisham Road, Needingworth CfS:291 (300 homes)
  • Emmanuel Knoll Village east of Godmanchester CfS: 207 (1,200 homes and community uses)
  • Hungary Hall, Broughton & Wyton on the Hill CfS:47 (new community including 5,000 homes)
	limited supply of land in the district which is grade 3b or below.
	• An integrated water strategy is required, the requirement for natural flood management has been added and a housing trajectory showing anticipated development phasing included.
	• Strategic green infrastructure will be required alongside a full range of open space uses.
	• A Heritage Impact Assessment has been completed.
	• Early engagement with the Environment Agency and Anglian Water has been added as a requirement to align work on wastewater capacity with delivery.
	• Education requirements have been amended to provide flexibility at each stage of reserved matters to assess needs and secure appropriate education provision for each phase of development.
	• The site boundary has been amended to reflect the latest information provided.
	• The other sites promoted as alternatives/ additions have been tested through a range of assessments and evidence base material and identified as less sustainable or appropriate so are not included in preference.

North Huntingdon 4 (23 comments) • Significant concerns raised regarding transport and accessibility of the site focusing on existing local congestion, the A141 upgrade project not yet being funded, details of access arrangements, insufficient vehicle access to the A1307, the need for improved bus routes and clarification sought over details of active travel routes. • Some objection to the exclusion of class B8 storage and distribution including the suggestion that this can provide skilled employment and that	• Discussions are progressing with the CPCA on provision of the A141 and St Ives Improvements Scheme to delivery the necessary transport upgrades. • The allowance for B8 has been amended to "storage and distribution uses (use class B8) only where they are ancillary to other uses or providing 'last mile' distribution operations" • The masterplanning and place-making strategy requirements have been amended to include clarification of the need for separation from

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
the site is better suited to this use than other proposed B8 allocations. • Settlement coalescence concerns were raised regarding the potential merging of Huntingdon and St Ives, Houghton & Wyton and other nearby villages. • Pressure on the Great Ouse Valley priority landscape was put forward as a risk with concerns over landscape impact and potential demand for an additional road crossing this area. • Long lead-in time was raised as a concern and the impact on early housing delivery, build out rates within the plan period and the ability to produce a 5-year supply of housing land. • Clearer phasing of delivery was sought for both infrastructure and housing with concerns over the impact on community facilities and travel patterns. • Water resource and wastewater uncertainties were cited along with concerns over flood risk affecting Bury Brook, Parsons Drove and St Ives; the need for fully funded long term drainage solutions was identified. • Sports England request playing field loss be prevented and that facilities should be provided to meet the needs of the new community. • Historic England acknowledge there are no designated heritage assets on the site; they request a heritage impact assessment to evaluate impacts on the setting of nearby assets. • A more diverse housing supply was suggested as preferable, with an increased number of small and medium sized extensions to existing settlements. In support of this Emmanuel Knoll Village east of Godmanchester CfS: 207 (1,200 homes and community uses) was promoted as an alternative or additional site. • The site promoter supports the allocation subject to seeking a series of detailed amendments to provide greater flexibility over housing types, provision of education and other community facilities, allow class B8 uses and reduction of BNG to 10%. A Vision document and masterplan were provided to illustrate the development potential for the site along with a highways and transport response to demonstrate deliverability. • The site promoter reaffirmed their commitment to bringing the site forward in support of the defence cluster and opportunity zone identified in the CPCA's Local Growth Plan. • The site promoter for Emmanuel Knoll Village submitted a detailed critique of the local highway	Houghton and Wyton village. The supporting text has also been amended to stress the need for a gap between the site and the proposed development at Lodge Farm. • No additional road crossing the Great Ouse Valley is proposed within the transport mitigation having been ruled out in 2018. • A housing trajectory will be included in the local plan and phased construction expected to ensure build out rates align with infrastructure. • The requirement for early engagement and agreement with water resource and wastewater infrastructure providers has been added to the proposed allocation. The certainty of allocation will assist the infrastructure providers in securing funding through their own business planning processes. • Sports provision is expected to be secured in line with the needs arising from the development; this may include relocation or alternative provision than that on the former RAF base given the different demographic mix of future users. • A heritage impact assessment is required. • Additional text has been included to reflect the diverse housing mix which is required • Discussions with the Defence Infrastructure Organisation have confirmed that the land allowed for employment uses is sufficient to meet expected future needs for defence related uses which are suitable for provision outside of the securely fenced RAF Wyton base. • Emmanuel Knoll Village has not been included as an alternative or additional site due to ongoing concerns over deliverability of the access elements of the scheme; it is noted that a planning application has been prepared.

Main Issues Raised	Council Response / How the Council has taken this into account
and transport conditions in support of their site as a preferable alternative or additional site. They also highlighted the increasing national emphasis on military intelligence hosted on the adjacent RAF Wyton as a potential risk for the site should this need to expand.	

Market Towns

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (7 comments) • Concerns that cumulative impacts from multiple large sites and development around St Ives could strain infrastructure and lacks evidence for sustainable growth. Expansion may change Market Towns' identities or merge parishes into larger conurbations. • Concerns emergency services may struggle to meet higher demand from new developments. Additionally, St Ives may not receive Community Infrastructure Levy (CIL) funding for nearby projects, despite being affected by them. • Support for heritage-led planning, including mandatory design codes reflecting traditional architecture and stricter protection for older buildings with a preference for preserving old buildings to store embodied carbon and reduce environmental impact. • Support for energy-efficient design, including natural ventilation and reduced energy use with a focus on increasing biodiversity and flood resilience with better green infrastructure. • Concerns exist about unclear policy terminology, especially with Market Town definitions.	• Concerns regarding cumulative impacts are noted. HDC are working with partners and the CPCA on the delivery of strategic road and infrastructure requirements. The Local Plan is also supported by a Strategic Transport Study and Infrastructure Delivery Study. • Comment regarding obligations are noted, policies LP3 How will infrastructure be provided and LP4 Securing infrastructure provision addresses concerns. • Comments regarding high quality design and energy efficient design are noted - chapter 5 of the Preferred Options Local Plans sets out the Council's approach to securing these. • The Settlement Hierarchy section of the Preferred Options Local Plan (pages 59 to 62) define each of the layers of the hierarchy.
Huntingdon general (0 comments) • No comments	• No comments to address
Huntingdon 1 (11 comments) • The NHS support redevelopment of the site and note the hospital's priority status for comprehensive redevelopment under the NHS New Hospital Programme to provide updated facilities and improved access. In addition to healthcare and supporting uses they suggest including research, development, laboratory, office, and ancillary services supporting the North Huntingdon Growth Cluster. They note that the masterplanning exercise is largely completed and subject to review by the NHS New Hospital	• NHS support noted and appreciated, multiple minor amendments have been made to the proposed allocation to reflect detailed points raised including provision of other related healthcare uses, specification of multiple access points including an access directly onto Views Common Road to reduce use of Hinchingbrooke Park Road • Road improvements associated with the A141 are part of a larger proposal being supported through the CPCA which are expected to improve conditions for connecting traffic using the A1307.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Programme; wording changes are suggested to reflect submission of an outline planning application. • Concern expressed that the Trust's planned access road is too close to an already congested crossroads, creating risks for hospital traffic, and will significantly increase traffic and overlooks future congestion impacts from the North Huntingdon Growth Cluster. Additional pressures come from A14 diversion traffic, Active Travel proposals, and school-related congestion on Huntingdon Road. • A second access road into Hinchingbrooke linking the top of Hinchingbrooke Road to the A1307 is sought to ensure safe, reliable and future-proofed traffic flow. This could serve residents, hospital users, schools and emergency services, and support future developments. An illustration of a suggested route was provided avoiding the need to take access through the former Police HQ land onto Views Common Road. • Concerns expressed over existing alterations proposed, e.g. for active travel enhancements and their implications on road safety, parking and accessibility. • Essential for Cambridgeshire County Highways, North West Anglia NHS Foundation Trust and Huntingdonshire District Council to work together to devise a long term solution to the traffic implications of development in Hinchingbrooke and the North Huntingdon Growth Cluster. Funding could be shared between the NHS Trust and developers through Section 106 contributions. • The new plan future does not future proof either safe and reliable access for hospital traffic, or free flowing traffic along the A1307 at the bottom of Hinchingbrooke as a result of the developing North Huntingdon Growth Cluster • Car parking for patients and visitors need to be close to the hospital with staff a little further away. We must look after our vulnerable residents and those caring for them. • Strong support for multiple access points, including an essential link to Views Common Road, to address severe congestion on Hinchingbrooke Park Road. • Bus routes must reliably serve all hospital entrances with free-flowing, delay-free access beyond Brampton Road.	While the improvement scheme is acknowledged through the local plan HDC are not the Highway Authority responsible for delivering this so it cannot be directly proposed in the local plan. • Negotiations are ongoing on the potential access road/ roads to the hospital and will be resolved through the planning application process. • Car parking provision within the site is a detailed matter to be resolved through the planning application • Ensuring delay-free bus access is beyond the scope of the local plan. • The requirement for strategic green infrastructure has been enhanced and the need for informal open space for the use of staff, visitors and patients added to the proposed uses. • The former Police playing fields and dog training area have been separated from the Police HQ by construction of Views Common Road and have not functioned as playing fields for about 15 years. • The site has been included within the Heritage Impact Assessment completed to support the local plan and a more detailed site specific heritage impact assessment added to the requirements of the allocation. • The requirement for safeguarding of Anglian Water assets has added to the allocation. • A requirement to provide affordable key worker housing within the site has been added to the allocation.

Main Issues Raised	Council Response / How the Council has taken this into account
• Impacts on Police and Fire HQ access are raised and the implications of these for the local community. • Redeveloped hospital land, especially near Hinchingbrooke Park Road, should become strategic green infrastructure. • Sport England sought clarification on whether open space east of the hospital is a playing field, as this affects NPPF compliance. • A heritage impact assessment is required due to the site's proximity to Hinchingbrooke House, listed structures, and Conservation Area features. • Anglian Water infrastructure on site must be protected with safeguarded maintenance access. • The Council should consider affordable/key worker housing for NHS staff and collaborate closely with NHS partners throughout the planning process. • Key worker housing should remain for key workers in perpetuity, ideally through rental-only tenure.	
Huntingdon 2 (5 comments) • Support expressed for development of a brownfield site, efficient land use, and integration with surrounding properties. • Cambridgeshire County Council supports the allocation, highlighting positive assessments, sustainability, accessibility, and lack of major constraints. • An additional site access and investment in local public services was promoted. • Concerns expressed regarding the combined scale of developments in the area, pressure on local schools/doctors/dentists, limited bus services, traffic congestion on Mayfield Road, and potential road damage during construction. • Anglian Water seek protection of access to existing infrastructure	• Support noted for the reuse of previously developed land. • The concerns regarding the development are noted and criteria within the policy alongside policies across the Local Plan seek high quality standards of design, sustainable development and is informed by infrastructure and transport studies. • Additional criterion added to the policy requiring 'the safeguarding of suitable access for the maintenance of existing water supply and sewerage infrastructure' and supporting text added.
St Neots general (3 comments) • Concerns the LAA is flawed, ignores evidence and expert advice, and its conclusions are unsupported. • The development proposals that have not been allocated avoid flood zones, and any objections from the Lead Local Flood Authority are technical rather than fundamental. • Three sites, Land North of Priory Park (Cfs:239), Rectory Farm (CfS:21) and Hardwicke Grange (CfS:208), are promoted as strategic, sustainable residential expansions for St Neots, emphasising	• LAA methodology has been shaped by consultation through 2023 and the views of residents, landowners and stakeholders have informed amendments to the LAA outcomes and shaped the preferred options sites. • 25/01694/OUT has been submitted and is awaiting determination for Priory Park. • Uncertainty over East West Rail means that the deliverability of Hardwicke Grange and Rectory Farm are uncertain at the moment. • For consistency purposes, the St Neots East allocation (SEL2 in the Local Plan to 2036) has

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
the town's suitability for housing growth due to its settlement status, improved rail connectivity, and the need for deliverable, well-prepared allocations in the Local Plan.	been included as an 'existing' allocation with updates to reflect the latest position.
St Neots 1 (14 comments) • Concern raised infrastructure and public services are insufficient for accommodating approximately 1,100 new homes. • Concerns regarding transport and connectivity to amenities, anticipated high car use, and uncertainty around East–West Rail. Concerns about impact of East–West Rail safeguarding on site deliverability, urging policy amendments. • Concerns on noise, air quality and vibration impacts from infrastructure upgrades on residential amenity and environment. • Historic England raise concerns around potential harm to the Grade II listed Tithe Farmhouse and nearby Monks Hardwicke House, calls for a full Heritage Impact Assessment. • Some cite constraints and infrastructure as limiting factors, while others see potential for higher numbers. Realistic planning and phased coordination with nearby developments are required. • Promotors of alternative sites advocate for a more varied housing supply by increasing small and medium site allocations rather than focusing predominantly on large strategic sites like St Neots 1. • Requests have been made to amend policy wording to require the provision or funding of fire, rescue, and police facilities. • Anglian Water highlights that St Neots WRC requires network reinforcement, with funding to come from regional infrastructure charges rather than individual developers, before any development can connect.	• Concerns noted regarding infrastructure, transport and connectivity are noted, the Local Plan is supported by an Infrastructure Delivery Study to identify infrastructure requirements. The site is also of a scale where many services and infrastructure can be delivered onsite over the course of its development. • Criterion f. requires liaison with East West Rail Co amended to refer to understand the nature and extent of temporary and permanent land requirements, the accommodation of land uses and site phasing. Supporting paragraph 10.19 and plan refer to policies map on safeguarding zone. • Criterion g. of the draft policy requires an assessment of noise and air quality impacts for the site. No changes made. • The sites selected in St Neots as they are the most preferable considering the in-combination LAA and SA assessments. The sites also align with the preferred development strategy and are the most deliverable considering they are the least impacted by a future East-West Rail route. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Funding for emergency services is addressed through developer contributions, no change made. • Criterion e. amended to require early engagement with Anglian Water on waste water flows
St Neots 2 (6 comments) • Concerns raised on site connectivity and access, highlighting limited and unsafe pedestrian/cycle routes, constrained vehicle movement, and increased car dependency due to inadequate sustainable transport links. • Concerns of noise, air quality, and residential amenity due to the site's close proximity to major roads and the railway. • Site's relationship to St Neots is contested, objections citing isolation and poor connectivity,	• Concerns regarding transport and sustainable travel integration are noted, the draft policy already addresses these issues. • The draft policy requires an air quality assessment and appropriate mitigation regarding noise and air due to its proximity to strategic transport infrastructure. Policy LPP30 - Preventing and reducing air pollution would also apply to any future planning application. • Comments regarding site's relationship with St Neots and deliverability are noted. As part of the Infrastructure Delivery Study, the site promoter

Main Issues Raised	Council Response / How the Council has taken this into account
while supporters consider it a logical, well-integrated extension of the town's planned eastern growth. • Supporters highlight deliverability of housing with objectors raising concerns over land availability. • Anglian Water highlights that St Neots WRC requires network reinforcement, with funding to come from regional infrastructure charges rather than individual developers, before any development can connect.	has been asked to provide a trajectory of build out to support the evidence for the Local Plan. • Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows.
St Ives general (11 comments) • Significant concern key services such as schools, GP surgeries, utilities, and digital connectivity are already overstretched, with no clear or funded plan to support future growth. • Significant concerns that additional development will negatively affect the landscape, rural character, particularly around Giffords Park and Houghton Road. • Objection to proposed developments at Giffords Park and Houghton Road, citing overcrowding, poor community integration, loss of greenfield, damage to biodiversity, and further strain on nature areas, flood risk and drainage systems. • Westwood Farm (CfS:246) is considered a preferable development by the site promoter due to lower flood risk, minimal landscape impact, less public opposition, and good access to services and transport for 600 homes; disputing HDC concerns about local character, proximity to sewage works, and infrastructure.	• Concerns regarding cumulative impacts are noted. HDC are working with partners and the CPCA on the delivery of strategic road and infrastructure requirements. The Local Plan is also supported by a Strategic Transport Study and Infrastructure Delivery Study. • Draft policy criteria for Giffords Park and Houghton Road seek to overcome the issues identified. • Westwood Farm (CfS:246) - the site would need to be part of a wider development as in isolation the site would sit uncomfortably and also need more certainty on road improvement works. More sustainably located sites have been selected that have direct access to services and facilities including town centre.
St Ives 1 (27 comments) • Concerns about increased congestion calling for a new river crossing, improved traffic modelling, and active travel infrastructure prior to more development. • Town Council and technical consultees warn that local health, education, water, and emergency services lack the capacity and funding for further development, and large projects north of the Great Ouse could overload infrastructure. • Key concerns around harm to landscape, and agricultural land; the need to protect green infrastructure and wildlife corridors, implementing green buffers and sensitive landscaping to stop suburbanisation. • Concerns that the SA particularly does not provide a cumulative assessment on flood risk, drainage, and transport; alongside unsubstantiated mitigation assumptions.	• Concerns regarding cumulative impacts and infrastructure are noted. HDC are working with partners and the CPCA on the delivery of strategic road and infrastructure requirements. The Local Plan is also supported by a Strategic Transport Study, Infrastructure Delivery Study and a Water Cycle Study assessing waste water capacity. Anglian Water are working closely with HDC on this and reviewing Assets Management Plans to accommodate future growth. • Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study. The draft policy requires satisfactory resolution of any impact caused by traffic generated from the allocation on the local and strategic road networks. Requirement for a roundabout with the A1123/ Sawtry Way junction has been amended to allow a more flexible solution.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Significant concerns regarding flooding and sewage capacity, with calls for fully funded, strategic drainage upgrades before development. • Development near the site may impact several nearby Grade II listed buildings, requiring a Heritage Impact Assessment prior to any allocation. • Site is isolated from St Ives, poorly connected, distant from essential services and jobs, misaligned with commuting routes, and accessible only by a single road. • Anglian Water confirm there are no assets within the site and support criteria f. with regard to accommodating wastewater flows. As indicated by the Stage 2 WCS, St Ives WRC has dry weather flow capacity to accommodate growth in St Ives, although future upgrades may be necessary in subsequent AMPs to increase capacity and recommends developer's early engagement with AW. • A key submission from land promoters notes the site's access to the Guided Busway, potential for 400 homes (40% affordable), quality landscaping, increased biodiversity, strong pedestrian and cycle links, and no major technical issues.	• The draft policy requires a comprehensive parameter plan is required to ensure a holistic approach to the design of development integrating it with St Ives and mitigating landscape impact. Also the draft policy requires development to provide 12 ha of green infrastructure, this is about 50% of the whole land area. • Draft allocation requires development to provide a flood risk assessment. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • The site is located on the western edge of St Ives with good connectivity to the town. • Anglian Water support noted, criterion f. amended to require early engagement with AW on waste water flows • Information from site promoter noted.
Ramsey and Bury general (22 comments) • Road infrastructure is already beyond capacity, and further development would worsen congestion, speeding, safety risks and fen related road failures. • Flooding and drainage systems are inadequate, with surface water issues already evident and likely to intensify with new development. Community facilities, leisure spaces and green assets are insufficient and under pressure, with fears of losing valued open spaces. • Healthcare, schools and utilities lack capacity, and growth is outpacing investment in essential infrastructure. • Cumulative growth has already exceeded what local services can support, and assessments fail to account for combined impacts. • Public transport is insufficient, leaving residents car dependent and undermining sustainability aims.	• Concerns regarding cumulative impacts are noted. HDC are working with partners and the CPCA on the delivery of strategic road enhancements. The Local Plan is also supported by a Strategic Transport Study and Infrastructure Delivery Study. • The Local Plan is supported by a Strategic Flood Risk Assessment and a Water Cycle Study assessing waste water capacity. Anglian Water are working closely with HDC on this reviewing Assets Management Plans to accommodate future growth. • Support for Bury 2 noted. • Comment regarding obligations are noted, policies LP3 How will infrastructure be provided and LP4 Securing infrastructure provision address concerns working alongside the Infrastructure Delivery Study to deliver key pieces of infrastructure.

Main Issues Raised	Council Response / How the Council has taken this into account

• Bury's distinct village identity is threatened, with opposition to coalescence with Ramsey and misclassification as a 'market town'.
• Concerns raised relating to heritage impact, loss of green space, flooding risk, and traffic implications.
• Noise, pollution and road safety issues are significantly harming quality of life, especially for residents along key routes.
• Site promoters seek allocation of their sites: land North of High Street and East of Bury Road, Bury (CfS:162), land off Brookfield Way, Bury (CfS:279) and land south of Biggin Lane (CfS:118) with promoter submitting further evidence.
	• Comments regarding specific sites are addressed in the following rows.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Land North of High Street and East of Bury Road, Bury (CfS:162) - no substantive new evidence and concerns remain regarding development of the site and the neighbourhood plan designation is still in place.
	  • Land off Brookfield Way, Bury (CfS:279) - no substantive new evidence and concerns remain regarding flood risk with sequentially preferable sites being selected for allocation.
	  • Land south of Biggin Lane (CfS:118) - No substantive new evidence and concerns remain regarding landscape impact, heritage and flood risk, sequentially preferable sites have been selected for allocation.

Bury 1 (5 comments) • Bury Parish Council support the allocation with conditions regarding flood risk, contamination, and infrastructure capacity. • There should be wider public right of way and footpath improvements within Bury and Ramsey. • Historic England state a heritage impact assessment is needed because development is within Ramsey conservation area and could affect nearby listed buildings, its findings should determine whether the site is suitable for allocation and what mitigation is required. • Anglian Water supports the requirements to seek agreement with the EA and Anglian Water regarding accommodating wastewater flows. There is a sewer pumping station adjacent to the southern boundary requiring a encroachment buffer of at least 15m to ensure it does not impact on the amenity of future residents on the site due to odour.	• Support from the Parish Council is noted - the criteria within the draft policy addresses flood risk, contamination and infrastructure concerns. No changes made. • Public right of way improvements noted, the draft policy can only provide improvements to rights of way directly impacted by the proposal. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion added to draft policy to address Anglian Water comments seeking an access to enable maintenance of existing water supply infrastructure. Supporting paragraph 10.56 updated.
Bury 2 (11 comments) • Support for using the site for flood mitigation measures, with requests to make Natural Flood Management interventions a firm policy requirement. • Expectation that the site should prioritise biodiversity net gain, with enhanced landscape features and long term stewardship—preferably	• Support for the draft allocation is noted and welcomed. • Site promoter commitment to providing BNG is welcomed, the draft policy has been amended to allocate the site for just BNG uses. • Public right of way improvements noted, the draft policy can only provide improvements to rights of way directly impacted by the proposal.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
involving the Parish Council. Site promoters sought policy changes confirming the site as a biodiversity net gain habitat bank—not open space—along with revised assessment scoring and commitment to deliver BNG if wording changes are made • Support for improved, inclusive public access with upgraded PROW links, potentially including cycling provision. • Desire for multiple green infrastructure allocations in the wider area, not just Bury 2. • Anglian Water supports the allocation for flood and biodiversity benefits, noting no direct asset conflicts. • Historic England identify the site is adjacent to the Ramsey Conservation Area and listed buildings so seeks a heritage assessment to inform policy requirements.	• Support from Anglian Water noted. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan.
Bury 3 (16 comments) • Respondents want the runway and RAF Upwood heritage retained and incorporated into a park or green space rather than lost to further housing. • Objections cite already overstretched infrastructure—roads, health services, schools, drainage, and utilities—and argue no further development should proceed without major upgrades. • Concerns about existing unsafe roads, speeding near schools, accident history, construction traffic impacts, cumulative traffic growth, and significant noise pollution affecting residents' wellbeing. • Support for a through bus route (not an extended slow route) and safe walking/cycling connections, including links to northern Ramsey. • Bury Parish Council supports redevelopment only with strict safeguards to protect the strategic gap between Bury and Ramsey, requiring strong landscape buffers, lower densities on edges, and prevention of future coalescence. • Opposition to the scale of phases 3 & 4, describing cumulative harm from previous phases, insufficient local services, and degradation of rural village character. • Comments report existing surface water flooding, ditch capacity issues, runoff from fields, and fears that additional hard surfacing will worsen flood risk without adequate mitigation. • Site promoter supports allocation but argue capacity should increase from 170 to 200 dwellings, oppose requirements for greenfield	• Comments regarding reuse of runway noted, supporting paragraph 10.66 updated to identify the potential heritage value of its reuse. • Concerns regarding cumulative impacts and infrastructure are noted. The Local Plan is also supported by a Strategic Transport Study and Infrastructure Delivery Study to address infrastructure required as a result of growth. A Water Cycle Study assessing waste water capacity. Anglian Water are working closely with HDC on this and reviewing Assets Management Plans to accommodate future growth. • Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study. Concerns regarding wider transport issues are noted, the draft policy requires provision of safe vehicular and pedestrian access supported by a transport assessment and travel plan. No changes made. • Support for bus route noted. • The draft policy requires 11.5 ha of the site, some 65% of the total site area to include green infrastructure. This will provide important landscaping and retain a sense of separation between it and nearby Ramsey. • Criterion c. of the draft policy requires an assessment of flood risk and a detailed drainage strategy to support development. • Site promoter support and vision document welcome, comments regarding increasing capacity are noted. In the text regarding the need for

Main Issues Raised	Council Response / How the Council has taken this into account
runoff rates, oppose vehicular connectivity to Ramsey 1, and seek clarification on wastewater and drainage policy expectations. • Anglian Water supports wastewater engagement requirements but notes constraints at Ramsey WRC may require phased development until network reinforcement is delivered.	agreement with the introduction of Section D, it states there is a 10% tolerance either side of the 'about' figure set out is considered to be reasonable. This means that up to 187 dwellings could be appropriate on the site. No change is therefore made. • Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. Comments are noted and will inform the housing trajectory which will be published at the next stage of Plan preparation.
Ramsey 1 (21 comments) • Residents are concerned that inadequate drainage and new developments may increase flood risk in several areas. • There are concerns about rising traffic, road safety, and poor transport infrastructure, with calls for traffic calming, better junctions, improved bus services, and more active travel options. • Local services like GPs, dentists, and schools are under strain, as past developments have often lacked sufficient infrastructure. Residents note the pace of new housing and want fewer developments. • Many are worried that overdevelopment in Upwood, Bury, and Ramsey is causing urbanisation and pollution, eroding the area's rural character. • Opposition to southern industry placement near Fairmead Park; proposal to relocate it north by the hangars and reserve the south for green space or recreation. • Some worry that better connectivity between development phases may lead to rat-running, and that connecting residential and industrial areas by road is seen as inappropriate. • There are concerns about losing mature hedgerows and trees, displacing wildlife like foxes, bats, owls, and deer, and requests for Tree Preservation Orders to safeguard the area. • Site Promoters generally back the growth strategy and allocations at Bury 3 and Ramsey 1 but have concerns about housing numbers, infrastructure, employment uses, and environmental standards, and request policy and site distribution changes to enhance deliverability and viability.	• Criterion d. of the draft policy requires an assessment of flood risk and a detailed drainage strategy to support development. • HDC are working with partners and the CPCA on the delivery of strategic road and infrastructure requirements. The Local Plan is also supported by a Strategic Transport Study and Infrastructure Delivery Study. A Water Cycle Study assessing waste water capacity has been undertaken working closely with Anglian Water, this includes reviewing Assets Management Plans to accommodate future growth. • Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study. Concerns regarding wider transport issues are noted, the draft policy requires provision of safe vehicular and pedestrian access supported by a transport assessment and travel plan. No changes made. • The draft policy requires 9.2ha of the site, some 65% of the total site area to include green infrastructure. This will provide important landscaping and opportunities to support wildlife and habitats. • Site promoter support and vision document welcome, the vision document shows that the employment uses will indicatively be located on the southern edge of the site separated from residential properties to the east by landscaping and a tree belt. The draft policy requires that an assessment of noise, light, air, and dust pollution impacts from the proposed employment be made with mitigation in place. • Anglian Water support noted, criterion e. amended to require early engagement with AW on waste water flows. Comments are noted and will inform the housing trajectory which will be published at the next stage of Plan preparation.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Ramsey 2 (12 comments) • Concerns include limited transport infrastructure: narrow roads, traffic near schools, poor public transport, long distances to amenities, and issues with site accessibility, sustainability, and connectivity. • Waterlogging and flooding are ongoing concerns that may worsen with further development. New projects should be phased due to Ramsey WRC network limits until a solution is found. Anglian Water supports policies requiring agreement with the EA and Anglian Water on wastewater flows. • Concerns about heritage and conservation have led to calls for comprehensive assessments to safeguard the Ramsey Conservation Area, the Abbey's historic setting, and associated assets. • Impact on local landscape, preserving features like hedgerows and a heritage oak, and ensuring development integrates with the Museum Meander Walk. • Concerns about losing Abbey College's playing fields, as their necessity and any replacements remain unclear, casting doubt on the site's deliverability. • Site promoters support as a logical, sustainable expansion of Ramsey, noting the landowner's efforts to address technical, heritage, and environmental issues through planning, collaboration, and prioritising sensitive design and biodiversity.	• Concerns regarding wider transport issues are noted, the draft policy requires provision of safe vehicular and pedestrian access supported by a transport assessment. No changes made. • Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criteria requires the retention of existing trees, hedges and boundary features to mitigate land[ace impact and requires a landscape plan or strategy. • Concerns regarding loss of playing fields are noted, the site promoter has commented with a commitment from the landowner to undertake early technical work, masterplanning and engagement with relevant stakeholders. • Site promoter comments noted.
Ramsey 3 (32 comments) • Development of the field would disrupt community events and vital car parking, threatening their viability and local income. • Site's position in the Ramsey Conservation Area, near listed buildings, raises heritage concerns. A Heritage Impact Assessment is recommended before any site allocation. • Flooding and wastewater issues require detailed modelling and upgrades before development. Consultation with relevant authorities is necessary, and areas at risk may need to be excluded from plans. • Road safety and access on Wood Lane are problematic, due to speeding and lack of footpaths or cycle links. • Regular noisy events may conflict with future residential use, risking complaints and event restrictions.	• Upon review of the concerns and objections raised to Ramsey 3, the site has been removed as a draft allocation despite the rationale for allocating it being to secure the long term use of the wider site for community open space uses.

Main Issues Raised	Council Response / How the Council has taken this into account
• Development threatens Ramsey's valued green fringe, important for wellbeing and biodiversity. • Preference is for alternative sites in Ramsey or better-served settlements, supported by local surveys opposing development. The field should be de-allocated unless impacts are proven manageable. • The landowner supports development if master planning delivers better community facilities and open space, subject to technical studies and engagement in 2026. • Past appeals dismissed development over heritage and overdevelopment concerns. Current allocation should be rejected unless strong new evidence addresses these issues.	

Service Centres

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (8 comments) • The Plan over-relies on large strategic sites, risking delayed delivery due to complexity, viability, market conditions. Delivery review mechanisms should be used and more smaller/medium sites should be allocated. • Buckden and Warboys have no allocations, site promoters consider east of Bishops Way, Buckden for up to 160 homes (CfS 210) and Fenton Road, Warboys for 170–195 homes (CfS:85) should be allocated, additional documents were submitted. • Anglian Water supports the draft site allocation policy requirements to seek agreement with the EA and Anglian Water regarding accommodating wastewater flows. • Concerns about sustainability of Somersham, impact on village character and services without proper investment. Public and active transport is unsuitable for daily needs, GP capacity issues, congested High Street and safety of the B1050 and B1086. • Support for use of traditional architecture in schemes and banning demolition of pre 1950s buildings.	• The Preferred Options Plan proposes allocations of varying scales across various settlements in the district.The Council is working proactively with the CPCA and infrastructure partners in delivery the necessary infrastructure to unlock transformational levels of growth. The Local Plan is also supported by an Infrastructure Delivery Study. • Additional small and medium sized sites have been identified to add to the 5YHLS and will be consulted upon through May to June 2026. • Of the sites promoted in Buckden and Warboys none were put forward as draft allocations as they were either discounted through the in-combination LAA and SA assessment or there were issues regarding scale and integration. • Anglian Water support noted. • Concerns regarding cumulative impact on Somersham are noted and Somersham 2 has been removed as a draft allocation. • The Plan seeks high quality design that reflects local character and distinctiveness.
Brampton general (6 comments) • Promoters argue unallocated sites are deliverable, sustainable and under assessed providing further technical evidence. Inconsistencies in the SA and LAA assessments has been highlighted.	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated: • Additional 4.58ha of land at Brampton to the north west of Dorling Way adjacent to the

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Additional 4.58ha of land at Brampton to the north west of Dorling Way adjacent to the A1 and Thrapston Road for housing. • Land to the North of Thrapston Road (CfS 320) for 10–15 homes as it is an infill site. • Park Farm (CfS 222,224,225226) for employment/mixed-use site covering four parcels of land as one linked development supported by wide technical evidence including odour assessments, noise, employment demand etc. • Land North of Thrapston Road and South of the A141, (CfS: 342) promoter states the smaller parcel is suitable for housing/commercial development as it is well served with manageable constraints. • Residents argue Brampton faces over intensification without the appropriate addition of infrastructure to serve the cumulative impacts of growth. In particular transport capacity (A1,A14,A141 and Brampton Hut); flood risk, drainage and waste water gaps; landscape, heritage, pollution and environmental impacts. • Concerns raised at the lack of Infrastructure Delivery Plan to demonstrate mitigation for the growth on infrastructure.	A1 and Thrapston Road for housing - the Council is very concerned about the harm to resident amenity due to its proximity to the strategic road network. There are also concerns about how a development here could be successfully integrated as the neighbouring development has been designed so that there is limited vehicular access to this site. The intention for this parcel of land was to be retained as a landscape buffer. • Land to the North of Thrapston Road (CfS 320) for 10–15 homes as it is an infill site - no substantive new evidence, concerns remain. • Park Farm (CfS 222,224,225226) for employment/mixed-use site covering four parcels of land as one linked development supported by wide technical evidence including odour assessments, noise, employment demand etc - The collective four parcels have been assessed in full in the LAA and SA but Council are still concerned over unacceptable landscape and traffic impacts. • Land North of Thrapston Road and South of the A141, (CfS: 342) promoter states the smaller parcel is suitable for housing/commercial development as it is well served with manageable constraints - no substantive new evidence, concerns remain regarding highway safety and integration challenges. • Concerns are noted. The Local Plan is supported by various technical studies and assessments including a Habitats Regulation Assessment, Strategic Flood Risk Assessment, climate change evidence, Housing Needs Assessment, Employment Study, Strategic Transport Study and an Infrastructure Delivery Study.
Brampton 1 (4 comments) • Objections cite concerns about noise, poor future living conditions due to the site's location near the A141 junction and Thrapston Road, and insufficient wastewater treatment at Brampton WRC. • Anglian Water advises any development be phased alongside infrastructure upgrades. • Middle Level Commissioners and Sawtry IDB discharge consent will be needed. MLC should	• Concerns are noted, the draft policy includes criterion e. which seeks the provision of suitable noise, light and air quality mitigation measures in relation to the A141. The draft policy LP30 - Preventing and reducing air pollution will also apply to future applications made on site. • Anglian Water comments regarding phased development in line with infrastructure are noted and will be considered as part of the housing

Main Issues Raised	Council Response / How the Council has taken this into account
be referenced alongside the EA and LLFA. Good to see reference to MLC engagement re stresses in our system. • Heritage issues are also raised, as most of the western site is a scheduled monument, prompting calls for a Heritage Impact Assessment and consultation with Historic England.	trajectory preparation for the submission Local Plan. • Reference to the MLC and Sawtry IDB now included within the supporting text. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan.
Brampton 2 (6 comments) • Concerns include inadequate transport infrastructure, poor road conditions and access, pedestrian safety risks, and increased congestion. Flood risks involve more surface runoff from developing the site and reduced floodplain capacity, with calls for design changes to address these issues. • Wastewater upgrades are needed for connections and access to a sewer to the SW road boundary will need to be safeguarded • Some concerns regarding potential antisocial behaviour while some support the project for better access and leisure. • Historic England require policy integration relating to heritage impacts.	• Concerns are noted, the draft policy includes requirement for masterplanning and also a requirement for a flood risk assessment and detailed drainage strategy. • Criterion added to require the safeguarding of suitable access for the maintenance of existing water supply infrastructure. Supporting paragraph 11.16 amended. • Policy LP 20 of the Local Plan provides guidance on the creation of well designed places including requirements for promoting safe and enjoyable public amenity spaces • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan.
Fenstanton general (4 comments) • A promotor suggests the inclusion of mixed-use development on Conington Road, Fenstanton, citing its viability for early housing delivery. • Concerns include inadequate infrastructure resulting in; increased traffic and congestion; flood risk; existing utility issues; and environmental impact. • Some residents think up to 100 new homes could be managed, prioritising affordable options for first-time buyers and families but large-scale projects may overwhelm the village.	• Conington Road, Fenstanton - the site promoter did not submit any substantive new evidence to justify adding the site in as a draft allocation. Concerns remain regarding how the site could effectively integrate with the existing place and community due to its physical detachment, safety concerns due to potential increased usage of underpass to access Fenstanton, adverse impacts on the landscape and on heritage assets. • Infrastructure concerns, traffic congestions and flood risk and environmental issues are noted and addressed through policy and criteria.. • Welcome support for development, the draft Local Plan does not allocate housing sites in Fenstanton but policies in the Plan support any sustainable windfall development which could come forward over the lifetime of the Plan.
Fenstanton 1 (18 comments) • Promoters and some residents favour the allocation and policy. Promoters commit to technical studies and roundabout solutions. • Anglian Water require development to account for the pressurised sewer on site and ensure access for maintenance, with any relocation requiring formal approval from Anglian Water. Due to existing network and treatment capacity	• Support form the site promoter is noted and welcomed. Commitment to undertake technical studies set out in the draft policy is welcomed. • Criterion c. amended to identify the rising main along the southern boundary and across the south west corner of the site as identified by Anglian Water. Paragraph 11.26 of the supporting text updated too.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
constraints, future growth in the Huntingdon area will need to be phased and supported by strategic infrastructure planning. • Historic England raises concerns regarding the Manor House and listed buildings, and calls for a Heritage Impact Assessment. • Several challenges were raised, including flood risks from Zones 2 and 3, the need for clearer biodiversity net gain, congestion at the Galley Hill junction requiring redesign, and necessary improvements to Marsh Lane and travel routes. • Minerals and Waste suggest changes to point l. of criteria.	• A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Concerns regarding the site are noted and the policy addresses each of these issues within the criteria. • Amended criterion l. to state 'make best use of minerals (sand and gravel) located within the site' as requested by the Minerals and Waste Authority.
Godmanchester general (7 comments) • A petition signed by 86 residents seeks an infrastructure-first approach for all allocations. • Repeated concerns expressed over the capacity of Godmanchester's infrastructure to accommodate more growth. • Criticism expressed of evaluating possible sites in isolation rather than as a single transport system around the A1198/A1307/A14 corridor • Disproportionate level of growth proposed for Godmanchester compared to other Service Centres, particularly Brampton • Strong lobbying for Emmanuel Knoll Village in which the site promoter contends that the three Preferred Option allocations face major transport and highways constraints, with heavy reliance on the uA141 scheme, poor active travel conditions, and significant congestion impacts. In contrast, Emmanuel Knoll Village is positioned as the most deliverable, sustainable, and lowest-risk strategic site, capable of early delivery and not dependent on major external infrastructure with evidence presented claiming that access challenges can be overcome. Substantial additional information provided. • Site promoter urging inclusion of land off Bluegate (CfS 23-24180) asserting that access is achievable and the character likely to change significantly due to preferred sites	• The concerns regarding infrastructure to accommodate growth and the cumulative impact of development are noted. The Local Plan is supported by various technical studies and assessments including a a Strategic Transport Study and an Infrastructure Delivery Study - these have shaped the preferred strategy and sites set out in the Preferred Options Local Plan and sets out the infrastructure mitigations required to enable development through the plan period. • More growth is allocated in Godmanchester than Brampton, this is primarily due to the other sites promoted in Brampton that did not progress to draft allocations being discounted through the in-combination LAA and SA assessment or there were issues regarding scale and integration. • Emmanuel Knoll Village is an extension to Godmanchester, however, would result in a substantial increase that it would not connect through and integrate with Godmanchester. Concerns remain about deliverability of the link road from A1198 to A1307 and provision of junction on the A1307. Inclusion would necessitate the removal of the Lattenburys as having both would result in coalescence. • Land off Bluegate (CfS 23-24180) - upon review, this land has been included within the collective site area of Godmanchester 2. It has the potential to deliver housing development and also provide connectivity to areas of greenspace.
Godmanchester 1 (8 comments) • General support for redeveloping this brownfield site in a sustainable location and protecting Portholme SAC.	• Support noted and welcomed. • Additional information included within the allocation criteria and supporting text to address active travel solutions as reflected in approved application 25/01587/FUL.

Main Issues Raised	Council Response / How the Council has taken this into account
• Potential for an active travel route through the site should be safeguarded. • Heritage concerns raised regarding proximity to conservation areas, listed buildings and scheduled monuments; Historic England seeking an HIA before allocation. • Anglian Water requests safeguarding access to existing water mains and does not support temporary foul-water mitigation. • Wastewater capacity issues at Huntingdon WRC; development likely dependent on AMP9 solutions. • Limited ability to deliver community benefits due to viability constraints.	• A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion added to require the safeguarding of a suitable access for the maintenance of existing water supply infrastructure. • Anglian Water comments regarding phased development inline with infrastructure are noted and will be considered as part of the housing trajectory preparation for the submission Local Plan. • The site is under construction.
Godmanchester 2 (28 comments) • Requests for additional retail (grocery/supermarket), bigger play areas, and clarity on estate management and service adoption. • Objections cite adverse landscape and visual impact effects and erosion of rural setting/settlement edge; fear of coalescence with The Lattenburys; Town Council concerned about local identity and impact on the character of Godmanchester. • Desire for strategic green infrastructure, play space, biodiversity net gain. • Wildlife Trust concerned about Portholme recreational pressure; Sport England seeking protection of adjacent playing fields. Some challenge the fixed 5.1 ha BNG figure. • Support for a new A1198 roundabout, but strong asks for active travel links, multiple crossings, speed reduction, and stubs for future expansion; concern over congestion and safety without a full transport strategy. • Anglian Water flags Huntingdon WRC shortfalls (no AMP8 capacity; phasing to AMP9+), opposes short-term foul mitigation, and requests safeguarding access to water infrastructure. Developers contest making AWS sign-off a pre-condition given statutory duties. • Surface-water flooding linked to Stoneyhill Brook, London Road/Crowhill, and A1198; calls for sequential testing, detailed modelling, and remediation before further growth. Several seek deletion of the allocation or rerouting/mitigation; drainage from new road questioned. • Promotion of land at Bluegate and Emmanuel Knoll Village as alternative or additional sites.	• Retail, play areas etc. Will be addressed through the planning application. • Concerns are noted, this site will form as an expansion to Godmanchester, whereas The Lattenburys is designed to be a standalone community. Landscaping and green infrastructure is proposed to retain a rural edge. • Criterion added to require the safeguarding of a suitable access for the maintenance of existing water supply infrastructure. • The draft allocation requires that land around Stoneyhill Brook and bordering Silver Street must be used for natural green space or biodiversity net gain totalling a minimum of 6.8ha. • Within the policy a safe crossing point has been added to the requirement for a new roundabout. • Anglian Water comments regarding phased development inline with infrastructure are noted and will be considered as part of the housing trajectory preparation for the submission Local Plan. Criterion added to require the safeguarding of a suitable access for the maintenance of existing water supply infrastructure. • The draft allocation requires a flood risk assessment and that built development be sequentially located in flood zone 1. The draft allocation also includes land for natural green space which can provide flood management and a betterment to the current flooding issues experienced locally. • Land off Bluegate (CfS 23-24180) - upon review, this land has been included within the collective site area of Godmanchester 2. It has the potential to deliver housing development and also provide connectivity to areas of greenspace. This

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
	• increases the draft allocation to include about 550 homes. • Emmanuel Knoll Village is an extension to Godmanchester, however, would result in such a substantial increase that it would not connect through and integrate with Godmanchester. Concerns remain about deliverability of the link road from A1198 to A1307 and provision of junction on the A1307. Inclusion would necessitate the removal of the Lattenburys as having both would result in coalescence.
Godmanchester 3 (5 comments) • Alternative site Brampton Road, Buckden (CfS:281) promoted as more suitable: extant permission, faster delivery, better location, and meets SME B2/B8 needs. • Highways Authority supports allocation but stresses careful design to avoid worsening safety at the A14 dumbbell roundabout. • Anglian Water highlights wastewater capacity constraints at Huntingdon WRC; development may need phasing and cannot rely on short-term foul drainage measures; requests safeguarding of water-main access. • Town Council sees commercial use as appropriate but seeks clarification on potential A14 access/ slip-road upgrades and associated traffic impacts on A1198 and Lattenburys.	• Brampton Road, Buckden (CfS:281) - significant constraints remain including impact on Great Ouse Valley and minerals and waste. This site is therefore not considered as a suitable alternative to Godmanchester 3. • Highways Authority support noted, further information has been provided in supporting paragraph 11.60 to identify that design will need to ensure that it does not adversely impact on safety performance of the existing roundabout. • Criterion added to require the safeguarding of a suitable access for the maintenance of existing water supply infrastructure. Further information added to supporting paragraph 11.58. Anglian Water comments regarding phased development inline with infrastructure are noted. • Support from Town Council noted. Access and traffic impacts are addressed through criteria in the policy and supporting text, which will be addressed as part of the planning application.
Kimbolton general (3 comments) • Insufficient allocations for Kimbolton given its role as the largest settlement in the west of the district. • Housing growth already exceeding the draft plan's intentions, with approvals far beyond the 25-unit allocation. • Opposition to large-scale expansion that would reduce access to or quality of local amenities and services, particularly from Catworth. • Pressure on local services, particularly the already stretched Kimbolton Health Centre, affecting surrounding villages.	• Of the remaining sites promoted in Kimbolton, none were put forward as draft allocations as they were either discounted through the in-combination LAA and SA assessment or there were issues regarding scale and integration.
Kimbolton 1 (3 comments) • Anglian Water confirms no assets on site, supports a surface-water strategy, and indicates wastewater capacity is sufficient but that the developer should work with them on a sustainable sewer connection.	• Anglian Water support and comments welcome. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • The site has a Level 2 SFRA and a sequential test undertaken, since the publication of the draft

Main Issues Raised	Council Response / How the Council has taken this into account
• Heritage impacts are a major concern, requiring a formal Heritage Impact Assessment before the site can be justified. • Parts of the site fall within Flood Zones 2–3, and required Sequential/Exceptions Tests should occur at plan-making, not application stage so the site is undeliverable and should be removed from the Local Plan.	policy, 25/00433/FUL for 23 homes was approved in February 2026 therefore demonstrating that flood risk on site can be overcome.
Kimbolton 2 (2 comments) • Anglian Water advise an onsite drainage/wastewater solution will be required subject to Environment Agency consents. • Landowner supports overall but seeks clearer guidance on sustainable transport obligations and states the site is deliverable early with a development partner.	• Addition to criterion e. to require a site drainage/ wastewater solutions in agreement with the Environment Agency to address Anglian Water comments. • Support noted from landowner. Sustainable travel will be determined in accordance with LP27 - Supporting active and sustainable travel.
Little Paxton general (1 comment) • Concern over useability of the online consultation portal and request for clearer signposting and an easy-to-use site list by parish or settlement.	• Concerns noted, an engagement strategy was prepared which utilised various forms of engagement from the online consultation portal, site notices, posters at leisure centres and documents at libraries. Also, documents were sent to Parish and Town Councils, the Local Plan consultation was publicised at various events such as the Climate Conference and Business events. There were also a series of public exhibitions and a how to video and guide to explain how to submit comments.
Little Paxton 1 (14 comments) • Key objections focused on the site's closeness to a quarry, recycling plant, and haul road, with concerns about dust, noise, vibration, loss of outlook and suitability for homes. • Other major issues included unsafe access, physical separation and possible isolation from the village, impacts on wildlife, risks to mineral operations, flooding, drainage, and strain on infrastructure like schools and healthcare. • Concern raised over highway safety and wider access to the highway network. • Concern that development would change the character of the area and reduce community access to a valued local amenity. • Anglian Water identify no assets within the site. The need for a surface water drainage strategy for the site should be required as part of the proportional flood risk assessment. A growth scheme for St Neots WRC is planned for delivery in AMP8 to accommodate future growth in the	• Concerns noted, the criteria within the draft allocation policy seek to overcome issues regarding transport, ecology, flood risk, pollution, and infrastructure. The criteria within the policy will also be used alongside the other policies in the Local Plan. • Anglian Water support noted, criterion e. requires a surface water flood risk assessment. Criterion f. updated to identify early engagement with the EA and AW on wastewater capacity. • Criterion k. amended to address Minerals and Waste comments, stating that development or its future occupancy must not adversely affect the operation, restoration or aftercare of Little Paxton Quarry (Minerals Development Area) located immediately adjacent to the north of the site. Supporting paragraph 11.86 updated to reflect their comments. • Support from site promoter welcome.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
WRC catchment - early engagement with AW is recommended. • Minerals & Waste Authority require that criterion k. be updated to ensure that development or its future occupancy must not adversely affect the operation, restoration or aftercare of Little Paxton Quarry (Minerals Development Area) located immediately adjacent to the north of the site - appropriate noise and air quality assessment and mitigation will be required regarding mineral extraction. • The site promoter supports the site as viable, available and deliverable and agrees with the criteria set out within the allocation.	
Little Paxton 2 (12 comments) • Concerns that current A1 junction is unsafe; congestion at Mill Lane bridge; expected traffic increase. Requests include redesigning the junction, lowering speed limits, and adding a roundabout. • Concerns about noise, air pollution, and vibration due to proximity to A1; potential landscape impact and loss of farmland; minerals assessment needed. • Concerns around flooding at Mill Lane bridge, variable groundwater, reliance on culverts; complex drainage systems require better infrastructure protection and water/sewer planning. • Site risks creating isolation; ask for safe pedestrian/cycle paths and stronger integration with the village. Village growth strains schools, healthcare, parking, and river bridge; scale of proposed development seen as excessive. • Fears over increased recreation and ecological harm to Paxton Pits Nature Reserve (SSSI); requests for assessments, enhancement plans, and SPA status consideration. • Anglian Water identify there is a water main and rising main (pressurised sewer) on the eastern (B1041) boundary to the site and seek appropriate maintenance access to it. The need for a surface water drainage strategy is supported. A growth scheme for St Neots WRC is planned for delivery in AMP8 to accommodate future growth in the WRC catchment - early engagement with AW is recommended. • Minerals & Waste Authority require that criterion j. and supporting text be updated to require a minerals assessment that development should	• Concerns noted, the criteria within the draft allocation policy seek to overcome issues regarding transport, ecology, flood risk, pollution, active and sustainable travel. The criteria within the policy will also be used alongside the other policies in the Local Plan. • Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the rising main along the eastern boundary of the site. Supporting paragraph 11.94 updated as well. • Criterion j. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development and undertake a Minerals Resource Assessment. Supporting paragraph 11.98 updated to reflect their comments. • Support from site promoter welcome. Capacity increased to 410 and delivered as a phased development.

Main Issues Raised	Council Response / How the Council has taken this into account
maximise incidental extraction of any minerals as part of development. • Promoter supports allocation, suggests raising housing cap, wording changes, and ongoing dialogue.	
Sawtry general (0 comments) • No comments	• No comments to address
Sawtry 1 (11 comments) • Concern about cumulative flood risk from Sawtry 1, Sawtry 2 and existing developments, withcalls for settlement wide flood and drainage and traffic modelling rather than site by site assessment. • Anglian Water support need for a surface water drainage strategy and confirms no AW assets on site. • Minerals and Waste Authority suggest deletion of criterion j. as it is adequately addressed • Safety and connectivity issues raised over Glatton Road/Sawtry Road, calls for dedicated pedestrian and cycle links and road improvements. • Need for provision/ funding for fire & rescue and police facilities. • Environmental concerns focus on lack of strategic natural greenspace, with recommendations for a single 10–20 ha nature area to prevent recreational pressure on nearby protected sites. • Middle Level Commissioners and Sawtry IDB discharge consent will be needed, MLC should be referenced alongside the EA and LLFA and Byelaws do not allow development within 20m of the top of bank. • Site promoter supports allocation but request clarifications and more flexible policy wording around access, flood risk, open space and infrastructure. • Deliverability concerns, especially around access through the approved development (22/01080/REM) and whether technical evidence supports the scale of allocation.	• Concerns noted regarding cumulative impact and also deliverability of housing in this location. The site forms an extension to an already approved development which is now under construction. • Anglian Water support noted and welcomed. • Criterion j. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Criterion i addresses active travel connectivity to Sawtry. No change made. • Funding for emergency services is addressed through developer contributions, no change made. • The draft allocation includes 2ha of open space within the development, this equates to a little over 15% of the site area and considering the potential population within the development would be in excess of the minimum greenspace standard of 3ha/1,000 population. Therefore, the provision is considered to be appropriate and no changes have been made. • Reference to MLC and Sawtry IDB now provided in the supporting text alongside easements. • Support from site promoter noted criteria reviewed and are consistent across other comparable sites so no changes made.
Sawtry 2 (6 comments) • Anglian Water support need for a surface water drainage strategy and confirms no AW assets on site. • Minerals and Waste Authority suggest deletion of criterion j. as it is adequately addressed • Middle Level Commissioners and Sawtry IDB discharge consent will be needed, MLC should be referenced alongside the EA and LLFA and	• Anglian Water support noted and welcomed. • Criterion j. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Reference to MLC and Sawtry IDB now provided in the supporting text alongside easements and reference to opportunities to 'give space to water'

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Byelaws do not allow development within 20m of the top of bank and infilling of ditches must be avoided (not should) or compensated for. • Environmental concerns focus on lack of strategic natural greenspace, with recommendations for a single 10–20 ha nature area to prevent recreational pressure on nearby protected sites. • Site promoter supports allocation, though requests refinements to policy wording to improve clarity and ensure proportionality. • Objection that allocating Sawtry 1 and Sawtry 2 alongside an existing 350 home development is unsound should not proceed without a full settlement wide cumulative impact assessment.	• The draft allocation includes 1ha of open space within the development, this equates to 15% of the site area and considering the potential population within the development would be in excess of the minimum greenspace standard of 3ha/1,000 population. Therefore, the provision is considered to be appropriate and no changes have been made. • Support from site promoter noted, criteria reviewed and are consistent across other comparable sites so no changes made. • Concerns noted regarding cumulative impact.
Sawtry 3 (8 comments) • Anglian Water support need for a surface water drainage strategy and identifies there is a water main along its eastern boundary. Safeguarding of suitable maintenance access is sought. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings and on-site archaeological remains, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Minerals and Waste Authority suggest deletion of criterion k. as it is adequately addressed. • Environmental concerns focus on lack of strategic natural greenspace, with recommendations for a single 10–20 ha nature area to prevent recreational pressure on nearby protected sites. • Middle Level Commissioners and Sawtry IDB discharge consent will be needed, MLC should be referenced alongside the EA and LLFA and Byelaws do not allow development within 20m of the top of bank and infilling of ditches must be avoided (not should) or compensated for. • Cambridgeshire Fire and Rescue highlight need for provision/ funding for fire & rescue and police facilities. • Objection that allocation relies on unproven flood-risk mitigation, depends on a failing foul drainage system with no guaranteed upgrades, and lacks evidence that cumulative or downstream risks can be safely managed. • Site promoter supports allocation and requests expanding the site boundary to enable a landscape-led scheme, noting ongoing technical	• Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the rising main along the eastern boundary of the site. Supporting paragraph 11.123 amended. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion k. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • The draft allocation includes 3ha of open space within the development, this equates to 16% of the site area and considering the potential population within the development would be in excess of the minimum greenspace standard of 3ha/1,000 population. Therefore, the provision is considered to be appropriate and no changes have been made. • Reference to MLC and Sawtry IDB now provided in the supporting text alongside easements and reference to opportunities to 'give space to water' • Funding for emergency services is addressed through developer contributions, no change made. • Concerns noted, the criterion within the draft allocation policy seek to overcome the concerns highlighted alongside the other policies in the Local Plan. This includes flood risk and drainage. • Support from site promoter noted. The site boundary has not been expanded as the capacity assessment in the LAA found that 330 homes can be accommodated on 50% of the site area, allowing for sufficient landscaping, open space

Main Issues Raised	Council Response / How the Council has taken this into account
work, pre-application engagement and an intention to submit a planning application in early 2026.	and biodiversity to be provided within the site boundary keeping the site more tightly contained to the existing settlement.
Sawtry 4 (5 comments) • Anglian Water support need for a surface water drainage strategy for the site and confirms no AW assets on site. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings and archaeological remains, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Middle Level Commissioners and Sawtry IDB discharge consent will be needed, MLC should be referenced alongside the EA and LLFA and Byelaws do not allow development within 20m of the top of bank and infilling of ditches must be avoided (not should) or compensated for. • Minerals and Waste Authority suggest deletion of criterion i. as it is adequately addressed, • Site promoter supports the allocation but seeks to revisions to allow greater flexibility for a range of commercial uses, ensuring the development can adapt to market needs while retaining open space, key landscape features and sustainable design principles.	• Anglian Water support noted and welcomed. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Reference to MLC and Sawtry IDB now provided in the supporting text alongside easements and reference to opportunities to 'give space to water' • Criterion i. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Support from site promoter noted - an extended use class has been included in criterion 2 to allow for greater flexibility.
Sawtry 5 (5 comments) • Anglian Water support need for a surface water drainage strategy and identifies there is a water mains running along the boundaries of the site. Safeguarding of suitable maintenance access is sought. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings and archaeological remains, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Middle Level Commissioners and Sawtry IDB discharge consent will be needed, MLC should be referenced alongside the EA and LLFA and Byelaws do not allow development within 20m of the top of bank and infilling of ditches must be avoided (not should) or compensated for. • Minerals and Waste Authority suggest deletion of criterion g. as it is adequately addressed. • Site promoter supports the allocation providing evidence that flood risk, drainage, access and	• Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the rising main along the boundaries of the site. Supporting paragraph updated. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Reference to MLC and Sawtry IDB now provided in the supporting text alongside easements and reference to opportunities to 'give space to water' • Criterion g. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Support from site promoter noted and further technical evidence documents welcome.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
design requirements can be met, and requesting that related policies, particularly biodiversity net gain, are applied reasonably and consistently with national guidance.	
Sawtry 6 (4 comments) • Anglian Water support need for a surface water drainage strategy and identifies there is a water mains running along the boundaries of the site. Safeguarding of suitable maintenance access is sought. • Middle Level Commissioners and Sawtry IDB discharge consent will be needed, MLC should be referenced alongside the EA and LLFA and Byelaws do not allow development within 20m of the top of bank and infilling of ditches must be avoided (not should) or compensated for. • Minerals and Waste Authority suggest deletion of criterion h. as it is adequately addressed. • Site promoter supports the allocation but requests that the full site boundary be included and that the policy allow B2 and B8 uses to come forward independently to provide greater flexibility in line with market demand and national policy.	• Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the rising main along the boundaries of the site. Supporting paragraph 11.149 updated. • Reference to MLC and Sawtry IDB now provided in the supporting text alongside easements and reference to opportunities to 'give space to water' • Criterion h. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Support from site promoter noted. The uses have been have been amended to allow B2 and/or B8 uses on site to allow for greater flexibility. Land area has not been extended to include land to the north as this would increase land impacted by flood risk.

Somersham general (7 comments)
• Somersham Parish Council objects to the number of proposed site allocations totalling 321 homes, citing this is more than a third of Somersham's current housing stock. Seeks to reduce number of allocations.
• Parish Council also concerned that neighbouring development in Colne will impact Somersham more than Colne directly.
• Middle Level Commissioners identify some sites will need MLC and/ WSP IDB discharge consent
• Site Promoter for The Pasture, Somersham requests the Plan identifies the site as a committed housing site for around 13 homes (HLP2036 allocation SM3, CfS:107) and be extended over the further land covered by the permission in principle 23/01676/PIP.
• Several site promoters have put sites forward for allocation putting forward further evidence:
  • Land at Parkhall Road, Somersham (CfS:23-24247) for 70 homes as the Waste Management Area constraint is obsolete.
  • Land North of Newlands Way, Somersham for 55 homes, a site not previously submitted.
	• Somersham PC's comments are noted. Concerns regarding the cumulative impact of all developments on the village and local services and infrastructure are noted. Following a review of sites, Somersham 2 will be removed from the draft Local Plan based on its scale and also integration challenges and landscape impact. This reduces the number proposed in Somersham by 140 homes.
	• MLC comment noted.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • The Pasture, Somersham (HLP2036 allocation SM3, CfS:107) - there is a statement in the Local Plan that identifies that existing planning permissions are included in the commitments and are still expected to be built out, also the site benefits from a planning permission on the additional unallocated land so already counts towards the Council's housing commitments.
	  • Land at Parkhall Road, Somersham (CfS:23-24247) - no substantive new

Main Issues Raised	Council Response / How the Council has taken this into account
• Parkhall Nursery & Garden Centre, Somersham (CfS23-24169) for 20 – 30 homes as it is previously developed and considers ecological concerns are untested. • Land east of Parkhall Road, Somersham (CfS:102) for 60 homes as technical evidence shows it is a suitable and capable of delivering policy compliant development.	evidence , concerns remain and there are more sequentially preferrable sites. • Land North of Newlands Way, Somersham for 55 homes, a site not previously submitted. The site would rely upon adjoining land to the south to be developed first, there are also concerns regarding the cumulative impact of allocating further development in Somersham. • Parkhall Nursery & Garden Centre, Somersham (CfS23-24169) - no substantive new evidence, concerns remain including the location of the site to enable sustainable development. • Land East of Parkhall Road, Somersham (CfS:102) for 60 homes providing further information - no substantive new evidence, concerns remain and there are more sequentially preferrable sites.
Somersham 1 (15 comments) • Comments raised issues on highway safety, congestion, flooding, drainage, infrastructure capacity and density of development integrating with the village. • Site promoter supports the allocation and consider the allocation sustainable and manageable with mitigation. • Minerals and Waste Authority recommend adding to supporting text site's location within sand and gravel mineral safeguarding area and seeks the best use of minerals incidentally extracted as part of development. • Anglian Water support need for a surface water drainage strategy and that there is a rising main along the eastern boundary to the site. Safeguarding of suitable maintenance access is sought.	• Concerns noted, the criterion within the draft allocation policy seek to overcome these issues alongside the other policies in the Local Plan. • Support from site promoter noted. • Criterion added to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the rising main along the eastern boundary of the site. Supporting paragraph 11.158 updated.
Somersham 2 (14 comments) • Access on St Ives Road raises safety concerns alongside congested B-roads (B1050, B1086) and the High Street too narrow to upgrade. • Infrastructure is already overstretched, including transport, services, community facilities and wastewater. • Anglian Water identify the site will need to be phased and that there are no assets within the site and Fens Reservoir corridor does not interface with this site. Supports need for a surface water drainage strategy.	• Following a review of comments received from residents and stakeholders, who cite concerns regarding infrastructure capacity, cumulative impact of all draft allocations on the village, transport impacts, landscape harm and scale of the proposal, the site has been removed as a draft allocation.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Flooding issues present, including railway cutting flooding and proximity to sewage land drains. • The site forms valued open green space, providing important rural views on approaching Somersham. • Historic England state a heritage impact assessment is needed because development could affect nearby heritage assets, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Environmental and biodiversity sensitivities, including a wildlife-associated pond near the site. • Site promoter supports the allocation providing further information in support of the site.	
Somersham 3 (12 comments) • A comment recommends removing the allocation as the site is detached from the village would extend development further westwards. • Infrastructure is already overstretched, including transport, services, community facilities and wastewater. • B-roads (B1050, B1086) are in poor condition and have safety concerns, and the High Street too narrow to upgrade • Anglian Water identify the site will need to be phased and that there are no assets within the site and Fens Reservoir corridor does not interface with this site. Supports need for a surface water drainage strategy. • Minerals and Waste Authority suggest deletion of criterion h. as it is adequately addressed. • Site promoter supports the allocation but recommend policy wording on flood risk, foul drainage, active travel and mineral safeguarding are updated.	• Concerns noted, the criterion within the draft allocation policy seek to overcome these issues alongside the other policies in the Local Plan. The site provides regeneration opportunities and the ruse of previously developed land. The site already has an access established from Chatteris Road but the policy still requires a transport assessment to assess transport impact. • Anglian Water support noted, comments regarding phased development inline with infrastructure are noted and will be considered as part of the housing trajectory preparation for the submission Local Plan. • Criterion h. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Support from site promoter noted. No amendments made to the criteria for flood risk, these have been informed by the Level 2 SFRA, the site developer will be required to undertake a flood risk assessment using the most up to date information at the time. Reference to waste water flows in criterion d is amended to note agreement with the Council.
Somersham 4 (11 comments) • Further investigations on flood risk required. • Infrastructure is already overstretched, including transport, services, community facilities and wastewater. • Anglian Water identify the site will need to be phased and that there are no assets within the	• Concerns noted, the criterion within the draft allocation policy seek to overcome these issues alongside the other policies in the Local Plan. • Anglian Water support noted, comments regarding phased development inline with infrastructure are noted and will be considered as part of the

Main Issues Raised	Council Response / How the Council has taken this into account
site and Fens Reservoir corridor does not interface with this site. Supports need for a surface water drainage strategy. • Site is currently under consideration by Neighbourhood Plan panel as providing valuable open green space and views towards to the countryside as an 'introduction' to this rural village.	housing trajectory preparation for the submission Local Plan. • The site is a current allocation in the Local Plan to 2036, which is a strategic policy. Identifying the site as open space in any future Neighbourhood Plan would therefore be in conflict with the basic conditions that Neighbourhood Plans are required to comply with.
Yaxley general (7 comments) • Yaxley PC and residents support limited development at Eagle Business Park, Phase 3, citing issues of flooding, strained infrastructure, green space loss, and impacts on services and wildlife. They oppose further growth and request transparent, phased planning with thorough assessments and public consultation. • A promoter for land south of Main Street supports more housing, stating amenities and sustainability justify it, with Anglian Water backing drainage adequacy. • Middle Level Commissioners letter commenting on water and flood management for land south of Main Street and further engagement is needed with MLC and well as technical studies. • Another promoter at Norman Cross proposes large-scale logistics and warehousing, promising up to 4,550 jobs and addressing employment space needs. Their plan includes environmental mitigation and is supported by technical reports.	• Support for employment growth noted and welcomed. Concerns are also noted, the criteria within the draft allocation seeks to overcome these concerns alongside the technical evidence base supporting the Local Plan. • Main Street, Yaxley - this site was not included as a draft allocation due to significant concerns raised at local exhibitions and in response to the consultation regarding significant flooding and drainage issues being experienced across Yaxley. It was therefore deemed inappropriate to carry forward any residential led allocations at this time. • Norman Cross, Yaxley – this was discounted through the in-combination LAA and SA assessment due to very significant concerns regarding impact on Yaxley and Great Fen, as well as transport impact on the A1 and concerns around impacts on A1 and A15 junction at Norman Cross.
Yaxley 1 (2 comments) • The southwestern site has a rising main, so access for sewerage maintenance must be preserved. Anglian Water request sewerage infrastructure access safeguarding wording to be added and advise a surface water drainage strategy is advised. The Yaxley Pathfinder Project found serious issues with surface water misconnections and infiltration, and the Peterborough (Flag Fen) WRC catchment has network capacity problems under review. Developers should consult Anglian Water for sustainable wastewater connections. • Middle Level Commissioners support criterion b. and e. MLC discharge consent and fee will be required prior to construction and this is independent from planning permission. There is opportunity for development to improve public access and use of Pig Water including for paddle sports.	• To address Anglian Water comments, an additional criterion has been added to preserve an access to allow for the maintenance for the rising main in the southwest of the site. Supporting paragraph 11.190 updated. • The policy already requires a flood risk and detailed drainage strategy and also engagement wit the EA and AW to secure sustainable wastewater connections can be achieved so no changes made. • Support from MLC is noted and welcomed. • Planning application 23/00973/OUT has been approved for the site.

5 Preferred Options

Local Service Villages

Main Issues Raised	Council Response / How the Council has taken this into account

General comments (16 comments)
• Comments of support that Sibson Garden Village had not been included as a draft allocation
• Elton should have a higher sustainability score
• Holywell-cum-Needingworth PC consider Needingworth should not be in this category as services have not changed since the last local plan.
• Commentary on why there are limited allocations in Service Centres in western Huntingdonshire although allocations in Local Service Villages
• Transport and accessibility to these villages raised.
• Hemingford Grey PC objects to the cumulative effect of proposed allocations in the area north of the River Great Ouse in and around St Ives from Wyton-on-the Hill through the parishes of Houghton & Wyton, Needingworth, and Bluntisham adversely impacting traffic infrastructure.
• Support for use of traditional architecture in schemes and banning demolition of pre 1950s buildings.
• Site promoters seek allocation of their sites:
  • Hemingford Grey Lake, Marsh Lane, Hemingford Grey (CfS:216) for leisure moorings and submitted documents to address suitability, ecology, flood risk and highways
  • Land between Duck Street and Wansford Road, Elton (CfS:59) for residential development citing that the existing committed permissions in Elton include holiday lodges which are not permanent so a housing allocation is required.
  • Mill Lane Field, Hemingford Grey (CfS:29) for open space
  • Field South of St Ives Road, Hemingford Grey (CfS:170 and CfS:105) for open space and local infrastructure by Parish Council and residential by landowner
  • Land west of Farcet (CfS:108) as it is considered to provide a logical, flood safe village extension that could enhance local services and recreation.
  • Land east of Stow Road, Spaldwick (CfS:305) for 80 – 100 homes providing further technical evidence
	• Comments in support of not allocating Sibson Garden Village are noted.
	• Comments regarding Elton's and Needingworth positions in the settlement hierarchy are noted. There positioning was informed by the outcomes of the Sustainability of Settlements document.
	• Transport and accessibility by sustainable modes of transport across the district is varied, and this was a factor in determining the classification of settlements as local service villages.
	• Concerns noted regarding cumulative impact are noted, the Local Plan is supported by an Infrastructure Delivery Study to identify infrastructure requirements. Needingworth 2 capacity has been reduced, Bluntisham 1 has been removed.
	• The Plan seeks high quality design that reflects local character and distinctiveness and supporting new green infrastructure by designating areas of strategic green and blue infrastructure in line with the LRNS and Nature Recovery Network, including the Great Ouse Valley.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Hemingford Grey Lake, Marsh Lane, Hemingford Grey (CfS:216) for leisure moorings and submitted documents to address suitability, ecology, flood risk and highways - no substantive new evidence, there are still fundamental concerns with the delivery of the site.
	  • Land between Duck Street and Wansford Road, Elton (CfS:59) for residential development citing that the existing committed permissions in Elton include holiday lodges which are not permanent so a housing allocation is required - no substantive new evidence.
	  • Mill Lane Field, Hemingford Grey (CfS:29) for open space - no substantive new evidence to overcome deliverability of open space uses.
	  • Field South of St Ives Road, Hemingford Grey (CfS:170 and CfS:105) for open space and local infrastructure by Parish Council and residential by landowner - no substantive new evidence to overcome deliverability of open space uses.

Main Issues Raised	Council Response / How the Council has taken this into account
	• Land west of Farcet (CfS:108) as it is considered to provide a logical, flood safe village extension that could enhance local services and recreation - concerns remain regarding coalescence between Farcet and Peterborough. • Land east of Stow Road, Spaldwick (CfS:305) for 80 – 100 homes providing further technical evidence. This site is being considered as an allocation. The new draft allocation will be drafted and consulted upon through May to June 2026.
Abbots Ripton general (2 comments) • The Parish Council supports moderate, sympathetic housing development taking account of the conservation status of the village and impact on local infrastructure.	• Support noted and welcomed.
Abbots Ripton 1 (21 comments) • Existing road network and junctions are unsafe, requiring mandatory off site mitigation, pedestrian links and speed management. • Significant local flooding, “valley effect” and downstream vulnerability demand more rigorous modelling and strengthened flood risk policy requirements. Concerns over failing of the sewage pumping station. • Misclassification of Bury Brook as an “ordinary watercourse” undermines assessment accuracy and regulatory compliance. Middle Level Commissioners identify reference to MLC and/or IDB discharge consent is important. • Local Plan wording must be tightened to require enforceable mitigation on transport, drainage, runoff rates and cumulative impacts. • Historic England identify need for a Heritage Impact Assessment due to proximity to heritage assets and to shape appropriate mitigation. • Concerns that Abbots Ripton lacks key services and public transport, raising questions about development sustainability. • Anglian Water identify need for a 15m buffer around the pumping station and safeguarding of sewer infrastructure which runs through the eastern area of the site. • Landowner emphasises capacity to deliver a well designed, community led scheme with supporting technical work.	• Concerns noted, the criteria within the draft allocation policy seek to overcome issues regarding transport and flood risk. The criteria within the policy will also be used alongside the other policies in the Local Plan. Additionally, the site has a Level 2 SFRA and has been subject of the sequential test. • reference to Bury Brook now included in policy and supporting text and reference to discharge and MLC included in supporting text. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion added to draft policy to address Anglian Water comments seeking an access to enable maintenance of existing water supply infrastructure. Supporting paragraph 12.9 updated. • Support from site promoter noted and welcomed.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Alconbury general (4 comments) • Allocations opposed due to scale of growth, inadequate infrastructure, overstretched facilities, increase traffic, and loss of rural character with risk of becoming part of Alconbury Weald. • New development on greenfield land would worsen long standing brook and surface water flooding issues with development favoured on brownfield sites. • Development should only proceed if robust flood, traffic and sewage infrastructure upgrades are delivered and enforced. • Development threatens local wildlife habitats and risks significant landscape harm, especially on exposed or sloping sites. • Site promoter for an alternative site land at School Lane (CfS:346) for 95 homes argues the site is sustainable and deliverable submitting a vision document.	• Concerns noted regarding cumulative impact are noted, the Local Plan is supported by an Infrastructure Delivery Study to identify infrastructure requirements. Alconbury Weald is located to the east of Alconbury separated by the A1(M), the intervening land is not proposed for development therefore retaining the sense of separation between Alconbury and the emerging new community at Alconbury Weald. • Comments regarding landscape impact, flood, traffic and sewage infrastructure are noted with criteria to address these issues included in the allocation policy. • Land of School Lane for (CfS:346) for 95 homes argues the site is sustainable and deliverable submitting a vision document - no substantive new evidence to overcome concerns regarding landscape impact. Concern regarding cumulative impact of further development within Alconbury village.
Alconbury 1 (13 comments) • The sloping site increases runoff towards Great North Road and the village, worsening an already high and climate sensitive flood risk. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings. • Development could create a suburban feel at the village gateway, undermining rural character and ecology. • Minerals and Waste Authority suggest deletion of criterion g. as it is adequately addressed. • Anglian Water support need for a surface water drainage strategy and identifies there is a water main along Great North Road. Safeguarding of suitable maintenance access is sought. • Great North Road's speeding, poor visibility, and existing congestion mean safe access requires major redesign and cumulative transport assessment. • Site promoter wrote in support of the policy.	• The criteria within the policy require a flood risk assessment and detailed drainage strategy to support development. No changes made. • Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • The policy criteria within the draft policy requires careful use of design that respects the site's location at the entrance to the village. No changes made. • Criterion g. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the existing water supply infrastructure. Supporting paragraph 12.16 updated. • Highway safety concerns are noted, the criteria within the draft policy requires the provision of safe and appropriate vehicular access from Great North Road. Requirement for a proportionate transport assessment added to supporting paragraph 12.18. Requirement for provision of safe and appropriate pedestrian access added to policy requirement. • Site promoter comments noted and welcomed.

Main Issues Raised	Council Response / How the Council has taken this into account
Alconbury 2 (11 comments) • Anglian Water support need for a surface water drainage strategy. • Minerals and Waste Authority suggest deletion of criterion g. as it is adequately addressed. • Uncertain and incomplete surface water evidence with strong calls for strict run off control and guaranteed no increase in flood risk within the wider Alconbury Brook catchment. • Globe Lane is narrow and constrained to support development without guaranteed improvements and safe pedestrian connections. • Historic England state a heritage impact assessment is needed because development could affect nearby heritage assets. • Concerns about infrastructure limits, rural character loss, landscaping, flooding, traffic, and sewage issues. • Site promoter wrote in support of the policy submitting a vision document.	• Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. • Criterion g. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • The criteria within the policy requires a flood risk assessment and detailed drainage strategy to support development including surface water flood risk. No changes made. • Highway safety concerns are noted, the criteria within the draft policy requires the provision of safe and appropriate vehicular access from Globe Lane. Requirement for provision of safe and appropriate pedestrian access added to policy requirement. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Concerns noted regarding infrastructure are noted, the Local Plan is supported by an Infrastructure Delivery Study to identify infrastructure requirements which has informed the policy criteria. Comments regarding landscape, flooding, rural character, traffic and sewage infrastructure are noted with criteria to address these issues included in the allocation policy. • Site promoter comments noted and welcomed.
Bluntisham general (18 comments) • Objection to significant housing growth in Bluntisham, as a 30–36% population increase may overwhelm Bluntisham and Colne, conflict with local development policies, and alter the villages' rural character. There are concerns the proposal could lead to suburbanisation, disrupt historic growth patterns, and blur boundaries between Bluntisham, Earith, and Colne. • Concerns that existing infrastructure (schools, healthcare, and community facilities) cannot accommodate the proposed housing growth, with no improvement plans in place. • Concerns relating to inadequate transport links, existing congestion, dangerous junctions, flood-prone routes, limited public transport, and the likelihood of increased traffic from proposed development. • Concerns over wastewater provision, as Somersham Water Recycling Centre is already	• Concerns regarding the cumulative impact of all developments on the village and local services and infrastructure are noted. Following a review of sites, Bluntisham 1 will be removed from the draft Local Plan based on its significant heritage impact. This reduces the number proposed in Bluntisham by 20 homes and to two proposed allocations. • Concerns noted regarding infrastructure, transport, waste water and flooding are noted, the Local Plan is supported by an Infrastructure Delivery Study to identify infrastructure requirements, a strategic transport study to assess traffic impact, a Strategic Flood Risk Assessment to identify flood risk and a Water Cycle Study assessing waste water capacity. Anglian Water are working closely with HDC on this and reviewing Assets Management Plans to accommodate future growth. • Draft allocations Bluntisham 2 has criteria that require development to provide 3ha of open space

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
at or above its permitted capacity, with no investment planned before 2030 and only unrealistic interim solutions suggested, posing a risk of environmental breaches affecting Berry Fen SSSI. • Concerns about shallow groundwater, frequent flooding, increased flood risk due to loss of permeable land, and the absence of a comprehensive flood risk assessment. • Concerns relating to negative environmental and biodiversity impacts. • Concerns have been raised about the fairness and transparency of the site selection process, with claims that Bluntisham's high allocation is not justified compared to similar villages. • Concerns raised that the Local Plan process is premature, with calls to pause consultation until after the expected 2028 local government reorganisation and clarity on future governance arrangements.	to mitigate recreational pressure impacts to nearby nature sites. • Draft allocations Bluntisham 2 and 3 require developments to provide flood risk assessments. • Concerns regarding Local Plan timetable and Local Government Reorganisation are noted. The Council updated its Local Development Scheme to defer consultation until September 2026.
Bluntisham 1 (24 comments) • Concerns that developing the historic ridge and furrow field would irreversibly damage Bluntisham House's setting, harm the Conservation Area, harm views towards the river and fens, breach heritage policies, and screening would be ineffective with land levels. • Southern part of the site is prone to flooding, development may disrupt natural drainage, worsen local flood risk. • Concerns have been raised about the site's proximity to important nature reserves (RSPB Ouse Fen, Ouse Washes SPA/Ramsar, Berry Fen SSSI), including the potential for recreational pressure. The site undermines environmental objectives of the NPPF by failing to conserve the natural and historic environment. • The A1123 (Rectory Road) faces significant congestion, flooding-related closures, unsafe pedestrian crossings, and access challenges, particularly affecting school children and requiring major engineering solutions. • Local infrastructure, including highway network, sewage, healthcare, and schools are already at or near capacity, with upgrades not expected. AW raise that Somersham WRC does not have sufficient capacity to accommodate growth, development would need to be phased to align with delivery of a WRC growth scheme.	• Following a review of comments received from residents and stakeholders, who cite concern regarding heritage and impact on the Grade II* Bluntisham House as well as potential impact to ridge and furrow land, alongside concerns about the cumulative impact of development on services and infrastructure within Bluntisham, the site has been removed as a draft allocation.

Main Issues Raised	Council Response / How the Council has taken this into account
• Limiting development to the site's northern half may lead to high-density housing, less green space, a stronger visual effect on heritage assets, and inadequate frontage space. • A few responses support allocating the site due to its appropriate scale, location, alignment with settlement priorities, and ability to address environmental and heritage issues while preserving southern open space.	
Bluntisham 2 (4 comments) • No Anglian Water assets are present on-site, and upgrades to wastewater treatment will be required in AMP9 which may require phased development. • The site, formerly part of Frogs Hall, requires comprehensive archaeological evaluation and consideration of nearby heritage records in line with NPPF guidance. • Access is limited due to unsafe entry from the A1123 and no pavements on Holliday's Road, requiring key improvements for safe pedestrian and vehicle access. • Concerns about surface water flooding due to the site's low elevation, requiring a drainage plan. Wastewater infrastructure is also lacking. • Proximity to protected habitats raises concerns about ecological mitigation and recreational impacts on nearby nature sites, Habitat Regulations Assessment recommended.	• Anglian Water comments are noted and will inform the housing trajectory and site phasing which will be published at the next stage of Plan preparation. • Comments regarding archaeology are noted, an additional criterion has been added to require archaeology investigation, recording and where appropriate conservation. Text added to supporting paragraph 12.37. • Criteria within the policy requires provision of safe and appropriate vehicle and pedestrian access. No changes made. • Draft allocation requires development to provide a flood risk assessment. No changes made. • Criteria requires provision of amenity and open space as part of the development to mitigate impact on nearby nature sites. A Habitats Regulation Assessment for the whole plan is being prepared to assess the Local Plan's impact on internationally protected sites.
Bluntisham 3 (6 comments) • Concerns focus on rising congestion in St Ives, particularly near the A1096 and Morrisons roundabout, prompting calls for updated transport plans and new river crossings. • There are concerns about recreational impact on Berry Fen SSSI and surrounding areas, leading to a proposal for Suitable Alternative Natural Greenspace (SANG) as mitigation. • Flood risk is a concern, and a detailed drainage plan is suggested. • Anglian Water reports no on-site assets, and Somersham Water Recycling Centre is at capacity, so phased development is likely. • Historic England identify potential impact to nearby Grade II listed buildings at Wood End to the south-west of the site and requests for a Heritage Impact Assessment to inform policy. • The development would cause minimal loss of prime agricultural land, with most of it kept as gardens, open spaces, and SANG, remaining	• Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study. • The allocation has criteria that require development to provide 3ha of open space to mitigate recreational pressure impacts to nearby nature sites. A Habitats Regulation Assessment for the whole plan is being prepared to assess the Local Plan's impact on internationally protected sites. Reference to SANG removed. • Draft allocation requires development to provide a flood risk assessment and drainage strategy. No changes made. • Anglian Water comments are noted and will inform the housing trajectory and phasing of the site which will be published at the next stage of Plan preparation. • Heritage concerns are noted, the listed buildings are some 250m to the south west corner of the site with large residential curtilages and trees obscuring the site from view. Additionally, the

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
below Natural England's threshold for significant loss. • Minerals and Waste Authority suggests removing the minerals policy criterion since it is covered in the supporting text. • Supporters say the plan is sustainable, fits land assessments, and adds 90 homes (40% affordable), SANG, biodiversity gains, open space, school staff parking, and easy access to village amenities and buses.	proposed 3ha of open space will be located on the western and northern edges of the site, providing further mitigation form heritage impact. A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Amended criteria g. to seek opportunities to maximise incidental extraction of any minerals as part of development. • Site promoter comments are noted and welcomed.
Great Gransden general (0 comments) • No comments	• No comments to address.
Great Gransden 1 (5 comments) • Broad support for a small-scale commercial allocation. • Concern expressed regarding access via Sand Road due to its narrow width, safety risks, unsuitable junction. • Need for a landscaped buffer near the nursery. • Anglian Water noted the presence of a gravity sewer requiring safeguarded maintenance access. • Landowner supports the allocation and notes expected economic benefits. • Suggestion to reserve part of the site for a potential future primary school, with remaining land limited to compatible uses.	• Support noted. • The policy requires that there must be a satisfactory access from Sand Road. The supporting text details this further by requiring a proportionate transport assessment. No changes made. • The policy requires the retention of existing boundary features and the provision of a landscaping strategy. No changes made. • Criteria added to require the safeguarding of suitable access for the maintenance of existing water supply infrastructure. Supporting paragraph 12.59 updated. • Comments regarding the potential use of the site for a future primary school are noted, the site has not been promoted for this use and the need for a new primary school in this location is not evidenced.

Great Staughton general (1 comments)
• Two additional sites promoted with the promoter contending that the plan period should be extended to 2050 to better align with higher level aspirations so additional housing sites will be required and that more small sites are required to provide early delivery and balance the reliance on strategic scale sites: Land West of Cage Lane, Great Staughton (CfS: 377), Brook Farmyard, Great Staughton (CfS: 373; 374; & 375) and a new site: land west of Cage Lane, Great Staughton for up to 9 dwellings.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Land West of Cage Lane, Great Staughton (CfS: 377) - no substantive new evidence. Integration challenges remain.
	  • Brook Farmyard, Great Staughton (CfS: 373; 374; & 375) - the site is already allocated in the Neighbourhood Plan for Great Staughton and therefore is already part of the development plan.
	  • Land west of Cage Lane, Great Staughton for up to 9 dwellings - new site with a layout plan submitted -concerns regarding integration challenges.

Main Issues Raised	Council Response / How the Council has taken this into account
Great Staughton 1 (6 comments) • Residents ask that the Local Plan clearly reference how the site integrates with Neighbourhood Plan allocations. Support for the site's allocation if Neighbourhood Plan preferred sites take priority. • Historic England identify development close to heritage sites, such as Grade II listed buildings or Scheduled Monuments, needs a Heritage Impact Assessment before allocation to confirm suitability and necessary actions. • Anglian Water identify there is a gravity sewer running along the road boundary to the site. Support for surface water drainage strategy. Coordination with Anglian Water is necessary to verify connections. • Site promoter supports the policy but seeks some flexibility on capacity of site. Provided plans and drainage assessment.	• The allocations in the neighbourhood plan still stand as part of the development plan. The site allocation in the Local Plan is in addition to these. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the existing water supply infrastructure. Supporting paragraph 12.66 updated. • Support form site promoter noted and welcomed. Draft policy amended to say 'about 15 homes'. In the introduction of Section D, it states there is a 10% tolerance either side of the 'about' figure set out is considered to be reasonable. This means that up to 17 dwellings could be appropriate on the site.
Hemingford Abbots general (1 comment) • Suggestion put forward that substantial comprehensive development, joining this area to Godmanchester would be a better solution allowing for comprehensive infrastructure provision along the A1307 corridor.	• Comment noted, retaining separation between Godmanchester and the Lattenbury's is sought so that Godmanchester's distinct identify is retained and so that the Lattenbury's can deliver its vision of providing two distinct new villages.
Hemingford Abbots 1 (25 comments) • Concerns were raised about the potential traffic impacts on Godmanchester, the Hemingfords, St Ives, A1198, A1307 and A14, the format of potential junctions and the desire to future proof full opening up of the A1198/ A14 junction. • National Highways advised that the impact on the strategic road network needs to be assessed. CCC Highways expressed uncertainty on the feasibility of a new safe access onto the A1307 given the proximity to the Rideway junction and the New Road junction. • A permanent settlement gap is sought between Godmanchester and The Lattenburys with various long term protection methods suggested including compulsory purchase and designation as green belt. Godmanchester Town Council confirmed support would only be forthcoming if there was a clear mechanism to ensure the proposal would remain a separate village from Godmanchester. • Concerns expressed over the need for robust phasing, masterplanning and early delivery of schools, shops, care homes, green space and doubts about short-term deliverability.	• Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study. The draft policy requires a transport assessment and travel plan with agreement of Highways Authority. No changes made. • Discussions are ongoing between the site promoter and County Highways regarding alterations to junctions to ensure safe access and ensure delivery of the site. • Godmanchester Town Council comments noted, the policy supporting text identifies that The Lattenburys must demonstrate how the new community will blend housing, employment and other uses and ensure that it remains a distinct community separate from Godmanchester and the Hemingfords. A masterplan is required. • The proposal includes a new 26ha country park and other green infrastructure which will alleviate pressure on Portholme. The Local Plan is supported by a Habitats Regulation Assessment as well. Criteria j. addresses the HRA requirements and has been amended to require early engagement with the EA on this matter.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account

• Concerns expressed over inadequate green space provision and recreational pressure on Portholme.
• Historic England requested a heritage impact assessment be undertaken.
• Hemingford Grey Parish Council has no fundamental objections to the site being developed subject to appropriate flood risk management, upgrading of Cow Lane WWRC, traffic management and timely provision of supporting infrastructure.
• Anglian Water highlight wastewater and WRC capacity constraints.
• Drainage and flooding issues needing holistic solutions across the Great Ouse catchment.
• The site promoter of Emmanuel Knoll Village strongly advocated that it is a more preferrable site to the Lattenburys with additional evidence put forward on deliverability and transport issues.
• Other alternative sites were also suggested namely east of Bluntisham Road Needingworth (CfS290), north of Overcote Road Needingworth (CfS291) and Abbotsley Golf Club (CfS234).
	• A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan.
	• Hemingford Grey PC's comments are noted, the draft policy criteria addresses each area of concern.
	• The draft policy requires a flood risk assessment and detailed drainage strategy. No change made.
	• Anglian Water comments noted, criterion i. amended to require early engagement with AW on waste water flows.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Emmanuel Knoll Village (CfS:207) - is an extension to Godmanchester, however, would result in such a substantial increase that it would not connect through and integrate with Godmanchester. Concerns remain about deliverability of the link road from A1198 to A1307 and provision of junction on the A1307. Inclusion would necessitate the removal of the Lattenburys as having both would result in coalescence.
	  • Abbotsley Golf Club (CfS234) - no substantive new evidence to overcome concerns.
	  • East of Bluntisham Road Needingworth (CfS290) and north of Overcote Road Needingworth (CfS291) - concerns regarding flood risk and cumulative impact on Needingworth.

Houghton and Wyton general (0 comments) • No comments	• No comments to address.
Houghton and Wyton 1 (5 comments) • Concerns regarding landscape and visual harm, loss of productive agricultural land overstated renewable energy and biodiversity benefits. Flood risk is also a concern. • Cumulative impacts are not considered, including effects alongside the Houghton Road housing allocation, RAF Wyton, Giffords Park and other St Ives/Wyton-on-the-Hill developments, leading to untested risks of urbanisation and landscape fragmentation • Historic England request that a HIA be undertaken to consider potential impacts on heritage assets.	• Concerns regarding landscape, biodiversity, climate change and loss of agricultural land and flood risk are noted. The Renewables Energy Assessment has identified that the site has technical potential for ground mounted solar energy generation. Criteria within the policy allocation addresses these issues. No change made, • Concerns regarding cumulative impact are noted. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion f. amended to require the safeguarding of suitable access for the maintenance of existing

Main Issues Raised	Council Response / How the Council has taken this into account
• Anglian Water seek maintenance access to infrastructure assets. • CCC Minerals & Waste suggest deletion of criteria f. as adequately covered elsewhere.	water supply infrastructure. Supporting paragraph 12.91 amended. • Criterion h. amended to seek opportunities to maximise incidental extraction of any minerals as part of development.
Needingworth general (7 comments) • Proposed housing numbers will change the area's character, with suggestions that development should be directed south of the River Great Ouse near the A14 / A1198. • Existing road networks (A1123, Morrison's roundabout, Harrison Way) experiences congestion and worsen pollution. • Flooding events (especially around Marley Gap Brook / Parsons Drove) highlight that drainage systems and culverts require major upgrades. • Respondents cite insufficient school places, GP capacity, water supply resilience, utilities, digital connectivity, and waste management. • Large scale growth is viewed as harmful to wildlife habitats, green corridors, and local landscape character, with risks of losing recreational and ecological value. • Site promoter for land west of Needingworth (CfS:211) seeks allocation for residential uses and landscaping.	• Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study which identifies suitability of sites and transport impacts and mitigation measures required as a result of growth. • Flooding concerns are noted, both draft allocations require flood risk assessments and a SFRA for the whole Plan has been prepared. • Concerns regarding harm to landscape character and biodiversity are noted. About 50% of the land area for Needingworth 1 (65.5ha) is allocated for green infrastructure mitigating harm and providing opportunities for strategic green infrastructure connectivity and enhancements. • Land west of Needingworth (CfS:211) - concerns remain regarding flood risk as well as the cumulative impact of development in and lack of integration with Needingworth.
Needingworth 1 (26 comments) • A1123, Harrison Way, A1096 and double roundabouts (Morrisons/Aldi) are at or beyond capacity, with further evidence required including cumulative impacts. • Site experience surface water flooding, with areas in Flood Zones 2 and 3, and objections highlight need for further flood risk evidence. • The site is wholly greenfield, containing agricultural land. • Representations cite lack of capacity in schools, GP services, water supply, wastewater treatment and utilities, with calls for robust and funded infrastructure plans before any allocation proceeds. • Development out of scale with Needingworth and functions effectively as a major expansion of St Ives. • Pressure on Great Ouse Valley green infrastructure, landscape sensitivity, and wider ecological impacts of large-scale growth north of the river.	• Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study which identifies suitability of sites and transport impacts and mitigation measures required as a result of growth. The draft policy requires a transport assessment and travel plan. No changes made. • Draft allocation requires development to provide a flood risk assessment. Also built development is not proposed on areas at higher risk of fluvial flooding. No changes made. • The site is also of a scale whereby many services and pieces of infrastructure can be provided for on-site or contributions be made locally to meet the demands of the development. Anglian Water are working closely with HDC to ensure WRC capacity to support growth. • The draft policy requires development to provide 65.5ha of green infrastructure, this is about 50% of the whole land area and will provide strategic scale enhancements.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Minerals and Waste Authority suggest deletion of criterion r. as it is adequately addressed. • Site promoter supports the allocation, submitting a vision document.	• Amended criteria r. to seek opportunities to maximise incidental extraction of any minerals as part of development. • Site promoter comments and vision document noted and welcome.
Needingworth 2 (16 comments) • Flooding concerns, the need for strong mitigation, and uncertainty over drainage effectiveness, particularly given constraints linked to the Fens Reservoir pipeline. • Traffic impacts on the A1123, Morrisons roundabout, and surrounding network especially at peak times. • Need for noise attenuation from the A1123 bypass; worries about poor air quality and the site's sensitivity to traffic-related disturbance. • Concerns regarding loss of farmland, impact on the Great Ouse and coalescence with St Ives. • Respondents cite insufficient education, sewage, utilities, emergency services, and local facilities to support major expansion; Anglian Water raises concerns about phasing and pipeline route safeguarding for Fens Reservoir. • Minerals and Waste Authority suggest deletion of criterion k. as it is adequately addressed. • Site promoter suggests increasing capacity to up to 450 homes if constraints are redesigned or mitigated. • Some seek deletion of allocation and instead seek smaller/medium sites.	• The scale of Needingworth 2 has been reduced from 290 homes to 100 in response to concerns relating to traffic impacts, flood risk, coalescence with neighbouring settlements, landscape concerns and the size of the site. Draft allocation requires development to provide a flood risk assessment. No changes made. • Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study which identifies suitability of sites and transport impacts and mitigation measures required as a result of growth. The draft policy requires a transport assessment and travel plan. No changes made. • Criteria within the policy requires a strong landscaping scheme and the site has been reduced to minimise landscape impact. • Draft policy requires an assessment of noise and air quality impacts. No change made. • Anglian Water comments are noted and will inform the housing trajectory and phasing of the site which will be published at the next stage of Plan preparation. A statement of common ground is being prepared to ensure WRC capacity to support growth and address Fens Reservoir Infrastructure. • Amended criteria k. to seek opportunities to maximise incidental extraction of any minerals as part of development. • Site promoter comments noted. • Additional small and medium sized sites have been identified to add to the 5YHLS and will consulted upon through May to June 2026.
Offord D'Arcy and Offord Cluny general (1 comments) • Site promoter for land to the North Offord Cluny not allocated, seeks future consideration with the Local Plan citing it is well-related to the built-up area, directly adjoining the settlement edge, and free from flooding-risk. Red Line Plan included.	• The new site land to the North Offord Cluny - upon review the site extends eastwards into the open countryside, in depth development on this site of the B1043 would be uncharacteristic from the linear form of development to the south.
Offord D'Arcy 1 (4 comments) • Flood risk and drainage concerns were raised, site promoters note that proposed measures and	• The criteria within the policy require a flood risk assessment and detailed drainage strategy to support development. Additional wording added

Main Issues Raised	Council Response / How the Council has taken this into account
planning conditions could adequately manage risks. Anglian Water support the need for a surface water drainage strategy. They identify a need for future wastewater infrastructure planning and collaboration with Anglian Water. • Concerns raised about narrow and hazardous pedestrian routes, poor public transport, limited vehicle access and visibility, and potential congestion, while promoters maintain that the transport assessment demonstrates safe access and improved connectivity. • Site promoters note provision green buffers, strengthened vegetation, and sensitive landscape design to mitigate impacts and are submitting a planning application. • Minerals and Waste recommend amending criterion f. since it is sufficiently addressed in the supporting text.	to clarify this is to include surface water flooding as well has been made. Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. • Criteria in the allocation policy requires safe and suitable access and a transport assessment to identify mitigation. • 25/01738/OUT for 70 homes is under consideration. Site capacity lowered to align with application. • Criterion f. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development.
Offord Cluny 1 (5 comments) • Anglian Water support the need for a surface water drainage strategy for the site is supported. They identify a need for future wastewater infrastructure planning and collaboration with Anglian Water. • There are concerns about flood risk and drainage due to blocked pipes, support for a robust surface water strategy. • Historic England recommend development near Offord Cluny Conservation Area and Grade II listed buildings requires a Heritage Impact Assessment to assess suitability and guide appropriate safeguards. • Minerals and Waste recommends deleting policy text regarding the need for agreement with the County Council on mineral safeguarding, as this is already covered in the supporting text. • Site promoter suggests a slightly higher capacity (45–55 homes), recommends minor policy wording changes, and highlights that wastewater capacity should be addressed at the strategic planning stage.	• Anglian Water support noted, criterion e. amended to require early engagement with AW on waste water flows. • The criteria within the policy require a flood risk assessment and detailed drainage strategy to support development. No changes made. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion i. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Site promoter support welcome, comments regarding increasing capacity are noted. In the introduction of Section D, it states there is a 10% tolerance either side of the 'about' figure set out is considered to be reasonable. This means that up to 50 dwellings could be appropriate on the site. No change is therefore made.
Stilton general (1 comments) • The site promoter of a new site land North/West of North Street, Stilton for circa 150 homes raises concerns over current housing supply and contingency and suggests smaller sites of 100-200 homes should be included to enhance flexibility.	• Land North/West of North Street, Stilton for circa 150 homes - upon review of this site there are concerns regarding the cumulative impact of development on Stilton and the integration of the site with the village as well as the feasibility of the access to support the quantum of development.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Stilton 1 (6 comments) • Historic England raise heritage constraints as part of the site lies in Stilton Conservation Area and the Grade II listed buildings along North Street requesting a Heritage Impact Assessment to determine impacts and guide mitigation and policy wording. • Anglian Water support surface water drainage strategies. There are water mains and gravity sewers along North Street within the highway entrance to the site. • Middle Level Commissioners identify reference to MLC and/or IDB discharge consent is important. • County Council Minerals And Waste suggest policy simplification; mineral safeguarding is acknowledged in supporting text and may not need repeating in criteria i. • Residents raise concerns regarding access and traffic impacts, particularly related to North Street and require clear management. • Support for improvement of the site.	• A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the existing water supply infrastructure. Supporting paragraph 12.146 updated. • Reference to MLC/IDB now included in the supporting text. • Criterion i. amended to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development. • Since the publication of the draft allocation, 24/00238/FUL for 9 dwellings was approved in November 2025 identifying vehicular access from the existing access from North Street and no vehicle through route to the adjoining site Stilton 2. • Support noted and welcomed for the potential regeneration qualities of the site.
Stilton 2 (6 comments) • Highway safety concerns on North Street include its narrowness, on-street parking, poor visibility, and unsafe pedestrian conditions. Consultees request proof of safe access and improved pedestrian measures. • The site promoter suggests capacity could increase to 70 homes, reflecting planning application 22/02275/FUL and demonstrating capacity on submitted layouts. • Historic England raise concerns due to proximity to the Conservation Area and Grade II listed buildings; request for a Heritage Impact Assessment to inform allocation and policy wording. • Anglian Water identify there are foul and surface water sewers within the site to the south and along the eastern boundary and seek safeguarding of a maintenance access, support for a surface water drainage strategy. • Middle Level Commissioners identify reference to MLC and/or IDB discharge consent is important.	• Highway safety concerns are noted, the criteria within the draft policy requires the provision of safe and appropriate vehicular access. • 22/02275/FUL for the erection of 70 dwellings pending consideration. Capacity left inline with the draft allocation. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the existing water supply infrastructure. Supporting paragraph 12.154 updated. • Reference to MLC/IDB now included in the supporting text.

Villages

Main Issues Raised	Council Response / How the Council has taken this into account

General comments (18 comments)
• Support for not allocating Sibson Garden Village.
• Support for minimal development to preserve rural character and prevent overloading limited services. Comments stress the importance of maintaining the distinct rural identity of small parishes.
• Opposition to Bury being grouped as part of a "Market Town," arguing it is a village taking disproportionate growth without matching infrastructure.
• Site promoters argue that land west of Potton Road, Hilton (CfS:42), land east of St Ives Road, Hilton (CfS:41) and land at Church Street/ Short Drove, Holme (CfS:157) should be allocated, disputing flood risk assessments and emphasising deliverability.
• Site promoters for Sibson Garden Village (CfS:348) and Chesterton Garden Village (CfS23-2414) seek allocations for their sites providing further documentation.
• Comment that relying on extant permissions alone is unjustified and that one additional allocation should be made, for example in Alconbury Weston.
• Site promoter for Tin Lid, Brampton (CfS:281) promoting their site for B2/B8 SME development.
• Support for use of traditional architecture in schemes and banning demolition of pre1950s buildings.
	• Comments in support of not allocating Sibson Garden Village are noted.
	• Support for sympathetic village development noted.
	• Allocations have been made across various settlements with the most growth directed to the most sustainable settlements as per the Settlement Hierarchy. Some village growth is sustainable and helps to sustain local services and facilities as well as provide housing and employment opportunities for residents.
	• Objections to Bury being grouped with Ramsey as part of the Market Town category in the Settlement Hierarchy are noted. The village is functionally and physically connected to Ramsey and therefore shares many of its services and infrastructure. Proposed site allocations identify which are in Bury and Ramsey recognising that they two connected settlements.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Land west of Potton Road, Hilton (CfS:42) and land east of St Ives Road, Hilton (CfS:41) - No substantive new evidence. Concerns regarding scale and integration remain.
	  • Land at Church Street/ Short Drove, Holme (CfS:157) - no substantive new evidence, sequentially preferable site in the village proposed.
	  • Tin Lid, Brampton (CfS:281) - wholly within a Minerals Development Area, no further information has been provided to enable additional assessment.
	  • Sibson Garden Village (CfS:348) - transport concerns remain including impact on Oundle Road.
	  • Chesterton Garden Village (CfS23-2414) - transport concerns remain including impact on Oundle Road.
	• The Plan seeks high quality design that reflects local character and distinctiveness

Abbotsley general (0 comments) • No comments	• No comments to address

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
Abbotsley 1 (6 comments) • Abbotsley PC consider location is inappropriate as there is no junction close from the new A428 and it is not easily accessible on to the new A428. They also note there is a supply of land for this purpose in St Neots, with both vacant buildings and land. • St Neots TC supportive and would also like retail included. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings. • Anglian Water identify and onsite waste water solution would need to be taken forward, subject to the necessary discharge consents, to be agreed by the Environment Agency. • National Highways state if an application is made prior to the A428 being detrunked, it would be subject to the Circular 01/2022 for new accesses and connections to the SRN. Any agreement to a new access off the A428 would also need to be in consultation with Cambridgeshire County Council.	• Abbotsley PC comments are noted, the draft policy requires provision of access from the A428. • St Neots TC comment noted, uses remain for E(g)(i-ii) and B8 as no evidence provided to support retail in this location. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Anglian Water comment noted. Reference to an onsite solution included within the criteria and supporting text. • National Highways comment noted. Reference to consultation with Cambridgeshire County Council included in the supporting text.
Alwalton general (1 comment) • Development of this site has significant potential to alter the nature of the village and bring an increase in traffic movements to a village which already experiences traffic problems - especially at peak times, with queues coming off the A1.	• Following a review of comments received from residents, stakeholders and neighbouring authorities, who cite concern regarding heritage, transport impacts and scale of the proposal, the site has been removed as a draft allocation.
Alwalton 1 (14 comments) • Support for the allocation includes a request to refine policy wording so the Design Code sets requirements and parameters. • Peterborough City Council notes the site is functionally linked to Peterborough and cumulative traffic and ecological impacts—especially regarding the A605, Nene Valley NIA, and Showground development—must be jointly assessed. • National Highways states traffic impact on the A1 and suitability of the southbound slip road are untested; modelling is required and severance issues may call for new infrastructure such as overbridges. • The site promoter supports allocation but seeks flexibility on flood alleviation land (to be determined at planning stage) and highlights extensive technical work completed to show the site is deliverable. Submitted technical documents and plans.	• Following a review of comments received from residents, stakeholders and neighbouring authorities, who cite concern regarding heritage, transport impacts and scale of the proposal, the site has been removed as a draft allocation.

Main Issues Raised	Council Response / How the Council has taken this into account
• Historic England state a heritage impact assessment is needed because development could affect nearby Alwalton Hall, listed buildings, existing Conservation Area, and setting of Durobrivae, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Objections focus on access near the A1 slip road, risks linked to heavy traffic flows, previous refusals on safety grounds, and construction traffic impacts. • Concerns highlight steep gradients, low lying flood prone areas, groundwater flooding history, and the risk that development would worsen runoff. • Respondents believe development would be visually prominent, harm the Nene river meadows, and put pressure on valued countryside and ecological sites. • Concerns about lack of school and GP capacity, limited local amenities, and dependence on car travel due to poor accessibility. • Some residents and Alwaton Parish Council favour modest, incremental development rather than a single large scheme. • Minerals and Waste Authority suggests removing criterion j. as it adequately addressed in supporting text. • Oundle Town Council considers the development could worsen safety and congestion on the already over capacity A605 and requests independent, up to date traffic assessment before any approval. • Anglian Water identifies assets within the site; satisfied with criterion b. Encourage developers to submit a pre-planning enquiry to determine sustainable point of connection to AW wastewater network. The need for a surface water drainage strategy for the site is supported.	
Bythorn general (1 comment) • Reduction in the number of properties being built so that Warren Lane can cope with the additional construction traffic or an alternative site should be pursued.	• Comment noted and addressed in the box below.
Bythorn 1 (21 comments) • Bythorn has no services, no public transport, and no safe active travel routes. Development relies entirely on car use and conflicts with local policy.	• Taking into consideration the concerns and comments from the Parish Council and residents, this site has been reviewed and so has Home Farm (CfS:111). It is proposed to remove land west of Warren Lane for allocation and replace

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Scale disproportionate to the village, detached from the village, surrounded on three sides by countryside. • Site is outside of the built up area on elevated ground, development would intrude into open countryside, destroy ridge and furrow, and harm views—especially of St Lawrence Church from public rights of way and would require rerouting of exciting PROWs. • Historic England state a heritage impact assessment is needed because development could affect nearby heritage assets, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Anglian Water identify the need for a detailed assessment of surface water flood risk is supported. Encourage developers to engage with AW to determine sustainable point of connection to our wastewater network. • Minerals and Waste Authority suggest adding its location within a Mineral Safeguarding Area for Brick Clay and prior extraction of brick clay is unlikely to be feasible as part of development. • Warren Lane and Smiths Lane are narrow single track rural lanes, no footpaths, no street lighting and cannot be widened due to adjacent buildings. Increased traffic would cause safety risks, blockages, and conflict with agricultural and service vehicles. • Surface water floods properties downhill. A ditch beside the site has no outfall, regularly overflows. • Comments, including the Parish Council, state Home Farm (CfS:111) and other previously suggested sites are far more suitable, with safer access and better village integration.	this with Home Farm instead for 15 homes. The new draft allocation will be drafted and consulted upon through May to June 2026.
Colne general (0 comments) • No comments	• No comments to address
Colne 1 (6 comments) • Objections highlight the lack of footpath/cycleway on Earith Road and request upgraded access tracks, enhanced pavements, and a new shared pedestrian/cycle link to Earith. • Respondents stress past refusals and an appeal dismissal which found the site to be open countryside forming a visual buffer and conflict conflicting with Colne's linear pattern harming rural character and that the capacity is too high.	• Comments regarding footpath access is noted, the site area goes up to Earith Road so there could be opportunities for enhancement. • Planning history is noted. • The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the design policies in the Local Plan. • Anglian Water support noted, criterion c. amended to require early engagement with AW on waste water flows. Comments are noted and will inform

Main Issues Raised	Council Response / How the Council has taken this into account
• Requests to restrict building heights and remove permitted development rights for roof alterations to protect neighbouring privacy and avoid overshadowing. • Anglian Water identifies no assets within the site; no requirement for a detailed assessment of surface water flood risk, this should be addressed through SuDS and any discharge to a watercourse or drain. Development would need to be phased to align with delivery of a WRC growth scheme. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Minerals and Waste Authority suggests removing criterion f. as it adequately addressed in supporting text.	the housing trajectory which will be published at the next stage of Plan preparation. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion f. amended to make the criterion consistent with others regarding minerals.
Ellington general (2 comments) • Site promoter for land west of Grafham Road (CfS:35) seeks allocation for up to 32 homes. • Ellington Parish Council identifies it conflicts with the neighbourhood plan, scale of growth is disproportionate, outside of the village envelope, would harm local character and a full wastewater capacity study and consideration to green and blue infrastructure should be done and homes should be for smaller, affordable housing or homes for older residents.	• Land west of Grafham Road (CfS:35) - upon review, this site is considered potentially suitable for allocation as it is relatively unconstrained and there is capacity within the WRC and local primary school. The new draft allocation will be drafted and consulted upon through May to June 2026. • Ellington PC comments regarding the neighbourhood plan are noted. A Water Cycle Study assessing waste water capacity has been undertaken working closely with Anglian Water, this includes reviewing Assets Management Plans to accommodate future growth.
Ellington 1 (4 comments) • Ellington Parish Council identifies it conflicts with the neighbourhood plan, scale of growth is disproportionate, outside of the village envelope, would harm local character and a full wastewater capacity study and consideration to green and blue infrastructure should be done and homes should be for smaller, affordable housing or homes for older residents. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings and conservation area, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Anglian Water identify a water main on High Street. Seeks safeguarding of suitable maintenance access. The need for a detailed assessment of surface water flood risk for the site	• Ellington PC comments regarding the neighbourhood plan are noted. The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the design policies in the Local Plan. • A Water Cycle Study assessing waste water capacity has been undertaken working closely with Anglian Water, this includes reviewing Assets Management Plans to accommodate future growth. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Anglian Water support noted, criterion c. amended to require early engagement with AW on waste water flows. Additional criterion added to require preservation of access to allow for

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
is supported. Encourage developers to engage with AW to determine sustainable point of connection to our wastewater network. • Minerals and Waste Authority suggests removing criterion g. as it adequately addressed in supporting text.	maintenance of their assets. Supporting paragraph 13.42 updated. • Criterion g. amended to make the criterion consistent with others regarding minerals.
Grafham general (0 comments) • No comments	• No comments to address
Grafham 1 (9 comments) • Grafham Parish Council notes the allocation conflicts with the Neighbourhood Plan and local conditions, raising issues around scale, drainage, access and a recently permitted PIP application on the site. • Responses highlight flood risk, surface water issues, and argue the land should be left for ponds/wildlife rather than development. • Comments identify Church Road as narrow, unlit, with blind bends and no footpaths—unsafe for increased traffic or pedestrian movements. Calls for speed reductions and better access arrangements. • Footpaths shown on CCC maps are said to have been unusable for decades due to past development. • Residents report frequent water outages, arguing additional homes cannot be supported without infrastructure upgrades. Anglian Water identify no assets on site. Need for a detailed assessment of surface water flood risk is supported. Encourage developers to engage with AW to determine sustainable point of connection to our wastewater network. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Archaeological potential (HER sites, medieval settlement traces, drainage systems, ponds possibly linked to historic features).	• Grafham PC comments regarding the neighbourhood plan are noted. The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the design policies in the Local Plan. • Criterion c. requires a flood risk assessment and detailed drainage strategy. No changes made. • The draft policy requires development to provide safe vehicular and pedestrian access supported by a proportionate transport assessment. No changes made. • Public rights of way comments are noted, criterion f. and supporting paragraph 13.53 have been removed. • Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Archaeological potential of the site is noted and a criterion within the draft policy has been added to require a programme of work designed to investigate, and where appropriate protect, archaeological assets working the County Council on this. Supporting paragraph added to detail this further.
Great Paxton general (0 comments) • No comments	• No comments to address
Great Paxton 1 (16 comments) • Respondents state that part of the site has functioned as a car park for over 20 years, essential for the recreation ground and football	• Concerns of residents are noted and loss of informal parking. A criterion has been added to require a transport assessment to assess transport impacts of the development. The site

Main Issues Raised	Council Response / How the Council has taken this into account
clubs; its loss would force parking onto the High Street, creating major safety risks for drivers and pedestrians. Residents highlight that new dwellings would increase reliance on private cars. • Development would be out of character, representing dense backland housing behind a linear frontage, harming the rural feel, causing overlooking, and degrading existing visual amenity. • Site previously included a historic orchard that was cleared in 2025, harming wildlife and that the land could be restored rather than developed. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Sport England supports keeping the access path to the playing fields and recommends policy wording ensuring no loss or prejudice to the playing field. • Minerals and Waste Authority suggest adding its location within a Mineral Safeguarding Area for sand and gravel recommending a construction management plan making best use of minerals extracted. • Site promoter supports allocation submitting a supporting document with their comments outlining proposals for 25/02068/FUL.	area has been reduced to omit the land used for parking for the football ground. • The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the design policies in the Local Plan. • The draft policy requires an ecological assessment and BNG requirements will also apply. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Sports England support for retaining paths to playing pitches noted. • Criterion h. amended to make the criterion consistent with others regarding minerals. • Site promoter comments and supporting documents noted and welcomed.
Great Paxton 2 (3 comments) • Anglian Water identify water mains to the north and west boundaries. Seek safeguarding of maintenance access. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings, and its findings should determine whether the site is suitable for allocation and what mitigation is required. • Site promoter supports allocation and proposed capacity submitting a supporting document with their comments highlighting is availability and deliverability.	• Anglian Water support noted, additional criterion added to require preservation of access to allow for maintenance of the existing water supply infrastructure. Supporting paragraph 13.64 updated. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Site promoter support noted and additional documents welcome.
Haddon general (41 comments) • The A605 is dangerous and over capacity, and additional HGV traffic would create severe, unmitigable safety and congestion impacts and is car dependent.	• Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study. The draft policy requires a transport assessment and travel plan with agreement of Highways Authority. No changes made.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• The development would cause major and irreversible harm to rural character, agricultural land, biodiversity, greenfield land, and the Northern Wolds landscape. • The allocation contradicts multiple Draft Local Plan policies and lacks a transparent sequential or evidence based justification. • Development threatens an area rich in archaeological features and heritage settings, risking irreversible harm. • Combined effects with Thrapston and Peterborough warehouses would overload the A605 further and undermine spatial strategy. • Fear that approving Haddon 1 would enable large scale future sprawl ("warehouse creep") west of the A1. • Support focuses on job creation, alignment with logistics need, and synergy with Peterborough Services, though these represent a minority. • Suggestions include relocating logistics to SRN linked or rail served sites, reinstating CfS:140 (Brampton 16), or creating a clearer "Hamlets & Countryside" chapter for transparency.	• Concerns regarding loss of landscape and sprawl of development west of the A1 are noted. No other sites are allocated to the west of the A1 for commercial development of this scale and the allocations in the Local Plan are priority sites to be delivered before any others which would have to demonstrate with the policies in the Local Plan. • Development is required to be phased to ensure land is not developed if market situations change. The site is one of three sites to provide logistics and distribution in line with the recommendations of the Economic and Employment Needs Assessment. Further large scale development would be determined through other specific policies in the plan on logistics and distribution. • Archaeological potential of the site is noted and reflected in the draft policy. • Support for the economic benefits and job creation of the scheme are noted. • Brampton Cross (CfS:140) was considered inappropriate for development through the in-combination outcomes of the LAA and SA which noted that it could impact nature conservation designations as the site is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area. A critical factor is to determine through engagement with CCC whether developing the site could adversely impact the existing water recycling centre and if commercial uses can be successfully integrated with it. • Chapter renamed to 'Villages, Hamlets and the Countryside
<u>Haddon 1/ Peterborough Services (126 comments)</u> • Elton Parish Council and residents provided several supporting documents including a technical note on nationally significant archaeology, traffic survey report and injury RTA map. • Concerns that the A605 is over capacity with a serious accident history, and added HGV flows are viewed as unsafe and unmitigable, that the site will be car dependant with no viable public transport or active travel access, contradicting sustainability objectives. • Some respondents seek removal of the draft allocation. • Nassington and Glapthorn Parish Councils responded due to potential cross boundary impacts of the development.	• Elton PC's and resident's concerns are noted and the additional supporting documentation are welcomed. The draft policy requires transport assessments and travel plan, archaeological investigations, assessment of air, light and noise pollution impacts, and a Landscape and Visual Impact Assessment, alongside maximising opportunities for net zero. • Concerns regarding wider transport issues are noted, the Local Plan is supported by a Strategic Transport Study and Infrastructure Delivery study, mitigation measures are identified to enable delivery of the site which includes public transport. retention of public rights of ways and a sustainable transport network for vehicles, cyclists, pedestrians and public transport informed by a Travel Plan is included within the policy criteria.

Main Issues Raised	Council Response / How the Council has taken this into account
• Large scale warehousing would cause major, irreversible harm to open countryside and the Northern Wolds landscape. • Historic England state a heritage impact assessment is needed because development could affect nearby listed buildings and identifies a Roman Farmstead and Roman bath close to the site. The findings should determine whether the site is suitable for allocation and what mitigation is required. • Respondents argue the allocation conflicts with a wide range of Local Plan policies, from settlement hierarchy to climate, design, transport and heritage. • Increased noise, light pollution, rat running and reduced residential amenity would harm nearby villages including Haddon and Elton. • Development results in the loss of productive farmland, biodiversity, carbon sequestering land, and raises concerns about flooding, wastewater and SAC impacts. • The need for the site is questioned, with brownfield options and SRN linked sites like CfS:140 (Brampton 16) considered more suitable. • Supportive comments cite potential economic benefits and synergy with the existing service area, provided impacts are mitigated. • Minerals and Waste Authority suggests removing criterion m. as it adequately addressed in supporting text.	• Cross Boundary discussions have been held with adjoining local authorities who have also commented on the Local Plan and site allocations. Statements of Common Ground have been produced to reflect areas of agreement. • The site is required to phase development to ensure that if market demand changes, land can remain as open countryside. No changes made • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • The location of strategic logistics was guided by evidence set out in the Economic and Employment Needs Assessment and the assessment of Spatial Development options through evidence documents relating to infrastructure, transport and the Sustainability Appraisal. • A proposal will require a noise and air quality assessment and appropriate mitigation from the A1(M) and proposed uses on the site. No changes made. • The Local Plan is supported by a Habitats Regulation Assessment which considers the impact of this site and all others on internally protected site. Criteria e. requires an ecological assessment to assess biodiversity and also potential impact on Orton Pit SAC. The allocation policy includes criteria to address and flooding and waste water concerns. No changes made. • Brampton Cross (CfS:140) was considered inappropriate for development through the in-combination outcomes of the LAA and SA which noted that it could impact nature conservation designations as the site is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area. A critical factor is to determine through engagement with CCC whether developing the site could adversely impact the existing water recycling centre and if commercial uses can be successfully integrated with it. • Support for the economic benefits of the scheme are noted. • Criterion m. amended to make the criterion consistent with others regarding minerals.
Hail Weston general (0 comments) • No comments	• No comments to address
Hail Weston 1 (2 comments)	• The allocation policy includes criterion to require safe and appropriate access to the site from

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Comment in support of allocation but concern raised about speed limit, safety and lighting along and at the junction with the B645. • Anglian Water identify water mains to the southern boundary of the site. Encourage developers to engage with AW to determine point of connection to network.	High Street which connects directly from B645. No changes made. • Criterion added to require agreement with Anglian Water Services to determine a sustainable point of connection. Supporting paragraph added to detail the requirement. Criterion added to require the safeguarding of suitable access for the maintenance of existing water supply infrastructure. Supporting paragraph added to detail the requirement.
Holme general (2 comments) • Concerns are raised about developing a site near a busy junction, emphasising the importance of careful site entrance planning and suggesting the potential to include a village play area if the development proceeds. • Objection is raised to the Draft Local Plan for not allocating the Church Street, Short Drove, Holme (CfS:157) site for housing, despite the Council's own assessment confirming the site's suitability and deliverability; a request is made for its allocation or for a clear, evidence-based explanation for its omission.	• Concerns regarding the highway safety are noted. The draft policy requires a transport assessment to be undertaken to demonstrate impact of traffic flow, movement and parking. • Support for village play area is noted. • Church Street, Short Drove, Holme (CfS:157) - no substantive new evidence, moresequentially preferable site in the village proposed.
Holme 1 (6 comments) • Concerns development will result in increased traffic and congestion and pedestrian and cyclist safety is at risk due to inadequate footways; access and road layout issues are highlighted, especially a dangerous bend and cumulative access pressures. • Development's density is considered excessive for the village, arguing 25–35 homes are suitable and consistent with existing settlement character. • Retail and health facilities are welcomed, there are doubts about their impact on reducing car use, and a specific need for a children's play area is identified. • Anglian Water supports requirement for a surface water drainage strategy. Drainage and wastewater infrastructure is currently adequate but may need expansion for future growth; early coordination with Anglian Water is recommended. • Middle Level Commissioners identify reference to MLC and/or IDB discharge consent is important. • Site falls within a Mineral Safeguarding Area for brick clay, with the planning authority recommending best use of any incidentally extracted minerals.	• Concerns regarding the highway safety are noted. The draft policy requires a transport assessment to be undertaken to demonstrate impact of traffic flow, movement and parking and identify appropriate mitigation.. • Concerns regarding the scale of the proposal are noted. The draft policy identifies about 50 homes on site, this aligns with the outcomes of the in-combination LAA and SA assessment and also the developer's aspirations for the site. • Support for retail and community facilities is noted. Support for village play area is also noted. • Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. • Reference to discharge rates and the MLC/IDB now included within the supporting text. • Criterion added to address Minerals and Waste comments, stating that development should maximise incidental extraction of any minerals as part of development.

Main Issues Raised	Council Response / How the Council has taken this into account
Ramsey Forty Foot general (1 comments) • Objection to the omission of land east of Ugg Mere Court Road (CfS:146) for residential development. Ramsey villages lack sufficient housing allocations. Although this area is within the flood plain, there is now an opportunity to address local housing demand.	• Land east of Ugg Mere Court Road (CfS:146) - no substantive new evidence, fundamental constraints of the site being wholly classified as being grade 1 agricultural land and within flood zone 3a remain.
Ramsey Forty Foot 1 (2 comments) • Heritage Impact Assessment is needed to evaluate the potential effects of site development on nearby heritage assets and guide decisions regarding site allocation, policy, and necessary mitigation. • Middle Level Commissioners state the EA has no role here so can be excluded as the site is MLC land. MLC consent is required in both our navigation and flood role, notwithstanding as land owner they would be the ones promoting any development.	• A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Reference to the Environment Agency removed.
The Stukeleys general (1 comments) • Site promoter requests reconsideration for the Heron Shore (CfS:23-24210) site in the Local Plan, highlighting its proximity to Grange Farm, historical features, size, existing pond and access road, and suitability for luxury homes.	• Heron Shore (CfS:23-24210) - no substantive new evidence to overcome concerns. The site relates more to the countryside than Great Stukeley and it cannot be effectively masterplanned to integrate with the existing settlement. It is recognised that the wider area is evolving with the development of Alconbury Weald and Grange Farm, there may be opportunities for the site's development in the future.
Great Stukeley 1 (1 comments) • Anglian Water note that a surface water drainage strategy using SuDS is supported, and early engagement with Anglian Water is advised.	• Anglian Water support noted, criterion e. amended to require early engagement with AW on waste water flows.
Upton general (0 comments) • No comments	• No comments to address
Upton 1 (9 comments) • Site promoter in support of the allocations providing plans. Seeks minor changes to policy and supporting text relating to a proportionate flood risk assessment, where possible retaining boundary landscaping and access from Pig Market End appropriate to the scale and nature of the village. • Development should meet requirements for Custom and Self-Build registers, and ensuring	• Support from site promoter noted and additional plans welcome. Minor wording changes made to supporting text, policy wording not changed to provide consistency with other draft allocations. • Supporting paragraph added to identify that a proposal should consider the requirements set out in the authorities' self build register in terms of types and sizes of plots. • Anglian Water support noted, criterion d. amended to require early engagement with AW on waste water flows. Supporting paragraph 13.112 amended.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
design quality through established frameworks and codes. • Anglian Water support the requirement for a surface water drainage strategy; early coordination with Anglian Water is recommended.	
Waresley general (1 comments) • Site promoters propose a small-scale residential development of up to 15 homes at Home Farm, Waresley for inclusion in the Huntingdonshire Local Plan, citing easy access, minimal constraints, and the potential to meet local housing needs.	• Home Farm, Waresley, a newly promoted site for 15 homes - the site is located to the north of the draft allocation Waresley 1, as such the new site would extend development further north away from key services making it less preferable than the preferred options site. Also the cumulative impact of an additional development of this scale in Waresley would be significant.
Waresley 1 (17 comments) • Objections to 10 homes, preferring 2–6 dwellings to preserve rural character and prevent overdevelopment. The landowner suggests up to 9 homes for viability. • Heritage Impact Assessment is needed to evaluate the potential effects of site development on nearby heritage assets and guide decisions regarding site allocation, policy, and necessary mitigation. • Anglian Water identified assets within the site and support criterion d. Support the requirement for a detailed assessment of surface water and groundwater flood risk. Encourage the developer to engage with Anglian Water to determine whether a sustainable point of connection to our wastewater network can be identified. • Highlight unsafe, narrow road conditions and increased risks from more traffic, especially for pedestrians and vulnerable road users. • Concerns regarding drainage, sewer & flooding with residents reporting sewer issues and flooding, fearing further strain from 10 new homes without infrastructure upgrades. • Loss of open farmland, harm to countryside views, and threats to local wildlife and village identity are key concerns. • Additional noise and light are seen as detrimental to the quiet, rural setting. • Doubts raised about alignment with existing permissions, inclusion of woodland, and the timing of the proposal amid potential local government changes.	• In response to objections to proposed scale of the development noted, to help overcome landscaping, access, heritage and infrastructure concerns the capacity has been reduced to 6 dwellings. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Anglian Water support noted, criterion amended to require early engagement with AW on waste water flows. • Supporting paragraph added to identify that a proposal should consider the requirements set out in the authorities' self build register in terms of types and sizes of plots. • The policy includes criteria to address concerns relating to safe vehicular and pedestrian access, waste water, flooding, landscape impact and retention of woodland. No change made.

Main Issues Raised	Council Response / How the Council has taken this into account
Appendix 1 (11 comments)	
• Concern regarding scale of growth in Somersham and provision of infrastructure improvements. • Unclear why not all villages are included. • Comment seeks increase in Alconbury Weston commitments. • 22 holiday lodges at Elton Furze Golf Club appear to be listed within the existing commitments for Elton - these should be removed as not permanent dwellings. Instead site promoter seeks allocation of land between Duck Street and Wansford Road, Elton (CfS:59). • It would be more transparent if the "Total completed and committed" figures were listed in a table rather than just a figure. • The 0 figure is supported in Catworth as evidenced in the Parish survey. • Sites for which applications were received prior to the draft plan should be indicated with a different colour so as to be able to adequately consider the impact of newly proposed sites.	• Infrastructure needs to support additional development have been identified through the Infrastructure Delivery Study • Only places with a designated neighbourhood area are required to be ascribed a housing requirement • Appendix updated to reflect latest housing completions and commitments data. • Details of existing completions and commitments are not added separately as the purpose of the Appendix is to guide Neighbourhood Planning Groups with future plan requirements. • A site for 25 homes has been added to Catworth following further community engagement • Applications prior to the Local Plan preparation are included in the grey shaded first column, newly proposed ones are in the blue shaded second column. No changes made.
Appendix 2 (3 comments)	
• General support for monitoring scheme. • Cambridgeshire County Council recommended that the indicator for policy LP49 is reviewed as it only considers impact to statutory designated sites. Suggest monitoring the impact to Local Sites is also considered, such as: 1) number of Local Sites that have been removed / partially destroyed as part of development, 2) number of Local Sites that have been expanded as part of development, or 3) number of Local Sites in positive conservation management or number of sites that have been removed. • The appendix should set out what the Council if it does not meet any of its targets or indicators.	• Support noted and appreciated. • Monitoring of local sites have not been added due to the resource implications of monitoring these. The monitoring will include local sites that are monitored by Cambridgeshire and Peterborough Environmental Records Service. • Additional text has been included to explain actions if indicators are not met.
Appendix 3 (1 comments)	
• Support for list of acronyms.	• Support noted.
Appendix 4 (1 comments)	
• Comment stating support for policies.	• Support noted.
Glossary (2 comments)	

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• General support for glossary. • Underneath definition for Infrastructure - add after health 'fire & rescue, police and ambulance'.	• Collective reference to emergency service provision added.

Outcomes

5.12 The changes outlined in the tables above were made. Minor amendments were made to the document to address any spelling or grammatical errors. The layout and order of some policies were updated, therefore policy numbers within the Pre-Submission Local Plan may not match the policy numbers referred to in the Preferred Options Draft Local Plan

Preferred Options Sustainability Appraisal

Consultation Responses Summaries

5.13 The following table outlines a summary of the type of comments received to the Sustainability Appraisal consulted on between 5 November and 17 December 2025:

Responses to the Sustainability Appraisal

	Sustainability Appraisal
Number of Comments Made	85
Number of Individuals or Organisations that Responded	50
Number of Supports	2
Number of Objections	29
Number of Observations	54

5.14 People were able to comment on all aspects of the document by section, paragraph and tables. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Sustainability Appraisal Consultation Responses

Summary from the Sustainability Appraisal

5.15 The following provides a summary of the main issues raised during the consultation on the Sustainability Appraisal and how the Council has taken these into account.

Sustainability Appraisal

Main Issues Raised	Council Response / How the Council has taken this into account
Chapter 1 Sustainability Appraisal (13 comments)	
• Several argue the SA does not properly test different growth levels, spatial strategies, or the implications of higher/lower housing numbers, making the process legally non-compliant. • Concerns raised about inadequate consideration of water supply, sewerage capacity, flood risk, traffic impacts, pollution, and catchment-wide effects (including major external projects like Tempsford). • Respondents highlight contradictory scoring between similar sites, poor treatment of constraints, and missing evidence—undermining confidence in the methodology. • Education Authority highlights SA10 needs to also consider whether the allocation of the site	• A substantial review of the SA has been undertaken with significant additional material included to assist with interpretation of the testing of growth levels, different spatial strategies and consideration of reasonable alternatives. • The Local Plan is supported by a suite of evidence including those specifically for employment need and those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency. The outcome of these studies have been fed into allocation policies and general local plan policies and have been fed into the SA where appropriate. • Sustainability Appraisal is an iterative process. Additional explanation has been included on how

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
considers catchment areas and the ability to travel to education infrastructure via sustainable transport and a safe walking route or with suitable mitigation which will enable this. • Objection to development on best and most versatile farmland, rural character, biodiversity, and the integrity of landscapes such as the Great Ouse Valley. • Concerns that the process as rushed, insufficiently consultative, and lacking clear justification for decisions. • Support positive SA findings where sites are deemed suitable for development, provided impacts are mitigated - including site promoters for land at Little Common Farm, Sawtry (CfS:380) and land north of Houghton Road (CfS:198) with further documents submitted.	it has evolved through preparation of the local plan, a tracker added to reflect responses and changes at each stage by theme and sustainability benefits more clearly identified. • Stage B2 Developing Plan Options sets out how the strategy has evolved and how reasonable alternatives have been tested through the evidence base to reach a preferred strategy. This chapter has been expanded further to integrate the next stages of evidence gathering and further detail how reasonable alternatives have been considered. • Education has been considered through the sustainability appraisal and further detailed through the Infrastructure Delivery Study. • SA scoring was undertaken using the most up to date available information and a consistent framework and methodology which was available for comment through the scoping stage. • Support from site promoters noted.
Chapter 2 - Sustainability Appraisal Methodology (3 comments)	
• The SA contains inconsistencies, unclear reasoning, and factual errors in scoring. • Employment land allocations contradict the Local Plan's own sustainability hierarchy, allocating the largest amounts to less sustainable villages instead of towns and service centres. • A uniform, accurate, and future-infrastructure-aware assessment framework is required; proper methodology would change outcomes for several sites, including land adjacent to the A1 and Norman Cross (CfS:130). • Missing reasonable alternatives (e.g., Farcet - CfS:30): Some highly sustainable settlements like Farcet were not assessed or justified as exclusions. • The SA lacks robust assessment of sewage capacity and flooding risk, despite large-scale growth in sensitive catchments that currently lack treatment infrastructure.	• The SA scoring follows a standard scoring matrix set out on page 27 of the Preferred Options SA. • The Local Plan is supported by a suite of evidence including those specifically for employment need and those relating to infrastructure, transport, economy, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency. Stage B2 Developing Plan Options sets out how the strategy has evolved and how reasonable alternatives have been tested through the evidence base to reach a preferred strategy. This chapter has been expanded further to integrate the next stages of evidence gathering and further detail how reasonable alternatives have been considered. • Land adjacent A1 at Norman Cross, Folksworth (CfS:130) for commercial development submitting a Vision document - concerns remain regarding transport impact on the A1 and around impacts on A1 and A15 junction at Norman Cross. • Land at West of Peterborough Road and North of Gazeley Gardens, Farcet (CfS:30) for 185 dwellings submitting a supporting document, concerns remain regarding coalescence between Farcet and Peterborough. • SA objective SA3 explores and assesses the existing waste water infrastructure and capacity. Each site has been assessed using data from the

Main Issues Raised	Council Response / How the Council has taken this into account
	Water Cycle Study and SFRA to consistently score each site.
Chapter 3 - Introduction to the SA on the Preferred Options Local Plan (0 comments)	
• No comments	• No comments to address
Chapter 4 - Stage B1: Testing the plan objectives against the SA framework (0 comments)	
• No comments	• No comments to address
Chapter 5 - Stage B2: Developing plan options (2 comments)	
Two site promoters commented: • Sibson Garden Community (CfS:348) is a potential freestanding strategic development, but was not appraised under Strategy Option 4 with comparable sites and was only considered in Strategy Option 1, unlike other similar sites assessed under multiple options. The SA does not explain why certain sites—including Sibson—were excluded or rejected, despite case law requiring clear justification of selected and rejected reasonable alternatives. Further documentation submitted alongside comment. • Sapley Park Garden Village (CfS:197) was not appraised under Growth Option 2, even though similar sites like Lodge Farm and Wyton Airfield were. The SA refined earlier six options into four strategies but did not include a reasonable alternative that assessed the North Huntingdon Growth Cluster, despite its strategic significance in the Local Growth Plan. The site lies centrally within the Growth Cluster and, given its strong locational advantages, the representation argues it should be included in full as a Local Plan allocation.	• Stage B2 Developing Plan Options sets out how the strategy has evolved and how reasonable alternatives have been tested through the evidence base to reach a preferred strategy. This chapter has been expanded further to integrate the next stages of evidence gathering and further detail how reasonable alternatives have been considered. • Sibson Garden Village (CfS:348) - transport concerns remain including impact on Oundle Road. • Sapley Park Garden Village has been reissued for public consultation as a potential reserve site to further support delivery of the A141. Wording will be drafted and then be consulted upon through May to June 2026.
Chapter 6 - Stage B3 to B5: Predicting and evaluating the effects of the Plan and considering its effects (65 comments)	
Introduction (1 comment) • The SA must transparently and robustly assess all reasonable alternatives—clearly justifying why some policy options are chosen or rejected. Further evidence on the following sites provided: land at Marley Road, St Ives (CfS:292), land at Ramsey Road, Ramsey (CfS:250), land at Ramsey Road, Warboys (CfS:293), land at Mill Road, Buckden (CfS:294).	• Stage B2 Developing Plan Options sets out how the strategy has evolved and how reasonable alternatives have been tested through the evidence base to reach a preferred strategy. This chapter has been expanded further to integrate the next stages of evidence gathering and further detail how reasonable alternatives have been considered. • Land at Marley Road, St Ives (CfS:292) for up to 600 homes providing further information - would need to be part of a wider development as in isolation the site would sit uncomfortably. Need more certainty on road improvement works.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
	A more sustainably located site with and direct access to services and facilities including town centre was selected. • Land at Mill Road, Buckden (CfS:294) for 195 homes providing further information no substantive new evidence, concerns remain. • Land at Ramsey Road, Warboys (CfS:293) for 210 homes providing further information- no substantive new evidence, concerns remain. • Land at Ramsey Road, Ramsey (CfS:250), for residential development providing further information - no substantive new evidence, concerns remain including cumulative impacts on Ramsey and Bury.
Policies - How Huntingdonshire will grow and change (10 comments) • Policy LP1 - promoter for land north of Priory Hill, St Neots (CfS:239) promotes their site and considers the SA fails to test or justify reasonable alternatives to the housing and employment requirement and overlooks affordability, growth and infrastructure factors. • Policy LP2 - promoter for land north of Prior Hill, St Neots (CfS:239) promotes their site and considers Council's preferred spatial strategy is unjustified because the SA fails to properly assess reasonable alternatives for distributing growth among the Market Towns, relies on incomplete evidence, and defaults without adequate reasoning to a single broad location north of Huntingdon. • Policy LP6 - Bury Parish Council considers the SA incomplete because it fails to account for the village's cumulative growth, underestimates environmental, transport and infrastructure pressures, and therefore requires amendments to accurately reflect Bury's sustainability challenges. • Policy LP9 - Ellington Parish Council identifies the SA recognises some benefits of directing development to villages but should more strongly protect agricultural land and require clearer commitments to improving active travel and public transport, which are currently under-emphasised in the policy. • Policy LP13 - St Neots Town Council commented that low flood risk does not preclude wider town impacts from loss of permeable green space and increased run-off.	• 25/01694/OUT has been submitted and is awaiting determination for Priory Park. Stage B2 Developing Plan Options sets out how the strategy has evolved and how reasonable alternatives have been tested through the evidence base to reach a preferred strategy. This chapter has been expanded further to integrate the next stages of evidence gathering and further detail how reasonable alternatives have been considered. • The Local Plan is supported by a suite of evidence including those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency. These consider cumulative impacts and their outcomes fed into allocation policies and into the SA where appropriate. • Amendments to policies have been made to maximise reference for sustainable transport. • St Neots Town Council comments are noted. • Amendments to specific policies where relevant can be found in 'Preferred Options Draft Local Plan'. • Monitoring of planning policies is undertaken through the Council's Annual Monitoring Report.

Main Issues Raised	Council Response / How the Council has taken this into account
• Policy LP14 - St Neots TC seek confirmed waste and sewer upgrades, capacity assessments, and timelines. • Policy LP15 - St Neots TC commented that low flood risk does not preclude wider town impacts, seek introduction of monitoring and enforcement mechanisms for BNG, trees, on-site renewables, and surface water management. • Policy LP16 - comment sought 80 l/p/d. • Policy LP17 - support for the Plan setting measurable on-site renewable/low-carbon heat targets beyond minimum Building Regulations; require post-occupation energy performance reporting. • Policy LP18 - comment says to develop and publish an online dashboard tracking obligations, milestones, and KPIs for each development.	
Policies - How will we create well designed places (9 comments) • General section - comment seeks adoption of an access standard (e.g. 10-minute walk to nature) and net gain for accessible green space • Policy LP19 - compact form must be paired with standards guaranteeing access to quality green space. • Policy LP20 - secure BNG for 30 years with management plans. • Policy LP21 - require pre-commencement delivery plans for energy, drainage, and green infrastructure, with stage gates tied to inspections and green space standards. • Policy LP23 - set measurable on-site renewable/low-carbon heat targets beyond minimum Building Regulations; require post-occupation energy performance reporting. • Policy LP26 - support for wildlife corridors integrating crossing points, hedgerow networks, and riparian buffers in masterplans and monitor effectiveness. • Policy LP27 - develop and publish an online dashboard tracking obligations, milestones, and KPIs for each development and Green Space Standards (e.g., 10-minute walk to nature) and net gain for accessible green space. • Policy LP30 - Bus enhancements and town-centre vitality measures plus EWR opportunities, should be fully considered to reinforce active travel,	• The Local Plan has tested and is proposing the Fields in Trust plus allotments standard which overall provides some 5.56ha/ 1,000 people of greenspace. This exceeds Natural England's recommended greenspace standards. • Most comments were related not specifically to the details of the SA but focused on wider policy responses to integrating biodiversity, greenspace, active and sustainable travel and infrastructure. Changes to these policies have been made, please see responses to the Preferred Options for further details. • A substantial review of the SA has been undertaken with significant additional material included to assist with interpretation of the testing of growth levels, different spatial strategies and consideration of reasonable alternatives.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
ensuring avoidance of weak bus access and station distances. • Policy LP31 - seek confirmed waste and sewer upgrades, capacity assessments, and timelines.	
Policies - How we will support a strong economy (3 comments) • Policy LP32 - set clear employment-growth targets for St Neots and align them with housing and infrastructure delivery and reassess strategic employment land in light of EWR and Tempsford/Little Barford. • Policy LP33 - St Neots TC state the Local Plan should adopt a brownfield-first sequential approach for St Neots, supported by a public brownfield register and policy guidance for industrial estates balancing employment retention with relocation to better connected sites, while identifying suitable locations to bring homes closer to the town centre minimising loss of agricultural land. • Policy 38 - review and expand St Neots town centre boundary to reflect current commercial patterns and the need to grow. Embed heritage and local distinctiveness explicitly into Vision and strengthen heritage policy with criteria-based assessments.	• St Neots Town Council are noted. The policies apply to the whole district and set a strategic plan for housing and employment growth supported by infrastructure to meet needs across the district and taking into account EWR. To set more localised policies addressing employment need for St Neots, an update to the Neighbourhood Plan may be more appropriate way to achieve this. • The Council have reviewed the Town Centre boundaries as part of the update to the local plan. • The vision for the Local Plan has been updated and more clearly refers to the historic environment.
Policies - How we will support homes for all (3 comments) • Policy LP42 - should be a greater mix of requirements for bungalows and specialist homes tailored to St Neots' demographics, with monitoring of delivery by site and phase. • Policy LP45 - should be a greater mix of requirements for bungalows and specialist homes tailored to St Neots' demographics, with monitoring of delivery by site and phase. • Policy LP47 - should be a greater mix of requirements for bungalows and specialist homes tailored to St Neots' demographics, with monitoring of delivery by site and phase.	• Comments are noted. The policies apply to the whole district and are support by a district wide Housing Needs Assessment. To set more localised policies addressing the specific housing mix requirements or aspirations in St Neots, an update to the Neighbourhood Plan may be more appropriate way to achieve this.
Policies - How we will conserve and enhance the environment (3 comments) • General section - wildlife movement is constrained by transport and rail corridors, planning should incorporate nature corridors and crossings to reduce bottlenecks and fragmentation. • Policy LP52 - St Neots TC state the Local Plan should adopt a brownfield-first sequential approach for St Neots, supported by a public	• Comment regarding wildlife movement is noted. • St Neots Town Council comments are noted. The Council had few brownfield sites submitted through the call for sites, sites that were considered appropriate through the in combination LAA and SA and which were supported by technical evidence gathering have been drafted as allocation. To set more localised approach to brownfield sites or to bring forward specific

Main Issues Raised	Council Response / How the Council has taken this into account
brownfield register and policy guidance for industrial estates balancing employment retention with relocation to better connected sites, while identifying suitable locations to bring homes closer to the town centre minimising loss of agricultural land. • Policy LP54 - require pre-commencement delivery plans for energy, drainage, and green infrastructure, with stage gates tied to inspections.	brownfield sites in St Neots, an update to the Neighbourhood Plan may be more appropriate way to achieve this.
Development Sites general (2 comments) • Objection that the SA does not compare alternative sites and the earlier LAA (2024) did exclude sites, but this does not replace SA requirements, requesting to update the SA to include full assessment of reasonable alternatives using latest evidence. • Site promoter put forward land east of Bluntisham Road and north of Overcote Lane, Needingworth (CfS:291) submitting vision document. • Historic England has limited capacity to review the SA but raises that significant heritage impacts may be under-scored (e.g. Bluntisham 1, Alwalton 1, Waresley 1) and some designated heritage assets missing from assessments (e.g. scheduled monument near Alwalton 1). • SA process should be iterative, with updates made when negative impacts identified. Heritage Impact Assessments should be used to inform updates to the SA.	• Stage B2 Developing Plan Options sets out how the strategy has evolved and how reasonable alternatives have been tested through the evidence base to reach a preferred strategy. This chapter has been expanded further to integrate the next stages of evidence gathering and further detail how reasonable alternatives have been considered. • Land east of Bluntisham Road and north of Overcote Lane, Needingworth (CfS:291) for 240 dwellings submitting a Vision document - concerns remain regarding flood risk and cumulative impact on Needingworth. • Due to the considerable heritage impact, proposed allocations for Alwalton 1 and Bluntisham 1 have been removed from the next stage of the Local Plan preparation. • Heritage Impact Assessments for all preferred option sites have been undertaken and are available to view in the evidence library for the local plan. These have further shaped the allocation policy and appraisal for these sites.
Development sites - North Huntingdon Growth Cluster Opportunity Zone (4 comments) • SA acknowledges that large parts of the northern Huntingdon landscape would be permanently altered, with loss of green space and rural character. • Growth cluster developments, especially around Brampton Cross, raise concerns about HGV movements, rat-running, increased congestion on the A141/A1307, and lack of mitigation. • Parts of the cluster are at fluvial flood risk and require substantial drainage and wastewater infrastructure, which is not evidenced as deliverable. • Sites near major roads would face higher noise, air, light and visual pollution, with additional risks to SSSIs, SACs, and key wildlife habitats.	• Comments and concerns noted. • SA scoring was undertaken using the most up to date available information. • Heritage Impact Assessments on proposed site allocations have been undertaken and are available on the evidence library, recommendations have been fed back into allocation policy and SA where appropriate. • The Local Plan is supported by a suite of evidence including those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency. These have been fed into allocations and into the SA where appropriate.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Several sites, including Brampton Cross and Huntingdon 1, contain or border sensitive landscapes and heritage assets that the SA does not fully assess. • Respondents highlight misclassified agricultural land, misleading screening assumptions, and incorrect statements about previously developed land. • Concerns that the SA fails to assess wider transport sustainability, cumulative impacts, and whether proposed allocations can realistically deliver sustainable development. Further transport assessment are requested.	
Development sites - Market Towns (6 comments) • Respondents highlight concerns about insufficient wastewater capacity, traffic pressures, lack of safe walking routes, and overstated assumptions about transport accessibility — particularly around St Neots and Ramsey. • Objections frequently reference flood-prone land, impacts on wildlife habitats, greenfield loss, landscape change, and risks to the Ouse Valley and green infrastructure. • Comments raise that Ramsey 1 and 3 threaten settlement identity, remove valued community open space, and risk merging villages such as Bury and Ramsey. • Issues in SA include incorrect public transport scoring, land status and under- or over-weighting of environmental and access criteria. • Objections raised to Ramsey 3 (field near to Rural Museum) where objections cite wildlife, flooding, lack of services, and recreational value. • A few landowners support allocations (Bury 3, Ramsey 1) but request adjustments to SA scoring to reflect proposed mitigation, open space, or brownfield reuse submitting further documentation.	• Concerns noted. The Local Plan is supported by a suite of evidence including those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency. • SA scoring was undertaken using the most up to date available information and a consistent framework and methodology which was available for comment through the scoping stage. • Ramsey 3 has been removed as a draft allocation from the next stage of the Local Plan despite the rationale for allocating it being to secure the long term use of the wider site for community open space uses. • Support form site promoters noted, the SAs for Bury 3 and Ramsey 1 will be reviewed as part of Stage D of the SA process where changes between Regulation 18 and 19 are appraised.
Development sites - Service Centres (10 comments) • Several respondents strongly contest the reclassification of settlements—particularly Bluntisham—arguing they lack the facilities, infrastructure and transport links required to function as Service Centres. • Concerns focus on unsafe road access, high-speed roads, lack of footways, poor public transport, and limited local services in places such as Little Paxton, Somersham, and St Ives, suggesting proposed growth is unsustainable.	• Comments regarding how settlements have been categorised are noted. The categorisations were informed by the outcomes of the Sustainability of Settlements document. • SA scoring was undertaken using the most up to date available information. • Of the sites promoted in Buckden and Warboys none were put forward as draft allocations as they were either discounted through the in-combination LAA and SA assessment or there were issues regarding scale and integration.

Main Issues Raised	Council Response / How the Council has taken this into account
• Some criticise errors, outdated assumptions and inconsistent scoring—particularly around flood risk, agricultural land classification, achievability, and the comparative treatment of sites like Land south of Old Great North Road Sawtry (CfS:15), land off Fenton Road Warboys CfS:85, Emmanuel Knoll Village (CfS:207), and The Lattenburys (CfS:247). Promoters submitted further technical documents. • Promoters in support allocations (Fenstanton 1, Sawtry 2, Sawtry 3) but request updated SA assessments aligned with masterplans, mitigation proposals, and revised site boundaries. • Concerns are raised about disproportionate growth in some Service Centres without corresponding upgrades in schools, healthcare, parking, and local facilities.	• Comments from site promoters in Sawtry are noted, the policies have been reviewed and changes made where considered appropriate. • Emmanuel Knoll Village (CfS:207) - is an extension to Godmanchester, however, would result in such a substantial increase that it would not connect through and integrate with Godmanchester. Concerns remain about deliverability of the link road from A1198 to A1307 and provision of junction on the A1307. Inclusion would necessitate the removal of the Lattenburys as having both would result in coalescence. • Concerns noted. The Local Plan is supported by a suite of evidence including those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency to inform the development of the local plan.
Development sites - Local Service Villages (9 comments) • Several responses highlight that actual growth in Bluntisham is higher than stated due to current planning applications and that the SA fails to assess cumulative effects on infrastructure, landscape, and the Berry Fen SSSI. • SA is criticised for inconsistent scoring, overstating benefits, failing to demonstrate viability, and not explaining why some villages receive large allocations while others receive none. • Needingworth 1 is not supported. • Stilton PC raise concerns about heritage, noise from the A1(M), unsafe road access, congestion, HGV movement risks, and lack of safe cycling/walking routes. • A site promoter promoted their site land west of Farcet (CfS:108). • Site promoter for the Lattenburys (Hemingford Abbots 1) support allocations but seek adjustments to scoring or minor policy changes.	• Concerns noted. • SA scoring was undertaken using the most up to date available information and a consistent framework and methodology which was available for comment through the scoping stage. • Land west of Farcet (CfS:108) - concerns remain regarding coalescence between Farcet and Peterborough. • Support from site promoters noted, the SA for Hemingford Abbots 1 will be reviewed as part of Stage D of the SA process where changes between Regulation 18 and 19 are appraised.
Development sites - Villages (5 comments) • Objections to SA of Haddon 1 with respondents considering the site is inappropriate for development. Supporting documents provides a detailed analysis of the SA. • Impact on Ellington of the North Huntingdon Growth Cluster Opportunity Zone and need for	• The SA for Haddon 1/ Peterborough Services 1 will be reviewed as part of Stage D of the SA process where changes between Regulation 18 and 19 are appraised. • Concerns noted, the SA includes individual SA of all sites within the North Huntingdon Growth Cluster as well as an SA for the whole Growth Corridor capturing cumulative impacts. Also, the

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
further detailed transport and infrastructure studies. • Objection to Great Paxton 1 as site currently used for parking for the football ground, concerns over traffic implications on the village.	Local Plan is supported by a suite of evidence including those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency. • Great Paxton 1, concerns of residents are noted and loss of informal parking. A criterion has been added to require a transport assessment to assess transport impacts of the development. The site area has been reduced to omit the land used for parking for the football ground.
Chapter 7 - Stage B6: How we propose to monitor the significant effects of the plan (1 comment)	
• Current planning policy lacks the technical tools and independent expertise needed to assess major flood, hydrology, sewage, and transport risks for large-scale growth, creating a high likelihood of system overload, infrastructure bottlenecks, and long-term failures. • An independently funded and politically separate technical body should be established to carry out full engineering due diligence—covering water, flood, sewage, and transport—before development proceeds, with clear accountability and compensation routes if failures occur.	• Comments noted. The Local Plan is supported by a suite of evidence including those relating to infrastructure, transport, water and flood risk. Evidence base documents have continued to be published as soon as possible after completion for transparency.
Chapter 8 - Stage C - Prepare the SA report (0 comment)	
• No comments	• No comments to address
Chapter 9 - Stage D - Consultation and development of the Plan (1 comment)	
• Comment that 6 weeks is too short a consultation period	• The 6 week timetable was necessitated by the transition arrangements deadline set by government. Hard copies of documents were made available through council offices and public libraries and responses were accepted in email and letter format to support inclusion of comments from those who found use of the online portal challenging.
Stage E - Monitoring and implementation of the Plan (0 comments)	
• No comments	• No comments to address

Outcomes

5.16 The changes outlined in the tables above were made. Minor amendments were made to the document to address any spelling or grammatical errors. As the Sustainability Appraisal is an iterative document, it will be updated and re-published as part of the Pre-Submission Local Plan consultation.

Additional Site Allocations for Local Plan

Consultation Responses Summaries

5.17 The following table outlines a summary of the type of comments received to the Additional Site Allocations for the Local Plan consulted on between 13 May to 10 June 2026:

Responses to the Additional Site Allocations for Local Plan

	Additional Site Allocations for Local Plan
Number of Comments Made	240
Number of Individuals or Organisations that Responded	130
Number that Support draft allocation	48
Number that Object to draft allocation	103
Number that Have Observations on draft allocation	89

5.18 People were able to comment on all aspects of the document by section, paragraph, tables and by site. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Additional Site Allocations for Local Plan consultation responses

5.19 **Sustainability Appraisal**

5.20 The Sustainability Appraisals of these sites at the time of the consultation remained unchanged from the previous consultation. Comments received previously will be reconsidered alongside responses to this consultation.

Summary of Sites consulted on in the Additional Site Allocations for Local Plan

5.21 The following sections provide a summary of the main issues raised during the consultation on the Additional Site Allocations for Local Plan and how the Council has taken these into account.

Main Issues Raised	Council Response / How the Council has taken this into account

General comments (18 comments)
• General support for allocating further small sites in settlements allowing for greater resilience for the strategy to deliver houses and to maintain a 5-year housing.
• Site promoters seek allocation of their sites:
  • Land at Fenton Road, Warboys (CfS: 85)
  • Eaton Bank, Land North of Bushmead Road (part of the site CfS: 54)
  • Land West of Potton Road, Hilton (CfS: 42)
	• Support noted.
	• Responses to sites promoted again, where appropriate the LAA and SAs for sites have been updated:
	  • Land at Fenton Road, Warboys (CfS: 85) - no substantive new evidence. Concerns remain regarding scale and integration.
	  • Eaton Bank, Land North of Bushmead Road (CfS: 54) - for a mixed use development. Vision document for the whole site submitted. The site has been put forward as

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Land West of Cage Lane, Great Staughton (CfS: 377) • Brook Farmyard, Great Staughton (CfS: 373; 374; & 375) • Sibson Garden Community (CfS:348) • Land South of Folksworth Road, Folksworth (CfS: 23-245) • Rectory Farm, St Neots (CfS: 21) • Hardwicke Grange, St Neots (CfS:208) • Land east of Bishops Way, Buckden (CfS: 210) • Hemingford Grey Lake (CfS: 216) • Land West of West Street, Great Gransden (CfS: 257) • Land Between Duck Street and Wansford Road, Elton (CfS:59) • Land at Park Farm, Brampton (CfS: 222,224,225, 226) • National Grid identified assets within the area. • Historic England and Natural England provide general advice and make site specific comments on each site.	an integral part of the large scale Eaton Bank proposal with proposed uses shared across the wider site. Currently, the larger site proposal is not included within the draft Bedford Borough Plan to 2040 there is no expectation of its delivery. As this is not being taken forward at present it is not appropriate to assess the land as a free-standing site because it is not the intention of the site promoter to develop it in this manner. • Land West of Potton Road, Hilton (CfS: 42) - no substantive new evidence. Concerns regarding scale and integration. • Land West of Cage Lane, Great Staughton (CfS: 377) - no substantive new evidence. Integration challenges remain. • Brook Farmyard, Great Staughton (CfS: 373; 374; & 375) - the site is already allocated in the Neighbourhood Plan for Great Staughton and therefore is already part of the development plan. • Sibson Garden Community (CfS:348) - transport concerns remain including impact on Oundle Road. • Land South of Folksworth Road, Folksworth (CfS: 23-245) - for up to 200 homes submitting a Vision document - the vision document also includes more land to the east, this is disproportionate to the size of Folksworth. • Rectory Farm, St Neots (Cfs:21) - for a mixed use development consisting of at least 900 homes. The East West Safeguarding area was updated in June 2026 and now covers almost the entirety of the site making the deliverability of the site for this Local Plan uncertain. • Hardwicke Grange, St Neots (CfS:208) - for a mixed use development. The East West Safeguarding area was updated in June 2026 and now covers almost the entirety of the site making the deliverability of the site for this Local Plan uncertain. • Land east of Bishops Way, Buckden (CfS: 210) - for residential development. Significant constraints that impede the development of the site including access, impact on the Great Ouse Valley green infrastructure priority area, County Wildlife Site and the wider ecological network of the

Main Issues Raised	Council Response / How the Council has taken this into account
	Ouse Valley have not been sufficiently addressed. • Hemingford Grey Lake (CfS: 216) - for leisure moorings and submitted documents to address suitability, ecology, flood risk and highways - no substantive new evidence, there are still fundamental concerns with the delivery of the site. • Land West of West Street, Great Gransden (CfS: 257) - for 55 homes. The neighbourhood plan identifies this area as an opportunity to restore or enhance existing ecological network access, the site is therefore considered inappropriate for development due to potential for ecological impact. The promoter has not submitted any technical evidence to address this. • Land Between Duck Street and Wansford Road, Elton (CfS:59) - for residential development citing that the existing committed permissions in Elton include holiday lodges which are not permanent so a housing allocation is required - no substantive new evidence. • Land at Park Farm, Brampton (CfS: 222, 224, 225, 226) - for employment/mixed use site covering four parcels of land as one linked development supported by wide technical evidence including odour assessments, noise, employment demand etc - The collective four parcels have been assessed in full in the LAA and SA but Council, concerns remain over unacceptable landscape and traffic impacts. • National Grid comment noted. • Comments from Historic England and Natural England are addressed against each site below.
<u>Introduction (7 comments)</u> • General support for additional small site allocations to assist in achieving a 5-year housing land supply and supporting smaller settlements • Further technical information should be provided to justify allocation such as trajectory information • National Highways recommend that there is a focus on connectivity and sustainable travel, to reduce the car driver mode share and thus minimise potential effects on local SRN junctions and links. Consider that the sites are unlikely to be of significant impact in terms of the SRN, although Spaldwick 1 has the potential to be car	• Support noted. • Trajectory surveys will be sent to all proposed site allocations and other existing commitments to inform the housing trajectory for the Pre-Submission Local Plan. • National Highways comments noted, sites that are brought forward into the Pre-Submission Local Plan will sit within a wider spatial strategy and active and sustainable travel policies in the plan will apply. Comments regarding the Reserve site at Sapley are noted. • Additional 4.58ha of land at Brampton to the north west of Dorling Way adjacent to the A1 and

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
dependent. Further technical work to support Reserve Site A: Sapley Garden Village to assess impact the A1(M) at Alconbury and the junction of the A141 with the A1 and A14 required. • Additional 4.58ha of land at Brampton to the north west of Dorling Way adjacent to the A1 and Thrapston Road promoted.	Thrapston Road for housing - the Council is very concerned about the harm to resident amenity due to its proximity to the strategic road network. There are also concerns about how a development here could be successfully integrated as the neighbouring development has been designed so that there is limited vehicular access to this site. The intention for this parcel of land was to be retained as a landscape buffer.
Bythorn 1 (41 comments) • Some support for the site stating it will help supply of sites that contribute towards a 5-year housing supply. • Objections, with some support mainly for the Home Farm site replacing Warren Lane, but some comments support Warren Lane over Home Farm with some stating no support for any allocations. • Existing Planning in Principle approval on the site means the allocation would lead to overdevelopment when combined. Common suggested changes include reduce or phase the scale of development or consider other sites. • Concern regarding scale, limited services and facilities, or public transport; resulting in a reliance on private vehicles and concerns over increased traffic and safety. • Effects on conservation area, listed buildings, historic farm buildings, and wildlife interest made. Historic England recommends Heritage Impact Assessment to support the proposal. CCC Historic Environment team recommends suitable planning conditions and historic building recording • Anglian Water identify some capacity for growth at Molesworth WRC and support provision of a proportionate flood risk assessment and drainage strategy with detailed assessment of surface water flood risk. • LLFA identify a low risk of surface water flooding and discharge rates should remain at greenfield rates. • CCC Highways states there is sufficient frontage to achieve an access achievable from highway. • CCC Education raise that there is sufficient school capacity mitigation may be required for secondary provision.	• Support noted. • Mixed responses to the site over Warren Lane are noted. The benefit to Home Farm is that there is an existing access and would support the reuse of buildings and could provide heritage benefit. The Local Plan will include this site in the Pre-Submission Local Plan and remove the allocation in Bythorn included in the Preferred Options Draft Local Plan. • Existing planning approval on northern part of the site is reflected in the policy, the inclusion of the farm buildings brings potential heritage benefit and a high quality heritage led redevelopment reusing existing buildings. No changes made. • Concerns are noted regarding scale. The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the policies in the Local and Neighbourhood Plan. • The Plan incudes a policy on supporting active and sustainable travel and seeks where appropriate enhancement to active travel networks. The Plan is also supported by an Infrastructure Delivery and Transport studies. • Criterion d. requires a flood risk assessment and detailed drainage strategy. No changes made. • Anglian Water support noted, criterion e. requires early engagement with AW on waste water flows. No changes made. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • CCC Highways and Educations comments are noted, additional secondary provision will be assessed in the Infrastructure Delivery Study.
Catworth 1 (17 comments) • Some support for the site including from the Parish Council who identify the site was supported over others for some development in their	• Support noted particularly that this site is a preferred site amongst the Parish Council and residents supported by the neighbourhood plan survey and engagement. Site to be included within the Pre-Submission Local Plan.

Main Issues Raised	Council Response / How the Council has taken this into account
neighbourhood plan survey, however the capacity should be reduced. • Promoter for Land East of Station Road (CfS: 357) seeks removal of this site and replacement with theirs. • Some objections based on the impact on local character and insufficient services within Catworth • Historic England and CCC Historic Environment team identify the site's proximity to scheduled monument. CCC identify a planning condition could overcome any archaeological constraint. • LLFA identify low surface water flood risk and discharge rates should remain at greenfield rates • Anglian Water state there no existing Anglian Water assets within or adjacent to the site boundary. The provision of a proportionate flood risk assessment and drainage strategy is supported. Engagement with Anglian Water and wider water supply planning as nearby wastewater treatment works reaching capacity. • CCC Highways states there is sufficient frontage to achieve an access achievable from highway. Local infrastructure improvements may be required in the form of walking/cycling connectivity. • CCC Education raise that there is sufficient school capacity and this development would likely to support the viability of the existing primary school, and early years provisions. Mitigation may be required for secondary provision.	• Land east of Station Road (CfS: 357) - no substantive new evidence to overcome concerns. • Concerns regarding impact on local character noted, the criteria within the policy and other policies in the plan seek to overcome these. No changes made. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • Criterion c. requires a flood risk assessment and detailed drainage strategy. No changes made. • Anglian Water support noted, criterion added to require early engagement with AW on waste water flows. • CCC Highways and Educations comments are noted.
Ellington 2 (21 comments) • Some support for the site as part of a wider small sites strategy to improve housing supply and five year land supply. • Objections considered 35 dwellings as a significant increase for Ellington and the site being outside settlement boundary, contrary to Grafham & Ellington Neighbourhood Plan and concerns regarding cumulative impacts. • Limited services (no shop, poor public transport), lack of safe active travel routes to nearby settlements. • Site promoter states site is deliverable for 35 homes including self-build plots with an existing PIP application on part of the site and being capable of contributing to the 5-year housing supply. Supported by technical work (masterplan, transport, flood, ecology) • . LLFA identify some surface water flood risk attributed to the surface water flow path running	• Support noted. Site to be included within the Pre-Submission Local Plan • Ellington PC comments regarding the neighbourhood plan are noted. The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the policies in the Local and Neighbourhood Plan where applicable. • Concerns are noted. The Plan incudes a policy on supporting active and sustainable travel and seeks where appropriate enhancement to active travel networks. The Plan is also supported by an Infrastructure Delivery and Transport studies. • Landowner comments and technical work to date noted and welcome. Site policy amended to include reference for 3 self and custom build plots to align with the submitted illustrative masterplan for the site. • Criterion c. requires a flood risk assessment and detailed drainage strategy and details of the

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
along the eastern boundary of the site. There is potential residual risk to the site from a culvert beneath Grafham Road. • Anglian Water state there no existing Anglian Water assets within or adjacent to the site boundary. The provision of a proportionate flood risk assessment and drainage strategy is supported. • Historic England raises no concern. CCC Historic Environment team recommend archaeological conditions. • This site potentially triggers Natural England's Impact Risk Zone (IRZ) for discharges. • Potential requirement for recreational pressure on Brampton Wood SSSI • CCC Highways states there is sufficient frontage to achieve an access achievable from highway. Local infrastructure improvements may be required in the form of walking/cycling connectivity. • CCC Education note that there is sufficient school capacity mitigation may be required for secondary provision.	culvert provided in the supporting text. No changes made. • Anglian Water support noted, criterion d. requires early engagement with AW on waste water flows. No changes made. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. • The site has been included for assessment of impact on SSSIs in the Ecological Constraints Assessment available in the evidence library. • CCC Highways and Educations comments are noted, additional secondary provision will be assessed in the Infrastructure Delivery Study.
Grafham 2 (25 comments) • Some support identified stating it would keep the village more compact in form and have less higher safety issues. • Some support for the site stating it will help supply of sites that contribute towards a 5-year housing supply. • Objections and concerns from residents and the parish council with development being contrary to the neighbourhood plan. Development seen as harmful to the rural character and overall nature of the village and concern regarding cumulative impacts. • Concerns about busy roads, impacts on pedestrians, cyclists, and the Buckden roundabout. Identify limited local services and infrastructure; lack of public transport; pressure on sewerage systems. • Parish Council state site area is 1.1ha rather than 1.62h and number of homes be reduced to a maximum of 24 if development were to proceed. • Common suggested changes include reduce or phase the scale of development or consider other sites. • Existing surface water and sewer surcharge problems; soakaways considered ineffective due to clay soils.	• Support noted. Site to be included within the Pre-Submission Local Plan • Grafham PC comments regarding the neighbourhood plan are noted. The draft policy requires design that integrates with the surrounding area. Any application will also be determined against the policies in the Local and Neighbourhood Plan where applicable. • Concerns are noted. The Plan incudes a policy on supporting active and sustainable travel and seeks where appropriate enhancement to active travel networks. The Plan is also supported by an Infrastructure Delivery and Transport studies. • Site area reviewed and amended to 1.1ha, as such the capacity has been reviewed and reduced to 25 homes to align with the site densities in the LAA methodology. • The site was initially promoted for 60 homes, through the in combination LAA and SA assessment of the site, this was reduced providing a more proportionate scale of development. • Criterion c. requires a flood risk assessment and detailed drainage strategy. No changes made. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. Additional

Main Issues Raised	Council Response / How the Council has taken this into account
• LLFA identify a low risk of surface water flooding, pre-app advice recommended. • Potential harm to the setting of Grade II listed Village Farm and wider historic character, comment seeks landscape buffer if to proceed. Historic England recommend a Heritage Impact Assessment support the site. CCC Historic Environment team identify there is ridge and furrow earthworks within the site boundaries and resists its allocation. • Potential requirement for recreational pressure on Grafham Water SSSI and Brampton Wood SSSI. May trigger Natural England's IRZ if discharge of water exceeds discharge rates. • Anglian Water identify some capacity for growth at Buckden WRC and confirm there are no existing Anglian Water assets within or adjacent to the site boundary. The provision of a proportionate flood risk assessment and drainage strategy is supported. • CCC Highways states there is sufficient frontage to achieve an access achievable from highway. Local infrastructure improvements may be required in the form of walking/cycling connectivity. • CCC Education raise that there is sufficient school capacity mitigation may be required for secondary provision.	text added to criterion e. to also include ridge and furrow. • The site has been included for assessment of impact on SSSIs in the Ecological Constraints Assessment available in the evidence library. • Anglian Water support noted, criterion d. requires early engagement with AW on waste water flows. No changes made. • CCC Highways and Educations comments are noted, additional secondary provision will be assessed in the Infrastructure Delivery Study.
Ramsey Forty Foot 2 (15 comments) • General support for allocation of the site, particularly as part of a wider strategy of small and medium sites to boost housing supply and five year land supply • Landowner confirms the site is available, suitable, and deliverable, with work underway (masterplanning, surveys, technical studies). Wishes to increase capacity to 42 dwellings. • Historic England and CCC Historic Environment team identify the site's proximity to scheduled barrow cemeteries and need for a proportionate Heritage Impact Assessment (HIA) and possible mitigation and archaeological works. • Need for SuDS and careful foul/surface water management • Engagement with Anglian Water and wider water supply planning • Potential hydrological link to Ouse Washes SAC so surface and foul water must be managed and treated to avoid environmental harm.	• Support noted. Site to be included within the Pre-Submission Local Plan • Landowner comments confirming technical works underway are welcome. Site promoter seeks to raise capacity from 25 to 42 is noted, the site has been assessed suitable for approximately 27 homes through the in combination LAA and SA assessment as it is of scale that could be integrated with the existing community. The capacity has been increased to 30 to reflect the landowner's aspirations while also enabling more landscaping to overcome landscape impacts and heritage considerations due to its proximity to a scheduled monument and for biodiversity net gain to provided on site. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. Criterion added to the policy requiring archaeological investigation, recording and where appropriate conservation.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• This site is just within the sub-catchment served by the Skeggins Fen (private). Surface water pumps into the Middle Level Commissioners Old River Nene, also known as the River Nene (Old Course), near Bodsey Bridge. Treated Foul Effluent Water discharges into the MLC High Lode via Ramsey WRC. • CCC Highways states there is sufficient frontage to achieve an access achievable from highway. Local infrastructure improvements may be required in the form of walking/cycling connectivity. • CCC Education raise that school capacity mitigation may be required to accommodate development	• Criterion c. requires a proportionate flood risk assessment and drainage strategy. No changes made. • Criterion d. requires engagement and agreement with Anglian Water on waste water flows. No changes made. • The site is included within the Habitats Regulation Assessment accompanying the Local Plan. • MLC comments noted. • CCC Highways and Educations comments are noted, additional education provision will be assessed in the Infrastructure Delivery Study.
Spaldwick 1 (30 comments) • Some support for the site stating it will help supply of sites that contribute towards a 5-year housing supply. • Local objection stating 90 homes seen as a significant expansion, out of keeping with a small rural settlement. Insufficient evidence on wastewater, drainage, utilities, healthcare, schools, and community facilities. Common suggested changes include reduce or phase the scale of development or consider other sites. • Repeated concern that key constraints (infrastructure, access, flood risk) are unresolved and should be addressed before allocation. • Potential requirement for recreational pressure on Brampton Wood SSSI • Anglian Water identify some capacity for growth at Easton WRC and confirm there are no existing Anglian Water assets within or adjacent to the site boundary. The provision of a proportionate flood risk assessment and drainage strategy is supported. • LLFA identify a high risk of surface water flooding, pre-app advice recommended. Support criterion requiring for a site-specific flood risk assessment and detailed drainage strategy. • CCC Highways states there is sufficient frontage to achieve an access achievable from highway. Right of Way should be retained on their existing alignment, maintained, or enhanced including connectivity to the wider Right of Way/highway network. • CCC Education raise that there is sufficient school capacity mitigation may be required for secondary provision.	• Support noted. Site to be included within the Pre-Submission Local Plan • Comments seeking removal or reduction of the site are noted. Text has been added to the supporting text to reflect that development should be provided in two phases to enable integration of the development with the village. • Concerns are noted. The Plan incudes a policy on supporting active and sustainable travel and seeks where appropriate enhancement to active travel networks. The Plan is also supported by an Infrastructure Delivery and Transport studies. • Criterion e. requires the provision of a suitable means of access from Stow Road and provision of a safe and appropriate access to the village by vehicles and active travel modes. No changes made. • The site has been included for assessment of impact on SSSIs in the Ecological Constraints Assessment available in the evidence library. • Criterion d. requires engagement and agreement with Anglian Water on waste water flows. No changes made. • Criterion f. seeks the retention and enhancement of existing rights of way. No changes made. • Criterion c. requires a proportionate flood risk assessment and drainage strategy. No changes made. • CCC Highways and Educations comments are noted, additional secondary provision will be assessed in the Infrastructure Delivery Study. • A proportionate Heritage Impact Assessment for the site has been prepared and is available in the evidence library for the new Local Plan. Criterion added requiring design and layout that is sensitive

Main Issues Raised	Council Response / How the Council has taken this into account
• Historic England raises no concerns. Although CCC Historic Environment team identify there is a medieval deserted medieval settlement earthworks and ridge and furrow earthworks within the site boundaries and resists its allocation. • Support from site promoter with site layout plan submitted. • Promoter for land south of High Street, Spaldwick (CfS: 23-24322) promoting their site instead of this one.	to the remains of a deserted medieval village and on ridge and furrow informed by a proportionate heritage assessment. • Proposed site layout plan from site promoter is supported. • High Street, Spaldwick (CfS: 23-24322) - no substantive new evidence has been provided to overcome surface water flood risk on site, more sequentially preferable sites are available.
Reserve Site Sapley Park Garden Village (66 comments) • Many objections to the proposed Strategic Reserve Site with some support. • Support from site promoter with site concept masterplans submitted. • Some support for having a reserve site in principle to bring flexibility and resilience, but only if infrastructure is delivered in advance, and strict controls and clearer triggers are applied. • Objections come from residents, parish councils (Alconbury, Abbots Ripton, Broughton and Kings Ripton, Ellington, Houghton and Wyton), and stakeholders, often aligning on similar concerns. Concern that roads, schools, healthcare, sewage, and utilities cannot support the scale of development. • Strong concerns about increased flooding (particularly Bury Brook catchment), inadequate drainage, and existing sewer capacity failures. • Loss of countryside, biodiversity, and agricultural land; conflict with climate and food security objectives. • Harm to conservation areas (Abbots Ripton, Kings Ripton, Broughton), local character, and setting of heritage assets. • Development viewed as disproportionate (town-scale), leading to urban sprawl and overdevelopment of the North Huntingdon cluster. • Doubts over viability, infrastructure funding, long lead-in times, and reliance on uncertain projects (e.g. A141 upgrades, rail station). • Lack of clarity on reserve site triggers, delivery mechanisms, and oversight. • Developers/land promoters: Concern the site is not effective as a reserve due to delivery times and infrastructure dependency; suggest alternative sites such as land off Conington Road, Fenstanton (CfS: 265)	• Following a review of the consultation responses and of the concerns raised, the reserve site proposal will not be taken forward in the pre-submission version of the Local Plan to 2046. The Local Plan will not propose any other sites as reserve sites.

5 Preferred Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Anglian Water notes development would need to be phased to align with delivery of a WRC growth scheme from AMP9 onwards. • CCC Historic Environment team identify potential for archaeology and recommends predetermination evaluation. Historic England recommends a Heritage Impact Assessment. • CCC Highways state for phase 1, primary access should be from the A141and secondary accesses may be possible from C112 King Ripton Road/Sapley Road and C115 Abbots Ripton Road; all of which appear to have sufficient access. Local infrastructure improvements may be required in the form of walking/cycling connectivity. Rights of Way should be retained on their existing alignment, maintained, or enhanced including connectivity to the wider Right of Way/highway network. • CCC Education comments note the need to meet the needs of the early years and primary age, it would require a total of three 4 form entry (FE)/840- place primary schools requiring a land take of 4 hectares (ha) each, and one 2FE/420-place school with a land take of 3ha and consider standalone nursery provision. It would require a total of two 6FE/900-place secondary schools and associated post-16 provision and SEND provision. • This site potentially triggers Natural England's IRZ for discharges. May be hydrologically connected to the Ouse Washes SAC. • A recreational pressure assessment should be required as the broad site is within the zones of influence for Portholme SAC/SSSI and Monk's Wood NNR/SSSI.

District Council Agrees to Start Full Update to Adopted Local Plan

26-Jan-2023

Huntingdonshire District Council has committed to the preparation of a full update to the adopted Local Plan, at a Cabinet meeting on Tuesday 24 January 2023. This will set out how the district will grow over the coming decades.

The council's current 'Local Plan to 2036' was adopted on 15 May 2019 identifying sufficient land for new homes, jobs, facilities, infrastructure, and open spaces to meet known needs. This will continue to be used to determine planning applications until the updated Local Plan is completed.

The Local Plan is an important District Council document that sets the statutory planning framework for the district, shaping development many years into the future. Town and Country Planning Regulations state that the local planning authority must review it every five years starting from the date of adoption.

Executive Councillor for Planning, Cllr Tom Sanderson, said: "An updated Local Plan provides opportunities to introduce policies that can help to deliver the council's and communities' priorities. We can look to make changes to reflect new and emerging national legislation, our corporate ambitions as a Joint Administration and priorities we have heard through community engagement on Huntingdonshire Futures and the Climate Strategy."

Approval was also given to issue the council's proposed Statement of Community Involvement (SCI) for public engagement. This document outlines how the District Council will engage and consult with the local community on planning matters. A proposed Sustainability Appraisal Scoping Report (SASR) was also approved for public engagement. This sets out how the District Council will consider the possible environmental, social and economic impacts of the Local Plan update throughout its preparation.

Public engagement on the SCI and SASR documents will commence in early February 2023. This is the first of a series of public engagement opportunities that will shape the full update to the Local Plan.

District Council to Launch Call for Sites Consultation

27-Mar-2023

Huntingdonshire District Council is launching a Call for Sites consultation, as part of the second phase of engagement on a full update to the Local Plan.

The Call for Sites is a process in which developers, landowners and members of the public are invited to put forward potential sites across the district for consideration, such as:

- Residential (such as housing, specialist homes, moorings, care homes)
- Commercial (such as retail, leisure, industrial, logistics)
- Infrastructure (such as health uses, community facilities, renewable energy)
- Open Space Use (such as sports and recreation, allotments, biodiversity net gain, flooding safeguarding)

The suitability of these sites will be assessed for potential allocation for their proposed use in the Local Plan update and consulted on in the future.

Executive Councillor for Planning, Cllr Tom Sanderson, said: "The Call for Sites is a big step in the work to update our Local Plan. We are inviting input from people to inform the options for future development in Huntingdonshire. This process gives us a greater understanding of potential development areas and their possible uses. We encourage the local communities, landowners and developers to put forward potential sites and the proposed uses for them."

The Consultation opens on Wednesday 29 March 2023 and runs for 10 weeks until Wednesday 7 June 2023. Potential sites for development can be submitted through the online planning portal. The District Council will send invitations to participate to a wide local audience including Parish and Town Councils, landowners, developers, agents and businesses.

Submitted sites will be assessed against the criteria set out in the Land Availability Assessment Methodology and the Sustainability Appraisal Scoping Report.

Launching at the same time as the Call for Sites is the consultation on two methodologies that will be used during the full update to the local plan. These are:

- Settlement Hierarchy Methodology
  - o This document has been developed to assess the sustainability of settlements and aid in the decision-making on their suitability for future growth in the next Local Plan.
- Land Availability Assessment Methodology (LAA)
  - o The primary purpose of the LAA is to set out a clear methodology by which to assess potential development sites and provide a consistent way in which to assess their suitability, availability, achievability, deliverability and potential capacity.

The consultation for these two documents also opens on Wednesday 29 March 2023 and runs for 6 weeks until Wednesday 10 May 2023. Comments can be made on the council's planning portal.

The Local Plan is an important District Council document that sets the statutory planning framework for the district, shaping development many years into the future. Town and Country Planning Regulations state that the local planning authority must review it every five years starting from the date of adoption.

Issues Paper Consultation for Local Plan Launched

26-Apr-2023

Huntingdonshire District Council has launched the Issues Papers consultation as part of the next stage of the development of the council's new Local Plan.

Responding to this consultation, which runs for 10 weeks until Wednesday 5 July, is an opportunity for people to shape the future of Huntingdonshire.

The consultation highlights known issues in the district and asks for people's opinions on topics including:

- responding to the climate crisis
- enhancing the natural environment
- supporting places
- meeting housing needs for all
- promoting a prosperous economy
- developing high quality sustainable communities with supporting infrastructure and
- distributing new growth.

Executive Councillor for Planning, Cllr Tom Sanderson, said: "The Issues Paper is a fundamental step in starting to prepare a new local plan for Huntingdonshire. It seeks to find out what local residents, communities, businesses and organisations think the priorities are for improving the district for future generations and how to reduce the impacts of the climate crisis and ecological emergency on the local area.

"It's important we hear from as many people as possible so please do take the time to have your say on the things that matter the most to you. You only need to respond to the particular topics or questions that you are interested in."

There are three options to help people respond to the consultation:

- The Issues Engagement Paper - an in-depth look at the issues including detailed questions to encourage comprehensive responses
- The Issues Summary Paper - a quick look at the headline issues, with one or two open questions to get your opinions
- The Issues Easy Read Version - a simplified document with tick box questions.

People can complete the consultation online via the planning consultation portal.

The Local Plan is an important district council document that sets the statutory planning framework for the district, shaping development many years into the future.

Visit the Local Plan Update page for further information.

HDC Seeks Community Input for the Local Plan Engagement 2024

18-Sep-2024

Huntingdonshire District Council (HDC) is calling on the community to participate in the Local Plan Engagement 2024, a crucial consultation process, running from 18 September to 27 November, that will shape the future of Huntingdonshire.

The Local Plan is a strategic document that outlines the vision and policy framework for sustainable development across the district. It plays a pivotal role in addressing key issues such as climate change, housing affordability, infrastructure, flooding, and employment and identifies key areas for development, specifying the nature of that development, and establishing the policies by which planning applications are assessed.

The goal of the Local Plan is to ensure that Huntingdonshire develops sustainably, meeting the needs of the current community without compromising the ability of future generations to meet their own needs.

Huntingdonshire District Council is currently seeking feedback on several key documents that are essential to the plan-making process.

These include:

- Further Options and Issues Paper 2024: This document outlines various options for addressing a series of important issues facing the district.
- Land Availability Assessments: An assessment of sites that were submitted to the council that could be suitable for development.
- Sustainability Appraisals: An analysis of site proposals and options based on their economic, environmental, and social impact.

Feedback must be submitted through the consultation portal to be formally considered in the local plan process.

In addition to providing feedback online, there will be opportunities to view the documents and speak with the planning team in person at several local events.

All events are drop-in between 2pm to 8pm:

- Tuesday 8 October, Queens Park Hall, Daimler Avenue, Yaxley, PE7 3LX
- Thursday 10 October, Civic Suite Pathfinder House
- Tuesday 15 October, Burleigh Hill Community Centre, Constable Road. St Ives, PE27 3ER
- Monday 21 October, Sawtry Women's Institute, Gidding Road, Sawtry, PE28 5TS
- Tuesday 22 October, Kimbolton Scout Hut, Thrapston Road, PE28 0HW
- Monday 28 October, Love's Farm House, 17 Kester Way, St Neots, PE19 6SL
- Thursday 31 October, Ramsey Community Centre, 3 Stocking Fen Road, Ramsey, PE26 1SA

Deputy Executive Leader, Vice-Chair of the Cabinet and Executive Councillor for Planning, Cllr Tom Sanderson, said: "We urge everyone in the community to engage with this consultation process. Your input is invaluable in ensuring that the updated Local Plan reflects the collective vision for Huntingdonshire's future. The more voices we hear, the more likely we are to achieve sustainable outcomes that benefit us all."

The Local Plan update is a powerful tool for strategic planning and the consultation process offers a unique opportunity for residents to have their say in how Huntingdonshire will be shaped in the years to come.

For more information on how to participate in the Local Plan Engagement 2024 please visit Let's Talk Huntingdonshire or email local.plan@huntingdonshire.gov.uk.

Press Release

NEWS RELEASE

Huntingdonshire DISTRICT COUNCIL

23 April 2025

District Council opens consultation on Additional Sites for the Local Plan

Huntingdonshire District Council is launching a consultation on additional sites as part of the Local Plan from Wednesday 23 April to Wednesday 4 June 2025.

The Local Plan sets out a long-term vision for sustainable development across the district. It identifies areas of land for new homes, jobs, services and infrastructure, and provides the planning policies used to determine planning applications.

To meet future housing and employment needs, the council issued a call for sites, receiving 369 submissions initially. A consultation on those sites was held between September and November 2024. Further sites were submitted between 1 August 2024 and 31 January 2025, and these 66 additional sites have now been assessed.

This consultation specifically relates to the additional sites and encompasses a total of 66 locations. These include 51 sites proposed for residential use, six sites proposed for commercial development, one site proposed for infrastructure, seven mixed-use sites proposals, and three sites proposed for renewable energy projects.

As part of the consultation, the council is inviting feedback on two key documents. The Additional Sites Land Availability Assessments provide an evaluation of each site's suitability for development, while the Additional Sites Sustainability Appraisal assesses the potential environmental, social and economic impacts of the proposed sites.

The Additional Sites consultation does not revisit sites consulted on during the Further Issues and Options Consultation held in autumn 2024. It focuses solely on new sites submitted in the latter part of the site submission window.

Clara Kerr, Head of Planning, Infrastructure and Public Protection at Huntingdonshire District Council, said: "This is an important opportunity for residents and stakeholders to share their views on how and where growth should take place across the district. Your input will help shape a Local Plan that strikes the right balance between meeting development needs and protecting our environment and quality of life.

"Residents can review whether any proposed sites are located near where they live and provide feedback on the council's assessments as part of this consultation. These assessments indicate whether the council considers a site to be potentially suitable for development or not. If you disagree with an assessment or its conclusions — which are outlined at the end of each report — please tell us why or suggest what might make a site more appropriate for development. Not all sites will be required; the number selected will depend on the district's housing and employment needs, the preferred growth strategy, and supporting evidence."

Have Your Say on the Local Plan

05-Nov-2025

Huntingdonshire District Council (HDC) is inviting residents, businesses and community groups to have their say on the Preferred Options Consultation, which will be open for six weeks from 5 November 2025.

The Preferred Options consultation will form part of The Local Plan, which sets out how Huntingdonshire will grow and develop sustainably up to 2046. It outlines the policies the council will use to make planning decisions, identifies sites for new homes, jobs, services and facilities, and ensures the right infrastructure is in place to support future communities.

Alongside this, HDC is also consulting on the Sustainability Appraisal, which tests the draft proposals against environmental, social and economic objectives to make sure they support long-term sustainability.

This is a crucial opportunity to help shape the future of Huntingdonshire. By giving feedback now, residents and organisations can influence the scale, location and design of new development, before planning applications are submitted.

The consultation includes a full draft of the proposed Local Plan Update, which sets out the amount and type of housing needed, employment opportunities to support the local economy, and the infrastructure required for growth. It also includes the Sustainability Appraisal, which assesses how the draft policies and site allocations meet sustainability objectives.

The Local Plan Update is the blueprint for Huntingdonshire's future development, delivering the ambitions of the Huntingdonshire Futures Place Strategy and the Corporate Plan. Community feedback will directly shape the final Local Plan, making it sustainable, inclusive and responsive to local needs.

Councillor Tom Sanderson, Deputy Executive Leader and Executive Councillor for Planning, said: "This Local Plan will shape Huntingdonshire for the next 20 years, it's about the homes, jobs, services and green spaces our communities need. It's also about creating places that our children and grandchildren will be proud to live in. Please take this opportunity to get involved, share your views, and help us build a sustainable future for Huntingdonshire together."

A series of in-person engagement events will be held across the district, from 2pm to 8pm, where people can speak directly with the planning team and learn more about the Local Plan:

- Bluntisham, Community Room Village Hall - 12 November
- Godmanchester, Godmanchester Rovers Football Club - 13 November
- Ramsey, Ramsey Community Centre - 18 November
- Wyton on the Hill, Wyton on the Hill Primary School - 20 November
- St Ives, Corn Exchange - 26 November
- St Neots, St Neots Town Football Club - 27 November
- Sawtry, Village Hall - 3 December
- Huntingdon, Commemoration Hall - 4 December

> The consultation will **close on Wednesday 17 December 2025 at 11:59pm**. To get involved, go to the Preferred Options webpage.

Glossary

Duty to Cooperate - The duty to cooperate was introduced by the Localism Act 2011, and is set out in section 33A of the Planning and Compulsory Purchase Act 2004. It placed a legal duty on local planning authorities and county councils in England, and prescribed public bodies to engage constructively, actively and on an ongoing basis to maximise the effectiveness of local plan and marine plan preparation in the context of strategic cross boundary matters. (Source: NPPG, Paragraph: 029, Reference ID: 61-029-20190315)

EEA - Established Employment Area

EENA - Economic and Employment Needs Assessment, an evidence base for the local plan

General Consultation Bodies - a term defined in The Town and Country Planning (Local Planning) (England) Regulations 2012 for consultation bodies that the local planning authority may consider appropriate to consult

LAA - Land Availability Assessment an evidence base for the local plan assessing the sites submitted in the Call for Sites

Regulation 18 of The Town and Country Planning (Local Planning) (England) Regulations 2012 - Sets out information on the preparation of the local plan and who should be consulted, extract below:

Preparation of a local plan

18.—(1) A local planning authority must—

(a)notify each of the bodies or persons specified in paragraph (2) of the subject of a local plan which the local planning authority propose to prepare, and

(b)invite each of them to make representations to the local planning authority about what a local plan with that subject ought to contain.

(2) The bodies or persons referred to in paragraph (1) are—

(a)such of the specific consultation bodies as the local planning authority consider may have an interest in the subject of the proposed local plan;

(b)such of the general consultation bodies as the local planning authority consider appropriate; and

(c)such residents or other persons carrying on business in the local planning authority's area from which the local planning authority consider it appropriate to invite representations.

(3) In preparing the local plan, the local planning authority must take into account any representation made to them in response to invitations under paragraph (1).

Specific Consultation Bodies - Named organisations set out in The Town and Country Planning (Local Planning) (England) Regulations 2012

Statement of Community Involvement - A Statement of Community Involvement sets out how Local Planning Authorities such as Huntingdonshire District Council (the Council/HDC) will engage with the community on planning matters. The requirement to produce a Statement of Community Involvement (SCI) is set out in regulation 18 of the Planning and Compulsory Purchase Act 2004 and also referred to in regulation 13 of the Neighbourhood Planning Act 2017 (these Acts can be amended through the production of other legislation, so it is always useful to find the most up to date versions). Further guidance on SCIs is also set out in National Planning Practice Guidance in the Plan-Making section.

Glossary

Statement of Consultation - Regulation 22 (1) (c) of The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended), asks that the Council provides a document to demonstrate how the plan has been shaped this is known as the Statement of Consultation. The Statement of Consultation is a record of the consultation and public engagement carried out as part of the development of a Local Plan. It also includes summaries of the main issues raised by the public and statutory consultees, how comments have been taken into account, and any actions the Council has taken as a result.

Executive summary

E1. Lepus Consulting was commissioned by Huntingdonshire District Council to undertake a Habitats Regulations Assessment (HRA) of the Huntingdonshire Local Plan: Proposed Submission (Regulation 19) (hereafter referred to as the 'Local Plan'), in accordance with the Conservation of Habitats and Species Regulations 2017 (as amended).

E2. This report presents the findings of the HRA screening assessment and Appropriate Assessment (AA) undertaken alongside preparation of the Local Plan. The assessment has been informed by previous HRA work undertaken at earlier stages of plan preparation and by the latest available evidence relating to European sites and the impact pathways considered through the HRA.

E3. The screening assessment considered each Local Plan policy and site allocation and identified where implementation of the Local Plan could result in Likely Significant Effects (LSEs) on European sites, either alone or in combination with other plans and projects. In accordance with the Habitats Regulations, mitigation measures were not taken into account when determining whether LSEs could be excluded at the screening stage.

E4. The screening assessment identified potential LSEs associated with recreational pressure, urbanisation, air quality, water quality and water quantity. These pathways were therefore taken forward for Appropriate Assessment in relation to the relevant European sites, comprising:

- Barnack Hills & Holes SAC;
- Eversden and Wimpole Woods SAC;
- Fenland SAC;
- Nene Washes SAC, SPA and Ramsar;
- Ouse Washes SAC, SPA and Ramsar;
- Portholme SAC;
- The Wash and North Norfolk Coast SAC;
- The Wash SPA and Ramsar; and
- Woodwalton Fen Ramsar.

E5. The Appropriate Assessment considered whether the Local Plan could adversely affect the integrity of these European sites, either alone or in combination with other plans and projects, having regard to their qualifying features, conservation objectives and the environmental conditions and supporting processes necessary to maintain them. The assessment was informed by technical evidence prepared in support of the Local Plan, consultation with Natural England and other relevant bodies, and the mitigation and policy safeguards incorporated into the Local Plan.

E6. Detailed assessment of air quality concluded that the changes associated with Local Plan growth would not adversely affect the integrity of the European sites considered. Assessment of water quality identified existing water quality pressures within the catchment and considered the additional changes associated with Local Plan growth. Taking account of the wastewater treatment improvements identified through the Water Cycle Study, including Technically Achievable Limit upgrades where required, the assessment concluded that the Local Plan would not adversely affect the integrity of hydrologically connected European sites through changes in water quality. Water quantity, recreational pressure and urbanisation effects were similarly assessed having regard to the relevant Local Plan policy provisions, strategic mitigation measures and wider regulatory mechanisms.

E7. The Appropriate Assessment concludes that, with the mitigation measures and safeguards identified within the Local Plan and this HRA, the Huntingdonshire Local Plan will not adversely affect the integrity of any European site, either alone or in combination with other plans and projects.

E8. Huntingdonshire District Council is the Competent Authority for the purposes of the Habitats Regulations and is responsible for undertaking the Integrity Test in light of the findings of this HRA. In reaching its decision, the Council must have regard to any representations made by Natural England in accordance with the Habitats Regulations.

1 Introduction

1.1 A new Local Plan for Huntingdonshire

1.1.1 Huntingdonshire District Council (hereafter referred to as 'the Council') is preparing a full update to the adopted Local Plan[1] to provide an up-to-date vision and framework to guide decision making on how, where, and when development can come forward in the district for the period up to 2046.

1.1.2 The new Huntingdonshire Local Plan, referred to as the 'Local Plan' hereafter, will cover the entirety of Huntingdonshire District. This area is henceforth referred to as the 'Plan area' and is illustrated in **Figure 1.1**. The Plan area includes the district's five main towns of Huntingdon, Godmanchester, Ramsey, St Neots and St Ives, together with a number of large and small villages and hamlets.

1.1.3 An Issues and Options consultation ran between 26th April to 5th July 2023, with a further Issues and Options consultation taking place between 18th September 2024 and 27th November 2024. The Issues and Options stage sought views on the key planning challenges and potential approaches to meeting future development needs. The Council subsequently prepared the Regulation 18 Preferred Options draft Local Plan[2], which outlined its emerging strategy, preferred policy approaches and indicative site allocations and was consulted upon between 5 November and 17 December 2025. The responses to these consultations have informed the Proposed Submission Local Plan consultation at Regulation 19 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended)[3].

1.2 Habitats Regulations Assessment

1.2.1 The application of Habitats Regulations Assessment (HRA) to land-use plans is a requirement of the Conservation of Habitats and Species Regulations 2017 (as amended)[4] (the Habitats Regulations). HRA applies to plans and projects, including all Local Development Documents in England and Wales.

1.2.2 Where a plan is likely to have a significant effect on a European site (either alone, or in-combination) and is not directly connected with, or necessary to, the management of the European site, the Habitats Regulations notes that the plan-making authority for that plan must, before the plan is given effect, make an Appropriate Assessment (AA) of the implications for the site in view of that site's conservation objectives. These tests are referred to collectively as an HRA.

[1] Huntingdonshire District Council (2019) Huntingdonshire's Local Plan to 2036.

[2] Huntingdonshire District Council (2025) Local Plan update preferred options consultation draft.

[3] The Town and Country (Local Planning) (England) Regulations 2012 Statutory Instrument 767.

[4] Conservation of Habitats and Species Regulations 2017 SI No. 2017/1012, TSO (The Stationery Office), London, as amended by The Conservation of Habitats and Species (Amendment) (EU Exit) Regulations 2019.

1.2.3 The Habitats Regulations provide a definition of a European site at Regulation 8. These sites include Special Areas of Conservation (SAC), Sites of Community Importance, Special Protection Areas (SPA) and sites proposed to the European Commission in accordance with Article 4(1) of the Habitats Directive. Ramsar Sites are designated under the 1971 Ramsar Convention. The Planning and Infrastructure Act 2025[5] modified the Habitats Regulations such that Ramsar Sites are now treated in the same way as European Sites for certain purposes. In addition, policy in England and Wales notes that the following sites should also be given the same level of protection as a European site[6]:

- A potential SPA (pSPA);
- A possible/proposed SAC (pSAC); and
- In England, sites identified or required as compensation measures for adverse effects on statutory European sites, pSPA, pSAC, and listed or proposed Ramsar sites.

1.2.4 The Council, as the competent authority, is responsible for making the Integrity Test. The Integrity test asks whether the Local Plan will have an adverse effect upon the integrity of any European site (either alone, or in-combination) and will be undertaken in light of the conclusions of the HRA process having regard to representations made by Natural England (NE) under the provisions of the Habitats Regulations.

1.2.5 This HRA report has been prepared in line with Planning Practice Guidance for Appropriate Assessment[7].

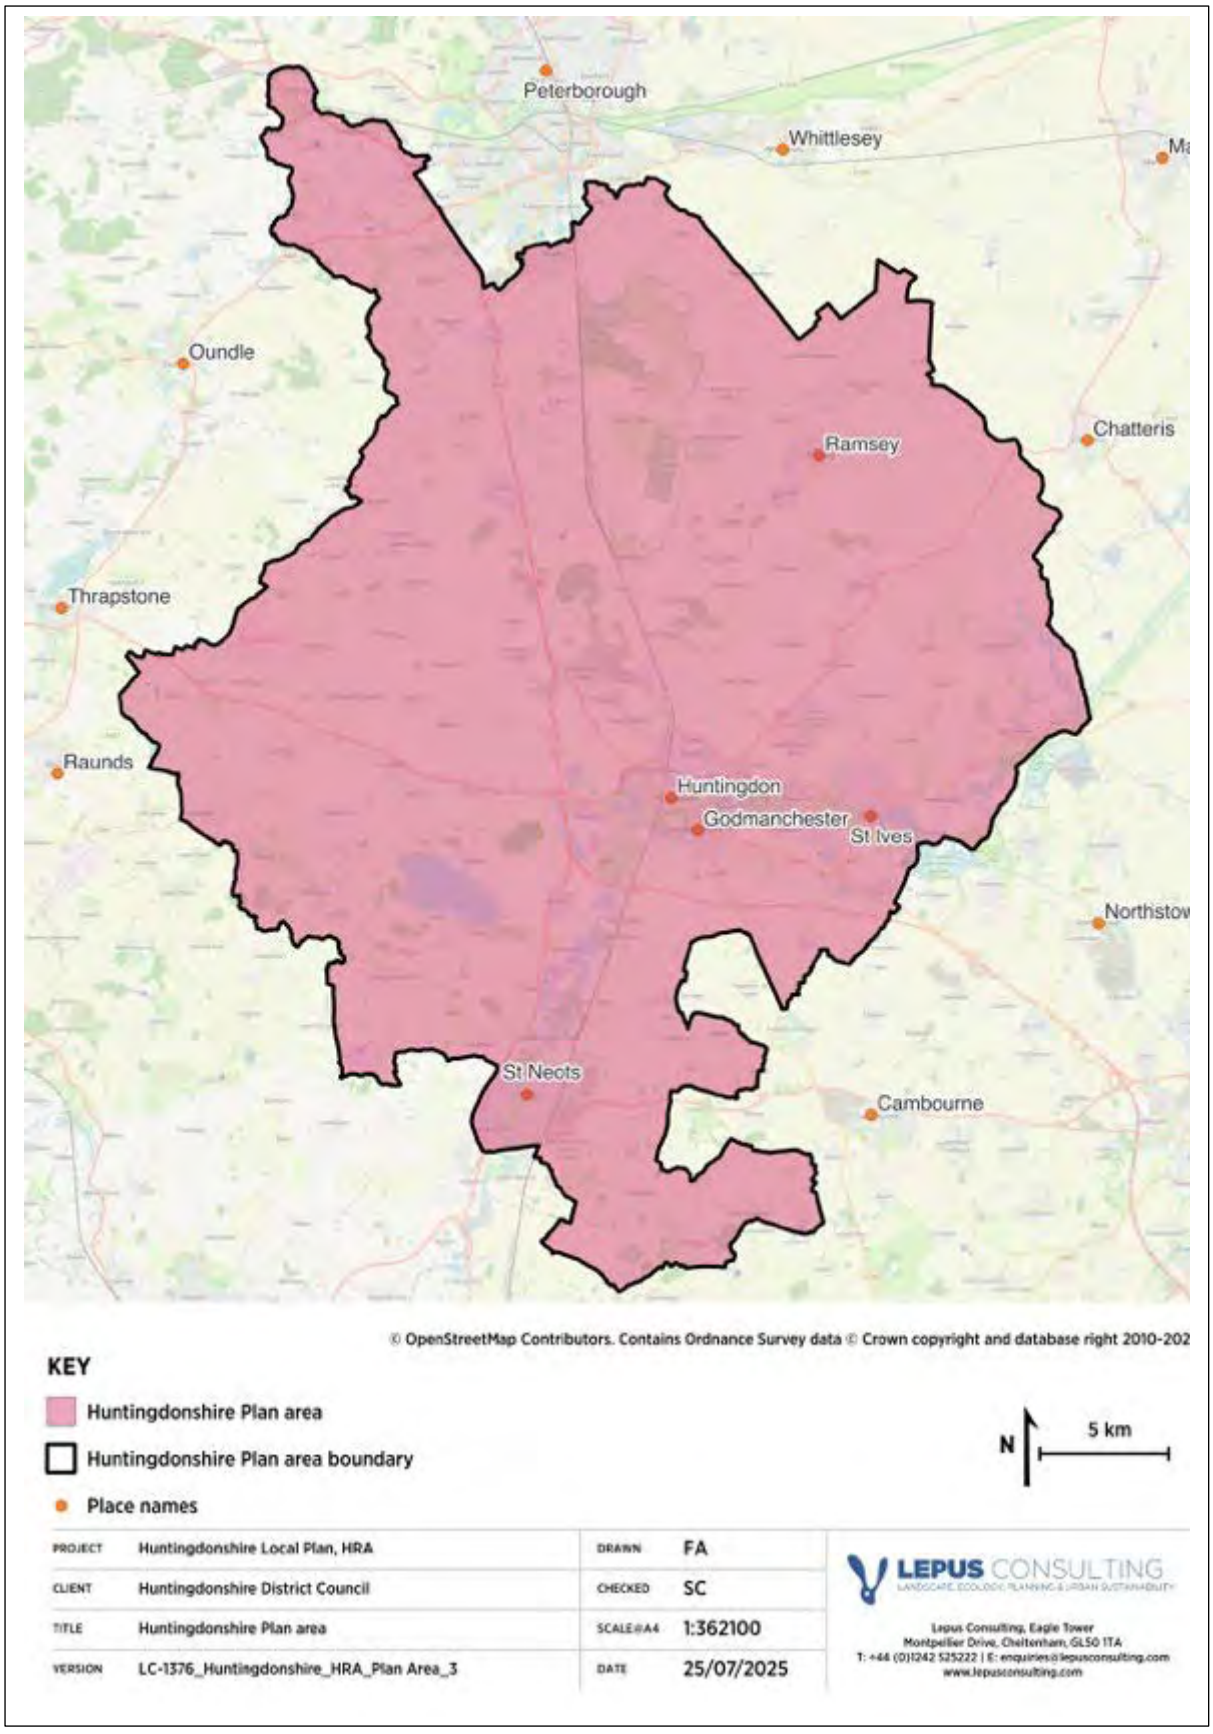

Figure 1.1: *Huntingdonshire Plan Area*

1.3 Previous HRA work

1.3.1 The Huntingdonshire Local Plan to 2036[8] was adopted in May 2019 and set out a development strategy and planning policies. It was supported by an HRA Screening[9], which considered likely significant effects upon the following European sites, located within 15km of the Plan area or hydrologically linked to the Plan area:

- Barnack Hills & Holes SAC;
- Eversden & Wimpole Woods SAC;
- Fenland SAC;
- Nene Washes SAC,
- Nene Washes SPA;
- Nene Washes Ramsar;
- Orton Pit SAC;
- Ouse Washes SAC,
- Ouse Washes SPA;
- Ouse Washes Ramsar;
- Portholme SAC;
- Rutland Water SPA;
- Rutland Water Ramsar;
- The Wash & North Norfolk Coast SAC;
- The Wash SPA;
- The Wash Ramsar;
- Upper Nene Valley Gravel Pits SPA;
- Upper Nene Valley Gravel Pits Ramsar; and,
- Woodwalton Fen Ramsar.

1.3.2 The AA of this HRA concluded that there would be no adverse impacts on the integrity of European sites, either alone, or in-combination, so long as the "*policies identified as key in [the HRA] report are retained, and/or the wording changes recommended for policies highlighted are adopted*".

[8] Huntingdonshire District Council (2019) Huntingdonshire's Local Plan to 2036, May 2019. Available at: https://www.huntingdonshire.gov.uk/media/3872/190516-final-adopted-local-plan-to-2036.pdf [Date accessed: 25/07/25]

Local Plan Update (Regulation 18 Preferred Options Consultation)

1.3.3 The Preferred Options consultation at Regulation 18 was supported by an HRA screening report[10]. This included a screening of all components of the plan, including policies and allocations, for likely significant effects (LSEs). Taking no account of mitigation measures, the screening stage identified potential impacts upon a number of European sites and recommended a full Appropriate Assessment (AA). The key threats and pressures screened in for consideration in the AA included the following:

- Air quality
- Water quality
- Water quantity
- Recreational pressure
- Urbanisation effects

1.3.4 NE provided a response to the Preferred Options consultation at Regulation 18 and the HRA Screening Report (October 2025) in December 2025. In this response NE indicate a requirement to consider impacts associated with a change in air quality from the Local Plan upon the following European sites and qualifying features:

- Nene Washes SAC and Ramsar – Spined loach (*Cobitis taenia*) and wetland plant assemblage.
- Ouse Washes SAC and Ramsar – Spined loach and wetland plant assemblage.

1.3.5 NE also highlighted the requirement to compare water quality modelling results to more stringent water quality targets for a number of European sites, in particular the Nene Washes SAC and Ramsar and the Ouse Washes SAC and Ramsar and confirm hydrological links to Orton Pit SAC. These water quality targets have subsequently been defined through consultation with NE. NE also required consideration of recreational impacts upon the Ouse Washes SAC, SPA and Ramsar (in relation to angling) and urbanisation and recreational impacts upon areas of functionally linked bird habitat for both the Ouse and Nene Washes SPAs and Ramsar sites. These requirements have been considered in the HRA process as summarised in the AA presented in **Chapters 5 – 9**.

1.4 Purpose of report

1.4.1 Lepus Consulting has been commissioned by the Council to carry out an HRA to support the preparation of the proposed submission draft of the Local Plan[11]. The proposed submission draft is also known as the Regulation 19 version of the plan because Regulation 19 of the Local Plan Regulations 2012[12] requires that local plans are subject to particular stages of consultation.

2 Methodology

2.1 Overview

2.1.1 HRA is a rigorous precautionary process centred around the conservation objectives of a European site's qualifying interests. It is intended to ensure that European sites are protected from impacts that could adversely affect their integrity. A step-by-step guide to the methodology followed for the HRA is illustrated in **Figure 2.1.**

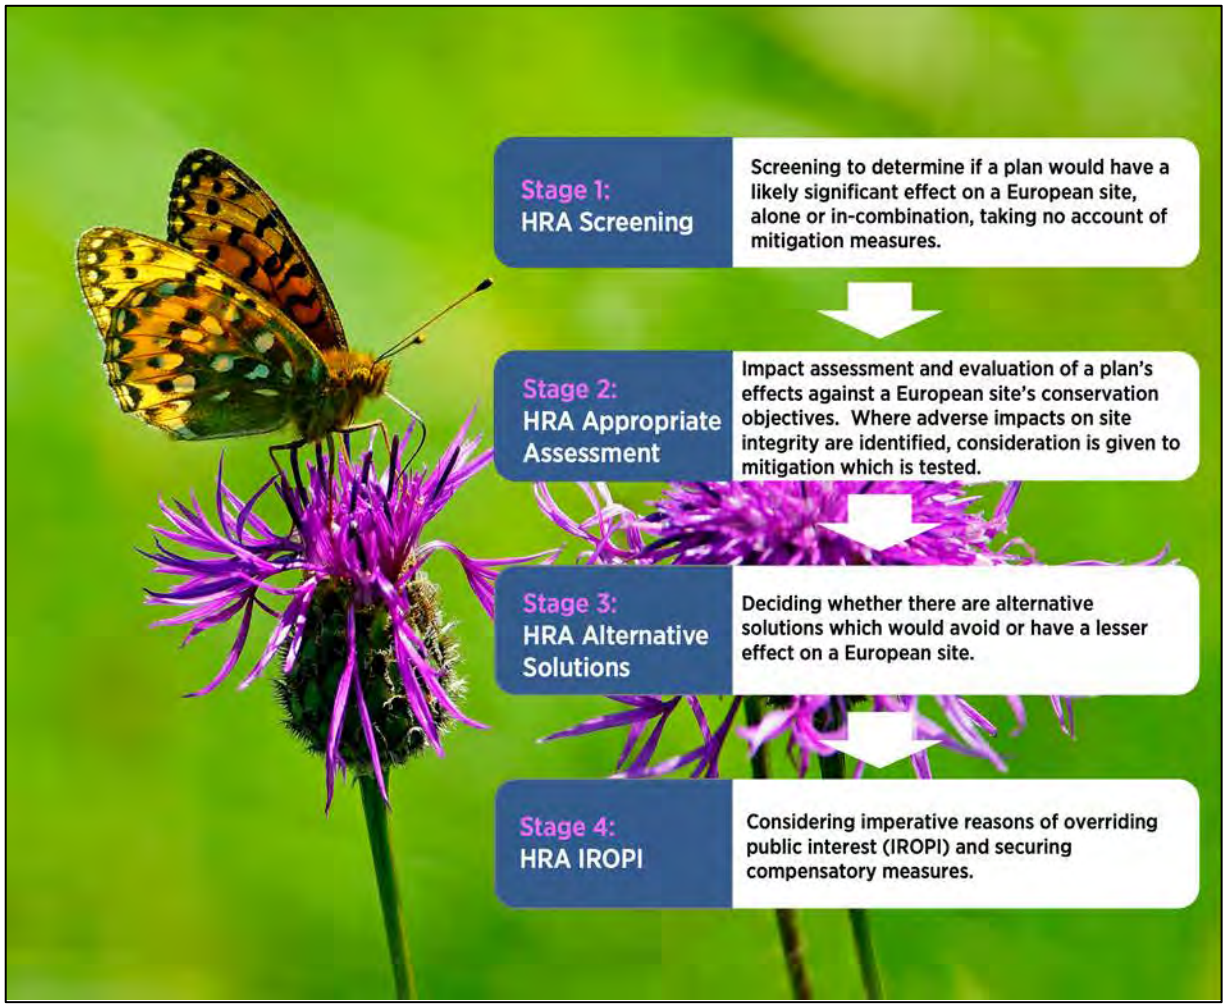

Figure 2.1: *Stages in the Habitats Regulations Assessment process*[13]

[13] Based on the now withdrawn DTA Handbook. Source: Tyldesley, D., and Chapman, C. (2013) The Habitats Regulations Assessment Handbook (December) (2019) edition UK: DTA Publications Limited.

2.2 Stage 1: Screening for Likely Significant Effects

2.2.1 The first stage in the HRA process comprises the screening stage (see **Figure 2.1**). The purpose of the screening process is to firstly determine whether a plan is either (1) exempt (because it is directly connected with or necessary to the management of a European site); (2) able to be excluded (because it is not a plan); or (3) able to be eliminated (because there would be no conceivable effects) from the HRA process. If none of these conditions apply, it is next necessary to identify whether there are any aspects of the Local Plan which may lead to a likely significant effect (LSE) at a European site, either alone, or in-combination with other plans or projects.

2.2.2 Where elements of the Local Plan will not result in an LSE on a European site (alone, or in-combination), these elements are screened out and not considered in further detail in the process. Where LSEs are identified, these elements of the Local Plan are screened in for further consideration in an AA. The screening process uses a number of evaluation codes to summarise whether or not a plan component is likely to have LSEs alone, or in-combination. These codes are set out in **Table 2.1** and are used to inform the formal screening decision (Column 2).

Table 2.1: *Screening evaluation categories*[14]

Screening evaluation categories		Screen in / Screen out
A.	General statements of policy / general aspirations.	Screen Out
B.	Policies listing general criteria for testing the acceptability / sustainability of proposals.	Screen Out
C.	Proposal referred to but not proposed by the Plan.	Screen Out
D.	General plan-wide environmental protection / designated site safeguarding / threshold policies.	Screen Out
E.	Policies or proposals that steer change in such a way as to protect European sites from adverse effects.	Screen Out
F.	Policies or proposals that cannot lead to development or other change.	Screen Out
G.	Policies or proposals that could not have any conceivable or adverse effect on a site.	Screen Out
H.	Policies or proposals the (actual or theoretical) effects of which cannot undermine the conservation objectives (either alone or in-combination with other aspects of this or other plans or projects).	Screen Out
I.	Policies or proposals with a Likely Significant Effect on a site alone.	Screen In
J.	Policies or proposals unlikely to have a significant effect alone.	Screen Out
K.	Policies or proposals unlikely to have a significant effect either alone or in-combination.	Screen Out
L.	Policies or proposals which might be likely to have a significant effect in-combination.	Screen In
M.	Bespoke area, site or case-specific policies or proposals intended to avoid or reduce harmful effects on a European site.	Screen In

[14] Adapted from the now with drawn DTA HRA Handbook. Source: Tyldesley, D., and Chapman, C. (2013) The Habitats Regulations Assessment Handbook (December) (2019) edition UK: DTA Publications Limited.

2.2.3 The judgement by the European Court of Justice on the interpretation of the Habitats Directive in the case of People Over Wind and Sweetman vs Coillte Teoranta (Case C-323/17[15]) determined that mitigation measures are only permitted to be considered as part of the AA stage of the HRA process. Therefore, when assessing the LSEs of the Local Plan on European sites, the HRA screening process will take no account of incorporated mitigation or avoidance measures that are intended to avoid or reduce harmful effects on a site. These are measures which, if removed (i.e. should they no longer be required for the benefit of a European site), would still allow the lawful and practical implementation of a plan.

2.2.4 Where screening concludes there are no LSEs from the Local Plan alone, it is next necessary to consider whether the effects of the Local Plan in-combination with other plans and projects would result in an LSE on any European site. It may be that the Local Plan alone will not have a significant effect but could have a residual effect that may contribute to in-combination effects on a European site.

2.2.5 Plans and projects which are considered to be most relevant to the in-combination assessment of the Local Plan include those that have similar impact pathways. These include plans and projects with potential to increase development in the HRA study area. In addition, plans and projects with potential to increase traffic across the study area and which may act in-combination with the Local Plan, such as the transport[16,17], and waste and mineral[18] plans, will also be considered. Plans which allocate water resources or are likely to influence water quality within the study area will also be considered. Finally, local plans of neighbouring authorities (listed below and detailed in **Appendix A**), which may increase development-related pressures at European sites, will be considered. It is recognised that the status of other plans and projects will change over the timescale of the development of the Local Plan; at the time of writing, neighbouring LPA Local Plans include the following:

- North Northamptonshire Local Plan[19];
- Peterborough Local Plan[20];
- Fenland Local Plan[21];

2.2.6 The approach taken to the consideration of in-combination effects will be compliant with the Wealden Judgement[27], which requires an in-combination approach that considers the development of neighbouring and nearby authorities when assessing LSEs.

2.3 Stage 2: Appropriate Assessment and Integrity Test

2.3.1 Stage 2 of the HRA process comprises the AA and Integrity Test. The purpose of the AA is to undertake an assessment of the implications of a plan for a European site in light of its conservation objectives[28].

2.3.2 As part of this process, plan makers should take account of the potential consequences of no action and the uncertainties inherent in scientific evaluation, and they should consult interested parties on the possible ways of managing the risk, for instance, through the adoption of mitigation measures. Mitigation measures should aim to avoid, minimise or reduce significant effects on European sites. Mitigation measures may take the form of policies within the Local Plan, or mitigation proposed through other plans or regulatory mechanisms. All mitigation measures must be deliverable and able to mitigate the adverse effects for which they are targeted.

2.3.3 The AA aims to present information regarding all aspects of the Local Plan and ways in which it could, either alone, or in-combination with other plans and projects, impact a European site. The plan-making body (as the Competent Authority) must then ascertain, based on the findings of the AA, whether the Local Plan will adversely affect the integrity of a European site, either alone, or in-combination with other plans and projects. This is referred to as the Integrity Test.

[28] MHCLG and DLHC (2019) Appropriate assessment: Guidance on use of Habitats Regulations Assessment. Available at: https://www.gov.uk/guidance/appropriate-assessment [Date accessed: 25/06/26]

2.4 Dealing with uncertainty

2.4.1 Uncertainty is an inherent characteristic of an HRA, and decisions can be made using currently available and relevant information. This concept is reinforced in the 7th September 2004 'Waddenzee' ruling[29]:

2.4.2 *"However, the necessary certainty cannot be construed as meaning absolute certainty since that is almost impossible to attain. Instead, it is clear from the second sentence of Article 6(3) of the Habitats Directive that the competent authorities must take a decision having assessed all the relevant information which is set out in particular in the AA. The conclusion of this assessment is, of necessity, subjective in nature. Therefore, the competent authorities can, from their point of view, be certain that there will be no adverse effects even though, from an objective point of view, there is no absolute certainty."*

2.5 The Precautionary Principle

2.5.1 The HRA process is characterised by the Precautionary Principle. This is described by the European Commission: *"If a preliminary scientific evaluation shows that there are reasonable grounds for concern that a particular activity might lead to damaging effects on the environment, or on human, animal or plant health, which would be inconsistent with protection normally afforded to these within the European Community, the Precautionary Principle is triggered"*. The Precautionary Principle is embedded in the Integrity Test.

3 Scoping of threats and pressures at European sites

3.1 Introduction

3.1.1 An important initial stage of the screening process is gathering information on European sites which may be affected by the Local Plan. This is informally known as scoping and provides an understanding of potential impact pathways from the Local Plan and connections to European sites and their vulnerabilities. This information will be used to inform the formal screening assessment of the Local Plan provided in **Chapter 4**. European sites identified as vulnerable to threats and pressures will form the basis of the HRA screening process and are mapped in **Figures 3.1** and **3.2**.

3.2 Identification of an HRA study area

3.2.1 Each European site has its own intrinsic qualities, besides the habitats or species for which it has been designated, that enable the site to support its particular ecosystems. An important aspect of this is that the ecological integrity of each site can be vulnerable to change from natural and human-induced activities in the surrounding environment (known as pressures and threats). For example, sites can be affected by land use plans in a number of different ways, including the direct land take of new development; the type of use the land will be put to (for example, an extractive or noise-emitting use); or, the pressure/threat a development generates (air pollution, water pollution or increased recreational pressure) and the resources used (for example, water abstraction).

3.2.2 An intrinsic quality of any European site is its functionality at the landscape ecology scale. This refers to how the site interacts with its immediate surroundings, as well as the wider area. This is particularly the case where there is potential for development resulting from a plan to generate water or air-borne pollutants, use water resources, or otherwise affect water levels. Adverse effects may also occur via impacts to mobile species when located outside a designated site boundary, but which are qualifying features of the site. For example, there may be effects on protected birds, bats and fish which use land or waterbodies outside a designated site for foraging, feeding, spawning, roosting, breeding or other activities.

3.2.3 There is no guidance that defines the study area for inclusion in an HRA. Planning Practice Guidance (PPG) for AA indicates that: *"The scope and content of an appropriate assessment will depend on the nature, location, duration and scale of the proposed plan or project and the interest features of the relevant site. 'Appropriate' is not a technical term. It indicates that an assessment needs to be proportionate and sufficient to support the task of the competent authority in determining whether the plan or project will adversely affect the integrity of the site"*[30].

[30] MHCLG and DLHC (2019) Planning Practice Guidance Note, Appropriate Assessment, Guidance on the use of Habitats Regulations Assessment.

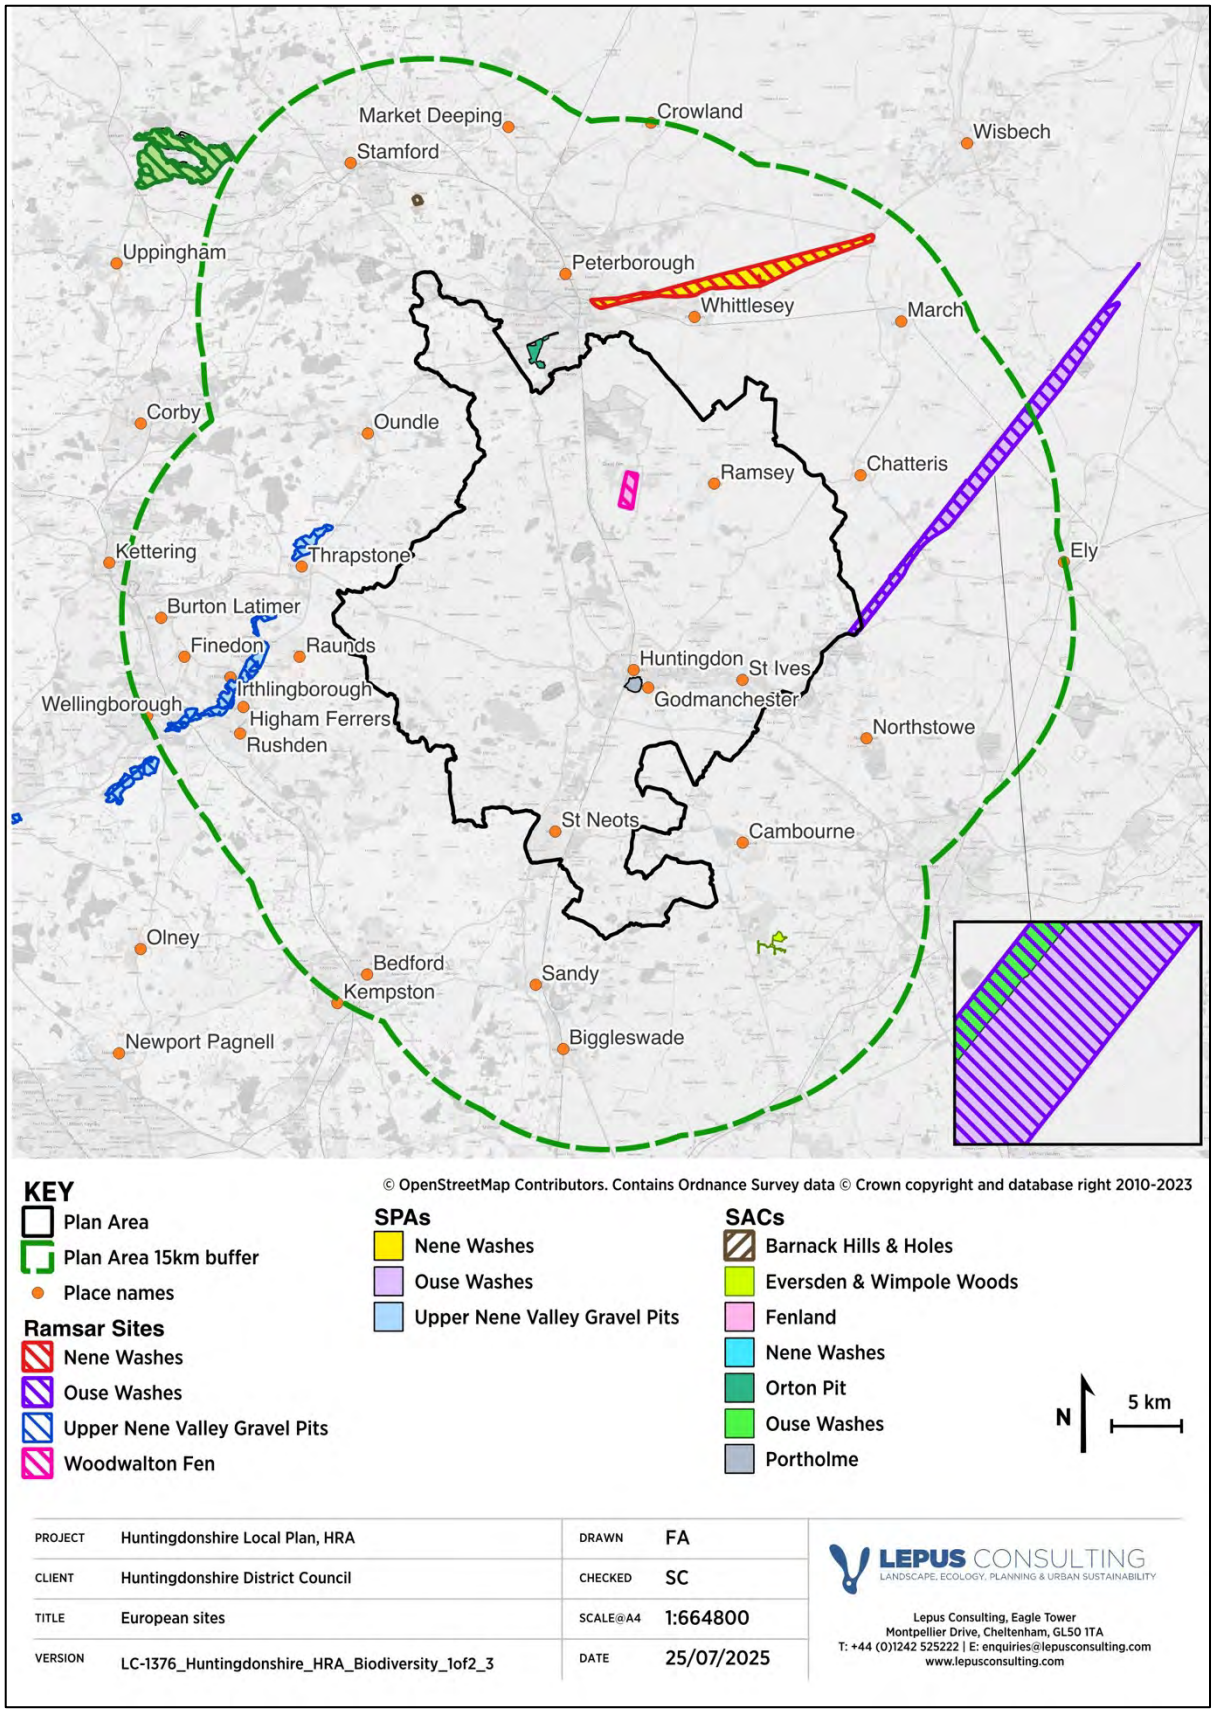

Figure 3.1: *European sites scoped into the HRA process (1)*

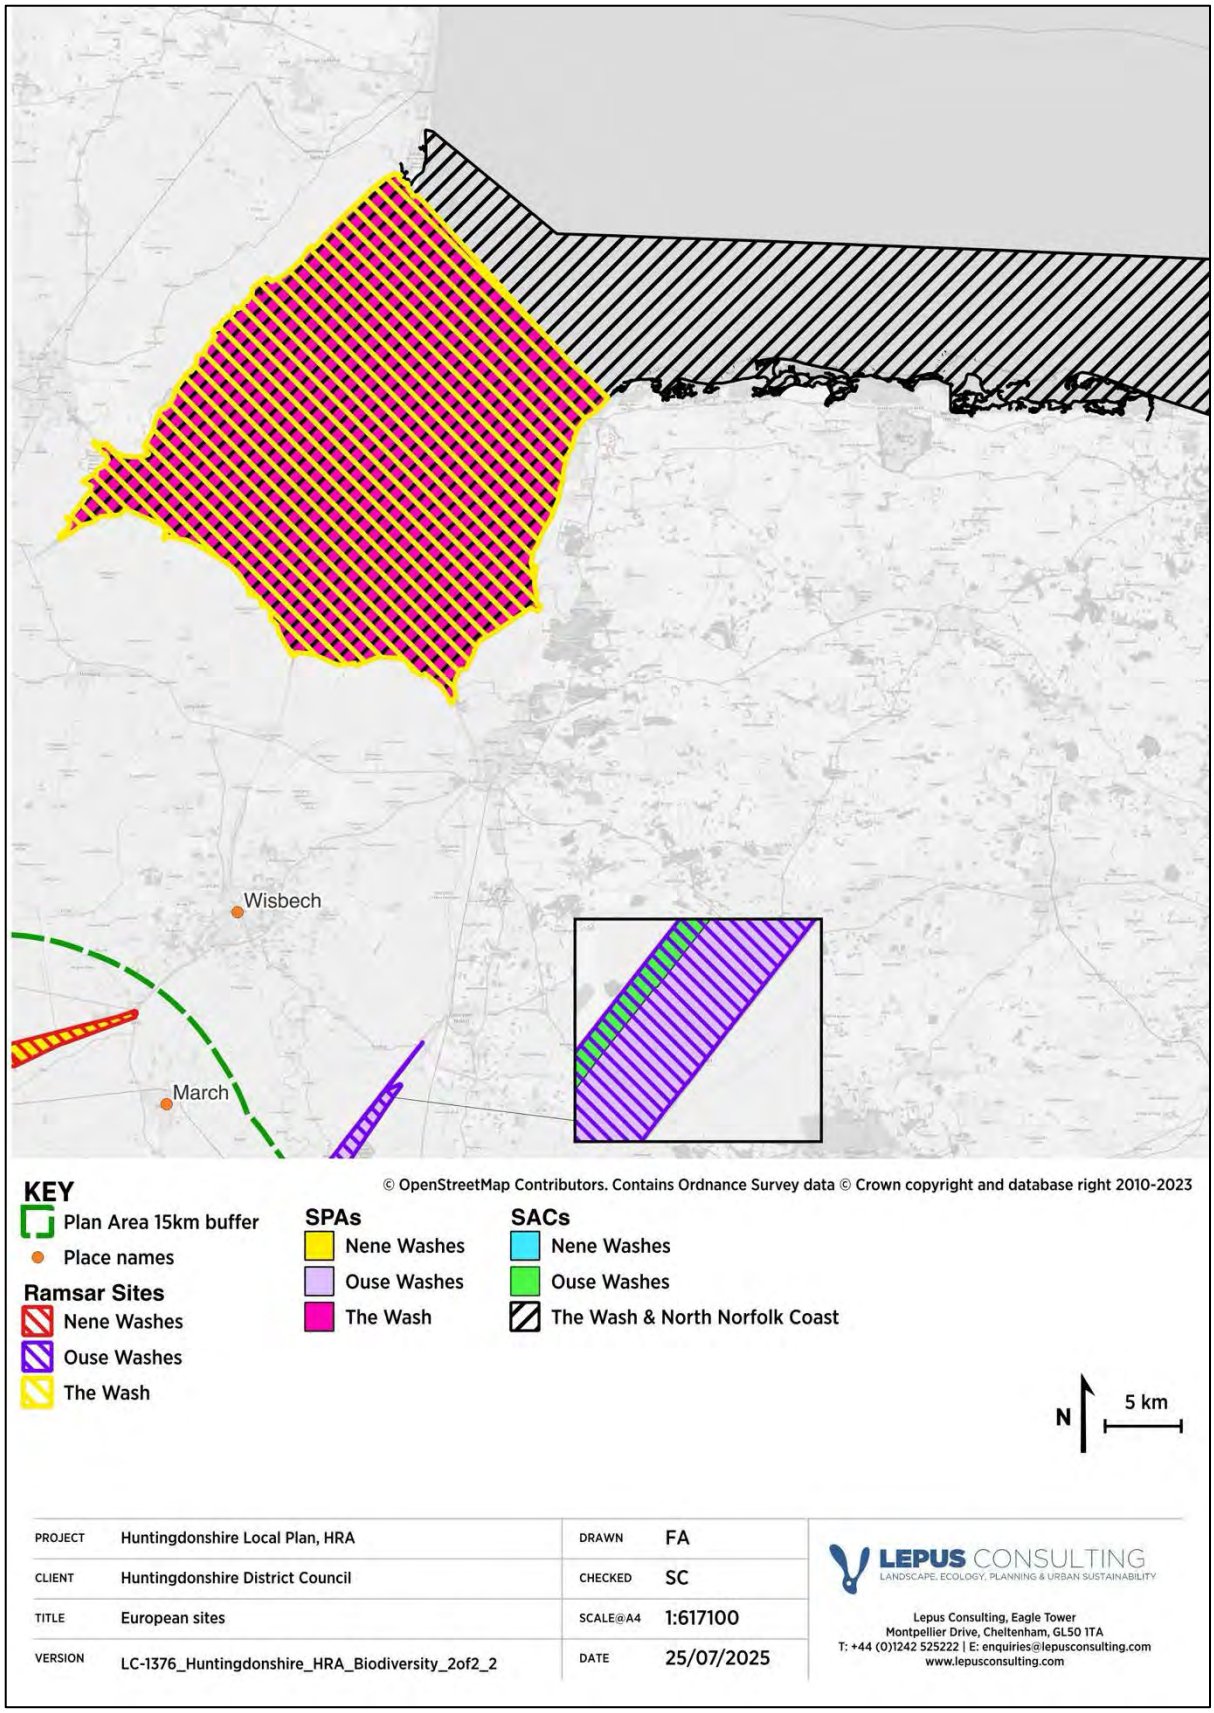

Figure 3.2: *European sites scoped into the HRA process (2) to illustrate the location of The Wash SPA, The Wash Ramsar and The Wash & North Norfolk Coast SAC.*

3.3 Scoping impact pathways

3.3.1 Threats and pressures to which European sites are vulnerable have been identified through reference to data held by the Joint Nature Conservation Committee (JNCC) and Natural England (NE), and through reference to Ramsar Information Sheets and Site Improvement Plans (SIPs). This information provides current and predicted issues at each European site and is summarised in **Appendix B**.

3.3.2 Supplementary Advice on Conservation Objectives prepared by NE often provides more recent information on threats and pressures upon European sites than SIPs and has, therefore, also been reviewed.

3.3.3 A number of threats and pressures are unlikely to be exacerbated by the Local Plan and have not been considered.

3.3.4 Sites of Special Scientific Interest (SSSIs) are protected areas in the United Kingdom (UK). SSSIs are the building blocks of site-based nature conservation in the UK. An SSSI will be designated based on the characteristics of its fauna, flora, geology and/or geomorphology. The conservation status of SSSI features that overlap with European sites offer a useful indicator of habitat/species health at a particular location.

3.3.5 NE conducts Whole Feature Assessments (WFAs) which measure the condition of each notified feature across the whole of a SSSI. The conservation status of each notified feature highlights any areas which are particularly vulnerable to threats/pressures. Conservation status is defined as below:

- Favourable;
- Unfavourable – recovering;
- Unfavourable – no change; or,
- Unfavourable – declining.

3.3.6 SSSI features in either an ‘Unfavourable – no change’ or ‘Unfavourable – declining’ condition indicate that the European site may be particularly vulnerable to certain threats or pressures. It is important to remember that SSSI features may be in an unfavourable state due to the condition of features unrelated to its designation. However, it is considered that the conservation status of SSSI features that overlap with European sites offer a useful indicator of habitat/species health at a particular location.

3.3.7 NE defines zones around each SSSI which may be at risk from specific types of development; these are known as Impact Risk Zones (IRZs). These IRZs are "*a GIS tool developed by Natural England to make a rapid initial assessment of the potential risks to SSSIs posed by development proposals. They define zones around each SSSI which reflect the particular sensitivities of the features for which it is notified and indicate the types of development proposal which could potentially have adverse impacts. The IRZs also cover the interest features and sensitivities of European sites, which are underpinned by the SSSI designation and 'Compensation Site', which have been secured as compensation for impacts on Natura 2000/Ramsar sites*"[31]. The location of IRZs has been taken into consideration in this assessment, as they provide a useful guide as to the location of functionally linked land and likely vulnerabilities to development proposed within the Local Plan.

3.3.8 Based on previous HRA work undertaken to support the Local Plan (see **Section 1.4**), the following potential impact pathways are considered to be within the scope of influence of the Local Plan.

- **Air pollution:** Land use planning has the potential to increase atmospheric emissions of pollutants to the air. This can result in adverse effects at European sites, such as eutrophication (nitrogen), acidification (nitrogen and sulphur) and direct toxicity (ozone, ammonia and nitrogen oxides)[32].
- **Water resources and water levels:** Development can change runoff rates from urbanised areas to European sites or watercourses which run through them. An increase in housing provision can also influence supply and demand for water within the region, which may impact water levels.
- **Water quality:** Surface water runoff from urban areas has the potential to reduce the quality of water entering a catchment. Water quality may also be reduced through point source effluent discharges from new development at Wastewater Treatment Works (WwTWs) and other controlled discharge sources.
- **Recreational pressure:** New housing development has the potential to increase recreational pressure upon European sites which are accessible to the public.
- **Urbanisation effects:** Development has the potential to result in disturbing activities (such as noise, lighting, cat predation and visual disturbance). Disturbance effects may impact upon European sites themselves, and their qualifying features, when outside a designated site boundary.

[31] Natural England (2019) Natural England's Impact Risk Zones for Sites of Special Scientific Interest User Guidance.

[32] APIS. APIENs Home. Available at: https://www.apis.ac.uk/APIENs. [Date accessed: 02/06/26]

3.3.9 Land use planning also has the potential to result in impacts upon qualifying features of a European site when located outside a designation boundary, known as FLL. "*The term 'functional linkage' refers to the role or 'function' that land or sea beyond the boundary of a European site might fulfil in terms of ecologically supporting the populations for which the site was designated or classified. Such land is therefore 'linked' to the European site in question because it provides an important role in maintaining or restoring the population of qualifying species at favourable conservation status*"[33]. This HRA, therefore, also considers effects upon FLL or mobile species when located outside a designated site boundary within the above topic assessments.

3.4 Air quality

3.4.1 The main mechanisms through which air pollution can have an adverse effect is through eutrophication (nitrogen), acidification (nitrogen and sulphur) and direct toxicity (ozone, ammonia and nitrogen oxides). As highlighted through the review of threats and pressures at European sites (**Appendix B**), air pollution, and in particular atmospheric nitrogen deposition, has been identified as a threat or pressure for qualifying features of a number of European sites within the relevant SIPs and Supplementary Conservation Advice notes.

3.4.2 Excess atmospheric nitrogen deposition within an ecosystem or habitat can disrupt the delicate balance of ecological processes interacting with one another. As the availability of nitrogen increases in the local environment, some plants that are characteristic of that ecosystem may become competitively excluded in favour of more nitrophilic plants. It also upsets the ammonium and nitrate balance of the ecosystem, which disrupts the growth, structure and resilience of some plant species.

3.4.3 Excess nitrogen deposition often leads to the acidification of soils and a reduction in the soils' buffering capacity (the ability of soil to resist pH changes). It can also render the ecosystem more susceptible to adverse effects of secondary stresses, such as frost or drought, and disturbance events, such as foraging by herbivores.

3.4.4 Natural England has developed a methodology for the assessment of traffic-related air quality impacts under the Habitats Regulations, which is relevant to the HRA of land use plans which may result in a change in traffic flows[34]. For the assessment of air quality effects from local plans, Natural England has produced Standard Advice. This was issued for the Huntingdonshire Local Plan as part of the NE Regulation 18 consultation response (December 2025).

3.4.5 It comprises a number of discrete stages as follows which have been followed in the HRA process for the Local Plan. Stages 1 to 3 comprises the screening stage.

- Stage 1: Initial screening for credible risk of an effect
- Stage 2: Detailed AQ modelling
- Stage 3: Applying screening thresholds

[33] Natural England (2016) Commissioned Report. NECR207. Functional linkage: How areas that are functionally linked to European sites have been considered when they may be affected by plans and projects - a review of authoritative decisions. [34] Natural England (2018) Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001). Available at: http://publications.naturalengland.org.uk/publication/4720542048845824. [Date accessed: 21/08/2026]

- Stage 4: Detailed assessment of ecological impacts
- Stage 5: Appropriate Assessment for habitats sites

3.4.6 The Institute of Air Quality Management (IAQM)[35] and the Chartered Institute of Ecology and Environmental Management (CIEEM)[36] have also prepared advice on the assessment of air quality impacts at designated sites. Taken together this guidance sets a methodology and thresholds for screening of air quality LSEs at the HRA screening stage (Stage 1 of the HRA process) and further AA of air quality impacts where relevant (Stage 2 of the HRA process).

Stage 1: Initial screening for credible risk of an effect

3.4.7 Stage 1 of NE's Standard Advice requires an initial screening assessment to determine if there is a credible risk of an air quality effect from the Local Plan. This should take account of whether significant emissions can reach a European site using distance criteria and also whether the qualifying habitats or supporting habitat of qualifying species associated with a European site are sensitive to air quality impacts.

3.4.8 The Local Plan will trigger development and therefore increase traffic-related emissions. Air quality impacts have been shown to typically affect European sites within 10km of a Plan boundary[37]. For the purpose of decision-making, unless local circumstances support a wider zone, JNCC guidance notes that plan HRA should take account of the potential effects of traffic emissions on European sites located within 10km of the plan boundary. This zone is based on professional judgment recognising that the effects of growth from development beyond 10km will have been accounted for in the Nitrogen Futures modelling work business as usual scenario[38].

3.4.9 This 10km distance threshold can be a useful guide to identify the broad areas that may be impacted by air quality. However, it is noted that consideration should also be given to larger residential or commercial allocations and their wider potential for air quality impacts, in the context of the local and regional road network, including key commuting areas.

3.4.10 Data obtained from the Office for National Statistics (ONS) in 2021 highlights the most common destinations for journeys to work arising from, and finishing in, the Plan area[39]. The most common commuting destinations/origins are Peterborough (which lies just north of the Plan area), Fenland (which is located northeast of the Plan area) and South Cambridgeshire (which is located southeast of the Plan area). Other common commuting destinations/origins include the neighbouring areas of Bedford and East Cambridgeshire. This commuting pattern is reflected in the Economic and Employment Needs Assessment prepared in support of the Local Plan[40].

[40] Volterra (2025) Economic and Employment Needs Assessment.

3.4.11 European sites beyond 10km of the Plan area but within these key commuting areas which are sensitive to air quality effects are also considered within this HRA where they are linked to the Plan area via key strategic road links. These are roads which provide a clear route linking residential and employment areas within the Plan area.

3.4.12 Taking this information into consideration, a 10km buffer from the Plan area is considered precautionary, as it encompasses both the key commuting areas and strategic road links that connect to the Plan area.

3.4.13 It is widely accepted that air quality impacts are greatest within 200m of a road source, decreasing with distance[41,42,43]. Baseline mapping data has been used to determine the proximity of European sites, and their qualifying features, to roads (within 200m) which may result in an exceedance of NE's screening thresholds.

3.4.14 The UK Air Pollution Information System (APIS) provides information on all European sites and the sensitivity of their qualifying features (habitats and/or species) to air pollution. This data has been interrogated, alongside a desk-based review of site-based data (**Appendix B**), to determine whether there may be impact pathways from the Local Plan to any European site, through a change in atmospheric emissions.

3.4.15 The results (shown in **Table 3.1**) indicate that nine European sites within 10km of the Plan area (which corresponds to the key commuting area) are sensitive to air quality impacts.

3.4.16 Of the nine European sites deemed sensitive to air quality impacts, Barnack Hills & Holes SAC, Eversden & Wimpole Woods SAC, Fenland SAC[44] and Woodwalton Fen Ramsar, are not located within 200m of a strategic road link. Therefore, these four sites can be scoped out of the HRA process in terms of air quality impacts. A review of Natural England data for Orton Pit SAC indicates that it is not sensitive to air quality impacts and therefore can also be scoped out of the HRA process. The remaining five European sites are scoped into the HRA process based on air quality impact pathways.

Table 3.1: *Scoping of air quality impact pathways for European sites within the influence of the Local Plan[45]*

European sites within the influence of the Local Plan	Is the European site sensitive to air quality impacts (as per SIP – Appendix B)?	Is there a strategic road link (A and B road or motorway) located within 200m of the site?
Barnack Hills & Holes SAC	Yes	No (the closest strategic road link, the B1443, is located approximately 240m north of the site).
Eversden & Wimpole Woods SAC	Yes	No (the closest strategic road link, the A1198, is located approximately 650m from the site).

[42] Natural England (2018) Natural England's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001).

[43] Bignal, K., Ashmore, M. & Power, S. (2004) The ecological effects of diffuse air pollution from road transport. English Nature Research Report No.580, Peterborough.

[44] Fenland SAC is split across three components which lie 27 miles apart. The component of the SAC within 10km of the Plan area is underpinned by Woodwalton Fen SSSI.

[45] Green shading in Chapter 3 scoping tables indicate threat / pressure at European site is scoped out. Red shading indicates threat / pressure at European site is scoped in for further consideration in the HRA process.

European sites within the influence of the Local Plan	Is the European site sensitive to air quality impacts (as per SIP – Appendix B)?	Is there a strategic road link (A and B road or motorway) located within 200m of the site?
Fenland SAC	Yes	No (the closest strategic road link, the B660, is located approximately 1.9km to the north of the SAC).
Nene Washes SAC	Yes Spined loach identified by NE as being sensitive to air pollution in Regulation 18 consultation response	Yes, within 10km of the Plan area the following strategic road links run within 200m of the designation: A139 and B1040.
Nene Washes SPA	No	N/A
Nene Washes Ramsar	Yes Wetland plant assemblage identified by NE as being sensitive to air pollution in Regulation 18 consultation response	Yes, within 10km of the Plan area the following strategic road links run within 200m of the designation: A139 and B1040.
Orton Pit SAC	No	N/A
Ouse Washes SAC	Yes Spined loach identified by NE as being sensitive to air pollution in Regulation 18 consultation response	Yes, within 10km of the Plan area the following strategic road links run within 200m of the designation: A1123, B1050, B1381 and A142
Ouse Washes SPA	No	N/A
Ouse Washes Ramsar	Yes Wetland plant assemblage identified by NE as being sensitive to air pollution in Regulation 18 consultation response	Yes, within 10km of the Plan area the following strategic road links run within 200m of the designation: A1123, B1050, B1381 and A142
Portholme SAC	Yes	Yes (the A1307 is located approximately 40m from the SAC's northern boundary, the B1514 approximately 190m from this boundary, the B1044 approximately 150m from the eastern boundary, and the B1043 approximately 175m from the SAC's southern boundary).
Upper Nene Valley Gravel Pits SPA	No	N/A
Upper Nene Valley Gravel Pits Ramsar	No	N/A
Woodwalton Fen Ramsar	Yes	No (the closest strategic road link, the B660, is located approximately 1.9km to the north of the Ramsar).

3.4.17 The Local Plan will trigger housing and employment development. Therefore, there is potential for an increase in traffic-related emissions within 10km of the Plan area and key commuting areas. As a consequence, there is potential for an increase in traffic-related emissions along road links located within 200m of four European sites that have been identified as sensitive to air quality impacts.

Stage 2: Detailed air quality modelling

3.4.18 The next stage of the process involved detailed air quality modelling (outlined in full in **Chapter 5**). This was conducted by AQC, in accordance with Natural England's recommended staged approach, considering future traffic associated with the Local Plan and comparing predicted concentrations and deposition rates against relevant Critical Levels (CLe) and Critical Loads (CLo). Where Process Contributions exceed the screening threshold of 1% of the relevant CLe or CLo, further investigation was completed to consider the ecological significance of the predicted changes, including the spatial extent of effects, the location of qualifying habitats and supporting habitats, existing background conditions, predicted future trends in emissions and the conservation objectives of each European site.

3.5 Water quality and water quantity

3.5.1 Urban development coming forward through the Local Plan has the ability to affect water-dependent European sites through a number of impacts, as listed below. These impacts have the potential to change the water balance (levels) entering European sites and the quality of this water:

- Change in surface permeability and runoff rates;
- Increased water demand to supply new homes and businesses;
- Reduced quality of surface water runoff; and,
- Increased effluent discharge for treatment.

3.5.2 It is noted that a change in water levels may have knock-on implications for the quality of water due to reduction in the dilution effect within a watercourse.

3.5.3 The Local Plan may also impact functionally linked watercourses and habitat through a deterioration in water quality, flows and loss, and/or deterioration of riparian and in-stream habitat.

3.5.4 Any change in the quality or quantity of water at water dependant European sites as a result of the Local Plan may result in adverse effects on the achievement of the conservation objectives which aim to maintain and restore the condition of these features for relevant qualifying species.

3.5.5 For a number of European sites, site specific water quality targets have been set to reflect baseline conditions and the tolerance of site features.

3.5.6 The main watercourse that flows through the Plan area is the River Great Ouse, with the River Nene also flowing along the northern Plan area boundary. The River Great Ouse and its tributaries, which include the River Kym and River Til, drain the southern section of the Plan area. These rivers form a network of watercourses that discharge at the Wash Estuary, through three European sites: The Wash SPA, The Wash Ramsar, and The Wash & North Norfolk Coast SAC. Several waterways that are part of the Middle Level Navigations waterway network are also located in the centre of the district, between the River Great Ouse and River Nene, and are largely used for land drainage. Numerous tributaries and smaller watercourses also flow through the Plan area, including Bury Brook, Cock Brook, Ellington Brook, Diddington Brook, West Brook, Marley Gap Brook, Billing Brook and Alconbury Brook.

3.5.7 The Plan area lies within the Anglian River Basin District. River Basin Districts are sub-divided into surface water management catchments (SWMCs)[46]. The majority of the northern half of the Plan area is located within the Old Bedford including the Middle Level SWMC and the majority of the southern part of the Plan area is located within the Ouse Upper and Bedford SWMC, with two small areas in the north and east falling into the Nene SWMC, and a very small portion of southeast Huntingdonshire falling within the Cam and Ely Ouse SWMC (see **Figure 3.3**).

3.5.8 River Basin Management Plans (RBMPs) provide a framework for protecting and enhancing the benefits provided by the water environment. To achieve this, and because water and land resources are closely linked, they also inform decisions on land-use planning. **Appendix A** provides a summary of the Anglian RBMP[47].

3.5.9 Catchment Abstraction Management Strategies (CAMS) are six-year strategies developed by the Environment Agency (EA) for managing water resources at the local level, produced for every river catchment area in England and Wales. Through the CAMS process, the EA prepares an Abstraction Licensing Strategy (ALS) to manage water resources and contribute to implementation of the WFD, with strategies that feed into Water Resource Management Plans (WRMPs).

[47] Environment Agency (2022) Anglian river basin district river basin management plan: updated 2022. Available at: https://www.gov.uk/guidance/anglian-river-basin-district-river-basin-management-plan-updated-2022 [Date accessed: 02/06/26]

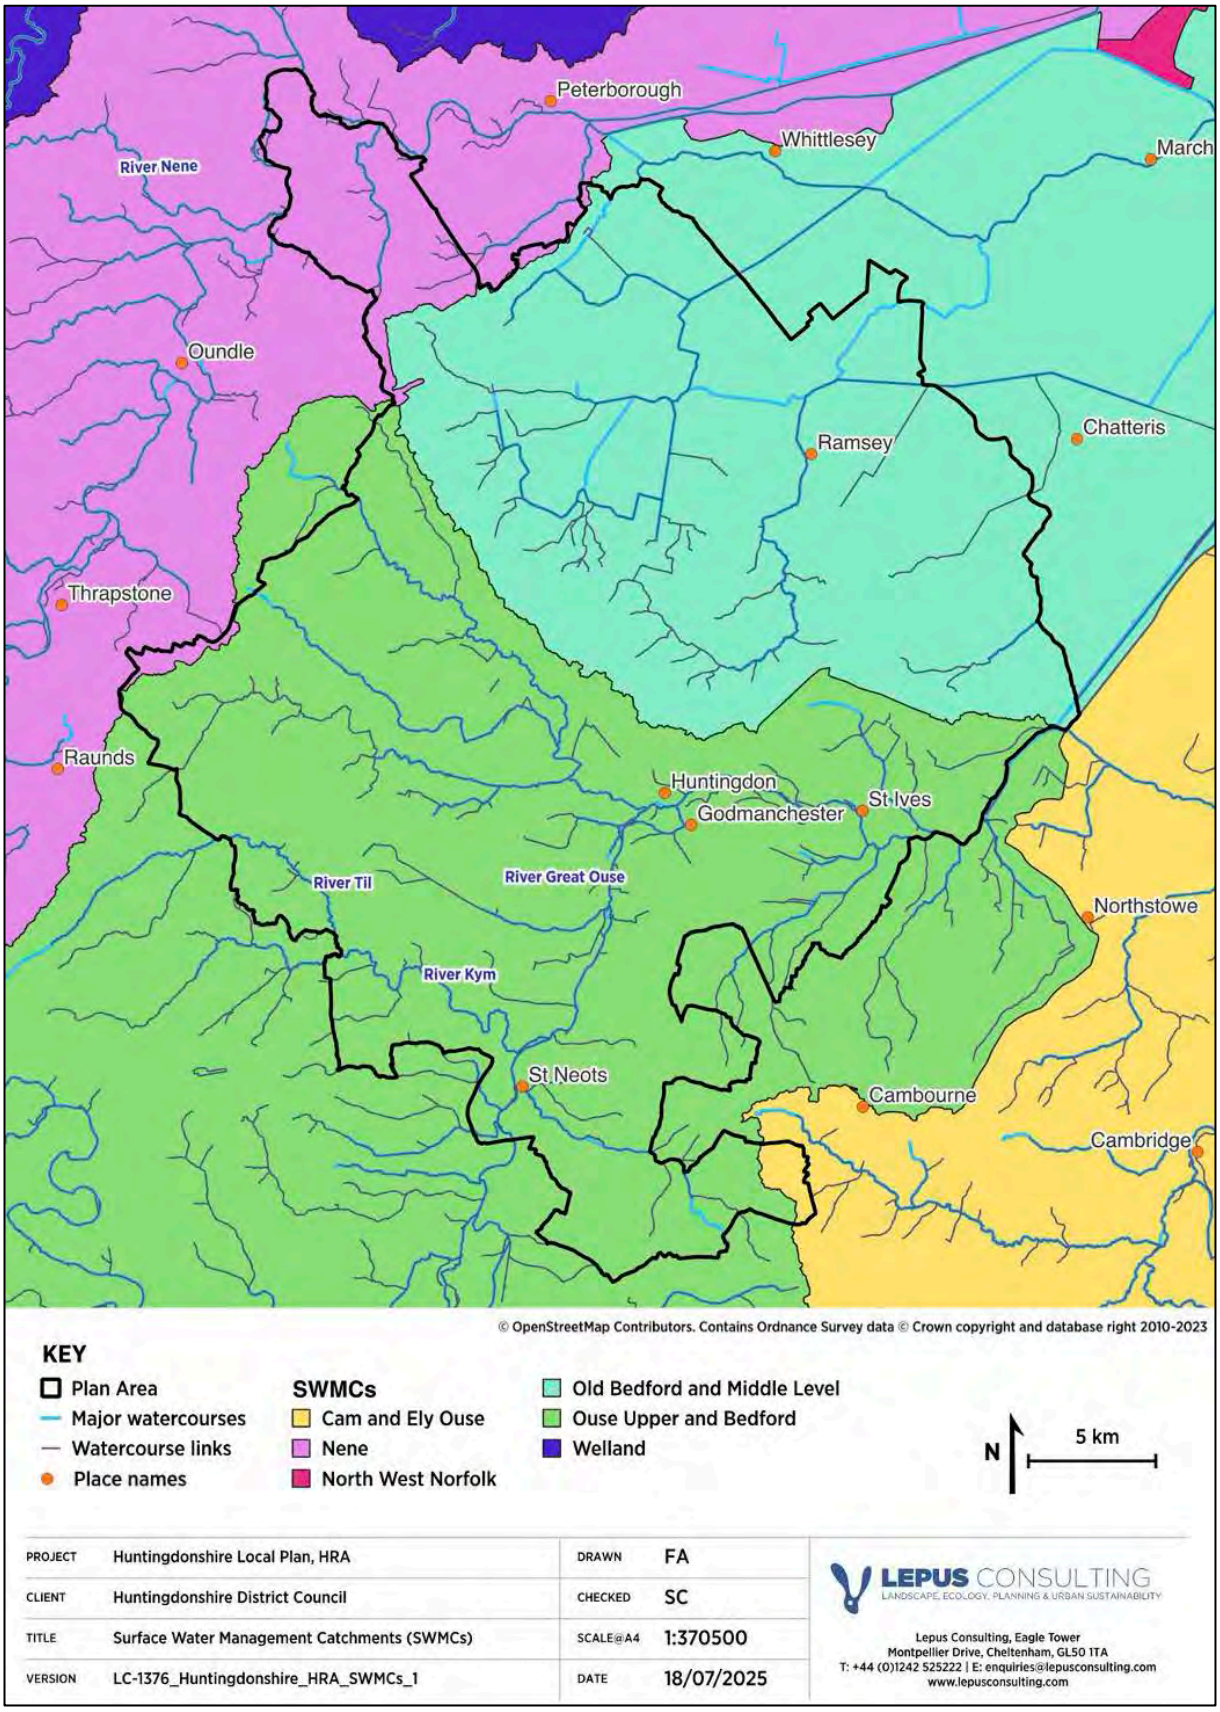

Figure 3.3: *Watercourses and Surface Water Management Catchments (SWMCs) in and around the Plan area*

3.5.10 The Plan area is located predominantly within the Old Bedford including the Middle Level, and the Ouse Upper and Bedford ALS catchments. A small portion of the northern and eastern parts of the Plan area also falls within the Nene ALS catchment. A very small portion of southeast Huntingdonshire falls within the Cam and Ely Ouse ALS catchment. The ALSs outline the available water resources in each catchment area, alongside how these water resources are being used and the intention regarding management of further abstraction. European sites located within these catchment areas have the potential to be affected by water abstraction. The Old Bedford including the Middle Level ALS[48] lists the Ouse Washes SAC, SPA and Ramsar as vulnerable to the impacts of poor/unsustainable water abstraction practices. The Ouse Upper and Bedford ALS[49] lists Portholme SAC; the Ouse Washes SAC, SPA and Ramsar; The Wash & North Norfolk Coast SAC; and The Wash SPA, as able to be affected by abstraction practices within the ALS area. The Nene ALS[50] lists the Nene Washes SPA, Orton Pit SAC, the Upper Nene Valley Gravel Pits SPA and Ramsar, The Wash & North Norfolk Coast SAC, The Wash SPA and The Wash Ramsar as vulnerable to the impacts of poor/unsustainable water abstraction practices, due to the water-dependency of their qualifying features.

3.5.11 For the purposes of water resource planning and supply, the country is divided into Water Resource Zones (WRZs). WRZs are the largest possible zone for water resource management in which customers share the same risk of a resource shortfall. The Plan area is served by the Ruthamford North and Ruthamford South WRZs, as supplied by Anglian Water, and the Cambridge Water Company Wide WRZ, as supplied by Cambridge Water (see **Figure 3.4**). To increase resilience to drought, water trading with Affinity Water is discussed within the Anglian Water WRMP. Both Ruthamford North and South have been identified as being at risk of climate change impacts in the future; hence, Huntingdonshire's water supply is vulnerable to climate-related risks. The EA has designated the whole of the Anglian Water region as under serious water stress.

3.5.12 Decisions relating to water abstraction for supply and disposal of water are controlled through a number of licensing mechanisms and a high-level water planning framework which is subject to HRA. This ensures the protection of the water environment and compliance with the WFD. One element of this framework is the WRMP that each water service provider is obligated to produce and publish every five years. WRMPs articulate long term plans to accommodate the impacts of population growth, drought, environmental obligations and climate change uncertainty, in order to balance water supply and demand.

3.5.13 The water service providers for the Plan area are Anglian Water and Cambridge Water. Anglian Water's 2024 WRMP[51] highlights the potential for a shortfall of 571 megalitres of water per day by 2050, with a deficit anticipated across 25 of the 27 WRZs that Anglian Water supplies, if no action is taken. The WRMP outlines a number of measures that need to be taken to ensure the continuation of sustainable sources of supply, including smart metering, leakage reduction and progressing strategic resource options (such as making effective use of the Lincolnshire and Fens reservoirs). The Anglian Water WRMP was supported by an HRA[52] which recommended mitigation measures that, if implemented, should help to avoid adverse impacts upon the integrity of any European sites either alone, or in-combination. Cambridge Water's WRMP[53] also demonstrates the potential for a growing supply/demand deficit in the absence of effective management planning. The WRMP also places emphasis on leakage reduction, in addition to reducing household and non-household water consumption, and enforcing universal metering by 2030. The Cambridge Water WRMP was supported by an HRA[54] which concluded that, alone, the WRMP would have LSEs upon the following European sites, if the recommended mitigation measures were not implemented:

- Ouse Washes SAC;
- Ouse Washes SPA;
- Ouse Washes Ramsar;
- Fenland SAC; and,
- Eversden & Wimpole Woods SAC.

3.5.14 WRMPs are linked to Drought Plans. Drought Plans outline the steps that water companies must take in a drought event to ensure that the population maintains access to sufficient water supplies, without detrimentally impacting rivers and the environment. The Anglian Water Drought Plan[55] and the Cambridge Water Drought Plan[56] both cover the period from 2022 to 2027 and set out a series of actions to address droughts, including actions to reduce customer demand for water and identification circumstances wherein drought orders and permits may be required.

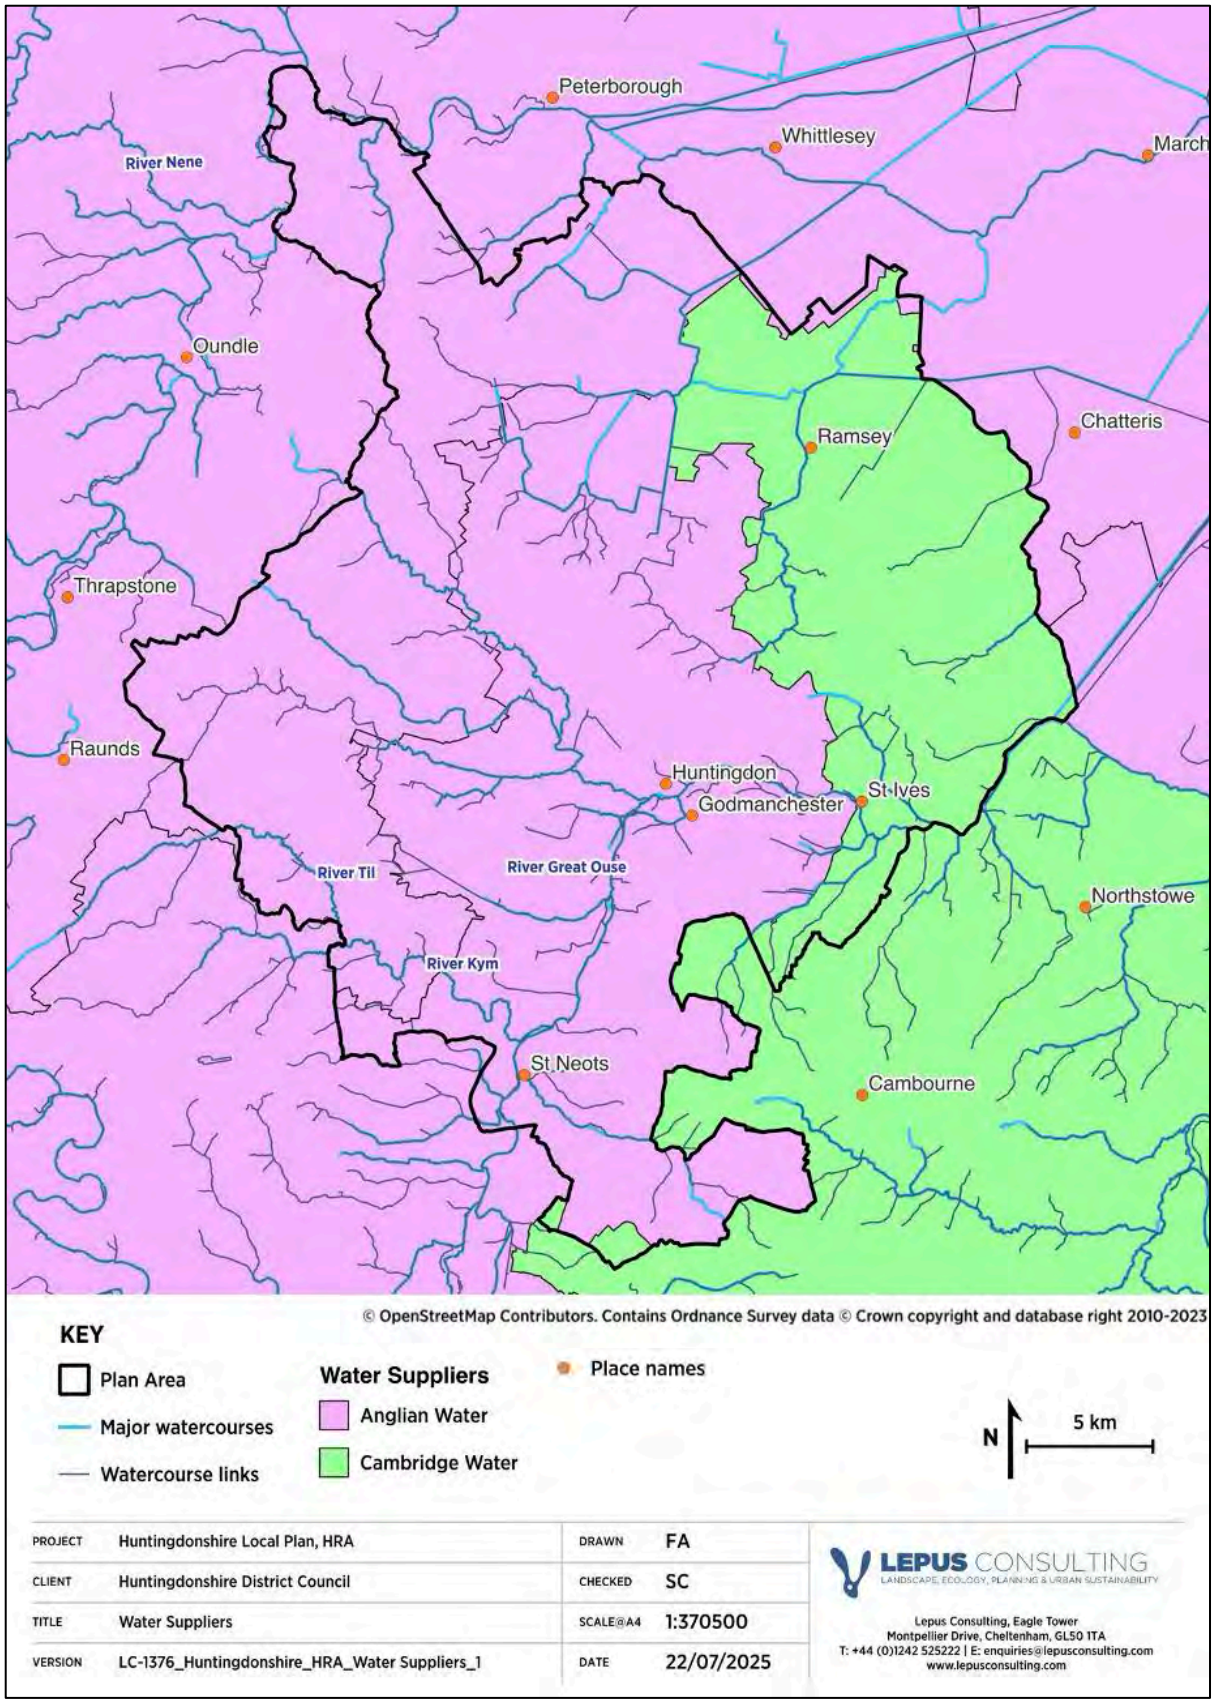

Figure 3.4: *Watercourses and Water Suppliers in and around the Plan area*

3.5.15 Anglian Water provide wastewater services for development in Huntingdonshire. Anglian Water use the term Water Recycling Centres (WRC) to refer to these services. There are 33 WRCs that are within or currently serving communities in Huntingdonshire. Twenty-nine of these are expected to serve growth from commitments or adopted plans[57]. Sewerage Undertakers have a duty under Section 94 of the Water Industry Act 1991 to provide sewerage and treat wastewater arising from new domestic development[58]. Environmental permits are used alongside water quality limits as a means of controlling the pollutant load discharged from a WRC to a receiving watercourse.

3.5.16 In March 2024, Huntingdonshire District Council completed a Stage 1 Water Cycle Study[59], comprising the first stage of the Integrated Water Management Strategy (IWMS) for Huntingdonshire. This assessed headroom at WRCs serving Huntingdonshire and identified a requirement for an increase in flow permits and potential upgrades to treatment processes.

3.5.17 The IWMS sets out the anticipated growth of the study area up to 2046 and outlines a set of objectives for assessing future water management options. The report also highlights that, according to the latest WFD assessment data, "*all of the watercourses in the study area have moderate or poor overall status*", largely due to "*the water industry (sewage dischargers) and agricultural and rural land management (livestock, arable and land drainage)*" and pollution from "*urban and highway runoff*". A Stage 2 Water Cycle Study (Integrated Water Management Strategy) was prepared in 2026[60]. This included additional modelling of dissolved oxygen and nitrate to support the HRA. Although these parameters are not routinely assessed as part of Water Cycle Studies, the modelling provided further evidence to inform the assessment of potential effects on designated sites.

[60] JBA Consulting (2026) Huntingdonshire Integrated Water Management Strategy: Stage 2 Water Cycle Study Final Report.

3.5.18 As noted in **paragraph 3.5.6**, the main watercourses in the Plan area drain into The Wash Estuary, which comprises three European sites: The Wash & North Norfolk Coast SAC, The Wash SPA, and The Wash Ramsar. These sites encompass the largest embayment in the UK, as well as extensive intertidal sand and mudflats, subtidal sandbanks, biogenic and geogenic reef, saltmarsh, and a barrier beach system. These systems support populations of Common Seal (*Phoca vitulina*) and Otter (*Lutra lutra*), and provide rich foraging grounds and important roosting habitat for a number of bird species for which the SPA and Ramsar sites are designated[61,62,63]. The species and habitats for which the three European sites are designated are sensitive to changes in water quality and quantity[64,65,66]. As the River Great Ouse and Nene flow through and around the Plan area and discharge at The Wash, there is a possibility for activity in the Plan area to adversely affect the quality of water flowing to the three European sites. Furthermore, as the Plan area falls partly within the same ALS catchment area as the Wash (the Nene ALS catchment area), water use/extraction activity within the Plan area has the potential to adversely affect the quantity of water at the European sites. Consequently, despite their location being outside of the Plan area, it is necessary to scope The Wash & North Norfolk Coast SAC, The Wash SPA, and The Wash Ramsar into the HRA process based on hydrological impact pathways.

3.5.19 The northern central section of the Plan area comprises the Great Fen, which was once part of a natural fenland landscape, with a large area of open water called Whittlesey Mere dominating the north, and a mosaic of bogs, fens and wet woodland to the south[67]. The Fenland SAC (where it is underpinned by Woodwalton Fen SSSI and also Woodwalton National Nature Reserve (NNR)) and Woodwalton Fen Ramsar are located within the Great Fen area (see **Figure 3.5**) and, alongside surrounding supporting habitat (see **Figure 3.6**), have significant ecological importance (**Figure 3.7**).

[67] Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire, Environment Agency, Natural England, and Huntingdonshire District Council (2010) Great Fen Masterplan, March 2010. Available at: https://www.greatfen.org.uk/sites/default/files/2019-10/env03-great-fen-masterplan-2010.pdf [Date accessed: 16/06/26]

3.5.20 The Council has partnered with the EA, NE, and the Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire, to carry out the Great Fen project[68]. The aim of this project is to help restore the Great Fen and improve the connectivity of its habitats, ultimately aspiring to oversee the creation of a large-scale nature recovery network including the restoration of 14 square miles of wild fen over the next 50 to 100 years.

3.5.21 The Council has collaborated on the Great Fen Masterplan[69] to help achieve the aims of the Great Fen project. This masterplan advocates for the re-establishment of pastoral farming practices and promoting the occurrence of natural processes, which will benefit wildlife and locals alike. Good progress has been made to date[70] and the Local Plan should seek to facilitate further progress by aligning with the aims of the project. This will also require consideration of the SSSIs and National Nature Reserves (NNRs) that underpin the Woodwalton Fen European sites (Woodwalton Fen SSSI and Woodwalton Fen NNR) and other parts of the Great Fen area (Holme Fen SSSI and Holme Fen NNR). These national designations (see **Figure 3.5**) play a crucial role in the wider ecological landscape through provision of functional linkages and processes. Woodwalton Fen NNR supports many important species, including over 1,000 beetle species (of which over 200 are rare), over 900 species of moths and butterflies, over 400 species of wildflowers, and birds such as the Marsh Harrier (*Circus aeruginosus*)[71] (see **Figures 3.6** and **3.7**). Holme Fen NNR also supports numerous species of birds, including the Nightingale (*Luscinia megarhynchos*) and the Long-eared Owl (*Asio otus*), as well as Dragonflies (*Anisoptera*), around 450 species of fungi, and an extensive Birch (*Betula*) population[72].

3.5.22 The features of the Great Fen, including the qualifying features of Fenland SAC (where it is underpinned by Woodwalton Fen SSSI) and Woodwalton Fen Ramsar (**Appendix B**) and surrounding areas of supporting habitat, are dependent on wetland habitats which are reliant on surface and/or groundwater. Therefore, maintaining the quality and quantity of water supply is critical to these designations. These European sites, and areas of surrounding functionally linked habitat across the Great Fen area, are, therefore, scoped into the HRA process in terms of water quality and water quantity impacts.

3.5.23 Taking into consideration potential changes in water supply (through abstraction for water supply) and water quality (through surface water run-off and discharges from WwTWs), European sites were screened for potential hydrological impact pathways. This review looked at European sites which are hydrologically linked to the Plan area and hydrologically sensitive, including impacts upon functionally linked watercourses. **Table 3.2** indicates those European sites that will be scoped into the screening assessment for further consideration in the HRA process based on hydrological impact pathways.

Table 3.2: *Assessment of hydrological impact pathways for European sites within the influence of the Local Plan*

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
Fenland SAC[75]	Fenland SAC is designated for its calcareous fen and meadow habitats, which support populations of Spined Loach (*Cobitis taenia*) and Great Crested Newt (*Triturus cristatus)*. Fenlands are notably sensitive to changes in water quality, with changes to nutrient levels and water chemistry easily able to offset the balance of the ecosystem[76]. The SAC is located within the Plan area; therefore, development under the Local Plan has the potential to adversely affect the SAC through changes to water quality. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Fenland SAC (and the northern half of the Plan area) is located within the Old Bedford including the Middle Level ALS catchment area. The ALS[77] concluded that *"licensed abstraction has such a small influence on water levels in Woodwalton Fen that they can be shown not to have an adverse effect on the integrity of the site".* However, the Great Fen area (specifically the Woodwalton Fen area) has been identified as vulnerable to changes to water levels via flooding[78], which may become more prevalent as a result of decreased permeability of land associated with development under the Local Plan. Fenlands are highly sensitive to changes in water quantity[79]; hence, activity within the Plan area has the potential to threaten the status of the fenland habitats and supported species. Therefore, the SAC is scoped into the HRA process for water quantity impact pathways.	Yes

[75] Fenland SAC is split across three components which lie 27 miles apart. The component of the SAC within 10km of the Plan area is underpinned by Woodwalton Fen SSSI.

[76] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Fenland (SAC) Site Code: UK0014782. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK0014782.pdf [Date accessed: 25/06/26]

[79] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Fenland (SAC) Site Code: UK0014782. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK0014782.pdf [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
Nene Washes SAC	Nene Washes SAC[80] is designated for supporting the Spined Loach, which is sensitive to changes in water quality. The site is located approximately 2.1km north of the Plan area and is hydrologically connected to the Plan area via the River Nene and its tributaries. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Nene Washes SAC is located within the Nene ALS catchment area. Consultation with NE has indicated that the SAC is highly vulnerable to changes in water levels. As such, the site is scoped into the HRA process for water quantity impact pathways.	Yes
Nene Washes SPA	Nene Washes SPA[81] is designated for supporting numerous breeding and non-breeding bird species, such as the Northern Shoveler (*Anas clypeata*), which are sensitive to changes in water quality. The site is located approximately 2.1km north of the Plan area and is hydrologically connected to the Plan area via the River Nene and its tributaries. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Nene Washes SPA is located within the Nene ALS catchment area and identified as vulnerable to changes in water levels as a result of abstraction in the Nene ALS. The Nene ALS catchment area covers some of the northern and eastern parts of the Plan area; hence, increased abstraction rates to serve development within the Plan area may adversely affect the water levels of the supporting habitat upon which bird species, such as the Northern Shoveler for which the site is designated, rely. As such, the site is scoped into the HRA process for water quantity impact pathways.	Yes

[80] Natural England (2018) European Site Conservation Objectives for Ouse Washes SAC (UK0013011). Available at: https://publications.naturalengland.org.uk/publication/4894882430713856 [Date accessed: 25/06/26]

[81] Natural England (2019) European Site Conservation Objectives for Nene Washes SPA (UK9008031). Available at: https://publications.naturalengland.org.uk/publication/4894064390438912 [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
Nene Washes Ramsar	Nene Washes Ramsar[82] is designated for supporting *"an assemblage of nationally rare breeding birds"*, *"a wide range of raptors"*, "*several nationally scarce plants"*, "*two vulnerable and two rare British Red Data Book invertebrate species*" and the Tundra Swan (*Cygnus columbianus bewickii*). Many of these qualifying species are sensitive to changes in water quality. The site is located approximately 2.1km north of the Plan area and is hydrologically connected to the Plan area via the River Nene and its tributaries. As such, the Ramsar is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Nene Washes Ramsar is located within the Nene ALS catchment area, which covers some of the northern and eastern parts of the Plan area. As the Nene Washes SPA is identified as vulnerable to changes in water levels as a result of abstraction in the Nene ALS, it can be assumed that the Nene Washes Ramsar site is similarly vulnerable given the similarity in qualifying features. Increased abstraction rates to serve development within the Plan area may adversely affect the water levels of the supporting habitat upon which qualifying bird species rely. As such, the Ramsar is scoped into the HRA process for water quantity impact pathways.	Yes
Orton Pit SAC	Orton Pit SAC[83] is designated for its calcium-rich, nutrient-poor waters and Great Crested Newt. The site is located within 600m of the Plan area's northern boundary; however, there is no identified hydrological pathway for water quality impacts associated with development within the Plan area. In particular, there are no WwtW serving planned growth that discharge upstream of watercourses adjacent to Orton Pit SAC. Therefore, there is unlikely to be an impact from growth during the Local Plan period and the SAC will be scoped out of the HRA process for water quality impact pathways.	The Nene ALS lists Orton Pit SAC as one of the water-dependent European sites located within the catchment area with the potential to be affected by abstraction practices. As the Plan area is partially located within the Nene ALS catchment area, additional abstraction to serve development within the area may result in changes to the water levels at Orton Pit, which could adversely affect both the habitat and species for which it is designated. Therefore, the SAC is scoped into the HRA process for water quantity impact pathways.	Yes

[82] JNCC (1993) Information Sheet on Ramsar Wetlands (RIS): Nene Washes. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11046.pdf [Date accessed: 25/06/26]

[83] Natural England (2018) European Site Conservation Objectives for Orton Pit SAC (UK0030053). Available at: https://publications.naturalengland.org.uk/publication/5289941760212992 [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
Ouse Washes SAC	Ouse Washes SAC[84] is designated for supporting the Spined Loach, which is sensitive to changes in water quality. The southern portion of the site coincides with the eastern part of the Plan area. The site is downstream of, and hydrologically connected to, the Plan area via the River Great Ouse and its tributaries. As such, the SAC is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Ouse Washes SAC is located within The Old Bedford including the Middle Level ALS catchment area, adjacent to the Ouse Upper and Bedford ALS[85] catchment area. Both ALSs, consider the Ouse Washes SAC as a proximate, water-dependent site that may be affected by abstraction practices within the area. Increased abstraction rates to serve development within the Plan area (also partly located within the two ALS catchment areas) may have an impact upon the supporting habitat for the Spined Loach for which the site is designated. As such, the SAC is scoped into the HRA process for water quantity impact pathways.	Yes
Ouse Washes SPA	Ouse Washes SPA[86] is designated for supporting numerous breeding and non-breeding bird species, such as the Northern Shoveler, which are sensitive to changes in water quality. The southern portion of the site coincides with the eastern part of the Plan area. The site is downstream of, and hydrologically connected to, the Plan area via the River Great Ouse and its tributaries. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Ouse Washes SPA is located within The Old Bedford including the Middle Level ALS catchment area, adjacent to the Ouse Upper and Bedford ALS catchment area. Both ALSs consider the Ouse Washes SPA as a proximate, water-dependent site that may be affected by abstraction practices within the area. Increased abstraction rates to serve development within the Plan area (also partly located within the two ALS catchment areas) may have an impact upon the supporting habitat for the Northern Shoveler and other species of breeding and non-breeding birds for which the site is designated. As such, the SPA is scoped into the HRA process for water quantity impact pathways.	Yes

[84] Natural England (2018) European Site Conservation Objectives for Ouse Washes SAC (UK0013011). Available at: https://publications.naturalengland.org.uk/publication/4894882430713856 [Date accessed: 25/06/26]

[85] Environment Agency (2017) Upper Ouse and Bedford Ouse abstraction licensing strategy. Available at: https://assets.publishing.service.gov.uk/media/5a820dd6e5274a2e87dc0e7f/ALS_2017_Upper_Ouse_and_Bedford_Ouse.pdf [Date accessed: 25/06/26]

[86] Natural England (2019) European Site Conservation Objectives for Ouse Washes SPA (UK9008041). Available at: https://publications.naturalengland.org.uk/publication/6636062256398336 [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
Ouse Washes Ramsar	Ouse Washes Ramsar[87] is designated for supporting a number of bird species, as well as relict fenland fauna and "*several nationally scarce plants*", such as the Small Water Pepper (*Polygonum minus*) that is sensitive to changes in water quality. The southern portion of the site coincides with the eastern part of the Plan area. The site is downstream of, and hydrologically connected to, the Plan area via the River Great Ouse and its tributaries. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Ouse Washes Ramsar is located within The Old Bedford including the Middle Level ALS catchment area, adjacent to the Ouse Upper and Bedford ALS catchment. Both ALSs consider the Ouse Washes Ramsar as a proximate, water-dependent site that may be affected by abstraction practices within the area. Increased abstraction rates to serve development within the Plan area (also partly located within the two ALS catchment areas) may have an impact upon the supporting habitat for the Small Water Pepper and other aquatic species for which the site is designated. As such, the Ramsar is scoped into the HRA process for water quantity impact pathways.	Yes
Portholme SAC	Portholme SAC[88], designated for its lowland hay meadows, is located within the centre of the Plan area, surrounded by numerous tributaries of the River Great Ouse. The site is identified in NE's SIP[89] and Supplementary Advice[90] documents as vulnerable to changes in water quality from the floodwaters arising from the River Great Ouse, which may be impacted by development occurring through the Local Plan. As such, the SAC is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Portholme SAC is located within the Ouse Upper and Bedford ALS catchment area and is identified in the associated ALS as vulnerable to changes in water levels as a result of abstraction activity in the area. Approximately half of the Plan area falls within this ALS catchment area. Therefore, the SAC is scoped into the HRA process based upon water quantity impact pathways as the meadows may be adversely affected by changes to water levels due to increased abstraction to serve development allocated under the Local Plan.	Yes

[87] JNCC (1976) Information Sheet on Ramsar Wetlands (RIS): Ouse Washes. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11051.pdf [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
The Wash & North Norfolk SAC	Two of the main waterbodies in and around the Plan area (the River Great Ouse and River Nene) discharge at The Wash Estuary, where The Wash & North Norfolk SAC is located. The SAC[91] is designated for numerous habitats (such as intertidal sandbanks and mudflats) and species (such as the Common Seal (*Phoca vitulina*) and Otter (*Lutra lutra*)) that are noted as sensitive to changes in water quality[92,93]. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	The Wash & North Norfolk Coast SAC lies partly within the Nene ALS catchment area. The site is identified as vulnerable to changing water levels due to abstraction practices within the area[94]. Increased abstraction rates to serve development within the Plan area (also partly located within this ALS catchment) has potential to alter water levels at the site, adversely affecting the status of the water-dependent habitats and supporting species for which it is designated. The Ouse Upper and Bedford ALS also identified vulnerability to changing water levels due to abstraction practices within this catchment area (which covers approximately half of the Plan area). Therefore, the SAC is scoped into the HRA process based upon water quantity impact pathways.	Yes

[91] Natural England (2018) European Site Conservation Objectives for The Wash & North Norfolk Coast SAC (UK0017075). Available at: https://publications.naturalengland.org.uk/publication/5950176598425600 [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
The Wash Ramsar	Two of the main waterbodies in and around the Plan area (the River Great Ouse and River Nene) discharge at The Wash Estuary, where The Wash Ramsar is located. The Ramsar[98] is designated for numerous breeding and non-breeding bird species (such as the Grey Plover, *Pluvialis squatarola)* that are noted as sensitive to changes in water quality[99]. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	The Wash & North Norfolk Coast Ramsar lies partly within the Nene ALS catchment and is vulnerable to changing water levels as a result of abstraction practices within the area. Increased abstraction rates to serve development within the Plan area (also partly located within this ALS catchment) has potential to alter water levels at the site, adversely affecting supporting habitats for the bird species for which it is designated. The site is also identified in the Ouse Upper and Bedford ALS as vulnerable to changing water levels due to abstraction practices within this catchment area (which covers approximately half of the Plan area). Therefore, the Ramsar is scoped into the HRA process based upon water quantity impact pathways.	Yes
Upper Nene Valley Gravel Pits SPA	Upper Nene Valley Gravel Pits SPA is designated for the Great Bittern, Gadwall, and European Golden Plover. The closest part of the European site to the Plan area is located approximately 3.5km from the eastern boundary. The SPA is positioned along the River Nene; however, it lies upstream of the Plan area. As such, LSEs upon water quality at the SPA are not anticipated to arise through development occurring under the Local Plan. Therefore, the SPA is scoped out of the HRA process for water quality impact pathways.	Upper Nene Valley Gravel Pits SPA is located within the Nene ALS catchment area. The site is noted as vulnerable to changing water levels due to abstraction within the Nene ALS. The Nene ALS catchment covers some of the northern and eastern parts of the Plan area. Increased abstraction rates to serve development within the Plan area may adversely affect the water levels of the habitats supporting qualifying bird species. As such, the site is scoped into the HRA process for water quantity impact pathways.	Yes

[98] Natural England (2018) European Site Conservation Objectives for The Wash & North Norfolk Coast SAC (UK0017075). Available at: https://publications.naturalengland.org.uk/publication/5950176598425600 [Date accessed: 25/06/26]

[99] Natural England (2024) The Wash & North Norfolk Coast SAC, Supplementary Advice. Available at: https://tinyurl.com/3kzmvxch [Date accessed: 25/06/26]

European sites with hydrological links to the Plan area	Potential water quality LSEs	Potential water quantity LSEs	Will the European site be scoped in for further assessment in the HRA process?
Upper Nene Valley Gravel Pits Ramsar	Upper Nene Valley Gravel Pits Ramsar is designated for a waterbird assemblage, including Mute Swans and Gadwall. The closest part of the European site to the Plan area is located approximately 3.5km from the eastern boundary. The Ramsar is positioned along the River Nene; however, it lies upstream of the Plan area. As such, LSEs upon water quality at the SPA are not anticipated to arise through development occurring under the Local Plan. Therefore, the SPA is scoped out of the HRA process for water quality impact pathways.	Upper Nene Valley Gravel Pits Ramsar is located within the Nene ALS catchment area. The site is noted as vulnerable to changing water levels as a result of abstraction within the Nene ALS. The Nene ALS catchment area covers some of the northern and eastern parts of the Plan area. Increased abstraction rates to serve development within the Plan area may adversely affect the water levels of the habitats supporting the qualifying bird species. As such, the site is scoped into the HRA process for water quantity impact pathways.	Yes
Woodwalton Fen Ramsar	Woodwalton Fen Ramsar is designated for its fenland habitat, which supports two species of British Red Data Book plants (Fen Violet (*Viola persicifolia*) and Fen Wood-rush (*Luzula pallidula*)), as well as many wetland invertebrates, aquatic beetles, flies and moths. Fenlands are notably sensitive to changes in water quality, with changes to nutrient levels and water chemistry easily able to offset the balance of the ecosystem[100,101]. The site is located within the Plan area; therefore, development under the Local Plan has the potential to adversely affect the Ramsar through changes to water quality. As such, the site is scoped in for further consideration in the HRA process based upon water quality impact pathways.	Woodwalton Fen Ramsar (and the northern half of the Plan area) lies in the Old Bedford including the Middle Level ALS catchment area. Increased abstraction rates to serve development within the Plan area may cause a decline in water levels, affecting the fenland habitat and supporting species for which the site is designated. Furthermore, the Woodwalton Fen area is vulnerable to changes to water levels via flooding[102], which may become more prevalent due to decreased permeability of land associated with development under the Local Plan. Fenlands are highly sensitive to changes in water quantity[103]; hence, activity within the Plan area has the potential to threaten the status of the fenland habitats and supported species. Therefore, the Ramsar is scoped into the HRA process for water quantity impact pathways.	Yes

3.6 Recreational pressure

3.6.1 Increased recreational pressure at European sites can result in damage to habitats in a number of ways, including through erosion and compaction; troubling of grazing stock; causing changes in behaviour to animals such as birds at nesting and feeding sites; spreading invasive species; dog fouling; and tree climbing.

3.6.2 A common approach taken across the UK to address recreational impacts at European sites is to establish a buffer zone or Zone of Influence (ZoI) based on detailed visitor survey data. The ZoI is the area within which there are likely to be significant effects arising from recreational activities undertaken by additional residents due to growth. This is often calculated by taking the distance travelled to reach a particular site by 75% of the respondents to visitor surveys. Where available, buffer distances have been applied to determine potential pathways of recreational impacts from the Local Plan.

3.6.3 The broad principle of buffer zones is one component of the HRA screening process for recreational pressures. The recreational draw of a European site depends on a number of factors. These factors include the extent and range of facilities provided (in particular parking); accessibility, both within the European site and in terms of linkages to the wider area beyond the site; incorporation of a European site as part of a wider designation, such as a National Park; and promotion of the site. A review of Recreational Impact Assessments (RIAs) undertaken for other European sites across the UK indicates that visitors typically live within 4.2 km (overall median value) of nature conservation sites and that the majority (75%) live within 12.6 km[104]. However, this review recognises that some visitors are prepared to travel longer distances to visit particular sites, for instance coastal and wetland sites.

3.6.4 As such, a precautionary distance of 15km has been applied to the scoping of European sites which may be sensitive to potential recreational impact pathways. This scoping exercise draws on a review of NE data which identifies vulnerabilities at each of the European sites located within 15km of the Plan area (**Appendix B**).

3.6.5 The following 14 European sites are located within 15km of the Plan area:

- Barnack Hills & Holes SAC;
- Eversden & Wimpole Woods SAC;
- Fenland SAC[105];
- Nene Washes SAC,
- Nene Washes SPA;
- Nene Washes Ramsar;
- Orton Pit SAC;
- Ouse Washes SAC,

[104] Weitowitz, D, C. Panter, C. Hoskin, R. and Liley, D. (2019) The effect of urban development on visitor numbers to nearby protected nature conservation sites. Journal of Urban Ecology, 5(1). Available at: https://academic.oup.com/jue/article/5/1/juz019/5602629. [Date accessed: 25/06/26]

[105] Fenland SAC is split across three components which lie 27 miles apart. The component of the SAC within 10km of the Plan area is underpinned by Woodwalton Fen SSSI.

- Ouse Washes SPA;
- Ouse Washes Ramsar;
- Portholme SAC;
- Upper Nene Valley Gravel Pits SPA;
- Upper Nene Valley Gravel Pits Ramsar; and,
- Woodwalton Fen Ramsar.

3.6.6 Barnack Hills & Holes SAC[106] comprises semi-natural dry grassland and scrubland habitat on calcareous substrates within a disused medieval quarry and is an important orchid site. The SAC is also designated as an NNR. The features of the SAC have been identified as vulnerable to public access and disturbance, particularly from dog walkers which are compacting the grassland and increasing nitrogen loading and the spread of negative indicator species[107]. The HRA of the adopted Local Plan highlighted the risk of increased visitor pressure from the nearby village of Barnack[108]. A review of mapping data indicates that the site is only accessible on foot via a car park on Wittering Road to the north of the site. Given the site is a disused quarry it is steep in parts and paths are uneven. No visitor facilities are provided on the site itself and the visitor draw is likely to be limited, predominantly from the village of Barnack, but no further than 5km. Whilst Barnack does not lie within Huntingdonshire, as the European site is located just under 5km from the Plan area's northern boundary, it is possible that residential development concentrated in the north of the district could result in an increasing number of dog walkers visiting the SAC. Therefore, Barnack Hills & Holes SAC is scoped into the HRA process for further consideration of recreational pressures in the screening assessment.

3.6.7 The qualifying species of Eversden & Wimpole Woods SAC[109] is the Barbastelle Bat (*Barbastella barbastellus*). This SAC is situated approximately 4km to the south east of the Plan area. Public disturbance is not been identified as a threat to the SAC in the SIP[110,111]. Public access is permitted through the woods, however, the supplementary advice for the SAC notes that '*There is no evidence that daytime public access to woodland used by barbastelles causes disturbance to these bats. It seems very likely that light pollution during hours of darkness would be disturbing. Tree management that damaged actual or potential roosts, carried out for H&S reasons in areas used by the public, or indeed any other reason, would certainly cause serious disturbance to the bats'*[112]. South Cambridgeshire District Council has published a Biodiversity Supplementary Planning Document (SPD) which identifies a key conservation area around the SAC of 5km and a 10km sustenance or wider conservation area[113]. These zones reflect urbanisation effects upon bats at this SAC which are addressed in detail at **Section 3.7**. Based on details presented in the Supplementary Advice for the SAC and the accompanying SIP, Eversden & Wimpole Woods SAC is scoped out of the HRA process for further consideration in terms of recreational pressures.

3.6.8 Nene Washes SAC[114] and Ramsar[115] are designated for supporting the Spined Loach (**Appendix B**). The Spined Loach is restricted to five east-flowing rivers in eastern England. This species appears to have limited means of dispersal; therefore, distribution records are patchy[116]. The Nene Washes SAC and Ramsar contain the highest recorded density of Spined Loach. Recreation is, however, not identified as a threat to the SAC or Ramsar for this species due to a lack of angling interest[117,118] and, therefore, recreational impacts upon the Nene Washes SAC can be scoped out of any further assessment.

3.6.9 The qualifying species of the Nene Washes SPA[119] include a number of internationally important species of birds which are reliant on the Washes seasonally flooded habitat for providing breeding and wintering habitat. The Nene Washes Ramsar is also designated for Tundra Swan and a number of breeding birds, raptors and nationally scarce plants and invertebrates (**Appendix B**). The Nene Way long distance path runs along the northern bank of the River Nene, providing public access from Peterborough eastwards past Whittlesey to Ring's End. The SPA and Ramsar designations have been identified as vulnerable to disturbance caused by human activity upon bird populations, specifically through visitors engaging in recreational activities such as angling, wildfowling, bird watching and skating at the site[120]. As the SPA and Ramsar are located approximately 2km from the northern boundary of the Plan area, residential development allocated in the Plan has the potential to increase recreational pressure upon the designation; therefore, both sites are scoped into the HRA process for further consideration of this impact pathway.

3.6.10 The Ouse Washes SAC[121] is designated for the Spined Loach. Consultation with NE has indicated that Spined Loach in the Ouse Washes SAC are particularly vulnerable to recreational impacts and therefore this impact pathway is scoped into the HRA process in terms of this impact pathway. The Ouse Washes SPA[122] is designated for supporting numerous breeding and non-breeding bird species. The Ouse Washes Ramsar[123] is also designated for supporting a number of bird species, as well as relict fenland fauna and "*several nationally scarce plants*", such as the Small Water Pepper. The conservation of habitats at the Ouse Washes SPA is noted to be dependent on control of access and recreational activities[124]. The Ouse Washes SPA and Ramsar designations extend into the eastern section of the Plan area. The Ouse Washes encompasses two canalised main river channels of the River Great Ouse that run along each side of its length, with an extensive area of wet grassland and field drains in between[125]. Public access is possible along both the main river channels and the open access land in the fields between. Given the location of these designations within the Plan area, the SPA and Ramsar will be scoped into the HRA process for further consideration of recreational impacts.

3.6.11 It is noted that qualifying bird species associated with the Nene Washes SPA and Ramsar and the Ouse Washes SPA and Ramsar may also use functionally linked land within the wider area, outside the designation boundaries. Functionally linked bird habitat associated with the SPA and Ramsar is likely to primarily consists of surrounding arable farmlands and pasturelands that host non-breeding wildfowl and waders. These off-site habitats serve as critical complementary areas for daytime foraging and nighttime roosting, particularly when the main washland is deep underwater. In addition to these areas, functionally linked habitat may include the interconnecting drainage ditch network that is located beyond the designations. Qualifying species of birds located within areas of functionally linked land may also be vulnerable to recreational impacts. NE's SSSI IRZs around these designations include the area immediately surrounding the Nene Washes SPA and Ramsar and the Ouse Washes SPA and Ramsar and extending up to several kilometers into the wider Cambridgeshire and Fens landscape and encompassing adjacent SSSI designations (such as Berry Fen SSSI) and RSPB reserves such as the Ouse Fen reserve, these areas are frequently referred to as "Goose and Swan Functional Land" IRZ.

3.6.12 Orton Pit SAC[126] is designated for its calcium-rich, nutrient-poor waters and the Great Crested Newt. The site is privately owned with no public access; therefore, recreational impact pathways can be scoped out of the HRA process[127].

3.6.13 Portholme SAC[128], designated for its lowland hay meadows, is located within the centre of the Plan area. The meadows have not been identified as vulnerable to recreational pressure[129,130] in the SIP or Supplementary Advice documents provided by NE; however, in their comments on the HRA for the adopted Local Plan, NE expressed concern surrounding the sensitivity of meadow flora communities to existing recreational activities such as walking and dog walking. The SAC is open access land with three Public Rights of Way, including the Ouse Valley Way, passing through the SAC with parking provided to its immediate north. Development under the Local Plan that is concentrated within walkable and drivable distance from the SAC has the potential to increase the extent of recreational pressure. Therefore, Portholme SAC is scoped into the HRA process based upon the recreational pressure impact pathway.

3.6.14 Upper Nene Valley Gravel Pits SPA[131] and Ramsar[132] comprise a series of disused sand and gravel pits along the River Nene valley which provide valuable nesting and feeding conditions for major inland concentrations of wintering water birds. Disturbance from recreation (particularly walkers and dogs) affects wintering birds at these designations by reducing the time available for feeding and increasing energy expenditure when birds take flight to avoid sources of recreational disturbance[133]. North Northamptonshire Council, West Northamptonshire Council and Bedford Borough Council jointly commissioned a study on the recreational impacts at the Upper Nene Valley Gravel Pits designations to inform the HRAs of their respective Local Plans. This project consisted of two surveys:

- Visitor Access Survey[134]; and,
- Bird Disturbance Survey[135].

3.6.15 These surveys identified bird disturbance from walkers with dogs, walkers, watersports activities, wildfowling and anglers. Visitor survey results showed that 75% of visitors on a short visit, directly from home, during the winter, lived within a 5.9km ZoI of the SPA. This distance has informed a recommended zone within which new development is likely to have an adverse in-combination recreational effect upon the SPA. As the SPA and Ramsar sites are located approximately 3.5km from Huntingdonshire, the Plan area falls within this ZoI. Therefore, both designations are scoped into the HRA process for further consideration of recreational impacts.

3.6.16 Fenland SAC (where it is underpinned by Woodwalton SSSI and Woodwalton NNR)[136] and Woodwalton Ramsar[137] are located near the centre of the Plan area. The SAC is designated for its meadow and fen habitats, as well as Great Crested Newt and Spined Loach. The Ramsar is designated for Fen Violet and Fen Wood-rush, as well as numerous wetland invertebrates, aquatic beetles, flies and moths. The conservation of meadow habitats at Fenland SAC are noted to be dependent on recreation/visitor management[138]. The site is bound by watercourses including Wheatley's Drain and Great Raveley Drain and crossed by a number of smaller watercourses. Given the location of the SAC and Ramsar within the Plan area and availability of informal public access across promoted routes, these designations will be scoped into the HRA process for further consideration of recreational impacts.

3.6.17 Rutland Water SPA[139] and Ramsar[140] are designated for numerous breeding and non-breeding bird species. These designations lie just over 15km from the Plan area. However, advertising itself as the "*playground of the East Midlands*"[141], Rutland Water has a notable recreational draw and has been identified as vulnerable to associated recreational threats and pressures[142] from a range of activities, including watersports, dog walking, cycling, golfing, fishing, and bird watching[143]. Given the extent of recreational draw to this European site, it has also been included for assessment in this scoping assessment. However, the HRA[144] completed to inform the Rutland Local Plan established a recreational ZoI of 6-7km within which recreational impacts from new development were considered likely at Rutland Water SPA and Ramsar. The Huntingdonshire Plan area does not fall within 7km of Rutland Water, being located 15.1km to its southeast. It can, therefore, be concluded that development under the Local Plan will not increase recreational pressure upon the SPA or Ramsar site. As such, these designations have been scoped out of the HRA process based upon this impact pathway.

3.6.18 **Table 3.3** summarises European sites where recreational effects associated with the Local Plan will be considered further in the HRA process.

Table 3.3: *Summary of recreational impact pathways for European sites within the influence of the Local Plan*

European sites within the influence of the Local Plan	Potential recreation LSEs	Will the European site be scoped in for further assessment in the HRA process?
Barnack Hills & Holes SAC	Barnack Hills & Holes SAC is also designated as a NNR and has been identified as being vulnerable to public access and disturbance. Recreation LSEs from the Local Plan are possible and will therefore be considered further in the HRA process.	Yes
Eversden & Wimpole Woods SAC	There is no evidence of daytime public access to the bat roosts and therefore recreational impacts from the Local Plan can be scoped out.	No
Fenland SAC	Given the location of Fenland SAC within the Plan area, the vulnerability of its meadow and fen habitats and access at the SAC, it will be scoped into the HRA process.	Yes
Nene Washes SAC	The qualifying features of the Nene Washes SAC are not sensitive to recreational impacts. Recreational LSEs will therefore be scoped out of the HRA process.	No
Nene Washes SPA	The qualifying features of the Nene Washes SPA are sensitive to recreational impacts associated with public access. Recreation LSEs are possible and will therefore be considered further in the HRA process. Consideration will be given to impacts on associated areas of FLL.	Yes
Nene Washes Ramsar	The qualifying features of the Nene Washes Ramsar are sensitive to recreational impacts associated with public access. Recreation LSEs are therefore possible and will be considered further in the HRA process.	Yes
Orton Pit SAC	There is no public access to Orton Pit SAC and therefore recreational LSEs will be scoped out of the HRA process.	No
Ouse Washes SAC	The qualifying features of the Ouse Washes SAC is noted by NE to be sensitive to recreational impacts. Recreational LSEs will therefore be scoped into the HRA process.	Yes
Ouse Washes SPA	The qualifying features of the Ouse Washes SPA are sensitive to recreational impacts associated with public access. Recreation LSEs are possible and will therefore be considered further in the HRA process. Consideration will be given to impacts on associated areas of FLL.	Yes
Ouse Washes Ramsar	The qualifying features of the Ouse Washes Ramsar are sensitive to recreational impacts associated with public access. Recreation LSEs are possible and will therefore be considered further in the HRA process.	Yes
Portholme SAC	Given the location of Portholme SAC within the Plan area, the vulnerability of its features to recreational impacts and public access at the site, this SAC will be scoped into the HRA process.	Yes
Rutland Water SPA	Given the Plan area is located outside the recreational ZoI for Rutland Water, the SPA will be scoped out of the HRA process as recreational LSEs are considered unlikely.	No

European sites within the influence of the Local Plan	Potential recreation LSEs	Will the European site be scoped in for further assessment in the HRA process?
Rutland Water Ramsar	Given the Plan area is outside the recreational ZoI for Rutland Water, this Ramsar will be scoped out of the HRA process as recreational LSEs are considered unlikely.	No
Upper Nene Valley Gravel Pits SPA	Given the location of the Plan area within the recreational pressure ZoI for the SPA this site will be scoped into the HRA process.	Yes
Upper Nene Valley Gravel Pits Ramsar	Given the location of the Plan area within the recreational pressure ZoI for the Ramsar this site will be scoped into the HRA process.	Yes
Woodwalton Fen Ramsar	Given the location of Woodwalton Ramsar within the Plan area, the vulnerability of its meadow and fen habitats and access at the Ramsar, it will be scoped into the HRA process.	Yes

3.7 Urbanisation effects

3.7.1 Urbanisation effects typically occur when development is located close to a European site boundary. Impacts may include noise disturbance, lighting effects, cat predation, fly-tipping, wildfire, littering and vandalism. Strategic mitigation schemes elsewhere in the UK have set out to limit development (i.e. avoid a net increase in residential dwellings) on the basis of site-specific evidence on how to safeguard against these impacts.

3.7.2 As with recreational impacts, it is common practice for urbanisation mitigation strategies in the UK to involve the implementation of a buffer zone. Typically, these zones extend around 400m from the edge of a designation. This accounts for likely impacts from pets (e.g. cat predation) and the distance from which people tend to access a site on foot. However, urbanisation effects may also take place at FLL (see definition in **paragraph 3.3.9**), which is especially relevant for European sites which are designated for species which rely on the wider landscape for activities such as feeding, commuting and foraging. For instance, certain species of birds use a variety of habitats outside the designation boundary of a European site as feeding or roosting habitat and bats may use the wider landscape for foraging and commuting. These habitats may be functionally linked where they play an important role in maintaining or restoring the population of a qualifying species at a favourable conservation status. The tests set out in the Habitats Regulations need to be applied to plans which may significantly affect FLL. This scoping exercise focuses upon European sites falling within 400m of the Plan area, but also takes FLL into consideration.

3.7.3 Portholme SAC is located within the Plan area, immediately south of Huntingdon and north west of Godmanchester, two of the district's towns, and also in close proximity to key roads and public transport routes. As outlined in **paragraph 3.6.13**, the grasslands for which Portholme SAC is designated are sensitive to recreational impacts, such as trampling by walkers and dog walkers (see **Section 3.6**). Urbanisation effects, such as noise and light pollution, are unlikely to affect the conservation status of the lowland hay meadow beyond those impacts associated with recreational pressure and direct footfall from home. Urbanisation effects are not therefore identified as a threat in either the SIP for the SAC or NE's supplementary conservation advice. As such, the Portholme SAC will be scoped out of the HRA process based upon the urbanisation effects impact pathway.

3.7.4 The three Ouse Washes designations are all located within 400m of the Plan area, with a small portion of each site falling within the Plan area, to the east. The Spined Loach for which Ouse Washes SAC is designated is unlikely to be adversely impacted by urbanisation effects; therefore, the SAC will be scoped out of the HRA process in terms of urbanisation effects. Many birds are particularly sensitive to urbanisation effects, such as noise and light pollution which can disrupt breeding and nesting habits[145]. As such, the Ouse Washes SPA and Ramsar will be scoped into the HRA process based upon the urbanisation effects impact pathway.

3.7.5 Consideration will also be given to urbanisation impacts upon qualifying species of bird associated with the Ouse Washes SPA and Ramsar and the Nene Washes SPA and Ramsar sites when located outside the designation boundaries (on areas of FLL) as discussed in **paragraph 3.6.11**.

3.7.6 Orton Pit SAC is located approximately 550m from the Plan area's northern boundary. Great Crested Newts for which the SAC is designated have been known to travel approximately 500m from their breeding pond habitat during the terrestrial phase of their lifecycle[146]. Newts forage, disperse and rest on land. Depending on the location of the ponds within the SAC, the terrestrial habitat of this species may include land outside the SAC boundary. Therefore, any development within 500m of this SAC has the potential for urbanisation effects. Whilst the SAC is not accessible to the public (see **paragraph 3.6.12**), it is vulnerable to illegal activities including off-roading, vandalism, arson and disturbance from dogs jumping into ponds[147]. Given the proximity of the SAC to the Plan area, it will be scoped into the HRA process based upon the urbanisation effects impact pathway.

3.7.7 Fenland SAC is designated for its meadows and fen habitats, and species including the Spined Loach and Great Crested Newt. With the exception of the Spined Loach, these qualifying features, and functionally linked habitat which supports them, has the potential to be affected by urbanisation effects due to its location in the Plan area. Great Crested Newts may be vulnerable to urbanisation effects where habitat within 500m of a breeding pond is affected (as described above in **paragraph 3.7.6**). The meadow and fen qualifying habitats may be vulnerable to impacts such as fly-tipping, anti-social behaviour and littering. Fenland SAC is, therefore, scoped into the HRA process for further consideration of urbanisation effects.

3.7.8 Woodwalton Fen Ramsar, which has the same geographical location as Fenland SAC (where it is underpinned by Woodwalton SSSI and Woodwalton NNR), is designated for fen habitat, invertebrates and nationally scarce plants. Research by Ganguly and Candolin (2023)[148] highlights the potential for artificial light at night (ALAN) to affect ecologically important invertebrates which are themselves responsible for providing key ecosystem functions. The invertebrates for which Woodwalton Fen Ramsar is designated may be adversely affected by illumination and fen habitat and plants affected by fly-tipping and littering as a result of development under the Local Plan. As such, Woodwalton Fen Ramsar is scoped into the HRA process based upon urbanisation effects. As set out in **Section 3.5**, consideration of the wider context of the Fenland SAC and Woodwalton Fen Ramsar will be of great importance during the next stages of the HRA process. These designations lie within the Great Fen area, which provides a range of habitats of significant ecological importance, and for which there are aspirations to restore and reconnect the wider landscape thorough the Great Fen Project[149]. It is important that urbanisation effects from the Local Plan do not compromise the aims of this project and maximise restoration to ensure functionally linked and supporting habitat plays a role in their long-term conservation.

3.7.9 The Upper Nene Valley Gravel Pits SPA and Ramsar are not located within 400m of the Plan area; however, these designations must be considered on the basis of FLL. The SPA and Ramsar are designated for a breeding bird assemblage of lowland open waters and their margins, wintering waterbird species and an assemblage of over 20,000 waterbirds in the non-breeding season[150]. Qualifying bird species of the Upper Nene Valley Gravel Pits SPA and Ramsar designations use a variety of habitats outside the SPA and Ramsar boundary for nocturnal and diurnal foraging and roosting. These areas of habitat are considered to be FLL. Golden Plover and Lapwing (*Vanellus vanellus*)[151] are qualifying features of the Upper Nene Valley Gravel Pits SPA and Ramsar designations. These species often spend time feeding or roosting on grassland, wetland and arable land outside the designation boundaries. The British Trust for Ornithology (BTO) Wetland Bird Survey (WeBS) Alert for the Upper Nene Valley Gravel Pits SPA[152] reports that Golden Plover have shown a 76% decline since baseline analysis, (high alert, red). Lapwing, which are part of the waterbird assemblage, have shown a 45% decline since baseline analysis, and the waterbird assemblage a 26% decline (medium alert, amber).

3.7.10 There is limited information regarding the use of FLL by Golden Plover and Lapwing within surrounding area to the SPA. However, due to the continued decline in Golden Plover and Lapwing populations, NE has been involved in a partnership project with the Wildlife Trust in surveying and analysing potential FLL within 10km of the SPA. The mapping is based on field criteria for Golden Plover and Lapwing and historic biological records and will be progressively enhanced by additional records obtained from Golden Plover and Lapwing records in an ongoing manner[153].

3.7.11 The Plan area falls within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar sites. Therefore, both designated sites will be scoped into the HRA process due to potential urbanisation effects upon areas of FLL.

[153] Natural England (2025) E-mail to Lepus Consulting, 25 July

3.7.12 Whilst Eversden & Wimpole Woods SAC is not located within 400m of the Plan area, urbanisation effects upon its qualifying species, the Barbastelle Bat, have been taken into consideration. Barbastelle bats are rare within the UK, with few breeding sites currently known[154]. Maternity colonies use cracks and crevices within woodlands or buildings for breeding, with caves and underground structures used for hibernation. The majority of Barbastelles tend to forage up to 7km from their woodland roosts[155], however, they will travel up to 20km from roost sites to reach productive hunting grounds[156]. As noted in **paragraph 3.6.7**, South Cambridgeshire District Council has published a Biodiversity SPD which identifies a key conservation area around the SAC of 5km and a 10km sustenance or wider conservation area, which has been reflected in the NE SSSI IRZs for this SAC.

3.7.13 Development set out in the Local Plan has the potential to disrupt FLL upon which bats rely for foraging or commuting. Potential impacts from development on FLL can include:

- Loss of / damage to roost sites;
- Loss of flyways used for commuting/foraging;
- Strategic loss or disruption of key flyways between different roosts;
- Loss of/degradation to foraging habitat; and,
- Artificial lighting and noise.

3.7.14 In addition to direct loss or degradation of habitat (designated or FLL), development has the potential to result in the fragmentation of connecting wildlife corridors which would hinder bat movements. Diverse habitat corridors of wetland, grassland, scrub, hedgerow and woodland habitats are also likely to provide an abundance of insects and prey upon which bats may feed. As well as being sensitive to development, bats are also vulnerable to impacts associated with renewable energy projects.

3.7.15 Core Sustenance Zones (CSZ), or core areas, are the defined areas surrounding bat roosts which link to connecting flightlines and foraging zones for bats[157]. The CSZ for Barbastelle Bats is 7km. Given the Plan area lies approximately 4km from Eversden & Wimpole Woods SAC, urbanisation effects upon the SAC will be scoped in for further consideration in the HRA process.

3.7.16 **Table 3.4** summarises European sites where urbanisation effects associated with the Local Plan, either at European sites or upon areas of FLL, will be considered further in the HRA process.

Table 3.4: *Summary of urbanisation impact pathways for European sites within the influence of the Local Plan*

European sites within the influence of the Local Plan	Potential urbanisation LSEs	Will the European site be scoped in for further assessment in the HRA process?
Eversden & Wimpole Woods SAC	Development set out in the Local Plan has the potential to have urbanisation effects upon areas of FLL associated with this SAC and it will therefore be scoped into the HRA process.	Yes
Fenland SAC	Given the location of this SAC within the Plan area urbanisation LSEs are possible, and it will therefore be scoped into the HRA process.	Yes
Orton Pit SAC	Whilst this SAC is not located within 400m of the Plan area, given its susceptibility to illicit activities it will be scoped into the HRA process.	Yes
Nene Washes SPA	The qualifying features of the SPA are vulnerable to urbanisation LSEs. Given the potential for areas of FLL to be located within 400m of the Plan area this SPA will therefore be scoped into the HRA process.	
Nene Washes Ramsar	The qualifying features of the Ramsar are vulnerable to urbanisation LSEs. Given the potential for FLL to be located within 400m of the Plan area this Ramsar will therefore be scoped into the HRA process.	
Ouse Washes SAC	The qualifying features associated with the SAC are not vulnerable to urbanisation LSEs and this SAC will therefore be scoped out of the HRA process.	No
Ouse Washes SPA	The qualifying features of the SPA are vulnerable to urbanisation LSEs. Given its location within 400m of the Plan area this SPA will therefore be scoped into the HRA process. Consideration will also be given to urbanisation impacts upon birds when using areas of associated FLL.	Yes
Ouse Washes Ramsar	The qualifying features of the Ramsar are vulnerable to urbanisation LSEs. Given its location within 400m of the Plan area this Ramsar will therefore be scoped into the HRA process. Consideration will also be given to urbanisation impacts upon birds when using areas of associated FLL.	Yes
Portholme SAC	Lowland hay meadows are not sensitive to urban impacts such as noise and visual disturbance and urbanisation effects are not identified in the SIP or NE's conservation advice for the SAC.	No
Upper Nene Valley Gravel Pits SPA	There is potential for FLL associated with this SPA designation to be present within the Plan area and therefore it will be scoped in for further consideration in the HRA process.	Yes
Upper Nene Valley Gravel Pits Ramsar	There is potential for FLL associated with this Ramsar designation to be present within the Plan area and therefore it will be scoped in for further consideration in the HRA process.	Yes
Woodwalton Fen Ramsar	Given the location of this Ramsar within the Plan area urbanisation LSEs are possible, and it will therefore be scoped into the HRA process.	Yes

3.8 European sites threats and pressures

3.8.1 The impact pathways with potential to affect European sites are summarised in **Table 3.5**. European sites identified as vulnerable to threats and pressures will form the basis of the HRA screening process and are mapped in **Figures 3.1** and **3.2**.

Table 3.5: *Summary of impact pathways to European sites which may be associated with the Local Plan*

European site name	Air Pollution Impact Pathway?	Water Quality Impact Pathway?	Water Quantity Impact Pathway?	Recreational Pressure Impact Pathway?	Urbanisation Effects Impact Pathway?
Barnack Hills & Holes SAC	No	No	No	Yes	No
Eversden & Wimpole Woods SAC	No	No	No	No	Yes
Fenland SAC	No	Yes	Yes	Yes	Yes
Nene Washes SAC	Yes	Yes	Yes	No	No
Nene Washes SPA	No	Yes	Yes	Yes	Yes
Nene Washes Ramsar	Yes	Yes	Yes	Yes	Yes
Orton Pit SAC	No	No	Yes	No	Yes
Ouse Washes SAC	Yes	Yes	Yes	Yes	No
Ouse Washes SPA	No	Yes	Yes	Yes	Yes

4 Screening of Proposed Submission Local Plan

4.1 Policy and allocations screening

4.1.1 This section of the report screens the Proposed Submission Local Plan for LSEs at European sites. Each policy and allocation which forms the Local Plan was evaluated against the HRA screening criteria (see **Table 2.1**), taking into consideration case law and best practice (see **Section 2.2**). The screening assessment concluded LSEs in-combination at a number of European sites. **Appendix C** and **Appendix D** provide the output of this screening exercise which has informed the test of likely significance i.e. will the Local Plan have an LSE, alone or in-combination, at a European site.

4.1.2 It is concluded that LSEs, either from the Local Plan alone, or in-combination with other plans or projects, could be screened out for most policies. This is because the policies fall into the following categories (see **Table 2.1** for a description of each category):

- **Category A:** General statements of policy/general aspirations
- **Category B:** Policies listing general criteria for testing the acceptability/sustainability of proposals
- **Category D:** Environmental protection/site safeguarding
- **Category F:** Policies or proposals that cannot lead to development or other change

4.1.3 A number of policies were, however, considered likely to have an LSE as they fell into **Category L** – Policies or proposals which might be likely to have a significant effect in combination and **Category M –** Bespoke area, site or case-specific policies or proposals intended to avoid or reduce harmful effects on a European site. All allocations were screened in under **Category L** because they had the potential for LSEs in combination.

4.1.4 The following policies (**Table 4.1**) and all allocations will, therefore, be explored in the AA (Stage 2 of the HRA process) in more detail.

Table 4.1: *Summary of screened in policies*

*(Note: only policies screened into the HRA process have been included in the summary table below. The screening outcome for all policies is provided in **Appendix C**).*

Policy Number	Policy Name
Policy LP1	How much development do we expect?
Policy LP2	Our strategy for change
Policy LP3	Distribution of growth
Policy LP6	Market Towns
Policy LP7	Service Centres
Policy LP8	Local Services Villages
Policy LP9	Villages

Policy Number	Policy Name
Policy LP10	Hamlets and the Countryside
Policy LP16	Approach to renewable energy schemes
Policy LP23	Managing surface water
Policy LP35	Protecting and enhancing established employment areas
Policy LP36	Expansion and diversification of rural businesses
Policy LP37	Shaping new businesses in the countryside
Policy LP38	Enabling key clusters and innovation-led growth
Policy LP39	Enabling logistics and distribution
Policy LP40	Helping tourism and recreation in the countryside
Policy LP41	Defining our retail hierarchy
Policy LP42	Promoting town centre vitality and viability
Policy LP43	Supporting local centres
Policy LP44	Services and facilities outside designated centres
Policy LP51	Gypsies, travellers and travelling showpeople
Policy LP57	Water-related development

4.1.5 Whilst no site allocation falls within the 5.9km recreational ZOI associated with the Upper Nene Valley Gravel Pits SPA and Ramsar, potential windfall developments within this zone over the Plan period must be considered. In addition, potential urbanisation LSEs within the wider 10km buffer zone surrounding these designations must also be assessed, particularly in relation to impacts of windfall and renewable energy schemes on Golden Plover and Lapwing habitat. Therefore, the Upper Nene Valley Gravel Pits SPA and Ramsar will be screened into the HRA process.

4.1.6 Based on the location of site allocations outside an area with potential for recreation and urbanisation LSEs (impact risk areas are discussed in **sections 3.6** and **3.7**), a number of LSEs can be screened out of the HRA process. These include recreational LSEs at Barnack Hills & Holes SAC and urbanisation LSEs at Fenland SAC, Orton Pit SAC and Woodwalton Fen Ramsar.

4.2 Screening Conclusion

4.2.1 The Local Plan is not directly connected with, or necessary, to the management of any European site. Therefore, as required under the Habitats Regulations, an assessment of LSEs of the Local Plan upon European sites has been undertaken. The screening checks (**Appendix C** and **Appendix D**) indicate that the Local Plan has the potential to have LSEs upon the following European sites:

- **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC.

- **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar.
- **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar.
- **Recreational pressure:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar.
- **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.

4.2.2 The screening assessment takes no account of mitigation measures that the Local Plan may incorporate to mitigate adverse impacts upon European sites. It is, therefore, concluded that the Local Plan will be screened into the HRA process. The next stage of the HRA process will be an AA.

5 Air quality appropriate assessment

5.1 Introduction

5.1.1 The HRA screening process in **Chapter 4** concluded that a number of Local Plan policies (**Appendix C**) and all allocations when taken cumulatively (**Appendix D**) have the potential to result in LSEs at Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC due to changes in air quality. These European sites contains qualifying habitats, or supporting habitats for qualifying species, which are sensitive to atmospheric nitrogen deposition and associated acidification.

5.1.2 To inform this Appropriate Assessment, Huntingdonshire District Council commissioned air quality modelling following Natural England's standard methodology for assessing traffic-related air pollution under the Habitats Regulations. The modelling assessed changes in nitrogen oxides (NOx), ammonia (NH_3), nitrogen deposition and acid deposition associated with the proposed submission Local Plan.

5.1.3 The Appropriate Assessment follows Natural England's Standard Advice for Local Plans together with guidance published by the Institute of Air Quality Management (IAQM) and the Chartered Institute of Ecology and Environmental Management (CIEEM). The role of this chapter is to interpret the modelling outputs in an ecological context and determine whether the Local Plan would adversely affect the integrity of any European site, either alone or in combination with other plans and projects.

5.2 Appropriate Assessment

5.2.1 Air quality modelling undertaken by AQC follows Natural England's recommended staged approach. The modelling considers future traffic associated with the Local Plan and compares predicted concentrations and deposition rates against relevant Critical Levels (CLe) and Critical Loads (CLo). Consistent with Natural England's guidance, exceedance of the precautionary 1% screening threshold does not automatically indicate an adverse effect on site integrity but identifies where further ecological assessment is required. Where Process Contributions exceed 1% of the relevant CLe or CLo, this chapter considers the ecological significance of the predicted changes, including the spatial extent of effects, the location of qualifying habitats and supporting habitats, existing background conditions, predicted future trends in emissions and the conservation objectives of each European site.

5.2.2 The modelling concludes that NOx and acid deposition can be screened out for all assessed European sites (see Appendix G). Ammonia requires further assessment for Nene Washes SAC/Ramsar and Ouse Washes SAC/Ramsar, whilst nitrogen deposition requires further assessment for Portholme SAC, Nene Washes SAC/Ramsar and Ouse Washes SAC/Ramsar. The Appropriate Assessment presented below focuses on those pollutants requiring further ecological interpretation.

5.3 Portholme SAC

Baseline

5.3.1 Portholme SAC is designated for its lowland hay meadows (*Alopecurus pratensis* and *Sanguisorba officinalis*), which are sensitive to atmospheric nitrogen deposition. Increased nitrogen inputs have the potential to alter soil nutrient availability, favour competitive grasses and reduce the diversity and composition of the qualifying habitat. The conservation objectives for the SAC therefore require the extent, distribution, structure and function of the qualifying habitat to be maintained or restored.

Appropriate Assessment

5.3.2 Air quality modelling demonstrates that the Local Plan will not result in exceedances of the Critical Levels (CLe) for nitrogen oxides (NOx) or ammonia (NH_3), whilst acid deposition remains below the relevant Critical Load (CLo).

5.3.3 Nitrogen deposition exceeds the precautionary 1% screening threshold within a limited area adjacent to the affected road network and therefore requires further ecological assessment. The accompanying isopleth map (**Figure 5.1**) demonstrates that the greatest increases in nitrogen deposition are confined to the area immediately adjacent to the affected road and decline rapidly with increasing distance from the carriageway. The spatial extent and magnitude of the predicted change therefore provide important context for the Appropriate Assessment but, as the qualifying lowland hay meadow is sensitive to increased nitrogen inputs, further consideration is required of whether the predicted deposition could affect the composition, structure and function of the qualifying habitat.

5.3.4 The lower Critical Load for the qualifying lowland hay meadow habitat at Portholme SAC is 10 kg N/ha/yr. At the worst-case modelled location, 44 m from the road, total nitrogen deposition is predicted to decrease from 17.6 kg N/ha/yr in the 2023 baseline to 15.1 kg N/ha/yr in the 2046 With Local Plan scenario. The Local Plan alone contributes 0.036 kg N/ha/yr at this location, equivalent to 0.36% of the Critical Load and therefore below the 1% screening threshold. In combination with other plans and projects, the predicted contribution is 0.46 kg N/ha/yr, equivalent to 4.6% of the Critical Load. The Critical Load is therefore exceeded under both existing and future conditions, and the in-combination contribution exceeds the 1% screening threshold. Further ecological consideration is consequently required through Appropriate Assessment.

Distance from road	2023 baseline	2046 Zero Growth	2046 Base	2046 With Local Plan	Local Plan PC	In-combination PC
44 m	**17.6 (176% CL)**	14.6 (146%)	15.0 (150%)	**15.1 (151%)**	**0.036 (0.36% CL)**	**0.46 (4.6% CL)**
65 m	16.9 (169%)	14.3 (143%)	14.6 (146%)	**14.6 (146%)**	0.029 (0.29%)	0.33 (3.3%)
129 m	15.9 (159%)	13.9 (139%)	14.0 (140%)	**14.1 (141%)**	0.018 (0.18%)	0.16 (1.6%)
200 m	15.4 (154%)	13.7 (137%)	13.8 (138%)	**13.8 (138%)**	0.012 (0.12%)	0.09 (0.9%)

Table 5.1: *Nitrogen deposition at the worst-case modelled transect (Transect A), Portholme SAC*

5.3.5 The modelling also demonstrates that overall nitrogen deposition is predicted to decrease between the 2023 baseline and the 2046 assessment year as a consequence of improvements in vehicle emissions and wider emissions reduction policies. Appendix A3 of the air quality modelling considers whether the Local Plan would retard these predicted improvements. At the worst-case transect within Portholme SAC, the Local Plan alone is predicted to delay reductions in nitrogen deposition by between 0.16 and 0.27 years, whilst the Local Plan in combination with other plans and projects is predicted to delay reductions by between 1.3 and 3.5 years. However, the modelling concludes that these estimates are highly precautionary and are likely to overestimate any delay because they do not account for continued improvements in vehicle technology and emissions beyond those incorporated within the assessment. Overall nitrogen deposition under the Local Plan scenario remains lower than existing (2023) conditions across the site.

5.3.6 Taking account of the limited spatial extent of the predicted exceedance, the small contribution of the Local Plan to overall nitrogen deposition, the absence of any predicted measurable change to the extent, distribution, structure or function of the qualifying habitat, the reduction in future background deposition, and the findings of the retardation assessment, it is concluded that the Huntingdonshire Local Plan would not undermine the conservation objectives of Portholme SAC. Accordingly, the Appropriate Assessment concludes that the Local Plan will not result in an adverse effect on the integrity of Portholme SAC through changes in air quality, either alone or in combination with other plans and projects.

5.3.7 It is also worth noting that Portholme SAC comprises lowland hay meadow within the functional floodplain of the Great Ouse. The ecological functioning of the qualifying habitat is therefore influenced by its hydrological regime, including periodic inundation, as well as by traditional meadow management. The influence of floodplain processes and meadow management on nutrient cycling could be investigated further if necessary.

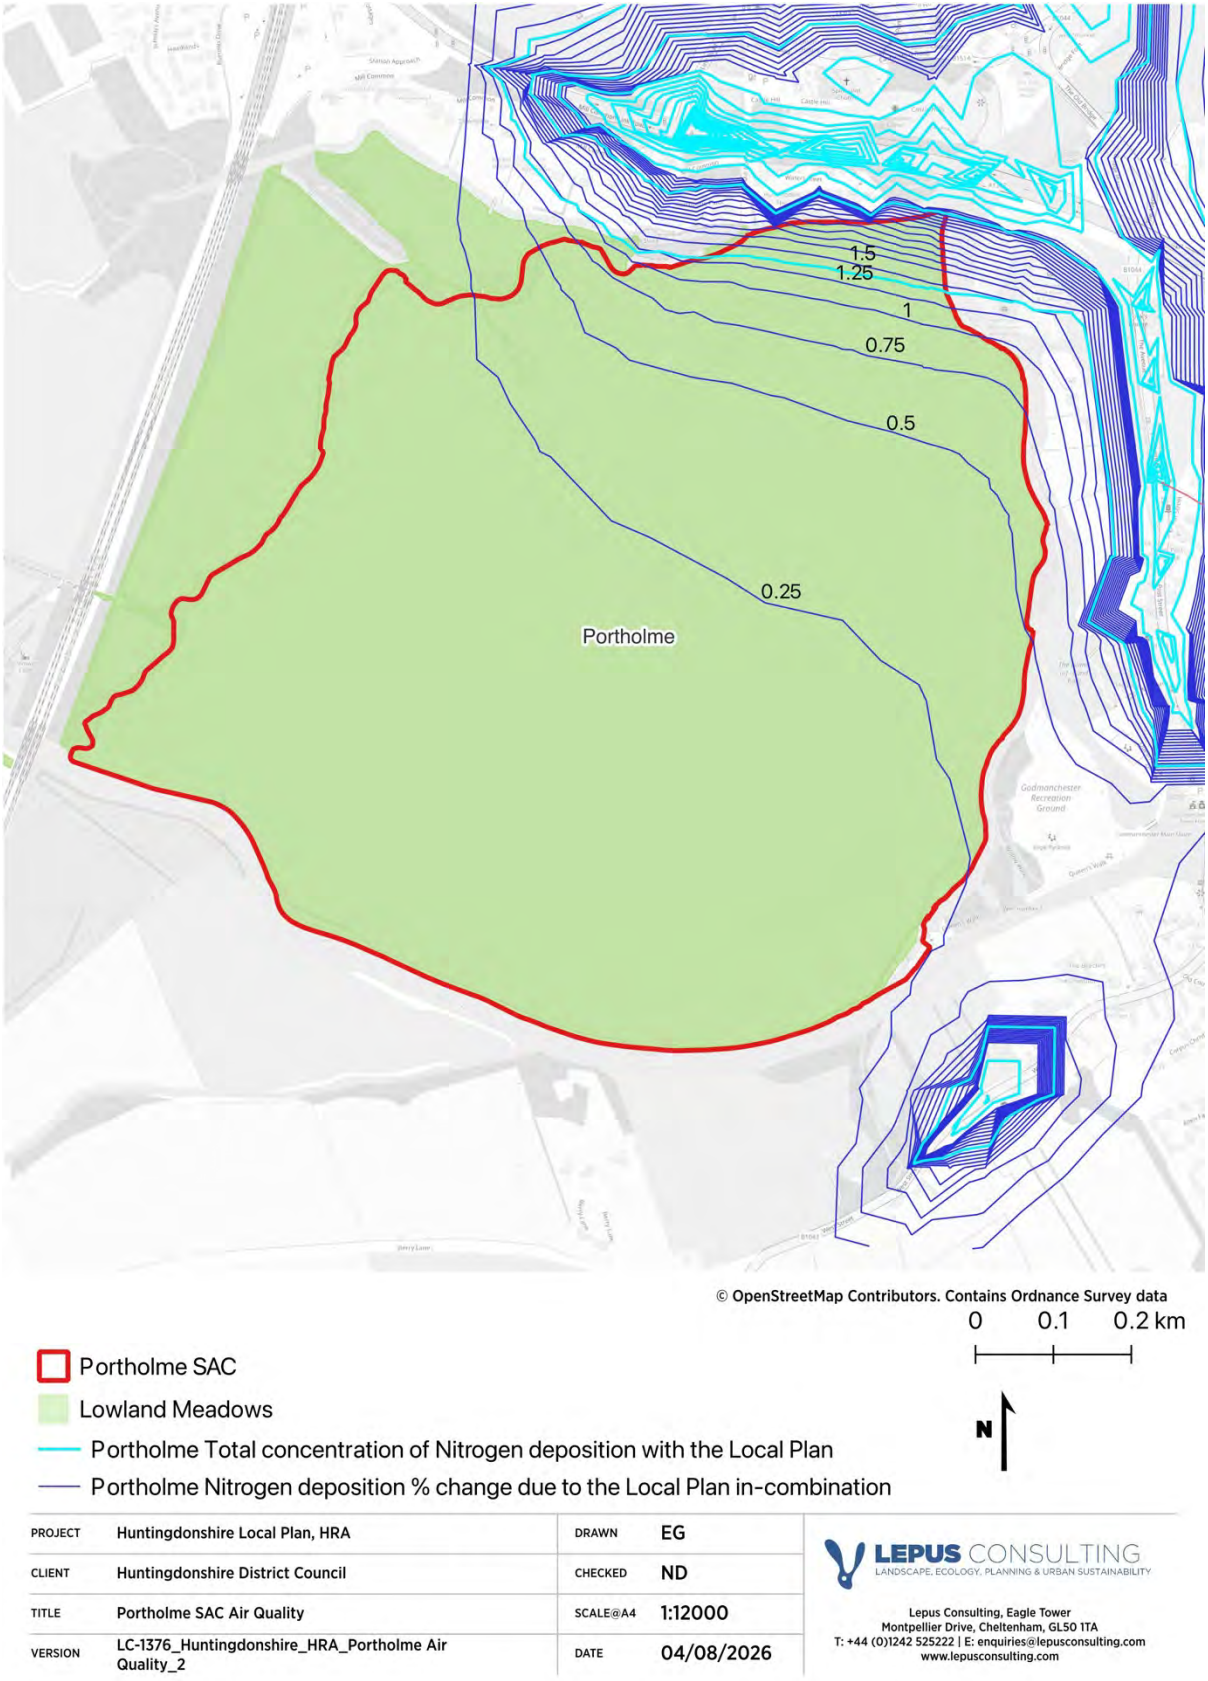

***Figure 5.1**: Isopleth map for Portholme SAC*

5.4 Nene Washes Ramsar

Baseline

5.4.1 The Nene Washes Ramsar Site is designated for its internationally important floodplain wetland, associated plant and invertebrate communities, and assemblages of breeding and wintering waterbirds. Whilst the qualifying bird species are not themselves directly affected by atmospheric pollutants, the wetland habitats that contribute to the ecological character of the Ramsar Site may be sensitive to elevated ammonia concentrations and nitrogen deposition.

Appropriate Assessment

5.4.2 Air quality modelling demonstrates that the predicted environmental concentration (PEC) for nitrogen oxides (NOx) remains below the relevant Critical Level (CLe), whilst total acid deposition remains below the relevant Critical Load (CLo; see Tables 4 and 7 of the air quality modelling report in **Appendix G**). The PEC represents the total predicted environmental concentration or deposition, taking account of the Local Plan and other sources. NOx and acid deposition therefore do not require further assessment.

5.4.3 For ammonia (NH_3) concentration and nitrogen deposition, the process contribution from the Local Plan alone remains below the precautionary 1% screening threshold; however, the in-combination contribution exceeds the 1% threshold and these pollutants are therefore taken forward for Appropriate Assessment (see Tables 5, 6 and 8 of the air quality modelling report in **Appendix G**).

5.4.4 The Nene Washes Ramsar Site includes qualifying wetland habitats and plant communities that are potentially sensitive to atmospheric ammonia and nitrogen deposition. The modelling demonstrates that annual mean ammonia concentrations are below the Critical Level of 3 µg/m³ at all modelled receptors except the closest receptor on Transect G, where the 2023 baseline concentration is 3.25 µg/m³. Nitrogen deposition exceeds the relevant Critical Load of 10 kg N/ha/yr across all modelled transects and distances. The spatial extent of these in-combination exceedances is shown in **Figures 5.2 to 5.4**. The implications of the predicted in-combination changes for the ecological character of the Ramsar Site are therefore considered below.

5.4.5 In terms of overall nitrogen deposition, the modelling predicts a decrease between the 2023 baseline and the 2046 assessment year as a consequence of improvements in vehicle emissions and wider emissions reduction policies. Appendix A3 of the air quality modelling report in **Appendix G** considers the extent to which the Local Plan would retard these predicted improvements. At the worst-case Nene Washes transect (Transect E), the Local Plan alone is predicted to delay reductions in nitrogen deposition by between 0.17 and 1.09 years, whilst the Local Plan in combination with other plans and projects is predicted to delay reductions by between 1.5 and 13 years. These retardation periods are precautionary modelled estimates rather than predictions of the period for which existing deposition levels would persist.

5.4.6 The calculation assumes a linear trajectory in nitrogen deposition between 2023 and 2046 which continues thereafter, whilst the assessment of future background deposition incorporates reductions only to 2030 because the Nitrogen Futures modelling does not extend beyond that date. The air quality modelling therefore identifies the calculated retardation periods as particularly worst-case. Notwithstanding the calculated retardation, nitrogen deposition under the 2046 With Local Plan scenario is lower than under the 2023 baseline across Transect E, the worst-case transect within the Nene Washes.

5.4.7 Taking account of the spatial extent of the predicted in-combination exceedances, the fact that the Local Plan alone contribution remains below the precautionary 1% screening threshold, the predicted reduction in nitrogen deposition between 2023 and 2046, and the findings of the retardation assessment, it is concluded that the Huntingdonshire Local Plan would not undermine the ecological character of the Nene Washes Ramsar Site. The Appropriate Assessment therefore concludes that the Huntingdonshire Local Plan will not result in an adverse effect on the integrity of the Nene Washes Ramsar Site or its ecological character through changes in air quality, either alone or in combination with other plans and projects.

5.5 Nene Washes SAC

Baseline

5.5.1 Nene Washes SAC is designated solely for spined loach (*Cobitis taenia*). The conservation objectives seek to maintain or restore the extent, distribution, structure and function of the habitats supporting the qualifying species, together with the ecological processes on which it relies, including appropriate hydrological conditions, water quality, substrate and aquatic vegetation.

Appropriate Assessment

5.5.2 Air quality modelling demonstrates that the predicted environmental concentration (PEC) for nitrogen oxides (NOx) remains below the relevant Critical Level (CLe), whilst total acid deposition remains below the relevant Critical Load (CLo; see Tables 4 and 7 of the air quality modelling report in Appendix G). The PEC represents the total predicted environmental concentration or deposition, taking account of the Local Plan and other sources.

5.5.3 For ammonia (NH_3) concentration and nitrogen deposition, the predicted process contribution from the Local Plan alone is below the precautionary 1% screening threshold. When considered in combination with other plans and projects, the predicted process contribution exceeds the 1% screening threshold for both ammonia concentration and nitrogen deposition and therefore requires Appropriate Assessment (see Tables 5, 6 and 8 of the air quality modelling report in Appendix G). The isopleth mapping (**Figures 5.2 to 5.4**) demonstrates that the area over which the 1% threshold is exceeded is very restricted in spatial extent and confined to land closest to the affected road network.

5.5.4 The Nene Washes SAC is designated solely for Spined Loach (*Cobitis taenia*), which occurs within the drainage channels and associated aquatic habitats of the washlands. The conservation status of the qualifying feature depends upon the maintenance of appropriate hydrology, water quality, channel morphology, substrate and aquatic vegetation. The air quality assessment has therefore considered the potential for effects upon the aquatic vegetation supporting the qualifying feature. However, the predicted in-combination exceedances of the 1% screening threshold relate to atmospheric NH_3 concentrations and nitrogen deposition to vegetation. The qualifying feature and its supporting aquatic vegetation occur within the aquatic environment and are not exposed to these effects in the same manner as terrestrial vegetation. The modelled exceedances therefore do not provide a mechanism by which the conservation status of Spined Loach, or the aquatic habitat supporting the species, would be adversely affected. Accordingly, no adverse effect on the integrity of the Nene Washes SAC is predicted through this pathway.

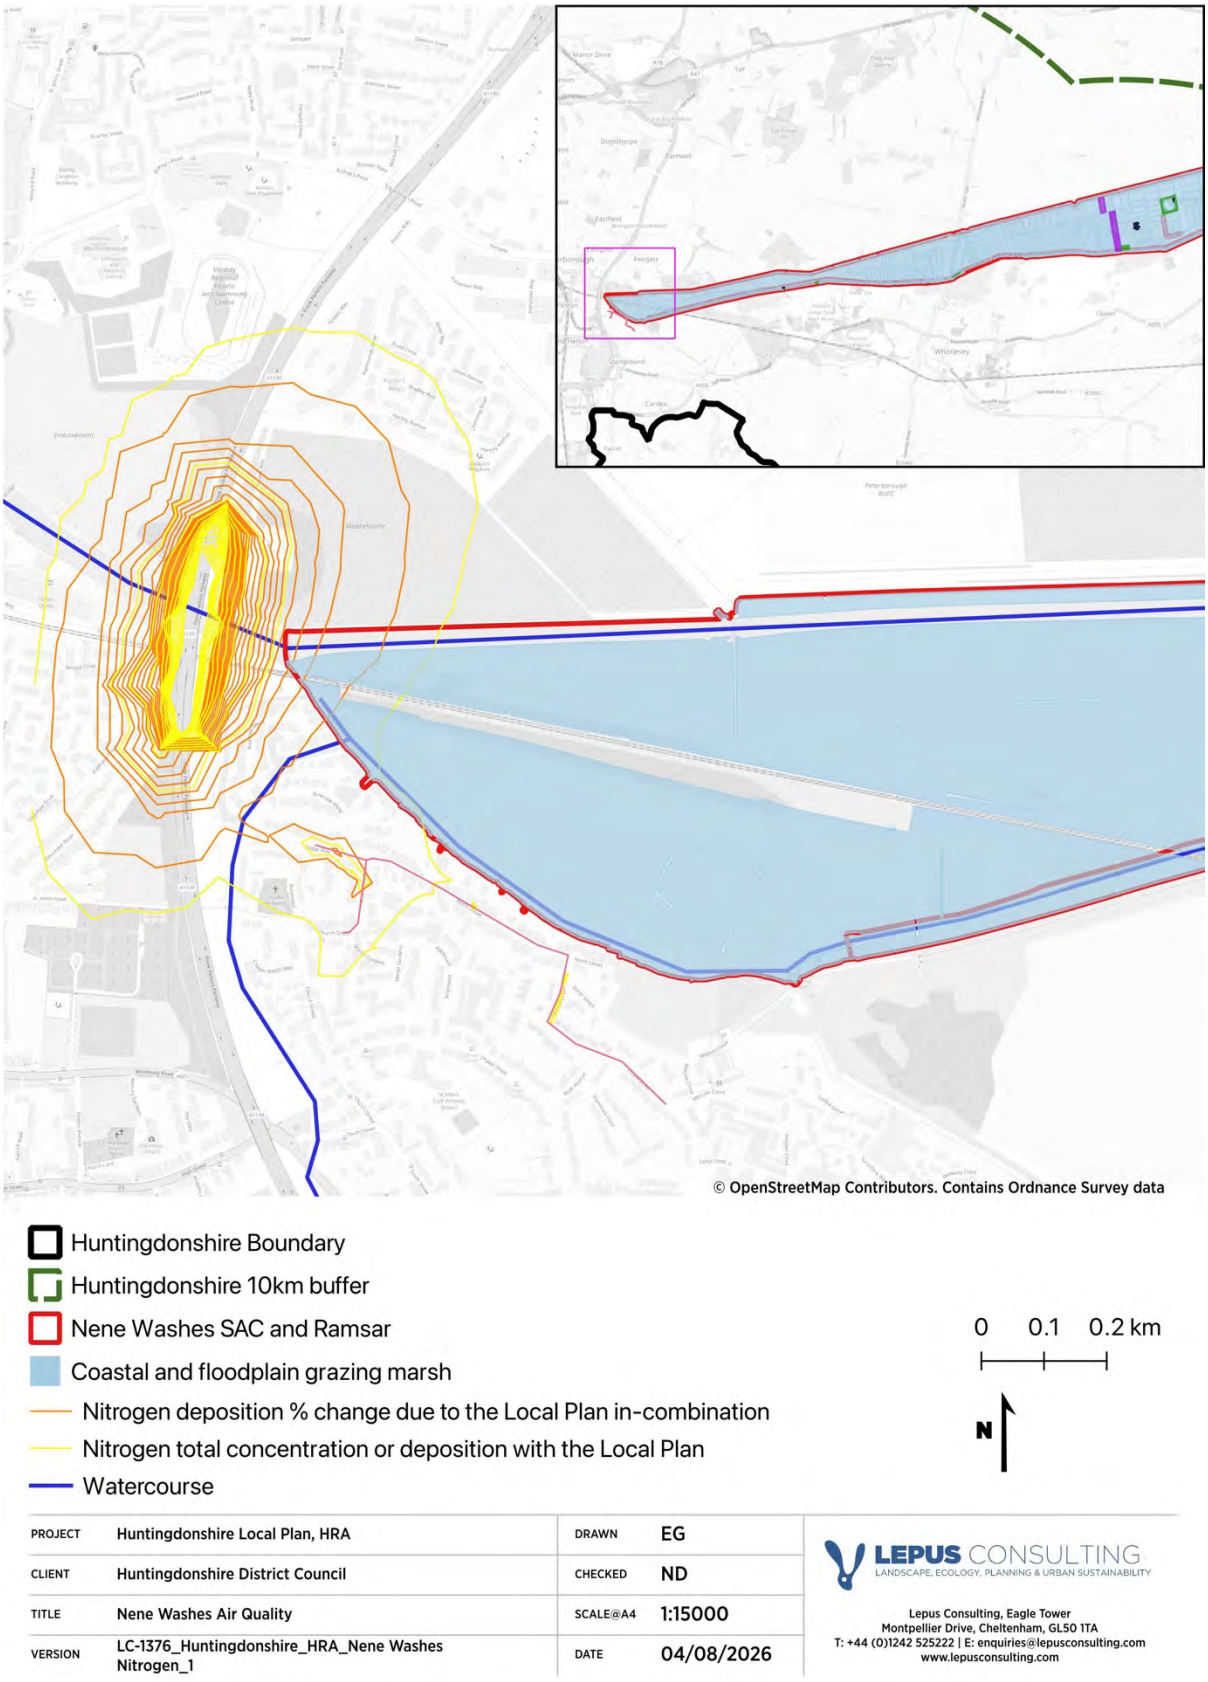

***Figure 5.2**: Isopleth map of the west of Nitrogen deposition in the west of Nene Washes SAC and Ramsar*

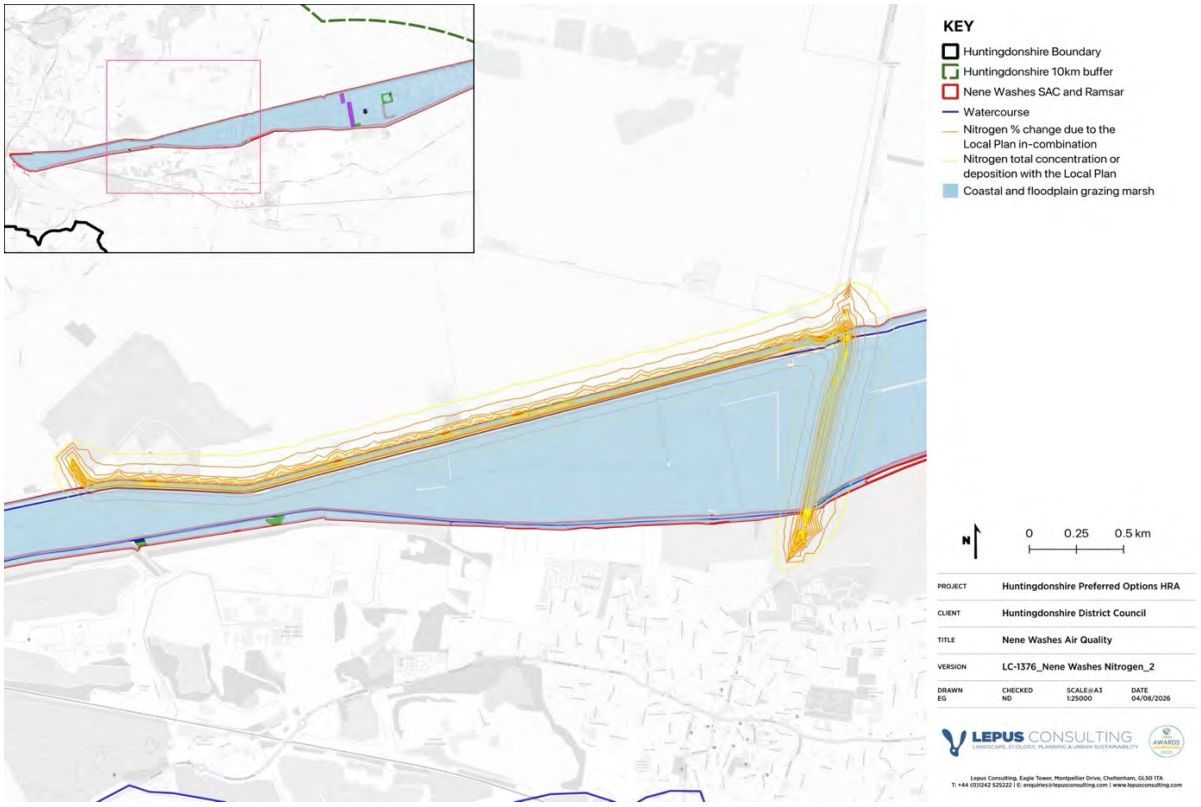

Figure 5.3: *Isopleth map of Nitrogen deposition in Nene Washes SAC and Ramsar*

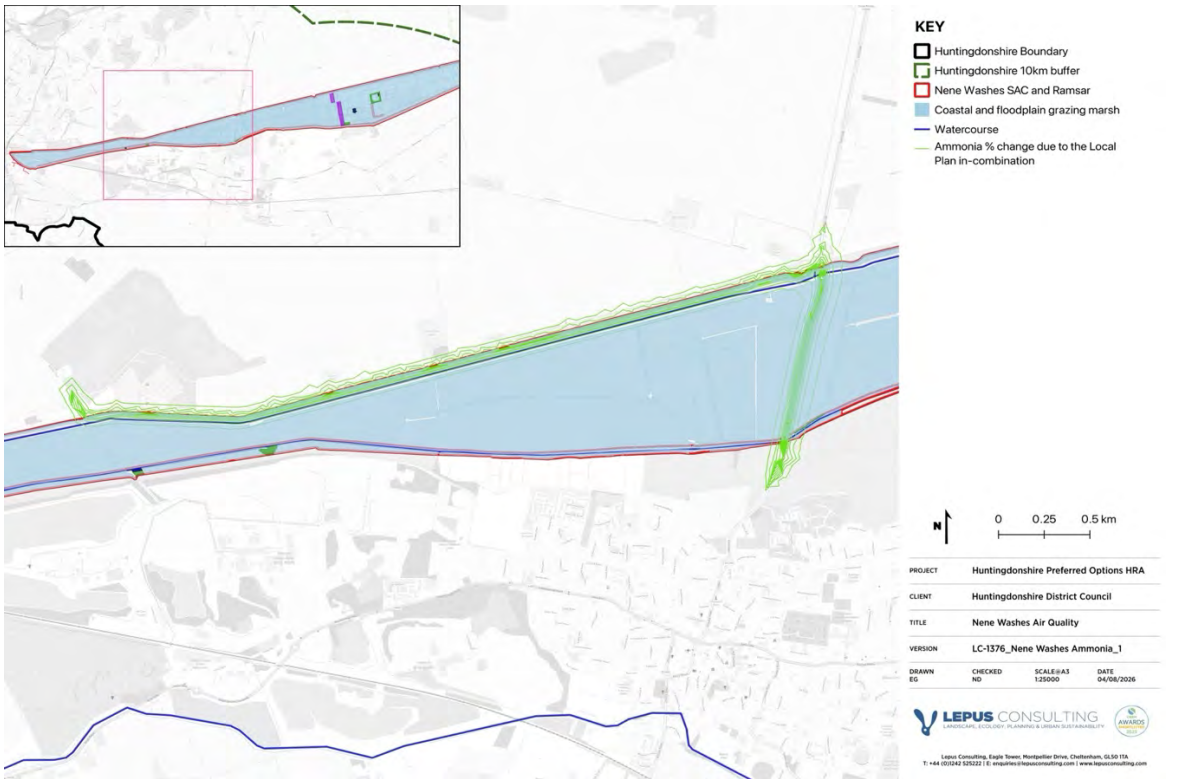

Figure 5.4: *Isopleth Map of Ammonia in Nene Washes SAC and Ramsar Ouse Washes Ramsar*

5.6 Ouse Washes Ramsar

Baseline

5.6.1 The Ouse Washes Ramsar Site is designated for its internationally important floodplain wetland, associated wetland plant and invertebrate communities, and assemblages of breeding and wintering waterbirds. Whilst the qualifying bird species are not themselves directly affected by atmospheric pollutants, the wetland habitats that underpin the ecological character of the Ramsar site may be sensitive to elevated ammonia concentrations and nitrogen deposition where increases are of sufficient magnitude and duration.

Appropriate Assessment

5.6.2 Air quality modelling demonstrates that the predicted environmental concentration (PEC) for nitrogen oxides (NOx) remains below the relevant Critical Level (CLe), whilst acid deposition remains below the relevant Critical Load (CLo). Predicted process contributions for ammonia (NH_3) concentration and nitrogen deposition exceed the precautionary 1% screening threshold at limited locations immediately adjacent to affected road links and therefore require Appropriate Assessment. The modelling demonstrates that pollutant concentrations and deposition decline rapidly with increasing distance from the carriageway. The accompanying isopleth maps (**Figures 5.5 to 5.8**) show that only a limited proportion of the Ouse Washes SAC and Ramsar site falls within the area where the Local Plan contribution exceeds the precautionary 1% screening threshold, with the substantial majority of both designated sites lying outside the affected area.

5.6.3 The isopleth mapping demonstrates that the predicted exceedances of the 1% screening threshold are confined to narrow strips immediately adjacent to the affected road network and do not extend across the majority of the designated sites (**Figures 5.5 to 5.8**). Although the precautionary screening threshold is exceeded at limited locations, the predicted increases in ammonia concentration and nitrogen deposition are highly localised and represent a relatively small contribution to overall pollutant concentrations and deposition. The assessment therefore considers whether these localised increases represent a credible impact pathway to the qualifying features of the Ouse Washes SAC and Ramsar Site.

5.6.4 The Ouse Washes SAC is designated solely for the Spined Loach (*Cobitis taenia*). The qualifying feature occurs within the Counter Drain and associated aquatic habitat, with aquatic vegetation forming part of its supporting habitat. Natural England identified this supporting aquatic vegetation as the reason for considering air quality effects at the SAC. The air quality assessment has therefore considered this potential pathway. However, the predicted exceedances of the 1% screening thresholds relate to atmospheric NH_3 concentrations and nitrogen deposition to short vegetation. The qualifying feature and its supporting aquatic vegetation occur within the aquatic environment and are not exposed to these effects in the same manner as terrestrial vegetation. The modelled exceedances therefore do not provide a mechanism by which the conservation status of Spined Loach, or the aquatic habitat supporting the species, would be adversely affected. Accordingly, no adverse effect on the integrity of Ouse Washes SAC is predicted through this pathway.

5.6.5 The Ouse Washes Ramsar Site includes qualifying wetland habitats and plant communities that are, in principle, sensitive to atmospheric ammonia and nitrogen deposition. However, the Appropriate Assessment considers the Local Plan's contribution to pollutant concentrations and deposition rather than existing background exceedances alone. Whilst Critical Levels and Critical Loads may already be exceeded under baseline conditions, the magnitude of the Local Plan contribution reduces rapidly with increasing distance from the affected road network, and exceedances of the 1% screening threshold are restricted to limited areas adjacent to existing road infrastructure, as shown by the isopleth mapping **(Figures 5.5 to 5.8).**

5.6.6 The modelling also demonstrates that nitrogen deposition is generally predicted to decrease between the 2023 baseline and the 2046 assessment year as a consequence of improvements in vehicle emissions and wider emissions reduction policies. Appendix A3 of the air quality modelling report considers the extent to which the Local Plan could retard these predicted improvements. At the worst-case transect within the Ouse Washes SAC and Ramsar Site, the Local Plan alone is predicted to delay reductions in nitrogen deposition by between 0.15 and 0.53 years, whilst the Local Plan in combination with other plans and projects is calculated to delay reductions by between 7.2 and 24 years.

5.6.7 These figures represent a theoretical delay in the rate of improvement, calculated by dividing the predicted process contribution by the assumed annual rate of reduction in nitrogen deposition; they do not represent a predicted duration of ecological effect. The air quality modelling report identifies this calculation as highly precautionary because the assumed future reduction in background deposition is itself likely to be underestimated. At the closest receptors on the worst-case transect, nitrogen deposition under the 2046 Local Plan scenario is predicted to be broadly comparable with the 2023 baseline, with reductions predicted with increasing distance from the road.

5.6.8 Taking account of the limited spatial extent of the predicted exceedances of the 1% screening threshold, the rapid reduction in predicted contributions with increasing distance from the affected road network, the absence of a credible impact pathway to the sole qualifying feature of the Ouse Washes SAC, the spatially limited exposure of Ramsar wetland habitats, the wider forecast reductions in nitrogen deposition, and the findings of the precautionary retardation assessment, it is concluded that the Huntingdonshire Local Plan would not undermine the conservation objectives of Ouse Washes SAC or the ecological character of the Ouse Washes Ramsar Site. The Appropriate Assessment therefore concludes that the Huntingdonshire Local Plan will not result in an adverse effect on the integrity of Ouse Washes SAC or the ecological character of the Ouse Washes Ramsar Site through changes in air quality, either alone or in combination with other plans and projects.

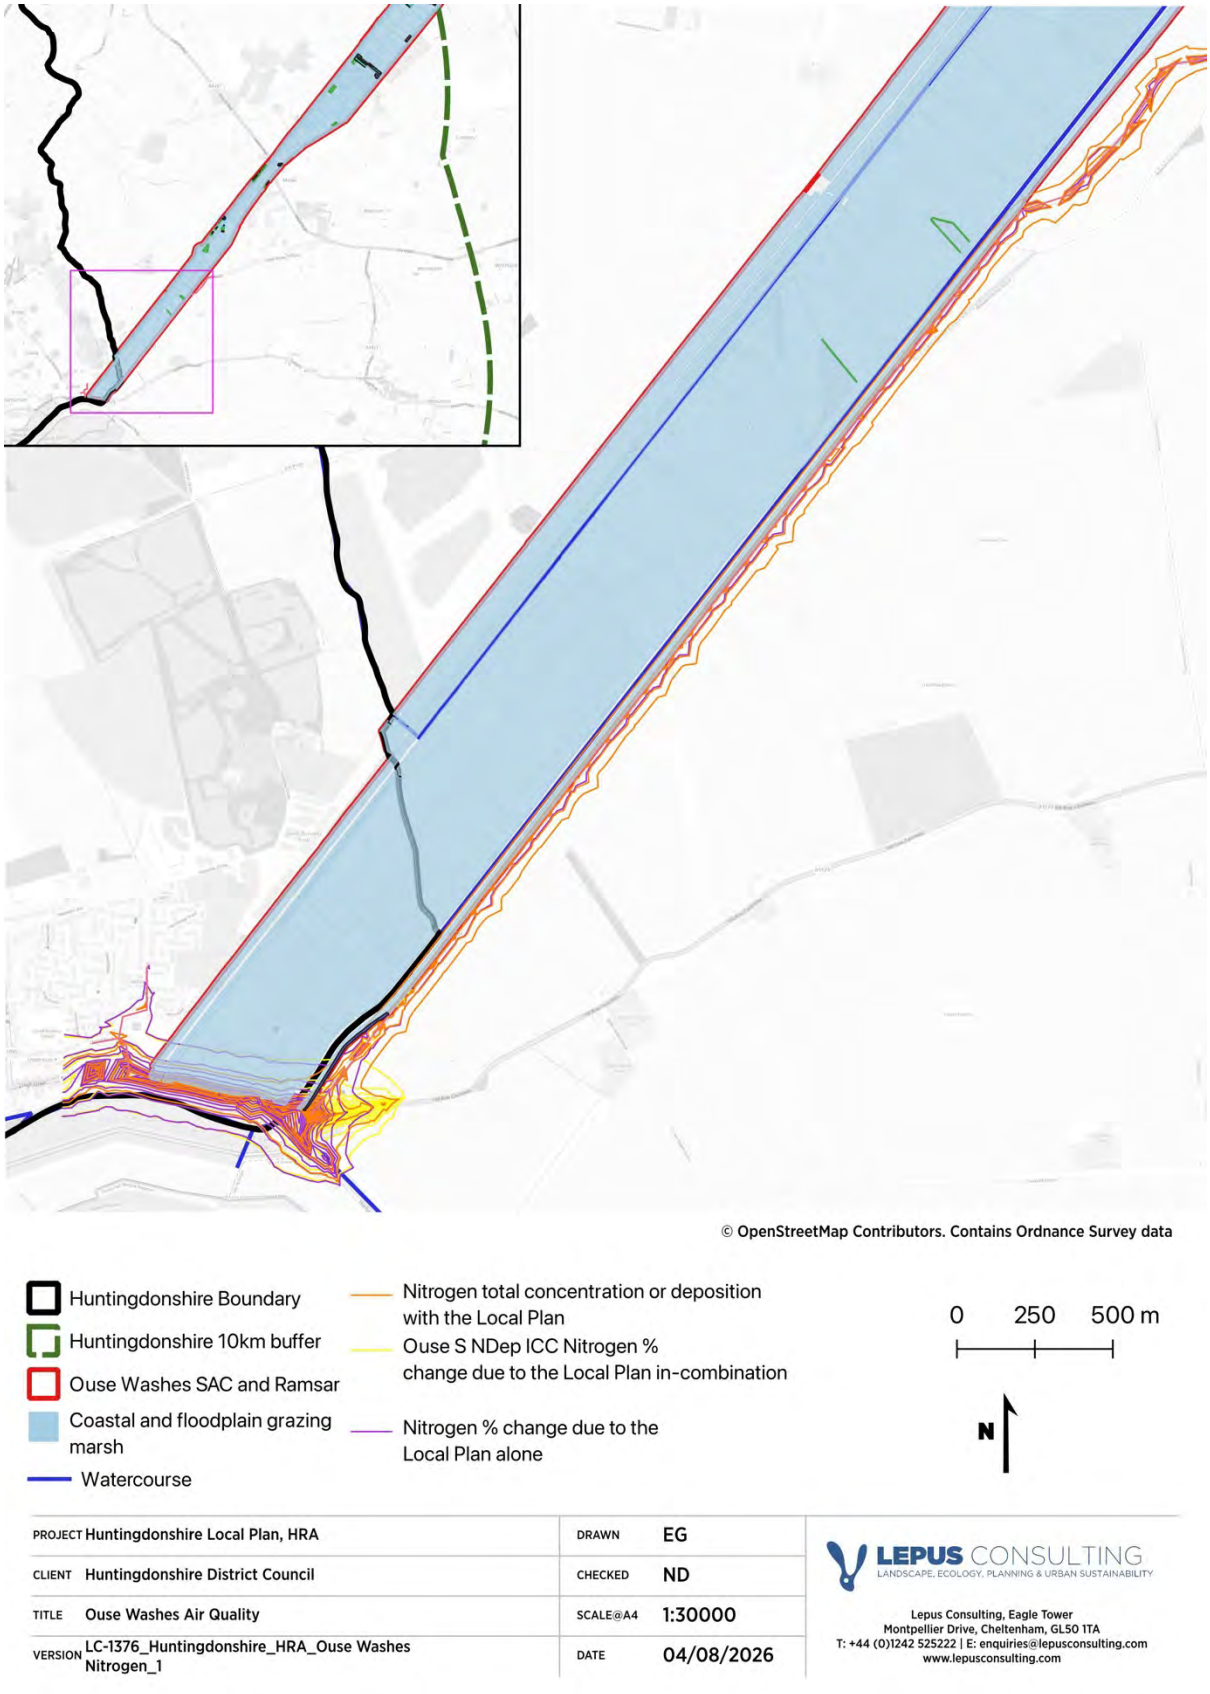

Figure 5.5: *Isopleth Map of Nitrogen deposition in the south of Ouse Washes SAC and Ramsar*

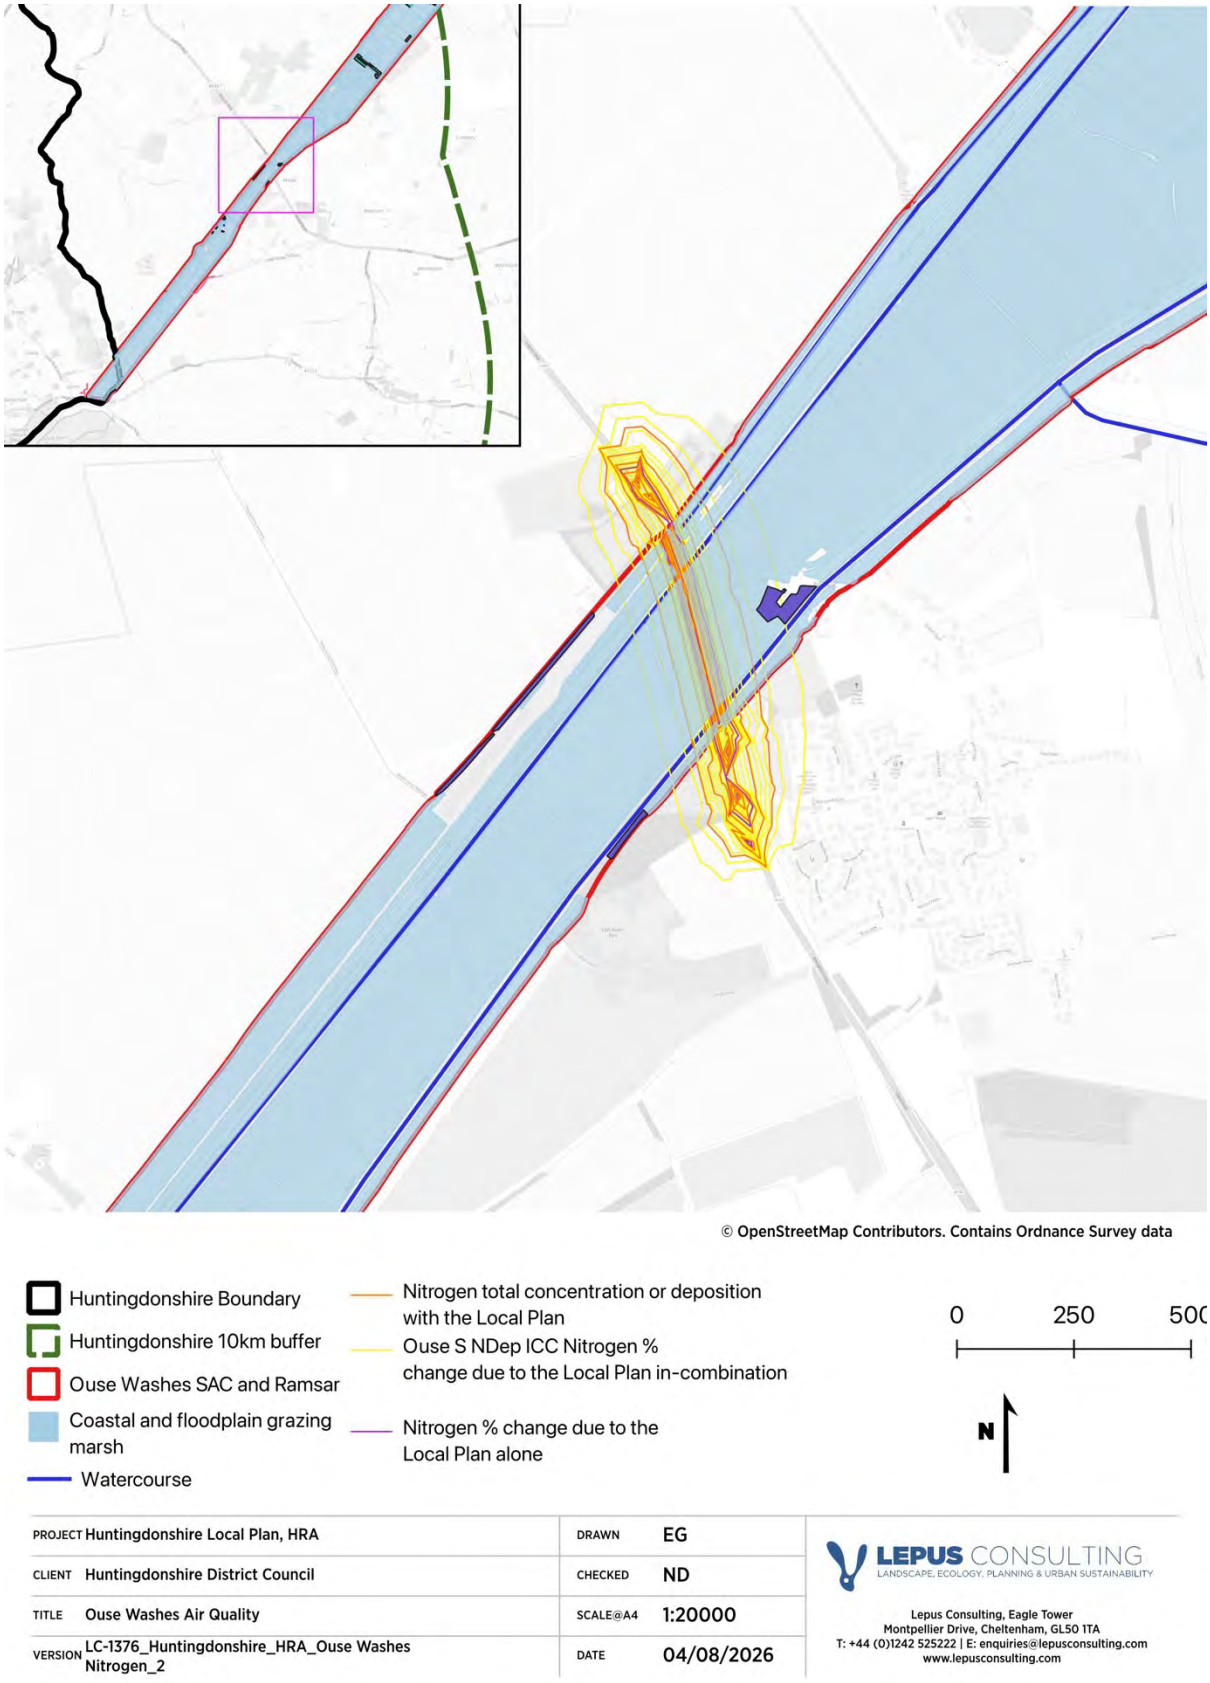

Figure 5.6: *Isopleth Map of Nitrogen deposition in the centre of Ouse Washes SAC and Ramsar*

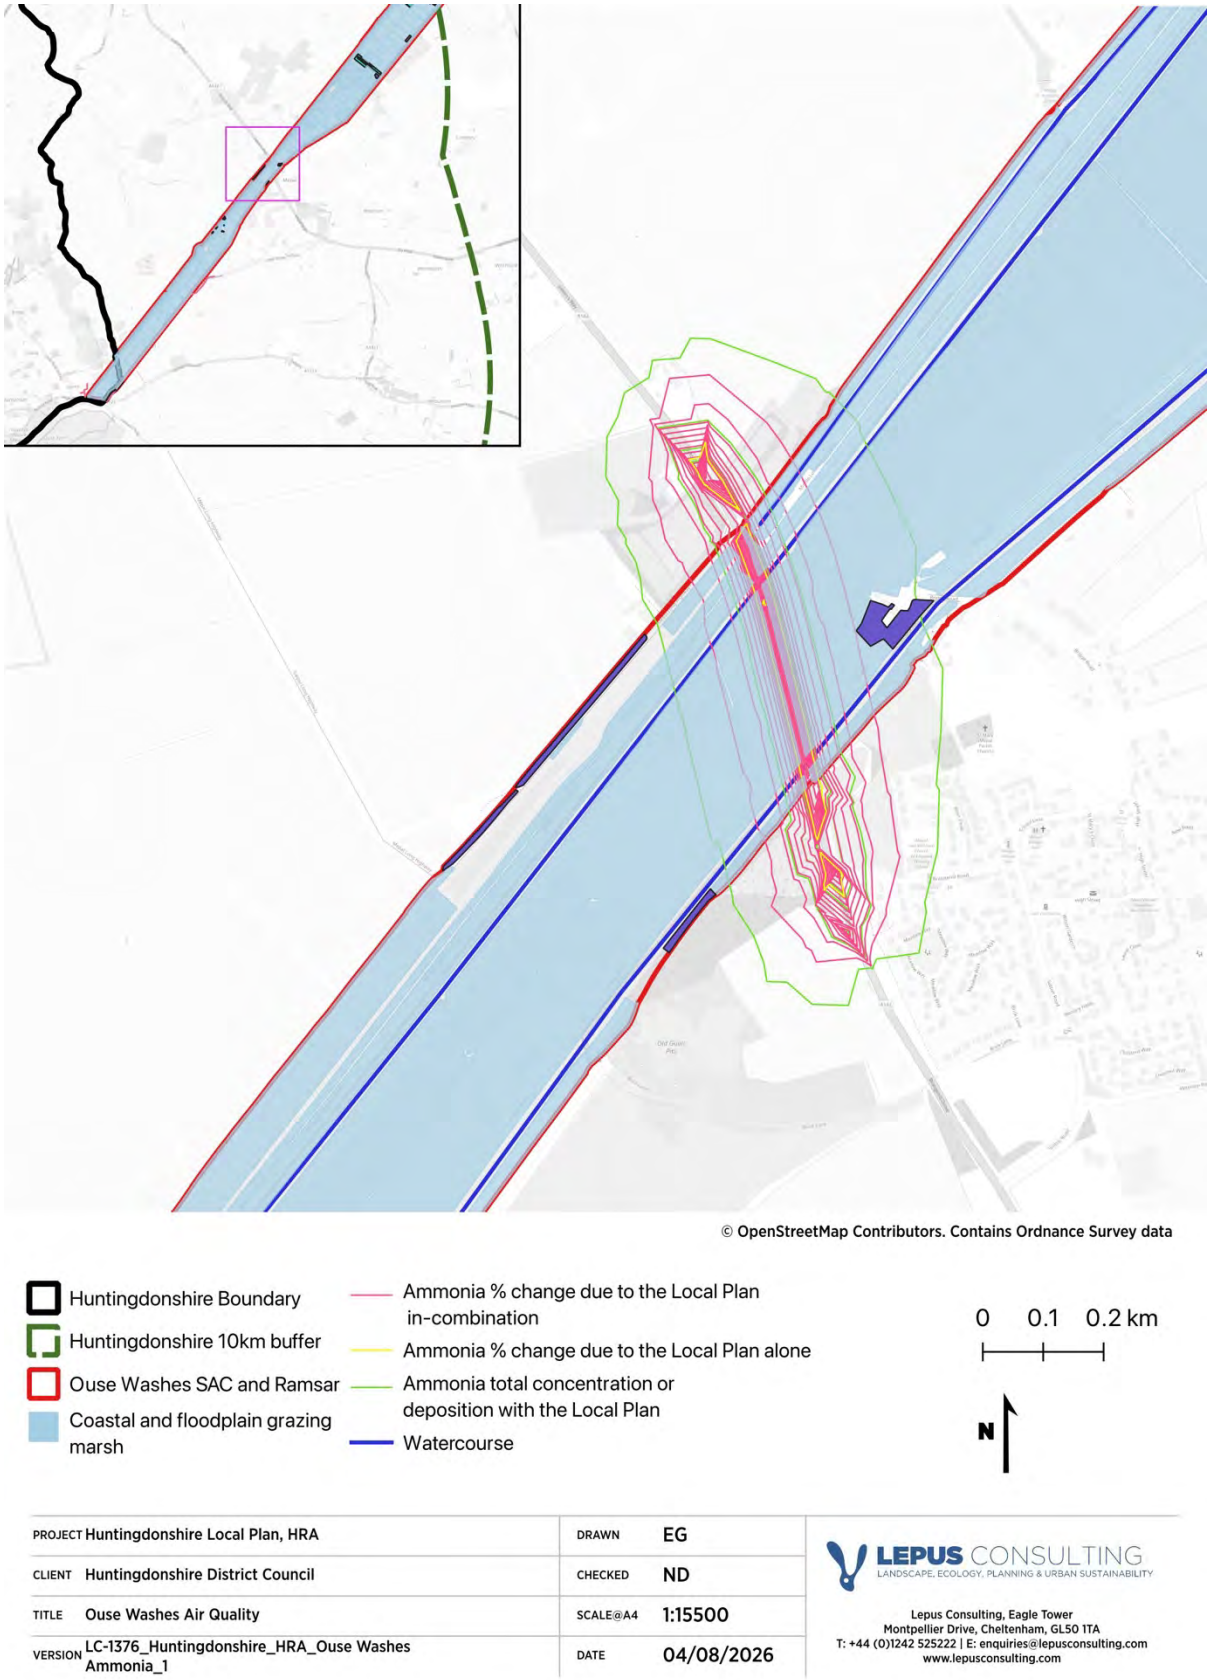

Figure 5.7: *Isopleth Map of Ammonia in the centre of Ouse Washes SAC and Ramsar*

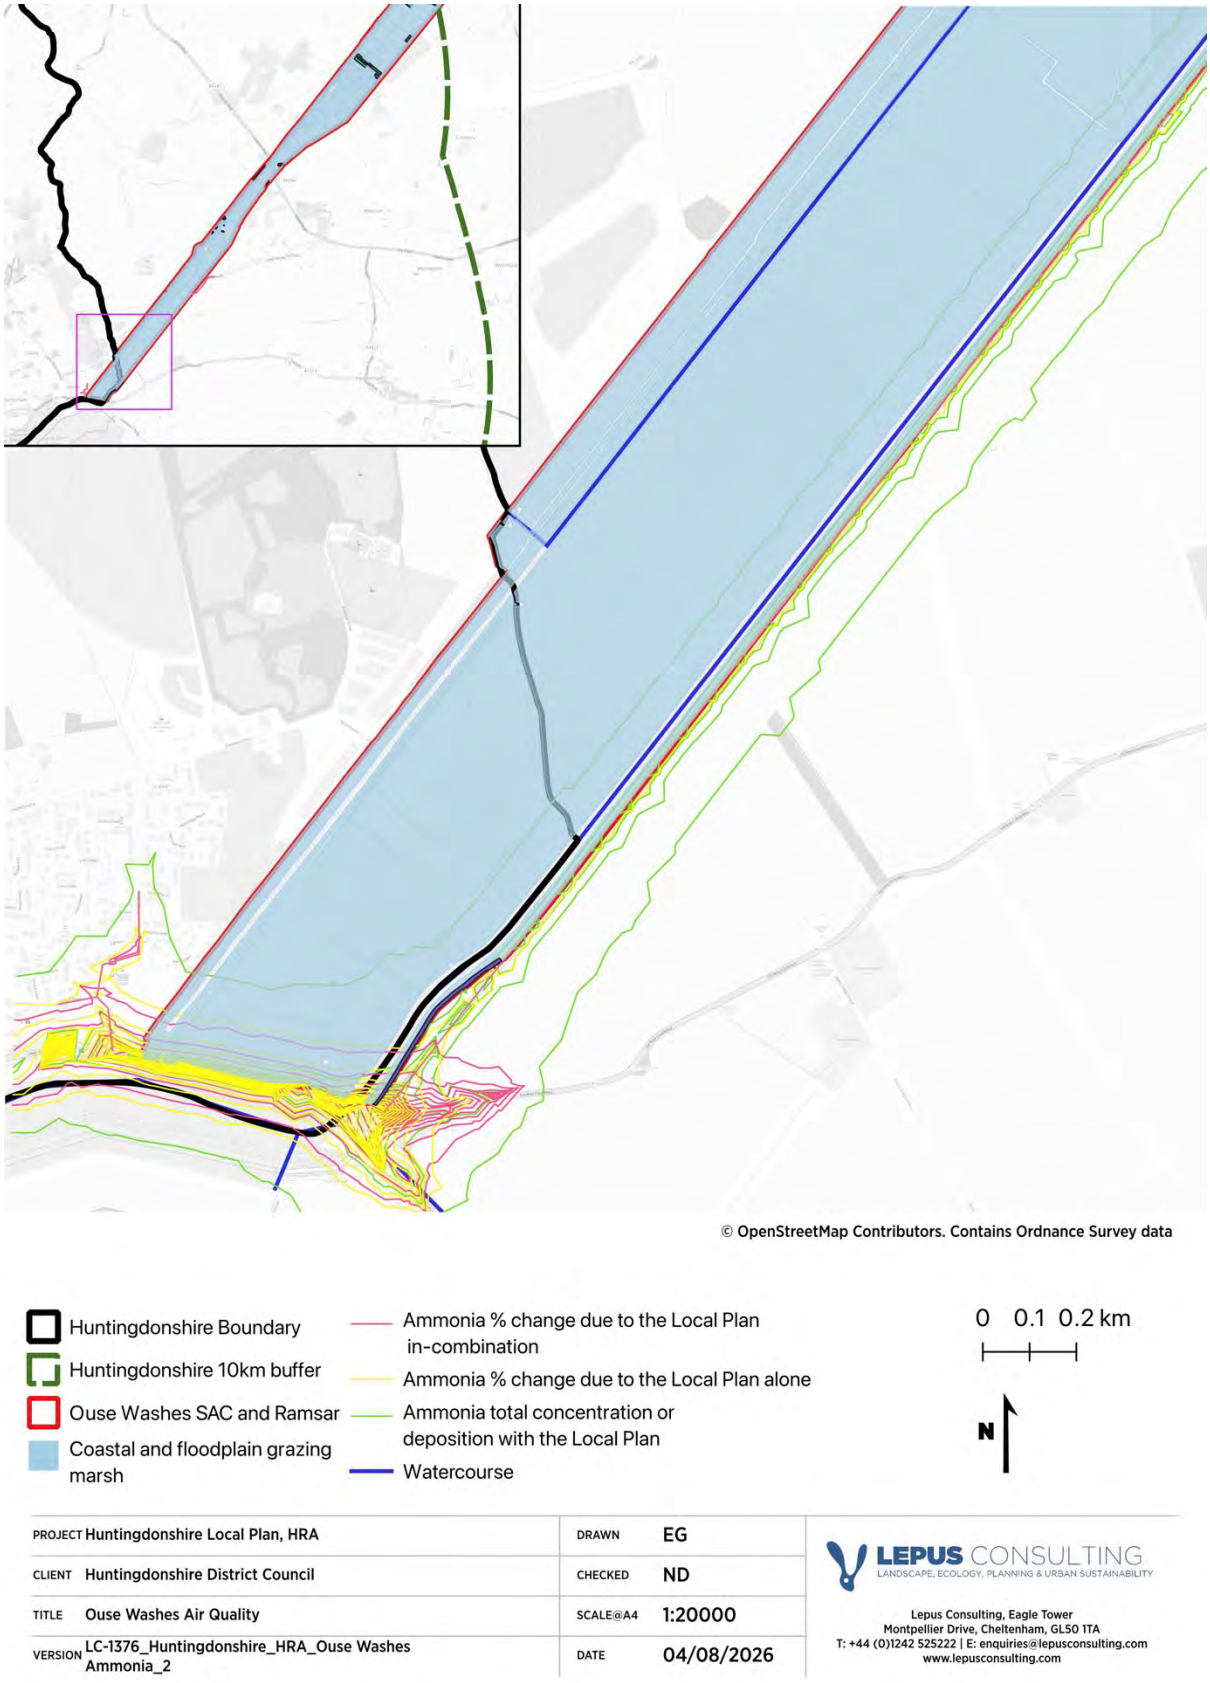

Figure 5.8: *Isopleth Map of Ammonia in the south of Ouse Washes SAC and Ramsar*

5.7 Ouse Washes SAC

Baseline

5.7.1 The Ouse Washes SAC is designated solely for Spined Loach (*Cobitis taenia*). The conservation objectives seek to maintain or restore the extent, distribution, structure and function of the habitats supporting the qualifying species, together with the ecological processes on which they rely, including appropriate water quality, hydrology and aquatic vegetation.

Appropriate Assessment

5.7.2 Natural England identified aquatic vegetation supporting Spined Loach as the reason for considering air quality effects at the SAC. The qualifying feature occurs within the Counter Drain and associated aquatic habitat, with aquatic vegetation forming part of its supporting habitat. The air quality assessment has therefore considered this potential pathway. However, the predicted exceedances of the 1% screening thresholds relate to atmospheric NH_3 concentrations and nitrogen deposition to short vegetation. The qualifying feature and its supporting aquatic vegetation occur within the aquatic environment and are not exposed to these effects in the same manner as terrestrial vegetation. The modelled exceedances therefore do not provide a mechanism by which the conservation status of Spined Loach, or the aquatic habitat supporting the species, would be adversely affected. No adverse effect on the integrity of Ouse Washes SAC is therefore predicted through this pathway.

5.8 Conclusions

5.8.1 The HRA screening assessment identified the potential for likely significant effects on Nene Washes SAC and Ramsar, Ouse Washes SAC and Ramsar, and Portholme SAC as a result of changes in air quality associated with development proposed through the Huntingdonshire Local Plan.

5.8.2 The Appropriate Assessment has considered the findings of the air quality assessment, including detailed dispersion modelling, isopleth mapping and the retardation assessment of future nitrogen deposition. The assessment demonstrates that predicted exceedances of the precautionary screening threshold for ammonia and nitrogen deposition are limited in extent, represent a small contribution to overall pollutant concentrations and deposition, and are not sufficient to adversely affect the qualifying features, supporting habitats or ecological character of the designated sites.

5.8.3 Accordingly, it can be concluded that the Huntingdonshire Local Plan will not result in adverse effects on the integrity of Nene Washes SAC and Ramsar, Ouse Washes SAC and Ramsar, Portholme SAC or Woodwalton Fen Ramsar through changes in air quality, either alone or in combination with other plans and projects.

6 Water quality appropriate assessment

6.1 Introduction

6.1.1 As noted in **Section 3.5**, development has the potential to affect the quality of water entering a catchment through processes including sedimentation, accidental spillages of chemicals and materials, operational surface water runoff and increased effluent discharges from WwTWs. Increased nutrient inputs can lead to algal blooms, reduced dissolved oxygen and increased turbidity, potentially affecting the condition of receiving waterbodies and hydrologically connected European sites and their qualifying features.

6.1.2 The HRA screening process (see **Appendix C**) identified the potential for LSEs from changes in water quality at a number of European sites. Screening considered the hydrological connectivity between the Plan area and European sites, together with the potential for development supported by the Local Plan to affect water quality.

6.1.3 The following European designations are located downstream of the Plan area and were considered to be potentially hydrologically connected.

- Fenland SAC;
- Nene Washes SAC;
- Nene Washes SPA;
- Nene Washes Ramsar;
- Ouse Washes SAC;
- Ouse Washes SPA;
- Ouse Washes Ramsar;
- Portholme SAC;
- The Wash & North Norfolk Coast SAC;
- The Wash SPA;
- The Wash Ramsar; and
- Woodwalton Fen Ramsar.

6.2 Appropriate Assessment

Overview

6.2.1 Water quality modelling undertaken by JBA Consulting as part of the Huntingdonshire Water Cycle Study has been used to inform this Appropriate Assessment. The modelling considered three scenarios:

- Baseline – representing existing conditions using the latest version of the SIMCAT model, with wastewater treatment works serving growth updated using flow data from 2021–2025;
- Future – representing the increase in treated effluent flows associated with growth over the Local Plan period; and
- Technically Achievable Limit (TAL) – representing a scenario where wastewater treatment works are upgraded to achieve technically achievable limits to investigate whether deterioration in water quality could be prevented.

6.2.2 The modelling assessed ammonia, biochemical oxygen (BOD), dissolved oxygen (DO), nitrate and phosphate against the water quality standards provided by Natural England. The results are presented in **Table 6.1**.

6.2.3 Additional modelling was undertaken for dissolved oxygen and nitrate to support the HRA. Outputs were obtained from the latest version of the water quality model to provide further evidence in relation to the potential effects on designated sites.

6.2.4 The modelling results for each hydrologically connected European site are presented in **Table 6.1**. The implications of these results are considered separately below for each European site and its qualifying features.

***Table 6.1**: Water quality modelling results*

Sites	Standard	Baseline Concentration (mg/l)	Future Concentration (mg/l)	Technically Achievable Limit result (mg/l)
Fenland SAC (Woodwalton Ramsar)				
Ammonia	0.6	0.3313	0.3305	0.3131

6.3 Fenland SAC and Woodwalton Fen Ramsar

Fenland SAC Baseline

6.3.1 Fenland SAC is designated for *Calcareous fens with Cladium mariscus and species of the Caricion davallianae*. Within the Huntingdonshire area, the hydrologically connected component of the SAC is Woodwalton Fen.

6.3.2 The qualifying habitat is dependent upon maintaining suitable hydrological conditions and good water quality. Increases in nutrient concentrations, organic loading or reductions in dissolved oxygen have the potential to alter the structure and function of the fen communities and adversely affect the integrity of the SAC.

6.3.3 The conservation objectives for Fenland SAC are to maintain or restore the extent and distribution of the qualifying habitat, together with its structure, function and supporting processes. This includes maintaining the hydrological and hydrochemical conditions necessary to support the qualifying calcareous fen habitat.

Woodwalton Fen Ramsar

6.3.4 Woodwalton Fen Ramsar Site is designated under Ramsar Criterion 1 as a near-natural remnant of the East Anglian fens, supporting a range of open fen and swamp communities. The site also qualifies under Ramsar Criterion 2 for its nationally rare wetland plants, including fen violet (*Viola persicifolia*), fen wood-rush (*Luzula pallidula*) and fen ragwort (*Senecio paludosus*), together with an important wetland invertebrate assemblage that includes 20 British Red Data Book species. Aquatic beetles, flies and moths are particularly well represented.

6.3.5 The ecological character of the Ramsar Site is dependent upon maintaining the hydrological and hydrochemical conditions that support these fen and swamp communities and their associated plant and invertebrate assemblages. Changes in nutrient concentrations, organic loading or dissolved oxygen therefore have the potential to alter vegetation communities and associated habitat conditions and adversely affect the features for which the Ramsar Site is designated.

Appropriate Assessment for Fenland SAC and Woodwalton Fen Ramsar

6.3.6 The modelling indicates that ammonia concentrations remain below the Natural England assessment standard under all scenarios. Dissolved oxygen concentrations remain above the relevant standard, whilst nitrate concentrations decrease slightly from 29.3 mg/l under the baseline scenario to 29.1 mg/l under the future scenario. These results demonstrate that Local Plan growth would not result in deterioration in these water quality parameters.

6.3.7 BOD exceeds the agreed assessment standard of 5 mg/l under all scenarios, with a baseline concentration of 5.2939 mg/l and a future concentration of 5.2866 mg/l. Total phosphorus also exceeds the Natural England target of 0.1 mg/l under baseline and future conditions, increasing slightly from 0.2105 mg/l to 0.211 mg/l. Under the TAL scenario, phosphorus reduces to 0.1832 mg/l but remains above the Natural England target.

6.3.8 For total phosphorus, the modelled increase between the baseline and future scenarios is 0.0005 mg/l, from 0.2105 mg/l to 0.211 mg/l. Implementation of TAL upgrades would reduce the modelled concentration to 0.1832 mg/l, below both the baseline and future scenarios, although it would remain above the Natural England target of 0.1 mg/l.

6.3.9 Total phosphorus concentrations under existing baseline conditions are substantially above the Natural England target of 0.1 mg/L. This reflects existing nutrient pressures within the wider catchment, including diffuse agricultural inputs. Against this existing position, the Local Plan would result in a negligible increase in total phosphorus of 0.0005 mg/L, from 0.2105 mg/L to 0.211 mg/L. Improvements to wastewater treatment infrastructure under the TAL scenario would reduce the modelled concentration to 0.1832 mg/L by the end of the Plan period. The improvements associated with the TAL scenario would therefore more than offset the negligible increase arising from Local Plan growth, resulting in a lower total phosphorus concentration than under existing baseline conditions.

6.3.10 Taking account of these results and the mitigation measures set out in **Section 6.8**, it is concluded that the Huntingdonshire Local Plan would not result in an adverse effect on the integrity of Fenland SAC through changes in water quality, either alone or in combination with other plans and projects.

6.4 Nene Washes

Nene Washes Ramsar Baseline

6.4.1 Nene Washes Ramsar comprises an internationally important floodplain wetland supporting nationally scarce plants, rare invertebrates and important populations of waterbirds. The site qualifies under Ramsar Criterion 2 for its assemblage of nationally rare breeding birds, nationally scarce plants and rare invertebrates, and under Criterion 6 for its internationally important population of Bewick's swan (*Cygnus columbianus bewickii*).

6.4.2 The ecological character of the Ramsar site is dependent upon the hydrological and water quality conditions that maintain its wetland habitats and associated plant and invertebrate communities. Changes in nutrient concentrations, organic loading or dissolved oxygen therefore have the potential to alter the habitats and ecological processes supporting the Ramsar features.

Nene Washes SAC Baseline

6.4.3 Nene Washes SAC is designated solely for Spined Loach (*Cobitis taenia*). The species occurs within the drainage channels of the washlands, with Moreton's Leam supporting the highest recorded density of Spined Loach in the UK and populations also occurring within smaller ditches.

6.4.4 The conservation status of Spined Loach is dependent upon the maintenance of suitable aquatic habitat and supporting processes. Water quality is therefore relevant insofar as changes in nutrient concentrations, organic loading or dissolved oxygen could affect the aquatic habitat and vegetation supporting the qualifying species.

Nene Washes SPA Baseline

6.4.5 Nene Washes SPA supports an internationally important assemblage of breeding and non-breeding waterbirds, including Bewick's Swan (*Cygnus columbianus bewickii*), Wigeon (*Mareca penelope*), Gadwall (*Mareca strepera*), Teal (*Anas crecca*), Pintail (*Anas acuta*), Garganey (*Spatula querquedula*), Shoveler (*Spatula clypeata*) and Black-tailed Godwit (*Limosa limosa*).

6.4.6 The qualifying bird species are dependent upon the wetland habitats of the Nene Washes for feeding, breeding and roosting. Water quality is therefore relevant principally through its potential to affect the extent, structure and function of these supporting habitats and the ecological processes upon which the qualifying bird populations depend. Natural England's conservation objectives specifically require the maintenance or restoration of the habitats of the qualifying features and the supporting processes upon which those habitats rely.

Appropriate Assessment for Nene Washes Ramsar, SAC and SPA

6.4.7 The modelling demonstrates that ammonia concentrations remain below the Natural England assessment standard of 0.6 mg/L under the baseline, future and TAL scenarios. BOD also remains below the relevant standard of 5 mg/L under all three scenarios. The change between the baseline and future scenarios is negligible for both parameters.

6.4.8 Total phosphorus exceeds the Natural England target of less than 0.1 mg/L under baseline conditions. The future scenario increases the modelled annual mean concentration from 0.1491 mg/L to 0.1499 mg/L, an increase of 0.0008 mg/L. This represents a negligible increase attributable to Local Plan growth.

6.4.9 Under the TAL scenario, improvements to wastewater treatment infrastructure reduce the modelled total phosphorus concentration to 0.0694 mg/L. The TAL scenario therefore more than offsets the negligible increase associated with Local Plan growth, reduces phosphorus concentrations below existing baseline levels and, importantly, achieves the Natural England target of less than 0.1 mg/L.

6.4.10 Taking account of these results, the Local Plan would not result in deterioration in the water quality conditions supporting the qualifying features of Nene Washes SAC, the qualifying bird populations and supporting habitats of Nene Washes SPA, or the ecological character of Nene Washes Ramsar Site. With the implementation of the mitigation measures set out in **Section 6.8**, the modelled phosphorus concentration at the end of the Plan period would be lower than the existing baseline and below the Natural England target. It is therefore concluded that the Huntingdonshire Local Plan would not result in an adverse effect on the integrity of Nene Washes SAC or SPA, or the ecological character of Nene Washes Ramsar Site, through changes in water quality, either alone or in combination with other plans and projects.

6.5 Ouse Washes

Ouse Washes Ramsar Baseline

6.5.1 Ouse Washes Ramsar Site qualifies under Ramsar Criterion 1 as an extensive example of seasonally flooded washland, and under Criterion 2 for its nationally scarce wetland plants, rare invertebrates and nationally rare breeding waterbirds. The site also qualifies under Criterion 5 for its internationally important assemblage of wintering waterbirds and Criterion 6 for internationally important populations including Bewick's Swan (*Cygnus columbianus bewickii*), Whooper Swan (*Cygnus cygnus*), Wigeon (*Mareca penelope*), Gadwall (*Mareca strepera*), Teal (*Anas crecca*), Pintail (*Anas acuta*) and Shoveler (*Spatula clypeata*).

6.5.2 The ecological character of the Ramsar Site is dependent upon the hydrological and water quality conditions that maintain its wetland habitats and associated plant, invertebrate and waterbird communities. Changes in nutrient concentrations, organic loading or dissolved oxygen therefore have the potential to affect the habitats and ecological processes supporting the Ramsar features.

Ouse Washes SAC Baseline

6.5.3 Ouse Washes SAC is designated for Spined Loach (*Cobitis taenia*). The species occurs within the extensive network of drainage channels within the washlands, with the Counter Drain providing particularly important habitat characterised by clear water and abundant aquatic vegetation.

6.5.4 Water quality is relevant to the qualifying feature because changes in nutrient concentrations, organic loading and dissolved oxygen have the potential to affect the aquatic habitats and vegetation upon which Spined Loach depends.

Ouse Washes SPA Baseline

6.5.5 Ouse Washes SPA supports internationally important populations and assemblages of breeding and non-breeding waterbirds associated with the seasonally flooded washland and its network of wet grassland, open water and drainage channels. Qualifying species include Bewick's Swan (*Cygnus columbianus bewickii*), Whooper Swan (*Cygnus cygnus*), Wigeon (*Mareca penelope*), Gadwall (*Mareca strepera*), Teal (*Anas crecca*), Pintail (*Anas acuta*) and Shoveler (*Spatula clypeata*).

6.5.6 The qualifying bird species are dependent upon the wetland habitats of the Ouse Washes for feeding, breeding and roosting. Water quality is therefore relevant principally through its potential to affect supporting habitats, associated invertebrate communities and the availability of food resources upon which the qualifying bird populations depend.

Appropriate Assessment

6.5.7 The modelling demonstrates that ammonia concentrations remain below the Natural England assessment standard of 0.6 mg/L under the baseline, future and TAL scenarios. BOD also remains below the relevant standard of 5 mg/L under all three scenarios. Additional modelling undertaken by JBA demonstrates that dissolved oxygen remains above the relevant Natural England standard under the baseline, future and TAL scenarios, with negligible variation between scenarios. The change between the baseline and future scenarios is small for ammonia and BOD.

6.5.8 Total phosphorus exceeds the Natural England target of less than 0.1 mg/L under baseline conditions. The future scenario increases the modelled annual mean concentration from 0.2519 mg/L to 0.2541 mg/L, an increase of 0.0022 mg/L. The elevated phosphorus concentration is therefore principally an existing water quality pressure, with Local Plan growth resulting in a small additional increase.

6.5.9 Under the TAL scenario, improvements to wastewater treatment infrastructure reduce the modelled total phosphorus concentration to 0.1403 mg/L. Whilst this remains above the Natural England target, it represents a substantial improvement compared with both the baseline and future scenarios. The TAL improvements therefore more than offset the increase associated with Local Plan growth, such that total phosphorus concentrations at the end of the Plan period would be lower than under existing baseline conditions. This is consistent with the WCS modelling, which identifies a reduction in phosphorus under the TAL scenario at Ouse Washes.

6.5.10 Total phosphorus concentrations at the Ouse Washes are already substantially above the Natural England target under existing baseline conditions, reflecting existing nutrient pressures within the wider catchment, including diffuse agricultural inputs. Against this existing baseline, the Local Plan would result in only a small increase in total phosphorus. With implementation of the mitigation measures set out in **Section 6.8**, including improvements to wastewater treatment infrastructure under the TAL scenario, total phosphorus concentrations at the end of the Plan period would be lower than under existing baseline conditions, although they would remain above the Natural England target.

6.5.11 Taking account of these results, the Local Plan would not result in deterioration in the water quality conditions supporting Spined Loach within Ouse Washes SAC, the qualifying bird populations and supporting habitats of Ouse Washes SPA, or the ecological character of Ouse Washes Ramsar Site. It is therefore concluded that the Huntingdonshire Local Plan would not result in an adverse effect on the integrity of Ouse Washes SAC or SPA, or the ecological character of Ouse Washes Ramsar Site, through changes in water quality, either alone or in combination with other plans and projects.

6.6 Portholme SAC

Baseline

6.6.1 Portholme SAC is designated for Lowland Hay Meadows, characterised by Meadow Foxtail (*Alopecurus pratensis*) and Great Burnet (*Sanguisorba officinalis*). The site comprises an extensive area of traditionally managed floodplain meadow associated with the River Great Ouse and is subject to seasonal flooding.

6.6.2 The qualifying grassland habitat is dependent upon the maintenance of appropriate hydrological and nutrient conditions. Water quality is therefore relevant through the potential for floodwater to influence nutrient inputs to the meadow, which could affect the composition, structure and function of the qualifying vegetation.

6.6.3 The conservation objectives for Portholme SAC are to maintain or restore the extent, distribution, structure and function of the qualifying habitat together with the supporting natural processes upon which it relies. This includes maintaining the hydrological regime and appropriate water quality necessary to sustain the characteristic floodplain meadow vegetation and prevent deterioration of the site's ecological condition.

Appropriate Assessment

6.6.4 The modelling demonstrates that ammonia concentrations remain below the Natural England assessment standard of 0.6 mg/L under the baseline, future and TAL scenarios. BOD also remains below the relevant standard of 5 mg/L under all three scenarios. Additional modelling undertaken by JBA demonstrates that dissolved oxygen remains above the relevant Natural England standard under the baseline, future and TAL scenarios, with only limited variation between scenarios.

6.6.5 Total phosphorus is substantially above the Natural England target of 0.12 mg/L under existing baseline conditions, with a modelled concentration of 0.3303 mg/L. The future scenario increases the concentration to 0.369 mg/L. Under the TAL scenario, improvements to wastewater treatment infrastructure reduce the modelled concentration to 0.3599 mg/L. Whilst this reduces the increase associated with Local Plan growth, the resulting concentration remains above both the Natural England target and the existing baseline concentration.

6.6.6 Portholme SAC is designated for Lowland Hay Meadows rather than an aquatic habitat. The qualifying vegetation is influenced by river water principally during periods of flooding, when floodwater may introduce nutrients to the floodplain meadow. The modelled increase in phosphorus concentration within the River Great Ouse is unlikely to translate directly into an equivalent increase in nutrient availability within the meadow soils or vegetation. The ecological effect will depend upon the frequency, volume, duration and extent of inundation, together with nutrient retention and cycling within the floodplain meadow.

6.6.7 Taking account of the terrestrial nature of the qualifying habitat, the intermittent pathway through flooding, and the reduction in phosphorus concentrations achieved under the TAL scenario compared with the unmitigated future scenario, the predicted change in river-water phosphorus concentration would not result in a change in nutrient conditions sufficient to alter the composition, structure or function of the Lowland Hay Meadows qualifying habitat. Taking account of these results and the mitigation measures set out in **Section 6.8**, it is therefore concluded that the Huntingdonshire Local Plan would not result in an adverse effect on the integrity of Portholme SAC through changes in water quality, either alone or in combination with other plans and projects.

6.7 The Wash and North Norfolk Coast SAC, The Wash SPA and Ramsar

6.7.1 The Wash and North Norfolk Coast SAC, The Wash SPA and The Wash Ramsar Site are located a considerable distance downstream of the Huntingdonshire Local Plan area. Although hydrologically connected to the Plan area via the River Great Ouse and River Nene catchments, the considerable distance downstream, together with the associated dilution and attenuation of any changes in water quality arising from Local Plan development, substantially limits the potential for effects upon these designations. The modelling results are considered below.

Appropriate Assessment

6.7.2 The modelling demonstrates that ammonia and BOD remain below the relevant Natural England standards under the baseline, future and TAL scenarios. Additional modelling undertaken by JBA demonstrates that dissolved oxygen remains above the standard required to maintain High Ecological Status under all three scenarios, with negligible variation between them.

6.7.3 Total phosphorus exceeds the Natural England target of 0.12 mg/L under baseline conditions. Local Plan growth results in a negligible increase from 0.1506 mg/L to 0.1513 mg/L. Under the TAL scenario, improvements to wastewater treatment infrastructure reduce the modelled concentration to 0.0866 mg/L, which is below both the existing baseline concentration and the Natural England target.

6.7.4 Given the considerable distance downstream, the negligible change associated with Local Plan growth and the reduction in total phosphorus below both baseline conditions and the Natural England target under the TAL scenario, the Local Plan would not result in deterioration in the water quality conditions supporting these designations. Taking account of the mitigation measures set out in **Section 6.8**, it is concluded that the Huntingdonshire Local Plan would not result in an adverse effect on the integrity of The Wash and North Norfolk Coast SAC or The Wash SPA, or the ecological character of The Wash Ramsar Site, through changes in water quality, either alone or in combination with other plans and projects.

6.8 Mitigation

6.8.1 The Water Cycle Study identifies improvements to wastewater treatment infrastructure as necessary to ensure that growth proposed through the Huntingdonshire Local Plan can be accommodated without unacceptable deterioration in water quality. The Technically Achievable Limit (TAL) modelling demonstrates the water quality improvements that can be achieved through upgrades to relevant wastewater treatment works (**Table 6.1**). At Portholme SAC, where phosphorus concentrations remain above baseline conditions under the TAL scenario, the implications for the qualifying Lowland Hay Meadows habitat have been considered separately in the Appropriate Assessment above.

6.8.2 Natural England has advised that sufficient hydraulic and environmental capacity should be demonstrated before development is permitted[158]. The phasing of development should therefore be aligned with the delivery of the necessary wastewater infrastructure. Where sufficient capacity or appropriate mitigation cannot be demonstrated, development should not proceed until the necessary measures are in place.

6.8.3 The Statement of Common Ground between Huntingdonshire District Council and Anglian Water confirms that the Water Cycle Study has informed Anglian Water's strategic planning and that future wastewater infrastructure requirements will be considered through its investment planning processes[159]. Wastewater discharges will also remain subject to environmental permitting and regulation by the Environment Agency.

6.8.4 These measures ensure that development will be linked to the availability of sufficient wastewater treatment capacity and the delivery of the infrastructure necessary to avoid adverse effects on the integrity of hydrologically connected European sites.

6.9 Water quality conclusion

6.9.1 Taking account of the findings of the Water Cycle Study, the site-specific Appropriate Assessments set out above and the mitigation measures identified in **Section 6.8**, it is concluded that the Huntingdonshire Local Plan will not result in an adverse effect on the integrity of any European site, either alone or in combination with other plans and projects, as a result of changes in water quality.

[158] Huntingdonshire District Council and Anglian Water (2026) Statement of Common Ground Between Huntingdonshire District Council and Anglian Water. Available at: https://huntingdonshire.gov.uk/media/lb5dchgh/statement-of-common-ground-between-hdc-and-anglian-water.pdf [Date accessed: 19/08/26]

7 Water quantity appropriate assessment

7.1 Introduction

7.1.1 As noted in **Section 3.5**, development can reduce catchment permeability and the presence of drainage networks may be expected to remove runoff from urbanised catchments. This may result in changes in run off rates from urbanised areas to European sites or watercourses which connect to them and therefore a change in water levels. Water mains leakage and sewer infiltration may also affect water levels. In addition, supply to meet water demand associated with new development (residential and employment development supported by the Local Plan) also has the potential to affect water balances at hydrologically sensitive European sites which are connected to the Plan area.

7.1.2 European sites which are located within an ALS area within which the Local Plan is also located have been screened in for further consideration in this AA (see **Table 3.2** for scoping outputs).

7.1.3 The following European sites have the potential to be impacted by water quantity effects as a result of the Local Plan:

- Fenland SAC
- Nene Washes SAC
- Nene Washes SPA
- Nene Washes Ramsar
- Orton Pit SAC
- Ouse Washes SAC
- Ouse Washes SPA
- Ouse Washes Ramsar
- Portholme SAC
- The Wash & North Norfolk Coast SAC
- The Wash SPA
- The Wash Ramsar
- Upper Nene Valley Gravel Pits SPA
- Upper Nene Valley Gravel Pits Ramsar
- Woodwalton Fen Ramsar

7.2 Mitigation and Appropriate Assessment

7.2.1 Together the Government, the EA and the water companies are responsible for preparing plans and strategies and implementing a regulatory framework to ensure there is enough water for the future needs of both people and the environment. This is undertaken through a catchment-based approach and provides protection for European sites and ensures compliance with the WFD[160].

7.2.2 Anglian Water's 2024 WRMP[161] identifies the potential for a water supply shortfall of 571 megalitres per day by 2050 if no action is taken, with deficits anticipated across 25 of its 27 Water Resource Zones (WRZs). The WRMP identifies measures to maintain sustainable supplies, including smart metering, leakage reduction and strategic resource options. The Anglian Water WRMP was supported by an HRA[162] which recommended mitigation measures that, if implemented, should help to avoid adverse impacts upon the integrity of any European sites either alone, or in-combination.

7.2.3 Cambridge Water's WRMP [163] also demonstrates the potential for a growing supply/demand deficit in the absence of effective management planning. The WRMP also places emphasis on leakage reduction, in addition to reducing household and non-household water consumption, and enforcing universal metering by 2030. The Cambridge Water WRMP was supported by an HRA[164] which concluded that, alone, the WRMP would have LSEs upon a number of European sites, if the recommended mitigation measures were not implemented including the Ouse Washes SAC, SPA and Ramsar, Fenland SAC and Eversden & Wimpole Woods SAC.

7.2.4 The Local Plan has been supported by an IWMS (Phase 2 WCS)[165] which provides an assessment of water resources in relation to Local Plan growth. This concludes that the growth forecast in each of the Water Resource Zones which feed the Plan area exceeds the forecast number of properties throughout the WRMP24 plan period, suggesting planned combined demand from growth is likely to be ahead of supply. Anglian Water and Cambridge Water were consulted through the preparation of the IWMS (however no reply was received from Cambridge Water).

[164] Ricardo (2023) Habitats Regulations Assessment: Draft Water Resources Management Plan 2024. Available at: https://www.cambridge-water.co.uk/media/twqh2ovj/cambridge-water-draft-wrmp24-hra-issue-3.pdf [Date accessed: 01/06/26]

[165] JBA Consulting (2026) Huntingdonshire Integrated Water Management Strategy: Stage 2 Water Cycle Study Final Report.

7.2.5 Anglian Water has commenced preparation of WRMP29 for the period from 2030 onwards. Local Plan growth projections, including major strategic development, will need to be reflected in future water resource planning. The IWMS identifies a need for further engagement with Cambridge Water to establish whether growth within AMP8 can be accommodated within existing plans and whether subsequent plans can be adapted to reflect Local Plan growth.

7.2.6 The IWMS recommends continued engagement between HDC, neighbouring authorities within the same WRZs, Anglian Water and Cambridge Water to ensure that planned growth is reflected in future water resource planning. This is particularly important where Local Plan growth is forecast to exceed the growth assumptions currently incorporated within WRMP24. The Council should therefore continue to work with the water companies, through cooperative work such as the 2026 Statement of Common Ground with Anglian Water[166], to align Local Plan growth with future water resource planning and infrastructure delivery.

7.2.7 As set out in **Section 3.5**, abstractions for water supply are managed by the EA through licences issued in line with their CAMS process.

7.2.8 Water supply issues will also be addressed through the higher-level water planning framework and licensing process (RBMP, WRMP, Drought Plans and CAMS). Local Plan policies to improve water efficiency (Policy LP 24 - Water Efficiency) will also ensure water supplies at European sites can be met to meet the requirements of European sites. Policy LP 24 (Water Efficiency) sets a water efficiency target of 90L per person per day.

7.3 Conclusion

7.3.1 To minimise strain placed upon water quantity by development coming forward through the Local Plan, there has been pursuit of both water policies, such as LP24 on water efficiency, and ongoing dialogue with water companies regarding infrastructure delivery, illustrated by outputs such as the 2026 Statement of Common Ground[167]. It can be concluded on the basis of such policies and cooperative efforts that there will be no adverse impacts on the integrity of any European site, either alone or in-combination, due to a change in water quantity as a result of the Local Plan.

[166] Huntingdonshire District Council and Anglian Water (2026) Statement of Common Ground Between Huntingdonshire District Council and Anglian Water. Available at: https://huntingdonshire.gov.uk/media/lb5dchgh/statement-of-common-ground-between-hdc-and-anglian-water.pdf [Date accessed: 19/08/26]

[167] Ibid.

8 Recreational pressure appropriate assessment

8.1 Introduction

8.1.1 The following section of the AA focuses on assessing the ecological impacts of increased recreational pressures from the Local Plan upon the qualifying features of the following European sites which were screened into the HRA process (**Chapter 4**):

- Fenland SAC;
- Nene Washes SAC;
- Nene Washes SPA;
- Nene Washes Ramsar;
- Ouse Washes SAC;
- Ouse Washes SPA;
- Ouse Washes Ramsar;
- Portholme SAC;
- Upper Nene Valley Gravel Pits SPA;
- Upper Nene Valley Gravel Pits Ramsar; and
- Woodwalton Fen Ramsar.

8.1.2 Policies with the potential to have LSE recreational impacts and therefore which will be assessed in the recreational pressure AA include the following:

- LP1- How much development do we expect?
- LP2 – Our strategy for change
- LP3 – Distribution of growth
- LP6 – Market towns
- LP7 – Service centres
- LP8 – Local service villages
- LP9 - Villages
- LP10 – Hamlets and the countryside
- LP51 – Gypsies, Travellers and Travelling Showpeople

8.1.3 Development, and specifically housing growth, has the potential to increase recreational pressure at European sites. These pressures can cause the loss of, or damage to, the features for which a European site is designated[168]. Recreational activities can lead to impacts such as:

- Habitat loss
- Habitat fragmentation
- Habitat damage through trampling and erosion

[168] Natural England. Public Access and Disturbance Theme Plan A strategic approach to identifying and addressing significant effects on the features of Natura 2000 sites.

- Disturbance to plants and animals from increased numbers of people undertaking a range of different open air recreational activities
- Disturbance to plants and animals from dogs
- Pollution and contamination caused by dog fouling (eutrophication)

8.1.4 **Appendix D** identifies all proposed allocations that could have a LSE arising from recreational pressure on designated sites, as they promote new housing.

8.2 Fenland SAC and Woodwalton Fen Ramsar

Baseline information

8.2.1 As noted in **Section 3.6**, Fenland SAC (where it is underpinned by Woodwalton SSSI and Woodwalton NNR)[169] and Woodwalton Ramsar[170] are located near the centre of the Plan area. The SAC is designated for its meadow and fen habitats, as well as Great Crested Newt and Spined Loach. The Ramsar is designated for Fen Violet and Fen Wood-rush, as well as numerous wetland invertebrates, aquatic beetles, flies and moths.

8.2.2 The underpinning SSSI is designated for seven features of which five are in an 'unfavourable - no change' condition (ditches, floodplain fen (lowland), lowland moor grassland and rush pasture, Fen Woodrush and vascular plant assemblage), one is 'unrecorded' (Fen Violet) and one is in a 'favourable' condition (wet woodland)[171]. The unfavourable condition status is not attributed to recreational pressure but potentially linked to water quality.

8.2.3 The conservation of meadow habitats at Fenland SAC are noted to be dependent on recreation/visitor management[172]. Fenland SAC and Woodwalton Fen Ramsar are both sensitive to recreational pressure due to the vulnerability of their fen, meadow and wetland habitats[173].

[169] Natural England (2018) European Site Conservation Objectives for Fenland SAC (UK0014782). Available at: https://publications.naturalengland.org.uk/publication/6712672527581184 [Date accessed: 18/06/26]

[173] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Fenland (SAC) Site Code: UK0014782.

Appropriate Assessment

8.2.4 Woodwalton Fen is a large, 209ha site managed by Natural England and owned by the Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire[174]. A site visit was undertaken in January 2026 to assess the existing baseline recreational use at the site and impacts currently taking place upon its qualifying features. The output of these site visits is summarised in **Appendix E**. These site surveys indicated that there are no official Public Rights of Way (PRoW) across the site due to private ownership, however there is public access on promoted and managed routes. Parking provision at the site is limited, with no formal car park present. However, informal parking was observed at the time of the survey along a track off Chapel Road, which could accommodate approximately 20 vehicles. Access to the site is provided via a bridge crossing the Great Raveley Drain and access to the designated sites is limited to small tracks and lanes. Extensive signage is present at the main entrance, including site information and clear notices prohibiting access for dogs, bicycles, and unauthorised vehicle within the site.

8.2.5 The results of the baseline recreation study walkover indicated that evidence of path erosion at the site was minimal. Access management by Natural England was evident with promoted routes being clearly signposted throughout the site. The baseline recreation study concluded that there was no evidence of recreational adverse impacts upon the qualifying features of the SAC or Ramsar at the time of the survey.

8.2.6 The closest residential and mixed-use allocations to the SAC and Ramsar are located in the settlements of Abbots Ripton to the south, Bury to the east, Holme to the north west and Sawtry to the west. Allocations within approximately 5km of the SAC and Ramsar are listed below and illustrated in **Appendix D**, **Figure D.1**. The closest of these allocations is 3.7km in Bury (Bury 3). All other allocations made in the Local Plan are considerably further away from these designated sites close to Huntingdon which is located over 8.5km to the south. Access from all Local Plan allocations to the SAC and Ramsar is limited to small tracks and lanes.

- Abbots Ripton 1: 15 residential units – approximately 5.5km to the south
- Bury 1: 30 residential units – approximately 5.1km to the east
- Bury 3: 170 residential units – approximately 3.7km to the east
- Holme 1: 50 residential units – approximately 3.8km to the north west
- Ramsey 2: 20 residential units – approximately 6.1km to the east
- Sawtry 1: 330 residential units – approximately 6.1km to the west
- Sawtry 2: 170 residential units – approximately 5.8km to the west
- Sawtry 3: 330 residential units – approximately 4.8km to the west

8.2.7 The Local Plan contains policies which protect and secure open spaces and local greenspace for recreation as summarised below:

- Policy LP 4 – Green and Blue Infrastructure Priority Areas. This policy recognises the importance of green and blue infrastructure priority areas across Huntingdonshire as identified in the Local Nature Recovery Strategy for

[174] https://www.greatfen.org.uk/woodwalton-fen

Cambridgeshire and Peterborough[175] and the Huntingdonshire Nature Recovery Network Report[176]. It also recognises the requirement for development in the Local Plan to contribute positively to the Great Fen Masterplan (see **paragraph 5.2.21**). Priority Areas identified in Policy LP 2 include the locations listed below. These locations include the Great Fen within which Fenland SAC and Woodwalton Ramsar are located. In addition, proposals at Paxton Pits will be supported by Policy LP 4 where they help to deliver the objectives of the Nature Reserve Management Plan (2017) or successor documents and/ or the objectives of the Reserve Management Strategy for the planned extension to Paxton Pits Nature Reserve (2007) or successor documents[177].

  - Fen-edge Woodlands
  - Folksworth-Elton-Ashton Wold
  - Grafham-Brampton-River Kym
  - Great Fen
  - Great Ouse Valley
  - Hail Weston-Bushmead
  - Holme-Conington
  - West Cambridgeshire Hundreds
  - Nene Valley
  - River Corridors (Kym, Alconbury Brook, Ellington Brook & Fen Rivers)

- Policy LP 12 – How will infrastructure be provided. This policy sets out requirements for new development and links to the Infrastructure Delivery Study which supports the Local Plan and sets requirements in terms of green space provision.
- Policy LP 13 – Securing infrastructure provision. This policy sets provisions for securing funding for infrastructure costs set out in the Infrastructure Delivery Study which include recreation provision and green infrastructure.
- Policy LP 19 – Green and blue infrastructure. This policy sets out the role that provision and enhancement of strategic green and blue infrastructure have in achieving the strategy and balancing built development. This policy also sets out the Council's approach to protecting and enhancing Huntingdonshire's green and blue infrastructure for the benefit of biodiversity and the environment as well as for local residents for recreation and leisure. The supporting text to this policy notes that the Local Plan is pursuing the Fields in Trust plus the National Allotment and Leisure Gardeners Society standard for open spaces.
- Policy LP 52 – Protecting our open spaces, outdoor sport and recreational facilities. This policy seeks to protect areas of open space, sports and

[175] Local Nature Recovery Strategy for Cambridgeshire and Peterborough https://naturalcambridgeshire.org.uk/local-nature-recovery-strategy-for-cambridgeshire-and-peterborough-now-live/

[176] The Wildlife Trust for Bedfordshire, Cambridgeshire & Northamptonshire (2024) An Interim Nature Recovery Network for Huntingdonshire. Draft report.

[177] https://paxton-pits.org.uk/about-paxton-pits/habitat-management/

recreational facilities from development that would lead to their partial or complete loss.

8.2.8 As set out in the above policy requirements (Policy LP 19) Open Space Standards have been developed by the Council based on the Fields in Trust (FIT) Standard plus the National Allotment and Leisure Gardeners Society Standard. This is a nationally recognised standard that seeks a total overall quantum of open space of 3.2ha/1,000 people and when considered alongside outdoor sport and play standard space this rises to a total of 5.35ha/1,000 people. The requitement to achieve this standard is set out in Policy LP 19. This standard provides a greater overall level of provision of accessible natural greenspace (when compared to the NE GI Framework standard of 3ha/1000) and it is support by the Local Plan infrastructure and viability evidence base.

8.2.9 There are a number of alternative recreational options located within close proximity to site allocations within the Plan area. These include the following which provide alternative recreational destinations with a range of visitor facilities.

- Hinchingbrooke Country Park which covers 150 acres of open grasslands, mature woodland and lakes. Visitor facilities include a range of promoted routes, a café, play areas, toilets, a countryside centre and parking.
- Holt Island Nature Reserve which comprises a 2.8 ha reserve includes the remnants of the once-worked Osier beds, native tree species and beds of phragmites reed mixed with sedge. Visitors are directed across the site on a raised boardwalk with promoted routes and Holt Cabin.
- Riverside Park Huntingdon which extends over approximately 14ha and includes 2km paths along the riverbank, from the bridge over the River Great Ouse near the Old Bridge Hotel to Hartford Church. Visitor facilities include promoted walking routes, parking and a children's play area
- Grafham Water is an 800-hectare reservoir and SSSI, managed by Anglian Water, and nature reserve which offers outdoor activities like walking, cycling, sailing, and fishing and contains a nature reserve, cafes, and family-friendly play areas. Visitor facilities include a visitor centre, toilets, parking, cafes, nature trails, cycle hire and cycling routes, water sport activities, angling opportunities, play areas,
- Barford Road Pocket Park is located in Eynesbury, St Neots and covers approximately 45 acres of grassland, wildflower meadows, woodland, hedgerows, and reedbeds along the River Great Ouse. Visitor facilities include fitness and play trails and promoted routes including a board walk.
- Paxton Pits is a Local Nature Reserve (LNR) and a SSSI which is managed by Huntingdonshire District Council and The Friends of Paxton Pits. It comprises a series of lakes, meadows and woodland rich in wildlife, with guided, accessible trails. Facilities include a visitor centre including café and free parking for cars and bikes.

8.2.10 Taking into consideration the outputs from the results of the baseline recreation study walkover and the Local Plan policies regarding the protection and requirements for open space, and alternative areas of open space closer to Local Plan allocations, it can be concluded that there will be no adverse recreational impacts upon Fenland SAC and Woodwalton Ramsar from the Local Plan alone or in-combination.

8.3 Nene Washes SPA and Ramsar

Baseline information

8.3.1 The Nene Washes SPA and Ramsar designated sites are located at their closest point approximately 2km to the north of the Plan area. As noted in **Section 3.6**, the qualifying species of the Nene Washes SPA[178] include a number of internationally important species of birds which are reliant on the Washes seasonally flooded habitat for providing breeding and wintering habitat. The Nene Washes Ramsar is also designated for Tundra Swan and a number of breeding birds, raptors and additionally nationally scarce plants and invertebrates (**Appendix B**).

8.3.2 The Nene Washes SPA and Ramsar are underpinned by the Nene Washes SSSI. The SSSI is designated for 14 features of waterfowl, one of which is in an 'unfavourable – declining' condition. It is also designated for ditches ('unfavourable - recovering' condition), Lowland wet neutral grassland (MG11, MG13) ('unfavourable - no change' condition), and lowland wet neutral grassland ('unfavourable – recovering'). The unfavourable condition status of these SSSI features is not attributed to recreational pressure but is noted to be potentially linked to climate change and milder winters on the continent.

8.3.3 The SIP for the SPA (and SAC) does not identify recreational impacts as a threat[179]. Natural England's conservation advice notes that: '*Although visitor numbers aren't accurately measured, human disturbance should be low due to the remoteness of the site and lack of infrastructure. It is popular with bird watchers particularly from nearby counties. Parts of the site are also used for wildfowling, angling and skating. Wildfowling causes disturbance to wintering birds until the end of January, particularly in the Low Wash and the High Wash*'[180]. The conservation advice also notes that: '*Anglers are able to use Moreton's Leam, but aren't thought to cause a disturbance problem. Public access is along a footpath on the South Barrier Bank; it is little used and far enough away from the centre of the washes to be unlikely to cause significant disturbance*.'

Appropriate Assessment

8.3.4 As noted in **Section 3.6**, the Nene Way long distance path runs along the northern bank of the River Nene, providing public access from Peterborough eastwards past Whittlesey to Ring's End.

[178] Natural England (2019) European Site Conservation Objectives for Nene Washes SPA (UK9008031). Available at: https://publications.naturalengland.org.uk/publication/4894064390438912 [Date accessed: 18/06/26]

[179] Natural England (2014) Site Improvement Plan Nene Washes SAC and SPA.

[180] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Nene Washes SPA Site Code: UK9008031.

8.3.5 A review of allocations indicates that the closest residential allocation to the SPA and Ramsar is located within the settlement of Stilton. one for eight residential units (Stilton 1) and 55 residential units on Stilton 2. These allocations are more than 8.5km to the south west of the SPA and Ramsar and are bound on all sites by residential development and the A1(M) on their eastern boundary. There are also a number of small residential allocations located in Sawtry and Ramsey (as listed in **paragraph 8.2.6**), however, all other Local Plan allocations are situated significantly further away from the SPA and Ramsar and more than 22km to the south around the town of Huntingdon.

8.3.6 A review of SSSI IRZ data associated with the underpinning Nene Washes SSSI indicates that no Local Plan allocation either triggers consultation with Natural England or is located within an IRZ associated with the Nene Washes SSSI.

8.3.7 The local plan contains a number of policies which protect and secure open spaces and local greenspace for recreation as summarised in **paragraphs 8.2.7 to 8.2.10**. In addition, as listed in **paragraph 8.2.11** there are a number of alternative recreational options located within close proximity to site allocations within the Plan area.

8.3.8 Taking into consideration the location of allocations in relation to the Nene Washes SPA and Nene Washes Ramsar, the Local Plan policies regarding the protection and requirements for open space and alternative areas of open space closer to Local Plan allocations, it can be concluded that there will be no adverse recreational impacts upon the Nene Washes SPA and Nene Washes Ramsar from the Local Plan either alone or in-combination.

8.4 Ouse Washes SAC, SPA and Ramsar

8.4.1 The Ouse Washes comprise one of the most extensive areas of seasonally flooded washland in the UK. The SPA and Ramsar designations encompass two canalised main river channels of the River Great Ouse that run along each side of its length, with an extensive area of wet grassland and field drains in between[181]. The SAC designation covers the Old Bedford River Counter Drain only. These designations are linear in nature and predominantly located outside the Plan area, however they extend for approximately 1.2km into the eastern edge of the Plan area close to Earith (**Figure 3.6**).

8.4.2 The Ouse Washes supports a wide range of wetland habitats, including open water, ditches and wet grassland. The SAC is designated for Spined Loach (*Cobitis taenia*) and the SPA for the large assemblages of breeding and non-breeding waterbirds, including internationally important wintering populations of Swans and wildfowl. The features of the Ramsar include the internationally important bird assemblages, the extensive area of seasonally-flooded washland, relict fenland invertebrates and several nationally scarce plants, such as the Small Water Pepper (*Polygonum minus*).

[181] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features, Ouse Washes (SPA) Site Code: UK9008041. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK9008041.pdf [Date accessed: 05/02/26].

8.4.3 The Ouse Washes SAC, SPA and Ramsar are underpinned by the Ouse Washes SSSI. This SSSI is designated for 21 bird features (both breeding and non-breeding) eight of which are in an 'unfavourable – no change' condition. It is also designated for ditches ('unfavourable - recovering' condition), lowland wet neutral grassland (MG11, MG13) ('unfavourable - no change' condition), and a vascular plant assemblage. The unfavourable condition status of these features is not noted on NE's designated site viewer to be attributed to recreational pressure.

8.4.4 The SIP for the SPA and SAC does not identify recreational impacts as a threat[182]. The conservation advice for the SPA however notes that: '*The nature, scale, timing and duration of some human activities can result in the disturbance of birds at a level which may significantly affect their behaviour, and consequently impact on the long-term viability of their populations. ….. The location of birds will depend on the flood conditions, with swans preferring deeper water for roosting. The section closest to Earith tends to be least preferred, probably because of disturbance by walkers and dogs on footpaths along the flood banks. There are footpaths along the barrier banks. In general these are quiet because of the location of the site and difficult access, but there is significant disturbance immediately north of Earith, particularly from dog walkers. Numbers of visitors to the RSPB reserve at Manea are small and are unlikely to result in disturbance. Numbers of visitors to the WWT reserve at Welney are larger but access is restricted and disturbance is also unlikely there.* [183]'. Whilst recreation is not identified in the conservation advice for the SAC as a threat to its qualifying feature (Spined Loach), in their Regulation 18 consultation response, NE raised the potential adverse impacts associated with activities such as angling on Spined Loach populations and requested consideration of this in the AA.

8.4.5 It is noted that qualifying bird species associated with the Ouse Washes SPA and Ramsar may also use functionally linked land within the wider area, outside the designation boundaries. Functionally linked bird habitat associated with the SPA and Ramsar is likely to primarily consists of surrounding arable farmlands and pasturelands that host non-breeding wildfowl and waders. These off-site habitats serve as critical complementary areas for daytime foraging and nighttime roosting, particularly when the main washland is deep underwater. In addition to these areas, functionally linked habitat may include the interconnecting drainage ditch network that is located beyond the designations. Qualifying species of birds located within areas of functionally linked land may also be vulnerable to recreational impacts. NE's SSSI IRZs around these designations include the area immediately surrounding the Nene Washes SPA and Ramsar and the Ouse Washes SPA and Ramsar and extending up to several kilometers into the wider Cambridgeshire and Fens landscape and encompassing adjacent SSSI designations (such as Berry Fen SSSI) and RSPB reserves such as the Ouse Fen reserve, these areas are frequently referred to as "Goose and Swan Functional Land" IRZ.

[182] Natural England (2014) Site Improvement Plan Nene Washes SAC and SPA.

[183] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features, Ouse Washes (SPA) Site Code: UK9008041. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK9008041.pdf [Date accessed: 05/02/26].

8.4.6 A strategic approach to mitigation was set out in the Norfolk Green Infrastructure and Recreational Impact Avoidance and Mitigation Strategy ('GIRAMS')[184] for a number of European sites located in Norfolk including the Ouse Washes SAC, SPA and Ramsar designations. This Strategy built on visitor survey results[185] to establish mitigation approaches. The current GIRAMS strategy has been in place since 2020 in Norfolk. In 2024 the GIRAMS strategy was revisited to reflect changes in public access and recreation patterns following COVID and also a study of the North Norfolk Coast and the Wash[186] which identified a new direction for visitor management and highlighted the need to reduce visitor numbers in a strategic way. The Norfolk Recreational Impact Avoidance and Mitigation Action Plan was prepared in 2024[187]. This covers a number of European sites within Norfolk which have a varying levels of accessibility.

8.4.7 The Norfolk Action Plan includes the Ouse Washes SPA, SAC and Ramsar designations. However, due to a lack of visitor survey data, the Action Plan notes that there is uncertainty around the scale of any ZoI associated with these designations. A preliminary ZoI of 7km is noted in the Action Plan for the Ouse Washes. The Action Plan sets out measures, with associated approximate costs, that provide a package of mitigation for all the European sites, including the Ouse Washes. For the Ouse Washes mitigation measures comprise monitoring surveys for detection/spread of invasive species (e.g. Floating Pennywort) and a watching brief on recreation use. The combined costs attributed to this package sets a suitable per dwelling tariff that can be applied across Norfolk in order to fund the mitigation for cumulative and in-combination recreational impacts from housing growth in Norfolk. It is noted that no costs are included for the Ouse Washes in the Action Plan.

8.4.8 The Action Plan notes that mitigation will also need to include measures away from the European sites. These largely comprise measures that relate to providing alternative recreation provision, typically referred to as Suitable Alternative Natural Greenspace (SANG) and whilst these are part of the overall 2020 GIRAMS approach they were outside the scope of the Norfolk Action Plan.

Appropriate Assessment

8.4.9 The Ouse Washes is large linear site approximately 330ha in area and 30km in length with multiple landowners, including areas managed by the Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire, the Royal Society for the Protection of Birds (RSPB), and the Wildfowl & Wetlands Trust. A number of towns and villages surround the site. Of note is the town of Earith in the south, as this is the only town local to the Ouse Washes which is located within the Huntingdonshire Plan area. Recreational access from this town is noted in NE's SIP for the SPA (**paragraph 8.4.4**). Much of the designated site is surrounded by open agricultural fields.

[184] Hooton, S. and Mills, R. (2020) Norfolk Green Infrastructure and Recreational Impact Avoidance and Mitigation Strategy. Report by Place Services for Norfolk Strategic Planning Framework.

[185] Panter, C., Liley, D. and Lowen, S. (2017) Visitor surveys at European Protected Sites across Norfolk in 2015 and 2016. Unpublished report by Footprint Ecology for Norfolk County Council.

[186] Liley, D. et al. (2022) The Wash and North Norfolk Coast Limits of Acceptable Change Study. 682. Footprint Ecology / Norfolk County Council.

[187] Liley, D., Saunders, P., Bishop, R., Rush, E. & Panter, C. (2024) Norfolk Recreational Impact Avoidance and Mitigation Strategy Action Plan. Report by Footprint Ecology.

8.4.10 As set out in the Baseline Study of Recreational Use and Impact (**Appendix E**), the southern extent of the site, at Earith, provides formalised public access in the form of two car parks: a small car park at Earith Sluice on the River Delph, which can accommodate approximately five vehicles, and a second car park to the east at the Earith Bridge Picnic Area, which can accommodate approximately 20 vehicles.

8.4.11 At Earith, PRoWs are located on the raised banks of both river channels enclosing the Ouse Washes, with one well signposted PRoW running along the eastern boundary of the site adjacent to the River Delph. This route is clearly signed, with kissing gates at access points, and showed a significant level of use, including footprints and dog fouling. This footpath is separated from the Ouse Washes by a hedgerow and tree line, providing a physical and visual buffer that reduces potential disturbance from recreational users to birds using the central section.

8.4.12 Stretches of PRoW which are accessible from the A1123 are similarly screened from the Ouse Washes by hedgerow, scrub, and trees; however, this screening is not however continuous along the full length of the road where it borders the site, leaving some areas more exposed. The bridge at the Earith Sluice and the Earith Bridge, crossing the River Delph and the New Bedford River respectively, provides no screening.

8.4.13 PRoW which are accessible along the B1381, which runs parallel to the New Bedford River on the eastern side of the site, are screened by a low scrub barrier from the designations. A further PRoW along the eastern side of the site, beginning at the Earith Bridge Picnic Area, appears to have been historically well used. Although access was blocked at the time of the site walkover, there was evidence of continued informal use. Whilst no formal access exists onto the washlands, vehicular gates for land management purposes are present, with signs of limited unofficial recreational access beyond these points.

8.4.14 Parking was noted to be informal and recreational access more limited in other areas of the designations moving in a north easterly direction away from Earith. With intermittent vegetation in places screening PRoW from the designated sites.

8.4.15 On the whole, walkovers undertaken as part of the Baseline Study (**Appendix E**) indicate that public access and recreational use to the Ouse washlands is limited, with most of the PRoWs being located along the boundaries of the designated site, running along the banks of the River Delph and the New Bedford River. These river banks are raised along the length of the designated site.

8.4.16 The Baseline Study (**Appendix E**) concluded that recreational pressure at the Ouse Washes is generally low and largely constrained to PRoWs, with very limited evidence of access into the washlands that support the SPA and Ramsar bird assemblages. The linear nature of the site means that most recreational use occurs along riverbanks and site boundaries, where PRoWs, roads and access points are located, rather than within the core washland itself. Hedgerows, tree lines, embankments and topography provide visual and physical screening between recreational routes and the washlands, reducing the potential for disturbance to birds. However, this screening is not continuous, and there are localised sections where views across the Ouse Washes are unobstructed and disturbance from the presence of people and dogs could occur. Flooding at the time of survey limited the assessment of unofficial access onto the Washes, though this flooding is likely to act as a natural deterrent for much of the year. Overall, while recreational use is evident and locally concentrated, its effects appear spatially limited, with the majority of the Ouse Washes remaining relatively undisturbed.

8.4.17 Angling activity was noted to be present along parts of the site, although none was observed during the visit. Fishing rights for the Ouse Washes and the wider River Great Ouse are leased to local angling clubs and preservation societies. In order to fish, membership must be obtained or a valid day ticket purchased. Spined Loaches are a small bottom dwelling species which is rarely directly affected by angling because they are of no commercial or angling interest. They are tiny bottom-dwellers with very small mouths which makes them difficult to catch on a standard rod and line. In addition, given they are a legally protected species listed in the Habitats Directive, deliberately targeting the Spined Loach requires a special licence. Indirect impacts associated with angling may include predation by large coarse fish stocks, trampling of bankside vegetation and submerged water plants by anglers and disturbance of sediments[188]. Fishing and coarse fish stocks on the Ouse Washes are managed through a dual structure divided between statutory government regulation and local angling club enforcement. Local angling groups enforce strict club rules to prevent fishermen from accidentally harming the Spined Loach or disrupting their ecosystem in terms of areas of access and fishing timings. This is likely to provide mitigation for indirect angling impacts upon Spined Loach populations.

8.4.18 A review of allocations indicates that the closest residential allocation to the SAC, SPA and Ramsar are located within the settlements of Bluntisham, Colne, Somersham and Needlingworth as listed below. Other Local Plan allocations are located more than 7km[189] from these designations to the west and south beyond St Ives.

- Bluntisham 1: 35 residential units located approximately 1.5km to the west
- Bluntisham 2: 85 residential units located approximately 1.9km to the west
- Colne 1: 15 residential units located approximately 1.4km to the north west
- Needingworth 1: 1750 residential units located approximately 6km to the west
- Needingworth 2: 100 residential units located approximately 4.7km to the west

[188] English Nature (1998) The habitat and management requirements of spined loach *Cobitis taenia* No. 244 - English Nature Research Reports.

[189] 7km reflects the ZoI for the Ouse Washes as provided in the Norfolk Action Plan – see **paragraph 8.4.7**

- Somersham 1: 120 residential units located approximately 4.3km to the north west
- Somersham 2: 50 residential units located approximately 3.5km to the north west
- Somersham 3: 45 residential units located approximately 4.6km to the north west

8.4.19 The above allocations are located either directly adjacent to or in close proximity to FLL associated with the SPA and Ramsar; potential Goose and Swan Functional Land SSSI IRZ (**paragraph 8.4.6**). A review of SSSI IRZ data flags up rural residential development of more than 10 units in Colne and Bluntisham, and of more than 50 units in Somersham and Needlingworth, outside existing settlements/urban areas as requiring consultation with NE.

8.4.20 The local plan contains a number of policies which protect and secure open spaces and local greenspace for recreation as summarised in **paragraphs 8.2.7 to 8.2.10**. Priority Areas identified in Policy LP 4 include the Great Ouse Valley and River Corridors. Site allocation policy wording for Bluntisham 1 and Bluntisham 2 notes that development must include provision of amenity and open space to mitigate recreational impacts on nearby nature sites. Policy wording for Needingworth 1 will include approximately 65.5ha of green infrastructure, sustainable drainage and flood mitigation use. In addition, as listed in **paragraph 8.2.9** there are a number of alternative recreational options located within close proximity to site allocations within the Plan area.

8.4.21 Taking into consideration the location of allocations in relation to the SPA and Ramsar, local angling group codes of conduct and rules in place to protect the Spined Loach, Local Plan policies regarding the protection and requirements for open space and alternative areas of open space closer to Local Plan allocations, it can be concluded that there will be no adverse recreational impacts upon the Ouse Washes SPA and Ouse Washes Ramsar from the Local Plan alone or in-combination.

8.5 Portholme SAC

8.5.1 Portholme SAC is one of the largest remaining examples of traditionally managed lowland hay meadow in England and is designated for its species-rich grassland habitat, specifically *H6510 Lowland hay meadows* (Annex I habitat, EU Habitats Directive). The site supports characteristic plant communities associated with periodically flooded meadows along the River Ouse. Conservation objectives seek to maintain or restore the extent, distribution, structure and function of the qualifying habitat, including its typical species, and to protect the natural processes, particularly appropriate flooding and management regimes, that sustain its ecological value. Portholme SAC is underpinned by Porthholme SSSI. The neutral lowland grassland feature is assessed as being in an 'unfavourable - recovering' condition.

8.5.2 The grasslands for which Portholme SAC is designated may be impacted by recreational impacts due to its location within the Plan area, the sensitivity of its lowland hay meadow habitat, and the availability of public access. These pressures may include trampling, soil compaction, erosion, disturbance to grazing management, nutrient enrichment from dog fouling and the spread of invasive species, such as trampling by walkers and dog walkers which can damage vegetation and soils.

8.5.3 The SIP for Portholme SAC does not identify recreational impacts as a threat[190]. The conservation advice for the SAC notes that management of visitor access is likely to be a conservation measure for the site but does not identify threats associated with current levels of access[191].

Appropriate Assessment

8.5.4 Portholme SAC is a large, 90ha open field of floodplain hay meadow bordered on two sides by the River Great Ouse and mostly owned by the London Angling Society, with a small 4 acre portion in the south west owned by The Thomas Miller Charity[192]. Huntingdon is located to the north of Portholme SAC, with Godmanchester to the east and agricultural fields to the south.

8.5.5 As set out in the Baseline Study of Recreational Use and Impact (**Appendix E**) the entirety of the site is open access, with three PRoWs, including the Ouse Valley Way, forming a triangle across the site with further unofficial routes leading across the centre of the site.

8.5.6 The central area of the site was inundated at the time of the baseline site survey which meant it was not possible to follow the PRoW across the site and made it difficult to see evidence of recreational impacts in that area.

8.5.7 Access to the site is provided via three main access points. The primary access point is located on the eastern side of the site from Godmanchester. Two car parks serve this access: Post Street Car Park, which provides 29 marked parking spaces, including two disabled bays, with free parking available for up to 23 hours, and a smaller car park adjacent to Queen Elizabeth School and Colman Creative Academy on Post Street, which can accommodate approximately 15 vehicles and includes a public toilet. Both car parks provide access to Queen's Walk, a paved public footpath that runs along the River Great Ouse and includes benches, numerous litter and dog waste bins, and areas of open green recreational space and play provision. Queen's Walk is well signed and includes portage points along the River Great Ouse, with clear directional signage leading users towards a pedestrian crossing over Godmanchester Lock. Beyond this point, access to Portholme SAC is facilitated via a kissing gate.

8.5.8 A second access point is located to the north of the SAC, off Mill Common in Huntingdon. An unofficial car park is present at this location and was observed to be in heavy use during the site visit, with capacity for approximately 15 vehicles. Footpath signage directs users towards the PRoW network across Portholme SAC, and access is provided via a bridge crossing the River Great Ouse, followed by a kissing gate and with information signage provided at the site entrance.

[190] Natural England (2014) Site Improvement Plan Portholme SAC.

[191] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Portholme Special Area of Conservation (SAC) Site Code: UK0030054.

[192] https://www.brampton-cambs-pc.gov.uk/uploads/portholme-meadows-summary.pdf

8.5.9 The third access point is located to the west of the SAC and is accessible on foot only, linking Portholme to the Ouse Valley Way walking route. This access point was flooded at the time of the site survey, and was therefore not fully assessed past the kissing gate onto the SAC itself. This path also connects to a PRoW running north adjacent to the SAC, however, due to the flooded access, this footpath was not walked.

8.5.10 Information boards outlining the importance and history of the Portholme SAC are present at each of the main access points. Outside of these formal access locations, no additional recreation site management measures were evident across Portholme.

8.5.11 The Baseline Survey concludes that whilst a network of PRoWs and informal routes are present across the SAC, evidence of path erosion was minimal and largely confined to the perimeter of the site at the time of the survey. Signs of path use displayed in the form of minor trampled vegetation but little to no erosion was evident. This is likely attributed to the open access nature of the site which allows multiple routes to be taken and therefore no specific paths becoming significantly eroded. In addition, seasonal flooding and inundation of the central areas of Portholme SAC appeared to limit recreational access across much of the site interior. Although dog walking was common and dogs were observed off lead, dog fouling was infrequently observed, and no evidence of littering was recorded. The baseline study concluded that whilst recreational activity at Portholme SAC was evident, it did not appear to be resulting in significant adverse effects on the qualifying hay meadow habitat at the time of survey.

8.5.12 A review of allocations indicates that there are a number of allocations within close proximity to the SAC in Huntingdon and Godmanchester as set out below. The majority of allocations are separated from the SAC by major routes connecting Huntingdon including the A1307, B1043 and B1514.

- Brampton 1: 10 residential units located approximately 2.6km to the north west
- Brampton 2: Open space and car parking facilities
- Godmanchester 1: 85 residential units located approximately 250m to the north
- Godmanchester 2: 550 residential units located approximately 875m to the south east
- Hemingford Abbots 1: 3,800 residential units located approximately 2.5km to the south east
- Huntingdon 2: 12 residential units located approximately 1.4km to the north east
- North Huntingdon 3: 4,900 residential units located approximately 2.6km to the north east

8.5.13 The Local Plan contains a number of policies which protect and secure open spaces and local greenspace for recreation as summarised in **paragraphs 8.2.7 to 8.2.10**. Site allocation policy wording for Brampton 1 requires provision of 0.4ha of open space. Brampton 2 adjoins and is located south of Hinchingbrooke Country Park County Wildlife Site and policy wording includes requirements to enhance opportunities in relation to green infrastructure and nature conservation sites through enhanced biodiversity net gain and natural and open space as well as providing infrastructure such as car parking to enable the enjoyment of the park.

8.5.14 Policy wording for Godmanchester 1 requires the provision of amenity and open space for users to mitigate the recreational impacts on nearby nature sites. Policy wording for Godmanchester 2 requires development to provide at least 0.8ha of land for an extension to Godmanchester Lawn Cemetery on land immediately adjoining the existing cemetery and green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible natural green space and flood mitigation. In the north western part of the Godmanchester 2 site, in the area comprising all land around Stoneyhill Brook and bordering Silver Street, policy wording requires the provision of natural green space or biodiversity net gain totalling a minimum of 6.8ha.

8.5.15 Policy wording for Hemingford Abbots 1 requires the provision of green infrastructure appropriate to the scale of development to include a mixture of strategic green space, accessible natural green space, amenity green space, flood mitigation areas, and land for biodiversity net gain including about 26ha to be established as a country park.

8.5.16 Policy wording for North Huntingdon 3 requires strategic green infrastructure, public open space uses, biodiversity net gain and other planting appropriate to the scale of development. In addition, and as listed in **paragraph 8.2.9** there are a number of alternative recreational options located within close proximity to site allocations within the Plan area.

8.5.17 Taking into consideration the location of allocations in relation to the SAC, the Local Plan policies regarding the protection and requirements for open space and alternative areas of open space closer to Local Plan allocations, it can be concluded that there will be no adverse recreational impacts upon Portholme SAC from the Local Plan alone or in-combination.

8.6 Upper Nene Valley Gravel Pits SPA and Ramsar

Baseline information

8.6.1 As noted in **Section 3.6**, the Upper Nene Valley Gravel Pits SPA[193] and Ramsar[194] comprise a series of disused sand and gravel pits along the River Nene valley which provide valuable nesting and feeding conditions for major inland concentrations of wintering water birds. These bird species are sensitive to recreation disturbance. A bird disturbance survey and visitor survey commissioned by North Northamptonshire Council, West Northamptonshire Council and Bedford Borough Council indicates that recreational impacts have the potential to take place within a 5.9km ZoI of the SPA. A 5.9km radius from the SPA coincides with the western section of the Plan area.

[193] Natural England (2019) European Site Conservation Objectives for Upper Nene Valley Gravel Pits SPA (UK9020296). Available at: https://publications.naturalengland.org.uk/publication/5495529882517504 [Date accessed: 18/06/26]

[194] JNCC (2011) Information Sheet on Ramsar Wetlands (RIS): Upper Nene Valley Gravel Pits. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11083.pdf [Date accessed: 18/06/26]

8.6.2 North Northamptonshire Council and West Northamptonshire Council produced the Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy in 2026 which replaces previous guidance in relation to the SPA[195]. This document is non-statutory guidance but sets out how the Upper Nene Valley Gravel Pits SPA should be considered and is intended to be a material consideration in the determination of planning applications and to assist the Councils in discharging their duties as competent authorities under the Conservation of Habitats and Species Regulations 2017 (as amended).

8.6.3 This guidance notes that new residential units and overnight accommodation within this 5.9km ZoI (**Figure 8.1**) will be required to mitigate in-combination effects of the development through contributions to a series of SPA Strategic Access Management and Monitoring (SAMM) Strategy measures designed to mitigate recreational impacts of development upon the SPA. Where development is considered likely to have an 'alone' effect on the SPA due to its size, location and availability (or lack thereof) of surrounding semi-natural greenspace, the guidance requires that Suitable Alternative Natural Greenspace (SANG) may also be required to provide an alternative recreation space for new residents, or an alternative package of SANG-like mitigation agreed with Natural England and the planning authority where it can be demonstrated that the alternative mitigation solution is sufficient. The guidance notes that developments of approximately 500 dwellings and greater should consider the possibility of 'alone' effects: applicants for these large proposals are advised to contact Natural England through its Discretionary Advice Service as early as possible.

8.6.4 It is however possible that windfall may come forward in areas of Huntingdonshire that lie within the 5.9km ZoI. The supporting text for Policy LP 52 notes the requirement for new development within the 5.9km ZoI to consider recreational impacts upon the SPA and Ramsar in compliance with the North Northamptonshire Council and West Northamptonshire Council Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy[196].

8.6.5 A review of local plan allocations indicates that there are no allocations with the 5.9km Zone of Influence.

[195] North Northamptonshire Council and West Northamptonshire Council (2026) Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy. [196] North Northamptonshire Council and West Northamptonshire Council (2026) Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy. Available at: https://www.northnorthants.gov.uk/planning-strategies-and-plans/upper-nene-valley-gravel-pits-special-protection-area [Date Accessed: 17/06/26].

8.7 Recreation effects conclusion

8.7.1 The Appropriate Assessment has considered the potential for recreational pressure associated with growth proposed through the Local Plan to affect European sites. Taking account of the location and scale of proposed growth, the available visitor evidence, relevant Local Plan policy provisions and the strategic mitigation measures identified within the Cambridgeshire and Peterborough Recreational Mitigation Strategy, it can be concluded that the Local Plan will not result in an adverse effect on the integrity of any European site through recreational pressure, either alone or in-combination with other plans and projects.

8.7.2 Compliance with mitigation policy wording set out in LP 52 (and the Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy) will ensure no adverse impacts upon the SPA or Ramsar due to increased recreational pressure from the Local Plan either alone or in-combination with other plans and projects.

9 Urbanisation effects appropriate assessment

9.1 Introduction

9.1.1 This AA focuses on assessing the ecological in-combination urbanisation effects from development set out in the Local Plan upon the following European sites and associated areas of functionally linked land (FLL).

- Eversden & Wimpole Woods SAC
- Nene Washes SPA and Ramsar
- Ouse Washes SPA and Ramsar
- Upper Nene Valley Gravel Pits SPA and Ramsar

9.1.2 The HRA screening process (**Chapter 4**) concluded that the several policies have the potential to result in LSEs on this SPA and Ramsar as a result of urbanisation effects on areas of FLL.

9.1.3 In addition, a number of allocations were also screened in including:

- Godmanchester 1: Former RGE Engineering site and HDC Car Park, The Avenue
- Somersham 2: Dews Bus and Coach Depot, Chatteris Road
- Bluntisham 1: Land off 18 Holliday's Road
- Great Gransden 1: South of Caxton Road
- Houghton and Wyton 1: Ruddles Lane
- Bythorn 1: Home Farm, Bythorn
- Waresley 1: Land between West Lodge and Home Farm

9.1.4 As noted in **Section 3.7,** urbanisation effects may include the direct loss / damage to European themselves and areas of associated FLL, construction and operation related noise pollution, light pollution, vibration, visual disturbance, dumping of waste, predation from domestic pets, vandalism, spread of invasive plant species and encroachments from properties among other impacts.

9.1.5 Species such as bats are particularly sensitive to noise disturbance and artificial sources of light pollution, which can disrupt bat echolocation. Bird species are also vulnerable to disturbance from noise, vibration, lighting and visual impacts. An increase in these sources of disturbance has the potential to cause birds to fly away, resulting in energy expenditure and abandonment of feeding or resting places.

9.1.6 In addition to direct impacts upon areas of FLL, urbanisation also has the potential to cause the fragmentation of connecting habitat (such as hedgerows and water features) between designated sites and other areas of FLL. Fragmentation can lead to the isolation of habitat and an increase in urban edge effects. Habitat loss, including that of FLL, can lead directly to the mortality of qualifying species, whereby a minimum amount of habitat is required to thrive and survive. Habitat size is also directly linked to species diversity. In other instances, the continued survival of displaced species relies on their capacity to find new suitable habitats. FLL, including ecological corridors, is crucial to supporting qualifying species and preventing the fragmentation of habitats.

9.1.7 The tests set out under the Habitats Regulations need to be applied in respect of plans which may significantly affect FLL that plays an important role in contributing to the favourable conservation status of the relevant species for which a European site is designated.

9.1.8 Both direct and indirect impacts upon species may include the following:

- Physical loss of habitats both within a designation boundary and at areas of FLL
- Habitat fragmentation through loss of habitat or visual barriers to movement
- Increased disturbance from human activity e.g. noise, lighting, visual disturbance etc
- Direct mortality e.g. collision with structures

9.1.9 In addition to being sensitive to urban development, species such as bats and birds are also vulnerable to impacts arising from renewable energy development. Such projects can result in direct mortality**,** as well as the fragmentation of key commuting and foraging routes, thereby affecting how species use and navigate the landscape. For instance, there is emerging evidence that solar farms may negatively affect bats. Studies indicate that solar installations can alter the quality of foraging habitats, thereby reducing prey availability and disrupting normal hunting behaviour[197,198,199]. Furthermore, the physical layout of solar arrays may contribute to habitat fragmentation, further impeding bat movement across the landscape. NE has commissioned a body of research into the ecological effects of solar farms, in particular on birds[200]. This literature review notes that the polarising effect of solar panels has the potential to induce drinking behaviour in some bird taxa, where the birds mistake the panels for water. It also highlights potential collision risks to birds from the infrastructure associated with solar farms. Both NE (through their SSSI IRZs) and the RSPB flag up potential issues associated with development of solar farms in sensitive locations but support renewable energy where located on sites which are not important for wildlife[201].

9.2 Eversden & Wimpole Woods SAC

Baseline information

9.2.1 Eversden & Wimpole Woods SAC consists of an ancient coppice woodland (Eversden Wood) and high forest woodland (Wimpole Wood) set within a landscape which includes copses, green lanes, ancient woodland and parkland. A colony of barbastelle bats, *Barbastella barbastellus*, is associated with this site and is the sole reason for the SAC designation on Eversden and Wimpole Woods. The evidence suggests that trees in Wimpole Wood are used as a summer maternity roost. The bats also use the whole site as a foraging area. Some of the woodland is also used as a flight path when bats forage outside the site[202].

[202] Natural England (2018) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Eversden and Wimpole Woods SAC Site Code: UK0030331.

9.2.2 Barbastelle bats forage over a wide area, with a typical nightly foraging radius of 7km depending on habitat suitability in the wider area. They are fast, agile flyers and specialist foragers in a range of habitats beyond the woodland and into the wider countryside including more open habitats such as wood pasture, parklands, wetlands and herb-rich meadows. Bats also typically forage and commute along linear features, such as hedgerows, rivers and woodland edges. They consume mainly small moths, but also flies and beetles[203]. This wider area of habitat is often defined by The Bat Conservation Trust as the "Core Sustenance Zones" (CSZ) which refers to the area surrounding a communal bat roost within which habitat availability and quality will have a significant influence on the resilience and conservation.

9.2.3 The conservation advice for the SAC in relation to supporting off-site habitat including flight lines and foraging areas notes the requirement to '*Maintain the presence, structure and quality of any linear landscape features which function as flight-lines between the SAC and surrounding foraging areas used by Barbastelles and maintain core areas of feeding habitat outside of the SAC boundary that are critical to Barbastelle bats during their breeding period*'.

9.2.4 As noted in **paragraph 3.6.7**, a draft protocol has been prepared by the Greater Cambridgeshire Shared Planning Service to facilitate sustainable development and secure a diverse and healthy landscape for bats, people and other wildlife. This is contained in the Greater Cambridgeshire Shared Planning Biodiversity SPD at Biodiversity Issue B9 – Eversden and Wimpole Woods Special Area of Conservation Bat Protocol). The protocol identifies a key conservation area around the SAC of 5km and a 10km sustenance or wider conservation area which is reflected in NE's SSSI IRZs (**Figure 9.1**). All new development within this CSZ has the potential to have an adverse impact upon the qualifying features of the SAC when located outside the designation and using areas of FLL.

[203] Buglife in partnership with Plantlife and the Bat Conservation Trust. Back from the Brink. Species Information Guide. Barbastelle *Barbastella barbastellus*

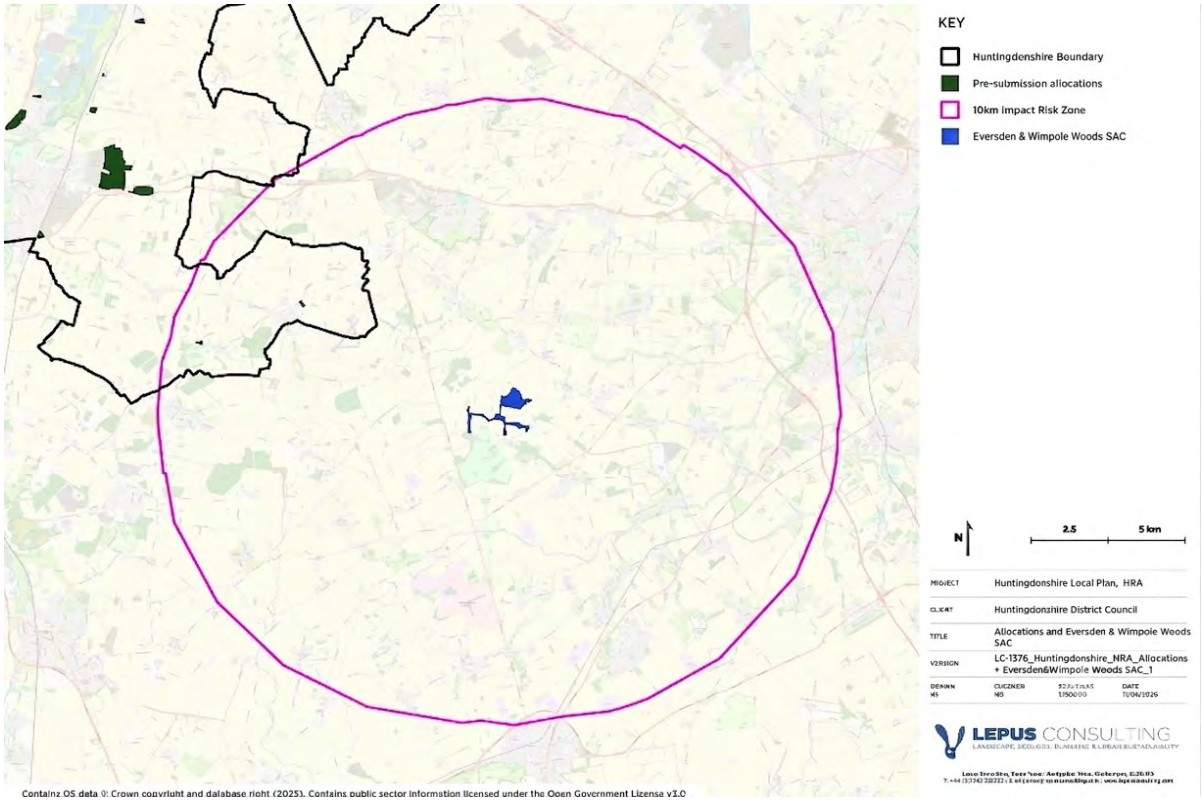

Figure 9.1: *Allocations within 10km of Eversden and Wimpole Woods SACAppropriate Assessment*

9.2.5 No allocations are located within the 5km key conservation area for the SAC. Two allocations are however located within the 10km sustenance or wider conservation area associated with Eversden and Wimpole Woods SAC as listed below and illustrated on **Figure 9.1**. Both sites comprise an area of grassland with tree boundaries.

- Waresley 1: Land between the West Lodge and Home Farm, Wareley – allocated for 8 residential units; and
- Great Gransden 1: South of Caxton Road – allocated for commercial development.

9.2.6 There is also potential for windfall development located within 5km and 10km of the SAC to have an adverse impact on site integrity.

9.2.7 In their Regulation 18 response, NE recommended that development at these allocations should avoid impacting potentially FLL (e.g. trees, hedgerows, watercourses, wet grassland) which may be used by foraging, roosting or commuting bats (particularly Barbastelle bats). NE also recommended that the allocation policy should include a requirement for an ecologically sensitive lighting strategy to be implemented, in line with the Institute of Lighting Professionals' Guidance Note 8 - GN08 Bats and Artificial Lighting (2023)[204] or successor documents. In addition, all development proposals within this area, including windfall, with the exception of householder applications, should aim to retain mature trees, woods and copses, and to provide new habitat linkages through new tree planting and the integration of existing hedgerow networks with new ones in line with the Greater Cambridgeshire Eversden & Wimpole Woods Special Area of Conservation protocol.

9.2.8 In response to NE's recommendations wording has been included within both site allocation policies to specify the requirement for the retention and conservation of key habitat features and that the lighting design be prepared in accordance with GN08 or successor documents.

9.2.9 In addition, Policy LP52 – Protecting our nature conservation sites – sets out detailed mitigation requirements for development that may be located within either the 5km or 10km zone established for the SAC. This includes a requirement retain mature trees, woods and copses, and to provide new habitat linkages through new tree planting and the integration of existing hedgerow networks with new one and comply with requirements for ecologically sensitive lighting, in line with GN08 or successor documents.

9.2.10 The Local Plan includes one allocation for ground mounted solar voltaic panels at Houghton and Wyton 1. Given the location of this allocation outside the 10km area associated with the Eversden & Wimpole Woods SAC CSZ it is unlikely to have an adverse impact on the integrity of the SAC, or areas of associated FLL, either alone or in-combination.

Conclusion

9.2.11 Taking into consideration the policy provisions set out in the Local Plan, it can be concluded that there will be no adverse impacts on the integrity of the Eversden and Wimpole Woods SAC, either alone or in-combination, as a result of urbanisation effects.

[204] Bat Conservation Trust and the Institute of Lighting Professionals' (2023) Bats and Artificial Lighting at Night.

9.3 Nene Washes SPA and Ramsar and Ouse Washes SPA and Ramsar

Baseline information

9.3.1 The Nene Washes comprise an extensive mosaic of low lying wet grassland and rough pasture. They total around 15 square kilometres and are located on the lower reaches of the River Nene, extending eastwards from Peterborough towards and past Whittlesey, ending at Ringsend. The grasslands associated with the Nene Washes play a land drainage role as a flood water storage area, and this washland, is therefore subject to regular winter flooding[205]. These habitats support internationally significant populations of wintering wildfowl and providing a crucial breeding ground for rare and at-risk wetland birds (**Appendix B**). The Nene Washes SPA and Ramsar are located approximately 2km from the Plan area and therefore direct urbanisation effects upon these designations are not likely.

9.3.2 The Ouse Washes comprise a flood storage reservoir, approximately 30km long and 1km wide constructed to drain an extensive area of the fens. It encompasses two canalised main river channels of the River Great Ouse that run each side of its length, and an extensive area of wet grassland and field drains in between[206]. It comprises a washland habitat which is subject to regular winter flooding. The extensive network of field drains, and high groundwater levels, keeps the low-lying grassland wet in the summer months. The SPA and Ramsar support high numbers of wintering wildfowl and breeding waders (**Appendix B**). The Ouse Washes SPA and Ramsar extends into the eastern section of the Plan area. Urbanisation effects upon the qualifying features associated with these designations are therefore possible.

9.3.3 As noted at **paragraph 3.6.11**, the qualifying bird species associated with the Nene Washes SPA and Ramsar and the Ouse Washes SPA and Ramsar (see **Appendix B**) may also use FLL within the wider area, outside the designation boundaries. Functionally linked bird habitat associated with the SPA and Ramsar is likely to primarily consists of surrounding arable farmlands and pasturelands that host non-breeding wildfowl and waders. These off-site habitats serve as critical complementary areas for daytime foraging and nighttime roosting, particularly when the main washland is deep underwater. In addition to these areas, FLL may include the interconnecting drainage ditch network that is located beyond the designations. Qualifying species of birds located within areas of FLL may be vulnerable to urbanisation impacts. It is important to maintain an unobstructed line of sight for qualifying birds, to enable them to detect predators. Development near habitat used by these species can obstruct lines of sight and therefore the habitat suitability for feeding or roosting. NE's SSSI IRZs around these designations include the area immediately surrounding the Nene Washes SPA and Ramsar and the Ouse Washes SPA and Ramsar and extending up to several kilometres into the wider Cambridgeshire and Fens landscape and encompassing adjacent SSSI designations (such as Berry Fen SSSI) and RSPB reserves such as the Ouse Fen reserve, these areas are frequently referred to as "Goose and Swan Functional Land" IRZ.

[205] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Nene Washes Special Protection Area (SPA) Site Code: UK9008031.

[206] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Ouse Washes Special Protection Area (SPA) Site Code: UK9008041.

9.3.4 The SIP for the SPA and SAC does not identify urbanisation impacts as a threat[207]. The conservation advice for the SPA notes that: '*The nature, scale, timing and duration of some human activities can result in the disturbance of birds at a level which may significantly affect their behaviour, and consequently impact on the long-term viability of their populations. …… Disturbance associated with human activity may take a variety of forms including noise, light, sound, vibration, trampling and sight of people, animals and structures. Angling occurs on the watercourses within the Ouse Washes, although there are restrictions within the refuge areas during the wildfowling season.* [208]'

9.3.5 Taking a precautionary approach, it is assumed for the purposes of this AA that areas of arable, grassland and wetland habitat have the potential to provide FLL for these bird species[209]. The ability of land to act as FLL is governed by a number of factors which include the following:

- Distance from the European site (sites closer to the SPA and Ramsar site are more likely to provide roosting and /or foraging opportunities for birds).
- Availability of priority habitat which may support qualifying species associated with the SPA and Ramsar.
- Site characteristics including:
    - Current land use of a site;
    - Land uses within the surrounding area;
    - Site size (sites of less than 1ha in size can be screened out);
    - Habitat type;
    - Cropping regime, including how often the site is planted with a suitable crop;
    - Visibility (for example are there unrestricted sight-lines);
    - Field boundaries (trees/hedgerows/field drains); and
    - Presence of permanent waterbodies, areas of seasonal flooding.
- Existing factors that may affect habitat suitability, including:
    - Existing PRoW and their usage, especially by users with dogs;
    - Proximity to existing built up areas; and
    - Existing farming practices (for example the use of bird scarers/deterrents).
- Noise and visual disturbance - drawing on the Waterbird Disturbance Tool Kit[210].
- Cat predation ranges.
- Presence of large and/or multiple overhead power lines.

[207] Natural England (2014) Site Improvement Plan Nene Washes SAC and SPA.

[210] The Waterbird Disturbance Mitigation Toolkit. TIDE tools - tide-toolbox.eu. Available at: https://gat04-live-1517c8a4486c41609369c68f30c8-aa81074.divio-media.org/filer_public/8f/bd/8fbdd7e9-ea6f-4474-869f-ec1e68a9c809/11367.pdf [Date Accessed: 04/08/25]

9.3.6 Urbanisation effects can result in changes to feeding or roosting behaviour, increased energy expenditure due to more frequent flights, abandonment of nest sites, disrupted incubation of eggs and desertion of supporting habitat (both within or outside the designated site boundary where appropriate). In addition, it is necessary to maintain an open landscape to facilitate movement of birds between the SPA / Ramsar designations and any off-site supporting habitat.

9.3.7 An increase in noise and vibration levels, artificial lighting and sources of visual disturbance has the potential to cause birds to fly away, resulting in energy expenditure and abandonment of feeding or resting places. Research suggests that disturbance is more likely to have an impact on bird populations where it is not continuous in nature. Sources of disturbance which are irregular and infrequent are also likely to have a greater impact, as birds are less likely to be habituated to these sources of disturbance.

9.3.8 Disturbance, excluding recreational pressure, which is addressed in **Chapter 8**, is therefore a function of the scale of disturbance, the distance of the source of disturbance and its frequency and duration. Research undertaken as part of the Waterbird Disturbance and Mitigation Toolkit[211] suggests that the qualifying birds associated with these European designations are likely to respond to visual and noise stimuli at varying distances up to approximately 300m for some species. It is noted that the waterbird disturbance toolkit was developed for an estuary setting which may not be appropriate to the setting of development in the Plan area. This distance does however provide a useful guide.

9.3.9 Other urbanisation effects, such as householder related garden waste dumping, vandalism, or anti-social behaviours, are likely where housing is located within close proximity to development. For other mitigation strategies across the UK, a distance of 400m has been used to represent the distance within which cat predation is likely to occur and the distance from which people will access designated sites by foot (rather than accessing sites from car parking locations as with recreational impacts).

Appropriate Assessment

9.3.10 A review of mapping data indicates that no allocations are located within 400m of either the Nene Washes SPA / Ramsar or the Ouse Washes SPA / Ramsar. Direct urbanisation effects are therefore unlikely.

9.3.11 Two allocations are however located within 400m of the Goose and Swan Functional Land IRZ associated with the Ouse Washes SPA and Ramsar (including the Ouse Fen Nature Reserve and Berry Fen SSSI) as listed below:

- Somersham 2 - Dews Bus and Coach Depot, Chatteris Road, for 50 residential units; and
- Bluntisham 1 – Land off 18 Holliday's Road, for 35 residential units.

9.3.12 Taking into consideration the factors listed at **paragraph 9.3.4**, the suitability of the sites and surrounding land to provide FLL has been considered.

[211] https://www.tide-toolbox.eu/tidetools/waterbird_disturbance_mitigation_toolkit/

9.3.13 Somersham 2 at Dews Bus and Coach Depot is located approximately 3.2 km to the north west of the Ouse Washes SPA and Ramsar. Whilst this site is located outside Natural England's Goose and Swan IRZ, it is immediately adjacent to this area. The site comprises greenfield and hardstanding areas bounded by hedgerows and trees, which are likely to restrict bird sightlines towards the SPA and Ramsar. Residential development associated with the settlement of Somersham is located immediately to the west of the site and is likely to represent an existing source of disturbance, with arable fields located to the east. Development at this allocation may therefore have indirect urbanisation impacts on potential areas of functionally linked land associated with the Ouse Washes SPA and Ramsar to the east. However, as the existing bus depot is unlikely to comprise functionally linked land itself, the principal consideration relates to avoiding disturbance of the surrounding land, including areas such as the lakes at Colne Fen. Appropriate mitigation measures, including the retention or enhancement of boundary screening and the implementation of an ecologically sensitive lighting strategy, should be incorporated at the project level to minimise the potential for disturbance.

9.3.14 The site allocation policy supporting text for Somersham 2 notes the location of this allocation immediately adjacent to the Goose and Swan IRZ and requires development at this site to consider mitigation measures such as adequate screening around the site boundary, implementation of an ecologically sensitive lighting strategy and provision of adequate levels of amenity and open space.

9.3.15 Bluntisham 1 at Land off 18 Holliday's Road is located approximately 1.5km to the west of the Ouse Washes SPA and Ramsar. Whilst this site is located outside NE's Goose and Swan IRZ and not within 400m of it, the site is located within 150m of the RSPB Ouse Fen Reserve and within 230m of Berry Fen SSSI. This site comprises green field and a small area of hard standing with a building. The site is bound by hedgerows which may restrict bird sight lines towards the SPA and Ramar. Residential development associated with Bluntisham is located to the west of the site and likely to comprise a source of disturbance for birds. Arable fields are located to the east, south and north. Development at this allocation may therefore have indirect urbanisation impacts upon potential areas of FLL associated with the Ouse Washes SPA and Ramsar.

9.3.16 The site allocation policy supporting text for Bluntisham 1 notes the location of this allocation within 150m of the RSPB Ouse Fen Reserve and within 230m of Berry Fen SSSI. This site allocation policy requires development at this site to consider appropriate mitigation measures and adequate levels of amenity and open space.

9.3.17 In addition, there is the potential for windfall to be located within 400m of the Ouse Washes SPA and Ramsar and areas of FLL associated within both the Ouse and Nene Washes areas of FLL. The location of windfall is unknown at this level of the plan making process and therefore it is not possible to assess individual sites at this stage against the factors listed at **paragraph 9.3.4**. The impact of windfall will therefore need to be taken into consideration in a project level HRA.

9.3.18 Policy LP 52 of the Local Plan recognises the location of potentially FLL in the plan area (Swan and Goose IRZ associated with the Ouse Washes SPA and Ramsar). The policy requires development proposals that may affect internationally designated sites, either alone or in combination with other plans or projects, to be subject to assessment under the Conservation of Habitats and Species Regulations 2017 (as amended). The supporting text also highlights the presence of the Ouse Washes Swan and Goose Impact Risk Zone within the plan area and identifies the need for proposals to consider potential impacts on functionally linked land where relevant. This provides an appropriate policy framework to ensure that potential effects on the Ouse Washes SPA and Ramsar, including impacts on functionally linked habitat, are identified and addressed through the planning application process.

9.3.19 No development will be located within 400m of either the Nene Washes SPA or Nene Washes Ramsar or associated areas of FLL and therefore it can be concluded that there will be no adverse impact from the Local Plan from urbanisation effects upon these designations either alone or in-combination.

9.3.20 The ground mounted solar voltaic panel allocation at Houghton and Wyton 1 is located significantly beyond areas of FLL land associated with either the Nene or Ouse Washes European sites at 8km to the west at its closest point. It is therefore unlikely to have an adverse impact on the integrity of these European sites, or areas of associated FLL, either alone or in-combination.

Conclusion

9.3.21 Taking into consideration the planning policy requirements for site allocations Somersham 2, Bluntisham 1, Policy LP52 and the hierarchical nature of plan making, it can be concluded that there will be no adverse impacts on the integrity of these European sites or areas of associated FLL, either alone or in-combination, as a result of urbanisation effects.

9.4 Upper Nene Valley SPA and Upper Nene Valley Ramsar

Baseline information

9.4.1 The Upper Nene Valley Gravel Pits SPA and Ramsar is comprised of a cluster of disused sand and gravel pits which extend along the River Nene floodplain from Clifford Hill to Thorpe Waterville. These shallow and deep open waters and associated marginal features, such as sparsely-vegetated islands, gravel bars and shorelines and habitats which include reed-swamp, marsh, wet ditches, rush pasture, rough grassland and scattered scrub, provide valuable resting and feeding habitat for wintering water birds, especially ducks and waders[212]. The SPA is designated for the following individual qualifying species:

- Eurasian Bittern (*Botaurus stellaris*)
- European Golden Plover (*Pluvialis apricaria*)

[212] Natural England (2017) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Upper Nene Valley Gravel Pits Special Protection Area (SPA) Site Code: UK9020296.

- Gadwall (*Mareca strepera*)
- Waterbird assemblage (non-breeding)[213]

9.4.2 As set out in **Section 3.7**, qualifying bird species of the Upper Nene Valley Gravel Pits SPA and Ramsar designations, use a variety of habitats outside the SPA and Ramsar boundary for nocturnal and diurnal foraging and roosting. These areas of habitat comprise FLL where they provide a crucial supporting role in maintaining the conservation status of the qualifying bird species at the SPA and Ramsar. Golden Plover and Lapwing[214] are qualifying features of the Upper Nene Valley Gravel Pits SPA and Ramsar designations. These species often spend time feeding or roosting on grassland, wetland and arable land outside the designation boundaries. Golden Plover and Lapwing feed on earthworms, beetles, insects and their larvae on surrounding agricultural land, however it is not known whether they remain faithful to specific fields or select fields based on crop type / food availability.

9.4.3 The British Trust for Ornithology (BTO) Wetland Bird Survey (WeBS) Alert for the Upper Nene Valley Gravel Pits SPA[215] reports that Golden Plover has shown a 76% decline since baseline analysis, (high alert, red). Lapwing, which are part of the waterbird assemblage, has shown a 45% decline since baseline analysis, and the waterbird assemblage a 26% decline (medium alert, amber).

9.4.4 Taking a precautionary approach, it is assumed for the purposes of this AA that areas of arable, grassland and wetland habitat have the potential to provide FLL for these bird species[216]. The ability of land to act as FLL is governed by a number of factors which are listed at **paragraph 9.3.4**.

9.4.5 An increase in noise and vibration levels, artificial lighting and sources of visual disturbance has the potential to cause birds to fly away, resulting in energy expenditure and abandonment of feeding or resting places. Research suggests that disturbance is more likely to have an impact on bird populations where it is not continuous in nature. Sources of disturbance which are irregular and infrequent are also likely to have a greater impact, as birds are less likely to be habituated to these sources of disturbance. Disturbance, excluding recreational pressure, which is addressed in **Chapter 8**, is therefore a function of the scale of disturbance, the distance of the source of disturbance and its frequency and duration. As set out in **Table 9.1**, research suggests that these species are likely to respond to visual and noise stimuli at 300m.

[213] During the non-breeding season, the SPA regularly supports an assemblage of waterfowl species numbering more than 20,000 birds. The main component species of this non-breeding waterfowl assemblage, which are not already covered under individual features, and which are present in either nationally important numbers or comprise 2,000 or more individuals include: Wigeon (*Anas penelope*), Mallard (*Anas platyrhynchos*), Northern Shoveler (*Anas clypeata*), Pochard (*Aythya farina*), Tufted Duck (*Aythya fuligula*), Great-crested Grebe (*Podiceps cristatus*), Mute Swan (*Cygnus olor*), Great Cormorant (*Phalacrocorax carbo*), Lapwing (*Vanellus Vanellus*) and Coot (*Fulica atra*).

[214] Lapwing are part of the waterbird assemblage.

[215] WeBS Report Online. Available at: https://app.bto.org/webs-reporting/alerts.jsp

[216] North Northamptonshire Council and West Northamptonshire Council (2026) Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy.

***Table 9.1:** Waterbird Disturbance Toolkit – Species disturbance distances*

Bird species listed in Waterbird Disturbance Toolkit	Visual disturbance distance	Noise disturbance distance
Golden Plover (*Pluvialis apricaria*)	200m	300m - 107-112dB
Lapwing (*Vanellus vanellus*)	300m	200m - 115-120dB

9.4.6 Other urbanisation effects, such as householder related garden waste dumping, vandalism, or anti-social behaviours, are likely where housing is located within close proximity to development. For other mitigation strategies across the UK, a distance of 400m has been used to represent the distance from which people will access designated sites by foot (rather than accessing sites from car parking locations as with recreational impacts).

Appropriate Assessment

9.4.7 As set out in **paragraph 3.7.10**, mapping indicates that Golden Plover and Lapwing often spend time feeding or roosting on land outside the SPA. These areas can be located up to 10km from the SPA and may be considered FLL to the Upper Nene Valley Gravel Pits SPA. This FLL 10km zone is reflected in the Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy that has been prepared jointly by North and West Northamptonshire Council[217]. The 10km radius from the SPA coincides with the western section of the Plan area.

9.4.8 One allocation is located within 10km of the Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar; Home Farm Bythorn (Bythorn 1) (see **Figure 9.2**). This site allocates a total of 15 residential units. The nature of development proposed at this location do not trigger any SSSI IRZ threshold.

9.4.9 Taking into consideration the factors listed at **paragraph 9.4.4**, the suitability of the site and surrounding land to provide FLL for Golden Plover or Lapwing has been considered.

9.4.10 Bythorn 1 is located approximately 6km to the east to the Upper Nene Valley Gravel Pits SPA and Ramsar. This site comprises buildings and hard standing associated with Home Farm. The site is bound by hedgerows and trees which restrict bird sight lines towards the SPA and Ramar. It is therefore unlikely that development will directly result in the loss of FLL for Golden Plover or Lapwing

[217] North Northamptonshire Council and West Northamptonshire Council (2026) Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy.

9.4.11 The settlement of Bythorn is located to the east of the site and arable fields are located to the west and south. Land between the allocation at Home Farm and the Ramsar and SPA designation is predominantly agricultural in nature. Whilst there are a number of restrictions to bird sight lines, in the form of hedgerows and existing infrastructure, there is potential that Golden Plover and Lapwing may use these arable fields for feeding. Should this be the case the fields adjacent to this allocation may provide a supporting role in maintaining the conservation status of these qualifying bird species. Development at Home Farm may therefore have indirect urbanisation impacts upon potential areas of adjacent FLL.

9.4.12 The supporting text for the site allocation policy for Bythorn 1 recognises the location of this allocation within the wider 10km FLL zone. It requires new development to comply with guidance set out in the Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy, which sets out mitigation requirements around avoiding disturbance impacts.

9.4.13 In addition, there is the potential for windfall to be located within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar. The location of windfall is unknown at this level of the plan making process and therefore it is not possible to assess individual sites at this stage against the factors listed at **paragraph 9.4.4**. The impact of windfall will therefore need to be taken into consideration in a project level HRA. This requirement is secured through Policy LP 52 where supporting text notes the requirement for development to comply with mitigation set out in the Upper Nene Valley Gravel Pits Special Protection Area Technical Guidance and Mitigation Strategy.

9.4.14 The exact details of the required mitigation measures will be provided at the planning application stage. This reflects the hierarchical nature of plan making and ensures that mitigation is indicative of final site proposals. Given there are widely used techniques available to mitigate urbanisation impacts, there is no uncertainty over the deliverability of these allocations. This approach is compliant with case law which requires the Competent Authority to be satisfied that mitigation solutions can be achieved in practice[218],[219], whilst recognising the multi-staged planning and approval procedural approach to plan making[220].

9.4.15 The ground mounted solar voltaic panel allocation at Houghton and Wyton 1 is located significantly beyond the 10km buffer associated with the Upper Nene Valley Gravel Pits SPA/Ramsar. It is therefore unlikely to have an adverse impact on the integrity of the SPA/Ramsar, or areas of associated FLL, either alone or in-combination.

[219] Opinion of Advocate General Kokott delivered on 9 June 2005. Commission of the European Communities v United Kingdom of Great Britain and Northern Ireland. Failure of a Member State to fufil obligations - Directive 92/43/EEC - Conservation of natural habitats - Wild fauna and flora. Case C-6/04.

[220] R (o a o Devon Wildlife Trust) v. Teignbridge DC [2015] EWHC 2159 (Admin). 28 July 2015.

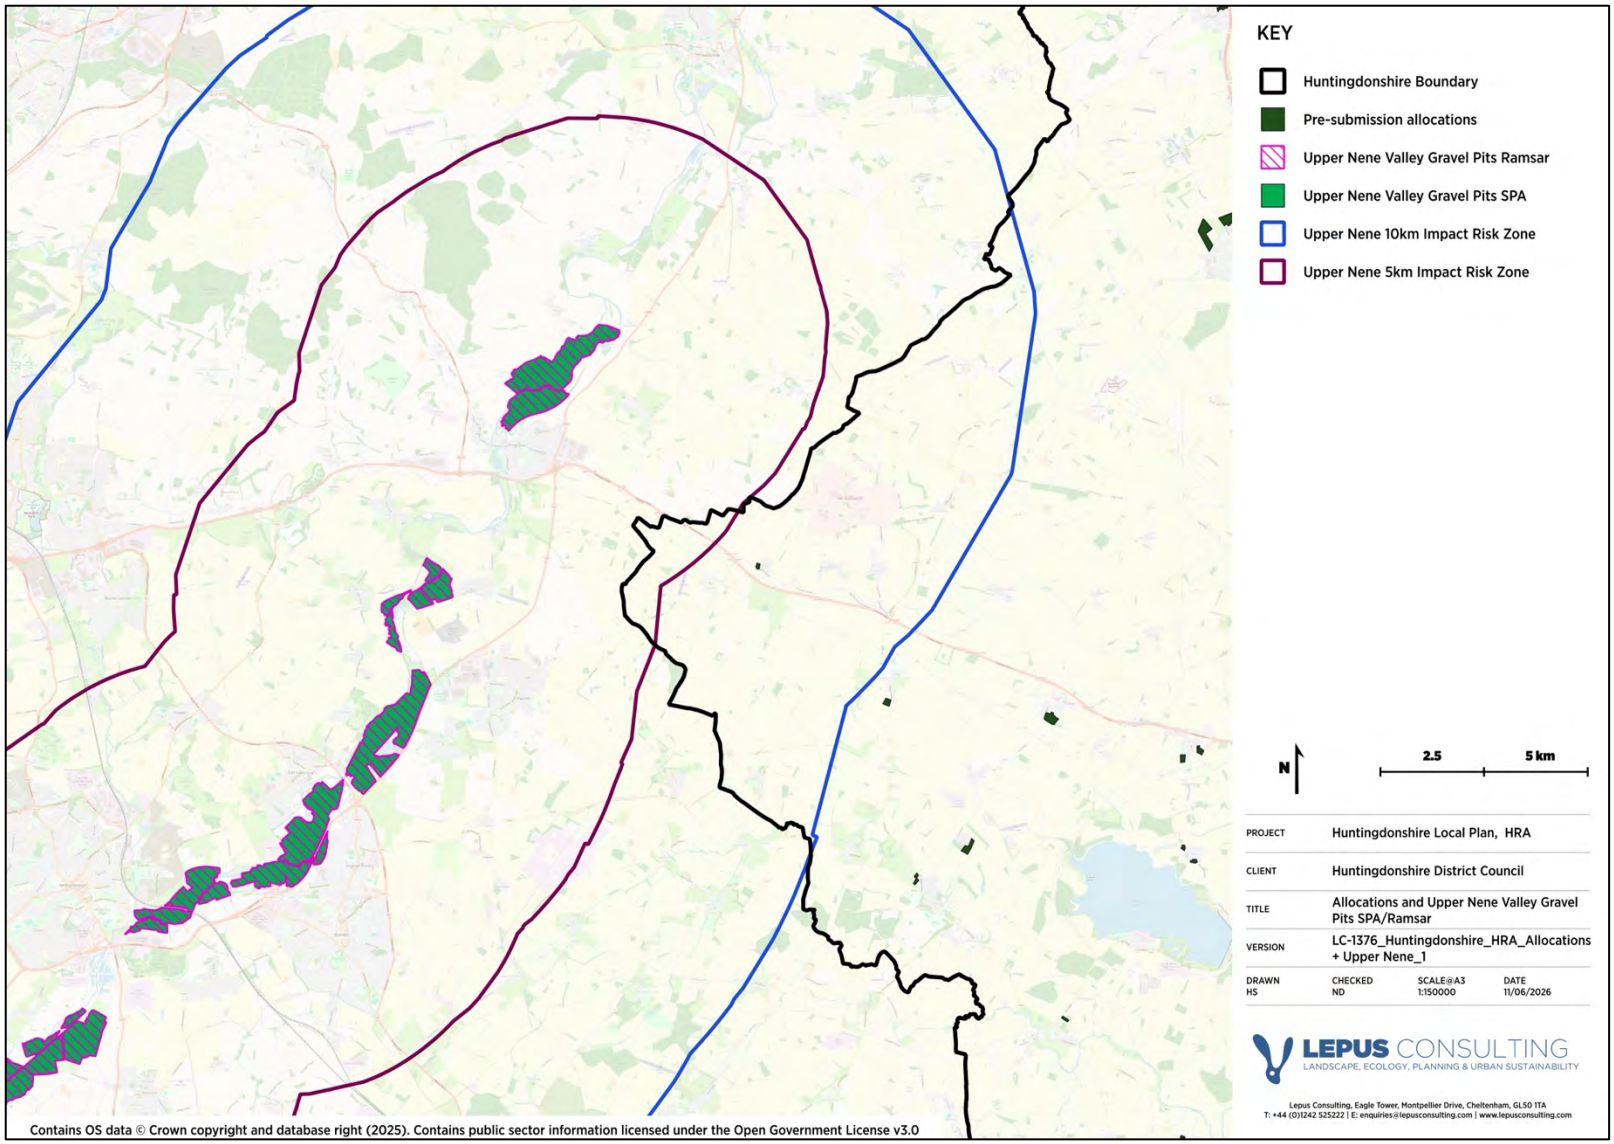

Figure 9.2: *Allocations within 10km of Upper Nene Valley Gravel Pits SPA and Ramsar*

9.5 Urbanisation conclusion

9.5.1 Taking into consideration the planning policy requirements in the supporting text for the site allocation policy for Bythorn 1 and Policy LP 52 and the hierarchical nature of plan making, it can be concluded that there will be no adverse impacts on the integrity of the Upper Nene Valley Gravel Pits SPA/Ramsar, either alone or in-combination, as a result of urbanisation effects.

10 Next steps

10.1 Conclusions

10.1.1 The Huntingdonshire Local Plan is not directly connected with or necessary to the management of any European site. A screening assessment was therefore undertaken to identify whether implementation of the Local Plan could result in Likely Significant Effects (LSEs) on European sites. Taking no account of mitigation measures, the screening assessment identified the potential for LSEs through recreational disturbance, air quality, water quality and water quantity.

10.1.2 The HRA therefore progressed to Appropriate Assessment to consider these impact pathways in greater detail. The assessment drew upon the latest available evidence prepared in support of the Local Plan, including the Air Quality Assessment, Water Cycle Study, water quality modelling, Water Resources Planning evidence, visitor survey information and advice provided by Natural England.

10.1.3 The Precautionary Principle has been applied throughout the Appropriate Assessment where uncertainty exists. The assessment has taken account of the mitigation measures embedded within the Local Plan, together with the strategic mitigation measures identified through the evidence base, including the Cambridgeshire and Peterborough Recreational Mitigation Strategy, wastewater infrastructure improvements, Technically Achievable Limit (TAL) upgrades, environmental permitting requirements and the wider statutory and regulatory framework governing water resources and wastewater treatment.

10.1.4 Taking account of the findings of the Appropriate Assessment and the identified mitigation measures, it can be concluded that implementation of the Huntingdonshire Local Plan will not result in adverse effects on the integrity of Barnack Hills & Holes SAC, Eversden and Wimpole Woods SAC, Fenland SAC, Nene Washes SAC, SPA and Ramsar, Ouse Washes SAC, SPA and Ramsar, Portholme SAC, The Wash and North Norfolk Coast SAC, The Wash SPA, The Wash Ramsar or Woodwalton Fen Ramsar, either alone or in-combination with other plans and projects.

10.2 Next Steps

10.2.1 The purpose of this report is to inform the Habitats Regulations Assessment of the Huntingdonshire Local Plan using the best available evidence.

10.2.2 Huntingdonshire District Council, as the Competent Authority, is responsible for undertaking the Integrity Test in light of the conclusions presented within this report.

10.2.3 This report will be submitted to Natural England for consultation. In accordance with the Habitats Regulations, Huntingdonshire District Council must have regard to Natural England's representations before determining whether to adopt the conclusions of this Habitats Regulations Assessment.

Appendix A: In-Combination Assessment

© Lepus Consulting for Huntingdonshire District Council

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
North Northamptonshire Local Plan[1]	The North Northamptonshire Joint Core Strategy was adopted in July 2016 and forms part of the adopted development plan for the area. North Northamptonshire Council is preparing a new Local Plan to guide development to 2045, which will replace the Joint Core Strategy and the Part 2 Local Plans. A Scoping Consultation was undertaken in May 2026, with consultation on the Proposed Local Plan Content and Evidence scheduled for late 2026.	The adopted Local Plan allows for the provision of 1,750 (rounded up to 2,000 when including a buffer as required by national policy) homes per annum from 2011-2031. The adopted Local Plan states that North Northamptonshire has an *"over-supply of committed employment land"*; hence, no further employment land was allocated, but a selection of new strategic sites were identified.	An HRA of the Local Plan was not available at the time of writing.	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European sites and areas of functionally linked land (FLL). The HRA will take these in-combination impacts into consideration.
Peterborough Local Plan[2]	The Peterborough Local Plan was adopted in July 2019. Work on a new Local Plan (which will cover the period up to 2044) is	The adopted Local Plan allows for the provision of 942 homes per annum from 2016 to 2021 (the first five years of the plan period), which then increases to 982 homes per annum from 2021 to 2036 (the remainder of the plan	The screening stage of the HRA[4] process completed to inform the new, emerging Peterborough Local Plan (for the period up to 2044) concluded that LSEs are	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
	currently underway, with a Draft Local Plan published for public consultation towards the end of 2026. The Proposed Submission version of the Local Plan is now in preparation, intended for public consultation in 2026.	period), in line with the updated Standard Method. The adopted Plan allows for the provision of the 76ha of employment land from April 2015 to March 2036 *"including land already committed with planning permission"*. Further employment land is allocated under this Plan (amounting to *"around 160ha"*) to allow for losses, flexibility and job choice. The draft Local Plan review will allocate approximately 22,130 new dwellings over the plan period and 90ha of employment land[3].	possible for Barnack Hills & Holes SAC; Nene Washes SAC, SPA and Ramsar; Orton Pit SAC; and Rutland Water SPA and Ramsar. Hence, an Appropriate Assessment (AA) is recommended.	sites and areas of FLL. The HRA will take these in-combination impacts into consideration.
Fenland Local Plan[5]	The Fenland Local Plan was adopted in May 2014. The Fenland Local Plan 2021–2040 Draft Local Plan [6]was published for consultation in August 2022 as an emerging policy document but was not adopted. Fenland District Council is preparing a new Local Plan ('Fenland 50') to	The adopted Local Plan allows for the provision of 11,000 new homes over the plan period 2011-2031, at a delivery rate of approximately 550 new homes per annum. The adopted Plan also allows for the provision of 85 ha of employment land (B1/B2/B8 land for employment uses) during 2011 to 2031.	An HRA [9] was prepared for the withdrawn Fenland Local Plan 2021–2040. The assessment concluded that the plan would not result in likely significant effects on European sites, either alone or in combination. The HRA for the emerging Fenland 50 Local Plan has not yet been published.	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European sites and areas of FLL. The HRA will take these in-combination impacts into consideration.

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
	2050. The plan is currently at an early stage of preparation, with adoption anticipated in October 2028.[7]	The Local Plan review aims to allocate approximately 10,525 new dwellings over the Plan period and 215ha of employment land[8]. Fenland District Council is preparing a new Local Plan ('Fenland 50') to 2050; however, the plan is at an early stage of preparation, and no housing or employment land requirements have yet been published.		
East Cambridgeshire District Local Plan 2015 (as amended 2023)[10]	The East Cambridgeshire District Council Local Plan was adopted in April 2015 and is now referred to as the East Cambridgeshire Local Plan 2015 (as amended 2023). The wider Cambridgeshire Local Plan review processes are being progressed by individual authorities[11].	Over the plan period (2011 to 2031) the Local Plan will allow for the provision of 5,400 new homes and at least 179 ha of employment land for B1/B2/B8 uses. The Local Plan will also allow for the provision of at least an additional 3,000m^2 (net) of convenience and 10,000m^2 (net) of comparison retail floorspace in the district from 2012 to 2031.	The HRA of the adopted Local Plan set out wording to strengthen policy wording to ensure no adverse impacts on European sites. It reached a conclusion of no adverse impacts on site integrity at any European site[12].	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European sites and areas of FLL. The HRA will take these in-combination impacts into consideration.

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
South Cambridgeshire District Local Plan[13]	The South Cambridgeshire Local Plan was adopted in September 2018 and covers the period to 2031. Preparation of the joint Greater Cambridge Local Plan is ongoing in accordance with the Greater Cambridge Local Development Scheme 2025.[14]	Over the plan period (2011 to 2031) the adopted Local Plan will allow for the provision of 19,500 new homes, with an average delivery of 975 homes per annum. The Local Plan will also allow for the provision of at least the 143,000m^2 of additional floorspaces or 43 ha of 'B' use employment land required over the plan period. The new joint Greater Cambridge Local Plan proposes approximately 58,500 jobs and 44,400 new homes over the Plan period[15].	An HRA[16] was completed to inform the adopted Local Plan, which concluded no LSEs upon any European sites alone, or in-combination, as a result of the plan. An HRA[17] has also been recently completed to inform the emerging new joint Greater Cambridge Local Plan. This HRA also concluded no LSEs upon European sites alone, or in-combination.	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European sites and areas of FLL. The HRA will take these in-combination impacts into consideration.
Cambridge City Local Plan[18]	The Cambridge Local Plan was adopted in October 2018 and guides development to 2031. It replaces the Cambridge Local Plan 2006 and forms part of the adopted	The Local Plan makes provision for at least 14,000 additional dwellings between 2011 and 2031 to meet objectively assessed housing need, equating to an average of 700 dwellings per year. Growth is focused within and around the existing urban area, including Areas of Major Change, Opportunity Areas, previously developed land and limited Green Belt	The Habitats Regulations Assessment (HRA) Screening report identified potential impact pathways. These were considered through the HRA process, including updates during the examination and	Yes. The Local Plan proposes significant housing and employment growth (approximately 14,000 dwellings and 22,100 jobs), which has the potential to contribute to in-combination recreational disturbance, air quality, water resource, water quality and

	development plan for Cambridge,	releases. The Plan also support approximately 22,100 new jobs by 2031, including around 8,800 B-use class jobs, and provides for at least 12 ha of employment land, including strategic employment allocations associated with the Cambridge Cluster.	assessment of the Main Modifications.	urbanisation effects on European sites and areas of functionally linked land. Although the Cambridge Local Plan HRA concluded that these effects could be mitigated, they should be considered alongside growth proposed by the emerging plan through the in-combination assessment.
Central Bedfordshire Local Plan[19]	The Central Bedfordshire Local Plan was adopted in July 2021. Work on a new Local Plan (to be adopted by December 2028) is currently underway and publication of a first draft (issues and options) for public consultation is scheduled for 2026.	Over the plan period (2015 to 2035), the adopted Local Plan will allow for the provision of 44,756, delivered at a varying rate (with most homes expected to be delivered between 2017 and 2029). The Local Plan will also allow for the provision of 118 ha of employment land over the plan period.	An HRA[20] was completed to inform the adopted Local Plan. This HRA concluded that, due to mitigation provided through the comprehensive policies in the Local Plan, no LSEs were anticipated from the plan alone. Due to neighbouring authorities' mitigative efforts and proposed development locations, in-combination LSEs were also deemed unlikely.	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European sites and areas of FLL. The HRA will take these in-combination impacts into consideration.

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
Bedford Borough Local Plan[21]	The Bedford Borough Local Plan 2030 was adopted in January 2020 and sets out the strategy for growth and development across the borough to 2030. The proposed Bedford Borough Local Plan 2040[22] was intended to provide for growth beyond the Local Plan 2030 period but was withdrawn in October 2025 A new Local Plan 2050[23] is now being prepared under the revised plan-making system.	The Local Plan 2030 seeks to meet Bedford Borough's housing needs by delivering 14,550 homes between 2015 and 2030, including the allocation of 3,169 additional dwellings. The plan also supports employment growth through the allocation of employment land. The Bedford Borough Local Plan 2050 will apply to the entire administrative area of the borough of Bedford.	There are no European or Ramsar sites within Bedford Borough. HRA work[24] undertaken for Bedford Borough's Local Plans concluded that the Plan is not anticipated to result in likely significant effects on any European sites, either alone or in combination with other plans or projects. Nevertheless, screening is required to assess potential effects on designated sites beyond the borough boundary, in consultation with Natural England.	Yes. This plan will trigger change or development close to the Plan area. There is potential for in-combination air quality, hydrology, recreation and urbanisation LSEs on European sites and areas of FLL. The HRA will take these in-combination impacts into consideration.
Cambridgeshire Local Transport Plan 2011-2031: Policies and Strategy[25]	Published July 2015	Identifies eight key transport-related challenges that the county faces from 2011-2031 and sets out strategies for tackling each of these challenges. This document is complemented by	The Local Transport Plan was supported by an HRA[28], which concluded that the Plan was	No. Policies set out in the Local Transport Plan are likely to encourage a modal shift from the

		the Long-Term Transport Strategy[26] (which outlines the changes required in relation to the county's services and transport infrastructure) and Transport Delivery Plans[27] (which outline the transport schemes the county intends to deliver over two-to-three-year periods).	anticipated to have no LSEs on European sites.	private car and positive impacts upon air quality.
Cambridgeshire and Peterborough Minerals and Waste Local Plan 2036[29]	Adopted July 2021	Outlines 12 objectives for mineral and waste management in the Cambridgeshire and Peterborough areas, for the period up to 2036. These objectives intend to guide sustainable waste management and the delivery of a "*steady, adequate but sustainable supply of minerals to meet current and projected future need".*	An HRA was not available at the time of writing.	Yes. This plan has the potential to trigger in-combination air, water and urbanisation effects at European sites and upon areas of FLL. The HRA will take these in-combination impacts into consideration.
Anglian River Basin Management Plan (RBMP)[30]	The Anglian RBMP was updated in December 2022	The RBMP provides an overview of river basin planning in England for the Anglian River Basin District. It includes an assessment of the status of waterbodies in the River Basin District, objectives for these waterbodies and a summary of the measures necessary to reach these objectives.	The RBMP was supported by an HRA[31]. This concluded that, at the strategic plan level, the RBMP is not likely to have any significant effects on any European sites, alone or in combination with other plans or projects.	The RBMP actions are focused on water bodies and the improvement of European sites that are water dependent. The achievement of these aims will be considered in the HRA process. Whilst development activities arising from Local Plans may inhibit the ability of the RBMP to achieve objectives relating to

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
				European sites, the overall effect of the RBMP is to promote management towards Good Ecological Status (GES).
Anglian Water's Water Resource Management Plan (WRMP) 2024[32]	Published September 2024	The WRMP24 sets out how Anglian Water will maintain a sustainable and secure supply of safe drinking water over the plan period.	The WRMP was supported by an HRA[33]. It concluded no adverse impacts on the integrity of any European sites either alone, or in-combination, so long as adjustments are made to the application of measures described in the individual assessments.	This plan aims to protect the water environment and takes account for future water demand. The achievement of these aims will be considered in the HRA process. It is unlikely that the WRMP will have alone or in-combination effects on the water environment.
Anglian Water Drought Plan[34]	Published April 2022. A Draft Drought Plan 2027 has since been published for statutory public consultation.[35]	The Drought Plan outlines the operational steps that will be conducted if a drought occurs in the five-year period from 2022 to 2027. It proposes ongoing leakage reduction measures, water efficiency, and monitoring and metering activities. The Draft Drought Plan 2027 provides an overview of the operational and tactical actions that would be implemented to manage a drought during the period 2027–2032, while maintaining public water supplies and minimising environmental impacts.	An HRA[36] was prepared in support of the Drought Plan. It concluded no adverse impacts on the integrity of any European sites, either alone, or in-combination.	This plan aims to protect the water environment in times of drought. The achievement of these aims will be considered in the HRA process. It is unlikely that the Drought Plan will have alone, or in-combination, effects on the water environment.

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
Affinity Water (AW) Water Resource Management Plan (WRMP) 2024[37]	Published October 2024	Whilst the Plan area is not located within the AW WRMP area, to increase resilience to drought, water trading with AW is discussed within the Anglian WRMP. Within AW's WRMP there is a focus on climate change resilience, the implementation of smart meters and working towards better pipe connections to increase water availability.	An HRA[38] was undertaken in support of the WRMP, which set out a series of mitigation measures. The HRA concluded that, provided the mitigation measures are included in the WRMP, it would not result in an adverse effect on any European sites.	This plan aims to protect the water environment and takes account for future water demand. The achievement of these aims will be considered in the HRA process. It is unlikely that the WRMP will have alone or in-combination effects on the water environment.
Cambridge Water's Water Resources Management Plan (WRMP) 2024[39]	Published March 2025	The WRMP outlines how Cambridge Water will maintain a sustainable and secure supply of safe drinking water over the plan period.	An HRA[40] was prepared in support of the WRMP. It concluded that the WRMP will, alone, have LSEs upon the following three European sites: • Ouse Washes SAC, SPA and Ramsar; • Fenland SAC; and, • Eversden & Wimpole Woods SAC.	Yes. The HRA concluded that the plan would have LSEs upon three European sites: Ouse Washes SAC, SPA and Ramsar; Fenland SAC; and Eversden & Wimpole Woods SAC.

Plans and policies	Plan status	Summary of housing/employment – key elements of the Local Plan that could cause in-combination effects	Summary of HRA findings	Potential in-combination LSE
Cambridge Water Drought Plan[41]	Published April 2022	The Drought Plan outlines the intended actions of Cambridge Water before, during and after drought events, to ensure water demand needs and the needs of the environment both continue to be met.	An HRA[42] was prepared in support of the Drought Plan. It concluded no adverse impacts on the integrity of any European sites, either alone, or in-combination.	This plan aims to protect the water environment in times of drought. The achievement of these aims will be considered in the HRA process. It is unlikely that the Drought Plan will have alone, or in-combination, effects on the water environment.

Appendix B: European Site Conservation Objectives and Threats and Pressures

Barnack Hills & Holes SAC[1]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats; and,
- The supporting processes on which qualifying natural habitats rely.

Qualifying features:

H6210. Semi-natural dry grasslands and scrubland facies: on calcareous substrates (*Festuco brometalia*) (important orchid sites); Dry grasslands and scrublands on chalk or limestone (important Orchid sites – priority habitat)

Threats and Pressures at European site which may be affected by the Local Plan[2,3]:

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification; and,
- Public access/disturbance.

Eversden & Wimpole Woods SAC[4]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats;
- The supporting processes on which qualifying natural habitats rely;
- The populations of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

S1308. *Barbastella barbastellus*; Barbastelle Bat

Threats and Pressures at European site which may be affected by the Local Plan[5,6]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Landscape-altering development – impact of development altering the landscape and causing the loss of/disruption to flight lines to and from the site;

Eversden & Wimpole Woods SAC[4]

- Disturbance from human activity – impact of tree management practices and nighttime light pollution;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impact of pollutants entering supporting water habitats (specifically nearby lakes and ponds); and,
- Hydrology/water quantity – impact of inappropriate water levels of supporting water habitats (specifically nearby lakes and ponds).

Fenland SAC (where it is underpinned by Woodwalton Fen SSSI)[7]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats and habitats of qualifying species;
- The structure and function (including typical species) of qualifying natural habitats;
- The structure and function of the habitats of qualifying species;
- The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely;
- The population of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

H6410. *Molinia* meadows on calcareous, peaty or clayey-silt-laden soils (*Molinion caeruleae*); Purple moor-grass meadows

H7210. Calcareous fens with *Cladium mariscus* and species of the *Caricion davallianae*; Calcium-rich fen dominated by Great Fen-sedge (Saw-sedge) (priority habitat/species)

S1149. *Cobitis taenia*; Spined Loach

S1166. *Triturus cristatus*; Great Crested Newt

Threats and Pressures at European site which may be affected by the Local Plan[8,9]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impact of high nutrient levels, changes to water chemistry and other changes to water quality; and,
- Hydrology/water quantity – impact of disturbed water regimes (including the source, depth, duration, frequency, magnitude and timing of water supply), disturbed flooding regimes, changes to water levels, changes to water table height and other hydrological changes.

Nene Washes SAC[10,]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of the habitats of qualifying species;
- The structure and function of the habitats of qualifying species;
- The supporting processes on which the habitats of qualifying species rely.
- The populations of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

S1149. *Cobitis taenia*; Spined Loach

Threats and Pressures at the European site which may be affected by the Local Plan[11,,12,]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Water pollution/water quality – impacts of high nutrient levels (including high levels of phosphorous) and other changes to water quality; and,
- Hydrology/water quantity – impacts of disturbed flow regimes, changes to water quantity and other hydrological changes.

[10] Natural England (2018) European Site Conservation Objectives for Nene Washes SAC (UK0030222). Available at: https://publications.naturalengland.org.uk/publication/5559224163631104 [Date accessed: 02/06/26]

Nene Washes SPA[13,]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely.
- The populations of each of the qualifying features; and,
- The distribution of the qualifying species within the site.

Qualifying features:

A037. *Cygnus columbianus bewickii*; Bewick's Swan (Non-breeding)

A050. *Anas penelope*; Eurasian Wigeon (Non-breeding)

A051. *Anas strepera*; Gadwall (Breeding)

A051. *Anas strepera*; Gadwall (Non-breeding)

A052. *Anas crecca*; Eurasian Teal (Non-breeding)

A054. *Anas acuta*; Northern Pintail (Non-breeding)

A055. *Anas querquedula*; Garganey (Breeding)

A056. *Anas clypeata*; Northern Shoveler (Non-breeding)

A056. *Anas clypeata*; Northern Shoveler (Breeding)

A156a. *Limosa limosa limosa*; Black-tailed Godwit (Breeding)

Threats and Pressures at the European site which may be affected by the Local Plan[14],[15]

- Disturbance caused by human activity – disturbance of visitors (including those visiting the site to engage in angling, wildfowling, bird watching and skating);
- Landscape-altering development – impact of development altering the landscape and causing the loss of unobstructed lines of sight within feeding or roosting habitat, which can limit the ability of birds to detect predators;
- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Water pollution/water quality – impacts of high nutrient levels (including high levels of phosphorous) and other changes to water quality; and,
- Hydrology/water quantity – impacts of disturbed flow regimes, changes to water supply, changes to water depth, changes to the area of waterbodies, changes to overall water quantity and other hydrological changes.

Nene Washes Ramsar[16]

Conservation objectives:
Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

Ramsar Criterion	Justification for the application of each criterion
2	The site supports an important assemblage of nationally rare breeding birds. In addition, a wide range of raptors occur through the year. The site also supports several nationally scarce plants, and two vulnerable and two rare British Red Data Book invertebrate species have been recorded.
6	Qualifying Species/populations (as identified at designation): Species with peak counts in winter: • Tundra Swan, *Cygnus columbianus bewickii*, Northwest Europe 694 individuals, representing an average of 2.3% of the population (five year peak mean 1998/9- 2002/3) Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the annual Wetland Bird Survey report.

Threats and Pressures at European site which may be affected by the Local Plan[17]:

N/A

Orton Pit SAC[18]

Conservation objectives:
Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats;
- The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely.
- The populations of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

H3140. Hard oligo-mesotrophic waters with benthic vegetation of Chara spp.; Calcium-rich nutrient-poor lakes, lochs and pools

S1166. *Triturus cristatus*; Great Crested Newt

[16] JNCC (1993) Information Sheet on Ramsar Wetlands (RIS): Nene Washes. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11046.pdf [Date accessed: 03/06/26]

[17] Ibid.

[18] Natural England (2018) European Site Conservation Objectives for Orton Pit SAC (UK0030053). Available at: https://publications.naturalengland.org.uk/publication/5289941760212992 [Date accessed: 02/06/26]

Orton Pit SAC[18]

Threats and Pressures at European site which may be affected by the Local Plan[19,20]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Direct impact from third party – impact of illegal activities including off-roading, vandalism, arson and disturbance from dogs jumping into ponds;
- Water pollution/water quality – impact of acidification; and inappropriate levels of chlorophyll, dissolved oxygen, nitrogen, phosphate and other pollutants; and,
- Hydrology/water quantity – impact of disturbed water regimes, inappropriate water levels, and insufficient water transparency.

Ouse Washes SAC[21,]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of the habitats of qualifying species;
- The structure and function of the habitats of qualifying species;
- The supporting processes on which the habitats of qualifying species rely.
- The populations of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

S1149. *Cobitis taenia*; Spined Loach

Threats and Pressures at European site which may be affected by the Local Plan[22,23]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Water pollution/water quality – impacts of inappropriate levels of nutrients, organic pollutants and other pollutants (particularly pollution of groundwater); and,
- Hydrology/water quantity – impacts of inappropriate water levels and disturbed flow regimes.

Ouse Washes SPA[24]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely.
- The populations of each of the qualifying features; and,
- The distribution of the qualifying species within the site.

Qualifying features:

A037. *Cygnus columbianus bewickii*; Bewick's Swan (Non-breeding)

A038. *Cygnus cygnus*; Whooper Swan (Non-breeding)

A050. *Anas penelope*; Eurasian Wigeon (Non-breeding)

A051. *Anas strepera*; Gadwall (Breeding)

A052. *Anas crecca*; Eurasian Teal (Non-breeding)

A053. *Anas platyrhynchos*; Mallard (Breeding)

A054. *Anas acuta*; Northern Pintail (Non-breeding)

A055. *Anas querquedula*; Garganey (Breeding)

A056. *Anas clypeata*; Northern Shoveler (Non-breeding)

A056. *Anas clypeata*; Northern Shoveler (Breeding)

A082. *Circus cyaneus*; Hen Harrier (Non-breeding)

A151. *Philomachus pugnax*; Ruff (Breeding)

A156a. *Limosa limosa limosa*; Black-tailed Godwit (Breeding)

Waterbird assemblage

Breeding bird assemblage

Threats and Pressures at European site which may be affected by the Local Plan[25,26]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Disturbance caused by human activity – impact of human activity in and around the site, including angling, wildfowling and walking/dog walking;
- Landscape- and landform-altering development – impact of development altering the landscape/nearby landforms and causing the loss of unobstructed lines of sight within feeding or roosting habitat, which can limit the ability of birds to detect predators;
- Water pollution/water quality – impact of inappropriate levels of nutrients, organic pollutants and other pollutants (particularly pollution of groundwater); and,
- Hydrology/water quantity – impact of disturbed flow regimes, changes to water supply, changes to water area/depth, and other changes to water quantity.

[24] Natural England (2019) European Site Conservation Objectives for Ouse Washes SPA (UK9008041). Available at: https://publications.naturalengland.org.uk/publication/6636062256398336 [Date accessed: 02/06/26]

[25] Natural England (2014) Site Improvement Plan: Ouse Washes (SIP160). Available at: https://publications.naturalengland.org.uk/publication/5354106084392960 [Date accessed: 02/06/26]

[26] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features, Ouse Washes (SPA) Site Code: UK9008041. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK9008041.pdf [Date accessed: 02/06/26]

Ouse Washes Ramsar[27]

Conservation objectives:
Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

Ramsar Criterion	Justification for the application of each criterion
1	The site is one of the most extensive areas of seasonally-flooding washland of its type in Britain.
2	The site supports several nationally scarce plants, including Small Water Pepper *Polygonum minus*, Whorled Water-Milfoil *Myriophyllum verticillatum*, Greater Water Parsnip *Sium latifolium*, River Waterdropwort *Oenanthe fluviatilis*, Fringed Water-lily *Nymphoides peltata*, Long-stalked Pondweed *Potamogeton praelongus*, Hair-like Pondweed *Potamogeton trichoides*, Grass-wrack Pondweed *Potamogeton compressus*, Tasteless Water-pepper *Polygonum mite* and Marsh Dock *Rumex palustris*. Invertebrate records indicate that the site holds relict fenland fauna, including the British Red Data Book species Large Darter Dragonfly *Libellula fulva* and the Rifle Beetle *Oulimnius major*. The site also supports a diverse assemblage of nationally rare breeding waterfowl associated with seasonally-flooding wet grassland.
5	Assemblages of international importance: Species with peak counts in winter: • 59133 Waterfowl (five year peak mean 1998/99-2002/2003)
6	Qualifying Species/populations (as identified at designation): Species with peak counts in winter: • Tundra Swan, *Cygnus columbianus bewickii*, Northwest Europe 1140 individuals, representing an average of 3.9% of the population (five year peak mean 1998/9- 2002/3) • Whooper Swan, *Cygnus cygnus*, Iceland/UK/Ireland 653 individuals, representing an average of 3.1% of the population (five year peak mean 1998/9- 2002/3) • Eurasian Wigeon, *Anas penelope*, Northwest Europe 22630 individuals, representing an average of 1.5% of the population (five year peak mean 1998/9-2002/3) • Gadwall, *Anas strepera strepe*ra, Northwest Europe 438 individuals, representing an average of 2.5% of the GB population (five year peak mean 1998/9- 2002/3) • Eurasian Teal, *Anas crecca*, Northwest Europe 3384 individuals, representing an average of 1.7% of the GB population (five year peak mean 1998/9-2002/3) • Northern Pintail, *Anas acuta*, Northwest Europe 2108 individuals, representing an average of 3.5% of the population (five year peak mean 1998/9-2002/3) • Northern Shoveler, *Anas clypeata*, Northwest and central & Europe 627 individuals, representing an average of 1.5% of the population (five year peak mean 1998/9- 2002/3) Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the annual Wetland Bird Survey report.

[27] JNCC (1976) Information Sheet on Ramsar Wetlands (RIS): Ouse Washes. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11051.pdf [Date accessed: 03/06/26]

Threats and Pressures at European site which may be affected by the Local Plan[28]:

- Eutrophication – impact of high nutrient levels caused by sewage treatment works and agricultural runoff; and,
- Reservoir/barrage/dam impact: flooding – recent decades have seen an increase in occurrence of spring flooding and winter flood depths. These two factors have had an adverse impact on vegetation and bird features of the site.

Portholme SAC[29]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats; and,
- The supporting processes on which qualifying natural habitats rely.

Qualifying features:

H6510. Lowland hay meadows (*Alopecurus pratens*is, *Sanguisorba officinalis*)

Threats and Pressures at European site which may be affected by the Local Plan[30,31]

- Disturbance caused by recreation/visitors to the site – impact of unmanaged levels of site visitation and use of the site for recreation;
- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impact of high nutrient levels arising from floodwaters from the River Ouse; and,
- Hydrology/water quantity – impact of disturbed water regimes, disturbed flooding regimes, and inappropriate water table levels.

Rutland Water SPA[32]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely;
- The population of each of the qualifying features; and,
- The distribution of the qualifying features within the site.

Qualifying features:

A005. *Podiceps cristatus*; Great Crested Grebe (Non-breeding)

A036. *Cygnus olor*; Mute Swan (Non-breeding)

A050. *Anas penelope*; Eurasian Wigeon (Non-breeding)

A051. *Anas strepera*; Gadwall (Non-breeding)

A052. *Anas crecca*; Eurasian Teal (Non-breeding)

A056. *Anas clypeata*; Northern Shoveler (Non-breeding)

A061. *Aythya fuligula*; Tufted Duck (Non-breeding)

A067. *Bucephala clangula*; Common Goldeneye (Non-breeding)

A070. *Mergus merganser*; Goosander (Non-breeding)

A125. *Fulica atra*; Common Coot (Non-breeding)

Waterbird assemblage

Threats and Pressures at European site which may be affected by the Local Plan[33]

- Public access/disturbance – impacts of recreational activities in and around the SPA, including regular activities such as water sports, fishing, cycling, birdwatching and walking, and infrequent large events held on the banks of the reservoir annually;
- Direct impact from third party – impact of activities such as private firework displays in adjacent properties, hot air balloon flights and private aircraft flights;
- Planning permission – impacts of increasing development around the SPA (including development of windfarms), directly harming waterfowl species as well as resulting in habitat loss and fragmentation;
- Water pollution/water quality – impact of inappropriate nutrient levels (from diffuse sources, such as agriculture, and point sources, such as regulated treated and unregulated untreated sewage discharge into the SPA) and other pollutants; and,
- Hydrology/water quantity – impacts of inappropriate water levels, through human-induced changes to hydraulic conditions, including deliberate water abstraction practices.

Rutland Water Ramsar[34]

Conservation objectives:

Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

[32] Natural England (2023) European Site Conservation Objectives for Rutland Water SPA (UK9008051). Available at: https://publications.naturalengland.org.uk/publication/4978639963684864 [Date accessed: 02/06/26]

[33] Natural England (2014) Site Improvement Plan: Rutland Water SPA (SIP208). Available at: https://publications.naturalengland.org.uk/publication/5985520903520256 [Date accessed: 02/06/26]

[34] JNCC (1991) Information Sheet on Ramsar Wetlands (RIS): Rutland Water. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11062.pdf [Date accessed: 03/06/26]

Ramsar Criterion	Justification for the application of each criterion
5	Assemblages of international importance: Species with peak counts in winter: • 19274 Waterfowl (five year peak mean 1998/99-2002/2003)
6	Qualifying Species/populations (as identified at designation): Species with peak counts in spring/autumn: • Gadwall, *Anas strepera strepe*ra, Northwest Europe 1014 individuals, representing an average of 1.6% of the population (five year peak mean 1998/9- 2002/3) • Northern Shoveler, *Anas clypeata*, Northwest and central & Europe 619 individuals, representing an average of 1.5% of the population (five year peak mean 1998/9- 2002/3) Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the annual Wetland Bird Survey report.

Threats and Pressures at European site which may be affected by the Local Plan[35]:

N/A

The Wash & Norfolk Coast SAC[36]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of the habitats of qualifying natural habitats and habitats of qualifying species;
- The structure and function (including typical species) of qualifying natural habitats;
- The structure and function of the habitats of qualifying species;
- The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely;
- The populations of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

H1110. Sandbanks which are slightly covered by sea water all the time; Subtidal sandbanks

H1140. Mudflats and sandflats not covered by seawater at low tide; Intertidal mudflats and sandflats

H1150. Coastal lagoons (priority habitat)

H1160. Large shallow inlets and bays

H1170. Reefs

H1310. *Salicornia* and other annuals colonising mud and sand; Glasswort and other annuals colonising mud and sand

H1330. Atlantic salt meadows (*Glauco-Puccinellietalia maritimae*)

H1420. Mediterranean and thermo-Atlantic halophilous scrubs (*Sarcocornetea fruticosi*); Mediterranean

[35] Ibid.

[36] Natural England (2018) European Site Conservation Objectives for The Wash & North Norfolk Coast SAC (UK0017075). Available at: https://publications.naturalengland.org.uk/publication/5950176598425600 [Date accessed: 03/06/26]

The Wash & Norfolk Coast SAC[36]

saltmarsh scrub

S1355. *Lutra lutra*; Otter

S1365. *Phoca vitulina*; Common Seal

Threats and Pressures at European site which may be affected by the Local Plan[37,38]

- Public access/disturbance – impact of disturbance by visitors and recreational activity (including, but not limited to, boating, low altitude aircraft use, wildlife tours/watching, kiting, motorised vehicle use, biking, walking/dog walking, littering and barbecuing on the beach);
- Coastal squeeze – impact of sea level rise and coastal development (including erection and maintenance of coastal defences), which result in the loss of intertidal and coastal habitats;
- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impacts (including increased turbidity) of inappropriate levels of nutrients, dissolved oxygen, toxic chemicals, and other pollutants and contaminants; and,
- Hydrology/water quantity – impacts of inappropriate water levels/depth, changes to water area, changes to water density, and changes to the source, depth, duration, frequency, magnitude and timing of water supply or flow, through human-induced changes to hydraulic conditions.

The Wash SPA[39]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely.
- The populations of each of the qualifying features; and,
- The distribution of the qualifying species within the site.

Qualifying features:

A037. *Cygnus columbianus bewickii*; Bewick's Swan (Non-breeding)

A040. *Anser brachyrhynchus*; Pink-footed Goose (Non-breeding)

A046a. *Branta bernicla bernicla*; Dark-bellied Brent Goose (Non-breeding)

A048. *Tadorna tadorna*; Common Shelduck (Non-breeding)

A050. *Anas penelope*; Eurasian Wigeon (Non-breeding)

A051. *Anas strepera*; Gadwall (Non-breeding)

A054. *Anas acuta*; Northern Pintail (Non-breeding)

A065. *Melanitta nigra*; Black (Common) Scoter (Non-breeding)

A067. *Bucephala clangula*; Common Goldeneye (Non-breeding)

A130. *Haematopus ostralegus*; Eurasian Oystercatcher (Non-breeding)

The Wash SPA[39]

A141. *Pluvialis squatarola*; Grey Plover (Non-breeding)

A143. *Calidris canutus*; Red Knot (Non-breeding)

A144. *Calidris alba*; Sanderling (Non-breeding)

A149. *Calidris alpina alpina*; Dunlin (Non-breeding)

A156. *Limosa limosa islandica*; Black-tailed Godwit (Non-breeding)

A157. *Limosa lapponica*; Bar-tailed Godwit (Non-breeding)

A160. *Numenius arquata*; Eurasian Curlew (Non-breeding)

A162. *Tringa totanus*; Common Redshank (Non-breeding)

A169. *Arenaria interpres*; Ruddy Turnstone (Non-breeding)

A193. *Sterna hirundo*; Common Tern (Breeding)

A195. *Sterna albifrons*; Little Tern (Breeding)

Waterbird assemblage

Breeding bird assemblage

Threats and Pressures at European site which may be affected by the Local Plan[40,41]

- Public access/disturbance – impact of disturbance by visitors and recreational activity (including, but not limited to, boating, low altitude aircraft use, wildlife tours/watching, kiting, motorised vehicle use, biking, walking/dog walking, littering and barbecuing on the beach);
- Coastal squeeze – impact of sea level rise and coastal development (including erection and maintenance of coastal defences), which result in the loss of intertidal and coastal habitats;
- Landscape-altering development – impact of development altering the landscape and causing the loss of unobstructed lines of sight within feeding or roosting habitat, which can reduce predation detection by birds and fragment habitats;
- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impacts (including increased turbidity) of inappropriate levels of nutrients, dissolved oxygen, toxic chemicals, and other pollutants and contaminants; and,
- Hydrology/water quantity – impacts of inappropriate water levels/depth, changes to water area, changes to water density, and changes to the source, depth, duration, frequency, magnitude and timing of water supply or flow, through human-induced changes to hydraulic conditions.

The Wash Ramsar[42]

Conservation objectives:
Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

[40] Natural England (2014) Site Improvement Plan: The Wash and North Norfolk Coast (SIP245). Available at: https://publications.naturalengland.org.uk/publication/5327498292232192 [Date accessed: 03/06/26]

[41] Natural England (2024) The Wash SPA, Supplementary Advice. Available at: https://designatedsites.naturalengland.org.uk/ConservationAdvice/SupplementaryAdvice.aspx?SiteCode=UK9008021&SiteName=the%20wash%20&SiteNameDisplay=The+Wash+SPA&countyCode=29&responsiblePerson=&SeaArea=&IFCAArea=&NumMarineSeasonality=21 [Date accessed: 03/06/26]

[42] JNCC (1988) Information Sheet on Ramsar Wetlands (RIS): The Wash. Available at: https://jncc.gov.uk/jncc-assets/RIS/uk11072.pdf [Date accessed: 03/06/26]

Ramsar Criterion	Justification for the application of each criterion
1	The Wash is a large shallow bay comprising very extensive saltmarshes, major intertidal banks of sand and mud, shallow water and deep channels.
3	Qualifies because of the inter-relationship between its various components including saltmarshes, intertidal sand and mud flats and the estuarine waters. The saltmarshes and the plankton in the estuarine water provide a primary source of organic material which, together with other organic matter, forms the basis for the high productivity of the estuary.
5	Assemblages of international importance: Species with peak counts in winter: 292541 Waterfowl (five year peak mean 1998/99-2002/2003)
6	Qualifying Species/populations (as identified at designation): Species with peak counts in spring/autumn: • Eurasian Oystercatcher, *Haematopus ostralegus ostralegus*, Europe and northwest Africa (wintering) 15616 individuals, representing an average of 1.5% of the population (five year peak mean 1998/9-2002/3) • Grey Plover, *Pluvialis squatarola*, Eastern Atlantic/western Africa (wintering) 13129 individuals, representing an average of 5.3% of the population (five year peak mean 1998/9-2002/3 - spring peak) • Red Knot, *Calidris canutus islandica*, Western and southern Africa (wintering) 68987 individuals, representing an average of 15.3% of the population (five year peak mean 1998/9-2002/3) • Sanderling, *Calidris alba*, Eastern Atlantic 3505 individuals, representing an average of 2.8% of the population (five year peak mean 1998/9-2002/3) • Eurasian Curlew, *Numenius arquata arquata*, N. a. arquata Europe (breeding) 9438 individuals, representing an average of 2.2% of the population (five year peak mean 1998/9-2002/3) • Common Redshank, *Tringa totanus totanus*, 6373 individuals, representing an average of 2.5% of the population (five year peak mean 1998/9-2002/3) • Ruddy Turnstone, *Arenaria interpres interpres*, Northeastern Canada, Greenland/western Europe and northwest Africa 888 individuals, representing an average of 1.7% of the GB population (five year peak mean 1998/9- 2002/3) Species with peak counts in winter: • Pink-footed Goose, *Anser brachyrhynchus*, Greenland, Iceland/UK 29099 individuals, representing an average of 12.1% of the population (five year peak mean 1998/9-2002/3) • Dark-bellied Brent Goose, *Branta bernicla bernicla*, 20861 individuals, representing an average of 9.7% of the population (five year peak mean 1998/9-2002/3) • Common Shelduck, Tadorna tadorna, Northwest Europe 9746 individuals, representing an average of 3.2% of the population (five year peak mean 1998/9-2002/3) • Northern Pintail, *Anas acuta*, Northwest Europe 2108 individuals, representing an average of 3.5% of the population (five year peak mean 1998/9-2002/3) • Dunlin, *Calidris alpina alpina*, Western Siberia/western Europe 36600 individuals, representing an average of 2.7% of the population (five year peak mean 1998/9-2002/3) • Bar-tailed Godwit, *Limosa lapponica lapponica*, Western Palearctic 16546 individuals, representing an average of 13.7% of the population (five year peak mean 1998/9-2002/3) Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the annual Wetland Bird Survey report.

Threats and Pressures at European site which may be affected by the Local Plan[43]:

N/A

Upper Nene Valley Gravel Pits SPA[44]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely;
- The population of each of the qualifying features; and,
- The distribution of the qualifying features within the site.

Qualifying features:

A021. *Botaurus stellaris*; Great Bittern (Non-breeding)

A051. *Anas strepera*; Gadwall (Non-breeding)

A140. *Pluvialis apricaria*; European Golden Plover (Non-breeding)

Waterbird assemblage

Threats and Pressures at European site which may be affected by the Local Plan[45,46]

- Public access/disturbance – disturbance from recreation (particularly walkers and dog owners) and outdoor sports and leisure activities;
- Planning permission – impact of increasing built and recreational development within and around the SPA, resulting in habitat loss and fragmentation, and increased disturbance;
- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Landscape-altering development – impact of development altering the landscape and causing the loss of unobstructed lines of sight within feeding or roosting habitat, which can reduce predation detection by birds and fragment habitats;
- Water pollution/water quality – impacts of changes to water quality; and,
- Hydrology/water quantity – impacts of inappropriate water levels/depth, changes to water area, and other changes to water quantity.

Upper Nene Valley Gravel Pits Ramsar[47]

Conservation objectives:

Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

[43] Ibid.

[44] Natural England (2019) European Site Conservation Objectives for Upper Nene Valley Gravel Pits SPA (UK9020296). Available at: https://publications.naturalengland.org.uk/publication/5495529882517504 [Date accessed: 02/06/26]

[45] Natural England (2014) Site Improvement Plan: Upper Nene Valley Gravel Pits SPA (SIP254). Available at: https://publications.naturalengland.org.uk/publication/6732225261338624 [Date accessed: 02/06/26]

[46] Natural England (2017) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features Upper Nene Valey Gravel Pits Special Protection Area (SPA) Site Code: UK9020296 Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK9020296.pdf [Date accessed: 04/06/26]

[47] JNCC (2011) Information Sheet on Ramsar Wetlands (RIS): Upper Nene Valley Gravel Pits. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11083.pdf [Date accessed: 03/06/26]

Ramsar Criterion	Justification for the application of each criterion
5	The site regularly supports 20,000 or more waterbirds: In the non-breeding season, the site regularly supports 23,821 individual waterbirds (5 year peak mean 1999/2000 – 2003/04).
6	Qualifying Species/populations (as identified at designation): Species with peak counts in winter: • Mute Swan, *Cygnus olor*, 629 individuals, representing an average of 1.7% GB population (five year peak mean 1999/2000- 2003/4) • Gadwall, *Anas strepera strepe*ra, Northwest Europe 773 individuals, representing an average of 2.0% of the population (five year peak mean 1999/2000- 2003/4) Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the annual Wetland Bird Survey report.

Threats and Pressures at European site which may be affected by the Local Plan[48]:

- Unspecified development: urban use – activities connected with ongoing urban development can cause significant disturbance to wintering birds if unmanaged; and,
- Recreation/tourism disturbance – access by people and dogs both on and off of pubic rights of way is a significant cause of disturbance in some areas. The site is also subject to a variety of recreational activities including fishing and water sports. Demand for access and formal/informal recreational activities within the Nene Valley are increasing; development of facilities/opportunities is often in an uncoordinated manner.

[48] Ibid.

Woodwalton Fen Ramsar[49]

Conservation objectives:
Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

Ramsar Criterion	Justification for the application of each criterion
1	The site is within an area that is one of the remaining parts of East Anglia which has not been drained. The fen is near natural and has developed where peat-digging took place in the 19th century. The site has several types of open fen and swamp communities.
2	The site supports two species of British Red Data Book plants, Fen Violet (*Viola persicifolia*) and Fen Wood-rush (*Luzula pallidula*). Woodwalton also supports a large number of wetland invertebrates including 20 British Red Data Book species. Aquatic beetles, flies and moths are particularly well represented.

Threats and Pressures at European site which may be affected by the Local Plan[50]:

- Eutrophication; and,
- Drainage/land-claim for agriculture.

[49] JNCC (1995) Information Sheet on Ramsar Wetlands (RIS): Woodwalton Fen. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11078.pdf [Date accessed: 03/06/26]

Appendix C: Policies screening summary to inform test of likely significance

The Huntingdonshire Local Plan (Local Plan) policies and allocations have been screened using the screening categories[1] presented in **Table C.1.**

Table C.1: *Screening evaluation categories*

Screening evaluation categories	Screen in / Screen out
A. General statements of policy / general aspirations.	Screen Out
B. Policies listing general criteria for testing the acceptability / sustainability of proposals.	Screen Out
C. Proposal referred to but not proposed by the Plan.	Screen Out
D. General plan-wide environmental protection / designated site safeguarding / threshold policies.	Screen Out
E. Policies or proposals that steer change in such a way as to protect European sites from adverse effects.	Screen Out
F. Policies or proposals that cannot lead to development or other change.	Screen Out
G. Policies or proposals that could not have any conceivable or adverse effect on a site.	Screen Out
H. Policies or proposals the (actual or theoretical) effects of which cannot undermine the conservation objectives (either alone or in-combination with other aspects of this or other plans or projects).	Screen Out
I. Policies or proposals with a Likely Significant Effect on a site alone.	Screen In
J. Policies or proposals unlikely to have a significant effect alone.	Screen Out
K. Policies or proposals unlikely to have a significant effect either alone or in-combination.	Screen Out
L. Policies or proposals which might be likely to have a significant effect in-combination.	Screen In
M. Bespoke area, site or case-specific policies or proposals intended to avoid or reduce harmful effects on a European site.	Screen In

Chapter 1

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
n/a	Section A	Section A of the Local Plan is administrative text relating to the Plan and process for consultation.	Category A	Screen out

Section B: Our Strategy for Huntingdonshire to 2046

Chapter 2: Our Vision and Approach to Net Zero

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
n/a	Vision	The vision sets out the strategic priorities for an inclusive, sustainable, and healthy Huntingdonshire achieving net zero while supporting thriving communities and local prosperity. It is high level and does not trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category A	Screen out
n/a	Aims and objectives	The aims and objectives help implement the vision for the Local Plan across a range of topics. They are high level and do not trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category A	Screen out
n/a	Huntingdonshire net zero carbon aspirations	These aspirations set out how Huntingdonshire aspires to contribute towards achieving the national target of being net zero by 2050. They are high level and do not trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category A	Screen out

Chapter 3: How will Huntingdonshire grow and change?

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP1	How much development do we expect?	This policy defines the extent of development needed to meet Huntingdonshire's future housing needs over the Plan period. Provision will be made for as follows: • At least 32,000 new homes across a range of tenures, and • About 14,400 additional jobs This policy therefore triggers development and has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. - **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar. - **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.	Category L	Screen in
Policy LP2	Our strategy for change	This policy sets out the locations for distribution of housing need in Huntingdonshire. This policy therefore supports development and has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. - **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar.	Category L	Screen in

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
		- **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.		
Policy LP 3	Distribution of growth	This policy sets out the distribution of growth that will help to deliver the strategic approach to secure a sustainable development patterns across the district . This policy therefore supports development and has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. - **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar. - **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.	Category L	Screen in

© Lepus Consulting for Huntingdonshire District Council

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 4	Green and Blue Infrastructure Priority Areas	This policy outlines the criteria that all proposals are expected to support green and blue infrastructure, and highlights Priority Areas for their implementation. It does not directly trigger development which could lead to an LSE at any European site, either alone, or in combination.	Category D	Screen out
Policy LP 5	Settlement Hierarchy	This policy sets out the settlement hierarchy for Huntingdonshire. The policy will not trigger a change or development which could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 6	Market Towns	This policy sets out the Council's approach for development proposals on sites in addition to those allocated in the Local Plan where they are within or adjacent to the designated Market Towns. This policy therefore supports development and has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. - **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar. - **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.	Category L	Screen in
Policy LP 7	Service Centres	This policy sets out the Council's approach for development proposals on sites in addition to those allocated in this plan where they are within or adjacent to the designated Service Centres. This policy therefore supports development and has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. 		The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar. - **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.		
Policy LP 11	Placemaking for larger scale developments	This policy sets out the placemaking process for development proposals of 50 or more homes, 2,500m2 of floorspace (for all other uses) or where the number of residential units or floorspace is not given, on a site area of 2 hectares or more. It does not directly trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 12	How will infrastructure be provided?	This policy sets out a set of high-level criteria which development must meet to provide for the necessary on-site and, where appropriate, off-site infrastructure and facilities. It does not directly trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category B	Screen out
Policy LP 13	Securing Infrastructure Provision	This policy sets out the delivery of development, detailing conditions and planning obligations. It does not directly trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 14	Supporting and enabling strategic infrastructure	This policy seeks to ensure that development and infrastructure are planned in a coordinated way, recognising infrastructure as an enabler of sustainable growth rather than a constraint. It does not directly trigger development or change and would, therefore, not lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 15	Facilitating Transport, Travel and Connectivity	This policy sets out criteria for development which generates additional movements to and from a building or site, including strategic transport improvements, assessment and mitigation of travel	Category F	Screen out

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
		requirements, and digital connectivity. It does not directly trigger development or change that could lead to an LSE at any European site, either alone or in combination.		
Policy LP 16	Approach to renewable energy schemes	This policy sets out the Council's approach to renewable and low carbon energy (in the form of solar PV and wind energy), including those that are led by the community, to achieve reductions in carbon emissions. This policy therefore has the potential for urbanisation effects upon the following European sites and areas of associated FLL: LSEs as follows: - Nene Washes SPA; - Nene Washes Ramsar; - Ouse Washes SPA; - Ouse Washes Ramsar; - Upper Nene Valley Gravel Pits SPA; - Upper Nene Valley Gravel Pits Ramsar; and - Eversden & Wimpole Woods SAC.	Category L	Screen in
Policy LP 17	Heath and well-being	This policy sets out criteria for major scale development involving residential or employment uses in the context of creating healthy, inclusive, accessible, safe places that support healthy lifestyles. It does not directly trigger development which could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 18	Providing affordable homes	This policy sets out requirements for affordable housing provision within development proposals. It does not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
n/a	Heritage Strategy	This strategy seeks to conserve and enhance Huntingdonshire's historic environment by protecting designated and non-designated heritage assets and requiring appropriate assessments where proposals have the potential to affect heritage assets. It does not directly trigger development or activities that could lead to an LSE at any European site, either alone or in combination.	Category A	Screen out
Policy LP 19	Green and blue infrastructure	This policy outlines the criteria that all proposals are expected to support green and blue infrastructure. It does not directly trigger development which could lead to an LSE at any European site, either alone, or in combination.	Category D	Screen out
Policy LP 20	Supporting carbon capture through nature	This policy sets out sustainability framework involving incorporating tree planting, soft landscaping, green roofs, green spaces, and sustainable drainage within a proposal to support carbon sequestration. This policy is in favour of protecting the natural environment, and will have no LSEs on European sites alone, or in combination.	Category D	Screen out

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 21	Managing flood risk	This policy sets out the criteria for addressing all forms of flood risk in proposals within the Local Plan. It is a plan wide environmental protection policy and does not directly trigger development which could lead to an LSE at any European site, either alone or in combination.	Category D	Screen out
Policy LP 22	Managing Waste Water	This policy sets out the Council's approach to ensure waste water is managed and maintained appropriately throughout the plan period and lifetime of development to support sustainable development within the district. It is a plan wide environmental protection policy and does not directly trigger development which could lead to an LSE at any European site, either alone or in combination.	Category D	Screen out
Policy LP 23	Managing Surface Water	This policy sets out criteria for new developments to manage surface water flooding through design. It does not directly trigger development which could lead to an LSE at any European site, either alone or in combination. This policy contains specific provisions relating to the protection of water quality at European sites (Orton Pits SAC, Fens SAC, Woodwalton Fens SAC, Portholme SAC and the Ouse Washes SPA, SAC and Ramsar). It therefore provides bespoke topic specific mitigation and will be screened into the HRA process for consideration as mitigation through an Appropriate Assessment.	Category M	Screen in
Policy LP 24	Water Efficiency	This policy sets out requirements for new development to demonstrate that it is designed to utilise no more than 90 litres per person per day of mains supplied/ potable water. It is a plan wide environmental protection policy and will not trigger development or other change which could lead to an LSE on any European site, either alone or in combination.	Category D	Screen out

Section C: Our Development Management Policies

Chapter 5: How will we create well designed places?

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 25	Design context and character	This policy requires proposals for development to respond positively to its context, drawing inspiration from the key characteristics of its surroundings. It does not, therefore, lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out

© Lepus Consulting for Huntingdonshire District Council

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 26	Creating high quality places and spaces	This policy sets out requirements for new developments and advertisements to incorporate key placemaking principles. It does not, therefore, lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 27	Ensuring amenity for new buildings and neighbourhoods	This policy ensures that the physical environment created by new development protects ensures amenity for new buildings and neighbours. It does not, therefore, lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 28	Minimising embodied and operation carbon in new buildings	This policy sets out requirements for new development to take opportunities to reduce total embodied carbon content. Modern Methods of Construction could also be utilised. It does not, therefore, lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 29	Making existing buildings more energy efficient	This policy sets out requirements for new developments and redevelopments to consider opportunities to improve building energy efficiency. It does not, therefore, lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 30	Supporting active and sustainable travel	This policy sets out requirements for new development to contribute to an enhanced transport network that supports an increasing proportion of journeys being undertaken by active and sustainable travel modes. It is unlikely to have a significant effect on European sites either alone, or in combination.	Category F	Screen out
Policy LP 31	Parking Provisin and Vehicle Movement	This policy sets out requirements for appropriate provisioning for on-site servicing, movement, and parking of vehicles including commercial, service and emergency vehicles and incorporates appropriate parking for cycles. It does not lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 32	Providing electric vehicle charging points	This policy sets out requirements for new developments to make provision for electric vehicle charging infrastructure. It does not, therefore, lead to development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 33	Preventing and reducing air pollution	This policy ensures proposals will be accompanied by an Air Quality Assessment and low emissions strategy in the case of significant adverse air quality effects. This policy is in favour of protecting the natural environment, and will have no LSEs on European sites alone, or in combination.	Category D	Screen out
Policy LP 34	Preventing and reducing ground contamination	This policy sets out criteria for investigation, risk assessment, and remediation in the context of a contaminated site or land due to previous uses. This policy is in favour of protecting the natural environment, and will have no LSEs on European sites alone, or in combination.	Category D	Screen out

Chapter 7: How will we support homes for all?

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 45	Promoting a mix of housing	This policy requires major housing developments to provide a mix of sizes, types and tenures reflecting identified local needs. It does not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 46	Ensuring accessible and adaptable homes	This policy sets accessibility and adaptability standards for new homes in line with national building regulations. It does not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 47	Facilitating self and custom build homes	This policy states support for self or custom build housing, with marketing and design conditions. It does not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 48	Supporting specialist housing	This policy supports specialist C3 and C2 housing in accessible locations with criteria ensuring integration, access to services, and high design standards. It does not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 49	Supporting houses in multiple occupation	The policy supports C4 housing in multiple occupation with criteria ensuring sufficient size, safe and functional living conditions, high standards of amenity, and nationally required minimum room standards for HMOs. It does not trigger development or change that could lead to a LSE at any European site, either alone, or in combination.	Category F	Screen out

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 50	Promoting rural exceptions housing	This policy supports small-scale affordable housing development on rural exception sites where a local need is demonstrated. Although the policy includes criteria to ensure that development is appropriately located, proportionate and sustainable, it has the potential to facilitate additional residential development. Therefore, the policy could result in pathways for LSEs at European sites, including through increased recreational pressure, changes in water demand and wastewater generation. The policy is therefore screened in for further assessment.	Category L	Screen in
Policy LP 51	Gypsies, travellers and travelling showpeople	This policy identifies a requirement to provide 127 new pitches over the Plan period. Whilst specific locations for pitches have not been provided, development has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. - **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar. - **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.	Category L	Screen in

Chapter 8: How will we conserve and enhance the environment?

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
Policy LP 52	Protecting our nature and conservation sites	This policy establishes a clear hierarchy of protection for international, national and local nature conservation designations. It is a plan wide environmental protection policy and will not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category D	Screen out
Policy LP 53	Enhancing biodiversity and geodiversity	This policy sets out the council's approach to managing development and the natural environment in response to the decline in biodiversity. It is a plan wide environmental protection policy and will not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category D	Screen out
Policy LP 54	Protecting our trees, orchards, woodlands, hedges and hedgerows	This policy seeks to conserve and enhance trees and hedgerows, requiring surveys, assessments, and mitigation. Loss is only permitted in exceptional circumstances and must be mitigated or compensated. It is a plan wide environmental protection policy and will not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category D	Screen out
Policy LP 55	Protecting our Open Spaces, Outdoor Sport and Recreational Facilities	This policy identifies open and greenspaces and protects them from development. It will not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category F	Screen out
Policy LP 56	Heritage assets and their settings	This policy protects designated and non-designated heritage assets and their settings. It requires assessment of impacts, justification of harm, and enhancement of local character, and focuses on cultural heritage rather than biodiversity. It is a plan wide environmental protection policy and will not trigger development or change that could lead to an LSE at any European site, either alone, or in combination.	Category D	Screen out
Policy LP 57	Water-related development	This policy sets strict criteria for water-based development ensuring protection of water quality, biodiversity, flood risk and navigation safety. Whilst specific locations for water development have not been provided, development has the potential for LSEs as follows: - **Air quality:** Nene Washes SAC, Nene Washes Ramsar, Ouse Washes SAC, Ouse Washes Ramsar and Portholme SAC. - **Water quality:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC;	Category L	Screen in

Policy Reference	Policy name	Summary of Policy and Identification of LSEs	Screening category	Screening conclusion
		The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; and Woodwalton Fen Ramsar. - **Water quantity:** Fenland SAC; Nene Washes SPA; Nene Washes Ramsar; Orton Pit SAC; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; The Wash & North Norfolk Coast SAC; The Wash SPA; The Wash Ramsar; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Recreational pressure:** Fenland SAC; Nene Washes SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SAC; Ouse Washes SPA; Ouse Washes Ramsar; Portholme SAC; Upper Nene Valley Gravel Pits SPA; Upper Nene Valley Gravel Pits Ramsar; and Woodwalton Fen Ramsar. - **Urbanisation effects:** Eversden & Wimpole Woods SAC; Nene Washes SPA; Nene Washes Ramsar; Ouse Washes SPA; Ouse Washes Ramsar, Upper Nene Valley Gravel Pits SPA and Upper Nene Valley Gravel Pits Ramsar.		

Section D: Our development sites – see Appendix D.

Appendix D: Screening of Local Plan Proposed Submission Allocations

© Lepus Consulting for Huntingdonshire District Council

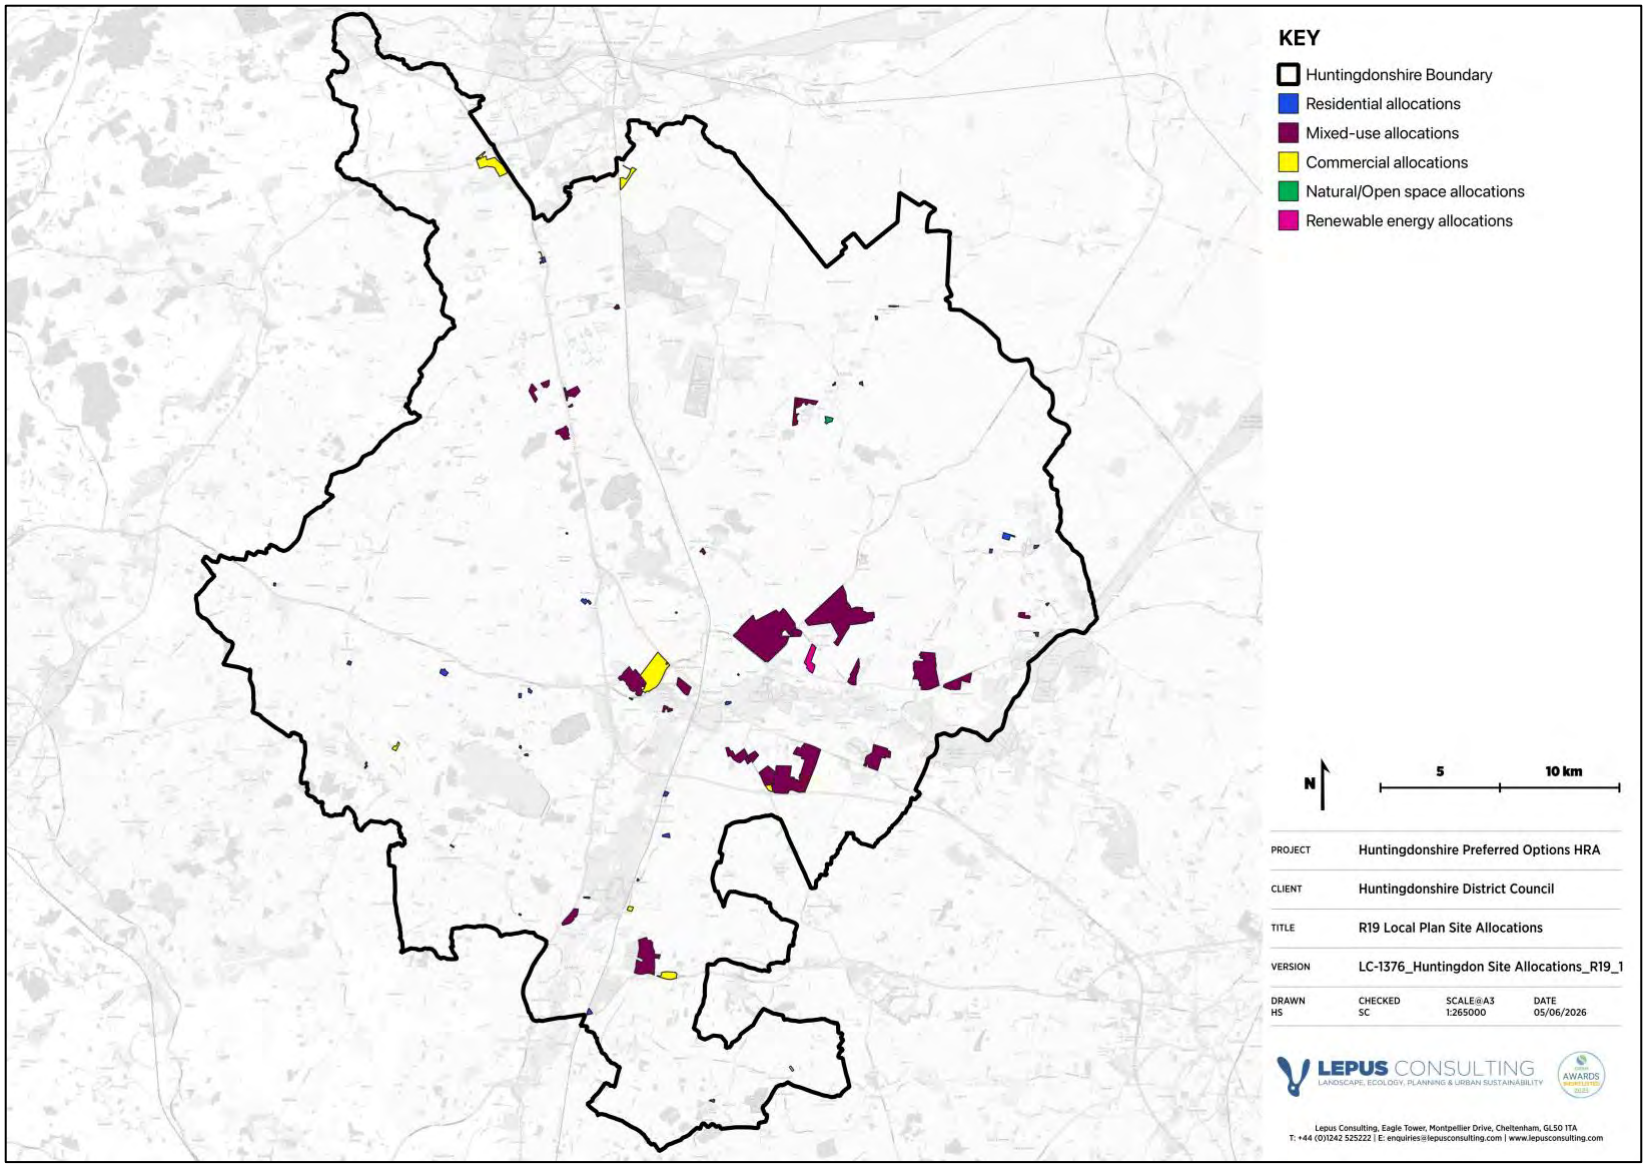

Figure D.1: *Local Plan Site Allocations Map*

© Lepus Consulting for Huntingdonshire District Council

Table Notes:

Air Quality LSEs: All site allocations set out in the Huntingdonshire Local Plan (Local Plan) have the potential to act cumulatively to increase traffic flows on the local and wider road network. An increase in traffic related emissions has the potential to change air quality. Air quality likely significant effects (LSEs) are considered possible at those European sites listed in **Section 3.4** of the Proposed Submission HRA report. Growth at all allocations (listed below) has the potential to contribute towards a change in air quality, in combination with other plans and projects (see **Appendix A**). All allocations below have therefore been screened in under Category L.

Water Quality and Quantity LSEs: All site allocations set out in the Local Plan (including those listed below) have the potential to act in combination with one another to increase the quantity of water required for treatment at Wastewater Treatment Works (WwTWs). This may result in the deterioration of downstream water quality. In addition, an increase in water demand from new development increase demand for water supply which may also affect water sensitive European sites. Taking a precautionary approach, hydrology impacts from the combined effect of all developments together, acting in-combination with other plans and projects (see **Appendix A**), have the potential to result in LSEs at hydrologically connected European sites listed in **Section 3.5** of the Proposed Submission HRA report. Water quality and quantity impacts at all allocations listed below have therefore been screened in under Category L.

Recreational pressure LSEs: A recreational ZOI of 5.9km has been established through visitor surveys for the Upper Nene Valley Gravel Pits SPA and Ramsar site. This ZOI has been applied in the following screening assessment.

Visitor surveys have not been undertaken to define a formal recreational ZOI for any other European site scoped into the HRA process at **Section 3.6** of the main HRA report.

The following screening assessment has therefore taken into consideration the location of each European site in relation to the Plan area, status of public access through PRoW / Open Access etc and visitor facilities (such as promoted routes, car parking, cafes and toilets) when screening recreational impacts at all other European sites set out in **Section 3.6** of the Proposed Submission HRA report.

Urbanisation effects LSEs: Urbanisation effects include impacts such as noise disturbance, lighting effects, cat predation, fly-tipping, wildfire, littering, vandalism and fragmentation of habitat. Impacts can directly affect a European site and also areas of Functionally Linked Land (FLL) outside a designation boundary. A precautionary buffer of 500m has been applied to identify potential urbanisation effects on all European sites. The assessment also takes into consideration urbanisation effects on areas of FLL associated with the Upper Nene Valley Gravel Pits SPA and Ramsar site (10km buffer zone as set out in **Section 3.7** of the main HRA report), Eversden & Wimpole Woods SAC (10km buffer zone as set out in **Section 3.7** of the Proposed Submission HRA report) and areas of FLL associated with the Ouse and Nene Washes SPA and Ramsar (Swan and Goose IRZ FLL).

© Lepus Consulting for Huntingdonshire District Council

Table D.1 screens urbanisation and recreational LSEs for each potential allocation as detailed in Section D of the Local Plan

Table D.1: *Screening summary for sites allocations*

Section D: Our Development Sites

North Huntingdon Growth Corridor

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Huntingdon 1: Huntingdon Racecourse	72ha of land for mixed use development. This includes: - Continued use of the site for the racecourse, equine support facilities and Huntingdon Rugby Football Club - Complementary conference and events facilities, outdoor recreational and leisure facilities	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	Whilst the proposed development uses do not include residential development, they are likely to include hotel uses and parking associated with all uses. Given the allocation is not within easy walking distance of any European site, it is unlikely that development will result in a recreational LSE on any European site.
North Huntingdon 2: North of A141 between the racecourse and A1307	103.5ha of land for industrial use. Light industrial and storage and distribution uses	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands	This site is not allocated for residential development and will therefore not result in recreational LSEs.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
		SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	
North Huntingdon 3: Lodge Farm, North of A141	317.7ha of land for new community and mixed use development - Approx. 4,900 homes - Approx. 8ha for employment - Approx. 6.5ha for a local centre - Land for transport, community, educational, recreational and green infrastructure	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
North Huntingdon 4: Wyton Airfield	254.9ha of land for mixed use development - Approx. 4,000 homes - Approx. 15ha for employment use - Approx. 6.4ha for a local centre	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
	- Land for transport, community, educational, recreational and green infrastructure		This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

Market Towns

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Huntingdon 1: Hinchingbrooke Hospital	22ha of land for mixed use development including: - redevelopment of the hospital, including necessary enabling works - reprovision of the ambulance station	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands	This site is not allocated for residential development and will therefore not result in recreational LSEs.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
	- provision of key worker and medical/care student accommodation - car parking for staff, patients and visitors - other primary care uses residential institutions (use class C2) to provide specialist residential accommodation including step down accommodation - strategic green infrastructure	SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	
Huntingdon 2: Amber Centre, 36 Mayfield Road, Huntingdon	0.35ha of land for residential development - - Approx. 12 homes	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
St Neots 1: East of Loves Farm (Tithe Farm)	99.5ha of land for mixed use development - Approx. 1,100 homes - Approx. 3.7ha for employment use - Land for transport, community, educational, recreational and green infrastructure	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
St Neots 2: Land South West of Potton Road	3.9ha of land for residential development - Approx. 80 homes	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
			recreational impact at this European site are unlikely.
St Ives 1: North of Houghton Road	23.9ha of land for mixed use development - Approx. 350 homes - 12ha for open space and landscaping	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Bury 1 : Bury Industrial Estate, Old Station Road, Bury	0.96ha of land for residential development - Approx. 30 homes	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
			This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Bury 2: Off Cheveril Lane	6.4ha of land for biodiversity net gain and flood mitigation	This allocation is for the protection of open space and therefore there will be no urbanisation LSEs.	This site is not allocated for residential development and will therefore not result in recreational LSEs.
Bury 3; RAF Upwood – Phase 3, Bury	Approx. 9.2ha for natural, green or open spaces and flood mitigation - Approx. 170 homes - Approx. 11.5ha natural, green or open spaces	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Ramsey 1: RAF Upwood - Phase 4	14ha of land for mixed use development - Approx. 4.8ha for employment use - Approx. 9.2ha for natural, green or open spaces and flood mitigation	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This site is not allocated for residential development and will therefore not result in recreational LSEs.
Ramsey 2: North of Hollow Lane	1.7ha of land for residential development - Approx. 20 homes	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

Service Centres

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Brampton 1: Wallis Land, Thrapston Road	0.7ha of land for mixed use development - Approx. 10 homes - 0.4ha of open space	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Brampton 2: Land off Huntingdon Road	5.97ha of land for mixed use development - Open space - Car parking facilities	This allocation is for open space and car parking facilities and therefore unlikely to lead to urbanisation LSEs.	Whilst this allocation does not allocate any residential development it does allocate car parking. This car parking is specifically for the Hinchingbrooke County Park. This car parking is on the opposite side of the main railway line from Portholme SAC and therefore recreational pressure caused by increased parking close to a European site are unlikely.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Fenstanton 1: Galley Hill	61ha of open space to safeguard against flooding - Commercial, business and industrial storage - 36ha of open space	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This site is not allocated for residential development and will therefore not result in recreational LSEs.
Godmanchester 1: Former RGE Engineering site and HDC Car Park, The Avenue	2.46ha of land for residential development - Approx. 85 homes	Portholme SAC is located approximately 276m to the south east of this allocation. Urbanisation LSEs are therefore likely, and this site is therefore screened in. This allocation is not located within 500m of any other European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Fenlands SAC or Woodwalton Ramsar.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. Of particular note is the close proximity of this allocation to Portholme SAC. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Godmanchester 2: South of Godmanchester off the A1198	43ha of land for mixed use development - Approx. 550 homes - 6.8ha for natural green space - 0.8ha cemetery extension - green infrastructure and transport infrastructure	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. Of particular note is the close proximity of this allocation to Portholme SAC. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Godmanchester 3: Former A14 Compound, North of A1198 Roundabout	5.2ha of land for commercial, business and industrial use	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This site is not allocated for residential development and will therefore not result in recreational LSEs.

© Lepus Consulting for Huntingdonshire District Council

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Kimbolton 1: Brittens Farm, Station Road	1.40ha of land for residential development - Approx. 25 homes - Approx. 0.5ha of land for open space to safeguard against flooding	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Kimbolton 2: South East of South of Bicton Industrial Estate, Stow Road	4.8ha of land for commercial, business and industrial uses	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This site is not allocated for residential development and will therefore not result in recreational LSEs.

Abbotsley 1: North of Wintringham Hall	19ha of land for office, research development, storage and distribution uses	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This site is not allocated for residential development and will therefore not result in recreational LSEs.
Bythorn 1: Home Farm, Bythorn	0.98ha of land for residential development - Approx. 15 homes	This allocation is located within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar and therefore there is potential for urbanisation impacts upon FLL associated with Golden Plover and Lapwing populations. This allocation has therefore been screened into the HRA process for further consideration. This allocation is not located within 10km of Eversden & Wimpole Woods SAC or the 500m of FLL associated with the Ouse Washes SPA / Ramsar or Nene Washes SPA / Ramsar.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar. This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
Catworth 1: Fruit Field, Catworth	Proposed additional allocation - 2.19ha - 25 homes	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Colne 1: Land at Ramadie, Earith Road, Colne	0.85ha of land for residential development - Approx. 15 homes	This allocation is not located within 500m of any European site, or within 10km of Eversden & Wimpole Woods SAC, within 10km of the Upper Nene Valley Gravel Pits SPA and Ramsar or within 500m of any area of FLL associated with either the Nene Washes SPA/Ramsar, Ouse Washes SPA/Ramsar, Portholme SAC, Fenlands SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore

Site Name	Employment land (ha) / Net new homes	Potential for urbanisation or habitat loss / fragmentation LSEs.	Potential for an increase in recreational pressure
		SAC or Woodwalton Ramsar. Urbanisation LSEs are therefore unlikely.	- Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.
Waresley 1: Land between West Lodge and Home Farm	1.6ha of land for residential development - Approx 8 custom and self build homes	This allocation is located approximately 8.8km to the north west of Eversden and Wimpole Woods SAC, which is within the established 10km wider conservation area as set out in the South Cambridgeshire SPD. FLL bat habitat associated with this SAC may therefore be susceptible to urbanisation LSEs from development at this allocation and it will be screened in. The allocation is not located within 10km of the Upper Nene Valley Gravel Pit SPA or Ramsar or within 500m of FLL associated with the Nene Washes SPA / Rasmar or Ouse Washes SPA / Ramsar.	This policy allocates residential dwellings which may increase recreational pressure at the following European sites: - Eversden and Wimpole Woods SAC; - Fenland SAC; - Nene Washes SPA and Ramsar - Ouse; Washes SPA and Ramsar; - Portholme SAC; and - Woodwalton Fen Ramsar This policy is therefore screened into the HRA process in terms of recreational LSEs. This allocation is not located within 5.6km of the Upper Nene Valley SPA or Ramsar and therefore recreational impact at this European site are unlikely.

1 Introduction

1.1 Background

1.1.1 Huntingdonshire District Council (hereafter referred to as 'the Council') is preparing a full update to the adopted Local Plan[1] to provide an up-to-date vision and framework to guide decision making on how, where, and when development can come forward in the district for the period up to 2046.

1.1.2 The new Huntingdonshire Local Plan, referred to as the 'Local Plan' hereafter, will cover the entirety of Huntingdonshire District. This area is referred to as the 'Plan area' and is illustrated in **Figure 1.1**. The Plan area includes the district's five main towns of Huntingdon, Godmanchester, Ramsey, St Neots and St Ives, together with a number of large and small villages and hamlets.

1.1.3 The Council has prepared the first complete draft of the Local Plan update, referred to as the Preferred Options Local Plan Consultation at Regulation 18 of the Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended)[2].

1.1.4 The Local Plan update will be supported by a Habitats Regulations Assessment (HRA) as required under the Conservation of Habitats and Species Regulations 2017 (as amended)[3].

1.1.5 Where a plan is likely to have a significant effect on a European site (either alone, or in-combination) and is not directly connected with, or necessary to, the management of the European site, Regulation 105 of the Habitats Regulations notes that the plan-making authority for that plan must, before the plan is given effect, make an Appropriate Assessment (AA) of the implications for the site in view of that site's conservation objectives. These tests are referred to collectively as an HRA.

1.1.6 The Habitats Regulations provide a definition of a European site at Regulation 8. These sites include Special Areas of Conservation (SAC), Sites of Community Importance, Special Protection Areas (SPA) and sites proposed to the European Commission in accordance with Article 4(1) of the Habitats Directive. In addition, policy in England and Wales notes that the following sites should also be given the same level of protection as a European site[4]:

- A potential SPA (pSPA);
- A possible/proposed SAC (pSAC);
- Listed and proposed Ramsar Sites (wetland of international importance); and,

[1] Huntingdonshire District Council (2019) Huntingdonshire's Local Plan to 2036. Available at: https://www.huntingdonshire.gov.uk/media/3872/190516-final-adopted-local-plan-to-2036.pdf [Date accessed: 05/02/26]

- In England, sites identified or required as compensation measures for adverse effects on statutory European sites, pSPA, pSAC, and listed or proposed Ramsar sites.

1.2 Purpose of report

1.2.1 Lepus Consulting has been commissioned by Huntingdonshire District Council to assess the existing baseline recreational use and impacts currently taking place upon the qualifying features of designated European Sites which are located within the Plan area. These European Sites include:

- Fenland SAC;
- Ouse Washes SAC,
- Ouse Washes SPA;
- Ouse Washes Ramsar;
- Portholme SAC; and
- Woodwalton Fen Ramsar.

1.2.2 This report aims to provide a baseline assessment, drawing on desk-based research and a walkover survey, to identify current levels of recreational and anti-social impacts upon the qualifying features of these European sites.

1.2.3 These surveys were conducted at a high level, aiming to provide a preliminary understanding of existing recreational use at each site and associated impacts. The findings are intended to help identify patterns of activity and potential areas of concern, and to inform whether further, more detailed surveys, such as visitor counts, are required to inform the HRA process that will be undertaken in support of the Local Plan.

1.2.4 It is noted that due to a combination of sub-optimal seasonality and adverse weather and site conditions full habitat, botanical and bird surveys were not included in the scope of works.

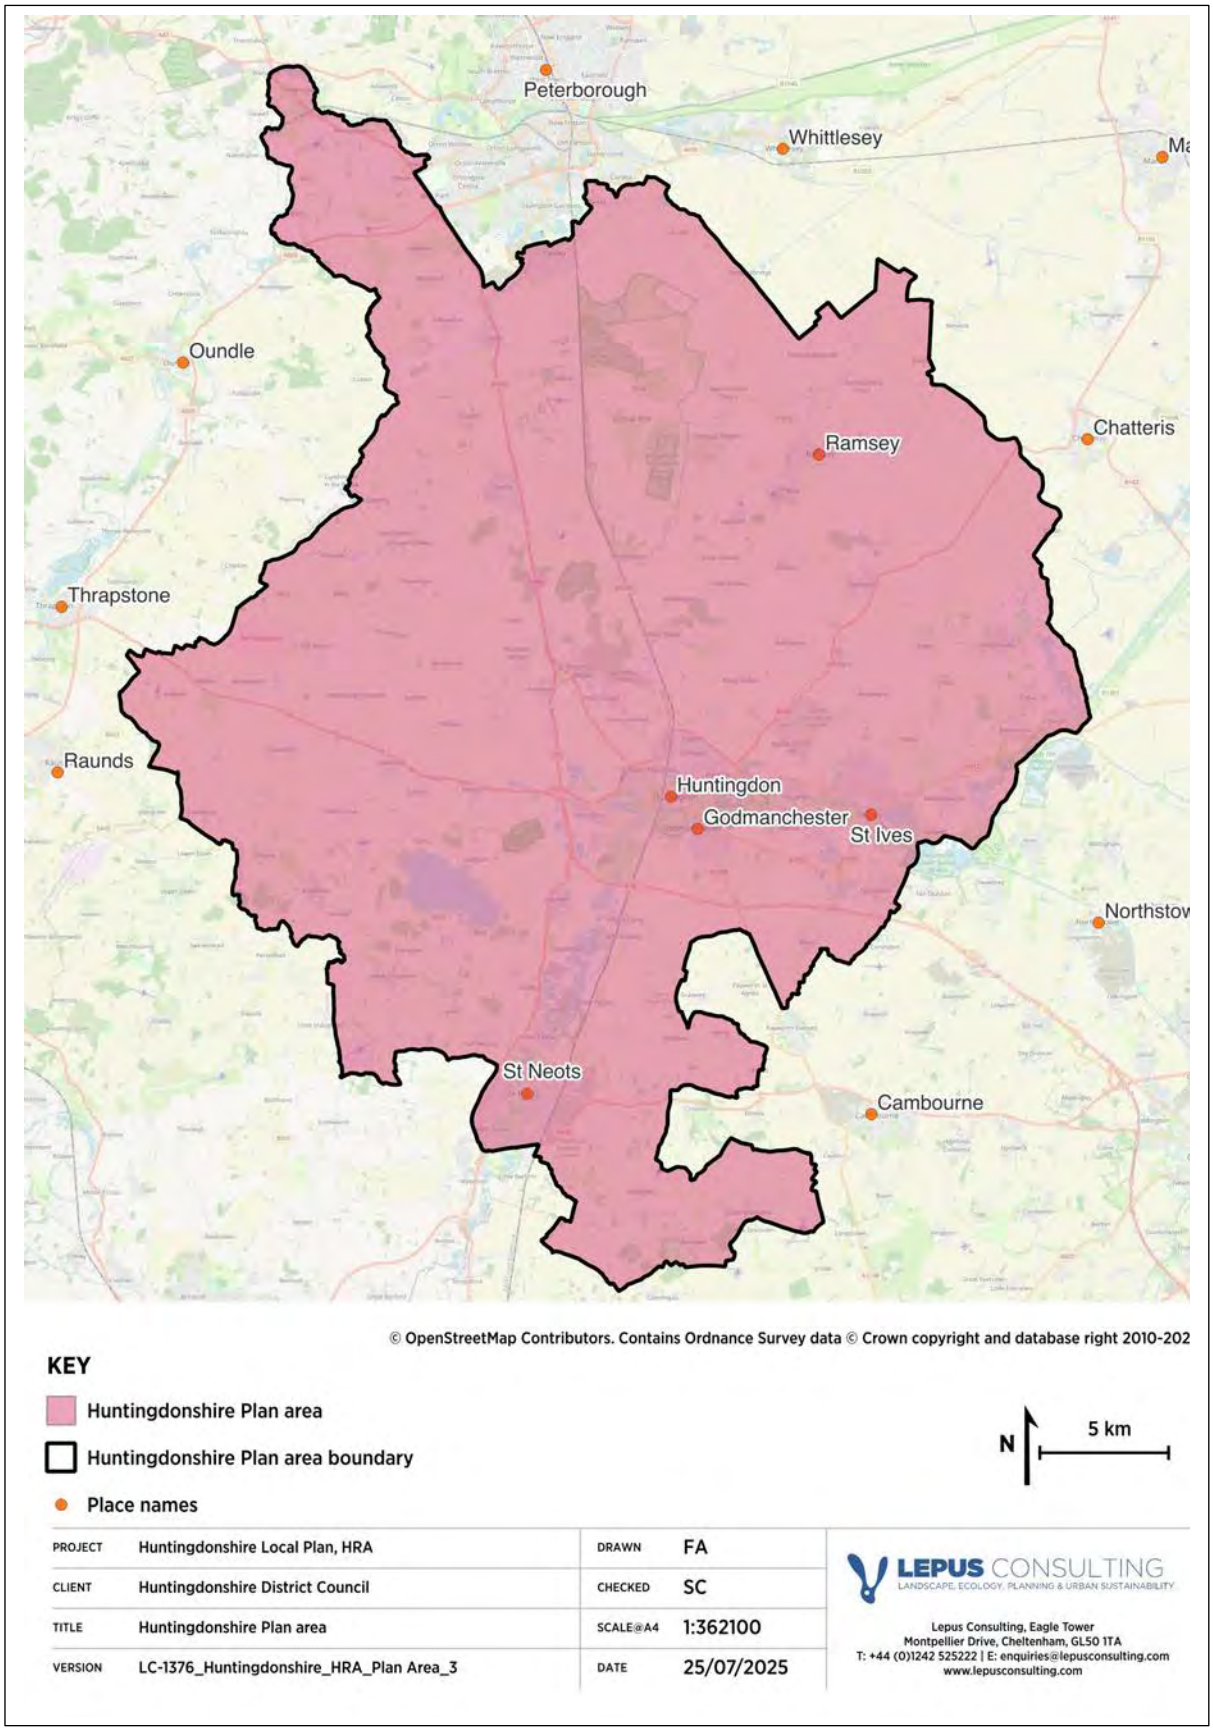

Figure 1.1: *Huntingdonshire Plan Area*

2 European sites within the Plan area

2.1 Threats and pressures

2.1.1 Each European site has its own intrinsic qualities, besides the habitats or species for which it has been designated, that enable the site to support its particular ecosystems. **Appendix A** sets out the conservation objectives for each European site in the Plan area. An important aspect of this is that the ecological integrity of each site can be vulnerable to change from natural and human-induced activities in the surrounding environment (known as pressures and threats).

2.1.2 This report focuses on establishing current public access and disturbance threats at the European sites located within the Plan area. Increased recreational pressure at European sites can result in damage to habitats in a number of ways, including through erosion and compaction; troubling of grazing stock; causing changes in behaviour to animals such as birds at nesting and feeding sites; spreading invasive species; dog fouling; and tree climbing. Urbanisation effects typically occur when development is located close to a European site boundary. Impacts may include noise disturbance, lighting effects, cat predation, fly-tipping, wildfire, littering and vandalism. Sites identified for walkover survey are detailed in **Sections 2.2, 2.3, and 2.4**, and shown in **Figure 2.1**.

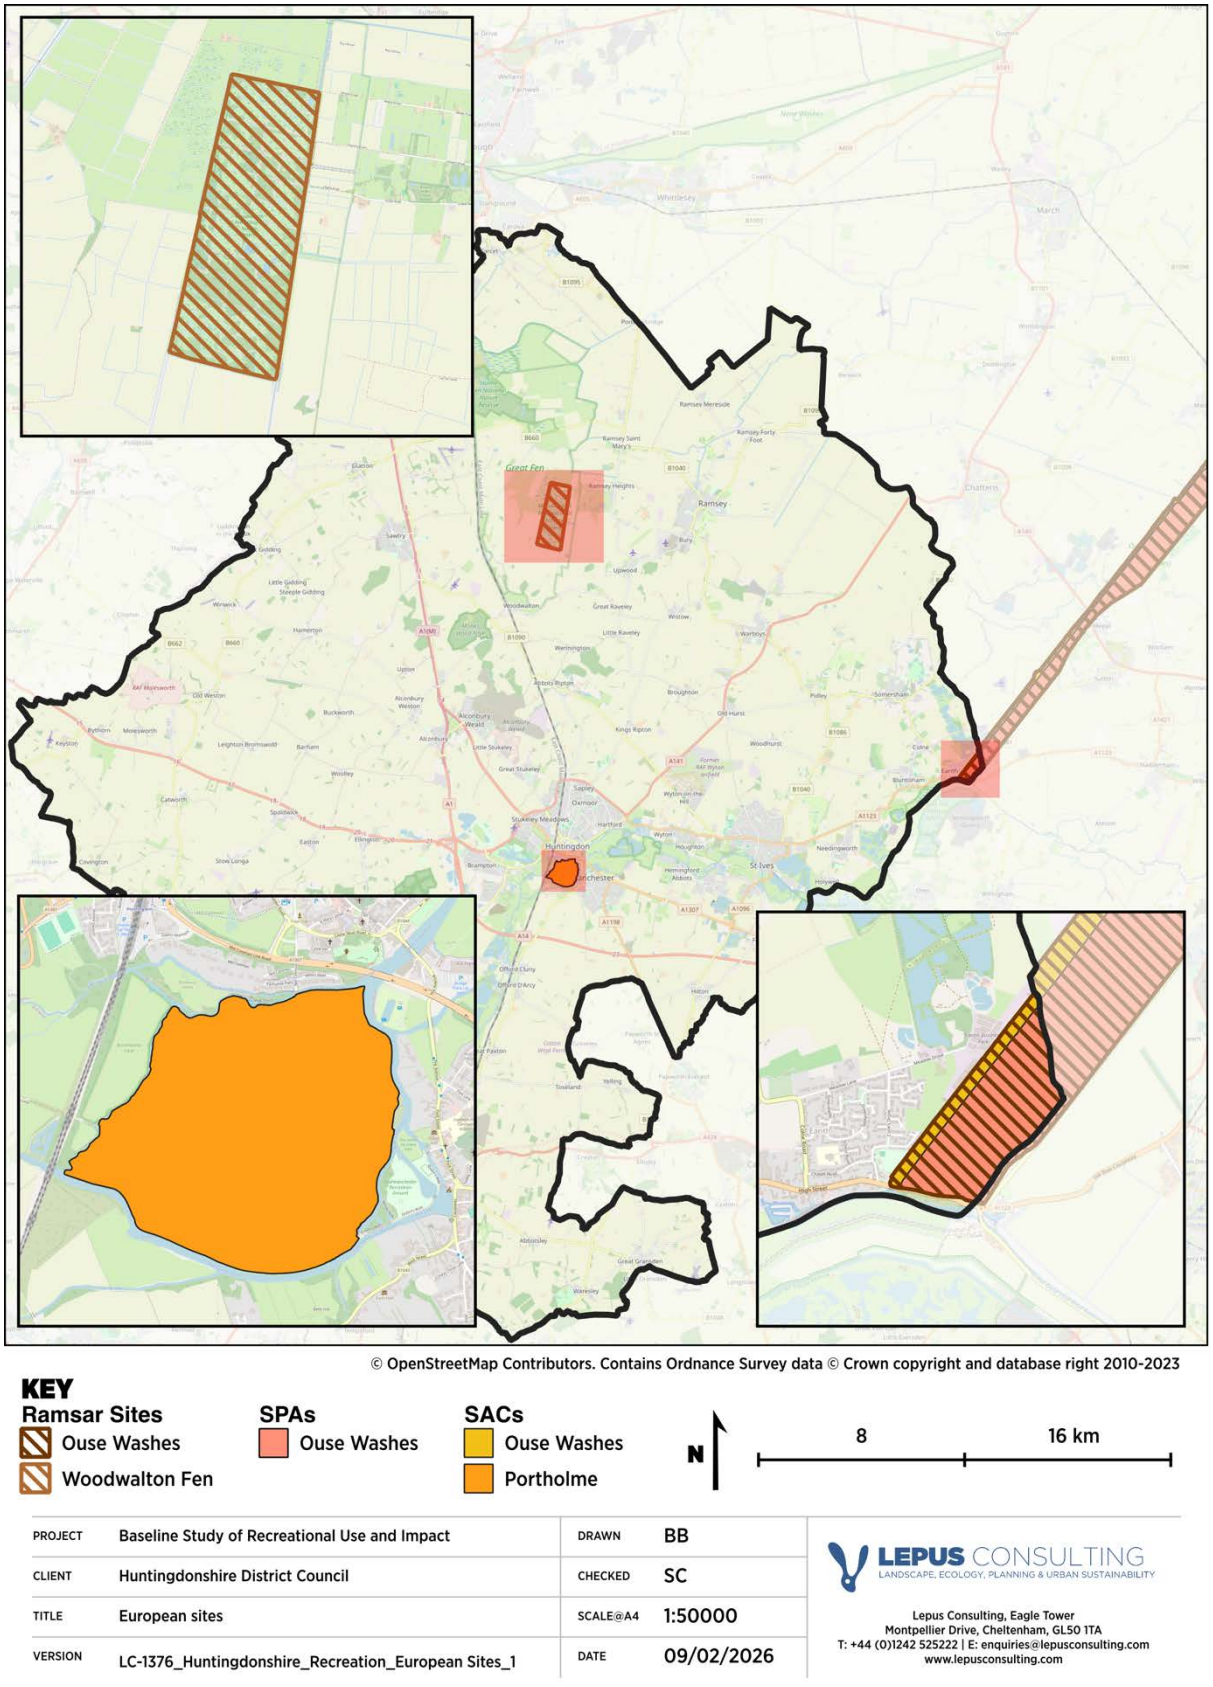

***Figure 2.1**: European sites identified as being vulnerable to recreation impacts, informing the decsion to conduct baseline walkover surveys*

2.2 Ouse Washes SAC, SPA and Ramsar

2.2.1 The Ouse Washes comprise one of the most extensive areas of seasonally flooded washland in the UK and are designated as a Special Area of Conservation (SAC), Special Protection Area (SPA) and Ramsar site. The designations encompass two canalised main river channels of the River Great Ouse that run along each side of its length, with an extensive area of wet grassland and field drains in between[5]. The Ouse Washes supports a wide range of wetland habitats, including open water, ditches and wet grassland. The SAC is designated for Spined Loach (*Cobitis taenia*) and the SPA for the large assemblages of breeding and non-breeding waterbirds, including internationally important wintering populations of Swans and wildfowl. The features of the Ramsar include the internationally important bird assemblages, the extensive area of seasonally-flooded washland, relict fenland invertebrates and several nationally scarce plants, such as the Small Water Pepper (*Polygonum minus*). The Ouse Washes SAC, SPA and Ramsar are underpinned by the Ouse Washes SSSI. The SSSI is designated for 21 features of waterfowl, eight of which are in an 'unfavourable - no change' condition. It is also designated for ditches ('unfavourable - recovering' condition), Lowland wet neutral grassland (MG11, MG13)('unfavourable - no change' condition), and vascular plant assemblage (Condition 'Not Recorded')[6].

2.2.2 The conservation of habitats at the Ouse Washes SPA is noted to be dependent on control of access and recreational activities[7]. The Ouse Washes SPA and Ramsar are sensitive to recreational pressure due to their reliance on open, undisturbed wetland habitats that support large assemblages of breeding and non-breeding waterbirds. Increased recreational use, including walking, dog walking and other informal access, has the potential to cause disturbance leading to behavioural changes and reduced habitat suitability. The qualifying feature of the Ouse Washes SAC (Spined Loach) is not considered sensitive to direct recreational impacts, however indirect impacts from activities such as angling are considered possible.

2.2.3 Urbanisation effects are also relevant for the Ouse Washes SPA and Ramsar where parts of the designations lie within close proximity of the Plan area. Potential impact pathways include noise and lighting disturbance, increased human presence, littering and other indirect pressures that could affect bird breeding and nesting habitats.

[7] Natural England (2019) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features, Ouse Washes (SPA) Site Code: UK9008041. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK9008041.pdf [Date accessed: 05/02/26].

2.2.4 The importance of the surrounding landscape to the birds associated with the SPA and Ramsar designations is recognised through the establishment of an area of functionally linked land for Geese and Swan. Functionally linked land (FLL) refers to the role or 'function' that land or sea beyond the boundary of a protected site designation boundary might fulfil in terms of providing a critical ecological role in supporting the populations for which the site was designated or classified[8]. In addition to urbanisation, recreation, water and air quality impacts upon areas of FLL, land use planning also has the potential to cause the fragmentation of connecting habitat (such as water features) between protected sites and other areas of functionally linked land. Fragmentation can lead to the isolation of habitat and an increase in urban edge effects. Habitat loss, including that of FLL, can lead directly to the mortality of protected species for which protected sites are designated, whereby a minimum amount of habitat is required to thrive and survive.

2.3 Portholme SAC

2.3.1 Portholme SAC is one of the largest remaining examples of traditionally managed lowland hay meadow in England and is designated for its species-rich grassland habitat, specifically *H6510 Lowland hay meadows* (Annex I habitat, EU Habitats Directive). The site supports characteristic plant communities associated with periodically flooded meadows along the River Ouse. Conservation objectives seek to maintain or restore the extent, distribution, structure and function of the qualifying habitat, including its typical species, and to protect the natural processes, particularly appropriate flooding and management regimes, that sustain its ecological value. Porthholme SAC is underpinned by Porthholme SSSI. The neutral lowland grassland features is assessed as being in an 'unfavourable - recovering' condition[9].

2.3.2 The grasslands for which Portholme SAC is designated may be impacted by recreational impacts due to its location within the Plan area, the sensitivity of its lowland hay meadow habitat, and the availability of public access. These pressures may include trampling, soil compaction, erosion, disturbance to grazing management, nutrient enrichment from dog fouling and the spread of invasive species, such as trampling by walkers and dog walkers which can damage vegetation and soils. Whilst urbanisation effects, such as noise and light pollution, are unlikely to affect the conservation status of the grasslands, impacts such as fly tipping, anti-social behaviour and littering may have an impact.

[8] Natural England (2016) Commissioned Report. NECR207. Functional linkage: How areas that are functionally linked to European sites have been considered when they may be affected by plans and projects - a review of authoritative decisions.

[9] Natural England. Designated Sites View: Portholme SSSI. Available at: https://designatedsites.naturalengland.org.uk/SiteDetail.aspx?SiteCode=S1002185&SiteName=portholme&countyCode=&responsiblePerson=&unitId=&SeaArea=&IFCAArea= [Date accessed: 05/02/26]

2.4 Fenland SAC and Woodwalton Ramsar

2.4.1 The Fenland SAC, underpinned by Woodwalton SSSI and Woodwalton NNR10, together with the Woodwalton Fen Ramsar site, represents a nationally and internationally important complex of fen, swamp, meadow and aquatic habitats. The Fenland SAC is designated for its meadow and fen habitats, as well as Great Crested Newt (Triturus cristatus) and Spined Loach. Woodwalton Ramsar is designated for Fen Violet (Viola persicifolia) and Fen Wood-rush (Luzula pallescens), as well as numerous wetland invertebrates, aquatic beetles, flies and moths. Fens SAC and Woodwalton Fen Ramsar is underpinned by Woodwalton Fen SSSI. The SSSI is designated for seven features or which five are in an 'unfavourable - no change' condition (ditches, floodplain fen (lowland), lowland moor grassland and rush pasture, Fen Woodrush and vascular plant assemblage), one is 'unrecorded' (Fen Violet) and one is in a 'favourable' condition (wet woodland)[11].

2.4.2 The conservation of meadow habitats at Fenland SAC are noted to be dependent on recreation/visitor management[12]. Fenland SAC and Woodwalton Fen Ramsar are both sensitive to recreational pressure due to the vulnerability of their fen, meadow and wetland habitats and the availability of public access. Recreational activities can result in trampling, erosion, and disturbance to sensitive species. Urbanisation effects are also a concern for both Fenland SAC and Woodwalton Fen Ramsar. Potential impacts may include noise and light disturbance, increased predation pressure from domestic cats, littering, vandalism and changes in surrounding land use. These pathways may affect habitat quality and species populations. Research by Ganguly and Candolin (2023)[13] highlights the potential for artificial light at night (ALAN) to affect ecologically important invertebrates which are themselves responsible for providing key ecosystem functions, and these invertebrates may be adversely affected by illumination.

3 Methodology

3.1 Site Visit

3.1.1 Site visits were undertaken on the 27th and 28th of January 2026 by professionally qualified ecologists Joseph Marcus (BSc, MSc, Qualifying member of CIEEM) and Benjamin Bayliss (BSc, MSc, Qualifying member of CIEEM). The primary objectives of the site walkovers were to:

- Identify and record current management arrangements at each site;
- Evaluate current levels of recreational impact within the sites;
- Evaluate movements off public rights of way, permissive and promoted routes;
- Evaluate effectiveness and clarity of current signage; and,
- Identify recreational and urbanisation pressures, and anti-social behaviour at each site.

3.1.2 Within each designated site, PRoWs and promoted routes were used to walk a representative route around the site. Car parks and informal (unofficial) parking locations were also visited and recorded. Desire lines off the promoted routes were identified and mapped. Where access to land was restricted by ownership or adverse terrain, sites were reviewed from accessible site boundaries and vantage points along the road network.

3.1.3 Where public access and disturbance threats and pressures were observed these were recorded through the use of target notes and a photographic record was made. The following signs of recreational impact were recorded:

- Erosion of rights of way and promoted routes through footpath / track widening and braiding of paths to avoid muddy areas;
- Informal paths (made by walkers, horse riders or cyclists);
- Compaction and erosion of soil around tree roots;
- Den building;
- Litter and evidence of fly-tipping;
- Evidence of mountain biking (e.g. earthworks for ramps and berms);
- Fire damage from BBQs or fire pits;
- Eutrophication signs;
- Damage caused by unofficial car parking; and
- Signage and existing recreational management.

3.1.4 The quality, frequency and complexity of access signage and information was observed throughout the sites. Current management arrangements on site were also recorded, such as fencing and information boards.

3.2 Limitations

3.2.1 It is acknowledged that this assessment is subject to limitations. The site walkovers were only undertaken over two days in January 2026, offering a limited temporal representation of site conditions. It is noted that recreational impacts may differ at other times of the year depending on holiday periods and weather conditions. It should be noted that access to each site was restricted to the PRoW network and areas of open access land. However, given the purpose of the survey was to explore the potential for likely significant public access and disturbance effects upon the designated features to help inform the baseline study, so access in this manner was considered appropriate. The timing of the survey allowed a number of recreational threats and pressures to be seen on site clearly, which may not have been visible at other times of the year. This is because impacts caused by footpath users leaving promoted routes are often more visible in muddy conditions. Such conditions are also considered optimal to highlight evidence of damage from car parking in designated and non-designated areas.

3.2.2 The surveys included casual observations of visitor patronage, however did not include a comprehensive survey of visitor numbers. Whilst evidence of direct damage on the European sites and underpinning SSSIs was noted, it is acknowledged that there were limitations associated with the methodology due to the season in which the surveys were undertaken which was outside the optimal botanical survey period. As such the survey did not comprise a detailed habitat survey of qualifying habitats. It is also noted that flooding at some of the sites limited the extent of the survey. Additionally, whilst causal observations were taken of bird species and number present where relevant, no new bird survey data has been obtained or commissioned. At the time of the site visits, there was extensive flooding of the Ouse Washes, which limited the ability to assess unofficial use of its central area.

4 Results and observations

4.1 Ouse Washes SAC, SPA and Ramsar

4.1.1 The Ouse Washes is large linear site approximately 330ha in area and 30km in length with multiple landowners, including areas managed by the Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire, the Royal Society for the Protection of Birds (RSPB), and the Wildfowl & Wetlands Trust. A number of towns and villages surround the site. Of note is the town of Earith in the south, as this is the only town local to the Ouse Washes which is located within the Huntingdonshire Plan area. Much of the site is surrounded by open agricultural fields. Due to the linear nature and size of this site, multiple locations along its length were visited on 27th January as it was not possible to walk the entirety of the designation within the allocated time. The locations visited are shown in **Figure 4.1**.

4.1.2 Two canalised rivers, the River Delph and the New Bedford River, run within the designated site boundary, along the eastern and western sides of the site. A central area of fields is located between these two rivers. This central area is prone to flooding and utilised by the bird species for which the SPA and Ramsar are designated, and is hereafter referred to as 'washlands'. Public access and recreational use to these washlands is limited, with most of the PRoWs being located along the boundaries of the designated site, running along the banks of the River Delph and the New Bedford River. These river banks are raised along much of the length of the designated sites.

***Figure 4.1**: Overview of transect survey route at the Ouse Washes*

4.1.3 The southern extent of the site, at Earith, provides formalised public access (as shown in **Figure 4.2**) in the form of two car parks: a small car park at Earith Sluice on the River Delph, which can accommodate approximately five vehicles, and a second car park to the east at the Earith Bridge Picnic Area, which can accommodate approximately 20 vehicles. Litter bins were present only at the Earith Bridge Picnic Area.

4.1.4 PRoWs are located on the raised banks of both river channels enclosing the Ouse Washes, with one well signposted PRoW running along the eastern boundary of the site adjacent to the River Delph. This route is clearly signed, with kissing gates at access points, and showed a significant level of use, including footprints and dog fouling. This footpath is separated from the Ouse Washes by a hedgerow and tree line, providing a physical and visual buffer that reduces potential disturbance from recreational users to birds using the central section.

4.1.5 Sections of the A1123 are similarly screened from the Ouse Washes by hedgerow, scrub, and trees; however, this screening is not however continuous along the full length of the road where it borders the site, leaving some areas more exposed. The bridge at the Earith Sluice and the Earith Bridge, crossing the River Delph and the New Bedford River respectively, provides no screening. Along the B1381, which runs parallel to the New Bedford River on the eastern side of the site, only a low scrub barrier is present, offering minimal protection from disturbance.

4.1.6 A further PRoW along the eastern side of the site, beginning at the Earith Bridge Picnic Area, appears to have been historically well used. Although access is currently blocked, there was evidence of continued informal use at the time of the survey. Whilst no formal access exists onto the washlands, vehicular gates for land management purposes are present, with signs of limited unofficial recreational access beyond these points. Litter was rare but not entirely absent within this area.

***Figure 4.2**: Overview of Ouse Washes location 1, including the transect route walked and target note locations*

4.1.7 The second location visited, as illustrated in **Figure 4.3**, is located to the west of the town of Mepal, adjacent to the A142 bridge crossing the Ouse Washes and the River Delph and New Bedford River. Access in this area is provided via Mepal Long Highway to the south and Engine Bank to the north. On the southern side of the A-road, there is no official parking provision. 'No Parking' signage was present, and a gated dirt track was blocked by a gate preventing access to a large open area that may otherwise be suitable for vehicle parking. Environment Agency (EA) management activity was observed in this location, including the presence of a heavy machinery vehicle and an EA vehicle stationed along the track. A fishing club operates locally, and the gated area may serve either club or EA management purposes. Unofficial roadside parking was possible along Mepal Long Highway, though no evidence of extensive use was observed.

4.1.8 Similar conditions were present north of the A142 along Engine Bank, where an access road to an open area suitable for parking was also gated. There was evidence of some informal parking recorded at this location. The A142 crosses the River Delph, the New Bedford River, and passes directly over the Ouse Washes, with no screening along its length. While this is the only road in the area subject to heavy use, disturbance from the A142 is therefore largely localised to the immediate vicinity of the bridge. Observations suggest that bird populations in this location appear to be acclimatised to the presence and activity of the A-road. Notable birds including Black-tailed Godwit (*Limosa limosa*), Common Redshank (*Tringa totanus*), Eurasian Curlew (*Numenius arquata*) and Wigeon (*Anas Penelope*) were observed in this area. There is no screening vegetation between Engine Bank or Mepal Long Highway and the Ouse Washes, however the raised embankment of the River Delph blocks the line of sight and may reduce the potential for bird disturbance. In addition, these roads were observed to experience extremely low traffic levels during the site visit.

4.1.9 A PRoW runs along the bank between Engine Bank and Mepal Long Highway, and the River Delph, overlooking the Ouse Washes. There are no buffering features (such as hedgerows and trees) between the footpath and the designated site, resulting in unobstructed views across the Washes. The route is clearly marked as a PRoW, with wooden steps and handrails leading onto it. Evidence of frequent use was observed along much of the route, including footpath erosion, dog fouling, and some littering. No litter or dog waste bins were present along this section of the PRoW. There is no pedestrian crossing point allowing access onto the washlands of the Washes at this location. Flooding across these fields at the time of the site visit prevented assessment of any potential unofficial recreational use within the centre of the designated site.

4.1.10 The third location visited was situated south of the Mepal site and east of the town of Sutton, along The Causeway (**Figure 4.3**). Parking is available at The Pilot Inn on the eastern bank of the New Bedford River for patrons, while informal parking was observed along the roadside over Gault Bridge, where the road passes through the designated site. A pedestrian boardwalk, incorporating lighting, runs alongside the road at this location and is elevated to account for frequent flooding, as indicated by numerous permanent flood warning signs. An information board is present adjacent to Gault Bridge, alongside PRoW signage, directing users to a PRoW on the opposite side of the New Bedford River. A kissing gate also provides access to a PRoW running along the bank of the New Bedford River on the washlands side of the watercourse. Flooding of the Ouse Washes at the time of the site visit prevented assessment of any unofficial access or recreational activity beyond the PRoW, however there were no obstructions or fencing in place to prevent access to the washlands. No litter or dog waste bins were present along this route, though low levels of dog waste were observed. Use by dog walkers was evident, and a quad bike was observed using the path, although this was likely part of site management activities. Instances of fly-tipping were recorded at site access points along the roadside. Along the River Delph on the western side of the site, access opportunities to the washlands of the Ouse Washes are absent; however, the presence of unofficial dog waste and litter bins suggests relatively high recreational use by walkers and dog walkers in this area.

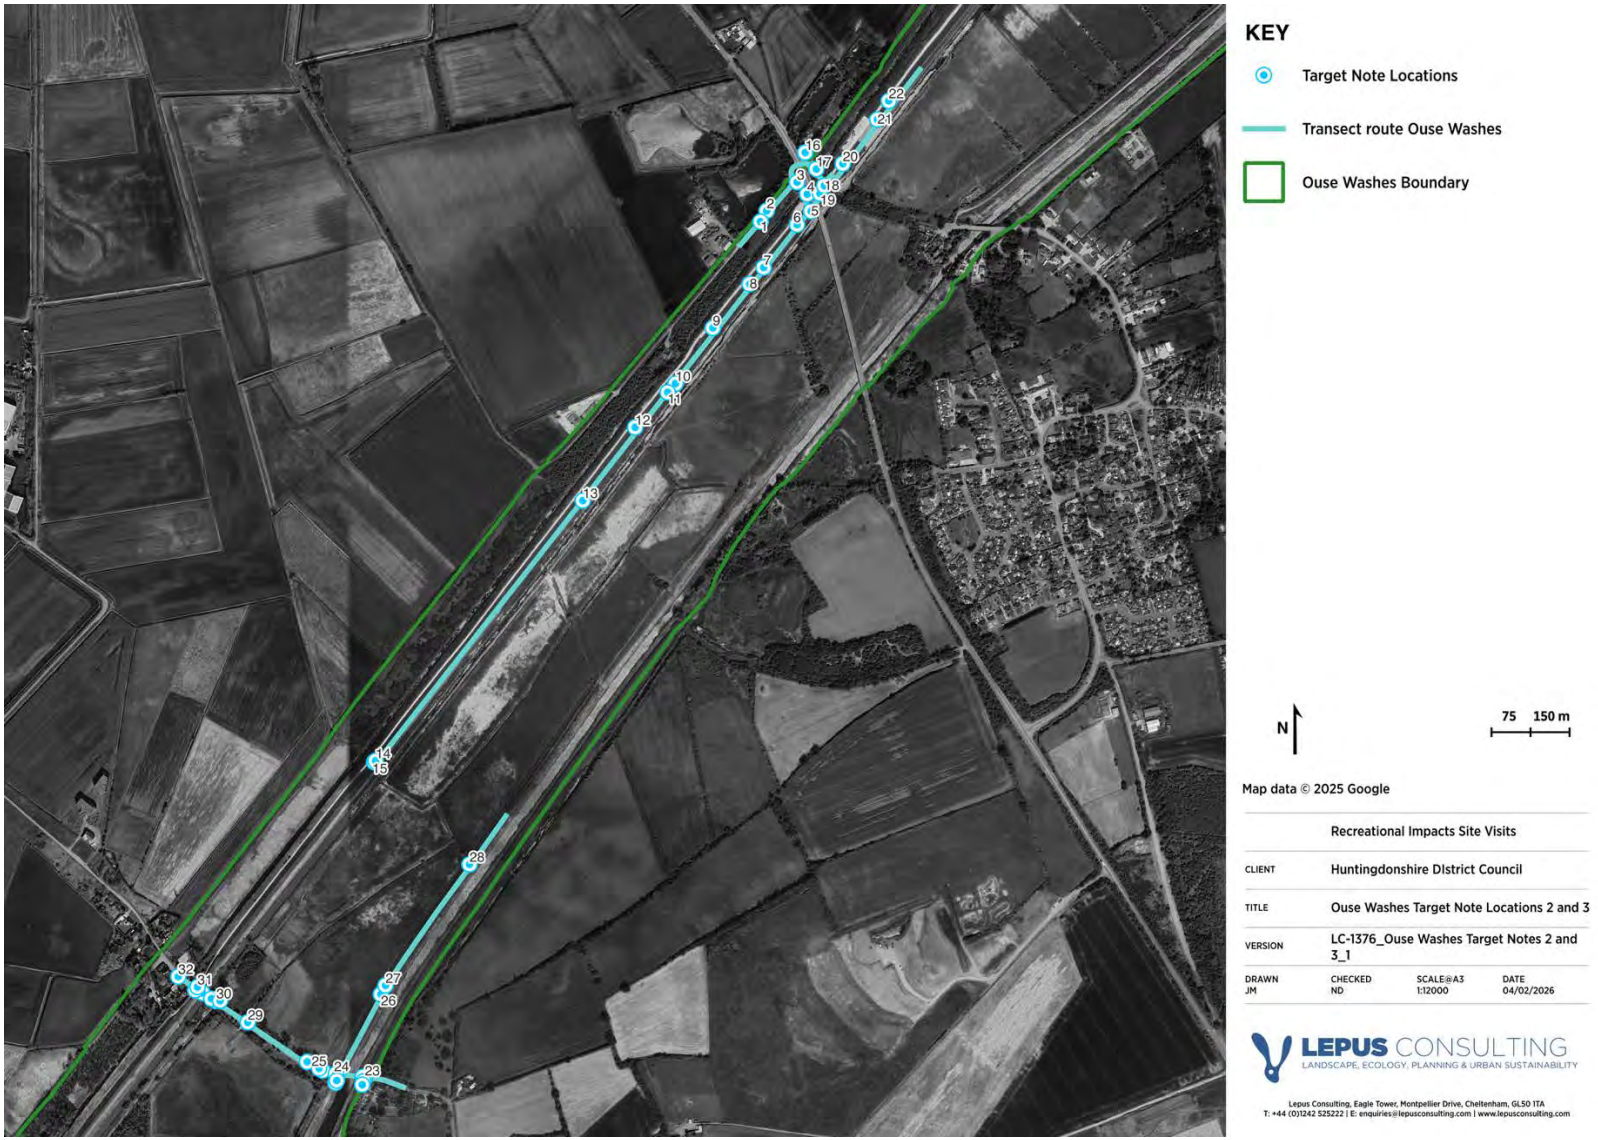

Figure 4.3: *Overview of Ouse Washes locations 2 and 3, including the transect route walked and target note locations*

4.1.11 The final location visited along the Ouse Washes was the RSPB Ouse Washes Reserve, as shown in **Figure 4.4**. The visitor centre provides a car park with capacity for approximately 12 vehicles, with additional informal parking available along the access road. Extensive signage is present, providing information on the importance and history of the site, as well as wayfinding for routes and bird hide locations. The site is well managed, with hard-surfaced paths, boardwalks, and handrails provided along steps and inclines. Paths showed evidence of regular use but were in good condition and well maintained. There is no access from this side of the River Delph onto the washlands of the Ouse Washes, and flooding across the Washes prevented assessment of any potential unofficial recreational activity. Three bird hides are promoted at this location, each of which was accessible, well maintained, and in good condition at the time of the survey. Additional interpretive information boards were present within the hides to support birdwatching and visitor understanding. Residential properties are located adjacent to the reserve, with The Ship Inn situated at the end of the access road. A dog walker with their dog off-lead was observed using the footpath leading to one of the three hides within the reserve. No litter was observed at this location, and litter bins were provided.

Figure 4.4: *Overview of Ouse Washes location 4, including the transect route walked and target note locations*

4.2 Portholme SAC

4.2.1 Portholme SAC is a large, 90ha open field of floodplain hay meadow bordered on two sides by the River Great Ouse and mostly owned by the London Angling Society, with a small 4 acre portion in the south west owned by The Thomas Miller Charity[14]. Huntingdon is located to the north of Portholme SAC, with Godmanchester to the east and agricultural fields to the south. Site visits to Portholme SAC took place on 28th January, and the transect route followed is shown in **Figure 4.5**. The entirety of the site is open access, with three PRoWs, including the Ouse Valley Way, forming a triangle across the site with further unofficial routes leading across the centre of the site. The central area of the site was inundated at the time of the survey which meant it was not possible to follow the PRoW across the site, and made it difficult to see evidence of recreational impacts in that area.

4.2.2 Access to the site is provided via three main access points. The primary access point is located on the eastern side of the site from Godmanchester. Two car parks serve this access: Post Street Car Park, which provides 29 marked parking spaces, including two disabled bays, with free parking available for up to 23 hours, and a smaller car park adjacent to Queen Elizabeth School and Colman Creative Academy on Post Street, which can accommodate approximately 15 vehicles and includes a public toilet. Both car parks provide access to Queen's Walk, a paved public footpath that runs along the River Great Ouse and includes benches, numerous litter and dog waste bins, and areas of open green recreational space and play provision. Queen's Walk is well signed and includes portage points along the River Great Ouse, with clear directional signage leading users towards a pedestrian crossing over Godmanchester Lock. Beyond this point, access to Portholme SAC is facilitated via a kissing gate.

4.2.3 A second access point is located to the north of the SAC, off Mill Common in Huntingdon. An unofficial car park is present at this location and was observed to be in heavy use during the site visit, with capacity for approximately 15 vehicles. Footpath signage directs users towards the PRoW network across Portholme SAC, and access is provided via a bridge crossing the River Great Ouse, followed by a kissing gate and with information signage provided at the site entrance.

4.2.4 The third access point is located to the west of the SAC and is accessible on foot only, linking Portholme to the Ouse Valley Way walking route. This access point was flooded at the time of the site survey, and was therefore not fully assessed past the kissing gate onto the SAC itself. This path also connects to a PRoW running north adjacent to the SAC, however, due to the flooded access, this footpath was not walked.

[14] https://www.brampton-cambs-pc.gov.uk/uploads/portholme-meadows-summary.pdf

4.2.5 Information boards outlining the importance and history of the Portholme SAC are present at each of the main access points. Outside of these formal access locations, no additional recreation site management measures were evident across Portholme. A network of PRoWs and informal routes was present across the site; however, evidence of path erosion was minimal and largely confined to the perimeter of the site. Signs of path use displayed in the form of minor trampled vegetation but little to no erosion was evident. This is likely attributed to the open access nature of the site which allows multiple routes to be taken and therefore no specific paths becoming significantly eroded. In addition, seasonal flooding and inundation of the central areas of Portholme SAC appeared to limit recreational access across much of the site interior. Numerous dog walkers were observed during the site visit, with dogs frequently off lead and ranging across the site. No evidence of littering or dog fouling was however recorded during the survey. It is worth noting that this walkover was undertaken in the winter season, while anecdotal evidence suggests that recreational pressures are highest during the summer. Moreover, no botanical surveys were undertaken and the full extent of qualifying features associated with the SAC was not accessible due to flooding in parts of the site.

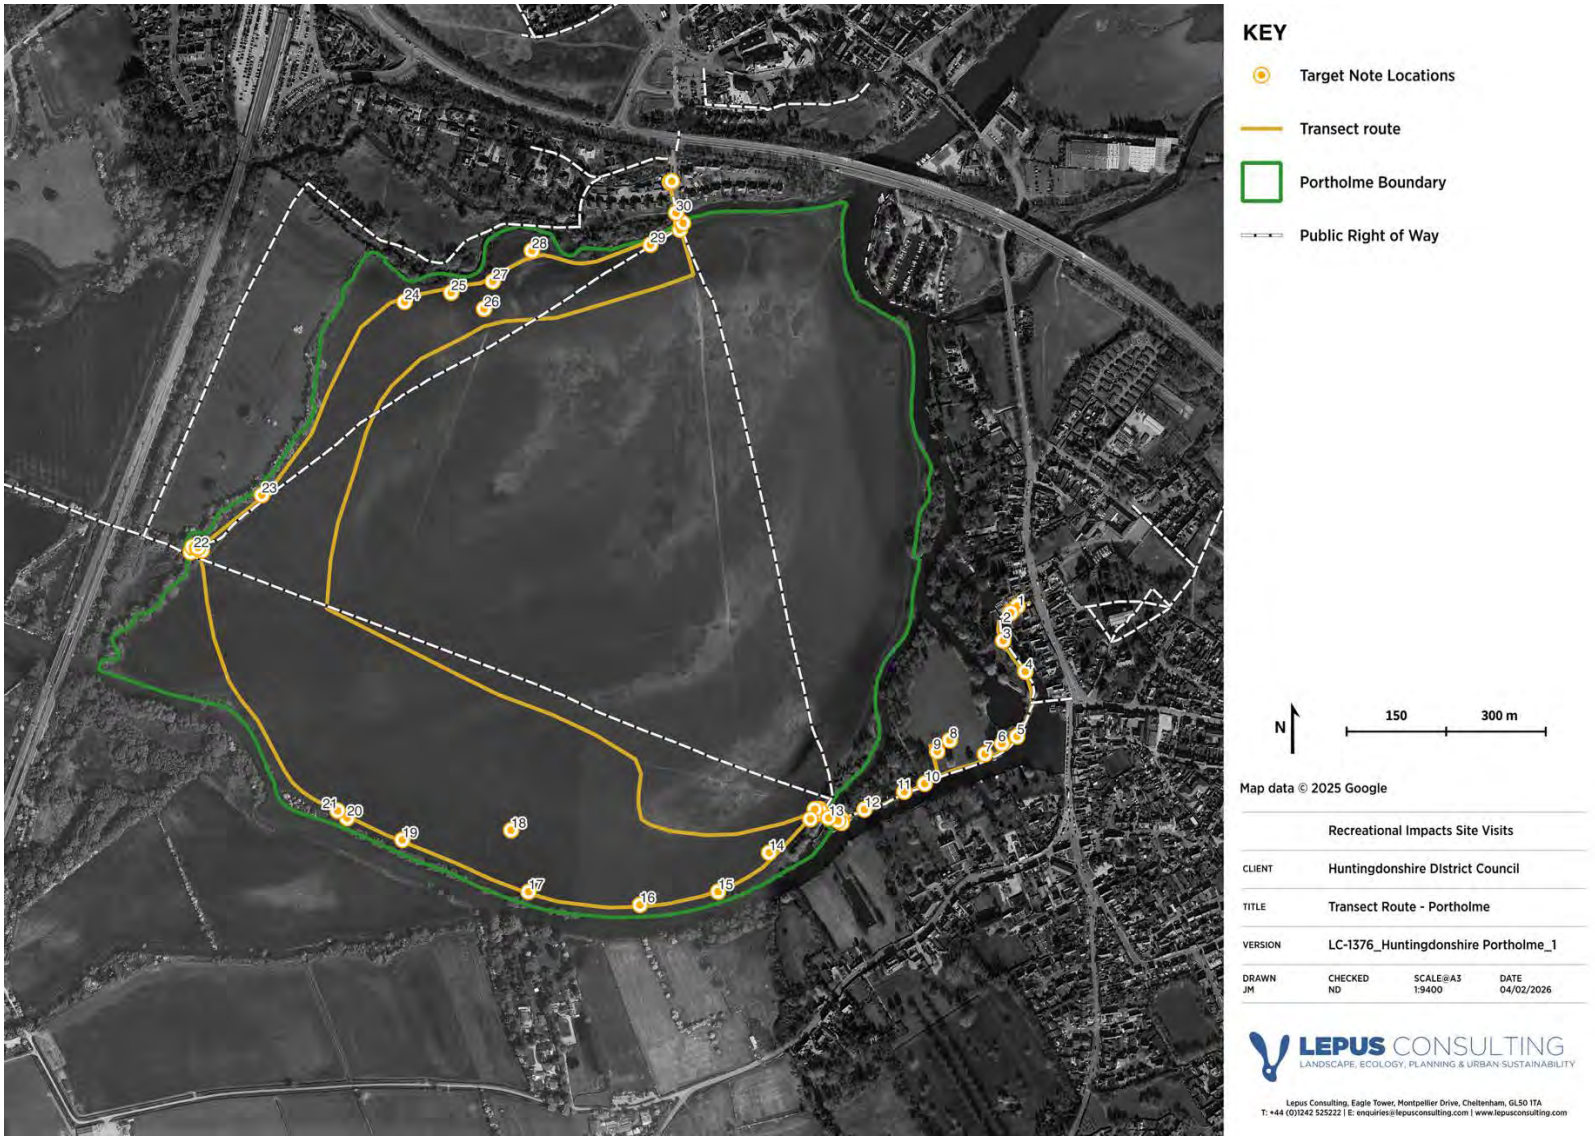

***Figure 4.5**: Overview of Portholme, including the transect route walked and target note locations*

4.3 Fenland SAC and Woodwalton Fen Ramsar

4.3.1 Woodwalton Fen is a large, 209ha site managed by Natural England and owned by the Wildlife Trust for Bedfordshire, Cambridgeshire and Northamptonshire[15]. The site was visited on 28th January, and the transect route walked is displayed in **Figure 4.6**. There are no official PRoW across the site due to private ownership, however there is public access on promoted and managed routes.

4.3.2 Parking provision at the site is limited, with no formal car park present. However, informal parking was observed along a track off Chapel Road, which appeared capable of accommodating approximately 20 vehicles. Access to the site is provided via a bridge crossing the Great Raveley Drain. Extensive signage is present at the main entrance, including site information and clear notices prohibiting access for dogs, bicycles, and unauthorised vehicle within the site.

4.3.3 Upon entering Woodwalton Fen, additional information boards are provided, outlining the site's importance, history, and management. This information is located outside a fenced compound housing machinery, equipment and vehicles. A network of promoted routes is clearly advertised across the site, directing visitors around the fen and towards a number of bird hides. Paths are well defined through a combination of mown routeways and signage requesting that visitors remain on designated mown paths. Evidence of path erosion was limited to absent, being present only at bottlenecks and path crossroads, and waymarkers associated with the promoted routes were frequent throughout the site. Numerous bridge crossings facilitate movement across drainage channels within the fen. In places, paths were physically blocked to restrict access to sensitive areas. As these were established and maintained routes, this is likely to reflect an active management intervention to alter visitor access patterns and prevent excessive use of particular pathways, thereby reducing potential disturbance and erosion within sensitive areas of the site. No evidence of informal or unofficial route creation was observed.

4.3.4 Visitor infrastructure within the site was well maintained. The bird hides were in good condition and accessed via boardwalks, with clear signage promoting their locations. However, one hide was closed at the time of the visit due to an unsafe bridge providing access; this was clearly signposted and accompanied by barriers preventing entry. No visitors were observed on site during the visit. A single instance of litter was recorded, located in the vicinity of the Rothschild Bungalow in the central area of the site. No evidence of dog fouling was recorded, consistent with signage at the entrance to the site prohibiting dogs from entering the site.

Figure 4.6: *Overview of Woodwalton Fen, including the transect route walked and target note locations*

5 Conclusions

5.1 Summary of findings

5.1.1 The qualifying features of the Ouse Washes SPA and Ramsar, large areas of open, undisturbed wetland to support internationally important assemblages of breeding and non-breeding waterbirds, are highly sensitive to recreational pressure. The SAC qualifying feature (Spined Loach) may also be affected by indirect effects from activities such as angling. Despite this, recreational pressure at the Ouse Washes was generally low and largely constrained to PRoWs, with very limited evidence of access into the washlands that support the SPA and Ramsar bird assemblages. The linear nature of the site means that most recreational use occurs along riverbanks and site boundaries, where PRoWs, roads and access points are located, rather than within the core washland itself. Hedgerows, tree lines, embankments and topography provide visual and physical screening between recreational routes and the washlands, reducing the potential for disturbance to birds. However, this screening is not continuous, and there are localised sections where views across the Washes are unobstructed and disturbance from the presence of people and dogs could occur. Flooding at the time of survey limited assessment of unofficial access onto the Washes, though this flooding is likely to act as a natural deterrent for much of the year. Facilitation of angling activity is present in parts of the site, although none was observed during the visit. Overall, while recreational use is evident and locally concentrated, its effects appear spatially limited, with the majority of the Washes remaining relatively undisturbed.

5.1.2 The qualifying lowland hay meadow habitat at Portholme SAC is sensitive to recreational pressure due to the vulnerability of its species-rich grassland and the presence of public access. While Portholme comprises open access land and is crossed by a network of PRoWs, there was little evidence of existing recreational impacts at the time of the site visit. Recreational use appeared to be dispersed across the site, with minimal path erosion and only limited signs of vegetation trampling, largely confined to the site margins. Seasonal flooding and inundation of the central areas of the meadow further restricted access and likely reduced pressure on the most sensitive habitats. Although dog walking was common and dogs were observed off lead, observations of dog fouling was infrequent and no evidence of littering was recorded. Whilst recreational activity at Portholme SAC was evident, it did not appear to be resulting in significant adverse effects on the qualifying hay meadow habitat at the time of survey.

5.1.3 The fen, meadow and wetland habitats that underpin the Fenland SAC and Woodwalton Ramsar are sensitive to recreational pressure as visitor access can lead to trampling, erosion and disturbance of qualifying features such as fen and meadow habitats, Great Crested Newt, Spined Loach, Fen Violet, Fen Wood-rush and diverse wetland invertebrates. Evidence of recreational pressure at Woodwalton Fen was limited at the time of the site visit. There is no formal public access in the form of open access land or PRoW, however, visitor access is permitted via a clearly defined network of promoted routes managed by Natural England. Risks from recreational pressure appear to be effectively managed through visitor infrastructure, clear signage, restrictions on dogs and bicycles, and active measures to control movement, such as mown paths, boardwalks, route closures and physical barriers to sensitive areas. Paths were well maintained with little to no evidence of erosion, no unofficial trails were observed, and only one instance of littering was seen. As such, there appeared to be no indication of adverse effects on the qualifying features at the time of survey.

5.2 Next Steps

5.2.1 This report provides a baseline review of existing recreational use at European sites within the Plan area which have the potential to be sensitive to recreational pressure and urbanisation effects. The findings outlined in **Sections 4.1**, **4.2** and **4.3**, and summarised in **Section 5.1**, will be used to inform the HRA which will be undertaken in support of the Local Plan as it develops, alongside ongoing discussions with Huntingdonshire District Council and Natural England.

Appendix A: European Site Conservation Objectives and Threats and Pressures

Ouse Washes SAC[16],

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of the habitats of qualifying species;
- The structure and function of the habitats of qualifying species;
- The supporting processes on which the habitats of qualifying species rely.
- The populations of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

S1149. *Cobitis taenia*; Spined Loach

Threats and Pressures at European site which may be affected by the Local Plan[17,18]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Water pollution/water quality – impacts of inappropriate levels of nutrients, organic pollutants and other pollutants (particularly pollution of groundwater); and,
- Hydrology/water quantity – impacts of inappropriate water levels and disturbed flow regimes.

[17] Natural England (2014) Site Improvement Plan: Ouse Washes (SIP160). Available at: https://publications.naturalengland.org.uk/publication/5354106084392960 [Date accessed: 04/02/26]

[18] Natural England (2015) European Site Conservation Objectives: Supplementary advice on conserving and restoring site features, Ouse Washes (SAC) Site Code: UK0013011. Available at: https://designatedsites.naturalengland.org.uk/TerrestrialAdvicePDFs/UK0013011.pdf [Date accessed: 04/02/26]

Ouse Washes SPA[19]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the aims of the Wild Birds Directive, by maintaining or restoring;

- The extent and distribution of the habitats of the qualifying features;
- The structure and function of the habitats of the qualifying features;
- The supporting processes on which the habitats of the qualifying features rely.
- The populations of each of the qualifying features; and,
- The distribution of the qualifying species within the site.

Qualifying features:

A037. *Cygnus columbianus bewickii*; Bewick's Swan (Non-breeding)

A038. *Cygnus cygnus*; Whooper Swan (Non-breeding)

A050. *Anas penelope*; Eurasian Wigeon (Non-breeding)

A051. *Anas strepera*; Gadwall (Breeding)

A052. *Anas crecca*; Eurasian Teal (Non-breeding)

A053. *Anas platyrhynchos*; Mallard (Breeding)

A054. *Anas acuta*; Northern Pintail (Non-breeding)

A055. *Anas querquedula*; Garganey (Breeding)

A056. *Anas clypeata*; Northern Shoveler (Non-breeding)

A056. *Anas clypeata*; Northern Shoveler (Breeding)

A082. *Circus cyaneus*; Hen Harrier (Non-breeding)

A151. *Philomachus pugnax*; Ruff (Breeding)

A156a. *Limosa limosa limosa*; Black-tailed Godwit (Breeding)

Waterbird assemblage

Breeding bird assemblage

Threats and Pressures at European site which may be affected by the Local Plan[20,21]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Disturbance caused by human activity – impact of human activity in and around the site, including angling, wildfowling and walking/dog walking;
- Landscape- and landform-altering development – impact of development altering the landscape/nearby landforms and causing the loss of unobstructed lines of sight within feeding or roosting habitat, which can limit the ability of birds to detect predators;
- Water pollution/water quality – impact of inappropriate levels of nutrients, organic pollutants and other pollutants (particularly pollution of groundwater); and,
- Hydrology/water quantity – impact of disturbed flow regimes, changes to water supply, changes to water area/depth, and other changes to water quantity.

Ouse Washes Ramsar[22]

Conservation objectives:
Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

Ramsar Criterion	Justification for the application of each criterion
1	The site is one of the most extensive areas of seasonally-flooding washland of its type in Britain.
2	The site supports several nationally scarce plants, including Small Water Pepper *Polygonum minus*, Whorled Water-Milfoil *Myriophyllum verticillatum*, Greater Water Parsnip *Sium latifolium*, River Waterdropwort *Oenanthe fluviatilis*, Fringed Water-lily *Nymphoides peltata*, Long-stalked Pondweed *Potamogeton praelongus*, Hair-like Pondweed *Potamogeton trichoides*, Grass-wrack Pondweed *Potamogeton compressus*, Tasteless Water-pepper *Polygonum mite* and Marsh Dock *Rumex palustris*. Invertebrate records indicate that the site holds relict fenland fauna, including the British Red Data Book species Large Darter Dragonfly *Libellula fulva* and the Rifle Beetle *Oulimnius major*. The site also supports a diverse assemblage of nationally rare breeding waterfowl associated with seasonally-flooding wet grassland.
5	Assemblages of international importance: Species with peak counts in winter: • 59133 Waterfowl (five year peak mean 1998/99-2002/2003)
6	Qualifying Species/populations (as identified at designation): Species with peak counts in winter: • Tundra Swan, *Cygnus columbianus bewickii*, Northwest Europe 1140 individuals, representing an average of 3.9% of the population (five year peak mean 1998/9- 2002/3) • Whooper Swan, *Cygnus cygnus*, Iceland/UK/Ireland 653 individuals, representing an average of 3.1% of the population (five year peak mean 1998/9- 2002/3) • Eurasian Wigeon, *Anas penelope*, Northwest Europe 22630 individuals, representing an average of 1.5% of the population (five year peak mean 1998/9-2002/3) • Gadwall, *Anas strepera strepe*ra, Northwest Europe 438 individuals, representing an average of 2.5% of the GB population (five year peak mean 1998/9- 2002/3) • Eurasian Teal, *Anas crecca*, Northwest Europe 3384 individuals, representing an average of 1.7% of the GB population (five year peak mean 1998/9-2002/3) • Northern Pintail, *Anas acuta*, Northwest Europe 2108 individuals, representing an average of 3.5% of the population (five year peak mean 1998/9-2002/3) • Northern Shoveler, *Anas clypeata*, Northwest and central & Europe 627 individuals, representing an average of 1.5% of the population (five year peak mean 1998/9- 2002/3)

[22] JNCC (1976) Information Sheet on Ramsar Wetlands (RIS): Ouse Washes. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11051.pdf [Date accessed: 04/02/26]

Ramsar Criterion	Justification for the application of each criterion
	Contemporary data and information on waterbird trends at this site and their regional (sub-national) and national contexts can be found in the annual Wetland Bird Survey report.

Threats and Pressures at European site which may be affected by the Local Plan[23]:

- Eutrophication – impact of high nutrient levels caused by sewage treatment works and agricultural runoff; and,
- Reservoir/barrage/dam impact: flooding – recent decades have seen an increase in occurrence of spring flooding and winter flood depths. These two factors have had an adverse impact on vegetation and bird features of the site.

Portholme SAC[24]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats;
- The structure and function (including typical species) of qualifying natural habitats; and,
- The supporting processes on which qualifying natural habitats rely.

Qualifying features:

H6510. Lowland hay meadows (*Alopecurus pratens*is, *Sanguisorba officinalis*)

Threats and Pressures at European site which may be affected by the Local Plan[25,26]

- Disturbance caused by recreation/visitors to the site – impact of unmanaged levels of site visitation and use of the site for recreation;
- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impact of high nutrient levels arising from floodwaters from the River Ouse; and,
- Hydrology/water quantity – impact of disturbed water regimes, disturbed flooding regimes, and inappropriate water table levels.

Fenland SAC (where it is underpinned by Woodwalton Fen SSSI)[27]

Conservation objectives:

Ensure that the integrity of the site is maintained or restored as appropriate, and ensure that the site contributes to achieving the Favourable Conservation Status of its Qualifying Features, by maintaining or restoring;

- The extent and distribution of qualifying natural habitats and habitats of qualifying species;
- The structure and function (including typical species) of qualifying natural habitats;
- The structure and function of the habitats of qualifying species;
- The supporting processes on which qualifying natural habitats and the habitats of qualifying species rely;
- The population of qualifying species; and,
- The distribution of qualifying species within the site.

Qualifying features:

H6410. *Molinia* meadows on calcareous, peaty or clayey-silt-laden soils (*Molinion caeruleae*); Purple moor-grass meadows

H7210. Calcareous fens with *Cladium mariscus* and species of the *Caricion davallianae*; Calcium-rich fen dominated by Great Fen-sedge (Saw-sedge) (priority habitat/species)

S1149. *Cobitis taenia*; Spined Loach

S1166. *Triturus cristatus*; Great Crested Newt

Threats and Pressures at European site which may be affected by the Local Plan[28,29]

- Loss of/disconnection from supporting off-site habitat – impact of loss of, or disconnection from, nearby habitats that support or are functionally linked to the site;
- Air pollution – impact of changes to air quality, including atmospheric nitrogen deposition and acidification;
- Water pollution/water quality – impact of high nutrient levels, changes to water chemistry and other changes to water quality; and,
- Hydrology/water quantity – impact of disturbed water regimes (including the source, depth, duration, frequency, magnitude and timing of water supply), disturbed flooding regimes, changes to water levels, changes to water table height and other hydrological changes.

Woodwalton Fen Ramsar[30]

Conservation objectives:
Ramsar sites do not have Conservation Objectives in the same way as SPAs and SACs. Information regarding the designation of Ramsar sites is contained in JNCC Ramsar Information Sheets. Ramsar Criteria are the criteria for identifying Wetlands of International Importance. The relevant criteria and ways in which this site meets the criteria are presented in the table below.

Ramsar Criterion	Justification for the application of each criterion
1	The site is within an area that is one of the remaining parts of East Anglia which has not been drained. The fen is near natural and has developed where peat-digging took place in the 19th century. The site has several types of open fen and swamp communities.
2	The site supports two species of British Red Data Book plants, Fen Violet (*Viola persicifolia*) and Fen Wood-rush (*Luzula pallidula*). Woodwalton also supports a large number of wetland invertebrates including 20 British Red Data Book species. Aquatic beetles, flies and moths are particularly well represented.

Threats and Pressures at European site which may be affected by the Local Plan[31]:

- Eutrophication; and,
- Drainage/land-claim for agriculture.

[30] JNCC (1995) Information Sheet on Ramsar Wetlands (RIS): Woodwalton Fen. Available at: https://jncc.gov.uk/jncc-assets/RIS/UK11078.pdf [Date accessed: 04/02/26]

Appendix F: Natural England Regulation 18 Consultation Comments and Responses

© Lepus Consulting for Huntingdonshire District Council

No.	Natural England comment	Incorporation into Reg 19
Comments on Regulation 18 HRA screening report – received 16th December 2025		
1	Nene Washes SAC and Ramsar is sensitive to air quality impacts due to potential impacts on aquatic plants (SAC supporting habitat for Spined loach and Ramsar wetland plant assemblage feature).	The Regulation 19 HRA has been updated to reflect Natural England's advice regarding the sensitivity of the Nene Washes SAC and Ramsar to air quality impacts. The air quality Appropriate Assessment was expanded to consider both the qualifying habitat supporting the Spined loach and the Ramsar wetland plant assemblage. A review of APIS and Natural England's supplementary advice was undertaken to identify the relevant critical levels and critical loads for atmospheric pollutants. Detailed air quality modelling, including nitrogen oxides (NOx), ammonia (NH_3) and nitrogen deposition, was completed to assess potential effects on qualifying habitats. The Appropriate Assessment concludes that pollutant concentrations and nitrogen deposition resulting from implementation of the Regulation 19 Local Plan would not result in adverse effects on the integrity of the Nene Washes SAC or Ramsar, either alone or in-combination with other plans and projects.
2	Ouse Washes SAC and Ramsar is sensitive to air quality impacts due to potential impacts on aquatic plants (SAC supporting habitat for Spined loach and Ramsar wetland plant assemblage feature).	The Regulation 19 HRA has been updated to reflect Natural England's advice regarding the sensitivity of the Ouse Washes SAC and Ramsar to air quality impacts. The air quality Appropriate Assessment was expanded to consider the qualifying habitats supporting Spined loach, Bullhead and Otter, together with the Ramsar wetland plant assemblage. A review of APIS and Natural England's supplementary advice was undertaken to identify the relevant critical levels and critical loads for atmospheric pollutants. Additional traffic data were incorporated into the air quality modelling to assess affected road links, and detailed modelling of nitrogen oxides (NOx), ammonia (NH_3) and nitrogen deposition was undertaken. The Appropriate Assessment concludes that pollutant concentrations and nitrogen deposition resulting from implementation of the Regulation 19 Local Plan would not result in adverse effects on the integrity of the Ouse Washes SAC or Ramsar, either alone or in-combination with other plans and projects.
3	Water Framework Directive (WFD) targets are not the same as those required by protected sites features (SAC and Ramsar), which are more stringent. Throughout the report WFD terminology is interchanged with HRA terminology. The WFD 'no deterioration' target does not satisfy the Habitat Regulations.	The Regulation 19 HRA has been updated to distinguish clearly between Water Framework Directive (WFD) objectives and the requirements of the Habitats Regulations. The Appropriate Assessment no longer relies solely on WFD objectives and instead assesses potential effects against the site-specific water quality standards and conservation objectives agreed with Natural England for each European site. The Water Cycle Study was updated to compare modelled baseline, future and Technically Achievable Limit (TAL) scenarios against these Natural

© Lepus Consulting for Huntingdonshire District Council

No.	Natural England comment	Incorporation into Reg 19
Comments on Regulation 18 HRA screening report – received 16th December 2025		
		England standards, including ammonia, biochemical oxygen demand (BOD), dissolved oxygen (DO), nitrate and total phosphorus where applicable. The Appropriate Assessment therefore considers whether implementation of the Local Plan could adversely affect the integrity of European sites in accordance with the Habitats Regulations, rather than relying on WFD 'no deterioration' objectives alone.
4	This section states that *'NE consider that 'good' ecological status under the WFD is an appropriate standard for functionally linked watercourse'* – we advise that this is incorrect when assessing the potential for impacts to protected sites, as it will depend on the water quality target of the protected site feature affected.	The Regulation 19 HRA has been updated to remove reliance on Water Framework Directive (WFD) ecological status as the primary assessment criterion for functionally linked watercourses. Instead, the Appropriate Assessment considers the site-specific conservation objectives and water quality standards agreed with Natural England for the relevant European sites. The water quality assessment has been informed by updated Water Cycle Study modelling, which compares the baseline, future and Technically Achievable Limit (TAL) scenarios against the Natural England water quality standards for each designated site. This ensures that the assessment is based on the requirements of the Habitats Regulations rather than WFD ecological status alone.
5	WFD and HRA requirements are again being conflated.	The Regulation 19 HRA has been revised to clearly distinguish between Water Framework Directive (WFD) objectives and the requirements of the Habitats Regulations. The Appropriate Assessment has been updated to assess potential effects against the site-specific conservation objectives and water quality standards agreed with Natural England, rather than relying on WFD ecological status or 'no deterioration' objectives. This approach is reflected throughout the water quality assessment and is supported by the updated Water Cycle Study modelling.
6	Nene Washes SAC is very vulnerable to changes in water level so must be scoped in.	The Regulation 19 HRA has been updated to scope Nene Washes SAC into the Appropriate Assessment for water quantity. The assessment considers the potential effects of Local Plan growth on water resources and hydrological conditions, drawing on the latest Water Cycle Study, water resources evidence and Natural England's advice. The Appropriate Assessment concludes that, with the embedded policy safeguards and wider regulatory framework governing water abstraction and water resource management, implementation of the Local Plan will not result in adverse effects on the integrity of Nene Washes SAC, either alone or in-combination with other plans and projects.

© Lepus Consulting for Huntingdonshire District Council

No.	Natural England comment	Incorporation into Reg 19
Comments on Regulation 18 HRA screening report – received 16th December 2025		
7	This section on Orton Pit SAC needs to be clear about any hydrological link between abstraction that is linked to growth and the designated site, as it is not clear from the way this is written. We also advise that if there are potential LSEs on water quantity, this may also lead to LSEs on water quality, so further consideration of this point is required.	The Regulation 19 HRA has been updated to clarify the hydrological relationship between Orton Pit SAC and the Local Plan area. The Water Cycle Study and supporting hydrological evidence were reviewed to confirm whether a hydrological pathway exists between Local Plan growth and the designated site. The assessment concluded that there is no hydrological connectivity between the Plan area and Orton Pit SAC through the identified abstraction and wastewater pathways. Accordingly, both water quantity and associated water quality pathways were considered and discounted, and the Regulation 19 HRA concludes that implementation of the Local Plan would not result in adverse effects on the integrity of Orton Pit SAC.
8	We advise that the Ouse Washes SAC is scoped in for recreational impacts, specifically angling.	The Regulation 19 HRA has been updated to scope Ouse Washes SAC into the Appropriate Assessment for recreational impacts. The assessment considers the potential for recreational activities, including angling, to result in indirect effects on the qualifying features of the SAC through habitat disturbance and degradation, recognising the reliance of supporting habitats on undisturbed riverbed sediments. The Appropriate Assessment concludes that, taking account of the location and nature of recreational activity, the characteristics of the qualifying features and the mitigation measures embedded within the Local Plan, implementation of the Local Plan will not result in adverse effects on the integrity of the Ouse Washes SAC, either alone or in-combination with other plans and projects.
9	Need to include FLL for the Ouse and Nene Washes' bird features in relation to recreational impacts and urbanisation effects.	The Regulation 19 HRA has been updated to incorporate Functionally Linked Land (FLL) associated with the Ouse Washes SPA/Ramsar and Nene Washes SPA/Ramsar, using the mapping provided by Natural England. The recreational disturbance and urbanisation Appropriate Assessments have been revised to consider the potential effects of Local Plan growth on supporting habitats used by the qualifying bird features beyond the designated site boundaries. The assessment concludes that, taking account of the identified Functionally Linked Land, the characteristics of the qualifying features and the mitigation measures embedded within the Local Plan, implementation of the Local Plan will not result in adverse effects on the integrity of the Ouse Washes SPA/Ramsar or Nene Washes SPA/Ramsar, either alone or in-combination with other plans and projects.

No.	Natural England comment	Incorporation into Reg 19
Comments on Regulation 18 HRA screening report – received 16th December 2025		
10	Updates required in relation to the above comments.	Please see comments above.
11	We have not reviewed each of the mentioned HRAs, but advise that if a plan has scoped out water pollution impacts due to distance from a hydrologically linked wetland receptor, this should not be relied upon and should be re-evaluated during your authority's in-combination assessment.	The Regulation 19 HRA has been updated to ensure that potential water quality impacts have been considered through the in-combination assessment, rather than relying solely on conclusions reached within other HRAs. A review of relevant plans and projects was undertaken to identify potential pathways for cumulative effects, including those associated with wastewater discharges and nutrient enrichment. The water quality Appropriate Assessment has been informed by updated Water Cycle Study modelling, which considers baseline, future and Technically Achievable Limit (TAL) scenarios against the site-specific water quality standards agreed with Natural England. This ensures that potential in-combination effects on hydrologically connected European sites have been appropriately considered in accordance with the Habitats Regulations.
12	The Appropriate Assessment (AA) should use the water quality targets etc. specified in the Supplementary Advice on Conservation Objectives (available via Designated Sites View – search for the relevant site, then select 'Conservation Advice' on the search results page) as these are, in some cases, more stringent than the Water Framework Directive targets. This may be due to the specifically designated habitats and species, and/or the slow/non-flowing nature of water on some protected sites. Nutrients and pollutants are not easily washed through the system as happens in rivers, but can instead build up over time. The volume of water also needs considering in conjunction with this. The Ouse Washes SAC is already in unfavourable condition due to water quality, and the HRA AA should take	The Regulation 19 HRA has been updated to ensure that the Appropriate Assessment considers the site-specific water quality targets identified within Natural England's Supplementary Advice on Conservation Objectives, rather than relying solely on Water Framework Directive (WFD) objectives. The water quality assessment has been informed by updated Water Cycle Study modelling, which compares baseline, future and Technically Achievable Limit (TAL) scenarios against the Natural England standards for relevant determinant's, including ammonia, biochemical oxygen demand (BOD), dissolved oxygen, nitrate and total phosphorus. The assessment also considers the existing condition of European sites, including the unfavourable condition of the Ouse Washes SAC in relation to water quality. The Appropriate Assessment concludes that, with the implementation of wastewater infrastructure improvements, including TAL upgrades where required, alongside policy safeguards and the wider regulatory framework, implementation of the Local Plan would not result in adverse effects on the integrity of the Ouse Washes SAC, either alone or in-combination with other plans and projects. The Regulation 19 HRA has also been updated to consider the two proposed allocations identified by Natural England as falling within the updated Impact Risk Zone (IRZ) for Eversden and Wimpole Woods SAC. The updated IRZ information

No.	Natural England comment	Incorporation into Reg 19
Comments on Regulation 18 HRA screening report – received 16th December 2025		
	this into account. Further comment on this is provided in relation to the Integrated Water Management Study. As noted in the Ecological Constraints Assessment section above, two proposed allocations will fall within the updated Impact Risk Zone for Eversden and Wimpole Woods SAC and should therefore be included in an updated HRA.	was reviewed alongside aerial photography and site information to consider the potential for functionally linked habitats associated with the SAC, including woodland, hedgerows, watercourses and other habitats that may support commuting, foraging or roosting Barbastelle bats. The assessment identified that Great Gransden 1: South of Caxton Road comprises an arable field with no adjacent woodland blocks, while Waresley 1: Land between the West Lodge and Home Farm includes woodland and connectivity to wider woodland habitats. These considerations have been incorporated into the Regulation 19 HRA screening and Appropriate Assessment process, with mitigation measures and policy safeguards applied where necessary.

1 Introduction

1.1 This report has been prepared by Air Quality Consultants Ltd | Part of Logika Group (AQC). It describes the air quality modelling methodology and results to inform the Habitats Regulations Assessment (HRA) of the Huntingdonshire District Council Local Plan.

1.2 The Local Plan will lead to changes in traffic flows on roads which pass within 200 m of designated nature conservation sites. Road traffic can emit nitrogen oxides (NOx) and ammonia (NH_3), and some sensitive vegetation may be affected by elevated concentrations of these pollutants. Furthermore, the deposition of both NOx and NH_3 can alter the nutrient and acidity balance of some ecosystems, causing changes to their composition and health. This assessment has quantified the changes to NOx and NH_3 concentrations that would be caused by the new Local Plan, as well as the changes to nitrogen and acid deposition fluxes. It has considered the following designated sites:

- Nene Washes Special Area of Conservation (SAC) and Ramsar site;
- Ouse Washes SAC and Ramsar site; and
- Portholme SAC.

1.3 The locations of these sites are shown in Figure 1.

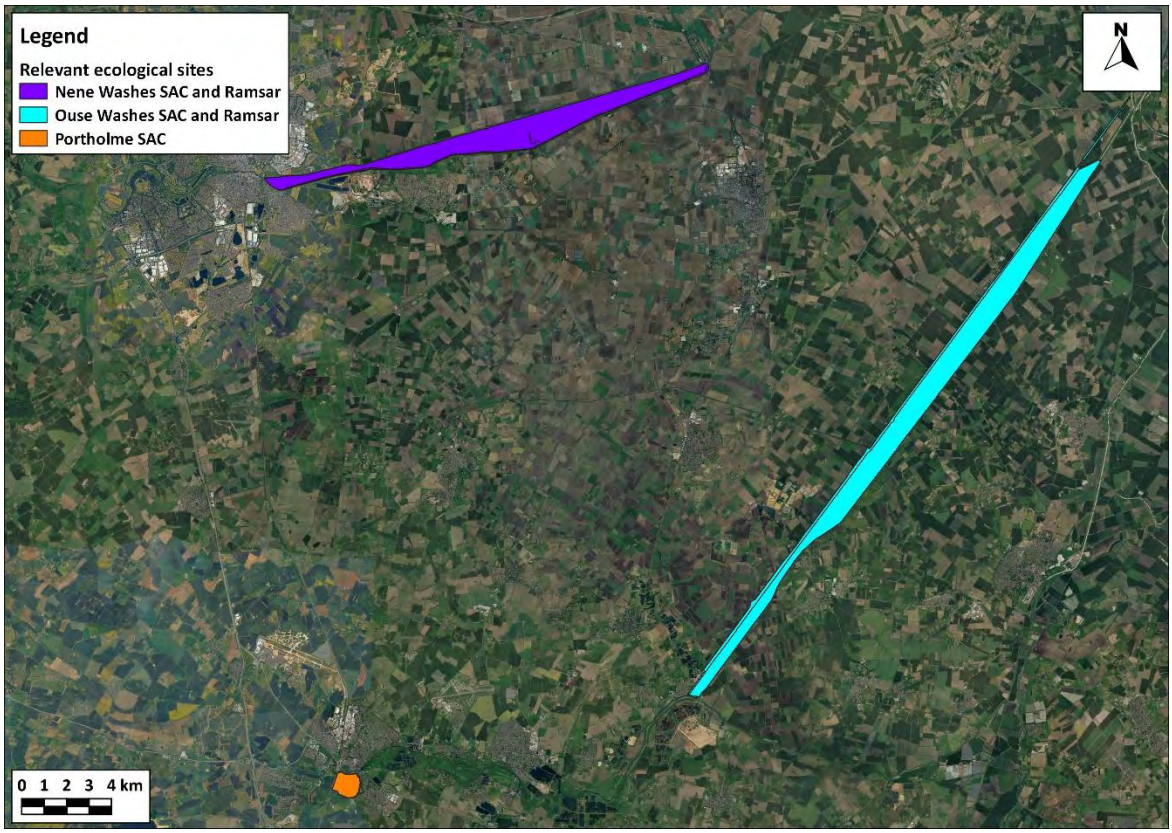

Figure 1: Designated Sites Included in this Assessment

Imagery ©2026.

1.4 This report describes the scope of the air quality assessment, the modelling methodology, and the modelled results. It compares the results with screening thresholds which can be used to discount the potential for significant effects. However, it does not seek to interpret the results any further than this

or reach a conclusion regarding the overall significance of effects; that assessment, including the policy against which the assessment is made, is provided separately by Lepus Consulting Ltd.

1.5 The professional experience of the consultants involved in the air quality assessment is summarised in Appendix A1.

2 Assessment Criteria

Policy Context

2.1 Protection of nature conservation sites is provided by an array of different policies. Different policy protection is usually provided to sites designated at European[1], national[2], and local levels[3]. Instead of considering each relevant policy individually, this current report applies criteria which are frequently used to screen out the potential for significant effects regardless of the specific policies protecting a site.

Critical Levels and Critical Loads

2.2 European Union (EU) Directive 2008/50/EC (The European Parliament and the Council of the European Union, 2008) sets a limit value for annual mean concentrations of nitrogen oxides and for annual and winter mean concentrations of sulphur dioxide[4]. The same values have been set as domestic objectives within the Air Quality (England) Regulations (2000) and the Air Quality (England) (Amendment) Regulations (2002). The limit values and objectives only apply a) more than 20 km from an agglomeration (about 250,000 people), and b) more than 5 km from Part A industrial sources, motorways and built-up areas of more than 5,000 people.

2.3 Critical levels (CLes) and critical loads (CLos) are the ambient concentrations and deposition fluxes below which significant harmful effects to sensitive ecosystems are unlikely to occur. Some of the CLes are set at the same concentrations as the objectives but do not have the same spatial constraints on where they apply. The CLes relevant to this assessment are set out in Table 1. The same values apply to all three sites.

2.4 The CLe for annual mean NOx concentrations is set at the same concentration irrespective of the habitats features of interest. There are two CLes for NH_3, with the lower value (1 $\mu g/m^3$) applying only where lichens or bryophytes are present or form a key part of the ecosystem integrity. This reflects the fact that lichens and bryophytes are not connected directly to soil nutrients and can therefore be particularly susceptible to changes in atmospheric nitrogen. Lepus Consulting has advised which NH_3 CLe applies in which location. A short-term (24-hour mean) CLe for NOx has also been set, however guidance from the Institute of Air Quality Management (IAQM) (Holman et al, 2020) recommends that: "*…only the annual mean NOx concentration is used in assessments unless specifically required by a regulator; for instance, as part of an industrial permit application where high, short term peaks in emissions, and consequent ambient concentrations, may occur*". Thus the 24-hour mean CLe is not relevant to the current assessment, which is concerned with annual average effects from increased road traffic.

2.5 The CLos are specific to different habitat types. The Air Pollution Information System (APIS) (2026) sets out the CLos which might apply across the entirety of nationally and internationally-designated sites. This information has been used, alongside discussions with Lepus Consulting to define which CLos are relevant to the locations of interest to this study.

[1] European sites make up the Natura 2000 network and include Special Protection Areas (SPAs), Special Areas of Conservation (SACs), and Ramsar Sites.
[2] Sites of national-level importance are principally designated as Sites of Special Scientific Interest (SSSIs).
[3] Local nature sites are usually taken to include those designated locally as well as national nature reserves and ancient woodland.
[4] Sulphur dioxide is no longer emitted in significant quantities from road transport and does not, therefore, require assessing here.

2.6 The CLos for nitrogen deposition are published as ranges. This is because other factors influence how sensitive a habitat may be to additional nitrogen; for example how a site is managed can affect its sensitivity to nitrogen deposition. However, this should not be taken to suggest that the lower-bound value is indicative of potential effects in the study area.

2.7 Acid deposition is assessed against the "CLmaxN" value published on APIS (2026). This is the level above which additional deposition will cause acidification.

2.8 The CLos used in this assessment are provided in Table 2. The same values apply to all three sites.

Table 1: Vegetation and Ecosystem CLes [a]

Pollutant	Time Period	CLe
Nitrogen Oxides (expressed as NO_2)	Annual Mean [a,b]	30 µg/m^3
NH_3	Annual Mean	3 µg/m^3

[a] The CLes are defined by the World Health Organisation (WHO, 2000).

[b] Away from major sources (see Paragraph 2.2), this CLe is set as an objective (Defra, 2007) and a limit value (The European Parliament and the Council of the European Union, 2008).

Table 2: Vegetation and Ecosystem CLos

Site	Nutrient Nitrogen (kgN/ha/yr)	Acid Deposition 'N_{max}' (keq/ha/yr)
Nene Washes SAC and Ramsar	10	4.856
Ouse Washes SAC and Ramsar	10	4.856
Portholme SAC	10	4.856

Screening Thresholds for Predicted Concentrations and Deposition Fluxes

2.9 The Environment Agency has published criteria which allow impacts from industrial developments requiring environmental permits to be screened out as insignificant (Environment Agency, 2025). Exceeding these criteria does not mean that there is a significant effect, it simply means that further consideration is required of the potential changes to air quality or deposition. With respect to annual average impacts from most industrial sources, no further assessment is required whenever the change caused by the proposed development (termed by the Environment Agency the Process Contribution, or 'PC') is less than 1% of the relevant CLe or CLo. Furthermore, there is no need to for further assessment if detailed dispersion modelling has shown that the CLe or CLo is not exceeded (i.e. the Predicted Environmental Concentration, or 'PEC' is less than 100% of the CLe or CLo).

2.10 Natural England's guidance on advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (Natural England, 2018) recommends the use of the Environment Agency criteria described above for changes to traffic caused by all types of plans or projects affecting European sites. It explains:

"1% of critical load/level are considered by Natural England's air quality specialists … to be suitably precautionary, as any emissions below this level are … considered to be imperceptible". It goes on:

"There can therefore be a high degree of confidence in [the use of these criteria] *to screen for risks of an effect".*

2.11 For European sites, Natural England (2018) explains that the 1% criterion should be applied to plans and projects both alone and in-combination. As with the Environment Agency guidance, exceeding 1% of the CLe or CLo does not mean that there will be a significant effect, it is simply a trigger for when further assessment is needed.

2.12 The CLes and CLos are defined as the "*deposition/concentration … below which adverse effects on receptors … do not occur according to present scientific knowledge*" (APIS, 2026). There is therefore no reasonable scientific doubt regarding the absence of a significant effect wherever the CLes and CLos are not exceeded, even where the PC exceeds the 1% criterion.

2.13 The CLos were recently subject to a detailed review and revision (Bobbink et al., 2022). Prior to that revision, Natural England (2018) referred to earlier work (NECR210, 2016) that there may be adverse effects below the (previously published) CLos. Natural England has not revised its guidance following the CLo revision and therefore, for European sites where there is a restore objective in place, an Appropriate Assessment is required wherever the PC is >1% of the CLe or CLo even when the total concentration or deposition is below the CLe or CLo. Natural England has confirmed that the potential for adverse effects may still be discounted on the basis that the total concentration or deposition is less than the current CLe or CLo, but procedurally, this should happen at the Appropriate Assessment rather than screening stage of HRA. This modelling report simply considers whether adverse effects can be ruled out solely on the basis of the air quality predictions and has therefore applied the following tests. The potential for a significant effect can be discounted wherever:

- The change (PC), both alone and in-combination, is less than 1% of the relevant CLe or CLo; OR
- The total concentration or deposition (PEC) is less than the relevant CLe or CLo.

3 Methodology

3.1 The assessment has been carried out following current best practice, drawing on the professional expertise of the consultants involved (Appendix A1). Care has also been taken to ensure consistency with guidance issued by the IAQM (Holman et al, 2020) and the Chartered Institute of Ecology and Environmental Management (CIEEM) (CIEEM, 2021).

Consultation

3.2 Lepus Consulting prepared a HRA Scoping Report in August 2025 (Lepus Consulting, 2025a) and a Screening Report in October 2025 (Lepus Consulting, 2025b). These concluded that Portholme SAC should be screened into the HRA process due to the potential for air quality impacts from changes in traffic using strategic roads within 200 m of the site.

3.3 Natural England responded in December 2025 (Natural England, 2025) with the following feedback:

"Nene Washes SAC and Ramsar is sensitive to air quality impacts due to potential impacts on aquatic plants (SAC supporting habitat for Spined loach and Ramsar wetland plant assemblage feature).

Ouse Washes SAC and Ramsar is sensitive to air quality impacts due to potential impacts on aquatic plants (SAC supporting habitat for Spined loach and Ramsar wetland plant assemblage feature)."

3.4 Impacts on the abovementioned sites have thus been included in this assessment.

In-Combination Projects

3.5 Impacts on European sites need to be considered in combination with other relevant projects or plans. Natural England (2018) recommends a pragmatic approach to defining the projects to be included in an in-combination assessment, relying on professional judgement and ensuring that the assessment remains focused on the project seeking permission. The in-combination projects considered here include committed developments from the existing Local Plan which will be carried forward into the new Local Plan; they do not include emerging local plans currently undergoing preparation by neighbouring Local Authorities as those local plans are not expected to be adopted before the Huntingdonshire District Council Local Plan.

Assessment Scenarios

3.6 NOx and NH_3 concentrations, and nitrogen and acid deposition fluxes, have been predicted for the following scenarios:

A) base year 2023;

B) 2046 without any increase in traffic from 2023 (including future-year emissions factors and future-year background concentrations and fluxes but base-year traffic within the dispersion model). This scenario is termed '2046 Zero Growth';

C) 2046 without the Local Plan but with the forecast background increase in traffic from 2023 and in-combination projects (also including future-year emissions factors and background concentrations and fluxes). This scenario is termed '2046 Base'; and

D) 2046 with the Local Plan (including proposed mitigation measures) and background traffic growth (also including future-year emissions factors and background concentrations and fluxes). This scenario is termed '2046 With Local Plan'.

3.7 The three 2046 scenarios have been compared to derive the impacts of the Local Plan alone and in-combination with other projects and plans:

- the difference between scenarios C and D represents the change (i.e. the PC) caused by the Local Plan alone; and
- the difference between scenarios B and D represents the PC caused by the Local Plan in-combination.

3.8 It should be noted that the growth in traffic predicted between 2023 and 2046 is not all caused by projects and plans as relevant to the HRA, and so this approach will over-predict the in-combination changes. This makes the assessment worst-case.

Monitoring

3.9 Information on existing NOx and nitrogen dioxide concentrations has been obtained by collating the results of monitoring carried out by the Huntingdonshire and Fenland District Councils. This has focused on roadside monitoring which is carried out to assess impacts on human health. The measurements have been used here to verify the air quality model as described in Appendix A2.

3.10 Information on existing background NH_3 concentrations has been obtained by collating results of monitoring carried out on behalf of Defra as part of the National Ammonia Monitoring Network (NAMN) (Defra, 2026b). This consists of 95 sites across the UK, four of which are close to the study area. Annual mean results for the baseline year of 2023 are summarised in Table 3 and the monitoring locations are shown in Figure 2. All of the measured concentrations are below the CLe of 3 $\mu g/m^3$.

Table 3: Summary of Annual Mean NH_3 Monitoring in 2023 ($\mu g/m^3$)

Site	Annual Mean
Stoke Ferry	2.3
Woodwalton Fen	1.2
Monks Wood	1.5
Chippenham Fen	1.3

Modelling Methodology

Background Concentrations and Fluxes

3.11 Background concentrations of NOx and NH_3, and nitrogen and acid nitrogen deposition fluxes, have been taken from APIS (2026). The concentrations and deposition fluxes represent 1 km x 1 km averages. APIS currently presents three-year mean values centred on the calendar year of 2023 and these have been taken to represent conditions in 2023. The APIS data take account of the measurements shown in Table 3 and therefore are similar to the measured concentrations.

3.12 Concentrations of NH_3 and deposition fluxes have been adjusted to represent the future using the rate of change predicted for this area using the Business-as-Usual assumptions of the JJNCC's Nitrogen Futures project (JNCC, 2020)[5]. Nitrogen Futures only predicted changes to 2030, so the rate of change predicted by JNCC between 2023 and 2030 has been used to predict concentrations and deposition in 2046 (i.e. only 7 years of change have been accounted for). Given the UK's national and international commitments to reduce emissions, as well as evidence from monitoring across the UK showing significant recent improvements in background concentrations of both NOx and NH_3, this approach is most likely to over-predict in 2046 and therefore provide a conservative assessment. Concentrations of NOx in 2046 have been predicted by multiplying the 2023 concentration taken

[5] A linear rate of change has been assumed between 2017 and the 2030 Business as Usual scenario, with the APIS 2023 data scaled based on the location-specific predicted changes. Acid nitrogen deposition has been calculated from the predicted nitrogen deposition.

from APIS by the relative change to concentrations (between 2023 and 2040[6]) for each location predicted in Defra's latest (2021-based) national NOx maps published for Local Air Quality Management (Defra, 2026a). Background concentrations of nitrogen dioxide (NO_2) are only needed to inform the conversion of NOx to NO_2. These have been taken directly from Defra's maps for each relevant year.

Influence of Local Road Traffic

3.13 Concentrations have been predicted using the ADMS-Roads dispersion model, with emissions of NOx derived using Defra's Emissions Factors Toolkit (EFT) (v14.1) (Defra, 2026a), and emissions of NH_3 derived using AQC's Calculator for Road Emissions of Ammonia (CREAM) (v2A) (AQC, 2025). Traffic flows have been derived from Huntingdonshire District Council's strategic traffic model. The model results for NOx and nitrogen dioxide have been verified against local measurements. Details of the model inputs and the model verification are provided in Appendix A2. Deposition fluxes have been calculated from the predicted concentrations of nitrogen dioxide and NH_3. Details of the method for calculating deposition are provided in Appendix A2.

Receptors

3.14 Impacts have been predicted at receptors arranged along transects running perpendicular to affected roads. The transects begin at the closest part of the designated site to the road[7]. Within designated sites, receptors have been placed at the following distances from the roads: 2 m, 3 m, 5 m, 9 m, 17 m, 33 m, 65 m, 129 m and 200 m [8]. Where the designated site is set back more than 2 m from the road, an additional receptor has been placed at the point closest to the road. These roadside transects are shown in Figure 3 to Figure 8. Additional receptors have been placed at various points in and around each SAC, using source-oriented grids at the same distances as the transects, and underlying Cartesian grids with spacing of 100 m. These additional receptors have been used to generate isopleths.

3.15 All receptors have been modelled at a height of 0 m.

[6] The furthest year for which predictions can currently be reliably made.
[7] Following guidance from the IAQM (Holman et al, 2020), impacts have not been predicted within 2 m of roads.
[8] These distances are used because they broadly reflect the expected rate at which concentrations of NOx and ammonia reduce with distance from roads. This provides an efficient way to more precisely show the predicted changes.

Uncertainty

3.16 There are many components that contribute to the uncertainty of modelling predictions. The road traffic emissions dispersion model used in this assessment is dependent upon the traffic data that have been input, which will have inherent uncertainties associated with them. There are then additional uncertainties, as models are required to simplify real-world conditions into a series of algorithms.

3.17 An important stage in the process of modelling road traffic emissions of is model verification, which involves comparing the model output with measured concentrations (see Appendix A2). Because the model has been verified and adjusted, there can be reasonable confidence in the prediction of base year (2023) concentrations. Development of the CREAM model, which has been used in this assessment, included verifying the emissions model, combined with the ADMS-Roads dispersion model, against measurements from the densest roadside NH_3 monitoring network in Europe (AQC, 2025). The modelling has thus been verified as far as is possible.

3.18 Predicting pollutant concentrations in a future year will always be subject to greater uncertainty. For obvious reasons, the model cannot be verified in the future, and it is necessary to rely on a series of projections as to what will happen to traffic volumes, background pollutant concentrations and vehicle emissions.

3.19 Forecasts of future-year concentrations are usually based on measurements made during a recent year. They then take account of projected changes over time to factors such as the composition of the vehicle fleet and the uptake of other new technologies, as well as population increases etc. In early 2020, activity in the UK was disrupted by the COVID-19 pandemic. As a result, concentrations of

traffic-related air pollutants fell appreciably (Defra Air Quality Expert Group, 2020). At the same time, concentrations of NH_3 seemed to increase, which is likely relate to disruption of agricultural and land management activities across Europe. A reduction in NOx and concurrent increase in NH_3 may have disrupted the formation of ammonium nitrate, which is another important component of nitrogen deposition. Data used in this assessment are based on post-pandemic years and are therefore considered to be representative of the future.

Assumptions

3.20 It is necessary to make a number of assumptions when carrying out an air quality assessment. In order to account for some of the uncertainty in the approach, as described above, assumptions made have generally sought to reflect a realistic worst-case scenario. A key assumption made in carrying out this assessment is the assumption that the Monks Wood meteorological monitoring station appropriately represents conditions in the study area (this is discussed further in Appendix A2).

4 Dispersion Model Results

Results Along Transects

4.1 Table 4 to Table 7 set out the concentrations and deposition fluxes along the transects, as well as the changes relative to the CLes and CLos. As explained in Paragraph 3.14, the transects begin at the edge of the designated site closest to the road (for example Transect A at Nene Washes, shown at the top of Table 4, represents a part of the designated site which is 140 m from the A1139). Where a negative number is shown in one of the two right-hand columns, this shows that an improvement is predicted. This can happen even when the total AADT flow increases, if there is a large reduction in forecast Heavy Duty Vehicles. By way of example, the section of the A1139 alongside Transect A at Nene Washes is predicted to carry more Light Duty Vehicles, but fewer Heavy Duty Vehicles as a result of the Local Plan.

4.2 In other parts of England, Natural England has sometimes requested that the degree of 'retardation' to ongoing reductions in nitrogen deposition should also be calculated. This calculation is provided in Appendix A3.

NOx

Table 4: Model Results for Annual Mean NOx

Transect	Distance from Road Edge (m)	Total NOx Concentration (µg/m³)					Change as % of CLe	
		CLe	A) 2023 Base	B) 2046 Zero Growth	C) 2046 Base	D) 2046 With Local Plan	Alone (D-C)	In Combination (D-B)
Nene Washes SAC and Ramsar

Summary

4.3 Table 8 summarises the air quality predictions at the worst-case location within each designated site. As explained in Paragraph 2.13, the potential for significant adverse effects can be ruled out wherever the PC is less than 1% of the CLe/CLo or the PEC is less than the relevant CLe/CLo. For HRAs, the test against the PEC may also need to be described within an appropriate assessment, but Table 8 nevertheless summarises which impacts can ultimately be disregarded solely on the basis of the air quality predictions.

Table 8: Summary of Air Quality Predictions

Pollutant	CLe/ CLo	PC Alone <1% of CLe/CLo	PC In Combination <1% of CLe/CLo	PEC < CLe/CLo	Screens Out
Nene Washes SAC and Ramsar					
Annual Mean NOx	30	Y	N	Y	Y
Annual Mean NH_3	3	Y	N	N	N
N Dep short vegetation	10	Y	N	N	N
Acid Deposition to short vegetation	4.856	Y	N	Y	Y
Ouse Washes SAC and Ramsar					
NOx	30	Y	N	Y	Y
NH_3	3	N	N	N	N
N Dep to short vegetation	10	N	N	N	N
Acid Deposition to short vegetation	4.856	Y	N	Y	Y
Portholme SAC					
NOx	30	Y	N	Y	Y
NH_3	3	Y	N	Y	Y
N Dep to short vegetation	10	Y	N	N	N
Acid Deposition to short vegetation	4.856	Y	Y	Y	Y

4.4 On the basis of the observations in Table 8, it is possible to discount all impacts except:

- Nene Washes SAC and Ramsar - NH_3 concentrations and nitrogen deposition to short vegetation;
- Ouse Washes SAC and Ramsar - NH_3 concentrations and nitrogen deposition to short vegetation; and
- Portholm SAC – nitrogen deposition to short vegetation.

4.5 For these sites/pollutants, further assessment is needed.

5 Isopleths

5.1 As the assessment has been unable to classify all of the impacts as insignificant (as shown in Table 8), isopleths have been plotted to show the areas over which the 1% of CLe/CLo screening criterion is exceeded. These are presented in Figure 9 to Figure 27, below. Isopleths are shown wherever the 1% criterion is exceeded within a habitat, even where the potential for a significant effect has already been discounted on the basis that the total does not exceed the CLe or CLo. Isopleths are not shown if the 1% criterion is not exceeded. It should be reiterated that exceeding the 1% criterion does not mean that there will be a significant effect. It simply means that impacts cannot be screened out at this stage. However, the potential for significant effects can be discounted to all areas outside the lines shown in Figure 9 to Figure 27.

5.2 It should be noted that these plots are intended to show impacts within the designated sites; outside of the designated sites, the isopleths will be less accurate. Furthermore, they provide only a very high-level summary of the predictions. More detailed contours have also been provided to Lepus Consulting Ltd. to inform the HRA.

7 Glossary

AADT	Annual Average Daily Traffic
ADMS-Roads	Atmospheric Dispersion Modelling System model for Roads
APIS	Air Pollution Information System
AQC	Air Quality Consultants
CLe	Critical Level - concentrations of pollutants in the atmosphere above which direct adverse effects on receptors, such as human beings, plants, ecosystems or materials, may occur according to present knowledge
CLo	Critical Load – a quantitative estimate of exposure to one or more pollutants below which significant harmful effects on specified sensitive elements of the environment do not occur according to present knowledge
CREAM	Calculator for Road Emissions of AMmonia
Defra	Department for Environment, Food and Rural Affairs
DfT	Department for Transport
EFT	Emissions Factors Toolkit
EU	European Union
Exceedance	A period of time when the concentration of a pollutant is greater than the appropriate air quality objective. This applies to specified locations with relevant exposure
HDV	Heavy Duty Vehicles (> 3.5 tonnes)
IAQM	Institute of Air Quality Management
JNCC	Joint Nature Conservation Committee
kph	Kilometres Per hour
LAQM	Local Air Quality Management
LDV	Light Duty Vehicles (<3.5 tonnes)
µg/m^3	Microgrammes per cubic metre
NAMN	National Ammonia Monitoring Network
NO	Nitric oxide
NO_2	Nitrogen dioxide
NOx	Nitrogen oxides (taken to be NO_2 + NO)
Objectives	A nationally defined set of health-based concentrations for nine pollutants, seven of which are incorporated in Regulations, setting out the extent to which the standards

	should be achieved by a defined date. There are also vegetation-based objectives for sulphur dioxide and nitrogen oxides
PC	Process Contribution
PEC	Predicted Environmental Concentration
SAC	Special Area of Conservation
WHO	World Health Organisation

8 Appendices

A1 Professional Experience

Dr Ben Marner, BSc (Hons) PhD CSci MIEnvSc MIAQM

Dr Marner is the Director of Air Quality Modelling and Assessment at AQC and has more than 20 years' relevant experience. He has been responsible for air quality and greenhouse gas assessments of road schemes, rail schemes, airports, power stations, waste incinerators, commercial developments and residential developments in the UK and abroad. He has acted as expert witness at public inquiries, where he has presented evidence on health-related air quality impacts, the impacts of air quality on sensitive ecosystems, and greenhouse gas impacts. He has developed a range of widely-used air quality models and contributed to the development of best practice. Dr Marner has provided support and advice to foreign governments, Highways England, Transport Scotland, Transport for London, Greater London Authority, the Joint Nature Conservation Committee, the Environment Agency, and numerous local authorities. He is a Member of the Institute of Air Quality Management and a Chartered Scientist. He currently advises the UK Government on air quality as part of its Air Quality Expert Group (AQEG), where his specific area of expertise relates to air quality assessment in the development control process, and has separately provided advice on air quality issues to Defra's Chief Scientific Adviser, the UK Chief Medical Officer, and the UK Chief Planner.

Dr Imogen Heard, BSc (Hons) MSc PhD

Dr Heard is an Associate of AQC with over 12 years' experience in the field of air quality. She has been involved in numerous development projects including road schemes, energy from waste facilities, urban extensions and energy centres. These have included the use of ADMS-5 and ADMS-Roads dispersion models to study the impacts of a variety of pollutants, including nitrogen dioxide, PM_{10} and $PM_{2.5}$, and the preparation of air quality assessment reports and air quality chapters for Environmental Statements. She also has experience in undertaking construction dust risk assessments, Air Quality Neutral assessments and human health risk assessments, as well as in preparing local authority reports. Prior to joining AQC she worked as a scientist in the Atmospheric Dispersion and Air Quality area at the UK Met Office for four years, modelling the dispersion of a range of pollutants over varying spatial and temporal scales.

A2 Modelling Methodology

Model Inputs

A2.1 Predictions have been carried out using the ADMS-Roads dispersion model (v5.1). The model requires the user to provide various input data, including emissions from each section of road and the road characteristics (including road width). Vehicle emissions have been calculated based on vehicle flow, composition and speed data using the EFT (Version 14.1) published by Defra (Defra, 2026a). Model input parameters are summarised in Table A2-1 and, where considered necessary, discussed further below.

Table A2-1: Summary of Model Inputs

Model Parameter	Value Used
Terrain Effects Modelled?	No
Variable Surface Roughness File Used?	Yes – 12km x 12km Cartesian grid at 50m resolution
Urban Canopy Flow Used?	No
Advanced Street Canyons Modelled?	No
Noise Barriers Modelled?	No
Meteorological Monitoring Site	Monks Wood
Meteorological Data Year	2023
Dispersion Site Surface Roughness Length (m)	N/A (variable surface roughness file used)
Dispersion Site Minimum MO Length (m)	1
Met Site Surface Roughness Length (m)	0.3
Met Site Minimum MO Length (m)	1
Gradients?	No

A2.2 AADT flows, diurnal flow profiles, speeds, and vehicle fleet composition data have been provided by Huntingdonshire District Council. Traffic speeds have been estimated based on professional judgement, taking account of the road layout, speed limits and the proximity to a junction. The traffic data used in this assessment are summarised in Table A2-2. Diurnal and monthly flow profiles for the traffic have been derived from the national profiles published by DfT (DfT, 2025).

A2.4 Hourly sequential meteorological data in sectors of 10 degrees from Monks Wood for 2023 have been used in the model. The Monks Wood meteorological monitoring station is located at C.E.H. Monks Wood, approximately 7 km to the northwest of Huntingdon. It is the nearest monitoring station representative of meteorological conditions at the designated sites. Both the designated sites and the Monks Wood meteorological monitoring station will be influenced by the effects of inland meteorology over flat-lying topography. A wind rose for the site for 2023 is provided in Figure A2-7. The station is operated by the UK Met Office. Raw data were provided by the Met Office and processed by AQC for use in ADMS.

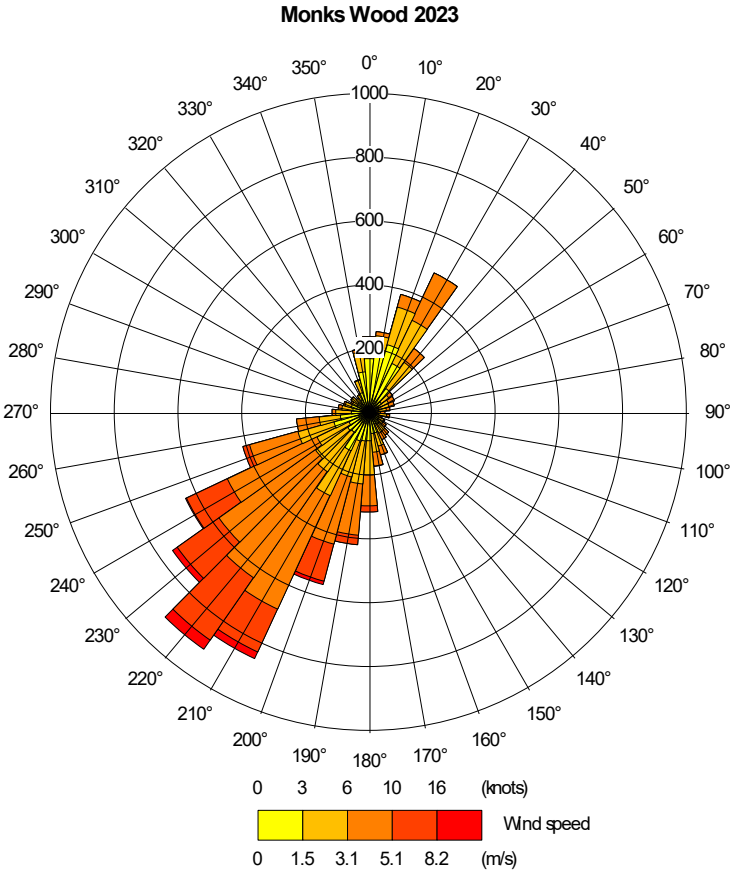

Figure A2-7: Wind Rose

Model Verification

A2.5 Evidence collected over many years has shown that, in most urban areas, dispersion modelling relying upon Defra's EFT has tended to systematically under-predict roadside nitrogen dioxide concentrations. To account for this, it is necessary to adjust the model against local measurements. The model has been run to predict annual mean nitrogen dioxide concentrations during 2023 at the S9 (Fenland District), Earith 1 (Huntingdonshire District), and PFH (Huntingdonshire District) monitoring sites. These sites have been selected because traffic data were available for the adjacent roads. Concentrations have been modelled at the heights of the monitors. The designated sites considered in this assessment are spread out from one another, but there is one monitoring site close to each designated site. For this reason, a separate adjustment factor has been calculated using each monitoring site, for application to roads within 200 m of the nearest designated habitat.

Nitrogen Dioxide

A2.6 Most nitrogen dioxide (NO_2) is produced in the atmosphere by reaction of nitric oxide (NO) with ozone. It is therefore most appropriate to verify the model in terms of primary pollutant emissions of nitrogen oxides (NOx = NO + NO_2). The model output of road-NOx (i.e. the component of total NOx coming from road traffic) has been compared with the 'measured' road-NOx. Measured road-NOx has been calculated from the measured NO_2 concentration and the predicted background NO_2 concentration using the NOx from NO_2 calculator (Version 9.1) available on the Defra LAQM Support website (Defra, 2026a).

A2.7 An adjustment factor has been determined as the ratio of the 'measured' road contribution and the model derived road contribution. This factor has then been applied to the modelled road-NOx concentration for each receptor to provide adjusted modelled road-NOx concentrations. The total nitrogen dioxide concentrations have then been determined by combining the adjusted modelled road-NOx concentrations with the predicted background NO_2 concentration within the NOx to NO_2 calculator (Defra, 2026a).

Nene Washes SAC and Ramsar Site

A2.8 The background annual mean nitrogen dioxide concentration used in the model verification was 6.84 µg/m³, having been derived from the national maps provided by Defra for Local Air Quality Management (Defra, 2026a).

A2.9 AADT flows, and the proportions of HDVs, for the road adjacent to the monitoring site, have been taken to be the same as those on link 125 in Table A2-2. The road and verification site are shown in Figure A2-8.

Figure A2-8: Modelled Road Network & Speed - Nene Washes Verification

Imagery ©2026 Airbus, Landsat / Copernicus, Maxar Technologies.

A2.10 The data used to calculate the adjustment factor are provided below:

- Measured NO_2 : 16.8 µg/m³
- Background NO_2 : 6.84 µg/m³
- 'Measured' road-NOx (using NOx from NO_2 calculator): 21.5 µg/m³
- Modelled road-NOx = 8.37 µg/m³

- Road-NOx adjustment factor: 21.5/8.37 = 2.562[9]

A2.11 The factor implies that the unadjusted model is under-predicting the road-NOx contribution. This is a common experience with this and most other road traffic emissions dispersion models.

Ouse Washes SAC and Ramsar Site

A2.12 The road network and verification site are shown in Figure A2-9.

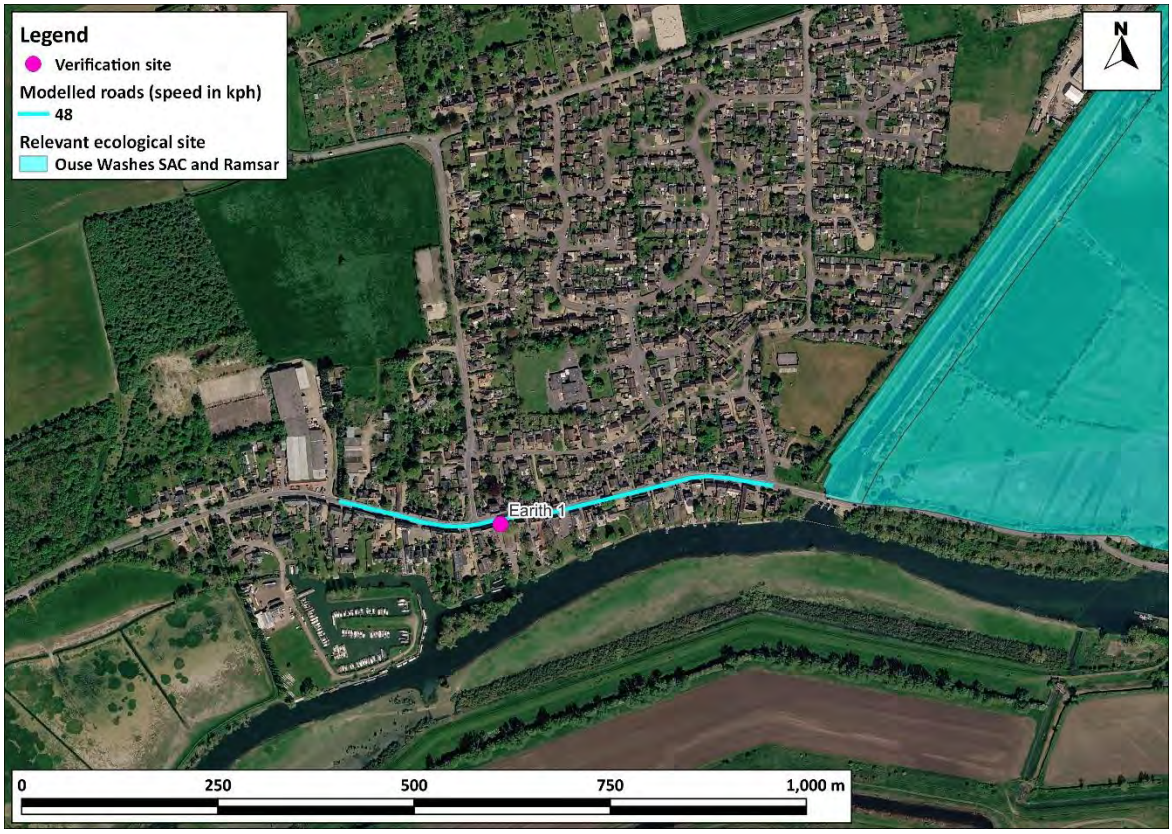

Figure A2-9: Modelled Road Network & Speed - Ouse Washes Verification

Imagery ©2026 Airbus, Landsat / Copernicus, Maxar Technologies.

A2.13 The data used to calculate the adjustment factor are provided below:

- Measured NO_2 : 10.2 µg/m³
- Background NO_2 : 6.72 µg/m³
- 'Measured' road-NOx (using NOx from NO_2 calculator): 7.14 µg/m³
- Modelled road-NOx = 7.64 µg/m³
- Road-NOx adjustment factor: 7.14/7.64 = 0.934[10]

A2.14 As the factor is less than one, no adjustment has been applied to the model. This will provide a worst-case assessment.

[9] Based on un-rounded values.
[10] Based on un-rounded values.

Portholme SAC

A2.15 The road network and verification site are shown in Figure A2-10.

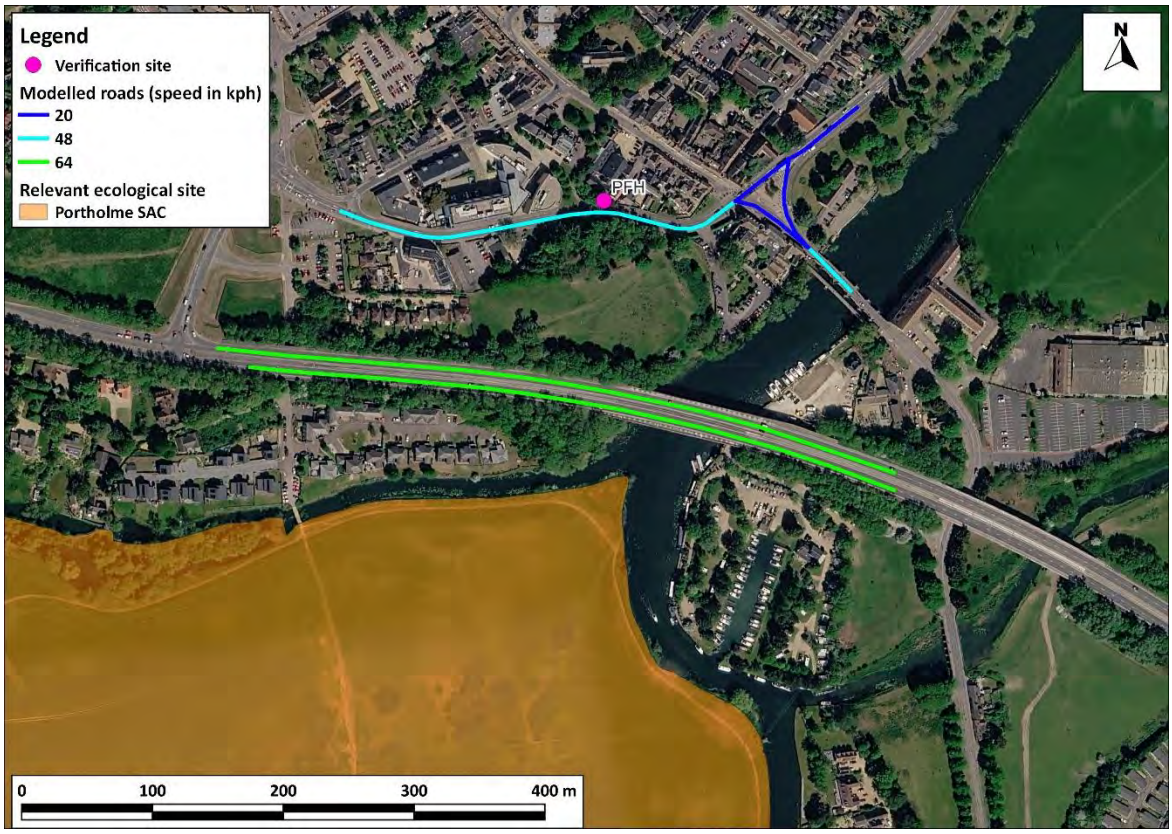

Figure A2-10: Modelled Road Network & Speed – Portholme SAC Verification

Imagery ©2026 Airbus, Landsat / Copernicus, Maxar Technologies.

A2.16 The data used to calculate the adjustment factor are provided below:

- Measured NO_2 : 25.0 µg/m^3
- Background NO_2 : 10.3 µg/m^3
- 'Measured' road-NOx (using NOx from NO_2 calculator): 33.9 µg/m^3
- Modelled road-NOx = 8.54 µg/m^3
- Road-NOx adjustment factor: 33.9/8.54 = 3.970[11]

A2.17 The factor implies that the unadjusted model is under-predicting the road-NOx contribution. Experience elsewhere has shown that this type of modelling is much more likely to under-predict road-NOx alongside slow-flowing 'urban' roads (such as Castle Moat Road, which runs alongside monitor PFH) than beside more open roads (such as the A1307, which runs past the SAC). An adjustment factor of 3.970 has been applied to emissions from all the roads around Portholme SAC, and this is expected to have over-predicted the impacts, making the assessment worst-case.

[11] Based on un-rounded values.

NH_3

A2.18 Development of the CREAM emissions models (AQC, 2020; 2025) included verification of concentrations predicted using the ADMS-Roads dispersion model and measured traffic data against ambient measurements from the most detailed network of roadside monitoring sites which has ever been run in the UK. No further adjustment to the model predictions is considered appropriate.

Post-processing

A2.19 The model predicts road-NOx concentrations at each receptor location. These concentrations have been adjusted using the adjustment factor set out above, which, along with the background NO_2, has been processed through the NOx to NO_2 calculator available on the Defra LAQM Support website (Defra, 2026a). The traffic mix within the calculator has been set to "All non-urban UK traffic" for Nene Washes SAC and Ramsar site and Ouse Washes SAC and Ramsar site, and to "All UK traffic" for Portholme SAC, which are considered suitable for the study areas. The calculator predicts the component of NO_2 based on the adjusted road-NOx and the background NO_2.

Deposition Rates

A2.20 Deposition of NO_2 has not been included within the dispersion model because this is calculated from NOx outside of the model. Instead, deposition has been calculated from the predicted ambient concentrations using the deposition velocities set out in Table A2-3. Deposition velocities refer to a height above ground, typically 1 or 2 m, although in practice the precise height makes little difference and here they have been applied to concentrations predicted at a height of 0 m above ground. The velocities are applied simply by multiplying a concentration ($\mu g/m^3$) by the velocity (m/s) to predict a deposition flux ($\mu g/m^2/s$) and then scaling by time and area to represent kg/ha/yr of the nitrogen component of the molecule. The deposition velocity for NH_3 has been included within the dispersion model to allow for the calculation of depletion. NH_3 deposits much more rapidly than NO_2, meaning that while it is important to include depletion for NH_3, it is relatively trivial for NO_2.

Table A2-3: Deposition Velocities Used in This Assessment

Pollutant	Deposition Velocity (m/s)	Reference
Nitrogen Dioxide	0.0015 m/s (Grassland); 0.003 m/s (Forest)	AQTAG06 (AQTAG, 2011)
NH_3	0.02 m/s (Grassland); 0.03 m/s (Forest)	AQTAG06 (AQTAG, 2011)

A2.21 Wet deposition of the emitted pollutants close to the emission source will be restricted to wash-out, or below cloud scavenging. For this to occur, rain droplets must come into contact with the gas molecules before they hit the ground. Falling raindrops displace the air around them, effectively pushing gasses away. AQTAG06 guidance (AQTAG, 2011) is that the wet deposition of sulphur dioxide, nitrogen dioxide and NH_3 is not significant within a short range. It has thus not been included.

A2.22 Deposition may have an acidifying effect through the release of acid protons during chemical transformation in the soil or biota. Thus, even alkaline gases such as NH_3 can have an acidifying effect. The acidity CLos are expressed as equivalents ('eq'), referring to the molar equivalent of potential acidity. This is calculated from the mass (in g) of the deposited element, taking account of both its atomic mass and its valency. For example, the acidifying potential (in eq) of both ammonium (NH_4^+) and nitrate (NO_3^-) is 1/14 times the deposited mass in grammes (with 14 being the atomic mass of nitrogen), while for sulphate (SO_4^{2-}) it is 2/32 (with 32 being the atomic mass of sulphur). The species

included in the calculation of acid deposition, and their calculated acidifying potentials, are set out in Table A2-4.

Table A2-4: Species Included in Acid Deposition Calculations

Pollutant	Calculation (kg deposition to keq)
N (from deposited NO_2, NH_3)	0.071

A3 Retardation

A3.1 Nitrogen deposition in the future will be less than in 2023. This is because of natural turnover of the vehicle fleet as well the response to policies to reduce emissions from many sectors across Europe. Natural England sometimes requests that the degree of 'retardation' to ongoing reductions in nitrogen deposition should be calculated, and that this should be done assuming a linear trajectory (in this case between 2023 and 2046) which also continues at the same rate afterwards[12]. This calculation has focused on the transect within each site with the highest PC in-combination with other projects and plans.

A3.2 As explained in Paragraph 3.12, background deposition has been assumed to change between 2023 and 2046 based on JNCC's Nitrogen Futures Business-as-Usual modelling, but only allowing 7 years of change because Nitrogen Futures did not make predictions beyond 2030. The total reductions to 2046 are therefore highly likely to have been under-predicted, which makes the 'retardation' calculation particularly worst-case.

A3.3 The first step of the 'retardation' calculation is to show the magnitude of improvement which is forecast between 2023 Base and the 2046 Zero Growth scenario, and between 2023 Base and the 2046 With Local Plan scenario. These improvements are shown in Table A3-1, expressed both as the 23-year total and as the change per year. For example, deposition at 2 m from the road along Transect E in the Nene Washes SAC and Ramsar site is expected to be 3.7 kgN/ha/yr lower in 2046 than in 2023 if there is no increase in traffic over this 23-year period. With the Local Plan and all other traffic growth, deposition will be 1.6 kgN/ha/yr lower than in 2023.

Table A3-1: Reduction in Nitrogen Deposition between 2023 and 2046 the Worst-case Transect in Each Designated Site, in kgN/ha/yr[a]

Dist from Road (m)	Change from 2023 **Base to '20**46 Zero **Growth'**		Change from 2023 **to '20**46 With Local **Plan'**	
	over 23 years	per year	over 23 years	per year
Nene Washes SAC and Ramsar (Transect E)				
2	-3.7	-0.16	-1.6	-0.07
3	-3.5	-0.15	-1.6	-0.07
5	-3.2	-0.14	-1.6	-0.07
9	-2.8	-0.12	-1.6	-0.07

5	-2.2	-0.09	0.0	0.000
9	-1.8	-0.08	-0.1	-0.005
17	-1.5	-0.06	-0.2	-0.010
33	-1.1	-0.05	-0.3	-0.015
65	-0.8	-0.03	-0.4	-0.017
129	-0.5	-0.02	-0.4	-0.016
200	-2.4	-0.11	-1.6	-0.070
Portholme SAC (Transect A)				
44	-3.1	-0.13	-2.6	-0.11
65	-2.7	-0.12	-2.3	-0.10
129	-2.0	-0.09	-1.9	-0.08
200	-1.7	-0.07	-1.6	-0.07

[a] The majority of values are shown as negatives since they are reductions over time.

A3.4 The next step is to divide the PC by the 'per year' improvements to the 2046 Zero Growth scenario. These results are shown in Table A3-2. At Transect E in the Nene Washes SAC and Ramsar site, the Local Plan alone will retard the improvements by between 0.17 and 1.09 years, while the Local Plan in-combination, will retard the improvements by between 1.5 and 13 years. At Transect D in the Ouse Washes SAC and Ramsar site, the Local Plan alone will retard the improvements by between 0.15 and 0.53 years, while the Local Plan in-combination, will retard the improvements by between 7.2 and 24 years. At Transect A in the Portholme SAC, the Local Plan alone will retard the improvements by between 0.16 and 0.27 years, while the Local Plan in-combination, will retard the improvements by between 1.3 and 3.5 years.

A3.5 It should be stressed that this calculation is highly precautionary. While this is the only approach to using JNCC's forecasts with which Natural England currently agrees, it assumes that the UK will break a raft of long-standing legal commitments to reduce emissions and environmental impacts in the future. In addition to this, regarding the years after 2046, which are invoked by the concept of a 'delay' while these years have not been modelled, it is reasonable to expect a significant volume of electric vehicles in the fleet by this time, which have no local emissions of NOx or NH_3. This means that the years of delay statistics are likely to have been significantly overpredicted.

Table A3-2: Years Delay to Reductions in Nitrogen Deposition at the Worst-case Transect in Each Designated Site, in kgN/ha/yr

Dist from Road (m)	Local Plan Alone		Local Plan In Combination	
	PC (kg/N/ha/yr)	Years Delay[a]	PC (kg/N/ha/yr)	Years Delay[a]
Nene Washes SAC and Ramsar (Transect E)				
2	-0.17	1.09	2.07	13.0
3	-0.16	1.03	1.89	12.5

Statement of Representations Procedure for the Huntingdonshire Local Plan to 2046

Huntingdonshire District Council has prepared a pre-submission draft local plan entitled “Huntingdonshire Local Plan to 2046” which is being published for representations. This is the draft Local Plan which the Council propose to submit to the government. It sets out the Council’s strategy for future growth and change through to 2046.

The representations period runs from **16th September to 28th October 2026**.

You can see read the Local Plan on our engagement portal at Huntingdonshire District Council Consultation Home - Keystone.

During the consultation period a paper copy of the draft local plan will be available at Pathfinder House, St Mary’s Street, Huntingdon, PE29 3TN, during normal office opening days and times on Mondays to Thursdays between 8:45am and 5pm and on Fridays between 8:45am and 4.30pm.

We strongly encourage representations to be made through our online engagement portal at Huntingdonshire District Council Consultation Home - Keystone
The portal includes a ‘frequently asked questions’ section which includes guidance eon how to register, login and make representations on the portal.

If you have difficulty responding online representations may be made in writing by completing a response form available on our website, or you can request a form by email to local.plan@huntingdonshire.gov.uk or by phone on 01480 388424.

Responses form may be returned by email to local.plan@huntingdonshire.gov.uk or in paper form to Ms Clara Kerr, Head of Planning, Infrastructure and Public Protection, Huntingdonshire District Council, Pathfinder House, St Mary’s Street, Huntingdon, Cambridgeshire, PE29 3TN.

Please note that the representations period **closes at 23:59 on Wednesday 28th October 2026**. As per current planning regulations all representations must be received by this time. Any representations received after this time will not be considered to be duly made. Only representations received within the specified period have a statutory right to be considered in the examination process. As this is a formal representations period no exceptions or extensions can be made.

Representations

During this period representations are required to state how they relate to ‘Soundness’ and ‘Legal Compliance’.

The tests of soundness are set out in the National Planning Policy Framework (December 2024 version) at paragraph 36. Plans are considered to be sound if they are:

a) Positively prepared – providing a strategy which, as a minimum, seeks to meet the area's objectively assessed needs; and is informed by agreements with other authorities, so that unmet need from neighbouring areas is accommodated where it is practical to do so and is consistent with achieving sustainable development;
b) Justified – an appropriate strategy, taking into account the reasonable alternatives, and based on proportionate evidence;
c) Effective – deliverable over the plan period, and based on effective joint working on cross-boundary strategic matters that have been dealt with rather than deferred, as evidenced by the statement of common ground; and
d) Consistent with national policy – enabling the delivery of sustainable development in accordance with the policies in this Framework and other statements of national planning policy, where relevant.

Legal compliance focuses on the processes by which the Local Plan has been prepared. This includes consideration of whether:

a) The Local Plan is included within the Local Development Scheme, and the key stages set out within that have been followed. The most recent Local Development Scheme was published in May 2026.
b) The process of community involvement is in general accordance with the Statement of Community Involvement.
c) A Sustainability Appraisal report is published to accompany the Local Plan.
d) The Local Plan complies with all other relevant requirements of the Planning and Compulsory Purchase Act (prior to the commencement of changes on 3 March 2026) and the Town and Country Planning (Local Planning) (England) Regulations 2012, as amended (the Regulations).

If you wish to make a representation seeking a modification to the Local Plan you should clearly state in what way you consider the Local Plan, or a specific element of the Local Plan, not to be legally compliant or unsound as explained above. Your representation should be supported by evidence wherever possible, which may be provided as a supporting document. Please be as precise as possible, and do not simply refer to an attached supporting document(s). For your representation to be considered, it must be set out within your submission, not wholly contained within a supporting document.

Wherever possible, state how you think the Local Plan should be modified to make it sound and legally compliant. Please put forward your suggested revised wording for any textual change. Where you wish to make representations on more than one part of the Local Plan, please submit separate representations for each.

Representations may be accompanied by a request to be notified at a specific address (email or postal) of any of the following:

a) the submission of the local plan for independent examination under section 20 of the Act,
b) the publication of the recommendations of the person appointed to carry out an independent examination of the local plan under section 20 of the Act, and

c) the adoption of the local plan.

Detailed advice about making representations can be found on the Council's website.

Additional Documents

Representations are also being invited on the Proposed Submission Policies Map, and the accompanying Sustainability Appraisal (incorporating the requirements of Strategic Environmental Assessment) and Habitats Regulations Assessment.

Data Protection

Please note that we cannot accept anonymous representations. Representations will be published on the Council's engagement portal and will include the names and organisations who submitted them. Other personal contact details will not be published on the engagement portal. Please refer to our privacy notice for further details, which can be found on our website. Copies of all representations (including respondent details) received during the consultation period will also be provided to the Planning Inspectorate as part of the submission and examination of the Local Plan. Please refer to the Planning Inspectorate's Privacy statement for further details.

Following the representations period

Following the representations period the draft local plan, all proposed submission documents and all duly made representations will be submitted to the Secretary of State for examination. The Council aims to complete the submission no later than 31st December 2026.

6. Electricity Network Capacity....10
7. Education Infrastructure....11
8. Healthcare....13
9. Green and Blue Infrastructure....15
10. Waste Management....16
11. Additional Approaches to Infrastructure Provision....16
12. Further Information....17

1. Introduction

1.1. This report follows a request by Members at Full Council, for information relating to infrastructure and the implications for the delivery of the emerging Local Plan to be brought together, in a consolidated way. This report does not seek to substitute or supersede any of the documents referred to within, and should be read alongside, or considered a summary of the key outcomes and positions from the evidence documents.

1.2. This report forms part of the appendices to the report submitted to Council for consideration on 9 September 2026 regarding the Pre-Submission Local Plan to 2046.

2. Background

2.1. The Council produced a Stage 1 and 2 Infrastructure Delivery Study. The Infrastructure Delivery Studies (IDS) identify the infrastructure required to support growth arising from the local plan. They assess the baseline infrastructure and cumulative impact of growth across the District and to individual settlements (where growth is proposed) as a result of the local plan to 2046.

2.2. The following stakeholders and infrastructure providers were consulted at both stages of the studies, ensuring a comprehensive assessment of all infrastructure:

- Anglian Water
- British Horse Society
- Cadent Gas
- Cambridgeshire Constabulary
- Cambridgeshire County Council – Education, Minerals and Waste, Public Health, Transport, Digital Communities etc.
- Cambridgeshire Fire & Rescue Service
- CPCA
- East of England Ambulance Service NHS Trust
- East West Rail
- Environment Agency
- HDC – Active Lifestyles, Health, Parks and Open Spaces, Operations, landscape and ecology, economic development & regeneration etc.
- Historic England
- Lead Local Flood Authority
- Middle Level Commissioners & IDBs
- National Highways
- National Highways
- Natural England
- Neighbouring authorities

- Network Rail
- NHS
- Sport England
- UK Power Networks
- Wildlife Trust

2.3. Stage 1 established a baseline of current infrastructure provision and deficits within the District. It tested a series of different growth options/locations to help identify a final growth strategy, alongside drawing the findings from a number of complementary evidence base documents, including but not limited to The Sustainability Appraisal, Transport Strategy, Water Cycle Study and Habitats Regulations Assessment and information from consultees. It also identified infrastructure required for a number of Strategic sites in consultation with infrastructure providers.

2.4. The Stage 2 Infrastructure Delivery Study assessed the infrastructure needed to support the emerging Huntingdonshire Local Plan to 2046, including employment and housing growth, five strategic housing allocations and two strategic employment allocations. It identified infrastructure requirements, costs, delivery mechanisms and phasing considerations across transport, education, healthcare, utilities, emergency services, green infrastructure, community facilities and sports and leisure. Infrastructure providers were consulted to inform the findings.

2.5. Stage 2 also identified what infrastructure will be required on large-scale strategic sites, where infrastructure can more readily be provided on-site to create sustainable new communities.

2.6. The Stage 2 Infrastructure Delivery Study includes three infrastructure schedules which list the infrastructure required to support the emerging Local Plan at a range of spatial scales: site specific; settlement focused; and district-wide. These schedules include infrastructure projects, costs, funding sources and delivery leads, these can be used alongside planning policies to leverage/determine developer contributions towards infrastructure, and inform site specific requirements as part of the planning application process. They also help to inform infrastructure providers of the infrastructure required to support growth to enable forward planning. If considered appropriate the schedules can also be used to identify potential CIL spending or identify to local communities' infrastructure or projects that could be funded through town or parish meaningful contributions[1].

[1] A proportion of CIL that must be passed to local communities, particularly parish and town councils. Under the CIL regulations, parish councils receive 15% of CIL receipts generated in their area (capped), rising to 25% where there is an adopted Neighbourhood Plan. This share is intended to give

2.7. The report concludes that growth as a result of the Local Plan to 2046 can be supported and that infrastructure is deliverable over the lifetime of the plan and can be delivered through a range of funding solutions, thus meeting the threshold for plan-making. It identifies that infrastructure projects and utility upgrades will be required to be implemented in parallel with development. It highlights that infrastructure planning will require ongoing monitoring and regular updates as capacity, costs and delivery programmes evolve.

3. Transport and Travel

A141 and St Ives Transport Improvement Scheme

3.1. The IDS identifies the A141 and St Ives Transport Improvements Scheme, including the A141 bypass, as an important infrastructure requirement for the Local Plan. It is described as critical to delivery of the North Huntingdon growth cluster.

3.2. Key elements include:

- New A141 bypass from Spittals Interchange to Sawtry Way.
- New and upgraded roundabouts.
- Junction improvements and signalisation.
- Integration with public transport and active travel measures.

3.3. Without the scheme:

- Congestion will continue on the A141.
- Public transport and park-and-ride measures become far less effective.
- Strategic sites at Wyton Airfield and Lodge Farm become more difficult to deliver.

Public Transport

3.4. Major improvements required include:

- Park and Ride facilities at Wyton Airfield and Huntingdon Racecourse.
- Guided Busway enhancements.
- New bus services and route extensions.
- Bus priority infrastructure and dedicated bus roads.

Active Travel

3.5. Required projects include:

- A141 cycleway improvements.
- Local Cycling and Walking Improvement schemes.

local communities a meaningful ability to influence and benefit from development-related infrastructure investment.

- Strategic walking and cycling links connecting major growth sites.

Council Response

3.6. The A141 and St Ives Improvements Scheme has been the subject of substantial public engagement and extensive collaborative working between HDC, Cambridgeshire and Peterborough Combined Authority and Cambridgeshire County Council (CCC). It is a CPCA project, which is identified within their existing list of transport schemes; with the technical work being delivered via consultants agreed by CCC.

3.7. The scheme is crucial to delivery of the North Huntingdon Opportunity Zone growth area which was established through the CPCA's Local Growth Plan. Collaboration on the scheme has recognised the importance of the Local Plan as a delivery vehicle for this element of the Local Growth Plan. Engagement has included a series of ongoing meetings of the A141 Project Board, along with more topic specific meetings primarily between HDC and CPCA regarding business cases and deliverability. A Statement of Common Ground is being prepared to identify progress and areas of agreement on the project along with a prospective timetable for the full business case and scheme delivery.

3.8. The housing trajectory to support the Local Plan reflects the need for the A141 and St Ives Improvements Scheme to be delivered before substantial development can take place, where development is dependent upon it. All schemes in North Huntingdon are phased for the first homes to complete beyond 2033/34 to allow housing growth to align with infrastructure delivery.

3.9. Huntingdonshire District Council have also been working with Cambridgeshire County Council (CCC) – Strategic Transport Modelling Team to develop the Huntingdonshire's Strategic Transport Assessment. This is using the CPCA's CAPCAM strategic transport model. The role of Cambridgeshire County Council has been to input into the project brief prior to issuing invitation to tender and review of submissions to assist with decision-making on appointment. Joint participation has continued through technical review meetings, discussions with consultants on details of modelling and mitigation options, review of technical outputs and provision of advice and commentary at all stages. This allows a cross boundary strategic response to Huntingdonshire's Strategic Transport Assessment with agreement across the two authorities throughout the process. Collaboration and engagement is ongoing. Engagement with CCC continued in relation to transport and growth options, where CCC confirmed that they are confident in the modelling approach and collaboration on the work. CCC noted that the A141 upgrade will assist with development at Lodge Farm and Wyton Airfield in particular. The Councils discussed the delivery of strategic sites and the need for phasing. CCC noted that A141 upgrade would remove transport

pressure on the A1123 and A1307 and in St Ives and that they are working with the Cambridgeshire and Peterborough Combined Authority (CPCA) on the development of the A141 and St Ives transport improvement scheme. CCC remain engaged with HDC to advise on transport and travel issues throughout preparation of the local plan, including being committed to providing support through the examination in public.

3.10. The Local Plan has included a policy on Supporting and Enabling Strategic Infrastructure to facilitate the delivery of strategic infrastructure. This includes the proposed A141 upgrade and rerouting, the proposed St Ives Transport Improvement Scheme, and initiatives that improve accessibility in rural parts of the district including public transport and active travel.

3.11. Strategic site allocation North Huntingdon 3 (Lodge Farm) includes a requirement for realignment route for the A141 including land for the roadway and active travel infrastructure along with associated landscaping and drainage infrastructure. It also requires the provision of transport infrastructure improvements proportionate to the scale of development including upgrades to the A141 and provision of public transport infrastructure at least one mobility hub and active travel routes. The site has been assessed through the Infrastructure Delivery Study and the Whole Plan Viability Assessment to demonstrate delivery.

3.12. Strategic site allocation North Huntingdon 4 (Wyton Airfield) includes a requirement for transport infrastructure improvements including upgrades to the A141, retention of land for a park and ride site, linkages to the Cambridgeshire Busway and provision of active travel routes along with associated landscaping and drainage infrastructure. The site has been assessed through the Infrastructure Delivery Study and the Whole Plan Viability Assessment to demonstrate delivery.

4. Water Supply

4.1. Huntingdonshire lies within a seriously water stressed area. Regional water supply plans do not yet fully reflect increased housing growth requirements following the revised NPPF standard method.

4.2. Key requirements to support growth as a result of the Local Plan include:

- Continued strategic engagement with Anglian Water.
- Water efficiency standards for all development.
- Greater use of water recycling and rainwater harvesting.
- Ongoing delivery of the Grafham-to-Cambridge Pipeline.

4.3. The report supports:

- 90 litres/person/day residential water consumption target.
- Enhanced water efficiency standards for commercial development.

Council Response

4.4. The Local Plan to 2046 includes a policy on water efficiency that goes beyond the national requirements it requires new residential development to demonstrate that it is designed to utilise fixtures and fittings that result in an average usage of 90 litres per person per day of mains supplied/ potable water. It also requires non-residential development to achieve a minimum of 3 credits in WAT01 water consumption category, or an equivalent standard set out in any future update to BREEAM; and asks that it has undertaken an assessment of non-domestic supplies if required by Anglian Water or Cambridge Water meeting any additional requirements as a result.

4.5. A Statement of Common Ground (SoCG) with Anglian Water demonstrates their support for the policy. A Statement of Common Ground with Greater Cambridge Planning also demonstrates how the Councils have worked collaboratively to address the issue of water supply. These SoCGs (along with other collaboration documents) are publicly available as part of the evidence library[2] for the Local Plan Update.

4.6. The Local Plan policy 'Managing Surface Water' requires the incorporation of rainwater harvesting, unless demonstrated to be inappropriate.

5. Wastewater Treatment Capacity

5.1. The Water Cycle Study and Infrastructure Delivery Study identifies that Huntingdon, Somersham and Brampton WRC catchments do currently not have sufficient capacity and no planned investment for AMP8.

5.2. Ramsey/Sawtry Water Recycling Centres (WRC). Peterborough (Flag Fen), and St Neots (which has network capacity constraints), have some capacity, but would not have capacity to serve all the growth planned in their catchments to 2046.

5.3. The report emphasised:
- Local Plan allocations must be phased in line with treatment capacity upgrades.
- Early engagement with Anglian Water is required.

- [2] Statement of Common Ground Between HDC and Anglian Water (Updated August 2026) & Greater Cambridge Proposed Submission Plan - Draft Statement of Common Ground

Council Response

5.4. Huntingdonshire District Council has engaged with Anglian Water throughout Local Plan preparation. A Statement of Common Ground (SoCG)[3] sets out how Anglian Water will support growth arising from the Plan to 2046.

5.5. The SoCG identifies St Neots WRC for a growth scheme between 2025 and 2030. Anglian Water is assessing growth forecasts and capacity requirements across all 2025-2030 WRC growth schemes and prioritising investment based on site-specific risks.

5.6. HDC and Anglian Water agree that several Water Recycling Centres serving planned growth through the Local Plan to 2046 will require capacity upgrades to support development to 2046. Both parties will continue to work together to align wastewater infrastructure delivery with planned allocated growth, this will include the phasing of allocated sites to coincide with infrastructure enhancements and delivery.

5.7. AW confirms that, upgrades at Huntingdon (Godmanchester), Brampton, Elton and Somersham WRCs will be assessed through DWMP28[4] to inform AMP9[5] (2030–2035) investment decisions, subject to regulatory approval and funding. For other catchments, infrastructure delivery will need to be phased alongside development trajectories, with AW's June 2026 strategic sites guidance[6] allowing temporary foul drainage connections to support early phases of major developments where appropriate.

5.8. AW has advised that they have recently identified an approach to strategic sites (500+ homes), such as The Lattenburys and Godmanchester 3. This approach is to prioritise development in locations where sufficient infrastructure capacity is already in place to support growth from the outset.

5.9. All parties agree that to overcome the issue of no existing WRC to serve the allocations identified in the Local Plan to 2046, onsite solutions could be a solution to be taken forward. Developers have an option to expedite delivery by providing an onsite WRC with potential to recover treated wastewater for non-potable reuse to supply onsite industrial uses, subject to the necessary discharge consents, to be agreed by the Environment Agency

[3] Statement Of Common Ground Between Huntingdonshire District Council and Anglian Water

[4] Drainage and Wastewater Management Plan
[5] Asset Management Plan – regulated by Ofwat the AMP periods (which cover 5-year time periods) sets out capital investment, infrastructure upgrades and environmental targets for water and wastewater companies.
[6] See Appendix 2 of Statement Of Common Ground Between Huntingdonshire District Council and Anglian Water

5.10. The Local Plan has included a policy on Supporting and Enabling Strategic Infrastructure to facilitate the delivery of strategic infrastructure. This includes strategic water infrastructure and wastewater networks.

5.11. The Local Plan includes a policy on Managing Wastewater which asks that "there is agreement with the Council in liaison with Anglian Water that there is capacity for wastewater treatment and a sustainable point of connection is or can be made available to serve the whole development for its lifetime, and that a sustainable foul/ used water strategy has been prepared and agreed with Anglian Water as the sewerage undertaker to establish whether any upgrades are necessary to ensure the provision of the required infrastructure to serve the whole development for its lifetime, prior to the occupation of the development." If upgrades to the infrastructure are necessary, the proposal must include an agreed plan for delivery with Anglian Water, where development is being phased, this must be demonstrated for each phase before first occupation.

5.12. Each site allocation within the local plan includes the requirement for early engagement and agreement with the Council in liaison with the Environment Agency and Anglian Water Services that they are satisfied that waste water flows from the proposal can be accommodated where relevant

6. Electricity Network Capacity

6.1. Through the findings of the Infrastructure Delivery Study and ongoing engagement with UK Power Networks (UKPN) the following was identified:

- UKPN will need to provide new infrastructure in the central section of Huntingdonshire in the medium term (post ED3[7] (2028 – 2033)) by means of a primary substation assuming proposed major development progresses in the forecasted timescales.
- There are some localised needs for reinforcement in areas such as Brington/Kimbolton, being addressed during ED2 and ED3. There are also plans to increase capacity to the east of St Neots and Godmanchester during ED3.
- There is potential for the need for cabling/connection work at Sawtry and Kimbolton 2: South East of Bicton Industrial Estate, Stow Road.
- To the north of the District, UKPN foresees potential for capacity constraints at Orton Primary Substation, which is relatively close to capacity and may require reinforcement. Dependent on energy intensity and efficiency, some individual pockets inside the new development areas may also need to await delivery of further Extra

[7] ED refers to Ofgem five-year price control framework it sets the revenue allowances, investment projects and performance targets for organisations such as UK Power Networks. Each ED lasts 5 years e.g. ED3 runs from 2028 to 2033.

High Voltage (EHV) reinforcements, currently being planned for the longer term with the neighbouring Distribution Network Operator (National Grid Electricity Distribution). The sites most affected are Peterborough Services 1: West of the A1 and south of Peterborough Motorway Services and Yaxley 1: 18 Eagle Business Park, Phase 3

Council Response

6.2. Huntingdonshire District Council have been working with UK Power Networks throughout the preparation of the Local Plan.

6.3. The Council has worked with UK Power Networks to ensure development as a result of the Local Plan can be accommodated. A Statement of Common Ground with UKPN notes that:

- UKPN are the responsible body for the operation, maintenance and upgrade of the electricity network infrastructure and that there is strategic alignment between more immediate development needs (Year 11 and under), existing network availability and planned network reinforcement e.g. works at Huntingdon Grid, reinforcement of Godmanchester Primary, establishment of a new supply to Hinchingbrooke Hospital and establishment of a new primary substation to the east of St Neots.
- The cumulative impact of growth as a result of the Local Plan and growth in neighbouring areas have been adequately addressed through the development of the IDS, the involvement of HDC in the Regional Energy Strategic Planning Forum and through UKPNs continued engagement with other energy infrastructure providers including National Grid.
- UKPN will investigate whether localised needs for reinforcement in areas such as Brington and Kimbolton are required in the long-term and include measures within the relevant price review process.
- Peterborough Services 1: West of the A1 and south of Peterborough Motorway Services and Yaxley 1: 18 Eagle Business Park, Phase 3 may need to be phased to accommodate additional capacity development at Orton Primary (circa 3–5 years). However, overall requirements for system upgrades will depend on the energy intensity and efficiency of end uses. If demand exceeds the wider system capacity, some sites may need to await delivery of further EHV reinforcements. The timeframe associated with these EHV reinforcements lies in the range of 5-10 years.
- There will be a need in the medium term (post ED3/2033) to establish new infrastructure in the central section of Huntingdonshire by means of a primary substation. This will be triggered by developments at Huntingdon 4: Wyton Airfield and Huntingdon 3: Lodge Farm.

Preparations including site selection and cable routes are currently being reviewed.

7. Education Infrastructure

7.1. Huntingdonshire District Council has been working with Cambridgeshire County Council throughout the preparation of the Local Plan including through the development of the Infrastructure Delivery Study (IDS). The IDS identifies that growth as a result of the local plan generates the following education requirements:

Infrastructure	Estimated Cost
Early Years	£27.5m
Primary Schools	£187.5m
Secondary Schools	£143.6m
SEND	£34.4m

7.2. The IDS identifies key requirements including:

- Multiple new primary schools.
- New secondary schools on strategic sites.
- Additional SEND provision.
- Expansion of existing schools across settlements.

Council Response

7.3. The Council has worked with Cambridgeshire County Council (CCC) to ensure development as a result of the Local Plan can be accommodated and how the Local Plan can allocate growth to sustain the continued provision of education in settlements. A Statement of Common Ground[8] with CCC notes that:

- The cumulative impact of growth as a result of the Local Plan and growth in neighbouring areas have been adequately addressed and identified through the development of the Infrastructure Delivery Studies.
- Any existing deficits in education infrastructure provision is not the remit of Huntingdonshire's Local Plan to 2046.
- CCC are the responsible body for the provision of educational infrastructure across Huntingdonshire which meets basic need requirements. Monies levied through developer contributions by Huntingdonshire District Council will assist in the delivery of future

[8] Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

infrastructure provision to meet the needs of growth across the plan period. However, where section 106 funds have not been secured, and demand for expansion can be evidenced, Cambridgeshire County Council will be encouraged to apply for funding through the Community Infrastructure Levy (CIL).

- Schools and academy trusts are responsible for managing the maintenance and condition of existing infrastructure.
- Strategic sites North Huntingdon 3: Lodge Farm, North of A141, North Huntingdon 4: Wyton Airfield and Hemingford Abbots 1: The Lattenburys identified within the Pre-Submission Local Plan are expected to deliver primary and secondary education provision. This is adequately addressed within the relevant site allocation policies, the Infrastructure Delivery Study and accompanying Schedule with specific detail to be agreed at planning application stage.
- Strategic sites Needingworth 1: Giffords Park, East of B1040 and St Neots 1: East of Loves Farm (Tithe Farm) identified within the Pre-Submission Local Plan are expected to provide developer contributions to contribute to educational infrastructure delivery with specific detail to be agreed at planning application stage. This is adequately addressed within the relevant site allocations policies, the Infrastructure Delivery Study and accompanying Schedule.
- The expansion of Abbey College, Ramsey will deliver an additional 150 secondary places and is expected to be completed by 2027, which will provide additional places for the wider catchment and contribute, alongside the provision of developer contributions, to meeting future growth needs.
- SEND provision does not operate on catchment areas and places are sorted by the type of facility across Cambridgeshire that best meet a child's needs, taking into consideration parental preference at all times. Contributions will be requested from developments towards countywide schemes.
- On smaller sites, off-site developer contributions will be determined at application stage and guided by the Infrastructure policies and the Developer Contributions Appendix as set out in the Local Plan in consultation with CCC.

7.4. Strategic sites identified within the local plan set out specific on-site requirements for education provision, these sites include North Huntingdon 3: Lodge Farm, North of A141, North Huntingdon 4: Wyton Airfield and Hemingford Abbots 1: The Lattenburys.

8. Healthcare

8.1. Huntingdonshire District Council has been working with NHS Central East Integrated Care Board and NHS Property (CE ICB) throughout the preparation of the Local Plan including through the development of the Infrastructure Delivery Study (IDS). The IDS identifies that healthcare capacity is already under pressure, with most GP practices reporting capacity deficits.

8.2. The IDS identifies the following requirements as a result of growth from the Local Plan:

- an approximate investment of between £19,415,062 - £25,098,147 (at present day costings) would be needed to provide the additional 3,857 sqm of primary care-led floorspace necessary to directly mitigate the impact of planned housing growth.
- New Neighbourhood Health Centres on major strategic sites.
- Expansion of existing facilities elsewhere.

Council Response

8.3. The Council has worked with CE ICB to ensure development as a result of the Local Plan can be accommodated. A Statement of Common Ground[9] with CE ICB notes that:

- The cumulative impact of growth as a result of the Local Plan and growth in neighbouring areas have been adequately addressed and identified through the development of the Infrastructure Delivery Studies.
- CE ICB are the responsible body for the planning and commissioning of health infrastructure across Huntingdonshire District Council and developer contributions from new housing growth will play a key role in guaranteeing the delivery of future health infrastructure provision to meet the needs of growth across the plan period.
- Any existing deficits in infrastructure provision is not the remit of Huntingdonshire's Local Plan to 2046.
- Delivery of new floorspace will be required on-site for the strategic housing allocations of North Huntingdon 3: Lodge Farm, North of A141, North Huntingdon 4:Wyton Airfield and Hemingford Abbots 1: The Lattenburys where the need for approximately 3,100sqm GIA of new primary care-led floorspace is required. Interim facilities during early phases of the development may be required and will be determined a planning application stage as part of a phasing plan and Section 106 agreement. This is adequately addressed within the relevant site allocation policies, the Infrastructure Delivery Study and

[9] Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

accompanying Schedule. With specific detail to be agreed at planning application stage.

- Primary Care resulting from site allocation St Neots 1: East of Loves Farm (Tithe Farm) would require the extension/refurbishment of an existing Primary Care facility. This would be determined at application stage. This is adequately addressed within the relevant site allocation policies, the Infrastructure Delivery Study and accompanying Schedule. Specific details are to be agreed at planning application stage.
- On sites where less floorspace needs are generated, provision through off-site financial contributions towards the extension/refurbishment of existing premises will be determined at application stage and guided by the Infrastructure policies and the Developer Contributions Appendix as set out in the Local Plan.

8.4. Strategic sites identified within the local plan set out specific on-site requirements for healthcare provision, these sites include North Huntingdon 3: Lodge Farm, North of A141, North Huntingdon 4: Wyton Airfield and Hemingford Abbots 1: The Lattenburys

Ambulance Services

8.5. The IDS also identifies that:

- Existing ambulance facilities are operating at capacity.
- Growth across Huntingdonshire and neighbouring authorities will worsen pressure.
- A new ambulance hub/station is required, estimated at £22 million.

Council Response

8.6. Hinchingbrooke Hospital Allocation (Huntingdon 1) in the Pre-Submission Local Plan, sets out criteria for an ambulance station as part of the redevelopment of Hinchingbrooke Hospital. This can be constructed to meet existing and future needs.

9. Green and Blue Infrastructure

9.1. The Infrastructure Delivery Study Identifies district-wide requirements as a result of growth from the Local Plan. These include a requirement for:

- 36.94 ha parks and gardens.
- 27.71 ha amenity greenspace.
- 83.12 ha natural and semi-natural open space.
- 11.54 ha equipped play space.
- 9.7 ha allotments/community gardens.

9.2. The report also supports strategic projects such as:

- Paxton Pits Nature Reserve expansion.
- Wider green corridors and nature recovery projects.

Council Response

9.3. The Pre-Submission Local Plan includes a number of policies on Green and Blue infrastructure including: LP4 ‘Green and Blue Infrastructure Priority Areas’, LP 19 ‘Green and Blue Infrastructure’ where development will be expected to support green and blue infrastructure and incorporates open/ green space in accordance with 'Appendix 3: Developer Contributions'. The Developer Contributions Appendix includes enhanced green space standards to that of the current adopted Local Plan to 2036 including open space, outdoor sports, play space and allotments.

9.4. Policy LP 55 looks to protect existing open spaces, outdoor sport and recreational facilities.

9.5. All large-scale residential-led allocations specifically require strategic green infrastructure within the policy criteria :

- North Huntingdon 3 - Lodge Farm, North of A141
- North Huntingdon 4 - Wyton Airfield
- St Neots 1 - East of Loves Farm (Tithe Farm)
- Hemingford Abbots 1 - The Lattenburys
- Needingworth 1 Giffords Park, East of B1040

9.6. Some smaller scale sites also set out specific open space requirements such as Fenstanton 1 - Galley Hill and Godmanchester 2 - South of Godmanchester off the A1198. All sites will be required to incorporate open/ green space in accordance with 'Appendix 3: Developer Contributions' where applicable.

10. Waste Management

10.1. The findings from the Infrastructure Delivery Study identifies a strategic need for:

- New Household Recycling Centre capacity.
- A replacement waste transfer station after 2036.
- Additional waste handling infrastructure to support growth.

Council Response

10.2. Huntingdonshire District Council has identified these requirements within the infrastructure delivery schedule and will continue to engage with the County Council on the location of sites as more information becomes available.

11. Additional Approaches to Infrastructure Provision

11.1. The Pre-Submission Local Plan includes a comprehensive framework to ensure infrastructure is delivered alongside new development. Policy LP12 requires developers to provide the necessary on-site and, where appropriate, off-site infrastructure to address the direct and cumulative impacts of growth. Infrastructure must be delivered at the right time to avoid adverse effects on existing communities, and existing facilities may need to be retained or enhanced depending on the scale of development.

11.2. Policy LP13 sets out the developer contributions that may be required to support infrastructure provision, with further guidance provided through the Developer Contributions Appendix. Together, these policies help ensure that the costs of new infrastructure and services arising from development are appropriately addressed.

11.3. Strategic infrastructure investment is recognised as essential to supporting Huntingdonshire's future growth, resilience and economic prosperity. Policy LP14 supports the coordinated delivery of key infrastructure projects, including improvements to the A141 and St Ives transport networks, East West Rail, strategic water infrastructure such as the Fens Reservoir and Grafham to Cambridge Pipeline, wastewater networks, and initiatives that improve public transport, active travel and accessibility in rural areas.

11.4. The Pre-Submission Local Plan will phase delivery of allocated sites. This is demonstrated within policy LP 1 'How much development do we expect'.

11.5. A stepped housing trajectory is a housing delivery strategy used in a Local Plan where the annual housing requirement is set at different levels during different stages of the plan period, rather than requiring the same number of homes to be delivered every year. It typically starts with a lower requirement in the early years and increases later in the plan period. Planning Practice Guidance states that a stepped housing requirement may be appropriate where there is a significant change between existing and emerging housing requirements, or where major strategic sites are expected to deliver homes later in the plan period.

11.6. The approach recognises that large strategic allocations often require substantial lead-in times for planning, land assembly and infrastructure provision before homes can be delivered at scale. A stepped trajectory therefore aligns housing delivery with the timing of infrastructure and the realistic build-out of strategic sites, while allowing smaller and more deliverable sites to provide housing in the early years. Many authorities have

used stepped trajectories where housing requirements increase significantly from previous plans or where major infrastructure is needed to unlock growth. This is also an approach supported by the Planning Inspector on their advisory visit to review the Local Plan.

11.7. This approach is proposed in the Pre-Submission Local Plan and policy LP 1 'How much Development do we expect'.

12. Further Information

12.1. The following list identifies some of documents related to infrastructure which can be found in the Evidence Library for the Local Plan Update (https://www.huntingdonshire.gov.uk/planning/local-plan-update/evidence-library-for-local-plan-update/)

- **Infrastructure Delivery Study Baseline Assessment** - The first stage of the Infrastructure Delivery Study, an evidence-based assessment of existing and future infrastructure requirements to support the Huntingdonshire District Council's Preferred Options Draft Local Plan to 2046 (Regulation 18). It includes strategic growth options and some strategic scale sites that were put forward to the council
- **Stage 2 Infrastructure Delivery Study** - provides an assessment of infrastructure to inform the Pre-Submission Local Plan and presents a schedule of infrastructure, at a range of prioritisation scales, to be delivered across the Plan Period to 2046, and beyond (in the case of strategic allocations)
  - Appendix B: Infrastructure Schedules - Strategic Sites
  - Appendix C: Infrastructure Schedules - Settlements
  - Appendix D: Infrastructure Schedules - District-wide
- **Statement of Common Ground** between HDC and UK Power Networks
- **Statement of Common Ground** Between HDC, NHS Central East Integrated Care Board and NHS Property Services
- **Statement of Common Ground** Between HDC and Anglian Water (Updated August 2026)
- **Draft Statement of Common Ground** - Greater Cambridge Proposed Submission Plan
- **Statement of Common Ground** between HDC and Peterborough City Council
- **Statement of Common Ground** between HDC and Cambridgeshire County Council (Education)

4 Assessment of Proposals 28

1 Introduction

Equalities Act 2010

1.1 The Equalities Act 2010 requires the Council to have due regard to the need to eliminate unlawful discrimination, advance equality of opportunity and foster good relations. The Council also needs to demonstrate its compliance with the Equality Duty. The Council therefore needs to understand how its decisions and activities impact on different people and how they are affected by policies and practices. An Equality Impact Assessment is the method by which the Council can assess the impact of a new strategy, policy or decision.

1.2 The assessment focuses primarily on identifying circumstances where an adverse impact may occur; an adverse impact is is defined as occurring when a strategy, policy or decision has a disproportionately negative effect on a protected group or groups. Any adverse impact may be unintentional.

Public Sector Equalities Duty

Table 1 Relationship between the Preferred Options Draft Local Plan to 2046 and Implementation of the Public Sector Equalities Duty

Aim	Relevant?	Details
Eliminate unlawful discrimination, harassment, victimisation and any other conduct prohibited by the Act.	Yes	The Preferred Options Draft Local Plan to 2046 aims to ensure the sustainable development of Huntingdonshire up to 2046. The promotion of balanced and inclusive communities that benefit all is a key element of this. The policies set out in the Local Plan aim to guide development and promote opportunities for all members of the community. It specifically includes policy guidance which is intended to have a positive impact in helping to eliminate unlawful discrimination, harassment and victimisation of all groups of Gypsies, Travellers and Travelling Showpeople. Facilitating an adequate supply of sites for Gypsies, Travellers and Travelling Showpeople to occupy, in line with current evidence of existing and future need, will help to ensure fair and equal treatment, in a way that promotes their traditional way of life whilst respecting the interests of settled communities.
Advancing equality of opportunity between people who share protected characteristics and those who do not.	Yes	The Preferred Options Draft Local Plan to 2046 aims to promote balanced, inclusive and sustainable communities that benefit all residents as well as those who work or visit the district. The Local Plan will have a broad and positive impact on advancing equality of opportunity, particularly through its policies to deliver a wide range of housing, including both general and rural exceptions affordable housing, specialist housing for older people and those with specific needs and accessible and adaptable housing. It also seeks to advance equality of opportunity for gypsies, travellers and travelling showpeople through specific policy guidance to promote suitable sites to meet their needs whilst respecting the interests of settled communities. Policies to promote local provision of services and facilities, sustainable travel, green infrastructure, health impact assessments, employment and community facilities also aim to have a positive impact on advancing equality of opportunity.

Aim	Relevant?	Details
Foster good relations between people who share a protected characteristic and those who do not.	Yes	The Preferred Options Draft Local Plan to 2046 will have a broad positive impact on fostering good relations through its housing policies which aim to further the creation of balanced, mixed, sustainable communities. Policies promoting local services and facilities, community planning proposals and tourism and recreation will also aim to have a positive impact.

1.3 The protected characteristics considered are:

- Age
- Gender
- Disability
- Marriage and civil partnership status
- Pregnancy and maternity
- Race
- Religion or belief
- Sexual orientation
- Gender reassignment

What proposal is being assessed?

1.4 This Equalities Impact Assessment is considering the Preferred Options Draft Local Plan to 2046. This sets out planning policies and proposals to guide development in the district up to 2046. Huntingdonshire is committed to providing equality in our policy-making and service delivery and continuing to improve the quality of life for residents and promoting sustainable economic growth.

What is the purpose of the proposal?

1.5 The purpose of the Equalities Impact Assessment is to assess the potential impact of the policies and proposals in the Preferred Options Draft Local Plan to 2046 on groups with the protected characteristics listed above. Each aspect is assessed by consideration of whether the policy or proposal could have a differential impact on each group of people with a protected characteristic and seeks to identify and address any potential inequalities of outcome.

1.6 The Pre-Submission Local Plan to 2046 sets out policies and proposals for development and growth and for protection and enhancement of the natural and built environment of the district. It contains:

- An overall vision for Huntingdonshire up to 2046 to indicate aspirations for the nature and characteristics of Huntingdonshire by this time
- A series of objectives indicating how this vision may be delivered
- The approach to climate resilience to be taken through land use planning
- Policies to shape the nature and scale of development
- Site allocation proposals to deliver the district's growth targets

2 Protected Characteristics in Huntingdonshire

2.1 The following section provides brief details relating to the protected characteristics where data is available.

Age

2.2 The diagram below illustrates broad age groups for Huntingdonshire in 2024 sourced from Cambridgeshire Insight which has built on the 2021 Census.

2.3 The table below shows the comparative percentages of broad age groups across Huntingdonshire, Cambridgeshire and England in 2024. This shows that Huntingdonshire has a higher proportion of people aged 65 and over than average across wider areas.

	Huntingdonshire	Cambridgeshire	England
Persons aged 0 - 15	34,743	126,334	10,768,248
Persons aged 0 - 15 %	18.2	17.8	18.4
Persons aged 16 - 64	116,811	449,253	36,870,761
Persons aged 16 - 64 %	61.3	63.3	62.9
Persons aged 65+	39,065	134,730	10,981,092
Persons aged 65+ %	20.5	19	18.7

Date: 2024 | Source: ONS, Population Estimates

2.4 The age profile in 5 year groups is set out below to provide detailed information.

Table 3 Comparative age profiles

Name	Huntingdonshire	Huntingdonshire %	Cambridgeshire	Cambridgeshire %	England	England %
Age 0 - 4	9,883	5.18	35,406	4.98	3072243	5.24
Age 5 - 9	11,170	5.86	40,095	5.64	3401724	5.80

Name	Huntingdonshire	Huntingdonshire %	Cambridgeshire	Cambridgeshire %	England	England %
Age 10 - 14	11,442	6.00	42,462	5.98	3581732	6.11
Age 15 - 19	9,863	5.17	42,390	5.97	3509155	5.99
Age 20 - 24	8,092	4.25	44,452	6.26	3526018	6.02
Age 25 - 29	11,106	5.83	46,666	6.57	3885571	6.63
Age 30 - 34	12,962	6.80	48,857	6.88	4101144	7.00
Age 35 - 39	13,795	7.24	49,906	7.03	4073458	6.95
Age 40 - 44	12,764	6.70	47,231	6.65	3855280	6.58
Age 45 - 49	11,755	6.17	44,027	6.20	3479767	5.94
Age 50 - 54	13,011	6.83	46,333	6.52	3728798	6.36
Age 55 - 59	13,348	7.00	45,908	6.46	3861340	6.59
Age 60 - 64	12,363	6.49	41,854	5.89	3562779	6.08
Age 65 - 69	10,243	5.37	34,807	4.90	2951642	5.04
Age 70 - 74	9,021	4.73	31,375	4.42	2568308	4.38
Age 75 - 79	9,120	4.78	30,675	4.32	2433995	4.15
Age 80 - 84	5,737	3.01	19,334	2.72	1543135	2.63
Age 85 - 89	3,231	1.70	11,789	1.66	951,369	1.62
Age 90+	1,713	0.90	6,750	0.95	532,643	0.91
	190,619		710,317		58620101	

2.5 All age data is based on estimates at 2024 sourced from Cambridgeshire Insight.

Gender

2.6 Cambridgeshire Insight's population report provides details on the structure of Huntingdonshire's population as at 2024. The illustration below shows that the gender structure of our population is very similar to that for the wider county and for England as a whole with a marginal higher proportion of males than the other areas.

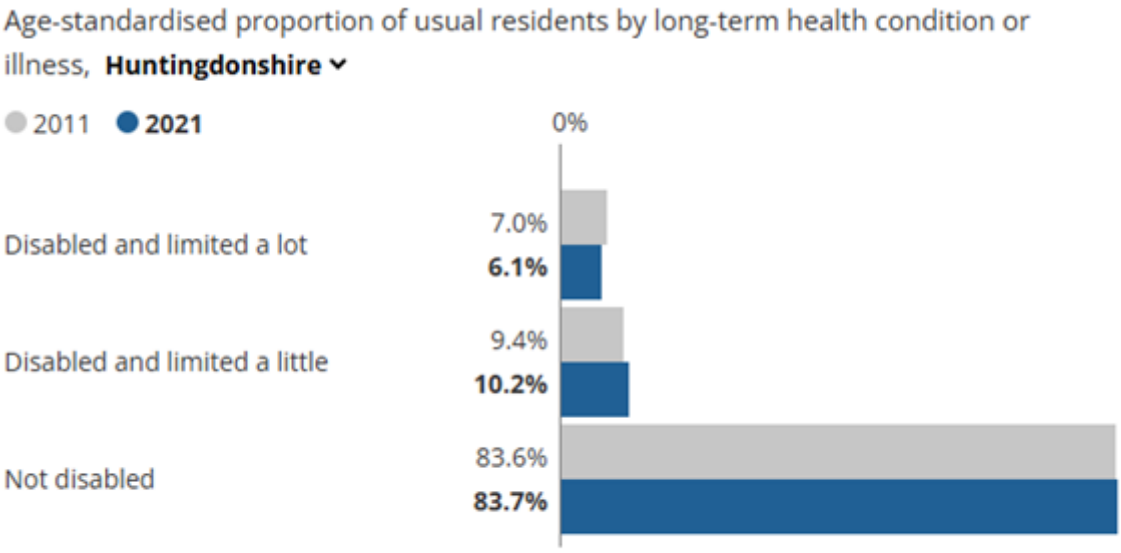
	Huntingdonshire	Cambridgeshire	England
Females	96,367	360,378	29,895,762
Females (%)	50.6	50.7	51
Males	94,252	349,939	28,724,339
Males (%)	49.5	49.3	49

Date: 2024 | Source: ONS, Population Estimates

Disability

2.7 In 2021, 6.1% of Huntingdonshire residents were identified as being disabled and limited a lot. This figure decreased from 7.0% in 2011. These are age-standardised proportions. In 2021, just over 1 in 10 people (10.2%) were identified as being disabled and limited a little, compared with 9.4% in 2011. The proportion of Huntingdonshire residents who were not disabled increased from 83.6% to 83.7%.

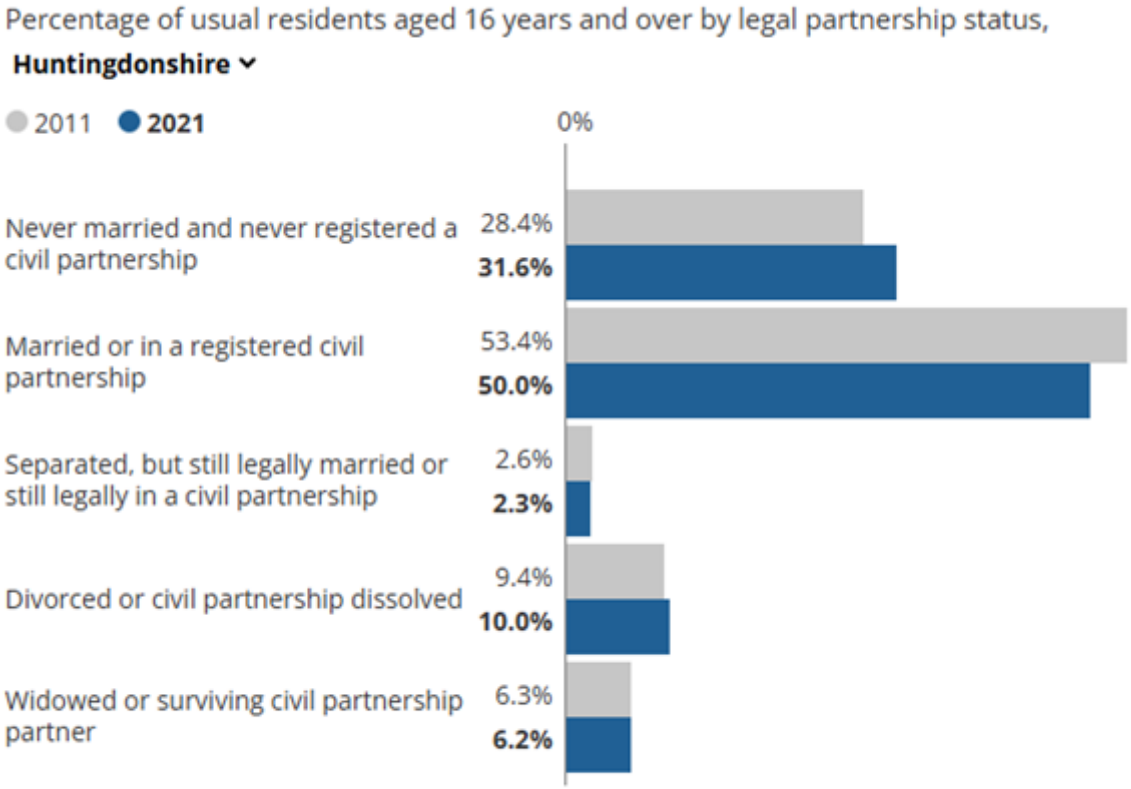
2.8 The decrease in the proportion of residents who were identified as being disabled and limited a lot in Huntingdonshire (0.9 percentage points) was similar to the decrease across the East of England (1.2 percentage points, from 7.8% to 6.6%). Across England, the proportion fell by 1.6 percentage points, from 9.1% to 7.5%.



Source: Office for National Statistics – 2011 Census and Census 2021

Marriage and civil partnership status

2.9 Official statistics from the Office for National Statistics shown below indicate people's marital/ partnership status.



Source: Office for National Statistics – 2011 Census and Census 2021

2.10 Of Huntingdonshire residents aged 16 years and over, 31.6% said they had never been married or in a civil partnership in 2021, up from 28.4% in 2011.

2.11 In 2021, around one in two people (50.0%) said they were married or in a registered civil partnership, compared with 53.4% in 2011. The percentage of adults that had divorced or dissolved a civil partnership increased from 9.4% to 10.0%.

2.12 The increase in the percentage of people aged 16 years and over who had never been married or in a civil partnership was greater across the East of England (3.7 percentage points, from 31.1% to 34.8%) than in Huntingdonshire (3.2 percentage points). Across England, the percentage increased from 34.6% to 37.9%.

2.13 These figures include same-sex marriages and opposite-sex civil partnerships in 2021, neither of which were legally recognised in England and Wales in 2011. Same-sex marriages have been legally recognised in England and Wales since 2014 and opposite-sex civil partnerships have been recognised since 2019.

Pregnancy and maternity

2.14 In 2024 1,731 live births were recorded in Huntingdonshire as published by the Office for National Statistics in August 2025. This represented a maternity rate of 49.9 per 1,000 women aged 15 to 44 compared to 45 for Cambridgeshire which is influenced by the exceptionally low rate in Cambridge, and 48.5 for England .

2.15 Office for National Statistics data on fertility, pregnancy and birth is illustrated below.

Indicator	Period	Hunts		East of England	England	England		
		Recent Trend	Count	Value	Value	Value	Worst/ Lowest	Range	Best/ Highest
Fertility and demographic information									
General fertility rate New data	2023	–	1,714	51.4	52.3	49.4	27.9		67.2
Under 18s conception rate New data	2022	→	35	12.4	12.9	13.9	34.4		4.2
Under 18s births rate New data	2023	→	3	1.0	2.8	3.0	10.9		0.7
Deliveries to women aged 12 to 17	2023/24	–	-	-	0.5%	0.6%	-	*Insufficient number of values for a spine chart*	-
Deliveries to women aged 35 years and above	2023/24	→	450	27.5%	24.8%	24.7%	12.5%		47.8%
Deliveries to women from ethnic minority groups	2023/24	↑	210	12.8%	22.2%	27.9%	1.6%		74.5%
Planning and preparation for pregnancy									
Smoking status at time of delivery New data	2024/25	→	135	8.3%	6.5%	6.1%	13.2%		2.2%
Pregnancy and birth									
Stillbirth rate	2021 - 23	–	25	4.7	4.0	4.0	7.1		1.3
Premature births (less than 37 weeks gestation)	2020 - 22	–	375	69.5	74.6	77.0	108.1		44.0
Low birth weight of term babies New data	2024	→	30	2.0%	2.7%	3.0%	5.2%		1.0%
Deliveries by caesarean section	2023/24	↑	665	40.7%	41.2%	40.9%	56.2%		13.1%
Admissions of babies under 14 days	2023/24	→	150	91.7	84.1	88.7	679.2		16.3
Breastfeeding									
Baby's first feed breastmilk ⚠	2023/24	–	1,150	73.5%	74.3%	71.9%	41.3%		94.3%
Emergency admissions for gastroenteritis (0 to 4 years)	2023/24	→	105	106.8	58.9	67.6	243.2		12.6
Emergency admissions for lower respiratory tract infections (0 to 4 years)	2023/24	↑	225	228.8	186.8	207.7	486.3		50.2

Race

2.16 The way people describe their ethnic group is based on their culture, family background, identity or physical appearance. The 2021 Census identified 92.4% of our population as being of 'White' ethnic groups including white British, Irish, and Eastern European. This differs from the Cambridgeshire population of whom 88.6% are within this group and differs even more from the average for England as a whole where 81% are of White ethnicity. The largest ethnic minority group was Asian, Asian British or Asian Welsh at 3.2%. While these also represent the largest ethnic minority groups in Cambridgeshire at 5.8% and England at 9.6% the Huntingdonshire proportion is significantly lower. This is followed by people of multiple or mixed ethnicities at 2.2% in Huntingdonshire which shows less divergence from the Cambridgeshire figure at 2.9% and the England figure at 3%.

2.17 The table below from the 2021 Census data provides broad categories for ethnic groups allowing comparison across Huntingdonshire, Cambridgeshire and England.

	Huntingdonshire	Cambridgeshire	England
Asian, Asian British or Asian Welsh	5,745	39,689	5,426,392
Asian, Asian British or Asian Welsh (%)	3.2	5.8	9.6
Black, Black British, Black Welsh, Caribbean or African	2,646	9,745	2,381,724
Black, Black British, Black Welsh, Caribbean or African (%)	1.5	1.4	4.2
Mixed or Multiple ethnic groups	4,057	19,354	1,669,378
Mixed or Multiple ethnic groups (%)	2.2	2.9	3
White	167,116	601,166	45,783,401
White (%)	92.4	88.6	81
Other ethnic group	1,268	8,895	1,229,153
Other ethnic group (%)	0.7	1.3	2.2

Date: 2021 | Source: ONS, Census 2021

Religion or belief

2.18 Christianity is the still the most widespread religion held in Huntingdonshire with 47.3% of residents stating this in the 2021 Census although this represents a significant fall since the 60.8% of residents identifying as Christian in the 2011 Census. The next largest group was no religion at 44%. 1.4% of residents identify as Muslim, and 0.5% identify as Hindu and 0.4% as Buddist. The proportion identifying as Christian is slightly higher than the average of 45.1% for England. The proportions identifying as Muslim are significantly lower than the England average of 6.7% or as Hindu at 1.8% across England.

Table 4 Comparison of religious affinity from the 2021 Census

Name	Huntingdonshire	Cambridgeshire	England

Sexual orientation

2.19 The 2021 Census asked a question on sexual orientation for the first time. This indicated that amongst those aged 16 and over who answered the question 3,938 people indicated that they identified as one of: gay or lesbian, bisexual, pansexual, asexual, queer or other non-heterosexual. This compares to 1.46 million identifying within these groups across England.

Gender reassignment

2.20 The 2021 Census for the first time asked adults (16+): 'is the gender you identify with the same as your registered sex at birth?' (Table TS070). However, since 5 September 2024 the figures initially published have been downgraded from being accredited official statistics to official statistics in development. This change in designation reflects the innovative nature of the gender identity estimates and the evolving understanding of measuring gender identity, along with the uncertainty associated with these estimates. Broad data is is published at a regional level but no details are available at a district level now.

2.21 The initial data indicates that of those who answered the question in Huntingdonshire just over 200 people recorded a different gender identity than the sex registered at birth, representing 0.14% of residents aged 16 and over.

3 Assessment of Policies

3.1 This table provides an analysis of each Local Plan policy against the protected characteristics groups and considers whether the likely effect of the policy is positive (+), neutral (~) or negative (-) with respect to that particular group compared to the overall population.

Table 5 Assessment of Policies: How will Huntingdonshire grow and change

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP1: How much development do we expect	~	~	~	~	~	~	~	~	~	Providing an adequate supply of homes and employment opportunities is likely to benefit all sectors of society equally.
LP2: Our strategy for change	+	~	+	~	+	~	~	~	~	Focusing development in settlements with greatest opportunity to access services and facilities should help improve access for all but may have a particularly positive effect on those with restricted mobility through age, disability or pregnancy & maternity.
LP3: Distribution of growth	+	~	+	~	+	~	~	~	~	Focusing development in settlements with greatest opportunity to access services and facilities should help improve access for all but may have a particularly positive effect on those with restricted mobility through age, disability or pregnancy & maternity.
LP4: Green and blue infrastructure priority areas	+		+	~	~	+	~	~	~	The policy seeks to promote additional green infrastructure for the benefit of all sectors of the community. It may in particular be beneficial in supporting the development of young people and the well-being of older people and those with mental health challenges. Provision of additional blue and green infrastructure, particularly in more accessible locations supports overcoming challenges such as those demonstrated in work commissioned by the National Trust which found that black and Asian people visit natural settings 60 per cent less than white people.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP5: Settlement hierarchy	~	~	~	~	~	~	~	~	~	The settlement hierarchy provides a categorisation of places in the district to which other policies are applied and so has no direct impact on any protected characteristics.
LP6: Market towns	+	~	~	~	+	~	+	~	~	Facilitating growth for all types of development within the market towns should contribute to the provision of a range of services and facilities within the most accessible locations in the District for many residents. This could result in a positive effects from reduced potential for isolation amongst the ageing population, parents and pregnant women through increased opportunities for social interaction. They may also include places in which faith groups can meet. It may also provide younger people with the opportunity to live independently where they have grown up.
LP7: Service centres	+	~	~	~	+	~	+	~	~	Facilitating growth for all types of development within the service centres should contribute to the provision of a range of services and facilities within locally accessible locations. This could result in a positive effects from reduced potential for isolation amongst the ageing population, parents and pregnant women through increased opportunities for social interaction. It may also provide younger people with the opportunity to live independently where they have grown up.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP8: Local service villages	+	~	~	~	~	~	~	~	~	Facilitating some growth for housing and other uses within the local services centres may have a positive impact on older people through provision of suitable and accessible homes within their established communities and provide younger people with the opportunity to live independently where they have grown up.
LP9: Villages	+	~	~	~	~	~	~	~	~	Facilitating some growth for development within villages may have a positive impact on older people through provision of suitable and accessible homes within their established communities and provide younger people with the opportunity to live independently where they have grown up.
LP10: Hamlets and the countryside	+	~	~	~	~	~	~	~	~	Facilitating limited growth within hamlets and the countryside may have a positive impact on younger people through provision of suitable and accessible homes specifically related to rural employment.
LP11: Placemaking for larger scale developments	+	+	+	~	+	~	+	+	~	The policy seeks to ensure large scale developments are masterplanned to promote fully inclusive communities where all people's needs are met and they feel comfortable living and working. This is likely to particularly benefit people with reduced mobility whether this temporary through maternity, a permanent disability or due to age. It also has potential to benefit people seeking specific places of worship or of varied sexual orientation where community inclusion is designed into the scheme.

Table 6 Assessment of Policies: How we will enable sustainable growth

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP12: How will infrastructure be provided	+	~	+	~	+	~	+	~	+	The policy seeks provision of infrastructure to meet the needs arising from new development which may have positive impacts for young and older people or those with disabilities, health and gender reassignment care needs where education, health and social care facilities are provided and for people seeking specific buildings for places of worship.
LP13: Securing infrastructure provision	+	~	+	~	+	~	+	+	+	Securing infrastructure through planning decisions can help benefit all sectors of the community through provision of general or specialist infrastructure including health care, education, and places of worship.
LP14: Supporting and enabling strategic infrastructure	+	~	+	~	+	~	+	~	+	Securing and enabling strategic infrastructure through planning decisions can help benefit all sectors of the community through provision of water management, water supply, transport and public transport.
LP15: Facilitating transport, travel and connectivity	+	+	+	~	~	~	~	~	~	The policy strongly supports provision of active travel infrastructure, and public and community transport users. This should benefit young people who are often dependant on active travel for personal mobility, older and disabled people and women who are typically higher users of use public transport.
LP16: Approach to renewable energy schemes	~	~	~	~	~	~	~	~	~	The policy is likely to benefit all sectors of society equally by supporting provision of power.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP17: Health and well-being	+	+	+	~	+	~	~	+	+	The policy strongly focuses on ensuring larger scale new developments create inclusive, accessible, safe places which support the needs of the most vulnerable members of society and contribute to social cohesion and interaction. As such, implementation of this policy has the potential to have positive impacts of many of the groups with protected characteristics.
LP18: Providing affordable homes	+	+	+	~	+	~	~	~	~	Promoting provision of affordable homes will contribute to providing a range of sizes, types and tenures of housing suitable to meet the needs of all sectors of the community. It may particularly benefit older people with specialist needs, women and young people and families seeking a secure home.
LP19: Blue and green infrastructure	~	~	~	~	~	~	~	~	~	The policy is likely to benefit all sectors of society equally through promoting accessible blue and green infrastructure for all.
LP20: Supporting carbon capture through nature	+	~	~	~	~	~	~	~	~	Supporting carbon capture should limit increases in air temperature and pollution arising from climate change which will be particularly beneficial for older and young people who are generally more vulnerable to temperature extremes and impacts of poor air quality.
LP21: Managing flood risk	~	~	~	~	~	~	~	~	~	The policy is likely to benefit all sectors of society equally through the management of flood risk.

Policy	Age	Gender	Disability	Marriage & civil partner-ship status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assign-ment	Explanation
LP22: Managing waste water	~	~	~	~	~	~	~	~	~	The policy is likely to benefit all sectors of society equally through the management of waste water and provision of enhanced waste water management infrastructure.
LP23: Managing surface water	~	~	~	~	~	~	~	~	~	Integrating surface water management into the design of development is likely to benefit all sectors of the community equally.
LP24: Water efficiency	~	~	~	~	~	~	~	~	~	The policy is likely to benefit all sectors of the community equally by ensuring adequate provision of water services.

Table 7 Assessment of Policies: How we will create well designed places

Policy	Age	Gender	Disability	Marriage & civil partner-ship status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP25: Design context and character	~	~	~	~	~	~	~	~	~	Ensuring development responds well to its context is likely to benefit all sectors of the community equally.
LP26: Creating high quality places and spaces	+	~	+	~	+	~	~	~	~	Well designed proposals are expected to be of benefit to all but the particular focus on ensuring ease of getting around is likely to benefit a range of groups for whom mobility may be more challenging.
LP27: Ensuring amenity for new buildings and neighbours	~	~	~	~	~	~	~	~	~	Ensuring high standards of amenity is likely to benefit all sectors of the community equally.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP28: Minimising embodied and operational carbon in new buildings	+	+	+	~	+	~	~	~	~	Minimising embodied carbon in new buildings is expected to have long term beneficial impacts for all members of our community. While reducing operational carbon will help to reduce energy running costs for all new buildings it has the potential to be of particular benefit to older and young people, those experiencing pregnancy and maternity and people with reduced mobility where additional heating may be required to maintain a comfortable living or working environment. This may also benefit women who head up a higher proportion of single parent households.
LP29: Making existing buildings more energy efficient	~	~	~	~	~	~	~	~	~	Enhancing the energy efficiency of existing buildings when uses are changing or extensions being constructed is likely to benefit all sectors of the community equally.
LP30: Supporting active and sustainable travel	+	+	+	~	+	~	~	~	~	Enhancing transport networks and supporting opportunities for travel by sustainable modes is likely to benefit all sectors of the community but may have a particularly positive effect on those with restricted mobility through age, disability or pregnancy & maternity; enhancements to public transport may positively effect women and young people who are disproportionately higher users of these services..
LP31: Parking and vehicle movement	+	~	+	~	~	~	~	~	~	This policy supports incorporation of adequate vehicle and cycle parking provision for all development proposals; it

Policy	Age	Gender	Disability	Marriage & civil partner-ship status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
										may have a positive effect on people with mobility disabilities through requirement of specific parking provision for people with disabilities.
LP32: Electric vehicle charging points	~	~	~	~	~	~	~	~	~	Provision of additional electric vehicle charging points will help all members of the community equally by contributing to access to this service and reducing the impacts of fossil fuel usage ont he environment.
LP33: Preventing and reducing air pollution	+	~	~	~	~	~	~	~	~	Prevention and reduction of air pollution and requirement for an air quality assessment where necessary may have a positive effect on older and young people in particular and those with respiratory conditions.
LP34: Preventing and reducing ground contamination and groundwater pollution	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by safeguarding the natural environment.

Table 8 Assessment of Policies: How will we support a strong local economy

Policy	Age	Gender	Disability	Marriage & civil partner-ship status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assign-ment	Explanation
LP35: Protecting and enhancing Established Employment Areas	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by supporting the local economy and providing employment opportunities.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP36: Expansion and diversification of rural business	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by supporting the local economy and providing employment opportunities.
LP37: Shaping new businesses in the countryside	+	+	~	~	~	~	~	~	~	This policy will support access to rural employment opportunities in more diverse locations which are less likely to require access to a private car.
LP38: Enabling key cluster and innovation-led growth	+	~	+	~	~	~	~	~	~	This policy seeks to support more diverse, more skilled and higher value jobs in the local economy which may be beneficial to young people and those with certain disabilities may offering greater employment opportunities close to home and so reducing the time and cost of commuting.
LP39: Enabling logistics and distribution	~	~	+	~	+	~	~	~	~	Supporting logistics and distribution, including provision of last-mile facilities may be particularly beneficial to people with disabilities or experiencing pregnancy and maternity by enhancing opportunities to have items delivered directly home and so reducing the need to travel.
LP40: Helping tourism and recreation in the countryside	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by enhancing leisure opportunities and supporting the rural economy.
LP41: Defining our retail hierarchy	+	~	+	~	~	~	~	~	~	The policy seeks to protect town centres and areas of local shops that are most likely to be in more accessible locations to people with limited mobility or reliant on active travel or public transport.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP42: Promoting town centre vitality and viability	+	~	~	~	~	~	~	~	~	The policy seeks to protect town centres that are most likely to be in more accessible locations to people with limited mobility or reliant on active travel or public transport.
LP43: Supporting local centres	+	~	+	~	+	~	~	~	~	Provision and protection of community services and facilities may positively benefit a range of protected groups by promoting easily accessible options.
LP44: Services and facilities outside designated centres	+	~	+	~	+	~	~	~	~	Provision and protection of community services and facilities may positively benefit a range of protected groups by promoting easily accessible options.

Table 9 Assessment of Policies: How will we support homes for all

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP45: Promoting a mix of housing	+	~	+	~	+	~	~	~	~	Promoting a wide range of housing types and sizes will have a positive benefit for all members of the community looking for a new homes, particularly older and young people, people with disabilities and people experiencing pregnancy or maternity through promoting properties particularly suitable to meet their needs.

Policy	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
LP46: Ensuring accessible and adaptable homes	+		+		+					Ensuring that all new homes are constructed to enhanced Building Regulation standards will support those with permanent or temporary reduced mobility due to age, disability, pregnancy or maternity.
LP47: Facilitating self and custom build homes	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by providing additional housing options.
LP48: Supporting specialist housing	+	~	+	~	~	~	~	~	~	Both self-contained specialist housing and residential institutions are particularly intended to have a positive effect for older people including those seeking to downsize and people with a range of physical and/or mental health needs.
LP49: Supporting houses in multiple occupation	~	~	~	~	~	~	~	~	~	This policy is expected to support all members of the community equally.
LP50: Promoting rural exceptions housing	+	~	+	~	+	~	~	~	~	Promoting provision of affordable housing will contribute to providing a range of sizes, types and tenures of housing suitable to meet the needs of all sectors of the community. It may particularly benefit older people with specialist needs, or those who wish to stay within their existing community but require alternative housing and young people and families seeking a secure home.
LP51: Gypsies, Travellers and Travelling showpeople	~	~	~	~	~	+	~	~	~	A criteria based policy to facilitate provision of sufficient plots/ pitches to meet needs of the protected groups is expected to have a positive effect on their well-being.

Table 10 Assessment of Policies: How we will conserve and enhance the environment

Policy	Age	Gender	Disability	Marriage & civil partner-ship status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assign-ment	Explanation
LP52: Protecting our nature conservation sites	+	~	+	~	~	~	~	~	~	This is likely to benefit all sectors of the community by safeguarding the natural environment. It may be particularly beneficial in supporting young people's development and the well-being of older people and those with mental health challenges.
LP53: Enhancing biodiversity and geodiversity	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by safeguarding the natural environment.
LP54: Protecting our trees, orchards, woodlands, hedges and hedgerows	+	~	+	~	~	~	~	~	~	This is likely to benefit all sectors of the community and may be particularly beneficial for protecting older and young people from overheating and those and people with respiratory illnesses from poor air quality.
LP55: Protecting our open spaces, outdoor sports and recreational facilities	+	~	+	~	+	~	~	~	~	Protection of open spaces may help promote social cohesion by providing opportunities for interaction particularly amongst young and older people, and those during pregnancy and early stages of maternity. It also has the potential to benefit all sectors of the community.
LP56: Heritage assets and their settings	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by prevention of harm to the historic environment.
LP57: Water related development	~	~	~	~	~	~	~	~	~	This is likely to benefit all sectors of the community equally by safeguarding the natural environment.

3.2 6

4 Assessment of Proposals

4.1 This table provides an analysis of each category of site proposals by location against the protected characteristics groups and considers whether the likely effect of the type of site proposal is positive (+), neutral (~) or negative (-) with respect to that particular group compared to the overall population. This approach has been taken to avoid extensive repetition across the 67 proposed site allocations set out in the Preferred Options Draft Local Plan to 2046.

Table 11 Assessment of Proposals: North Huntingdon Growth Cluster

Proposals	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
Proposals at: • Lodge Farm, North of A141 • Wyton Airfield	+	+	+	~	+	~	+	+	~	These two proposals are expected to form substantial new communities offering a wide range of homes, local services and facilties, enhanced active travel and public transport, strategic green infrastructure, integral employment opportunities and enhanced highway infrastructure. The scale of each development provides opportunities to benefit all members of the community. They may particularly benefit older people and those with disabilities through the requirements to include supported housing and care homes. It may also particularly benefit young people through the requirements for secondary school, primary schools and day care/ nursery provision. Inclusion of local shops and services, enhanced active travel and public transport infrastructure connecting the new communities to existing larger settlements may positively support older and younger people, those with disabilities and those experiencing pregnancy and maternity through both access to local services and enhanced access to wider services and facilities by non-car modes of travel. Inclusion of community facilities, particularly community meeting spaces, may benefit many people with protected characteristics

Proposals	Age	Gender	Disability	Marriage & civil partner-ship status	Pregnancy & mater-nity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
										by offering safe, modern places for groups sharing a characteristic to meet if they choose to do so.
Proposals at: • Huntingdon Racecourse • Land North of A141 between the Racecourse and A1307										These two proposals are for non-residential development with the Racecourse seeking to upgrade facilities to aid long term retention of the activity and the land and the land north of the A141 put forward for a large scale logistics and distribution site. The enhanced employment opportunities may particularly benefit young people seeking work close to where thye have grown up and give more opportunities for people with disabilities to work in large modern environments that may more easily accommodate any specialist adaptations needed.

Table 12 Assessment of Proposals: Market Towns

Proposal	Age	Gender	Disability	Marriage & civil partner-ship	Pregnancy & mater-nity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
Proposals in Huntingdon, St Neots and St Ives	+	~	+	~	+	~	+	~	~	All development proposals within Huntingdon, St Neots and St Ives are likely to benefit all sectors of the community through provision of new development in the district's most sustainable and accessible locations. They may particularly

Proposal	Age	Gender	Disability	Marriage & civil partnership	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
										benefit older people and those with disabilities where specialist accommodation is sought. They may also benefit young people through greater proximity to secondary schools, primary schools and day care/ nursery provision encouraging education and independence. Proximity to local shops, services and meeting places may positively support older and younger people, those with disabilities and those experiencing pregnancy and maternity. There are active mosques in Huntingdon and St Ives offering places of worship for the district's second largest religious group.
Proposals in Ramsey	+	~	+	~	+	~	~	~	~	Development proposals in Ramsey are likely to benefit all sectors of the community equally by provision of homes in our smallest market town. The range of facilities is lower than the other market towns but young people may benefit from secondary education being located within the town encouraging access by active travel while people with disabilities and experiencing pregnancy and maternity may benefit from proximity to GP services.

Table 13 Assessment of Proposals: Service Centres

Proposal	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
Proposals in Brampton, Godmanchester, Little Paxton and Yaxley	+	~	+	~	+	~	~	~	~	Development proposals in these locations are likely to benefit all sectors of the community by provision of homes and green infrastructure in a sustainable location. Older and younger people may particularly benefit from local provision of education and those as well as people experiencing pregnancy and maternity may benefit from local access to healthcare. Proposals in these places may also benefit people with disabilities by being close to larger centres of services and facilities.
Proposals in Kimbolton, Sawtry and Somersham	+	~	~	~	~	~	~	~	~	Development proposals in these locations are likely to benefit all sectors of the community by provision of homes and green infrastructure in a sustainable location. Younger people may particularly benefit from local provision of education. Older people seeking more suitable accommodation within their established community may benefit from a wider choice of homes built to higher accessibility standards. Those as well as people experiencing pregnancy and maternity may benefit from local access to healthcare.

Table 14 Assessment of proposals: Local Services Villages

Proposal	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
Proposals in Abbots Ripton, Alconbury, Bluntisham, Great Gransden, Great Staughton, Houghton & Wyton, Offord D'Arcy & Offord Cluny, and Stilton	+	~	~	~	~	~	~	~	~	Development proposals in these locations are likely to benefit all sectors of the community by provision of homes in a sustainable location and may particularly benefit older people seeking a wider choice of homes built to higher accessibility standards within their established community.
Proposals for The Lattenburys and Giffords Park	+	+	+	~	+	~	+	+	~	The Lattenburys is expected to form a substantial new community offering a wide range of homes, local services and facilties, enhanced active travel and public transport, strategic green infrastructure, integral employment opportunities and enhanced highway infrastructure. Giffords Park is of a smaller scale but immediately adjoins St Ives and so has al the services and facilities of the market town close by. Each development provides opportunities to benefit all members of the community. They may particularly benefit older people and those with disabilities through the requirements to include supported housing and care homes. It may also particularly benefit young people through the requirements for education provision. Inclusion of local shops and services, enhanced active travel and public transport infrastructure connecting them to existing larger settlements may positively support

Proposal	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
										older and younger people, those with disabilities and those experiencing pregnancy and maternity through both access to local services and enhanced access to wider services and facilities by non-car modes of travel. Inclusion of community facilities, particularly community meeting spaces, may benefit many people with protected characteristics by offering safe, modern places for groups sharing a characteristic to meet if they choose to do so.

Table 15 Assessment of Proposals: Villages

Proposal	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
Proposals in Abbotsley, Bythorn, Colne, Ellington, Grafham, Hail Weston, Holme, Ramsey Forty Foot, Upton and Waresley	+	~	~	~	~	~	~	~	~	Proposals in these villages may particularly benefit older people by offering more accessible homes allowing people to downsize while remaining in the same community to maintain social and community links.
Proposals in Alwalton, Great Paxton, Haddon, and The Stukeleys	+	~	~	~	~	~	~	~	~	Proposals in these villages may particularly benefit older people by offering more accessible homes allowing people to

Proposal	Age	Gender	Disability	Marriage & civil partnership status	Pregnancy & maternity	Race	Religion or belief	Sexual orientation	Gender re-assignment	Explanation
										downsize while remaining in the same community to maintain social and community links.

Parking Strategy

Executive Summary: words

Recommendations

The Overview & Scrutiny Panel is:

1. Invited to comment on the Parking Strategy

This page is intentionally left blank

Date:
O&S (P&G) - 2nd September 2026
Cabinet -15th September 2026

Report by:
Head of Economy, Regeneration & Housing Delivery
Operations Manager, Parking & Markets Services

Lead Cllrs:
Cllr J Kerr - Executive Councillor for Parks and Countryside, Waste & Street Scene
Cllr B Mickelburgh - Executive Councillor for Economy, Regeneration & Housing Delivery

Parking Strategy

Executive Summary: words

Recommendations
Cabinet is recommended in respect of the funding proposal to: 1. To consider and adopt the Parking Strategy

	Key Corporate Plan Priorities
1	*Objective 33 - Progress the development of a parking strategy that informs our approach to the management of our car parks; and move to implement the adopted strategy and associated actions*
2	

	Place Strategy Priorities
1	*Supporting economic growth*
2	*Boosting town centre vitality and Improving accessibility*

Report Author(s)

Author 1, Head of Economy, Regeneration & Housing Delivery
Author 2, Operations Manager, Parking & Markets Services

1. PURPOSE OF THE REPORT

1.1 The purpose of this report is to seek endorsement for the 'Parking Strategy'. The Parking Strategy includes objectives and sets an ambition for how we will operate our car parks. The strategy sets a *Vision, Themes, Objectives* and includes *Principles of parking charges*. The strategy does not set charges, however the elements that form it will inform how we establish our tariff structures.

2. BACKGROUND & CONTEXT

2.1 The Councils previous Parking Strategy was adopted in 2018 and applied until 2023. During this time, it was agreed that the Council would deviate from this strategy enabling the pursuit of Civil Enforcement in Huntingdonshire.

2.2 Key principles included *implementing technology that positively assists our car park users* which led to the installation of equipment that facilitated card and contactless payment, along with *promoting environmental sustainability by supporting alternative fuel and travel methods* that supported our installation of cycle shelters and our early works implementing EV charge points.

2.3 The Joint Administration committed to refreshing the strategy following significant local change with the introduction of Civil Parking Enforcement in 2025. The development of the Parking Strategy is an objective within the Councils Corporate Plan.

2.4 That strategy review commenced in early October 2025 following a procurement exercise. There was also a clear desire for the evidence/data collection to take place during the pre-Christmas peak period. Rowley Arts Centre car park has not been included within the scope of this strategy as this forms part of the Councils commercial Estate.

2.5 Activities that have been undertaken to inform the strategy includes a review of the current car parks (e.g. features) and multiple occupancy studies to provide a robust evidence base to underpin any future considerations.

2.6 The strategy sets out a Vision

> *The Huntingdonshire Car Park Strategy will enable a well-managed, balanced and future-focused parking service that supports vibrant town centres and sustainable economic growth, ensuring parking is appropriately located, efficiently operated and integrated with active and sustainable travel, whilst providing a safe, accessible and positive parking experience for residents, businesses and visitors.*

2.7 Underpinning the Vision are our Themes to:

- Support Thriving town centres and economic activity
- Deliver a modern, efficient, and customer focussed parking service
- Integrate parking with active travel and sustainable transport
- Manage parking assets responsibly and plan for the future

2.8 The proposed strategy the reflects the current position and aims to provide clear direction for the service and guide future courses of action. Similarity in the proposed and previous parking strategy can be seen as both recognise the importance of our car parks as a way in which we can support our towns; previously through 4 core priorities, and now through 4 themes.

3. RECOMMENDATION

3.1 The works undertaken as part of the development of the Parking Strategy included an assessment of our car park to understand in detail the features and standards at each location. The user surveys sought to understand what is important to respondents, which in turn informed the Vision, Themes and Objectives that include activities to explore and support improvement of our sites.

3.2 Data gathering has taken place including an extensive review of occupancy through studies undertaken to understand the levels of usage within our car parks to provide a robust evidence base for any future decision making. These were conducted:

- October 2025 (neutral week)
- October 2025 (half-term)
- December 2025
- June 2026

3.3 The 'Parking Strategy' that has been developed provides clarity and direction that will inform service activity and future delivery.

3.4 For the reasons set out above, it is recommended that Cabinet considers and adopts the Parking Strategy.

4. COMMENTS OF OVERVIEW & SCRUTINY

4.1 The comments of the relevant Overview and Scrutiny Panel will be included in this section prior to its consideration by the Cabinet.

5. POST ADOPTION / IMPLEMENTATION

5.1 The strategy sets objectives which inform its actions. Following adoption, works will commence to deliver the quick wins identified with priority being given to those that can be achieved and delivered within in-year available resource

5.2 Other actions will inform future service plans. Any financial implications being considered through established governance and budget-setting arrangements.

6. IMPLICATIONS OF THE DECISION

6.1 Council Key Priorities and Performance

6.1.1 Corporate Plan 2023 - 2028

The development of the Parking Strategy is in accordance with the **Council's Corporate Plan** objective 33:

- Priority - Creating a better Huntingdonshire for future generations
- Outcome - Forward-thinking economic growth
- Objective - *Progress the development of a parking strategy that informs our approach to the management of our car parks; and move to implement the adopted strategy and associated actions.*

Endorsement of the Parking Strategy would achieve this Corporate Plan Objective.

6.1.2 Huntingdonshire Futures Place Strategy

The **Huntingdonshire Futures Place Strategy** aims to make town centres more attractive and accessible.

The Parking Strategy recognises the importance that car parks play in supporting town centres through objectives that focus on providing the right parking in the right place, and others that consider wayfinding and pedestrian connections along with the overall appearance of our car parks.

6.2 Financial Implications

6.2.1 The adoption of the Parking Strategy does not introduce any new financial commitments or implications.

6.2.2 The Parking Strategy includes objectives and sets an ambition for how we will operate our car parks. These objectives will inform service actions, with future financial implications being considered through established governance and budget-setting arrangements.

6.2.3 The Parking Strategy sets a Vision, Themes, Objectives and includes 'Principles of parking charges'. The strategy does not set charges, however the elements that form it will inform how we establish our tariff structures.

6.3 Policy Implications

6.3.1 The proposal is considered to be in alignment with the Councils agreed policy framework with the development of the Parking Strategy being in accordance with the Council's Corporate Plan objective 33 (6.1.1).

6.4 Legal & Constitutional Implications

6.4.1 The Parking Strategy includes objectives and sets an ambition for how we will operate our car parks. These objectives will inform actions, with future financial implications being considered through established governance and budget-setting arrangements.

6.4.2 Endorsement of the Parking Strategy is an Executive function as confirmed by the DMO who had no adverse comments to make, there are therefore no legal or constitutional implications which should prevent this matter from proceeding.

6.5 Community Engagement

6.5.1 A Phase 1 user survey was conducted from 12th November 2025 and remained live until 21st December 2025. The survey received a total of 1,546 responses. A summary of the findings is in Appendix 3. The finding of this informed the early development of a Vision, Themes and Objectives.

6.5.2 A Phase 2 engagement was conducted from 16th July 2026 and remained live util 16th August 2026. The survey received a total of 1,472 responses. A summary of the findings is in Appendix 4. This survey aimed to test the Vision, Themes and Objectives to understand what was important to respondents. This has informed the ordering within the developed strategy, therefore leading to a difference when compared to the ordering in the other appended documents.

6.6 Environment & Climate Change Implications

6.6.1 The strategy considers through its themes how we integrate parking with active and suitable travel. The strategy reflects that the Council previously adopted its EV Strategy and looks at how active travel may be supported within our car parks by improving facilities for people walking and cycling, along with exploring other opportunities for wider active travel support.

6.7 Equality & Diversity Implications

6.7.1 Accessibility is fundamental to good parking management. Car parks should be safe and convenient for everyone, including disabled users, older people and those with temporary mobility impairments. The strategy looks at how we can deliver a customer focussed parking service, with an objective to undertake an accessibility review of council-operated car parks, including disabled parking provision and pedestrian accessibility.

6.8 Implications on Resources

6.8.1 The Parking Strategy includes objectives and sets an ambition for how we will operate our car parks. These objectives will inform actions undertaken by the service with initial focus on *quick wins* where possible to be delivered within in-year available resource. Other actions will inform future service plans with any financial implications being considered through established governance and budget-setting arrangements.

6.9 Health & Wellbeing Implications

6.9.1 The occupancy works undertaken included sites near our open spaces along with facilities at our One Leisure sites. The strategy sets out that we will provide the right parking in the right places, such as short-stay parking near shops and long-stay parking further away.

6.9.2 Two of our principles of parking charges are

> '*Tariff structures are not just models of pricing; they determine the available durations of stay and can be used as a mechanism to promote access and turnover of space'*

and

> '*Car parks will be assessed on an induvial basis considering location and desired usage which will inform the tariff structure'.*

6.9.3 The strategy recognises and supports the need to make decisions based on the individual requirements of a location.

6.10 Local Government Reorganisation (LGR) Implications

6.10.1 The parking strategy sets out how the Council operates its car parks with a focus on delivering the priorities for its users. As reorganisation progresses, the parking strategy may require review by the new authority.

6.10.2 The strategy will be less than 2 years old at the point currently envisaged for vesting day. The strategy is supported by evidence which can act as a baseline position; it therefore provides a document which the new authority can use in its own decision making and can act as an interim guide whilst it develops its own plans and strategies.

7. RISK MANAGEMENT

7.1 The ability to deliver all identified actions within available resources and timescales may be impacted by competing priorities, capacity constraints, or external factors. This risk will be managed through robust prioritisation, performance monitoring, and regular review of actions.

8. LIST OF APPENDICES

DELIVERING THE IMPLEMENTATION PLAN....51

CONCLUSION....56

INTRODUCTION

Ethos Consultants have been commissioned by Huntingdonshire District Council to prepare a new Parking Strategy for its off-street car parks. The strategy establishes a long-term framework for managing, maintaining and investing in the Council's parking assets, ensuring they continue to support residents, businesses and visitors while responding to future growth, evolving travel patterns and changing customer expectations.

The Parking Strategy has been developed to support the Council's wider priorities and ambitions for Huntingdonshire. Parking is an essential part of the transport network, providing access to employment, retail, leisure, community facilities and services across the district. The way parking is planned and managed can also influence travel choices, support the local economy, improve the customer experience and ensure valuable public assets are used effectively.

The Council has previously adopted a Parking Strategy, however, the parking landscape has continued to evolve in response to changing travel patterns, customer expectations, technological innovation and wider Council priorities. This refreshed strategy builds upon previous work to provide an updated strategic framework that will guide future decision making, ensuring parking is managed consistently and continues to support the Council's ambitions over the lifetime of the strategy.

The strategy has been informed by a comprehensive evidence base, including parking surveys, utilisation data, stakeholder engagement and user surveys. Rather than repeating this evidence, the Parking Strategy builds upon the accompanying Evidence Base Report and translates its findings into a clear vision, four strategic themes and 20 objectives that will guide the future management of the Council's parking service.

While Huntingdonshire District Council owns and manages a significant off-street parking portfolio, the wider parking network also includes on-street parking managed by Cambridgeshire County Council, together with privately operated car parks. This strategy therefore focuses on those areas where the District Council has direct responsibility and influence, whilst recognising that successful parking management will continue to rely on partnership working with the County Council, neighbouring authorities, transport operators, businesses and other stakeholders.

Over recent decades, increasing reliance on private car travel has contributed to higher levels of traffic congestion, carbon emissions and poorer air quality, particularly within busy town centres and at peak times. While travel patterns have evolved since the Covid-19 pandemic, private vehicles continue to play a vital role for many residents, businesses and visitors, particularly in a predominantly rural district such as Huntingdonshire where travel choices can vary significantly between communities.

This strategy recognises that the private car will remain an important mode of transport for many journeys. However, it also acknowledges that parking should be planned as part of a wider, integrated transport system. As travel behaviour, technology and customer expectations continue to evolve,

parking must adapt to support greater travel choice whilst continuing to provide convenient and accessible parking where it is needed.

A key principle of the strategy is to integrate parking with active and sustainable transport, along with the existing EV Strategy previously developed. This does not mean discouraging people from driving where the car remains the most appropriate option. Instead, the strategy seeks to ensure that the right parking is provided in the right locations, managed in a way that supports local economic activity whilst encouraging walking, cycling and public transport wherever practical.

Measures such as improved active travel connections, enhanced public transport integration, electric vehicle infrastructure and, in the longer term, integrated transport hubs will all contribute towards a more balanced, resilient and sustainable transport network.

There are many benefits in Huntingdonshire District Council taking the proactive approach to deliver a sustainable parking strategy. Some of these benefits include:

DELIVERING CHANGE

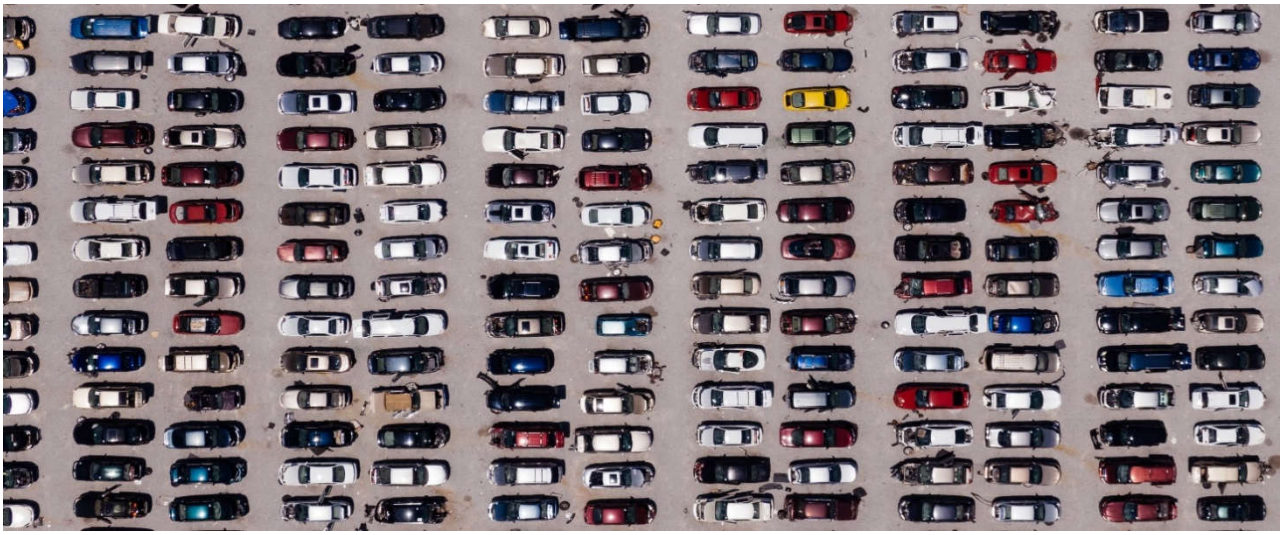
The Parking Strategy sets out a long-term vision for the future management of Huntingdonshire District Council's off-street parking provision. The vision is supported by four strategic themes, each containing a series of objectives that together establish the direction for how parking will be managed, maintained and developed over the lifetime of the strategy.

The themes and objectives should not be viewed in isolation. They have been developed as a complementary framework, with each supporting the delivery of the Council's wider priorities. Collectively, they provide an approach that recognises the important role parking plays in supporting residents, businesses and visitors, whilst responding to changing travel patterns, customer expectations and future opportunities.

Supporting the strategy is an Implementation Plan that translates the strategic objectives into a programme of actions and initiatives. The Implementation Plan identifies the measures required to deliver the vision, together with indicative timescales, priorities and responsibilities. Actions are grouped into short, medium and longer-term priorities, recognising that some improvements can be delivered quickly whilst others require further planning, investment or partnership working.

The Parking Strategy provides the framework for future decision making rather than detailed solutions for every location. As individual projects come forward, further feasibility work, technical assessments and stakeholder engagement may be required to ensure proposals are appropriate, deliverable and represent value for money.

Successful delivery of the strategy will also depend upon continued collaboration with a range of partners. While the Council has direct responsibility for its off-street parking assets, achieving the wider vision will require ongoing partnership working with the County Council, transport operators, businesses, developers and communities to ensure parking supports wider transport, and economic objectives within Huntingdonshire.



WHY DO WE NEED A STRATEGY?

Parking is one of the Council's most important public assets. Well-managed parking supports thriving town centres, enables access to employment, retail, leisure and community facilities, and contributes to the overall attractiveness of Huntingdonshire as a place to live, work and visit.

At the same time, parking is a finite resource that must be managed carefully to balance the needs of residents, businesses, visitors and the wider community.

The way people travel is continually evolving. Changes with technology, customer expectations, vehicle ownership, patterns of development and environmental priorities are influencing how parking is used across the district. A long-term strategy provides a clear framework for responding to these changes, ensuring decisions are made consistently, supported by evidence and aligned with the Council's wider priorities.

The Parking Strategy recognises that parking is about much more than providing spaces for vehicles. It is an important tool that can support economic growth, improve accessibility, encourage sustainable travel, enhance the customer experience and ensure the Council's parking assets continue to meet the needs of future generations.

SUPPORTING A THRIVING ECONOMY

Parking plays a vital role in supporting the vitality and viability of Huntingdonshire's market towns, local centres and visitor destinations. Convenient, well-managed parking helps people access shops, services, employment, leisure facilities and community venues, supporting both local businesses and the wider economy.

The strategy promotes an approach that balances the availability of parking with effective management of demand, helping ensure that parking continues to support regeneration, investment and economic growth while responding to the differing needs of individual towns and locations across the district.

SUPPORTING ACTIVE & SUSTAINABLE TRAVEL

For many journeys, particularly within Huntingdonshire's rural communities, the private car will continue to be an essential mode of transport. However, parking also has an important role in supporting wider

transport objectives by integrating with walking, cycling, public transport and emerging travel options.

The strategy promotes a balanced approach that seeks to provide convenient parking where it is needed while encouraging greater travel choice where practical. This includes supporting infrastructure such as electric vehicle charging, improved cycling facilities and, where appropriate, opportunities to better integrate parking with sustainable transport networks.

INVESTING IN HIGH QUALITY PARKING

The Council's car parks represent valuable public assets that require ongoing investment to remain safe, attractive and fit for purpose. Maintaining these assets protects their long-term value, improves the customer experience and ensures parking continues to meet the needs of residents, businesses and visitors.

The strategy promotes a planned approach to maintenance, renewal and investment, recognising that improvements should be prioritised using evidence, customer feedback, asset condition and future demand to maximise the value delivered by the parking service.

PLANNING FOR THE FUTURE

Huntingdonshire will continue to change over the lifetime of this strategy. Population growth, new development, advances in technology, changing travel behaviour and environmental commitments will all influence future parking requirements.

This strategy provides a flexible framework that enables the Council to respond positively to these changes, ensuring parking remains an integral part of a connected, accessible and sustainable transport network. Through regular monitoring and periodic review, the strategy will continue to evolve alongside the district and the communities it serves.

Parking restrictions apply. Please see the sign near the store entrance for full details.

OUR VISION

The Huntingdonshire Car Park Strategy will enable a well-managed, balanced and future-focused parking service that supports vibrant town centres and sustainable economic growth, ensuring parking is appropriately located, efficiently operated and integrated with active and sustainable travel, whilst providing a safe, accessible and positive parking experience for residents, businesses and visitors.

We have developed a clear and ambitious vision that establishes the long-term direction for the management of Huntingdonshire District Council's off-street parking assets.

The vision recognises the important role that parking plays in supporting residents, businesses and visitors, whilst responding to changing travel patterns, evolving customer expectations, technological innovation and future growth across the district.

Alongside this, the strategy promotes greater integration between parking and the wider transport network. By considering parking alongside walking, cycling, public transport and emerging technologies, the Council will seek to provide greater travel choice, improve accessibility and support more sustainable travel where practical.

The aim is not to discourage the use of the private car where it remains the most appropriate option, but to ensure that parking contributes positively to creating attractive, well connected and prosperous communities that support economic growth and enhance quality of life.

The vision is supported by four strategic themes that reflect the Council's priorities for the future of parking in Huntingdonshire. Each theme is underpinned by a series of objectives that establish the strategic direction for the parking service and provide a consistent framework for future decision making in both the short and longer term.

Delivering these themes and objectives will be the focus of the strategy over its lifetime. Together with the supporting Implementation Plan, they provide a clear programme for investment, management and continuous improvement, ensuring the Council's parking assets continue to support the district's economic, environmental and community ambitions for many years to come.

OUR STRATEGIC PARKING THEMES

SUPPORT THRIVING TOWN CENTRES AND ECONOMIC ACTIVITY

Vibrant town centres rely on convenient, accessible and well managed parking. Whether people are travelling to shop, work, access services, visit attractions or spend time with family and friends, the availability and quality of parking plays an important role in shaping their experience.

Parking therefore makes a significant contribution to the vitality and long-term viability of Huntingdonshire's market towns and local centres.

Managing parking effectively is about more than simply providing enough spaces. The Council must ensure parking is available in the right locations, is easy to find and is managed in a way that supports an appropriate turnover of spaces.

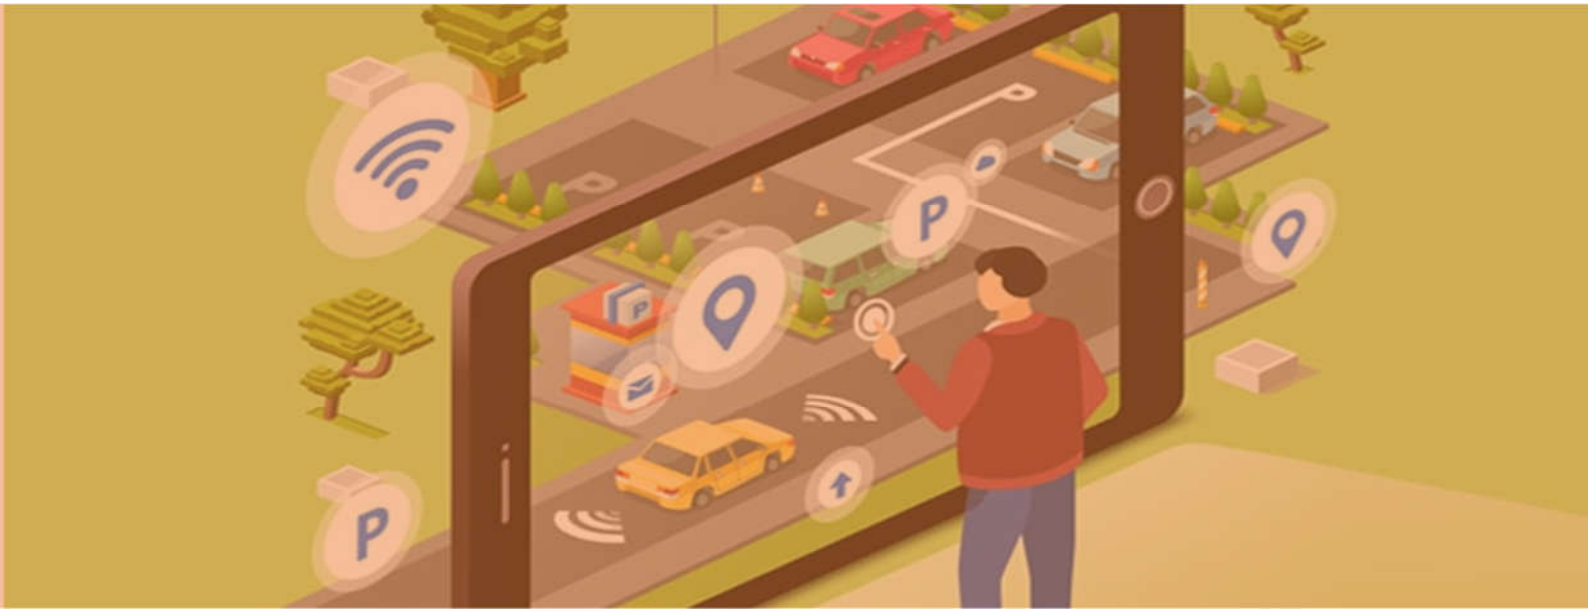
Clear information, effective wayfinding, appropriate tariffs and consistent management help maximise the efficient use of existing parking assets while supporting local businesses and encouraging repeat visits. As customer expectations continue to evolve, parking facilities must also adapt.

This includes maintaining safe, attractive and accessible car parks that meet the needs of a wide range of users, whilst embracing technology that makes parking simpler and more convenient. Investment in the customer experience will help ensure the Council's parking assets continue to meet future needs.

Parking is also a valuable public asset. Decisions about investment, management and future provision should balance economic prosperity with the efficient use of land, ensuring parking continues to support regeneration, town centre vitality and changing patterns of demand.

While opportunities will continue to emerge to encourage more sustainable travel, the private car will remain an important mode of transport for many journeys across Huntingdonshire.

The Council will therefore seek to ensure parking continues to support residents, businesses and visitors, helping create attractive, prosperous and successful town centres for current and future generations.



DELIVER A MODERN, EFFICIENT, AND CUSTOMER FOCUSED PARKING SERVICE

Customer expectations continue to evolve, and the Council's parking service must evolve with them. Delivering a modern parking service means providing facilities that are easy to use, well maintained and supported by technology that improves convenience, efficiency and overall customer experience.

At the same time, the Council must ensure that investment in new technology delivers genuine value, improves the visitor experience, operational performance and supports informed decision making.

Digital technology is becoming increasingly important in the operation and management of parking services. Modern payment systems now offer customers greater flexibility through contactless payments, mobile applications and cashless transactions, making parking quicker and more convenient.

These technologies can also reduce operational costs, improve reliability and minimise the need for cash handling and maintenance of ageing equipment.

Technology also provides opportunities to improve the management of parking assets. Real time information, digital permit systems, occupancy monitoring and data driven management can help make more efficient use of available parking, improve customer information and support evidence-based decisions.

As technology continues to develop, the Council will remain open to innovations that enhance both the customer experience and operational efficiency.

Alongside technological change, the transition to electric vehicles and other emerging forms of mobility will continue throughout the lifetime of this strategy.

The Council will ensure that its parking service remains adaptable, responsive and capable of supporting changing travel behaviour, whilst maintaining a high quality service that meets the needs of residents, businesses and visitors.

INTEGRATE PARKING WITH ACTIVE AND SUSTAINABLE TRANSPORT

Parking should not be considered in isolation but as part of Huntingdonshire's wider transport network. While the private car will continue to play an important role for many journeys, particularly within the district's rural communities, parking also supports walking, cycling, public transport and other sustainable travel options.

By integrating parking with these modes, the Council can improve accessibility, increase travel choice and create a more connected and resilient transport network.

Encouraging sustainable travel requires a coordinated approach across transport planning, infrastructure and parking management. Continued collaboration with Cambridgeshire County Council, the Combined Authority, developers and neighbouring authorities will ensure parking complements wider transport investment and supports local and regional objectives.

Car parks can also help enable more sustainable journeys, providing opportunities for improved cycle parking, better public transport connections and infrastructure that makes sustainable travel more convenient.

In the longer term, there may be opportunities to develop integrated transport hubs where parking, active travel and public transport come together to improve connectivity and support seamless end-to-end journeys. These locations could incorporate facilities such as EV charging, secure cycle parking, mobility hubs and high-quality passenger facilities, making it easier for people to switch between different modes of transport.

The transition to electric vehicles will continue throughout the lifetime of this strategy. Huntingdonshire District Council has already established an Electric Vehicle Strategy, and this Parking Strategy supports its continued delivery by recognising that appropriately located charging infrastructure within Council car parks will be an important part of meeting future demand.

By integrating parking with active and sustainable transport, the Council can improve accessibility, support cleaner journeys and ensure the parking service continues to evolve alongside changing travel behaviour, technological innovation and the wider ambitions for Huntingdonshire.

MANAGE PARKING ASSETS RESPONSIBLY AND PLAN FOR THE FUTURE

The Council's off-street car parks are valuable public assets that support residents, businesses and visitors whilst making an important contribution to the local economy.

Managing these assets responsibly means ensuring they continue to meet the needs of communities today while remaining adaptable to changing travel behaviour, technological innovation, population growth and future development across the district.

Providing the right amount of parking in the right locations is essential. Too little parking can reduce accessibility, constrain economic activity and discourage investment, whilst an oversupply can result in underused land, unnecessary maintenance costs and missed opportunities to support wider regeneration objectives.

The Council must therefore take a balanced, evidence-led approach that considers current demand alongside future needs, enabling informed and appropriate decisions that support long-term economic, environmental and community objectives.

Parking assets should also be viewed within the wider context of place making and sustainable growth. As travel patterns evolve, some locations may require additional investment, whilst others may present opportunities for alternative uses, redevelopment or more efficient operation.

Decisions should be informed by robust evidence and aligned with the Council's ambitions for housing, regeneration, economic growth, sustainability and creating successful places that meet the needs of current and future generations.

The supply, management and pricing of parking must continue to support the long-term success of Huntingdonshire's market towns whilst complementing wider transport and planning objectives.

Through regular monitoring, ongoing review and proportionate investment, the Council will ensure its parking assets remain financially sustainable, resilient and capable of meeting the changing needs of future generations.

OUR OBJECTIVES:

The four strategic Themes are supported by a series of Objectives that establish the long-term direction for the Council's parking service. Together, these Objectives provide a clear framework for future decision making, setting out the Council's priorities, the rationale behind them and the outcomes they are intended to achieve.

The 20 Objectives within this strategy are grouped under the four strategic Themes that together support the Council's long-term vision for parking. Whilst each Objective has a distinct focus, many contribute to more than one Theme, reflecting the interconnected nature of the parking service. It is important to recognise that no Objective should be considered in isolation. Delivering the vision will require the Themes and Objectives to be implemented collectively, ensuring the greatest benefits for residents, businesses, visitors and the wider district.		Support Thriving Town Centres & Economic Activity	Deliver a Modern, Efficient, & Customer Focused Parking Service	Integrate Parking with Active & Sustainable Transport	Manage Parking Assets Responsibly & Plan for the Future
Objective 01-1	**Support Town Centres:** We will manage parking to support thriving town centres, local businesses and visitors.	✓	✓		✓
Objective 01-2	**Fair Parking Charges:** We will review parking charges regularly to ensure they remain fair, appropriate and based on local needs.	✓			✓
Objective 01-3	**The Right Parking in the Right Places:** We will provide the right type of parking in the right locations, such as short-stay parking near shops and long-stay parking further away.	✓	✓		✓
Objective 01-4	**Parking for Events and Visitors:** We will ensure parking can respond to busy periods, events and increased visitor demand.	✓	✓		✓
Objective 01-5	**Better Signs and Car Parks:** We will improve car park signs, directions and the overall appearance of council car parks.	✓	✓	✓	✓
Objective 02-1	**Easy and Accessible Parking:** Provide a safe, accessible and easy-to-use parking service for everyone.	✓	✓		✓
Objective 02-2	**Looking After Our Car Parks:** Maintain council car parks so they remain safe, reliable and in good condition.	✓	✓		✓
Objective 02-3	**Fair Parking Enforcement:** Ensure parking rules are applied fairly and consistently.	✓	✓		✓
Objective 02-4	**Using Parking Data:** Use parking data to help improve how council car parks are managed.	✓	✓		
Objective 02-5	**Using Technology:** Use technology to make parking easier and improve the parking service.	✓	✓		✓
Objective 03-1	**Support Sustainable Travel:** Support walking, cycling, buses and other sustainable ways to travel.	✓		✓	✓
Objective 03-2	**Walking and Cycling Facilities:** Improve facilities for people walking and cycling to and from council car parks.	✓	✓	✓	✓
Objective 03-3	**Future Transport Hubs:** Identify locations for future transport hubs with parking, cycling, walking and public transport connections.	✓	✓	✓	✓
Objective 03-4	**Electric Vehicle Charging:** Provide electric vehicle charging where there is demand.		✓	✓	
Objective 03-5	**Working with Partners:** Work with partners to encourage more sustainable travel and reduce parking demand.	✓		✓	✓
Objective 04-1	**Planning for the Future:** Plan ahead for future parking needs as towns and communities grow.	✓		✓	✓
Objective 04-2	**Monitoring Parking Demand:** Monitor parking demand to ensure enough parking is available as the district grows.	✓			✓
Objective 04-3	**Supporting Future Growth:** Ensure parking supports new development and future growth across the district.	✓	✓		✓
Objective 04-4	**Making Better Use of Car Parks:** Review underused car parks to see how they could be used more effectively.	✓	✓	✓	✓
Objective 04-5	**Considering Alternative Uses:** Consider alternative uses whilst ensuring that the required car parking capacity required as demonstrated by data is maintained or replaced within close proximity or in situ.	✓	✓	✓	✓

SUPPORT THRIVING TOWN CENTRES AND ECONOMIC ACTIVITY

O1-1: Support Town Centres: We will manage parking to support thriving town centres, local businesses and visitors.

WHY THIS OBJECTIVE?

Convenient, accessible and well managed parking is fundamental to the continued success of Huntingdonshire's market towns. Council car parks provide access to retail, employment, leisure, healthcare and community facilities, making them an important contributor to the local economy and the attractiveness of town centres.

Different towns and locations perform different roles and experience varying levels of parking demand. A consistent approach across every location would not recognise these differences or support the diverse needs of residents, businesses and visitors.

Instead, parking provision, duration of stay and tariffs should reflect the function of each town centre, encouraging an appropriate turnover of spaces whilst maintaining convenient access for those who need it.

As travel behaviour, economic conditions and town centres continue to evolve, parking policies must remain responsive.

Decisions should be informed by evidence, customer demand and wider regeneration ambitions, ensuring the parking service continues to support prosperous, vibrant and accessible town centres throughout the lifetime of this strategy.

HOW WILL IT BE DELIVERED?

The Council will regularly review parking demand, utilisation, duration of stay and customer behaviour to ensure parking arrangements remain appropriate for each location.

Future decisions relating to tariffs, charging periods, time limits and parking management will be informed by evidence and considered alongside the role each car park plays in supporting local economic activity.

The Council will continue to monitor the performance of its parking assets throughout the lifetime of the strategy, allowing policies to evolve in response to changing travel patterns, customer expectations, technological innovation and future growth.

This will ensure the parking service continues to provide a positive customer experience whilst supporting thriving town centres across Huntingdonshire.

O1-2: Fair Parking Charges: We will review parking charges regularly to ensure they remain fair, appropriate and based on local needs.

WHY THIS OBJECTIVE?

Parking tariffs are one of the Council's most effective tools for managing demand and ensuring parking is used efficiently. Appropriately set tariffs help encourage an appropriate turnover of spaces, improve parking availability in the busiest locations and support access to town centres for shoppers, visitors and those accessing local services, amenities, and open spaces.

Tariffs should therefore be viewed as an important part of the overall management of the parking service, helping to balance the needs of different users whilst supporting the continued vitality and viability of Huntingdonshire's market towns.

Parking tariffs should not remain static over the lifetime of this strategy. Changes in travel behaviour, customer expectations, inflation, operating costs and wider economic conditions mean that charging arrangements must be reviewed periodically to ensure they remain appropriate.

Equally, different car parks perform different roles within the parking network, and tariff structures should continue to reflect these differences rather than adopting a one-size-fits-all approach.

Evidence must remain at the heart of future tariff decisions. Parking occupancy surveys, duration of stay information, benchmarking against comparable authorities, customer feedback and an understanding of local economic conditions all provide valuable insight into how parking is being used and whether existing tariffs continue to achieve their intended purpose. This evidence-led approach will enable the Council to make informed, transparent and appropriate decisions that reflect local circumstances rather than applying changes uniformly across the district.

Income generated through the parking service also plays an important role in maintaining and improving the Council's parking assets. Revenue supports the ongoing operation of the parking service and enables investment in maintenance, technology, accessibility improvements and customer facilities.

By balancing demand management, economic vitality and financial sustainability, the Council can ensure that parking continues to provide value for residents, businesses and visitors while supporting the long-term management of its parking assets.

HOW WILL IT BE DELIVERED?

The Council will undertake regular reviews of parking tariffs using a robust evidence base that includes parking occupancy and duration of stay surveys, benchmarking against comparable authorities, customer feedback, operational costs and local economic conditions. This information will help ensure tariffs remain proportionate, reflect local circumstances and continue to support the role of each car park within the wider parking network.

Future tariff reviews will consider a range of factors, including the location and function of each car park, parking demand, the availability of alternative parking, the needs of residents, businesses and visitors, and the potential impact on town centre vitality.

Where changes are proposed, the Council will seek to ensure they are justified by evidence and aligned with wider transport, regeneration and economic objectives rather than being considered in isolation.

The Council will also continue to review the consistency and simplicity of its charging structure, recognising that clear and understandable tariffs improve the customer experience and make the parking service easier to use.

Opportunities to simplify tariff structures, introduce greater consistency across similar car parks and respond to changing customer expectations will be considered where these support the wider objectives of the strategy.

Tariffs will continue to be monitored throughout the lifetime of the strategy, allowing the Council to respond to changing travel patterns, economic conditions and future growth.

This will ensure the parking service remains financially sustainable whilst continuing to support thriving town centres, positive customer experiences and the long-term management of the Council's parking assets.

O1-3: The Right Parking in the Right Places: We will provide the right type of parking in the right locations, such as short-stay parking near shops and long-stay parking further away

WHY THIS OBJECTIVE?

Not all car parks serve the same purpose. Some primarily support short visits to shops and services, whilst others accommodate employees, commuters, leisure users or longer-stay visitors.

Managing every car park in the same way can reduce the overall effectiveness of the parking network and limit the availability of spaces where demand is greatest.

Car parks located closest to town centre destinations are often the most convenient and therefore the most valuable for supporting retail, hospitality and other businesses that rely on regular customer turnover.

Ensuring these locations remain available for short-stay parking, where appropriate, can improve accessibility, increase parking availability and support the continued vitality of Huntingdonshire's market towns.

At the same time, longer-stay parking remains an important part of the overall parking offer. Providing appropriate long-stay parking in suitable locations can help meet the needs of employees, commuters and visitors while reducing pressure on the most centrally located car parks.

Managing the parking network in this way enables different car parks to perform complementary roles that maximise the efficient use of available capacity.

HOW WILL IT BE DELIVERED?

The Council will continue to review the role and performance of each car park using occupancy data, duration of stay information, customer demand and local knowledge.

This evidence will inform decisions on parking duration, tariffs, charging periods and other management measures, ensuring each car park operates in a way that best supports its intended function.

Future changes will be considered alongside wider town centre strategies, regeneration projects, transport initiatives and local circumstances, recognising that parking requirements may differ between Huntingdonshire's market towns.

The Council will also work with businesses, local communities and key stakeholders to ensure that parking management reflects the needs of each location.

Regular monitoring and periodic reviews will enable the Council to respond to changing travel patterns, customer expectations and future growth, ensuring the parking network remains balanced, flexible and capable of supporting both economic activity and wider transport objectives throughout the lifetime of the strategy.

O1-4: Parking for Events and Visitors: We will ensure parking can respond to busy periods, events and increased visitor demand.

WHY THIS OBJECTIVE?

Huntingdonshire's towns host a wide range of events throughout the year, including markets, festivals, cultural activities, seasonal celebrations and sporting events, all of which generate temporary increases in parking demand. The evidence base demonstrates that while the Council's overall parking portfolio has sufficient capacity to accommodate typical levels of demand, some car parks can experience significantly higher occupancy during busy periods, creating localised pressure and reducing the availability of convenient parking.

Supporting the visitor economy is an important role of the Council's parking service. Well managed parking helps ensure that residents and visitors can access town centres easily, supporting local businesses, markets, hospitality venues and community events. Equally, poor parking management during busy periods can lead to unnecessary congestion, inefficient use of available capacity and a poorer visitor experience.

Rather than providing additional permanent parking to accommodate occasional peaks in demand, the Council should seek to make better use of its existing parking assets through effective management, clear communication and flexible operational arrangements.

This will enable the parking network to respond to changing patterns of demand whilst continuing to support the economic vitality and attractiveness of the towns across the Huntingdonshire district.

HOW WILL IT BE DELIVERED?

The Council will continue to monitor parking demand associated with major events, seasonal trading periods and markets, using occupancy surveys, transaction data and operational experience to understand how demand varies throughout the year.

This evidence will be used to identify locations where temporary management measures may improve the operation of the parking network.

Where appropriate, the Council will consider a range of measures to manage peak demand, including temporary signage, customer information, revised parking arrangements, enhanced wayfinding and improved communication directing motorists towards available parking. Opportunities to utilise spare capacity within nearby car parks, where available, will also be explored to reduce pressure on the busiest locations.

The Council will work closely with stakeholders to ensure parking arrangements are considered as part of the planning process for major events.

This collaborative approach will help maintain accessibility, support the visitor economy and provide a positive experience for residents and visitors whilst making the most effective use of the existing parking portfolio.

O1-5: Better Signs and Car Parks: We will improve car park signs, directions and the overall appearance of council car parks.

WHY THIS OBJECTIVE?

A well-designed parking experience begins before a vehicle enters a car park. Clear directional signage, intuitive wayfinding and an attractive public realm help visitors find parking quickly and confidently, reducing unnecessary circulation, congestion and driver frustration. Once parked, safe and welcoming pedestrian routes encourage people to continue their journey on foot and create a positive first impression of the town.

For many visitors, a Council operated car park represents their first interaction with a town. The quality, appearance and ease of use of the car park can therefore influence perceptions of the wider area. Well maintained parking facilities, high-quality signage and attractive pedestrian environments contribute to a more welcoming experience, encouraging repeat visits and supporting local businesses and the visitor economy.

Improving legibility and the public realm also benefits residents, businesses and those with accessibility needs. Providing clear information, safe walking routes and inclusive design principles helps create facilities that are easier to use, more accessible and better connected to surrounding destinations.

HOW WILL IT BE DELIVERED?

The Council will review existing signage, wayfinding and pedestrian connections across its parking estate to identify opportunities for improvement.

Future investment will seek to provide clear and consistent directional signage, intuitive information for users and high-quality pedestrian links between car parks and nearby destinations, making it easier and more enjoyable to access key destinations.

Opportunities to improve digital parking information and online mapping will also be considered where these enhance the customer experience.

Improvements to the public realm will be considered alongside wider town centre regeneration projects, public realm enhancements and transport initiatives, ensuring parking facilities complement the character and function of each location.

Where appropriate, the Council will also consider opportunities to improve landscaping, lighting, accessibility and the overall appearance of its car parks as part of planned maintenance and investment programmes.

The Council will continue to monitor customer feedback, condition assessments and evolving best practice to ensure parking facilities remain safe, welcoming and easy to use, supporting a positive customer experience and reinforcing Huntingdonshire's reputation as an attractive place to live, work and visit.

DELIVER A MODERN, EFFICIENT, AND CUSTOMER-FOCUSED PARKING SERVICE

Objective O2-1: Easy and Accessible Parking: Provide a safe, accessible and easy-to-use parking service for everyone.

WHY THIS OBJECTIVE?

For many people, the car park provides their first and last impression of a town centre. A well-managed, welcoming and easy-to-use parking environment encourages repeat visits, supports local businesses and creates confidence in the Council's parking service.

Huntingdonshire's parking portfolio has developed over many years and reflects different periods of investment. As a result, there are variations in signage, facilities, accessibility and customer information. Whilst individual car parks will continue to perform different roles, there is value in providing a more consistent customer experience across the parking estate.

Accessibility is fundamental to good parking management. Car parks should be safe and convenient for everyone, including disabled users, older people, families with young children and those with temporary mobility impairments. This includes parking provision, safe pedestrian routes, good lighting, high-quality surfaces and clear signage.

Customers also expect parking to be simple and convenient. Straightforward payment options, clear information and easy-to-understand parking arrangements all contribute to a positive experience. By delivering a consistent and customer focused approach, HDC can improve satisfaction and ensure its parking service continues to support residents, businesses and visitors.

HOW WILL IT BE DELIVERED?

The Council will seek to establish consistent standards across its parking estate, covering signage, customer information, accessibility, lighting, maintenance and the overall quality of the parking environment.

Whilst individual car parks will continue to reflect their specific role and location, customers should experience a recognisable standard of service wherever they park.

Investment programmes will continue to improve accessibility where opportunities arise, including reviewing accessible parking provision, upgrading pedestrian routes, enhancing lighting and improving surfaces as part of planned maintenance programmes.

The Council will continue to modernise the customer experience through clear information and flexible, reliable payment options, whilst ensuring that inclusive payment methods remain available for those who do not wish to use digital services.

Customer feedback, parking data and emerging best practice will inform future improvements, ensuring Huntingdonshire's parking service remains safe, accessible, efficient and responsive to changing customer expectations.

Objective O2-2: Looking After Our Car Parks: Maintain council car parks so they remain safe, reliable and in good condition.

WHY THIS OBJECTIVE?

The Council's car parks represent valuable public assets that require ongoing investment to remain safe, accessible and fit for purpose. Surfaces, drainage, lighting, signage, payment equipment and other infrastructure will deteriorate over time, and without planned maintenance relatively minor defects can develop into significant and costly problems.

A structured approach to asset management provides an opportunity to move away from predominantly reactive maintenance towards planned intervention based on condition, risk and expected asset life. This enables investment to be anticipated and prioritised, helping the Council make more efficient use of available resources and reduce the potential for unexpected expenditure.

The condition of car parks also directly influences customer experience. Well-maintained surfaces, reliable equipment, lighting and quality infrastructure contribute to facilities that feel safe, welcoming and professionally managed. Maintaining these standards is therefore important both operationally and in supporting the attractiveness of towns and key destinations.

Lifecycle planning is particularly important given the long-term horizon of this strategy. Understanding when significant components are likely to require repair, renewal or replacement will enable the Council to plan future budgets and coordinate improvements rather than considering individual assets in isolation.

HOW WILL IT BE DELIVERED?

The Council will develop a maintenance and lifecycle programme for its parking estate, supported by periodic condition assessments and an up-to-date inventory of key assets.

This will identify maintenance requirements, anticipated replacement periods and indicative costs, allowing investment to be prioritised according to condition, safety, operational importance and funding.

Where possible, maintenance will be coordinated with wider car park improvements so that resurfacing, lighting, accessibility, signage, technology and other works can be delivered efficiently as part of planned investment programmes.

Priority will be given to interventions necessary to maintain safety, accessibility and compliance, while preventative maintenance will be used where appropriate to extend asset life and reduce longer-term costs.

The programme will be reviewed periodically to reflect changing asset condition, costs and operational requirements.

This lifecycle approach will provide the Council with greater certainty over future investment requirements, helping maintain the quality of its parking estate while ensuring expenditure remains planned, proportionate and financially sustainable over the lifetime of the strategy.

Objective O2-3: Fair Parking Enforcement: Ensure parking rules are applied fairly and consistently.

WHY THIS OBJECTIVE?

Effective enforcement is an important part of a well-managed parking service. Parking restrictions and conditions are introduced for specific reasons, including maintaining availability, encouraging turnover, protecting accessible bays and ensuring car parks operate safely and efficiently.

Without appropriate enforcement, these objectives can be undermined, and responsible users may be disadvantaged.

Enforcement should be fair, consistent and appropriate. Customers should be able to understand where they can park, how long they can stay, what they are required to pay and any restrictions that apply. Clear signage, straightforward terms and reliable payment systems are therefore as important to achieving compliance as enforcement itself.

The purpose of enforcement should primarily be to encourage compliance rather than generate revenue. A successful parking service is one where customers understand and follow the requirements, allowing available capacity to be used effectively and ensuring spaces intended for particular users or purposes remain available.

Enforcement also needs to respond to changing parking behaviour. Different car parks experience different levels and types of non-compliance, meaning resources should be applied according to evidence and operational need rather than applying the same level of enforcement across every location. Providing a reactive service to customers can often improve relationships.

HOW WILL IT BE DELIVERED?

The Council will continue to operate a consistent approach to enforcement across its parking estate, ensuring restrictions and parking conditions are clearly communicated and appropriately enforced.

Enforcement activity will be informed by compliance data, customer feedback and operational experience, enabling resources to be focused on locations and times where non-compliance has the greatest impact.

Particular consideration will be given to behaviours that affect accessibility, safety, turnover or the availability of spaces for legitimate users.

The Council will periodically review signage, parking conditions and customer information to identify opportunities to make requirements clearer and reduce inadvertent non-compliance.

Where recurring issues are identified, consideration will be given to whether changes to management arrangements could address the underlying problem before increased enforcement is considered.

Technology and parking data will also be used where appropriate to improve the efficiency and targeting of enforcement activity.

This balanced approach will help maintain public confidence in the parking service while ensuring enforcement remains fair, transparent and focused on supporting the effective operation of Huntingdonshire's car parks.

Objective O2-4: Using Parking Data: Use parking data to help improve how council car parks are managed.

WHY THIS OBJECTIVE?

Effective parking management requires a clear understanding of how car parks are being used and how demand changes over time. Occupancy, duration of stay, turnover, payment and compliance data can provide valuable insight into where pressure exists, where capacity is underutilised and how individual car parks are performing.

The evidence gathered to support this strategy demonstrates that parking demand varies considerably between locations, times of day and different periods of the year.

Town wide averages can also mask significant differences between individual car parks. Regular monitoring is therefore important to ensure future decisions respond to actual patterns of use rather than assumptions about parking demand.

Improved data can support decisions relating to tariffs, investment, maintenance and the function of individual car parks. It can also help the Council identify emerging trends and evaluate whether changes to parking management are achieving their intended outcomes.

A data-led approach does not mean that decisions will be determined by parking data alone. Customer feedback, economic conditions, accessibility, town centre priorities and wider transport objectives will continue to be considered alongside quantitative evidence to provide a balanced basis for decision making.

HOW WILL IT BE DELIVERED?

The Council will establish an appropriate and effective approach to monitoring its parking portfolio, using available information such as occupancy surveys, duration of stay, parking transactions, payment data and compliance information. The frequency and level of monitoring will reflect the role of individual car parks and the decisions that need to be informed.

Where appropriate, existing and future digital systems will be used to improve the quality and accessibility of parking data, enabling trends to be identified more efficiently and reducing reliance on periodic manual surveys.

Parking data will be reviewed periodically to inform tariff reviews, investment priorities, operational changes and the future role of individual car parks.

Particular attention will be given to identifying locations experiencing sustained capacity pressure or underutilisation rather than responding to isolated peaks.

The Council will also use monitoring to evaluate the impact of interventions delivered through this strategy, creating an ongoing evidence base that allows parking management to adapt as demand, travel behaviour and customer expectations change. It is recommended to review the Implementation Plan approximately 24 months post strategy approval to determine how much progress has been made.

Objective O2-5: Using Technology: Use technology to make parking easier and improve the parking service.

WHY THIS OBJECTIVE?

Technology is transforming the way parking services are managed, providing opportunities to improve the customer experience whilst making the parking service more efficient and responsive.

Digital payment systems, real-time information, remote monitoring and improved data collection can all help simplify parking for users whilst supporting more effective management of the Council's parking portfolio.

However, technology should be introduced where it provides a clear benefit rather than being adopted for its own sake. Huntingdonshire's car parks perform a variety of functions and operate at very different levels of demand. As a result, the level of technological intervention required will vary between locations. In many cases, simpler and lower-cost solutions may provide better value than more complex systems.

A proportionate approach allows investment to be targeted where it delivers the greatest operational, financial and customer benefits. It also provides flexibility to respond to future technological advances and changing customer expectations without committing to unnecessary infrastructure or expenditure.

HOW WILL IT BE DELIVERED?

The Council will continue to review emerging technologies and assess opportunities to improve customer experience, operational efficiency and the quality of parking data.

Decisions on future investment will be based on evidence of need, operational benefits, affordability and value for money.

Where appropriate, the Council will consider technologies such as improved payment systems, digital customer information, remote monitoring, occupancy data collection and other smart parking solutions that simplify parking and support more efficient management.

The type of technology adopted will reflect the role and function of each car park rather than applying a single solution across the entire parking estate.

The performance of new technologies will be monitored throughout the lifetime of the strategy, ensuring investment continues to deliver measurable benefits for customers and the Council whilst remaining flexible to future innovation and changing service requirements.

INTEGRATE PARKING WITH ACTIVE & SUSTAINABLE TRANSPORT

Objective O3-1: Support Sustainable Travel: Support walking, cycling, buses and other sustainable ways to travel.

WHY THIS OBJECTIVE?

Parking should not be considered in isolation. Every journey begins and ends with parking, whether travelling by car, public transport, walking or cycling. The way car parks are planned, managed and connected to surrounding destinations can therefore have a significant influence on how people choose to travel, particularly for shorter journeys and trips within Huntingdonshire's market towns.

Historically, parking has often been viewed simply as a destination in its own right. Increasingly, however, there is recognition that car parks form an integral part of the wider transport system.

Well located, well connected and accessible parking can encourage people to complete part of their journey on foot, by cycle or by public transport, whilst poorly integrated parking can reinforce unnecessary car dependency and reduce the attractiveness of more sustainable travel options.

The evidence base demonstrates that Huntingdonshire generally benefits from sufficient off-street parking provision across its principal towns. Rather than continually increasing parking supply, there is an opportunity to maximise the value of existing car parks by improving how they connect with surrounding streets, public spaces, public transport facilities and active travel routes.

Better integration can improve accessibility without requiring significant increases in parking capacity.

This approach also supports the Council's wider ambitions around sustainable growth, healthier communities and reducing transport related carbon emissions. Whilst the private car will remain an essential mode of transport for many residents, particularly within a predominantly rural district, many shorter journeys have the potential to be undertaken, either wholly or in part, by walking, cycling or public transport where attractive alternatives are available.

Importantly, this objective is not intended to discourage car use. Instead, it seeks to ensure that parking complements the wider transport network, enabling people to choose the most appropriate mode of travel for each journey.

By improving connectivity between car parks and other transport modes, the Council can create a more resilient, efficient and accessible transport system that supports residents, businesses and visitors alike.

HOW WILL IT BE DELIVERED?

The Council will consider parking as an integral component of the wider transport network when planning future investment and improvements across its parking portfolio. This will include ensuring that car parks provide safe, direct and attractive walking connections to town centres, public transport interchanges, employment areas, visitor attractions and key community facilities wherever practicable.

Future investment programmes will seek opportunities to improve links between parking facilities and active travel infrastructure, including walking routes, cycle networks and secure cycle parking. Where appropriate, car parks may also provide locations for supporting infrastructure such as cycle parking, mobility hubs, electric vehicle charging and facilities that encourage multi-modal journeys.

The Council will continue to work closely with Cambridgeshire County Council, the Cambridgeshire and Peterborough Combined Authority, neighbouring authorities, public transport operators, developers and other partners to ensure parking is considered alongside wider transport and development proposals.

Integrating parking with the Local Cycling and Walking Infrastructure Plan (LCWIP), public transport improvements, town centre regeneration and new development will help ensure that future investment delivers multiple benefits rather than treating parking as a standalone asset.

As travel patterns and technology continue to evolve, the Council will also remain responsive to emerging opportunities that improve integration between different modes of transport. This may include the future development of mobility hubs, enhanced interchange facilities, shared mobility services and smarter parking management technologies that make it easier for users to combine different modes within a single journey.

The Council will use parking occupancy surveys, customer feedback and wider transport evidence to monitor how parking supports access to town centres and key destinations.

This evidence-led approach will enable future investment to be targeted where it delivers the greatest benefit, ensuring parking continues to support sustainable travel whilst maintaining convenient access for those journeys where the private car remains the most appropriate choice.

Objective O3-2: Walking and Cycling Facilities: Improve facilities for people walking and cycling to and from council car parks.

WHY THIS OBJECTIVE?

Car parks provide more than simply a place to leave a vehicle. They are often the starting point for onward journeys on foot or by cycle and should provide safe, convenient and attractive facilities that encourage active travel where appropriate. Improving these facilities can make it easier for residents and visitors to complete part of their journey without relying solely on the private car.

Many Council operated car parks are well positioned to support access to town centres, employment areas, visitor attractions and community facilities.

However, the availability and quality of supporting infrastructure varies between locations. Opportunities exist to improve pedestrian routes, provide secure cycle parking and strengthen links with existing and proposed walking and cycling networks.

Providing active travel infrastructure can deliver multiple benefits. Secure cycle parking encourages more people to cycle, whilst high-quality pedestrian routes improve accessibility for all users, including those with mobility impairments, parents with pushchairs and visitors unfamiliar with the area. These improvements also contribute to a safer, more welcoming environment and a better customer experience.

Not every car park will be suitable for every type of intervention. Improvements should therefore be based on the role, location and function of each site, ensuring investment is targeted where it delivers the greatest benefit.

HOW WILL IT BE DELIVERED?

The Council will review its parking estate to identify locations where active travel facilities would provide the greatest benefit.

Priority will be given to car parks serving town centres, transport interchanges, visitor destinations and locations that connect directly with existing or proposed walking and cycling routes.

Future investment will consider facilities such as secure cycle parking, improved pedestrian routes, dropped kerbs, wayfinding, seating and lighting, alongside other measures that improve access to and from car parks.

Where appropriate, complementary facilities such as cycle repair stations or lockers will also be considered.

These improvements will be coordinated with wider transport, public realm and regeneration projects wherever possible, whilst external funding opportunities will be pursued to support delivery.

As the parking estate evolves, significant refurbishment projects and new parking provision should also consider how active travel facilities can be incorporated from the outset, creating more accessible, attractive and inclusive parking facilities that support a wider range of travel choices.

Objective O3-3: Future Transport Hubs: Identify locations for future transport hubs with parking, cycling, walking and public transport connections.

WHY THIS OBJECTIVE?

Travel patterns are expected to continue evolving over the next 20 years. Advances in vehicle technology, customer expectations, improvements to public transport and active travel infrastructure, and the continued growth of low emission vehicles all have the potential to reshape how Huntingdonshire's towns and key destinations are accessed.

Whilst HDC's existing parking portfolio provides sufficient capacity to meet current demand, there is an opportunity to consider how parking provision may evolve over the longer term. Rather than accommodating all parking demand within town centres, future investment may encourage a more balanced distribution by providing alternatives on the edge of towns, well connected to walking, cycling and public transport.

Integrated Transport Hubs can play a key role in supporting this transition. These facilities would combine convenient parking with a range of sustainable travel options, allowing users to complete their journey by alternative modes where appropriate.

Depending on local circumstances, they could incorporate EV charging, secure cycle parking, cycle hire, shared mobility services and convenient public transport connections, providing greater travel choice while helping reduce pressure on central parking facilities.

The concept is not intended to replace town centre parking or discourage car use where it remains the most appropriate option. Instead, it recognises that some journeys may be better served by parking on the edge of town where onward travel by sustainable modes is attractive, convenient and reliable. Over time, this could improve accessibility, reduce congestion and create greater flexibility in how parking assets are managed.

Given the long-term nature of this opportunity, the priority is not to deliver Integrated Transport Hubs immediately, but to identify and safeguard suitable opportunities where appropriate. This will allow the Council to respond to future changes in travel behaviour, funding opportunities and technological development without limiting future choices.

HOW WILL IT BE DELIVERED?

The Council will work with stakeholders to identify locations that could support future Integrated Transport Hubs. These should provide convenient access to town centres while connecting effectively with existing or proposed transport networks.

As part of future transport planning, regeneration projects and development proposals, the Council will consider opportunities to safeguard land capable of accommodating these facilities. Potential sites will be assessed against accessibility, surrounding land uses, transport connectivity, parking demand, environment and delivery.

Where opportunities arise, Integrated Transport Hubs could be introduced incrementally, allowing facilities to evolve alongside demand. Initial phases may focus on enhanced walking and cycling links, secure cycle parking and EV charging, with facilities such as cycle hire, and shared mobility added over time.

Objective O3-4: Electric Vehicle Charging: Provide electric vehicle charging where there is demand.

WHY THIS OBJECTIVE?

The transition towards low emission vehicles represents one of the most significant changes affecting the parking sector over the lifetime of this strategy. As electric vehicle ownership continues to increase, the availability of convenient and reliable charging infrastructure will become an increasingly important consideration for residents, businesses and visitors when choosing where to travel and park.

Huntingdonshire District Council has already adopted an Electric Vehicle Strategy, which provides the strategic framework for the rollout of charging infrastructure across the district. This Parking Strategy supports that wider strategy by recognising the important role that council operated car parks will play in accommodating future charging demand.

Rather than duplicating the objectives of the EV Strategy, this objective focuses on ensuring that parking infrastructure evolves alongside changing vehicle technology and customer expectations.

Council operated car parks provide many of the characteristics required for public charging infrastructure. They are located close to town centres, employment areas, community facilities and visitor destinations, often with dwell times that are well suited to destination charging.

They also provide opportunities to support residents without access to private driveways, enabling equitable access to charging infrastructure across the district.

The transition to electric vehicles must, however, be carefully managed. Installing charging infrastructure requires significant investment, electrical capacity and ongoing maintenance, whilst excessive provision risks underutilising valuable parking spaces during the earlier stages of market growth.

Equally, insufficient infrastructure may discourage electric vehicle adoption and reduce the attractiveness of town centres and visitor destinations.

For these reasons, investment should be evidence-led and appropriate, responding to changes in vehicle ownership, charging behaviour and technological development.

This will ensure that infrastructure is delivered where it is needed most, whilst maintaining an appropriate balance between charging provision and general parking capacity.

HOW WILL IT BE DELIVERED?

The Council will continue to deliver charging infrastructure in accordance with its adopted Electric Vehicle Strategy, ensuring that investment within council operated car parks complements the wider rollout of charging facilities across Huntingdonshire.

Future provision will be informed by parking demand, utilisation of existing charge points, local patterns of electric vehicle ownership, available electrical capacity and emerging technologies.

Objective O3-5: Working with Partners: Work with partners to encourage more sustainable travel and reduce parking demand.

WHY THIS OBJECTIVE?

Many of the factors that influence parking demand sit beyond the direct control of HDC. The availability of public transport, the quality of walking and cycling infrastructure, the location of new development, and wider travel patterns are shaped by a range of organisations. Delivering a successful parking strategy therefore requires close partnership working.

The evidence demonstrates that parking demand varies a lot between locations and time of year. Whilst effective management can optimise the use of existing capacity, longer-term reductions in unnecessary parking demand are most likely to be achieved by improving the attractiveness and availability of alternative travel options, particularly for shorter journeys where sustainable travel choices are realistic.

Partnership working also provides opportunities to coordinate investment, secure external funding and ensure parking is considered alongside wider transport, regeneration and development proposals. By aligning priorities and sharing evidence, organisations can deliver more integrated solutions that improve accessibility whilst supporting economic growth, environmental objectives and healthier communities.

Importantly, this objective recognises that the private car will continue to play a vital role for many journeys across Huntingdonshire, particularly in rural areas where travel choices are more limited. The aim is therefore not to discourage car use, but to provide greater travel choice and reduce unnecessary parking demand where practical alternatives exist.

HOW WILL IT BE DELIVERED?

The Council will continue to work closely with stakeholders to ensure parking is considered as part of wider transport planning and investment decisions. This collaborative approach will help align parking with improvements to active travel, public transport and connectivity across the district.

Opportunities will be sought to coordinate parking management with new transport infrastructure, regeneration projects and major developments, ensuring future growth is supported by a balanced and integrated approach to access. The Council will also seek external funding opportunities to support projects that deliver wider transport and parking benefits.

Where appropriate, HDC will support initiatives that encourage sustainable travel choices, including workplace travel planning, public transport improvements and active travel programmes. Although many of these measures are led by partner organisations, the Council's parking service can play a supporting role by ensuring parking policies complement wider transport initiatives.

The Council will share evidence, monitor travel patterns and review parking demand alongside its partners, ensuring future parking decisions respond to changing travel behaviour and informed by an understanding of the districts transport needs.

MANAGE PARKING ASSETS RESPONSIBLY AND PLAN FOR THE FUTURE

Objective O4-1: Planning for the Future: Plan ahead for future parking needs as towns and communities grow.

WHY THIS OBJECTIVE?

Huntingdonshire is expected to continue to grow over the lifetime of this strategy, with new housing, employment and regeneration potentially changing the scale and distribution of parking demand. Although current evidence indicates generally sufficient capacity across the Council's portfolio, this may not remain the case in every location over the next 20 years.

Future demand will be influenced by development, population growth, changes in town centre activity and evolving travel behaviour. Some locations may experience increasing pressure, particularly where existing parking is already well utilised or opportunities to expand provision are constrained.

Planning for these changes does not necessarily mean providing additional car parks. Better management of existing capacity, changes to the function of individual sites or improved sustainable transport connections may provide more appropriate solutions.

However, where evidence indicates that additional provision could be required, potentially suitable opportunities should not be unnecessarily lost through development or changes in land use.

Considering future parking requirements alongside the planning process will therefore help retain flexibility as Huntingdonshire's towns continue to grow and evolve.

HOW WILL IT BE DELIVERED?

The Council will use parking demand data, development forecasts and other available evidence to identify locations where future growth could place additional pressure on parking provision. This will be considered alongside the Local Plan and relevant regeneration and development proposals.

Where future capacity constraints are identified, the Council will work with, stakeholders and partners to consider appropriate responses. These may include better management of existing capacity, changes to parking controls, shared parking options, sustainable transport measures or, where justified, additional provision.

Where there is a clear strategic case, opportunities to safeguard suitable land or retain flexibility within existing Council assets will be considered. This would not represent a commitment to additional parking, but would ensure that viable options remain available should future evidence demonstrate a need.

Requirements will be reviewed as development comes forward and travel patterns change, ensuring future decisions remain evidence-led, proportionate and aligned with wider planning, economic and transport objectives.

Objective O4-2: Monitoring Parking Demand: Monitor parking demand to ensure enough parking is available as the district grows.

WHY THIS OBJECTIVE?

Parking demand is not static. Over the 20-year lifetime of this strategy, Huntingdonshire will continue to experience population and housing growth, regeneration, changes in town centre activity and evolving travel behaviour. New development may create additional demand in some locations, while improvements to public transport, walking and cycling, changes in working patterns and new mobility technologies may reduce or redistribute demand elsewhere.

The evidence gathered through the parking surveys demonstrates that Huntingdonshire currently has sufficient parking capacity when considered at a district wide level. However, this overall position masks significant variation between towns and individual car parks. Some facilities experience sustained periods of high occupancy, while others retain considerable spare capacity. Demand also varies between weekdays and weekends and across different periods of the year.

The location and function of parking are therefore as important as the overall number of spaces provided. A town may have sufficient capacity in aggregate while experiencing pressure in the car parks closest to shops, services and other key destinations. Equally, apparently underutilised facilities may perform an important strategic, seasonal or leisure function that is not fully reflected by average occupancy.

A balanced approach will enable the Council to maintain sufficient parking capacity to support accessibility and economic activity, while avoiding unnecessary over provision. It will also provide the flexibility to respond to future growth, development and changing travel patterns over the lifetime of the strategy. Importantly, decisions on future parking provision will consider the wider function and strategic value of each asset, rather than being based solely on current levels of utilisation.

HOW WILL IT BE DELIVERED?

The Council will maintain an evidence-led understanding of parking supply and demand across its portfolio. Occupancy, duration of stay, turnover and other available parking data will be monitored periodically to identify locations experiencing sustained pressure, as well as car parks where significant spare capacity exists.

Assessment will consider more than average occupancy. Peak demand, seasonal variation, the function and location of individual car parks, surrounding land uses and the availability of alternative parking will all be considered before changes to provision are proposed. This will help distinguish between genuinely surplus capacity and parking that performs an important function at particular times or for particular users.

Where sustained capacity pressure is identified, the Council will initially consider whether existing provision can be used more efficiently. This could include improved wayfinding, changes to the function of individual car parks, tariff or duration controls, better utilisation of nearby capacity or measures to encourage alternative travel choices.

Additional parking provision should generally be considered where there is clear evidence that existing capacity and management measures cannot accommodate demand.

Conversely, where car parks demonstrate persistent and substantial spare capacity, the Council may consider opportunities for consolidation, reconfiguration or alternative uses. This could include public realm, active travel infrastructure, electric vehicle charging, mobility facilities or other uses that support wider Council objectives. Any proposal would be subject to appropriate assessment of future parking requirements, displacement effects and the strategic value of retaining the site.

The Council will also seek to protect flexibility within its estate. Where uncertainty exists about longer-term demand, temporary or reversible uses may provide an opportunity to make better use of underutilised land without permanently removing strategically important parking capacity.

Through regular monitoring and periodic review, the Council will ensure that parking provision evolves alongside the districts towns rather than remaining fixed throughout the 20-year strategy period. This will support a parking estate that remains appropriately sized, efficiently used and capable of responding to future economic, development and transport needs.

Objective O4-3: Supporting Future Growth: Ensure parking supports new development and future growth across the district.

WHY THIS OBJECTIVE?

Huntingdonshire is expected to experience continued housing and employment growth over the lifetime of this strategy. New development can influence the level and distribution of parking demand, particularly where growth occurs close to existing town centres or Council operated car parks.

Parking provision therefore needs to be considered alongside the Local Plan and development process. Insufficient provision can result in displacement onto surrounding streets, public car parks or neighbouring communities, while excessive provision can encourage unnecessary car use and occupy land that could support more productive uses.

New development also provides an opportunity to influence travel behaviour from the outset. Locating development where people have realistic access to walking, cycling and public transport can reduce dependence on the private car, while appropriate parking ensures that remaining demand is effectively accommodated.

Aligning parking management with spatial planning will allow the Council to anticipate where future pressure may emerge and ensure decisions about existing parking assets take account of planned growth. This is particularly important over the strategy's 20-year horizon, during which parking requirements may change considerably.

HOW WILL IT BE DELIVERED?

The Council will consider emerging Local Plan allocations, major development proposals and regeneration opportunities when reviewing parking demand and future investment requirements. Existing parking evidence will help inform understanding of available capacity and the potential implications of growth.

The Council will work with developers and other partners to ensure new development achieves an appropriate balance between parking and sustainable transport provision. Consideration will be given to development scale and location, accessibility by different modes, existing capacity and potential displacement onto surrounding streets or public car parks.

Where significant growth occurs, parking demand will be monitored as development progresses, to allow arrangements to respond to actual patterns of demand and identifying whether further intervention is required.

Opportunities will be sought to coordinate development with improvements to walking, cycling and public transport, reducing additional parking demand where possible.

Aligning the Parking Strategy, Local Plan and development management process, parking provision can evolve alongside district growth while supporting development, protecting existing communities and promoting sustainable travel.

Objective O4-4: Making Better Use of Car Parks: Review underused car parks to see how they could be used more effectively.

WHY THIS OBJECTIVE?

The Council's car parks are valuable assets that support town centres, businesses, leisure facilities and local services. However, utilisation varies considerably across the estate, creating opportunities to make better use of available capacity.

Low utilisation does not necessarily mean that a car park is surplus to requirements. Location, signage, tariffs, accessibility, condition or customer awareness may influence demand, while some sites perform important seasonal, leisure or strategic roles that are not reflected by average occupancy alone.

Understanding reasons for underutilisation is therefore important. Relatively modest interventions may increase use and help redistribute demand from more heavily used town centre car parks, making better use of capacity across the parking network as a whole. Spare capacity could also support markets, events or other temporary uses where evidence demonstrates this can be accommodated without adversely affecting parking availability.

Where significant spare capacity persists and there is no strategic requirement to retain the existing level of provision, alternative uses may also be appropriate.

This could support regeneration, development, public realm, sustainable transport or other Council priorities while making more productive use of Council assets.

HOW WILL IT BE DELIVERED?

The Council will periodically review its parking assets using occupancy, duration of stay, financial performance, condition and other relevant evidence, alongside consideration of accessibility, seasonal demand and the wider strategic role of each site.

Where underutilisation is identified, the Council will first consider how available capacity could be used more effectively. This could include improved signage and wayfinding, tariff or duration changes, revised parking designations, physical improvements or better promotion of available capacity.

Opportunities to direct demand from more heavily utilised car parks or use spare capacity to support temporary events and town centre activities will also be considered.

Where underutilisation persists, consideration may be given to changing the function or configuration of part of a site. This could include EV charging, active travel or mobility facilities, public realm or other complementary uses including those which produce income while retaining sufficient parking capacity.

Development or disposal would only be considered where evidence demonstrates that parking capacity is no longer required and the wider implications have been assessed.

Detailed modelling would be undertaken to understand potential displacement and wider town centre capacity, ensuring decisions reflect the long-term strategic value of the asset rather than short-term utilisation alone.

Objective O4-5: Considering Alternative Uses: Consider alternative uses whilst ensuring that the required car parking capacity required as demonstrated by data is maintained or replaced within close proximity or in situ.

WHY THIS OBJECTIVE?

Car parks are important transport assets, but they also occupy significant areas of land, often in accessible and commercially valuable town centre locations.

The parking evidence demonstrates that utilisation varies considerably across the Council's estate. While some car parks experience sustained periods of high demand, others have significant spare capacity.

The objective was posed in the survey as *"Considering Alternative Uses - Consider alternative uses for suitable car parks where parking needs can still be met"*. Support was shown as was a similar level of disagreement, therefore this has been amended to offer assurance to its meaning.

Where this underutilisation is persistent, there may be opportunities to reconsider how part or all of a site is used, particularly where alternative uses could contribute to wider place-making or regeneration objectives.

Repurposing does not necessarily mean removing an entire car park. In many locations, partial redevelopment may allow parking to be retained while releasing surplus land for another use.

Opportunities could range from relatively small interventions, such as public realm, landscaping or community facilities, through to more significant mixed-use, commercial or residential development where the location and evidence support this.

However, parking occupancy alone should not determine whether a site is suitable for repurposing. Consideration must also be given to seasonal and peak demand, the function of the car park, future development, accessibility, alternative parking provision and the potential for displacement onto surrounding streets or other facilities.

A car park that appears underutilised during typical periods may still perform an important strategic or seasonal function.

The objective is therefore not to reduce parking provision for its own sake, but to ensure that Council owned land is used effectively.

Where parking capacity is genuinely surplus to current and foreseeable requirements, retaining all of that capacity may represent a missed opportunity to support other priorities and improve the contribution that the Council's assets make to Huntingdonshire's towns.

HOW WILL IT BE DELIVERED?

The Council will use the evidence gathered through this strategy, together with ongoing monitoring, to identify car parks that may have potential for partial or full repurposing.

Initial consideration will focus on sites demonstrating sustained spare capacity, alongside their location, condition, financial performance, strategic role and relationship with surrounding land uses.

Before any parking capacity is removed, the Council will assess the implications for the wider parking network. This will include consideration of peak and seasonal occupancy, future demand, displacement, accessibility and whether nearby car parks have sufficient capacity to accommodate any redistributed demand.

Where appropriate, opportunities to improve the use of existing alternative parking provision will form part of this assessment.

Potential alternative uses will be considered in the context of wider Council priorities and local needs. Partial repurposing will be considered where this provides an appropriate balance between retaining necessary parking and making better use of surplus capacity.

This could allow sites to evolve incrementally and retain flexibility should parking requirements change over the longer term.

Any significant proposals will be subject to appropriate feasibility assessment, business case development, planning considerations and stakeholder engagement.

Repurposing will only be progressed where there is a robust evidence base demonstrating that change can be accommodated without creating unacceptable parking displacement. This will enable the Council to make more effective use of its land and assets while maintaining sufficient parking to support accessibility, economic activity and the continued vitality of Huntingdonshire's towns.

PRINCIPLES OF PARKING CHARGES

Parking charges are an important tool for managing the Council's parking assets and influencing how available capacity is used. The approach to charging should recognise the role that tariffs can play in supporting access, encouraging turnover, managing demand and responding to the different functions of individual car parks.

This chapter establishes a set of Principles of Parking Charges that will guide the Council's approach to setting and reviewing parking charges across Huntingdonshire. The principles provide a consistent framework for future decision making while retaining sufficient flexibility to respond to the different characteristics, demand patterns and roles of individual car parks.

The principles are intentionally strategic and holistic. They do not prescribe specific tariffs or determine what should be charged at individual locations. Instead, they establish the considerations that will inform future tariff reviews and charging decisions, supported by evidence on occupancy, duration of stay, demand, location and the intended function of each car park.

This approach recognises that a single charging structure will not necessarily be appropriate across Huntingdonshire. Different towns, car parks and even different areas within the same car park may perform different functions and require different approaches. The following principles will therefore govern how parking charges are considered and developed throughout the lifetime of this strategy.

Our principles of parking charges are that:

- Car parks will be assessed on an induvial basis considering location and desired usage which will inform the tariff structure.
- Tariff structures are not just models of pricing; they determine the available durations of stay and can be used as a mechanism to promote access and turnover of space.
- Where we look to implement incentives and schemes to promote use, these should be driven by evidence and data.
- Differential pricing by site is acceptable as is mixed use within an induvial site.
- Demand and convenience will be considered and may inform available tariff structures.
- We will continue to offer "Pay for what you use" where appropriate to enable customers pay for a duration that closely matches how long they wish to stay.

These principles should be considered as part of the overall strategy, its vision, themes and objectives.

IMPLEMENTATION PLAN

The Parking Strategy establishes a long-term direction for the management and development of Huntingdonshire's off-street parking estate.

Delivering this vision will require a combination of immediate actions, ongoing management, further investigation and longer-term investment. The Implementation Plan translates the objectives of the strategy into a programme of practical actions that can be progressed over its lifetime.

The initial Implementation Plan is structured around the four strategic themes and identifies specific actions associated with each objective.

These range from relatively straightforward reviews of existing parking arrangements, signage, accessibility, tariffs and data, through to more significant interventions such as infrastructure improvements, Integrated Transport Hubs and the potential repurposing of parking assets.

Actions have been assigned an indicative delivery timescale reflecting their complexity, dependencies and likely priority:

Quick Wins - within 12-18 months: Actions that can be progressed relatively quickly, typically using existing resources or evidence. These include initial reviews, audits, monitoring programmes and the establishment of management frameworks.

Short Term - 1 to 2 years: Actions requiring further development, coordination or investment following completion of the initial quick wins.

Medium Term - 2 to 5 years: More substantial interventions that may require feasibility work, funding, partnership working, procurement or phased physical delivery.

Long Term - 5 years or more: Strategic interventions that are likely to depend on future demand, development, funding or the outcome of earlier actions. Their inclusion safeguards future opportunities rather than representing a commitment to delivery.

Ongoing: Activities that will require periodic review or continued delivery throughout the strategy period, including monitoring parking demand and engagement with the planning and development process.

The sequencing of actions is important. In many cases, early reviews and evidence gathering will directly inform whether subsequent investment is required and the form that it should take.

For example, occupancy monitoring will inform future decisions on capacity, while condition assessments will help prioritise maintenance and renewal.

Similarly, feasibility work will be required before significant proposals such as repurposing car parks or developing Integrated Transport Hubs are progressed.

The Implementation Plan also recognises that delivery will take different forms. Some actions will primarily involve Council-led reviews, monitoring or policy development, while others will require further feasibility or technical studies, partnership working, or physical works and investment.

Several actions will require collaboration with Cambridgeshire County Council, the Cambridgeshire and Peterborough Combined Authority transport operators, developers, town and parish councils and other stakeholders.

The Plan should therefore be regarded as a live delivery framework rather than a fixed programme. Priorities will need to respond to changes in parking demand, development and regeneration proposals, available funding, emerging technology and wider Council priorities.

Actions identified for later phases should be reviewed in light of the outcomes achieved through earlier interventions.

Progress against the Implementation Plan should be reviewed periodically, allowing completed actions to be recorded, priorities to be updated and new interventions to be introduced where evidence demonstrates a need.

This will ensure that implementation remains proportionate, affordable and responsive throughout the 20-year strategy period, while maintaining a clear link between individual actions, the four strategic themes and the overall vision for parking in Huntingdonshire.

Ref	Objective	Implementation Actions	Delivery Timescale
THEME 1 - SUPPORT THRIVING TOWN CENTRES & ECONOMIC ACTIVITY			
O1-1	Support Town Centres	Review parking demand, turnover, and duration of stay across town centre car parks to ensure parking supports economic activity and visitor turnover.	Quick Win
		Develop town specific parking management principles reflecting the role and function of each location.	Short Term
O1-2	Fair Parking Charges	Establish a regular parking tariff review process informed by occupancy data, benchmarking, and local economic conditions.	Quick Win
		Undertake periodic benchmarking against neighbouring authorities and comparable market towns.	Ongoing / Short Term
		Review opportunities for seasonal, location based tariff structures where appropriate.	Medium Term
O1-3	The Right Parking in the Right Places	Review the balance of short-stay and long-stay parking provision across council car parks.	Quick Win
		Introduce revised time restrictions or operational arrangements where evidence demonstrates a need for change.	Short Term
O1-4	Parking for Events and Visitors	Review parking demand associated with key events, markets, and seasonal visitor activity.	Quick Win
		Develop temporary parking management arrangements and communication plans for major events where required.	Short / Medium Term
O1-5	Better Signs and Car Parks	Undertake a district-wide review of parking signage, gateway signage, and pedestrian wayfinding.	Quick Win
		Deliver phased signage and wayfinding improvements across the district, including the introduction of VMS at strategic locations where appropriate to improve parking visibility, circulation, and driver information.	Short / Medium Term
		Identify priority car parks requiring public realm enhancements, resurfacing, landscaping, or lighting improvements.	Short / Medium Term
		Deliver phased environmental and public realm improvements across priority sites.	Medium Term

Ref	Objective	Implementation Actions	Delivery Timescale
THEME 2 - DELIVER A MODERN EFFICIENT & CUSTOMER FOCUSED PARKING SERVICE			
O3-1	Easy and Accessible Parking	Undertake an accessibility review of council-operated car parks, including disabled parking provision and pedestrian accessibility.	Quick Win
		Review consistency of parking information, signage, payment systems, and customer communications.	Short Term
O3-2	Looking After Our Car Parks	Undertake condition assessments of car park infrastructure, equipment, lighting, and surfaces.	Short Term
		Develop a long-term planned maintenance programme for council parking assets.	Short / Medium Term
		Deliver phased maintenance and renewal works based on asset condition and risk.	Medium Term
O3-3	Fair Parking Enforcement	Review enforcement operations and compliance trends across the district.	Short Term
		Identify opportunities to improve operational efficiency and consistency of enforcement activity.	Short Term
O3-4	Using Parking Data	Establish a structured programme of parking occupancy and usage monitoring.	Quick Win
		Develop a centralised parking data management approach.	Short Term
O3-5	Using Technology	Review existing parking technology and digital systems across the parking estate.	Quick Win
		Identify opportunities for improved cashless payments, virtual permits, and back-office integration.	Short Term
		Investigate feasibility of smart parking technologies and real-time parking information systems.	Medium Term

Ref	Objective	Implementation Actions	Delivery Timescale
THEME 3 - INTEGRATE PARKING WITH ACTIVE & SUSTAINABLE TRANSPORT			
O2-1	Support Sustainable Travel	Embed parking considerations within wider transport, regeneration, and active travel planning processes.	Short Term
		Work with transport partners to identify opportunities for improved integration between parking and sustainable transport modes.	Short / Medium Term
O2-2	Walking and Cycling Facilities	Audit existing cycle parking and pedestrian facilities within council car parks.	Short Term
		Identify priority sites for upgraded cycle parking and improved pedestrian connectivity.	Medium Term
		Deliver phased active travel improvements across suitable locations.	Medium Term
02-3	Future Transport Hubs	Identify and assess potential edge-of-centre locations suitable for future Integrated Transport Hubs.	Long Term
		Safeguard suitable sites through planning and asset management processes where appropriate.	Long Term
		Explore opportunities for pilot mobility hub facilities including EV charging, cycle hire, and enhanced public transport integration.	Long Term
O2-4	Electric Vehicle Charging	Identify priority sites for additional EV charging provision based on demand and grid capacity.	Short Term
		Deliver additional EV charging infrastructure across priority sites in accordance with the Councils EV strategy.	Medium Term
O2-5	Working with Partners	Work with local transport operators and stakeholders to improve awareness of sustainable travel alternatives.	Short Term
		Explore opportunities for integrated ticketing, mobility hubs, or joint initiatives with transport partners.	Long Term

Ref	Objective	Implementation Actions	Delivery Timescale
THEME 4 - MANAGE PARKING ASSETS RESPONSIBLY & PLAN FOR THE FUTURE			
O4-1	Planning for the Future	Review future parking demand associated with planned growth and Local Plan allocations.	Short Term
		Identify locations where additional parking provision or management interventions may be required in future.	Medium Term
O4-2	Monitoring Parking Demand	Continue periodic parking occupancy and utilisation surveys across the district.	Ongoing / Short Term
		Identify locations where parking pressures or underutilisation may justify operational changes or future investment.	Medium Term
O4-3	Supporting Future Growth	Embed parking strategy principles within Local Plan and development management processes.	Short Term
		Develop parking guidance or expectations for major developments where appropriate.	Medium Term
		Continue engagement with planning officers and developers regarding parking impacts and sustainable transport integration.	Ongoing / Short Term
O4-4	Making Better Use of Car Parks	Develop a framework for assessing car park performance and utilisation.	Short Term
		Review underperforming sites to identify opportunities for operational improvements, alternative uses, or rationalisation.	Medium Term
O4-5	Considering Alternative Uses	Asses car parks against performance and utilisation framework to understand how they can be used to support wider outcomes.	Medium Term
		Bring forward redevelopment or repurposing proposals where supported by evidence and business case assessment.	Long Term

DELIVERING THE IMPLEMENTATION PLAN

The Implementation Plan demonstrates that delivery of the Parking Strategy will involve considerably more than investment in individual car parks. Across the four themes, the actions establish a coordinated programme of monitoring, operational review, infrastructure improvement, partnership working and longer-term asset planning.

Collectively, these actions are intended to ensure that Huntingdonshire's parking estate continues to support its towns while responding to changing demand, customer expectations, transport priorities and future growth.

A consistent feature in the Implementation Plan is the importance of establishing a stronger evidence base before significant changes are made. Several of the early actions involve reviewing occupancy, turnover and duration of stay, establishing structured monitoring arrangements and assessing the performance of individual car parks. This evidence will directly support decisions relating to tariffs, short and long-stay provision, enforcement, investment and the future role of individual sites.

Continued occupancy and utilisation surveys will also allow the Council to identify whether parking pressure or underutilisation is persistent rather than responding to isolated periods of high or low demand.

Within ***Theme 1 – Support Thriving Town Centres and Economic Activity***, the emphasis is initially on making better use of the existing parking offer. Actions include reviewing demand, turnover and duration of stay, developing town specific parking management principles and considering whether the balance between short and long-stay parking remains appropriate.

This recognises that the role of parking differs between towns and that a single management approach will not necessarily produce the best outcome in every location.

Tariff management forms an important part of this approach. The Implementation Plan establishes both regular tariff reviews and periodic benchmarking, supported by consideration of occupancy, inflation, operating and maintenance costs, local economic conditions and wider market trends. The intention is therefore not simply to increase or decrease charges, but to establish a repeatable mechanism through which tariffs can remain appropriate to the role and performance of individual locations.

Over the medium term, this may extend to consideration of seasonal, location based approaches where evidence demonstrates that these would improve parking management.

Theme 1 also identifies a significant programme of improvements to the physical relationship between car parks and the places they serve. A district wide signage and wayfinding review is proposed, followed by phased implementation, potentially including Variable Message Signs at strategic locations.

This is complemented by identifying car parks requiring public realm, resurfacing, landscaping or lighting improvements. Together, these actions recognise that available capacity is only useful if customers can find it easily and move conveniently between the car park and their destination. Specific reviews of event, market and seasonal demand will also enable temporary arrangements and communication plans to be developed where exceptional activity places additional pressure on the network.

Example of improving the appearance of a HDC car park to make it more attractive

Within ***Theme 2 – Deliver a Modern, Efficient and Customer-Focused Parking Service***, the actions concentrate on the quality and efficiency of the existing service.

Accessibility is an immediate priority, with a review of Council operated car parks covering disabled parking and pedestrian accessibility. This is accompanied by a review of the consistency of information, signage, payment systems and customer communications.

Technology is approached proportionately. The first requirement is to understand the systems already operating across the estate before considering improvements to cashless payments, virtual permits and back-office integration.

More advanced smart parking technologies and real time information are identified for subsequent feasibility investigation rather than automatic implementation. This ensures investment is driven by an identifiable customer or operational benefit. Data management and enforcement follow a similar approach.

A structured occupancy and usage monitoring programme will be complemented by a centralised approach to parking data and reporting, creating a stronger basis for future management decisions.

Enforcement operations and compliance trends will also be reviewed, with subsequent actions focused on improving efficiency and consistency. These measures reinforce the principle that enforcement should support effective parking management and compliance rather than operate independently from wider parking objectives.

Maintaining the physical estate is another significant delivery requirement. Condition assessments of infrastructure, equipment, lighting and surfaces will inform a long-term planned maintenance programme, followed by phased renewal according to condition and risk. This establishes a clearer lifecycle approach to investment and provides an opportunity to coordinate maintenance with accessibility, public realm, technology and other improvements rather than delivering works independently.

Example of how HDC car parks could benefit from technology and a more efficient service

The actions within ***Theme 3 – Integrate Parking with Active and Sustainable Transport*** progressively reposition car parks as part of the wider transport system.

An early requirement is to embed parking considerations within transport, regeneration and active travel planning rather than treating the parking estate as a standalone service. This will be supported by partnership working to identify opportunities to connect parking more effectively with sustainable modes.

There is also a clear infrastructure component. Existing cycle parking and pedestrian facilities will be audited, priority locations identified and improvements delivered on a phased basis. Additional electric vehicle charging will similarly be targeted towards priority sites according to demand and grid capacity, building on the Council's existing approach to EV infrastructure.

These actions allow investment to be concentrated where there is a demonstrated requirement rather than applying uniform provision across the estate.

The more transformational elements of Theme 3 sit towards the medium and long term. Opportunities for integrated ticketing, mobility hubs and joint initiatives with transport operators will be explored, alongside identifying potential edge of centre locations for future Integrated Transport Hubs.

Suitable sites could subsequently be safeguarded and, where justified, pilot facilities developed incorporating elements such as EV charging, cycle hire and improved public transport integration. These actions deliberately retain flexibility, allowing the Council to respond to future changes in travel behaviour and funding rather than committing prematurely to a particular model.

Example of utilising existing car park assets to integrate parking with active travel & sustainable transport

Finally, ***Theme 4 – Manage Parking Assets Responsibly and Plan for the Future*** takes the longest-term view of the parking estate. Continued utilisation surveys will identify locations experiencing pressure or persistent underuse, providing the evidence for operational changes or future investment.

A formal framework for assessing car park performance will further support this process and enable poorly performing assets to be considered consistently.

The Implementation Plan also explicitly connects parking with Huntingdonshire's future growth. Parking demand associated with Local Plan allocations will be reviewed, potential future capacity requirements identified and parking strategy principles embedded within the Local Plan and development management process.

Continued engagement with planning officers and developers will be particularly important in ensuring that new development does not create unmanaged pressure on existing Council car parks or surrounding streets.

Where existing sites are consistently underutilised, the programme allows the Council to consider a broader range of outcomes. This begins with assessing whether operational changes could improve performance but can ultimately extend to rationalisation, partial repurposing or redevelopment.

Potential sites would be subject to feasibility work considering parking displacement, regeneration benefits, housing need and financial implications before any long-term proposals are brought forward.

This creates a clear progression from identifying underperformance to understanding alternatives and, only where justified by evidence and a business case, implementing a change of use.

Taken together, the actions establish a clear direction for the parking estate. In the near term, the emphasis is on understanding, reviewing and optimising what the Council already has. The short to medium term moves increasingly towards targeted physical investment, improved integration and modernisation.

Longer-term actions provide the flexibility to reconsider where and how parking is provided as Huntingdonshire grows and travel patterns evolve.

This ensures that investment is not undertaken in isolation, but forms part of a coordinated programme in which evidence gathered through earlier actions directly informs the scale, location and nature of subsequent interventions.

CONCLUSION

This strategy establishes a clear and ambitious direction for the future of parking across Huntingdonshire. It recognises that parking is an important part of the district's transport system, supporting access to town centres, businesses, services, leisure opportunities and communities, while also influencing how people choose to travel.

Through the four strategic themes and associated objectives, the strategy provides a framework for creating a parking service that is responsive to changing demand, supports thriving town centres, integrates more effectively with active and sustainable transport, provides a modern and accessible customer experience, and ensures that parking assets are managed responsibly over the long term.

The evidence gathered through the development of the strategy demonstrates that parking demand and the role of individual car parks vary considerably across Huntingdonshire. The strategy therefore avoids a one-size-fits-all approach.

Instead, future decisions will be informed by local demand, duration of stay, the function of individual car parks and the wider needs of each town. This will allow the Council to respond appropriately to areas of parking pressure while also considering opportunities presented by underutilised assets.

Importantly, the strategy looks beyond the immediate operation of the existing parking estate. Over its lifetime, changes in development, technology, travel behaviour and sustainable transport provision will influence how parking is used. The strategy provides the flexibility to respond to these changes, including opportunities for improved active travel facilities, EV charging, integrated transport hubs, better use of technology and, where appropriate, the repurposing or redevelopment of parking land to support wider regeneration, housing and community objectives.

The objectives and actions within the strategy are also intended to complement wider Council and partner priorities. Successful delivery will therefore require collaboration across Huntingdonshire District Council and with Cambridgeshire County Council, the Combined Authority, town and parish councils, transport operators, businesses, developers and other stakeholders.

The Implementation Plan provides the mechanism for translating the strategy into action, with measures identified across quick-win, short, medium and longer-term timescales. This phased approach allows immediate improvements to be progressed while providing sufficient flexibility for more significant interventions to be developed as evidence, funding and opportunities emerge.

Ultimately, the strategy is about ensuring that Huntingdonshire has the right parking, in the right places, managed in the right way.

By balancing the continuing need for convenient access by car with opportunities to support sustainable travel, improve town centres and make better use of Council assets, the strategy provides a framework for a parking network that can continue to meet the needs of residents, businesses and visitors while supporting a more accessible and sustainable Huntingdonshire.

1.0 INTRODUCTION

Ethos Consultants (hereafter referred to as Ethos) have been commissioned by Huntingdonshire District Council to prepare a comprehensive car park strategy covering the Council's off-street car parks across the district. As a key action aligned with the Council's strategic priorities, the strategy will be evidence-led and focused on embracing modern parking technologies, responding to climate and sustainability ambitions, identifying opportunities to enhance assets, and supporting the generation of resilient income streams to underpin wider service delivery.

To support this work, the Council has established an agreed scope that includes optimising charges and payment systems, evaluating car park usage and capacity, supporting active travel and climate objectives, and understanding the role of parking in sustaining local employment, town centre vitality, and economic growth.

Off-street car parks form a critical part of the district's transport and place making infrastructure, supporting access for residents, workers, and visitors while influencing wider economic, environmental, and community outcomes. Their effective management therefore requires a considered balance between accessibility, sustainability, and financial stewardship.

Parking provision delivers several important public functions. It enables convenient access to services, retail centres, workplaces, and leisure destinations, while supporting the operational needs of businesses and contributing to local economic resilience. Parking policy also plays a significant role in shaping travel behaviour, supporting the shift towards more sustainable transport, and contributing to improvements in air quality and the public realm.

Any operating surplus generated from off-street parking represents a valuable resource for local authorities. These funds can be reinvested in maintaining and upgrading parking assets or allocated to support broader community priorities, infrastructure improvements, and essential frontline services, reinforcing the wider value of the parking service.

Huntingdonshire District Council serves a large and diverse area within Cambridgeshire, combining historic market towns, rural villages, and rapidly growing communities. The district is home to approximately 180,000 residents (Census 2021), with major settlements such as Huntingdon, St Neots, St Ives, and Ramsey acting as key centres for employment, retail, and services. Its strategic transport links to Cambridge, Peterborough, London, and the wider region, along with its rich heritage and natural assets, contribute to a strong local economy and a distinctive pattern of travel and parking demand.

Figure 1 below illustrates the location of Huntingdonshire within the East of England and its relationship to neighbouring authorities and strategic transport corridors.

As town centres and local communities continue to adapt to evolving retail patterns, working practices, and travel behaviours, it is essential that the Council's parking approach remains responsive to changing needs. Ensuring that car parks are accessible, appropriately priced, and aligned with economic and community priorities will help support thriving and resilient towns.

Although this strategy focuses on the Council's off-street car parks, it is important to acknowledge the relationship with on-street provision and the wider transport network. Combined, these assets contribute to the district's environmental and sustainability ambitions. The strategy must therefore support the transition to cleaner travel through enabling electric vehicle uptake, integration with public transport, and promoting walking and cycling for shorter journeys.

1.1 PLANNING CONTEXT

Huntingdonshire is strategically located within the East of England, benefiting from excellent regional and national transport connections. The district is served by a series of major road corridors, including the A1, A14, and A428, which provide vital north–south and east–west linkages and connect communities to Cambridge, Peterborough, Bedford, and the wider motorway network. The recent upgrade of the A14 between Cambridge and Huntingdon has further improved journey reliability and reinforced the district's position as a key transport hub.

Rail connectivity is similarly strong, with stations at Huntingdon, St Neots, and St Ives (via the Cambridgeshire Guided Busway interchange) offering direct services to London, Peterborough, Cambridge, and other destinations across the region. Fast rail services to London Kings Cross (typically 40–50 minutes from St Neots or Huntingdon) enhance the district's attractiveness for commuters and businesses, while the Guided Busway provides a high-quality public transport corridor linking key settlements to Cambridge and major employment sites.

The district also benefits from proximity to key international gateways. London Stansted Airport, located less than an hour away, provides extensive global connectivity, while Luton Airport and East Midlands Airport are also within reasonable travel distance. These connections strengthen Huntingdonshire's economic offer and support the movement of both people and goods.

Huntingdonshire comprises a diverse mix of historic market towns, including Huntingdon, St Neots, St Ives, and Ramsey, together with a wide range of rural villages and growing residential communities. This variation in settlement size and function creates distinct travel and parking patterns across the district. While the urban areas act as focal points for employment, retail, services, and leisure, rural communities often rely heavily on access by car due to more limited public transport availability.

Travel behaviour in the district is characterised by a high reliance on car use, reflecting both the rural geography and the strategic road network that serves the area. The majority of journeys, particularly for work, shopping, and leisure, are made by car, while active

travel and public transport currently play a more modest role in day-to-day movement. Although some commercial bus routes provide links between towns and into neighbouring areas, services are less frequent in many rural locations, reducing the practicality of alternatives to the private car.

This reliance on car travel contributes to localised congestion, particularly around town centres, key junctions, and during peak commuter periods. Growth in housing and employment, particularly around St Neots, Alconbury Weald, and the wider A14 corridor, is likely to place additional pressure on the transport network and parking assets in the coming years. A robust and future-focused parking strategy is therefore essential to support sustainable travel, manage demand effectively, and improve access to key destinations.

The district contains 86 Town and Parish Councils, each playing a role in shaping local priorities and influencing how residents travel and interact with nearby services. They form an important stakeholder group for the parking strategy, reflecting the wide variation in needs between different communities.

Huntingdonshire is bordered by several local authority areas that influence its connectivity and economic relationships. To the east, the district adjoins South Cambridgeshire District Council, with strong employment and commuter flows into the Cambridge area. To the north lies Peterborough City Council, a major sub-regional centre with extensive transport links and economic activity. East Cambridgeshire borders the district to the northeast, while Bedford Borough and Central Bedfordshire lie to the west and southwest, providing important transport connections along the A1 and A421 corridors. These neighbouring relationships shape patterns of travel demand and influence the strategic role of Huntingdonshire's parking infrastructure.

In 2023, Huntingdonshire District Council adopted its Corporate Plan 2023–2028, which sets out a clear long-term direction for the district and defines three overarching priorities:

- **Improving quality of life for local people** – focusing on community wellbeing, access to services, housing quality, and creating opportunities for residents to thrive.

- **Creating a better Huntingdonshire for future generations** – emphasising environmental sustainability, climate resilience, high-quality places, and the infrastructure needed to support planned growth.
- **Doing our core work well** – ensuring high-quality, value-for-money services, strong governance, and effective management of the Council's assets and statutory responsibilities.

While the Corporate Plan does not reference parking explicitly, the management of the district's off-street parking assets plays an important role in supporting these priorities. A modern, evidence-led parking strategy can help enhance access to town centres and key services, support local businesses, shape sustainable travel behaviour, and ensure the parking service contributes positively to environmental and economic objectives. By aligning parking policy with the Corporate Plan, the Council can deliver a balanced approach that meets current needs while planning proactively for future growth, accessibility, and sustainability.

1.2 HUNTINGDONSHIRE DISTRICT PARKING CAPACITY

Huntingdonshire District Council operates a network of off-street car parks located across the district's market towns and key service centres. In total, the Council provides 3149 publicly available off-street parking spaces across 25 car parks. These facilities support access to town centres, employment areas, leisure destinations, and community services. In addition, there are small village hall car parks in villages that include Earith and Warboys, providing an additional 46 public parking spaces.

The location of all Council operated car parks are illustrated in figure 1. More detailed plans showing the car parks in each town is shown in figures 2-6.

Figure 1 – Location of HDC car parks across the Huntingdonshire district

Figure 2 - Location of car parks in Godmanchester

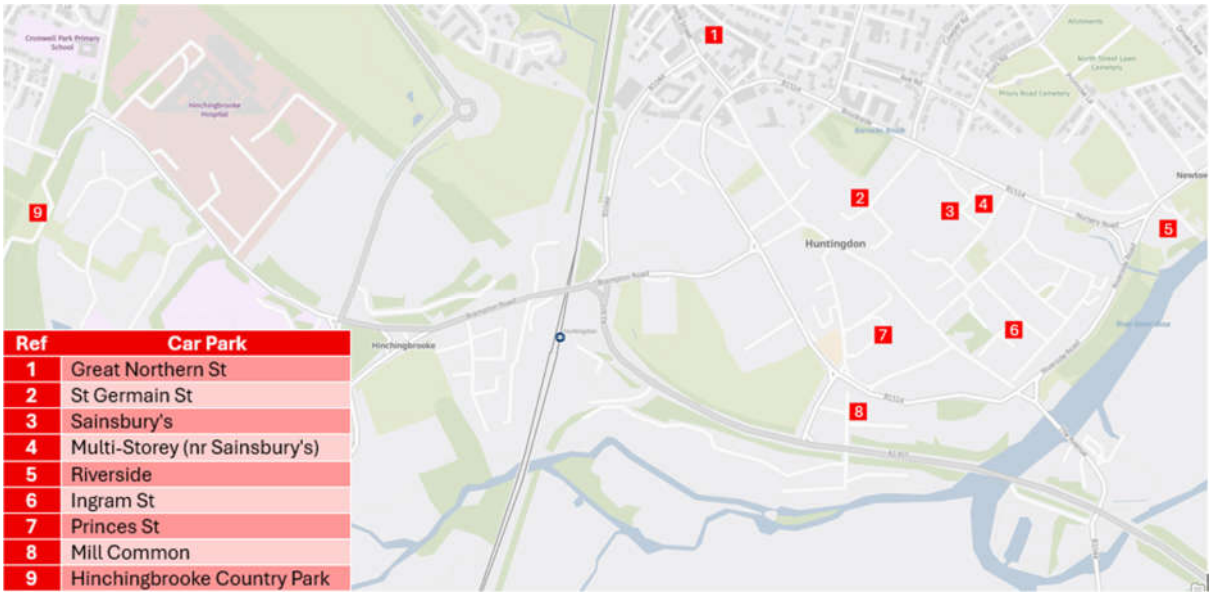

Figure 3 - Location of car parks in Huntingdon

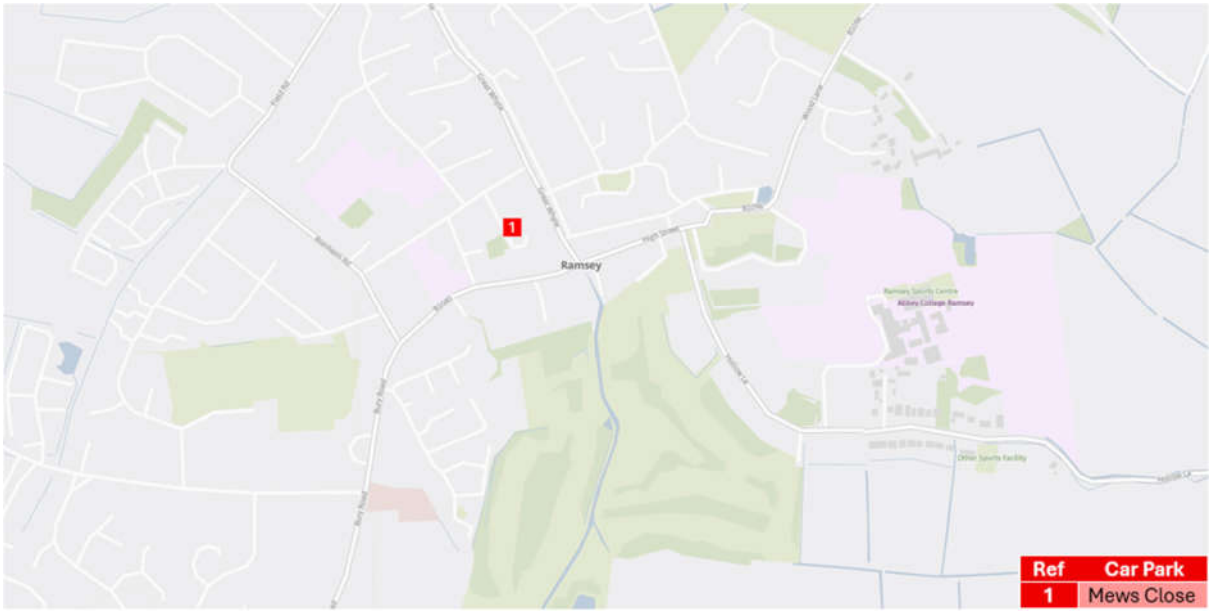

Figure 4 - Location of car park in Ramsey

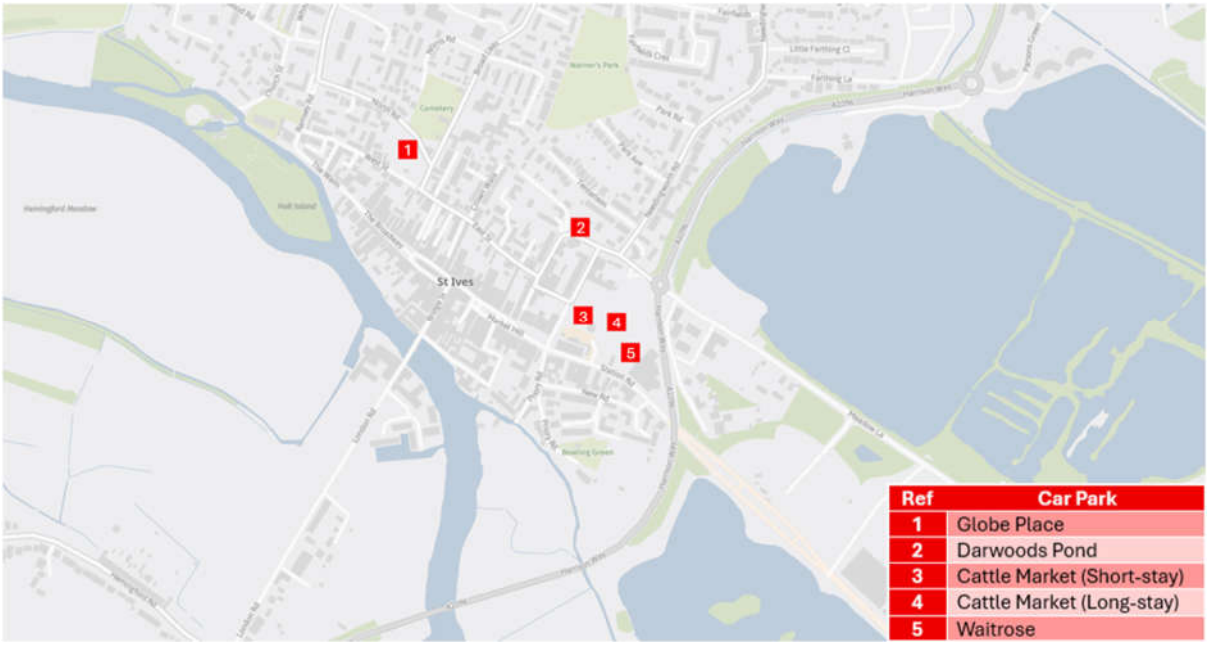

Figure 5 - Location of car parks in St Ives

Figure 6 - Location of car parks in St Neots

This strategy focuses specifically on the Council's off-street parking estate. It does not include privately operated car parks, parking provision associated with commercial or residential developments, or on-street parking, which is the responsibility of Cambridgeshire County Council as the Highway Authority.

Table 1 presents a summary of Huntingdonshire District Council's off-street car parks, including their locations and individual parking capacities.

Location	Car Park Name	Capacity	Duration
Godmanchester	Bridge Place	257	Long
	Park Lane	25	Free
	Post Street	31	Free
Huntingdon	Great Northern St	71	Long
	Hinchingbrooke Country Park	60	Short
	Ingram St	44	Long
	Mill Common	52	Long
	Multi-Storey (nr Sainsbury's)	404	Short
	Princes St	77	Short
	Riverside	190	Long
	Sainsbury's	290	Short
	St Germain St	36	Short

Ramsey	Mews Close	60	Both
St Ives	Cattle Market (Long-stay)	196	Long
	Cattle Market (Short-stay)	197	Long
	Darwoods Pond	83	Long
	Globe Place	162	Long
	Waitrose	75	Short
St Neots	Brook St	13	Short
	Priory Centre	49	Long
	Priory Lane	35	Short
	Riverside Park	276	Long
	Tan Yard	37	Short
	Tebbutts Rd	241	Long
	Waitrose	188	Short

Table 1 – HDC town car parks across Huntingdonshire

As part of this assessment, the Council's One Leisure car parks have also been reviewed to ensure a comprehensive understanding of parking provision across the district. While these sites form part of the wider off-street parking estate, they play a distinct and important role in supporting the operational and financial performance of the One Leisure centres by providing convenient, dedicated access for members, staff, and visitors. Any future changes to tariff structures, management arrangements, or capacity at these locations must therefore carefully consider the potential impacts on leisure centre usage, customer experience, income generation, and wider community health and wellbeing objectives.

The One Leisure estate comprises several key leisure centres located in Huntingdon, St Ives, St Neots, and Ramsey, that enable users to access the facilities conveniently throughout the day. Collectively, these sites provide approximately 523 parking spaces, with individual car parks ranging from 34 spaces at the smaller community sites to 171-210 spaces at the district's flagship centres such as One Leisure Huntingdon and St Neots. These car parks typically offer a mix of standard bays, disabled parking, and provision for coaches or larger vehicles where required. Their locations, adjacent to or integrated within the leisure centre footprints supports the operational viability of the centres and accommodating peaks in demand associated with classes, school use, clubs, and seasonal sports programming.

1.3 GODMANCHESTER CAR PARKS

Godmanchester contains three council operated car parks, providing 313 off-street parking spaces that support a range of local access needs for residents, businesses, leisure users, and visitors. Together, these facilities form an important part of the town's parking offer, helping to manage demand within a predominantly residential setting.

Post Street Car Park (31 spaces) serves as a key access point for those visiting the town and the surrounding riverside environment. It is particularly well used by walkers accessing Queen's Walk and the adjoining open spaces, offering convenient short-stay parking close to popular recreational routes. Its location within a residential area, combined with free parking, means it is also likely to be used informally by local residents for daytime and overnight parking.

Park Lane Car Park (25 spaces) similarly provides free parking within a residential area and plays an important role in supporting nearby community facilities. It primarily serves the primary school, swimming pool, and surrounding neighbourhood, offering convenient access for parents, leisure users, and staff. As with Post Street, the availability of free parking and its residential context suggest that some local residents may rely on this car park for longer-stay or overnight parking, particularly where on-street capacity is constrained.

The largest facility, Bridge Place Car Park (257 spaces), is situated slightly further from the town and does not have a clearly defined functional focus. Its scale and location indicate that it may operate as a general purpose long-stay car park, likely accommodating a mix of visitors, leisure users, and workers. Its proximity to the A1198 corridor suggests that some users may also utilise it as a convenient parking option for accessing both Godmanchester and Huntingdon, reflecting its role as a strategic asset within the local network.

1.4 HUNTINGDON CAR PARKS

Huntingdon contains a diverse portfolio of off-street car parks that together provide 1,224 spaces across a mix of long-stay and short-stay facilities. This means 39% of the total parking spaces in the district are located in Huntingdon. These car parks play a vital role in supporting access to the town centre, retail destinations, employment areas, and key transport corridors, while also accommodating leisure activity associated with the riverside and wider green spaces. The overall distribution reflects the town's position as one of the district's principal commercial centres, with parking provision structured to meet both local and visitor needs.

Great Northern Street (71 spaces) and Ingram Street (44 spaces) function as centrally located long-stay car parks, providing convenient access to the town centre and key employment sites. Their positioning and tariff structure suggest that they predominantly serve workers, longer-duration visitors, and those seeking reliable all day parking close to retail and business areas.

Mill Common (52 spaces), situated close to Huntingdon bus interchange and the historic core, also operates primarily as a long-stay car park. Its location adjacent to green space and walking routes makes it well placed for leisure trips and dog walking, in addition to general town centre access.

The Multi-Storey Car Park near Sainsbury's (404 spaces) represents the town's largest parking asset and forms a major gateway to the retail area. As a short-stay facility, it supports high-turnover visits to shops, services, and hospitality venues, contributing significantly to Huntingdon's economic vitality. Its scale allows it to absorb peak period demand, including seasonal and event related activity.

A number of smaller short-stay car parks provide additional access points to the town centre. Princes Street (77 spaces), St Germain Street (36 spaces), and the Sainsbury's Car Park (290 spaces) all serve local retail and service functions, with their proximity to key destinations driving high turnover and supporting convenience shopping and short visits.

Riverside Car Park (190 spaces) provides longer-stay parking close to the river, open spaces, and leisure walking routes. Its role extends beyond town centre access, catering to recreational users, visitors to the riverside parkland, and those seeking a more relaxed access point into Huntingdon via walking connections.

Hinchingbrooke Country Park Car Park (60 spaces), while serving a specific leisure function rather than the town centre directly, forms an important component of the wider parking network. As a short-stay site adjacent to one of the district's most significant green spaces, it experiences high use from families, dog walkers, and visitors to the Country Park's recreational facilities.

Together, Huntingdon's car parks serve a broad cross-section of transport and access needs, balancing high-turnover retail parking with strategic long-stay capacity and important leisure related provision. Their varied roles and geographic spread reflect the complexity of demand within the district's principal town, highlighting the need for a coordinated approach to management, pricing, and future investment to ensure continued accessibility, economic resilience, and alignment with sustainable travel objectives.

1.5 RAMSEY CAR PARKS

Ramsey contains a single council operated off-street car park, Mews Close, providing 60 parking spaces, which plays an important role in supporting access to the town centre, local services, and the surrounding residential areas. Although smaller in scale than the parking provision in Huntingdonshire's larger market towns, Mews Close fulfils a multifunctional purpose that reflects the town's compact urban form and mixed land-use structure.

Located close to the high street and key community facilities, Mews Close serves both short-stay and long-stay users, offering flexibility for shoppers, local workers, and

visitors. Its dual duration designation enables the car park to accommodate a variety of trip purposes, supporting quick turnover visits to shops and services while also providing reliable all-day parking for those working in or visiting the town centre.

Given its central location and proximity to residential streets, the car park also provides an important alternative to on-street parking for residents, particularly during busier periods or in areas where kerbside capacity is limited. This helps alleviate local parking pressures and ensures that the town centre remains accessible and functional throughout the week.

1.6 ST IVES CAR PARKS

St Ives contains a well distributed network of council operated off-street car parks that together provide 713 parking spaces across five sites This equals 23% of the districts total parking spaces. These facilities play a critical role in supporting the town's busy commercial centre, its riverside attractions, and its strong commuter links via the nearby Guided Busway. The overall provision reflects St Ives' function as one of the district's most vibrant market towns, where a combination of retail activity, employment, tourism, and community services drives varied and sustained parking demand.

The Cattle Market Long-Stay (196 spaces) and Cattle Market Short-Stay (197 spaces) car parks form the core of the town's central parking offer. Their location adjacent to the town centre ensures convenient access for shoppers, workers, and visitors, with the long-stay section catering to all-day users, including commuters and those travelling into Cambridge via the Guided Busway. The short-stay provision plays an essential role in supporting high-turnover visits linked to the retail and service economy, helping to maintain the health of the high street.

Darwoods Pond Car Park (83 spaces) provides an important long-stay option slightly further from the central shopping area. This location supports local employment as well as day visitors, offering good access to the surrounding residential neighbourhoods and green spaces. Its long-stay designation helps to relieve pressure on the more intensively used town centre car parks.

Globe Place Car Park (162 spaces) is one of the larger long-stay facilities in St Ives and serves a mix of commuters, employees, and visitors. Its scale and proximity to key walking routes into the town centre make it a strategic asset within the wider network, supporting both everyday activity and seasonal demand associated with local events.

Waitrose Car Park (75 spaces) provides short-stay parking that primarily supports the supermarket and nearby retailers. Its location near the edge of the town centre ensures that it also accommodates a portion of general retail trips, helping to distribute short-stay demand more evenly across the area.

Together, the car parks in St Ives deliver a balanced mix of short and long-stay provision, supporting the town's significant economic role and its strong connectivity to the rest of the district and the Cambridge sub-region. Ensuring that these facilities are effectively

managed and able to accommodate future growth, in both visitor numbers and commuting activity, will be central to maintaining St Ives' vitality and accessibility.

1.7 ST NEOTS CAR PARKS

St Neots contains a diverse portfolio of council operated off-street car parks, providing a total of 839 spaces across seven sites (27% of the districts total). As the largest town in Huntingdonshire and a major growth area, St Neots experiences sustained and varied parking demand linked to its expanding residential communities, vibrant town centre, riverside attractions, and strong commuter flows to Cambridge, London, and the wider region. The distribution of parking provision across the town reflects this multifaceted demand, supporting both everyday activity and longer-term strategic growth.

Riverside Park Car Park (276 spaces) is the town's largest facility, serving visitors to the extensive riverside open space, leisure activities, and the adjacent walking and cycling routes. Its long-stay designation allows it to accommodate a mix of recreational users and day visitors, particularly during weekends and summer months when the park experiences peak demand.

Tebbutts Road Car Park (241 spaces) provides a significant long-stay offer close to key employment and community facilities. Its size and location make it particularly attractive for workers, visitors staying for extended periods, and those accessing the riverside area and nearby residential neighbourhoods.

Waitrose Car Park (188 spaces) offers short-stay parking that serves both the supermarket and surrounding retail and service uses. Its position near the edge of the town centre helps accommodate convenience shopping trips while contributing to the overall distribution of short-stay demand.

Priory Centre (49 spaces) and Priory Lane (35 spaces) provide additional parking capacity adjacent to the town's key commercial and community destinations. The mix of long-stay (Priory Centre) and short-stay (Priory Lane) options helps support both workers and high-turnover visitors to St Neots' retail core.

Tan Yard Car Park (37 spaces) and the small Brook Street Car Park (13 spaces) function as short-stay facilities, offering convenient access to local shops, services, and residential areas. Their smaller scale and central locations support quick-turnover trips and help reduce pressure on main routes through the town centre.

The combination of high capacity long-stay provision, strategically located short-stay options, and substantial leisure related parking creates a flexible network capable of serving the town's growing population and increasingly diverse visitor base.

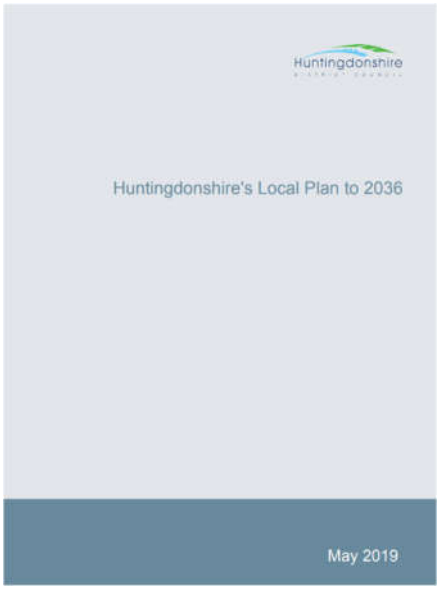
2.0 PARKING POLICY BACKGROUND

2.1 OVERVIEW

Parking plays a critical role in supporting the economic, social, and service functions of towns and villages across Huntingdonshire. As a largely rural district characterised by dispersed settlements, extensive residential areas, and several major market towns, Huntingdon, St Ives, St Neots, and Ramsey, the ability to access key destinations by car remains an essential component of daily life for many residents. Public transport provision varies across the district, and in many rural communities services are limited. As a result, parking infrastructure is fundamental to ensuring that people can reach employment, education, healthcare, retail centres, and leisure facilities.

However, the balance of parking provision is crucial. Insufficient parking can constrain economic vitality, reduce the attractiveness of town centres, and displace demand into neighbouring residential streets. Conversely, excessive parking supply can consume valuable land that may be needed for housing, commercial development, green space, or public realm improvements. Overprovision can also entrench car dependency, increase traffic volumes, and reduce opportunities to encourage active travel or public transport use. In some locations, large surface car parks may create barriers for pedestrians and cyclists, fragmenting movement networks and detracting from place quality.

In Huntingdonshire, these issues are particularly relevant given the district's rapid housing and employment growth, especially in areas such as St Neots and Alconbury Weald, and the need to manage increasing travel demand sustainably. Higher levels of car access associated with additional parking can contribute to congestion and environmental impacts along key corridors including the A14, A1, and A428, as well as within town centres.



Local and national policy therefore play a vital role in shaping how parking should be planned, managed, and delivered. Huntingdonshire District Council's Local Plan 2019 establishes the framework for development management, including parking standards for new developments and expectations for designing accessible, sustainable places. Complementary strategies, such as the Huntingdonshire Futures Place Strategy, Cambridgeshire and Peterborough Local Transport Plan, the Local Cycling and Walking Infrastructure Plan, and the new Huntingdonshire Approach to Active Travel Plan, seek to improve walking and cycling conditions, enhance public transport, and reduce reliance on private car travel where alternatives are viable.

The integration of parking policy with these wider transport and planning objectives is essential. Where parking supply, pricing, or location does not align with ambitions for sustainable mobility, town centre vitality, or climate objectives, unintended consequences can occur. For example, reducing parking charges might make a town more immediately accessible by car, but could also increase traffic, congestion, and pollution, undermining the overall attractiveness of the town centre and conflicting with active travel and environmental priorities.

A coherent, district-wide parking strategy is therefore required to bring these considerations together. It must ensure that parking provision supports rather than conflicts with Huntingdonshire's economic, environmental, and spatial ambitions; complements the role of sustainable and active travel; and responds effectively to the district's unique geography and growth pressures.

This strategy will be prepared with reference to relevant national, regional, and local policy, including planning frameworks, transport strategies, and growth-related documents that shape the future development of Huntingdonshire.

2.2 NATIONAL POLICY

2.2.1 NATIONAL PLANNING POLICY FRAMEWORK (NPPF)

The NPPF sets out the Government's expectations and requirements from the planning system. It is meant as high-level guidance for local councils to use when defining their own personal local and neighbourhood plans. This approach allows the planning system to be tailored to reflect the needs and priorities of individual communities.

The NPPF sets out the criteria for setting local parking standards. It states that local planning authorities should take into account:

- The accessibility of the development;
- The type, mix and use of development;
- The availability of and opportunities for public transport;
- Local car ownership levels;
- An overall need to reduce the use of high emission vehicles.

This Parking Strategy will be undertaken in accordance with paragraph 112 of the NPPF (2023) which states: *"In town centres, local authorities should seek to improve the quality of parking so that it is convenient, safe and secure, alongside measures to promote accessibility for pedestrians and cyclists"*. They should set appropriate parking charges that do not undermine the vitality of town centres. Parking enforcement should be proportionate.

2.2.2 PARKING STRATEGIES & MANAGEMENT (IHT)

A document was prepared by the Institution of Highways and Transportation (IHT) in 2005 to provide guidance on parking policy context; objectives and measures; and implementation for the preparation of parking strategies. Whilst this is document that

has been available for 20 years, the guidance is still very relevant. The guidance will be used to inform preparation of the Parking Strategy.

One of the key elements of this guidance is the recommended level of demand and supply of parking spaces. The guidance suggests that an appropriate target would be that peak demand should not exceed 85% of the supply of parking spaces. The aim of this is to limit the amount of searching for a space by drivers and the consequential environmental damage, congestion and frustration. Where demand exceeds this threshold then steps should be taken to either reduce demand (by increasing parking charges or improving non-car modes of travel, for instance) or by increasing the amount of available parking space.

2.3 REGIONAL POLICY

2.3.1 CAMBRIDGESHIRE & PETERBOROUGH LOCAL TRANSPORT PLAN

Transport policy across Huntingdonshire is shaped by the Cambridgeshire & Peterborough Local Transport Plan (LTP), produced by the Cambridgeshire & Peterborough Combined Authority (CPCA). The LTP provides the overarching vision, objectives, and investment framework for transport across the region, including Huntingdonshire's market towns and rural communities.

The LTP aims to create a safe, accessible, sustainable and integrated transport network, supporting the area's significant housing and employment growth while addressing wider challenges such as climate change, congestion and public health. It builds upon local transport evidence, national policy direction, and emerging initiatives including LCWIPs and the Combined Authority's Bus Strategy.

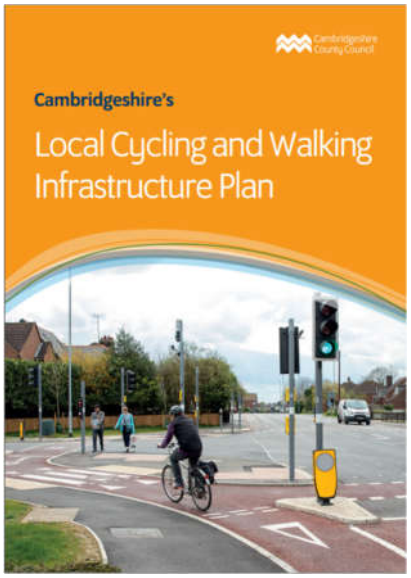
The LTP sets out several strategic objectives that are directly relevant to parking policy:

1. Reducing carbon emissions and improving air quality through measures that shift travel towards public transport and active modes.
2. Supporting thriving, well-connected places, ensuring town centres remain accessible while reducing the dominance of private car trips.
3. Improving network reliability and resilience, particularly along major corridors such as the A14, A1 and A428, which influence parking demand in Huntingdon, St Neots and St Ives.
4. Enhancing inclusion and accessibility, ensuring that rural residents, older adults, and those without access to a car can reach services and opportunities.

These principles reinforce the need for a balanced approach to parking provision, one that supports local economic vitality while encouraging modal shift. The LTP also highlights the importance of coordinated land-use planning, reducing reliance on private cars where alternatives are viable, and integrating parking management with wider town centre strategies.

As the CPCA continues to refresh its transport policies, including updated proposals for active travel, bus service improvement, and demand management, the LTP framework will remain central to aligning Huntingdonshire's parking strategy with regional objectives.

2.3.2 LOCAL CYCLING & WALKING INFRASTRUCTURE PLANS (LCWIPS)



Cambridgeshire County Council, supported by the CPCA, has developed LCWIPs for market towns and strategic corridors across the county. LCWIP work has already been undertaken for Huntingdon, St Neots and St Ives, with the plans being used to guide investment in active travel networks.

LCWIPs aim to:

- Identify priority walking and cycling routes;
- Improve safety and accessibility of local networks;
- Strengthen connections to public transport;
- Support modal shift and reduce car dependency.

Parking policy and LCWIP objectives are interrelated. Inappropriate parking provision, such as over provision or poorly located parking, can undermine walking and cycling connectivity, create barriers for pedestrians, and reduce the quality of public spaces. Conversely, well-managed parking can complement LCWIP aspirations by encouraging shifts to active travel for shorter journeys and relieving pressure on congested town centre streets.

Ensuring these strategies are aligned is essential for delivering safer streets, healthier travel patterns and sustainable growth across Huntingdonshire.

2.3.3 CAMBRIDGESHIRE & PETERBOROUGH JOINT STRATEGIC NEEDS ASSESSMENT

The Cambridgeshire & Peterborough Joint Strategic Needs Assessment (JSNA) provides a comprehensive assessment of population health, wellbeing and demographic trends across the region, including Huntingdonshire. Its findings have direct implications for transport and parking policy.

Key themes within the JSNA include:

- The importance of active travel in improving physical health and reducing long-term conditions;

- The need to address transport accessibility challenges, particularly in rural areas where public transport options are limited;
- The growing proportion of older residents, many of whom require accessible parking close to key services;
- The role of transport in tackling inequalities and ensuring equitable access to healthcare, employment, education and leisure.

The JSNA supports a transport and parking system that enables independence, reduces isolation, and promotes healthier lifestyles. This includes:

- Accessible parking provision for users with limited mobility;
- Integration of parking with walking, cycling and bus networks;
- Consideration of rural transport barriers in policy design;
- Measures that encourage physical activity and reduce reliance on the private car for short trips.

Embedding JSNA considerations into the parking strategy will ensure Huntingdonshire's parking offer supports wider health and wellbeing outcomes for its residents.

2.4 LOCAL POLICY

2.4.1 HUNTINGDONSHIRE LOCAL PLAN TO 2036

The Huntingdonshire Local Plan to 2036, adopted in 2019, provides the strategic framework guiding growth, development, and land use planning across the district. The plan identifies Huntingdonshire as a dynamic and growing area, shaped by its network of market towns, alongside extensive rural settlements. It sets out policies supporting housing delivery, economic development, and infrastructure provision, while ensuring that growth is delivered in a manner that is sustainable, resilient, and sensitive to the district's natural and historic environment.

Key elements of the Local Plan relevant to parking include:

1. **Housing and Development:** The plan allocates significant new housing at locations including Alconbury Weald, St Neots East, and key market towns. Each development must provide appropriate transport infrastructure, including well designed parking that reflects local needs and mitigates overspill.

2. **Sustainable Transport and Climate Objectives:** The Local Plan emphasises reducing carbon emissions and improving air quality by encouraging walking, cycling, and public transport. Parking provision must therefore be coordinated with active travel infrastructure and public transport access to support modal shift.

3. **Town Centres and Economic Vitality:** Policies seek to maintain and enhance the vibrancy of Huntingdonshire's market towns. Well-managed parking is essential to ensuring town centres remain accessible to residents, visitors, and businesses, while avoiding congestion and maintaining high-quality public realm.

4. **Environmental and Heritage Constraints:** The district includes important landscapes along the Great Ouse Valley and significant heritage assets. Parking design must therefore respect sensitive settings, manage visual impact, support sustainable drainage, and promote EV charging.

A review of the Local Plan is underway, reflecting shifts in national planning policy and the district's ongoing need to support sustainable growth. Future updates are expected to further emphasise climate action, accessibility, and integrated transport networks.

Parking provision intersects directly with these Local Plan objectives, ensuring access for new and existing communities, supporting economic activity, and aligning with Huntingdonshire's commitments to sustainable travel and high-quality place-making.

2.4.2 PARKING AND DESIGN STANDARDS

Unlike some authorities, Huntingdonshire District Council does not currently have a standalone Parking Standards Supplementary Planning Document. Instead, parking requirements for new developments are informed by:

- Huntingdonshire Local Plan policies on design and transport impacts;
- Cambridgeshire County Council's parking guidance, including residential and non-residential parking standards;
- The Huntingdonshire Design Guide SPD, which provides expectations for street design, layout, cycle parking, accessibility, and integration with active travel routes.

Historically, national guidance encouraged maximum parking standards as a means of managing car use. However, rural settlement patterns across Huntingdonshire, combined with limited public transport options in many areas, mean that residents continue to rely heavily on private vehicles. As a result, insufficient parking in new developments has often resulted in overspill parking on local streets and verges.

Current guidance therefore takes a more pragmatic approach, recognising that:

- Adequate parking must be provided to meet local needs, particularly in rural villages;
- Parking layouts must support highway safety, avoid obstructive parking, and protect high-quality street environments;
- Provision must incorporate cycle parking, mobility-impaired spaces, increasingly, electric vehicle charging infrastructure to reflect national policy;
- Car parking should not dominate development layouts or undermine opportunities for walking and cycling.

This approach balances the realities of local travel behaviour with long-term sustainability and placemaking objectives.

2.4.3 INFRASTRUCTURE DELIVERY AND DEVELOPER CONTRIBUTIONS

Infrastructure planning across Huntingdonshire is supported by the Infrastructure Delivery Framework, comprising:

- The Infrastructure Funding Statement (IFS);
- The Developer Contributions SPD (which outlines expectations for Section 106 contributions);
- Evidence supporting the Local Plan and area-based development frameworks.

These documents identify the transport, community, green infrastructure, and utilities investments required to support sustainable growth across the district.

Implications for parking provision include:

Supporting Development Growth

New housing, employment, and mixed-use developments must incorporate sufficient and well-designed parking to meet identified needs, in line with Local Plan policy and county level standards. This includes appropriate provision for cycles, EV charging, and visitor parking to minimise overspill and maintain safe, accessible neighbourhoods.

Enhancing Transport Connectivity

Infrastructure planning emphasises strengthening connections between modes, walking, cycling, bus services, and rail. Parking provision at key hubs, including railway stations, leisure centres, and town centres, must complement sustainable transport objectives rather than undermine modal shift.

Town Centre Regeneration and Investment

Parking is integral to ensuring the continued vitality of Huntingdon, St Neots, St Ives and Ramsey. Infrastructure plans recognise the need to balance accessibility with high-quality public realm, digital parking solutions, and measures that reduce congestion.

Environmental and Climate Considerations

Parking infrastructure must reflect Huntingdonshire's climate commitments, including:

- Expanding EV charging;
- Supporting active travel;
- Incorporating permeable surfacing and sustainable drainage where appropriate;
- Designing parking layouts that reduce emissions, minimise vehicle circulation, and avoid harm to sensitive landscapes such as the Great Ouse Valley.

Visitor and Leisure Demand

The district attracts visitors to its riverside parks, nature reserves, market towns, and cultural attractions. Infrastructure planning acknowledges the need for seasonal and event-responsive parking management to minimise congestion and protect town centre environments.

3.0 BENCHMARKING WITH OTHER LOCAL AUTHORITIES

3.1 INTRODUCTION

As part of the development of this parking strategy, a benchmarking exercise has been undertaken to understand how parking provision, pricing, and management in Huntingdonshire compares with other local authorities. Benchmarking provides valuable insight into how neighbouring areas and similar districts across the UK structure their parking services, set tariffs, manage demand, and adapt to strategic challenges such as climate commitments, town centre vitality, and evolving travel behaviour.

To ensure the analysis is robust and meaningful, two categories of comparator authorities have been used:

1. Neighbouring authorities that share geographic proximity, economic linkages, similar market town functions, and comparable transport networks.
2. Statistical neighbours, authorities elsewhere in England that resemble Huntingdonshire in terms of population size, rural–urban balance, settlement pattern, and demand on car parking assets.

These comparators provide an appropriate basis for evaluating Huntingdonshire's current parking provision, identifying best practice, and informing options for policy refinement.

Neighbouring Authorities

The following neighbouring authorities have been identified as suitable comparators given their proximity, similar settlement structures, market-town characteristics, and transport corridors:

- **South Cambridgeshire District Council** – shares boundaries with Huntingdonshire, contains similar rural settlements, and faces comparable pressures from growth and commuter travel to Cambridge.
- **Fenland District Council** – predominantly rural with market towns and similar challenges relating to accessibility, transport choice, and car dependency.
- **East Cambridgeshire District Council** – comparable population scale, a mixture of rural villages and market towns, and similar patterns of car use and off-street parking provision.
- **Peterborough City Council (non-metropolitan area functions)** – while larger, Peterborough provides a useful contrast in tariff structure and town centre parking strategy, particularly given cross-boundary travel for employment and services.
- **West Northamptonshire Council (St Neots catchment influence)** – shares economic and commuting linkages and offers comparable market-town parking arrangements.

These authorities provide a relevant geographical context and reflect similar travel patterns, economic dependencies, and pressures on town-centre parking.

Statistical Neighbours (Similar Characteristics)

To supplement local benchmarking, statistical comparators have been identified using factors including population (150,000–220,000), number and scale of market towns, rurality, parking estate size, and reliance on private car travel. These authorities provide a broader reference point for service provision and policy alignment.

Suitable statistical neighbours for Huntingdonshire include:

- **South Kesteven District Council** – similar population size, a network of market towns (Grantham, Stamford, Bourne), comparable rural/urban profile, and similar parking demands.
- **North West Leicestershire District Council** – mixture of towns and rural communities, similar population scale, and strong commuter patterns.
- **Wychavon District Council** – market town economy (Evesham, Pershore, Droitwich), rural hinterland, and similar approach to car park management and tariff setting.
- **Breckland District Council** – dispersed rural district with key service centres, similar demographic structure, and comparable dependence on car travel.
- **Mendip (Somerset) / now part of Somerset Council** – historically similar settlement pattern of rural villages and large market towns, offering comparable parking challenges before unitary transition.
- **East Lindsey District Council** – predominantly rural with several medium-sized towns, similar car ownership levels, and significant leisure based parking demand.

These authorities provide meaningful benchmarking comparators for understanding how similar UK districts manage off-street parking, structure tariffs, invest in EV charging, and integrate parking with wider transport and regeneration strategies.

3.2 CAR PARK SPACE PROVISION PER 1,000 POPULATION

One of the most valuable comparative measures when assessing parking provision across local authorities is the ratio of publicly available parking spaces to the resident population. This provides a high-level indication of whether an area may be under or over-supplied with parking relative to its size, settlement pattern, and the needs of residents, businesses, and visitors.

An insufficient supply of parking can place significant strain on town centres and service centres. When users are unable to reliably find a parking space, particularly during busy periods, frustration increases, visitor numbers decline, and economic performance can suffer as people choose to shop, work, or access leisure opportunities elsewhere. Evidence from previous parking strategies indicates that the ability to easily and

predictably find a space is frequently one of the most important factors influencing where people choose to visit.

Conversely, an excessive supply of parking may indicate an inefficient use of valuable land, particularly in town centres where land could be repurposed for housing, commercial development, public realm enhancements, or active travel infrastructure. Under-utilisation may also reflect issues with the attractiveness of the parking offer, such as tariff structure, stay restrictions, or the wider appeal of the location.

To provide a meaningful comparison of Huntingdonshire's parking provision, a benchmarking assessment has been undertaken comparing:

- Total number of council managed car parking spaces;
- Total off-street parking spaces;
- Resident population;
- Number of spaces per 1,000 population.

This approach enables the district to be assessed against both neighbouring authorities and relevant statistical comparators, offering insight into how Huntingdonshire's parking supply aligns with districts of similar size, settlement character, and economic function.

The results of this analysis are presented in table 2.

Location	Comparison Type	Population	Number of Car Park Spaces	% of Car Parks to Population per 1,000
Huntingdonshire District		186,000	3149	16.9
Central Bedfordshire	Neighbouring authorities	294,000	2080	7.1
Fenland District		103,000	1802	17.5
East Cambridgeshire District		88,000	1114	12.7
Peterborough City (unitary)		216,000	2552	11.8
West Northamptonshire District		426,000	5728	13.4
South Kesteven District	Statistical neighbours	146,000	1771	12.1
Telford & Wrekin District		186,000	3302	17.8
Wychavon District		138,000	4133	29.9
Breckland District		142,000	2273	16.0
Warwick District		149,000	2550	17.1
East Hertfordshire District		156,000	3295	21.1

Table 2– Benchmarking site information

The benchmarking analysis provides a valuable perspective on how Huntingdonshire's parking provision compares with both neighbouring authorities and statistical counterparts. This comparison helps identify areas of strength, potential gaps, and opportunities for strategic adjustments to ensure the district's parking infrastructure remains fit for purpose and aligned with future needs.

Comparison with Neighbouring Authorities

The Huntingdonshire District has 3,149 council managed off-street parking spaces, equating to 16.9 spaces per 1,000 residents. This places it above several neighbouring authorities in terms of relative provision.

Fenland District and West Northamptonshire District offer broadly similar or slightly lower ratios, with 17.5 and 13.4 spaces per 1,000 population respectively. Fenland's relatively high ratio reflects its dispersed rural settlement pattern and reliance on off-street parking in market towns, while West Northamptonshire's position reflects a much larger population spread across a diverse geography.

East Cambridgeshire District and Peterborough City show lower ratios of 12.7 and 11.8 respectively. These areas tend to have a mix of private and public parking, with larger town centre retail and commercial developments offering private parking capacity that supplements council supply.

By contrast, Central Bedfordshire shows the lowest provision among neighbouring authorities, with just 7.1 spaces per 1,000 residents, likely reflecting stronger reliance on private parking provision, different town centre layouts, and extensive residential growth areas where parking is absorbed within developments rather than in council owned car parks.

Overall, Huntingdonshire performs strongly within its regional context, offering a comparatively generous supply of public off-street parking relative to population.

Comparison with Statistical Neighbours

When compared against districts with similar demographic, economic, and geographic profiles, Huntingdonshire again performs competitively.

Huntingdonshire's 16.9 spaces per 1,000 residents sits within the mid-to-upper range of statistical neighbours. Telford & Wrekin (17.8), Warwick District (17.1), Breckland (16.0), and South Kesteven (12.1) show broadly comparable ratios, illustrating that Huntingdonshire's parking estate is consistent with areas characterised by a mix of rural communities and larger service towns.

However, two authorities stand out. East Hertfordshire provides 21.1 spaces per 1,000 residents, reflecting its high parking demand driven by strong commuter flows and vibrant market towns. Wychavon District shows a markedly high ratio of 29.9, the highest among all comparators. This exceptionally high figure likely relates to Wychavon's combination of strong tourism appeal, extensive leisure demand, and generous town centre surface parking across its three main settlements (Evesham, Droitwich Spa, and Pershore).

These outliers demonstrate the upper bounds of provision rather than typical benchmarks.

Across the group as a whole, Huntingdonshire's position indicates a balanced and well-proportioned level of parking provision, aligned with the patterns seen in comparable rural and market town districts.

Key Insights

Huntingdonshire's parking provision is comparatively strong, exceeding most neighbouring authorities and sitting comfortably above the median of its statistical comparator group, indicating that current supply meets population-based demand without evident overprovision. The notably higher ratios observed in areas such as Wychavon and East Hertfordshire illustrate how factors like tourism, commuter demand, and retail intensity can significantly elevate parking requirements beyond population alone. This reinforces the need for Huntingdonshire to continue aligning its parking supply with local economic activity, visitor behaviour, and future growth to ensure capacity remains both appropriate and responsive.

Figure 7 illustrates the breakdown percentage of car parks to the population per 1,000 for the neighbouring authorities, whereas figure 8 provides the same breakdown for the statistical neighbours to identify how Huntingdonshire compares.

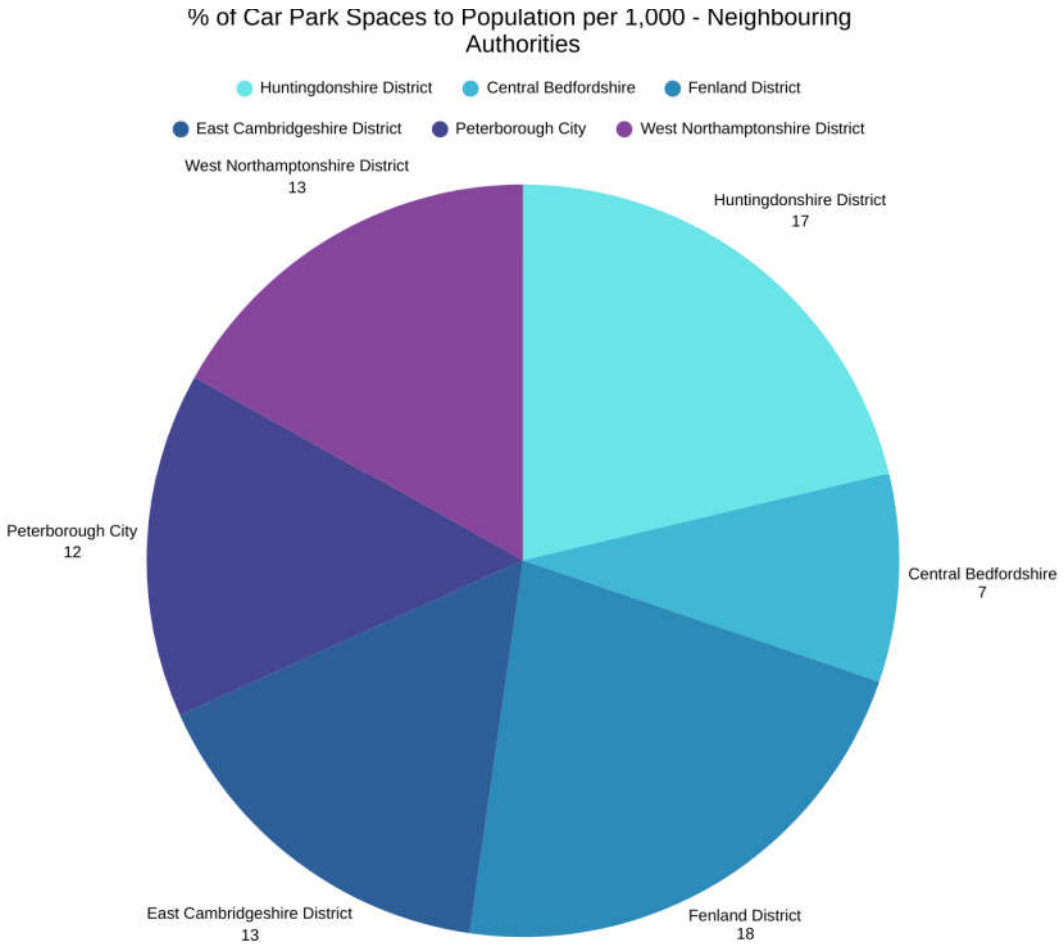


Figure 7 – Percentage of car park spaces to population per 1,000 – neighbouring authorities

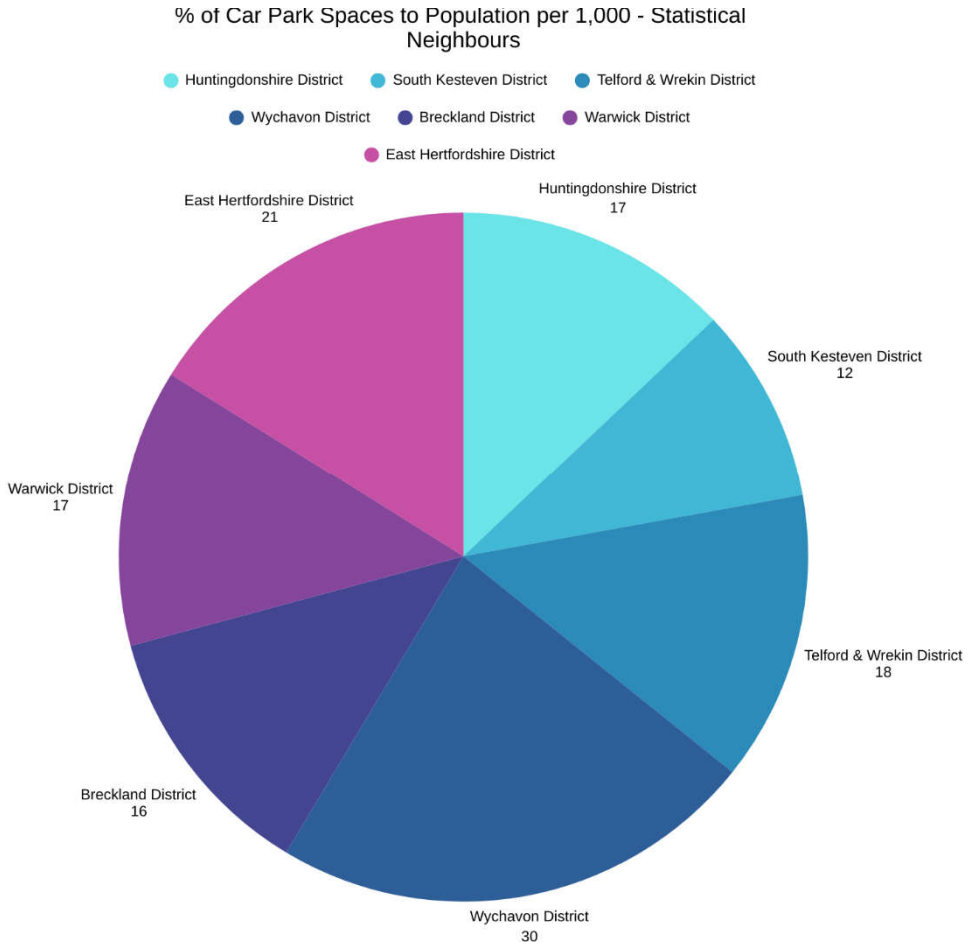

Figure 8 – Percentage of car park spaces to population per 1,000 – statistical neighbours

3.3 SHORT-STAY PARKING TARIFF COMPARISON

A comparison of short-stay parking tariffs between Huntingdonshire and a range of neighbouring and statistical comparator authorities reveals distinct differences in charging approaches, reflecting local economic priorities, commercial pressures, and policy philosophies around parking management.

Table 3 presents the short-stay parking tariffs for both neighbouring authorities and identified statistical comparator areas. In some cases, local authorities apply multiple tariff structures across their car park portfolio, making direct like-for-like comparison more complex. Where this occurs, either the most widely applied tariff or an appropriate average has been used to ensure a consistent and meaningful basis for comparison.

Location	Comparison Type	1 Hour	2 Hours	3 Hours	4 Hours
Huntingdonshire District		£1.00	£1.80	£2.60	£3.40
Central Bedfordshire	Neighbouring authorities	£1.00	£1.80	£2.60	£4.10
Fenland District		Free			
East Cambridgeshire District		Free			
Peterborough City (unitary)		£2.00	£3.00	£4.00	£5.00
West Northamptonshire District		£1.10	£2.20	£3.30	£4.40
South Kesteven District		Free	£2.00	£2.50	£2.50

Telford & Wrekin District	Statistical neighbours	Free			N/A
Wychavon District		£1.00	£2.00	£3.00	N/A
Breckland District		Free			
Warwick District		£1.50	£2.70	£4.00	£5.20
East Hertfordshire District		£1.20	£2.40	£3.60	£4.80

Table 3 – Short-stay car park tariff benchmarking

Huntingdonshire's tariff structure, £1.00 for one hour, £1.80 for two hours, £2.60 for three hours, and £3.40 for four hours, positions the district within the lower to mid-range of the benchmarking group. This suggests that the Council's charges remain modest, aiming to balance the need for revenue generation with maintaining affordability for residents, visitors, and businesses.

Among neighbouring authorities, there is significant variation. Fenland and East Cambridgeshire operate entirely free short-stay parking models, which are typically used to stimulate footfall in smaller or more economically sensitive market towns. In comparison, Huntingdonshire's charges will appear higher to users travelling across district boundaries, although free models are becoming increasingly uncommon due to financial pressures on councils. Central Bedfordshire presents a contrasting picture: its tariffs closely mirror Huntingdonshire's for stays up to three hours, indicating a shared regional norm for short-stay pricing. The divergence occurs at the four-hour mark, where Central Bedfordshire's tariff rises to £4.10, higher than Huntingdonshire's £3.40, offering Huntingdonshire a small competitive advantage for longer short-stay visits.

Higher charging urban authorities such as Peterborough charge substantially more across all durations. These areas typically experience greater parking demand linked to larger retail centres, higher turnover expectations, and greater private sector competition for parking capacity. Against this backdrop, Huntingdonshire's comparatively lower tariffs position its town centres as more affordable destinations, potentially enhancing their appeal to visitors who may otherwise travel to nearby regional centres.

A similar pattern emerges when examining statistical neighbours. Districts such as South Kesteven, Telford & Wrekin, and Breckland adopt free parking for at least the first hour, and in some cases for all short-stay durations. These approaches commonly reflect an economic development priority to encourage visiting and shopping, particularly in rural and market town settings. In contrast, Wychavon, Warwick, and East Hertfordshire adopt mid-to-upper tariff levels, with charges exceeding those in Huntingdonshire. Warwick and East Hertfordshire, in particular, operate some of the highest tariffs among the comparator group, likely influenced by strong local economies, higher property values, and sustained demand for town-centre parking.

Taken together, the benchmarking demonstrates that Huntingdonshire's tariff structure sits firmly in the affordable and competitive segment of the market. While not as low as districts offering free parking, the Council's charges remain well below those of higher-

value or more urbanised areas. This positioning supports accessibility while helping to maintain a sustainable income base.

Importantly, the analysis highlights that tariff setting is not simply a matter of relative price, but of broader strategic intent. Councils offering free parking often do so to address specific local challenges or to stimulate economic activity, whereas those with higher tariffs may rely on price mechanisms to manage demand in constrained town centres. Huntingdonshire's current charges strike a middle ground, supporting economic vitality while avoiding the extremes at either end of the pricing spectrum.

3.4 LONG-STAY PARKING TARIFF COMPARISON

Table 4 presents the long-stay parking tariffs for Huntingdonshire and the selected neighbouring and statistical comparator authorities. As with the short-stay benchmarking, some councils operate differing tariff structures across their car parks, which can make direct comparison challenging. Where necessary, the most commonly applied tariff or a representative value has been used to ensure a consistent and meaningful assessment of long-stay pricing.

Location	Comparison Type	2 Hours	3 Hours	4 Hours	All Day
Huntingdonshire District		£1.60	£2.00	£2.40	£4.00
Central Bedfordshire	Neighbouring authorities	£1.80	£2.60	£4.10	£8.20
Fenland District		Free			
East Cambridgeshire District		Free			£4.00
Peterborough City (unitary)		£3.50	£6.50	£6.50	£7.50
West Northamptonshire District		£2.20	£3.30	£4.40	£6.60
South Kesteven District	Statistical neighbours	£2.00	£2.50	£2.50	£7.00
Telford & Wrekin District		Free			
Wychavon District		£1.00	£2.00	£3.00	£4.00
Breckland District		Free			
Warwick District		£2.70	£4.00	£5.20	£8.00
East Hertfordshire District		£2.40	£3.60	£4.80	£7.20

Table 4 – Long-stay car park tariff benchmarking

Huntingdonshire's long-stay tariff structure, £1.60 for two hours, £2.00 for three hours, £2.40 for four hours, and £4.00 for all-day parking, places the district at the lower end of the pricing spectrum within the comparator group. This indicates a deliberate positioning aimed at ensuring affordability for longer-duration stays, which is likely to support commuter use, leisure visits, and sustained activity within town centres.

A clear divide emerges among Huntingdonshire's neighbouring authorities. Fenland and East Cambridgeshire continue their free parking model for significant durations, offering free stays up to at least four hours and, in East Cambridgeshire's case, a £4.00 all-day tariff. These approaches reflect long-standing economic strategies to enhance the attractiveness of smaller market towns and encourage footfall. Compared to these

authorities, Huntingdonshire is more expensive for shorter long-stay periods, but broadly comparable for all-day parking when considering East Cambridgeshire's £4.00 charge.

Central Bedfordshire, Peterborough, and West Northamptonshire adopt considerably higher tariffs across all durations. Central Bedfordshire's all-day rate of £8.20 is more than double Huntingdonshire's, while Peterborough and West Northamptonshire charge £7.50 and £6.60 respectively. These higher rates are typical of areas with stronger commercial centres, elevated demand for commuter parking, and pressures on town centre capacity. In this context, Huntingdonshire's pricing remains notably more affordable, offering competitive advantages for workers, visitors, and longer-stay users.

Among statistical comparator authorities, there is again a mixture of free-parking, mid-range, and premium pricing models. South Kesteven's tariffs (£2.00 for two hours, £2.50 for three and four hours, £7.00 all day) show a modest premium over Huntingdonshire's short-duration pricing, but a significantly higher all day rate. Wychavon District similarly adopts a mid-range structure for 2-4 hour stays, but matches Huntingdonshire with a £4.00 all day tariff, positioning it as a near direct comparator in overall long-stay pricing.

At the other end of the scale, Breckland and Telford & Wrekin provide substantial free-parking offers, reducing or eliminating charges for long-stay durations. These models are generally deployed in districts with lower parking pressure and a desire to stimulate economic activity in dispersed rural centres.

Warwick and East Hertfordshire, authorities with stronger economic profiles and higher parking demand, operate significantly higher long-stay charges. Warwick's all day rate (£8.00) and East Hertfordshire's (£7.20) illustrate a premium pricing model linked to vibrant town centres and high-value service economies. Against these comparators, Huntingdonshire's £4.00 all day tariff is markedly lower, further reinforcing its competitive positioning.

3.5 SUNDAY PARKING TARIFF COMPARISON

A comparison of Sunday parking arrangements between Huntingdonshire and the selected neighbouring and statistical comparator authorities shows that Huntingdonshire's offer of free Sunday parking is strongly aligned with the majority practice in similar districts. Most comparator authorities operate free parking on Sundays, particularly those with market town functions or more rural economic profiles, reflecting a common approach to supporting weekend visitation and local retail activity.

Among neighbouring authorities, Fenland and East Cambridgeshire also offer free Sunday parking, while West Northamptonshire provides a partial concession of the first two hours free. In contrast, Peterborough City provides no Sunday concession, which is consistent with its status as a larger urban centre with higher weekend demand. Central Bedfordshire applies a Sunday charge of £2.10, representing a more revenue focused model.

The pattern among statistical neighbours mirrors this divide. South Kesteven, Telford & Wrekin, Wychavon, and Breckland all offer free Sunday parking, supporting the view that Huntingdonshire's approach is typical of comparable districts. Conversely, Warwick District applies no concession, and East Hertfordshire District charges £2.00, again reflecting characteristics of higher-demand, higher-value town centres.

3.6 DISABLED PARKING COMPARISON

Across the benchmarking authorities, disabled parking provision varies widely, reflecting local priorities and differing approaches to accessibility, equity, and parking management. Many of the more rural or market town districts, such as Fenland, East Cambridgeshire, South Kesteven, Wychavon, Breckland, and Telford & Wrekin, offer free parking for Blue Badge holders in most or all council operated car parks. In these areas, demand levels and turnover pressures are generally lower, and free concessions are seen as an important means of supporting access for disabled residents and visitors who may have few realistic alternatives to car travel.

Other authorities operate hybrid models that provide some level of concession without making disabled parking entirely free. In places such as West Northamptonshire, Blue Badge holders may benefit from extended stay allowances, the first two hours free, or exemptions from certain time limits. This approach seeks to balance inclusivity with the need to maintain revenue and manage car park turnover, recognising that disabled motorists may require longer or more flexible parking arrangements.

By contrast, larger and more economically active centres such as Peterborough, Warwick, and East Hertfordshire tend to charge disabled motorists the standard tariff. In these towns, high parking demand, limited capacity, and greater commercial pressures mean that differential charging could undermine turnover or reduce the availability of spaces. Instead, support for disabled users is typically delivered through the provision of well located, high quality accessible bays, sometimes accompanied by extended stay allowances.

Huntingdonshire's approach sits comfortably within the spectrum of practices adopted by similar district authorities. The benchmarking highlights that there is no uniform national model. Some councils prioritise free access, while others emphasise consistency or demand management. What is consistent, however, is a growing focus on the quality of disabled parking infrastructure. Many authorities are upgrading bay layouts, improving gradients and footpath connections, and enhancing the accessibility of digital payment systems. As electric vehicle charging infrastructure expands, several councils are also beginning to introduce accessible EV bays to ensure equal access for Blue Badge holders.

4.0 ASSESSMENT OF HUNTINGDONSHIRE CAR PARKS

4.1 OVERVIEW

As part of the development of Huntingdonshire District Council's car park strategy, a comprehensive condition and quality assessment has been undertaken across the towns included within the survey programme. The purpose of this assessment is to establish a clear and consistent understanding of the current state of the district's off-street parking assets, providing a robust evidence base to inform future investment priorities and strategic recommendations. Site visits were conducted in October 2025 alongside the occupancy and duration of stay surveys.

The evaluation covered all council owned off-street car parks included within the survey scope. Each site was reviewed using a predefined assessment framework, ensuring a consistent and objective approach to scoring and enabling the development of a prioritisation matrix to identify locations requiring maintenance, enhancement, or further investigation.

The assessment considered a range of quality, accessibility, and operational criteria, including:

- Proximity to key destinations and local attractions;
- Safety, lighting provision, and availability of CCTV;
- Condition of boundaries and perimeters;
- Quality and visibility of road markings;
- Lighting coverage and reliability;
- Pedestrian routes and accessibility within the car park;
- Vehicular access arrangements and circulation;
- Directional signage on approaches;
- Wayfinding to town centres and nearby destinations;
- Overall condition and presentation of the site;
- Availability and quality of electric vehicle charging infrastructure;
- 24-hour access arrangements;
- Presence and condition of ancillary facilities, such as toilets.

Each of the criteria listed above has been defined with detailed descriptions to enable consistent scoring for each car park. Most criteria allow for a score ranging from 0 to 2, while some are assessed on a binary scale of 0 or 1, depending on the specific evaluation. The maximum achievable score for a car park, based on the established criteria, is 21.

Table 5 provides an overview of the assessment criteria and associated scoring methodology.

Criteria	Description	Result and Score		
Location to nearby attractions;	How close is the car park to nearby attractions that would generate car park demand?	It's less than a 2 minute walk	It's between a 2-5 minute walk	Its more than a 5 minute walk
		2	1	0
Safety, CCTV and boundaries	How safe will customers feel, including leaving their vehicles in the car park, and how well protected is the car park?	Car park covered with CCTV with good lighting and near urban areas	Car park has CCTV but remote	Car park has no CCTV and is remote
		2	1	0
Road markings	Are there road markings in the car park, and what is the condition of these?	Yes - very good condition	Yes - fair condition	Yes - poor condition, or no markings
		2	1	0
Lighting	Is there street lighting within the car park?	Yes	No	
		1	0	
Pedestrian access	Are there safe pedestrian facilities such as footways, crossing points, and routes into and out of the car park segregated from vehicles?	Yes - high quality provision	Yes - adequate provision	Yes - poor provision, or no facilities
		2	1	0
Vehicular access	How easy is the car park to access, and are there any constraints that may impact use?	Car park easy is access, close to key routes	Some minor constraints with access	Major constraints with access
		2	1	0
Directional signage on approach to the car park	Is the car park well signed from the highway network?	Yes - good provision	Yes - adequate provision	No signage
		2	1	0
Wayfinding to key destinations in or near the car park	Are the key attractions signposted within or near the car park pedestrian entrances?	Yes - good provision	Yes - adequate provision	No wayfinding
		2	1	0
Overall condition	What is the overall standard of the car park? Is there a paved surface? If so what is the condition like?	High quality	Adequate quality	Below expected standard
		2	1	0
Electric vehicle facilities	Does the car park have EV charging facilities?	Yes - good provision	Yes - some provision	No EV charging
		2	1	0
24hr Facility	Can you use the car park at all times?	Yes	No	
		1	0	
Toilets	Does the car park have toilet facilities?	Yes	No	
		1	0	

Table 5 - Car park assessment scoring table

4.2 GODMANCHESTER CAR PARKS

Godmanchester contains three council operated car parks. Overall scores range from 8 to 10, reflecting a generally good standard of provision, with two of the three sites performing strongly in the assessment.

Bridge Place and Post Street achieve the joint highest scores in Godmanchester, each receiving 10 points. Although they serve different functions within the town, both benefit from strong overall condition, good road markings, and reasonable levels of pedestrian access and vehicular circulation. Post Street car park performs particularly well due to its proximity to local walking routes, including the popular Queen's Walk, and its location within a residential setting. Its scoring reflects good safety, strong road-marking quality, and adequate lighting, making it an important facility for both residents and visitors accessing the riverside and leisure areas.

Bridge Place, despite being situated slightly further from the town centre and lacking a clearly defined role, also performs adequately. The car park benefits from high-capacity provision, good road markings, and effective vehicular access. Its location, between Godmanchester and Huntingdon, suggests a mixed user base.

Park Lane ranks lowest among the three car parks with a score of 8, driven largely by limitations in lighting provision and overall pedestrian access. Nevertheless, Park Lane benefits from strong safety characteristics, reflecting its close association with the nearby school and swimming pool, which provide good natural surveillance during peak activity periods. Located within a residential area and offering free parking, Park Lane is likely to experience higher levels of local day and overnight use.

Collectively, the Godmanchester car parks provide a solid foundation for local parking needs. With Bridge Place and Post Street performing well and Park Lane serving important community functions, these sites represent valuable assets within Huntingdonshire's wider parking portfolio. A targeted programme of small-scale improvements, particularly around lighting, signage, and EV readiness, could strengthen their long-term resilience and user experience.

Table 6 below provides a breakdown of scores for the Godmanchester car parks.

Car Park	Location	Safety, CCTV & Boundaries	Road Markings	Lighting	Pedestrian Access	Vehicular Access	Signage (Car Park)	Signage (To further destinations)	EV Charging	Overall Condition	24hr Facility	Toilets	Total Score
Bridge Place	0	2	2	1	2	1	0	0	0	1	1	0	10
Park Lane	2	1	1	0	1	1	0	0	0	1	1	0	8
Post Street	2	2	1	1	1	1	0	0	0	1	1	0	10

Table 6 – Assessment of car parks in Godmanchester

4.3 HUNTINGDON CAR PARKS

Huntingdon contains nine council operated car parks, ranging from small short-stay sites supporting the town centre to larger long-stay facilities serving commuters, visitors, and town centre businesses. The assessment scores reveal a wide variation in performance, reflecting differences in location, infrastructure, and overall quality. Total scores range from 5 to 16, with several high-performing car parks and a small number offering more limited facilities.

The Multi-Storey (near Sainsbury's) and Sainsbury's surface car park jointly achieve the highest score of 16, reflecting their strong overall condition, excellent road marking quality, and good access for both vehicles and pedestrians. Their proximity to key retail destinations and the town centre significantly enhances their performance. Both locations also benefit from multiple EV charging bays, which is uncommon elsewhere in the district and an important feature as charging demand grows. Good lighting levels, clear internal circulation, and strong overall presentation make these two car parks standouts within Huntingdon's parking estate.

Mill Common ranks next with a score of 14, performing well across most categories. Its strong vehicular access, defined pedestrian routes, and well maintained condition contribute positively to its rating. While the car park does not offer EV charging facilities and has limited signage directing users to onward destinations, these factors do not significantly detract from its overall performance due to the site's inherent accessibility and favourable location. Mill Common remains a well-used, high-quality long-stay facility.

St Germain Street also performs strongly with a total score of 11, driven by excellent location, good safety conditions, strong road markings, and convenient pedestrian and vehicular access. Although it lacks EV charging and sanitary facilities, its position near key destinations and its compact, easy-to-navigate layout make it a valuable short-stay asset.

Ingram Street, Princes Street, and Riverside each score 9, forming a cluster of mid-performing car parks that provide reliable but unexceptional facilities.

- Ingram Street scores consistently across safety, road markings, pedestrian access, and general condition, making it a well-balanced long-stay car park.

- Princes Street is well located for central Huntingdon and offers good baseline facilities, though the absence of EV charging and toilets limits its potential future resilience.
- Riverside benefits from strong pedestrian access, good markings and lighting, and a scenic riverside location, though lack of EV charging and limited signage to further destinations constrain its score.

These car parks have solid fundamentals but present opportunities for targeted enhancements, particularly in signage, EV readiness, and boundary/security upgrades.

Great Northern Street receives a total score of 8, reflecting generally adequate but unremarkable facilities. Although located reasonably close to key areas and offering acceptable access and markings, the car park is limited by a lack of EV charging, basic lighting, and no dedicated toilet facilities. Improvements to signage and lighting could help raise its performance.

The lowest scoring site is Hinchingbrooke Country Park, with a score of 5. Its rural nature, limited infrastructure, basic lighting, lack of CCTV, and absence of EV charging contribute to its low rating. However, this car park serves a fundamentally different purpose from town centre locations. Its primary function is to support leisure and parkland use rather than providing a high specification urban parking environment. As such, its low score must be interpreted in context. Substantial upgrades may not align with the character of the site or typical user expectations.

Table 7 below provides a breakdown of scores for the Huntingdon car parks.

Car Park	Location	Safety, CCTV & Boundaries	Road Markings	Lighting	Pedestrian Access	Vehicular Access	Signage (Car Park)	Signage (To further destinations)	EV Charging	Overall Condition	24hr Facility	Toilets	Total Score
Great Northern St	1	1	1	1	1	1	0	0	1	0	1	0	8
Hinchingbrooke Country Park	2	0	0	0	1	1	0	0	0	0	0	1	5
Ingram St	1	1	1	1	1	1	0	0	1	1	1	0	9
Mill Common	1	1	1	1	2	2	2	0	1	2	1	0	14
Multi-Storey (nr Sainsbury's)	2	2	2	1	2	1	2	0	2	2	0	0	16
Princes St	1	1	1	1	1	1	1	0	1	1	0	0	9
Riverside	1	1	1	1	1	1	1	0	0	1	1	0	9
Sainsbury's	2	2	2	1	2	1	2	1	1	2	0	0	16
St Germain St	2	2	1	1	1	1	1	0	0	1	0	1	11

Table 7 – Assessment of car parks in Huntingdon

4.4 RAMSEY CAR PARKS

Ramsey has one council operated car park, Mews Close, which provides a total of 60 spaces and accommodates both short-stay and long-stay users. With an overall score of 9, Mews Close performs at a solid mid-level standard, offering a reasonable balance of accessibility, safety, and functionality for a market town setting.

Mews Close benefits from a good central location within Ramsey, scoring well for proximity to key destinations and offering convenient access for visitors and residents. The car park also performs consistently across categories such as road markings, lighting, pedestrian access, and vehicular circulation, indicating that the fundamental layout and operational characteristics of the site are sound.

Safety features, while adequate, are limited by the absence of CCTV and more robust boundary treatments. Although lighting and natural surveillance help mitigate these issues, improvements to security infrastructure could strengthen user confidence and reduce the risk of antisocial behaviour.

The lack of EV charging provision represents a notable gap, particularly as charging demand is expected to increase across the district. Introducing even a small number of charging points would significantly improve the car park's future readiness and overall performance.

Despite these limitations, Mews Close remains a functional and valuable asset for Ramsey, providing reliable access to the town centre and supporting local businesses and services. With targeted enhancements, particularly in signage, security, and EV infrastructure, the car park could achieve a stronger performance and further contribute to the town's vitality.

Table 8 below provides a breakdown of scores for the Mews Close car park.

Car Park	Location	Safety, CCTV & Boundaries	Road Markings	Lighting	Pedestrian Access	Vehicular Access	Signage (Car Park)	Signage (To further destinations)	EV Charging	Overall Condition	24hr Facility	**Toilets**	Total Score
Mews Close	1	1	1	1	1	1	1	0	0	1	1	0	**9**

Table 8 – Assessment of car parks in Ramsey

4.5 ST IVES CAR PARKS

St Ives contains five council operated car parks that collectively provide a mix of short-stay and long-stay options serving the town centre, local businesses, leisure destinations, and residential catchments. Overall scores range from 11 to 13, indicating that St Ives has a generally strong and well-performing parking estate with no low-scoring outliers.

Darwoods Pond and Waitrose achieve the highest score of 13, although they serve quite different user groups. Darwoods Pond stands out due to its strong road marking quality, good overall condition, and well managed vehicular and pedestrian access. The car park is supported by clear internal circulation and adequate safety provisions, including reasonable natural surveillance. Its location also contributes positively to the score, offering convenient access to nearby residential and commercial areas. The presence of EV charging further enhances the car park's long-term resilience, distinguishing it from several others in St Ives.

Waitrose also scores 13, benefiting from its high quality condition, excellent markings, and strong lighting provision. The car park offers good connectivity to the supermarket and nearby town centre destinations, with consistent signage and a well maintained layout. However, as a short-stay facility with no EV charging and no toilet provision, its role is more limited compared to larger, multi-purpose car parks. Even so, its strong baseline quality makes it one of the most user friendly sites in the town.

Both Cattle Market (Long-Stay) and Cattle Market (Short-Stay) score 12, reflecting their well-rounded provision and strategic location near the centre of St Ives. These adjacent car parks benefit from:

- Good road marking condition;
- Strong access arrangements;
- Adequate lighting and pedestrian facilities;
- Consistent internal signage.

The key difference between the two is the availability of EV charging, which is only present in the short-stay section. Neither car park offers toilets, and directional signage beyond the car park is limited, but overall they remain reliable and well used assets serving a wide range of users.

Globe Place, with a score of 11, is the lowest rated among St Ives' car parks, though still performing at a respectable level. Its slightly reduced score reflects minor limitations in

several categories, including a poor exit arrangement that will be difficult to manoeuvre for larger vehicles, car park level signage, and onward pedestrian wayfinding. Nonetheless, Globe Place benefits from good overall condition, adequate lighting, and strong natural surveillance, making it a functional and convenient long-stay option. These factors ensure that, despite its position at the lower end of the St Ives scoring range, Globe Place remains a valuable facility.

St Ives has one of the strongest overall car-park portfolios in Huntingdonshire, with all facilities achieving scores of 11 or higher. The car parks collectively demonstrate good levels of maintenance, accessibility, and safety, with several offering EV charging, a feature not yet consistently available across the district. While opportunities exist to enhance signage, expand EV provision, and improve user facilities, the general condition of St Ives' car parks is strong, supporting the town's economic and visitor appeal.

Table 9 below provides a breakdown of scores for the St Ives car parks.

Car Park	Location	Safety, CCTV & Boundaries	Road Markings	Lighting	Pedestrian Access	Vehicular Access	Signage (Car Park)	Signage (To further destinations)	EV Charging	Overall Condition	24hr Facility	Toilets	Total Score
Cattle Market (Long-stay)	2	2	1	1	1	1	1	1	0	1	1	0	**12**
Cattle Market (Short-stay)	2	2	1	1	1	1	1	1	0	1	0	1	**12**
Darwoods Pond	1	2	2	1	1	1	1	0	1	2	1	0	**13**
Globe Place	1	1	1	1	2	0	1	0	1	1	1	1	**11**
Waitrose	2	2	2	1	1	1	1	**1**	0	2	0	0	**13**

Table 9 – Assessment of car parks in St Ives

4.6 ST NEOTS CAR PARKS

St Neots contains seven council operated car parks, offering a mix of short-stay and long-stay provision that supports the town centre, Riverside Park, surrounding neighbourhoods, and local retail destinations. The scores range from 9 to 14, indicating a generally strong parking estate with several high-performing sites and no car parks falling into the lowest scoring categories.

Two car parks achieve the highest score of 14, Riverside Park and Tebbutts Road. These sites stand out for their strong overall condition, good safety features, high-quality markings, and well-designed pedestrian routes.

Riverside Park benefits from its attractive riverside setting and strong infrastructure, including excellent pedestrian access, clear circulation routes, and good overall maintenance. Its EV charging provision enhances its long-term resilience and positions it as a future ready asset in St Neots. As a large capacity car park serving both leisure and town centre trips, its strong performance reflects its importance within the wider parking

network. However, the entrance arrangement could be improved with limited visibility entering the car park due to a ramp with vehicles exiting the car park only becoming visible almost upon impact, which increases the likelihood of collisions.

Tebbutts Road similarly performs well across all assessment categories. It offers strong vehicle access, good lighting, well-maintained surfacing, and clear signage. It also benefits from EV charging bays and 24-hour use, making it a versatile and reliable choice for longer stays. Its central location and robust infrastructure highlight its strategic value to the town.

Four car parks fall within the 10–12 point range, reflecting solid functionality and generally good standards:

- Tan Yard scores 12, offering a well-rounded provision with strong lighting, clear signage, and good pedestrian access. Its compact layout and location near key town centre amenities contribute to its strong performance.
- Priory Lane, with a score of 11, performs well across most categories, particularly in road markings and vehicular access. It offers reliable short-stay provision with good proximity to shops and services.
- Waitrose also scores 11, benefiting from strong lighting, a good standard of maintenance, and convenient links to both the supermarket and wider town centre. As with other supermarket-adjacent car parks in the district, it does not provide EV charging or toilet facilities, which affects its potential to perform at the highest level.
- Brook Street, with a score of 10, is a small but functional short-stay facility offering strong pedestrian connections, good EV charging provision, and a well-maintained environment. Its overall performance is primarily constrained by limited signage and its small capacity, which reduces its ability to accommodate higher levels of demand.

Priory Centre is the lowest scoring car park in St Neots, though still achieving a respectable 9, indicating no fundamental performance issues. The score reflects limitations in lighting, pedestrian access, and the absence of EV charging. Despite these weaknesses, the car park retains good strategic value due to its proximity to the town centre and its role in supporting both leisure and retail activities.

St Neots benefits from a varied and generally high-performing car park portfolio, with multiple strong sites achieving high scores and no locations scoring poorly. Car parks such as Riverside Park and Tebbutts Road set a high standard for infrastructure,

maintenance, and accessibility. Across the estate, opportunities for improvement primarily relate to increasing EV charging provision, enhancing wayfinding, and improving lighting in select locations.

Table 10 below provides a breakdown of scores for the St Neots car parks.

Car Park	Location	Safety, CCTV & Boundaries	Road Markings	Lighting	Pedestrian Access	Vehicular Access	Signage (Car Park)	Signage (To further destinations)	EV Charging	Overall Condition	24hr Facility	Toilets	Total Score

Table 10 – Assessment of car parks in St Neots

4.7 ONE LEISURE CAR PARKS

In addition to the wider portfolio of council operated off-street car parks, a number of car parks associated with One Leisure facilities have been reviewed as part of this assessment. Although these sites have not been formally scored using the same assessment framework, they play an important and distinct role in supporting the operational and commercial performance of the leisure centres and therefore warrant specific consideration.

Across the district, the One Leisure car parks are generally in good overall condition and are directly adjacent to their respective leisure centres, ensuring convenient and legible access for customers. This proximity significantly reduces walking distances and enhances accessibility for a wide range of users, including families, older people, and those with mobility impairments. Several sites, most notably St Ives One Leisure Indoor, benefit from high-quality pedestrian routes and clearly defined walkways, contributing to a safer environment for users moving between vehicles and the leisure facilities.

A particularly positive intervention has been delivered at St Ives One Leisure Indoor, where solar panels have been installed within the car park. This represents a strong and visible commitment by Huntingdonshire District Council to sustainability and carbon reduction, generating renewable energy on

site while also future proofing the asset. This approach aligns well with the Council's wider climate ambitions and demonstrates how parking infrastructure can contribute to environmental objectives alongside its operational role.

In general, vehicular access to the One Leisure car parks is straightforward, with sites well connected to the local highway network. The primary exception is Ramsey One Leisure, where access requires vehicles to travel through the Abbey College site. While this does not prevent access, it introduces additional complexity and may be less intuitive for first-time visitors. St Neots One Leisure similarly operates within a shared environment, with parking provision jointly used with Ernulf Academy. This shared arrangement is functional but may introduce peak-time pressures and competing demands between school and leisure centre users.

Wayfinding and directional signage to the One Leisure car parks is generally limited, both on the highway approach and within the sites themselves. This is not unexpected, as these car parks are intended primarily for leisure centre customers rather than general public parking. However, site observations suggest that this intended use is not always adhered to. In particular, Huntingdon One Leisure and St Ives One Leisure Indoor show evidence of wider non-leisure use, likely due to their convenient locations and unrestricted access. This has potential implications for customer availability and operational efficiency, especially during peak leisure periods.

5.0 PARKING SURVEYS

5.1 INTRODUCTION

To support the development of the car park strategy, Ethos undertook a programme of car park occupancy and demand surveys across a representative range of council owned car parks. These surveys are a key component of the evidence base, providing an understanding of how car parks are used throughout the day and enabling assessment of space turnover, duration of stay, and the balance between short-stay and long-stay parking. Observations were undertaken at regular intervals during weekdays and Saturdays, typically at 10:00, 12:00, 14:00 and 16:00, allowing consistent comparison across locations and time periods. The findings help determine whether existing car park designations align with observed demand and whether adjustments, such as rebalancing short- and long-stay provision or exploring alternative uses, may be appropriate.

The surveys were carried out over a four-week period to ensure that the results reflected a range of demand conditions rather than a single snapshot in time. This included a neutral term-time week in October, the October half-term week, the week immediately preceding Christmas, which was used to represent a higher-demand, peak trading period, and a neutral week in June. Capturing data across these contrasting periods provides a more robust and representative picture of parking behaviour, ensuring that the analysis accounts for both typical usage patterns and seasonal fluctuations in demand.

In line with the defined scope of the parking strategy, private, and workplace parking provision were excluded from the surveys. While these facilities influence wider traffic patterns, congestion, and air quality, they fall outside the direct control of the Council and therefore outside the remit of this assessment. The surveys focused on council operated car parks, where the Council has the ability to directly manage supply, designation, and charging structures. A small sample of on-street roads that have existing permit parking controls were also included to understand parking behaviours.

A key objective of the survey programme was to confirm that short-stay car parks located close to town centres, leisure facilities, and other major trip generators demonstrate higher levels of turnover, supporting economic activity. Huntingdonshire benefits from a clear distinction between short-stay and long-stay parking, either through separate car parks or defined areas within larger facilities. This is a notable strength of the current parking offer and, where supply is well aligned to demand, supports efficient operation.

5.2 CAR PARK OCCUPANCY SURVEYS

Occupancy surveys were undertaken across 30 council operated car parks in Huntingdonshire, as identified in Chapter 4 of this report. The surveys were carried out over a four-week programme designed to capture a representative range of demand conditions. This approach ensured that the results reflected both typical parking

behaviour and seasonal peaks, providing a robust and balanced evidence base. No significant anomalies were identified across the survey periods, and as a result no additional surveys were required.

Surveys were undertaken at four consistent points during the day, 10:00, 12:00, 14:00 and 16:00, to capture changes in demand and patterns of use throughout the day. This enabled an assessment of likely parking purpose, distinguishing between longer-stay users, such as commuters or town centre workers, and short-stay visitors. For example, vehicles recorded across all survey intervals are likely to represent long-stay demand, whereas vehicles present at only one time period are more indicative of short-stay or retail based visits.

The resulting occupancy data for each car park is presented in Tables 11–22, with weekday results averaged across each week to provide a consistent and representative position. The full data is provided in Appendix A. For the purposes of analysis, car park demand has been categorised into four occupancy bands:

- **60–74% occupancy:** These car parks have sufficient capacity, allowing visitors to find parking spaces quickly and easily.
- **75–84% occupancy:** While spaces are generally still available, these car parks appear busy, and visitors may take slightly longer to find a space.
- **85–94% occupancy:** These car parks are near full capacity, making it challenging to locate spaces. Available spaces may include priority bays, limiting options for standard parking, which can cause frustration for drivers.
- **94%+ occupancy:** At this level, finding a space is extremely difficult, particularly in larger car parks, and often impossible in smaller ones. Drivers may need to thoroughly search all running lanes to identify any available spaces.

Car parks frequently reaching or exceeding 85% occupancy may require intervention, such as expanding parking provision or adjusting parking charges to manage demand and reduce long-term parking. Conversely, car parks consistently operating below 60% occupancy can be considered underutilised, suggesting potential for alternative land use or the need for increased promotion to encourage greater usage.

5.3 NEUTRAL WEEK CAR PARK OCCUPANCY DATA

Table 13 – Car park occupancy data for neutral Sunday survey

The occupancy surveys undertaken across Huntingdonshire provide a comprehensive picture of how parking demand varies by location, time of day, and car park designation. When the weekday, Saturday, and Sunday datasets are considered together, a consistent pattern emerges. Parking pressure is concentrated in a small number of town centre car parks during peak daytime periods, while several larger or more peripheral sites operate with substantial spare capacity. The removal of parking charges on Sundays introduces a distinct shift in behaviour, particularly in long-stay and leisure oriented locations.

On weekdays, demand is closely aligned with retail, employment, and service-based activity, with peak pressures typically occurring between 10:00 and 12:00.

In Huntingdon, multiple car parks repeatedly reach high levels of occupancy during core daytime periods. Great Northern Street, Ingram Street, Mill Common, and Princes Street all record occupancies approaching or exceeding 85–90% at peak times, indicating sustained pressure rather than isolated spikes. These locations experience demand across successive survey points, particularly at 12:00, reinforcing their role as primary town centre destinations.

By contrast, the Multi-Storey (near Sainsbury's), despite its large capacity, operates with significantly lower occupancy during the same periods, highlighting a clear imbalance between where demand occurs and where capacity exists.

In St Neots, weekday pressure is most evident at Brook Street, Priory Centre, Priory Park, and Tebbutts Road, all of which show strong mid-day demand. Tebbutts Road, in particular, demonstrates sustained occupancy across multiple time periods, consistent with its role as the town's principal long-stay facility. Riverside Park, however, remains lightly used throughout the day, despite its size due to its location to the town centre, with demand likely focused on the adjacent play park, on-site café, and river walks.

In St Ives, demand is more distributed. Cattle Market Short-Stay, Globe Place, and Darwoods Pond all experience clear midday pressure, while the long-stay and leisure related car parks operate with greater headroom.

Godmanchester shows a more localised pattern, with Park Lane and Post Street reaching high occupancy during peak periods, while Bridge Place remains significantly underutilised. There appears to be no natural trip generators that will result in demand for the car park, and as the only car park in the town with charges in place, it's highly unlikely visitors will use the car park to then travel into Godmanchester centre.

Figure 9 presents the weekday peak occupancy across each of five towns with council owned car parks. For the purpose of this, the 12pm survey has been taken as the peak. This excludes car parks that are not town centre focused i.e. Hinchingbrooke Country Park, Riverside, and Bridge Place car parks.

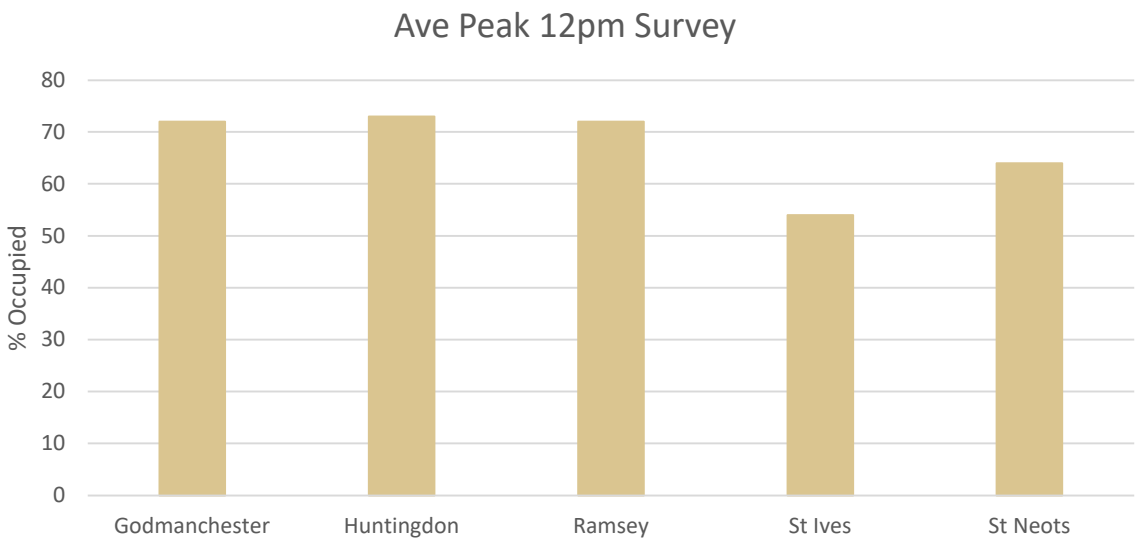

Figure 9 - Weekday peak occupancy by town (12:00 survey)

Saturday surveys show a broader spread of demand across towns, reflecting shopping, leisure, and visitor activity. Peak pressure again occurs around midday, but is generally more pronounced and more widespread than on weekdays.

In Huntingdon, Princes Street, Great Northern Street, St Germain Street, and Sainsbury's all reach very high occupancy during the middle of the day, with several car parks exceeding 90% occupancy. Unlike weekdays, demand is less clearly split between short-stay and long-stay locations, suggesting longer dwell times and reduced turnover.

In St Ives, Globe Place, Cattle Market Short-Stay, and Waitrose experience strong and sustained demand across multiple survey points, particularly at 12:00 and 14:00. The leisure related car parks also show a notable increase compared to weekdays, indicating a stronger recreational influence.

In St Neots, Priory Centre, Priory Park, Brook Street, and Waitrose all demonstrate high levels of demand during peak shopping hours, while Riverside Park again remains comparatively underused despite increased overall town activity.

Ramsey's Mews Close records consistently high occupancy across the day, indicating limited spare capacity on Saturdays and reinforcing its role as the town's primary parking asset. With no parking charges in place, this is likely to increase demand compared to other town centre car parks that have charges in place.

Figure 10 illustrates the car park profile across each of the five towns from the four Saturday surveys. Similarly to the above, this excludes the peripheral car parks and focuses more on the town centre car parks.

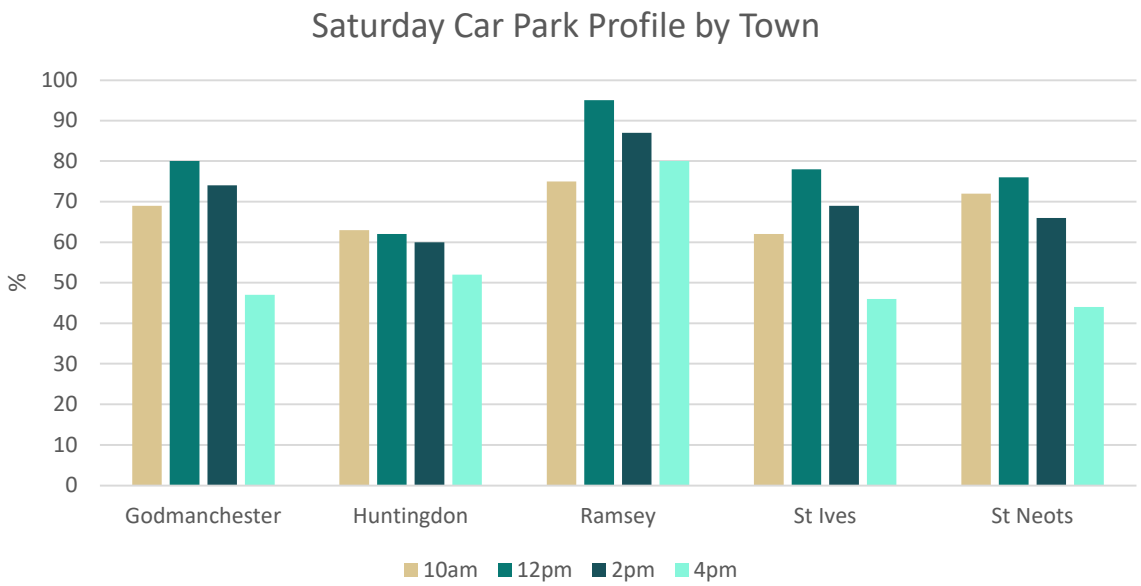

Figure 10 - Saturday occupancy profile by town

Figure 10 shows that parking demand is relatively consistent across the main towns, with broadly similar occupancy levels observed at key times of day, particularly during the late morning and early afternoon peak around 12:00. Ramsey stands out as having notably higher demand across all survey periods, which reflects the fact that the town is served by a single council operated car park that is free to use, concentrating demand into one location. In contrast, Huntingdon exhibits comparatively lower overall occupancy levels despite being a larger town, which can be attributed to the significantly greater supply of parking spaces spread across multiple car parks, diluting demand at any single site.

Godmanchester, St Ives, and St Neots sit between these two extremes, showing clear midday peaks followed by a gradual decline into the afternoon, indicating healthy but manageable levels of demand. Overall, the data suggests that differences in parking supply, rather than underlying town activity levels alone, play a key role in shaping observed demand patterns on Saturdays.

Sunday parking behaviour differs markedly due to the absence of parking charges and the removal of short-stay and long-stay distinctions. As a result, demand is driven primarily by leisure, recreation, and longer-duration visits, rather than turnover. Across the district, occupancy increases in several long-stay and peripheral car parks, while some prime short-stay locations remain busy but with less evidence of rapid turnover. For example:

- Hinchingbrooke Country Park, Riverside Park (St Neots), and other leisure oriented sites show significantly higher Sunday occupancy than on weekdays.
- In St Neots, Waitrose, Priory Park, and Tebbutts Road experience sustained high occupancy across the day, with less drop-off between survey periods.
- In St Ives, Globe Place and Darwoods Pond maintain strong demand throughout the day, while the outdoor One Leisure car park remains lightly used, indicating destination specific behaviour.

The absence of charging results in longer dwell times, meaning that even where overall occupancy is similar to Saturday levels, space turnover is reduced, which would have operational implications if such patterns occurred on charged days.

Figure 11 illustrates the comparison between occupancy demand at 12pm (peak) across the five towns between the weekday, Saturday, and Sunday surveys.

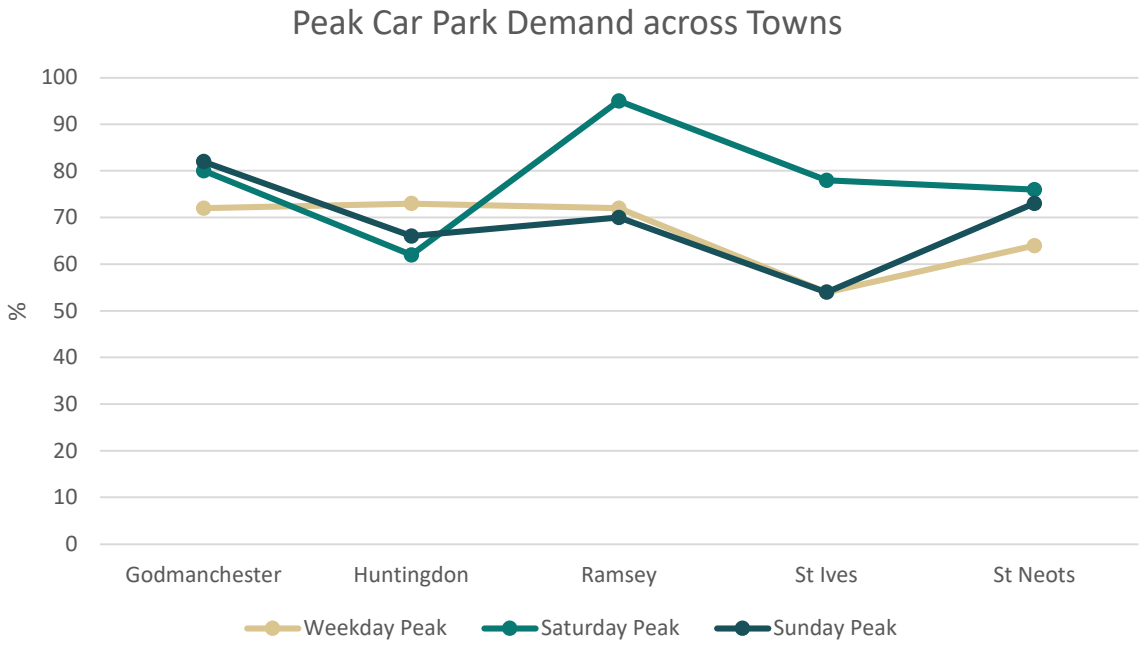

Figure 11 – Peak demand (12pm) across the three survey periods during a neutral week

At the 12:00 peak, the comparison across the three survey days indicates that there is no location where Sunday demand is clearly higher than Saturday demand, despite the absence of parking charges on Sundays. In Godmanchester, Huntingdon, and St Neots, peak occupancy levels on Saturdays and Sundays are broadly similar, suggesting that the removal of charges does not translate into a material uplift in peak parking demand. This reinforces the view that peak usage at the busiest time of day is driven more by the strength of local trip generators and parking supply than by pricing alone.

St Ives provides the clearest counterpoint to the assumption that free parking increases demand, with Saturday peak occupancy notably higher than Sunday peak occupancy, even though parking is free on Sundays. This pattern indicates that Saturday demand in St Ives is strongly linked to retail activity, markets, and leisure trips that are inherently higher on Saturdays, rather than being suppressed by parking charges. The lower Sunday peak suggests a different travel and activity profile, with fewer short, high-turnover trips into the town centre.

Ramsey again stands out, showing a much higher Saturday peak compared to both weekday and Sunday demand. While this could partially reflect charging arrangements elsewhere, it is more convincingly explained by the town's constrained parking supply, with demand concentrated into a single free car park. Importantly, this pattern is not replicated in Godmanchester, where the car parks included in the analysis are also free

but do not experience the same level of Saturday peak pressure, further indicating that parking charges are not the primary determinant.

5.4 OCTOBER HALF-TERM CAR PARK OCCUPANCY DATA

Table 16 – Car park occupancy data for October half-term Sunday survey

The October half-term occupancy surveys provide a useful contrast to the neutral week, capturing parking behaviour during a period of elevated leisure activity, school holidays, and more discretionary travel. When weekday, Saturday, and Sunday data are considered together, the overall spatial pattern of demand remains broadly consistent with the neutral week, but with notable intensification at leisure oriented and destination car parks, and greater persistence of demand across the day, particularly at weekends.

Rather than relying on average occupancy alone, this analysis focuses on peak occupancy levels, the consistency of demand across multiple survey periods, and the concentration of pressure at key times of day, which together provide a more accurate reflection of operational performance and user experience.

Weekday demand during the October half-term remains strongly aligned with retail, service, and town centre activity, but with less pronounced commuter dominance than during a neutral week. Peak pressure continues to occur between 10:00 and 12:00, although several car parks retain relatively high occupancy into the early afternoon.

In Huntingdon, town centre car parks again show sustained pressure. Great Northern Street, Ingram Street, Mill Common, and Sainsbury's all record high occupancy at 12:00, with Ingram Street and Mill Common again approaching or exceeding practical capacity thresholds. The persistence of demand across multiple survey points suggests these are structurally constrained locations rather than experiencing isolated peaks.

By contrast, the Multi-Storey (near Sainsbury's) continues to operate with significant spare capacity despite increased overall town activity, reinforcing the imbalance between where parking demand is concentrated and where capacity is available. Riverside and One Leisure remain lightly used, indicating limited change in weekday destination choice despite the school holiday period.

In St Neots, weekday half-term pressure is most evident at Tebbutts Road, Priory Centre, and Priory Park, all of which show strong midday occupancy. Tebbutts Road again stands out for its consistently high demand across the day, reflecting its role as the town's primary long-stay facility. Riverside Park remains lightly used relative to its size, despite increased leisure activity elsewhere in the town.

In St Ives, weekday half-term demand is more evenly distributed than in Huntingdon and St Neots. Globe Place and Cattle Market Short-Stay record clear midday pressure, while longer-stay sites such as Darwoods Pond show higher weekday occupancy than during the neutral week, reflecting school holiday activity.

In Godmanchester, Park Lane and Post Street again experience peak pressure at midday, while Bridge Place remains significantly underutilised. As in the neutral week, there is no evidence that Bridge Place benefits from increased half-term activity, reinforcing the view that location and trip generators, rather than seasonality alone, drive demand.

Figure 12 presents the weekday peak occupancy across each of five towns with council owned car parks. Again, this excludes car parks that are not town centre focused.

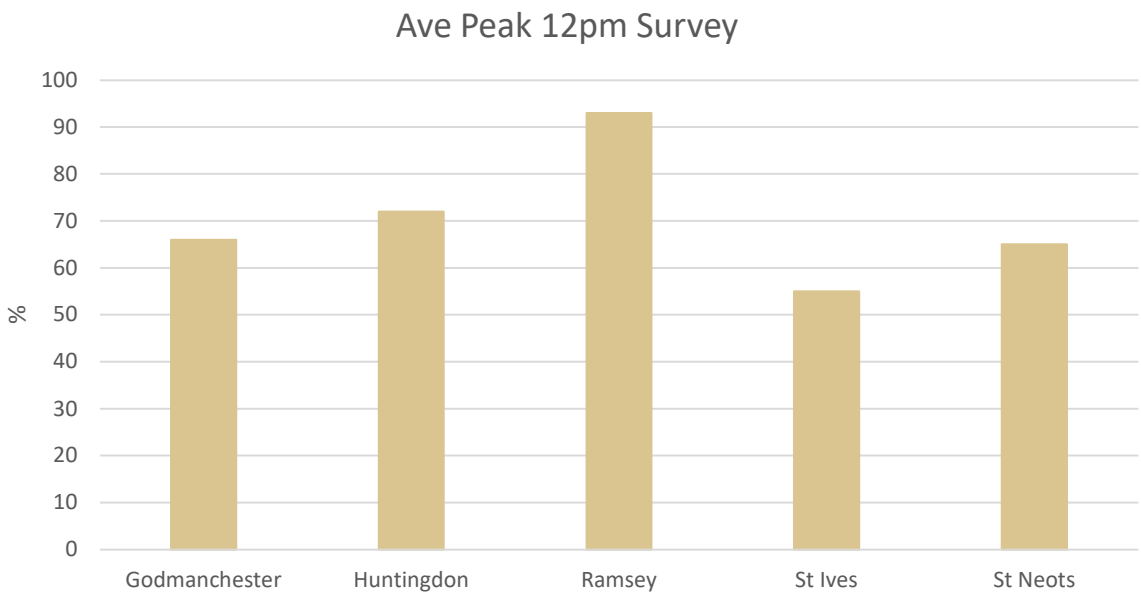

Figure 12 - Weekday peak occupancy by town (12:00 survey) Oct half-term

Saturday demand during the half-term week is more intense and more widespread than during the neutral week, with higher and more persistent peak occupancy across most towns. The late morning to early afternoon period (12:00–14:00) again represents the principal pressure point.

In Huntingdon, Sainsbury's, Great Northern Street, Mill Common, and Ingram Street all record very high midday occupancy, with several sites exceeding levels observed during the neutral week. Unlike weekdays, demand is less clearly differentiated between short-stay and long-stay designations, indicating longer dwell times and reduced turnover during peak shopping and leisure periods.

In St Ives, Saturday pressure is particularly pronounced. Globe Place and Cattle Market Short-Stay show sustained high occupancy across multiple time periods, with Darwoods Pond also experiencing stronger demand than during the neutral week. This pattern reflects the town's strong Saturday retail and leisure offer during school holidays.

In St Neots, Priory Centre, Priory Park, Tebbutts Road, and Waitrose again form the core pressure points, all recording high midday occupancy. While overall demand is higher than on weekdays, Riverside Park continues to absorb only a modest share of this activity, despite increased leisure trips across the town.

Ramsey again stands out. Mews Close records consistently high occupancy across the day, with limited spare capacity at peak times. As with the neutral week, this reflects the concentration of demand into a single council operated car park, rather than unusually high town wide activity, along with the car park not having parking charges in place.

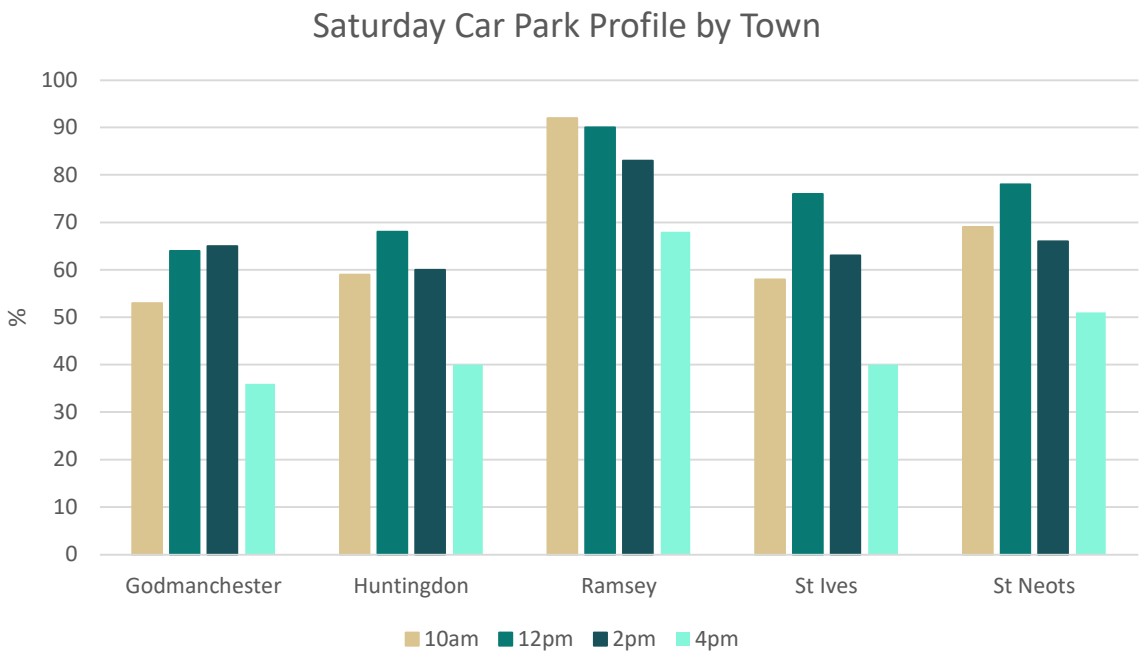

Figure 13 - Saturday occupancy profile by town Oct half-term

Figure 13 highlights clear differences in the relative intensity of parking demand between towns, rather than variations driven by time of day alone. Ramsey records the highest occupancy across all survey points, setting it apart from the other towns. Demand in Ramsey is notably higher throughout the day, reflecting the concentration of parking activity into a single council operated car park, which results in sustained pressure even outside the peak midday period.

St Neots and St Ives form a second tier of demand, with broadly similar profiles but distinct characteristics. St Neots generally operates at higher occupancy than St Ives, particularly in the late morning and at midday, indicating stronger overall demand across the town. St Ives, while still experiencing clear peaks, shows comparatively lower occupancy levels, suggesting greater spare capacity across its parking portfolio.

Huntingdon and Godmanchester sit at the lower end of the demand spectrum. Huntingdon consistently records lower occupancy than St Neots and Ramsey, which is reflective of its substantially larger supply of parking spaces spread across multiple car parks, diluting demand at any single location. Godmanchester exhibits a similar pattern, with occupancy levels closely aligned to Huntingdon despite its smaller scale, indicating more localised and less intensive parking demand.

Sunday parking behaviour during the half-term week continues to differ fundamentally from both weekdays and Saturdays due to the absence of parking charges and the removal of short-stay / long-stay distinctions. Demand is driven primarily by leisure, recreation, and longer-duration visits.

Across the district, occupancy increases in several leisure oriented and long-stay car parks, while prime short-stay town centre locations remain active but with less evidence of rapid turnover.

Key observations include:

- Hinchingbrooke Country Park, Riverside Park (St Neots), and other destination led sites show higher and more sustained Sunday occupancy than on weekdays.
- In St Neots, Waitrose and Tebbutts Road maintain high occupancy across the day, with less drop-off between survey periods, indicating longer dwell times.
- In St Ives, Globe Place and Darwoods Pond continue to attract steady demand, while the outdoor One Leisure car park remains lightly used, highlighting destination specific behaviour rather than a uniform uplift from free parking.

Importantly, while Sunday occupancy is often comparable to Saturday levels, there is no consistent evidence of Sunday peak demand exceeding Saturday peak demand across the towns, despite parking being free on Sundays.

Figure 14 illustrates the peak demand across the three surveys during the October half-term week.

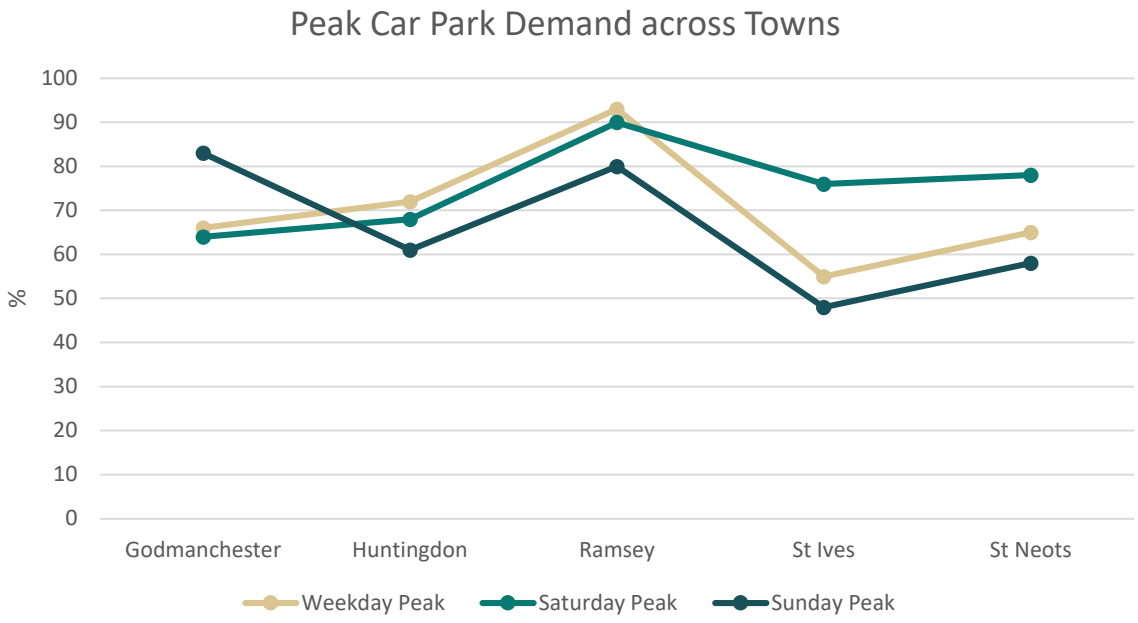

Figure 14 – Peak demand (12pm) across the three survey periods during Oct half-term

At the 12:00 peak during the October half-term survey period, the comparison across weekday, Saturday, and Sunday data again demonstrates that Sunday demand is not consistently higher than Saturday demand, despite the absence of parking charges on Sundays, with the exception of Godmanchester, although this only includes the free car parks. In Huntingdon, peak occupancy on Saturdays and Sundays remains broadly comparable, with only modest variation between the two days. This indicates that the removal of parking charges does not generate a material uplift in peak-time parking

demand and that usage at the busiest point of the day is more closely related to the availability of parking and the strength of local trip generators than to pricing alone.

St Neots, and St Ives once again, continues to provide a clear counter-example to the assumption that free parking drives higher demand. During the October half-term period, Saturday peak occupancy in both St Neots and St Ives is notably higher than Sunday peak occupancy. This reinforces the conclusion that Saturday demand is driven by retail, market, and leisure activity that is inherently stronger on Saturdays, rather than being constrained by parking charges. The lower Sunday peak reflects a different pattern of activity, characterised by fewer short, high-turnover trips into the town centre.

Ramsey again records a higher peak on Saturdays, as well as weekdays in comparison to Sundays. While this could be partially attributed to differences in charging regimes elsewhere, the more persuasive explanation remains the town's constrained parking supply, with demand concentrated into a single council operated car park. Importantly, this pattern is not replicated in Godmanchester, where the car parks included in the analysis are also free to use but do not experience the same level of Saturday peak pressure. This further supports the conclusion that parking supply and the concentration of demand, rather than charging policy alone, are the primary drivers of peak parking pressure across the district.

Table 19 – Car park occupancy data for pre-Christmas December Sunday survey

The pre-Christmas occupancy surveys capture parking behaviour during one of the most commercially intensive periods of the year, when town centre activity is driven by seasonal retail, leisure, and social trips rather than routine commuting. When compared

with both the neutral week and October half-term surveys, the pre-Christmas data shows a clear intensification of demand across town centre car parks, with higher peak occupancies, broader pressure across the day, and reduced availability at several key locations.

This analysis emphasises peak saturation, breadth of demand across time periods, and the extent to which high occupancy persists beyond the midday peak, all of which are more relevant to understanding operational stress and user experience during the Christmas trading period.

On weekdays, parking demand shows a marked uplift relative to earlier survey periods, particularly between 10:00 and 14:00, reflecting increased shopping, service use, and discretionary travel associated with Christmas activity. Unlike a neutral week, demand is less clearly segmented between short-stay and long-stay car parks, with several locations operating close to practical capacity across multiple survey points.

In Huntingdon, the pre-Christmas weekday surveys show sustained pressure across the core town centre car parks. Great Northern Street, Ingram Street, Mill Common, Princes Street and Sainsbury's all record very high occupancies at 12:00, with several exceeding 90% and remaining heavily occupied at 14:00. Notably, the Multi-Storey (near Sainsbury's) shows a significant increase in weekday usage compared to earlier surveys, indicating that overflow demand is beginning to utilise secondary capacity as prime locations fill earlier in the day. Riverside and One Leisure remain comparatively lightly used, suggesting that leisure activities do not see the same increase in usage as seen in more retail driven town centre car parks.

In St Neots, weekday demand intensifies most strongly at Tebbutts Road, Priory Centre, Priory Park and Brook Street, all of which show near-capacity conditions at midday. Tebbutts Road again demonstrates sustained high occupancy across the day, reinforcing its role as the town's primary long-stay facility during peak retail periods. Riverside Park continues to absorb a relatively small share of weekday demand despite increased overall activity, reflecting its leisure led function rather than town centre shopping use.

In St Ives, weekday pre-Christmas pressure is more pronounced than during half-term. Cattle Market Short-Stay, Globe Place and Waitrose all show strong midday saturation, while Darwoods Pond and One Leisure Indoor also experience noticeably higher weekday demand, reflecting an increase in leisure and family based trips associated with the festive period.

Godmanchester continues to display a polarised pattern. Park Lane and Post Street operate at or near capacity at midday, while Bridge Place remains consistently underutilised, even during the peak Christmas trading period. This reinforces the conclusion that seasonal uplift alone is insufficient to overcome locational disadvantage.

Figure 15 presents the weekday peak occupancy across each of five towns with council owned car parks. Again, this excludes car parks that are not town centre focused.

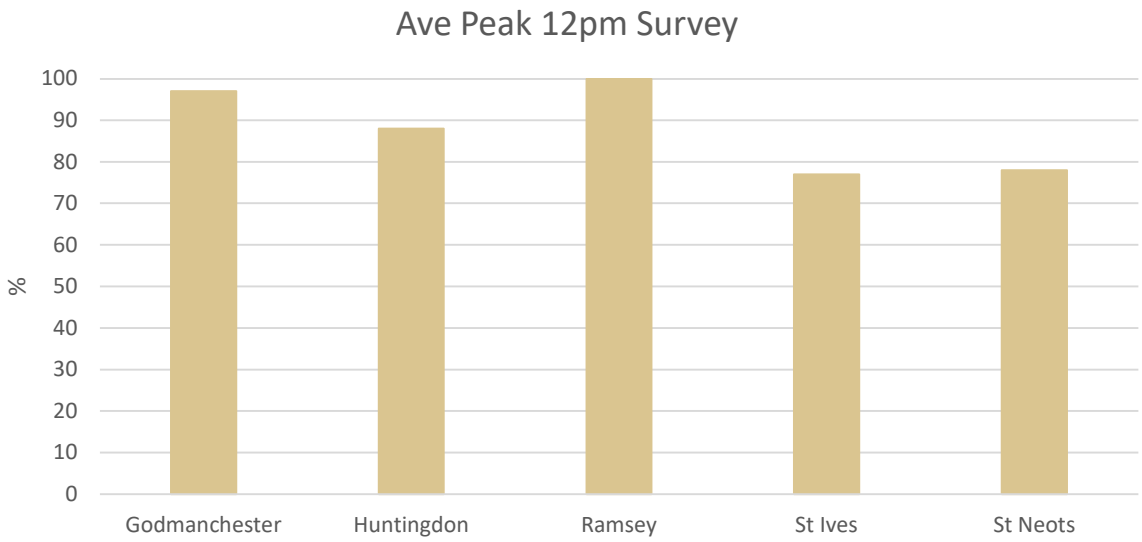

Figure 15 - Weekday peak occupancy by town (12:00 survey) pre-Christmas

The average peak occupancy profile highlights clear differences in how parking demand manifests across the towns. Huntingdon, despite having by far the largest overall parking supply, still operates at a very high level of occupancy at the weekday peak, indicating that demand at the busiest time of day is sufficient to place pressure on even a dispersed and extensive car park network. Godmanchester and Ramsey, by contrast, both reach near-full occupancy, indicating that demand quickly saturates available supply. While this may be influenced by the absence of parking charges, it also reflects the lack of alternative parking options within each town, meaning that even moderate levels of activity translate into high apparent pressure.

St Ives and St Neots display lower peak occupancy levels, with clear headroom remaining at midday, indicating that their parking portfolios are better able to accommodate weekday demand without routinely approaching capacity.

Saturday surveys during the pre-Christmas period represent the point of maximum system stress across the parking network. Demand is both higher and more persistent than in previous surveys, with limited availability even by mid-afternoon in several towns.

In Huntingdon, Sainsbury's, Princes Street, Ingram Street, Mill Common and Great Northern Street all operate at or close to capacity from 10:00 through to 14:00. The Multi-Storey again records significantly higher occupancy than in earlier survey periods. Unlike neutral weeks, the distinction between short-stay and long-stay function is less evident, suggesting longer dwell times and reduced turnover during Christmas shopping trips.

In St Neots, Saturday demand is particularly intense. Tebbutts Road, Priory Centre, Priory Park, Brook Street and Waitrose all reach very high midday occupancy, with several remaining heavily used at 14:00. This pattern reflects both strong retail draw and the concentration of parking demand into a relatively limited number of central car parks.

In St Ives, Saturday pressure is widespread and sustained. Globe Place and Cattle Market Short-Stay approach full capacity at midday, with Darwoods Pond and One Leisure Indoor also showing higher occupancy than in previous surveys. This reflects the town's strong Saturday retail and leisure offer during the Christmas period.

Ramsey again stands out. Mews Close operates at or near full capacity throughout the day, with virtually no spare capacity at peak times. The persistence of this pattern reinforces that demand pressure is driven primarily by constrained supply rather than seasonal uplift alone.

Figure 16 illustrates the car park profile across each of the five towns from the four Saturday surveys, again excluding the peripheral car parks.

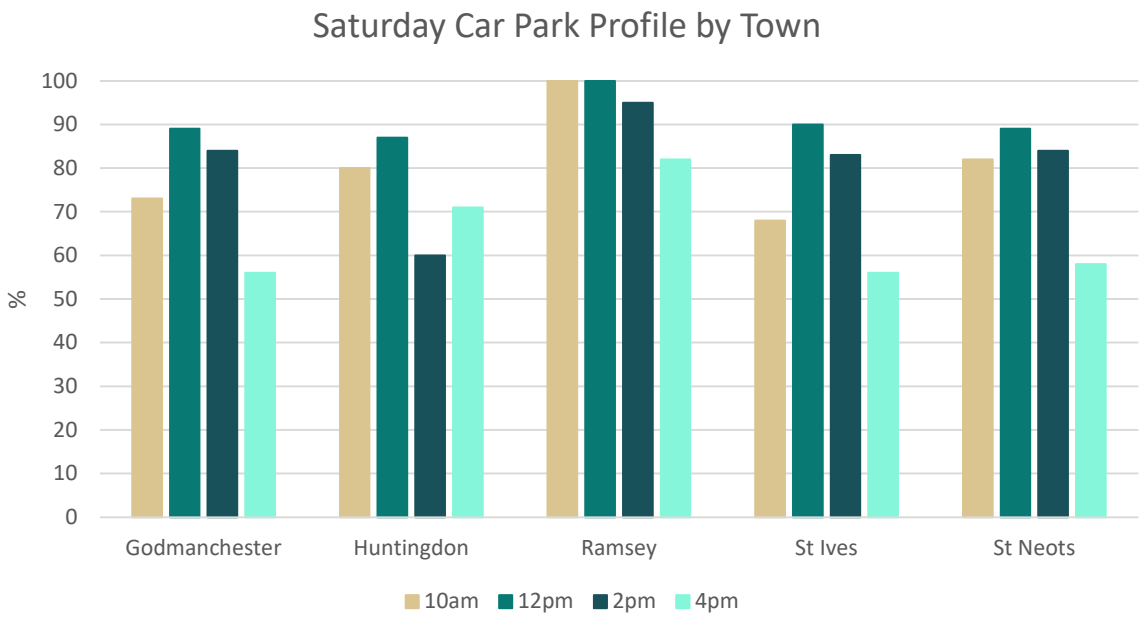

Figure 16 - Saturday occupancy profile by town pre-Christmas

Figure 16 reinforces the clear hierarchy in parking demand between towns, while also illustrating the intensification associated with peak seasonal activity. Ramsey again stands out as the most pressured location, reaching or approaching full occupancy across all survey periods and maintaining very high demand well beyond the midday peak. This reflects the structural constraint of having a single council-operated car park, meaning that increased Christmas trading activity translates directly into sustained saturation rather than being dispersed across multiple sites.

St Neots and St Ives continue to occupy an intermediate position, but with clearer divergence during the pre-Christmas period. St Neots consistently records higher occupancy than St Ives at all times of day, particularly at 12:00 and 14:00, indicating a stronger draw from Christmas shopping and town centre activity. St Ives also experiences a pronounced uplift compared to non-seasonal periods, but retains more spare capacity into the afternoon, suggesting that demand is spread across a wider range of car parks and destinations.

Huntingdon and Godmanchester again sit at the lower end of the spectrum in comparative terms, despite both showing elevated pre-Christmas demand. In Huntingdon, occupancy rises sharply at midday but drops more noticeably by late afternoon, reflecting the town's larger and more dispersed parking supply, which continues to absorb peak activity without creating uniform pressure across all sites. Godmanchester follows a similar pattern, with clear midday peaks but a faster fall-off later in the day, indicating more localised and time-limited demand rather than sustained saturation.

Sunday parking behaviour during the pre-Christmas period continues to differ fundamentally from both weekdays and Saturdays. Although parking is free, Sunday demand does not exceed Saturday peak levels in any town.

Across the district, virtually all car parks experience higher demand during this peak period survey compared to the Sunday surveys carried out during the neutral week and half-term week. This suggests that there is a heavy retail focus even on Sundays.

Key observations include:

- Hinchingbrooke Country Park, Riverside Park (St Neots) and other leisure oriented sites show strong and sustained Sunday use.
- In St Neots, Waitrose and Tebbutts Road maintain high occupancy across the day, with relatively limited drop-off between survey points, indicating longer dwell times.
- In St Ives, Globe Place and Darwoods Pond continue to attract steady demand, but Saturday peak occupancy remains materially higher than Sunday, despite Sunday being free.

Figure 17 illustrates the peak demand across the three surveys during the pre-Christmas December week.

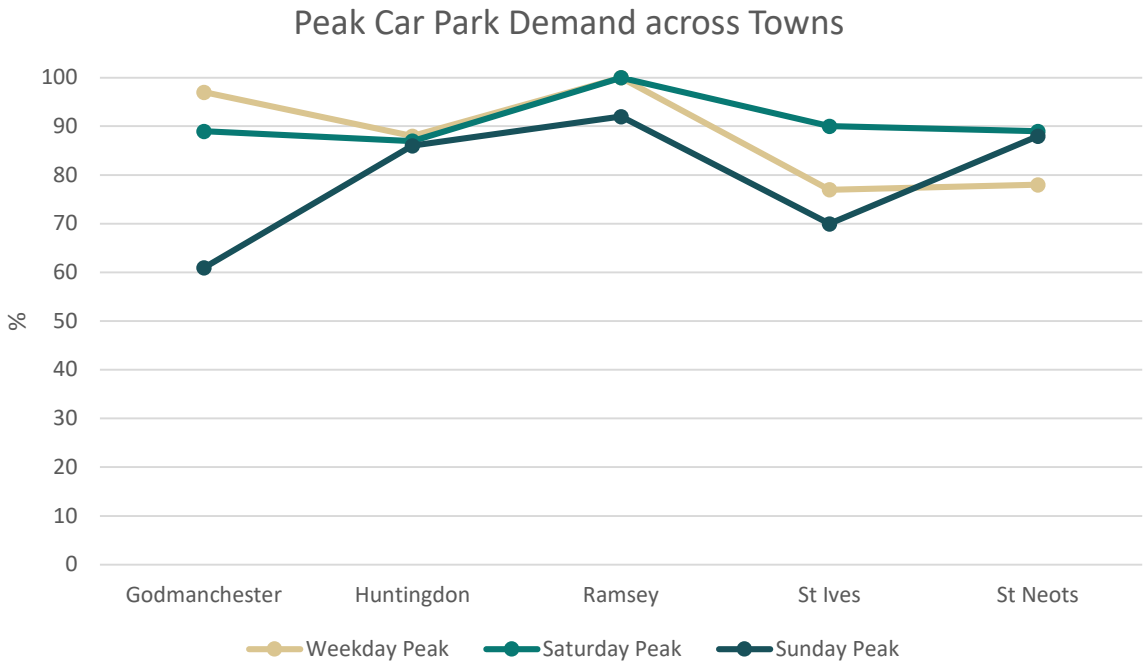

Figure 17 – Peak demand (12pm) across the three survey periods during the pre-Christmas week

Figure 17 shows that Sunday peak occupancy does not exceed Saturday levels in any of the towns, despite parking being free on Sundays. This reinforces the consistent finding that the presence or absence of parking charges is not, in itself, the primary driver of peak-time demand during the busiest part of the day.

Across Godmanchester, Huntingdon, Ramsey, and St Ives, Saturday remains the clear peak period, reflecting the dominance of Christmas shopping, leisure, and visitor activity. In these locations, Sunday demand either falls below or broadly aligns with weekday levels, indicating a shift toward longer-stay, leisure-led trips rather than the high-turnover town centre activity seen on Saturdays. In Huntingdon in particular, weekday, Saturday, and Sunday peaks are relatively tightly clustered, suggesting that overall capacity and the distribution of parking supply play a greater role in shaping peak occupancy than pricing policy.

St Neots is the only town where Sunday peak demand exceeds weekday demand, although it still remains below the Saturday peak. This pattern suggests that free parking may support a modest uplift in leisure led Sunday visits in St Neots, but it does not generate demand beyond that already created by Saturday trading and activity. Importantly, this reinforces the conclusion that parking charges are a secondary influence when compared with the underlying strength and diversity of a town's offer.

Table 22 – Car park occupancy data the June 2026 Sunday survey

Across the district, average weekday occupancy increases from 46% at 10:00 to a peak of 49% at 12:00, before falling to 43% at 14:00 and 38% at 16:00. This pattern reflects the

influence of employment, shopping, appointments and other town centre activity, with the greatest pressure generally occurring during the late morning and lunchtime period.

In Huntingdon, demand is strongly concentrated within the most conveniently located town centre car parks. Great Northern Street records occupancy of between 80% and 92% throughout the day, while Princes Street reaches 94% at 10:00 and remains above 80% at 12:00. Mill Common also operates at between 81% and 87% until the early afternoon, and Sainsbury's reaches 80% at 12:00. These results demonstrate sustained pressure across several central facilities rather than isolated short-duration peaks.

Ingram Street records a consistent occupancy of between 75% and 77% throughout the day. Although this remains below the practical capacity threshold, the limited variation between survey periods indicates that spaces are occupied for relatively long periods and that spare capacity is consistently restricted.

By contrast, the Multi-Storey near Sainsbury's has substantial spare capacity, with occupancy ranging from 17% to 28%. Riverside is similarly underused, operating at only 17% to 20%. This demonstrates a pronounced imbalance between demand at the most popular surface car parks and the capacity available elsewhere within Huntingdon. One Leisure is moderately used earlier in the day but falls from 59% at 10:00 to 42% at 16:00.

In St Neots, the highest weekday pressure occurs at Priory Centre, which reaches 94% at both 10:00 and 12:00 and remains at 84% at 14:00. Tebbutts Road also experiences sustained demand, reaching 72% at midday and remaining above 55% throughout the day. As the principal long-stay facility serving the town centre, its occupancy pattern is consistent with employee and longer duration parking.

Other St Neots car parks retain more capacity. Riverside Park averages only 18% across the day despite providing 276 spaces, while Priory Park averages 35%. Priory Lane and Tan Yard experience moderate demand but generally remain below practical capacity. The evidence therefore indicates that pressure in St Neots is concentrated at Priory Centre and Tebbutts Road rather than reflecting an overall shortage of parking across the town.

In St Ives, weekday demand is more evenly distributed. Darwoods Pond records occupancy of between 52% and 65%, while Globe Place reaches 60% at midday. Cattle Market Short-Stay peaks at 59% and Cattle Market Long-Stay at 47%, indicating that both retain usable capacity during the neutral weekday period. One Leisure Outdoor is particularly underused, averaging approximately 10%, while the indoor facility records a higher but declining profile across the day.

In Godmanchester, Park Lane and Post Street operate under significant pressure. Park Lane reaches between 76% and 88%, while Post Street records between 74% and 81%. Bridge Place, despite providing 257 spaces, averages only 7% occupancy. The contrast demonstrates that proximity to destinations and customer preference have a substantially greater influence on usage than the overall quantity of parking available.

In Ramsey, Mews Close is consistently heavily occupied, ranging from 88% to 95% and averaging 92% across the day. This indicates that the car park is operating at or close to practical capacity for much of the weekday. One Leisure experiences substantially lower demand, averaging 55%.

Figure 18 presents the weekday peak occupancy across each of five towns with council owned car parks. Again, this excludes car parks that are not town centre focused.

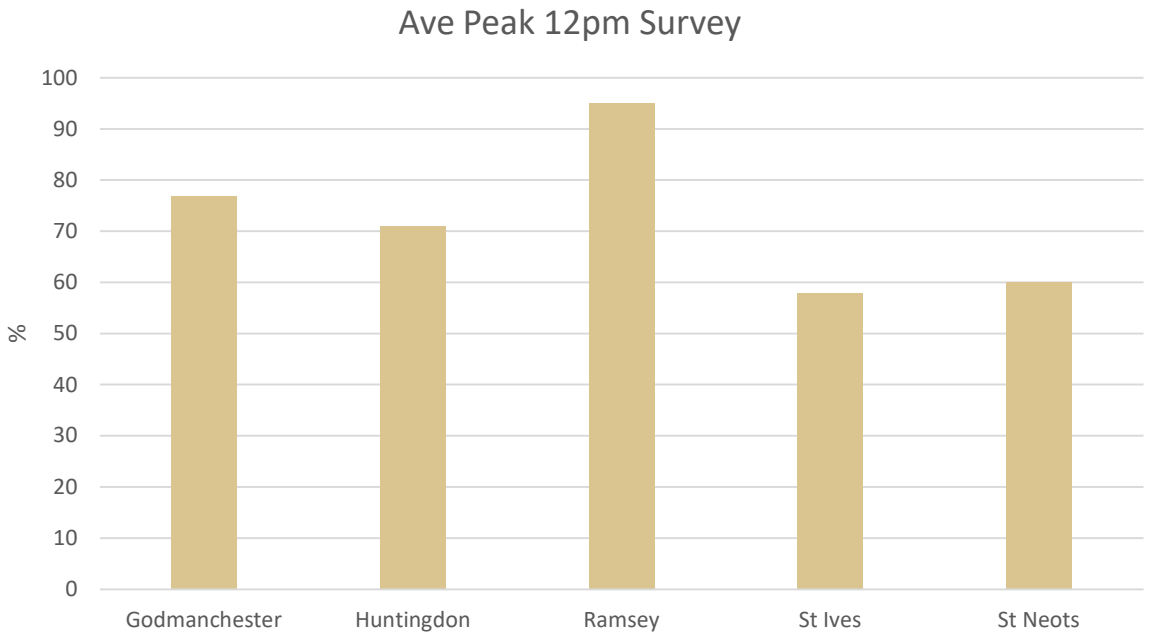

Figure 18 - Weekday peak occupancy by town (12:00 survey) June 2026

The June 2026 surveys highlight clear differences in parking demand across Huntingdonshire. At the average weekday 12:00 peak, Ramsey records the highest occupancy at around 95%, followed by Godmanchester at approximately 77% and Huntingdon at around 71%. St Neots and St Ives record lower peak levels of around 60% and 58% respectively, indicating greater overall headroom.

Ramsey is the most constrained location, with Mews Close operating at or close to practical capacity throughout much of the day. In Godmanchester, Park Lane and Post Street experience high occupancy, while Bridge Place remains significantly underused. This indicates that pressure is driven more by location and convenience than by an overall shortage of spaces.

Huntingdon shows a similar imbalance. Great Northern Street, Mill Common, Princes Street and Sainsbury's all experience strong weekday demand, while the Multi-Storey and Riverside retain substantial spare capacity. This suggests that the principal issue is the distribution of demand across the town rather than insufficient overall provision.

St Ives and St Neots generally have greater capacity to absorb weekday demand, although individual sites such as Priory Centre and Tebbutts Road in St Neots experience localised pressure.

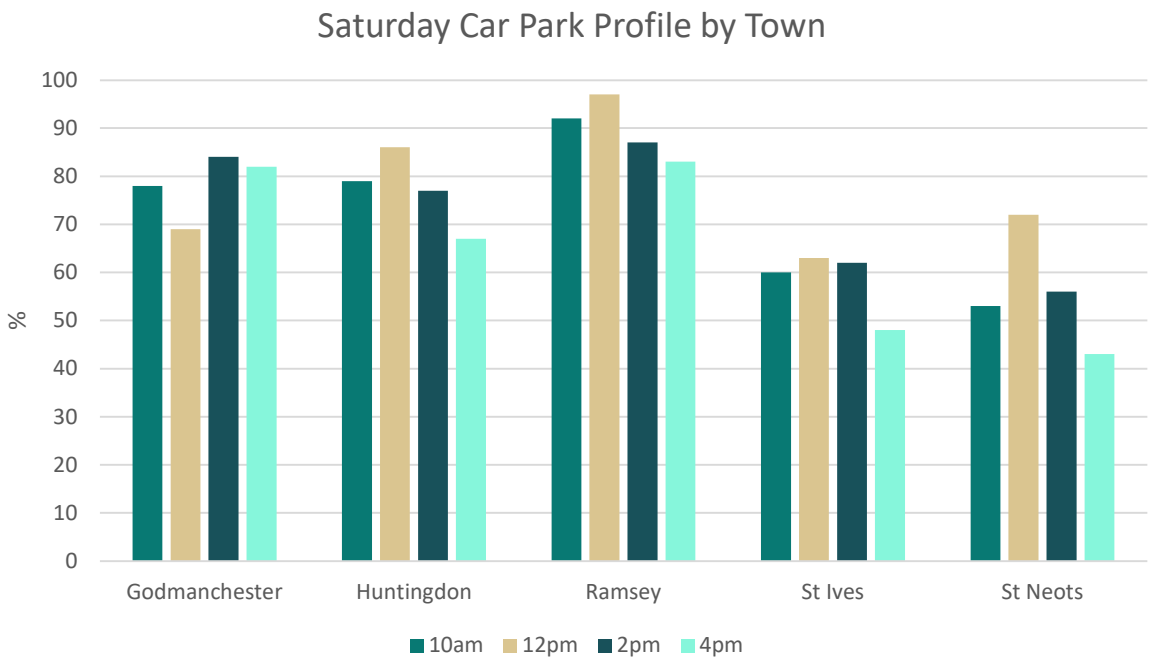

Figure 19 - Saturday occupancy profile by town June 2026

Figure 19 highlights the differences in Saturday parking demand across Huntingdonshire's towns and demonstrates how leisure, retail and visitor activity influence occupancy throughout the day. Ramsey again records the highest overall demand, remaining close to practical capacity across all four survey periods and peaking at approximately 97% at midday. This reflects the limited parking provision available within the town, where increased weekend activity cannot be readily absorbed by alternative facilities.

Huntingdon records the second highest level of Saturday demand, with occupancy rising from around 80% at 10:00 to approximately 87% at midday before gradually declining during the afternoon. Despite this relatively high overall occupancy, the town's larger parking portfolio continues to accommodate demand, although pressure remains concentrated within the most centrally located car parks rather than being evenly distributed across the network.

Godmanchester experiences a similar pattern, with occupancy increasing steadily to around 84% during the early afternoon before easing later in the day. The results again demonstrate that demand is focused on the town's smaller centrally located car parks.

St Neots and St Ives record lower overall Saturday occupancy, peaking at around 72% and 63% respectively. Both towns retain capacity across much of the day, although individual car parks experience considerably higher demand than the town wide averages suggest. This reinforces the conclusion that parking pressure across Huntingdonshire is generally driven by the popularity of specific locations rather than an overall shortage of parking provision.

Sunday parking demand presents a different pattern to both weekdays and Saturdays. Although overall occupancy is lower than the Saturday peak, several town centre and retail car parks continue to experience relatively high levels of use, reflecting the importance of shopping, leisure and visitor trips at weekends. Ramsey again records the highest overall demand, with Mews Close remaining close to practical capacity throughout the day, reinforcing that parking pressure is driven by constrained supply rather than weekday commuter activity.

Elsewhere, Huntingdon continues to experience strong demand at Princes Street, Sainsbury's and St Germain Street, while the Multi-Storey records substantially higher occupancy than on a typical weekday, demonstrating greater utilisation of available capacity during the weekend.

In St Neots, Waitrose and Priory Centre remain the busiest facilities, whereas Riverside Park continues to operate with considerable spare capacity. St Ives experiences a more balanced demand profile, with Globe Place attracting the highest occupancy but sufficient capacity remaining across the wider parking network. Overall, the Sunday surveys reinforce the wider findings that parking demand is concentrated within a relatively small number of popular, centrally located car parks, while several larger or more peripheral facilities continue to provide significant unused capacity.

Figure 20 illustrates the peak demand across the weekday, Saturday, and Sunday surveys during the June 2026 week.

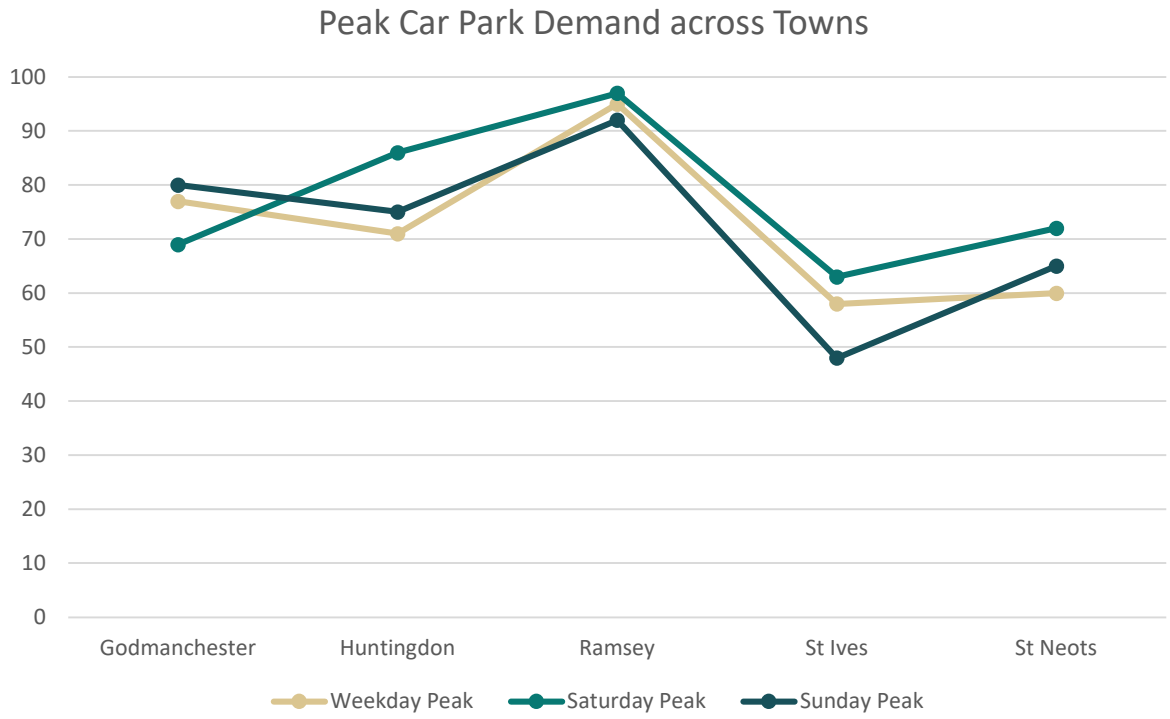

Figure 20 – Peak demand across the three survey periods during the June 2026 week

Figure 20 demonstrates that Saturday represents the peak period of parking demand across all five towns, with Sunday occupancy generally falling below Saturday levels

despite parking being free. This indicates that the intensity of retail, leisure and visitor activity has a greater influence on parking demand than pricing alone, with the busiest periods continuing to coincide with Saturday trading.

Ramsey again records the highest overall occupancy on Sunday, remaining close to practical capacity throughout the day and highlighting the limited flexibility within its parking provision. Huntingdon also maintains relatively high Sunday demand, although occupancy remains below Saturday levels, reflecting the town's diverse mix of retail, leisure and visitor destinations.

Godmanchester follows a similar pattern, with Sunday demand broadly comparable with the weekday peak but lower than Saturday, whilst St Ives records the lowest overall Sunday occupancy, demonstrating that sufficient capacity remains available across much of the town.

St Neots is the only town where average Sunday peak occupancy slightly exceeds the average weekday peak, although it remains below Saturday demand. This suggests that Sunday shopping and leisure activity generates additional demand compared with a typical weekday but does not exceed the levels experienced during the busiest weekend trading period.

5.6 COMPARISON ACROSS THE THREE SURVEY PERIODS

Alongside the district wide assessment, a town level analysis has been undertaken to examine how parking demand varies within each settlement across the survey programme. This approach provides a clearer understanding of local demand patterns and how they change between the neutral week surveys undertaken in June, the October half-term period, and the pre-Christmas period.

The figures below present a comparative overview of parking demand across all Council operated car parks within each town, drawing on averaged data from the weekday, Saturday and Sunday surveys for each survey period. This provides a balanced representation of typical parking demand while smoothing short-term fluctuations associated with individual days and enabling meaningful comparisons between survey periods.

For transparency and completeness, separate graphs showing the weekday, Saturday and Sunday demand profiles for each town are provided in Appendix B. These allow more detailed interrogation of day-specific parking behaviour where required, whilst the main report focuses on the wider trends, seasonal variation and comparative performance across Huntingdonshire.

Godmanchester car parks

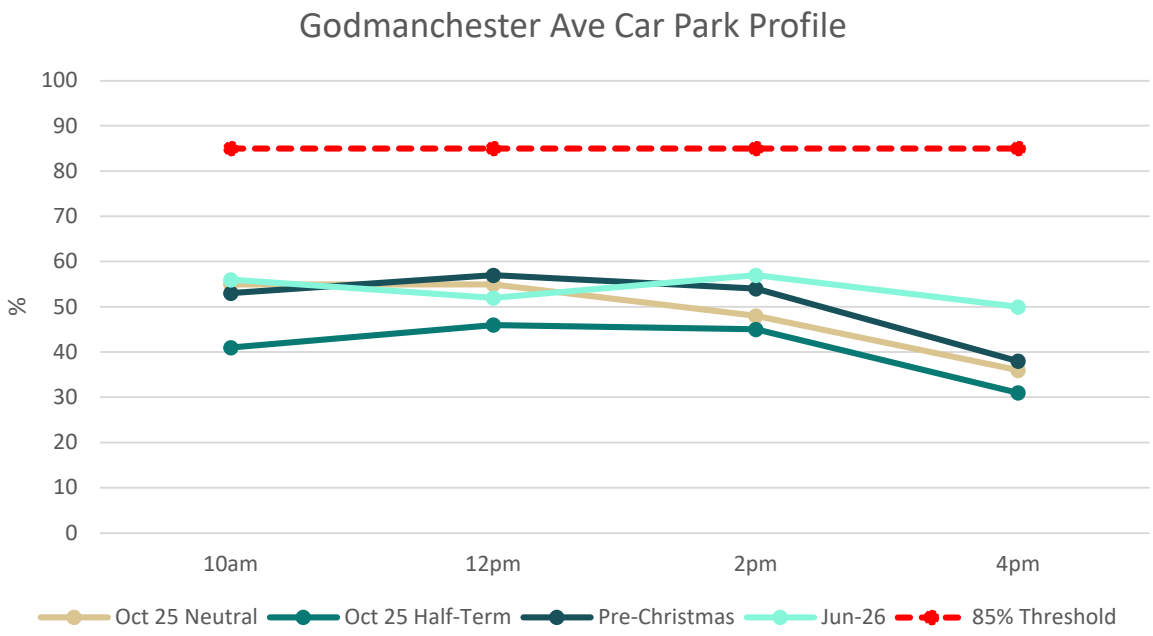

Figure 21 – Godmanchester average car park profile across the four survey periods

The averaged car park profile for Godmanchester demonstrates consistently low levels of parking pressure across all four survey periods, with demand at no point approaching the 85% occupancy threshold at which drivers typically begin to experience difficulty in finding a space. Across the June 2026 neutral week, October neutral week, October half-term and pre-Christmas surveys, demand remains relatively stable throughout the day, generally peaking between 12:00 and 14:00 before declining during the afternoon.

The overall averages are, however, heavily influenced by Bridge Place, which accounts for approximately 82% of the total parking supply in Godmanchester and consistently operates at very low occupancy, typically recording single-digit utilisation throughout the day. This significantly suppresses the town wide averages and masks the much higher levels of demand observed at the smaller town centre car parks, particularly Park Lane and Post Street. It should be noted that Bridge Place car park is now closed.

Comparison of the four survey periods demonstrates a remarkably consistent pattern of parking demand. The June 2026 surveys record marginally higher occupancy during the early afternoon than the October neutral week, whilst the pre-Christmas surveys show the greatest uplift around midday, reflecting increased seasonal activity. Despite these variations, the overall profile changes very little throughout the year, with the town continuing to operate comfortably within its overall parking capacity.

This reinforces the conclusion that the principal issue in Godmanchester is not the overall quantity of parking available, but the uneven distribution of demand between the centrally located free car parks and the underutilised Bridge Place car park.

Huntingdon car parks

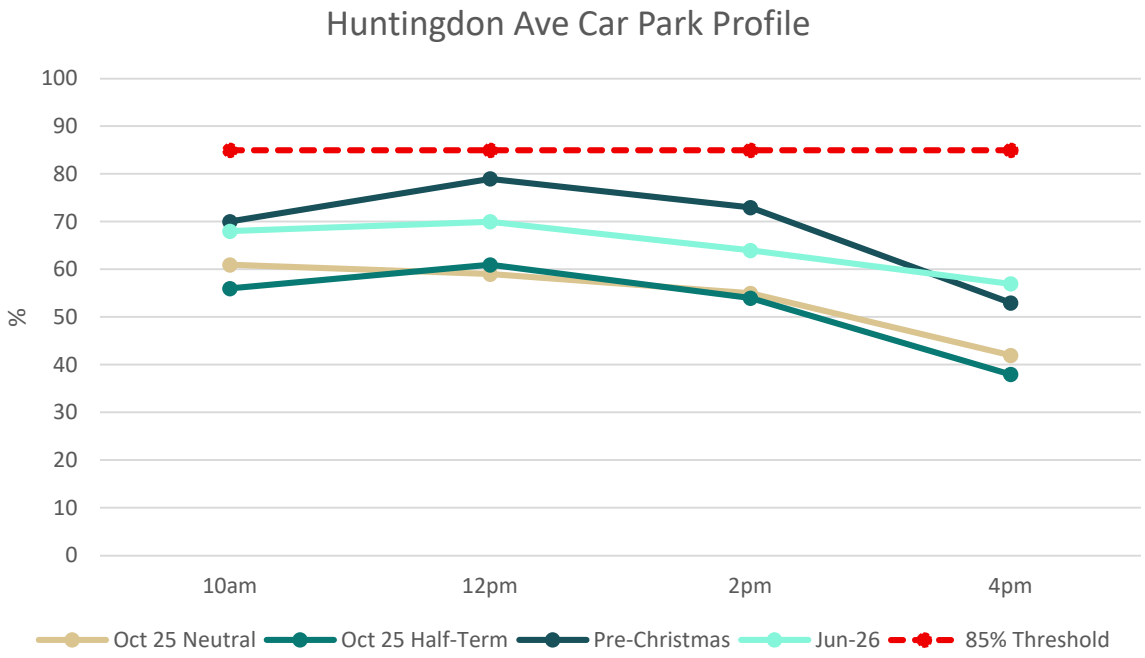

Figure 22 – Huntingdon average car park profile across the four survey periods

The averaged car park profile for Huntingdon shows a more varied demand pattern than Godmanchester, reflecting the town's role as the district's principal centre and its substantially larger parking supply. Across the June 2026 neutral week, October neutral week and October half-term surveys, average occupancy remains comfortably below the 85% threshold throughout the day, with demand generally peaking around midday before declining during the afternoon. The pre-Christmas surveys continue to record the highest levels of demand, particularly at 12:00, reflecting the additional pressures associated with seasonal shopping and visitor activity.

Huntingdon accommodates approximately 38% of the total Council operated parking spaces across the district, and this extensive supply plays a key role in moderating overall occupancy levels. Demand is spread across a large number of car parks, which reduces average town wide occupancy, even though several centrally located car parks regularly experience much higher utilisation than the overall profile suggests.

The inclusion of car parks that do not primarily serve the town centre, most notably Riverside and Hinchingbrooke Country Park, also suppresses the average profile. These sites typically operate at relatively low occupancy during the survey periods considered, yet are known to experience significantly higher demand during the summer months and periods of good weather, particularly Riverside, which functions primarily as a leisure and visitor destination rather than a traditional town centre car park.

Comparison of the four survey periods demonstrates a consistent pattern of demand, with occupancy increasing towards midday before reducing during the afternoon. The June 2026 surveys record stronger average demand than both the October neutral week

and October half-term throughout much of the day, although they remain below the pre-Christmas profile.

Despite the seasonal uplift observed before Christmas, the town wide average never reaches the 85% occupancy threshold, indicating that Huntingdon retains overall capacity to accommodate demand. This reinforces the conclusion that the principal challenge is not the overall quantity of parking available, but the uneven distribution of demand between the most popular town centre car parks and those with substantial spare capacity elsewhere in the parking network.

Ramsey car parks

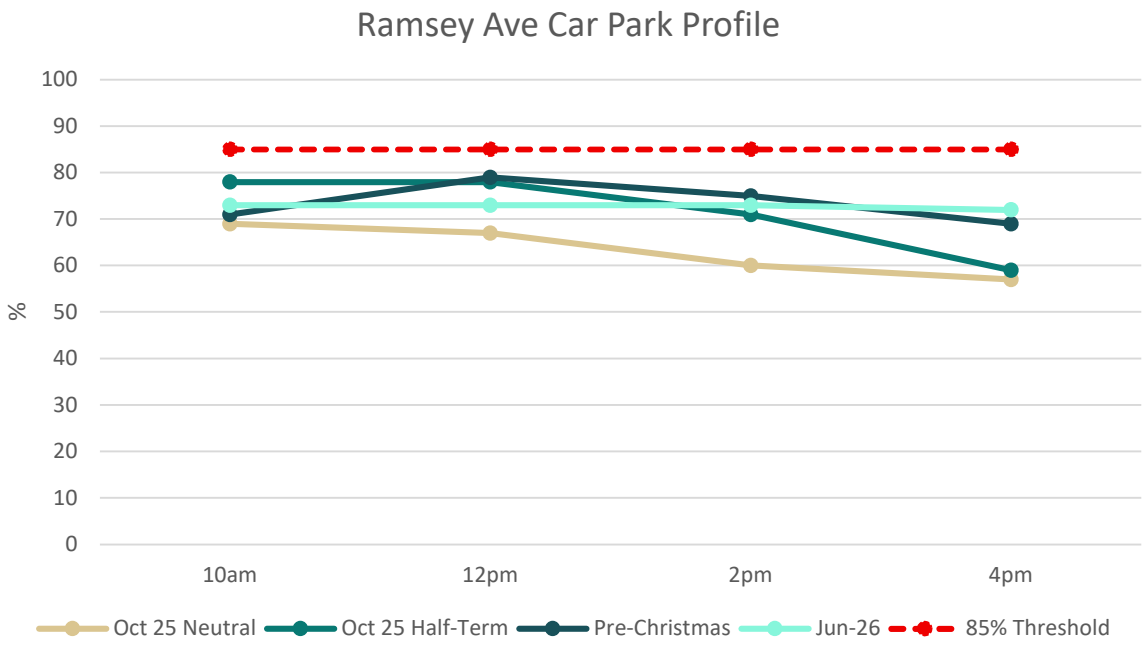

Figure 23 – Ramsey average car park profile across the four survey periods

The averaged car park profile for Ramsey highlights a fundamentally different demand pattern to the larger towns within Huntingdonshire, driven primarily by the very limited supply of off-street parking serving the town centre. Across all four survey periods, demand remains consistently high throughout the day, with average occupancy typically ranging between 70% and 80%. Although the June 2026 surveys record the highest neutral week profile, the half-term and pre-Christmas surveys continue to demonstrate that relatively modest increases in town centre activity quickly translate into higher levels of parking demand.

The presence of the One Leisure car park plays a critical role in moderating the overall average profile. Its inclusion provides additional capacity that keeps the town wide average below the 85% operational threshold. However, this masks the much higher levels of utilisation experienced at Mews Close, the town's principal parking facility. When considered in isolation, Mews Close regularly operates at or above the practical capacity threshold throughout the survey programme, indicating that parking demand is

constrained by the limited supply of centrally located spaces rather than short-term peaks in activity.

Comparison of the four survey periods demonstrates relatively little variation compared with the other towns across the district. Whilst the pre-Christmas surveys record the strongest midday demand and the October neutral week the lowest, the overall profile remains remarkably consistent throughout the year. This suggests that parking demand in Ramsey is less influenced by seasonality than by the limited availability of off-street parking serving the town centre.

Taken together, the surveys indicate that Ramsey operates with very limited resilience within its town centre parking offer. Although the inclusion of One Leisure provides some additional capacity, the continued pressure experienced at Mews Close suggests that any future growth in demand is likely to increase parking pressure unless opportunities are identified to improve the distribution of parking or expand provision closer to the town centre.

St Ives car parks

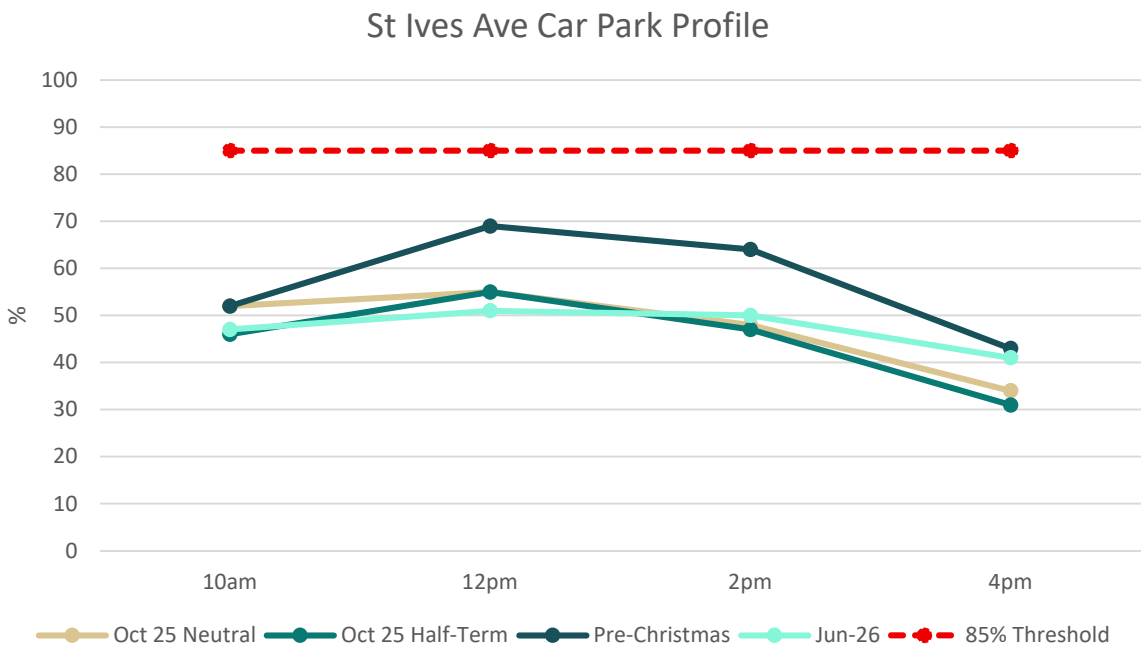

Figure 24 – St Ives average car park profile across the four survey periods

The averaged car park profile for St Ives indicates a comparatively balanced parking position, with sufficient capacity across the town when all Council operated car parks are considered together. The June 2026 neutral week, October neutral week and October half-term surveys all display a very similar demand profile, with occupancy increasing towards midday before declining steadily through the afternoon. This consistency suggests that both typical weekday activity and school holiday periods place comparable levels of pressure on the town's parking provision.

The pre-Christmas surveys record a noticeable uplift in demand, particularly between 12:00 and 14:00, reflecting increased retail and visitor activity associated with the festive period. Even so, the town wide average remains comfortably below the 85% occupancy threshold throughout the day, indicating that St Ives retains sufficient overall capacity to accommodate seasonal demand.

It is important to recognise that these averages are influenced by the presence of the two One Leisure car parks, particularly One Leisure Outdoor, which records consistently low levels of occupancy and therefore suppresses the overall town profile. As a result, the averaged figures understate the pressure experienced at the principal town centre car parks. During the pre-Christmas surveys, and particularly on Saturdays, Globe Place, Cattle Market Short-Stay and Waitrose all experience considerably higher levels of demand than the town wide average would suggest.

Overall, the surveys demonstrate that St Ives benefits from a well distributed parking portfolio with sufficient overall capacity throughout the year. However, seasonal increases in demand continue to be focused on a relatively small number of centrally located car parks, reinforcing the need to manage demand at an individual site level through appropriate parking management, signage and customer information rather than increasing parking provision across the town as a whole.

St Neots car parks

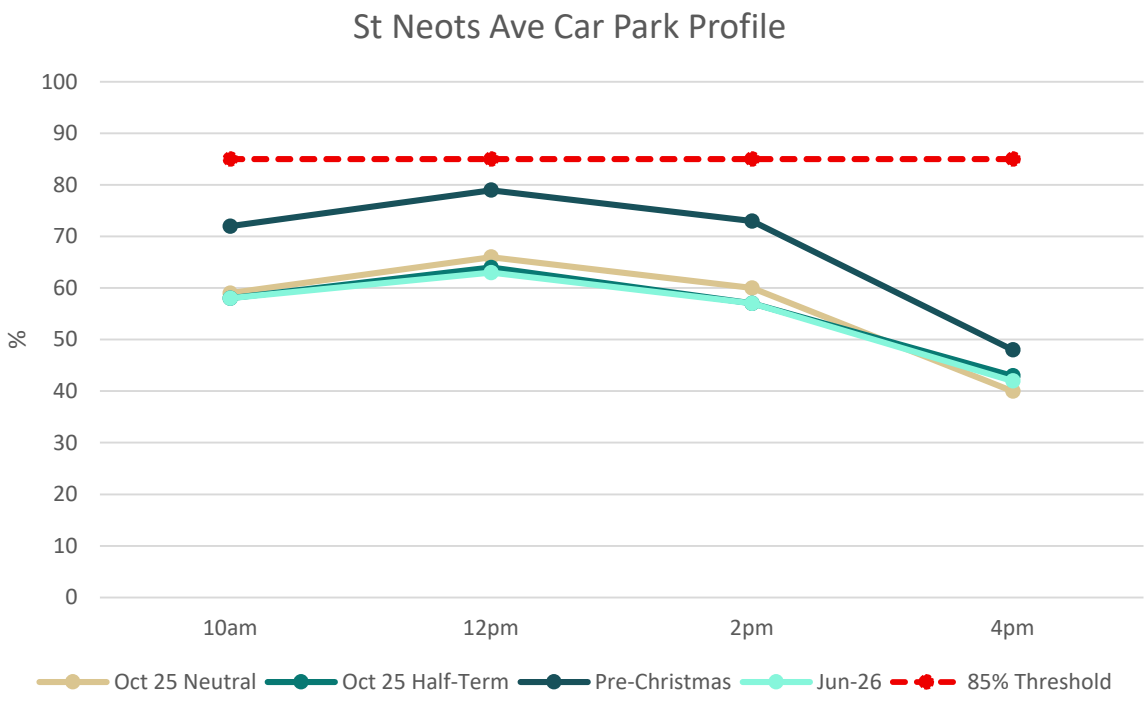

Figure 25 – St Neots average car park profile across the four survey periods

The averaged car park profile for St Neots indicates a generally well-balanced parking position throughout much of the year, with sufficient capacity when the full portfolio of Council operated car parks is considered together. The June 2026 neutral week, October neutral week and October half-term surveys all exhibit a very similar profile, with demand

increasing towards a midday peak before declining steadily during the afternoon. This consistency suggests that parking demand in St Neots is driven primarily by regular town centre activity, with relatively little variation outside the peak Christmas trading period.

The pre-Christmas surveys show a more pronounced uplift in demand, particularly at 12:00, where average occupancy approaches 80%. Although this remains below the 85% practical capacity threshold, it demonstrates the additional pressure generated by seasonal shopping and visitor activity. The overall profile nevertheless indicates that the town retains sufficient capacity to accommodate this increase in demand.

These averaged figures are, however, influenced by the presence of Riverside Park, which provides approximately one-third of St Neots' Council operated parking spaces. Owing to its location on the edge of the town centre, Riverside Park consistently records lower occupancy than the more centrally located car parks, reducing the overall town wide average. If Riverside Park were excluded from the analysis, average occupancy at the busiest central car parks would be considerably higher, with facilities such as Priory Centre and Tebbutts Road regularly operating close to practical capacity during peak periods.

It is also important to recognise that Riverside Park serves a different function to the principal town centre car parks. As a riverside leisure destination, its demand is likely to increase significantly during the summer months and periods of good weather, meaning that its lower occupancy during the autumn and winter surveys should not be interpreted as structural underuse.

Overall, the surveys demonstrate that St Neots has sufficient parking capacity at a town wide level, but that demand remains concentrated within a relatively small number of centrally located car parks.

5.7 DURATION OF STAY SURVEYS

An assessment of parking duration has been undertaken to provide insight into how effectively council operated car parks in Huntingdonshire support turnover and, by extension, town centre activity. Understanding how long vehicles remain parked is critical in assessing whether parking provision is functioning as intended, particularly in balancing access for short-stay visitors with the needs of longer-stay users.

Where turnover is low, this can indicate that parking controls or pricing structures allow vehicles to remain parked for extended periods, limiting space availability for other users and reducing the number of visitors able to access nearby shops, services, and facilities. Conversely, very high turnover may suggest that parking charges or time restrictions are discouraging longer visits, which can suppress dwell time and associated economic activity. The objective is therefore not to maximise turnover in isolation, but to achieve a balanced pattern of use that supports the local economy.

Duration of stay was assessed using vehicle registration data collected at the same time intervals as the occupancy surveys (10:00, 12:00, 14:00, and 16:00). Vehicles observed

across three or four survey periods are likely to be associated with longer-stay activity, such as employees, business owners, or commuters. In contrast, vehicles present for one or two survey periods are more indicative of short-stay trips, including shopping, leisure, or service visits.

To quantify turnover, the concept of a "parking act" has been applied. A parking act represents a single instance of a parking space being used by a vehicle during the survey day. Where a different vehicle occupies the same bay at successive survey points, each instance is counted as a separate parking act. Higher numbers of parking acts per space therefore indicate greater turnover, while lower figures suggest more static use.

Car parks with consistently low parking acts relative to their capacity are likely to be underperforming in terms of supporting town centre vitality, particularly where they are intended to serve short-stay demand. Conversely, car parks showing a strong concentration of parking acts within shorter durations (typically up to two hours) demonstrate healthier operational performance. It is recognised, however, that some car parks are intentionally long-stay in nature, including those serving employment areas or rail stations, where extended parking durations are both expected and appropriate.

Neutral October week

Table 23 presents the average weekday parking act analysis derived from the neutral week surveys, with Appendix C providing a disaggregated daily breakdown to enable more detailed consideration of individual weekdays. Table 24 sets out the corresponding Saturday analysis, while Table 25 presents the Sunday results for the same period. Together, these tables provide a robust, evidence base for understanding how different car parks operate in practice, the extent to which turnover supports town centre activity, and where changes to parking management or tariff structures may be warranted.

Table 25 – Duration of stay data, Sunday neutral week survey

Across the district, a consistent relationship is observed between day type and turnover. Saturdays generate the highest number of parking acts in almost all town centre locations, reflecting the combination of strong retail and leisure demand with the continued presence of parking charges and stay controls. Weekday parking acts are generally lower than Saturdays but remain relatively strong in central locations,

indicating a mix of short-stay visitor activity alongside some longer-stay commuter or employee parking. Sundays, by contrast, consistently record fewer parking acts, even where occupancy levels remain high. This reduction in parking acts strongly suggests longer dwell times associated with the removal of parking charges and time limits, rather than a reduction in overall demand.

This effect is particularly evident in the district's principal town centres. In Huntingdon, high activity car parks such as Princes Street, Sainsbury's, and Great Northern Street continue to record strong turnover on weekdays and Saturdays, with a clear dominance of 0–2 hour stays supporting retail and service uses. On Sundays, these same locations show a marked reduction in parking acts, accompanied by a greater proportion of longer stays. This indicates a shift away from short, high-turnover visits towards more leisure oriented, longer duration parking, reinforcing the conclusion that free parking suppresses turnover rather than stimulating additional peak demand.

A similar pattern is observed in St Ives and St Neots. Core town centre car parks such as Cattle Market (Short-Stay), Priory Lane, Waitrose (St Neots), and Brook Street show high acts per space during weekdays and Saturdays, confirming their role in supporting town centre vitality. On Sundays, turnover reduces noticeably, with longer dwell times becoming more prevalent across both towns. While these locations remain well used, the lower number of parking acts demonstrates that fewer individual visitors are accessing each space over the course of the day.

The relationship between car park size and turnover is a critical factor in interpreting the results. Larger car parks, particularly those with a leisure or destination focus, consistently record lower acts per space. Examples include Riverside Park in St Neots, Riverside (Huntingdon), and the Priory Centre (St Neots), which show relatively low turnover across all survey days. These facilities are designed to accommodate longer stays and, as such, contribute less to short-stay economic activity. When included in town wide averages, they significantly dilute overall turnover metrics and can mask the intensity of demand and turnover within core town-centre locations.

This effect is most pronounced in Godmanchester, where Bridge Place accounts for the majority of off-street supply but records extremely low acts per space across all survey days. As a result, overall turnover in the town appears weak, despite Park Lane and Post Street performing strongly as short-stay facilities. A similar, though less extreme, pattern is evident in St Neots, where Riverside Park represents a substantial proportion of supply but exhibits much lower turnover than the town's central car parks.

Ramsey presents a contrasting picture. The town centre car park at Mews Close consistently records high acts per space across weekdays, Saturdays, and Sundays, reflecting a constrained supply and concentrated demand rather than unusually high overall activity. The presence of the One Leisure car park reduces the town wide average slightly, but even with this included, Ramsey exhibits some of the strongest turnover characteristics in the district. This reinforces the conclusion that supply concentration,

rather than charging policy, is the dominant driver of parking pressure and turnover in the town.

Across all towns, Saturdays consistently show the strongest alignment between high parking acts and a dominant 0–2 hour stay profile, particularly in short-stay and retail adjacent car parks. Weekdays show a more mixed pattern, with evidence of longer stays in some locations reflecting commuter and employee use. Sundays diverge most clearly, with lower parking acts and a broader distribution of stay durations, confirming that free parking encourages longer dwell times rather than increased access to parking spaces.

Figures 23 to 25 present visual summaries of the duration of stay patterns recorded during the neutral week surveys, with separate figures provided for the weekday, Saturday, and Sunday datasets. Together, these figures illustrate how parking behaviour and turnover vary by town and by day type, providing a clear comparison of short-stay and long-stay usage across the district's towns with council operated car parks. The visual analysis highlights differences in how car parks function under typical operating conditions, and provides a robust evidence base to inform the car park strategy, particularly when considering opportunities to optimise space utilisation, manage turnover, and support town centre and local economic activity.

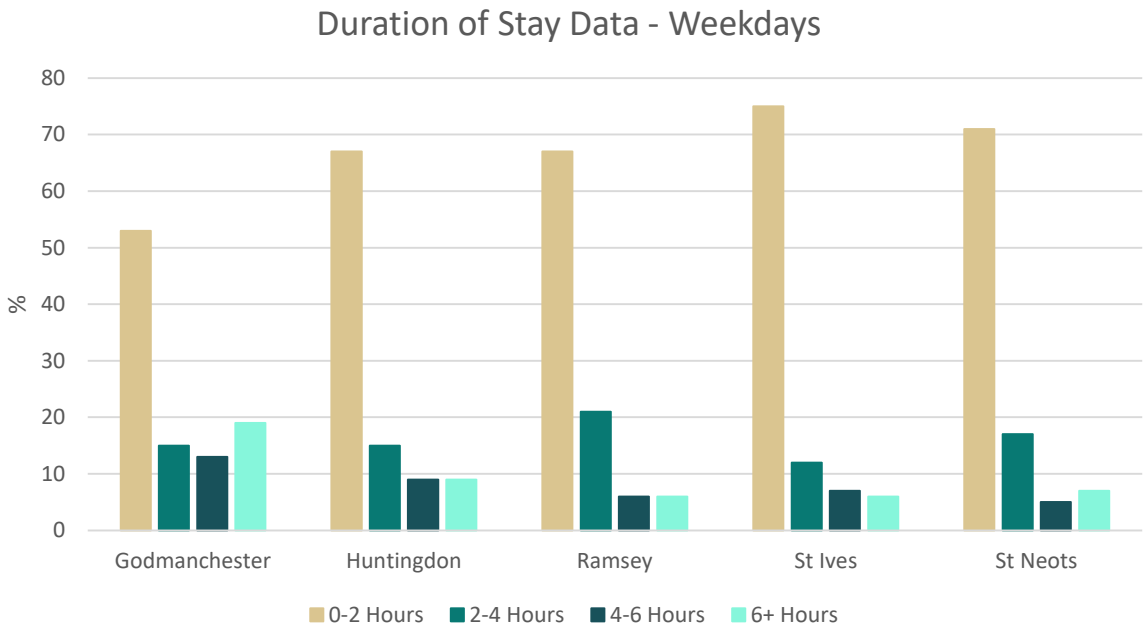

Figure 26 – Breakdown of parking acts across town car parks from neutral weekday surveys (ave)

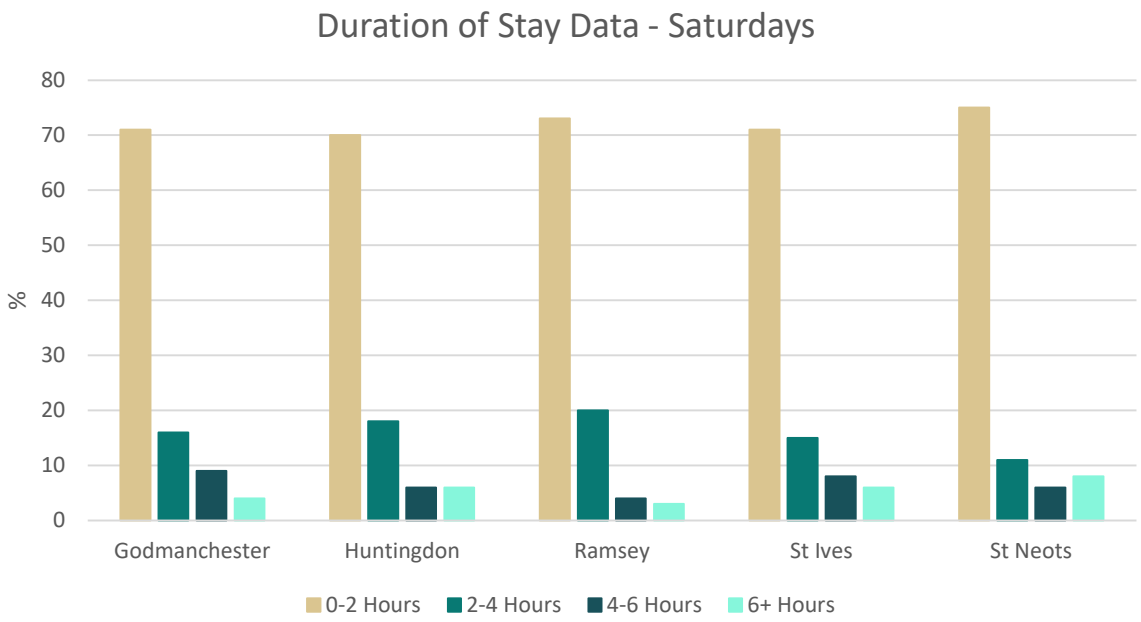

Figure 27 – Breakdown of parking acts across town car parks from neutral Saturday survey

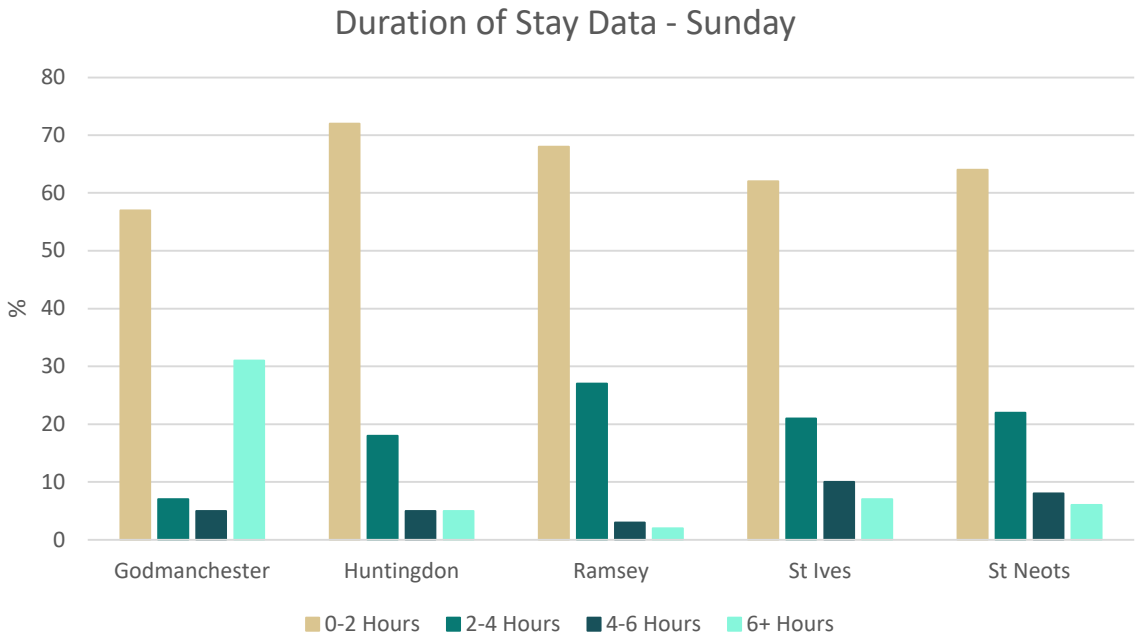

Figure 28 – Breakdown of parking acts across town car parks from neutral Sunday survey

Taken collectively, Figures 26 to 28 illustrate a broadly consistent behavioural profile across the district, with short-stay parking forming the dominant mode of use regardless of day type, while longer stays are more spatially and temporally concentrated.

Across all towns, the 0–2 hour category accounts for the majority of parking acts on weekdays and Saturdays, reinforcing the role of town centre car parks in supporting short shopping, service, and leisure trips rather than long-duration parking. This pattern is most pronounced on Saturdays, when short-stay demand increases further, reflecting stronger retail and discretionary activity. The consistency between towns suggests that,

despite differences in scale and supply, parking behaviour is shaped more by the function of town centres than by localised variations in management or layout.

Sunday patterns differ more clearly from weekdays and Saturdays. While short stays remain the largest single category, there is an increase in longer duration parking in several towns. This reflects the absence of charging and time restrictions on Sundays, which enables visitors to remain parked for longer periods and reduces turnover. The effect is most visible in towns with leisure destinations or larger peripheral car parks, where vehicles are more likely to remain parked across multiple survey periods.

Differences between towns are also evident in how evenly parking acts are distributed across stay lengths. Larger towns with a wider mix of car park types, such as Huntingdon and St Neots, show a more balanced spread between short and medium-stay parking, indicating a combination of retail, service, and longer-duration activity. In contrast, smaller towns or those with a more concentrated supply, such as Ramsey, display a stronger skew towards short stays.

October half-term week

Tables 26 to 28 present the duration of stay and parking act analysis for the October half-term survey period, covering weekday, Saturday, and Sunday conditions. This set of tables captures parking behaviour during a period of increased leisure activity and non-routine travel associated with the school holidays, providing a useful contrast to the neutral week baseline.

Table 28 – Duration of stay data, Sunday from October half-term week survey

The October half-term duration of stay data captures parking behaviour during a period of elevated leisure activity, school holidays, and more discretionary travel, providing a useful contrast to the neutral trading week. While the underlying structure of parking demand remains consistent, half-term introduces a clear uplift in turnover across

several town centre and leisure related car parks, particularly on weekdays and Saturdays.

Across the district, Saturdays continue to generate the highest number of parking acts in most town centre locations, reflecting the combination of strong retail activity and the continued presence of charging and stay controls. However, weekday turnover during half-term is noticeably stronger than in the neutral week, particularly in car parks serving shopping, leisure, and family-oriented destinations. Sundays again record fewer parking acts overall, with the reduction in turnover more pronounced during half-term, reinforcing the influence of free parking on dwell time rather than on the frequency of parking visits.

Figures 29 to 31 present a visual breakdown of duration of stay patterns recorded during the October half-term surveys, with separate figures provided for weekday, Saturday, and Sunday datasets. Together, these figures illustrate how parking turnover and dwell time respond to seasonal changes in activity levels and charging conditions across the district's towns.

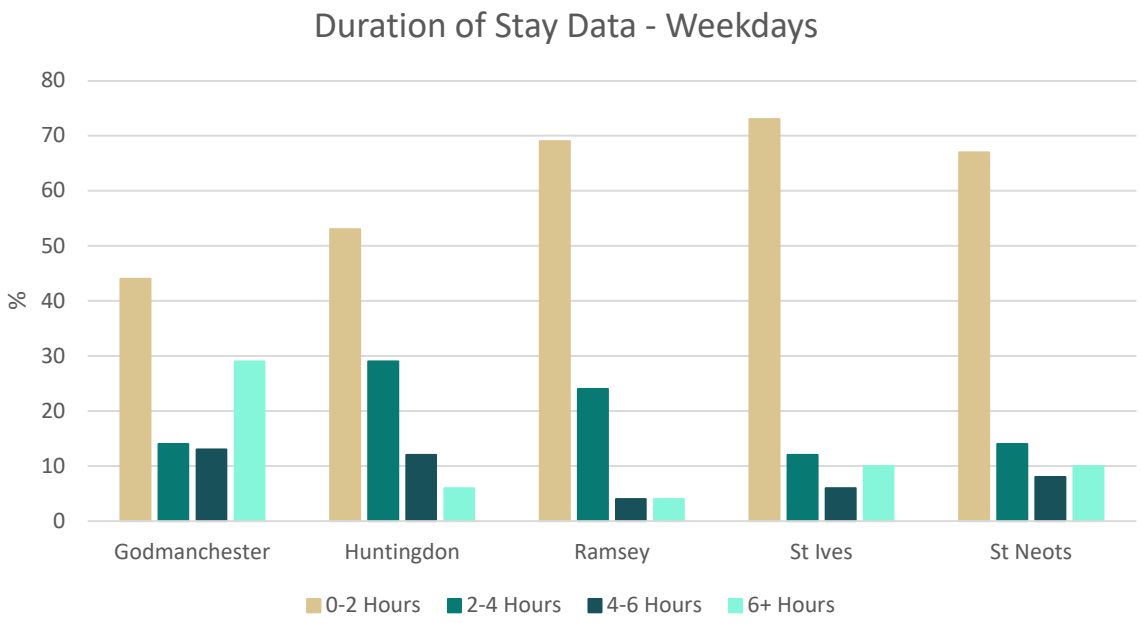

Figure 29 – Breakdown of parking acts across town car parks from Oct half-term weekday surveys (ave)

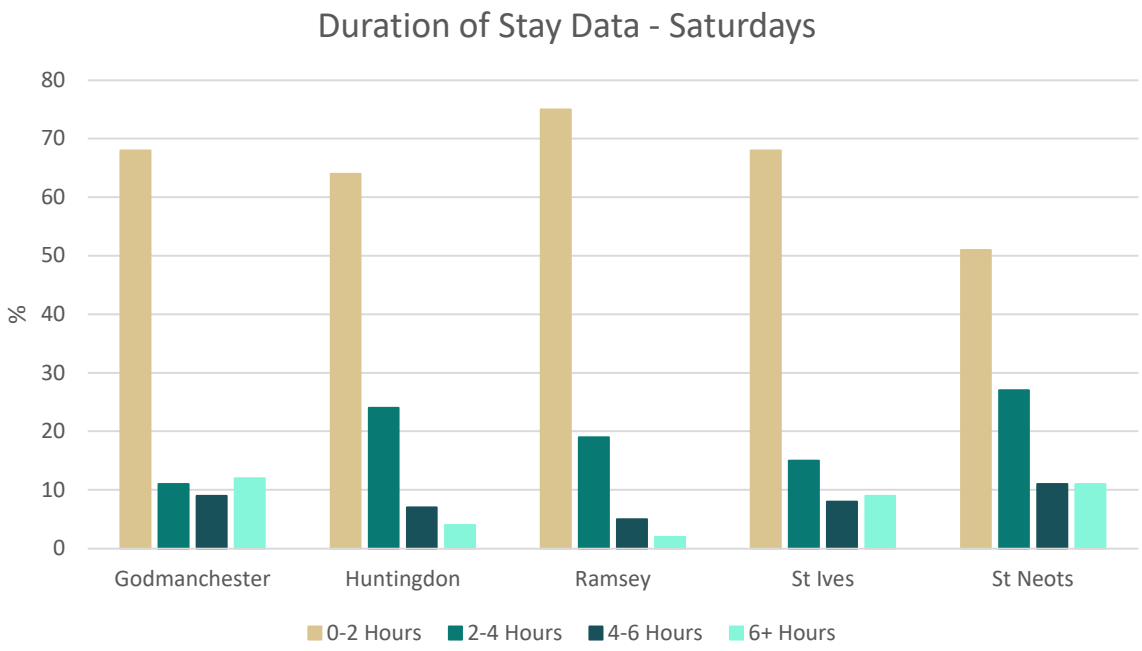

Figure 30 – Breakdown of parking acts across town car parks from Oct half-term Saturday survey

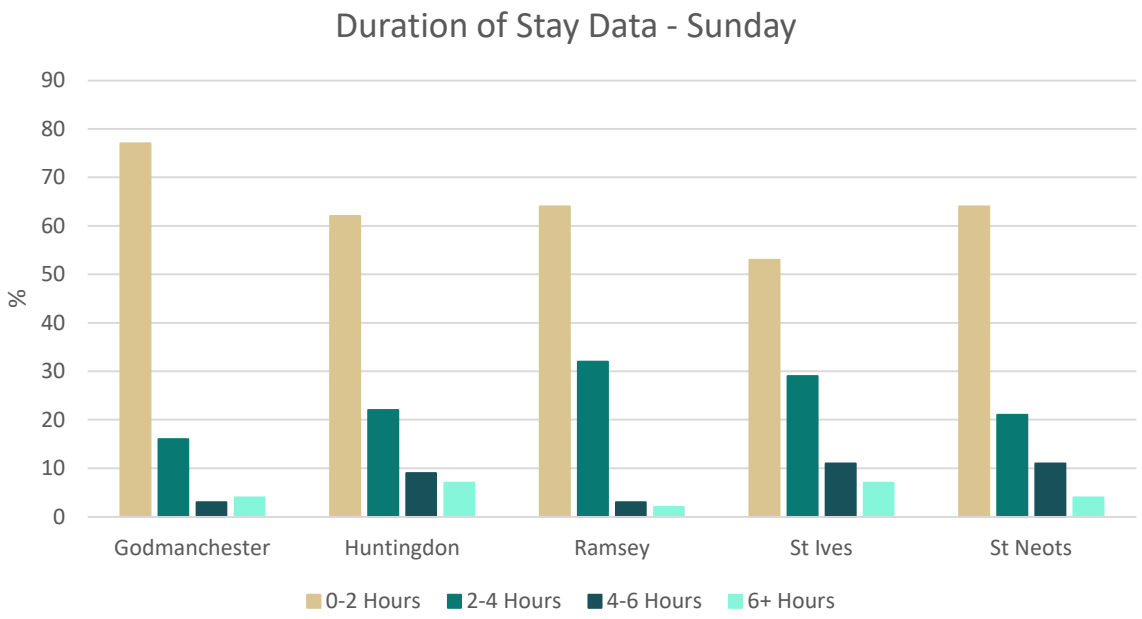

Figure 31 – Breakdown of parking acts across town car parks from Oct half-term Sunday survey

Taken collectively, the October half-term figures reinforce the dominance of short-stay parking across Huntingdonshire, while also demonstrating how school holidays subtly reshape parking behaviour rather than fundamentally altering it. Across all towns and day types, the 0–2 hour category remains the largest single component of parking acts, underlining the continued role of town centre car parks in supporting shopping, services, and leisure trips during the holiday period.

On weekdays, half-term demand shows a modest broadening of stay durations compared with the neutral week, with a greater share of 2–4 hour parking evident in several towns. This reflects a shift away from purely commuter-led activity towards more flexible, discretionary trips associated with families and leisure uses. Importantly, this effect is observed across both larger centres and smaller towns, indicating that half-term activity is distributed across the network rather than concentrated in a small number of locations.

Saturday patterns show the clearest intensification of short-stay behaviour. In all towns, the proportion of 0–2 hour stays increases further, confirming high turnover linked to peak retail and leisure activity. While medium-stay parking remains present, particularly in larger towns with a broader mix of facilities, the overall Saturday profile is strongly weighted towards shorter visits and rapid turnover.

Sunday behaviour diverges most clearly from the rest of the week. Although short stays continue to account for the largest share of parking acts, there is a noticeable increase in longer duration parking across several towns. This reflects the combined influence of free parking and leisure led travel during the school holidays, with visitors more likely to remain parked across multiple survey periods. The effect is most visible in towns with larger or more peripheral car parks, where longer stays can be accommodated without constraining access to core retail areas.

At a town-by-town level, differences remain evident in how parking acts are distributed across stay lengths. Larger centres with a wider mix of car park types show a more balanced spread between short and medium stays, reflecting a combination of retail, service, and leisure activity. More supply constrained towns continue to exhibit a stronger skew towards short-stay parking, indicating higher turnover within a limited stock of spaces. Overall, the half-term data confirms that seasonal increases in activity primarily intensify existing patterns of use, rather than generating new or atypical parking behaviours.

Pre-Christmas week

Tables 29 to 31 present the duration of stay and parking act analysis for the pre-Christmas survey period, covering weekday, Saturday, and Sunday conditions. These tables reflect parking behaviour during a peak seasonal trading period, characterised by heightened retail activity, increased town centre visits, and more discretionary travel in the lead-up to Christmas, providing a clear comparison with both the neutral week baseline and the October half-term surveys.

Table 31 – Duration of stay data, Sunday from pre-Christmas week survey

The pre-Christmas duration of stay data reflects parking behaviour during the district's peak retail trading period, when town centre activity is intensified by festive shopping, seasonal events, and higher volumes of discretionary trips. While the underlying structure of demand remains consistent with earlier survey periods, the pre-Christmas

surveys capture a clear uplift in activity levels, particularly within core retail car parks and during Saturday trading conditions.

Across the district, the data highlights a strong emphasis on short-stay parking during this period, driven by time limited shopping and service trips rather than extended leisure use. Weekday activity is notably stronger than in both the neutral and half-term periods, indicating that pre-Christmas demand is distributed across the working week as well as weekends. Sundays continue to show a different behavioural profile, with fewer parking acts despite sustained occupancy in some locations, reflecting longer dwell times associated with free parking.

Figures 32 to 34 present a visual breakdown of duration of stay patterns recorded during the pre-Christmas surveys, with separate figures provided for weekday, Saturday, and Sunday datasets.

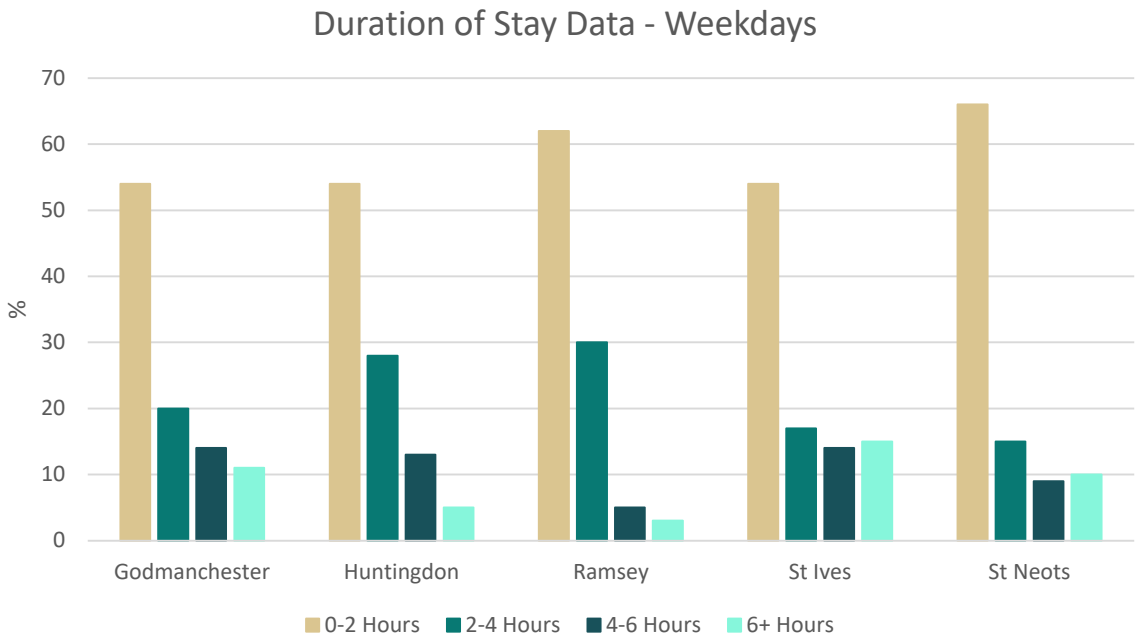

Figure 32 – Breakdown of parking acts across town car parks from pre-Christmas weekday surveys (ave)

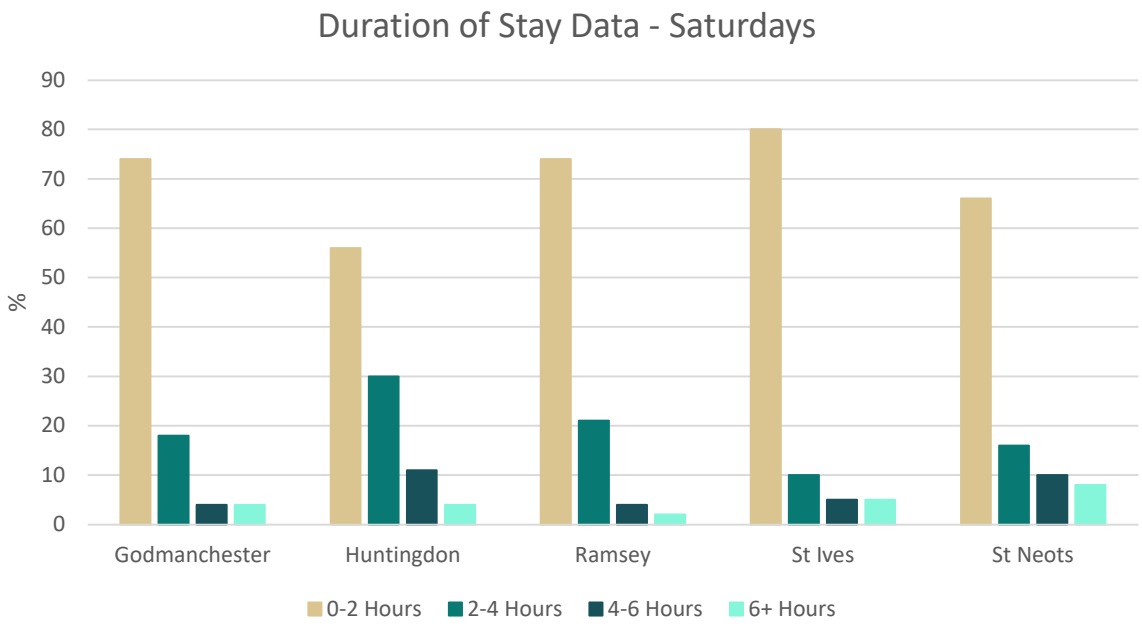

Figure 33 – Breakdown of parking acts across town car parks from pre-Christmas Saturday survey

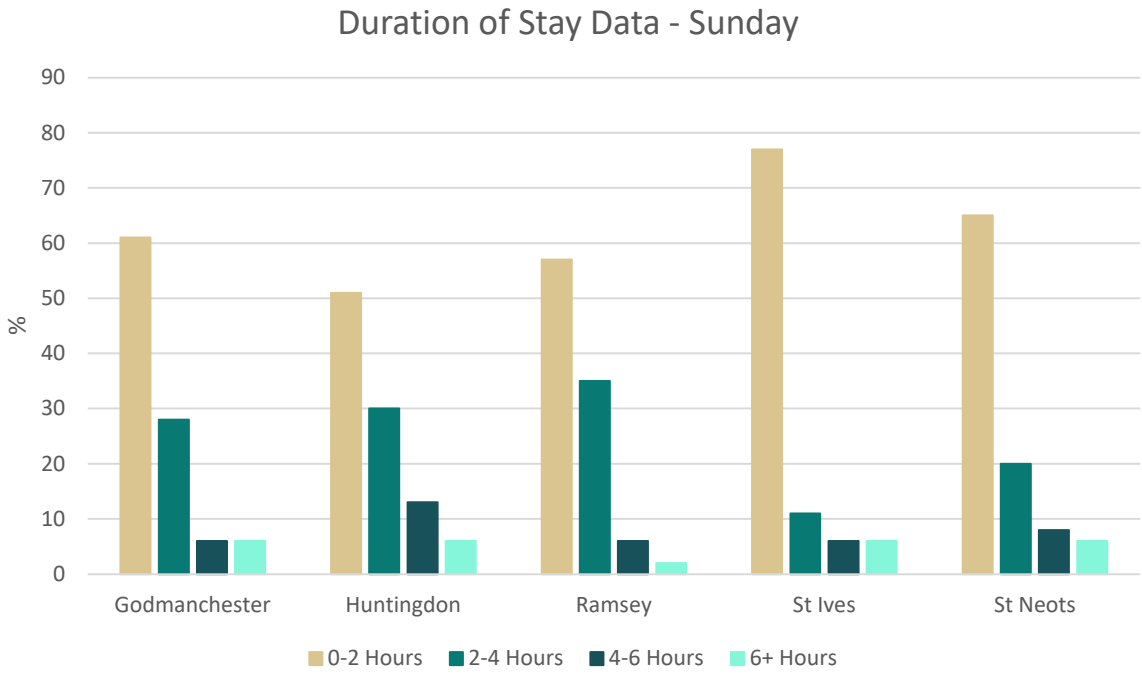

Figure 34 – Breakdown of parking acts across town car parks from pre-Christmas Sunday survey

Taken together, the figures illustrate a pronounced intensification of short-stay parking across Huntingdonshire during the pre-Christmas period, particularly on Saturdays and within retail focused town centre car parks. Across all towns and day types, the 0–2 hour category remains the dominant component of parking acts, reinforcing the role of off-street parking in supporting rapid turnover during peak trading conditions rather than accommodating longer stays.

Weekday data shows that this uplift is not confined to weekends. In the run-up to Christmas, weekday parking behaviour becomes more strongly aligned with Saturday profiles, with high levels of short-stay turnover evident across the district's main shopping locations. This reflects task-oriented trips such as gift purchasing, errands, and service visits, with limited evidence of a shift towards longer dwell times.

Saturday patterns are the most distinctive feature of the pre-Christmas period. In all towns, Saturdays exhibit the strongest concentration of short-stay parking observed across the survey programme, indicating very high turnover under peak retail conditions. Even in larger centres with a mix of car park types, medium and long-stay parking plays a clearly secondary role, confirming the dominance of short, time limited visits during festive trading.

Sunday behaviour remains more mixed. While short stays continue to account for the largest share of parking acts, there is a more visible presence of longer duration parking than on weekdays or Saturdays. This reflects the combined effect of free parking and leisure-led trips, particularly in towns with larger or more peripheral car parks where extended stays do not constrain access to core retail areas.

Differences between towns remain evident in how pre-Christmas demand is distributed across stay lengths. Larger centres with a broader range of car park sizes and functions display a more even spread between short- and medium-stay parking, reflecting a wider mix of trip purposes. More supply constrained towns continue to show a stronger skew towards short-stay use, indicating sustained pressure on limited town centre capacity even outside peak weekend conditions.

Overall, the pre-Christmas data confirms that festive trading amplifies existing parking behaviours rather than reshaping them. The period is characterised by higher intensity use, stronger weekday turnover, and very pronounced short-stay dominance on Saturdays, reinforcing the importance of effective short-stay capacity management during peak retail periods.

June 2026 Week

Tables 32 to 34 present the duration of stay and parking act analysis for the neutral June 2026 survey period, covering weekday, Saturday, and Sunday conditions. This set of tables captures parking behaviour during a warmer of weather, although it should be noted that four of the seven days had prolonged periods of rain at times.

Table 34 – Duration of stay data, Sunday from October half-term week survey

The June 2026 duration of stay surveys provide the baseline understanding of how council operated car parks are used during a typical period outside the influence of major seasonal events or school holidays. The surveys demonstrate that parking behaviour is generally well aligned with the intended function of individual car parks, with clear

distinctions between short-stay town centre facilities, longer-stay commuter and employee parking, and leisure orientated destinations.

Across the district, Saturdays generate the highest levels of parking activity in many town centre car parks, reflecting increased retail and leisure trips at weekends. Car parks serving shopping destinations continue to be dominated by short-stay visits of up to two hours, whilst facilities such as Tebbutts Road, Mews Close and Cattle Market Long-Stay accommodate a much greater proportion of longer duration parking. The surveys also highlight the differing role of leisure destinations, with Riverside in Huntingdon recording a significantly higher proportion of long-stay visits on the Saturday survey due to a major event taking place during the survey period.

Sunday parking activity generally records fewer parking acts than Saturdays, although the proportion of longer-stay visits increases across many locations as leisure and recreational trips become more prevalent. Figures 35 to 37 present a visual summary of the weekday, Saturday and Sunday duration of stay surveys, illustrating how parking turnover varies between different types of car park and providing an important baseline against which the subsequent seasonal surveys can be compared.

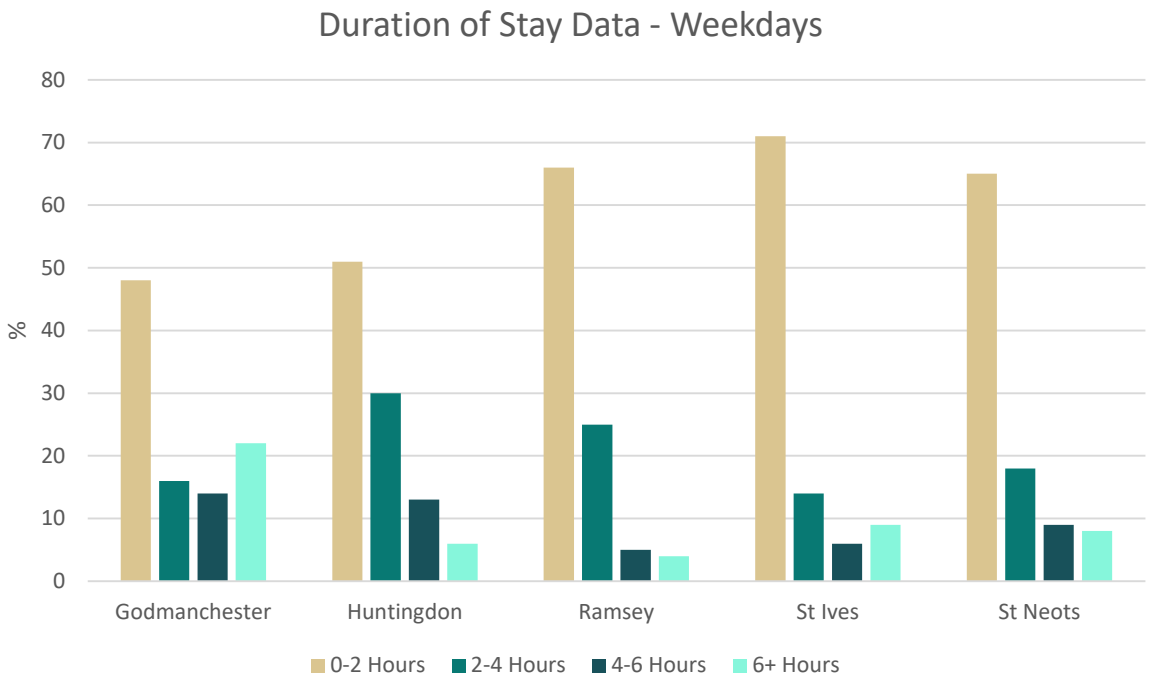

Figure 35 – Breakdown of parking acts across town car parks from June 2026 weekday surveys (ave)

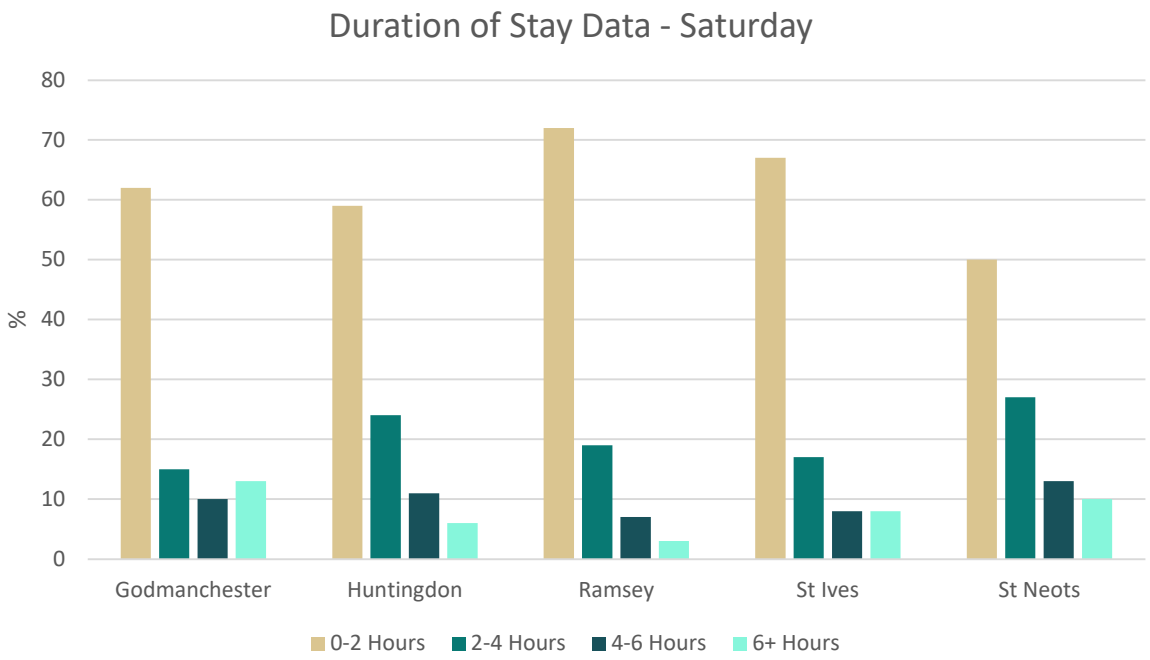

Figure 36 – Breakdown of parking acts across town car parks from June 2026 Saturday survey

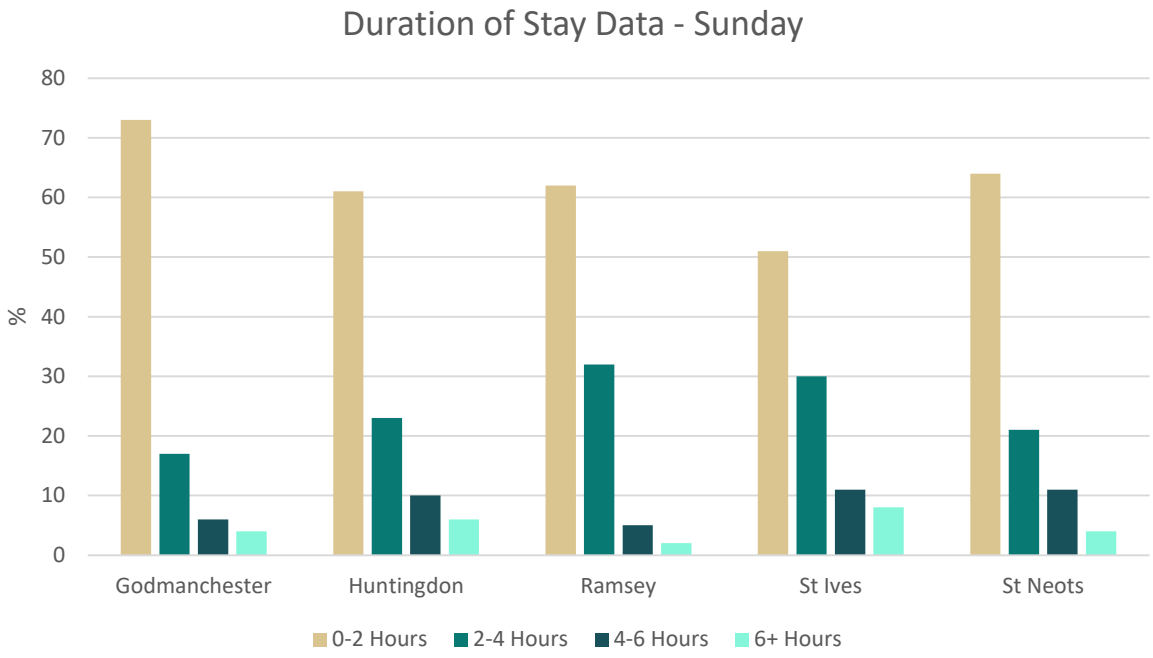

Figure 37 – Breakdown of parking acts across town car parks from June 2026 Sunday survey

The June 2026 duration of stay surveys confirm the dominance of short-stay parking across Huntingdonshire and demonstrate that the Council's parking portfolio is generally functioning in accordance with the intended role of each car park. Across all towns and all survey days, stays of up to two hours represent the largest proportion of parking acts, reflecting the important role that council-operated car parks play in supporting access to town centres, shopping, services and leisure activities.

Weekday parking behaviour shows a relatively consistent pattern across the district. Short-stay visits account for approximately half to two-thirds of all parking acts in every town, with Huntingdon exhibiting the highest proportion of medium-stay (2–4 hour) visits, reflecting its broader mix of employment, retail and service destinations. Ramsey and St Neots display a greater emphasis on short-stay parking, while Godmanchester and St Ives show a slightly more balanced distribution of stay durations. Longer stays of over four hours remain concentrated within specific long-stay and commuter facilities, rather than being widespread across the parking network.

Saturday surveys demonstrate the strongest emphasis on short-stay parking, with the proportion of visits lasting less than two hours increasing across almost every town. This reflects the higher turnover associated with weekend shopping and leisure activity. The principal exception is St Neots, where a greater proportion of medium and longer duration stays is evident, influenced by the mix of retail, leisure and recreational destinations. Riverside Car Park in Huntingdon also records a notably higher proportion of long-stay parking during the Saturday survey, reflecting the major event taking place on the survey day rather than typical weekend parking behaviour.

Sunday parking exhibits a different profile, with a modest reduction in short-stay visits and a corresponding increase in stays between two and six hours across most towns. This reflects the greater influence of leisure and recreational trips, with visitors tending to remain parked for longer than on weekdays or Saturdays. Even so, short-stay parking continues to account for the largest share of parking activity in every town, demonstrating that many Sunday trips remain destination focused rather than all-day visits.

The June surveys indicate that parking behaviour across Huntingdonshire is well aligned with the function of individual car parks. Larger centres, such as Huntingdon, St Ives and St Neots, exhibit a broader spread of stay durations, reflecting their more diverse mix of retail, employment and leisure uses, while smaller towns remain more heavily weighted towards shorter stays. The results provide a robust baseline against which future changes in parking demand and user behaviour can be monitored over the lifetime of the strategy.

5.8 DURATION OF STAY COMPARISON

To complement the district wide analysis, a town-by-town review of average duration of stay has been undertaken to understand how parking behaviour varies spatially and throughout the survey programme across Huntingdonshire. The following charts present average duration of stay profiles for each town, comparing the June 2026 baseline surveys, the October neutral week, October half-term and pre-Christmas survey periods.

By expressing each survey period as a proportion of total parking acts, the analysis focuses on the balance between short-stay and longer-stay parking rather than absolute demand. This approach enables meaningful comparison between towns of different

scale and parking supply, whilst illustrating how parking behaviour responds to changing levels of retail, leisure and seasonal activity over the course of the year.

Across all towns, short-stay parking (0–2 hours) remains the dominant form of use during every survey period, reinforcing the primary role of Huntingdonshire's town centre car parks in supporting shopping, services and short leisure trips. Although seasonal variation is evident, the June baseline demonstrates that the underlying parking characteristics of each town are already well established, with subsequent surveys generally intensifying or moderating these existing patterns rather than creating fundamentally different behaviours.

In Godmanchester, the June profile is broadly consistent with the October surveys, confirming that parking behaviour remains relatively stable throughout the year. The duration profile continues to be influenced by the presence of Bridge Place, which suppresses the proportion of shorter stays across the town-wide average. Whilst Park Lane and Post Street operate as high-turnover town centre facilities, Bridge Place fulfils a different role, resulting in a comparatively higher proportion of longer-stay parking throughout the survey programme.

Figure 38 illustrates the comparison between the four survey periods in Godmanchester.

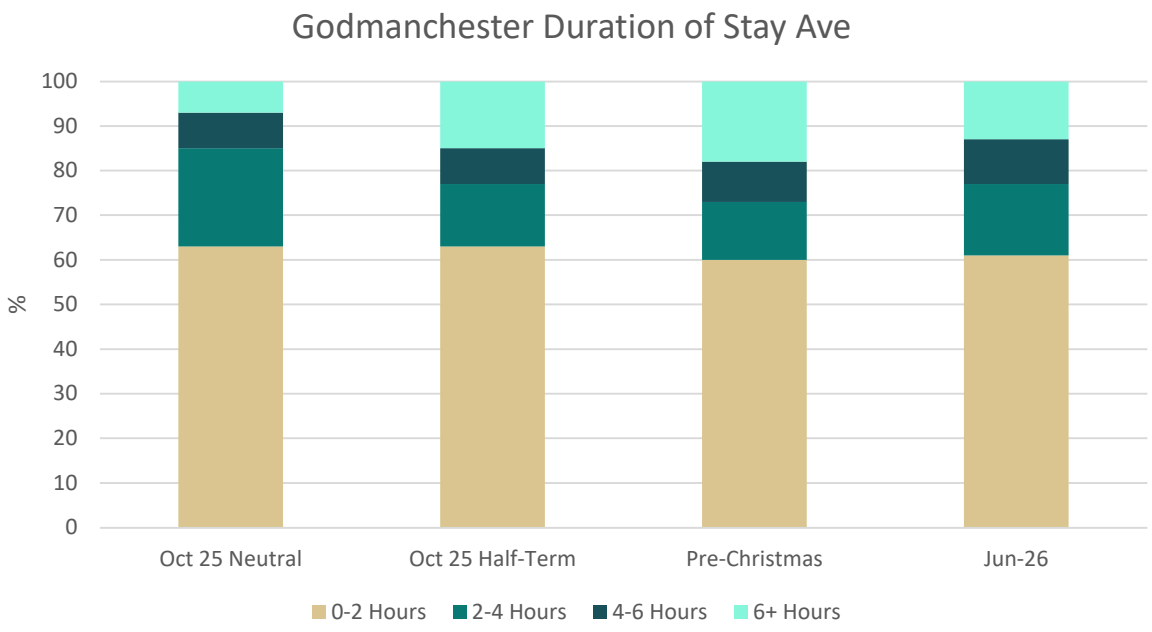

Figure 38 – Duration of stay comparison in Godmanchester

In Huntingdon, the June surveys provide a useful baseline, with approximately half of all parking acts lasting less than two hours and a relatively broad spread across the remaining stay durations, reflecting the town's diverse parking portfolio. October neutral week results are similar, while half-term introduces a modest increase in medium-stay parking associated with more discretionary trips. The pre-Christmas period shows the strongest emphasis on short-stay visits, indicating increased turnover linked to festive shopping and town centre activity.

Figure 39 illustrates the comparison between the four survey periods in Huntingdon.

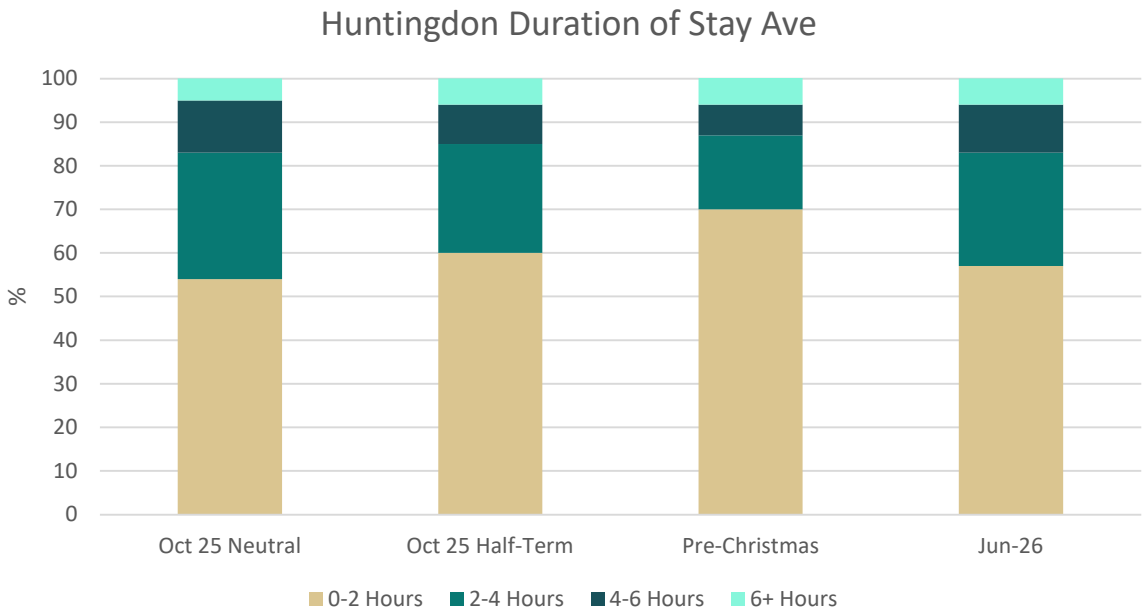

Figure 39 – Duration of stay comparison in Huntingdon

In Ramsey, the duration profile remains remarkably consistent across all four survey periods. The June baseline closely mirrors the October results, with short-stay parking accounting for around two-thirds of all parking acts and relatively little seasonal variation thereafter. This consistency reinforces that parking behaviour in Ramsey is driven primarily by the town's constrained parking supply and concentrated demand, rather than fluctuations in seasonal activity.

Figure 40 illustrates the comparison between the four survey periods in Ramsey.

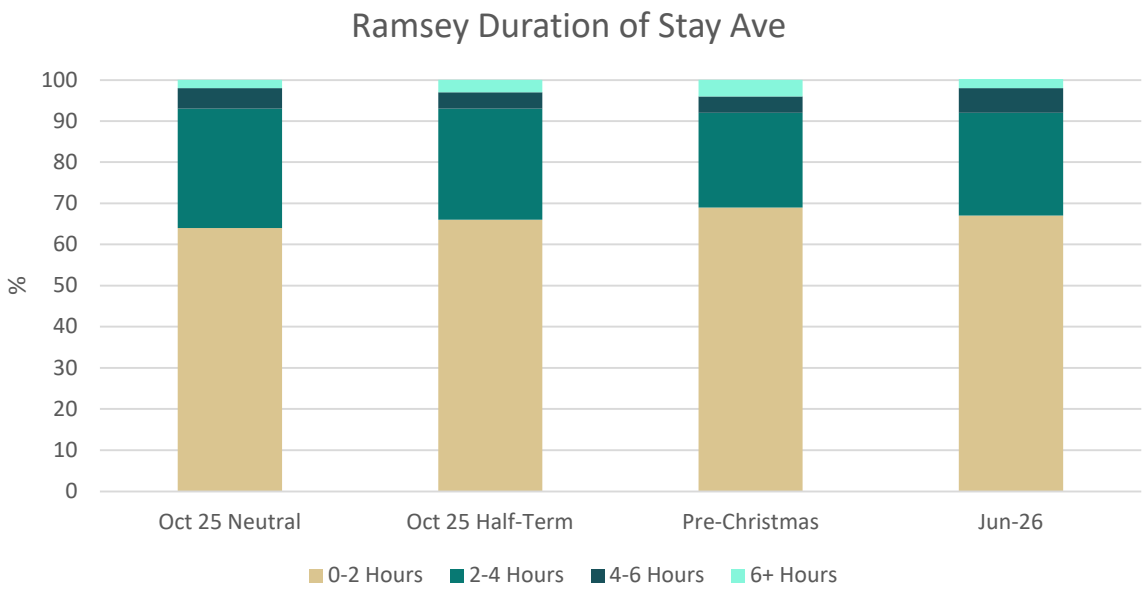

Figure 40 – Duration of stay comparison in Ramsey

In St Ives, the June surveys indicate a balanced parking profile with a broader mix of stay durations than some of the smaller towns. The October neutral and half-term surveys remain broadly consistent with this baseline, whilst the pre-Christmas period shifts the balance towards shorter stays as retail activity intensifies. Despite these changes, the overall duration profile remains relatively stable, reflecting the diverse range of town centre, leisure and longer-stay parking opportunities available within the town.

Figure 41 illustrates the comparison between the four survey periods in St Ives.

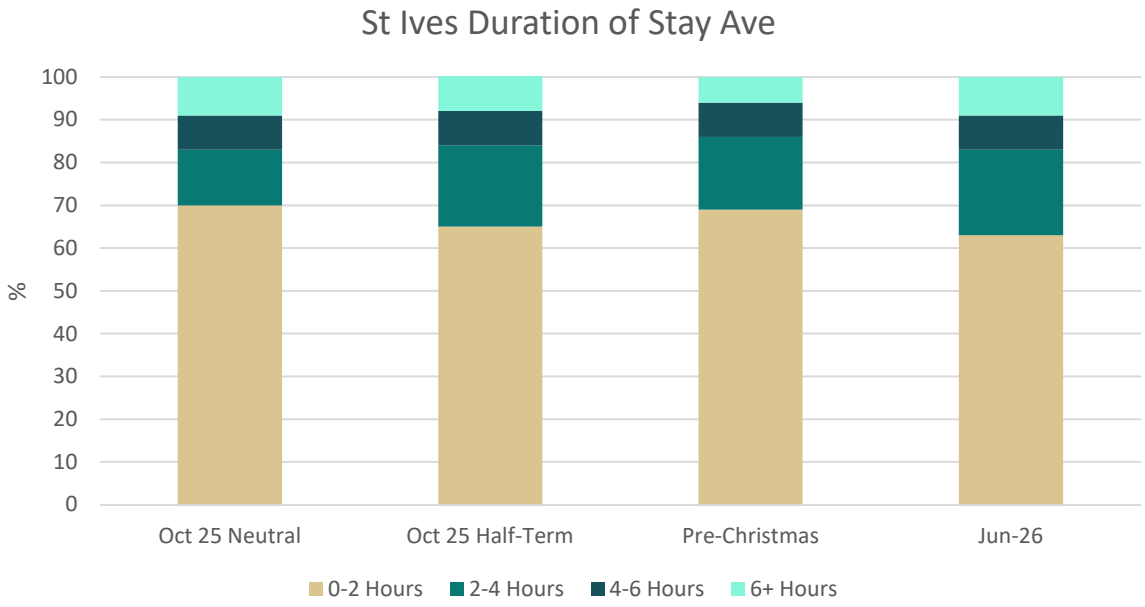

Figure 41 – Duration of stay comparison in St Ives

In St Neots, the June baseline demonstrates a strong predominance of short-stay parking, although with a greater proportion of longer-duration visits than Huntingdon and Ramsey due to the influence of larger peripheral car parks. The October neutral and half-term surveys remain broadly similar, while the pre-Christmas period shows a clear shift towards shorter stays associated with increased retail demand. Overall, the duration profile confirms that central car parks continue to operate as high-turnover facilities throughout the year, with seasonal changes primarily affecting the balance between short and medium-length visits.

Figure 42 illustrates the comparison between the four survey periods in St Neots.

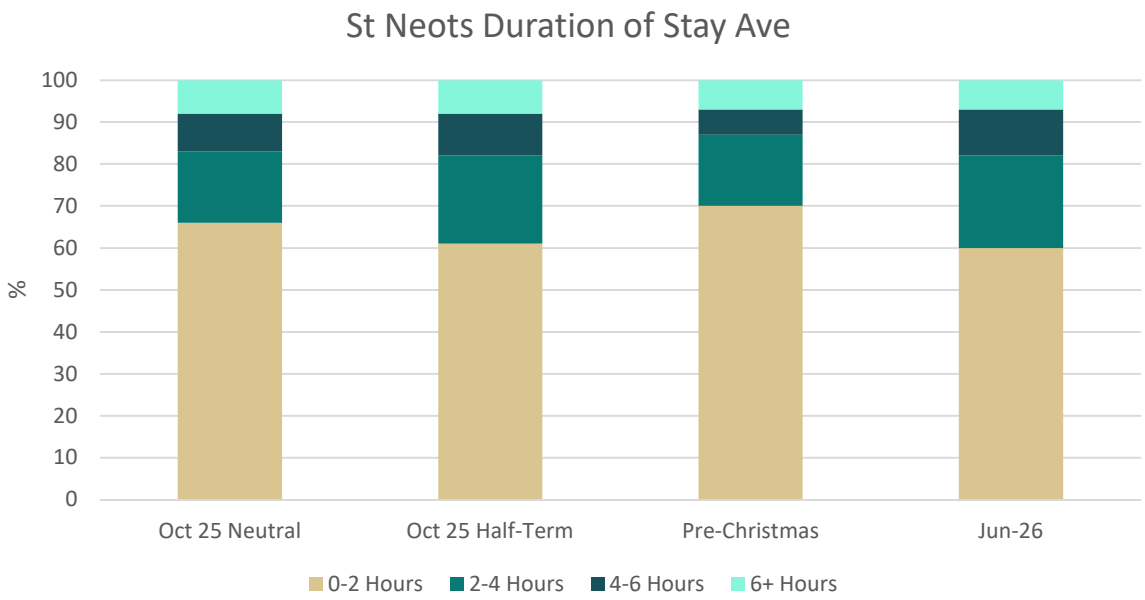

Figure 42 – Duration of stay comparison in St Neots

Taken together, the town specific charts demonstrate that the June baseline provides a robust representation of typical parking behaviour across Huntingdonshire. The subsequent October surveys show that seasonal pressures primarily influence the balance between short and longer stays rather than changing the fundamental role of individual car parks. Pre-Christmas activity strengthens the dominance of short-stay parking in the principal town centres, whilst the October half-term period introduces a modest increase in discretionary, medium-length visits.

Overall, the consistency between the four survey periods reinforces that Huntingdonshire's parking network is well aligned with the differing functions of its towns and that seasonal demand generally amplifies existing parking behaviours rather than creating new patterns of use.

5.9 ON-STREET PERMIT PARKING ASSESSMENT

Alongside the off-street car park surveys, a series of on-street spot occupancy surveys were undertaken within selected Resident Parking Scheme (RPS) streets in Huntingdon and St Neots. These surveys were carried out for information only, to provide contextual insight into on-street parking conditions within permit controlled areas and to support interpretation of wider parking demand patterns.

It is important to note that responsibility for resident parking schemes within Huntingdonshire sits with Cambridgeshire County Council, as the Highway Authority. Huntingdonshire District Council administers the schemes on the County Council's behalf, in line with the published permit terms and conditions. The surveys do not seek to review the operation, eligibility, or enforcement of the schemes themselves.

Spot counts were undertaken at 9am, 1pm, 5pm and 8pm across each of the three survey weeks. In Huntingdon, four streets were surveyed within Zone A and three streets within

Zone B. In St Neots, one street was surveyed in Zone A and one street in Zone B. The selected streets reflect a range of residential locations with differing proximity to town centres and off-street parking provision.

The surveys were undertaken in accordance with standard on-street parking survey methodology. The length recorded for each street relates specifically to the section of highway covered by the resident permit scheme, rather than the full street length. Parking capacity has been estimated by dividing the available permit eligible length by 5 metres, which is assumed to represent the typical space required per vehicle.

Where recorded demand exceeds the calculated capacity, this indicates that vehicles are parking beyond the designated permit bays, including on restrictions such as single or double yellow lines, or in areas not formally marked for parking.

Table 35 provides the results of the surveys carried out during the neutral week in October, table 36 provides the October half-term survey results, and table 37 provides the pre-Christmas survey results.

Town	Street	Length	Capacity	9am	1pm	5pm	8pm

St Neots (Zone B)	New Street	33	6	3	5	6	6

Table 37 – On-street permit parking surveys from pre-Christmas week

Across all three survey periods, on-street occupancy within resident permit areas is generally moderate during the daytime and increases into the evening, particularly after 5pm and most noticeably at 8pm when the scheme isn't in operation. This pattern is consistent with the primary function of these streets as residential parking, with demand increasing as residents return home, along with the opportunity for those that do not have permits to parking within the streets without receiving Penalty Charge Notices.

Huntingdon RPS

Huntingdon Zone A streets show relatively high daytime occupancy across all survey weeks, with typical utilisation at 9am and 1pm ranging between 60% and 80% of available capacity on streets such as Ingram Street, Euston Street, Montague Road and Hartford Road. Evening demand is consistently higher, with 8pm occupancy often reaching or exceeding theoretical capacity. For example:

- Hartford Road records between 25 and 28 vehicles at 8pm against a nominal capacity of 21 spaces across all three survey weeks.
- Montague Road regularly exceeds capacity at 8pm, rising from 23 vehicles during half-term to 25 pre-Christmas, compared to a capacity of 17.

Zone B streets operate at a smaller scale but display similar trends. Daytime occupancy is typically modest, often 50-75% of capacity, but evening demand increases materially. St John's Street, for example, rises from 2-4 vehicles during the day to 6-7 vehicles at 8pm, against a nominal capacity of 4 spaces. Roscrea Terrace and Ferrars Road show consistently lower absolute numbers but still reach or marginally exceed capacity in the evening across all survey weeks.

St Neots RPS

Bedford Street shows a clear and consistent pattern across all three survey periods. Daytime occupancy typically ranges from 40-65%, increasing steadily through the day and peaking at 8pm, where recorded demand reaches:

- 24 vehicles (neutral week)

- 20 vehicles (half-term)
- 23 vehicles (pre-Christmas)

Against a capacity of 24 spaces, this indicates that the street regularly operates at or near full occupancy in the evening, particularly outside of the half-term period.

New Street exhibits lower overall demand but follows the same daily profile. Daytime occupancy is generally 50-80%, rising to full or near-full occupancy at 8pm, with 6 vehicles recorded against a capacity of 6 spaces in both the half-term and pre-Christmas surveys.

Comparison Across Survey Periods

Differences between the three survey weeks are relatively subtle. The neutral and half-term weeks show broadly similar occupancy profiles, while the pre-Christmas surveys display slightly higher evening demand, particularly on streets closest to town centres such as Hartford Road and Montague Road. However, the dominant influence on on-street demand appears to be time of day rather than season, with evening residential parking demand consistently exceeding daytime levels regardless of survey period.

6.0 STAKEHOLDER ENGAGEMENT

6.1 PURPOSE AND OVERVIEW

A Stage 1 stakeholder engagement exercise was undertaken to inform the development of the Car Park Strategy. The engagement focused on understanding how council owned off-street car parks are currently used and perceived by residents, visitors, and businesses, and to identify priorities for improvement. This stage provides a baseline evidence position, ensuring that the emerging strategy responds to real-world user experience and local needs.

This engagement formed part of a structured two-stage engagement approach. Stage 1 captured views on the existing parking offer, while Stage 2 will seek feedback on the draft strategy, vision, and policy direction, directly informed by the findings summarised below. A separate more comprehensive engagement feedback report has been produced to provide more detailed analysis, with a high-level summary included below.

6.2 ENGAGEMENT REACH AND REPRESENTATION

The Stage 1 user survey generated a strong level of engagement, with 1,546 completed responses received over a six-week period. The vast majority of responses (1,522) were from residents and visitors, alongside 24 responses from businesses, providing an additional perspective on parking impacts on trading and staff access.

Responses were geographically well distributed across the district. Over 90% of responses originated from the district's main towns, reflecting where parking demand and usage is most concentrated. St Neots generated the highest proportion of responses (38%), followed by Huntingdon (27%) and St Ives (17%). Responses were also received from surrounding villages, demonstrating that parking is an issue of district-wide relevance rather than one confined solely to urban centres.

This breadth of participation provides confidence that the findings represent a robust and representative evidence base to inform the strategy.

6.3 WHY PEOPLE USE COUNCIL CAR PARKS

Across Huntingdonshire, shopping is the dominant reason for using council owned car parks, cited by approximately 75% of respondents. Leisure trips account for a further 12%, with smaller proportions visiting for work or other purposes such as medical appointments, volunteering, or visiting friends and family. These results underline the importance of off-street parking in supporting town centre vitality and everyday services.

The prominence of shopping and short-duration activities aligns closely with the survey based duration of stay and parking act data, reinforcing the importance of maintaining effective short-stay provision within town centres.

6.4 OVERALL PERFORMANCE AND EXPERIENCE

At a district-wide level, 53% of respondents stated that they had not experienced parking problems within council owned car parks in the last 12 months. This is a positive finding and broadly consistent with benchmarks from comparable local authority parking surveys, indicating that the current parking system generally functions effectively for many users.

However, some respondents reported experiencing issues, and these responses provide valuable insight into where targeted improvements could deliver the greatest benefit.

6.5 KEY ISSUES IDENTIFIED

Among respondents who reported issues, the most commonly cited problem was difficulty finding a parking space, particularly during peak periods such as Saturdays or midday weekdays. This issue was most frequently associated with high-demand town centre car parks, notably Tebbutts Road (St Neots) and Sainsbury's (Huntingdon), both of which are known from survey data to experience sustained high occupancy.

This finding reinforces the importance of managing turnover and ensuring that short-stay parking is prioritised in locations that support retail and service activity.

Parking charges were the single most frequently raised issue in open text responses. Many respondents expressed concern that charges, particularly for short stays, are high relative to nearby towns or out of town locations offering free parking. Importantly, feedback shows that acceptance of charges improves where users can see a clear link between pricing and service quality, maintenance, or investment in facilities.

This highlights the importance of transparency and communication in any future pricing or tariff changes.

A large number of respondents reported frustration with payment systems, particularly where machines were unreliable, unclear, or affected by poor mobile signal for app-based payments. While many users are supportive of digital payment methods, there is a strong expectation that systems should be robust, intuitive, and supported by clear instructions and contingency options.

Around 16% of respondents identified as having a disability or limited mobility, providing a meaningful evidence base on accessibility issues. Over half of these respondents reported difficulty locating an available Blue Badge space at least some of the time, particularly in higher-demand car parks. This suggests that, while provision may be adequate in some locations, there are localised pressures that warrant review as part of the strategy.

6.6 BUSINESS PERSPECTIVES

Although the business survey generated a smaller sample, the findings are consistent and highly indicative. Over 75% of businesses reported having no private parking, and

78% stated that their customers rely on council owned car parks. This underlines the critical role that off-street parking plays in supporting the local economy.

Over 50% of businesses reported that they or their customers had experienced parking problems, most commonly related to space availability at busy times. These findings reinforce the importance of aligning parking management with economic and town centre objectives.

6.7 LOCALISED VARIATION

While district wide themes are clear, the engagement highlights that parking issues are often highly localised. Differences in car park layout, demand intensity, and surrounding land uses mean that user experience varies between towns and even between individual car parks. Larger towns such as Huntingdon and St Neots tend to show greater pressure and a higher incidence of reported issues, whereas smaller centres experience more intermittent or location specific challenges.

This finding supports the need for a strategy that combines district-wide principles with locally responsive policies and interventions.

6.8 STRATEGIC IMPLICATIONS FOR THE CAR PARK STRATEGY

Taken together, the Stage 1 engagement confirms that Huntingdonshire's off-street parking system broadly meets user needs but faces pressures at peak times and in key town centre locations. The evidence highlights strong demand for short-stay parking, sensitivity to cost and value for money, and the importance of reliable payment systems and accessibility.

Crucially, the feedback suggests that future changes are more likely to be supported where they are clearly communicated, proportionate, and demonstrably reinvested into improving the parking offer. These insights provide a robust foundation for the development of the draft Car Park Strategy and will directly inform the options and policy direction tested through Stage 2 consultation.

7.0 FORECASTING FUTURE GROWTH

7.1 INTRODUCTION

The baseline analysis presented in Chapter 5 demonstrates that, at a district wide level, the current supply of council owned off-street parking in Huntingdonshire is broadly sufficient to meet existing demand. However, this overall position masks important localised variations. Given the district's mix of larger market towns, smaller settlements, and destination-based facilities, it is essential that future parking provision is assessed on a town-by-town basis to ensure that areas experiencing pressure at particular times or locations are clearly identified and appropriately addressed.

The survey data highlights that parking pressure within Huntingdonshire is not uniform. In the larger town centres, most notably Huntingdon, St Neots, and St Ives, demand can be more intense and persistent, particularly within core retail and short-stay car parks and during peak trading periods such as Saturdays and the pre-Christmas period. In contrast, other locations experience pressure only intermittently, often linked to specific trip generators, events, or seasonal activity. This reinforces the need for a targeted and proportionate approach to future planning, rather than a single district wide solution.

Where capacity constraints are identified, the expansion or reconfiguration of existing car parks typically represents a more cost-effective and deliverable option than the provision of entirely new facilities. New car park development carries significant capital costs and requires careful consideration of location to ensure proximity to key destinations and demand generators. Without this, new provision risks underutilisation and poor value for money. Exceptions may include facilities designed to serve a specific strategic purpose, such as park and ride facilities, which would require strong alignment with the primary road network and effective onward travel options.

Opportunities to significantly increase off-street parking capacity within Huntingdonshire are constrained by the existing urban form, the availability of suitable land, and wider planning considerations, particularly within established town centres where competing uses for land are prevalent. While multi-level parking can provide a potential means of increasing capacity on some constrained sites, such solutions require careful consideration of deliverability, cost, operational impact, and townscape implications, especially in historic or tightly developed areas. As a result, substantial increases in parking capacity are unlikely to be achievable across the district and would need to be considered selectively on a site-by-site basis.

In this context, the provision of additional parking supply should be regarded as a measure of last resort. A range of demand management and optimisation measures can be employed to respond to forecast growth, including tariff and stay controls, improved turnover management, better utilisation of underused assets, and the promotion of alternative modes for longer-stay trips. These approaches can often deliver more immediate and cost-effective benefits than new build solutions, while also supporting wider transport, environmental, and town centre objectives.

Sustainability therefore remains a central consideration in forecasting future parking demand within Huntingdonshire. The emerging car park strategy will consider how anticipated growth, both within the district and across the wider sub-region, can be accommodated through a balanced approach that prioritises efficient use of existing assets, supports economic vitality, and aligns with longer-term transport and carbon reduction ambitions.

7.2 FORECASTING GROWTH METHODOLGY

To support the development of car park strategies and transport planning initiatives that consider the long-term impacts of traffic growth, the Department for Transport (DfT) has developed a forecasting tool known as TEMPro (Version 8.1). This software is specifically designed to estimate traffic growth by incorporating projections for housing, population, car ownership, trip rates, and employment within a specified area. It also accounts for origin and destination data, allowing it to incorporate general growth from surrounding areas and predict its effects on the targeted region. By generating growth factors for both baseline and future years, TEMPro provides valuable insights into anticipated changes in traffic patterns.

While forecasts of future travel behaviour are inherently subject to uncertainty due to numerous influencing factors and unforeseen circumstances, TEMPro is considered the most reliable tool for making these predictions. To mitigate the risks associated with deviations in forecasted traffic growth, it is advisable to have contingencies in place and to conduct regular reviews of parking in towns. This proactive approach will ensure that strategies, plans, and schemes remain aligned with evolving trends and demands.

Factors Influencing Future Parking Demand

Estimating future parking demand is a complex process, influenced by various factors:

1. **Availability of Parking:** The accessibility of parking significantly affects driving behaviour. An ample supply of parking increases the attractiveness of driving to a location. Conversely, a shortage of parking can deter drivers, either by encouraging alternative travel modes or discouraging visits altogether. Additionally, an abundant parking supply often correlates with lower parking charges, which can further stimulate demand. Determining latent demand in such scenarios is challenging.

2. **Sustainable Travel Options:** The availability of attractive alternatives to private car use, such as public transport, cycling, or walking, can reduce reliance on cars and consequently lower parking demand. However, sustainable travel may not meet the needs of all individuals, especially for trips involving the transport of goods or those made under specific circumstances.

3. **Parking Charges:** The cost of parking plays a critical role in influencing demand. High parking charges can deter car use, prompting people to use alternative modes of transport, visit different destinations, or forgo trips altogether. Conversely, low or

non-existent parking charges can encourage excessive car use, leading to potential environmental and social impacts.

4. **The Growth of the Internet:** Advances in digital technology have transformed how people conduct everyday activities. Online shopping, remote working, and access to real-time information about parking availability and pricing have all influenced travel patterns and parking demand. Additionally, the internet has facilitated innovations such as driveway rentals, car sharing, and bike hire, which further impact parking needs.

5. **Population Growth and Relocation:** As populations grow and relocate, the demand for goods, services, and parking evolves. People are not confined to traveling to their nearest destination, which can lead to shifts in regional parking demand patterns.

Factors Influencing Parking Supply

In addition to demand-related factors, several issues influence the supply of parking spaces. Development proposals often affect the availability and location of public parking. Car parks, particularly those identified as underutilised, are frequently considered for redevelopment. In Huntingdonshire, only one car park has been flagged as underutilised (Bridge Place, Godmanchester). While this site presents an opportunity for alternative land use or redevelopment, efforts such as regeneration or local area improvements may also increase the usage.

Applying TEMPro to Forecast Parking Demand

TEMPro growth data has been applied to current survey data to project parking demand across the Huntingdonshire district over the next 20 years, extending to 2045. Instead of using trip end growth data, growth in car ownership has been applied, as it represents a higher projected increase. The resulting figures, presented in Tables 38 and 39, reflect base-level projections that assume growth within the current framework. Future regeneration projects and other improvements within the district are likely to lead to further increases in parking demand beyond these baseline figures.

This predictive modelling provides a valuable foundation for developing strategies that align parking provision with anticipated growth, ensuring that the district's parking infrastructure supports economic vitality, environmental sustainability, and the needs of its residents and visitors.

From...	To...	Origin Trip Growth	Destination Trip Growth	Average Trip Growth
2025	2030	1.0155	1.0207	1.0181
2025	2035	1.0173	1.0263	1.0218
2025	2040	1.0219	1.0350	1.0285
2025	2045	1.0288	1.0460	1.0374

Table 38 - Predicted growth TEMPRO Version 8.1

From...	To...	Don't own a Car	own 1 Car	Owns 2 Cars	Owns 3+ cars	All Cars

Table 39 - Car Ownership TEMPRO Version 8.1

7.3 IMPACT ON PARKING ACROSS HUNTINGDONSHIRE

It is acknowledged that whilst TEMPro provides a good basis for estimating background growth across the district in overall terms, it may not necessarily be reflective of the specific locations of growth and consequently parking demand within specific car parks in the towns.

It is important that the parking strategy fits as one element of the coherent overarching transport plan that covers parking across the district, which is the driving force behind the parking strategy. Care should be taken to ensure that the proposed level of parking is not set too high as to inadvertently encourage car use to access towns to the detriment of more sustainable modes, particularly if doing so would be likely to undermine the viability of such services and supporting infrastructure (e.g. congestion increasing delay for public transport vehicles or severance of key links for pedestrians and cyclists by major traffic corridors). This said, the future prosperity and economic success of towns will be reliant upon reasonable access by car.

The TEMPro figures are broken down into five-year periods. As this car park strategy Is being developed in 2025, the 20-year period covers the years 2030, 2035, 2040, and 2045. Tables 40-43 provide the forecasted growth in car park towns for each of the five-year periods. As previously discussed, this is based on many variables and should be taken as a guide only.

The parking surveys undertaken as part of this study provide a robust baseline against which future demand has been assessed. Rather than relying on isolated peak observations, the baseline has been derived by averaging peak occupancy levels across weekdays, Saturdays, and Sundays for each of the three survey periods. This approach intentionally smooths short-term anomalies and seasonal spikes, producing a representative measure of *typical high demand* that car parks are likely to experience on a regular basis. As such, the baseline does not reflect absolute worst-case conditions, but instead provides a realistic and repeatable benchmark of operational pressure.

This is particularly appropriate for forward forecasting, as it allows growth to be applied to a stable demand profile that reflects everyday user behaviour rather than exceptional trading days or one-off events. Using this averaged high-demand baseline ensures that future demand scenarios are both prudent and proportionate, supporting forecasts that are resilient to short-term variability while still sensitive to sustained growth in population, employment, retail activity, and travel demand across the district.

Table 43 – TEMPro forecasting across Huntingdonshire car parks for 2045

Across the district as a whole, the modelling indicates a steady but manageable increase in parking demand over time, with total peak occupancy rising from approximately 2,220 vehicles in the baseline to around 2,402 by 2030 (65% occupancy), 2,513 by 2035 (68%), 2,598 by 2040 (70%), and 2,708 by 2045 (73%). While this represents a gradual increase in overall utilisation, the forecasts highlight that pressure will not be evenly distributed and that capacity challenges will be concentrated in specific town centre locations.

In Godmanchester, growth remains modest in absolute terms, but the forecasts reinforce the existing contrast between car parks. Post Street is projected to exceed capacity by 2040 (102%) and rise further to 106% by 2045, indicating persistent pressure in this small, centrally located facility. Park Lane also approaches full capacity, reaching 100% by 2045. In contrast, Bridge Place continues to operate well below capacity throughout the forecast period, remaining below 10% occupancy even in 2045, confirming that location and function, rather than overall supply, remain the dominant factors shaping demand in the town.

Huntingdon experiences the most significant absolute growth in demand due to the scale and function of its town centre car parks. Several key sites are forecast to approach or exceed practical capacity within the forecast period. Ingram Street and Hinchingbrooke Country Park exceed 100% occupancy by 2040, rising to approximately 109% and 107% respectively by 2045. Great Northern Street and Princes Street both reach or exceed full capacity by 2045, while St Germain Street reaches 100% occupancy in the same period.

Larger facilities provide some moderation to town wide pressures. The multi-storey car park near Sainsbury's, despite absorbing significant growth, remains below capacity, reaching around 66% occupancy by 2045, while Riverside continues to operate with substantial spare capacity, remaining below 25% occupancy throughout the forecast horizon. Sainsbury's car park itself approaches full utilisation by 2045 at 98%, reinforcing its critical role in supporting town centre activity, although it's noted this car park regularly reaches capacity during noticeable peak periods.

Ramsey remains supply constrained throughout the forecast period. Mews Close, already operating at high utilisation, exceeds capacity by 2040 (103%) and rises further to 108% by 2045, indicating sustained pressure in the town's primary car park. One Leisure absorbs some demand growth but remains below capacity, reaching approximately 91% by 2045. The forecasts suggest that Ramsey's limited supply will continue to drive high turnover and pressure regardless of wider district trends.

In St Ives, demand growth is distributed across a broader range of car parks, reflecting the town's more diverse parking offer. Cattle Market (Short-stay) rises steadily to around 87% occupancy by 2045, while Globe Place reaches approximately 96% in the same year. One Leisure Indoor increases to around 70% occupancy by 2045, indicating moderate but manageable pressure. Longer-stay and peripheral sites, including Cattle Market (Long-stay) and One Leisure Outdoor, remain below capacity throughout the forecast period, providing some resilience within the town's overall parking network.

St Neots shows a clear concentration of future pressure within its core town centre car parks. Brook Street, Priory Centre, and Priory Park all exceed 100% occupancy by 2045, with Brook Street reaching approximately 108%. Tebbutts Road, the town's principal car park, remains heavily utilised, rising from 84% in 2030 to around 96% by 2045, while Waitrose also approaches full capacity at 101%. In contrast, Riverside Park continues to operate with substantial spare capacity, remaining below 50% occupancy even in 2045, reinforcing its role as a longer-stay, destination-led facility that offsets pressure elsewhere in the town.

Strategic Observations and Implications

Several clear themes emerge from the forecasts. First, district-wide capacity remains broadly sufficient, but pressures become increasingly concentrated in central, short-stay and retail-focused car parks. Second, larger and peripheral sites continue to play a critical balancing role, absorbing growth and preventing more widespread capacity exceedance. Third, by 2040–2045, a number of smaller town centre car parks are forecast to exceed practical capacity, indicating a growing need for active management rather than additional supply.

It is important to note that the figures presented reflect average peak demand levels, rather than the absolute highest demand observed across all survey periods. As a result, there will be specific days, seasons, or event-driven periods where parking demand exceeds the levels illustrated in this analysis, leading to short-term pressures that are higher than those captured in the forecasts. This means that while the modelling provides a reliable indication of typical high-demand conditions, it does not represent the upper limit of potential parking stress across the district.

Figure 43 provides an overview of the projected parking growth in Huntingdonshire car parks over five-year intervals, extending to 2045. The analysis compares these projections against the 85% occupancy threshold, a critical benchmark where the need for additional parking capacity may warrant further investigation, particularly if sustainable transport initiatives have already been implemented.

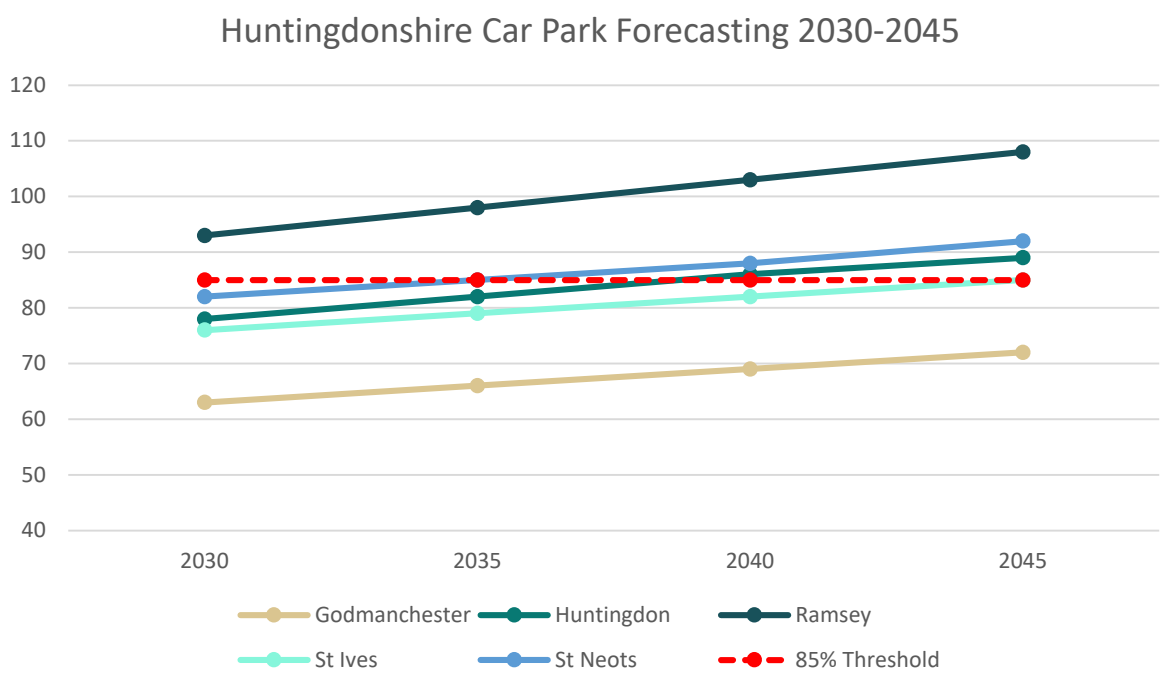

Figure 43 – Forecasting car park growth in Huntingdonshire car parks up to 2045

The town level forecasting illustrates a clear divergence in how parking demand is expected to evolve across Huntingdonshire between 2030 and 2045. By the end of the forecast period, Ramsey emerges as the most constrained town, with average peak demand projected to exceed the 85% occupancy threshold from 2035 onwards and to rise to around 108% by 2045. This indicates sustained and growing capacity pressure, reflecting Ramsey's relatively limited parking supply and concentrated town centre demand. Without intervention, this level of occupancy is likely to translate into regular difficulty in locating parking spaces during typical busy periods.

St Neots is also forecast to exceed the 85% threshold, with average peak demand reaching approximately 92% by 2045. While not as acute as Ramsey, this trend signals increasing pressure in the town's parking system, particularly within core short-stay and mixed-use car parks. Proactive management measures will therefore be important to ensure that town centre accessibility and turnover can be maintained as demand continues to rise.

Huntingdon is forecast to approach, but not materially exceed, the 85% threshold over the forecast period. By 2045, average peak demand is projected to be just under 90%, suggesting that while capacity pressures will increase, they are likely to remain manageable at an overall town level. That said, this masks variation between individual car parks, with some key retail focused sites expected to experience significantly higher localised pressure.

In contrast, St Ives remains below the 85% threshold throughout the forecast period, with demand rising steadily but remaining at around the low-to-mid 80% range by 2045. This indicates a comparatively resilient parking supply at a town wide level, although

continued monitoring will be important to manage pressures in the most popular central locations.

Godmanchester continues to exhibit the lowest overall level of forecast demand at a town wide scale, remaining well below the 85% occupancy threshold across all forecast years. However, this position is heavily influenced by the inclusion of Bridge Place car park, which accounts for a substantial proportion of the town's total parking supply and consistently records low utilisation. If Bridge Place were excluded from the assessment, average peak demand within the remaining car parks would increase markedly, reaching approximately 91% by 2030 and rising to around 103% by 2045.

This indicates that, while Bridge Place may not be essential to meeting day-to-day parking demand in its current form, its removal without mitigation would result in capacity shortfalls elsewhere in the town. Any future decisions regarding Bridge Place would therefore need to be accompanied by alternative provision or demand management measures to ensure that overall parking capacity remains sufficient.

Table 44 summarises the forecasting of future parking demand across all off-street car parks within the Huntingdonshire district over five-year periods up to 2045.

Table 44 – Summary of future forecasting in car parks across Huntingdonshire 2025-2045

8.0 HUNTINGDONSHIRE PARKING SERVICE

8.1 OVERVIEW

Huntingdonshire District Council operates a substantial portfolio of council owned off-street car parks across the district, serving a wide range of functions including town centre parking, leisure and retail access, commuter parking, and support for key community facilities. Given the role these assets play in supporting local economies, access to services, and visitor activity, it is essential that the Council delivers a high-quality, consistent, and customer focused parking service.

While this strategy is focused on off-street parking provision, it is recognised that users experience parking as part of a wider system that also includes on-street parking and the broader transport network. Ensuring coherence between off-street and on-street arrangements, particularly in town centres such as Huntingdon, St Neots, St Ives, Ramsey, and Godmanchester, is therefore important in delivering a seamless and legible experience for users.

Clear and effective signage and wayfinding are a critical component of this service, particularly for visitors and infrequent users who may be unfamiliar with local parking arrangements. Well-designed signage can reduce unnecessary circulation, improve access to appropriate car parks, and enhance first impressions of town centres, supporting repeat visits and sustained economic activity.

To deliver a modern, efficient, and user friendly parking service, the Council must consider the full range of service elements that influence the customer experience. Key areas include:

- **Car park signage and wayfinding** – ensuring signage is clear, consistent, and visible on approach and within car parks.
- **Payment options** – providing flexible, accessible payment methods, including cashless and app-based solutions, and clear information on charging periods.
- **Electric vehicle charging infrastructure** – expanding and upgrading EV charging provision to support the transition to low-emission vehicles.
- **Accessible and priority spaces** – ensuring sufficient provision for disabled users, families, and other priority groups.
- **Enforcement** – applying proportionate and effective enforcement to maintain availability, fairness, and compliance.
- **Information availability** – providing accurate, up-to-date parking information through the Council's website and digital platforms.
- **Short-stay parking provision** – supporting local businesses by enabling convenient parking for quick visits and high turnover.

- **Micro-mobility integration** – accommodating bicycles and other emerging modes where appropriate.
- **Parking technology** – making use of modern systems such as real-time occupancy data, improved payment technology, and enhanced back-office systems.

Each of these elements is explored in more detail in the sections that follow, drawing on evidence from car park assessments, benchmarking, and user behaviour analysis undertaken as part of the parking strategy. By addressing these service components in a coordinated and evidence-led manner, Huntingdonshire District Council can improve the overall parking experience, support economic vitality, and contribute to its wider environmental and sustainability objectives.

8.2 CAR PARK SIGNAGE AND WAYFINDING

As part of the development of the Huntingdonshire Parking Strategy, Ethos has undertaken a high-level review of car park signage and wayfinding across the district to identify opportunities for improvement. This review has considered both vehicular directional signage and pedestrian wayfinding, as well as the potential future role of Variable Message Signs (VMS) in managing parking demand more effectively.

There is a clear relationship between the vitality of town and local centres and the ease with which they can be accessed. For many visitors, particularly those unfamiliar with the area, the parking experience forms the first point of contact with a town. Ideally, town centres should be easily accessible from transport hubs such as off-street car parks, bus stops, rail stations, and locations offering secure cycle parking. Clear, early, and consistent signage is therefore essential in supporting accessibility and encouraging repeat visits.

Huntingdonshire District Council operates a substantial number of off-street car parks distributed across Huntingdon, St Neots, St Ives, Ramsey, and Godmanchester. This range of provision gives visitors choice and flexibility, allowing them to select the most appropriate car park for their destination. However, without effective signage on the highway network, this choice is not always clear or intuitive. Directional signage remains the primary means by which drivers can identify suitable parking locations and make informed decisions before entering town centres.

The review identified that, across much of the district, car park signage is limited in both coverage and visibility. In many locations, signage is small, inconsistently designed, or positioned too close to car park entrances to be effective. As a result, drivers often encounter parking information only after they have already navigated into the town centre, reducing the opportunity to manage demand efficiently and increasing unnecessary circulation. This can lead to certain car parks being disproportionately used while others remain underutilised.

Where signage does exist, it is often located immediately adjacent to the car park itself, or quite inconspicuous through vegetation or street furniture. While this has some value

in confirming arrival, it does little to assist drivers approaching from the wider road network. To be effective, parking signage needs to be positioned on key approach routes, and where possible on strategic corridors, providing early direction and allowing drivers to make decisions before reaching more constrained parts of town centres.

Figure 44 provides examples of the car park directional signage in place across the district including Huntingdon, St Ives, and St Neots.

Figure 44 – Examples of car park directional signage across Huntingdonshire

Wayfinding is equally important in shaping the overall parking experience. The effectiveness of vehicular signage can be undermined if onward pedestrian routes from the car park to town centre destinations are unclear. For visitors unfamiliar with Huntingdonshire's towns, poor wayfinding can create confusion, lengthen walking journeys, and detract from the overall experience.

Common wayfinding solutions include fingerpost signage directing pedestrians to key destinations such as town centres, toilets, leisure facilities, bus and rail stations, and riverside or cultural attractions. These can be supplemented by map-based monolith signs that provide orientation, key walking routes, and local information. Car parks are a particularly important location for such signage, as they represent the starting point for many visitor journeys.

Whilst there is wayfinding in place across the district, there appears to be a stronger provision in St Neots in particular. Although there are improvements that can be made, several car parks either have wayfinding in place within the car park, or within close proximity to the car park, as show in Figure 45.

Figure 45 – Examples of wayfinding in St Neots car parks

The assessment indicates that improvements to both vehicular signage and pedestrian wayfinding could significantly enhance the efficiency of town centre parking, reduce unnecessary vehicle movements, and support higher turnover of spaces. Enabling visitors to reach their destination quickly and confidently not only improves the parking experience but also maximises the economic benefit to town centres.

As part of this high-level assessment, four broad types of car parking signage have been considered:

- Strategic parking signage, providing directional information to multiple car parks or parking zones within a town.
- Advanced directional signage, guiding drivers to specific clusters of car parks from key approach routes.
- Variable Message Signs (VMS), offering real-time information on parking availability within larger town centres.
- Individual car park signage, either static or variable, identifying specific sites and their availability or restrictions.

Together, these measures provide a framework for improving parking legibility across Huntingdonshire and form an important component of delivering a more efficient, visitor friendly, and economically supportive parking service.

Figure 46 provides examples of these types of signs that can be installed in the towns.

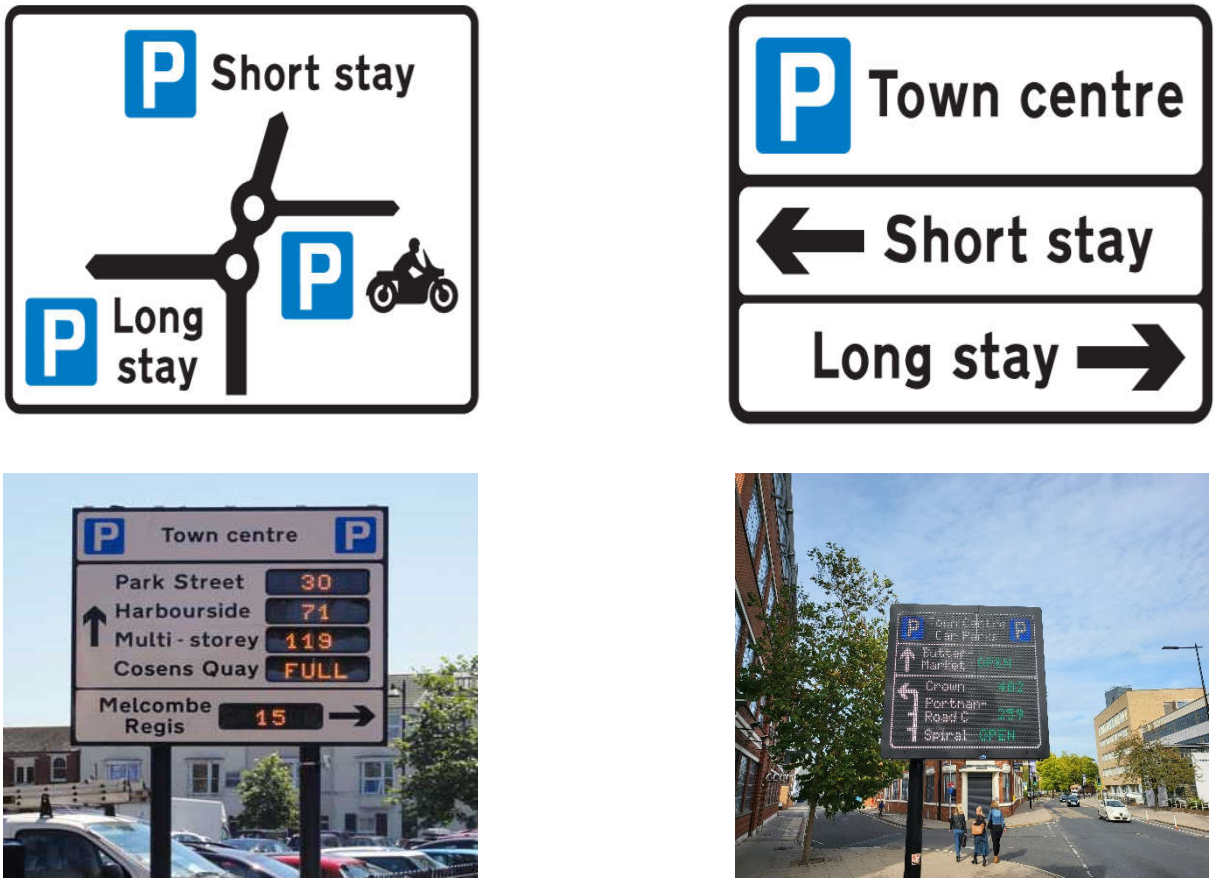

Figure 46 – Examples of car park signage

8.2.1 STRATEGIC CAR PARK SIGNAGE

Strategic car park signage is intended to provide early direction to parking areas before drivers enter constrained town centre environments. These signs should be positioned on key approach routes and use clear, generic terminology such as *Town Centre Parking*, *Short Stay*, or *Long Stay*, rather than listing individual car parks.

This form of signage is particularly relevant in Huntingdonshire's larger towns, where multiple entry routes converge and where early guidance can significantly influence driver behaviour. Strategic signage allows demand to be distributed more evenly across the parking network, improving efficiency and reducing pressure on central streets.

8.2.2 ADVANCED DIRECTIONAL CAR PARK SIGNAGE

Advanced directional signs provide more specific guidance, directing drivers to a limited number of named car parks or parking clusters. These signs are most effective when located on primary distributor roads or at key junctions on approach to town centres. Where appropriate, they can also reference major trip generators such as town centres, leisure facilities, rail stations, or retail areas.

In Huntingdonshire, advanced directional signage could play an important role in guiding drivers towards underutilised or peripheral car parks, helping to manage demand in areas prone to congestion or capacity constraints.

8.2.3 CAR PARK VARIABLE MESSAGE SIGNS (VMS)

VMS are one of the most effective tools for providing real time, concise information to drivers. These signs can display changing messages, including parking availability, car park status (e.g. *Spaces*, *Full*, *Closed*), or alternative parking options when sites reach capacity.

A positive example already exists in Huntingdon, where a car park guidance VMS has been installed near the entrance to Sainsbury's. This installation is a valuable asset, helping to direct drivers efficiently within a town that is constrained by a one-way system. Given the complexity of Huntingdon's road layout, there is strong justification for replicating this approach at one or two additional locations, capturing traffic from other key entry points and further reducing unnecessary circulation.

There is also a clear case for introducing VMS in St Ives and St Neots, where targeted installations could improve the visibility and utilisation of larger car parks:

St Ives

- Along Harrison Way, close to the roundabout with Meadow Lane, capturing traffic approaching from the south.
- Along Houghton Road (A1123) near the crossroads with Ramsey Road, intercepting traffic entering the town from the north and west.

St Neots

- Near the roundabout junction of St Neots Road and The Paddock, promoting Riverside Park car park, which is large but currently underused. This would help divert traffic away from the bridge and High Street, areas that are frequently subject to congestion.
- Along Cambridge Street, on the approach to the signalised junction with Huntingdon Street, providing early guidance before vehicles enter the town centre.

The effectiveness of VMS is highly dependent on their location. Signs must be positioned where drivers have sufficient time to read and respond to the information, without creating visibility or safety issues. Given their cost, it is essential that locations are selected to maximise exposure to the greatest number of vehicles, typically where routes converge. Accurate and reliable data is also critical; if displayed information does not reflect real conditions, driver confidence in the system will quickly erode.

Where car park infrastructure does not support accurate space counting, simpler messages such as *Spaces Available* or *Car Park Full* may be more appropriate than numerical counts.

8.2.4 SPECIFIC CAR PARK SIGNAGE (STATIC OR VMS)

Once drivers have been guided into a town, specific car park signage is required to direct them to individual sites. These signs should be clearly visible, unobstructed, and positioned at decision points where drivers need to choose a route.

Most council operated car parks should have at least one dedicated directional sign to support balanced occupancy across the network. Smaller car parks, or those closely associated with other uses (such as supermarkets), may require less prominent signage. Where infrastructure allows, VMS can be used to indicate availability, however, in many cases static signage will provide better value for money.

8.2.5 WAYFINDING SIGNAGE

Wayfinding signage for pedestrians is currently limited across Huntingdonshire and is often concentrated within town centres rather than at car parks, where many visitor journeys begin. This can create confusion for visitors unfamiliar with local layouts and reduce the overall quality of the parking experience.

It is recommended that consistent wayfinding signage be introduced at all council operated car parks, guiding users to key destinations such as town centres, leisure facilities, toilets, rail and bus stations, riverside routes, and cycle networks. Monolith-

style signs offer particular value, providing maps, walking times, and points of interest in a clear and accessible format.

To support long-term regeneration and growth, the Council should consider preparing a district-wide signage and wayfinding strategy. This would establish consistent design principles, placement standards, and maintenance requirements across Huntingdonshire's towns, ensuring clarity, coherence, and value for money both now and in the future.

8.3 CAR PARK REVENUE

Car park revenue represents a critical income stream for Huntingdonshire District Council, supporting the ongoing maintenance of parking assets, contributing to wider service delivery, and enabling reinvestment in infrastructure and technology. The Council operates a diverse portfolio of off-street car parks across its main market towns, leisure destinations, and recreational sites. This diversity creates differing demand profiles, influenced by town-centre activity, leisure use, and seasonal variation. An analysis of parking revenue generated during the most recent reporting period provides valuable insight into financial performance, usage patterns, and payment behaviour across the district.

Overview of Revenue Performance

Across Huntingdonshire, council operated car parks generated a total income of approximately £2.4 million between 1st April 2024 and 31st March 2025. This income is generated from the district's three principal towns, Huntingdon, St Neots, and St Ives.

- Huntingdon is the highest-performing location, generating £1.08 million, equivalent to 47% of total district-wide income.
- St Neots follows with £651,000 (28% of total income).
- St Ives generates £591,000 (25% of total income).
- Hinchingbrooke Country Park contributes a comparatively modest £69,000, reflecting its recreational function and lower charging intensity.

These figures demonstrate the central role that Huntingdonshire's main town centres play in supporting parking income and underline the importance of maintaining high-quality, accessible parking provision in these locations.

Figure 47 illustrates the breakdown of revenue generated across each of the three towns that has car park charges in place in Huntingdonshire.

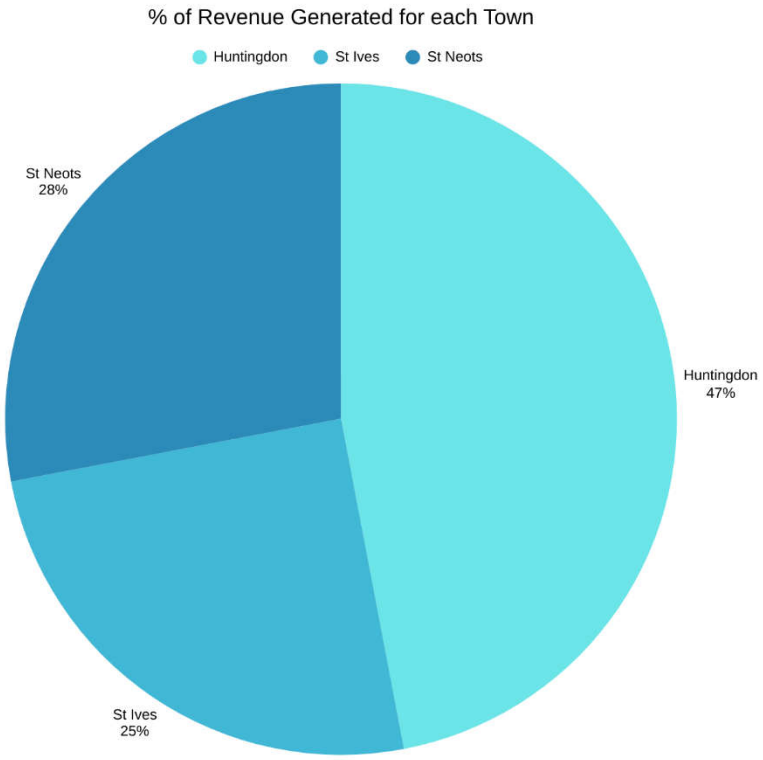

Figure 47 – Breakdown of income generated across HDC chargeable car parks

Analysis of the parking income identifies a small number of car parks that make a disproportionate contribution to the overall financial performance of the parking service. These sites are typically well located, offer high turnover, and are closely associated with major retail, employment, and town centre destinations.

The Sainsbury's car park in Huntingdon is the single highest-performing site in the district, generating £549,124.96 in income over the year. Its strong performance reflects consistent short-stay demand, high levels of activity throughout the day, and its strategic role in supporting town centre retail. Within Huntington, the other high-performing site is the Huntingdon Multi-Storey car park (£227,375.46), which provides a critical function within the town and supports a wide range of retail and employment trips.

In St Neots, Tebbutts Road car park (£263,037.49), is a key long-stay facility that benefits from its proximity to the town centre and strong commuter and visitor demand. Waitrose car park (£226,900.92) also performs strongly, driven by high short-stay turnover and its close relationship with the town's retail offer. Similarly, in St Ives, the Cattle Market Short-Stay car park (£217,084.04) is a significant income generator, reflecting its central location and role in supporting town centre activity.

Collectively, these high-performing car parks account for a substantial proportion of the Council's total parking income and represent the core financial assets within the parking portfolio. Their performance underlines the importance of protecting capacity at these locations, maintaining high standards of operation and customer experience, and prioritising them for investment in areas such as signage, payment technology, and electric vehicle infrastructure.

At the other end of the spectrum, the income analysis also identifies a group of car parks that generate comparatively low levels of revenue over the 2024/25 financial year. In most cases, this reflects the intended function and context of these sites, rather than underperformance in operational terms.

Lower-performing car parks are typically smaller in scale, located away from primary retail frontages, or designed to support specific uses such as residential access, leisure, or countryside destinations.

Examples include short-stay and local car parks such as Brook Street in St Neots, Ingram Street in Huntingdon, and Bridge Place in Godmanchester, all of which generate modest annual income relative to their capacity. These sites tend to serve localised demand, short visits, or overflow parking rather than acting as primary town centre destinations. Their role is therefore more closely aligned with supporting accessibility and managing on-street pressure than maximising revenue.

Leisure focused sites such as Hinchingbrooke Country Park also sit within the lower income range. While these car parks attract significant user numbers, income levels are constrained by lower tariffs and the recreational nature of trips. In such cases, financial performance should be considered alongside wider outcomes, including public health, wellbeing, and access to green space.

The analysis highlights that low income does not necessarily indicate poor performance. Instead, it reinforces the importance of assessing these car parks through a place based and function-led lens, recognising their contribution to local communities, visitor access, and the wider transport network. Future decisions relating to these sites should therefore focus on proportional management, cost control, and targeted improvements, rather than income maximisation, while ensuring they continue to meet local needs.

Payment Method Trends

Analysis of payment methods highlights a well-balanced mix of transaction types, reinforcing the need to maintain a range of payment options to meet user preferences. This is illustrated in figure 42 below.

Across the district:

- Card payments generate the highest share of income, contributing approximately £1.01 million;
- Coin payments remain significant, generating around £721,000;
- Phone-based payments account for approximately £660,000, demonstrating strong uptake of cashless and digital solutions.

In Huntingdon specifically, card payments account for the largest share of income (£448,000), followed by coin (£331,000) and phone payments (£305,000). Similar patterns are evident in St Neots and St Ives, indicating consistent user behaviour across the district. While digital payments continue to grow in importance, the continued use of coin payments highlights the need for inclusive systems that cater to all users.

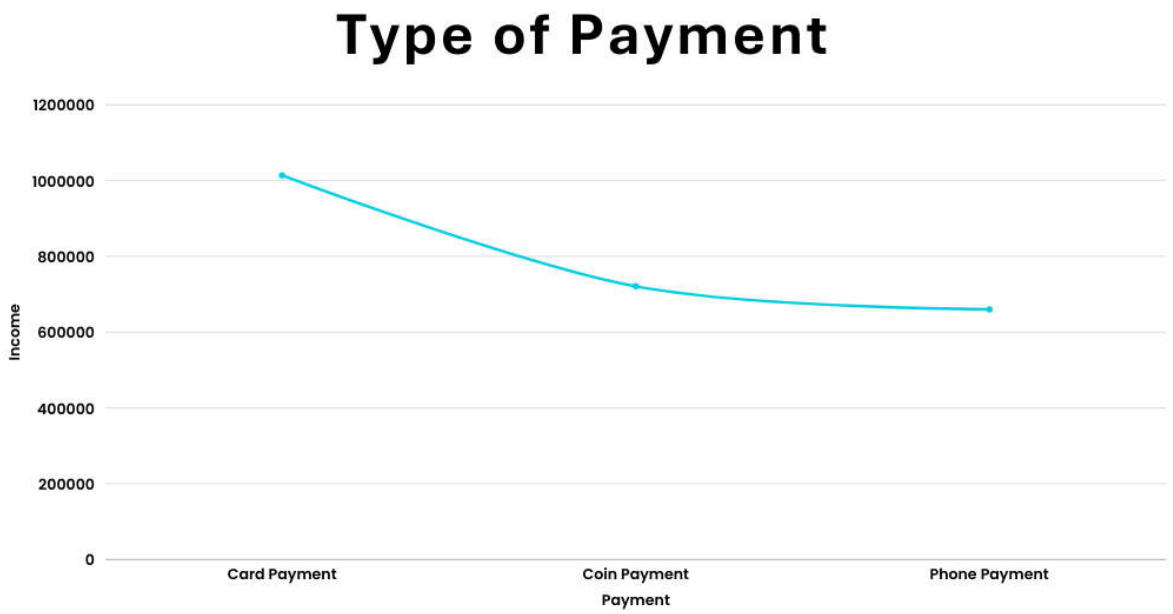

Figure 48 – Breakdown of payment options used in HDC car parks

User Activity and Demand

The data also highlights high levels of parking activity across the district, with approximately 1.86 million individual parking transactions recorded during the period under review. Of these, around 868,000 transactions occurred in Huntingdon, approximately 487,000 in St Neots, and around 440,000 in St Ives. This distribution closely mirrors the income profile and reflects the relative scale and intensity of retail, employment, and leisure activity within each town.

Hinchingbrooke Country Park recorded approximately 61,000 users, reinforcing its role as a leisure focused destination rather than a core revenue generator.

Key Observations

The revenue analysis highlights several important considerations for the parking strategy:

- Income is highly concentrated in the district's main towns, making these locations critical to the financial sustainability of the parking service.
- A balanced mix of payment methods remains essential, with no single payment channel dominating to the exclusion of others.
- Digital and phone-based payments are now a substantial contributor to revenue and should continue to be supported and expanded.
- Leisure and recreational car parks, such as Hinchingbrooke Country Park, serve an important social and wellbeing function but contribute relatively little to overall income.

Implications for the Parking Strategy

Given the strong performance of Huntingdon, St Neots, and St Ives, continued investment in these locations should be prioritised. This includes maintaining asset quality, improving signage and wayfinding, expanding EV charging provision, and ensuring payment systems remain modern and reliable.

Lower-revenue sites should be considered within the context of their wider social and environmental value rather than purely financial performance. For locations such as Hinchingbrooke Country Park, the emphasis should remain on accessibility, visitor experience, and sustainability rather than income maximisation.

Overall, the revenue data reinforces the importance of an evidence-led approach to parking management in Huntingdonshire, one that balances financial resilience with accessibility, economic vitality, and wider policy objectives.

8.4 UNDERUTILISATION OF CAR PARKS

An important element of the strategy is the identification and management of underperforming car parks, recognising that not all sites contribute equally to meeting demand or supporting town centre activity. Where car parks demonstrate consistently low levels of utilisation, there is an opportunity to consider alternative or complementary uses that better reflect local needs, land values, and future growth pressures. Any such consideration must be evidence-led and balanced against the role that these sites may play in the wider parking network over the medium to long term.

Underutilised car parks can present several strategic options. In some cases, sites may be suitable for partial or full repurposing, including redevelopment for housing, commercial, community, or mixed-use schemes, particularly where they are well located and aligned with wider regeneration objectives. Where redevelopment is pursued, this may need to be accompanied by mitigation measures, such as the retention of some parking capacity, revised tariff structures, or priority permit arrangements, to ensure that local parking needs continue to be met. In other cases, lower utilisation may indicate the need for improved promotion, clearer signage and wayfinding, or revised pricing and permit concessions to encourage greater use and rebalance demand across the parking stock.

Across Huntingdonshire, Bridge Place in Godmanchester is the only car park that exhibits a consistent and sustained pattern of underutilisation across survey periods and forecast years. Demand at this site remains low relative to its capacity, and its inclusion materially suppresses town wide utilisation figures. On this basis, Bridge Place represents the clearest opportunity for potential redevelopment within the district. However, forecast modelling indicates that overall parking demand in Godmanchester is expected to exceed supply in the future if Bridge Place were removed without replacement. Any redevelopment proposals would therefore need to incorporate alternative parking provision, demand management measures, or both, to ensure that the loss of capacity does not result in pressure elsewhere in the town.

Other car parks that show lower levels of utilisation, such as Riverside in Huntingdon and Riverside Park in St Neots, require a more cautious interpretation. These sites serve a specific functional role within the parking network, supporting leisure, riverside, and seasonal activity. While they may appear underutilised during neutral or off-peak survey periods, demand is likely to increase significantly during the summer months and during periods of good weather or events. As a result, these car parks are not considered underperforming in strategic terms, and there is limited scope for repurposing without undermining their ability to accommodate seasonal demand and protect more central car parks from overspill pressure.

More generally, the presence of underutilised capacity within the district does not automatically indicate surplus parking. Instead, it highlights the importance of understanding when, why, and how different car parks are used. Targeted interventions, such as differential pricing, time limited concessions, permit incentives, or improved communication and wayfinding, can often be effective in redistributing demand and improving overall network efficiency, reducing the need for new provision elsewhere.

This strategy therefore should adopt a measured approach to underutilisation. Only those sites that demonstrate consistently low demand, limited strategic function, and strong alignment with wider planning objectives should be considered for repurposing. Where such opportunities arise, they should be progressed in a way that supports future growth, maintains resilience in the parking network, and complements broader town centre and regeneration ambitions.

8.5 PARKING TARIFFS

Huntingdonshire District Council operates a uniform parking tariff structure across the district, applying the same short-stay and long-stay charges in all council owned car parks regardless of town or location. This approach offers clear advantages from both a management and customer perspective. For the Council, it simplifies administration, reduces complexity in enforcement and communications, and ensures consistency in

income forecasting. For users, it provides clarity and predictability, making parking easier to understand and reducing the risk of inadvertent non-compliance.

Short-stay charges are set at £1.00 for one hour, £1.80 for two hours, £2.60 for three hours, and £3.40 for four hours, while long-stay tariffs are £1.60 for two hours, £2.00 for three hours, £2.40 for four hours, and £4.00 for all-day parking. When benchmarked against neighbouring authorities and statistical comparators, these charges are not considered excessive. In most cases, they sit firmly within the lower to mid-range of the comparator group and are materially lower than those applied in larger urban centres such as Peterborough, Warwick, and East Hertfordshire.

The benchmarking demonstrates that Huntingdonshire's tariffs remain competitive and affordable, particularly for longer stays. While some neighbouring districts continue to offer free parking for short or long durations, these models are becoming increasingly uncommon due to financial pressures on local authorities. Against this backdrop, Huntingdonshire's approach strikes a balanced position, supporting town centre accessibility and economic activity while generating a sustainable income stream.

Importantly, the evidence suggests there is scope to consider modest increases to both short-stay and long-stay tariffs without materially impacting demand. Given the district's relatively low position in the pricing hierarchy, small, incremental uplifts would still leave Huntingdonshire competitive when compared with many similar authorities. Such changes could strengthen income resilience while remaining affordable for users.

Impact of Uniform Pricing on Demand Distribution

While uniform pricing brings operational and customer benefits, it also has implications for how demand is distributed across the parking estate. Car parks located closest to key destinations, such as Sainsbury's in Huntingdon, the Cattle Market Short-Stay car park in St Ives, and the Waitrose car parks in St Neots, experience consistently higher demand due to their proximity to retail and town centre attractions. Conversely, car parks located slightly further from the core destinations, such as Riverside in Huntingdon and Riverside in St Neots, tend to be less intensively used, despite offering good capacity and accessibility. It is acknowledged that these car parks will be subject to higher demand in the summer months due to the proximity to riverside walks, and open spaces.

This pattern is typical in districts with flat pricing structures and indicates that price is not currently being used as a demand-management tool. Introducing targeted concessions, time limited discounts, or differential pricing in selected locations could help rebalance demand across the parking portfolio. For example, modest incentives in peripheral car parks could encourage users to park once and walk, reducing pressure on the most popular sites while improving utilisation elsewhere.

8.6 PAYMENT OPTIONS

Payment options are a fundamental component of Huntingdonshire District Council's parking service, directly influencing accessibility, user confidence, and revenue

generation. Across the district, council operated car parks predominantly operate on a Pay & Display basis, with payment accepted via coin, debit/credit card (contactless and chip & pin), and mobile phone payments. This range of options provides a broadly inclusive offer. However, the condition and age of the payment infrastructure presents a clear challenge for the medium term.

Current Payment Infrastructure

The majority of payment terminals currently in use across Huntingdonshire are older-generation Pay & Display machines. While these machines continue to operate reliably and support multiple payment methods, their age suggests that replacement is likely to be required within the next two to three years. As technology evolves and user expectations continue to shift, maintaining aging equipment presents an increasing risk of obsolescence, reduced functionality, and higher maintenance costs.

Importantly, the existing terminals already support coin, card, and phone payments, ensuring that the parking service remains accessible to a wide range of users. This hybrid approach remains essential in Huntingdonshire, where fully cashless systems could risk excluding certain groups, particularly older residents or infrequent users who may be less comfortable with digital-only payment methods.

Flowbird Check-In / Check-Out Functionality

A notable feature of Huntingdonshire's current Pay & Display infrastructure is the inclusion of the Flowbird "check-in / check-out" functionality. This system represents an innovative hybrid approach, sitting between traditional Pay & Display and full pay-on-exit models. Users "check in" at the terminal on arrival and "check out" when leaving, with payment calculated based on actual length of stay.

From a technical perspective, this is a progressive and customer focused solution that reduces the risk of over or under payment and offers greater flexibility than conventional Pay & Display systems. However, feedback received by the Council indicates that some users find the system confusing, particularly in relation to temporary holding charges retained on bank accounts during the visit. These concerns have led to uncertainty

among users who are unfamiliar with how the system operates, despite no evidence of incorrect final charges being applied.

While these perceptions present a communication challenge, the underlying technology remains sound and offers significant potential benefits. As such, the check-in / check-out functionality should be retained and supported in any future replacement programme, with improved on-street messaging, clearer instructions at terminals, and consistent branding to improve user understanding and confidence.

Emerging Payment Technologies

New payment technologies continue to evolve, including QR code payments, vehicle registration based systems, and app-only models. While these options can improve convenience, they also introduce new risks. Recent national examples of fraudulent QR code scams affixed to parking payment machines highlight a significant and ongoing risk associated with QR-based payment systems. Until these risks can be fully mitigated through secure technology, robust controls, and enforceable safeguards, QR code payments should not be considered a suitable option for inclusion within the Council's parking payment offer.

More advanced solutions, such as ANPR enabled pay on exit systems, offer a highly intuitive user experience by charging only for time spent on site. However, these systems require significant capital investment and are typically only viable in large, high turnover car parks with suitable layouts.

Pay on Exit

None of Huntingdonshire District Council's car parks currently operate a full pay on exit system. While widely regarded as the most user friendly option, particularly for longer or uncertain stays, pay on exit systems require careful consideration of capital cost, operational impacts, and site suitability.

In Huntingdonshire, only a limited number of larger, high-demand car parks would be likely candidates for such systems in the future such as the Multi-Storey car park in Huntingdon, or Tebbutts Road in St Neots. Any move towards pay on exit would need to be supported by detailed feasibility work, including assessment of queuing impacts, layout constraints, enforcement implications, and financial viability.

Recommendations

Modernise Payment Infrastructure

The Council should plan for the phased replacement of existing Pay & Display machines within the next two to three years to mitigate the risks associated with aging infrastructure and to ensure service continuity. Any replacement programme should minimise disruption to users and maintain operational resilience. It is important that a hybrid payment offer is retained, allowing users to pay by coin, card, and mobile phone, to ensure the parking service remains inclusive and accessible to all user groups. All new terminals should also support the Flowbird check-in / check-out functionality, supported by clearer on-site guidance and improved signage, to address current user concerns and increase confidence in how the system operates.

Future-Proof the Payment Offer

Replacement terminals should be specified to allow integration with future technologies, including enhanced app-based payment platforms and the potential for ANPR compatibility, should this be required at a later date. While emerging technologies such as QR-based payments may offer convenience, they should be approached with caution. Given current fraud risks, QR payments should only be reconsidered once robust safeguards are demonstrably in place and supported by clear user communication.

Balance User Experience and Cost

While pay on exit systems can deliver a highly user-friendly parking experience, they involve significant capital and operational costs. As such, they should only be pursued where the scale, layout, and revenue potential of a car park clearly justify the investment. In the short to medium term, the Council should prioritise improving the clarity, reliability, and consistency of the existing payment experience across the estate, rather than pursuing wholesale system change that may not represent best value for money.

8.7 ELECTRIC VEHICLE CHARGNING INFRASTRUCTURE

Huntingdonshire District Council currently provides electric vehicle (EV) charging facilities across a number of its council owned car parks. While the precise number and

specification of charge points varies by location and continues to evolve, the Council has adopted a formal Electric Vehicle Strategy, which provides the primary policy framework for the future rollout, prioritisation, and management of EV charging infrastructure across the district. This strategy should therefore be regarded as the key reference document guiding investment decisions and delivery.

At present, EV charge points within council car parks are predominantly located in town centre and key destination sites, reflecting the Council's focus on supporting accessibility, local services, and the transition to lower-emission travel. The majority of existing installations are understood to be slow chargers, suitable for longer dwell times associated with shopping, leisure, and town centre activity. Provision remains modest when considered against the total number of off-street parking spaces across the district, which is consistent with current levels of EV ownership but is expected to require expansion over time.

Usage Characteristics and Location Considerations

Evidence from wider parking studies indicates that EV charge point usage within local authority car parks is often lower than in workplace or residential locations, reflecting the typically shorter dwell times associated with town centre parking. This pattern is likely to be reflected in Huntingdonshire, particularly where charge points are located in long-stay or mixed-use car parks rather than facilities designed for rapid turnover.

However, there is an emerging opportunity to better align charger type with parking function. In particular, short-stay town centre car parks may benefit from a greater proportion of rapid chargers, allowing users to achieve a meaningful charge during shorter visits. This approach can improve utilisation rates, enhance customer convenience, and support local economic activity without increasing overall parking duration. It may also reduce the need for greater numbers in the shorter term.

Strategic Context and Future Demand

National policy commitments to phase out the sale of new petrol and diesel vehicles by 2035, combined with steadily rising EV ownership, mean that demand for publicly accessible charging infrastructure will continue to grow. Stakeholder feedback from

comparable districts consistently demonstrates increasing public expectation that council car parks will provide EV charging as a standard facility, particularly in town centres and at leisure destinations.

Huntingdonshire's adopted EV Strategy provides the appropriate mechanism for responding to this demand in a coordinated and cost-effective manner. The parking strategy should therefore support, rather than duplicate, this approach by identifying where car parks can play a complementary role within the wider charging network and where parking-specific considerations, such as dwell time, turnover, and revenue impact, should influence charger type and location.

Recommendations

Align Delivery with the Adopted EV Strategy

All future EV charging provision within council owned car parks should be delivered in line with Huntingdonshire District Council's adopted EV Strategy, ensuring consistency with wider energy, transport, and sustainability objectives.

Target Charger Type to Car Park Function

Consider increasing the proportion of rapid chargers in short-stay town centre car parks where dwell times are limited, while retaining slower chargers in long-stay locations where vehicles are parked for extended periods.

Prioritise High-Visibility, High-Demand Locations

Focus investment on car parks that support town centre retail, leisure facilities, and key trip generators, where EV charging can deliver the greatest customer and economic benefit.

Monitor Usage and Adapt Provision

Regularly review utilisation data to ensure that charge points are well used and remain aligned with changing patterns of EV ownership and parking behaviour.

Explore Partnership and Funding Opportunities

Continue to explore opportunities to work with private charging operators, energy providers, and external funding programmes to accelerate delivery while minimising capital and operational risk to the Council.

8.8 DISABLED AND CHILD PRIORITY SPACES

The provision of priority parking spaces for disabled users and for parents or carers travelling with young children is a critical component of an inclusive and accessible parking service. Disabled drivers typically require spaces located close to key destinations, with sufficient width to deploy mobility aids safely. Similarly, parent and carer bays provide essential additional space to allow children to be loaded and unloaded safely, particularly in busy or constrained car parks. Ensuring that these

facilities are appropriately located, well maintained, and sufficient in number is therefore fundamental to meeting user needs across Huntingdonshire.

Disabled Parking

Disabled parking bays are in consistently high demand across Huntingdonshire's car parks, with surveys and operational feedback indicating that occupancy levels are typically high during peak periods. Across the district, disabled bays regularly operate at or near capacity, with average occupancy estimated at 80%, and many sites experiencing full utilisation at certain times of day. This level of demand means that disabled drivers are frequently observed parking in standard bays, which in turn reduces the availability of general parking spaces and has implications for overall car park revenue.

Disabled parking is currently provided free of charge in all Huntingdonshire District Council car parks. While this policy supports accessibility and inclusion, rising numbers of Blue Badge holders nationally suggest that demand for disabled parking is likely to continue increasing. If this trend continues, the impact on standard parking capacity and income will become more pronounced. As such, any future changes to disabled bay provision should be carefully managed to ensure that any reduction or reconfiguration of disabled spaces is fully replaced elsewhere within the estate, avoiding the creation of a deficit in accessible parking.

In the medium to longer term, the Council may need to consider whether its approach to free disabled parking remains sustainable, particularly if growth in Blue Badge ownership continues to outpace overall parking capacity. Evidence from other authorities shows that some councils have introduced charging or partial charging for Blue Badge holders in high demand locations, or have reviewed concession structures to balance accessibility with financial sustainability. While no immediate change is recommended, this is an issue that warrants ongoing monitoring as part of the wider parking strategy.

Parent and Carer Priority Parking

Parent and carer parking bays are currently provided on a limited basis across the district and are predominantly located in car parks that primarily serve large supermarkets and

retail destinations. Notable examples include car parks associated with Sainsbury's in Huntingdon and Waitrose in St Ives and St Neots, where demand from families with young children is highest. These bays provide an important safety and convenience function, particularly in car parks with higher vehicle turnover.

While parent and carer bays are not legally enforceable, and misuse can occur, they nonetheless deliver clear practical benefits and are widely understood and respected by most users. Their presence supports safer movement within car parks and improves the overall customer experience for families. As such, these spaces should be retained and, where space allows, expanded, particularly in larger short-stay or retail focused car parks where family use is most prevalent.

Any expansion of parent and carer bays should be proportionate and carefully balanced against overall capacity requirements, recognising both their value to users and the limitations around enforcement.

8.9 PARKING INFORMATION ON HDC WEBSITE

For many users, particularly visitors and infrequent users, the Council's website is the first point of reference when planning a trip and understanding parking options. It therefore plays an important role in shaping expectations, influencing travel choices, and supporting efficient access to town centres and key destinations across Huntingdonshire. Ensuring that parking information is clear, accurate, and easy to navigate is essential to providing a positive user experience.

The Huntingdonshire District Council website currently provides a good level of parking-related information, including details on parking charges, the number of spaces in each car park, car park designation (short-stay or long-stay), operating hours, and the availability of electric vehicle charging facilities. This level of transparency is a clear strength and provides users with the core information needed to plan their journeys effectively.

However, there is scope to enhance the usability and functionality of the website to better support users, particularly those travelling into town centres during busy periods. At present, the website does not provide real-time or near real-time information on car

park occupancy or availability. Introducing live or indicative status information, such as whether a car park is filling, full, or has good availability, would help users make informed decisions, reduce unnecessary circulation, and support better distribution of demand across the parking estate.

Figure 49 provides an example from the Bath and North East Somerset parking webpage to demonstrate an example of best practice from a local authority.

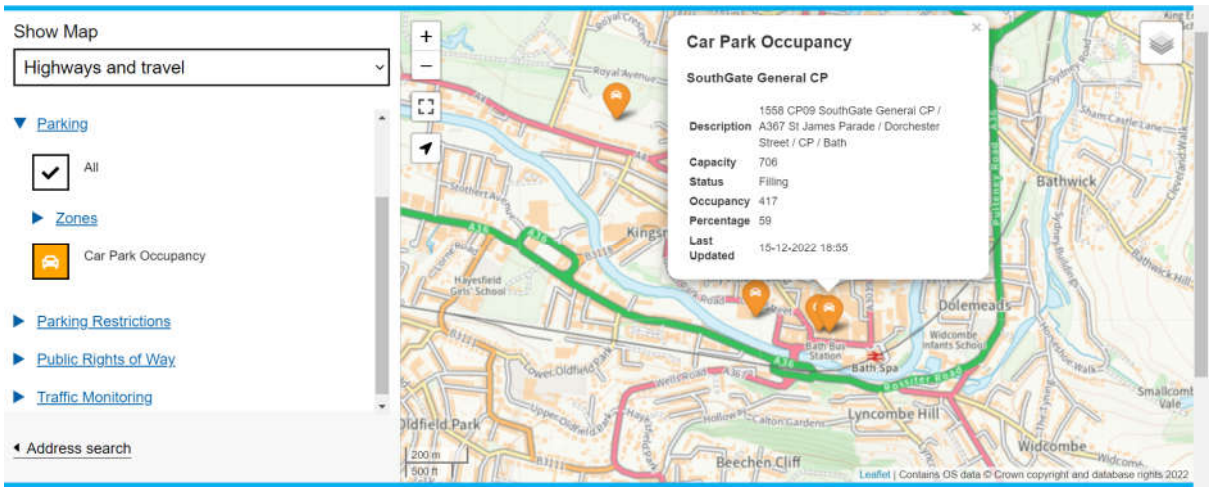

Figure 49 – Example of real-time parking information from a local authority website

Navigation could also be improved by grouping car park information by town (for example Huntingdon, St Neots, St Ives, and Ramsey), rather than presenting a single district-wide list. This would make it easier for users to quickly identify the most appropriate parking options for their destination, particularly on mobile devices where clarity and simplicity are critical.

Enhancements to mapping functionality would further strengthen the user experience. Clear visual identification of car park locations, access routes, and proximity to key destinations would assist visitors unfamiliar with the area. Ensuring that the website is fully optimised for smartphone use is particularly important, as many users will access parking information while already enroute.

Electric Vehicle Charging Information

The website already provides information on the presence of EV charge points within individual car parks, which is a positive feature. This could be strengthened by offering more detailed and accessible information, including the location of all charge points across the district, charger type, and associated charging costs. Linking to established third-party mapping platforms, such as Zapmap, would provide users with up-to-date and trusted information while avoiding duplication of data maintenance by the Council.

8.10 MICRO-MOBILITY INTEGRATION

Supporting micro-mobility, particularly cycling and other low-carbon modes, is an increasingly important component of a modern parking service. Council owned car parks can play a valuable role in facilitating this by acting as multi-modal access hubs, allowing

users to transition easily from private vehicle to active or shared transport for the final part of their journey into town centres and key destinations.

Across Huntingdonshire, the existing provision for cyclists within council car parks is generally good, and in several locations exceeds the standard seen in many comparable districts nationally. Notably, a number of town centre car parks already provide covered cycle shelters, offering protection from the weather and clear visibility, which supports everyday use by residents, commuters, and visitors. This level of provision provides a strong foundation on which to build.

Opportunities to Enhance Security and Functionality

While existing facilities are well used, there is scope to enhance both the security and attractiveness of cycle parking to encourage greater uptake. In particular, access-controlled or lockable cycle storage facilities, such as gated compounds or secure cycle hubs, could be introduced at selected high-demand locations. These facilities are increasingly common in town centres and transport interchanges and are particularly attractive to users of higher-value bicycles and electric bikes, where concerns about theft can be a significant barrier to use.

Figure 50 illustrates an example of a high-quality secure access controlled cycle hub, which should be seen as the target for introduction in council owned car parks in the future. Some authorities require a small membership charge, which can offset the higher cost associated with these facilities. Generally, uptake is good elsewhere in the UK.

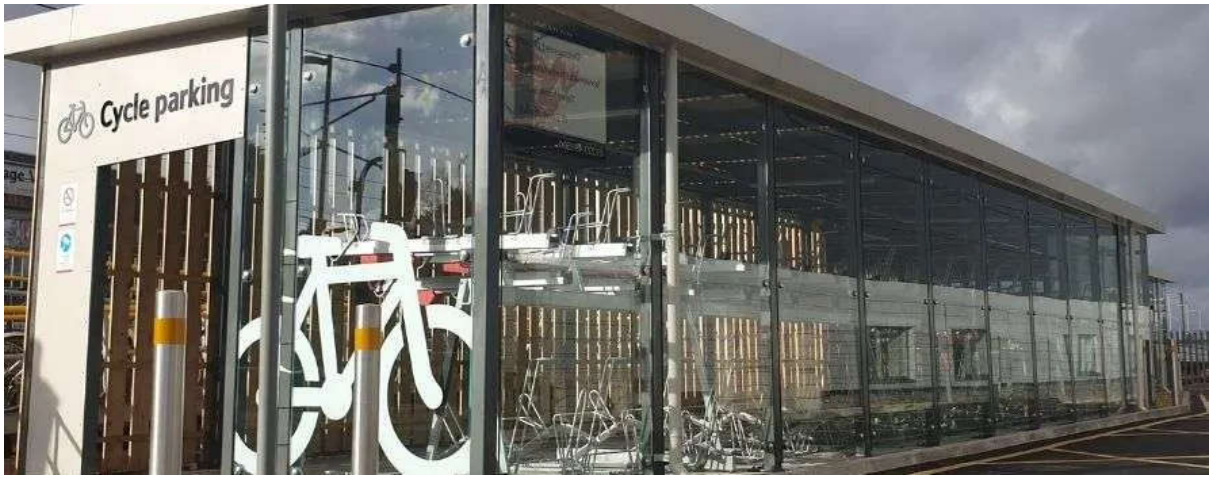

Figure 50 – Example of a high-quality secure cycle hub

The introduction of cycle repair and maintenance stations within or adjacent to car parks would further enhance usability. These low-cost installations typically include basic tools and pumps and can significantly improve the experience for cyclists, supporting both regular users and visitors who may encounter minor mechanical issues during their journey.

Integration with Shared and Electric Mobility

Council car parks also present an opportunity to support emerging forms of shared mobility. The provision of electric bike hire or shared micro-mobility facilities, located at or near key car parks, could enable users to park once and complete their journey into town or between destinations in a more sustainable and flexible way. This approach can help reduce short car trips, alleviate congestion in town centres, and support wider climate and air-quality objectives.

Where introduced, such facilities should be carefully located to avoid conflicts with pedestrians and vehicles and should be supported by clear signage and wayfinding. Partnerships with private operators may offer a cost-effective route to delivery, reducing financial risk to the Council while expanding transport choice.

Design, Visibility, and Safety

The success of micro-mobility facilities is strongly influenced by their visibility, lighting, and proximity to pedestrian routes. Cycle parking that is overlooked, well lit, and clearly integrated into car park layouts is more likely to feel safe and to be used consistently. Opportunities should therefore be taken, particularly during resurfacing or layout changes, to improve natural surveillance and pedestrian connectivity.

Clear signage identifying cycle facilities within car parks and linking them to onward routes and town centre destinations would further support uptake, particularly for visitors unfamiliar with local cycling networks.

APPENDIX A - FAQS 47

APPENDIX B – PHASE 1 USER SURVEY QUESTIONNAIRE 49

1.0 INTRODUCTION

Ethos Consultants (Ethos) has been commissioned by Huntingdonshire District Council to develop a district-wide car park strategy for the Council's off-street car park estate. The strategy responds to the Council's wider corporate priorities and seeks to provide a robust, future focused framework for managing parking assets. In particular, it aims to modernise the parking offer, respond to changing travel behaviours, support climate and sustainability objectives, identify opportunities for investment and improvement, and ensure that parking continues to contribute positively to the Council's financial resilience and service delivery.

Stakeholder engagement is a fundamental component of the Huntingdonshire Car Park Strategy, recognising that parking plays a critical role in the daily lives of residents, the vitality of local businesses, and the experience of visitors across the district's towns and service centres. To ensure the strategy is evidence-led, proportionate, and reflective of local needs, a structured two stage engagement process has been adopted to capture views from a broad range of users and stakeholders.

This feedback report summarises the findings from the stage 1 user survey, which focused on understanding how Huntingdonshire's off-street car parks are currently used and perceived. The survey sought views on what is working well, where there are challenges or frustrations, and where improvements could be made to the existing parking offer. The outputs from this stage provide a critical baseline, helping to identify key issues, priorities, and themes that will inform the development of the draft strategy.

Stage 2 of the engagement, planned for a later phase of the project, will build on this evidence by seeking feedback on the emerging vision, objectives, and policy direction for parking in Huntingdonshire. Insights from the Stage 1 user survey will directly shape this next stage, ensuring that the proposed strategy is developed in real world experience and aligned with stakeholder expectations.

2.0 ENGAGEMENT ARRANGEMENTS

2.1 REQUIREMENT FOR ENGAGEMENT

A structured, two stage stakeholder engagement approach has been adopted to inform the development of the Huntingdonshire Car Park Strategy and to ensure it reflects both current user experience and longer-term needs across the district's off-street car park portfolio. This approach is intended to provide a robust evidence base to support decision making over the next 20 years.

Stage 1 focuses on capturing user perspectives on the existing parking offer across Huntingdonshire, including how car parks are used, perceived strengths and weaknesses, and priorities for improvement. This stage has been delivered through a district wide user survey targeting residents, businesses, and visitors, ensuring that a broad range of views and experiences are represented.

In parallel with the Stage 1 user survey, Ethos Consultants has undertaken a detailed technical and operational assessment of individual car parks within the ownership of Huntingdonshire District Council. Each site has been reviewed against a defined set of criteria to assess performance, utilisation, accessibility, operational efficiency, and alignment with wider policy objectives.

The outputs from the car park assessments, when considered alongside the findings from the Stage 1 user survey, provide a comprehensive understanding of how the current parking system is performing and where change may be required. This combined evidence base will directly inform the development of the draft strategy, including its overarching vision, supporting policies, and prioritised recommendations for future investment and management.

2.2 ENGAGEMENT MATERIAL

To support the Stage 1 user survey and wider engagement activity, Ethos worked closely with key officers from Huntingdonshire District Council to establish a dedicated section of the Council's website to promote the survey and explain its purpose within the wider car park strategy. This ensured that clear, consistent information was available to residents, businesses, and visitors across the district.

Ethos also developed a dedicated engagement hub hosted on its digital engagement platform, Go Vocal. The hub provided background information on the car park strategy, set out why user feedback was being sought, and hosted the Stage 1 user survey. Separate survey routes were provided to reflect the differing perspectives of residents and businesses, ensuring that responses could be analysed meaningfully by user group.

The user survey was actively promoted through the Council's and Ethos' communication channels, including targeted social media activity such as Facebook posts, to maximise reach and encourage participation from a wide cross section of car park users across Huntingdonshire.

For Stage 1 engagement, a focused online questionnaire was identified as the most effective method for gathering consistent and comparable feedback on the existing parking offer. The survey was made available online to maximise accessibility and ease of completion, with alternative arrangements in place to provide paper copies where required for those unable to access the survey digitally.

To support understanding and transparency, a Frequently Asked Questions (FAQ) document was produced and made available via the engagement hub. This document provided additional context on the car park strategy, the purpose of the Stage 1 user survey, and how feedback would be used to inform the next stages of the project.

Appendix A provides a copy of the FAQ document prepared to support the Stage 1 user survey.

2.3 USER SURVEY QUESTIONNAIRE

The engagement process comprised a district wide user survey designed to capture feedback from residents, businesses, and visitors who use off-street car parks across Huntingdonshire. A structured questionnaire was developed to enable respondents to provide views on a range of relevant topics, including reasons for parking in the district's towns and villages, any issues experienced within Council owned car parks, and overall perceptions of the quality and ease of the parking experience.

The user survey was made available online to maximise accessibility and consistency of responses, supporting a comprehensive understanding of parking behaviour and user priorities across the district. The survey opened on 12 November and remained live until 21 December, providing sufficient time for participation and ensuring a broad cross section of views could be captured to inform the emerging car park strategy.

A copy of the user survey questionnaire can be found in Appendix B of this feedback report.

3.0 QUESTIONNAIRE ANALYSIS

3.1 INTRODUCTION

As part of the Stage 1 user survey, two tailored questionnaires were developed to reflect the differing perspectives of car park users. One questionnaire was aimed at residents and visitors, capturing views on the use and performance of off-street car parks across Huntingdonshire. A second questionnaire was designed specifically for businesses, focusing on parking related issues that may affect trading conditions, staff parking, customer access, and the wider local economy, and which could be addressed through the car park strategy.

During the survey period, a total of 1,546 completed responses were received. Of these, 1,522 responses were submitted by residents and visitors, with a further 24 responses received from businesses operating within the district.

This section provides a district wide summary of the feedback gathered through the user survey. A more detailed breakdown of responses by individual towns is provided in Section 4, allowing localised issues and priorities to be identified and considered alongside the wider strategic findings.

3.2 DISTRICT WIDE ANALYSIS

3.2.1 LOCATION

The user survey asked respondents to provide their postcode, allowing responses to be mapped and analysed at a local level across Huntingdonshire. This enabled an assessment of how engagement and feedback varied between the district's towns and villages. Figure 1 presents a heatmap of completed responses, illustrating the geographic distribution of survey participation.

The heatmap shows that responses were received from across the district, demonstrating that the survey successfully reached a broad and representative audience. As expected, the highest concentration of responses originated from the district's main towns, reflecting their larger populations, higher levels of parking activity, and greater reliance on off-street car parks.

In addition to the towns, there was notable participation from a number of villages, including Earith and Fenstanton, indicating that parking is also an important issue within smaller settlements and not solely an urban concern. This spread of responses provides confidence that the findings reflect district wide experiences and priorities, and that the emerging car park strategy will be informed by views from both urban and rural communities across Huntingdonshire.

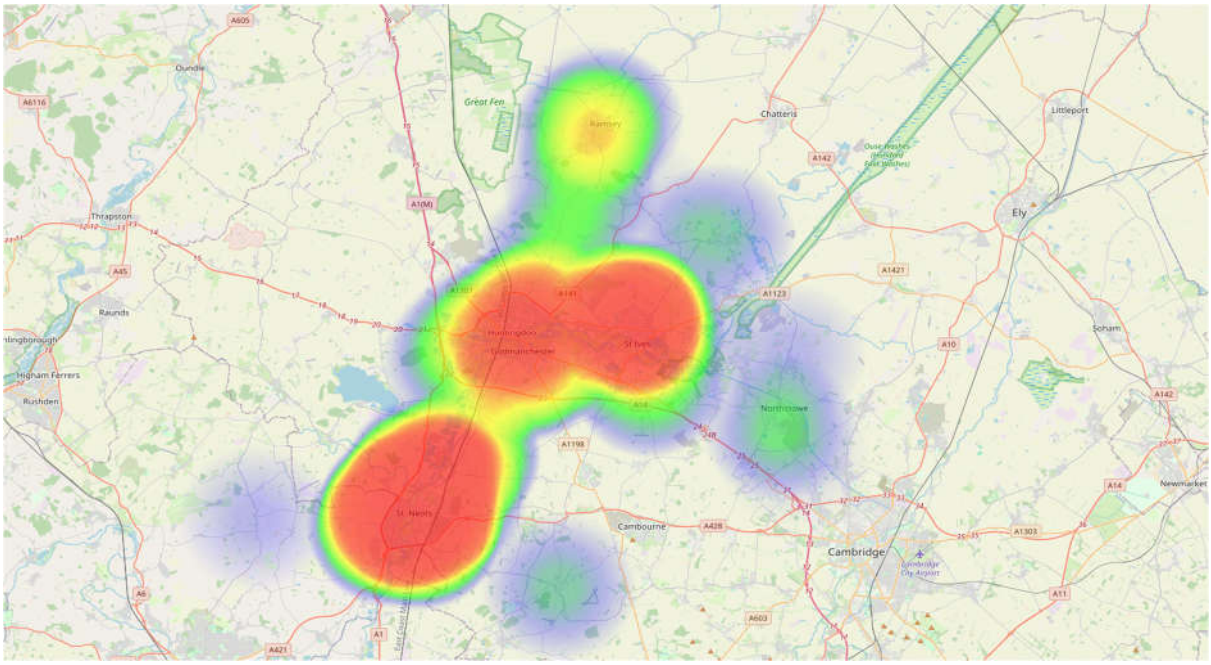

Figure 1 – Heatmap showing location of responses

The questionnaire contained a further 26 questions of both open and closed format and the data processed to access the responses and is summarised on the following pages. The following is a selection of questions from the questionnaire and an indication of the key responses that were provided.

3.2.2 QUESTION 2 ASKED ARE YOU RESPONDING AS ...

This question allowed respondents to select a single option, making it easy to analyse the results. It received 1,513 responses, meaning 33 respondents skipped the question.

This question aimed to identify who completed the questionnaire, allowing us to interpret the data based on respondents' location, which may impact the priority of potential policies recommended. The most common response was "resident in or near St Neots" (38%), followed by "Huntingdon" (27%) and "St Ives" (17%). Overall, 93% of responses came from the district's towns. Among the villages, Fenstanton had the highest response rate at 3%, followed by Earith with 2%. Visitors to the district accounted for 2% of the total responses.

3.2.3 QUESTION 3 ASKED WHAT IS THE MAIN REASON FOR USING A HDC CAR PARK WHEN VISITING A TOWN / VILLAGE CENTRE?

This question allowed respondents to select a single option. This question wasn't included in the business survey. It received 1,524 responses, meaning 22 respondents skipped the question.

Figure 2 below shows the breakdown of responses based on the criteria provided.

Figure 2 – Reason for visiting a town / village

The results shows that the primary reason for visiting towns and villages across Huntingdonshire is shopping, with 75% of respondents selecting this option. Visiting for leisure purposes was the second most common reason, identified by 12% of respondents. A smaller proportion of respondents (3.3%) stated that they visit towns and villages primarily for work related reasons. This figure is likely to be lower than would otherwise be expected due to work related parking issues being captured separately through the business focused survey.

A further 6.7% of respondents selected the option “other” and were invited to expand on their response. In total, 105 respondents provided additional detail. Common themes included dog walking, attending doctors’ or dentist appointments, visiting friends or family, and volunteering activities. Many of these responses could also reasonably be associated with the predefined categories, particularly shopping and leisure, indicating some overlap in how respondents interpret their trip purpose.

A follow-up question asked respondents to identify any additional reasons for using Council owned car parks, with the option to select multiple answers. This highlighted the multifunctional role of off-street car parks across the district. Nearly 60% of respondents selected leisure as a reason for use, followed by shopping (35%) and accessing local amenities (31%). Only 8% of respondents indicated that they use Council owned car parks for a single purpose only. This is a positive finding, as it demonstrates that car parks support a wide range of activities and trip purposes, reinforcing their importance to the vitality and accessibility of Huntingdonshire’s towns and villages.

3.2.4 QUESTION 5 ASKED IF YOU PARK ON-STREET NEAR TOWN / VILLAGE CENTRES, WHAT IS THE MAIN REASON?

This question enabled respondents to choose all options that apply. The question received 1,309 answers meaning 237 respondents did not answer this question.

Figure 3 below shows the breakdown of responses based on the criteria provided.

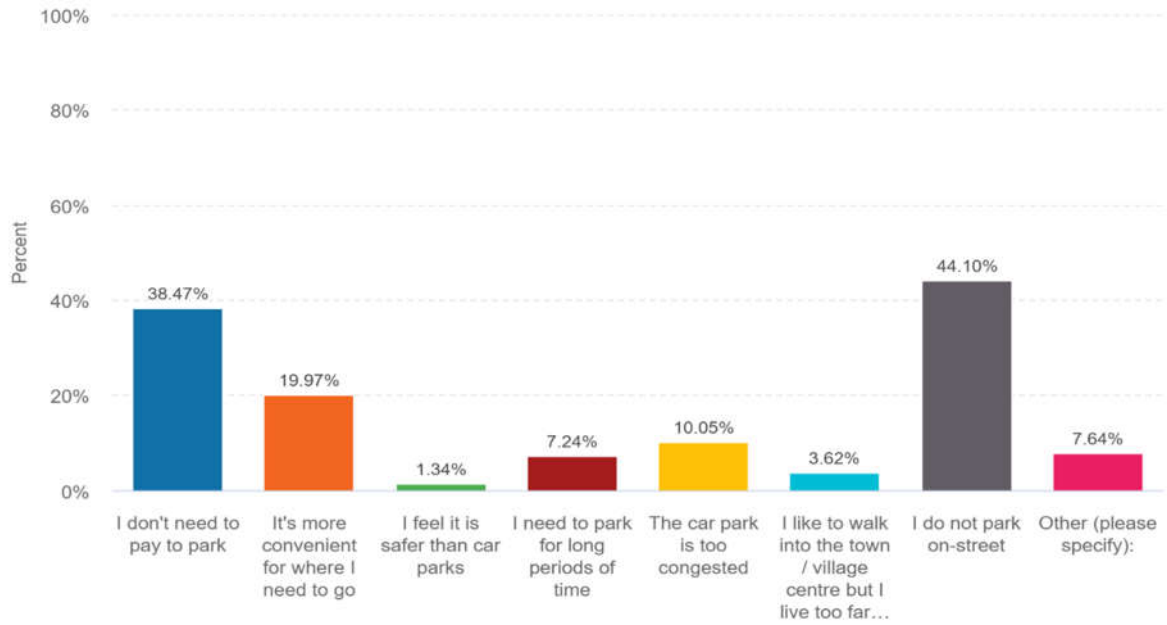

Figure 3 – Reason for parking on-street

Of the respondents who answered this question, 38% stated that they choose to park on-street because it provides free parking. This suggests that on-street parking is particularly attractive in locations where charging applies within nearby off-street car parks, or where free on-street provision remains available within or close to town and village centres across Huntingdonshire.

A further 20% of respondents indicated that they park on-street because it is more convenient than using an off-street car park. While the overall location of Council owned car parks across the district is generally viewed positively, this response suggests that, in some locations, on-street parking is perceived to offer better proximity or ease of access to key destinations. This may indicate gaps in off-street provision, layout constraints, or localised accessibility issues that make on-street parking the preferred option for some users.

Encouragingly, 44% of respondents stated that they do not park on-street at all, indicating a substantial proportion of users already rely solely on off-street parking and supporting the continued role of Council owned car parks in meeting demand.

In addition, 10% of respondents reported parking on-street because nearby car parks are perceived to be too congested. This highlights the importance of addressing capacity management, utilisation, and user confidence in space availability. Tracking this response in future user surveys will provide a useful indicator of whether changes introduced through the car park strategy are effective. It is anticipated that, through

targeted improvements to the off-street parking offer and the implementation of the strategy, the proportion of users citing congestion as a reason for on-street parking should reduce over time.

3.2.5 QUESTION 6 ASKED IF YOU USE COUNCIL OWNED CAR PARKS WITHIN THE DISTRICT, WHICH LOCATIONS DO YOU VISIT?

This question enabled respondents to choose all options that apply. The question received 1,518 answers meaning 28 respondents did not answer this question.

Table 1 below shows the breakdown of responses based on the criteria provided.

Answer Choice	Use Frequently (at least once a week)	Use Sometimes (at least once a month)	Use Occasionally (no more than a few times a year)	Didn't know there was a car park there	Do Not Use
Diddington	0.2%	0.2%	1.8%	13.9%	84.0%
Earith	0.3%	0.2%	2.8%	12.6%	84.3%
Fenstanton	0.4%	0.9%	3.7%	12.2%	82.9%
Godmanchester	5.6%	10.0%	28.2%	3.8%	53.5%
Huntingdon	34.2%	35.6%	25.4%	0.1%	4.7%
Ramsey	4.4%	3.0%	10.3%	4.6%	77.8%
St Ives	20.1%	26.9%	32.4%	0.4%	20.2%
St Neots	27.4%	23.3%	25.9%	0.6%	22.8%
Warboys	0.4%	1.1%	3.0%	14.9%	80.7%

Table 1 – How frequently council owned car parks are visited

While a high proportion of respondents selected "Do Not Use" for several locations listed in Table 1, this outcome is expected given the district wide scope of the user survey. Many residents will primarily use car parks within or close to their local town or village and may have little reason to visit other parts of Huntingdonshire on a regular basis. For example, respondents living in more rural settlements such as Diddington, Warboys, or Earith are unlikely to routinely use car parks in larger towns such as St Neots, and vice versa.

The results in Table 1 broadly align with earlier findings on respondent location, with higher levels of car park use recorded in the district's main towns where a greater proportion of respondents are based and where trip demand is naturally higher. Huntingdon shows the highest levels of regular use, with almost 70% of respondents indicating that they use car parks either frequently (34.2%) or sometimes (35.6%). Similarly, St Ives and St Neots demonstrate strong levels of use, with frequent or sometimes use reported by 47.0% and 50.7% of respondents respectively, and a further substantial proportion using car parks occasionally. These figures reflect the role of these towns as key service centres with retail, employment, leisure, and community facilities that generate regular parking demand.

Godmanchester also records notable levels of use, with 15.6% of respondents using car parks frequently or sometimes and a further 28.2% using them occasionally. This

indicates a pattern of more periodic use, likely linked to specific trip purposes rather than daily activity. Ramsey shows a lower level of regular use overall, with just over 7% of respondents using car parks frequently or sometimes, and the majority (77.8%) indicating that they do not use car parks in the town. This suggests that car parks in Ramsey serve a more limited or localised function.

Responses for smaller villages such as Earith and Fenstanton show very low levels of frequent or regular use, with over 80% of respondents selecting "Do Not Use" in each case. However, these locations still record a degree of occasional use, particularly in Fenstanton, where 3.7% of respondents indicated occasional use. This suggests that village car parks tend to support infrequent or purpose specific trips rather than regular parking demand. The relatively high proportion of respondents who were unaware that a car park existed in places such as Diddington, Warboys, Earith, and Fenstanton further reflects the limited scale and visibility of parking provision in these settlements.

3.2.6 QUESTION 7 ASKED HAVE YOU EXPERIENCED ANY PARKING PROBLEMS WITHIN THE LAST 12 MONTHS AT ANY HDC CAR PARK?

This question allowed respondents to select a single option. It received 1,531 responses, meaning 15 respondents skipped the question.

Figure 4 below shows the breakdown of responses based on the criteria provided.

Figure 4 – Respondents that have experienced issued at HDC car parks in the last 12 months

Figure 5 indicates that a slight majority of respondents (53%) reported that they had not experienced any issues with Council owned car parks in the last 12 months. This is a positive finding and suggests that, for many users, off-street car parks across Huntingdonshire are operating effectively and meeting day-to-day needs. Based on Ethos' experience of similar user surveys undertaken for local authorities across the UK, a positive response rate of around 50% is typically considered strong. Exceeding this

benchmark albeit by a small margin provides confidence in the overall performance and resilience of Huntingdonshire District Council's current car park operations.

Question 8 acted as a follow up for respondents who indicated that they had experienced an issue, asking them to identify the nature and location of those issues. In total, 519 respondents provided further detail. While issues were reported across a range of sites, responses tended to be concentrated in a small number of car parks, including:

- Sainsbury's Car Park, Huntingdon (25%);
- Multi-Storey Car Park, Huntingdon (18%);
- Tebbutts Road Car Park, St Neots (11%);
- Cattle Market (Short Stay) Car Park, St Ives (6%).

3.2.7 QUESTION 9 ASKED PLEASE SELECT THE ISSUES THAT ARE RELATED TO YOUR VISIT?

This question enabled respondents to choose all options that apply. The question received 1,058 answers meaning 488 respondents did not answer this question. This also demonstrates that some respondents who stated they haven't experienced issues in council owned car parks provided a response to this question.

Figure 5 below shows the breakdown of responses based on the criteria provided.

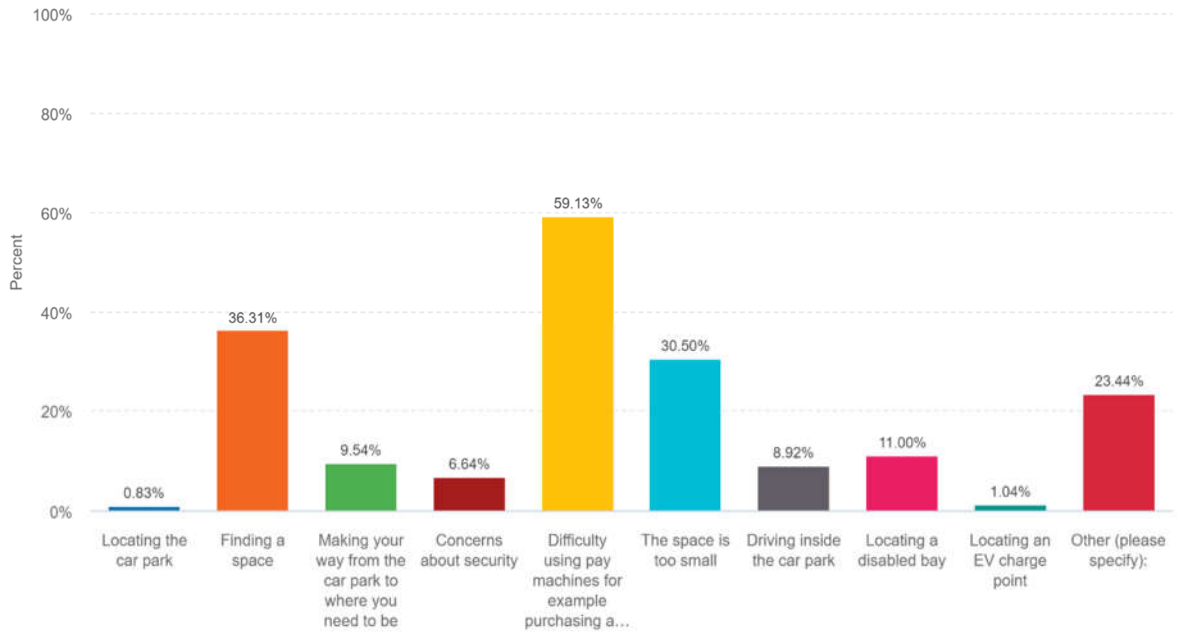

Figure 5 – Issues experienced in HDC car parks

As shown in Figure 6, the most frequently reported issue relating to Council owned car parks across Huntingdonshire is difficulty using pay machines, cited by 59% of respondents who indicated that they had experienced an issue. This clearly identifies payment as the single most significant pain point for users and highlights the importance of reliable, intuitive, and accessible payment systems as a priority area for the car park strategy.

The second most commonly reported issue is difficulty finding a parking space, selected by 36% of respondents. This suggests that, in certain locations and at peak times, demand can exceed perceived available capacity, leading to frustration for users. While this does not necessarily indicate a district wide shortage of spaces, it does point to localised pressure in busier car parks and reinforces the need for better demand management, wayfinding, and user confidence in space availability.

A further 30% of respondents stated that parking spaces are too small, reflecting an ongoing and widely recognised issue associated with historic bay dimensions that no longer align well with the size of modern vehicles. This issue is consistent with feedback seen in parking studies nationally and is an important consideration when assessing future refurbishment, reconfiguration, or redevelopment opportunities within the estate.

Other issues were reported at lower but still notable levels, including locating a disabled bay (11%), driving within car parks (9%), and making their way from the car park to their destination (10%). These responses point to opportunities to improve internal layouts, pedestrian routes, signage, and accessibility, particularly for users with mobility impairments.

A smaller proportion of respondents highlighted issues such as concerns about security (7%), locating an EV charging point (1%), and locating the car park itself (1%), indicating that while these are not widespread problems, they remain relevant considerations for specific sites.

Finally, 23% of respondents selected “Other” and provided further detail. Many of the comments aligned with the issues already captured above, particularly payment difficulties and capacity concerns. However, recurring additional themes included the cost of parking, mobile phone signal reliability for pay by phone, the number of different parking apps required, and the availability of specialist bays such as parent and child or disabled spaces. These qualitative insights add important context to the quantitative results and will help inform more targeted and user focused recommendations within the emerging car park strategy.

3.2.8 QUESTION 10 ASKED DO YOU CONSIDER THERE TO BE ENOUGH PARKING IN TOWN, AND VILLAGE CAR PARKS?

This question allowed respondents to select a single option. It received 1,499 responses, meaning 47 respondents skipped the question.

Table 2 below shows the breakdown of responses based on the criteria provided.

Answer Choice	Yes, at all times	Yes, expect for peak periods	No, there is not enough parking	Do Not Use
Diddington	1.7%	0.7%	0.7%	97.0%
Earith	0.7%	1.0%	1.6%	96.7%
Fenstanton	1.4%	1.7%	2.1%	94.8%
Godmanchester	8.1%	16.5%	14.3%	61.2%

Huntingdon	20.2%	51.2%	19.2%	9.4%
Ramsey	2.8%	5.5%	6.4%	85.4%
St Ives	32.4%	31.9%	7.9%	27.8%
St Neots	26.8%	31.5%	11.5%	30.3%
Warboys	2.1%	1.6%	2.8%	93.5%

Table 2 – Amount of available parking across HDC car parks

The results presented in Table 2 indicate that, based on user feedback, perceptions of parking availability across Huntingdonshire are generally positive, particularly outside of peak periods. In most locations, only a relatively small proportion of respondents believe that there is insufficient parking, with the exception of the district's larger towns where demand is naturally higher.

Huntingdon records the highest level of perceived pressure, with 19.2% of respondents stating that there is not enough parking. However, this is offset by the fact that a clear majority of respondents (51.2%) consider parking to be sufficient except during peak periods, and a further 20.2% believe that parking is sufficient at all times. This suggests that concerns in Huntingdon are largely linked to peak demand rather than a persistent shortfall in supply.

A similar pattern is evident in St Neots, where 11.5% of respondents feel there is insufficient parking, compared with 31.5% who believe parking is sufficient outside peak periods and 26.8% who consider it sufficient at all times. St Ives demonstrates the strongest perception of parking availability among the main towns, with 32.4% of respondents stating that parking is always sufficient and a further 31.9% reporting that it is sufficient except at peak times. Only 7.9% of respondents in St Ives indicated that there is not enough parking.

In Godmanchester, views are more mixed, with 14.3% of respondents reporting insufficient parking and 16.5% stating that availability becomes constrained during peak periods. However, the relatively high proportion of respondents who do not use car parks in the town (61.2%) suggests that these perceptions are drawn from a smaller user base and may reflect more localised issues rather than a town wide capacity problem.

Across the smaller towns and villages, including Ramsey, Earith, Fenstanton, Diddington, and Warboys, the majority of respondents selected "Do Not Use," which is consistent with earlier findings on travel patterns and localised car park use. Among those who do use car parks in these locations, only a small minority reported that parking is insufficient, indicating that supply generally meets local demand.

Overall, the feedback in Table 2 suggests that there is no clear evidence of a district wide shortage of parking provision. Instead, pressure on parking availability appears to be concentrated in the larger towns and primarily during peak periods. This supports an approach focused on managing demand, improving utilisation, and enhancing the user experience, rather than pursuing a broad increase in parking supply across Huntingdonshire.

3.2.9 QUESTION 11 ASKED HOW WOULD YOU RATE THE OVERALL QUALITY OF HDC CAR PARKS IN THE FOLLOWING LOCATIONS?

This question allowed respondents to select an option for each row (location). It received 1,496 responses, meaning 50 respondents skipped the question.

Table 3 below shows the breakdown of responses based on the criteria provided.

Answer Choice	Excellent	Good	Adequate	Below Standard	Poor	N/A
Diddington	0.0%	0.4%	1.6%	0.2%	0.5%	97.4%
Earith	0.0%	0.2%	1.9%	0.5%	0.9%	96.5%
Fenstanton	0.4%	0.4%	3.2%	0.9%	0.7%	94.5%
Godmanchester	2.2%	10.9%	18.1%	4.2%	2.7%	61.9%
Huntingdon	3.8%	27.4%	40.3%	10.9%	6.8%	10.8%
Ramsey	0.4%	2.5%	6.7%	2.5%	2.8%	85.3%
St Ives	4.7%	22.0%	30.7%	7.4%	4.7%	30.5%
St Neots	3.7%	20.2%	31.0%	8.0%	4.6%	32.6%
Warboys	0.0%	0.5%	2.9%	1.1%	1.1%	94.4%

Table 3 – Overall quality of HDC car parks

Overall, the feedback indicates that the quality of Council owned car parks across Huntingdonshire is generally viewed positively by those who use them, with the strongest and most reliable responses coming from the district's main towns.

In Huntingdon, St Ives, and St Neots, the majority of respondents rated car park quality as Adequate, Good, or Excellent, with "Adequate" being the most common response. Huntingdon in particular shows a high level of engagement, with over 70% of respondents providing a quality rating, reflecting its role as a primary service centre with frequent car park use. While a minority of respondents in these towns rated provision as Below Standard or Poor, these responses remain relatively limited and point to targeted improvement opportunities rather than systemic issues.

Godmanchester also demonstrates broadly acceptable perceptions of quality among users, although a higher proportion of respondents selected N/A, reflecting lower overall usage compared to the main towns.

In contrast, the very high N/A responses in smaller settlements such as Diddington, Earith, Fenstanton, Ramsey, and Warboys indicate limited use of Council owned car parks in these locations rather than dissatisfaction with quality. Among those who do use car parks in these areas, ratings are generally Adequate or Good, with very low levels of negative feedback.

Taken together, the results suggest that car park quality across Huntingdonshire is broadly acceptable and performing well in the locations where demand is highest. The

data supports a strategy focused on targeted enhancements in busier town centre car parks, rather than widespread quality interventions across the entire district.

3.2.10 QUESTION 12 ASKED DO YOU FEEL THE SIZE OF STANDARD PARKING BAYS IN OUR CAR PARKS IS SUITABLE?

This question allowed respondents to select a single option. It received 1,501 responses, meaning 45 respondents skipped the question.

Figure 6 below shows the breakdown of responses based on the criteria provided.

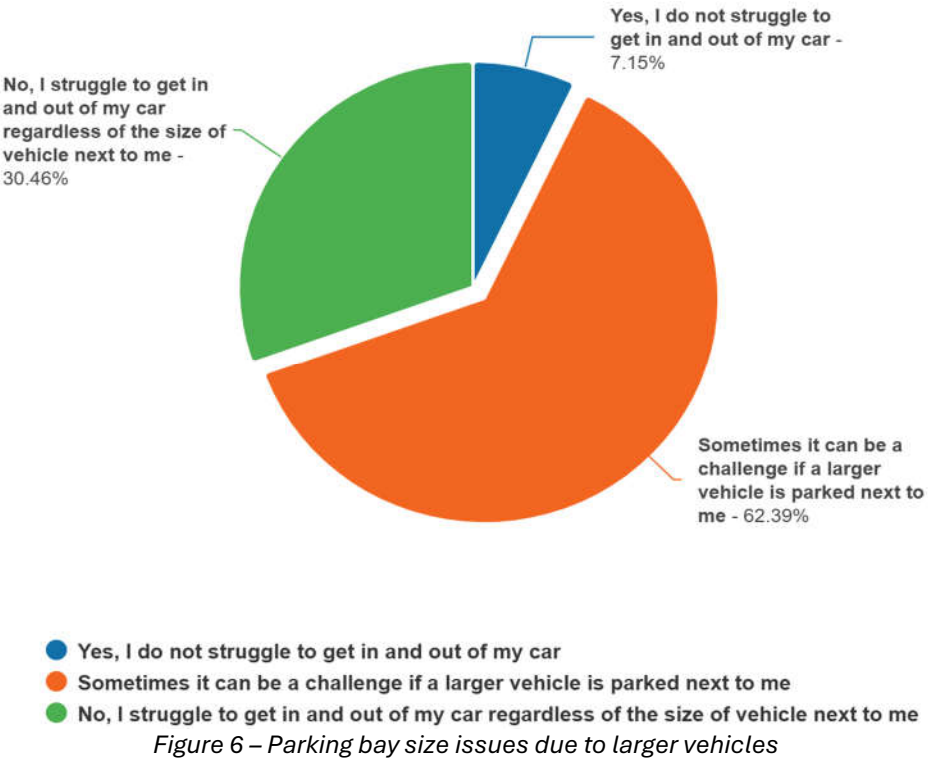

Figure 6 – Parking bay size issues due to larger vehicles

The results shown in Figure 6 indicate that a significant proportion of users experience difficulty getting in and out of their vehicles within Council owned car parks, highlighting the impact of parking bay size and layout on the overall user experience.

Only 7% of respondents stated that they do not struggle to get in and out of their car, suggesting that current parking provision works well for a very limited minority of users. The majority of respondents (62%) reported that accessing their vehicle can be challenging when a larger vehicle is parked in an adjacent space. This indicates that bay widths and spacing are often insufficient to comfortably accommodate modern vehicles side by side, particularly SUVs and vans.

In addition, 30% of respondents stated that they struggle to get in and out of their car regardless of the size of the vehicle parked next to them. This points to a more systemic issue with parking bay dimensions, circulation space, or the condition and marking of bays, rather than an isolated problem caused solely by neighbouring vehicle size.

Taken together, the findings demonstrate that difficulties associated with parking bay size are widespread and affect the majority of users to some degree. This reinforces the need for the car park strategy to consider bay dimensions, layout standards, and reconfiguration opportunities, particularly in higher use car parks, to improve accessibility, comfort, and inclusivity for all users.

3.2.11 QUESTION 13 ASKED WHAT DO YOU LIKE MOST ABOUT HDC PARKING FACILITIES YOU HAVE USED?

This question allowed respondents to select a single option. It received 1,512 responses, meaning 34 respondents skipped the question.

Figure 7 below shows the breakdown of responses based on the criteria provided.

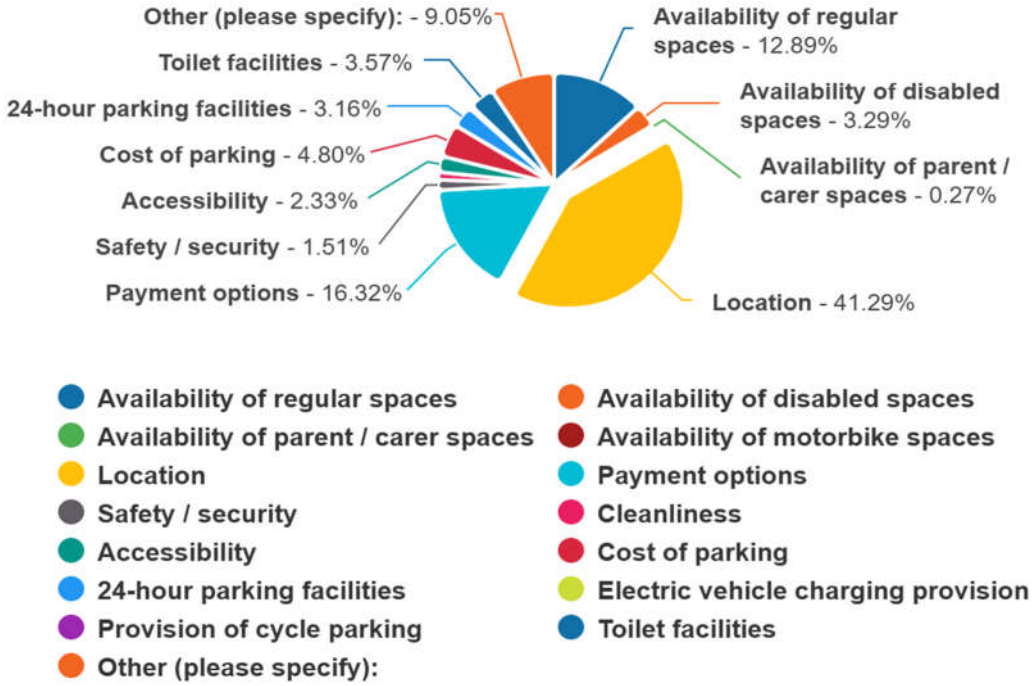

Figure 7 – Most liked aspect when using HDC car parks

The results shown in Figure 7 indicate that the location of car parks is the most highly valued aspect of Council owned car parks across Huntingdonshire, selected by 41% of respondents. This significantly outweighs all other factors and underlines the importance of having car parks that are well positioned in relation to town centres, shops, services, and community facilities. The prominence of location reflects the critical role that parking plays in supporting accessibility, town centre vitality, and the local economy.

The second most valued aspect is payment options, chosen by 16% of respondents. This highlights the importance users place on having flexible, reliable, and easy to use ways to pay for parking, and reinforces findings elsewhere in the survey which identify payment as a key driver of user satisfaction and dissatisfaction.

The availability of regular parking spaces ranks third, selected by 13% of respondents, indicating that while capacity is important, it is generally secondary to location and ease

of payment for most users. This aligns with earlier findings that parking supply is perceived to be broadly sufficient outside peak periods in most locations.

Other factors were selected by smaller proportions of respondents, including cost of parking (5%), toilet facilities (4%), and 24-hour parking availability (3%). Elements such as accessibility, safety and security, and the availability of disabled, parent/carer, and motorcycle spaces were each identified by a relatively small percentage of respondents, suggesting these are either performing adequately for most users or are relevant to more specific user groups.

A further 9% of respondents selected "Other" and provided additional comments. While a wide range of individual points were raised, no single dominant theme emerged. The majority of comments could be broadly aligned with the predefined response categories, providing additional context rather than identifying wholly new areas of priority.

3.2.12 QUESTION 14 ASKED WHAT WOULD YOU LIKE TO SEE IMPROVED WITHIN THE COUNCIL OWNED CAR PARKS?

This question allowed respondents to select a single option. It received 1,517 responses, meaning 29 respondents skipped the question.

Figure 8 below shows the breakdown of responses based on the criteria provided.

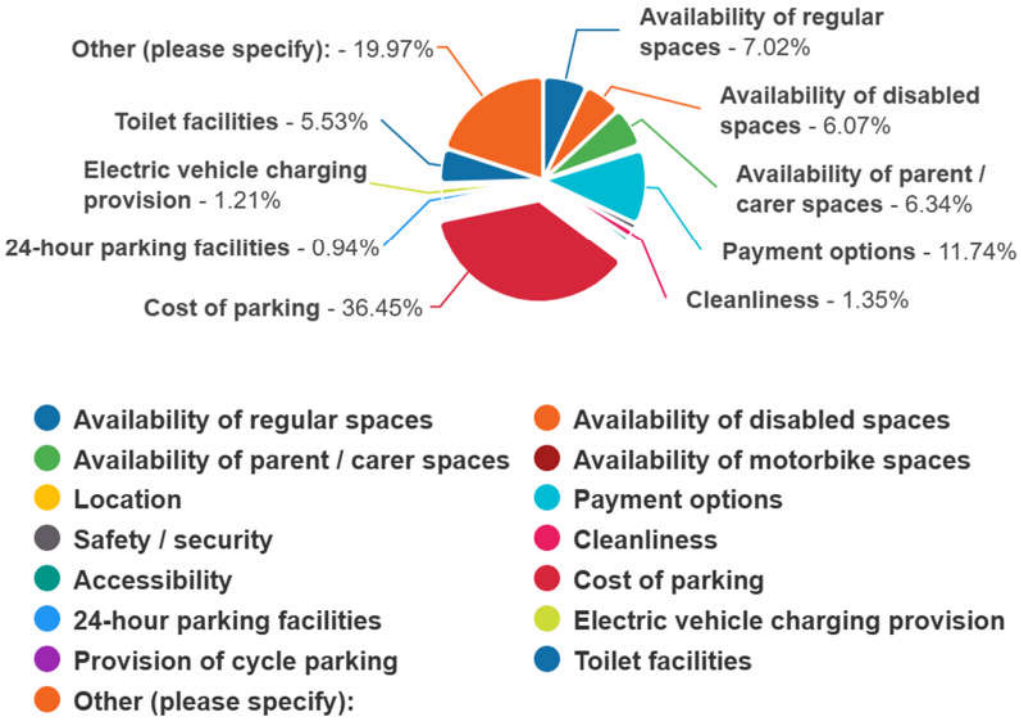

Figure 8 – Aspects that require improvement within HDC car parks

The results shown in Figure 8 indicate that the cost of parking is the most frequently identified area for improvement, selected by 36% of respondents. This is consistent with findings from parking user surveys nationally, where there is often a strong perception that parking charges are too high or that parking should be provided free of charge, particularly for shorter stays or local trips.

The second most commonly selected area for improvement relates to payment options, highlighted by 12% of respondents. This reinforces earlier survey findings that payment remains a key aspect of the parking experience and that users value flexibility, simplicity, and reliability in how they pay for parking.

Several other aspects attracted a similar level of response, including the availability of parent/carer spaces (6%), availability of disabled spaces (6%), and availability of regular parking spaces (7%). This suggests that while capacity is not viewed as a district wide issue, there are localised concerns around the mix and allocation of space types, particularly for users with specific accessibility needs.

Other factors, such as toilet facilities (6%), cleanliness (1%), electric vehicle charging provision (1%), and 24-hour parking facilities (1%), were identified by smaller proportions of respondents, indicating that these are either lower priorities overall or relevant to more specific user groups.

A notable 20% of respondents selected the "Other" option and provided additional comments. While many of these comments could be aligned with the predefined categories above, several recurring themes emerged. These included concerns about the size of parking bays, requests for motorhome or larger vehicle parking provision, calls for increased Civil Enforcement Officer presence, and site specific issues relating to entrance and exit arrangements at individual car parks. These qualitative responses provide valuable context and help to highlight more nuanced, location specific issues that may not be fully captured through fixed survey options.

3.2.13 QUESTION 15 ASKED WHETHER THERE HAS BEEN A DIFFERENCE IN CAR PARKS SINCE HDC INTRODUCED CIVIL PARKING ENFORCEMENT ON-STREET

This question allowed respondents to select a single option. It received 1,484 responses, meaning 62 respondents skipped the question.

The results highlight that the majority of respondents have not observed a noticeable change in how busy Council owned car parks feel over time. A substantial 78% of respondents stated that they have not noticed any difference, suggesting that, for most users, overall levels of parking activity are perceived as relatively stable.

A smaller proportion of respondents (11%) reported that car parks now seem busier, which may reflect localised pressures at specific sites, changes in travel behaviour, or increased demand due to vehicles not being able to park on-street due to concerns with enforcement. This perception is not widespread but demonstrates the positive impact more noticeable and frequent enforcement can have within local communities.

Only 1.5% of respondents felt that car parks have become quieter, indicating that there is very limited perception of declining demand across the estate. A further 10% of respondents were unsure, which may reflect more infrequent users or those who do not visit car parks often enough to identify longer-term trends.

3.2.14 QUESTION 16 ASKED WHEN WOULD YOU PREFER TO PAY FOR YOUR PARKING?

This question allowed respondents to select a single option. It received 1,500 responses, meaning 46 respondents skipped the question.

Figure 9 below shows the breakdown of responses based on the criteria provided.

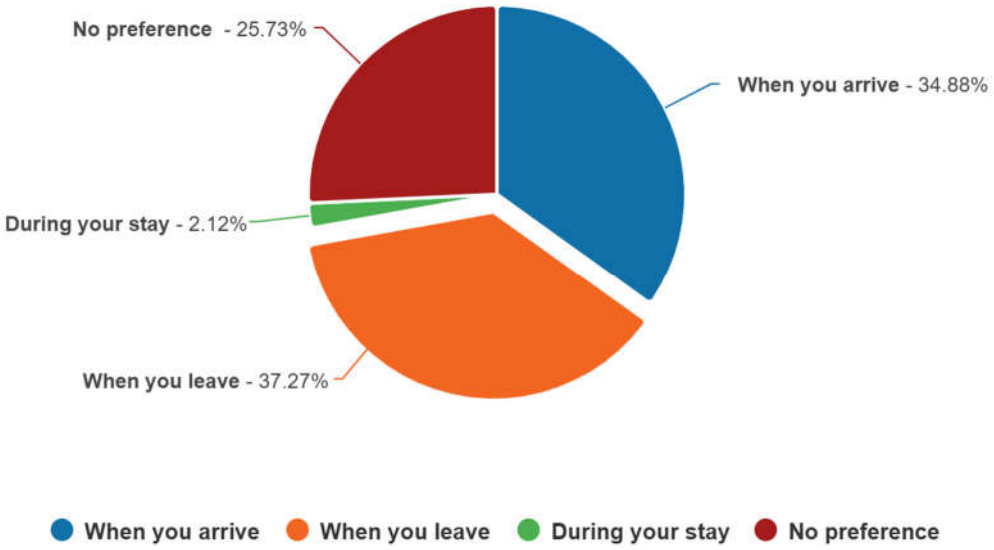

Figure 9 – Preference for parking payment

Figure 9 shows a clear preference among respondents for more flexible payment timing, with the strongest support for paying when leaving the car park. Just over 37% of respondents indicated that they would prefer to pay on exit, suggesting that post stay payment models are attractive to a significant proportion of users. This preference is likely influenced by familiarity with pay on exit systems used in other retail and leisure destinations, where payment is based on the actual duration of stay and removes the need to estimate parking time in advance.

A similar proportion of respondents (35%) stated that they prefer to pay on arrival, indicating continued support for more traditional pay and display arrangements. This may reflect familiarity, certainty over payment at the start of a visit, or a desire to use cash at the point of arrival.

A further 26% of respondents expressed no preference, suggesting that for a number of users the timing of payment is less important than other factors, such as ease of use, reliability of machines, or the availability of multiple payment options.

Only a very small proportion of respondents (2%) indicated a preference for paying during their stay, demonstrating limited appetite for mid-stay payment interactions.

3.2.15 QUESTION 17 ASKED RESPONDENTS WHETHER THEY USE THE CHECK-IN CHECK-OUT SYSTEM IN PLACE ACROSS HDC CAR PARKS

This question allowed respondents to select a single option. It received 1,483 responses, meaning 63 respondents skipped the question.

The results indicate limited awareness and mixed experience of check-in / check-out parking systems among respondents, with awareness being the most significant issue rather than user acceptance.

Almost 47% of respondents stated that they do not know what a check-in / check-out system is, highlighting a clear knowledge gap. This is a critical finding, as it suggests that a large proportion of users are currently unable to form an informed view on this payment model. Before any wider consideration of introducing such systems, this lack of awareness would need to be addressed.

Among respondents who were familiar with the concept, 33% stated that they do not use check-in / check-out systems, while 13% use them occasionally and only 7% use them regularly. This indicates that, even where awareness exists, usage is not yet widespread.

The data suggests that user unfamiliarity rather than resistance is the primary barrier. As such, if the Council wishes to explore check-in / check-out systems as part of the car park strategy, there is a clear case for proactive communication and user education. This could include simple explanations of how the system works, its benefits (such as paying only for the time used), and reassurance around enforcement and ease of use.

3.2.16 QUESTION 18 ASKED RESPONDENTS HOW THEY WOULD PREFER TO PAY FOR PARKING

This question enabled respondents to choose all options that apply. The question received 1,511 answers meaning 35 respondents did not answer this question.

Figure 10 below shows the breakdown of responses based on the criteria provided.

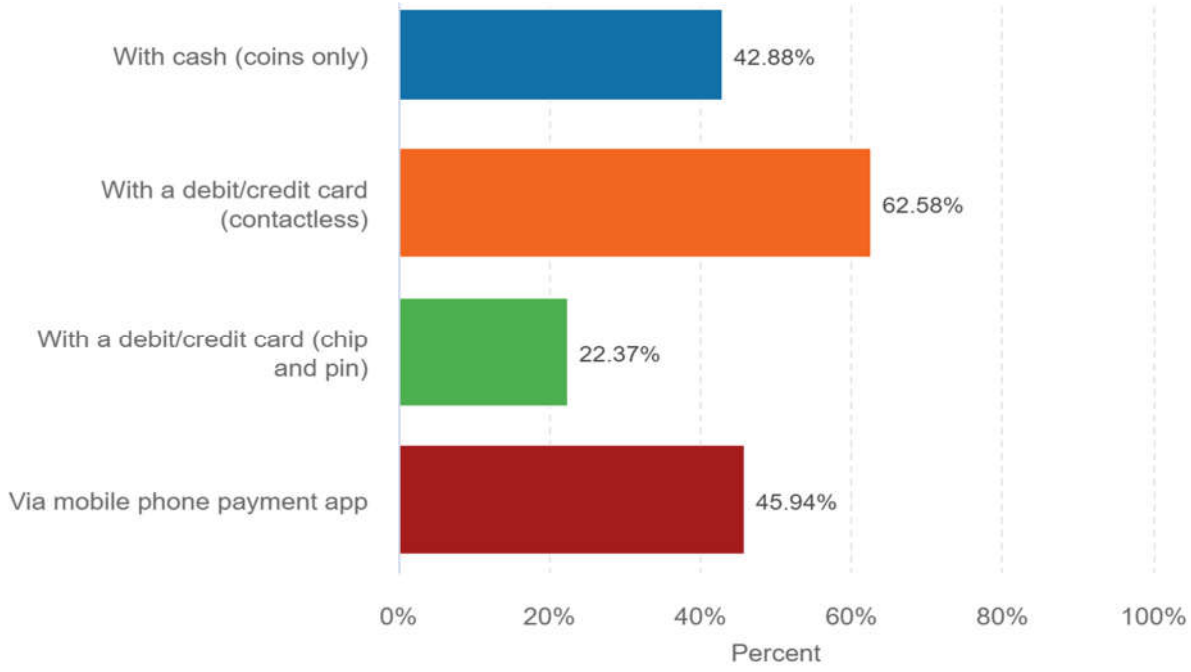

Figure 10 – Preference for parking payment

The results demonstrate a clear preference for flexible and modern payment methods, while also highlighting the continued importance of traditional options.

The most widely used payment method is contactless debit or credit card, selected by 63% of respondents. This reflects broader societal trends toward cashless payments and indicates strong user expectation that contactless card payment should be available as a standard feature across Council owned car parks.

Mobile phone payment apps are also well used, with 46% of respondents indicating that they pay via an app. This shows a significant level of acceptance of digital payment platforms and supports the case for maintaining and enhancing app based payment options, provided they are reliable, intuitive, and supported by good mobile signal coverage.

Despite the shift toward digital payments, cash remains important, with 43% of respondents stating that they pay using coins. This is a significant proportion and reinforces the need to retain some level of cash payment provision to ensure inclusivity, particularly for older users, those without access to digital payment methods, or visitors who prefer cash.

Traditional chip and pin card payments are used by a smaller proportion of respondents (22%), suggesting that while still relevant, this method is less critical than contactless and app based payments.

3.2.17 QUESTION 19 ASKED RESPONDENTS WHAT THEY THOUGHT ON LONG-STAY PARKING CHARGES ACROSS HUNTINGDONSHIRE

This question allowed respondents to select a single option. It received 1,512 responses, meaning 34 respondents skipped the question.

Figure 11 below shows the breakdown of responses based on the criteria provided.

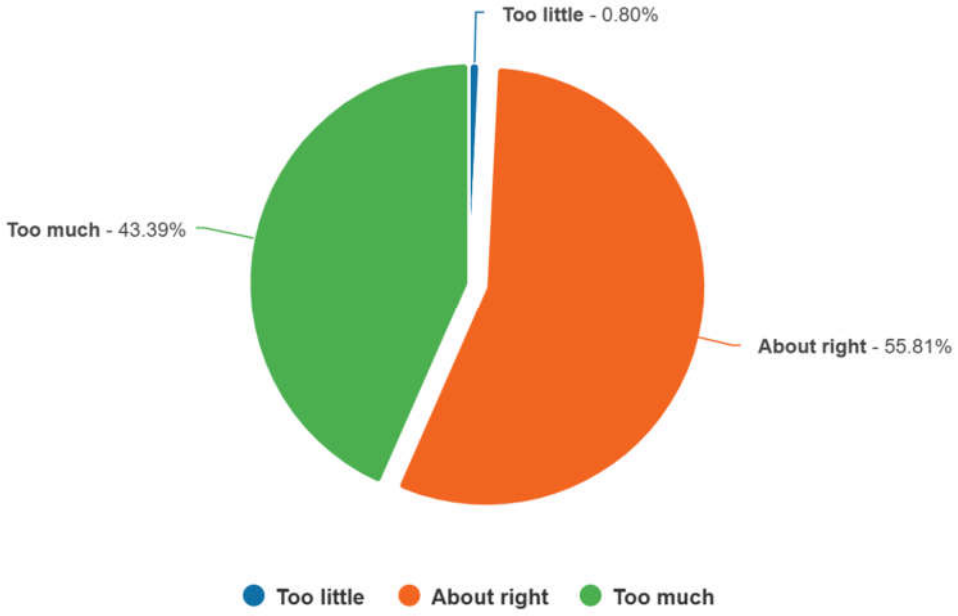

Figure 11 – Thoughts on long-stay parking charges in HDC car parks

The results indicate that perceptions of long-stay parking charges are broadly positive, with a clear majority of respondents viewing current pricing levels as appropriate.

56% of respondents stated that long-stay parking charges are “about right”, which is a strong and reassuring outcome. This level of agreement provides clear evidence that charges are not widely perceived as too high and suggests that current tariffs are broadly acceptable to users. From a strategic perspective, this also indicates there may be limited headroom to consider modest increases to long-stay charges, should this be required to support service sustainability or wider policy objectives, without a significant risk of adversely affecting demand.

A further 43% of respondents felt that long-stay charges are too high. While this is a sizeable minority and should not be dismissed, it is important to note that perceptions of cost sensitivity are common in parking surveys and often reflect a general preference for lower or no charges rather than evidence of pricing being prohibitive. The absence of a strong link elsewhere in the survey between charges and reduced usage suggests that these views may be attitudinal rather than behavioural.

Only 1% of respondents considered long-stay charges to be too low, reinforcing the view that there is no expectation for charges to increase significantly or rapidly.

3.2.18 QUESTION 20 ASKED RESPONDENTS WHAT THEY THOUGHT ON SHORT-STAY PARKING CHARGES ACROSS HUNTINGDONSHIRE

This question allowed respondents to select a single option. It received 1,510 responses, meaning 36 respondents skipped the question.

Figure 12 below shows the breakdown of responses based on the criteria provided.

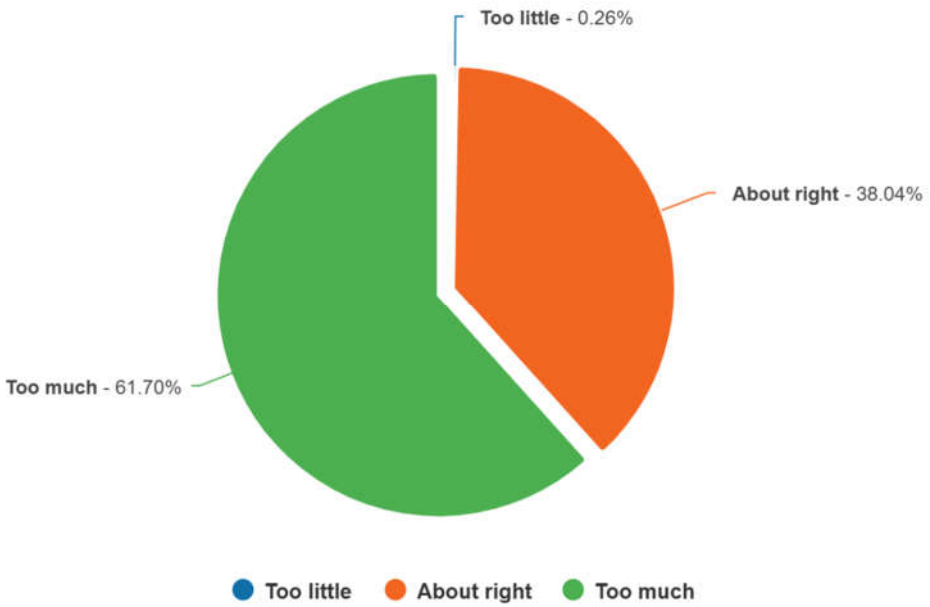

Figure 12 – Thoughts on short-stay parking charges in HDC car parks

The results highlight a significantly lower level of acceptance of short-stay parking charges compared to long-stay tariffs, indicating a clear divergence in how users perceive value for money across different lengths of stay.

A clear majority of respondents (62%) consider short-stay parking charges to be too high, while only 38% feel that charges are about right. Fewer than 1% believe charges are too low. This contrasts sharply with perceptions of long-stay parking, where the majority of respondents felt charges were appropriate, and suggests that short-stay tariffs are viewed as less equitable or less aligned with user expectations.

This disparity creates a strong impression that long-stay parking is perceived as fairer than short-stay parking. Short-stay users are more likely to be making quick, convenience based trips, such as shopping, or accessing services, and the findings suggest that higher short-stay tariffs may be seen as disproportionate to the duration and purpose of these visits.

3.2.19 QUESTION 21 ASKED HOW HDC CAR PARKING CHARGES COMPARE TO COUNCIL OWNED CAR PARKS IN OTHER AREAS?

This question allowed respondents to select a single option. It received 1,499 responses, meaning 47 respondents skipped the question.

Figure 13 below shows the breakdown of responses based on the criteria provided.

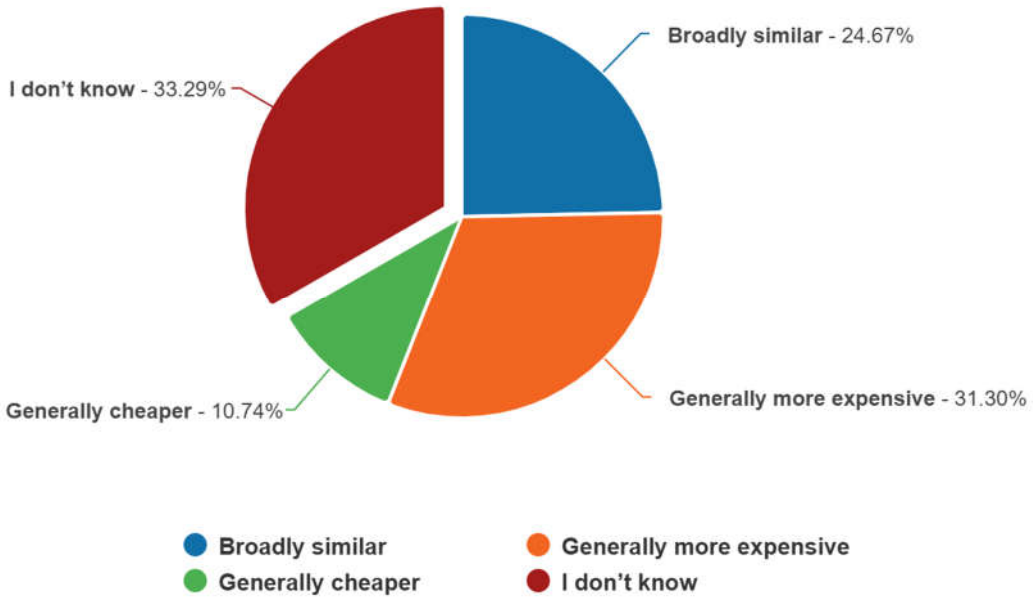

Figure 13 – Comparison between local authorities and parking charges

The results show mixed but generally balanced perceptions of how parking charges in Huntingdonshire District Council car parks compare with those in other local authority areas.

Around 25% of respondents consider parking charges to be broadly similar to those elsewhere, which is a positive finding and suggests that, for a significant proportion of users, charges are seen as broadly in line with expectations and comparable locations.

This is important, as a strong perception of higher than average charges could discourage residents and visitors from using local town centres.

However, 31% of respondents believe that parking charges in Huntingdonshire are generally more expensive than in other areas. While this perception should be acknowledged, it does not necessarily reflect actual pricing when benchmarked against comparable local authorities. Such views may be influenced by selective comparisons with locations that offer free or heavily subsidised parking, or with smaller settlements that provide fewer facilities and services.

Only 11% of respondents felt that parking in Huntingdonshire is generally cheaper than elsewhere. This suggests that there is limited perception of Huntingdonshire offering a cost advantage over neighbouring authorities, reinforcing the importance of clearly communicating value for money and the benefits provided through Council managed parking.

Notably, a substantial 33% of respondents stated that they do not know how parking charges compare with other areas. This indicates that a large proportion of users either do not regularly park outside the district or do not actively compare tariffs between locations. It also suggests that pricing decisions are often judged in isolation rather than through direct comparison with other authorities.

3.2.20 QUESTION 22 ASKED WHETHER RESPONDENTS WOULD SUPPORT EMISSIONS BASED CHARGING

This question allowed respondents to select a single option. It received 1,478 responses, meaning 68 respondents skipped the question.

The results indicate limited current support for emissions based parking charges, but also highlight a substantial proportion of respondents who are open to the concept subject to further information.

Just 16% of respondents stated that they would support emissions based charging, while almost 50% indicated that they would not support such an approach. This suggests that, at present, emissions based charging would be challenging to introduce without significant risk of public resistance.

However, a notable 30% of respondents stated that they would want to find out more before making a decision. This is an important finding, as it indicates that opposition is not fixed for a large section of users and that views may be influenced by clearer explanations of how emissions based charging would work in practice, what vehicles would be affected, and how any additional revenue would be used.

Only 4% of respondents were unsure, suggesting that most respondents felt able to express an initial view, even if that view was conditional on receiving more information.

3.2.21 QUESTION 23 ASKED WHETHER RESPONDENTS OWNED A HDC CAR PARK PERMIT

This question allowed respondents to select a single option. It received 1,494 responses, meaning 52 respondents skipped the question.

Only 4% of respondents stated they currently own a permit for council owned car parks across the district. Question 24 was a follow-up to this question asking respondents to state whether they would consider purchasing a permit in the future. 1,501 respondents answered this question, meaning that 45 respondents skipped the question.

Figure 14 below shows the breakdown of responses based on the criteria provided.

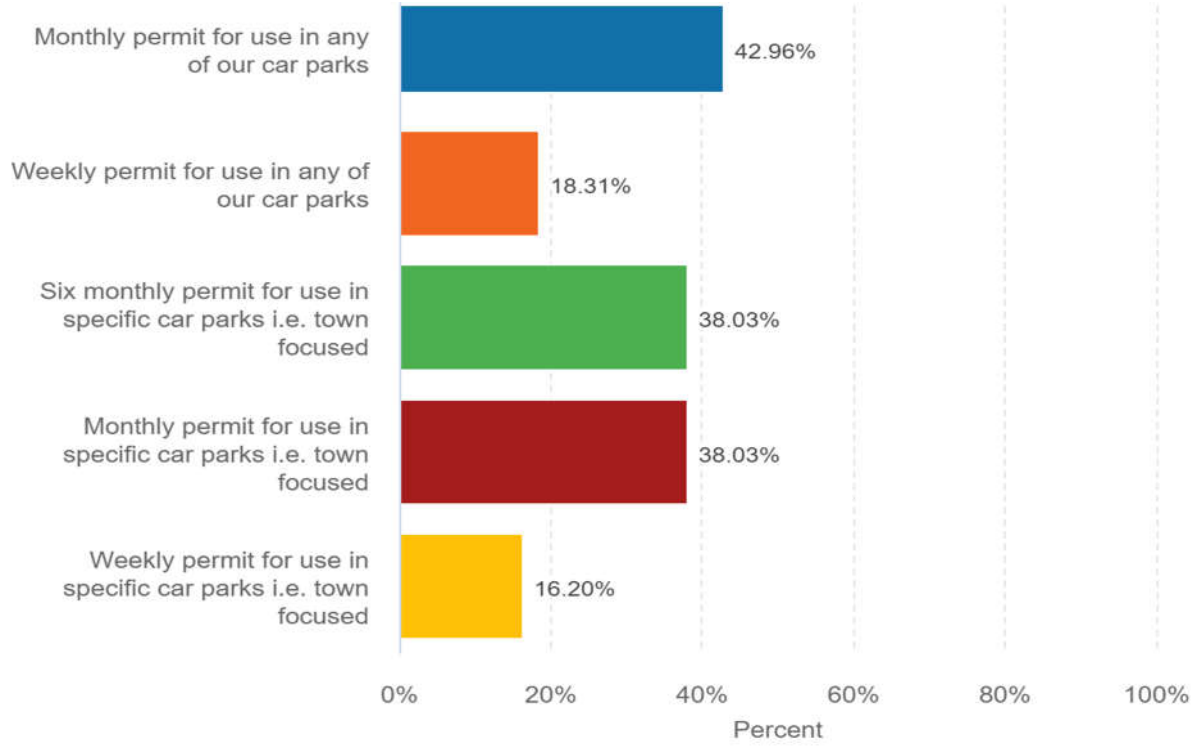

Figure 14 – Interest in potential HDC car parking permits

The results provide a clear indication of strong interest in flexible permit options, particularly those that balance convenience with affordability and reflect different user needs across Huntingdonshire.

The most popular option is a monthly permit valid across any Council owned car park, selected by 43% of respondents. This highlights a strong appetite for a simple, district wide permit offering flexibility of location, which is likely to appeal to regular users such as commuters, town centre workers, and residents who travel between different towns.

There is also significant support for town focused permits, with both monthly and six-monthly permits for use in specific car parks selected by 38% of respondents. This suggests that many users would value a lower cost option tied to a single town or location, providing a more targeted alternative for those with predictable parking patterns.

By contrast, weekly permits attract lower levels of interest. A weekly permit valid across all car parks was selected by 18% of respondents, while a weekly town specific permit was supported by 16%. This indicates that shorter duration permits may be more relevant to occasional users, visitors, or those with temporary parking needs, rather than forming the core of a permit offer.

3.2.22 QUESTION 25 ASKED WHETHER RESPONDENTS HAD A DISABILITY OR LIMITED MOVEMENT

This question received 1,433 responses, with 113 respondents choosing not to provide an answer. 16% of respondents indicated that they have a disability or limited mobility. This represents a sufficiently robust sample to support meaningful analysis of how inclusive and accessible Council owned car parks are across Huntingdonshire, and to inform considerations around provision, from an accessibility perspective.

A follow-up question for those that chose yes was to answer how easy it is to locate a blue badge space across council owned car parks. 654 respondents answered this question. Figure 15 illustrates the responses to the follow up question.

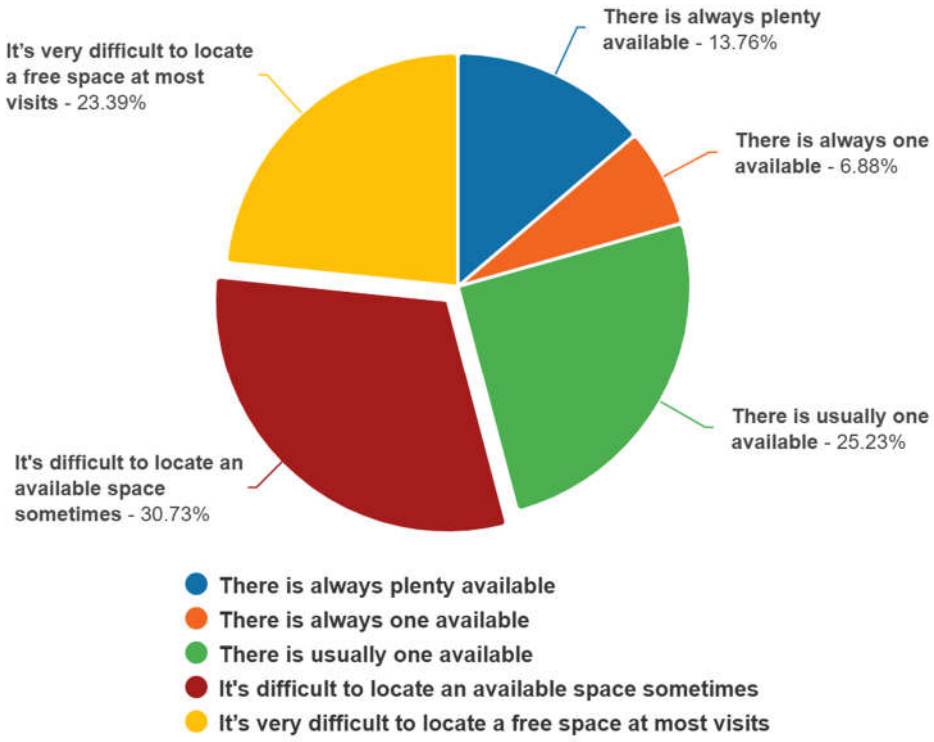

Figure 15 – How easy is it to locate a blue badge bay in HDC car parks

The results illustrate a mixed experience for users who rely on disabled parking bays, with availability varying notably by location and time of visit.

Just over 20% of respondents reported consistently positive availability, with 14% stating that there are always plenty of disabled spaces available and a further 7% indicating that there is always at least one space available. This suggests that, in some car parks, current provision is adequate and meeting user needs.

However, a larger proportion of respondents reported challenges. Around 25% stated that there is usually only one disabled space available, indicating limited resilience in provision and a higher risk of bays being fully occupied during busier periods. More significantly, 31% of respondents reported that it is difficult to locate an available disabled space at times, while 23% indicated that it is very difficult to find a free disabled space on most visits.

Taken together, these findings suggest that over half of respondents experience difficulty locating a disabled parking space either regularly or frequently. This points to localised shortfalls in provision, particularly in higher demand car parks or at peak times, and highlights the importance of reviewing the number, location, and visibility of disabled bays as part of the car park strategy. Improving provision in the most pressured locations would be likely to deliver a tangible improvement in accessibility and user experience for disabled users across Huntingdonshire.

3.2.23 OTHER COMMENTS REGARDING HDC CAR PARKS

The final question enabled respondents to provide any other comments regarding Council owned car parks across the district. In total, 816 comments were provided. These have been reviewed and grouped into key themes to identify recurring issues, sentiments, and priorities. A summary of the findings is set out below.

Cost of Parking

Indicative frequency of comments: 175

- Cost was the most commonly raised issue, with many respondents expressing the view that parking charges, particularly for short stays, are too high.
- A recurring sentiment was that parking should be cheaper or free for short visits, especially for quick trips such as shopping, medical appointments, or collections.
- Some respondents suggested that high charges discourage repeat visits to town centres and reduce dwell time.

Comparisons and value perception:

- Several comments compared Huntingdonshire unfavourably with nearby towns or out of town retail locations that offer free parking, reinforcing earlier survey findings on perceptions of relative cost.

Payment Systems and Reliability

Indicative frequency of comments: 158

- A significant number of comments related to payment machines not working reliably, particularly contactless and app based systems.
- Respondents frequently cited frustration when machines were out of order, slow, or unclear to use.
- Mobile phone signal issues affecting app payments were also raised, especially in certain locations.

Expectations:

- Many respondents accepted digital payments but stressed the importance of simple, robust, and well maintained systems, with clear instructions and fallbacks where technology fails.

Availability and Capacity of Spaces

Indicative frequency of comments: 107

- Respondents reported difficulty finding spaces at busy times, particularly in town centre car parks and during peak periods.
- Comments suggested that perceived capacity issues are often localised rather than district wide.
- Some respondents highlighted tensions between long-stay and short-stay parking, with long-stay vehicles occupying convenient spaces.

Electric Vehicle Charging and Future Provision

Indicative frequency of comments: 75

- Many respondents called for greater provision of EV charging, particularly in larger town car parks.
- Some comments highlighted inconsistency between climate objectives and the current limited availability of charging infrastructure.
- Others stressed the importance of future proofing car parks to support the transition to electric vehicles.

Enforcement and Compliance

Indicative frequency of comments: 52

- Views on enforcement were mixed. Some respondents felt enforcement was too strict or unfair, while others felt it was insufficient.
- A number of comments raised concerns about misuse of bays (e.g. overstaying, misuse of disabled bays) and called for more consistent enforcement presence.

Accessibility and Disabled Parking

Indicative frequency of comments: 46

- Respondents highlighted challenges around the availability, location, and enforcement of disabled bays.
- Some comments linked accessibility issues to wider concerns about bay size, gradients, and walking distances to destinations.

Parking Bay Size and Layout

Indicative frequency of comments: 38

- A recurring theme was that parking bays are too small for modern vehicles, making it difficult to enter and exit cars safely.

- This issue was often linked to accessibility, particularly for older users or those with limited mobility.

Signage and Wayfinding

Indicative frequency of comments: 13

- A small number of respondents raised issues around poor signage, unclear tariffs, or difficulty navigating larger car parks.

Positive Feedback

Indicative frequency of comments: 70

- While the open question naturally attracted more critical feedback, a notable number of respondents commented that parking generally “works well” or is “adequate for most needs.”
- Some respondents highlighted convenient locations and generally good availability outside peak times.

Key Observations Across All Themes

- **Consistency with structured survey results:** The free text responses strongly reinforce earlier findings, particularly around cost sensitivity, payment reliability, and short-stay fairness.
- **Localised issues dominate:** Many comments relate to specific car parks or towns rather than systemic district wide problems.
- **Value for money narrative:** Respondents frequently linked charges to expectations of quality, reliability, and investment, suggesting that acceptance improves when users can see tangible benefits.
- **Importance of communication:** Several comments point to confusion or frustration that could be reduced through clearer signage, better explanation of payment systems, and proactive communication about changes or improvements.

4.0 LOCAL PREFERENCE

4.1 INTRODUCTION

Section 3 presented a summary of responses received across Huntingdonshire as a whole. However, the district comprises a diverse range of towns and villages, each with differing patterns of car park use, levels of demand, and local context. As a result, user feedback is likely to vary by location. Understanding these local differences is important in ensuring that the car park strategy responds appropriately to the distinct needs and priorities of individual communities, rather than applying a single, uniform approach across the district.

This section therefore focuses on the findings from the Stage 1 user survey at a more local level within Huntingdonshire. It is not practical or proportionate to provide a detailed breakdown for every town and village, as this would result in very small sample sizes in some locations and would add limited analytical value. Instead, the location based analysis has been undertaken for the district's principal towns, (Huntingdon, St Ives, and St Neots) with responses from surrounding villages considered alongside these town level findings to ensure that the views of smaller settlements are appropriately reflected.

Similarly, it is not necessary to provide a local breakdown for every survey question, as this would lead to an overly lengthy report without materially improving the insight gained. The local analysis therefore focuses on a selected set of key questions that are most relevant to understanding differences in user experience and priorities between locations.

The questions included in the local level analysis include the following:

- Have you experienced any parking problems within the last 12 months at any Huntingdonshire District Council car parks?
- Please select the issues that are related to your visit
- What do you like most about Huntingdonshire District Council parking facilities you have used?
- What would you most like to see improved within Council owned car parks?
- When would you prefer to pay for your parking?
- Do you ever use the check-in check-out system when paying for parking in our car parks
- How would you like to pay for your parking
- How do you think current Huntingdonshire District Council car parking charges compare to Council owned car parks in other areas?
- Do you have a disability or limited movement?
- How easy do you find it to locate a Blue Badge parking space in Council owned car parks?

4.2 HUNTINGDON LOCAL ANALYSIS

Reviewing the completed responses, 386 can be attributed to the Huntingdon region. This includes within the town and the surrounding villages. The first question for the local analysis was “Have you experienced any parking problems within the last 12 months at any Huntingdonshire District Council car parks?” 64% of these respondents answered yes to the question, which is 11% higher than the district wide response. This suggests that there are greater issues with parking in Huntingdon car parks compared to other car park locations.

Figure 16 illustrates the issues that were highlighted by Huntingdon respondents.

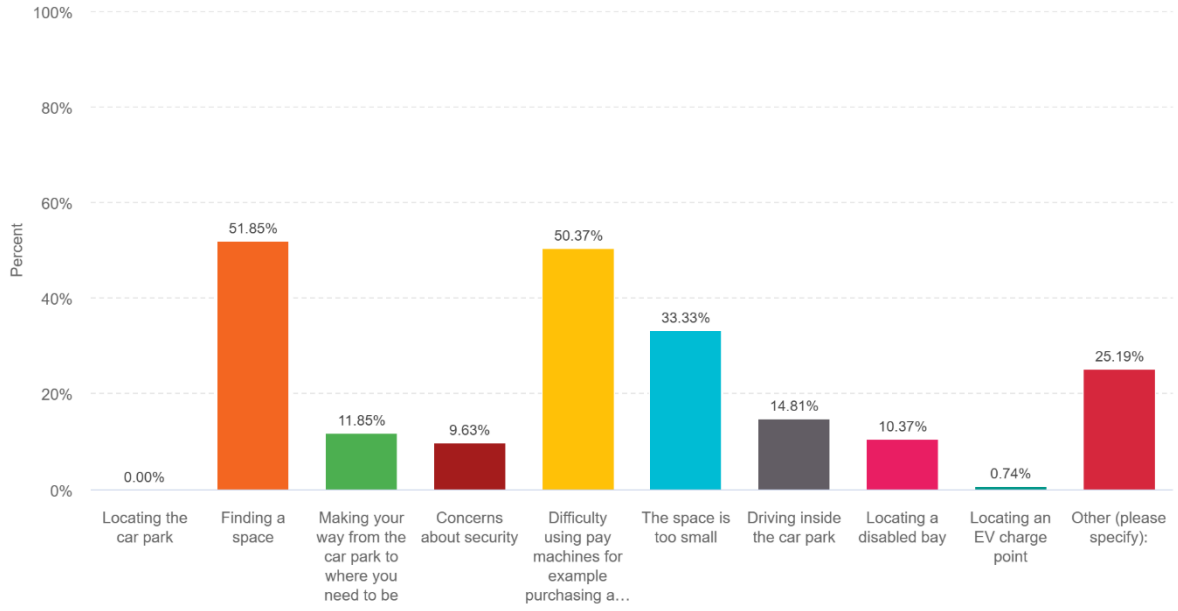

Figure 16 – Issues experienced in Huntingdon specific car parks

Across both the district wide and Huntingdon specific results, the same core issues emerge as the most prominent. At a district wide level, difficulty using pay machines is the most frequently cited issue, reinforcing that payment reliability and usability is a systemic concern rather than a location specific anomaly.

In Huntingdon specifically, however, finding a parking space is marginally more frequently identified than difficulty using payment machines, indicating that capacity pressures are felt more acutely in this location. Parking spaces being too small also features strongly in both datasets, confirming that bay dimensions and layout constraints are consistent challenges across the estate, but are particularly noticeable in busier town centre car parks such as those in Huntingdon.

Taken together, the comparative results indicate that Huntingdon experiences a more intense set of parking pressures than the district average, particularly in relation to capacity and operational performance at peak times. The significantly higher proportion of respondents reporting difficulty finding a space (around 52% in Huntingdon, compared to around 36% district wide), alongside increased issues with driving within

car parks, suggests that Huntingdon's car parks are operating closer to their practical capacity and are more sensitive to layout and circulation constraints. By contrast, issues such as locating disabled bays, security, wayfinding, and EV charging remain broadly consistent with, or slightly less pronounced than, the district wide position, indicating that these are not primary drivers of dissatisfaction in Huntingdon.

Question 13 asked respondents what they liked most about Huntingdonshire District Council car parks.

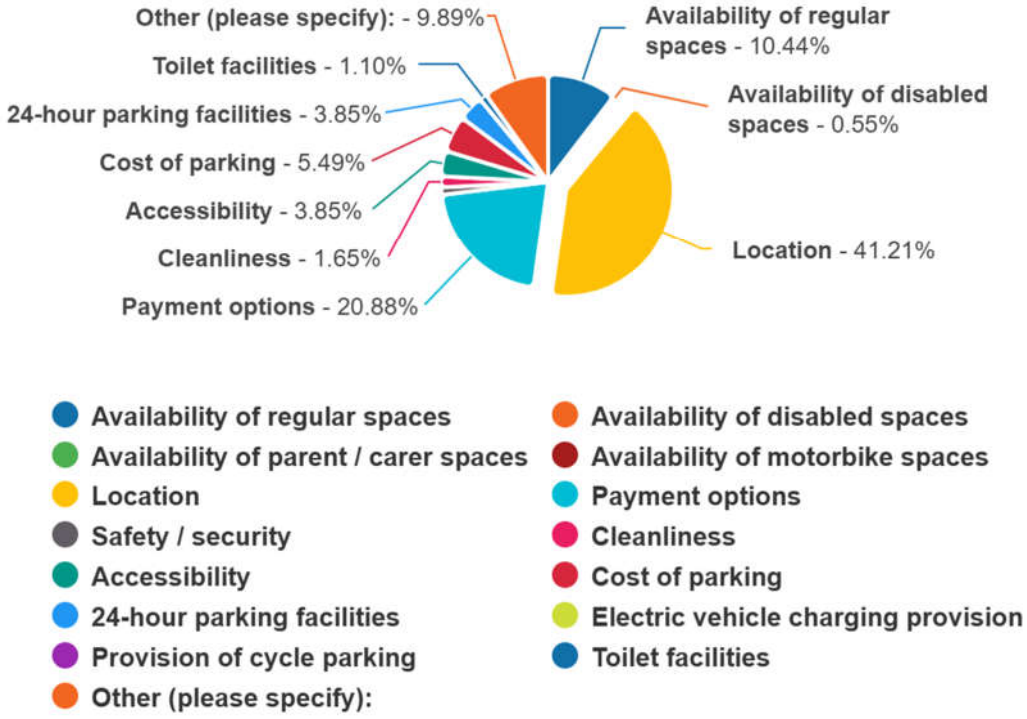

Figure 17 – Most like aspects of car parks in Huntingdon

A comparison of the district wide responses with the Huntingdon specific results shows a strong degree of alignment in what users value most about Council owned car parks, while also highlighting some important local differences in emphasis.

Across both datasets, location is overwhelmingly identified as the most valued aspect of the parking offer, accounting for just over 41% of responses in both the district wide and Huntingdon analyses. This consistency demonstrates that proximity to town centres, shops, services, and key destinations is the single most important factor for users, and that Huntingdon performs as strongly as the wider district in this respect. The stability of this result suggests that location is a fundamental strength of the car park estate rather than a variable influenced by local operating conditions.

The second most valued aspect in both datasets is payment options, although this is notably more prominent in Huntingdon. While payment options account for around 16% of district wide responses, this rises to approximately 21% in Huntingdon. This suggests that ease, flexibility, and reliability of payment are of heightened importance to users in Huntingdon, likely reflecting higher usage levels, greater turnover, and the more intensive day to day demands placed on town centre car parks.

Perceptions around the availability of regular parking spaces are broadly similar but slightly lower in Huntingdon (around 10%) compared to the district wide figure (around 13%). This may reflect the fact that, while availability is still valued, Huntingdon users are more likely to experience constrained capacity at peak times and therefore prioritise other factors such as payment convenience and location over absolute space availability.

Other aspects of the parking offer, such as cost of parking, accessibility, 24-hour parking, cleanliness, and toilet facilities, attract relatively small proportions of responses in both datasets and remain broadly consistent. Notably, the availability of disabled spaces is valued by a much smaller proportion of respondents in Huntingdon than across the district as a whole. This does not necessarily indicate that provision is unimportant, but rather that it may be less visible as a defining feature compared to other aspects of the parking experience in a busy town centre environment.

The following question was focused on areas of improvement within HDC car parks. As with the district wide results, the cost of parking was the highest rated area for improvement within Huntingdon. However, this wasn't deemed as significant, with a 5% lower rate provided for this option. Availability of regular spaces (4% increase), and the availability of parent / carer spaces (4% increase) were both slightly higher in Huntingdon compared to the wider district.

Similarly to the district wide analysis, although payment options was seen as a positive feature, there were also noticeable levels of respondents that believe this requires improvement in car parks, albeit a slightly less amount (2% reduction).

Question 16 asked respondents when they prefer to pay for parking. Figure 18 illustrates the feedback from the Huntingdon region.

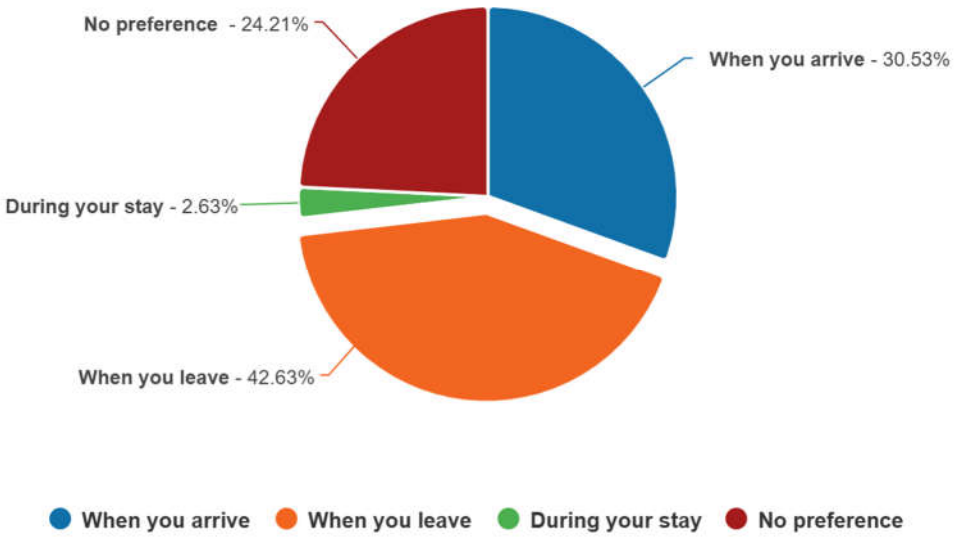

Figure 18 – Preference for parking payment in Huntingdon

A comparison of the district wide and Huntingdon specific results shows a broadly consistent pattern in preferences for when users would like to pay for parking, with some

notable differences in emphasis that reflect the more intensive use of car parks in Huntingdon.

Across the district as a whole, preferences are relatively evenly split between paying on arrival (35%) and on departure (37%), with a sizeable proportion of respondents (26%) indicating no preference. This suggests that, at a district wide level, users are generally comfortable with either approach, provided the payment system is clear, reliable, and easy to use. Very few respondents expressed a preference for paying during their stay, indicating limited appetite for mid-stay payment interactions.

In Huntingdon specifically, there is a clearer preference for paying on departure, with support rising to approximately 43%, compared to 31% who prefer to pay on arrival. This represents a stronger lean towards post stay payment models than is evident across the district as a whole. The proportion of respondents with no preference remains broadly similar (24%), suggesting that flexibility remains important, but that Huntingdon users are more likely to favour payment approaches that reflect actual length of stay rather than estimated duration.

The increased preference for pay on exit in Huntingdon is likely to reflect higher turnover, greater variability in stay duration, and a higher incidence of short, transactional visits in a busy town centre environment, where pay on exit is more common than smaller towns and villages.

Question 17 focused on the check-in / check-out system. When compared with the district wide results, the Huntingdon specific feedback indicates an even lower level of awareness of the system. In Huntingdon, around 55% of respondents stated that they do not know what a check-in / check-out system is, compared to approximately 47% district wide, reinforcing that lack of understanding is an even more pronounced issue locally.

Usage levels among those who are aware of the system are also slightly lower in Huntingdon, with fewer respondents reporting regular (2% reduction) or occasional use (2% reduction) and a similar proportion indicating that they do not use such systems at all. This suggests that, despite Huntingdon being the district's busiest town and a location where pay on exit systems could offer particular benefits, familiarity with this payment model remains limited.

Feedback on how respondents preferred to pay for parking in Huntingdon was very similar to the district wide analysis with no clear differences between the two datasets.

Question 21 asked respondents how they felt parking charges in other areas outside the district compared to Huntingdonshire. Across the district as a whole, views are relatively evenly split between those who consider charges to be broadly similar elsewhere (around 25%) and those who feel they are generally more expensive (around 31%). A notable proportion of respondents (around 33%) indicated that they do not know, suggesting that many users do not regularly compare parking charges between areas or do not feel strongly enough to make a comparison.

In Huntingdon, perceptions follow a similar pattern but with a slightly more balanced spread. The proportion of respondents who consider charges to be broadly similar is marginally higher (around 27%), while the proportion who feel charges are generally more expensive is lower (around 25%) compared to the district wide position. This suggests that relative to the rest of the district, Huntingdon users may be slightly less inclined to view parking charges as uncompetitive.

The proportion of respondents selecting "I don't know" remains high in both datasets and is marginally higher in Huntingdon (around 35%), reinforcing the view that perceptions of comparative cost are often formed without direct benchmarking. A small but consistent minority in both cases consider Huntingdonshire's parking to be generally cheaper, though this remains the least selected option.

Figure 19 illustrates this breakdown in Huntingdon.

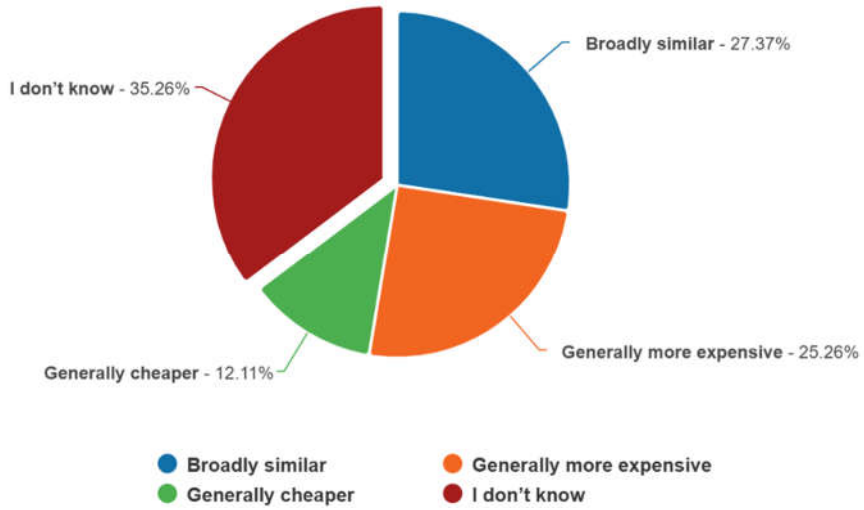

Figure 19 – Comparison between local authorities and parking charges from Huntingdon respondents

The final two questions selected for the local analysis focus on respondents with a disability or limited movement. The district wide analysis highlighted a 16% response rate, which is identical to the response rate within Huntingdon.

The comparison shows that availability of disabled parking spaces is perceived to be more constrained in Huntingdon than across the district as a whole. At a district wide level, around 47% of respondents indicated that an available disabled space is usually or always available, whereas in Huntingdon this falls to approximately 46%, with a notable shift toward more negative responses. In Huntingdon, the proportion of respondents stating that it is very difficult to locate a free disabled space at most visits increases significantly to around 31%, compared to around 23% district wide, while those reporting difficulty only sometimes falls from around 31% to 22%.

4.3 ST IVES LOCAL ANALYSIS

A review of the completed survey responses shows that 284 submissions relate to the St Ives area, encompassing both the town itself and the surrounding villages. The local analysis therefore begins with the question, "Have you experienced any parking

problems within the last 12 months at any Huntingdonshire District Council car parks?" The results show that 57.63% of respondents have experienced problems, while 42.37% have not. This indicates that parking issues are a material feature of the customer experience in St Ives, with a clear majority reporting challenges in the last year.

Figure 20 illustrates the specific issues reported by St Ives respondents.

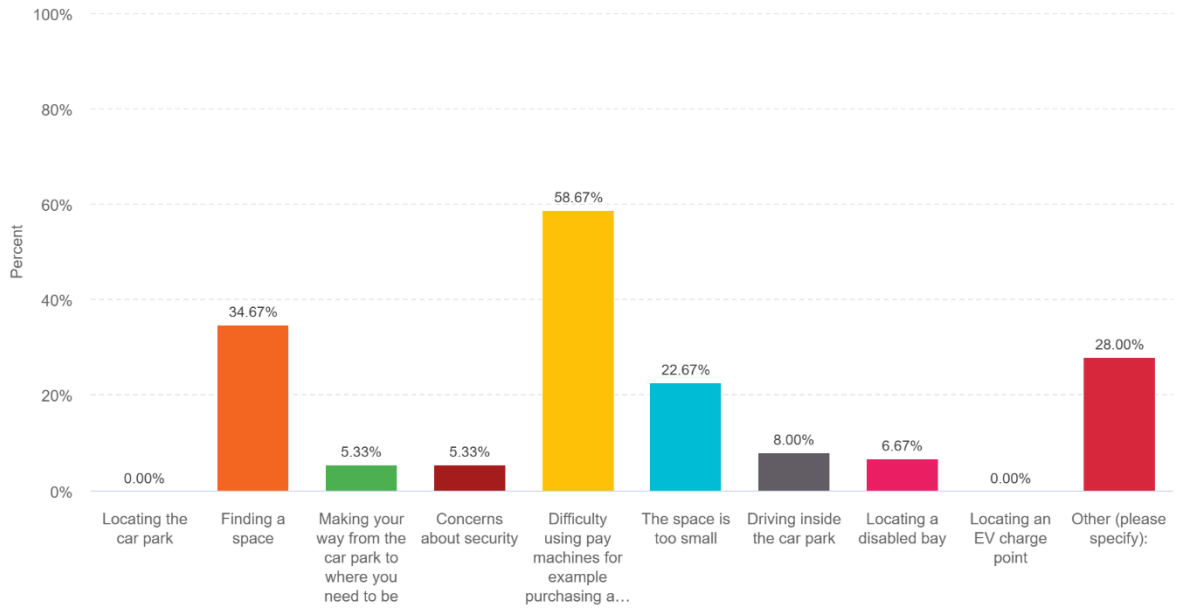

Figure 20 – Issues experienced in St Ives specific car parks

The most frequently cited problem is difficulty using pay machines (59%), reinforcing that payment reliability and usability are the dominant operational concern locally. Finding a parking space is the second most commonly reported issue (34%), indicating notable capacity pressure in St Ives at peak periods. A further 23% highlighted that spaces are too small, suggesting that bay dimensions and layout constraints are also affecting user confidence and convenience. Other issues are less prevalent but still relevant, including driving inside the car park (8%), and locating a disabled bay (7%). Concerns linked to security and walking routes/wayfinding from the car park are comparatively low (both 5%), and locating the car park and locating EV charge points were not identified as issues.

Question 13 asked respondents what they like most about HDC car parks they have used in St Ives. The results show that location is overwhelmingly the most valued feature (43%), confirming that proximity to the town centre and key destinations is the principal strength of the offer. After location, respondents most commonly value the availability of regular spaces (15%) and payment options (14%), suggesting that, when systems work well, convenient payment and the ability to find a space are highly important components of satisfaction. Smaller proportions referenced cost of parking (5%) and 24-hour parking facilities (5%), with low levels of emphasis placed on disabled space availability (2%) and wider supporting facilities such as toilets, EV charging provision, and accessibility (each 1%). Other comments account for 12.61%, indicating a degree of

local nuance that may warrant review of the free text responses for St Ives specific themes.

Figure 21 illustrates the breakdown of this feedback for the St Ives region.

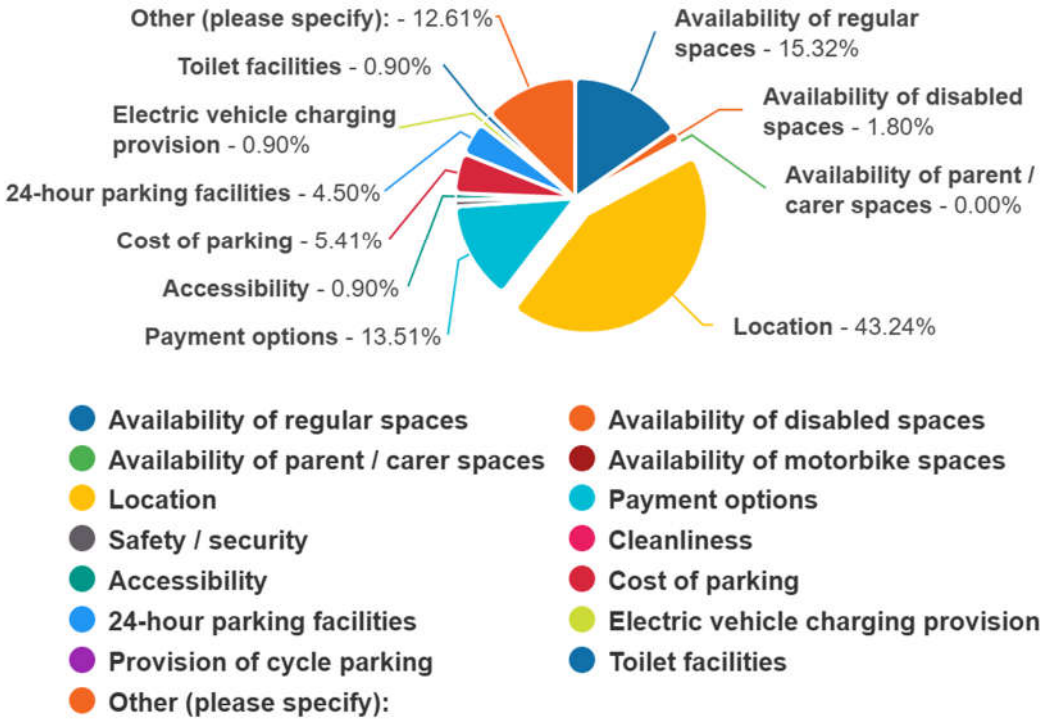

Figure 21 – Most liked aspects of parking in HDC car parks in St Ives

When compared with the district wide results for this question, the St Ives findings show a broadly similar pattern of priorities but with some notable differences in emphasis. Across the district as a whole, cost of parking also emerges as the most frequently cited area for improvement; however, the proportion of respondents highlighting this issue in St Ives (47%) is significantly higher than the district wide figure. This indicates that concerns about affordability are more acute in St Ives than elsewhere, and that pricing is a particularly sensitive issue for users of these car parks.

Conversely, while payment options remain a consistent secondary priority across both datasets, the St Ives figure (12%) is slightly lower than the district wide response. This suggests that, although payment usability is still an important consideration locally, it is relatively less dominant than cost when compared to the wider Huntingdonshire position. Improvements relating to availability of regular spaces, parent / carer spaces, and supporting facilities such as toilets and EV charging attract broadly similar or marginally lower levels of response in St Ives, indicating that these issues are present but not disproportionately problematic compared to the district average.

Question 16 explored when users would prefer to pay for parking. St Ives respondents show a stronger preference for paying on arrival (39%) than paying on departure (32%), with 26% expressing no preference and 3% preferring to pay during their stay. This suggests that, in St Ives, many users favour a more traditional “pay and display on entry”

approach, although the sizeable “no preference” segment indicates that flexibility remains valuable provided the payment process is simple and dependable.

When compared with the district wide analysis, the St Ives results reinforce and slightly amplify the same underlying pattern. Across the district as a whole, a substantial proportion of respondents also indicated that they do not know what a check-in / check-out system is. However, this lack of awareness is even more pronounced in St Ives, where 56% selected this option, compared to a lower but still significant district wide figure. This confirms that awareness, rather than acceptance, remains the principal barrier to meaningful engagement with this payment model, particularly at a local level.

Usage patterns among those who are aware of the system are broadly consistent with the district wide findings. In St Ives, 26% of respondents stated that they do not use check-in / check-out systems, while 15% use them occasionally and only 3% use them all the time. This mirrors the district wide trend of limited regular usage, with St Ives showing slightly lower levels of routine adoption. Overall, the comparison indicates that St Ives does not present a distinct resistance to check-in / check-out systems, instead, it reflects an environment where limited understanding and exposure are suppressing uptake, suggesting that targeted communication and simple user education would be a necessary precursor to any wider rollout.

Question 18 asked how respondents would like to pay for parking. St Ives respondents express a clear preference for contactless card payments (63%), alongside strong demand for a mobile phone payment app (47%). Importantly, cash (coins only) remains significant (43%), indicating that cashless only approaches would risk excluding a substantial minority. Chip and PIN is less preferred (20%), suggesting that where card payments are offered, contactless capability is the critical requirement.

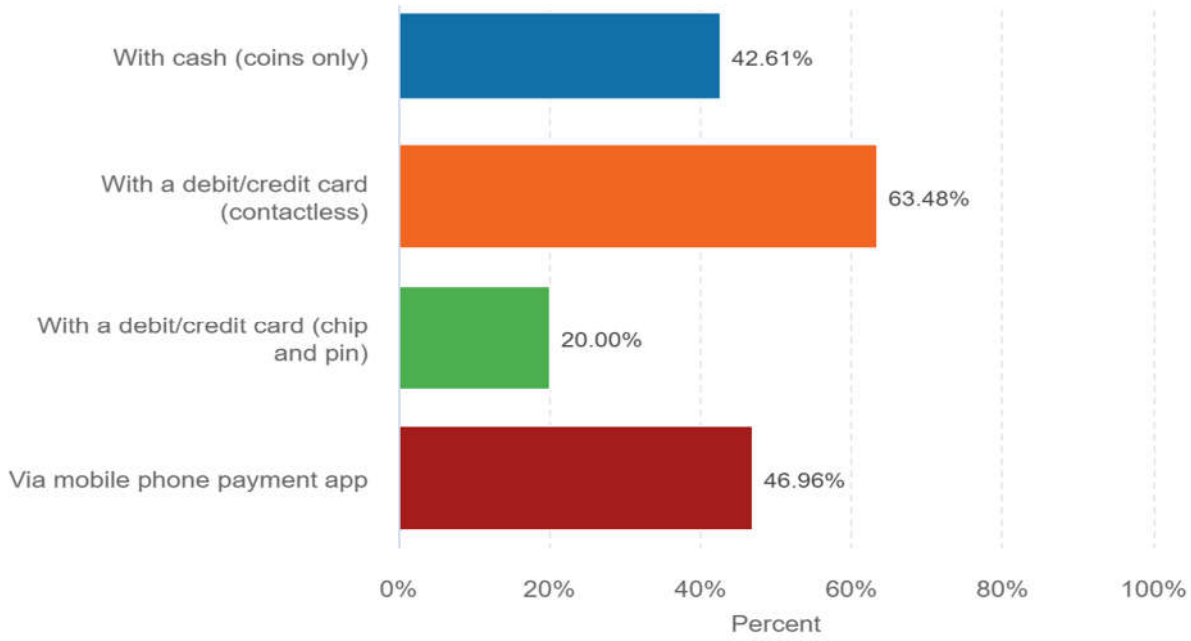

Figure 22 – Preference for car park payment in St Ives

Question 21 asked how respondents think HDC charges compare to car parks in other locations outside Huntingdonshire. When set against the district wide analysis, the St Ives findings follow a very similar overall pattern, but with some subtle differences in emphasis. As across the district as a whole, the most common response in St Ives is "I don't know" (37%), reinforcing the conclusion that a significant proportion of users do not actively compare parking charges between areas or do not feel sufficiently informed to do so. This proportion is slightly higher than the district wide figure, suggesting that uncertainty around comparative pricing is marginally more pronounced in St Ives.

Among respondents who do hold a view, perceptions in St Ives are broadly aligned with the district wide position but show a slightly stronger tilt towards negative comparisons. In St Ives, 30% consider charges to be generally more expensive, which is comparable to, though marginally lower than, the district wide level, while 21% feel charges are broadly similar, slightly below the district wide share. The proportion who believe charges are generally cheaper (12%) remains a small minority and is broadly consistent with the district wide response. Figure 23 illustrates this summary for the St Ives region.

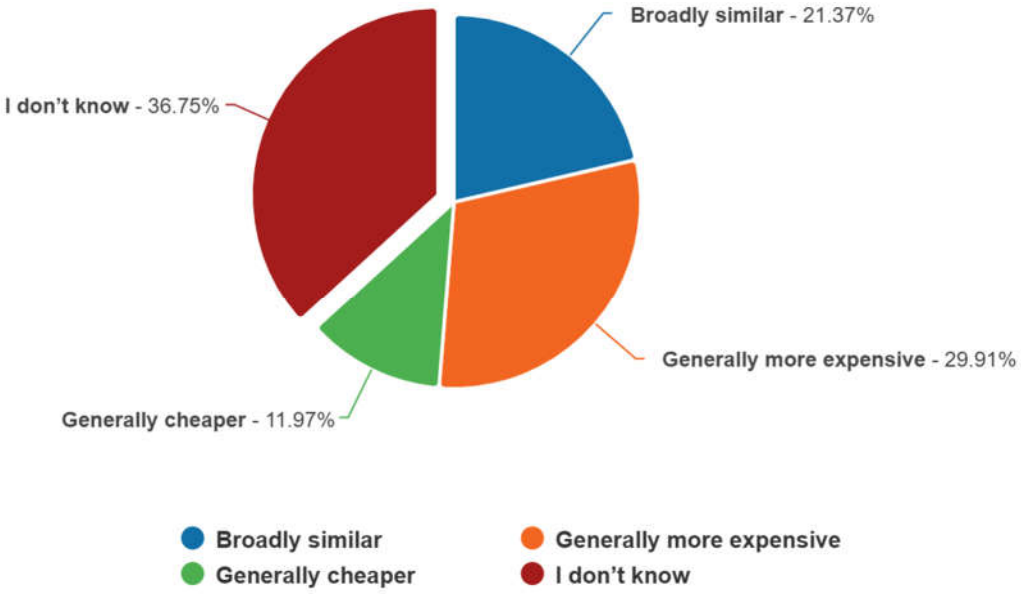

Figure 23 – St Ives respondents thoughts on how parking charges compare outside of HDC

Finally, in relation to accessibility, 14% of St Ives respondents stated they have a disability or limited movement, 2% lower than the district wide average. When compared with the district wide findings, the St Ives results point to a more constrained experience for blue badge holders. District wide, a slightly higher proportion of respondents report that disabled bays are always or usually available, indicating a more balanced level of provision across the wider estate.

However, only 17% of respondents state that a blue badge space is always available, with a further 31% indicating a space is usually available. By contrast, a clear majority of St Ives respondents experience some degree of difficulty, with 34% reporting that it is difficult to find a space sometimes and 17% stating that it is very difficult at most visits. This represents a stronger shift towards negative responses than is evident at a district wide level.

4.4 ST NEOTS LOCAL ANALYSIS

Reviewing the completed responses, 583 responses can be attributed to the St Neots area, including the town and surrounding settlements. The first question in the local analysis asked respondents: "Have you experienced any parking problems within the last 12 months at any Huntingdonshire District Council car parks?"

In St Neots, 44% of respondents answered yes, compared to the 53% district wide response rate, representing a reduction of 9%. This indicates that, while parking problems can remain an issue locally, the overall level of dissatisfaction in St Neots is notably lower than the district average.

Figure 24 illustrates the specific issues identified by respondents using St Neots car parks.

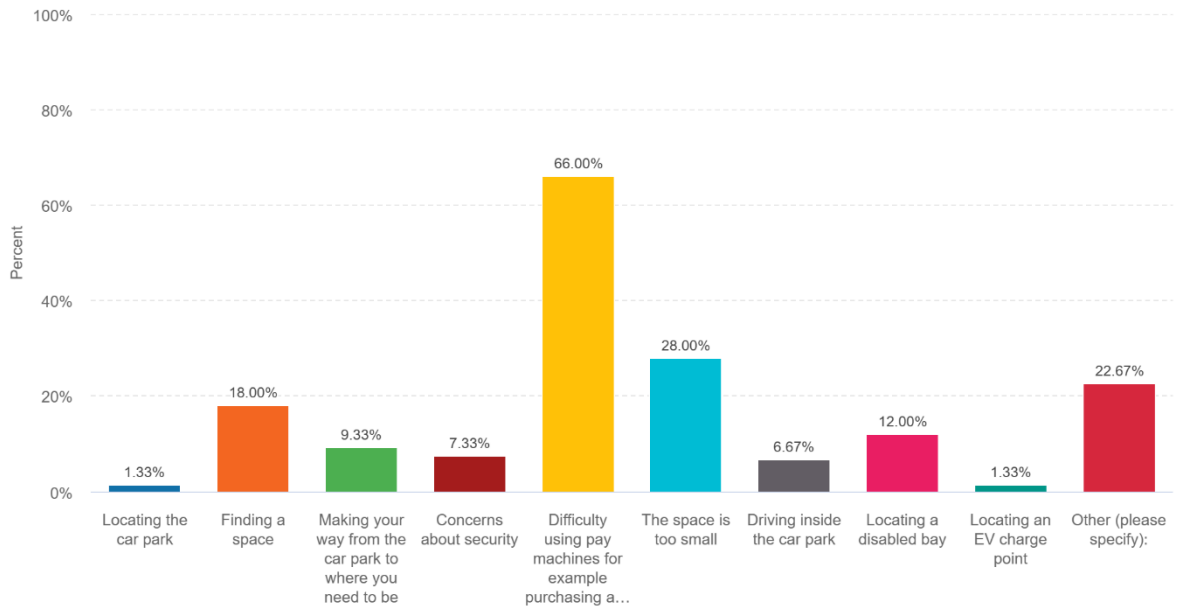

Figure 24 – Issues experienced in St Neots specific car parks

Across both the district wide and St Neots results, the same core issues emerge, although their relative prominence differs. At a district wide level, difficulty using pay machines is the most frequently cited issue (59%). In St Neots, this concern is even more pronounced, rising to 66%, an increase of 7%, reinforcing that payment usability and reliability are a particularly acute issue locally.

By contrast, finding a parking space is reported by 18% of St Neots respondents, which is significantly lower than the district wide figure of approximately 36% (a reduction of 18%). This suggests that relative to other parts of the district, St Neots experiences less intense capacity pressure overall. However, space size remains a notable issue locally, with 28% identifying bays as too small, which is broadly consistent with the district wide response (approximately 23%, a 5% increase).

Other issues, including concerns about security (7%), driving within the car park (7%), and locating disabled bays (12%), remain secondary in St Neots and are generally

comparable to or slightly below district wide levels. Taken together, the evidence suggests that while St Neots car parks are not under the same degree of capacity stress as larger centres, operational factors, particularly payment infrastructure, play a disproportionately important role in shaping user experience.

Question 13 asked respondents what they liked most about Huntingdonshire District Council car parks. Figure 25 presents the St Neots responses.

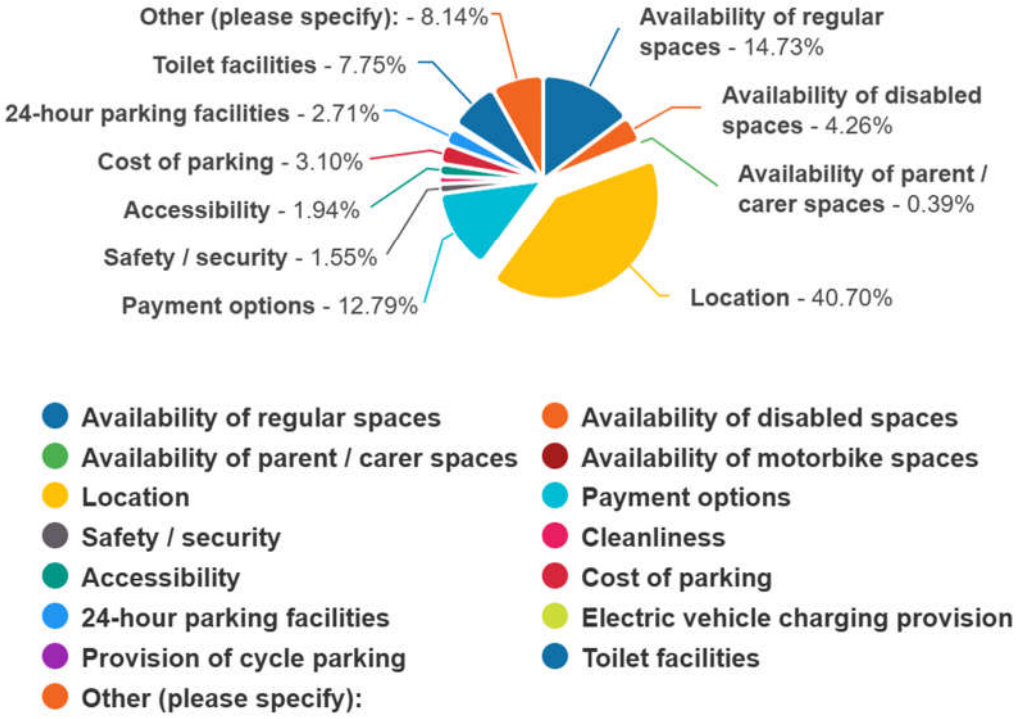

Figure 25 – Most liked aspects of parking in HDC car parks in St Neots

As with the district wide analysis, location is the most valued aspect of parking provision in St Neots, accounting for 41% of responses. This is closely aligned with the district wide figure of approximately 43%, indicating that proximity to town centre destinations remains a consistent strength across the estate.

The availability of regular parking spaces is the second most liked aspect of parking within St Neots, with 15% of respondents choosing this option, reinforcing earlier findings that capacity constraints are less severe locally. That being said, this figure is in line with the district wide response rate. Payment options are valued by 13% of St Neots respondents, which is marginally lower than the district wide figure (around 14%), suggesting that while payment is important, it is less likely to be viewed positively where reliability issues persist.

Other aspects, such as toilet facilities, accessibility, safety/security, and 24-hour parking, attract modest response levels and broadly mirror district wide patterns, indicating no major local divergence in what users value beyond location and basic availability.

When asked what they would most like to see improved, cost of parking remains the dominant concern in St Neots, selected by 39% of respondents. This is around 8% than the district wide figure (47%), indicating that while cost remains important, it is less acute locally than elsewhere in the district.

By contrast, availability of disabled spaces (7%) and parent/carer spaces (6%) are both higher than district wide responses (approximately 4–5%), suggesting greater sensitivity to inclusive provision in St Neots. Payment options are identified by 13%, which is broadly consistent with the district wide figure, reinforcing the dual perception of payment as both a valued feature and a priority for improvement.

Question 16 explored when respondents prefer to pay for parking. In St Neots, preferences are relatively balanced, with 36% favouring payment on departure and 32% preferring payment on arrival. This closely mirrors the district wide pattern (37% on departure and 35% on arrival), indicating no material local deviation. The proportion expressing no preference (29%) is slightly higher than district wide (around 26%), suggesting a degree of flexibility among St Neots users.

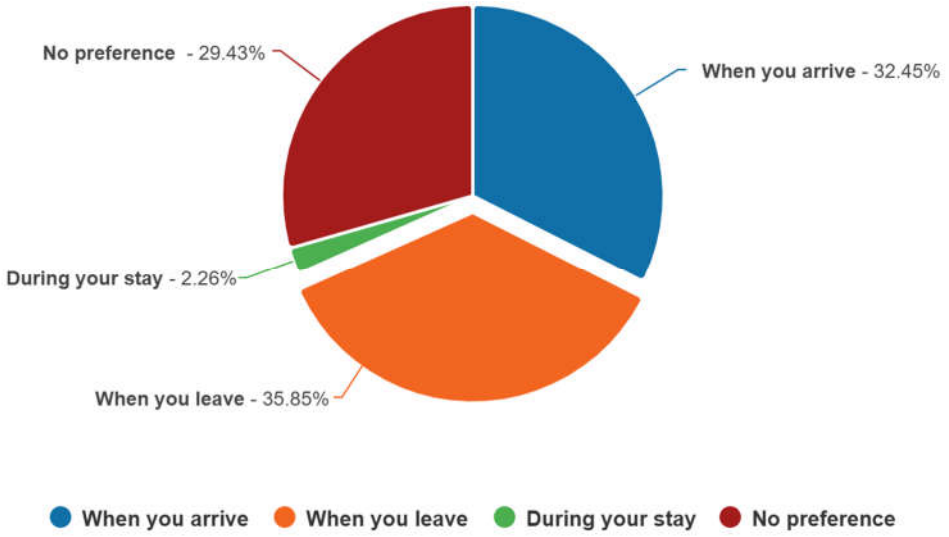

Figure 26 – Preference for parking payment in St Neots

Question 17 focused on awareness and use of check-in / check-out systems. In St Neots, 36% stated that they do not know what the system is, which is 11% lower than the district wide figure (approximately 47%). This indicates relatively higher awareness locally. However, actual usage remains limited. Only 11% report using the system all the time and 17% occasionally, while 36.84% state that they do not use it. Compared to district wide results, St Neots shows slightly higher regular usage (8%), suggesting that where awareness exists, uptake improves, though the system is still far from mainstream.

Preferences for how to pay for parking in St Neots closely mirror the district wide findings. Contactless card payments (62%) and mobile payment apps (47%) are the most popular options, with cash still used by a substantial minority (41%). Differences from district wide figures are marginal (within 2%), indicating consistent expectations across the district.

Question 21 asked how respondents felt St Neots parking charges compare with those elsewhere. The most common response is “generally more expensive” (39%), which is approximately 8% higher than the district wide figure (31%). The proportion stating “broadly similar” (18%) is lower than district wide (25%), a reduction of 7%).

Meanwhile, 35% selected “I don’t know”, broadly consistent with the district wide response. This suggests that St Neots users are more likely than the average respondent to perceive local parking charges as uncompetitive, even though a substantial minority remain uncertain.

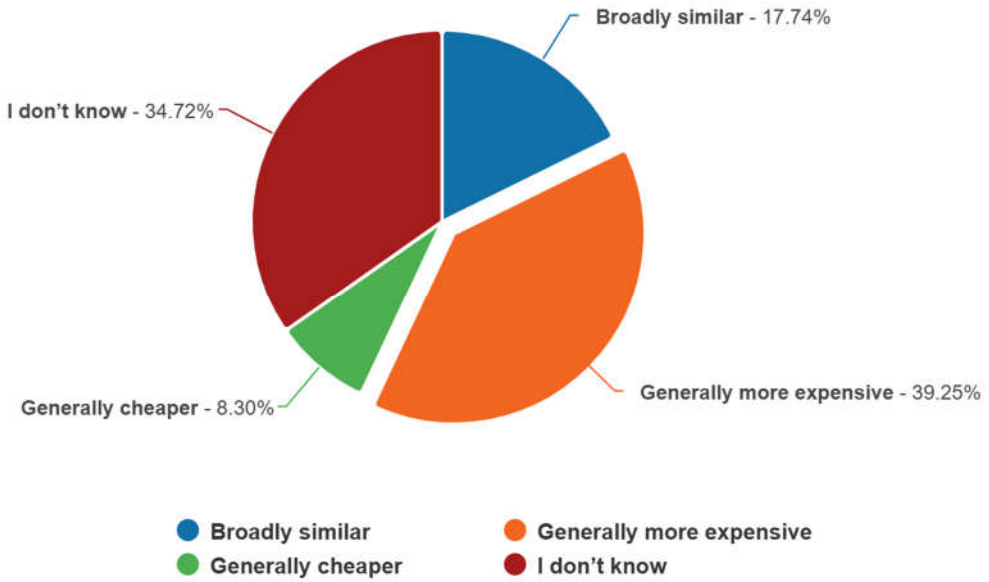

Figure 27 – St Neots respondents thoughts on how parking charges compare outside of HDC

The proportion of respondents identifying as having a disability or limited movement in St Neots (17%) is broadly consistent with the district wide figure (16%), providing a comparable evidence base.

However, perceptions of blue badge availability indicate slightly less pressure locally. In St Neots, 49% report that a disabled space is usually or always available, compared to approximately 47% district wide. At the same time, 22% report that it is very difficult to find a space at most visits, which is around 1% lower than the district wide figure, suggesting marginally better performance at peak times.

5.0 BUSINESS QUESTIONNAIRE

To support the Car Park Strategy development, a separate business questionnaire was conducted to support the resident and visitor user survey to gather insights from business owners and employees across the district. This questionnaire received 24 responses and included 25 questions, most of which were identical to those in the resident and visitor survey. This section focuses on the questions that differed to analyse the unique feedback provided by businesses.

Question 3 of the business questionnaire asked respondents whether their place of work had private off-street parking available. A significant 77% of respondents stated they did not, indicating that the vast majority of business owners, and employees are dependent on public parking facilities, including those managed by Huntingdonshire District Council. This finding underscores the critical importance of ensuring adequate public parking provisions to support local economies and facilitate business growth.

Among those with private parking, 8% reported availability for only one vehicle, while 10% stated they have provision for up to 10 vehicles. A detailed breakdown of these responses is presented in figure 28.

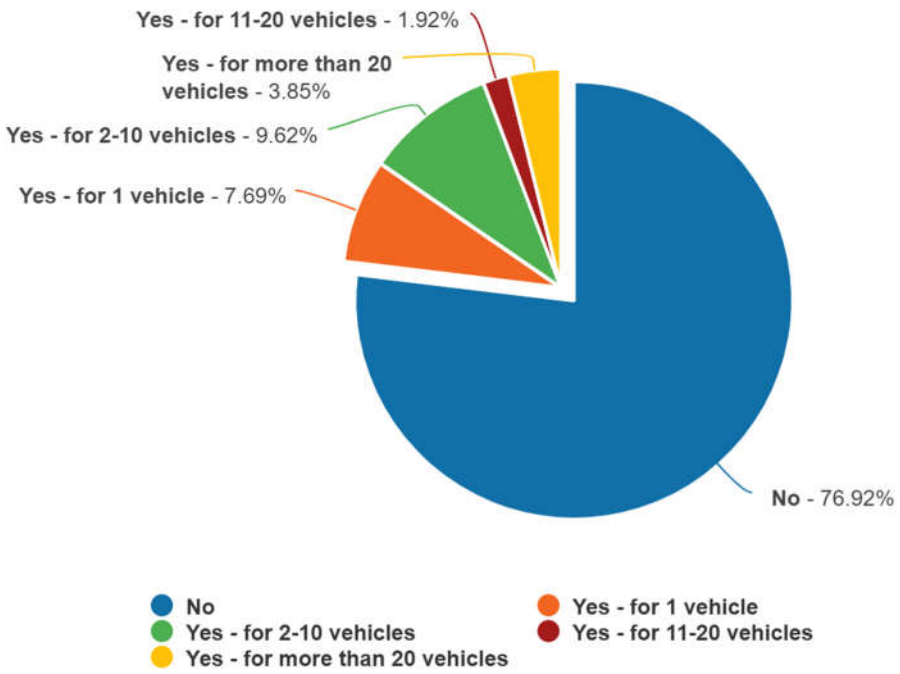

Figure 28 – Feedback to question 3 from the business questionnaire

Question 4 asked respondents where their customers typically park when visiting local businesses. The results reinforce the findings from Question 3, which highlighted a significant reliance on council owned car parks. A substantial 78% of respondents indicated that their customers primarily use council owned car parks, demonstrating their importance to local businesses.

In comparison, 37% of respondents stated that their customers park on-street. While this may be suitable in certain areas, it is not a viable option for all businesses. Additionally, only 20% of respondents reported that their customers have access to private or designated parking areas, underscoring the reliance on public parking.

Figure 29 provides a full breakdown of responses for this question.

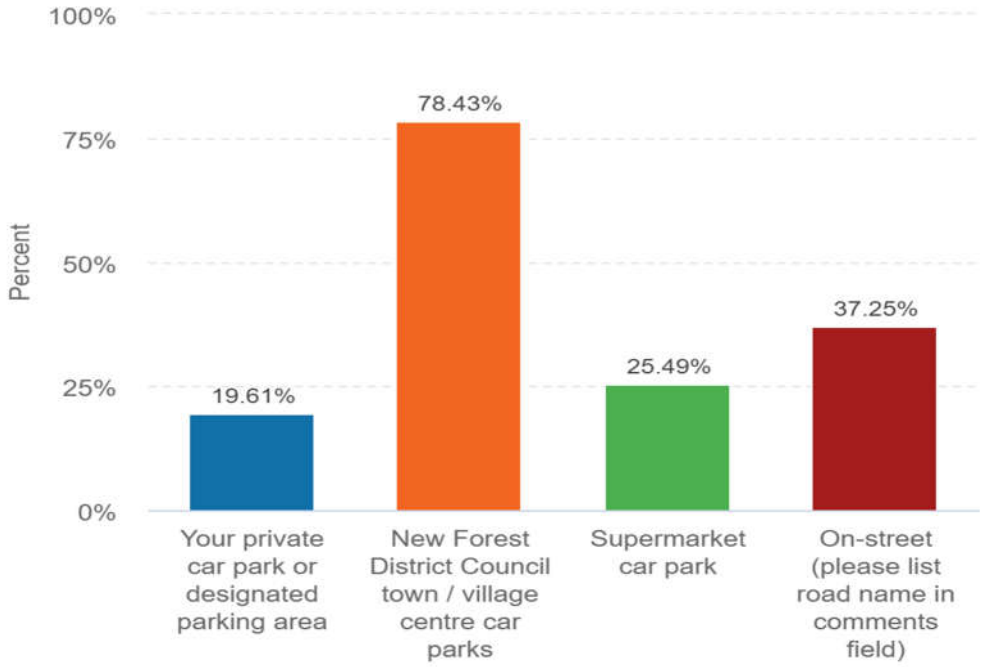

Figure 29 – Feedback to question 5 from the business questionnaire

Question 5 asked respondents whether they or their customers had experienced parking problems in Huntingdonshire District Council car parks within the past 12 months. A total of 51% of respondents reported experiencing issues, while 40% stated they had not. This is broadly in line with the resident and visitor survey, where 53% of respondents stated they had experienced issues with parking.

Question 6 asked respondents to specify the nature of the parking issues. Over 70% cited difficulties in finding a parking space, suggesting that customers visiting local businesses are likely doing so during peak times, such as Saturdays or midday on weekdays, when demand for parking is highest. This aligns with feedback from businesses that their customers often struggle to secure parking during busy periods.

Respondents were also asked to identify the specific car parks where issues occurred. Tebbutts Road Car Park, St Neots was the most frequently mentioned, selected by 26% of respondents. Car park surveys conducted during the development of the car park strategy confirm that this car park experiences frequent high demand, often nearing capacity despite its size. Sainsbury's Car Park, Huntingdon was the second most commonly mentioned, cited by 14% of respondents. Although this car park can also experience high demand, there is an alternative car park nearby Multi-Storey Car Park that typically has available spaces, potentially alleviating some of these challenges.

The remaining questions align with the resident and visitor survey, and the analysis has been grouped together and summarised in section 3 and 4 above.

APPENDIX A - FAQS

CAR PARKING USER SURVEY FAQ'S

The first question asks for my postcode. Why do I need to give this?

As part of the analysis carried out after the survey closes, it is important to understand the views of stakeholders in different locations. This information will allow a breakdown of stakeholders into specific towns and villages to understand what are the most important priorities for the locations.

Why has there been so few participates during the user survey?

The number of participants shown on the engagement hub represents those that have signed up to the platform to receive updates as the project progresses. The survey is an external provider, for which responses are not shown. The total responses to the survey will be reported on as part of an engagement feedback report produced after the survey is complete, and the feedback provided has been analysed.

Will the car parking strategy be designed to generate more income for the council?

No. The parking strategy is designed to improve the parking experience across the district and encourage active and sustainable travel where possible.

What is the difference between a Penalty Charge Notice and a Parking Charge Notice?

A Penalty Charge Notice can only be issued by an Enforcement Officer representing a local authority. This includes a local authority car park or parking on the public highway. For private parking operators such as privately owned car parks or privately owned land, any issuing of a contravention is a Parking Charge Notice. This means they are required to contact the DVLA to gain access to the registered keeper of the vehicle.

There isn't a car park in my local town / village. Can I still complete the survey?

Absolutely. It's likely that you will visit locations across the Huntingdonshire district that has car parks and will use car parks. Even if you are not a driver, you may be a passenger visiting the car parks, and we still want to hear your experiences using the car parks.

What is the difference between a Long Stay Car Park and a Short Stay Car Park?

The difference between a long stay car park and a short stay car park is that short stay car parks are used for short trips, and this means there is a higher turnover of spaces. Long stay car parks are for longer trips and therefore have a decrease in the turnover of spaces. Many Huntingdonshire District Council car parks have both in operation.

Why should I complete the questionnaire as I don't often park in the car parks?

It is important to get as much feedback as possible so that data can be interpreted, and progression can be made to find the best solutions to fit the broadest number of people.

How will my feedback be used by the council?

The feedback from this engagement will inform the final parking strategy, and proposals that the council may decide to implement to improve the parking service across the district.

Why are there no public meetings during the engagement period?

At this stage in the project, the information gained from answering the survey will provide sufficient data for Ethos to develop the car parking strategy. Once the draft policies that will inform the strategy are complete, there will be a second engagement exercise, which will include an in person drop-in roadshow, visiting multiple venues across the Huntingdonshire district.

Will the results of the survey influence parking changes in my street?

Not directly. This is a car park strategy that focuses on Huntingdonshire District Council car parks only. On-street parking falls within the remit of Cambridgeshire County Council as the highway authority. However, improving car parks may have an indirect impact on parking along roads across the district.

Can I use my phone to complete the survey?

If you have access to a smartphone, you will be able to complete the survey online. The software used for the survey will automatically adjust the questions based on the device to make them easy to read and answer.

When will changes start being made to the car parks?

Ethos Consultants have only just begun working on the car parking strategy, with the initial work focused on gaining robust data and analysing the data to support the development of the strategy. Draft parking strategy policies will be produced, which will be subject to a second public engagement early in 2026. Following conclusion of the second survey, Huntingdonshire District Council officers involved in the project will go through the relevant process to get the strategy approved. Implementing policies from the strategy cannot begin until the strategy document has been approved by full council.

Someone I know does not have access to a computer. Are there paper copies of the survey available to complete?

If you know someone who doesn't have access to a computer, a paper copy of the survey can be requested by emailing info@ethosconsultants.co.uk with an address to post a copy of the survey to, or phoning: 0203 912 1852. These contact details can be used if you have any issues completing the survey online.

APPENDIX B – PHASE 1 USER SURVEY QUESTIONNAIRE

Huntingdonshire
DISTRICT COUNCIL

Huntingdonshire Car Parking Strategy - Stage 1 User Engagement Survey

0%

About You

1. Please provide your full home postcode below so we have an idea of where you are responding from.

By providing us with your postcode, you are consenting for us to use this information to understand where respondents live. If you do not consent to us using this information in this way, please do not provide your postcode.

2. Are you responding as?

There are council operated car parks in 9 locations across the Huntingdonshire district. If you are a resident, please select the closest of the 9 towns / villages to where you live. Please note, the purpose of this question is to understand demand to council owned car parks and is not intended to capture a comprehensive list of settlements.

If you are responding as a Local Member, Town or Parish Councillor, please select the appropriate answer.

If you are a visitor to Huntingdonshire, please select this option at the bottom of the list.

If you are a business owner or employee within the district, please complete the business survey that can be accessed by clicking the following link: Business Survey

Parking in a town / village

3. What is the main reason for you using a Huntingdonshire District Council car park when visiting a town / village centre?

- ○ Work
- ○ Shopping
- ○ Leisure
- ○ Amenities i.e. leisure centres and places of worship
- ○ Visitor exploring the area
- ○ Other (please specify):

4. In addition to your main reason do you ever park for other reasons? If so, please select as many as apply

- ☐ Work
- ☐ Shopping
- ☐ Leisure
- ☐ Amenities i.e. leisure centres and places of worship
- ☐ Visitor exploring the area
- ☐ I don't use the car parks for any other reason
- ☐ Other (please specify):

5. If you park on-street (as opposed to in a car park) near town / village centres, what is the main purpose for doing so?

Please tick all that apply.

- ☐ I don't need to pay to park
- ☐ It's more convenient for where I need to go
- ☐ I feel it is safer than car parks
- ☐ I need to park for long periods of time
- ☐ The car park is too congested
- ☐ I like to walk into the town / village centre but I live too far away
- ☐ I do not park on-street
- ☐ Other (please specify):

6. If you use council owned car parks within the district, which locations do you visit? Please select one answer for each row.

If you are unsure whether the car park you park in is one operated by Huntingdonshire District Council, you can check our list of car parks below:

Town and village parking - Huntingdonshire District Council

	Use frequently (at least once a week)	Use sometimes (at least once a month)	Use occasionally (no more than a few times a year)	Do not use	I didn't know there was a car park here
Diddington	○	○	○	○	○
Earith	○	○	○	○	○
Fenstanton	○	○	○	○	○
Godmanchester	○	○	○	○	○
Huntingdon	○	○	○	○	○
Ramsey	○	○	○	○	○
St Ives	○	○	○	○	○
St Neots	○	○	○	○	○
Warboys	○	○	○	○	○

Finding a space

7. Have you experienced any parking problems within the last 12 months at any Huntingdonshire District Council car parks? (If not go to Q10)

- ○ Yes
- ○ No

8. Specifically, in which council car park have you experienced problems? (If you have experienced issues in more than one car park, please add details in the box below)

Additional car park locations:

9. Please select the issues that are related to your visit (tick all that apply)

- ☐ Locating the car park
- ☐ Finding a space
- ☐ Making your way from the car park to where you need to be
- ☐ Concerns about security
- ☐ Difficulty using pay machines for example purchasing a ticket, understanding the instructions, or locating the payment machines
- ☐ The space is too small
- ☐ Driving inside the car park
- ☐ Locating a disabled bay
- ☐ Locating an EV charge point
- ☐ Other (please specify):

10. Do you consider there to be enough overall parking in town, and village car parks at the following locations? Please select one answer for each row.

	Yes, at all times	Yes except for peak periods	No, there is not enough parking	Do not use
Diddington	○	○	○	○
Earith	○	○	○	○
Fenstanton	○	○	○	○
Godmanchester	○	○	○	○
Huntingdon	○	○	○	○
Ramsey	○	○	○	○
St Ives	○	○	○	○
St Neots	○	○	○	○
Warboys	○	○	○	○

Quality of parking experience

11. How would you rate the overall quality of our off-street car parks in the following locations? Overall quality will include the appearance, safety, accessibility, location, shelter, and payment options of the car park. Please select one answer for each row.

	Excellent	Good	Adequate	Below standard	Poor	N/A
Diddington	○	○	○	○	○	○
Earith	○	○	○	○	○	○
Fenstanton	○	○	○	○	○	○
Godmanchester	○	○	○	○	○	○
Huntingdon	○	○	○	○	○	○
Ramsey	○	○	○	○	○	○
St Ives	○	○	○	○	○	○
St Neots	○	○	○	○	○	○
Warboys	○	○	○	○	○	○

12. Do you feel the size of standard parking bays in our car parks is suitable?

- ○ Yes, I do not struggle to get in and out of my car
- ○ Sometimes it can be a challenge if a larger vehicle is parked next to me
- ○ No, I struggle to get in and out of my car regardless of the size of vehicle next to me

13. What do you like most about Huntingdonshire District Council parking facilities you have used?

- ○ Availability of regular spaces
- ○ Availability of disabled spaces
- ○ Availability of parent / carer spaces
- ○ Availability of motorbike spaces
- ○ Location
- ○ Payment options
- ○ Safety / security
- ○ Cleanliness
- ○ Accessibility
- ○ Cost of parking
- ○ 24-hour parking facilities
- ○ Electric vehicle charging provision
- ○ Provision of cycle parking
- ○ Toilet facilities
- ○ Other (please specify):

14. What would you most like to see improved within the council owned car parks?

- ○ Availability of regular spaces
- ○ Availability of disabled spaces
- ○ Availability of parent / carer spaces
- ○ Availability of motorbike spaces
- ○ Location
- ○ Payment options
- ○ Safety / security
- ○ Cleanliness
- ○ Accessibility
- ○ Cost of parking
- ○ 24-hour parking facilities
- ○ Electric vehicle charging provision
- ○ Provision of cycle parking
- ○ Toilet facilities
- ○ Other (please specify):

15. Since the introduction of Civil Parking Enforcement by Huntingdonshire District Council on-street, have you noticed a difference when using our car parks?

- ○ Yes, the car parks seem busier
- ○ Yes, the car parks seem quieter
- ○ No, I haven't noticed a difference
- ○ Unsure

Parking charges

16. When would you prefer to pay for your parking?

- ○ When you arrive
- ○ When you leave
- ○ During your stay
- ○ No preference

17. Do you ever use the check-in check-out system when paying for parking in our car parks?

- ○ Yes, all the time
- ○ Yes, occasionally
- ○ No
- ○ I don't know what the check-in check-out system is

If you chose no, are there any specific reasons why you do not use it?

18. How would you like to pay for your parking (tick all that apply)

- ☐ With cash (coins only)
- ☐ With a debit/credit card (contactless)
- ☐ With a debit/credit card (chip and pin)
- ☐ Via mobile phone payment app

19. How do you feel about the amount currently charged for long stay parking (in excess of four hours) in car parks that charge?

Please click here to see details on parking charges

- ○ Too little
- ○ About right
- ○ Too much

20. How do you feel about the amount currently charged for short stay parking (up to four hours) in car parks that charge?

Please click here to see details on parking charges

- ○ Too little
- ○ About right
- ○ Too much

21. How do you think the current Huntingdonshire District Council car parking charges compare to car parks in other locations outside Huntingdonshire?

- ○ Broadly similar
- ○ Generally more expensive
- ○ Generally cheaper
- ○ I don't know

Comments:

22. Would you support emissions based charging, meaning larger, or more polluting vehicles would pay a higher charge than small, low emission or zero emission vehicles?

- ○ Yes
- ○ No
- ○ I would want to find out more before making a decision
- ○ Unsure

23. Do you own a parking permit for use in our car parks?

- ○ Yes
- ○ No

24. Would you consider purchasing any of the following parking permits if they were made available (tick all that apply)?

- ☐ Monthly permit for use in any of our car parks
- ☐ Weekly permit for use in any of our car parks
- ☐ Six monthly permit for use in specific car parks i.e. town focused
- ☐ Monthly permit for use in specific car parks i.e. town focused
- ☐ Weekly permit for use in specific car parks i.e. town focused

Disabled parking

25. Do you have a disability or limited movement?

- ○ Yes
- ○ No

26. How easy do you find it to locate a blue badge parking space in any Huntingdonshire District Council car parks?

- ○ There is always plenty available
- ○ There is always one available
- ○ There is usually one available
- ○ It's difficult to locate an available space sometimes
- ○ It's very difficult to locate a free space at most visits

If you have any specific comments on disabled parking, please use the box below

Supplementary comments

27. If you have any other comments regarding car parking across the Huntingdonshire district, please use the box below.

APPENDIX A - FAQS 32

APPENDIX B – PHASE 1 USER SURVEY QUESTIONNAIRE 32

1.0 INTRODUCTION

Ethos Consultants (Ethos) has been commissioned by Huntingdonshire District Council to develop a district wide car park strategy for the Council's off-street car park estate. The strategy will provide a clear, future-focused framework for the management and development of parking across Huntingdonshire, supporting town centre vitality, accessibility, sustainable travel, improved customer experience and the responsible management of Council assets.

Stakeholder engagement has formed an important part of the strategy development process. A structured two-stage approach has been undertaken to ensure that the strategy is informed both by how people currently use and experience the Council's car parks and by their views on the future direction of parking provision across the district.

Phase 1 engagement focused on understanding existing parking behaviour and user experience. The survey explored how and why people use the Council's car parks, what works well, the issues and challenges experienced, and priorities for improvement. These findings, alongside the wider evidence base and parking surveys, helped inform the development of the draft Car Park Strategy and its emerging vision, themes and objectives.

Phase 2 engagement represented the next stage of this process and sought feedback on the emerging strategic direction for parking in Huntingdonshire. Rather than repeating the assessment of existing conditions undertaken during Phase 1, the Phase 2 survey presented respondents with the emerging proposals and provided an opportunity to indicate levels of support, identify priorities and comment on how the strategy should be developed.

This report presents the findings of the Phase 2 User Survey and provides an assessment of the level of support for the emerging strategy, together with the key themes arising from qualitative feedback. The findings have been used alongside the technical evidence and Phase 1 engagement results to refine the final Car Park Strategy and ensure that its objectives and proposed actions respond appropriately to the priorities of residents, businesses, visitors and other users of Huntingdonshire's car parks.

The Themes, and the Objectives within each Theme, have been presented in order of the level of support received through the Phase 2 consultation, with those receiving the strongest support shown first. This does not necessarily determine the order in which individual objectives or actions will be delivered, as implementation will also depend on factors such as need, funding, feasibility, dependencies and available resources.

However, structuring the Strategy in this way provides a clear "you spoke, we listened" response to the consultation, ensuring that the priorities expressed by respondents are visible within the final document and have directly influenced how the Strategy is presented.

2.0 ENGAGEMENT ARRANGEMENTS

2.1 REQUIREMENT FOR ENGAGEMENT

A two-stage engagement approach has been adopted to inform the development of the Huntingdonshire Car Park Strategy and ensure that both existing user experience and views on the future direction of parking are reflected within the final strategy. This approach provides an important complement to the technical evidence gathered through the wider study and supports transparent, evidence-led decision making.

Phase 1 focused on understanding how Huntingdonshire's off-street car parks are currently used and perceived. Through a district wide user survey, residents, businesses and visitors were invited to provide feedback on existing parking provision, including its strengths and weaknesses, issues experienced when using car parks and priorities for future improvement.

The findings from Phase 1 were considered alongside the detailed technical and operational assessment of the Council's car park portfolio, including parking occupancy and duration of stay surveys and individual site assessments. Together, this evidence informed the development of the emerging Car Park Strategy, including its vision, strategic themes, objectives and potential areas for intervention.

Phase 2 engagement was undertaken once this emerging strategic framework had been developed. Its purpose was to move the conversation from how the existing parking service performs to how parking should be managed and developed in the future. The Phase 2 User Survey therefore sought views on the proposed direction of the Strategy, including levels of support for its Themes and Objectives and the relative importance placed on different areas of future parking policy and investment.

The Phase 2 engagement provides an important opportunity to test whether the emerging Strategy responds appropriately to the priorities identified by users during Phase 1 and whether its proposed direction commands wider public support. The results have subsequently been used to refine the Strategy and help determine how its priorities are presented, ensuring a clear link between the evidence gathered through consultation and the final strategic framework.

While consultation support does not determine implementation priorities in isolation, it provides an important consideration alongside technical need, deliverability, funding, dependencies and available resources. In this way, Phase 2 completes the feedback loop established through the engagement process, demonstrating how stakeholder views have influenced the development of the final Huntingdonshire Car Park Strategy.

2.2 ENGAGEMENT MATERIAL

To support the Phase 2 User Survey and wider engagement activity, Ethos worked closely with key officers from Huntingdonshire District Council to develop clear and accessible consultation material explaining the emerging Car Park Strategy and the purpose of the second phase of engagement. Information was provided through the Council's website

and associated communication channels to encourage participation from residents, businesses and visitors across the district.

The dedicated engagement hub hosted on Ethos' digital engagement platform, Go Vocal, was updated for Phase 2. The hub provided background information on the development of the Strategy and presented the emerging strategic direction, enabling respondents to consider the proposals before providing feedback. The Phase 2 survey focused particularly on levels of support for the proposed Themes and Objectives, alongside opportunities for respondents to provide additional comments and identify priorities.

The digital consultation was promoted through Council and Ethos communication channels, including social media, helping to provide district wide access to the survey. However, recognising the importance of reaching people directly within the town centres and providing opportunities for face-to-face discussion, the online engagement was supplemented by in-person engagement activity in Huntingdon, St Ives and St Neots.

Ethos staff attended each of these town centres during the consultation period, distributing promotional leaflets to raise awareness of the Phase 2 survey and encourage participation. The sessions also provided an opportunity for members of the public to speak directly with the project team, ask questions about the emerging Strategy and discuss issues relating to parking within their town. These conversations provided useful qualitative context alongside the formal survey responses and helped ensure that engagement was not reliant solely on digital communication.

Promotional material used during the in-person engagement directed people towards the online consultation, allowing those approached within the town centres to subsequently review the proposals and complete the survey at a convenient time. This blended approach helped broaden awareness of the consultation while maintaining a consistent survey process through which responses could be captured and analysed.

The combination of digital consultation, targeted promotion and direct town centre engagement provided a proportionate approach to Phase 2, enabling the Council to test the emerging strategic direction with a broad range of parking users while also providing opportunities for direct interaction with the project team.

2.3 USER SURVEY QUESTIONNAIRE

The Phase 2 engagement comprised a district wide user survey designed to seek feedback from residents, businesses and visitors on the emerging direction of the Huntingdonshire Car Park Strategy. Building on the findings from Phase 1, the questionnaire moved the focus from existing parking experiences towards the future management and development of parking across the district.

A structured questionnaire was developed to test levels of support for the emerging Themes and Objectives of the Strategy and to understand the relative importance respondents placed on different areas of future parking policy. Respondents were also provided with opportunities to give additional comments, enabling the quantitative findings to be supported by more detailed qualitative feedback.

The survey was made available online through the dedicated engagement hub, supported by wider digital promotion and the in-person engagement activity undertaken in Huntingdon, St Ives and St Neots. This approach enabled people to consider the emerging proposals and provide structured feedback while also offering opportunities to discuss the Strategy directly with the project team.

The Phase 2 User Survey opened on 16 July 2026 and remained live until 16 August 2026, providing a four week consultation period in which residents, businesses, visitors and other interested parties could participate. The findings have been used to understand overall levels of support, identify areas of particular importance or concern and inform refinement of the final Car Park Strategy.

A copy of the Phase 2 User Survey questionnaire can be found in Appendix B of this feedback report.

3.0 QUESTIONNAIRE ANALYSIS

3.1 INTRODUCTION

As part of the Phase 2 engagement, a single district wide questionnaire was developed to capture feedback from all stakeholders, including residents, visitors, businesses and other users of Huntingdonshire's car parks. This provided a consistent approach to assessing views on the emerging Car Park Strategy and enabled direct comparison of responses across the district.

Unlike Phase 1, which focused principally on existing parking behaviour and user experience, the Phase 2 questionnaire sought to understand levels of support for the proposed strategic direction. Respondents were asked to consider the emerging Themes and Objectives, identify the areas they considered most important and provide additional comments on how parking should be managed and developed in the future.

During the consultation period, a total of 1,472 completed questionnaires were received. This represents a strong level of participation and provides a strong evidence base for understanding stakeholder views on the emerging Strategy.

This section provides a district wide analysis of the feedback received, including levels of support for the proposed Themes and Objectives and the principal priorities emerging from the consultation. Where appropriate, the quantitative findings are supplemented by analysis of the qualitative comments received, providing further insight into the reasons behind respondents' views and identifying issues for consideration in finalising the Car Park Strategy.

3.2 DISTRICT WIDE ANALYSIS

3.2.1 LOCATION

The Phase 2 User Survey asked respondents to provide their postcode, enabling the geographic distribution of responses to be mapped and providing an indication of where participation was strongest. Figure 1 presents a heatmap of completed responses across Huntingdonshire and the surrounding area.

The heatmap demonstrates a broad geographic spread of participation, with responses received from communities throughout the district. The strongest concentrations are associated with the principal population centres and areas served by the Council's off-street parking provision. Particularly prominent clusters can be seen around Huntingdon, St Ives and St Neots, with further concentrations around Ramsey and the wider settlements surrounding these towns.

Importantly, responses were not confined to the main urban centres. The heatmap shows participation extending across the district's rural areas and smaller settlements, including communities located between and around the principal towns. This is significant given that residents of these areas may regularly travel into Huntingdonshire's towns for employment, shopping, services and leisure and therefore have an important interest in how town centre parking is managed.

The geographic pattern also demonstrates some participation from locations beyond the district boundary, reflecting the wider catchments served by Huntingdonshire's town centres and their parking facilities. This is particularly relevant to a parking strategy, as the Council's car parks are used not only by residents of the immediate towns but also by people travelling from surrounding communities.

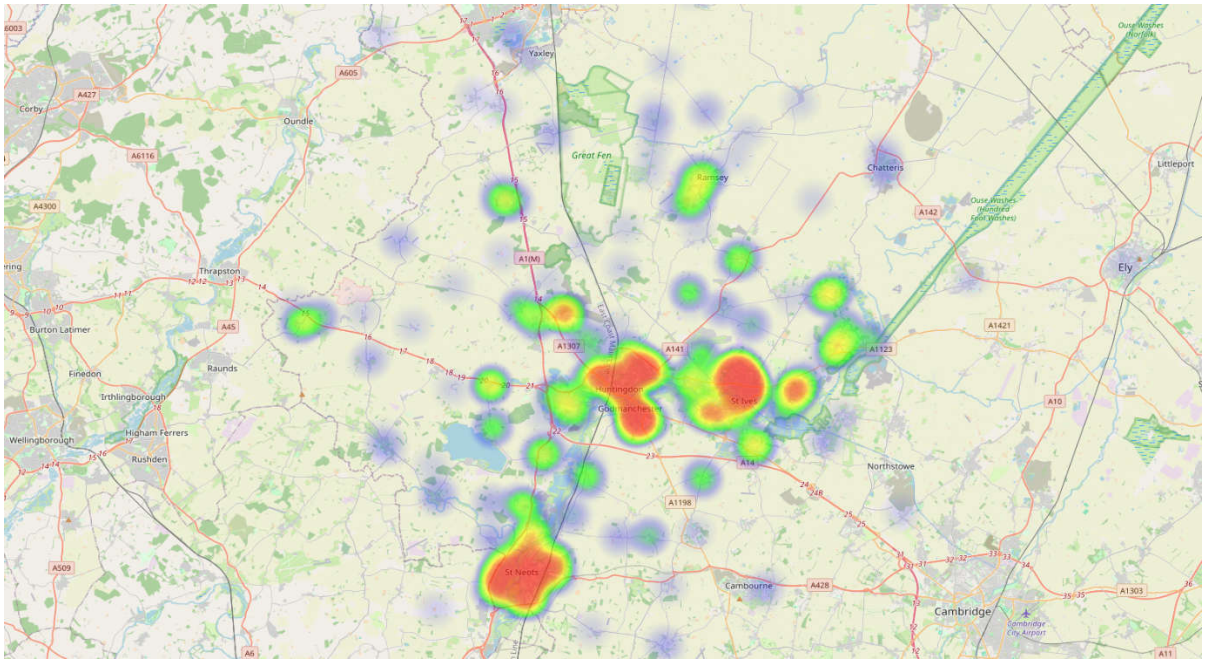

Figure 1 – Heatmap showing location of responses

The questionnaire contained a further 24 questions of both open and closed format and the data processed to access the responses and is summarised on the following pages. The following is a selection of questions from the questionnaire and an indication of the key responses that were provided.

3.2.2 RESPONDENT LOCATION AND TYPE

Question 2 asked respondents to identify the town or settlement with which they were most closely associated, or alternatively whether they were responding as a visitor or elected representative. The purpose of the question was not to establish a comprehensive picture of where respondents lived, but to understand the broad geographic distribution of responses in relation to the locations containing Council operated car parks.

Responses were strongly represented across the district's three largest towns. Huntingdon accounted for the highest proportion of responses at 27.65%, followed closely by St Neots at 25.19% and St Ives at 25.08%. Collectively, these three areas represented approximately 78% of all responses, reflecting their larger populations, greater concentration of Council-operated parking and the important role that parking plays in accessing their town centres.

The remaining towns and settlements generated smaller but still valuable levels of participation. Godmanchester accounted for 6.97% of responses and Ramsey for 4.07%,

while Fenstanton (1.82%), Warboys (1.50%), Earith (1.39%) and Diddington (0.54%) provided representation from smaller communities. This is important in ensuring that the consultation was not focused exclusively on the district's principal town centres and captured views from people who may travel into them from surrounding settlements.

A further 2.57% of respondents identified themselves as visitors to Huntingdonshire, demonstrating that the consultation also captured the perspective of people travelling into the district. Elected representatives were separately represented, including Parish Councillors (2.14%), Huntingdonshire District Councillors (0.64%) and Town Councillors (0.43%). No respondents identified themselves as Cambridgeshire County Councillors.

3.2.3 AGE PROFILE

Question 3 asked respondents to identify their age range to provide an understanding of the demographic profile of participants and assess whether feedback had been received from a broad range of age groups.

Responses were received across most adult age categories, although participation was weighted towards older age groups. The largest proportion of respondents were aged 65–74, accounting for 24.09%, followed by those aged 50–59 at 20.65%. Respondents aged 60–64 represented a further 13.97%, meaning that almost 59% of respondents were aged 50 or above.

There was nevertheless meaningful representation from younger and middle aged adults. Those aged 25–39 accounted for 15.64% of responses, while 12.93% were aged 40–49. Respondents aged 75 and over represented 9.70%, demonstrating that the survey also successfully captured the views of older users for whom issues such as accessibility, proximity and ease of payment may be particularly relevant.

Participation among younger people was substantially lower. Only 1.04% of respondents were aged 18–24, while no responses were recorded from people under 18. A further 1.98% preferred not to provide their age. This is not unexpected for a consultation focused specifically on off-street car parking, where younger age groups, particularly those under driving age, are likely to have less direct interaction with the service.

3.2.4 USUAL MODE OF TRANSPORT

Question 4 asked respondents to identify the mode of transport they most frequently use when visiting Huntingdonshire's town and village centres.

The results demonstrate a clear reliance on private vehicles, with 83.92% travelling as a car or van driver and a further 6.16% as a passenger. Combined, this means approximately 90% of respondents usually access town and village centres by car or van, reinforcing the importance of parking provision to accessibility and town centre activity.

Use of other modes was comparatively limited. Walking accounted for 5.32% of responses and bus travel for 2.09%, while cycling represented 1.46%. All other modes individually accounted for less than 1% of responses.

3.2.5 PARKING PERMITS

Question 5 asked respondents whether they currently hold a parking permit issued by Huntingdonshire District Council and, where they did not, whether they were aware that permits are available.

Permit ownership amongst respondents was relatively low, with 1.99% holding an off-street parking permit and a further 0.42% holding both an off-street and on-street permit. No respondents reported holding an on-street permit only.

More notably, awareness of the permit offer was relatively limited. While 38.53% did not hold a permit but were aware of those available, 59.06% were unaware that parking permits are available.

The results therefore indicate an opportunity to improve the visibility and communication of the Council's parking permit offer. While permits will only be relevant to a proportion of users, greater awareness could help ensure that regular users understand the options available and can select the most appropriate and cost-effective parking arrangement for their needs.

3.2.6 SUPPORT FOR THE STRATEGY VISION

Respondents were asked whether they supported the proposed vision for the Huntingdonshire Car Park Strategy. The results demonstrate a strong overall level of support, with 72% of respondents supporting the proposed vision.

A further 16% were unsure, while 12% indicated that they did not support the vision. This means that almost three-quarters of respondents positively endorsed the proposed direction, with only around one in eight expressing opposition.

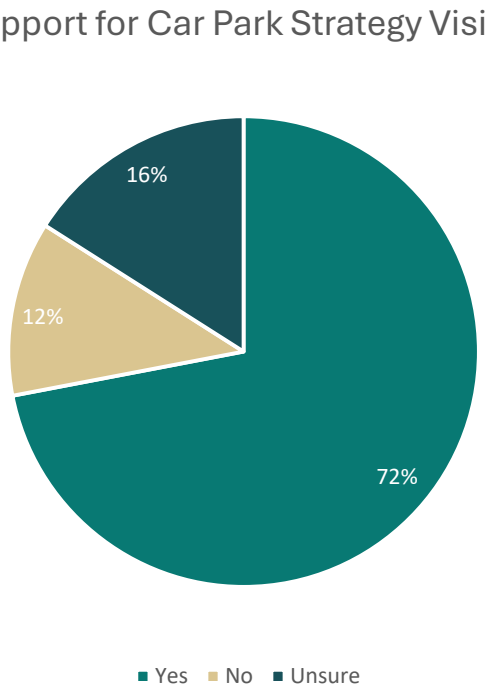

Figure 2 – Level of support for the proposed Car Park Strategy Vision

Summary of Comments on the Proposed Vision

The qualitative comments provide further context to the strong quantitative support for the proposed vision. A number of respondents welcomed the overall direction of the Strategy and supported the ambition to improve and modernise parking, strengthen town centres and ensure that parking remains accessible and responsive to future needs. One respondent specifically noted that improvements were required and welcomed positive changes, while others agreed with the principle that adequate parking is important to supporting town centres and the local economy.

There was also support for the vision's emphasis on considering parking as part of a wider transport system. Comments identified opportunities to improve walking, cycling and public transport alongside parking provision, with Huntingdon cited as an example where pedestrianisation, central bus access and car parking can perform complementary roles.

Accessibility and ease of use emerged as particularly important considerations. Respondents supported the principle of convenient parking close to shops, services and healthcare facilities, with calls for appropriate provision for disabled users and families. These comments reinforce the vision's emphasis on providing a safe, accessible and positive parking experience.

The comments also highlighted an important relationship between parking and town centre vitality. Respondents frequently recognised the role that accessible parking plays in supporting local businesses, enabling people from surrounding villages to visit the district's towns and maintaining access to shops and services. This broadly aligns with the Strategy's intention to support vibrant town centres and sustainable economic growth.

While the overall direction received substantial support, some respondents considered the wording of the vision to be too broad or difficult to translate into practical outcomes. There were requests for clearer explanation of terms such as "future focused" and greater detail on how the vision would translate into decisions on parking capacity, tariffs, accessibility and investment. Even some comments describing the vision positively sought greater clarity about how it would be delivered.

A significant recurring concern related to the potential loss or redevelopment of existing town centre parking, particularly in St Neots and St Ives. These comments were often framed not as opposition to the principles of the vision itself, but as a concern that sufficient, conveniently located parking must be retained if the Strategy is to achieve its objectives for accessibility, economic vitality and positive user experience.

Overall, the findings provide a clear mandate for the overarching direction of the Strategy. The level of support indicates broad agreement with the proposed approach of balancing effective parking provision with town centre vitality, economic growth, accessibility, operational efficiency and increased opportunities for active and sustainable travel.

3.2.7 PRIORITISING STRATEGY THEMES

Respondents were asked to rank the four proposed Strategy themes in order of importance, providing a clear indication of the relative priorities that stakeholders believe should guide the Council over the next 5–10 years.

Support Thriving Town Centres and Economic Activity was ranked as the clear highest priority, achieving a score of 3,537. This demonstrates a strong expectation that parking should continue to support access to Huntingdonshire's town centres, contribute to their vitality and help sustain local businesses and economic activity. This finding is consistent with earlier feedback emphasising the importance of convenient parking in supporting visits to shops, services and other town centre destinations.

Deliver a Modern, Efficient and Customer-Focused Parking Service was ranked second, with a score of 2,532. This indicates strong support for improving the quality and operation of the parking service, including making parking convenient, accessible and straightforward for users.

Integrate Parking with Active and Sustainable Transport ranked third, scoring 2,252. While respondents therefore recognised the importance of considering parking alongside wider travel choices, it was considered a lower priority than supporting town centres and improving the existing parking service.

Manage Parking Assets Responsibly and Plan for the Future was ranked fourth, with a score of 2,069. Although still an important component of the Strategy, respondents placed comparatively greater emphasis on the more immediate role of parking in supporting town centres and meeting customer needs.

Theme	Score	Rank
Support Thriving Town Centres and Economic Activity	3537	1
Deliver a Modern, Efficient, and Customer-Focused Parking Service	2532	2
Integrate Parking with Active and Sustainable Transport	2252	3
Manage Parking Assets Responsibly and Plan for the Future	2069	4

Table 1 – Ranking of Car Park Strategy Themes

3.2.8 SUPPORT FOR THEME 1 - SUPPORT THRIVING TOWN CENTRES AND ECONOMIC ACTIVITY

Theme 1 received an exceptionally high level of support, with 95% of respondents indicating that they supported the proposed theme. Only 1% did not support it, while a further 4% were unsure.

The results demonstrate a clear consensus that the Council's car parks should play an important role in supporting Huntingdonshire's town centres, local businesses, visitors and future growth. The very limited level of opposition indicates widespread recognition

of the relationship between accessible and appropriately located parking and the continued vitality of the district's town centres.

This finding is also consistent with the earlier ranking exercise, where Support Thriving Town Centres and Economic Activity was identified as the highest priority of the four Strategy themes. Taken together, the results provide particularly strong support for positioning town centre vitality and economic activity at the forefront of the Car Park Strategy.

Figure 3 illustrates the breakdown of support for Theme 1.

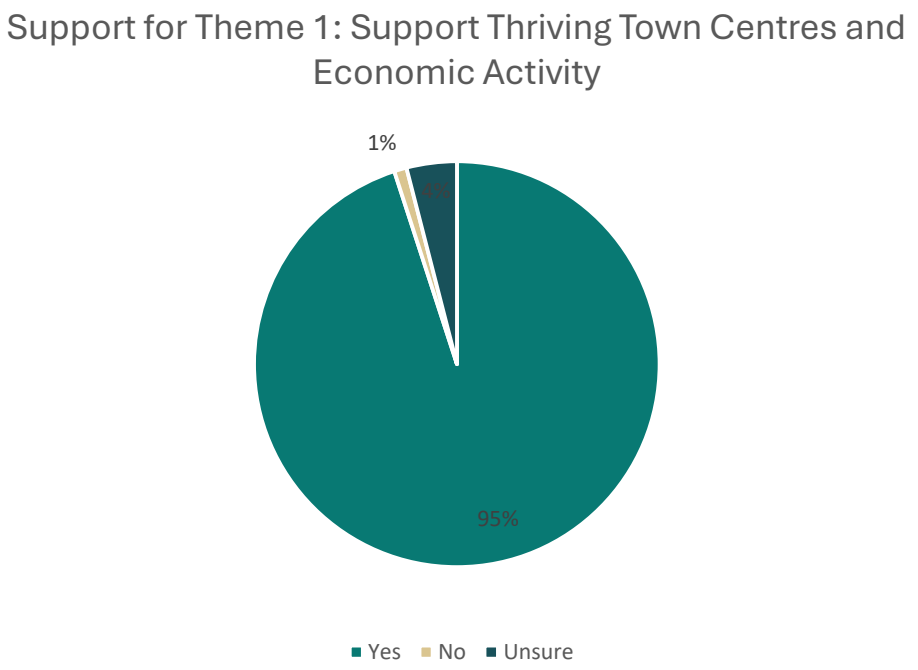

Figure 3 – Level of support for Theme 1: Support Thriving Town Centres and Economic Activity

3.2.9 SUPPORT FOR THEME 1 OBJECTIVES

Respondents were asked to indicate the importance they placed on each of the five objectives within Theme 1. The results demonstrate strong support across all five objectives, although there are clear differences in the relative priority attached to each.

Support Town Centres received the strongest endorsement, with 80% rating the objective as very important and a further 18% as important. With 98% combined support, this was the highest-rated objective within Theme 1 and reinforces the wider consultation finding that parking should principally support thriving town centres, local businesses and visitors.

Fair Parking Charges was the second-highest priority, with 74% considering the objective very important and 22% important, providing combined support of 96%. This demonstrates the importance respondents place on parking charges remaining fair, appropriate and responsive to local circumstances.

The Right Parking in the Right Places also received strong support, with 58% identifying it as very important and 34% as important, equivalent to 92% combined support. This indicates broad recognition that different locations and types of trip require different forms of parking provision.

Parking for Events and Visitors achieved 89% combined support, comprising 43% very important and 46% important. This demonstrates support for retaining sufficient flexibility within the parking estate to respond to seasonal demand, events and periods of increased visitor activity.

Better Signs and Car Parks received the lowest level of support within the theme, although 76% still considered it either very important or important. Some 23% considered this objective not important, suggesting that improvements to signage, directions and car park appearance are generally supported but are regarded as a lower priority than town centre support, fair charges and appropriate parking provision.

Table 2 below provides a breakdown for each of the five objectives for Theme 1.

Objective	Very important	Important	Not important	Don't know
Support Town Centres - We will manage parking to support thriving town centres, local businesses and visitors.	80%	18%	1%	1%
The Right Parking in the Right Places - We will provide the right type of parking in the right locations, such as short-stay parking near shops and long-stay parking further away.	58%	34%	6%	2%
Better Signs and Car Parks - We will improve car park signs, directions and the overall appearance of council car parks.	29%	47%	23%	1%
Fair Parking Charges - We will review parking charges regularly to ensure they remain fair, appropriate and based on local needs.	74%	22%	3%	1%
Parking for Events and Visitors - We will ensure parking can respond to busy periods, events and increased visitor demand.	43%	46%	8%	3%

Table 2 – Support for Theme 1 Objectives

Summary of Comments – Theme 1 Objectives

The feedback broadly reinforces the high levels of support recorded for the Theme 1 objectives. A recurring message was that accessible and appropriately located parking is regarded as an important component of supporting successful town centres, particularly for local shops, services, hospitality businesses and other town centre activities. Respondents frequently emphasised the importance of retaining convenient parking close to town centres rather than viewing parking solely as a transport-management issue.

There was particularly strong interest in fair and affordable parking charges. Many respondents advocated free or low cost short-stay parking, including suggestions for the first 30 minutes or hour to be free, to encourage people to make shorter visits and support local businesses. Others supported a more flexible approach to tariffs, with charges varying according to location, demand and time of day rather than applying a uniform model.

The principle of providing the right parking in the right places was also generally supported, although respondents stressed this should not automatically mean locating all long-stay parking further from town centres. Accessibility was a consideration for older people, people with mobility difficulties, families and those travelling from rural areas where public transport alternatives may be limited. Respondents favoured a flexible mix of short and longer-stay provision in accessible locations.

Comments also identified practical opportunities to improve the quality of the parking experience, including clearer signage and wayfinding, more reliable and easier-to-use payment machines, better lighting, CCTV, cleanliness and maintenance. These comments suggest that although this objective received a comparatively lower importance rating, there remains clear support for targeted improvements where existing facilities are deficient.

There was also recognition of the need for sufficient capacity during events and periods of peak demand, with respondents highlighting the importance of parking in supporting markets, leisure activities, the evening economy and other town centre events.

A significant strand of the feedback related to concerns about the potential loss or redevelopment of existing town centre parking, particularly Tebbutts Road in St Neots and car parks in St Ives. While these comments extend beyond the objectives themselves, they demonstrate the importance respondents attach to ensuring that future decisions about individual parking assets are evidence-led and consider accessibility, displacement, town centre vitality and periods of peak demand.

Overall, the results establish a clear hierarchy within Theme 1, with respondents placing the greatest emphasis on supporting town centres and ensuring fair parking charges. Importantly, however, every objective received majority support, providing a strong basis for retaining all five within the Strategy while using the results to help reflect stakeholder priorities in how they are presented and ultimately taken forward.

3.2.10 SUPPORT FOR THEME 2 - INTEGRATE PARKING WITH ACTIVE AND SUSTAINABLE TRANSPORT

Theme 2 received a clear level of support, with 66% of respondents indicating that they supported the proposed theme. A further 22% were unsure, while 12% did not support it.

The results demonstrate broad support for the principle that the Council's car parks should form part of the wider transport network and, where appropriate, provide opportunities to encourage active and sustainable travel. The relatively high proportion of respondents who were unsure suggests that there may be some uncertainty around how this would work in practice and the types of measures that could be introduced within individual car parks.

This finding is also consistent with the earlier ranking exercise, where Integrate Parking with Active and Sustainable Transport was ranked third of the four Strategy themes. Taken together, the results demonstrate that sustainable transport integration is supported by a clear majority of respondents, although it is considered a lower priority than supporting thriving town centres and delivering a modern, efficient and customer-focused parking service.

Figure 4 illustrates the breakdown of support for Theme 2.

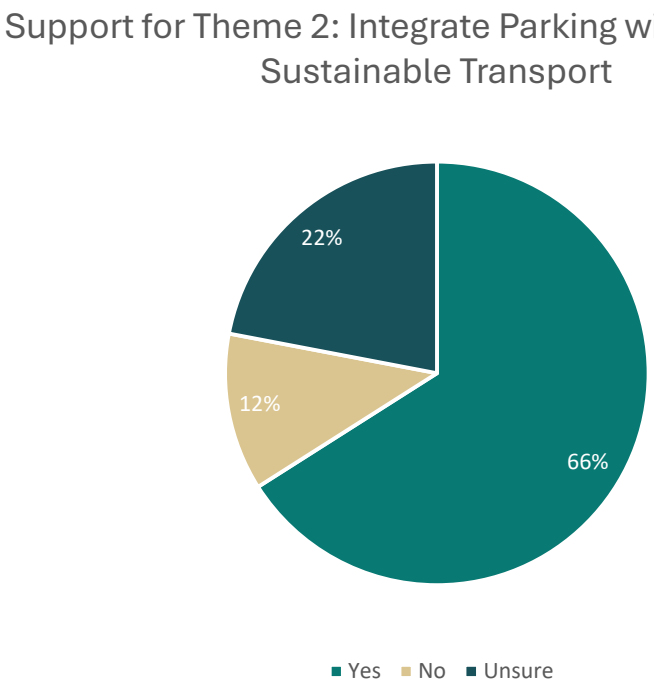

Figure 4 – Level of support for Theme 2: Integrate Parking with Active and Sustainable Transport

3.2.11 SUPPORT FOR THEME 2 OBJECTIVES

Respondents were asked to indicate the importance they placed on each of the five objectives within Theme 2. The results show majority support for all five objectives, although levels of support are more varied than those recorded for Theme 1.

Support Sustainable Travel received the strongest overall endorsement, with 30% rating the objective as very important and 43% as important, giving 73% combined support. This indicates broad recognition that car parks can play a role in supporting walking, cycling, public transport and other sustainable travel choices.

Walking and Cycling Facilities received 65% combined support, comprising 27% very important and 38% important. While almost one-third (32%) considered the objective not important, the majority supported improving facilities for people walking and cycling to and from Council car parks.

Future Transport Hubs achieved 63% combined support, with 23% considering the objective very important and 40% important. This provides a positive basis for exploring the longer-term potential for locations combining parking with cycling, walking and public transport connections, although the 10% who were unsure suggests the concept may require further explanation as proposals develop.

Electric Vehicle Charging received 59% combined support, comprising 16% very important and 43% important. However, 34% considered this objective not important, demonstrating a more mixed view on the role of Council car parks in supporting EV infrastructure.

Working with Partners received the lowest level of support within the theme, although a small majority (52%) still considered it very important or important. Some 38% considered the objective not important and 10% were unsure, suggesting that respondents place greater priority on tangible improvements within car parks than wider partnership activity intended to influence travel behaviour.

Table 3 below provides a breakdown for each of the five objectives for Theme 2.

Objective	Very important	Important	Not important	Don't know
Support Sustainable Travel - Support walking, cycling, buses and other sustainable ways to travel.	30%	43%	24%	4%
Walking and Cycling Facilities - Improve facilities for people walking and cycling to and from council car parks.	27%	38%	32%	4%
Electric Vehicle Charging - Provide electric vehicle charging where there is demand.	16%	43%	34%	6%
Working with Partners - Work with partners to encourage more sustainable travel and reduce parking demand.	18%	34%	38%	10%

Future Transport Hubs - Identify locations for future transport hubs with parking, cycling, walking and public transport connections.	23%	40%	27%	10%

Table 3 – Support for Theme 2 Objectives

Summary of Comments – Theme 2 Objectives

The qualitative feedback provides useful context to the more mixed results for Theme 2. While a number of respondents supported the principle of integrating parking with active and sustainable transport, comments frequently stressed that measures need to reflect the rural character of Huntingdonshire and the practical travel choices available to residents. In particular, respondents highlighted that many villages have limited or infrequent public transport and that walking or cycling is not a realistic alternative for every journey, particularly for older people, those with mobility difficulties, families and people carrying shopping.

There was nevertheless positive support for better walking and cycling infrastructure, particularly safe pedestrian routes and secure cycle parking. Several respondents identified cycle security as a barrier to cycling into town centres, suggesting that better quality secure facilities could make cycling more attractive.

Comments on electric vehicle charging were also broadly supportive of appropriate additional provision, with suggestions that charging should be targeted towards locations where evidence demonstrates demand. Some respondents specifically supported installing charging infrastructure within existing car parks, although there was concern that this should not unnecessarily reduce general or accessible parking capacity.

Views on future transport hubs and partnership working were more cautious. Some respondents recognised the potential for transport hubs to support sustainable travel and local businesses, but others questioned their suitability for smaller market towns or felt that existing public transport services should be improved before significant investment is made in new facilities. Partnership working was also seen as requiring clearer definition and alignment between the organisations involved.

A particularly strong recurring message was that sustainable transport measures should complement rather than replace accessible town centre parking. There was concern that support for these objectives could be interpreted as support for removing parking spaces or relocating parking away from town centres. Respondents therefore emphasised retaining appropriate parking while improving realistic alternatives to car travel.

The findings demonstrate support for retaining all five objectives within Theme 2, while establishing a clear hierarchy of priorities. Respondents placed greatest importance on supporting sustainable travel and improving walking and cycling facilities, with more measured support for future transport hubs, EV charging and partnership working.

3.2.12 SUPPORT FOR THEME 3 - DELIVER A MODERN, EFFICIENT, AND CUSTOMER-FOCUSED PARKING SERVICE

Theme 3 received a very high level of support, with 91% of respondents indicating that they supported the proposed theme. Only 2% did not support it, while a further 7% were unsure.

The results demonstrate a strong consensus that the Council should continue to modernise and improve the operation of its parking service, with an emphasis on making parking simple, safe and convenient for customers. The very limited level of opposition suggests widespread support for improvements to car parks, customer experience and the way in which parking services are managed.

This finding is also consistent with the earlier ranking exercise, where Deliver a Modern, Efficient, and Customer-Focused Parking Service was identified as the second highest priority of the four Strategy themes. Taken together, the results provide strong support for prioritising service modernisation, operational efficiency and customer experience within the Car Park Strategy.

Figure 5 illustrates the breakdown of support for Theme 3.

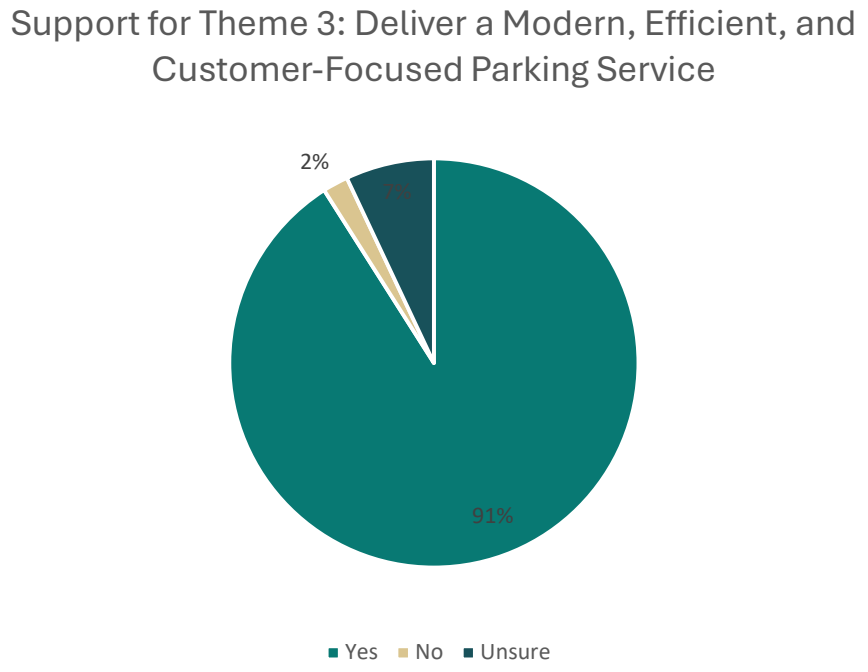

Figure 5 – Support for Theme 3: Deliver a Modern, Efficient, and Customer-Focused Parking Service

3.2.13 SUPPORT FOR THEME 3 OBJECTIVES

The results demonstrate strong support for the majority of objectives, particularly those directly associated with customer experience, car park condition and fair enforcement.

Easy and Accessible Parking received the strongest endorsement, with 75% rating the objective as very important and 23% as important, providing 98% combined support. This demonstrates a particularly strong expectation that the parking service should be safe, accessible and straightforward for all users.

Looking After Our Car Parks also received exceptionally strong support, with 61% considering the objective very important and 36% important, equivalent to 97% combined support. This highlights the importance respondents place on maintaining existing parking assets so that they remain safe, reliable and in good condition.

Fair Parking Enforcement achieved 89% combined support, comprising 44% very important and 45% important. The results demonstrate widespread support for parking rules being applied fairly and consistently, with only 8% considering this objective not important.

Views were more mixed regarding Using Parking Data, although a majority (61%) still considered the objective very important or important. Some 28% considered it not important and 10% were unsure, suggesting that respondents place greater importance on the outcomes delivered by the parking service than the underlying data used to inform management decisions.

Similarly, Using Technology received 60% combined support, comprising 24% very important and 36% important. However, 33% considered it not important and 7% were unsure. This suggests support for technology where it delivers clear customer or operational benefits, but comparatively less appetite for technology being introduced for its own sake. Table 4 below provides a breakdown for Theme 3 Objectives.

Objective	Very important	Important	Not important	Don't know
Easy and Accessible Parking - Provide a safe, accessible and easy-to-use parking service for everyone.	75%	23%	1%	1%
Using Technology - Use technology to make parking easier and improve the parking service.	24%	36%	33%	7%
Using Parking Data - Use parking data to help improve how council car parks are managed.	18%	43%	28%	10%
Fair Parking Enforcement - Ensure parking rules are applied fairly and consistently.	44%	45%	8%	3%
Looking After Our Car Parks - Maintain council car parks so they remain safe, reliable and in good condition.	61%	36%	2%	1%

Table 4 – Support for Theme 3 Objectives

Summary of Comments – Theme 3 Objectives

The feedback broadly reinforces the quantitative results, with respondents placing particular emphasis on accessible, straightforward and well-maintained parking. Safety, lighting, surface condition, clearly marked spaces, functioning lifts and appropriate provision for disabled users were frequently identified as important components of a customer focused parking service. A number of respondents specifically highlighted potholes and maintenance issues within existing car parks as areas requiring attention.

The most prominent issue concerned the use of technology. While respondents recognised that technology can make parking easier and more convenient, there was a strong view that it should supplement rather than replace conventional payment methods. Many respondents stressed the importance of retaining cash and/or card payment, particularly for older people, those without smartphones and users experiencing poor mobile connectivity. Reliability and simplicity were recurring themes, with concern about malfunctioning machines, difficult-to-read screens and the proliferation of different parking apps.

There was nevertheless support for technology where it provides a clear customer benefit, including contactless payment, pay-on-exit arrangements, ANPR and simpler payment systems. The underlying message was that technology should make parking quicker and easier rather than introduce additional complexity.

Comments on parking data were less prominent, although some respondents supported its use where it leads to better-informed decisions, while others wanted greater transparency about how data would be used. Similarly, fair enforcement was generally regarded as important, particularly to prevent inappropriate use of disabled and restricted spaces, although respondents emphasised that enforcement should be proportionate, consistent and genuinely fair.

3.2.14 SUPPORT FOR THEME 4 - MANAGE PARKING ASSETS RESPONSIBLY AND PLAN FOR THE FUTURE

Theme 4 received a strong level of support, with 80% of respondents indicating that they supported the proposed theme. Only 5% did not support it, while a further 15% were unsure.

The results demonstrate broad recognition of the need for the Council to manage its parking assets strategically and plan for future requirements, rather than considering current parking provision in isolation. The high level of support suggests respondents recognise the importance of ensuring the parking estate remains appropriate as the district grows and travel patterns and town centre needs evolve.

The comparatively higher level of uncertainty may reflect the broad nature of the theme and the potential implications of reviewing individual sites or changing how parking assets are used. This reinforces the importance of ensuring that any future changes are evidence-led, reflect local parking demand and capacity, and continue to provide appropriate parking to support communities and town centres.

While Theme 4 was ranked fourth in the earlier priority exercise, the 80% support demonstrates that respondents nevertheless consider responsible asset management and long-term planning to be an important component of the Car Park Strategy.

Figure 6 illustrates the breakdown of support for Theme 4.

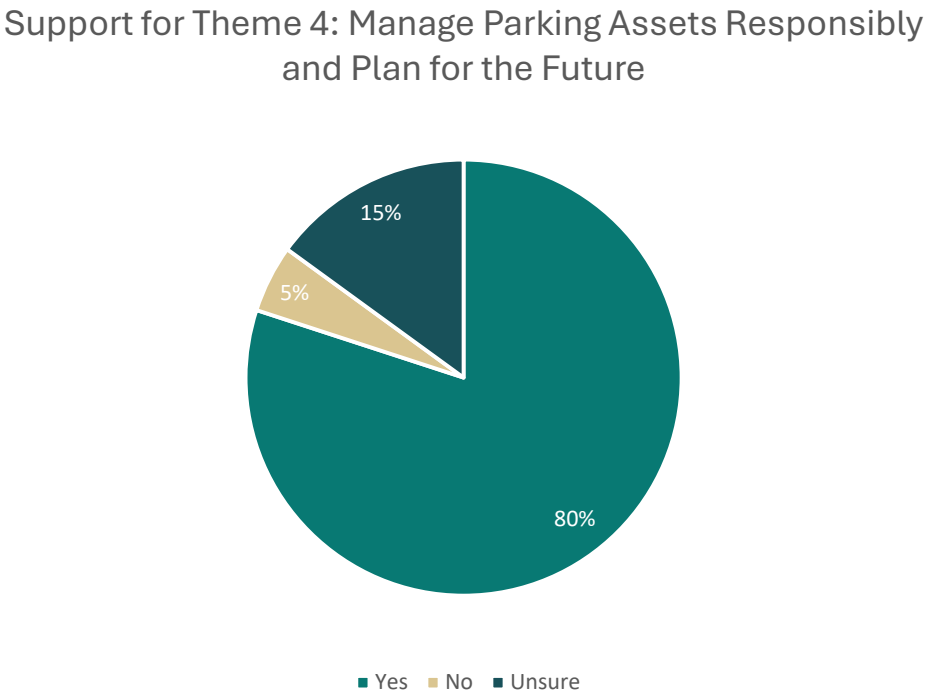

Figure 6 – Support for Theme 4: Manage Parking Assets Responsibly and Plan for the Future

3.2.15 SUPPORT FOR THEME 4 OBJECTIVES

The results demonstrate strong support for the objectives focused on ensuring sufficient parking provision and planning for future growth, with more mixed views on the potential reuse of underutilised parking assets.

Monitoring Parking Demand received the strongest overall endorsement, with 55% rating the objective as very important and 40% as important, giving 95% combined support. This demonstrates a clear expectation that future parking decisions should be based on evidence of demand and that the Council should continue to monitor whether sufficient parking is available as the district develops.

Planning for the Future also received very strong support, with 56% considering the objective very important and 39% important, equivalent to 95% combined support. Together with the monitoring objective, this indicates that respondents place considerable importance on ensuring the parking estate evolves in response to growth and changing needs rather than reacting to issues as they arise.

Supporting Future Growth achieved 88% combined support, comprising 47% very important and 41% important. This reinforces the view that parking should continue to play a role in supporting new development, growing communities and the district's economy.

Making Better Use of Car Parks received 73% combined support, with 30% rating it very important and 43% important. Although this represents a positive majority, 20% considered the objective not important, indicating some caution about changes to existing car parks and the importance of retaining parking where it continues to meet a local need.

The most mixed response related to Considering Alternative Uses. Only 47% considered the objective very important or important, while 41% considered it not important and 12% were unsure. This is a notably different response to the other objectives within Theme 4 and suggests that some respondents interpreted the objective as indicating a potential loss of parking spaces rather than a review of whether underused assets could serve wider community or regeneration purposes where sufficient parking capacity remains available.

In response to this feedback, the objective will be refined in the final Strategy to provide greater clarity about its intended purpose. The revised wording will make clear that alternative uses would only be considered where robust evidence demonstrates that parking demand can continue to be met, that any potential displacement has been assessed, and that decisions would be based on the wider strategic role of the car park rather than current utilisation alone. This clarification is intended to reflect the concerns raised through the consultation while retaining the principle of making the best use of Council owned assets where appropriate.

Objective	Very important	Important	Not important	Don't know
Monitoring Parking Demand - Monitor parking demand to ensure enough parking is available as the district grows.	55%	40%	2%	3%
Planning for the Future - Plan ahead for future parking needs as towns and communities grow.	56%	39%	3%	2%
Making Better Use of Car Parks - Review underused car parks to see how they could be used more effectively.	30%	43%	20%	7%
Considering Alternative Uses - Consider alternative uses for suitable car parks where parking needs can still be met.	15%	32%	41%	12%
Supporting Future Growth - Ensure parking supports new development and future growth across the district.	47%	41%	6%	6%

Table 5 – Support for Theme 4 Objectives

Summary of Comments – Theme 4 Objectives

The feedback broadly reinforced the strong support for monitoring parking demand, planning for future needs and ensuring that parking provision responds to growth. Respondents frequently highlighted the continuing expansion of Huntingdonshire's towns and the importance of ensuring that sufficient parking capacity is retained to support residents, visitors, businesses and access to services. Several comments specifically emphasised that monitoring should consider variations across the week, seasonal demand and busy periods rather than relying on a snapshot of utilisation.

There was also support in principle for making better use of underutilised car parks, although respondents stressed that the reasons for lower utilisation should first be understood. Suggestions included reviewing tariffs, improving how existing capacity is used and considering complementary activities or community uses during quieter periods. Some respondents recognised that alternative uses could be appropriate where a site is genuinely underutilised and parking requirements can continue to be accommodated.

The strongest concern related to the objectives concerning Making Better Use of Car Parks and Considering Alternative Uses. A significant theme within the comments was concern that these objectives could result in the redevelopment or permanent loss of existing town centre parking. Respondents frequently referred to the importance of considering the wider function of individual car parks, including their contribution to accessibility, town centre businesses, events and future parking capacity.

There was also evidence that the wording of Considering Alternative Uses was open to different interpretations. Some respondents indicated that they might support alternative uses such as community facilities or public space but interpreted the objective primarily as referring to redevelopment.

3.2.16 SHORT-STAY AND LONG-STAY PARKING DURATIONS

The next three questions explored respondents' views on how short-stay and long-stay parking should be defined within the Strategy. The results indicate a preference for flexibility rather than highly restrictive duration controls, particularly within long-stay car parks.

For short-stay parking, the most common response was a maximum stay of up to 2 hours, selected by 43% of respondents. A further 24% favoured up to 3 hours and 21% up to 4 hours, while only 8% considered one hour sufficient. Overall, the results suggest that a 2–3 hour maximum duration would most closely reflect user expectations, providing sufficient time to visit shops, services, appointments or hospitality venues while still supporting turnover of centrally located spaces.

When asked about the shortest stay that should be available within a long-stay car park, responses were weighted towards shorter durations. 38% favoured an option of up to 1 hour, with a further 27% selecting up to 2 hours. This indicates that respondents value

the ability to use long-stay car parks flexibly, rather than requiring users to commit to a longer minimum stay simply because a facility is designated as long stay.

The strongest consensus was recorded for the maximum duration within long-stay car parks. More than half of respondents (55%) supported parking for up to 23 hours, while a further 15% favoured up to 12 hours. Only small proportions selected limits below eight hours. This demonstrates clear support for long-stay car parks accommodating genuinely extended visits, including employment, longer leisure visits and other all-day activity.

Taken together, the findings support a parking structure in which short-stay car parks prioritise turnover but still provide sufficient time for meaningful town-centre visits, while long-stay car parks offer much greater flexibility in both minimum and maximum duration. This reinforces the Strategy's wider principle that tariff and duration structures should respond to the function and desired use of individual car parks rather than applying a single uniform model across the district.

3.2.17 CAR PARK TYPE BY ACTIVITY

Respondents were asked whether they would typically use a short-stay car park, long-stay car park or either type of car park for a range of common activities. The results demonstrate a clear relationship between the expected duration and purpose of a visit and the type of parking respondents consider most appropriate.

Short-stay parking was strongly preferred for activities involving relatively brief and convenient access to services. This was particularly evident for supermarkets and convenience stores, where 68% selected short stay, and doctor and dental appointments, where 65% selected short stay. Access to town centres and shopping areas also showed a preference for short-stay parking at 49%, although a substantial 43% considered either type of car park appropriate.

In contrast, long-stay parking was clearly preferred for activities involving extended periods away from the vehicle. This included parking for work (63%), accessing the train station (60%), longer healthcare visits (48%) and visiting family and friends (44%). These findings demonstrate the importance of retaining long-stay provision for employment, commuting and other activities where users require parking for several hours.

For a number of activities, respondents demonstrated greater flexibility. All car parks was the most common response for accessing a home or place of residence (57%), visiting family and friends (51%) and accessing green spaces (47%). Leisure and community facilities produced the most evenly distributed response, with 28% selecting short stay, 32% long stay and 40% either type.

Table 6 below provides a breakdown for car park activity.

Activity	Short Stay	Long Stay	All Car Parks
Access town centres and shopping areas	49%	8%	43%
Near supermarkets and convenience stores	68%	5%	27%
Near leisure and community facilities	28%	32%	40%
For doctor and dental appointments	65%	8%	27%
Around longer healthcare	9%	48%	43%
Near to green spaces	11%	42%	47%
Near to the train station	2%	60%	37%
Parking for work	1%	63%	36%
Parking to visit family and friends	5%	44%	51%
Parking to access my home/place of residence	4%	39%	57%

Table 6 – Car park type by activity

3.2.18 AVAILABILITY OF SHORT-STAY TARIFFS

Respondents were asked whether all Council owned car parks should provide a short-stay parking tariff. The results demonstrate a clear preference for flexibility, with 68% stating that all car parks should offer a short-stay tariff.

Only 11% considered that short-stay tariffs should be limited to car parks close to town centres, while 12% preferred a more targeted approach whereby short-stay tariffs would only be provided at selected car parks where there is evidence of demand. A further 9% were unsure.

The results therefore indicate strong support for enabling customers to undertake shorter visits across the Council's parking estate, rather than restricting this option according to the formal designation or location of a car park. This is consistent with the earlier findings showing that respondents value flexibility within long-stay car parks and want parking arrangements to accommodate a range of journey purposes and durations.

The findings support the Strategy's proposed principle of "pay for what you use" where appropriate, allowing customers to select a tariff that more closely reflects the duration of their visit. However, the suitability and structure of short-stay tariffs should continue to be considered on an individual car park basis, taking account of location, demand and the intended function of each site.

3.2.19 INFLUENCE OF PARKING CHARGES ON CAR PARK CHOICE

Respondents were asked whether a lower parking charge would influence which car park they used where two Council owned car parks were within a similar walking distance of their destination.

The results demonstrate that parking price is a significant influence on user choice, with 60% stating that a lower charge would definitely influence which car park they selected. A further 19% indicated that it probably would, meaning that 79% of respondents could potentially be influenced by differences in price.

Only 7% considered that price would probably not influence their decision, while 14% stated that they would choose based on convenience rather than price.

The findings demonstrate the potential for differential tariffs to influence how demand is distributed across the Council's parking estate. Where suitable alternative car parks serve similar destinations, pricing could therefore be used strategically to encourage greater use of available capacity and reduce pressure on more heavily used sites. This supports the Strategy's principle that differential pricing by individual car park can be appropriate, provided tariff decisions are informed by evidence, location, demand and the intended function of each site.

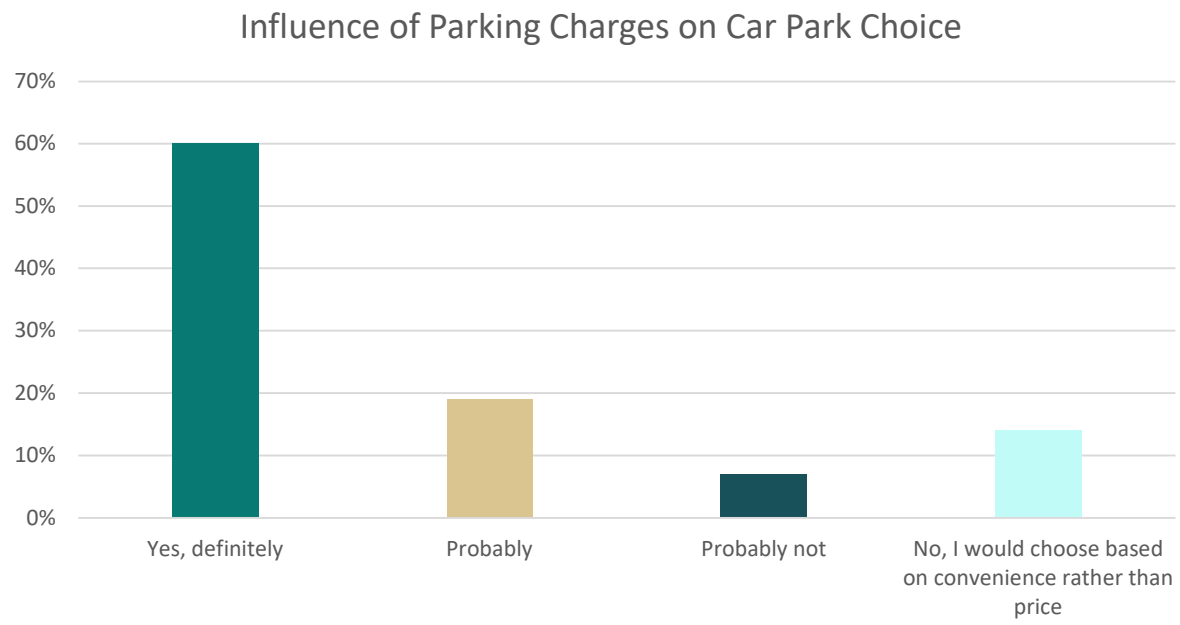

Figure 7 – Influence of parking charges on car park choice

3.2.20 SUPPORT FOR DIFFERENTIAL PARKING CHARGES

Respondents were asked whether they would support different parking charges in less busy car parks where this could encourage greater use and reduce pressure on busier locations.

The results demonstrate clear overall support for this approach, with 25% strongly supporting and 40% supporting differential charges, giving a combined support level of 65%. A further 23% neither supported nor opposed the principle.

Only 12% expressed opposition, split equally between 6% who opposed and 6% who strongly opposed the approach. This indicates that resistance to using tariffs as a mechanism for redistributing parking demand is relatively limited.

The findings are consistent with the previous question, which demonstrated that parking price can significantly influence car park choice. Together, the results provide support for the Strategy's principle that differential pricing between individual car parks can be appropriate, particularly where it can encourage greater use of available capacity and reduce pressure on more heavily used locations. Any such approach should nevertheless be informed by evidence of demand, location and the intended function of individual car parks.

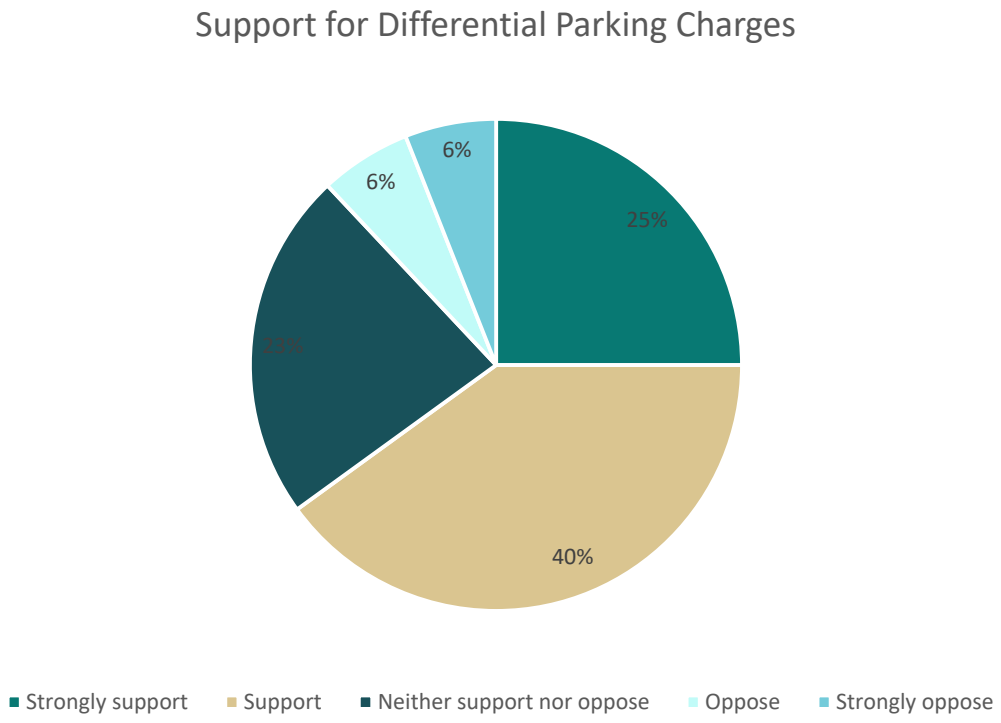

Figure 7 – Support for differential parking charges

3.2.21 INFLUENCE OF PARKING CHARGES ON TRAVEL DECISIONS

Respondents were asked to consider how parking charges influence when they choose to visit and park within Huntingdonshire. The results demonstrate a mixed picture, indicating that charges influence the behaviour of some users more strongly than others.

For the statement that parking charges do not influence when respondents visit, 38% agreed or strongly agreed, while a slightly higher 42% disagreed or strongly disagreed. This suggests that parking charges can influence the timing of visits for a substantial proportion of users, although the effect is not universal.

There was also evidence that some respondents actively adjust their behaviour to take advantage of periods when parking charges do not apply. 38% agreed or strongly agreed that they park after 6pm to avoid charges, compared with 32% who disagreed. The effect

was more pronounced on Sundays, with 47% agreeing or strongly agreeing that they shop on a Sunday to avoid parking charges, compared with 29% who disagreed.

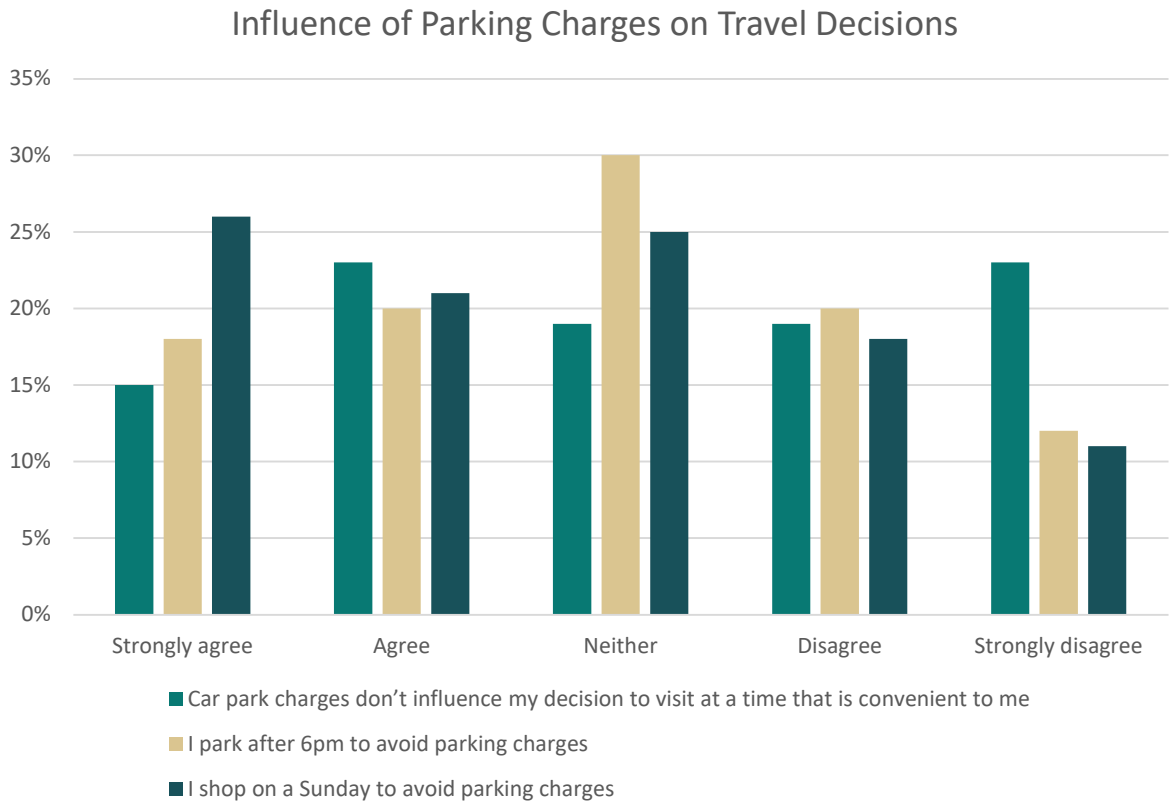

Figure 8 – Influence of Parking Charges on Travel Decisions

3.2.22 ADDITIONAL OBJECTIVES SUGGESTED BY RESPONDENTS

Question 24 provided respondents with an opportunity to identify any additional objectives or issues they felt should be explored further within the Car Park Strategy. The comments covered a wide range of topics, although several clear recurring themes emerged.

The most prominent theme related to parking charges and affordability. Respondents frequently suggested free or reduced-cost short-stay parking, particularly the first 30 minutes or one hour, as a means of supporting local shops and encouraging shorter town-centre visits. Other suggestions included cheaper long-stay parking, evening concessions, pay on exit or pay for what you use arrangements, and ensuring charges remain reasonable.

A second strong theme concerned protecting sufficient parking capacity. A number of respondents opposed the redevelopment of existing town centre car parks and emphasised that future decisions should take account of population growth, town centre activity and the potential displacement of parking. Tebbutts Road and the Cattle Market were specifically referenced within a number of comments.

Accessibility and inclusivity were also frequently raised. Suggestions included additional Blue Badge spaces, provision for people with limited mobility who do not qualify for a

Blue Badge, parent and child spaces, wider bays to accommodate modern vehicles, dropped kerbs and ensuring lifts and other accessibility infrastructure remain operational.

Respondents also identified opportunities to improve the quality and operation of existing car parks, including better maintenance of surfaces and markings, reliable payment machines, improved lighting and CCTV, litter bins and public toilets. Payment choice was a recurring issue, with respondents seeking simple arrangements that retain cash and card options alongside digital payment rather than relying exclusively on mobile applications.

Other suggestions related to sustainable transport and environmental improvements, including better public transport connections, cycle parking and cycle routes, EV charging and the potential use of solar canopies, green roofs and other measures to improve environmental performance and provide shade.

Finally, respondents raised issues around enforcement and management, including stronger action against illegal parking and misuse of disabled spaces, improved permit arrangements, reasonable grace periods and ensuring enforcement is proportionate. There were also calls for greater transparency and continued engagement with local communities when significant changes to parking provision are being considered.

3.2.23 OTHER COMMENTS RELATING TO CAR PARK STRATEGY

The final question provided respondents with an opportunity to raise any additional matters they considered relevant to the development of the Car Park Strategy. As might be expected from an open-ended question, the responses covered a broad range of issues and included both supportive suggestions and strongly expressed concerns.

The most prominent issue was the retention of existing town centre parking provision. A substantial number of comments expressed concern about the potential redevelopment or loss of existing car parks, with particular reference to Tebbutts Road in St Neots and the Cattle Market in St Ives. Respondents frequently described these car parks as well used, conveniently located and important to access to shops, services and employment. There was concern that reducing centrally located parking could displace vehicles elsewhere and adversely affect town-centre footfall, particularly as the district continues to grow.

Closely associated with this was the relationship between parking and town centre vitality. Many respondents considered convenient parking to be an important factor in supporting local businesses and felt that parking policy should encourage people to visit and spend time in Huntingdonshire's market towns rather than travel to out of town retail destinations.

Parking charges and affordability were another recurring topic. A significant number of respondents advocated some form of free or reduced cost parking, particularly a free first 30 minutes or one hour, to support short visits and local businesses. Some respondents questioned whether the proposed free parking periods would be sufficiently

useful, while others considered the existing level of charges reasonable or argued that resources would be better directed towards public transport and walking improvements. This demonstrates that views on charging were not uniform, although maintaining affordable parking was a consistent concern.

Respondents also highlighted accessibility and inclusivity, particularly the importance of retaining convenient parking for older people, disabled users, people with limited mobility and those accessing health services. Comments requested sufficient Blue Badge provision, appropriately sized spaces and recognition that moving parking further from destinations can disproportionately affect people who are unable to walk longer distances.

A related theme concerned the availability of realistic alternatives to travelling by car. Respondents from villages and rural areas frequently highlighted limitations in existing public transport and considered the car necessary for accessing the district's towns. At the same time, some comments supported greater investment in public transport, walking, cycling, secure cycle parking and other sustainable travel measures, indicating support for greater travel choice where viable alternatives can be provided.

A smaller but recurring group of comments focused on the day-to-day quality of the parking service, including reliable and straightforward payment arrangements, functioning ticket machines, clear signage, maintenance, lighting and safety. Respondents generally wanted technology to improve convenience while retaining alternatives for people who do not wish or are unable to use smartphone applications.

Finally, there was a notable strand of feedback relating to consultation, transparency and confidence in future decision making. Some respondents were concerned that decisions about the future of particular car parks might already have been taken or that insufficient information about wider regeneration proposals had been available when completing the questionnaire. Calls were made for continued engagement, clearer information and evidence, and greater involvement of residents, businesses and local councils before significant changes are made.

Corporate Performance Report, Quarter 1 2026/27

Executive Summary: This report provides Cabinet with an update on the Council's performance against the 2026-27 Corporate Plan at the end of Quarter 1 2026/27 (covering the period April to June 2026), including:

- Progress with Corporate Plan actions and projects
- Corporate Performance Indicators

Recommendations

1.1. The Cabinet is invited to consider and comment on progress and performance during Quarter 1, as summarised in the Corporate Performance Report attached and detailed in Appendices A, B & C

	Key Corporate Plan Priorities
1	Improving quality of life for local people
2	Creating a better Huntingdonshire for future generations
3	Doing our core work Well

	Place Strategy Priorities
1	Pride in Place
2	Inclusive Economy
3	Health Embedded
4	Environmental Innovation
5	Travel Transformed

Report Author(s)

Gregory Moore – Data Analyst (gregory.moore@huntingdonshire.gov.uk)

1. PURPOSE OF THE REPORT

1.1 This report presents the Council's progress against the Corporate Plan Actions and Corporate Performance Indicators during Quarter 1 (April to June) 2026/27.

2. BACKGROUND & CONTEXT

2.1 The Council's Corporate Plan 2023-2028 was refreshed for 2026/27 and approved at Council in July 2026.

2.2 The performance data in the attached Corporate Performance Report and its appendices relate to the performance measures, actions and projects agreed for 2026/27 and has been collated in accordance with standardised procedures.

2.3 The Corporate Performance Report (Appendix A) summarises progress and performance by outcome. Each outcome has a summary followed by tables and pie charts summarising the status of actions and projects, followed by the performance measures. A full list is also provided for each outcome, which shows the status reported for each action/project and performance measure linked to that outcome as at the end of quarter 1. The appendices to the Corporate Performance Report provide more detail.

2.4 Appendix B provides integrated updates on Corporate Plan actions and projects from officers, covering both progress against planned delivery and the impact that has had on the outcome.

2.5 Appendix C provides updates on Corporate Performance Measures, showing this year's performance broken down by month and how this compares to targets, intervention levels and the performance of the previous three years, where possible. This is provided via graphs to make such comparisons simpler and provide a visual indicator of direction of travel.

2.6 Metrics within the Operational Performance Measures have similarities to the Local Outcomes Framework – a new framework which enables outcomes-based performance measurement against key national priorities delivered at the local level. The framework has 127 outcome metrics and outcome metric placeholders across 16 priority outcomes which link directly back to the safety and wellbeing of residents. Councils are responsible for the monitoring and reporting this metrics for the launch of a national digital tool in 2026. Therefore, it is important that Huntingdonshire District Council is cognisant of the emerging reporting requirements and ensures appropriate governance and data quality are in place to support compliance. Doing this will create an opportunity for greater transparency with residents.

3. PERFORMANCE MANAGEMENT

3.1 Robust performance management is a priority at Huntingdonshire District Council, with stretch targets being implemented where relevant and external benchmarking occurring where possible. This was noted as a strength for HDC by our recent Local Government Association Corporate Peer Challenge.

3.2 Cabinet members and the Overview and Scrutiny (Performance and Growth) Panel are central to the Council's Performance Management Framework. This report provides regular performance data, allowing Councillors to review quarterly progress on strategic outcomes.

3.3 The following table summarises overall progress in delivering Corporate Plan actions for 2026/27 at the end of Quarter 1:

Status of Corporate Plan Actions	Number	Percentage
Green (on track)	43	91%
Amber (within acceptable variance)	4	9%
Red (behind schedule)	0	0%

Note: actions being delivered as/through projects/programmes are not included in this table as their status is being reported via project reporting mechanisms instead, and this avoids any double-counting. Percentages may not sum to 100% due to rounding.

3.4 91% of our Corporate Plan actions are reported as on track (green) this quarter. The remaining 9% of projects were reported as being within the acceptable variance (amber), with no actions reported as being behind schedule (red). 39 of the actions reported as green in Quarter 4 were also reported as green in Quarter 4. 2 of the 12 actions reported as amber this Quarter have reduced from reporting as green in Quarter 3, and the remaining 10 continue to report as amber.

3.5 The statuses of Corporate Plan projects at the end of March 2026 are shown in the following table:

Status of Corporate Plan Projects/Programmes	Number	Percentage
Green (on track)	9	90%
Amber (within acceptable variance)	1	10%
Red (behind schedule)	0	0%

Note: this only includes corporate projects which are linked to actions in the current Corporate Plan. Percentages may not sum to 100% due to rounding.

3.6 Quarter 1 saw a total of 9 Corporate Plan projects/programmes reporting as green (90%), with the other project/programme reporting as amber.

3.7 The latest status of operational performance measures at the end of March 2026 are summarised here:

Latest Operational Performance Indicator Results	Number	Percentage
Green (on track)	18	53%
Amber (within acceptable variance)	6	18%
Red (behind schedule)	10	29%

Note: this only includes operational performance measures which are linked to actions in the current Corporate Plan. Percentages may not sum to 100% due to rounding.

3.8 The Corporate Performance Measures that are behind the intervention level through quarter 1 of the 2026/27 year are:

Metric	Result
3. The number of residents enabled to live safely at home and prevented from requiring care or a prolonged stay in hospital due to a DFG	R
7. The number of homelessness preventions achieved	R
11. The number of new affordable homes delivered	R
22. The number of missed bins (excluding Food Waste collections)	R
24. The number of flytips reported (cumulative)	R
25. The number of sanctions against environmental crimes and anti-social behaviour	R
27. The percentage of calls to the Contact Centre answered	R
28. The average wait time for customers calling the Contact centre (seconds)	R
33. Staff long-term sickness days lost per FTE	R
35. The average length of staff service (years)	R

Please note: that other metrics are routinely reported internally to other committees (e.g. HR data goes before the Employment Committee and the Corporate Governance Committee receives an annual report on complaints and compliments), copies of these reports can be requested.

3.9 The number of residents enabled to live safely at home via a DFG (disabled facilities grant) has reported as red through the first quarter. Officers are extremely limited in directly impacting this metric as they rely on cases being passed to them through the Cambs Home Improvement Agency. A backlog of roughly 50 'P3' cases are currently being sorted by the Cambs Home Improvement Agency, some of which will be supported by Huntingdonshire District Council.

3.10 The number of homelessness preventions achieved through June of 2026/27 is 110, just 1 prevention behind being amber. To support this metric in becoming green, officers continue to support the delivery of new social rented homes so that residents can be housed through the Home-Link scheme, hence achieving homelessness preventions.

3.11 The target of 120 affordable homes per quarter is based on the 480 homes needed per annum to meet housing need following the ICENI Housing Needs Assessment. This figure is unlikely to be met every year due to the fluctuation in housing delivery. Slippage from quarter 4 of the previous year, whilst expected in quarter 1 has not yet been delivered due to continuing delays on sites, mainly due to highway improvements, most of these homes are now expected to be delivered throughout the remaining year. It is expected that this metric will still finish behind target this year.

3.12 The number of missed bins in the first quarter of the year was behind target, but still above the national benchmarking average of 0.076%. Agency staff were required to be used in quarter 1 due to multiple staff absences, and this meant less experience and knowledge of the round/areas, causing more missed bins. As agency staff become more experienced and regular staff return from leave, this metric is expected to improve.

3.13 The number of flytips has been significantly behind target this quarter. Processes have been revised to identify and track flytipping, and reviews are being undertaken to identify trends and recurring patterns.

3.14 The number of sanctions against environmental crimes and anti-social behaviour has started 2026/27 behind target. Officers focus on the prevention of these occurrences as well as the sanctioning of instances, and continue to focus on the same action plan as the previous year to ensure accurate and frequent sanctions are passed out when applicable.

3.15 Both customer services metrics are significantly behind target through the first quarter of 2026/27. Multiple factors contributed to this poor performance including higher call volume, longer calls, and vacancies. Resources were used efficiently, including resources from other teams, however performance was still behind target. Vacancies have now been filled and gradual improvement is expected from August onwards.

3.16 Long term sickness has increased in the last 3 months. All 19 cases are being managed actively, and long term cases of 6 months or longer have halved, however officers transitioning from short-term to long-term sickness has negatively impacted this metric. A sickness review group is now in place and working to identify trends and stabilise sickness.

3.17 Quarter 1 2026/27 included extremely positive performance. This includes improving the happiness and wellbeing of our residents by continuing to provide leisure services and Active Lifestyle sessions, with both metrics finishing significantly above target. All 3 planning metrics regarding the percentage of applications completed on time have achieved green compared to their stretched 2026/27 targets, with the backlog not increasing in this time. Additionally the economic development team continue to support businesses throughout the district to ensure Huntingdonshire is a place for businesses to thrive.

4. COMMENTS OF OVERVIEW & SCRUTINY

4.1 The Overview and Scrutiny (Performance & Growth) Panel is due to receive this report at its meeting on 2nd September 2026. Comments from the Panel will be shared with Cabinet following the Overview and Scrutiny Panel's meeting.

Outcome 1: Improving the happiness and wellbeing of residents

We want the highest possible quality of life for the people of Huntingdonshire. It will be a place which attracts employers and visitors and somewhere residents are proud to call home. We will be evidence based, responsive and support the foundations of a good life. This includes personal independence, prosperity, social connection, community and good health.

Quarter 1 saw the Play Sufficiency Scheme be initiated. Officers have begun to work on gathering information on existing play provision, site condition, accessibility and community need to ensure the correct work is prioritised. Initial project documents have been completed and are currently progressing through the Council's internal gating approval process. The Play Sufficiency Scheme is ensuring resources are directed to areas of greatest need and benefit for children and families across Huntingdonshire.

Huntingdonshire District Council is working with partners such as the CPCA to explore the benefits of an Anchor Partnership for Huntingdonshire which will benefit local communities. Anchor organisations maximise the impact of their spend, buildings, budgets, and more, using a coordinated approach. Huntingdonshire District Council is taking the lead on the group currently exploring this in further detail, with a paper being taken to the Cambs & Peterborough Public Sector Board. Working with partners to align impacts on local communities in a coordinated way will help improve health and wealth throughout the district.

Local people were supported in acquiring good jobs by working with partners in quarter 1. Multiple engagement meetings took place with multiple external partners to explore multiple pathways. Additionally, officers delivered the Construction Workshop Hub at Hinchingbrooke Hospital with Constructed Pathways and the NHS supporting 26 residents to explore careers in construction, with two participants already progressing into work experience placements, along with attending the launch of the Get Cambridgeshire and Peterborough Working Plan and a Regional Labour Market Analysis webinar to ensure activity aligns with current evidence and regional priorities.

The £30 million investment into One Leisure Huntingdon began pre-phase work, which encompasses legal documents being engrossed. Outstanding planning conditions will be discharged in July, allowing phase 1 to begin. The upgrades will supply better facilities and services for residents, and more activities and options will be available for the local community. This work builds on the positive work already being completed by Active Lifestyles, which is continuing to deliver sessions despite the loss of grant funding by increasing commissioned activity and 'pay as you go' sessions. Attendances at both One Leisure facilities and Active Lifestyles sessions surpassed targets in quarter 1.

The number of One Leisure Facilities admissions (excluding Burgess Hall, Sawtry & school admissions)	G	G

Outcome 2: Keeping people out of crisis

We will identify the root causes that lead people into crises and find ways to prevent them. We will do this through our own actions. We will also work in partnership with residents, businesses, community groups, charities and our public sector partners.

Huntingdonshire has worked with key partners regarding water management and flood prevention throughout quarter 1. All town and parish councils have been contacted regarding their emergency plans and provisions for an emergency weather event, and officers have made face to face meetings to ensure councils are aware of support. Because of this, some councils are renewing existing plans regarding flooding, and some are looking to write them again from scratch. It is too early to have fully established liaison points, but some are in progress. Additionally, a water source management event was planned in partnership with Cambridgeshire County Council; however, this had to be postponed. Additionally, options for events are being actively explored to ensure this event occurs.

The Council successfully maximised the value from the impact of Voluntary Sector organisations to help drive a preventative impact in quarter 1. Funding agreements were put in place with the Citizens Advice Bureau, which focuses on tackling the 7 key priorities within the Corporate Plan, specifically regarding Keeping People out of Crisis and Helping People in Crisis. Additionally, the delivery of priorities in the Crisis and Resilience Fund will be supported by the Residents Advice & Information team. The focus of this work is on the implementation of a new model that ensures that residents receive the right service at the first point of contact and are supported to navigate what is available from Citizens Advice Bureau or escalation onto the Residents Advice & Information Team.

The Community Health & Wealth Fund had its core components delivered in quarter 1 following the launch in January 2026. A large amount of interest was received throughout the quarter, and 23 organisations have been invited to submit full applications, resulting in 5 grants totalling £100,000. Additionally, social return on investment from the previous round of CHAWS funding is extremely positive, with one project seeing a £6.94 social return on investment per £1.00 spent. This demonstrates the clear social impact within the communities where last year's funding occurred, and this return is also expected for the most recent round of funding.

Although the Disabled Facilities Grant was not able to support as many residents as the target, all residents that were supported were supported in a timely manner of less than 24 weeks, allowing them to live at home safely and avoid a hospital visit. Although these metrics are heavily dependent on external organisations such as Places for People and the Cambs Home Improvement Agency, officers continue to process all applications they receive efficiently to ensure residents receive the support they require as quickly as possible.

The number of households housed through the Housing Register and Home-Link scheme	G	R

Outcome 3: Helping people in crisis

Where a crisis has already happened, we will work holistically to understand the issues, the cause of these issues and what opportunities exist to address them. We will seek to prevent multiple personal crises becoming entrenched and unmanageable by addressing root causes

To ensure that the Crisis and Resilience Fund is allocated appropriately among residents, quarter 1 saw Huntingdonshire District Council work with Cambridgeshire County Council to produce a submission paper regarding the distribution of these funds. The Crisis and Resilience Fund supports low-income households who encounter a financial shock and supports activity that builds individual and community financial resilience. The submission identified a need for additional capacity within the Resident Advice and Information Team, support with transporting furniture for identified residents experiencing poverty, a new tenancy support worker, as well as a prevention programme within primary schools. The outcomes and recommendations from the Poverty Commission were taken into account when submitting a funding proposal.

The Crisis and Resilience Fund is also being used to fund the Low income family tracker (LIFT)project and an associated officer for 2 years. The LIFT can be used to identify and engage with vulnerable households to ensure that they are aware of all funding they are eligible for. Whilst the LIFT is waiting to officially go live, the Residents Advice and Information team and the Citizens Advice Bureau continue to identify residents who are eligible for certain benefits.

Huntingdonshire District Council has continued to support refugees arriving from Ukraine under the Homes for Ukraine scheme. The number of new arrivals remains low, and focus has been on supporting and assisting those who are already in Huntingdonshire. There remains a strong support network from the community voluntary sector, and in many cases, these established relationships are enabling this cohort to fully embed in our communities and remain in a resilient position. Additionally, officers continue to support Serco in the procurement of properties for asylum seekers.

Officers have continued to help residents in crisis by supplying temporary accommodation to those who require it. As those in temporary accommodation are continually supported in finding solutions, this Key Performance Indicator has fallen to a green level at the end of June.

Outcome 4: Improving housing

We want everyone to live in a safe, high quality home regardless of health, stage of life, family structure, income and tenure type. Homes should be energy efficient and allow people to live healthy and prosperous lives. New homes should be zero carbon ready and encourage sustainable travel.

After the approval of the Empty Homes Strategy and the end of the previous quarter, work has begun to implement this Strategy across the district. Officers are working with Empty Homes owners to bring these homes back into use. This has resulted in 8 long-term empty properties being brought back into use via direct involvement with Huntingdonshire District Council, and a further 4 properties being sold with support from the Empty Homes officer. New homeowners will also be supported by officers to ensure they are brought back into use. This will increase the supply of homes for residents, which helps to support sustainable growth and reduce the environmental impact of new housing developments, along with enhancing the quality of life within Huntingdonshire's communities.

The implementation of the government's new Supported Housing (Regulatory Oversight) Act has been ongoing in quarter 1, with progress made since last quarter which has improved the action to a green status. An internal working group has been formed to support the implementation of this Act, along with officers being involved in a county-wide group. Huntingdonshire has supported Cambridge City Council in commissioning a supported housing strategy across multiple districts.

Delays have occurred in the development of policy to support the use of civil penalties with regard to private sector housing enforcement in quarter 1. However, delays have occurred in adopting the policy, which has been drafted in line with statutory guidance, due to the constitutional requirements of delegating the duties of the Renters' Rights Act 2025 to officers. Further progress in the full adoption of this policy is expected to occur in the next quarter. Existing powers are still being used to ensure private sector housing standards are maintained, and any disrepair issues are dealt with.

The action regarding maintaining or improving the level of housing delivery in Huntingdonshire remains amber. The Council continued to work with Amplius to bring forward surplus Council-owned sites amd we Inspired Solutions on the delivery of 200 homes on private sites. Affordable housing delivery began the year significantly behind target as only 45 affordable homes were delivered. Officers will continue to work with all housing suppliers to encourage effective and efficient delivery.

Outcome 5: Forward-thinking economic growth

We want our local economy to attract businesses that prioritise reducing their carbon footprint. A place where businesses choose to start up, grow and invest in high value jobs so they and our residents and high streets, can flourish and thrive. Local people should be able to develop their skills to take advantage of these opportunities, with businesses and education providers working more closely together to deliver an inclusive economy.

Work surrounding the North Huntingdon Growth Cluster was positive in quarter 1. Officers attended the East Regional Defence and Security Cluster event, Technology in the East, and joined the East Regional Defence and Security Cluster Steering Group to help shape regional collaboration across the defence and security sector. Engagement in this sector is establishing new relations with different businesses and strengthening Huntingdonshire's position within the regional defence ecosystem. Additionally, participation in these groups has helped raise the profile of strategic assets, including RAF Wyton, while a cross-Council working group is being established to coordinate defence-related opportunities and social value initiatives.

Quarter 1 saw the continuation of promoting Huntingdonshire as a destination for high-value inward investment. Officers attended UKREiiF to actively promote Huntingdonshire to businesses across the country, showcasing opportunities including Alconbury Weald, Project Fairfax and regeneration projects across the district's market towns. Additionally, Huntingdonshire was represented on the Connecting Cambridgeshire Digital Connectivity Steering Group, helping to shape regional digital infrastructure investment, share funding opportunities and address digital connectivity challenges. The constant promotion of Huntingdonshire led to over 350 business engagements in quarter 1, in terms of encouraging new business and engagement with local businesses.

The Council continued to strengthen the role of markets in our market towns as vibrant hubs for residents, visitors and local businesses in quarter 1. The delivery of recurring food markets for both St Neots and St Ives was facilitated, and the continuing establishment of a firm base of traders for the St Neots market occurred. Provision of a local event for the public to attend provides a platform for businesses to trade at and encourages shopping at local businesses. This supported the increase in footfall in the four market towns, in quarter 1, an above-target result of 3.95 million footfall was observed, which significantly supports the local economy.

Key infrastructure projects were continued to be influenced to ensure their delivery. This includes working with the DCO regarding the East West Rail project, and outlining a Business Case regarding the A141 project. The continuation and delivery of these Nationally Significant Infrastructure Projects will continue to boost the local economy.

Outcome 6: Lowering carbon emissions

We will take positive action to reduce carbon emissions and become a net zero carbon Council by 2040. We will enable and encourage local people and businesses to reduce carbon emissions and increase biodiversity across Huntingdonshire.

The delivery of energy efficiency improvements across Council assets and community buildings to reduce energy costs and carbon emissions began in quarter 1. Designs were received for roof-mounted solar panels to be installed at Pathfinder House. Pending financial approval, this project is due to begin in quarter 2. Additionally, a purchase order has been raised to install Endotherm into close hot water systems within qualifying Leisure systems, which will allow water to heat up quicker, hence reducing the amount of gas used. Additionally, early work is being considered for the power upgrade to Eastfield House as per the Fleet Renewal and Infrastructure Improvement Strategy. All these projects will not only reduce the carbon emissions produced by the council, but will also help to reduce energy costs.

The delivery of the Habitat Banking Programme across Council-owned sites began to be developed in quarter 1. Legal frameworks are currently being laid out for the selling of units for Phase 1 sites whilst also considering Phase 2 sites. Additionally, the Project Support Officer has now been recruited, and a commissioning exercise for delivering the ecological work for the Phase 2 sites has now been completed. This initial work will support the finished product of Habitat Banking, which will improve biodiversity and generate Biodiversity Net Gain units, whilst enhancing accessible open spaces for residents and creating opportunities for education and community engagement.

Huntingdonshire District Council is working with partners to maximise the uptake of the Warm Homes Local Grant scheme, which will run through to 2028. As the scheme is managed through the Cambridgeshire Energy Retrofit Partnership, the Council is partnering with Cambridgeshire Carbon Footprint to loan thermal imaging cameras to residents in Great Paxton and Warboys to identify cold spots where heat escapes in their homes. This allows residents to make informed improvements to their homes, which can lower energy bills, reduce carbon emissions, and improve home comfort.

The Council supported businesses to improve their net-zero ambitions in quarter 1, with multiple pieces of work being completed to support local businesses. Similarly to local residents in Great Paxton and Warboys, a thermal imaging camera training session and loan scheme was conducted to help businesses identify heat loss and improve energy efficiency. Additionally, the continued promotion of green business support tools such as the Cambridge Carbon Footprint Calculator and the Green Tourism accreditation scheme occurred. All of these not only reduce carbon emissions for local businesses, helping them strive towards net-zero, but also reduce operating costs.

Outcome 7: Delivering good quality, high value-for-money services

Around 80% of our resources are aligned to business as usual (BAU) service delivery and this priority focuses on delivering good quality, high value for money services with good control and compliance with statutory functions. We will continue to provide a wide range of existing statutory and important services and seek to improve their efficiency and effectiveness.

The Customer Experience Programme continued to be developed in the first three months of the year to ensure that our customers are always at the heart of what we do. Parts of the programme moved into BAU, such as the text reminder project. Further work has been implemented, such as the launch of the appointment-based face-to-face provision trial, and changes to card payment software were implemented, as required by law. Overall, 40% of face-to-face meetings were pre- booked, 60% seen as walk-ins, and a 40% reduction in statutory reminders issued where pre-reminder text messages were issued was observed. This supports the efficiency of Council officers and moved the Council further towards being digital first.

The Workforce Strategy Action Plan advanced in quarter 1, as it nears its 2-year completion in 2026. Staff development, wellbeing, and benefits through the successful completion of the Leadership Development Programme and transition into business as usual, as other schemes continue to advance, such as the expansion of health and wellbeing support through the Work Well service. This continual work on the Workforce Strategy Action Plan continues to support staff already at the organisation, as well as promote Huntingdonshire District Council as a place to work for job-seekers. For example, 3 graduates were secured via IMPACT, and the highest number of candidate applications for 5 quarter was seen in quarter 1.

As Local Government Reorganisation approaches, Huntingdonshire District Council has begun work on ensuring the continuity and quality of frontline services throughout Local Government Reorganisation, delivering core services well and minimising disruption for residents and communities. This is despite awaiting a decision in quarter 1. The corporate plan was written, which will progress through Scrutiny and Council, ensuring the business-as-usual elements of the council are prioritised, and services can deliver. Additionally, officers have ensured that Huntingdonshire's good practice and effective service delivery are embedded within the future LGR operating model. This has been achieved by completing taxonomy documents with neighbouring Cambridgeshire Council, outlining which services have high performance rates, and which have room for improvement. This will feed into regional conversations around Target Operating Models and demonstrates clearly where Huntingdonshire's value needs to be retained. This work will inform clear direction when a decision is made regarding Local Government Reorganisation.

Outcome: Improving the happiness and wellbeing of residents

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder ▲	Progress Update	Latest Status	Direction of Travel	Impact Update
1. Deliver the £30 million investment in One Leisure Huntingdon to create a Sport & Health hub that supports residents to be more active, through access to a high-quality, modern leisure facility that meets the needs of growing communities.	Cllr Debbie Mickelburgh	Legal documents are being engrossed, allowing for phase 1 of the project to commence on 20th July 2026. The construction of the 3G 11-aside football pitch at St Peters Academy is the first phase of the project. Outstanding planning conditions will be discharged by 17th July 2026, enabling work to commence on time and to schedule.	G	New	The upgrades will supply better facilities and services for our residents, and more activities and options will be available for the local community. The project will improve healthy outcomes for residents, ensuring people are more active more often, potentially relieving pressures in the long-term on the local NHS.
2. Deliver high-quality, accessible and sustainable green spaces that support health and wellbeing for the whole of Huntingdonshire, delivered through targeted investment and the Parks and Open Spaces Commercial Sustainability Plan.	Cllr Julie Kerr	Initial project to deliver the Aqua Park at Hinchingbrooke progressing well and on target for opening on 18th July. Capital Investment Programme works are progressing; we have now broken the programme down into phases and have allocated projects for feasibility and ultimately delivery.	G	New	Early programme development is creating an evidence-based approach to prioritising projects to ensure investment is timely and distributed evenly across the district, for maximum return on investment and impact for residents.

Outcome: Improving the happiness and wellbeing of residents

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
3. Develop proposals and deliver the Play Sufficiency Scheme, blending capital investment and external funding to improve and enhance children's play facilities across Huntingdonshire, ensuring they meet the needs of local communities.	Cllr Julie Kerr	Project initiation is underway. Information on existing play provision, site condition, accessibility and community need is being collated to support the prioritisation of future investment. The Business Case and Project Initiation Document have been completed and are progressing through the Council's approval process.	G	New	Early project development work is creating an evidence-based approach to prioritising future investment, helping to ensure resources are directed to areas of greatest need and benefit for children and families across Huntingdonshire.
4. Improve our evaluation of how we make a difference to local people, ensuring we become even better at demonstrating impact.	Cllr Debbie Mickelburgh	Officers are using a tool called the Social Value Engine to evaluate the impact of the investments made in the Community Health and Wealth Fund. The data is showing a clear return on investment that demonstrates the impact of the Council's work.	G	→	The spending of the Council budget on deliverables must show impact; this tool allows this to happen, as well as ensuring that the budget can be spent on the correct deliverables.

Outcome: Improving the happiness and wellbeing of residents

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
5. Embed the priorities of Huntingdonshire Futures across the Council's services, decision-making, and partnership activity, ensuring a coordinated place-based approach that enables communities, partners and stakeholders to contribute to shared outcomes.	Cllr Sarah Conboy	Work to embed Huntingdonshire Futures across HDC has begun and remains at an early stage. Initial activity has focused on strengthening its use within governance and decision-making processes, aligning relevant work programmes and grant activity to the Futures priorities, and raising awareness through internal and external engagement. Further work in Q2 will focus on broadening this approach across services so that the Futures priorities are more consistently reflected in service planning, partnership activity and reporting.	G	New	Early activity has established the foundations for Huntingdonshire Futures to become a more consistent framework for decision-making, partnership working and investment activity. While full organisational embedding will take time, initial work has helped increase awareness of the Futures priorities and supports a more joined-up approach across council services and partners.

Outcome: Improving the happiness and wellbeing of residents

Activity Type: Enable

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
6. Help local people get good jobs by working with key partners, including ARU, CRC and industries, to join the gap between skills and employment - including establishing programmes that directly address the evolving needs of our key sectors.	Cllr Brett Mickelburgh	Employment and Skills continued to strengthen relationships with key partners to support residents into employment and respond to local labour market needs. Engagement included meetings with the DWP Partnership Manager, Reed in Partnership (Restart Scheme), The One Group at a Peterborough Business Breakfast, and POSH Youth to explore pathways for young people and unemployed residents. The team also helped deliver a Construction Workshop Hub at Hinchingbrooke Hospital with Constructed Pathways and the NHS. In addition, officers attended the launch of the Get Cambridgeshire and Peterborough Working Plan and a Regional Labour Market Analysis webinar to ensure activity aligns with current evidence and regional priorities.	G	↑	The Construction Workshop Hub supported 26 residents to explore careers in construction, with two participants already progressing into work experience placements. Partnership working has strengthened local employment pathways and ensured employment and skills activity remains aligned with regional labour market priorities.
7. Focus on maximising physical activity in the district, and work to promote this across local partners. Build links and develop actions to embed connections between leisure, health, environment, economy, community and place, including working with health partners to unlock opportunities for co-located health and wellbeing services alongside our leisure services.	Cllr Debbie Mickelburgh	For Active Lifestyles and Sports Development, sessions for people to be active have been maintained despite the loss of grant funding. Commissioned activity and 'pay as you go' sessions have both increased to compensate. Two cohorts of ESCAPE have been delivered for WorkWell referrals, working in partnership with the Primary Care Networks and Integrated Neighbourhoods with the aim of helping people back into work. Work is progressing on a Transformational IT project that will further embed relationships with health partners locally.	G	→	The first ESCAPE Pain Management Course delivered for the WorkWell programme has helped 18 individuals with back pain, of whom 7 were WorkWell referrals. All 7 from WorkWell completed the course. 82% improved their mental wellbeing score using a validated tool. Working with parish councils has resulted in 77 sessions planned to be delivered over the school summer 6-week holiday period, a 22% increase on 2025 and 30% on 2024, leading to more opportunities for children and young people to be able to take part in sport and physical activity closer to home, reducing travel and supporting local families.

Outcome: Improving the happiness and wellbeing of residents

8. Embed the priorities of Huntingdonshire Futures across the work of the Council and Partners whilst influencing and enabling communities to do the same.	Cllr Sarah Conboy	Early work has focused on making Huntingdonshire Futures more visible and usable across council decision-making, grant activity and partnership engagement. This has included reviewing grant activity against the Futures priorities, embedding the five pillars within reporting processes, and promoting Huntingdonshire Futures through internal communications, stakeholder engagement and community events such as St Ives Green Week and Huntingdon Eco Fair.	G	→	The work undertaken in Q1 has increased awareness of Huntingdonshire Futures amongst partners, stakeholders and communities, while helping to establish stronger links between Council activity and the five Futures priorities. This provides a stronger foundation for future decision-making, investment and partnership activity aligned to Huntingdonshire Futures outcomes.
9. Continue to work with statutory partners to secure improvements to transport options for Huntingdonshire, including active travel.	Cllr Tom Sanderson	Engagement with statutory partners has continued through the preparation of the Infrastructure Delivery Study to identify transport and travel improvements associated with potential new developments.	G	→	No specific projects have been secured through CIL or S106 agreements this quarter, but 5 enquiries have been submitted for funding bids.

Outcome: Improving the happiness and wellbeing of residents

Activity Type: Influence

10. Work with key relevant partners to explore the benefits of an Anchor Partnership for Huntingdonshire which will benefit our local communities.	Cllr Debbie Mickelburgh	Anchor organisations maximise the impact of their spend, buildings, budgets, etc using a coordinated approach. A paper was taken to the Cambs & Peterborough Public Sector Board to look into this topic. HDC is taking the lead on this group, and initial discussions are planned in Q2. In addition, work is underway with Hinchingbrooke Hospital to maximise the impact the new development will have on local communities	G	New	Working with partners to align impacts on local communities in a coordinated way will improve outcomes - with a focus on health and wealth - a key HDC outcome.

Outcome: Keeping people out of crisis

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
11. Deliver the core components of the Community Health & Wealth fund, moving from successful pilots to embedded delivery that make a demonstratable difference for residents.	Cllr Debbie Mickelburgh	Following the launch of the CHAWS Fund in January 2026, the first official round of the fund was opened, and the Panel met again at the beginning of May to consider the applications received. 66 expressions of interest were received, and 23 organisations were invited to submit a full application. Following consideration, the multi-agency panel awarded 5 grants to the value of £100k. Conditions of grant detailing performance monitoring arrangements have now been signed and the funding released. Utilising the Social Value Engine, data provided so far for the pilot round confirms that the Social Return on Investment (SROI) for Creative Crafters (Ramsey) for Q1 is £5.93 per £1 invested, for Ramsey Memory Support Group the SROI for Q1 is £2.94 per £1 invested, and for Centre 33 for Q1 the SROI was £6.94 for £1 invested. This information, along with the performance data relating to the other funders' projects, is available on the dedicated HDC CHAWS web page.	G	New	The SVE SROI data is demonstrating clear impact within the communities where the projects are operating. The SROI will be shared either monthly or quarterly, as agreed with the project leads.
12. Work with town and parish councils and local flood groups to support community preparedness for flooding, enabling local action and building resilience to flood risk across Huntingdonshire.	Cllr Lara Davenport-Ray	Q1 activity has focused on establishing the baseline position across town and parish councils. Surveys have been issued to understand current emergency planning arrangements and officers have attended selected town and parish meetings to discuss local preparedness and the support available from HDC. This has prompted several councils to review or refresh their local plans.	G	New	The work has improved understanding of local preparedness arrangements and identified opportunities to strengthen resilience planning at a community level. Discussions regarding emergency liaison arrangements are underway and will support more effective coordination during future severe weather events.

Outcome: Keeping people out of crisis

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
13. Enhance support for care leavers by updating council policies and procedures to treat care experience as if it was a protected characteristic.	Cllr Nathan Hunt	The Care Leavers Housing Protocol & Pathway between Cambs County Council and the Districts has been reviewed and updated. There is an agreed pathway to help support care leavers with housing options and ultimately access to social rented housing where required. This covers young people leaving care in a planned way, and also where a crisis situation arises, potentially leading to a homelessness situation.	G	New	The revised pathway between CCC and the Districts provides a clear partnership approach to assisting care leavers faced with housing difficulties when leaving the looked-after system. The pathway is reviewed through the Sub-Regional Homelessness group to ensure that blockages or barriers are addressed to ensure the best outcomes for care leavers.

Outcome: Keeping people out of crisis

14. Explore opportunities with public and private sector partners to secure additional investment in the Community Health and Wealth Fund, supporting the delivery of improved outcomes for Huntingdonshire's communities.	Cllr Debbie Mickelburgh	Encouraging conversations held with partner organisations as well as local businesses. Now that performance data is available from the pilot round, we are able to use this to demonstrate clear social return on investment; the results are very encouraging. The CHAWS approach is a funding model that we would like to see adopted as a trusted way of awarding funding out to our communities.	G	New	Knowledge of the fund and the impact that it is having is growing amongst partners and businesses. The hope is that this will result in investment from these sources, which ultimately ensures longevity for the fund and sustained impact within our communities.
15. Prevent the causes of homelessness wherever we can by our own efforts, but also by working with other partners to tackle the root causes where we can.	Cllr Nathan Hunt	A range of pathways exist to highlight where a partnership approach and early warning systems can promote early interventions which aim to prevent a crisis situation developing. As with the care leaver pathway highlighted above, these pathways are regularly reviewed to ensure that barriers or blockages are overcome so that positive outcomes are achieved where possible. The review of the 16 & 17 year old protocol with Children's Services has been completed, and the review of the Criminal Justice pathway has begun.	G	New	A range of pathways exist to highlight where a partnership approach and early warning systems can promote early interventions which aim to prevent a crisis situation developing. As with the care leaver pathway highlighted above, these pathways are regularly reviewed to ensure that barriers or blockages are overcome so that positive outcomes are achieved where possible. 16. While not the lead flood authority, we will convene and work with key partners to host water management forums and engagement activity, influencing coordinated approaches to flood risk management within the district.	Cllr Lara Davenport-Ray	The planned water management event with Cambridgeshire County Council was postponed due to competing organisational priorities, such as Local Government Reorganisation. Alternative delivery options are now being explored, including incorporating elements of the programme within future climate engagement activity and broader partnership discussions on water management.	A	New	Although the planned event did not proceed in Q1, engagement with partners has continued and the importance of coordinated action on water management remains recognised. Work in future quarters will focus on delivering an alternative approach and maintaining momentum on this agenda.
17. Maximise the value from the impact of Voluntary Sector Organisations to help drive a preventative impact from our combined efforts.	Cllr Debbie Mickelburgh	Funding agreements in place with CAB and Support Cambridgeshire until 31st March 2029. The agreement with CAB focuses on tackling the relevant priorities within the Corporate Plan, including Keeping People out of crisis and helping people in crisis. They are also working alongside the RAI Team to deliver against the priorities of the Crisis and Resilience Fund. The focus of this work is on the implementation of a new model that ensures that residents receive the right service at the first point of contact and, if needs be, are supported to navigate what is available from CAB or escalation onto the RAI Team. This approach will help avoid duplication and ensure that all needs are identified and problem solved from the outset, resulting in a wrap approach to reduce the likelihood of residents re-presenting with service needs. Support Cambridgeshire are working directly with the community and voluntary sector to sustain volunteer capacity to help deliver offers that ensure better outcomes for our residents as well as reduce demand on public services. They also continue to support the operating model and CHAWS process in an advisory capacity.	G	↑	The funding agreements and associated performance measures were developed during Q1 and will be reported from Q2.

Outcome: Helping people in crisis

Activity Type: Do

18. Continue to support refugees and other guests, seeking to support good community relations and smooth transition into long-term residency or return home.	Cllr Debbie Mickelburgh	The team have continued to support those arriving in the district under the Homes for Ukraine scheme. Arrival numbers continue to be very low, and support / assistance is most needed in relation to move-on arrangements into social housing or rental properties. There remains a strong support network from the community voluntary sector, and in many cases, these established relationships are enabling this cohort to fully embed in our communities and remain in a resilient position. Serco continue to have the responsibility to procure properties for use as HMO accommodation for asylum seekers. The target set for Huntingdonshire is 111 bed spaces; 32 have been procured to date. The team continue to respond to property notifications as part of the consultation process and objects where concerns are identified. We also discourage saturation of an area and ask that an even spread in suitable areas is applied.	G	→	During this period, we have supported 57 households totalling 79 people via the Homes for Ukraine Scheme. There have been 9 households totalling 11 people arrive via the scheme during this period. 7 families moved on from the scheme into their own tenancy, two into social housing tenancies and 5 into the private rented sector. We have not seen any of this cohort return to Ukraine or move to another country during this quarter. The team have provided support in the form of form filling, Council Tax enquiries, assiting with establishing direct debits and utility contracts ahead of moving into a property, tenancy issues, concerns relating to damp and mould, assisting the 'move on' process, relationship management between hosts and guests as well as linking different refugee cohorts up with each other as well as the community and voluntary sector to enable them to become more resilient.

19. Work with the County Council and other key partners to embed the LIFT project in Huntingdonshire. The project seeks to ensure that residents are accessing relevant benefits and support to help their overall wellbeing.	Cllr Debbie Mickelburgh	Grant conditions have been signed with CCC, and the recruitment process will be run throughout July; this is in line with neighbouring authorities. Go-live will be as soon as possible, but in the interim, work to identify residents who are eligible for certain benefits continues through the RAI Team and CAB.	G	New	Impact data will be available once the officer and system are operational.

Outcome: Helping people in crisis

Activity Type: Influence

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
20. Be an active partner working with others within health and social care to make sure projects and new initiatives are delivered within Huntingdonshire and maximise the positive impact felt locally.	Cllr Debbie Mickelburgh	In Q1, working with CCC, HDC developed an approach to receive an allocation from the Crisis Resilience Fund (a national budget) to focus on improving health and social outcomes in Huntingdonshire. The paper was due to be taken to CCC Members in July.	G	→	Working with partners to align impacts on local communities in a coordinated way will improve outcomes - with a focus on health and wealth - a key HDC outcome
21. Work with key partners, particularly Cambridgeshire County Council, to maximise the impact of the Poverty Commission's work and deliver improved outcomes for residents across Huntingdonshire.	Cllr Debbie Mickelburgh	The outcomes and recommendations from the Poverty Commission were taken into account when submitting a funding proposal for CRF monies. The projects that are to be funded will report on progress made in relation to Poverty Commission priorities, so this data will be available moving forward.	G	New	Data is to be expected moving forward, so an impact update will be recorded in quarter 2

Outcome: Helping people in crisis

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
22. Work with Cambridgeshire County Council and other key partners to ensure that funding from the Government's Crisis Resilience Fund delivers meaningful support and improved outcomes for residents in Huntingdonshire.	Cllr Debbie Mickelburgh	Districts were asked to submit funding proposals to CCC to identify what initiatives they would like to fund that meet priorities within the Crisis and Resilience Fund. A submission was made that identified a need for additional capacity within the Resident Advice and Information Team, support with transporting furniture for identified residents experiencing poverty, a new tenancy support worker, as well as a prevention programme within primary schools. Requests have been awaiting approval, and this has now been confirmed with HDC being allocated £270k for 26-27. CRF is also being used to fund the LIFT project and an associated officer for 2 years, with recruitment to this post commencing imminently.	G	New	Following confirmation of the funding award, the plans will commence and further updates be available within quarter 2.

Outcome: Improving Housing

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
23. Continue to work with Amplius and Inspired to bring forward surplus Council-owned sites to deliver affordable housing.	Cllr Brett Mickelburgh	The first site in the contract at Station Road, Warboys has received planning. Amplius are currently working through Anglian Water and BNG matters which need to be resolved prior to bing able to deal with the pre-commencement conditions. Regular engagement continues with Amplius to support this activity.	A	→	The development of new affordable housing sites directly supports the Council's Corporate Plan by increasing the supply of affordable homes, meeting identified housing needs, supporting economic growth, helping prevent a housing crisis, improving residents' wellbeing and delivering sustainable communities for future generations.
24. Develop our Empty Homes service provision to help bring private sector empty homes back into use, including the implementation of the Empty Homes strategy.	Cllr Brett Mickelburgh	The Empty Homes Strategy was agreed in March 2026. HDC are working with owners of empty homes to bring them back into use. In the last quarter, 8 long-term empty properties have been brought back into use by direct involvement with the Council, and a further 4 have been sold by existing owners through support by the EHO; these new owners will be supported by the Council to bring these homes back into use.	G	New	Bringing empty homes back into use directly supports the Council's Corporate Plan by improving housing provision, increasing the supply of homes for local residents, supporting sustainable growth, reducing the environmental impact associated with new development, and enhancing the quality of life within Huntingdonshire's communities.

Outcome: Improving Housing

Activity Type: Do

25. Develop policy to support the use of civil penalties with regard to private sector housing enforcement to support improvements to private sector housing and ensure good standards of accommodation for residents.	Cllr Nathan Hunt	The policy is drafted in line with statutory guidance documents; however, there have been some delays in adopting it due to the constitutional requirements of delegating the duties of the Renters' Rights Act 2025 to officers. It is expected this will happen in Q2.	A	↓	Whilst the civil penalties policy is not in place, we cannot serve penalties but can still use existing powers to ensure private sector housing standards are maintained and any disrepair issues are dealt with; we still have the option to prosecute for the most serious offences.
26. Implement the government's new Supported Housing (Regulatory Oversight) Act, review of supported exempt accommodation in the area and introduce licensing regulations, improving the quality of housing within the district.	Cllr Nathan Hunt	An internal working group has been formed, as well as a county-wide group. Joint commissioning of a supported housing strategy across multiple districts is moving forward, with Cambridge City Council leading on this. Secondary legislation relating to the licensing element is awaited; it is expected that MHCLG will consult on this in late 2026.	G	↑	There is a positive impact in terms of strategic coordination and preparedness for when the second legislation becomes available.

Outcome: Improving Housing

Activity Type: Enable

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
27. Maintain or improve the level of new housing delivery in Huntingdonshire through working with all relevant stakeholders, including the type of home and tenure (open market and affordable housing).	Cllr Brett Mickelburgh	The Council continues to work in partnership with registered providers, developers, Homes England and other stakeholders to support the delivery of affordable housing across Huntingdonshire. Through collaborative working and ongoing engagement with partners, the Council has helped facilitate the provision of new affordable homes that meet local needs and support the creation of sustainable communities.	A	→	The Council continues to collaborate with housing associations, developers and strategic partners to bring forward affordable housing opportunities across the district. The delivery of new affordable homes supports local residents, helps address identified housing need and contributes to the development of balanced and sustainable communities. This activity directly supports the Corporate Plan priority of Creating a Better Huntingdonshire for Future Generations, particularly the Improving Housing outcome.

Outcome: Improving Housing

Activity Type: Influence

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
28. Continue to work with our registered providers (including Places for People) to improve conditions in existing accommodation and where appropriate consider regeneration schemes (e.g. the Suffolk House regeneration scheme).	Cllr Brett Mickelburgh	The Council is working with Places for People to support the delivery of Suffolk House and the surrounding area regeneration scheme. Currently progressing some legal matters, which should be resolved in July 2026; it is expected that P4P would undertake a PPA with the Local Planning Authority to bring the scheme forward in 2026/27.	A	→	Regeneration schemes support delivery of the Corporate Plan by stimulating sustainable economic growth, attracting investment, improving housing provision, enhancing community infrastructure and public spaces, and creating attractive places where people want to live, work and visit. Through the renewal of town centres, neighbourhoods and strategic sites, regeneration contributes to improved wellbeing, increased prosperity and a better Huntingdonshire for future generations.

Outcome: Forward thinking economic growth

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
29. Continue to promote Huntingdonshire as a destination for high-value inward investment; support and advance our key sectors and sub-sectors, including SMEs; and support delivery of the CPCA Local Growth Plan ambitions.	Cllr Brett Mickelburgh	Attended UKREiiF to promote Huntingdonshire as an investment destination, showcasing opportunities including Alconbury Weald, Project Fairfax and regeneration projects across the district's market towns. Continued to represent Huntingdonshire on the Connecting Cambridgeshire Digital Connectivity Steering Group, helping to shape regional digital infrastructure investment, share funding opportunities and address digital connectivity challenges.	G	→	Attendance at UKREiiF generated engagement with more than 50 investors, developers and partners, with follow-up discussions continuing to progress investment opportunities. Representation on the Digital Connectivity Steering Group has ensured Huntingdonshire's priorities continue to influence regional infrastructure investment.
30. Focus on unlocking the North Huntingdon Growth Cluster and build on the potential defence cluster by working with the MOD, the wider supply chain, partners and residents across the regional cluster; to help shape opportunities for innovation, investment and skills development.	Cllr Brett Mickelburgh	Attended the East Regional Defence and Security Cluster (ERDSC) event, Technology in the East, and joined the ERDSC Steering Group to help shape regional collaboration across the defence and security sector. Participated in a Defence Social Value Workshop to explore how the Council can maximise opportunities for local businesses and communities arising from defence investment and procurement.	G	New	Engagement with the defence sector established new relationships with more than 30 businesses and strengthened Huntingdonshire's position within the regional defence ecosystem. Participation in the ERDSC Steering Group has helped raise the profile of strategic assets, including RAF Wyton, while a cross-Council working group is being established to coordinate defence-related opportunities and social value initiatives.

Outcome: Forward thinking economic growth

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
31. Deliver the Regeneration Programme to stimulate economic growth and social activity, while ensuring robust monitoring and evaluation in line with funding requirements. Continue to work with partners, including Capital and Centric, to consider, explore and deliver Regeneration Opportunities.	Cllr Brett Mickelburgh	Capital & Centric (C&C) is working with the Council on a number of sites within our market towns to develop and test potential regeneration proposals through public engagement. Feedback gathered during this process, alongside further assessment and analysis, will help inform the next steps. Following consideration of the engagement outcomes, the Council and C&C will determine whether any of the proposals should be progressed. This could result in some proposals being taken forward to a planning application, while others may be revised or not progressed further.	G	↑	Regeneration schemes support delivery of the Corporate Plan by stimulating sustainable economic growth, attracting investment, improving housing provision, enhancing community infrastructure and public spaces, and creating attractive places where people want to live, work and visit. Through the renewal of town centres, neighbourhoods and strategic sites, regeneration contributes to improved wellbeing, increased prosperity and a better Huntingdonshire for future generations.
32. Continue the update to the Local Plan, including updating evidence bases in line with National Planning Policy, particularly where it relates to Economy, Environment and Housing, moving towards submission to the Planning Inspectorate.	Cllr Tom Sanderson	The Local Plan LDS was revised in May 2026, and remains on track in according with the revised LDC. In Q1 the Planning Inspectorate undertook and Advisory Visit to review the progress of the plan and a copy of that note will be shared with the Examining Inspector - no significant issues raised and advice considered. Evidence bases are put into the public domain on the Local Plan Update website as they are completed, alongside completed Statements of Common Ground with neighbouring councils and infrsatructure providers, demonstrating that the vision and framework is justified, sound and deliverable. In accordance with the LDS, the submission plan is to be presented to Scurtiny and Council in quarter 2	G	→	The Local Plan continues to progress in accordance with the LDS. Once the submission plan has been agreed, more weighting can be given to policies meaning a plan-led apprach to growth gains more weight. This provides certainty to communities, residents and businesses, including inward investment.

34. Continue to work with our partners, including town councils and retail groups, to create a stronger partnership and to deliver joint initiatives and enhance town centre vitality across all market towns.	Cllr Brett Mickelburgh	Business Boosters continued to be delivered monthly across Huntingdonshire's market towns and Alconbury Weald, providing businesses with access to advice, networking and support. Digital workshops were delivered for tourism and retail businesses, with one-to-one support from digital specialists. The Shop, Drink and Dine initiative was successfully delivered in St Ives to encourage increased footfall and support the town centre economy.	G	→	Business Boosters improved access to business support, with around five businesses attending each monthly session. Twenty businesses enhanced their digital capability through tailored support. The Shop, Drink and Dine campaign engaged over 45 participants and generated an estimated £2,220 of additional spending for St Ives businesses over a two-month period.
35. Work with partners, including the CPCA, and visitor economy businesses to deliver the Tourism Growth Plan, to support SMEs, Huntingdonshires night time economy and to maximise opportunities linked to major regional attractions such as Universal Bedford.	Cllr Brett Mickelburgh	Attended the destination branding validation workshop to help shape the future visitor proposition for Huntingdonshire. Led the coordination of local venues participating in Heritage Open Days, creating a more joined-up programme to strengthen the district's visitor offer.	G	→	Active participation in Local Visitor Economy Partnership work has ensured Huntingdonshire is well represented within the emerging Destination Management Plan and regional destination branding, helping raise the profile of the district and its visitor economy.

40. Ensure the delivery of key infrastructure that supports economic growth and housing delivery by influencing major schemes (including East West Rail, A428, A141 Strategic Outline Business Case and Alconbury Weald Railway Station) and working with partners to bring forward coordinated, investable and deliverable solutions.	Cllr Tom Sanderson	The planning team continues to work collaboratively with partner councils to influence the development of NSIP projects to support the growth agenda, unlocking housing and economic growth. This includes actively collaborating with partners for East West Rail, A428, A141 Strategic Outline Business Case and Alconbury Weald Railway Station. The planning team work closely with the CPCA and other providers to secure infrastructure necessary to support the growth of the district, this includes close working on the Infrastructure Delivery Study in support of the Local Plan, while also looking beyond the Local Plan to take account of the CPCA's Local Growth Plan inc the North Huntingdon Opportunity Zone as part of the emerging CPCA Spatial Development Strategy. Infrastructure work is not limited to roads and rail. Active engagement with Anglian Water continues to unlock future growth opportunities including the Fens Reservoir and South Lincs Reservoirs.	G	→	The East West Rail project is in active discussions with regular updates/meetings with all partners, with the DCO submission scheduled for late Autumn 2027. The A141 Strategic Outline Business Case is moving forward with all relevant partners engaged. Discussions are ongoing in regard to the A428 proposal. The Alconbury Weald Railway Station project is still in early discussions.
41. Engage with and work in partnership with the CPCA on the development of the Spatial Development Strategy for the region, including engagement and input in to its supporting documents and evidence bases.	Cllr Tom Sanderson	The formal preparation of the CPCAs Spatial Development Strategy (SDS) is expected to commence in Autumn 2026 pending secondary legislation rollout in line with the Planning and Infrastructure Act . In the meantime collaborative work has been underway with the CPCA by way of engagement on the preparation of the CPCAs Local Growth Plan and the North Huntingdon Opportunity Zone Growth Prospectus.	G	New	While awaiting secondary legislation for the SDS HDC continues to pur down firm foundations for growth by way of progression of the Local Plan Update, which must have regard to the CPCA LGP and takes account of the NHOZ thus demonstrating committment to secure infrastructure to support growth, support for project Fairfax and wider defence ambitions.

42. Deliver energy efficiency improvements across Council assets and community buildings to reduce energy costs and carbon emissions - including through the fleet renewal and Infrastructure Improvement Strategy.	Cllr Lara Davenport-Ray	Officers have received the desk top indicitive designs for roof-mounted solar to be installed at PFH. Money has been allocated for this through capital investment. Paper has been shared with Finance for sign-off to release the funds for the project to start. A PO has been raised to have a substance called Endotherm installed into our closed hot water systems within qualifying leisure centres, which allows water to heat up quicker, reducing the amount of gas used. Early stages of desktop exercises with external contractors to look at upgrades to BMS and decarbonisation feasibility studies. Early work is being considered for the power upgrade to Eastfield House as per the Fleet Renewal and Infrastructure Improvement Strategy.	G	New	These projects would cover a mixture of reducing carbon emissions and producing our own energy through renewable energy sources.
43. Work with partners to maximise the uptake of Warm Homes and similar retrofit schemes, improving the energy efficiency of homes across Huntingdonshire.	Cllr Lara Davenport-Ray	HDC is currently a partner in the Warm Homes Local Grant scheme, which runs through to 2028. This scheme is managed through the Cambridgeshire Energy Retrofit Partnership (CERP). HDC is partnering with Cambridgeshire Carbon Footprint to loan thermal imaging cameras to residents in Great Paxton and Warboys. Independently, residents have expressed an interest in borrowing cameras, so this will look to be trialled in the coming winter months.	G	New	WHLG continues to provide eligible residents with measures to retrofit their homes. The thermal imaging camera project has allowed residents to identify opportunities to prevent heat escaping in their homes. Allowing residents to independently borrow a camera will allow them to identify areas of heat loss and enable them to make informed improvements to their homes. This can lead to lower energy bills, reduced carbon emissions and improved home comfort, while increasing awareness of energy efficiency and supporting the district's wider climate change and net zero objectives.

Outcome: Lowering Carbon Emissions

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
44. Deliver the Habitat Banking Programme across Council-owned sites to improve biodiversity and generate Biodiversity Net Gain units, whilst enhancing accessible open spaces for residents and creatinging opportunities for education and community engagement.	Cllr Julie Kerr	The team are currently working with Brown Jacobsons' legal team to set out the legal frameworks for selling the units for the Phase 1 sites and due diligence of the phase two sites. The recruitment of the Habitat Banking Project Support Officer has been successful, and the officer is now in post. A commissioning exercise for delivering the ecological work for the phase 2 sites has now been completed, with AiDash and MKA Ecology being successful and will begin work on two sites each.	G	New	The progress made this quarter will enable the team to start selling units on the Phase 1 sites and start the process for the Phase 2 sites.
45. Enhance Huntingdonshire's natural environment and biodiversity by delivering tree planting initiatives across the district, enabling communities, partners and landowners to contribute to greener, more sustainable places.	Cllr Julie Kerr	Q1 activity has focused on exploring future opportunities to support tree planting and biodiversity enhancement in partnership with the Arboriculture Team. This includes considering options for future community participation, partnership working and potential tree distribution initiatives.	G	New	Early scoping work will help inform future activity aimed at increasing tree cover, supporting biodiversity and enabling greater community involvement in local environmental improvement initiatives. Further progress will be updated in Quarter 2.

Outcome: Lowering Carbon Emissions

Activity Type: Influence

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
46. Support businesses to improve their net-zero ambitions through green tools and resources.	Cllr Lara Davenport-Ray	In collaboration with the Climate Team, organised a thermal imaging camera training session and loan scheme to help businesses identify heat loss and improve energy efficiency. Continued to promote green business support tools, including the Cambridge Carbon Footprint Calculator and the Green Tourism accreditation scheme.	G	New	The thermal imaging camera scheme has provided businesses with practical support to improve energy efficiency and reduce operating costs. Promotion of carbon reduction tools and green business initiatives has increased awareness of sustainability support available to businesses and encouraged progress towards net zero ambitions.
47. Work with critical partners, including National Grid and the CPCA, to influence the development of long-term sustainable energy solutions within the district.	Cllr Lara Davenport-Ray	HDC participated in 2 strategic partnership meetings, one for further work concerning the local area energy plan (LAEP) and one to highlight the importance of the regional strategic energy plans or RESPS.	G	New	The purpose of the RESPS is to use current evidence bases (such as the LAEP) to identify areas where sustainable energy improvements are necessary, which includes community energy considerations. The RESPs are being led by the National Energy Systems Operator (NESO) and have been established to ensure that local areas get the energy infrastructure they need to meet local net zero and growth ambitions. This is currently in its infancy, and a further update will be able to be given in Q2.

Outcome: Lowering Carbon Emissions

Activity Type: Influence

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
48. Expand positive climate action support for local businesses, celebrating best practices and sharing knowledge.	Cllr Julie Kerr	There are 4 training events planned for November 2026, offering local businesses a chance to learn how to use and borrow thermal imaging cameras. These are going to take place in Ramsey, St Neots, St Ives and Alconbury Weald. This is in partnership with Cambridgeshire Carbon Footprint, a charity with whom HDC has worked previously to offer this service to residents.	G	→	This will allow businesses to identify areas of heat loss and enable them to make informed decisions on how to improve their properties e.g. through installing insulation, sealing draughts or upgrading windows and doors. Aiming to lower energy bills and reduce carbon emissions, this will have a more positive impact on these businesses and support the district's wider climate change and net zero objectives.

Outcome: Doing our core work well

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
49. Ensure the continuity and quality of frontline services throughout Local Government Reorganisation, delivering core services well and minimising disruption for residents and communities.	Cllr Sarah Conboy	After the elections in May, a new corporate plan was created that focused the Council on its priorities. These are proposed to remain the same and will be put to Council in July. Within the plan are new actions that specifically cover LGR and the need to deliver LGR and business as usual services for Huntingdonshire.	G	New	Delivering LGR is a priority and must be delivered, but until vesting day in April 2028 HDC continues to exist and must deliver services within Huntingdonshire.
50. Maintain the existing work on the Workforce Strategy to ensure that we support and retain the workforce required to deliver frontline services effectively during organisational change.	Cllr Lara Davenport-Ray	This action is being progressed through the Workforce Strategy as staff development has been strengthened with staff development, wellbeing, and benefits through the successful completion of the Leadership Development Programme and transition in to BAU, launch of the Coaching and Mentoring cohort, introduction of enhanced employee benefits including Perkbox and the Tusker hybrid scheme, delivery of staff engagement activities, expansion of health and wellbeing support through the Work Well service, and approval of a new Time Off for Volunteering Policy.	G	New	Attraction rates for recruitment campaigns have been strong, representing HDC as an employer of choice: Number of candidates applied Q1 25/26 - 644 Q2 25/26 - 1032 Q3 25/26 - 712 Q4 25/26 - 915 Q1 26/27 - 1265 Turnover has been decreasing from Q4 24/25 - 19% to Q4 25/26 - 16.95% All managers, aspiring and new managers, will have a Leadership Development Programme to enhance their skills

Outcome: Doing our core work well

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
51. Engage with residents, businesses and key stakeholders to deliver clear, consistent and timely communication throughout organisational change, aligning with wider engagement activity across Cambridgeshire and Peterborough.	Cllr Nathan Hunt	Developed a coordinated communications approach to support Local Government Reorganisation, delivering regular updates, consultation activity and stakeholder engagement while working with partner authorities to maintain consistent messaging across Cambridgeshire and Peterborough.	G	New	Through regular and consistent communication, residents, businesses, and stakeholders have been given the opportunity to find out more about LGR to increase their awareness and understanding. Collaborative communications with partners have helped build understanding and transparency.
52. Ensure that Huntingdonshire's good practice and effective service delivery are embedded within the future LGR operating model, while proactively adopting and implementing proven approaches from other councils locally where a clear business case exists.	Cllr Sarah Conboy	HDC have filled in the regional taxonomy spreadsheet, which outlines where our service provision has high performance rates and where we could improve. This will feed into regional conversations around Target Operating Models (when a decision is known) and demonstrates clearly where Huntingdonshire's value needs to be retained. Members of staff are also engaged in external workstreams where they advocate for Huntingdonshire's delivery models. An example of this is a recent Children's workstream where Huntingdonshire shared the good work it does in the prevention space (Active Lifestyles, Resident Advice, etc.)	G	New	The work completed will contribute to wider regional conversations and will inform direction once an LGR decision is known. Impact on target operating models is currently limited given the uncertainty of direction; however, HDC are internally considering the potential principles and structures for any new future authority.

Outcome: Doing our core work well

Activity Type: Do

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
53. Delivery of the Workforce Strategy Action Plan equipping the workforce with skills for the future whilst attracting, retaining and nurturing talent.	Cllr Lara Davenport-Ray	> Leadership Development Programme moves into BAU phase following delivery of the programme to all managers. > Coaching and Mentoring cohort has launched and will continue to grow through delivery of the Coaching and Mentoring Module. > Secured 3 Graduates via IMPACT (2 going to the Transformation team and one to Customer Services) > Upgraded benefits platform, Perkbox (formerly known as VIVUP), launched with staff savings of nearly £5000 so far in 5 weeks. Able to avoid a £3 per head renewal fee. > Tri Sector Challenge advertised to staff and team formed. > Hybrid vehicle scheme with Tusker launched. > Linked in with the work in Countryside events team to promote events they already run for family-friendly events for staff, such as 'Wildfest' rather than duplicating efforts. > Various engagement activities happened in Q1: Learning at work week - nutrition webinar (run by a staff member). 6th set of roadshows were completed. Wellbeing walk in May for Mental Health Awareness Month. > Work well through RAI Team - staff can be referred for free for any health concern they have had for 3 months or more for coaching. The service also offers Physio to help staff return to work or prevent going off. Time off for volunteering policy approved.	G	→	Attraction rates for recruitment campaigns have been strong, representing HDC as an employer of choice: Number of candidates applied Q1 25/26 - 644 Q2 25/26 - 1032 Q3 25/26 - 712 Q4 25/26 - 915 Q1 26/27 - 1265 Turnover has been decreasing from Q4 24/25 - 19% to Q4 25/26 - 16.95%
54. Continue our Customer Experience Programme to ensure that our customers are always at the heart of what we do.	Cllr Nathan Hunt	> Ebilling take up continues to progress, and project planning for automation of some high volume / low complexity Council Tax transactions has commenced. > Text Reminder project has moved to BAU > Successful launch of appointment-based face-to-face provision trial > Changes to card payment software implemented (required as part of call summarisation project) > Customer Change Programme reviewed with plans developed to relaunch as Customer Experience and Digital Engagement programme	G	→	The programme continues to generate improvements to customer access and digital engagement: - 3,000 accounts opted into electronic billing, resulting in 14% of all Council Tax bills sent in June being issued electronically - 40% reduction in statutory reminders issued where pre-reminder text messages were issued - 40% of face-to-face meetings were pre- booked, 60% seen as walk-ins

Outcome: Doing our core work well

Activity Type: Do

55. Deliver the enhancements to visitor facilities at Hinchingbrooke Country Park.	Cllr Julie Kerr	Project progressing well; car parking works are due to complete in early July 2026. Contract being managed, and no issues. Will be sending out the next stakeholder newsletter with updates on the team, cafe and progress on the project.	G	→	Improving the visitor centre at Hinchingbrooke Country Park supports the Council's Corporate Plan by enhancing residents' health and wellbeing, increasing access to high-quality recreational and educational opportunities, strengthening community engagement, supporting sustainable tourism and economic growth, and contributing to the Council's environmental ambitions.

Outcome: Doing our core work well

Activity Type: Enable

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
56. Continue to support and enable our volunteers, along with exploring other volunteering opportunities, that will improve the quality of our environmental assets. Links will also be built between volunteering and unpaid work in supporting health, environment, place and economy objectives.	Cllr Julie Kerr	Following the restructure of the Parks and Open Spaces service into the newly formed Active Environments service, the responsibility for the recruitment, training, delivery and retention of volunteers working on outdoor, practical and conservation works now sits with the Ranger Teams, and the handover process has begun, with the Teams taking on full responsibility by the 3rd August.	G	→	This work will lead to an orderly transition, with processes being embedded in the new teams.

Outcome: Doing our core work well

Activity Type: Influence

2026/27 Actions/Projects	Portfolio Holder	Progress Update	Latest Status	Direction of Travel	Impact Update
57. Our well-run Council will act as a model for our peers.	Cllr Sarah Conboy	The Council continues to look at benchmarking data to assess performance. For example, in Quarter 1, the collection data for Council Tax and Business rates was published nationally. HDC was in the top quartile in both elements In addition, the work on LGR is allowing the good practice of HDC to be captured and, where possible, fed into the new organisational design.	G	→	Managing the reputation of the Council projects confidence and encourages investment into the area.

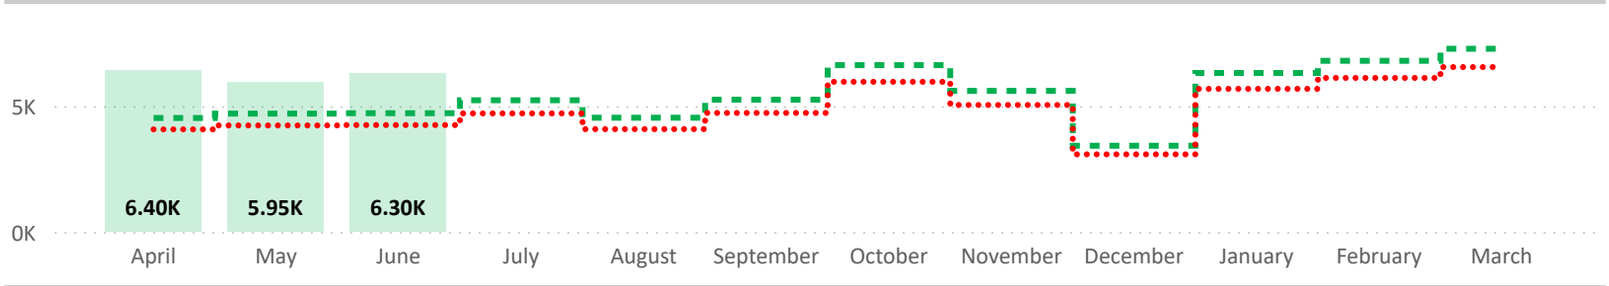
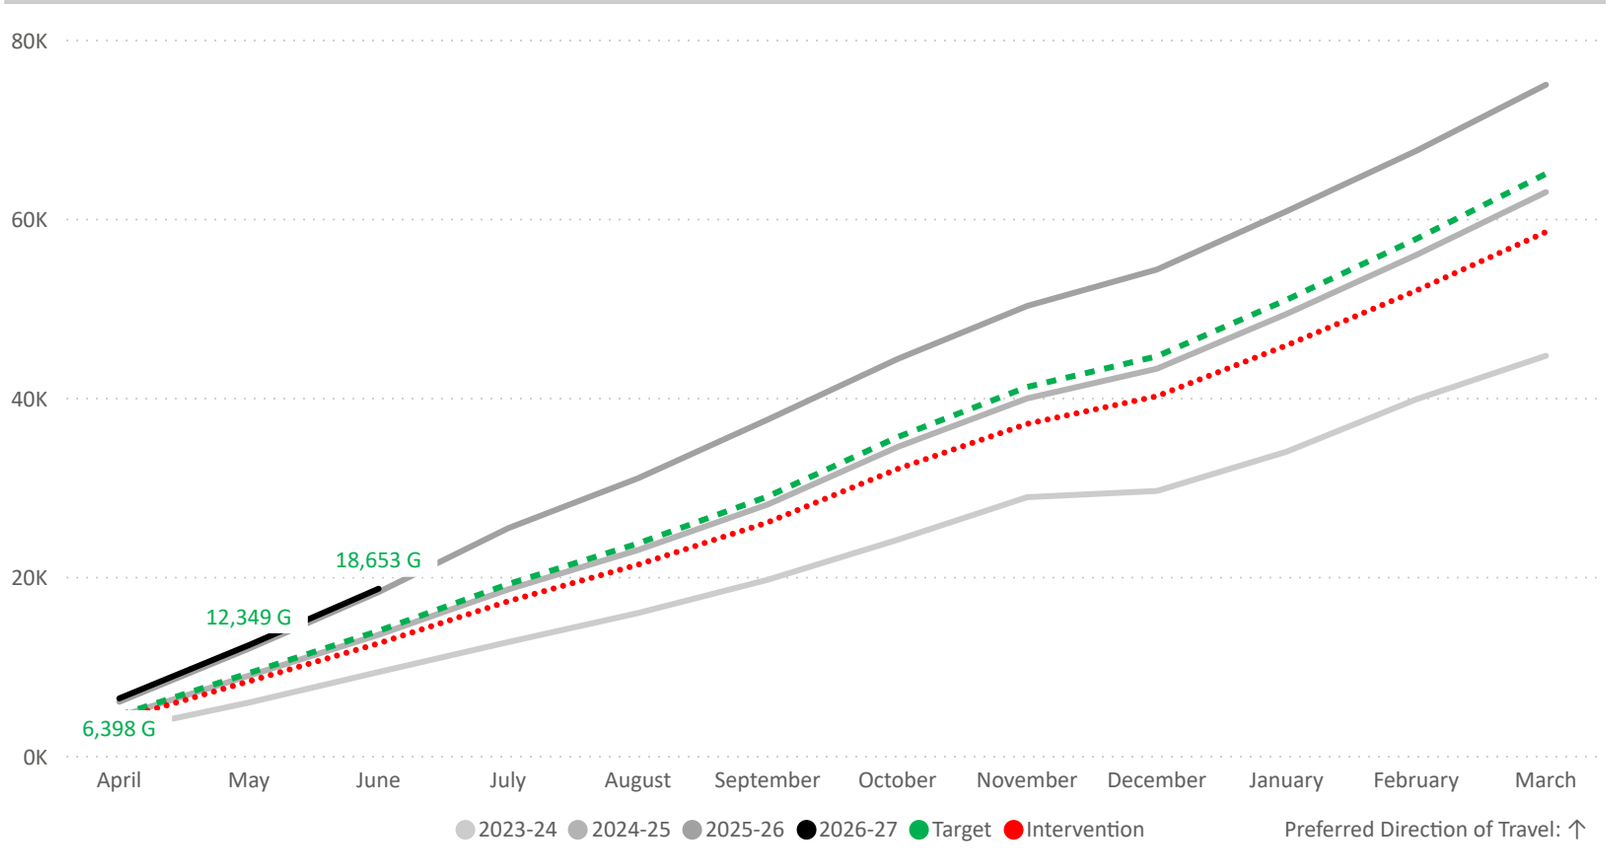
Outcome: Improving the happiness and wellbeing of residents

PI 1: The number of attendances at Active Lifestyles & Sports Development Activities

The number of attendances at HDC One Leisure Active Lifestyles programmes including Sports Development activities. Examples of classes include Specialist Exercise Classes, Exercise Referral Scheme Classes, and classes targeting senior residents.





Latest Commentary from Service:

June saw a 1% decrease in attendances compared to the same period in 2025/26, however, the entirety of quarter 1 saw attendances increase by 1% despite the unprecedented heatwaves we have experienced, which have led to some inevitable session cancellations. Commissioned services continue to grow with 433 sessions delivered in quarter 1 - an increase of 13% on the previous year, leading to an increase in attendances of 21% over the same period (5,146 v 4,251). Attendances at grant-funded sessions have significantly dropped 72% in line with the reduction of grant funding received (897 v 3,243); however, despite this, overall attendances are on a par with last year. Preparations are underway for a busy summer with 77 sessions booked by Parish Councils plus four new Family Park Sessions and four new Home Education Sessions specifically over the summer period.

Latest year-end forecast:

70,000

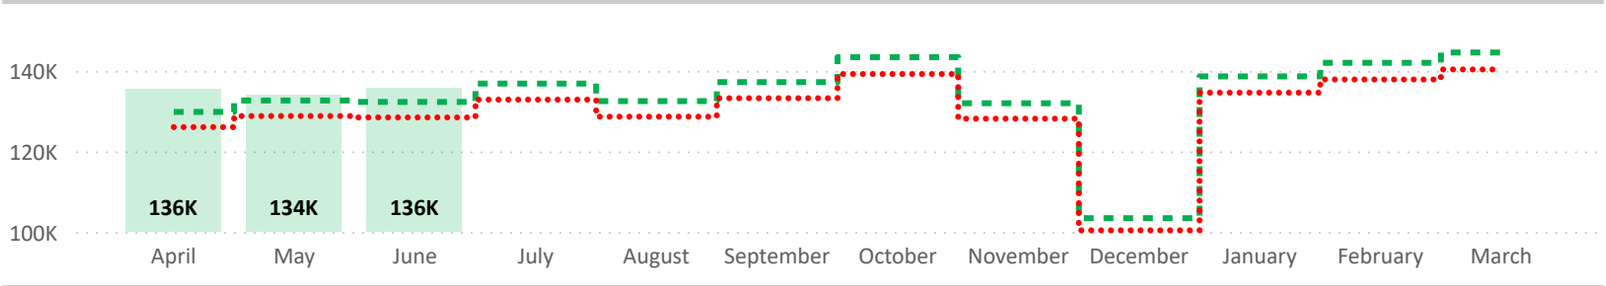
Latest projected outturn:

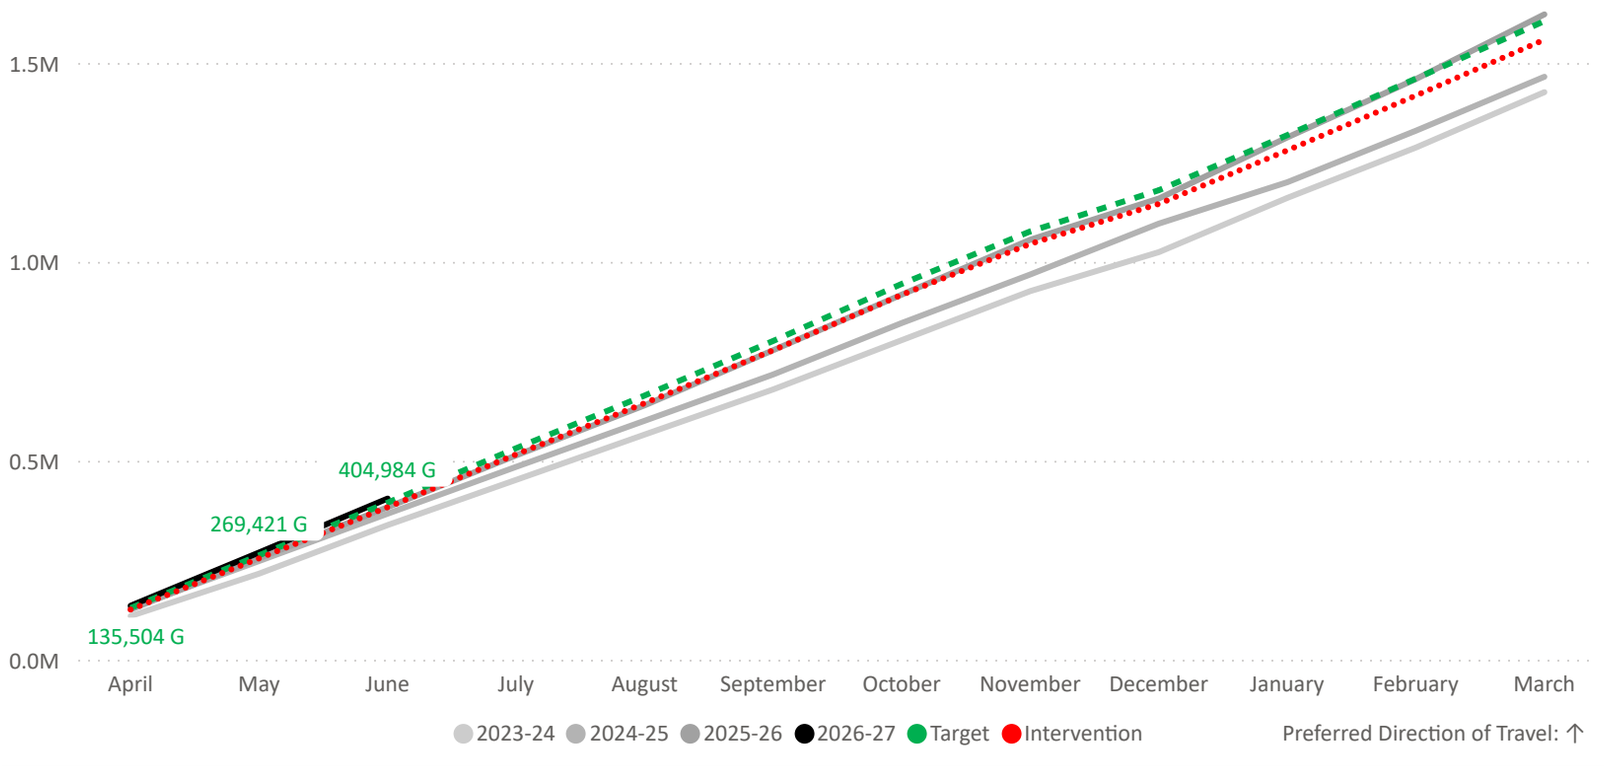
G

Outcome: Improving the happiness and wellbeing of residents

PI 2: The number of One Leisure Facilities admissions (excluding Burgess Hall, Sawtry & school admissions)

The number of admissions to One Leisure Facilities in Huntingdon, St Ives, St Neots and Ramsey (excluding Sawtry). Admissions include swimming, impressions, fitness classes, sports hall and pitches.





Latest Commentary from Service:

One Leisure has seen positive admissions figures continue for quarter 1 across all Leisure Centres. The main drivers for overall performance include Gym, Swimming, and Group Exercise. The continuation of consistent services and reliable facilities across all sites means that positive attendance is expected to continue throughout the year. Figures do not include OL Sawtry data as to facilitate a data baseline, and therefore figures are comparable to last year. OL Sawtry admissions would were 12,888 in quarter 1, with swimming being over half the admissions.

Latest year-end forecast:

1,625,365

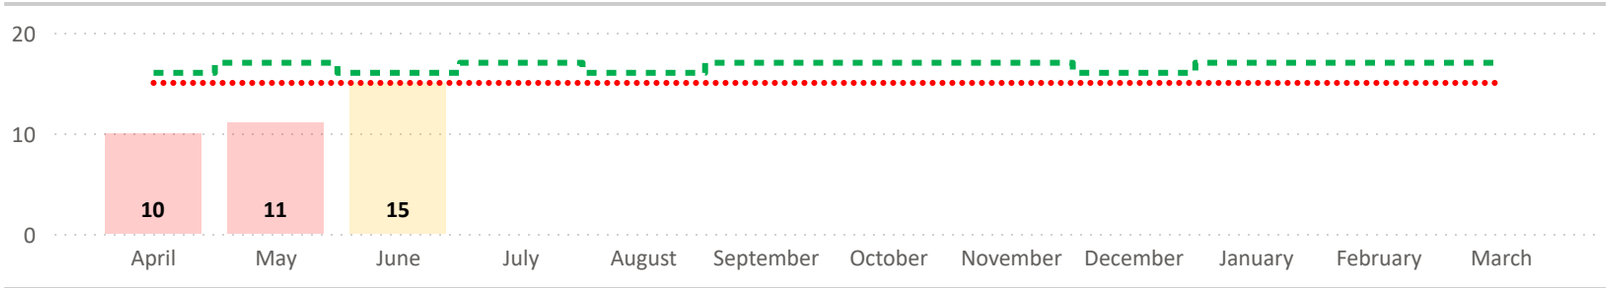
Latest projected outturn:

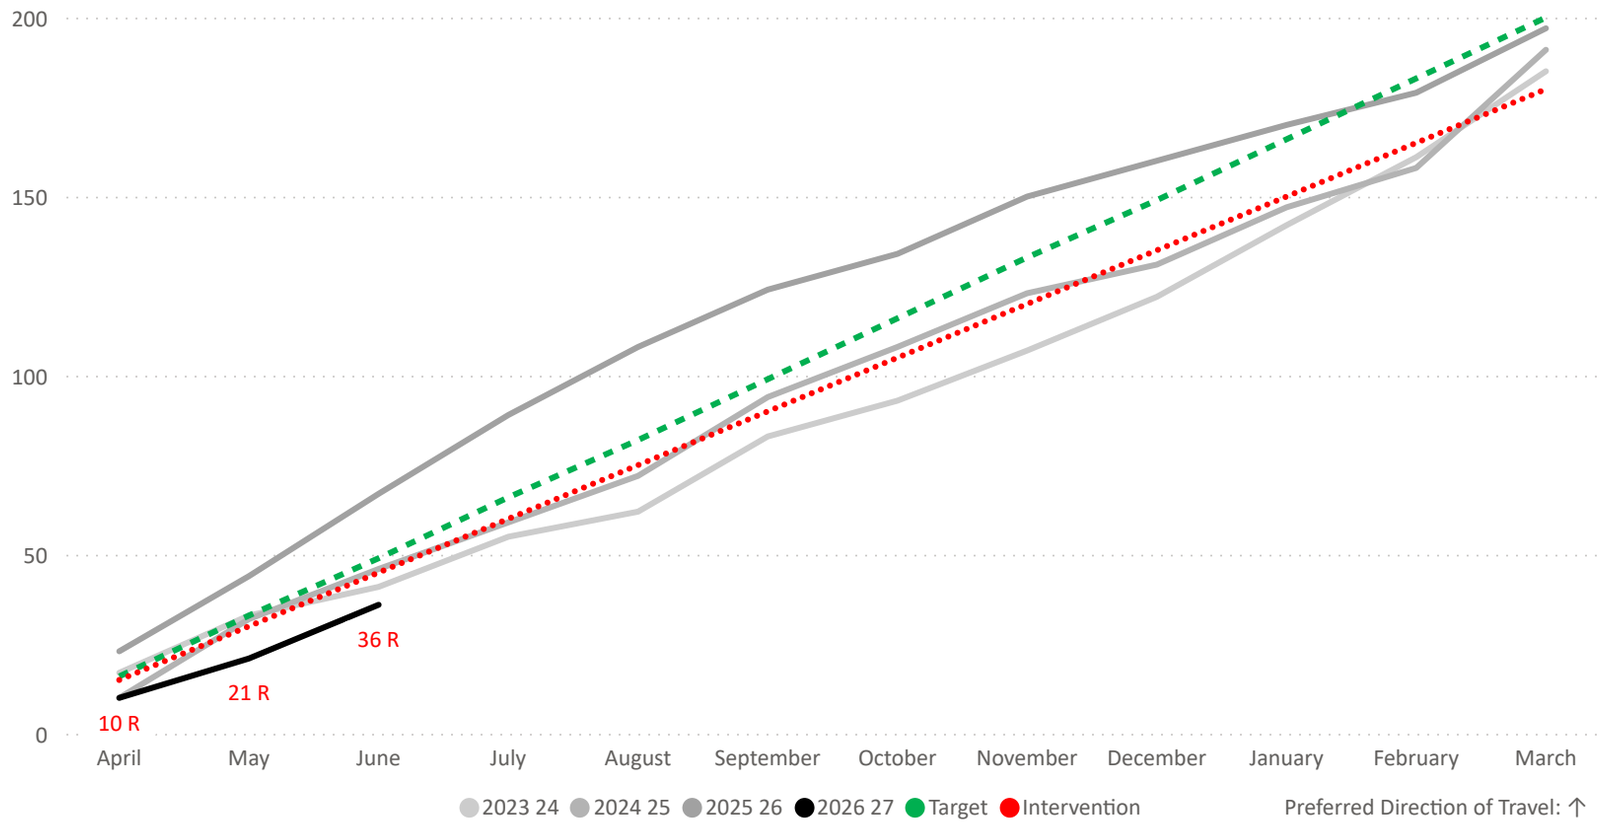
G

Outcome: Keeping people out of crisis

PI 3: The number of residents enabled to live safely at home and prevented from requiring care or a prolonged stay in hospital due to a Disabled Facilities Grant (DFG)

The number of residents that have had work completed in the month of data recording which has enabled to live safely at home and prevented from requiring care or a prolonged stay in hospital due to a Disabled Facilities Grant (DFG).





Latest Commentary from Service:

The 36 residents enabled to live safely at home is significantly lower than the figure of 68 for the same period last year. This is due to a reduction in the number of cases being passed to The Council from the Cambs Home Improvement Agency (CHIA). Additionally, the higher waiting times for a visit from an Occupational Therapist (12 weeks for adult cases and 24 weeks for child cases) are also negatively impacting the number of cases that are finalised. Note that this time is not included in the time taken metric PI 4. Contractors are also causing a delay by submitting incomplete documentation to the Home Improvement Agency, which causes delays and hence fewer residents are supported sooner.

PATH TO GREEN - The Occupational Therapy Service has employed an external agency to assist with the backlog, and hopes to clear 50 x 'P3' cases in 5 weeks. P3 is the lowest category assigned to OT visits for non-urgent cases. Not all of these will result in Disabled Facilities Grants as some client needs will be met with equipment. Additionally, the HIA manager has been made aware of the contractors causing delays.

Latest year-end forecast:

200

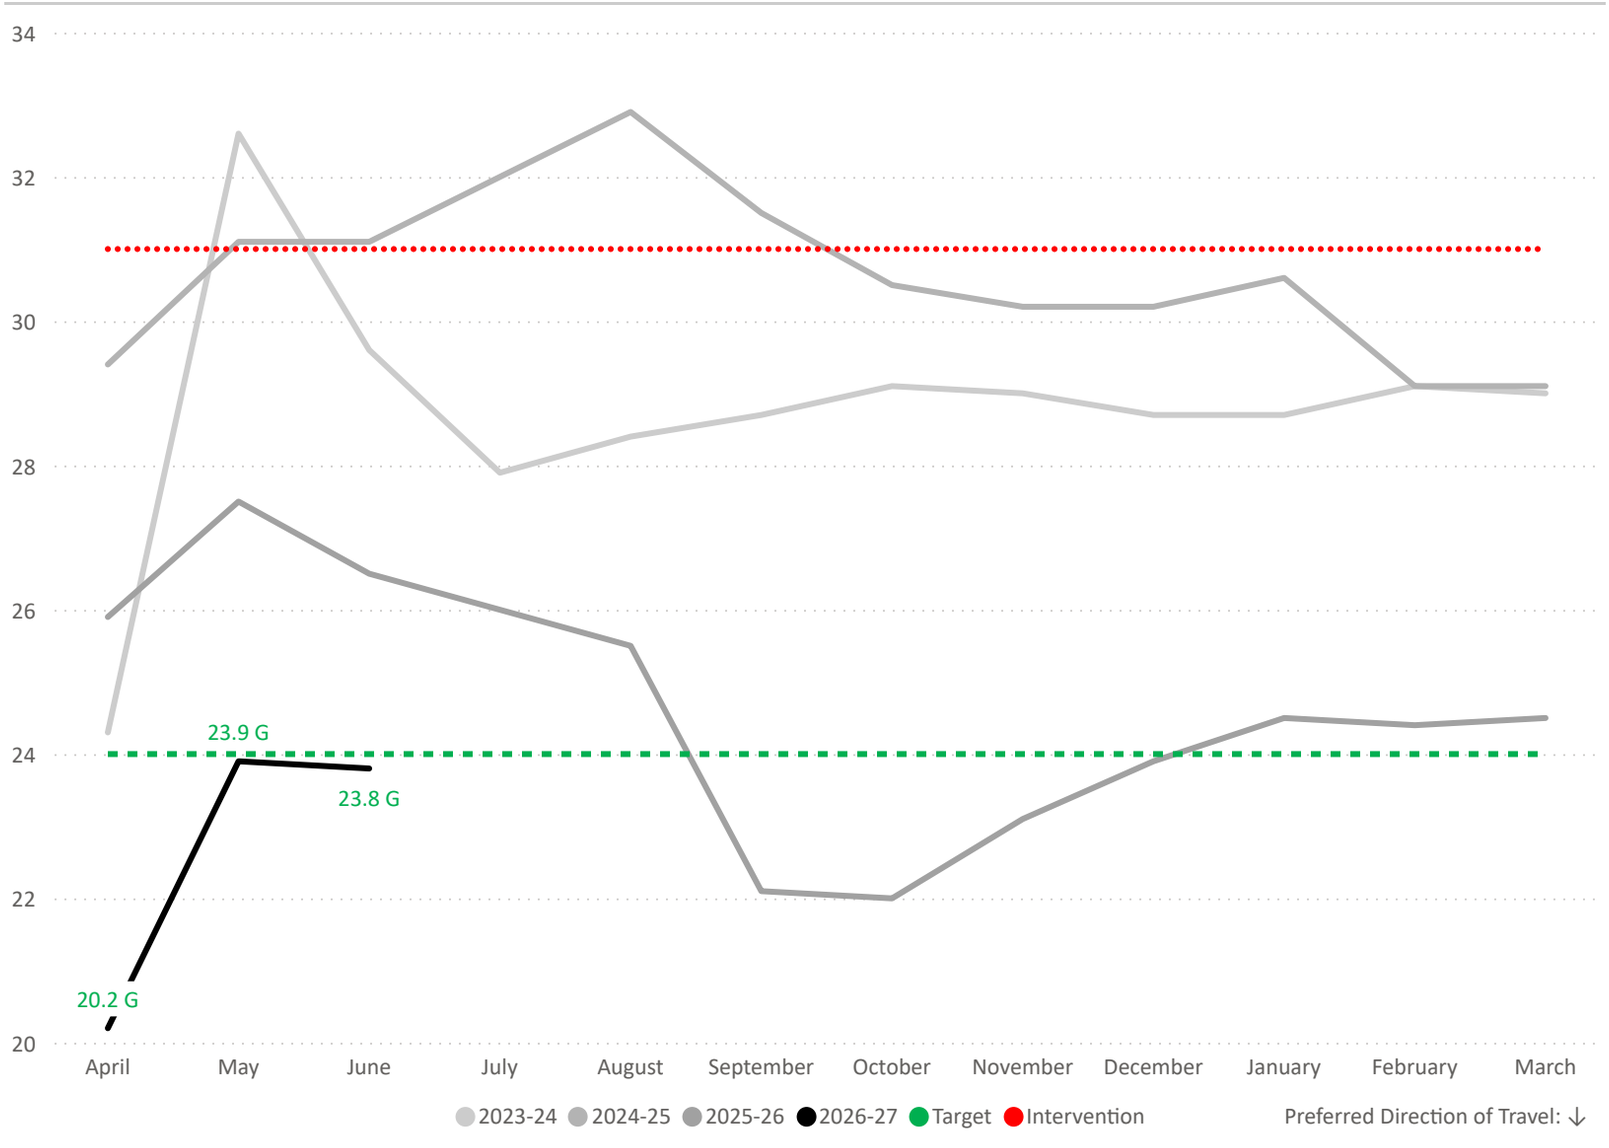
Latest projected outturn:

G

Outcome: Keeping people out of crisis

PI 4: The average number of weeks between referral and completion of jobs funded through the Disabled Facilities Grant (DFG)

The average time (in weeks) between date of referral and practical completion of jobs funded through Disabled Facilities Grants (DFG). This excludes any time taken before referral to Huntingdonshire District Council Officers.



Latest Commentary from Service:

A 2.7-week decrease can be seen in June 2026 compared to the 26.5 weeks taken in June 2025. This improvement is due to fewer complex cases being submitted and finalised. However, delays still persist in gaining consent from Places for People for the work to proceed in their properties, which increases the overall time taken for a case to be completed. Incomplete contractor documentation is also causing delays, eg missing risk assessments for asbestos if found; however, work is still being completed on average within acceptable time scales.

Latest year-end forecast:

24.00

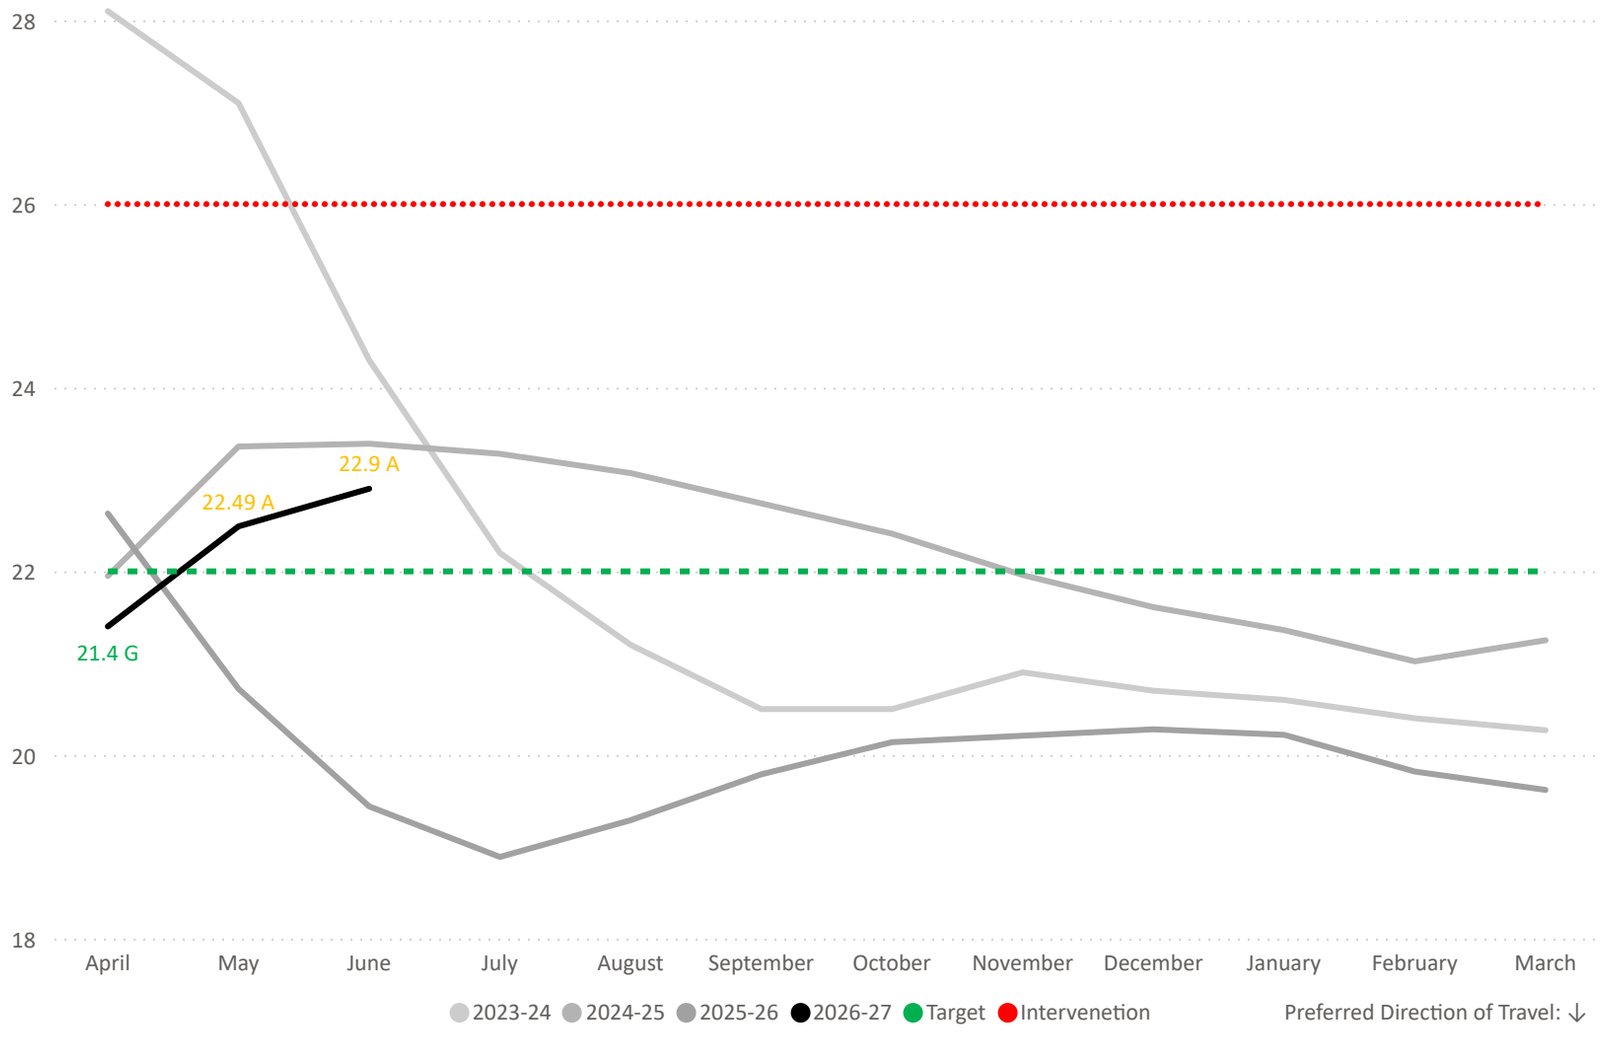
Latest projected outturn:

G

Outcome: Keeping people out of crisis

PI 5: The average number of days to process new claims for Housing Benefit and Council Tax support

The average number of days taken to assess new Housing Benefit and/or Council Tax Support claims for residents in the current financial year.



Latest Commentary from Service:

Year-to-date performance at the end of June is 0.9 days over target. This was due to a combination of staff sickness and a temporary lack of resources across the team throughout quarter 1. However, the actual performance towards the end of June has improved on the May and early June figures as expected, and it is anticipated that performance will improve again next month. The end-of-year forecast is unchanged.

PATH TO GREEN - Now that resources are in place and the spike of staff illness has subsided, performance is expected to improve throughout the next quarter, towards and potentially within the 22-week goal.

Latest year-end forecast:

22.00

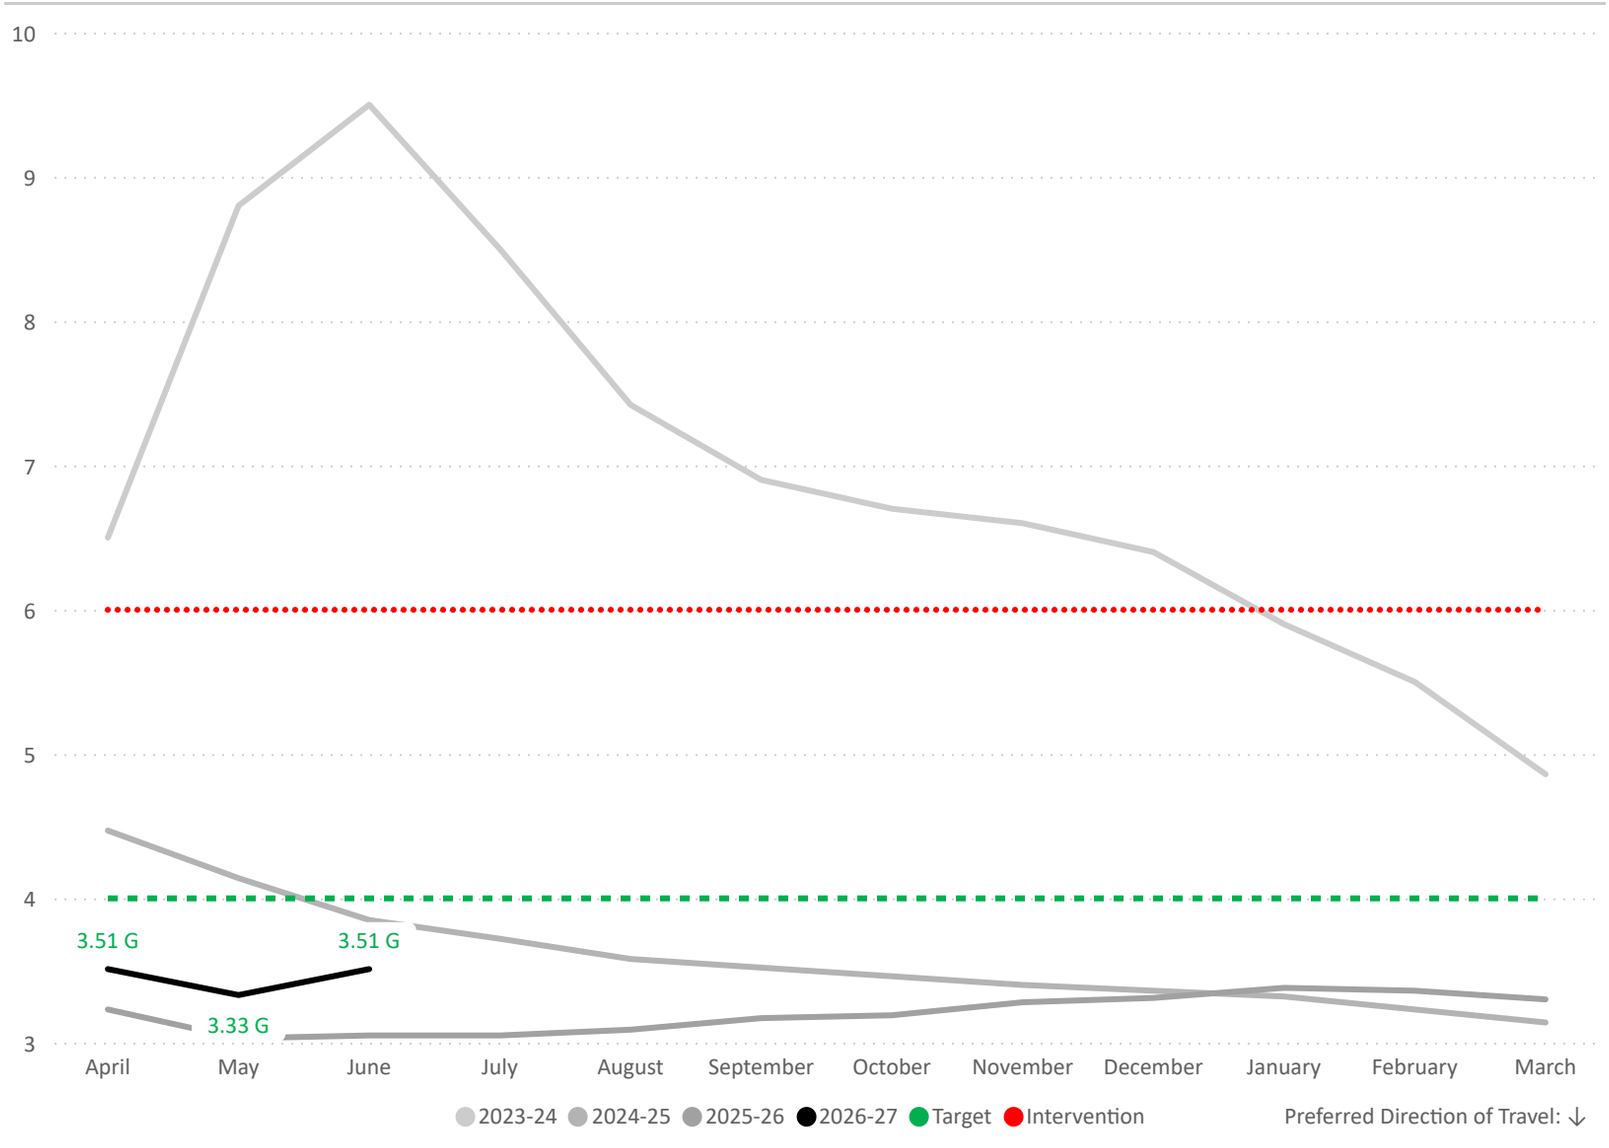
Latest projected outturn:

G

Outcome: Keeping people out of crisis

PI 6: The average number of days to process changes of circumstances for Housing Benefits and Council Tax support

The average number of days taken to assess Housing Benefit and/or Council Tax Support changes of circumstance for residents in the current financial year.



Latest Commentary from Service:

The YTD performance exceeded the target by 0.49 days. This was achieved whilst processing over 3,000 more changes than in Quarter 1 2025/26. This positive performance has been achieved through automation of the process, brought about by the implementation of the new Council Tax Support Scheme.

Latest year-end forecast:

4.00

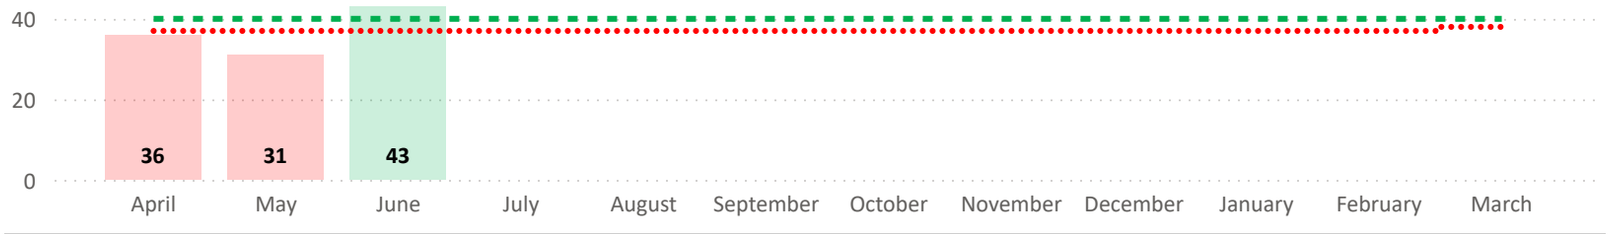
Latest projected outturn:

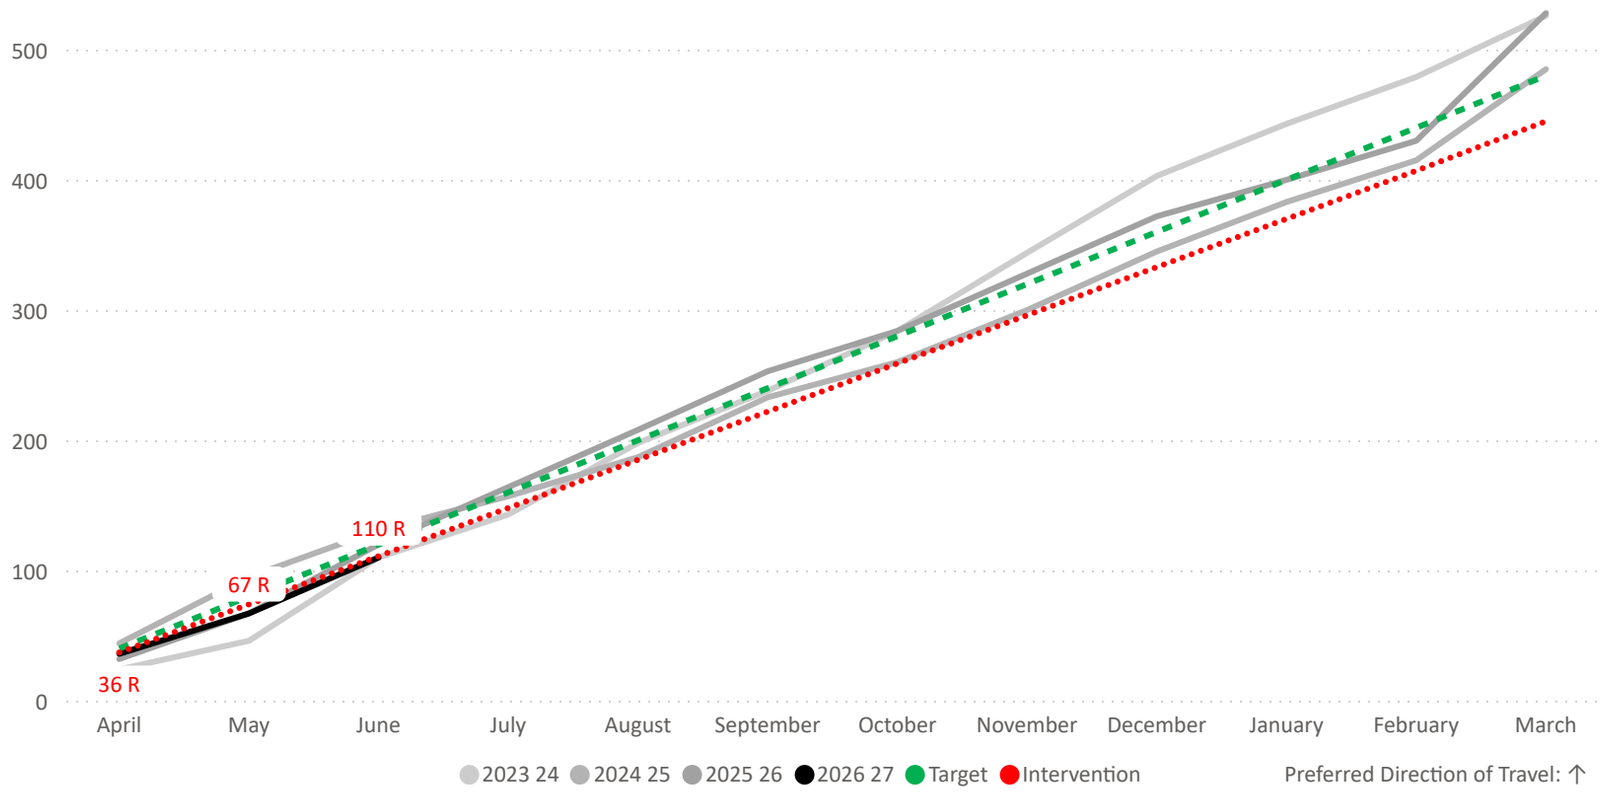
G

Outcome: Keeping people out of crisis

PI 7: The number of homelessness preventions achieved

Total number of successful homelessness preventions achieved – cumulative throughout the year. It measures how successful the organisation is at reducing the number of households that face the crisis of homelessness.





Latest Commentary from Service:

The number of successful homelessness preventions fluctuates throughout the year, depending on the rate of homelessness presentations and the opportunity to intervene in a timely way. We have achieved a total of 110 successful preventions from April to the end of June, compared to 120 in the same period last year (an 8% reduction). When considering whether this has led to an increase in the number of households in temporary accommodation (PI9), we can see that this figure is being kept within target.

PATH TO GREEN - We are still forecasting an end-of-year figure of 480 successful preventions, which will be dependent upon a number of factors, a key one being the delivery of properties on new-build sites, which will provide additional social rented homes to help resolve homelessness through lettings on the Home-Link scheme (see PI8).

Latest year-end forecast:

480

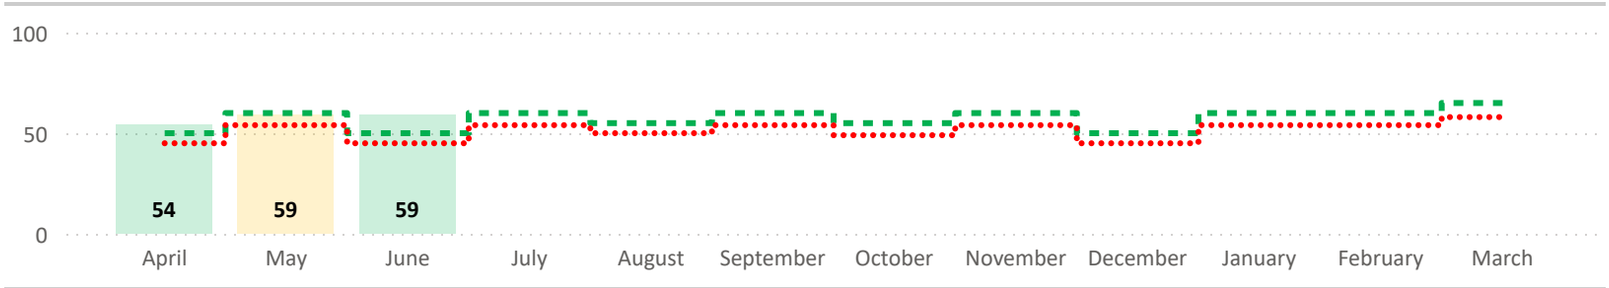
Latest projected outturn:

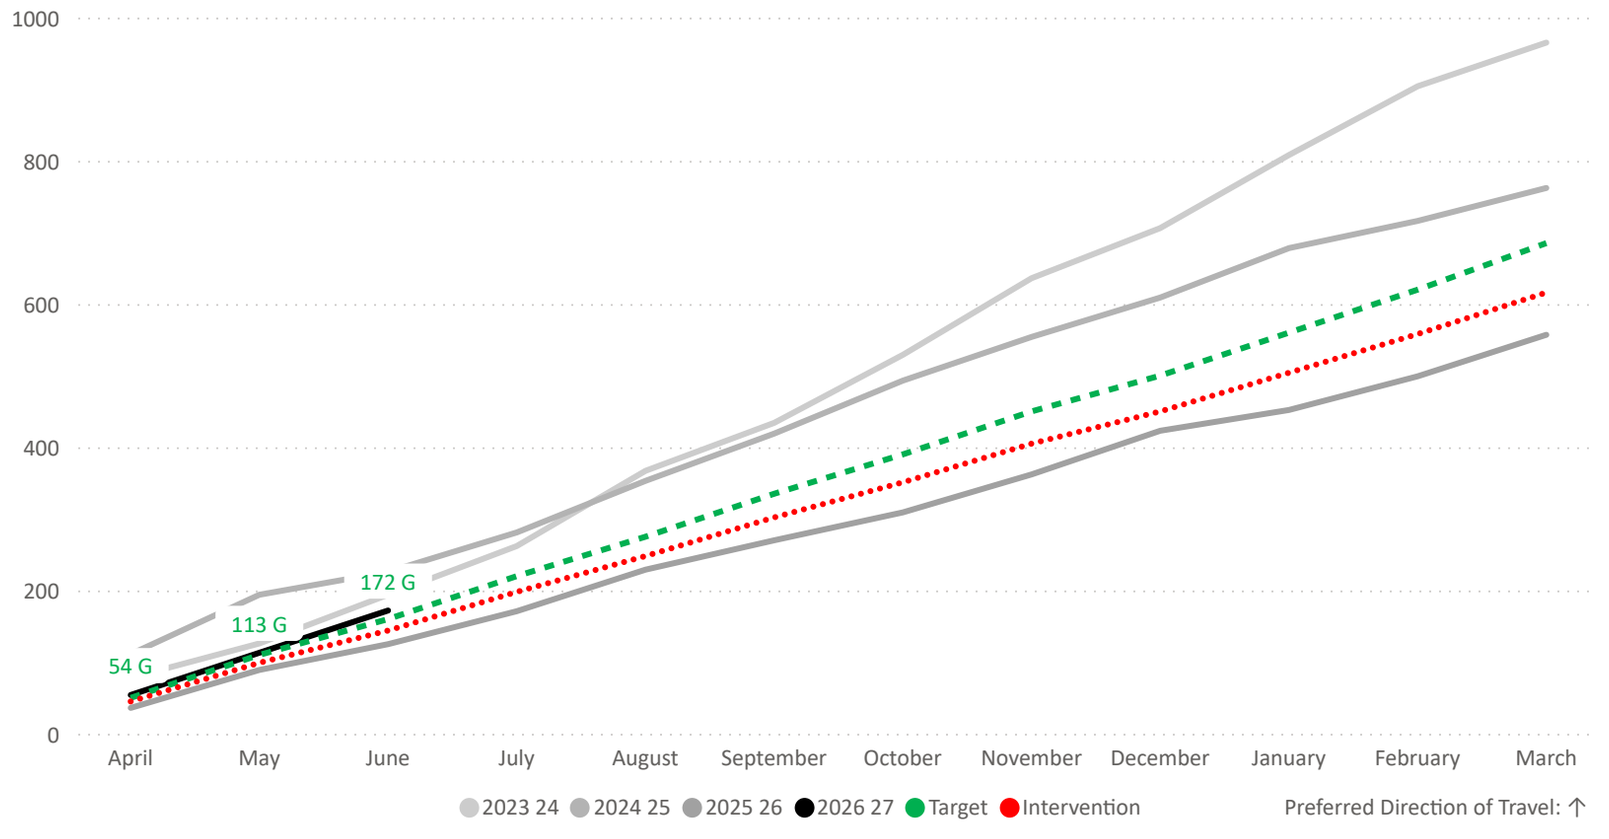
G

Outcome: Keeping people out of crisis

PI 8: The number of households housed through the Housing Register and Home-Link scheme

Total number of households housed into a permanent housing association home in the financial year through the Huntingdonshire Housing Register and Home-Link scheme.





Latest Commentary from Service:

The number of households housed will vary from month to month depending on the number of vacancies arising in existing social rented stock, plus the additional units delivered through the new-build programme. There were a total of 172 households housed from April to the end of June, compared to 125 in the same period last year. This increase is mainly due to completions of new builds that rolled over from the end of last year. We are forecasting a total of 600 lettings in the year, but this will be revised once we have more certainty about the delivery of properties anticipated on new build sites later this year. We will also confirm with Places for People what their plans are for property disposals this year, as this may also have an impact on the number of lettings becoming available.

Latest year-end forecast:

600

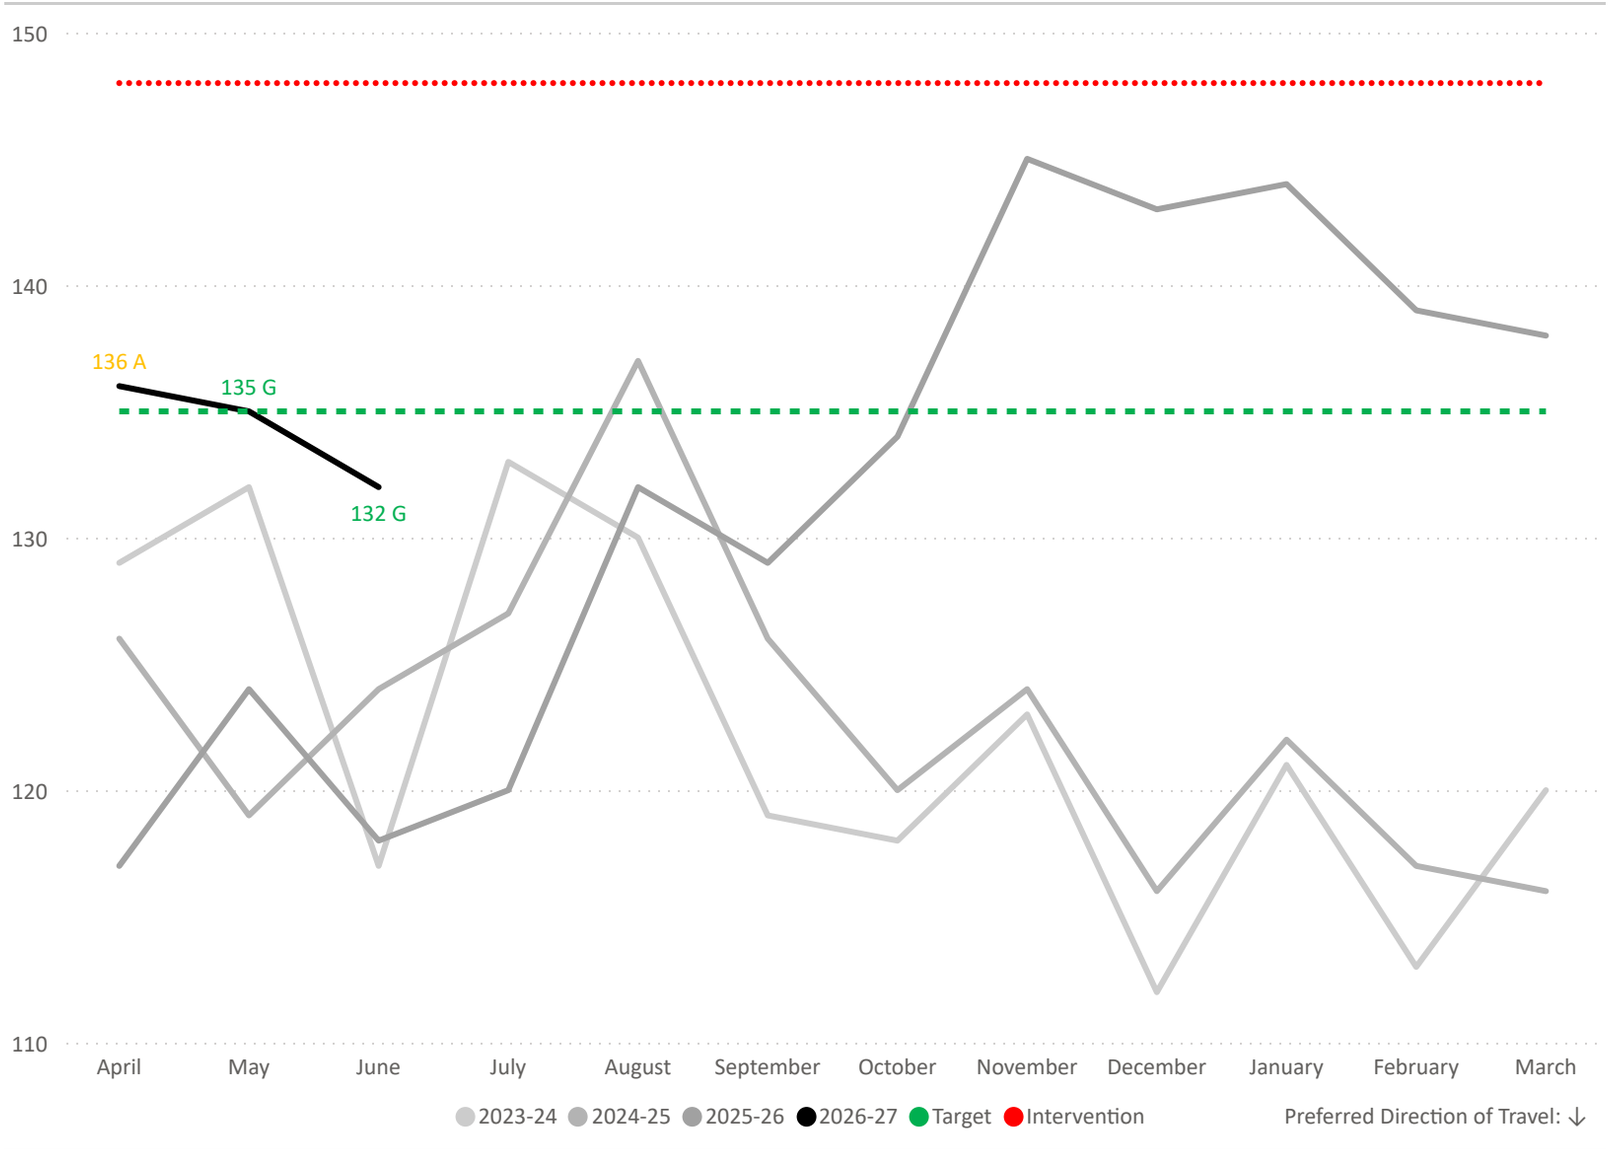
Latest projected outturn:

R

Outcome: Helping people in crisis

PI 9: The number of households in temporary accommodation

The total number of Households in temporary accommodation in Huntingdonshire at the end of each month. This could be higher or lower throughout the month, but the KPI tracks the number on the final day of each month.



Latest Commentary from Service:

The number of households in temporary accommodation (TA) at any one time will depend upon the number of homelessness presentations to the council, how successful officers are at preventing homelessness wherever possible, and the ability to move households through TA into settled housing promptly. The figure at the end of April was 132, which compares to 118 at the same point last year. This increase is mainly due to the reduction in the number of social tenancy lettings in 2025/26, which impacted our ability to move households through temporary accommodation into settled homes. However, the number of lettings (PI8) has increased in April and May, and this has enabled the throughput of some households from temporary accommodation and into settled homes. This will be a key factor throughout the year in trying to keep the number of households in temporary accommodation within the target.

Latest year-end forecast:

140

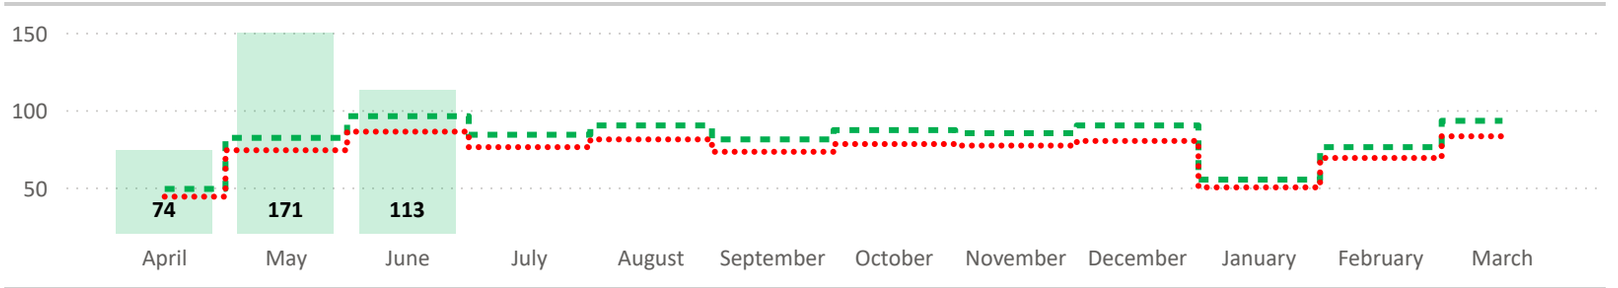
Latest projected outturn:

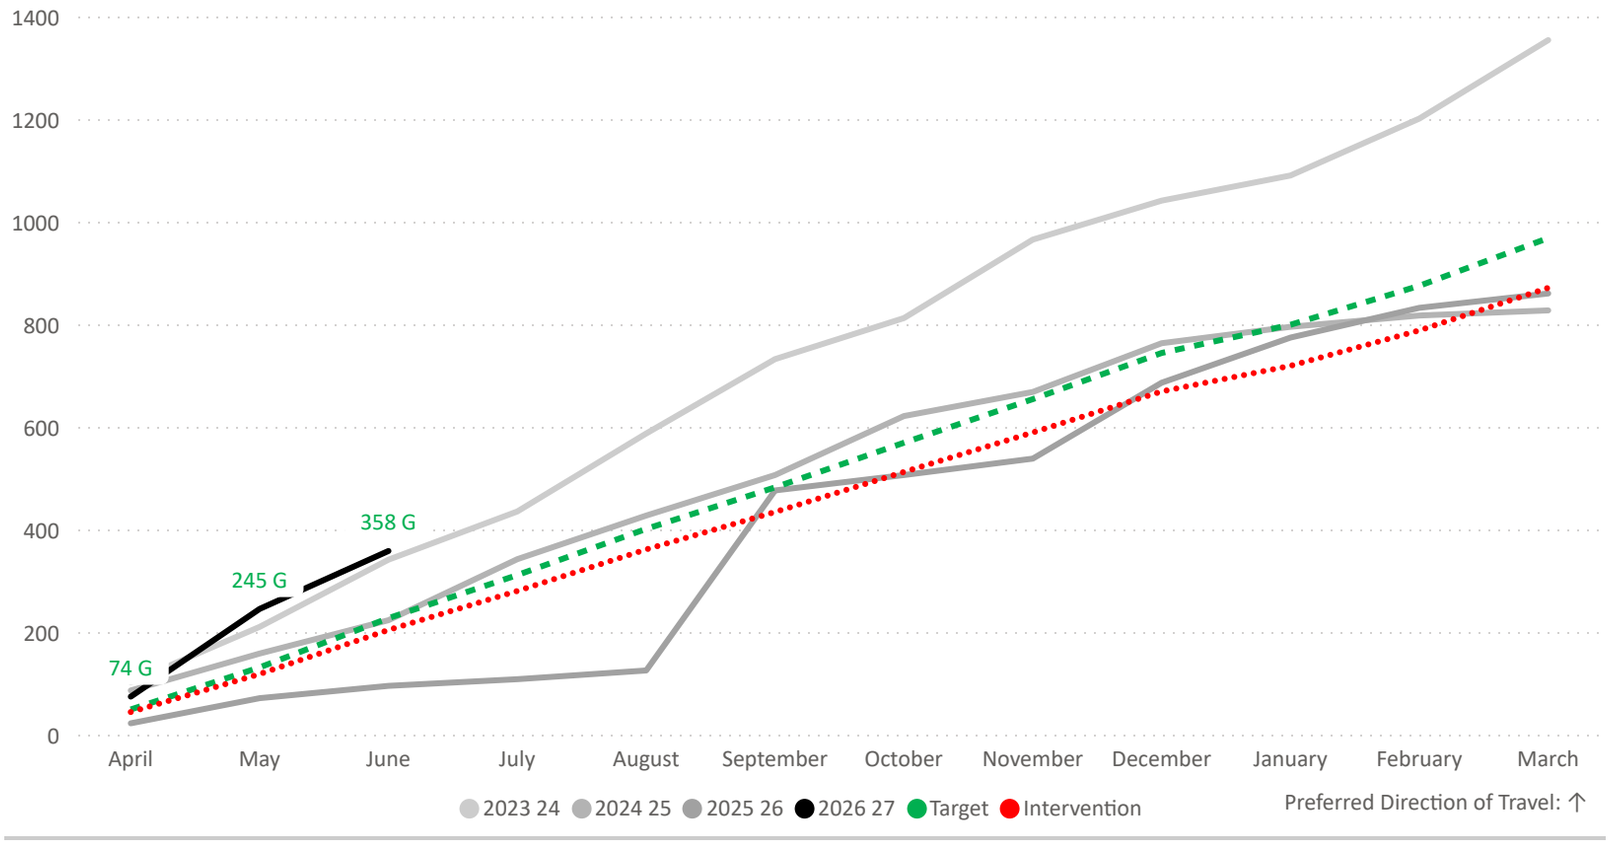
A

Outcome: Improving Housing

PI 10: The net change in the number of homes with a council tax banding

The number of homes which are assigned an official Council Tax Banding by the Valuations Office Agency in a given month. This is mainly required for when a new home is built in the district.





Latest Commentary from Service:

A total of 358 properties were banded in quarter 1 in Huntingdonshire, with significant increases being seen in Mid-May and the start of June. This is because the Valuation Office Agency continues to prioritise banding properties within the same location (for example, multiple houses on a new street or estate) rather than the oldest properties to recover from the significant backlog created over the past 18 months. 215 new properties are awaiting banding, and the number that are over 90 days old has significantly reduced to only 29 properties.

Latest year-end forecast:

1,000

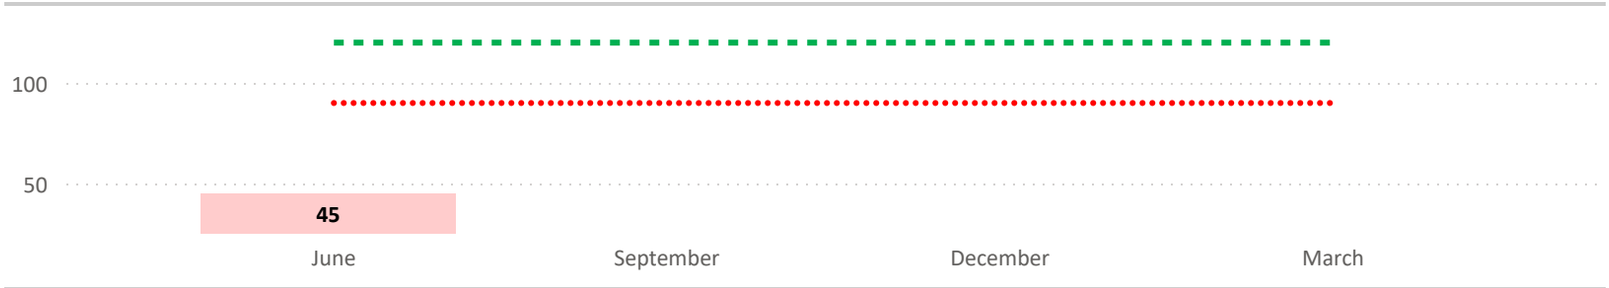
Latest projected outturn:

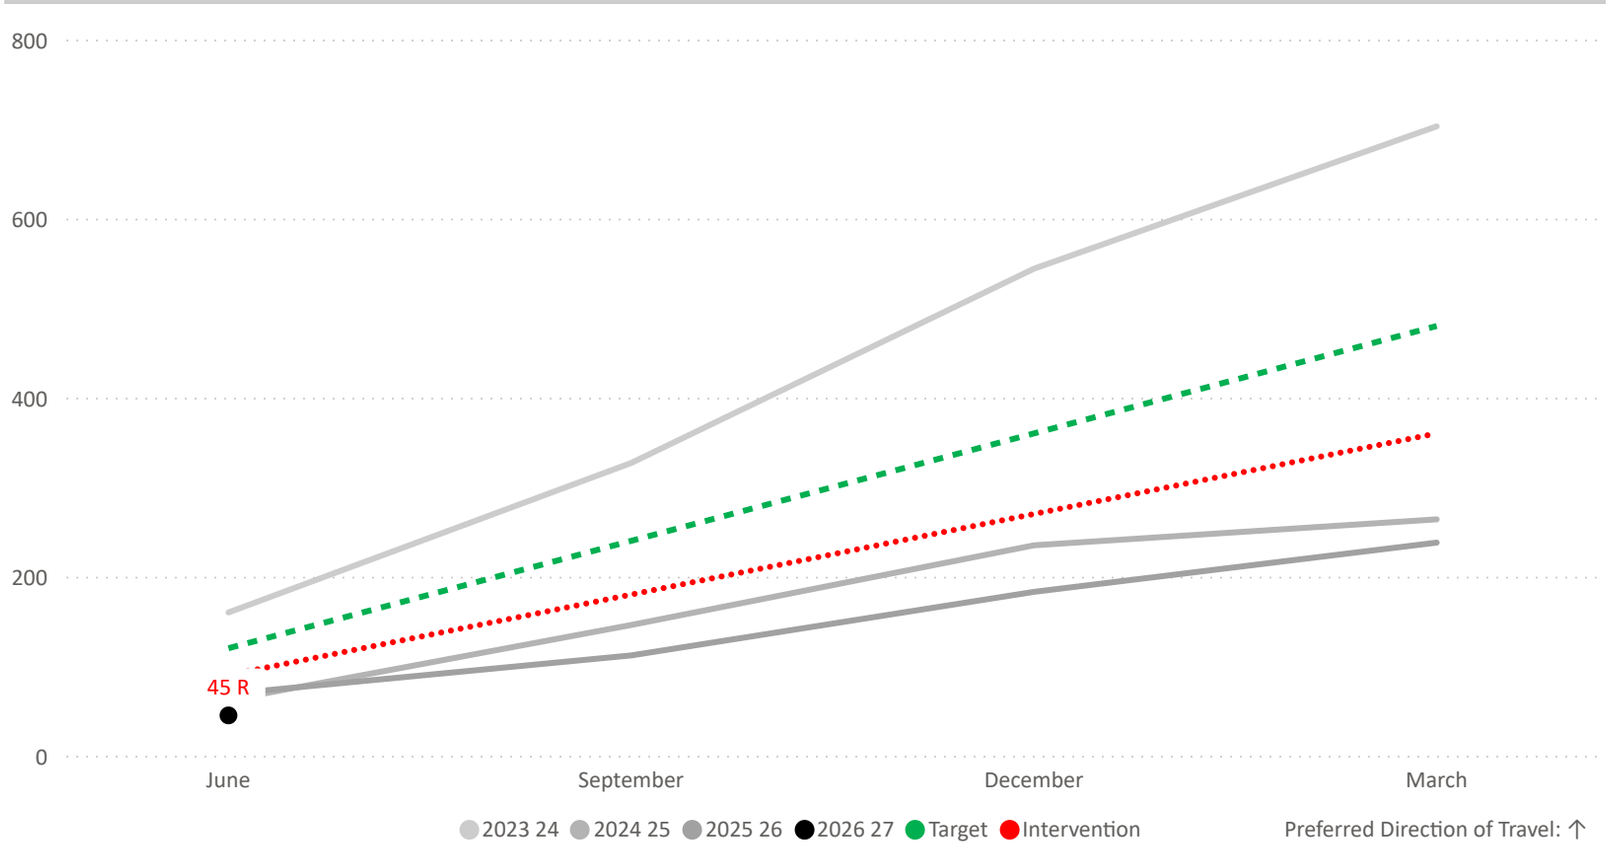
G

Outcome: Improving Housing

PI 11: The number of affordable houses delivered

The number of homes which have been built within Huntingdonshire which is defined as affordable by the National Planning Policy Framework (Housing for sale or rent, for those whose needs are not met by the market (including housing that provides a subsidised route to home ownership and/or is for essential local workers)





Latest Commentary from Service:

The target for affordable housing delivery is based on the latest Housing Needs Study, which suggests a need for 480 homes per year. This delivers a target for June of 120 new affordable homes; as with many Local Authorities, this overall target is rarely fully met, and for this reason the performance is currently Red. We have delivered a total of 45 affordable homes in Q1 and further delivery is planned throughout the year. At the end of quarter 1, it is expected that roughly 290 affordable homes will be delivered in the year.

PATH TO GREEN - it is unlikely that this metric will achieve green, but officers will continue to work with housing providers to ensure their path to delivering affordable homes is as straightforward as possible.

Latest year-end forecast:

290

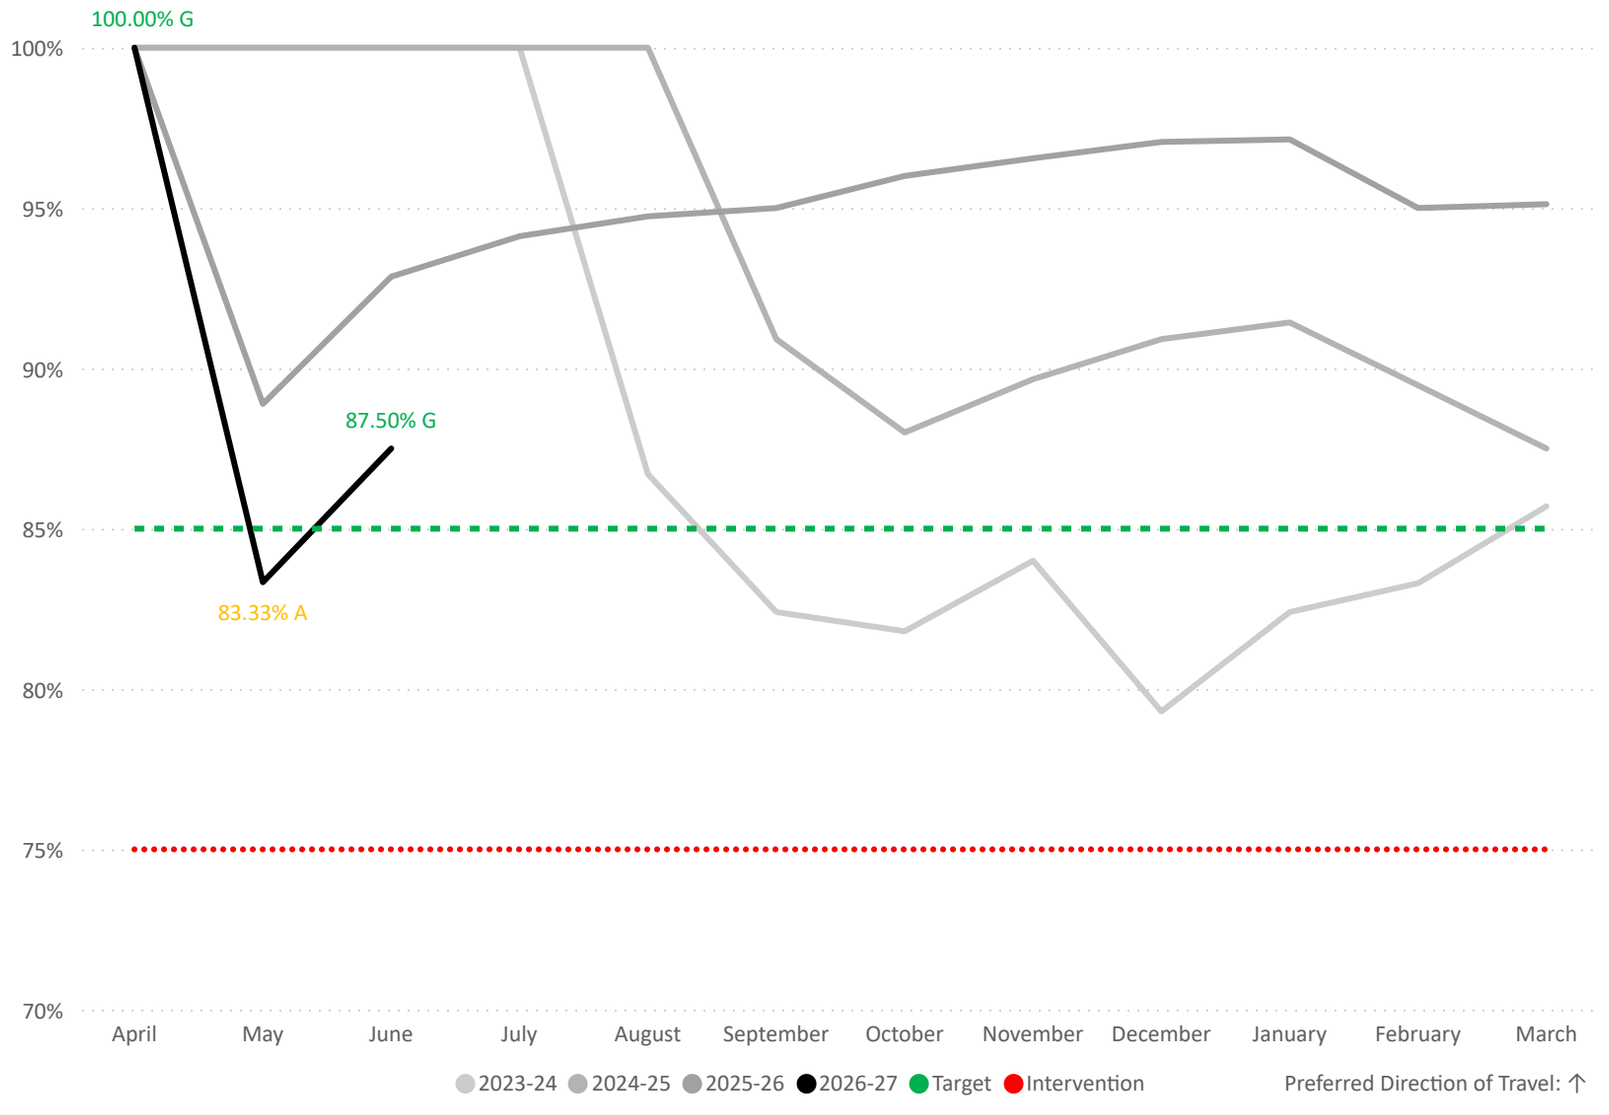
Latest projected outturn:

R

Outcome: Improving Housing

PI 12: The percentage of planning applications processed on target – Major (within 13 weeks or agreed extended period)

The percentage of planning applications that are deemed Major which are completed within the nationwide standard of 13 weeks, or completed within the agreed extended time period. A Major planning application is determined by the Development Management Procedure (England) Order 2015.



Latest Commentary from Service:

7 out of 8 Major planning applications were processed and determined on time in quarter 1, with 1 application being delayed by over 13 weeks in May. This metric is extremely sensitive due to the small amount of major applications received through Huntingdonshire.

Latest year-end forecast:

87.00%

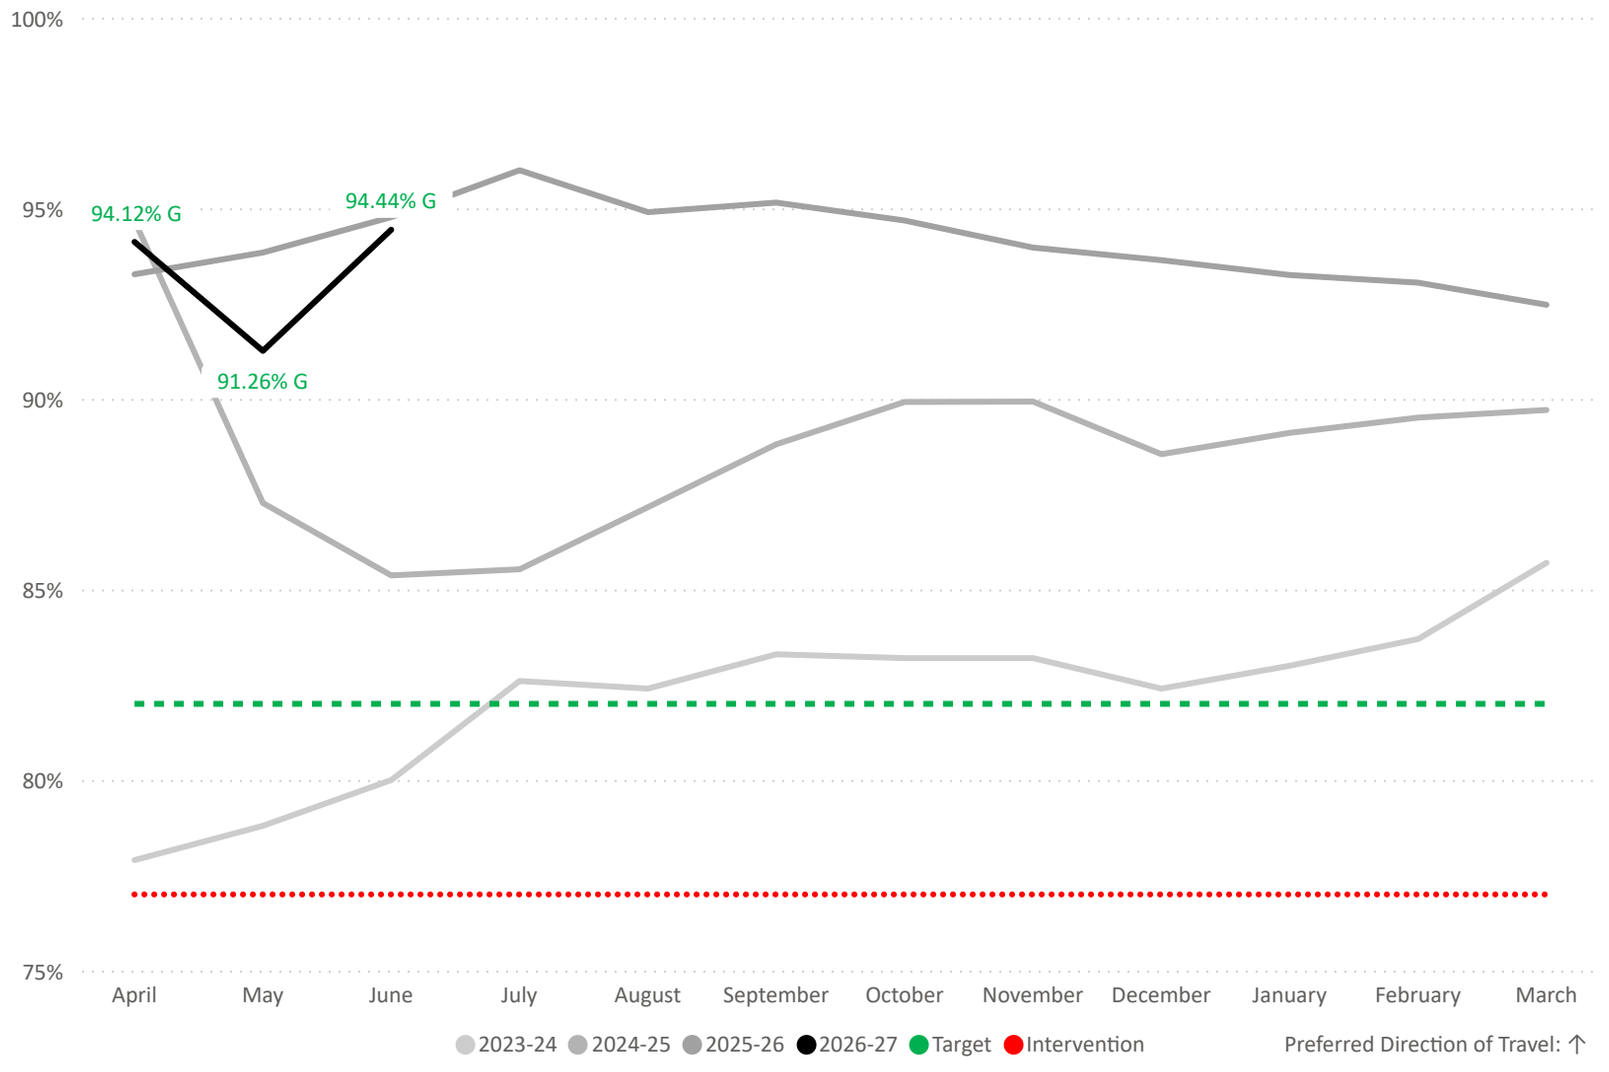
Latest projected outturn:

G

Outcome: Improving Housing

PI 13: The percentage of planning applications processed on time – Minor & Others (within 8 weeks or agreed extended period)

The percentage of planning applications that are deemed Minor or Other which are completed within the nationwide standard of 8 weeks, or completed within the agreed extended time period. A Minor or Other planning application is determined by the Development Management Procedure (England) Order 2015.



Latest Commentary from Service:

255 of 274 Minor & Other planning applications were processed and determined on time in quarter 1, with the majority of the 19 applications not achieving the 8-week target being in May.

Latest year-end forecast:

87.00%

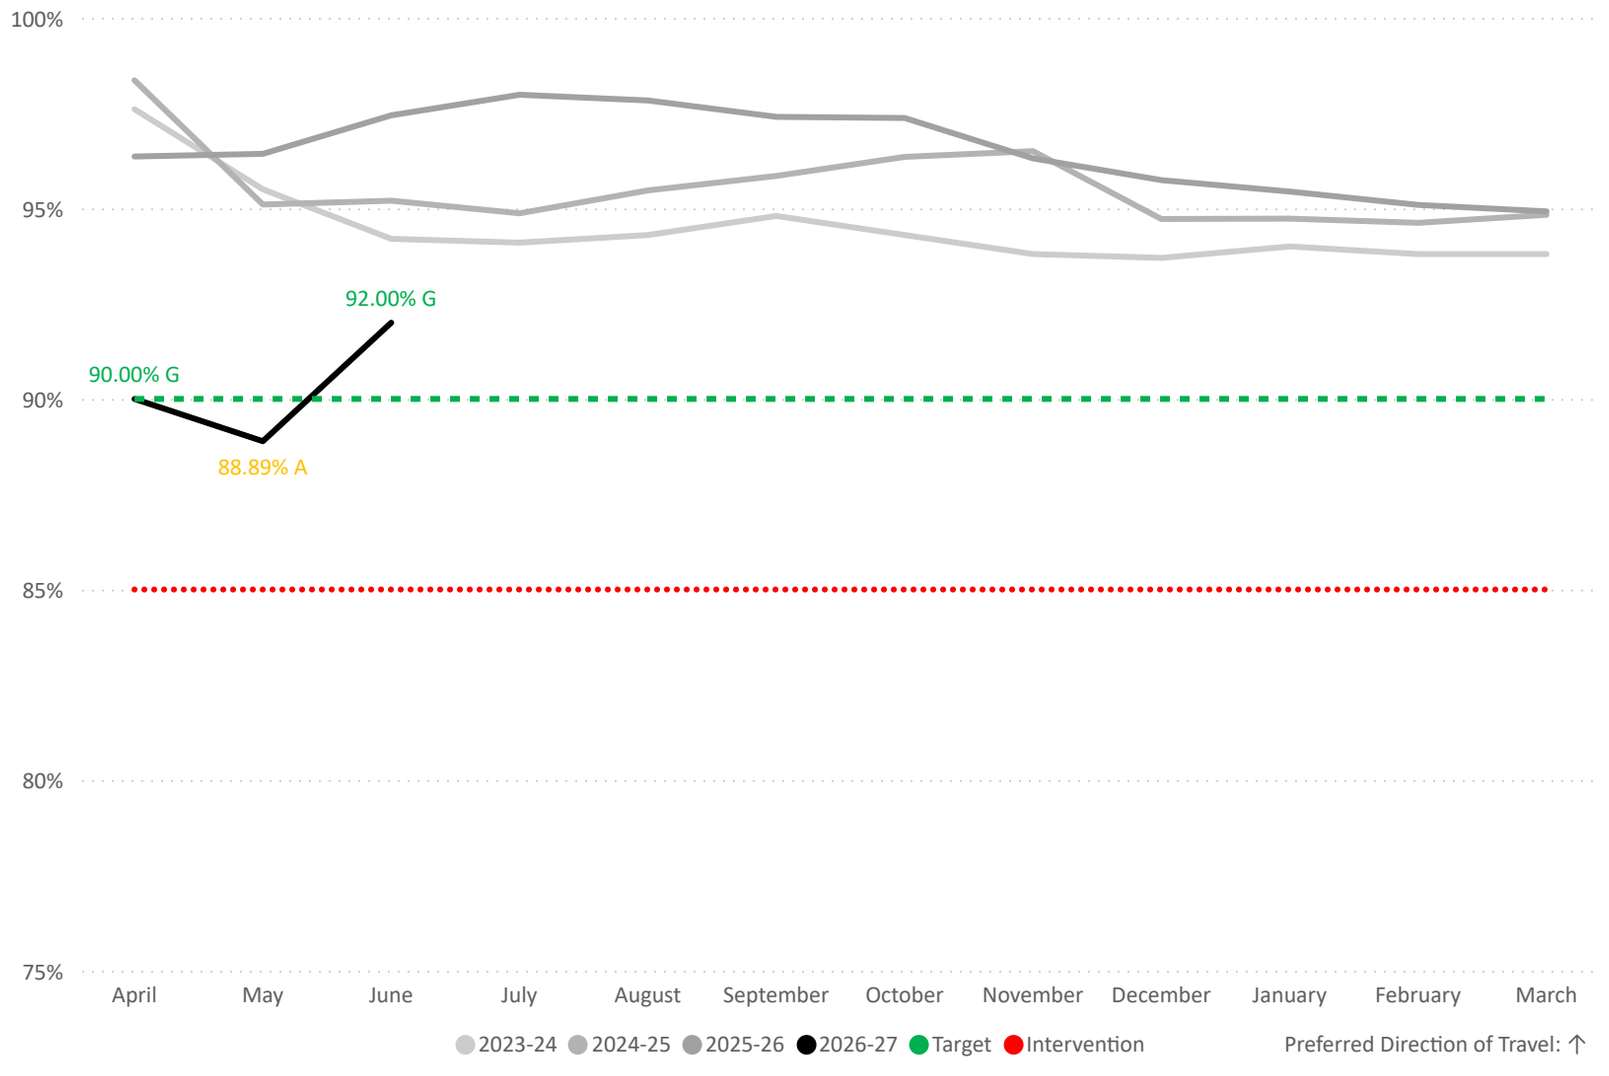
Latest projected outturn:

G

Outcome: Improving Housing

PI 14: The percentage of planning applications processed on target – Household Extension (within 8 weeks or agreed extension period)

The percentage of planning applications that are Household Extensions which are completed within the nationwide standard of 8 weeks, or completed within the agreed extended time period.



Latest Commentary from Service:

115 of 125 Household extension planning applications were processed and determined on time in quarter 1, with the majority of the 19 applications not achieving the 8-week target being in May.

Latest year-end forecast:

93.00%

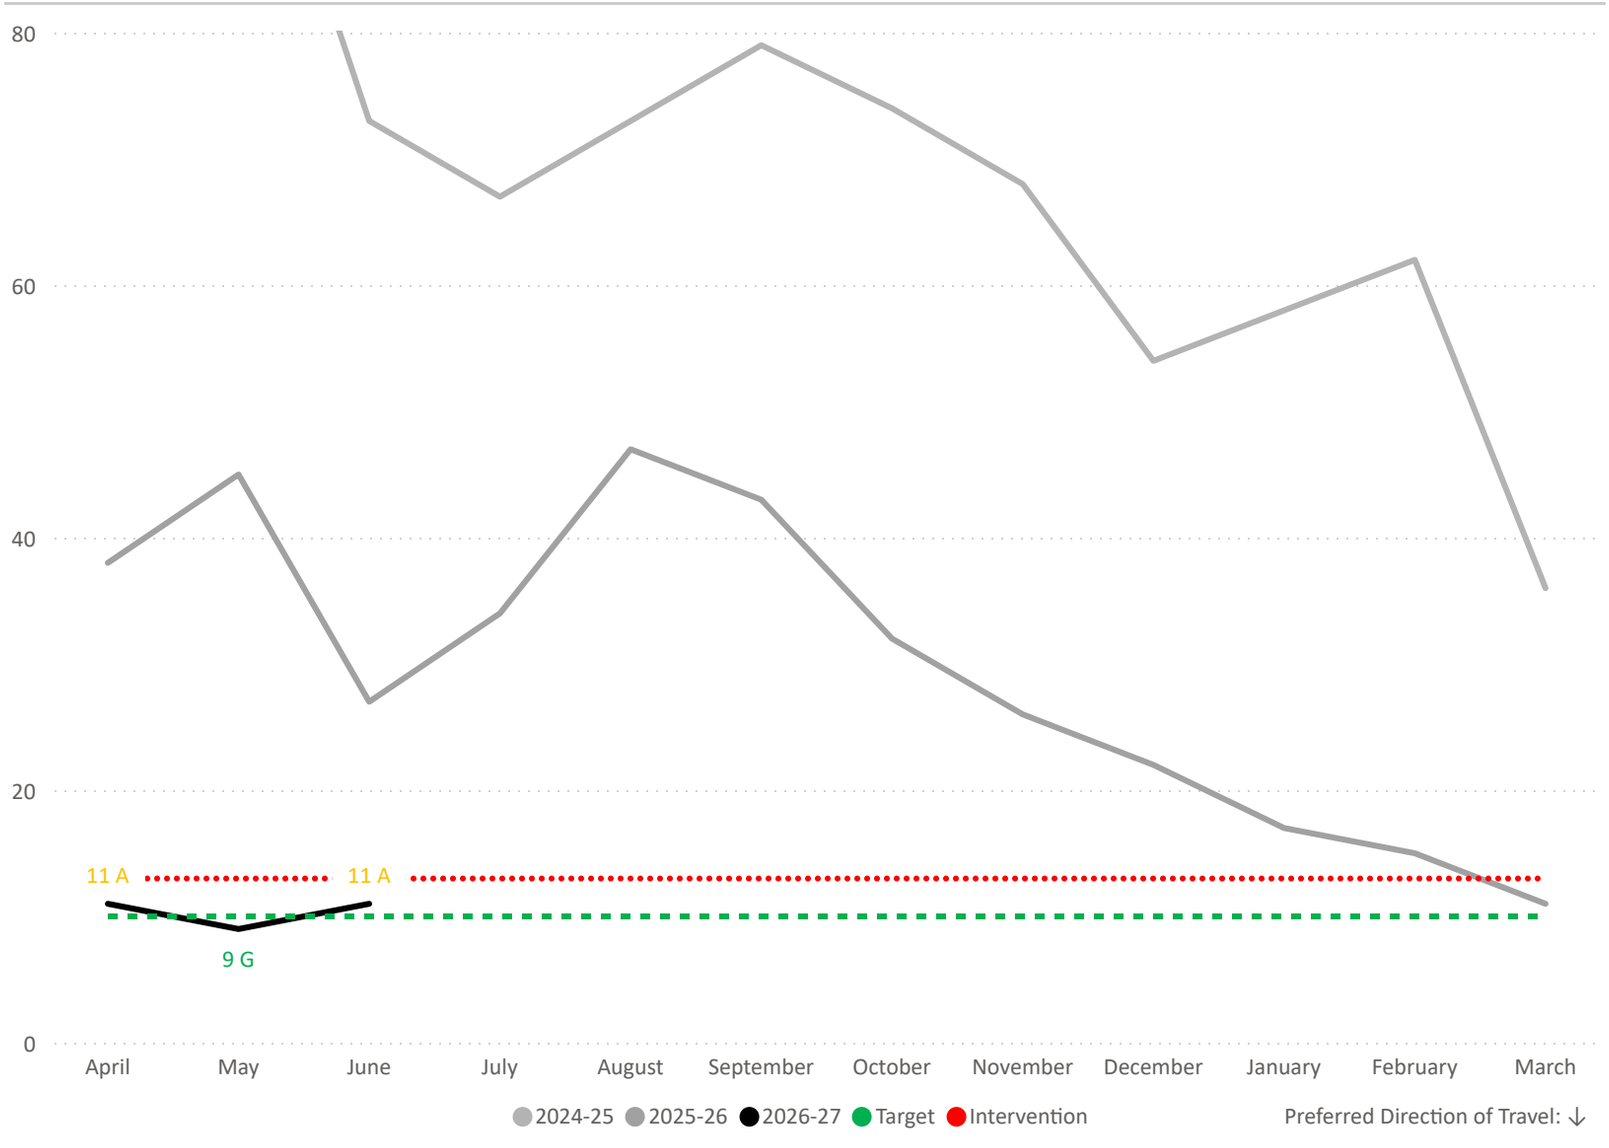
Latest projected outturn:

G

Outcome: Improving Housing

PI 15: The number of planning applications over 16 weeks old with no current extension in place

The number of planning applications that are currently being processed by the Planning Service which are over 16 weeks old and have no agreed extension in place.



Latest Commentary from Service:

A minor increase in backlog cases was seen in June, but the metric continues to perform extremely positively compared to previous years. Backlog applications remain a key focus for officers and the management team. Performance for this metric is expected to experience small fluctuations but improve over time; it is anticipated that performance will improve over the next month. The yearly average (to date) equates to 10.3 which moves the indicator to Green.

PATH TO GREEN - officers and the management team will continue to focus on ensuring the backlog is a priority, driving performance towards and past its target.

Latest year-end forecast:

8

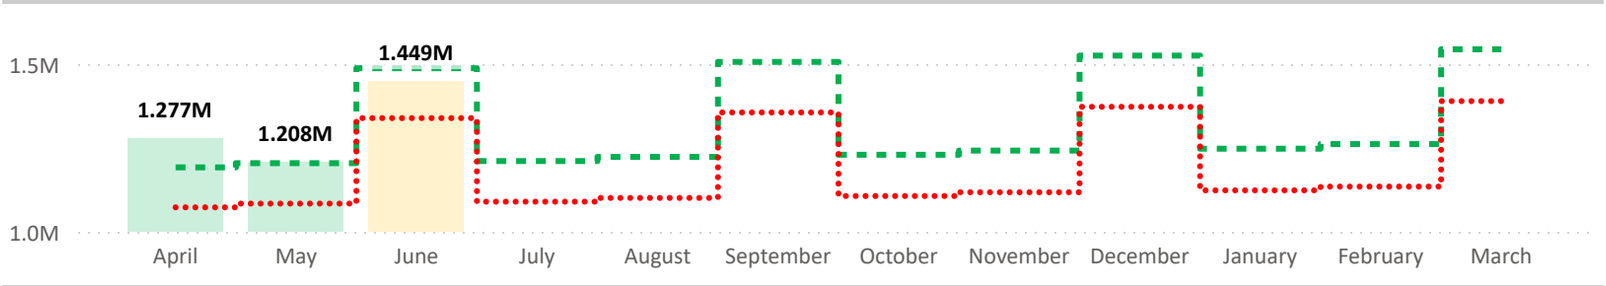
Latest projected outturn:

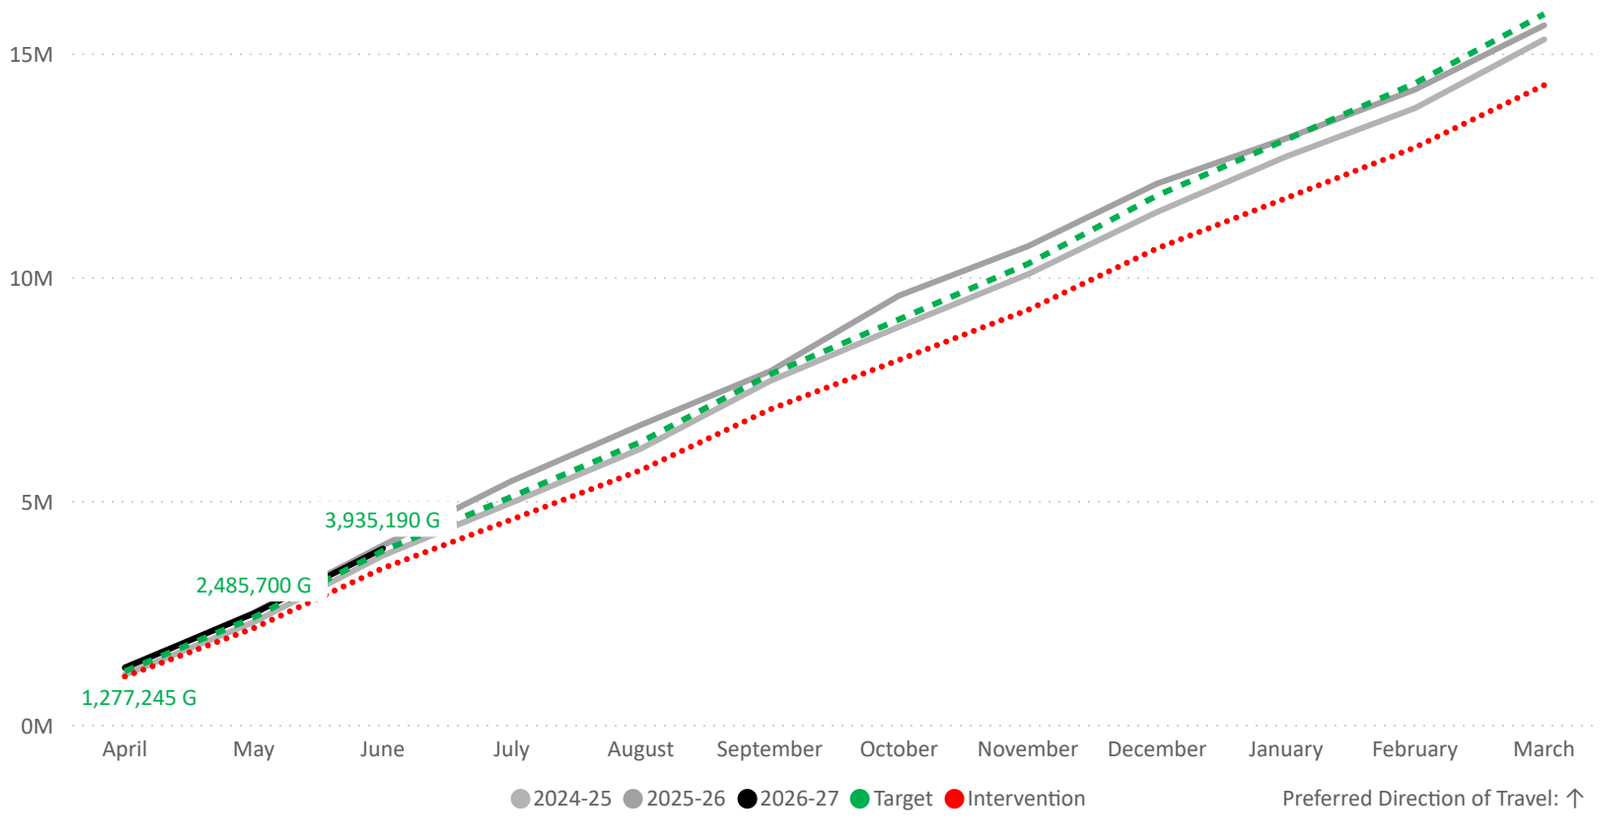
G

Outcome: Forward thinking economic development

PI 16: The cumulative footfall in our market towns

The footfall that was measured by Huntingdonshire District Council footfall counters in Huntingdonshire's four market towns - Huntingdon, St Ives, St Neots & Ramsey.





Latest Commentary from Service:

Huntingdon Q1 - 1,580,816: Markets on Saturdays and Wednesdays frequently saw high footfall in quarter 1 in Huntingdon. Popular days included the successful Sunset Beats & Bites event hosted by Huntingdon First BID and Huntingdon Town Council and the ABBA Tribute festival at Huntingdon race course.

St Ives Q1 - 1,156,686: The two most popular days for St Ives in quarter 1 were Saturday and Monday. The popularity of the market continues to drive footfall on Saturdays. The three bank holiday Mondays in quarter 1, along with the Charter Market in June drove Monday footfall.

St Neots Q1 - 1,163,742: St Neots had particularly high footfall days during days with events such as Friday Food Feast, the Big Listen and St Neots Food and Craft Fayre

Ramsey Q1 - 33,855: Ramsey's footfall continued to be consistent on market days, with a higher footfall on the Ramsey Neighbourhoods Trust “Great Whyte Dine Out” event.

Latest year-end forecast:

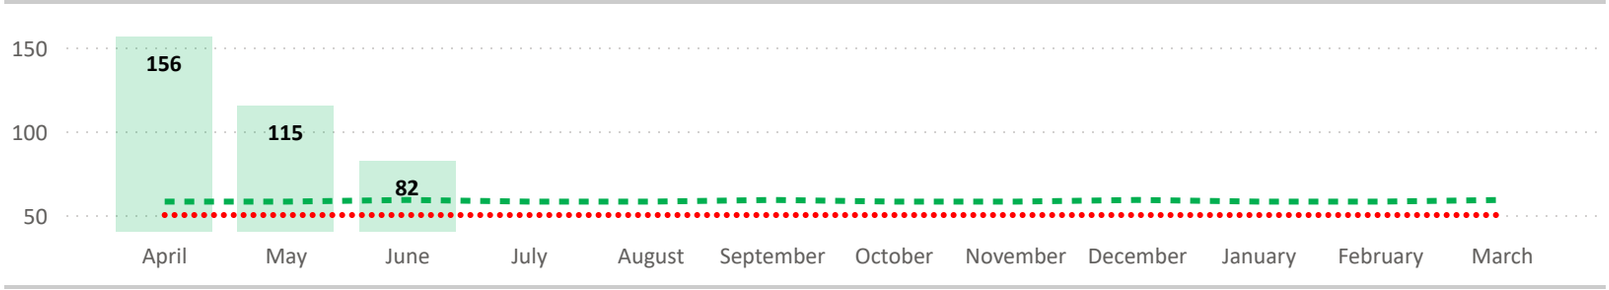
Latest projected outturn:

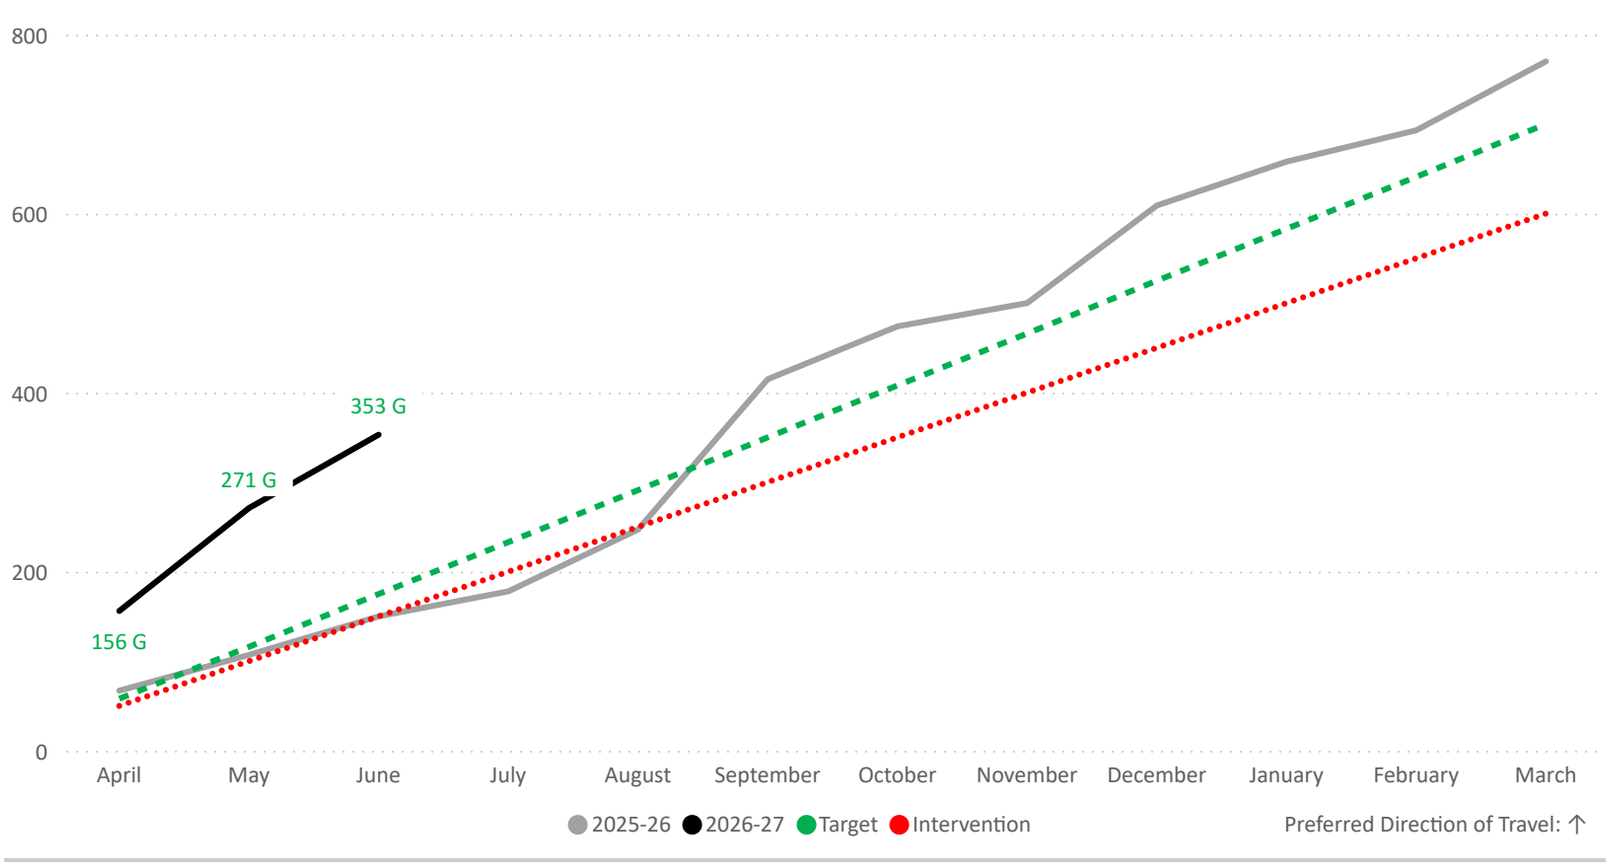
G

Outcome: Forward thinking economic development

PI 17: The total number of business engagements by the Economic Development Team

The number of businesses that the Economic Development team actively engage with support in a given month.





Latest Commentary from Service:

Throughout quarter 1, the Economic Development team continued to support businesses throughout Huntingdonshire across a range of areas, including: digital adoption, funding, business rates, recruitment, relocation, business support meetings, site visits, growth opportunities, skills development, specialist advice and marketing.

Engagement continued with organisations from the education, industry and public sector networks to support business development and skills activity through events, partnership working and knowledge sharing. A new business support initiative was launched at Alconbury Weald, providing advice sessions, networking opportunities and direct support to local businesses across several locations. Additional activity included supporting businesses with growth enquiries, inward investment interest, planning-related queries and construction-focused workshops, alongside continued development of the Business Growth Incentive Fund.

Defence engagement remained a key focus through meetings with businesses and stakeholders, attendance at sector events, and the development of a local SME engagement plan. The team also promoted the Huntingdonshire Business Awards, made referrals and introductions to partner organisations, supported businesses to access wider opportunities, and attended a range of business, skills and economic development events to strengthen relationships and identify new opportunities across the district.

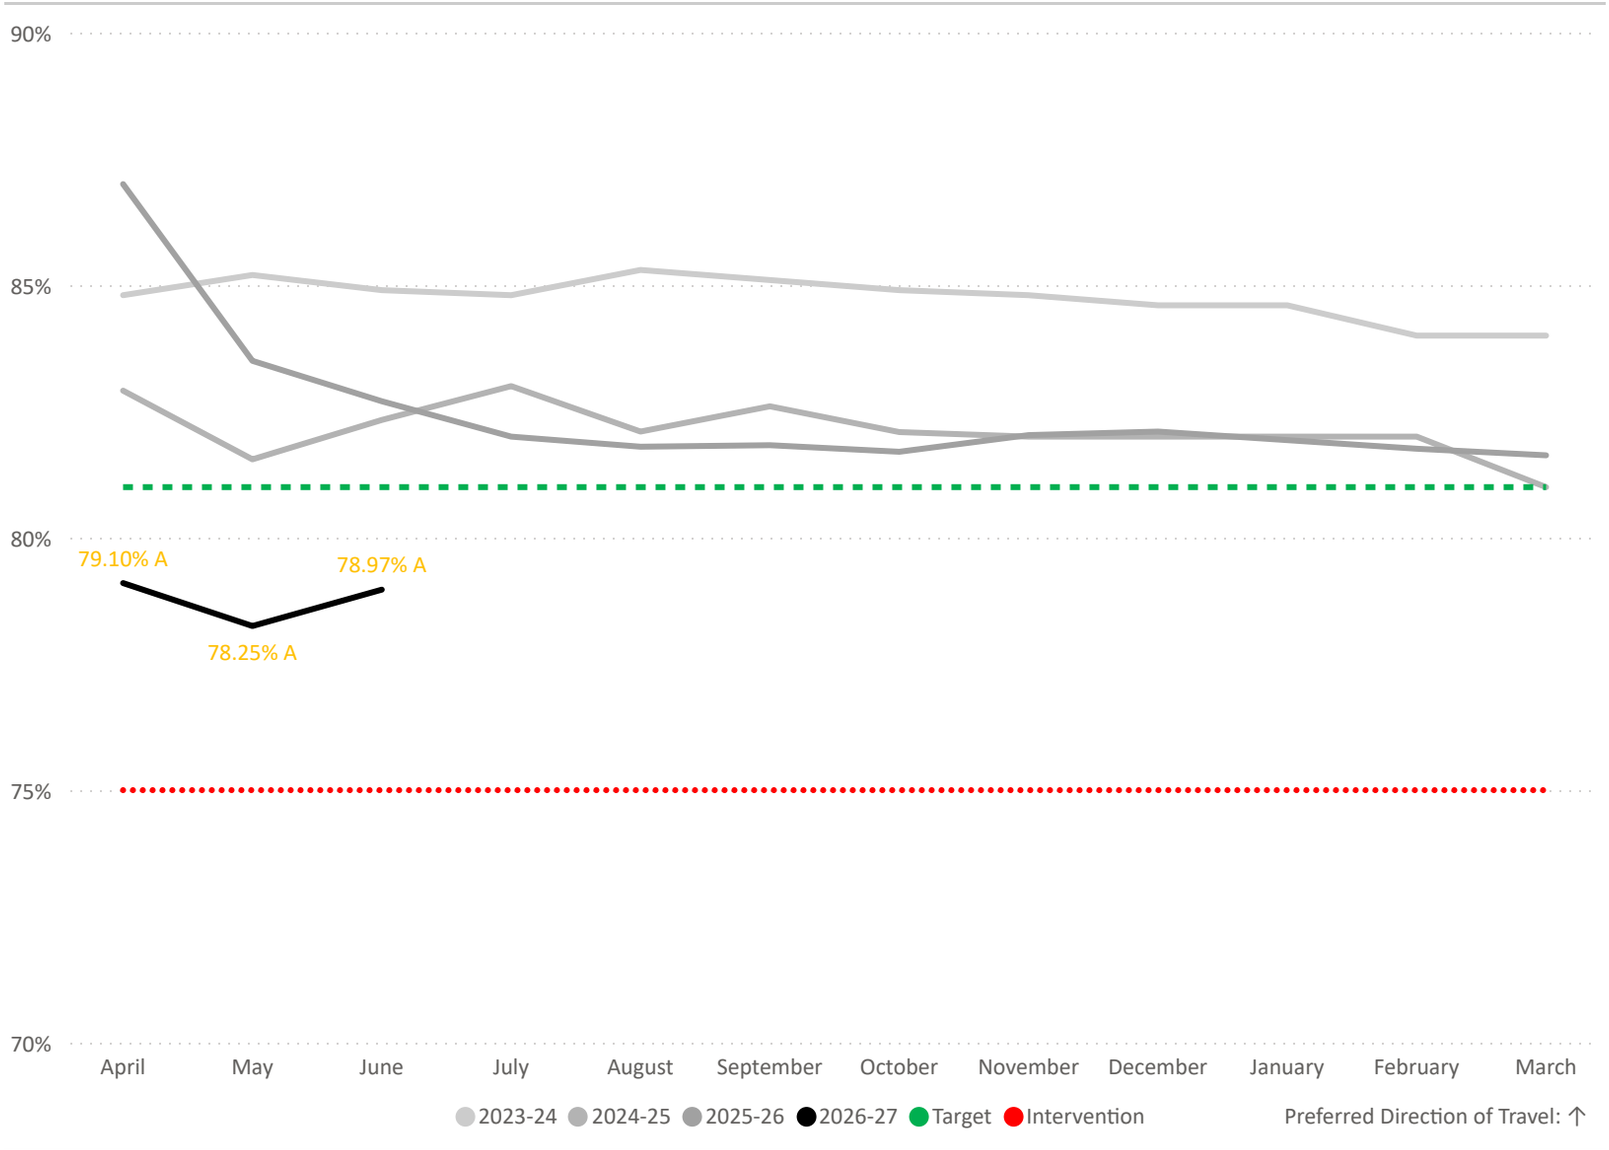
Outcome: Lowering carbon emissions

PI 18: The efficiency of vehicle fleet driving – Energy Efficient Driving Index Score for the waste service

The cumulative efficiency score of HGV drivers as determined by the Energy Efficient Driving Index. A higher score indicated more efficient driving practices such as smoother braking and less harsh acceleration.



Latest Commentary from Service:

Due to some errors with the systems and software that record this data, a new system is scheduled to be installed across the fleet during July. It should be noted that the implementation of the new system will require a period of adjustment to ensure all parameters are correctly configured. As a result, it is expected that some fine-tuning will be required over the coming months before the system is fully optimised. However, any significant issues for individual users are being identified, investigated, and resolved as they arise.

PATH TO GREEN - the identification of issues and their resolution will drive the performance of this metric towards target. Additionally, the implication of bug-free software and systems will allow for more accurate data and hence more ability to identify and rectify issues.

Latest year-end forecast:

81.00%

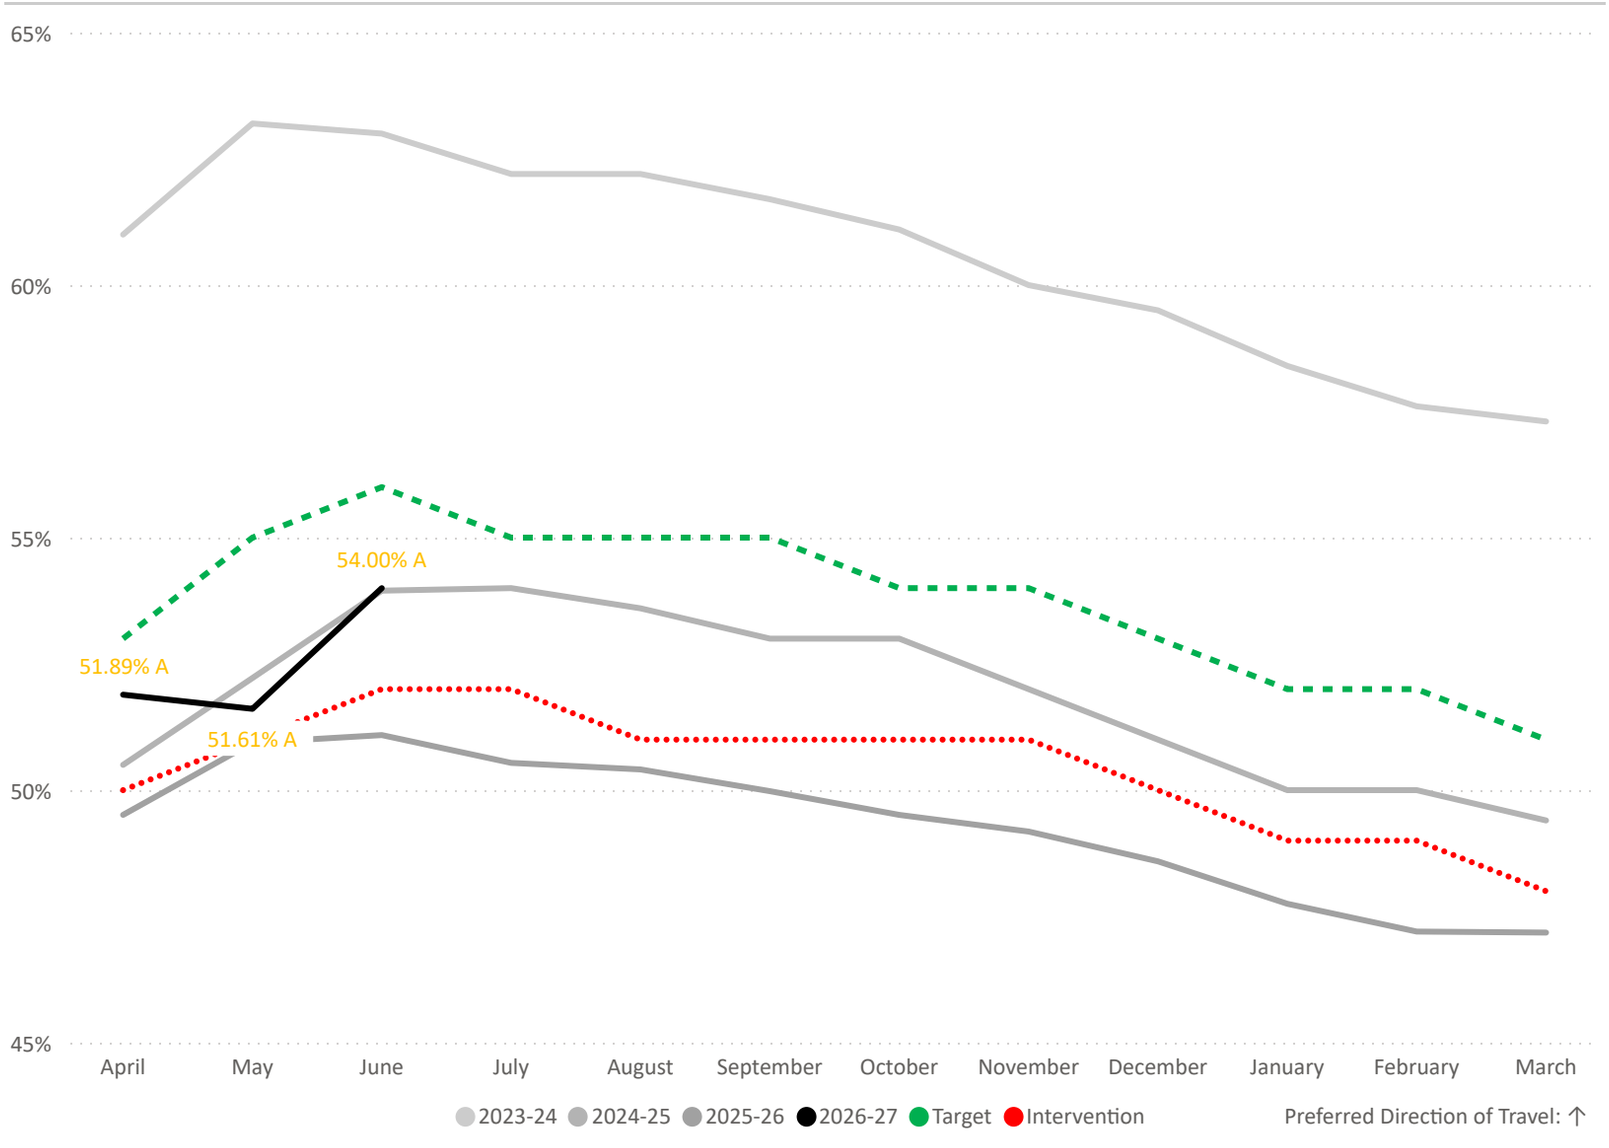
Latest projected outturn:

G

Outcome: Delivering good quality, high value for money services

PI 19: The percentage of household waste reused / recycled / composted (excluding food waste collections) (cumulative year to date)

The percentage of residential household waste that is reused, recycled or composted after being collected by HDC refuse crews. This is calculated as the total amount of recycling and garden waste divided by the total waste collected (excluding food waste collections).



Latest Commentary from Service:

In total for quarter 1, 15152.76 tonnes of residual waste, dry recycling and garden waste were collected from domestic properties across the district, with 54% either recycled or composted.

Positive performance in June drove performance for this metric upwards, with 56% of waste recycled or composted (2973.96 tonnes out of 5280.70 tonnes).

In quarter 1, 6962.70t of residual waste, 4022.26t of dry recycling, 4167.80t of Garden waste, and 1298.40t of food waste were collected, and with 9488.4 tonnes either recycled or composted, the recycling rate for Q1 is 58%

PATH TO GREEN - The Waste Minimisation Team continues to work with residents to encourage full use of the weekly food waste collection service. This helps to reduce the amount of food waste disposed of through the residual waste stream, contributing to improved recycling performance . The team also continues to promote the benefits of reducing food waste, supporting residents to minimise waste at source.

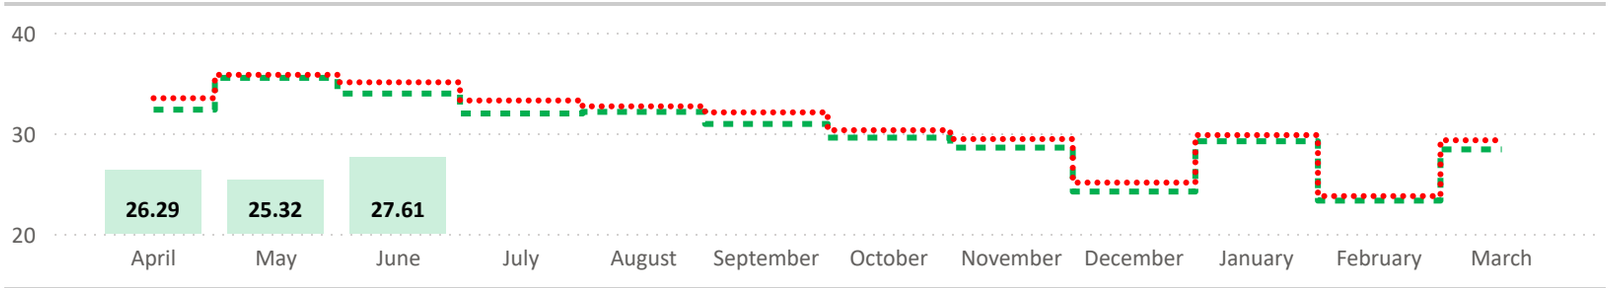
Latest projected outturn:

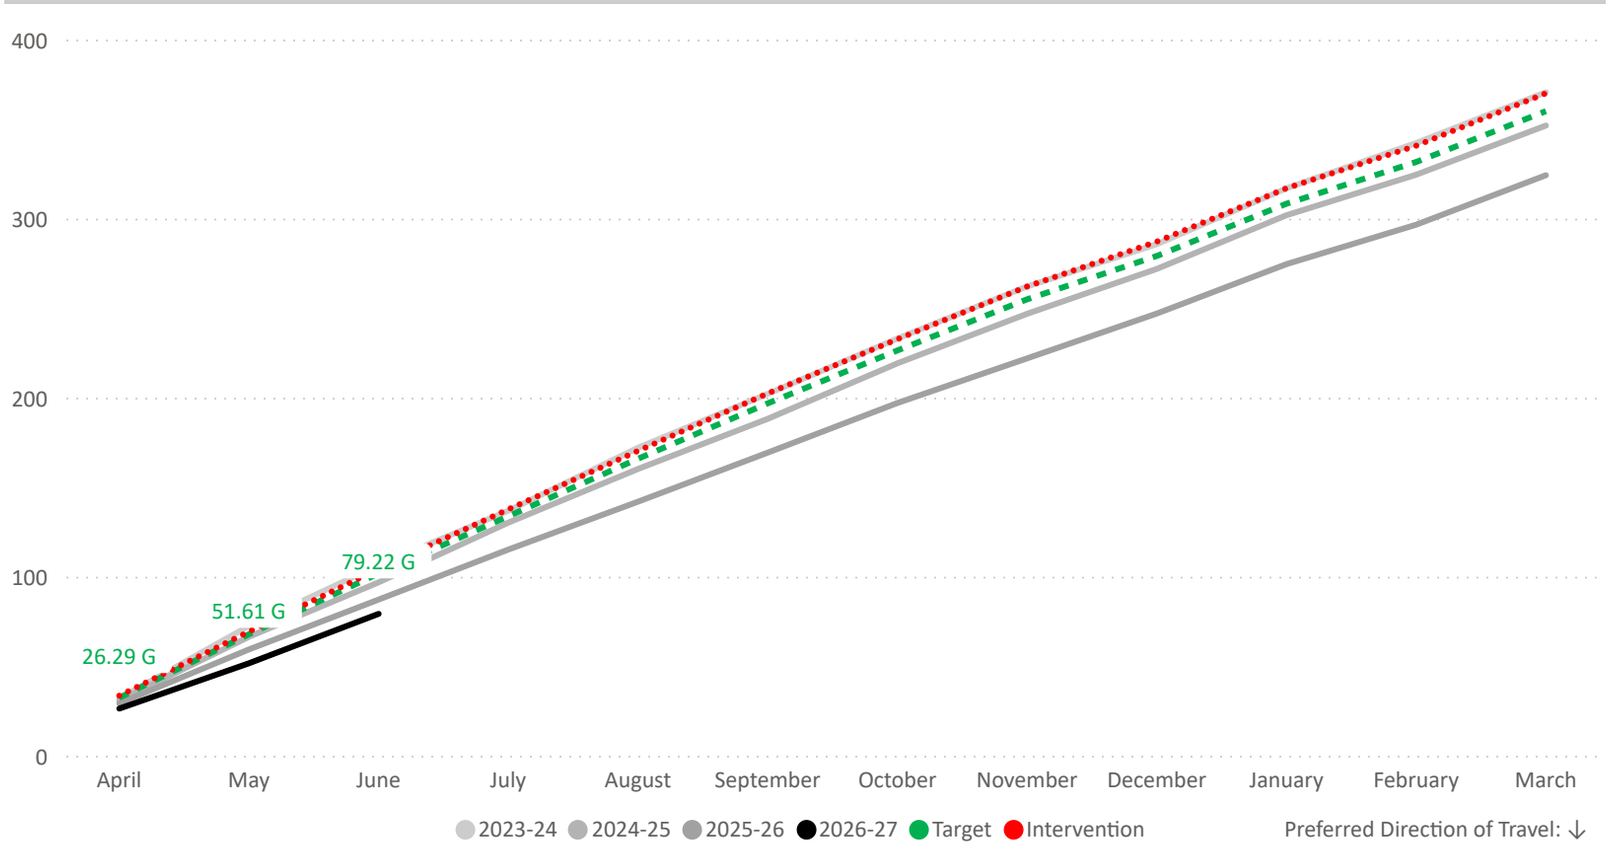
G

Outcome: Delivering good quality, high value for money services

PI 20: The collected household waste per person (kilograms, excluding food waste collections) (cumulative year to date)

The total amount of waste collected from residential households, divided by the total population of Huntingdonshire. The total waste collected is the sum of residual waste, recycling waste, and garden waste)





Latest Commentary from Service:

Household waste generation per person for June 2026 was 27.61 kg, based on the total residual waste, dry recycling and garden waste collected. This is 79.22 kg per person for the entirety of quarter 1.

In addition, 2.24 kg of food waste per person was collected during the month. Including food waste collections, the total household waste generated per person in June was 29.85 kg.

This remains below the UK monthly average of 34 kg per person.

With the inclusion of food waste, a total of 86.01kg per person has been collected in Quarter 1, with the monthly average sitting at 28.67kg/person.

Latest year-end forecast:

360.00

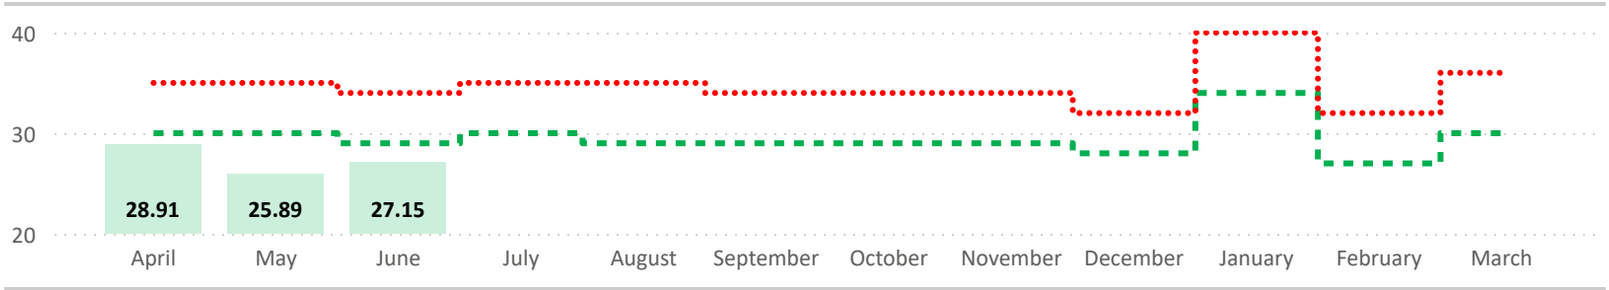
Latest projected outturn:

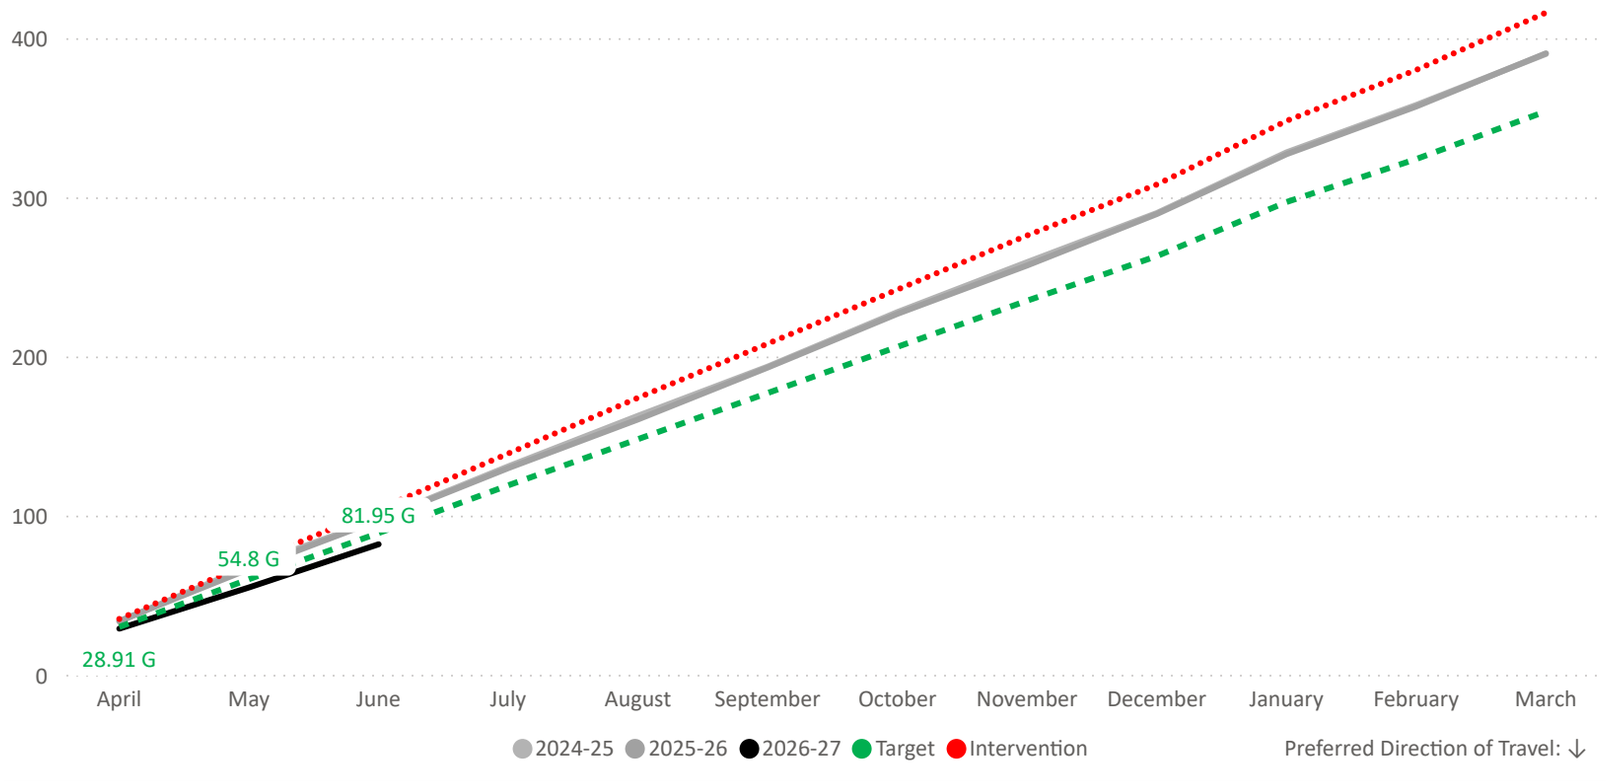
G

Outcome: Delivering good quality, high value for money services

PI 21: The residual waste collected per household (kilograms) (cumulative year to date)

The total weight of residual household waste collected from domestic kerbside collection divided by the number of households in Huntingdonshire. Residual waste is non-recycled and non-composted waste.





Latest Commentary from Service:

Residual waste collected per household in June was 27.15 kg, which is 1 kg more than last month, but is 3.71kg lower than the same period last year.

A further 5.05 kg per household was diverted through the weekly food waste collection service in June.

Performance continues to compare favourably against the UK average of 74 kg of residual waste per household per month.

In quarter 1, a total of 81.95kg of residual waste was collected per household.

Latest year-end forecast:

354

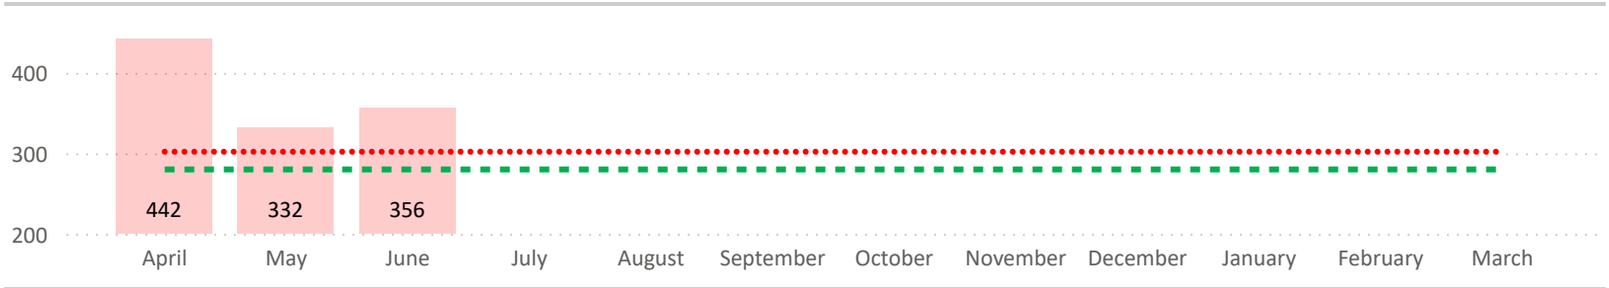
Latest projected outturn:

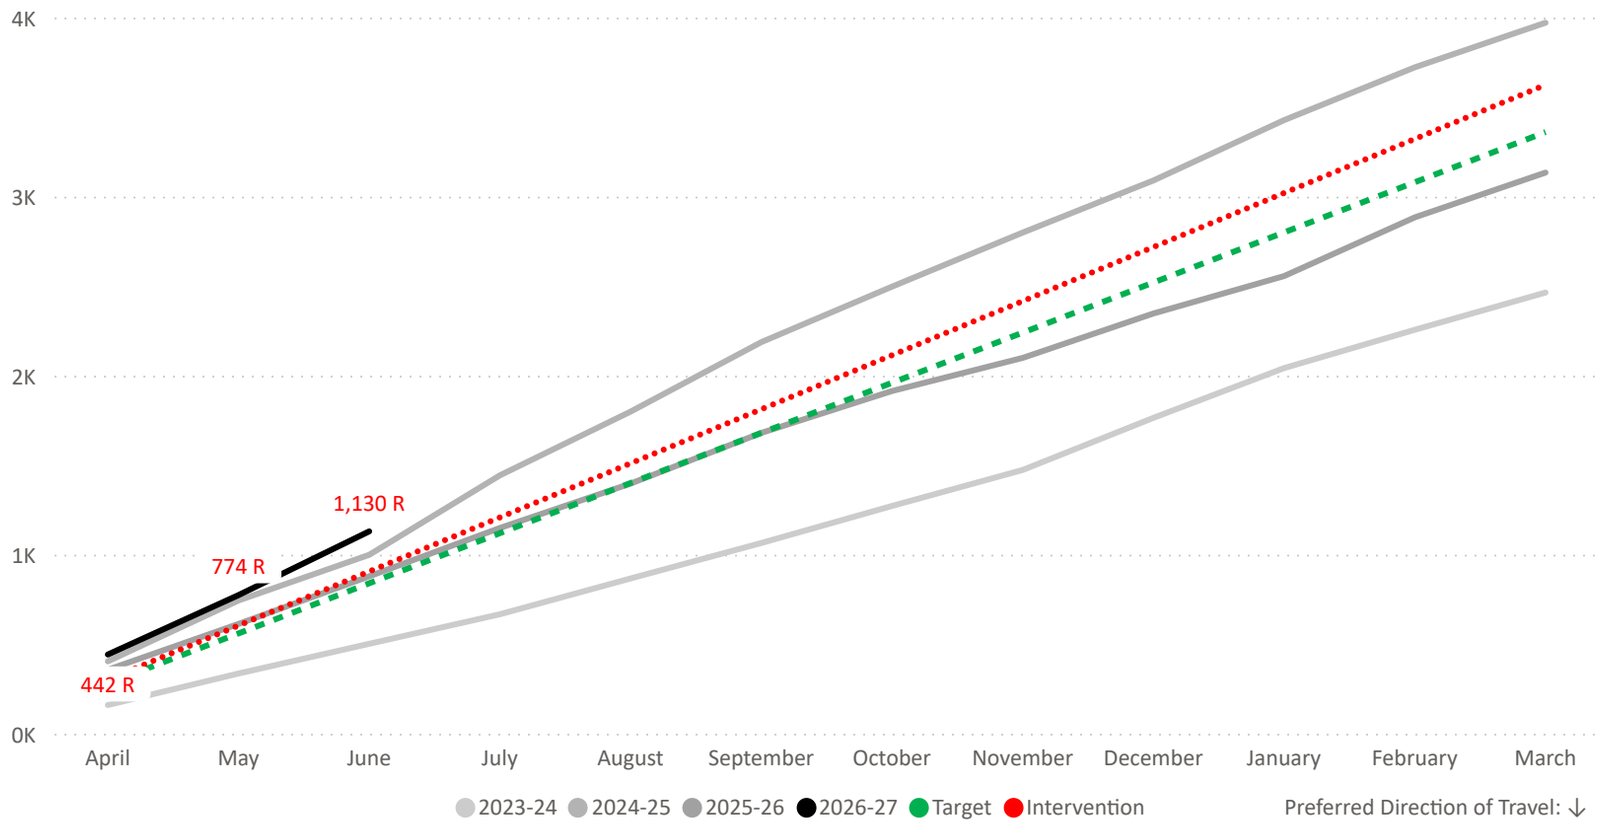
G

Outcome: Delivering good quality, high value for money services

PI 22: The number of missed bins (excluding Food Waste collections)

The number of resident bins that were reported as missed by residents, excluding food waste bins.





Latest Commentary from Service:

A total of 1,130 residual waste, dry recycling and garden waste collections were missed in quarter 1, with a missed collection rate of ~0.065%. This performance remains better than the APSE benchmark average of 0.076%, reflecting continued operational reliability and service quality.

We have experienced long-term sickness on all waste streams, so reliance is on agency staff, without knowledge of the rounds/areas. Whilst we do our best to mitigate this as much as possible, this has had an impact on the missed bins.

In quarter 1, a further 1,398 food waste collections were reported as missed; however, it must be noted that 1,038,081 collections were scheduled, as these collections are weekly. The missed rate equates to 0.13% of all collections made for the food waste service. Support for the teams continues to ensure the number of missed bins is reducing over the coming months.

PATH TO GREEN - Managers continue to work closely with the collection teams to monitor and reduce missed collections, and implement improvements where necessary. As agency staff continue to gain experience and become more familiar with collection routes and procedures, and as permanent staff return from periods of sickness absence, performance is expected to improve further, resulting in a continued reduction in missed collections.

Latest year-end forecast:

3,360

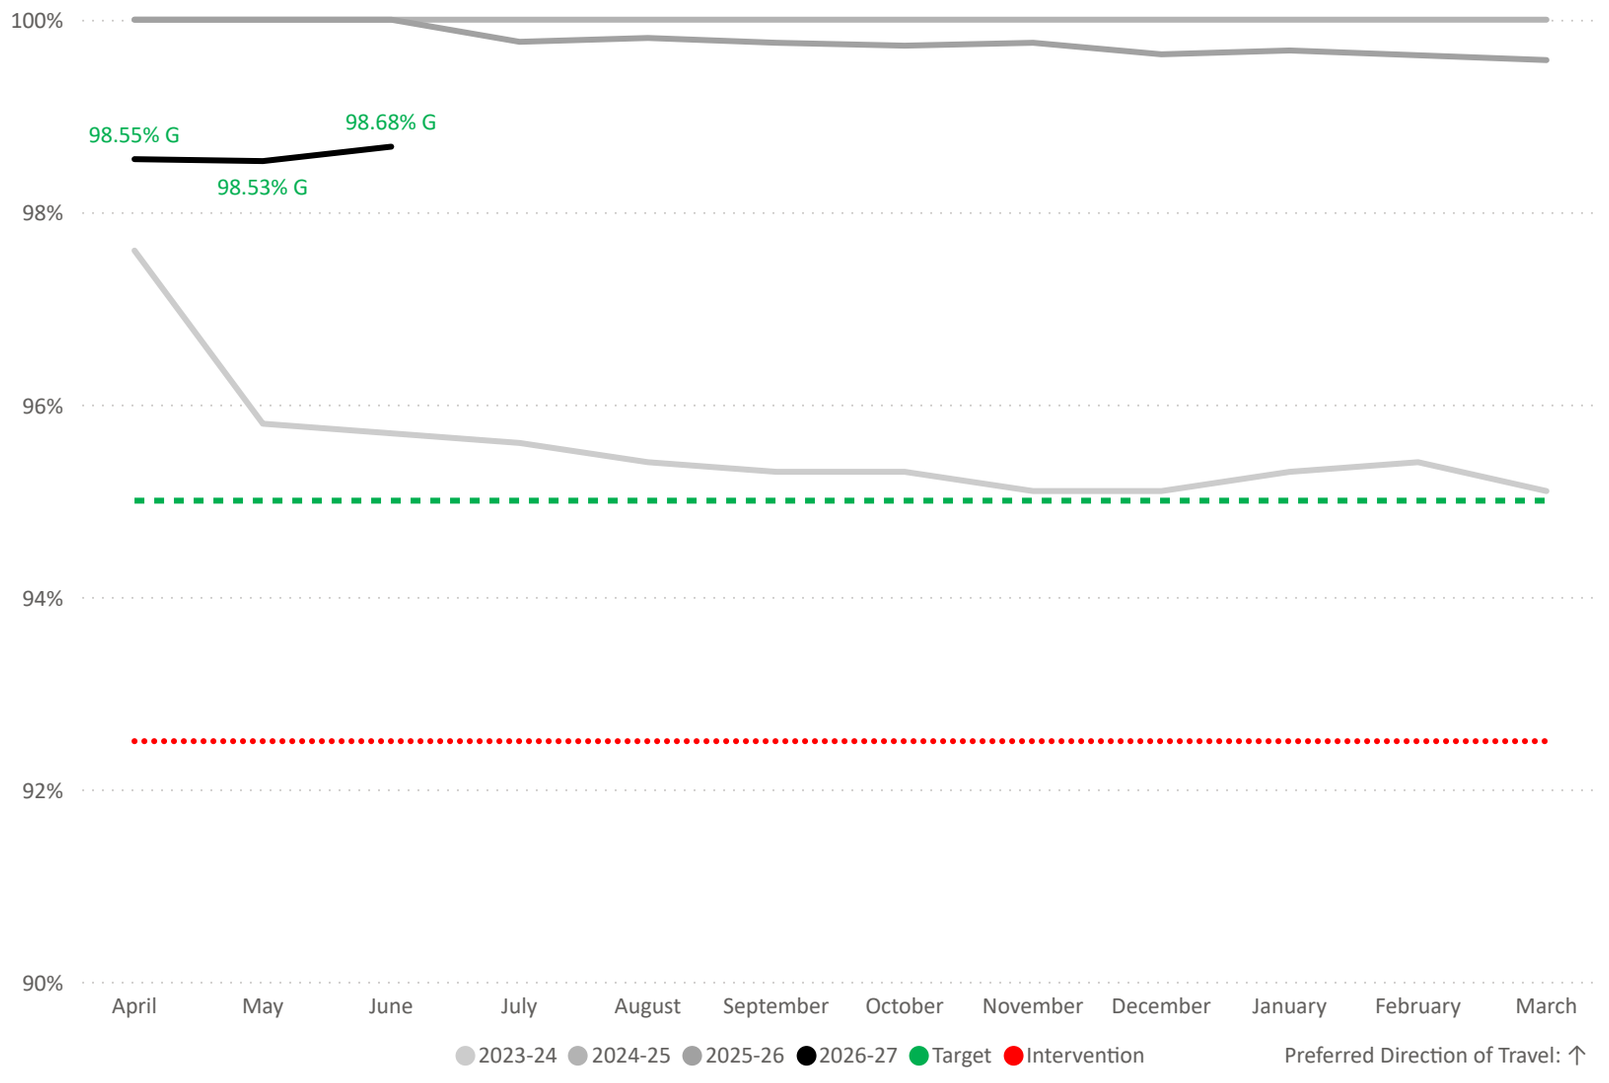
Latest projected outturn:

G

Outcome: Delivering good quality, high value for money services

PI 23: The percentage of sampled areas clean or predominantly clean of litter, detritus, graffiti, flyposting or weed accumulations

The percentage of sampled areas that are graded A or B by official APSE measurements, when considering for litter, detritus, graffiti, flyposting, and weed accumulations.



Latest Commentary from Service:

607 inspections were completed in quarter 1, with 8 failures. All of these failures were graded as Grade C under the street cleansing inspection grading system, which measures cleanliness on a scale from Grade A (very good) to Grade D (poor). A Grade C indicates that the area required attention to restore the expected standard but was not assessed as being in the lowest condition. Following the inspections, all identified issues were addressed and have since been rectified.

Latest year-end forecast:

95.00%

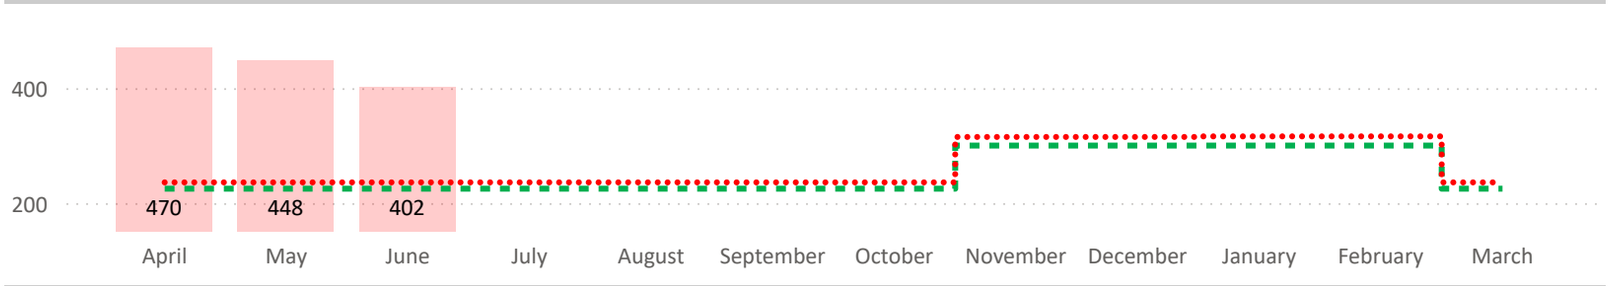
Latest projected outturn:

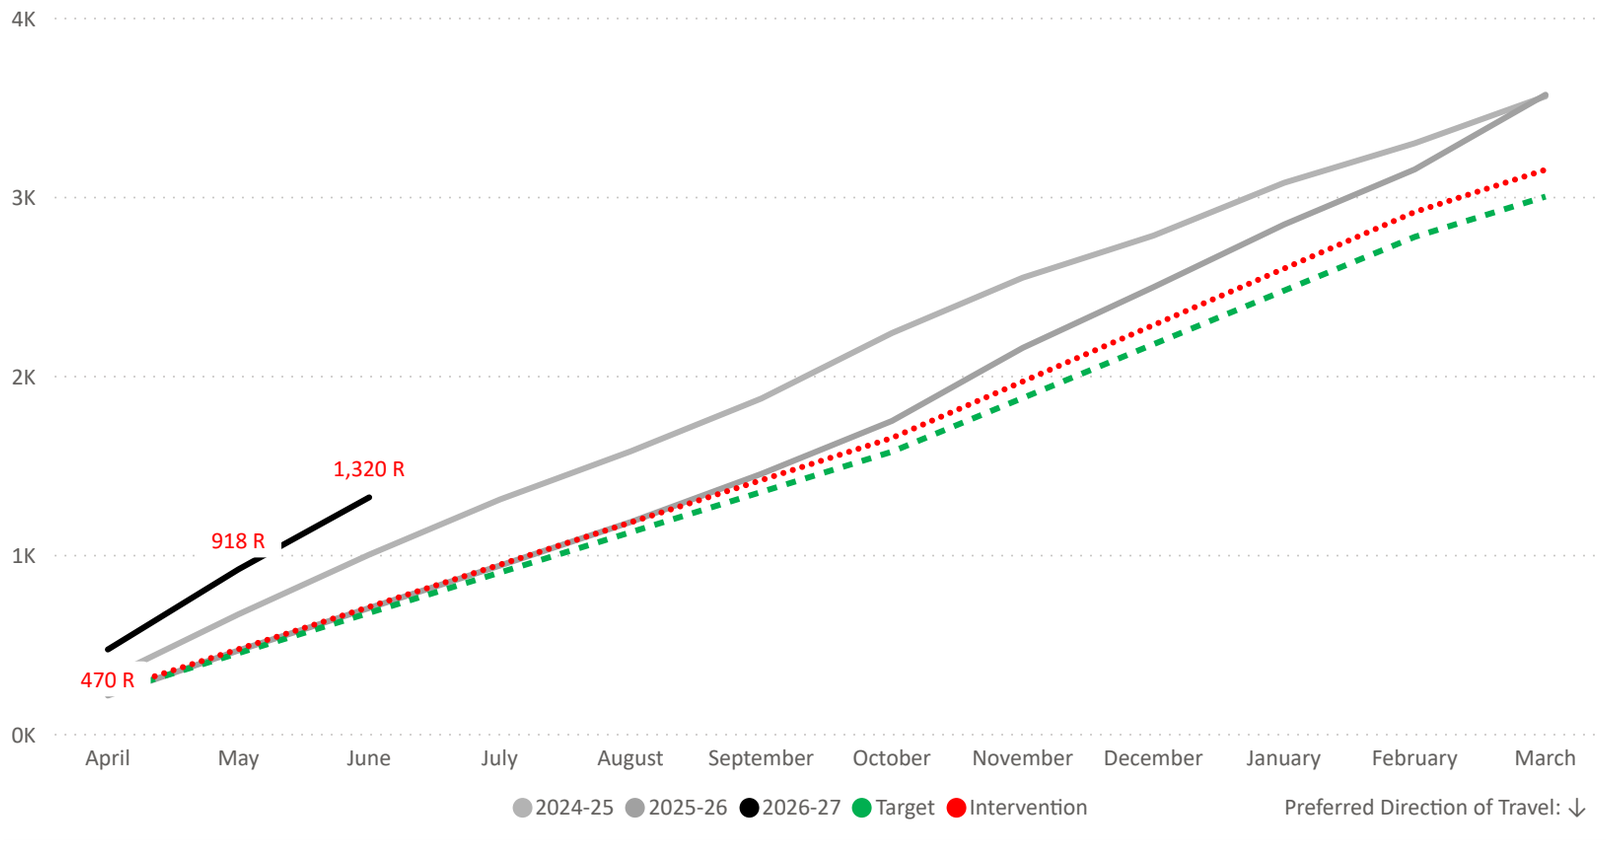
G

Outcome: Delivering good quality, high value for money services

PI 24: The number of flytips reported

The number of unique flytipping incident reported to HDC, with a flytip being the illegal dumping of liquid or solid waste on land or in water.





Latest Commentary from Service:

A total of 1320 flytips have been reported and cleared up in quarter 1.

The service continues to observe high numbers of small flytips, car bootloads or less, and mainly in residential areas.

PATH TO GREEN - Processes have been revised to strengthen our approach to identifying and tackling fly-tipping. We have reviewed previous data to identify trends and recurring patterns, enabling the creation of a list of fly-tipping hotspot locations. This list will be reviewed and updated monthly and shared with the Enforcement Team to support targeted prevention and intervention work.

In addition, fly-tipping and evidence-gathering procedures have been rolled out with the teams. This has reinforced the importance of consistently identifying, recording and handling any evidence found, helping to ensure a more effective and coordinated response to fly-tipping incidents.

Latest year-end forecast:

3,000

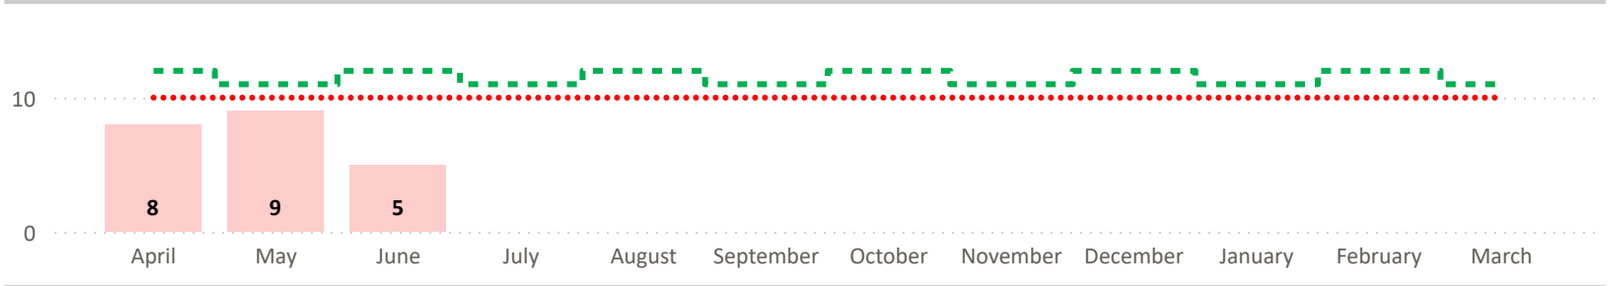
Latest projected outturn:

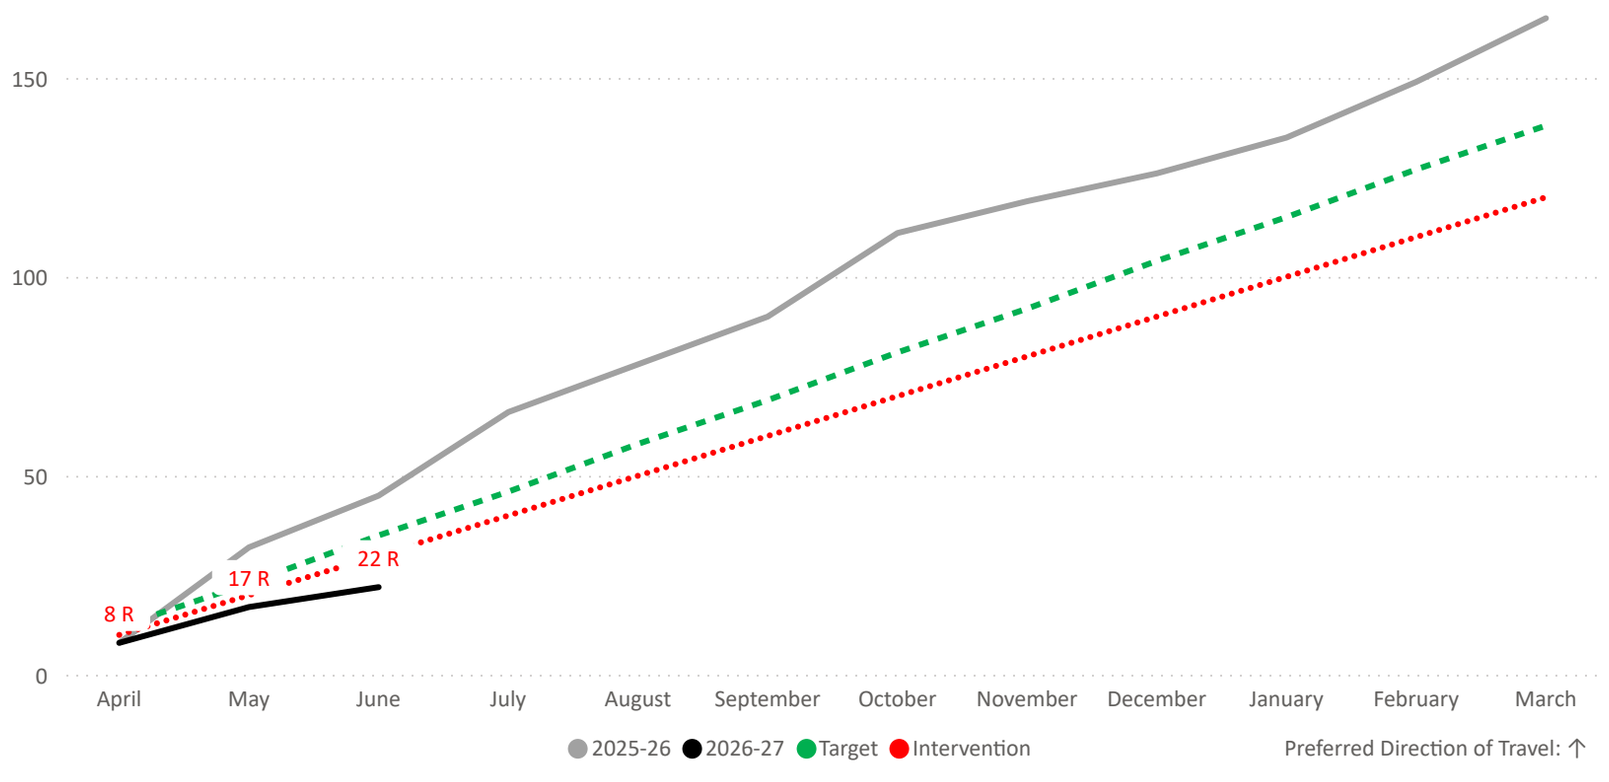
G

Outcome: Delivering good quality, high value for money services

PI 25: The number of sanctions against environmental crimes and anti-social behaviour

The total number of sanctions implemented by the Community Action Team. This includes all Intervention and Enforcement. The team aims to work with residents and the community to ensure that a Prevention before Intervention, Enforcement is used. The sanctions included within this KPI include CPW/CPN, Breaches of PSPO, FPNS's and Prosecutions.





Latest Commentary from Service:

Quarter 1 saw below-target sanctions against environmental crimes and ASB each month. The service continues to prioritise preventive actions compared to reactive actions.

PATH TO GREEN - The service will continue to complete fixed penalty notices and sanctions where there is sufficient means to, with no different action plan compared to 2025/26.

Latest year-end forecast:

120

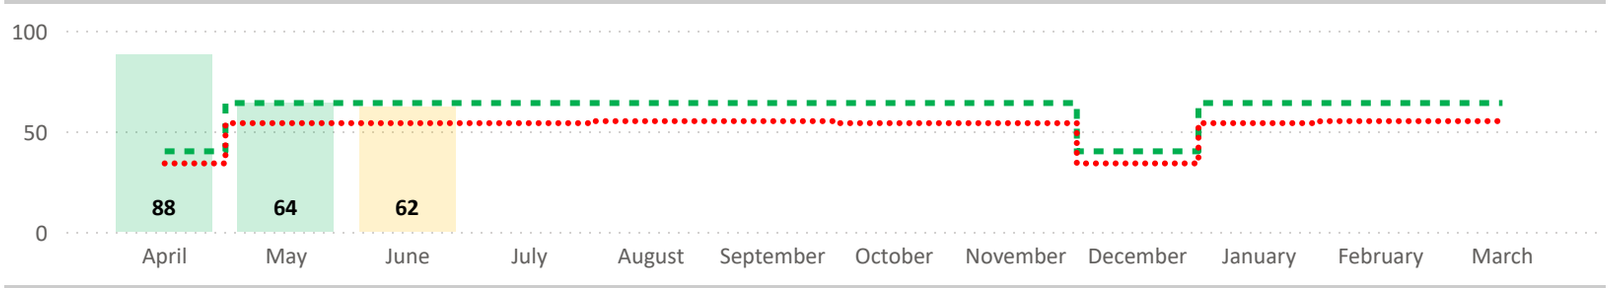
Latest projected outturn:

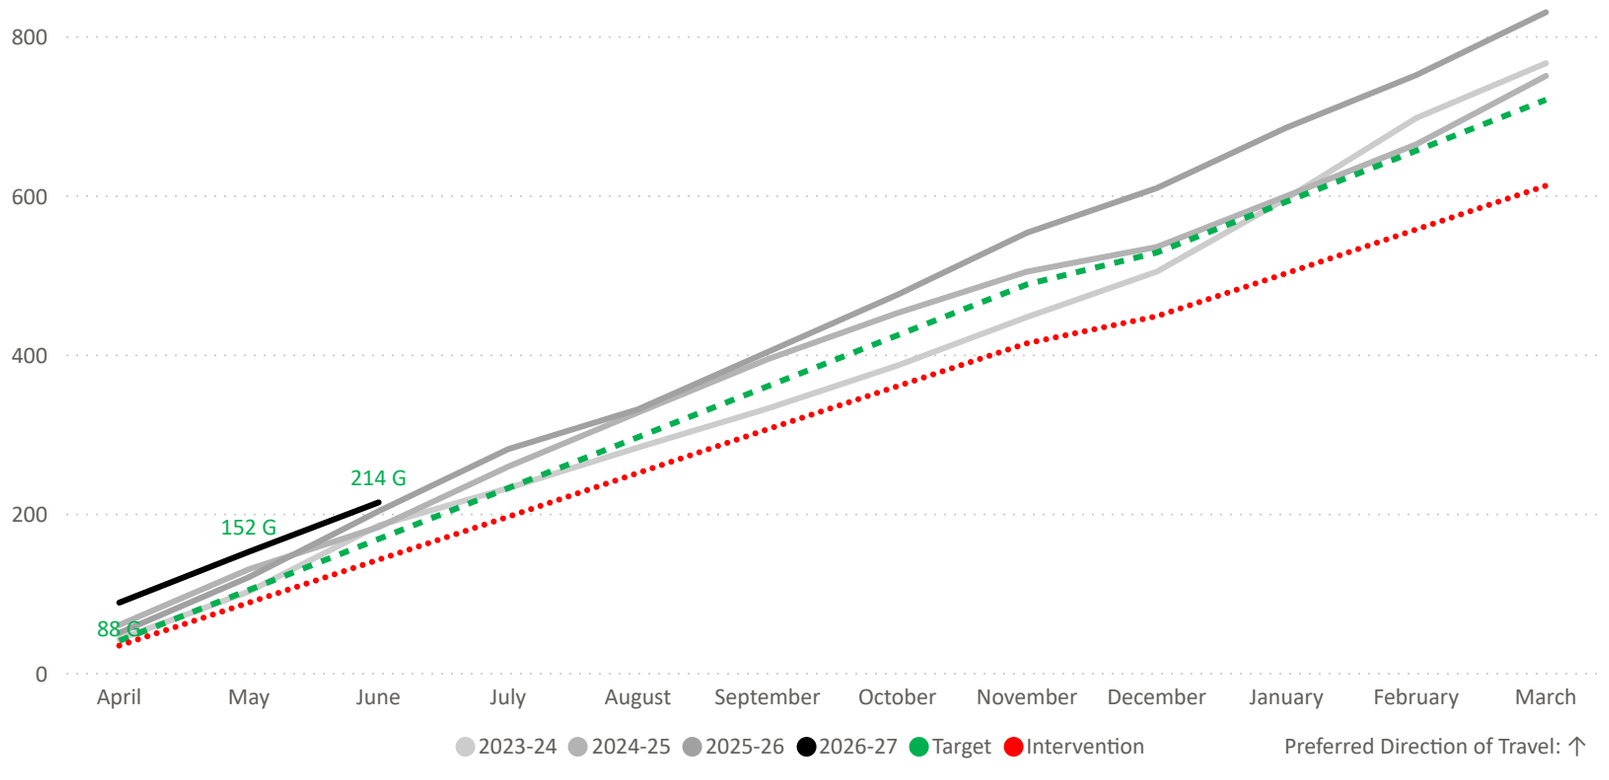
A

Outcome: Delivering good quality, high value for money services

PI 26: The number of programmed food hygiene inspections undertaken

The cumulative number of programmed food hygiene inspections that have taken place each month. This includes all full and partial programmed inspections due in year 2026/27 and any outstanding from previous years. Aborted inspections and closed premises inspections are also included in the figure but interventions using the alternative enforcement strategy are not included.





Latest Commentary from Service:

The number of food hygiene inspections is exceeding the target and the previous year's performance despite resource absence. The team continues to follow standards set out in the Food Law Code of Practice to ensure premises are inspected within 28 days of their inspection being due.

Latest year-end forecast:

856

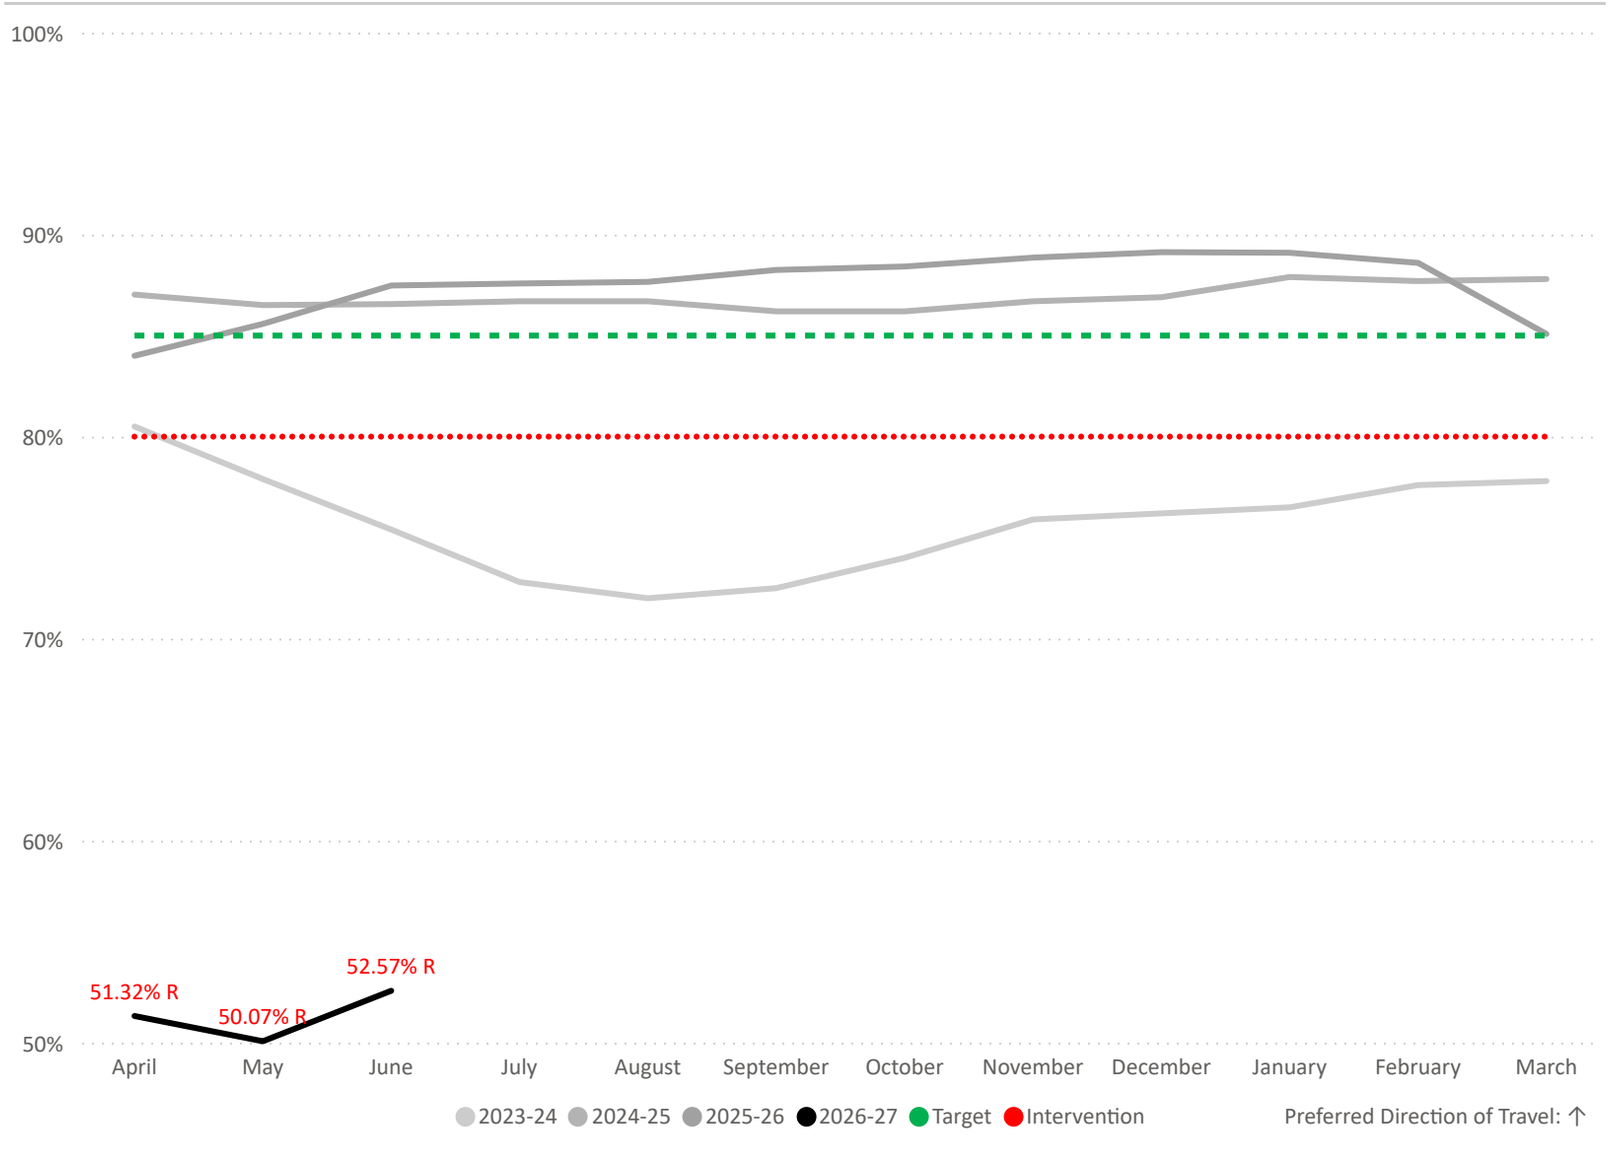
Latest projected outturn:

G

Outcome: Delivering good quality, high value for money services

PI 27: The percentage of calls to the Contact Centre answered

The answer rate of calls directed to Huntingdonshire District Council Contact Centre. This is calculated by the number of calls answered divided by the number of calls received. This is cumulative throughout the year.



Latest Commentary from Service:

Q1 performance was impacted by a short-term combination of increased customer demand, more complex enquiries and reduced available capacity. Call volumes were 25% higher than the same period last year with longer call durations, driven by several concurrent service pressures including implementation of the food waste service, garden bin renewals, annual billing, the new Citizen Portal, Council Tax text messaging and May elections.

These pressures were compounded by vacancies and sickness absence within Customer Services and service teams, together with the short-notice loss of the temporary support brought in to manage additional food waste contact.

Mitigating action was taken throughout the quarter. Lower-priority work was paused and email response times temporarily extended to ensure resources prioritised call handling. Live performance data was used to deploy staff where demand was greatest, and the team worked closely with back-office services to improve customer messaging, support demand planning and reduce avoidable contact where possible.

PATH TO GREEN - The position is expected to improve from August, with vacancies filled and staff undergoing training, and sickness absence has reduced significantly. While demand will continue to see peaks around monthly Council Tax reminder and summons activity, the service expects to return to the 85% answered-calls target from September and will continue to champion clear communication and digital self-service.

330

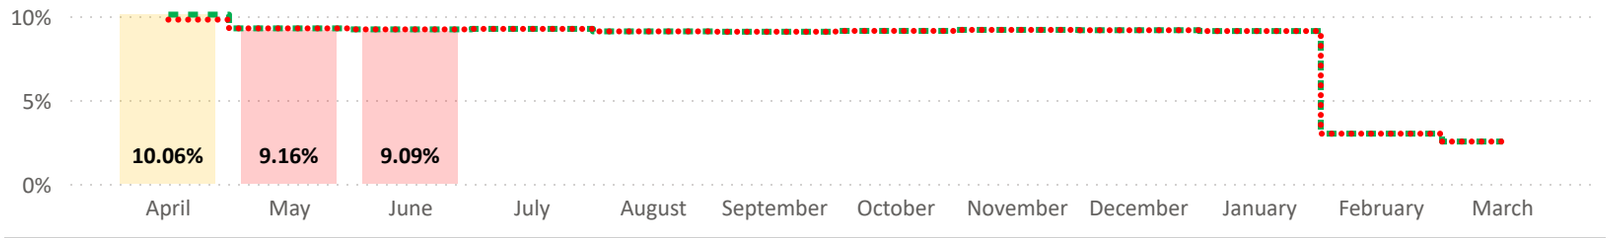
Latest projected outturn:

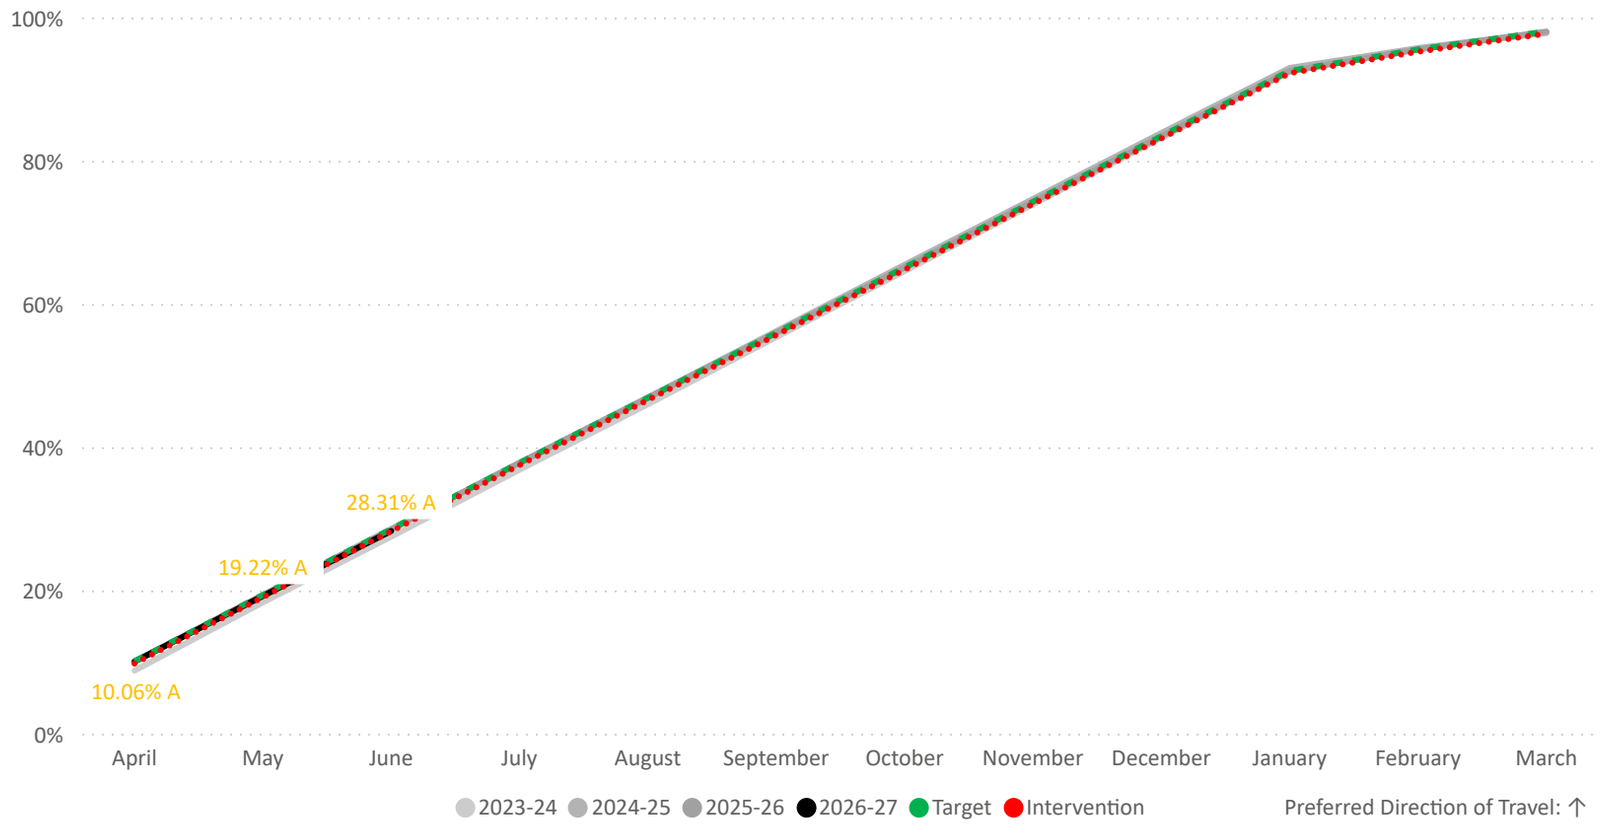
R

Outcome: Delivering good quality, high value for money services

PI 30: Council Tax collection rate

The percentage of Council Tax that has been collected compared to the total forecasted end-of-year Council Tax amount.





Latest Commentary from Service:

Council Tax collection rates do not always exactly follow the same trend as previous years and are influenced by a range of factors. Since the start of the financial year the net amount payable has increased by £450k, mainly as a result of 358 new properties being added to the Council Tax list as seen in PI10. Whilst the total annual Council Tax is added to the net collectable debit for the purposes of calculating the % collected, instalments may not yet be due for payment as at least 14 days notice of the first instalment must be provided. Residents have continued to opt to pay their Council Tax by 12months rather than 10, and the value of instalments due for payment in February and March 2027 has increased by £805k since the start of the financial year. The volume of reminders issued due to non-payment in Q1 reduced by 12% (858) when compared to the same period in the previous year, confirming that the slight reduction in collection is not due to non-payment, but reprofiling of instalments. This position will continue to be monitored throughout the year.

Latest year-end forecast:

98.05%

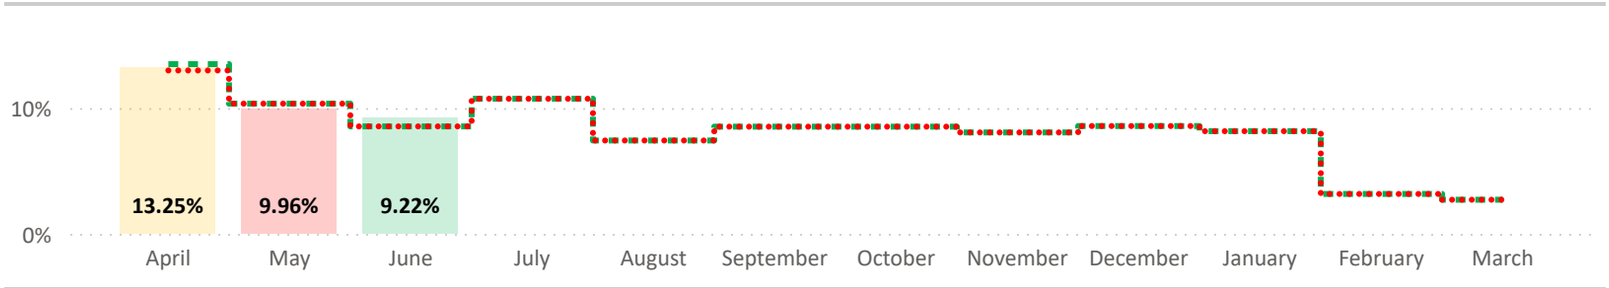
Latest projected outturn:

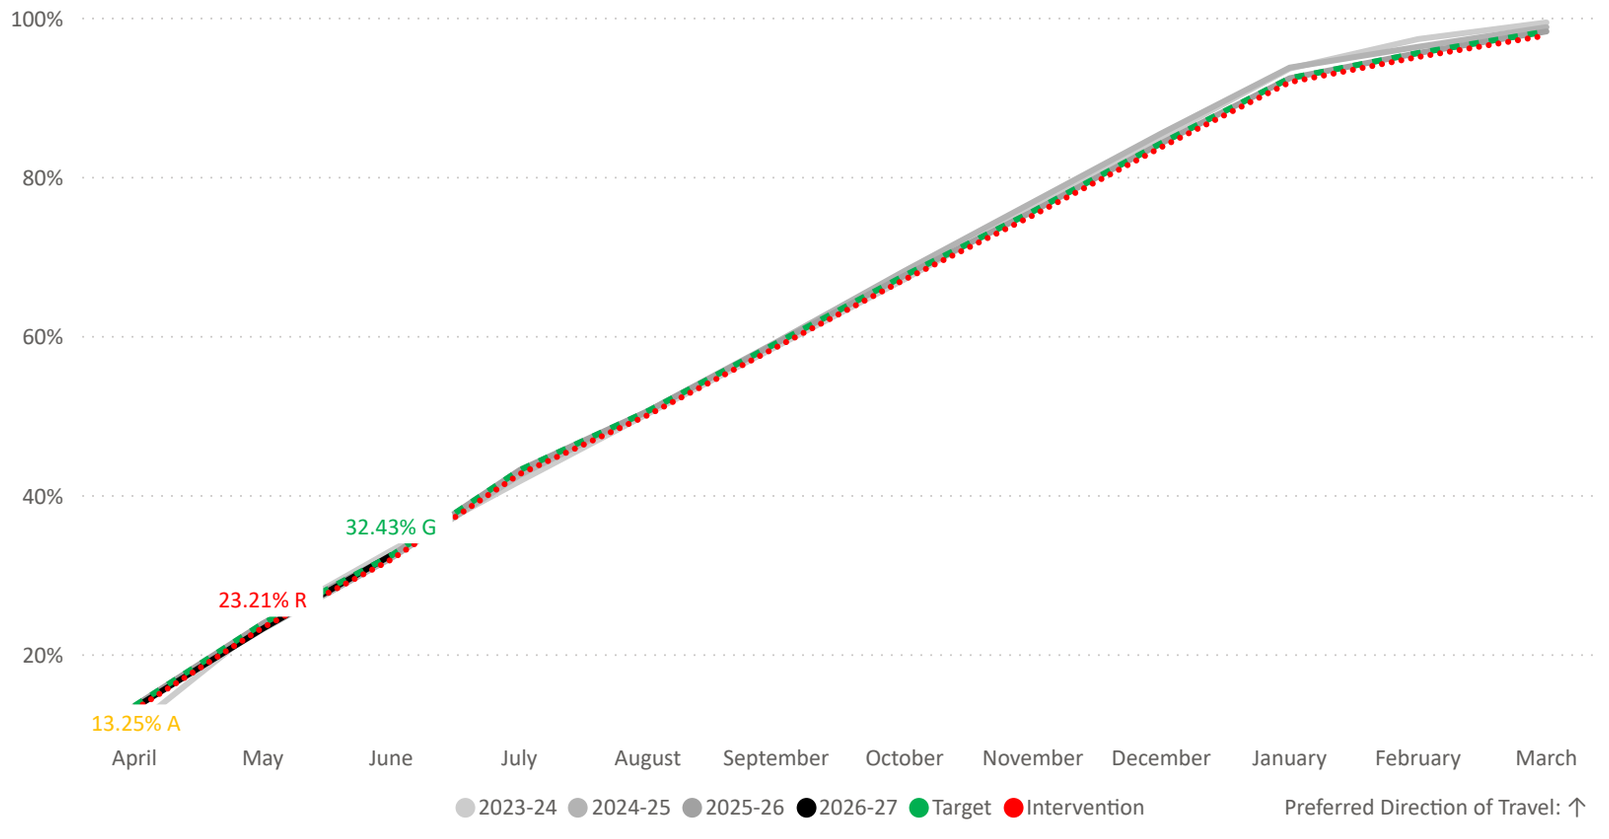
G

Outcome: Delivering good quality, high value for money services

PI 31: Business Rate collection rate

The percentage of Council Tax that has been collected compared to the total forecasted end-of-year Business Rates amount.





Latest Commentary from Service:

Software issues relating to Government-mandated changes that impacted collection in April and May have now been resolved, with performance now slightly above target for the end of Q1. As with Council Tax, monthly collection does not always follow previous trends exactly, and performance is continually monitored throughout the year.

Latest year-end forecast:

98.25%

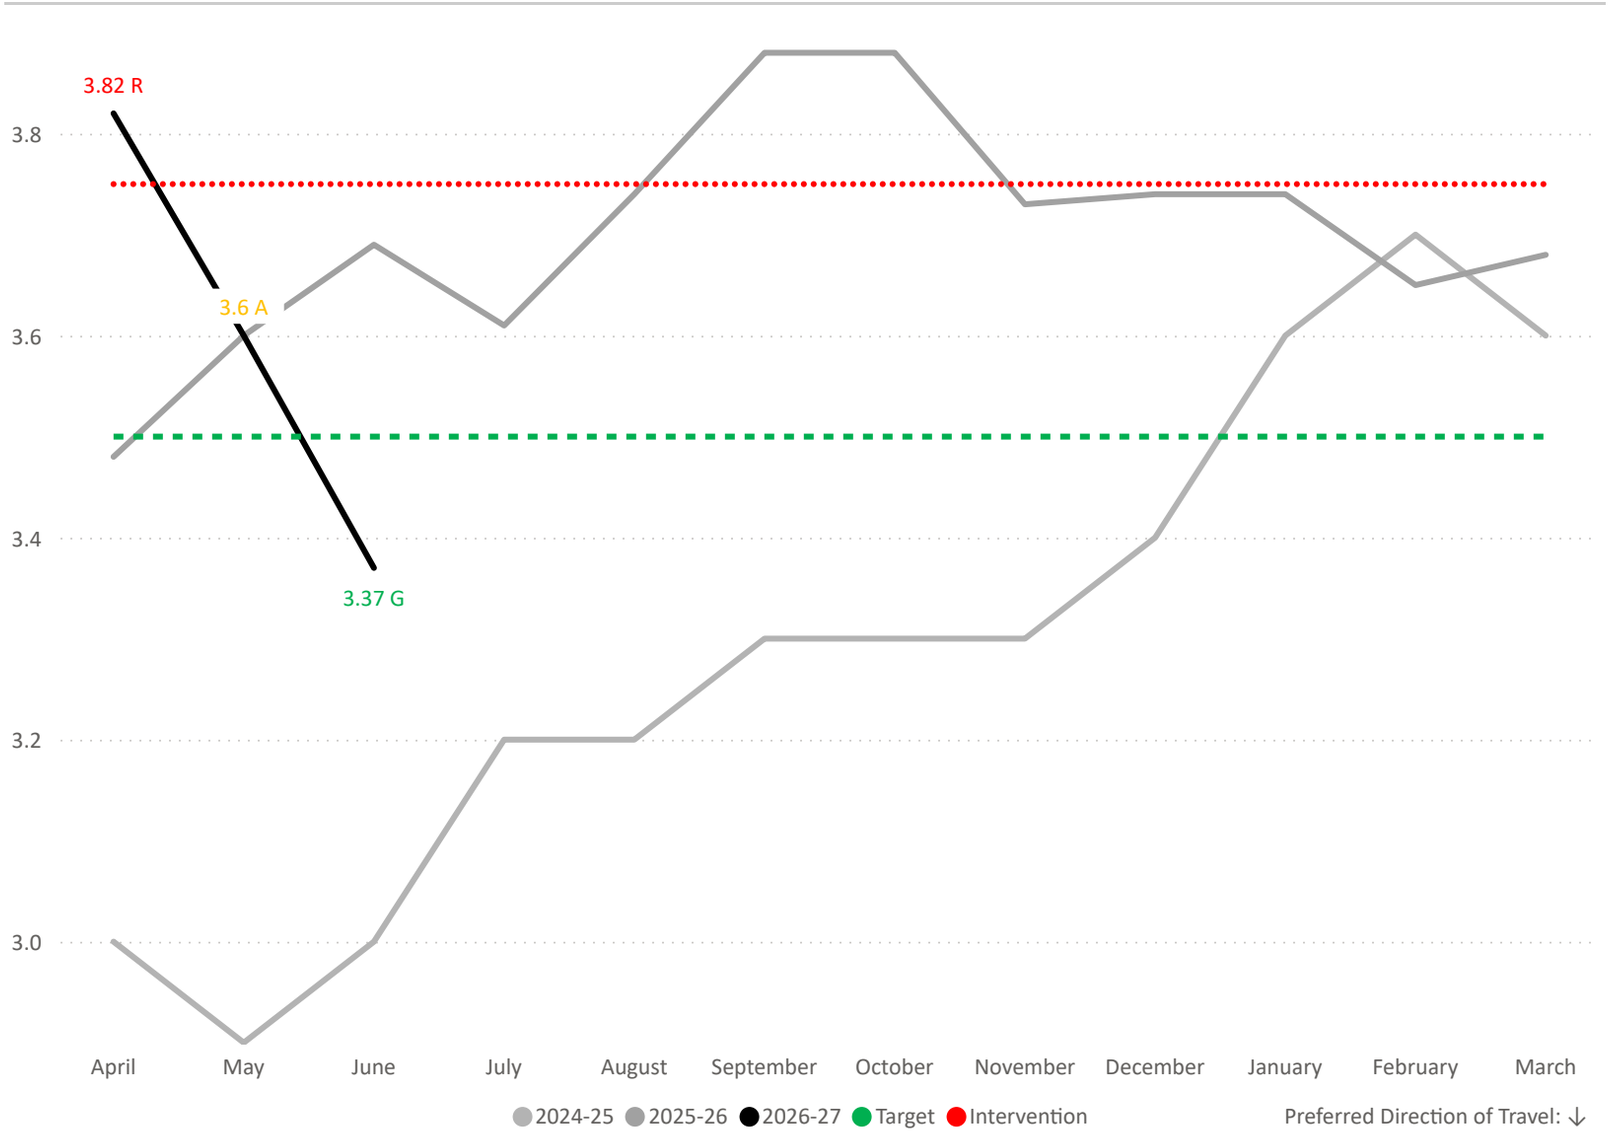
Latest projected outturn:

G

Outcome: Delivering good quality, high value for money services

PI 32: The number of short-term staff sickness days lost per full time equivalent (FTE) (rolling)

The number of short term sickness days taken per month, based on a 12 month rolling period, per Full Time Equivalent (37 hours). Short term sickness is defined as absences of less than 28 calendar days.



Latest Commentary from Service:

Extremely positive performance has occurred for short-term sickness, with 2 very positive months in May and June (as well as the removal of 2 quite negative months in May and June 2025, as it is a 12-month rolling average), which has meant that this metric is now within target. Coughs and Colds remain the highest reason for absence with 112 days taken in quarter 1. HR completed 10 As1's but had 23 outstanding. 5 probation sickness AS1's outstanding, and we completed 3 As2's with 15 outstanding. The sickness review group met and discussed what worked well and not so well with the sick absence process and any suggestions on how the process could be improved. HR have taken the feedback away and will be presenting a paper to CLT to consider in the next month.

Latest year-end forecast:

3.50

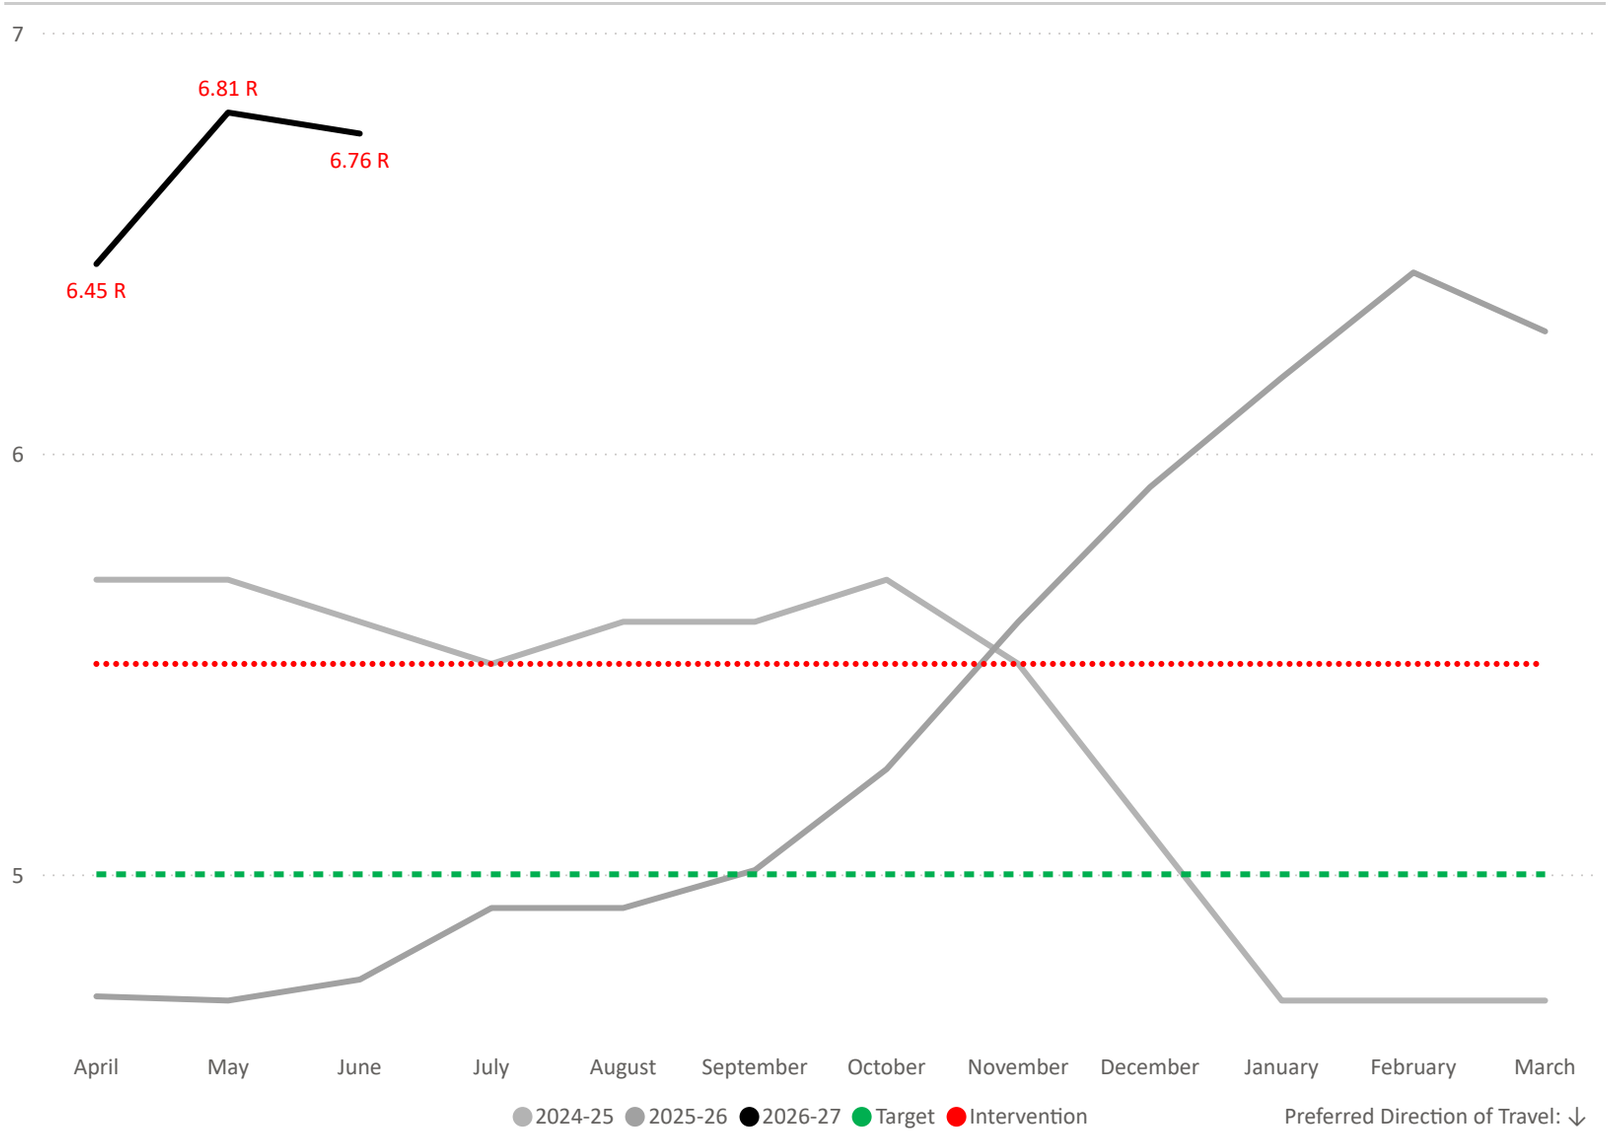
Latest projected outturn:

G

Outcome: Delivering good quality, high value for money services

PI 33: The number of long-term sickness days lost per full time equivalent (FTE) (rolling)

The number of long term sickness days taken per month, based on a 12 month rolling period, per Full Time Equivalent (37 hours). Long term sickness is defined as absences of over 28 calendar days.



Latest Commentary from Service:

Long-term absence is slowly reducing, losing 395 days in June compared to 460 in May; however, it has increased compared to March 2026. We had 19 live cases; 3 were managed out via the AS3 process, and 1 returned to work. We have 3 cases moving through the AS3 process and another case will leave next week on ill health retirement. Cases of 6 months or longer (8 cases) have reduced to 4, with 3 of those moving through the AS3 process and 1 hopefully returning to work next month. All remaining cases are being actively managed by HR.

PATH TO GREEN - The sickness review group met and discussed what worked well and not so well with the sick absence process and any suggestions on how the process could be improved. HR have taken the feedback away and will be presenting a paper to CLT to consider in the next month.

Latest year-end forecast:

6.00

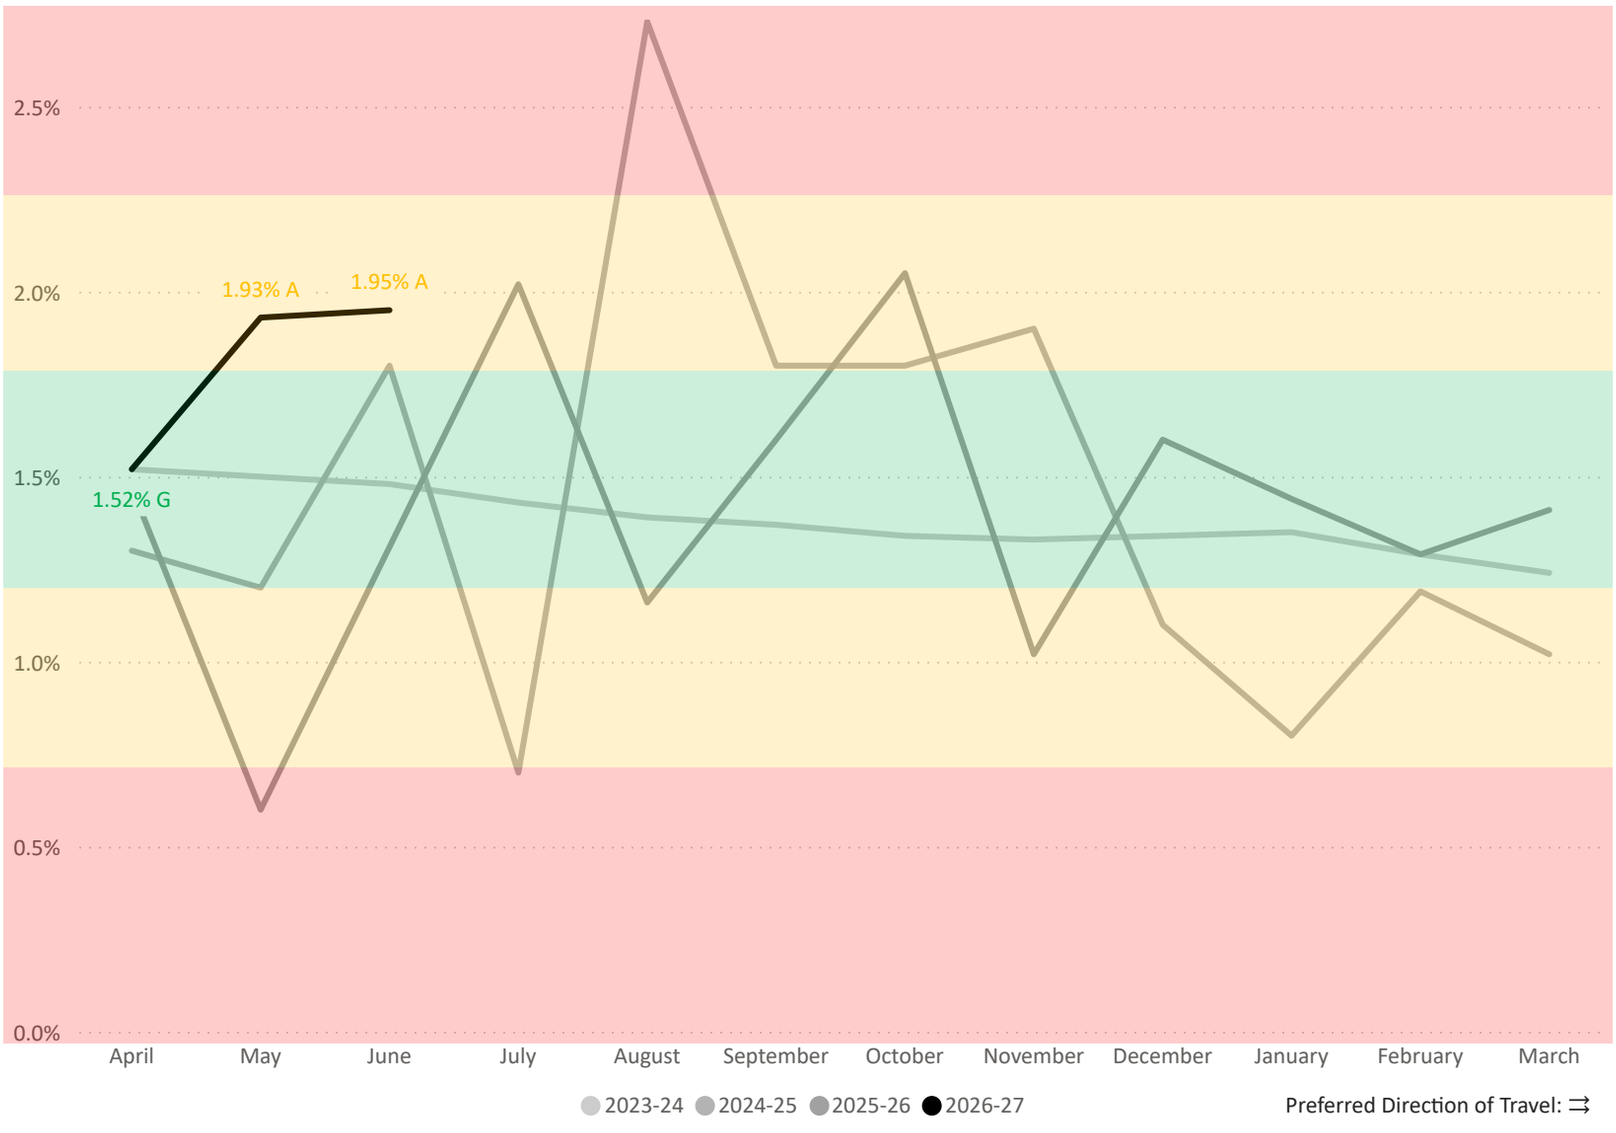
Latest projected outturn:

A

Outcome: Delivering good quality, high value for money services

PI 34: The percentage of staff Turnover (per month)

The number of contracted staff that have left the organisation compared to the average headcount of staff within the month. This includes terminations and resignations.



Latest Commentary from Service:

42 leavers were observed over the 3 months in quarter 1, with 35 of these being resignations for non-retirement purposes. This is slightly above a healthy turnover for the size of HDC, but would not be considered unhealthy. Completion of Exit questionnaires continues to be encouraged to source the root cause of officers leaving the organisation. No trend has been identified yet from the exit data, but HR will continue to monitor.

Latest year-end forecast:

1.50%

Latest projected outturn:
