5.805 The Regulation 19 version, Policy LP 55, broadens and strengthens this approach. The revised policy extends protection not only to public open spaces but also to outdoor sport and recreational facilities, reflecting the findings of the Council's Playing Pitch and Outdoor Sports Strategy (2022) and Indoor and Built Sports Facilities Strategy (2022). The policy provides a more comprehensive framework for managing proposals that could result in the loss of recreational assets and requires a more robust demonstration that facilities are surplus to requirements, have been replaced by equivalent or better provision, or that redevelopment would deliver wider community benefits. The revised wording improves consistency with the NPPF by explicitly recognising the importance of sport, recreation, physical activity, healthy lifestyles and social wellbeing.

5.806 The Regulation 19 policy therefore moves beyond a simple land protection policy and becomes a broader health, wellbeing and community infrastructure policy. It better integrates open space, recreation and sport provision within the wider growth strategy and infrastructure planning framework of the Local Plan.

5.807 The change to Policy LP 55 is material and the policy has therefore been reassessed. The updated appraisal concludes that LP55: Protecting our Open Spaces, Outdoor Sport and Recreational Facilities is expected to have significant positive effects in relation to SA5 and SA10, positive effects in relation to SA7, SA8 and SA15, and negligible effects across the remaining SA objectives. The table below shows the SA at Regulation 18 and again at Regulation 19:

SA Obj.	SA 1		SA 2	SA 3		SA 4		SA 5	SA 6		SA 7	SA 8	SA 9	SA 10			SA 11		SA 12		SA 13	SA 14	SA 15	SA 16
SA Reg 18	N	N	N	N	N	N	N	+	+	+	+	+	N	++	+	++	N	N	N	N	N	N	++	+
SA Reg 19	N	N	N	N	N	N	N	++	+	+	++	+	N	++	+	++	N	N	N	N	N	N	++	+

5.808 Both policy versions generate significant positive effects by protecting assets that support healthy lifestyles and community wellbeing.

5.809 **SA5 (Health and Wellbeing)** receives a significant positive effect because the policy safeguards access to open space, recreation and opportunities for physical activity.

5.810 The Regulation 19 version strengthens performance against **SA10 (Social Inclusion and Community Facilities)** through explicit protection of outdoor sport and recreational facilities as important community assets.

5.811 The revised policy also produces stronger positive effects for **SA7 (Landscape and Townscape)** and **SA8 (Environmental Quality)** through protection of multifunctional green spaces.

5.812 Overall, the Regulation 19 version of Policy LP 55 is the preferred option.

5.813 While both versions protect important community assets and deliver strong sustainability benefits, the Pre-Submission policy strengthens the relationship between open space protection, recreation, sport provision and healthy communities. It is supported by an updated and more comprehensive evidence base, including the Council's Playing Pitch and Outdoor Sports Strategy and Indoor and Built Sports Facilities Strategy, ensuring that decisions are informed by up-to-date assessments of community need.

5.814 The Regulation 19 policy secures broadly equivalent environmental benefits to the Regulation 18 version while delivering enhanced social and health outcomes. It provides clearer policy guidance, greater consistency with national planning policy, stronger protection of recreation infrastructure and improved justification for decision making. It also better supports the Local Plan's wider objectives relating to healthy lifestyles, community wellbeing, green infrastructure and sustainable placemaking.

5.815 Consequently, the Regulation 19 version achieves the strongest overall performance against the Sustainability Appraisal Framework, particularly SA5, SA7, SA8 and SA10. The policy therefore represents the most effective, justified and deliverable approach and is considered the version most appropriate.

Policy LP 55 Reasonable alternatives

5.816 The option of not including a policy to protect open spaces, outdoor sport and recreational facilities was not considered reasonable for Sustainability Appraisal purposes. National planning policy already places significant weight on protecting recreational land and sports facilities, recognising their contribution to health, wellbeing and community sustainability. Removing the policy would create uncertainty regarding the protection of locally important assets and would weaken the Local Plan's ability to support healthy lifestyles, social inclusion and high-quality places.

5.817 The realistic policy choice therefore relates to the level of protection and the scope of facilities covered. The Regulation 19 approach is preferred because it extends protection beyond open spaces alone to include outdoor sport and recreational facilities, providing a more comprehensive and evidence-based framework that better supports the sustainability objectives of the Local Plan and the SA Framework.

LP 56 Heritage Assets and their Settings

Policy numbering change

5.818 Draft Policy LP 53 has been retained as Policy LP 56. The purpose of this policy is to ensure that development proposals protect and conserve the district’s heritage assets and where possible enhance them and their settings.

5 Stage D - Consultation and development of the Plan

Changes since the Regulation 18 stage

5.819 The policy retains its original purpose and has not significantly changed. The SA from the Regulation 18 has been copied below:

SA Obj.	SA 1		SA 2	SA 3		SA 4		SA 5	SA 6		SA 7	SA 8	SA 9	SA 10			SA 11		SA 12		SA 13	SA 14	SA 15	SA 16
SA	++	N	++	N	N	N	N	N	N	N	++	N	N	N	N	N	N	N	N	N	N	+	+	++

5.820 The policy has not fundamentally changed, instead there has been refinement by adding reference to Heritage at Risk and amendments to the section addressing Archaeology. The updated policy is expected to achieve the same or stronger sustainability outcomes as the Regulation 18 version through improved implementation and heritage safeguards.

5.821 The Regulation 18 policy performed very positively against SA16 (Conserve, sustain and enhance designated and non-designated heritage assets and their setting(s)) and SA7 (Conserve and enhance the special qualities and integrity of our landscape and townscape character and the local distinctiveness of settlements) and positively against SA15 (Promote high quality design and placemaking that enables attractive, safe and resilient communities). It is expected that the refined wording will reinforce these positive outcomes.

5.822 The amendments improve clarity, certainty and deliverability while maintaining the same sustainability objectives and positive effects. The SA reassessment is therefore not considered necessary.

Policy LP 56 Reasonable alternatives

5.823 The Further Issues and Options document set out options for the Vision and Objectives based on the Huntingdonshire Futures Strategy which recognises the importance of conserving and enhancing the historic environment which underpin the Vision and Objectives in this Preferred Options Local Plan.

5.824 There is an existing statutory protection for designated heritage assets. Not setting out our approach to heritage and the historic environment is not a reasonable alternative as Local Plans are required in the NPPF to conserve and enhance them and comply with the legislative framework around the historic environment.

LP 57 Water related Development

Policy numbering change

5.825 Draft Policy LP 54 has been retained as Policy LP 57. The purpose of this policy is to set out the Council's approach to development proposals that relate to rivers, lakes and other water bodies within the district.

Changes since the Regulation 18 stage

5.826 The policy retains its original purpose and has not significantly changed. The SA from the Regulation 18 has been copied below:

SA Obj.	SA 1		SA 2	SA 3		SA 4		SA 5	SA 6		SA 7	SA 8	SA 9	SA 10			SA 11		SA 12		SA 13	SA 14	SA 15	SA 16
SA	N	N	+	++	++	N	N	++	+	+	+	+	++	+	+	++	N	N	N	N	N	N	+	++

5.827 The policy has not fundamentally changed, instead wording has refined for clarity when referencing the built-up area, a criterion has been added requiring berths outside of a built-up area to demonstrate sustainable access to services. Regarding Grafham Water text added to reference resilient water infrastructure to support growth across the region as well as locally. The policy already performed very positively regarding SA9 (All people have access to high quality affordable homes that meet their needs across their lifetime) and SA3 (Manage Huntingdonshire's water resources in a sustainable manner and reduce the risk from all potential sources of flooding to people, properties and the environment). The amendments provide clarity while maintaining the same sustainability objectives and positive effects.

5.828 The policy also performed positively against SA15 (Promote high quality design and placemaking that enables attractive, safe and resilient communities). It is expected that the refined wording will reinforce a more positive outcome.

5.829 The amendments provide clarity while maintaining the same sustainability objectives and positive effects. Considering this and that the text has already been appraised at the previous stage, SA reassessment is therefore not considered necessary.

Policy LP 57 Reasonable alternatives

5.830 The Further Issues and options document set out the following three options and the opportunity to suggest another regarding boat dweller accommodation:

A. Look for sites to allocate for new permanent residential moorings with access to basic facilities including water provision, waste disposal and electric hook-ups as well as being close to a safe walking or cycling route to local shops and services

B. Allow a proportion of moorings within existing leisure marinas to be used as permanent residential moorings Work with partners to ensure access to basic facilities for boat dwellers who prefer to continuously cruise

5.831 Not setting out our approach to water related development including boat dweller accommodation is not a reasonable alternative as Section 124 of the Housing and Planning Act 2016 creates a duty under Section 8 of the Housing Act 1985 to consider the needs of people residing in or resorting to a local authority area with respect to the mooring of houseboats as part of the periodical review of housing needs. The NPPF also requires local plans to assess and establish the size, type and tenure of housing needed for different groups in the community.

Assessment of Site Allocations

5.832 The information below provides a consolidated list of all Regulation 19 site allocation policies that require new or updated Sustainability Appraisal. These requirements arise where sites have been introduced or significantly amended resulting in material changes to their sustainability performance. The overall position between Regulation 18 and Regulation 19 is:

Table 6

Measure	Regulation 18	Regulation 19
Number of Allocated sites	67	68
Sites removed	-	4
New sites added	-	5
Site replacement	-	1
Strategic growth locations	5	5
Overall development strategy	Established	Maintained

5.833 In summary key changes are:

5 Stage D - Consultation and development of the Plan

Table 7

Change Type	Description
Reclassification of commitments	Existing strategic commitments in North Huntingdon and St Neots, including Alconbury Weald, Ermine Street and St Neots East, are identified separately from new allocations in the Regulation 19 Plan. Improved separation between committed development and proposed allocations for monitoring and implementation purposes. These changes improve clarity and do not alter planned development outcomes.
Sites removed	Five allocations identified in the Regulation 18 Plan were not carried forward and removed: • Ramsey 3: East of Wood Lane - this reduces allocations in Ramsey to two • Somersham 2: South of College Farm - this reduces allocations in Somersham to two • Bluntisham 1: South of Rectory Road - this reduces allocations in Bluntisham to two • Alwalton 1: North of 23-33 Oundle Road - this removes all allocations in Alwalton • Bythorn 1:West of Warren Lane - this site is replaced with Home Farm, Bythorn
New allocations	Three new village-scale allocations were introduced together with one replacement site in Bythorn: • Bythorn 1: Home Farm, Bythorn - this site replaces West of Warren Lane result in net net change in number of allocations in Bythorn • Catworth 1: Fruit Field, Catworth - introduces an allocation in Catworth • Ellington 2: Land west of Grafham Road, Ellington - increases number of allocations to two in Ellington • Grafham 2: South of Village Farm, Grafham - increases number of allocations to two in Grafham • Spaldwick 1: Land east of Stow Road, Spaldwick - introduces an allocation in Spaldwick • Ramsey Forty Foot 2: Woodlane Farm - - increases number of allocations to two in Ramsey Forty Foot
Renumbering and reclassifications	Some allocations were renumbered following the deletion of sites: • Somersham 3 in Regulation 18 became Somersham 2 and Somersham 4 in Regulation 18 became Somersham 3 after the deletion of former Somersham 2 South of College Farm • Bluntisham 2 in Regulation 18 became Bluntisham 1 and Bluntisham 3 in Regulation 18 became Bluntisham 2 after the deletion of former Bluntisham 1 South of Rectory Road Great Gransden was moved from the Local Service Village category to Village category meaning the employment allocation at South of Caxton Road (Great Gransden 1), was moved and no reclassified within the settlement hierarchy.
Strategic sites	The principal strategic growth locations remain unchanged: • Lodge Farm New Community for approximately 4,900 dwellings • Wyton Airfield New Community for approximately 4,000 dwellings

Change Type	Description
	• The Lattenburys New Community for approximately 3,800 dwellings • Giffords Park for approximately 1,750 dwellings • Tithe Farm, St Neots for approximately 1,100 dwellings These sites continue to provide the majority of planned growth and remain central to the spatial strategy.
Overall strategy	The spatial strategy and overall housing trajectory remain broadly consistent between plan stages.

5.834 The Submission Plan largely retains the spatial strategy established at Regulation 18, with the overwhelming majority of allocations carried forward. Amendments are targeted and proportionate, removing a small number of sites where further evidence, environmental constraints, deliverability considerations or consultation responses indicated that alternative sites would perform better against the sustainability objectives of the Local Plan. The additions and substitutions help maintain the overall housing land supply while improving the Plan's environmental performance and deliverability. Consequently, the changes between Regulation 18 and Regulation 19 do not alter the overall strategy but refine its implementation to ensure the Plan is justified, effective and consistent with national policy.

5.835 The full list of changes to sites allocation between Preferred Options stage and Pre-Submission Local Plan can be found in Appendix 'Appendix 7 - Table of site changes between Preferred Options and Pre-Submission'. It sets out all the proposed allocation sites in the Regulation 18 Preferred Options Local Plan and whether these have progressed into the Regulation 19 Local Plan. It identifies where sites have been removed and the new sites that have been added. A brief reason for the exclusion and inclusion of sites is also given in the table below. The table also identifies where policy references have been updated for ease of comparing sites between versions of the Local Plan.

5.836 The following sections group the Pre-Submission allocations into the LAA areas they were originally assessed in. Exceptions to these are the sites located within the North Huntingdon Growth Cluster, these were assessed in the north central and eastern LAA areas previously but have been identified separately here to reflect their location within the Growth Cluster. Commentary is provided on how each site performs regarding its performance against the sustainability framework looking at key themes such as climate resilience, biodiversity, landscaping and heirtage, housing, community facilities, accessibility and economic performance. A short conclusion for each site is provided.

5.837 Following the overview of SA performance for each allocation, the impacts regarding health and inequalities and cumulative impacts on each settlement is provided.

5 Stage D - Consultation and development of the Plan

North Huntingdon Growth Cluster Site Allocations

5.838 Allocated sites within the North Huntingdon Growth Cluster area are:

- North Huntingdon 1: Huntingdon Racecourse
- North Huntingdon 2: Land North of A141 between the Racecourse and A1307
- North Huntingdon 3: Lodge Farm, North of A141
- North Huntingdon 4: Wyton Airfield

5.839 There have been some material changes to three of the site policies since the Preferred Options stage, these are shown below. Therefore, further SA re-assessment is required for these sites. No additional sites have been allocated since the Preferred Options stage.

5.840 No additional sites have been allocated since the Preferred Options stage in the North Huntingdon Growth Cluster. The existing site allocation of Alconbury Weald and Ermine Street from the Local Plan to 2036 have been identified as a retained allocation. The sites benefit from existing planning permissions and are building out and is expected to do so into the the new Local Plan period. The rational of including a retained policy in the Local Plan to 2036 is to provide guidance for the determination of any future planning applications which are primarily expected to be reserved matters providing detailed information to enhance that provided through the outline planning permissions.

5.841 The table below demonstrates how site policies changed from the Preferred Options stage and the subsequent change in significant effect.

Site	Preferred Options Allocation	Submission Allocation	Housing / Development Change	Policy Change Relevant to Sustainability	SA Objective(s) with Significant Effect Change	Change in Significant Effect
North Huntingdon 2 – Land North of A141	B2/B8 employment allocation (up to 70% B8), protection of heritage assets, ecological assessment, employment and skills strategy.	Same site area and employment function. Adds bus depot/sustainable transport use, SSSI Impact Risk Zone assessment, stronger drainage/foul water requirements and archaeological provisions.	No housing change. Employment quantum broadly unchanged (240,000 sqm retained). Includes 1,000sqm for a bus depot	Greater emphasis on sustainable transport, biodiversity mitigation and skills provision.	SA6 Biodiversity SA12 Sustainable Transport SA13 Economy	SA6 improves from potential (–) (+) due to specific SSSI safeguards. SA12 likely improves from (+) (++) through bus depot/mobility function. SA 13 Significant positive economic effects remain unchanged (++).
North Huntingdon 3 – Lodge Farm	4,900 homes including c.450 supported living, c.260 extra-care, 280 C2 bedspaces; 3 primary schools and land for	4,900 homes retained; specialist housing expressed through tenure/needs-based approach. Adds innovation quarter, mobility hub, minimum 10% BNG, employment and skills plan,	Overall housing number unchanged. Delivery assumption unchanged.	Stronger biodiversity, transport integration, employment and climate resilience requirements.	SA6 Biodiversity SA11 Employment SA12 Transport	SA6 likely increases from (+) (++) due to explicit 10% BNG requirement. SA11 improves from (+) (++)

	secondary school explicitly specified. No BNG target.	natural flood management. Educational provision made more flexible.				SA12 improves from (+) (++) through mobility hub and active travel emphasis.
North Huntingdon 4 – Wyton Airfield	4,000 homes; 400 supported living, 240 extra-care; 250 C2 bedspaces; employment land excluding B8 except ancillary uses; reserved land for schools specified.	4,000 homes retained; care provision becomes needs-based; allows ancillary/"last mile" B8; integrated water strategy strengthened to include natural flood management; stronger settlement separation wording.	No housing change. Employment land unchanged.	Enhanced flood-management and settlement-separation provisions.	SA2 Climate Adaptation SA3 Flood Risk	Likely improvement from (+) (++) for SA2/SA3 because natural flood management is explicitly required.

North Huntingdon 1 – Huntingdon Racecourse

5.842 Based on comparison of the Preferred Options allocation and the Pre-Submission Local Plan, North Huntingdon 1 has not undergone a significant material change that would alter the overall Sustainability Appraisal conclusions. The allocation remains a mixed-use proposal centred on the retention and enhancement of the racecourse and associated leisure, recreation, equestrian and event-related activities, together with supporting development and infrastructure. The Pre-Submission Plan places greater emphasis on:

- coordinated delivery across North Huntingdon allocations;
- cumulative infrastructure planning;
- active travel connections;
- A141 infrastructure improvements;
- strategic green infrastructure integration;
- stronger sustainable transport expectations.

5.843 These changes largely strengthen mitigation and implementation mechanisms rather than altering the development proposition itself. The principal changes relate to greater specificity regarding flood risk management, ecological protection, landscape mitigation, wastewater capacity, transport assessments and sustainable travel requirements. Additional policy wording strengthens the approach to protecting nearby biodiversity assets, minimising visual impacts and securing infrastructure delivery. These modifications provide increased certainty over environmental mitigation and implementation but do not fundamentally alter the site's role, location, scale or overall development concept. Consequently, the sustainability performance of the allocation remains broadly unchanged and the previous SA conclusions remain robust.

North Huntingdon 2 – Land North of A141 between the Racecourse and A1307

5.844 Based on comparison of the Preferred Options allocation and the Pre-Submission Local Plan, North Huntingdon 2 has undergone some material refinement, but these changes do not significantly affect the overall SA conclusions. The allocation continues to perform the strategic employment and logistics role envisaged in the Preferred Options plan and remains a key component of the North Huntingdon Growth Cluster. The principal modifications include updated employment floorspace figures, stronger requirements for phased delivery, a more detailed emphasis on Employment and Skills Plans, and enhanced mitigation relating to landscape character, heritage assets, biodiversity, air quality, noise and water management. The Pre-Submission version also provides greater certainty

regarding infrastructure provision, wastewater treatment requirements, net zero measures and sustainable transport connections. These revisions improve clarity and strengthen mitigation measures, particularly for environmental objectives, but do not alter the allocation's strategic purpose as a major employment-led development. The overall SA findings therefore remain valid, with the site continuing to deliver strong economic benefits alongside manageable environmental effects subject to mitigation.

North Huntingdon 3 – Lodge Farm, North of A141

5.845 Based on comparison of the Preferred Options allocation and the Pre-Submission Local Plan, North Huntingdon 3 has not undergone a significant material change that would alter the overall Sustainability Appraisal conclusions. The allocation remains a large-scale mixed-use new community focused on delivering substantial housing growth, employment opportunities, education provision, community facilities, green infrastructure and sustainable transport connections. The principal changes comprise refinements to housing assumptions and phasing, enhanced requirements for health infrastructure, education provision, green infrastructure delivery, biodiversity net gain, water management and active travel connectivity. Additional detail has also been provided regarding place-making, skills and employment hub, the mobility hub, integrated water management and long-term stewardship arrangements. These modifications strengthen the certainty of delivery and mitigation while maintaining the same broad scale, land uses and strategic function. The allocation continues to generate significant positive effects for housing delivery, health, accessibility and economic growth, while environmental effects remain capable of mitigation. As such, the overall SA conclusions remain robust.

North Huntingdon 4 – Wyton Airfield

5.846 Based on comparison of the Preferred Options allocation and the Pre-Submission Local Plan, North Huntingdon 4 has not undergone a significant material change that would alter the overall Sustainability Appraisal conclusions. The allocation continues to comprise a major mixed-use new community delivering substantial housing growth, employment land, local centres, schools, community facilities, strategic green infrastructure and transport improvements within the North Huntingdon Growth Cluster. The key changes are refinements that provide greater certainty regarding the defence and innovation employment focus associated with RAF Wyton, park and ride facilities, public transport connectivity, infrastructure phasing, contamination assessment, wastewater management and biodiversity enhancement. The Pre-Submission plan also strengthens requirements relating to landscape protection, settlement separation, flood risk management, heritage considerations and sustainable design. These changes reinforce mitigation measures and improve confidence in implementation but do not represent a fundamental alteration to the allocation's role, scale, location or development strategy. The site's sustainability performance therefore remains broadly consistent with the Preferred Options assessment, and the previous SA conclusions remain appropriate and robust.

5.847 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

SA Objectives	SA1		SA2		SA3		SA4		SA5		SA6		SA7	SA8	SA9	SA10			SA11		SA12		SA13	SA14	SA15	SA16
North Huntingdon 1	N	+	-	--	_	--	_	-	+		--	+	_	-	N	+	+	++	+	++	++	++	++	-	+	+
North Huntingdon 2	+	+	+	++	--	+	--	--	-	++	+	++	_	-	N	+	N		--	++	++		++	N	_	-
North Huntingdon 3	++	++	+	++	--	+	--	--	++	++	++	++	_	-	++	+	++		--	++	++		+	+	-	+
North Huntingdon 4	++	++	++	++	--	+	++	++	++	++	++	+	++	-	N	+	++		++	+	+		+	+	+	+

North Huntingdon 1: Huntingdon Racecourse

5.848 The site is significantly constrained by flood risk, with the majority of the racecourse lying within areas susceptible to fluvial flooding and only a limited area within flood zone 1 suitable for more intensive built development. Nevertheless, the allocation directs development towards previously developed land and lower-risk areas, supported by site-specific flood risk assessment, sustainable drainage systems (SuDS), climate change allowances and integrated water management measures. These requirements help ensure that any development remains resilient to future climate impacts while avoiding increases in flood risk elsewhere.

5.849 The site lies within the Great Ouse Valley Green Infrastructure Priority Area and contains the Brampton Racecourse SSSI, with other ecological assets nearby including Brampton Meadow SSSI and Hinchingbrooke Country Park. Development therefore has the potential to affect biodiversity and ecological connectivity. However, the allocation requires retention and enhancement of green infrastructure, biodiversity net gain measures and sensitive management of visitor pressure. As a result, residual effects are considered neutral to positive provided the racecourse's environmental assets are safeguarded and enhanced.

5.850 The racecourse forms part of an important open landscape setting on the northern approach to Huntingdon. Extensive development could adversely affect landscape character and rural openness. However, careful siting, landscape buffers, structural planting and design requirements will limit visual impacts. While there are no major designated heritage assets within the site itself, nearby listed buildings require consideration through heritage assessment and sensitive design. Residual effects are therefore considered neutral.

5.851 The allocation supports the ongoing viability of Huntingdon Racecourse as a district-wide visitor attraction and enables growth in leisure, tourism and event-related activity. Additional employment opportunities and investment

5 Stage D - Consultation and development of the Plan

generated through complementary leisure and commercial uses contribute positively to local economic objectives. Community benefits also arise through the retention of recreational facilities and enhanced accessibility.

5.852 The site faces substantial flood risk and ecological constraints, but the Sustainability Appraisal indicates these can be managed through strong mitigation and a focus on limited development within the least constrained areas. The allocation supports tourism, leisure and economic objectives while maintaining strategic green infrastructure functions, giving rise to a broadly positive residual sustainability outcome.

North Huntingdon 2: Land North of A141 between the Racecourse and A1307

5.853 The site performs relatively well against climate resilience objectives, with approximately 91% of the allocation located within Flood Zone 1 and built development being accommodated in this area. Development requirements include SuDS, attenuation measures, strategic drainage infrastructure and climate-adapted design. Significant green infrastructure provision and landscape-led masterplanning provide additional resilience benefits and support carbon reduction ambitions.

5.854 Although no nationally designated ecological assets lie within the site itself, it adjoins important habitats including Brampton Racecourse SSSI and the Great Ouse Valley Priority Area. The allocation incorporates extensive green and blue infrastructure, biodiversity net gain requirements and ecological corridors. These measures provide opportunities to strengthen habitat connectivity while mitigating development impacts. Biodiversity effects are therefore assessed as neutral to positive.

5.855 Development of a strategic employment location will alter the existing agricultural landscape and could affect views from surrounding areas. Heritage considerations include nearby listed buildings and non-designated farmsteads whose settings require protection. The policy framework requires substantial structural landscaping, sensitive design and heritage assessment to minimise adverse effects. Following mitigation, landscape and heritage effects are considered broadly neutral.

5.856 The site represents one of the most significant employment allocations in the Local Plan and is expected to deliver substantial logistics, industrial and commercial floorspace with the capacity to support over 2,000 jobs. Its proximity to strategic transport routes and the wider North Huntingdon Growth Cluster strongly supports economic growth, inward investment and labour

5.857 North Huntingdon 2 generates significant positive economic and employment benefits and performs positively against climate adaptation and infrastructure objectives. Environmental effects relating to biodiversity, landscape and heritage can be effectively managed through embedded mitigation measures. The overall sustainability outcome is therefore strongly positive.

North Huntingdon 3: Lodge Farm, North of A141

5.858 The site performs favourably against flood risk objectives, with over 98% of the 317ha site located within flood zone 1. Strategic green infrastructure, drainage corridors and open space provision are embedded within the masterplan concept to manage surface water, address climate change risks and support long-term resilience. The allocation therefore performs positively against flood risk and adaptation objectives.

5.859 The allocation creates substantial opportunities for habitat creation, green infrastructure enhancement and ecological connectivity. Existing tree belts, hedgerows and woodland features provide a strong framework for biodiversity enhancement. While development will result in the loss of agricultural land, biodiversity net gain requirements and habitat-led masterplanning are expected to deliver a net improvement in ecological value over time.

5.860 Lodge Farm occupies a visually prominent location north of the A141 and development will extend Huntingdon's urban edge into the surrounding rural landscape. Significant landscape mitigation, green buffers and high-quality placemaking will be necessary to maintain separation from nearby settlements and minimise visual impacts. Archaeological potential

and heritage considerations will require assessment, but no overriding constraints have been identified. Residual effects are assessed as neutral following mitigation.

5.861 As a major strategic residential allocation, Lodge Farm makes a significant contribution to district housing needs and supports delivery of a broad range of housing types and tenures. The site benefits from proximity to Huntingdon's services, employment areas, education facilities and strategic transport improvements associated with the North Huntingdon Growth Cluster. Community infrastructure and active travel links further strengthen sustainability performance.

5.862 Lodge Farm performs strongly against housing delivery, accessibility and climate resilience objectives. Although landscape change will be significant, comprehensive masterplanning and environmental mitigation can successfully address identified constraints. The allocation is therefore considered capable of achieving a positive overall sustainability outcome.

North Huntingdon 4: Wyton Airfield

5.863 Wyton Airfield benefits from being predominantly located within flood zone 1 and comprises largely previously developed land, supporting efficient land use objectives. The scale of the site allows integrated drainage solutions, climate-resilient design and extensive open space provision. Consequently, the site performs positively against climate adaptation and flood risk objectives.

5.864 The allocation contains significant opportunities for strategic habitat creation, biodiversity net gain and enhancement of ecological networks associated with the wider Great Ouse Valley. Although nearby ecological assets require careful protection, the extensive green infrastructure framework proposed provides opportunities for substantial environmental enhancement and improved habitat connectivity. Biodiversity effects are therefore considered positive overall.

5.865 Redevelopment of the former RAF airfield will transform the existing landscape character. However, extensive masterplanning, woodland retention, green buffers and landscape enhancements will help establish a distinctive new community while avoiding coalescence with neighbouring settlements. The site's military heritage offers opportunities for place-making and local distinctiveness. Heritage effects are assessed as neutral to positive.

5.866 Wyton Airfield is a strategic new community allocation capable of delivering substantial housing, employment opportunities, social infrastructure and sustainable transport improvements. The site supports regeneration through reuse of previously developed land and aligns strongly with the North Huntingdon Growth Cluster vision and sustainability objectives. Long-term benefits include improved connectivity, investment, employment opportunities and support for district-wide housing delivery. Development can also support the enhanced sustainability of nearby settlements such as Wyton on the Hill who currently has very limited services.

5.867 The Sustainability Appraisal identifies Wyton Airfield as one of the strongest performing strategic allocations due to its scale, previously developed nature, infrastructure opportunities and capacity for comprehensive environmental mitigation. While careful management of landscape, heritage and ecological issues will be necessary, the site is expected to deliver a significantly positive overall sustainability outcome.

5.868 **Summary of Impacts on Human Health and Inequalities**

5.869 In relation to SA Objective 10 (Healthy Communities and Reduced Inequalities), all four North Huntingdon allocations and the retained allocations of Alconbury Weald and Ermine Street are expected to deliver positive residual effects. Huntingdon Racecourse supports recreation, tourism and employment opportunities; North Huntingdon 2 delivers substantial job creation and economic inclusion benefits; Lodge Farm provides new homes, active travel connections and access to services; and Wyton Airfield offers the most comprehensive package of housing, employment, green infrastructure and community facilities. Collectively,

these allocations contribute positively towards healthier lifestyles, improved access to employment and services, stronger community cohesion and reduced social and economic inequalities across northern Huntingdonshire.

Cumulative effects

5.870 The North Huntingdon Growth Cluster represents the largest concentration of planned growth in Huntingdonshire, comprising the existing Alconbury Weald and Ermine Street developments alongside the proposed allocations at Huntingdon Racecourse, Land North of the A141, Lodge Farm and Wyton Airfield. Collectively, these allocations would deliver substantial housing and employment growth, creating a new urban extension to Huntingdon and significantly expanding the settlement's strategic role within the district. The Local Plan identifies approximately 8,900 homes and around 198.5ha of employment land across the wider cluster, including major logistics, innovation, defence and business uses.

5.871 In cumulative terms, the principal effects are expected to relate to transport, healthcare, education, utilities and environmental infrastructure. Growth across all North Huntingdon allocations will increase demand on the A141 corridor, A1307, A14 junctions and connections into Huntingdon town centre. Significant strategic transport investment is already anticipated, including A141 improvements, new junction infrastructure, active travel routes, mobility hubs and enhanced public transport provision, which these sites can help to facilitate. Nevertheless, cumulative traffic generation from residential, employment and logistics development will require coordinated delivery of these interventions to avoid congestion and maintain network performance.

5.872 The combined allocations will also generate substantial demand for healthcare services. Whilst the cluster includes provision for new neighbourhood health facilities and the redevelopment of Hinchingbrooke Hospital, cumulative population growth will increase pressure on existing primary healthcare services and hospital facilities. Similarly, demand for education provision will rise significantly, requiring delivery of new primary schools, secondary school capacity, early years provision and specialist educational facilities across Lodge Farm and Wyton Airfield.

5.873 The cumulative effect on water supply, wastewater treatment and drainage infrastructure will also be notable. Evidence indicates that Water Recycling Centres that serve these sites will likely to require future upgrades to accommodate planned growth, whilst integrated water management strategies and sustainable drainage systems will be essential to address flood risk and surface water management across the cluster.

5.874 Notwithstanding these infrastructure requirements, the concentration of housing, employment, healthcare, education and community facilities within a highly sustainable location is expected to generate positive cumulative effects by creating new communities supported by a broad range of services, jobs and sustainable transport opportunities, reducing the need for longer-distance travel and strengthening Huntingdon's role as one of the district's principal growth locations.

North Huntingdon 1: Huntingdon Racecourse

5.875 Huntingdon Racecourse is a mixed-use allocation focused on retaining and enhancing the existing racecourse, equestrian and leisure functions while supporting complementary development. When considered alongside the wider North Huntingdon Growth Cluster, the site contributes relatively modest population growth but forms an important component of the area's leisure, recreation and visitor economy.

5.876 In cumulative terms, the site is likely to increase traffic associated with residential growth, leisure activities, conferences, events and race day operations. Combined with development at Lodge Farm, Wyton Airfield and the adjacent employment allocation, this will contribute to additional pressures on the A141 corridor and surrounding junctions. Sustainable transport improvements and enhanced walking, cycling and public transport connections will therefore be important to managing cumulative effects.

5.877 The site will also contribute to cumulative demands on healthcare and education services generated across the wider cluster, although these effects are expected to be proportionately smaller than those arising from the larger residential-led allocations. Environmental considerations are

particularly important at this location given the proximity of Brampton Racecourse SSSI, the Great Ouse Valley and areas of flood risk. In combination with neighbouring allocations, careful ecological management, flood mitigation and green infrastructure provision will be required to avoid adverse cumulative effects.

5.878 Overall, the allocation is expected to complement the wider growth strategy by reinforcing leisure, recreation and tourism functions whilst contributing to a balanced mix of uses within North Huntingdon.

North Huntingdon 2: Land North of A141 between the Racecourse and A1307

5.879 North Huntingdon 2 is a major employment-led allocation focused primarily on logistics, industrial and distribution uses. Together with employment growth at Alconbury Weald, the defence and innovation activities associated with Wyton Airfield and employment provision at Lodge Farm, the site will significantly strengthen North Huntingdon's economic role within the Oxford-Cambridge growth corridor.

5.880 The principal cumulative effect is likely to relate to transport. Logistics and distribution operations have the potential to generate substantial HGV movements which, combined with residential growth across the cluster, will increase pressure on the A141, A14 and wider strategic road network. Proposed highway improvements, active travel connections and public transport infrastructure will therefore be critical to mitigating cumulative effects.

5.881 The employment allocation is expected to generate a large number of new jobs and help improve the balance between homes and employment within the wider growth area. This may reduce out-commuting and support more sustainable travel patterns when considered alongside the nearby residential allocations.

5.882 Cumulative environmental effects will require careful management, particularly in relation to landscape character, heritage assets, air quality, noise and biodiversity. However, with appropriate mitigation and delivery of strategic green infrastructure, the site is expected to provide significant positive cumulative economic benefits whilst supporting the wider sustainability of the North Huntingdon Growth Cluster.

North Huntingdon 3: Lodge Farm, North of A141

5.883 Lodge Farm is the largest residential-led allocation within the North Huntingdon Growth Cluster and will form a major new community. Together with Wyton Airfield and existing commitments, the site will contribute significantly towards planned housing growth in the district.

5.884 In cumulative terms, Lodge Farm will increase demand across all key infrastructure sectors. Additional residents will place pressure on healthcare services, schools, community facilities, utilities and transport infrastructure. However, the allocation incorporates substantial supporting infrastructure, including a local centre, neighbourhood health facilities, primary schools, secondary school provision, sports facilities, green infrastructure and an innovation quarter providing employment opportunities.

5.885 Transport impacts will be particularly significant when combined with neighbouring allocations. Additional movements will increase demand on the A141, local roads and active travel network. Delivery of A141 improvements, mobility hubs, bus services and high-quality pedestrian and cycling routes will be essential to supporting sustainable travel across the wider growth area.

5.886 The allocation also offers positive cumulative effects through provision of local jobs, services and community facilities, reducing dependency on Huntingdon town centre and helping create a more self-sustaining settlement pattern. Combined with Wyton Airfield, Lodge Farm will underpin the creation of a substantial new urban community capable of supporting strategic investment in infrastructure and services.

5 Stage D - Consultation and development of the Plan

North Huntingdon 4: Wyton Airfield

5.887 Wyton Airfield is a strategic mixed-use new community which, alongside Lodge Farm, will drive much of Huntingdonshire's long-term growth beyond the current plan period. The allocation incorporates substantial housing, employment, education, healthcare and community infrastructure and is closely linked to the future role of RAF Wyton and associated defence-related activities.

5.888 In cumulative terms, the site will contribute significantly to population growth, increasing demand on healthcare, education, leisure and utility infrastructure. However, unlike many smaller allocations, Wyton Airfield includes provision for a wide range of services and facilities intended to meet much of this demand on-site, including schools, a local centre, health facilities, sports provision and employment land.

5.889 The cumulative transport effect is likely to be substantial when combined with Lodge Farm, the employment allocation north of the A141 and other North Huntingdon development. Pressure on the A141 corridor, strategic road network and public transport systems will increase considerably. Consequently, the timely delivery of highway improvements, active travel infrastructure and public transport enhancements will be critical.

5.890 The allocation is also expected to produce significant positive cumulative economic effects through new employment opportunities, support for defence and technology sectors and links to RAF Wyton and the emerging innovation economy. Whilst environmental impacts relating to landscape, heritage and biodiversity will require careful management, the scale of strategic green infrastructure proposed across the site should help mitigate these effects and contribute to wider environmental enhancement.

5.891 Overall, Wyton Airfield is expected to act as one of the primary drivers of Huntingdon's future growth and long-term sustainability.

Northern Huntingdonshire Site Allocations

5.892 In total five sites are allocated within settlements in Northern Huntingdonshire.

- Holme 1: North of Station Road
- Peterborough Services 1: West of the A1 and south of Peterborough Motorway Services
- Stilton 1: Land to the rear of The Stilton Cheese Inn
- Stilton 2: Rear of 16–58 North Street
- Yaxley 1 – Eagle Business Park Phase 3

5.893 There have been no material changes to most site policies since the Preferred Options stage, Holme 1 saw a material change as set out below. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites. The site allocation at the Preferred Options stage for Alwalton 1: North of 23–33 Oundle Road has been removed from the Plan following a review of comments received from residents, stakeholders and neighbouring authorities, who cite concern regarding heritage, transport impacts and scale of the proposal.

5.894 No additional sites have been allocated since the Preferred Options stage in the Northern Huntingdonshire area.

Site	Preferred Options Allocation	Submission Allocation	Housing / Development Change	Policy Change Relevant to Sustainability	SA Objective(s) with Significant Effect Change	Change in Significant Effect
Holme 1 - North of Station Road	50 homes, local retail/health uses or commercial uses.	Site area reduced to omit the two residential properties, landowner confirmed through the housing trajectory for the site that these will be retained and that 40 homes will be sought on site. Reduces site by 0.7ha.	40 homes - reduction of 10 homes.t	Greater emphasis on sustainable transport, biodiversity mitigation and skills provision.	SA7 Landscape and Townscape SA15 Integration	SA7 ad SA15 both improve from from (+) (++) through a slightly smaller development retaining existing properties providing a scale of development that can be integrated with the wider community.

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10			SA11		SA12		SA13	SA14	SA15	SA16
Holme 1	N	+	+	++	+	++	+	-	+	+	-	++	-	+	-	+	N	--	++	--	++	N	++	++	++
Peterborough Services 1	+	N		+	--	++	--	-	+	+	+	+	-	N	++	+		--	++	+		++	N	+	+
Stilton 1	N	+	+	++	+	++	--	++	--	++	-	++	-	++	+	++	+	--	++	+	++	N	N	+	-
Stilton 2	N	+	-	++	+	+	--	++	--	++	-	++	-	+	+	++	+	--	++	+	++	N	N	+	-
Yaxley 1	+	+	-	+	+	+	--	--	+	++	+	+	-	N	+	N	-	++	++	+	++	+	N	+	++

Holme 1: North of Station Road

5.895 Since the Preferred Options, the site promoter has sought to amend the site boundary to exclude the two existing properties on site and reduce the capacity to 40 dwellings, providing growth that that enables greater integration opportunities.

5.896 The site is located within flood zone 1 and therefore performs positively against flood risk and climate resilience objectives. Allocation requirements for a site-specific drainage strategy, sustainable drainage systems (SuDS), greenfield runoff rates and integration of natural flood management measures will ensure that development does not increase flood risk elsewhere.

5.897 The allocation provides opportunities for green infrastructure, biodiversity net gain and ecological enhancement. Habitat creation, landscape buffers and integration of natural flood management measures can result in positive residual biodiversity effects.

5 Stage D - Consultation and development of the Plan

5.898 Development has the potential to affect the rural setting of Holme and to a lesser extent the wider Great Fen landscape. The allocation requirements for landscape-sensitive design, retention of boundary vegetation, archaeological assessment. Heritage constraints are limited and can be overcome through design.

5.899 The site contributes positively to housing delivery in a village settlement and supports the maintenance of local services through population retention and growth. The provision of additional homes and a local retail and health facility supports community cohesion and contributes towards identified housing needs. While access to higher-order employment opportunities remains more limited than in larger settlements, these effects are not considered significant in the context of the scale of growth proposed.

5.900 Taking account of all embedded mitigation measures, Holme 1 is considered capable of delivering a net positive sustainability outcome. Any adverse effects relating to biodiversity, landscape character and heritage are effectively managed through the allocation requirements and wider policy framework, resulting in predominantly positive residual effects**.**

Peterborough Services 1: West of the A1 and south of Peterborough Motorway Services

5.901 The site is located within the parish of Haddon but is located in the countryside nearer to Peterborough Motorway Services and the A1(M) rather than the settlement itself. The allocation makes a significant contribution towards the Local Plan's employment objectives through provision of approximately 116,000sqm of commercial, industrial and distribution floorspace. The site directly supports economic growth, business expansion, inward investment and employment creation. These benefits are considered substantial and represent one of the strongest positive features of the allocation.

5.902 The site is predominately within flood zone 1, the allocation requires a site-specific Flood Risk Assessment, drainage strategy, maintenance strips and ongoing management of watercourses. Consequently, the residual flood risk effect is positive and demonstrates a clear application of the sequential approach.

5.903 The allocation provides opportunities for habitat creation, natural flood management, ecological enhancement and strengthening of green infrastructure. Landscape buffers, drainage corridors and retained open space provide opportunities for biodiversity net gain and ecological connectivity. The policy expectation for biodiversity enhancement means that residual ecological effects are considered neutral to positive.

5.904 There is potential for archaeology within the site, the allocation requires additional investigation to assess this. Also, requirements for buffer planting, landscape management and sensitive design ensure that the development integrates successfully with the surrounding environment and minimises visual effects on the wider landscape setting.

5.905 The site performs strongly in relation to infrastructure provision, digital connectivity and sustainable transport being located along the A1(M) south of Peterborough motorway services. The allocation has the potential to be a free standing employment location with linkages to nearby employment locations in Yaxley and Peterborough. It can connect directly to existing road infrastructure, active travel routes and utility networks. Policy requirements relating to wastewater capacity, transport assessments and sustainable movement further improve performance against sustainability objectives.

5.906 When assessed on a mitigation-on basis, Peterborough Services 1 delivers substantial positive economic and employment benefits with environmental effects effectively managed through embedded policy requirements. The allocation is therefore considered to result in a significantly positive overall sustainability outcome.

Stilton 1: Land to the rear of The Stilton Cheese Inn

5.907 The site is previously developed being land associated used for parking for the Stilton Cheese Inn so its redevelopment provides sustainability benefits by reusing land and provide a visual benefit to the streetscene as well as biodiversity enhancements.

5.908 The site is within flood zone 1 with minimal surface water flood risk. Through application of SuDS, water efficiency measures and climate-resilient design principles, the allocation performs positively against climate adaptation objectives.

5.909 Potential impacts on village character and nearby heritage assets are effectively managed through requirements for landscape integration, sensitive design and heritage assessment and mitigation where necessary. The redevelopment of the site can provide a heritage benefit through bringing it back into use.

5.910 The site contributes positively towards district housing requirements and supports the sustainability of Stilton by helping to maintain the local population, support services and provide additional housing choice. The social benefits of the allocation are therefore considered significant and long term.

5.911 The allocation generates positive social and housing outcomes and any environmental effects are appropriately mitigated through policy requirements. Consequently, the residual sustainability effect is positive overall.

Stilton 2: Rear of 16–58 North Street

5.912 The site is within flood zone 1 with minimal surface water flood risk which can be addressed through a drainage strategy, climate change modelling and implementation of SuDS. Consequently, residual effects against flood risk objectives are considered positive.

5.913 The site lies close to the Stilton Conservation Area and several listed buildings on North Street. Without mitigation there is potential for adverse effects on setting and local character. However, the allocation requires a proportionate heritage assessment, heritage-led design approach and consideration of impacts on designated assets. The retention of landscape buffers and careful integration with existing development significantly reduces potential effects. The residual heritage effect is therefore considered neutral rather than adverse.

5.914 The allocation requires retention of existing trees and landscape features, biodiversity enhancement measures and incorporation of green infrastructure. Opportunities for biodiversity net gain, ecological enhancement and habitat connectivity are available across the site. As a result, biodiversity effects are considered neutral to positive following mitigation.

5.915 Potential adverse effects arise from proximity to the A1, particularly in relation to noise, air quality and visual intrusion. The allocation requires appropriate mitigation measures including retention of landscaping, design responses and detailed technical assessments. With mitigation in place, residential amenity standards can be achieved and residual effects are reduced to minor adverse or neutral levels.

5.916 The allocation performs strongly against housing objectives by contributing approximately 55 dwellings in a Local Service Village. The site supports local services, education provision and village vitality, while making a proportionate contribution towards district-wide housing needs. These benefits are expected to be permanent and long term.

5.917 The Sustainability Appraisal concludes that the identified constraints can be satisfactorily addressed through embedded mitigation. The site therefore delivers a positive overall sustainability outcome with no significant residual adverse effects.

5 Stage D - Consultation and development of the Plan

Yaxley 1 – Eagle Business Park Phase 3

5.918 The allocation makes a significant contribution towards the Local Plan's employment objectives through provision of approximately 33,000sqm of commercial, industrial and distribution floorspace. The site directly supports economic growth, business expansion, inward investment and employment creation. It would provide a third phase to the Eagle Business Park established Employment Area. These benefits are considered substantial and represent one of the strongest positive features of the allocation.

5.919 A key strength of the allocation is the sequential approach to site layout. Built development is restricted to Flood Zone 1, whilst areas affected by higher flood risk are retained as open space, flood mitigation areas and environmental enhancement land. The allocation requires a site-specific Flood Risk Assessment, drainage strategy, maintenance strips and ongoing management of watercourses. Consequently, the residual flood risk effect is positive and demonstrates a clear application of the sequential approach.

5.920 The allocation provides opportunities for habitat creation, natural flood management, ecological enhancement and strengthening of green infrastructure. Landscape buffers, drainage corridors and retained open space provide opportunities for biodiversity net gain and ecological connectivity. The policy expectation for biodiversity enhancement means that residual ecological effects are considered neutral to positive.

5.921 No significant heritage constraints have been identified within the allocation itself. Nevertheless, requirements for buffer planting, landscape management and sensitive design ensure that the development integrates successfully with the surrounding environment and minimises visual effects on the wider fenland landscape setting. Residual heritage and landscape effects are therefore assessed as neutral.

5.922 The site performs strongly in relation to infrastructure provision, digital connectivity and sustainable transport. The allocation extends an established employment location and can connect directly to existing road infrastructure, active travel routes and utility networks. Policy requirements relating to wastewater capacity, transport assessments and sustainable movement further improve performance against sustainability objectives.

5.923 When assessed on a mitigation-on basis, Yaxley 1 delivers substantial positive economic and employment benefits with environmental effects effectively managed through embedded policy requirements. The allocation is therefore considered to result in a significantly positive overall sustainability outcome.

Summary of Impacts on Human Health and Inequalities

5.924 In respect of SA Objective 10 (Healthy Communities and Reduced Inequalities), all five allocations are considered to result in positive residual effects once embedded mitigation measures are taken into account. Holme 1, Stilton 1 and Stilton 2 support community cohesion, local service retention, access to green infrastructure and housing choice, whilst Yaxley 1 and Peterborough Services 1 deliver substantial employment, skills and economic inclusion benefits. No significant adverse effects on health have been identified that cannot be mitigated through allocation requirements, development management policies and statutory environmental assessment. Consequently, the allocations collectively contribute positively towards improving health outcomes and reducing social and economic inequalities across Huntingdonshire.

Cumulative effects in relation to wider settlement

Holme

5.925 Holme is a small rural village with limited local services and facilities and a high degree of reliance on neighbouring settlements, particularly Yaxley, Sawtry and Peterborough, for retail, employment, healthcare and secondary education needs. Additional development at Holme 1 would increase vehicle movements on the local road network and is likely to generate additional journeys to these higher-order centres, reflecting the limited public transport provision and absence of a rail connection.

5.926 In cumulative terms, growth could place additional demand on Holme Church of England Primary Academy and Sawtry Village Academy, although both schools currently have surplus capacity. Similarly, healthcare demand would increase on nearby GP practices serving the village, which are already operating with capacity pressures. Nevertheless, the overall scale of growth is unlikely to result in significant cumulative infrastructure impacts and could help support the long-term viability of existing community facilities within the village.

Haddon (Peterborough Services)

5.927 The site is located within the parish of Haddon but is located in the countryside nearer to Peterborough Motorway Services and the A1(M) rather than the settlement itself. It is located in a sustainable location for connections to the strategic road network supporting the site's proposed employment and commercial uses. The allocation has the potential to be a free standing employment location with linkages to nearby employment locations in Yaxley and Peterborough as it can connect directly to existing road infrastructure, active travel routes and utility networks.

5.928 The principal cumulative impact is likely to relate to transport, particularly where employment growth combined with ongoing nearby developments in Peterborough located on the other side of the A1(M). This may increase traffic on the strategic and local highway network and reinforces the importance of sustainable travel and active travel connections.

5.929 Additional employment development may also indirectly increase demand for local services, including schools and healthcare facilities, through associated workforce growth and population retention. While Haddon as a settlement has very limited services and facilities and relies on nearby settlements such as Sawtry, Yaxley and Peterborough for these, and whilst cumulative demands on education and healthcare services may increase, the scale of existing provision means that impacts are expected to be more readily accommodated than elsewhere in the district. Overall, the cumulative effect of Peterborough Services 1 is expected to be positive, supporting economic growth.

Stilton

5.930 Stilton is a relatively sustainable Local Service Village with a primary school, convenience shopping, healthcare access and regular public transport links. When considered alongside Stilton 2 and other existing commitments, development at Stilton 1 would result in additional traffic movements, particularly towards Peterborough, Yaxley and the strategic road network. However, the settlement is already well connected and benefits from established transport infrastructure capable of accommodating a moderate level of growth.

5.931 In combination with Stilton 1 and other planned development, Stilton 2 would contribute towards a level of growth consistent with the settlement's role as a Local Service Village. Cumulative transport impacts are likely to include increased use of local roads and additional commuting and service-related trips, although the village benefits from existing bus services and close proximity to larger settlements where higher-order services and employment opportunities are available.

5.932 The cumulative effect of growth would also increase demand for education and healthcare services. Existing primary and secondary schools currently have capacity to accommodate additional pupils, but cumulative growth may require future monitoring and infrastructure planning as demonstrated in infrastructure studies accompanying the Local Plan. Healthcare demand is similarly likely to rise across surrounding GP practices that already experience capacity pressures. Notwithstanding these considerations, the additional housing would help support the viability of local facilities and strengthen the sustainability of the settlement.

Yaxley

5.933 Yaxley is one of the district's most sustainable settlements, benefiting from extensive retail, educational, healthcare, recreational and employment provision. As an employment allocation at Yaxley 1 would contribute to the settlement's existing economic role and support a more balanced relationship between homes and jobs.

5 Stage D - Consultation and development of the Plan

5.934 The principal cumulative impact is likely to relate to transport, particularly where employment growth combines with ongoing residential development in Yaxley and the wider Peterborough fringe. This may increase traffic on the strategic and local highway network and reinforces the importance of sustainable travel and active travel connections. However, the settlement benefits from existing infrastructure and strong connectivity that are capable of supporting growth.

5.935 Additional employment development may also indirectly increase demand for local services, including schools and healthcare facilities, through associated workforce growth and population retention. Yaxley contains multiple primary schools, access to secondary education and an existing GP surgery, providing a significantly stronger infrastructure base than most villages in the district. Whilst cumulative demands on education and healthcare services will increase, the scale of existing provision means that impacts are expected to be more readily accommodated than elsewhere in the district. Overall, the cumulative effect of Yaxley 1 is expected to be positive, supporting both economic growth and the long-term sustainability of the wider settlement.

North Eastern Huntingdonshire Site Allocations

5.936 In total ten sites are allocated within settlements in North Eastern Huntingdonshire:

- Bury 1: Bury Industrial Estate
- Bury 2: Land off Cheveril Lane
- Bury 3: RAF Upwood - Phase 3
- Ramsey 1: RAF Upwood Phase 4
- Ramsey 2: North of Hollow Lane
- Ramsey Forty Foot 1: Ramsey Forty Foot Village Rural Mooring
- Ramsey Forty Foot 2: Woodlane Farm, West of Ramsey Road
- Somersham 1: College Farm West of Parkhall Road
- Somersham 2: Dews Bus & Coach Depot
- Somersham 3: College Farm West of Newlands Industrial Estate

5.937 There have been no material changes to the majority of site policies since the Preferred Options stage. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites.

5.938 Ramsey 3: East of Wood Lane was initially allocated in the Preferred Option Local Plan subsequently removed from Pre-Submission Plan. Upon review of the concerns and objections raised to the loss of community land at Ramsey 3, the site has been removed as a draft allocation despite the rationale for allocating it being to secure the long term use of the wider site for community open space uses. Ramsey Forty Foot 2: Woodlane Farm, West of Ramsey Road was added to the Pre-Submission Plan following the additional site allocations consultation in May-June 2026.

5.939 The site option Somersham 2: South of College Farm, was initially allocated in the Preferred Option Local Plan subsequently removed from Pre-Submission Plan. Following a review of comments received from residents and stakeholders, who cite concern regarding infrastructure capacity, cumulative impact of all draft allocations on the village, transport

impacts, landscape harm and scale of the proposal, the site has been removed as a draft allocation. The removal of this site resulted in the re-numbering of the remaining sites in the settlement.

5.940 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10				SA11		SA12		SA13	SA14	SA15	SA16
Bury 1	N	+	+	++	-	++	+	++	+	++	+	++	+	++	++	++	++	+	++	+	++	N	N	+	-
Bury 2	N	+	-	++	-	--	N	N	+	++	+	++	+	N	N	N	N	N	N	--	+	N	N	+	++
Bury 3	N	+	+	++	-	++	++	++	-	++	+	++	+	+	++	+	-	++	++	-	+	N	N	+	++
Ramsey 1	N	+	-	++	-	++	--	++	-	+	+	++	+	N	++	N	-	++	++	--	++	+	N	+	++
Ramsey 2	N	+	-	++	-	++	--	++	--	++	-	-	+	+	++	+	N	++	+	-	+	N	N	-	-
Ramsey Forty Foot 1	N	+	-	++	-	++	N	N	+	++	--	++	+	N	N	N	N	N	N	-	++	N	N	+	-
Ramsey Forty Foot 2	N	+	-	++	-	++	--	--	--	++	-	++	+	+	++	--	N	+	++	-	++		N	+	++
Somersham 1	N	+	-	++	-	++	--	--	+	+	-	++	+	++	+	++	+	+	++	-	++	N	N	++	++
Somersham 2	N	+	+	++	-	+	+	--	--	+	-	+	+	+	-	+	-	--	+	-	+	N	N	+	++
Somersham 3	N	+	-	++	-	++	--	--	--	+	-	+	-	+	-	+	N	+	++	-	++	N	N	+	+

Bury 1: Bury Industrial Estate, Old Station Road

5.941 The site is located within flood zone 1 with low surface water flood risk and therefore performs positively against flood risk objectives. The allocation requires a site-specific Flood Risk Assessment, drainage strategy, SuDS and modelling of the High Lode watercourse. These measures are expected to provide a positive residual effect for climate resilience and flood adaptation.

5 Stage D - Consultation and development of the Plan

5.942 The site is previously developed land, which helps minimise pressure on undeveloped countryside. Retention of mature trees and enhanced landscaping are required, providing opportunities for biodiversity net gain and improved ecological connectivity. Residual effects are therefore considered neutral to positive.

5.943 The site is adjacent to the Ramsey Conservation Area and requires a heritage assessment and sensitive design response. Redevelopment provides an opportunity to remove detracting industrial land uses and enhance the setting of the conservation area. Following mitigation, heritage effects are assessed as neutral to positive.

5.944 The allocation contributes approximately 30 dwellings in a sustainable location adjoining a market town. The site provides housing close to services, shops and employment opportunities while supporting regeneration of underused land. Social benefits are assessed as positive and long term.

5.945 The allocation performs particularly well through redevelopment of previously developed land, regeneration benefits and sustainable location. Embedded mitigation adequately addresses flood risk, contamination and heritage considerations, resulting in a positive overall sustainability outcome.

Bury 2: Land off Cheveril Lane

5.946 The allocation is intended primarily for biodiversity enhancement and flood mitigation rather than built development. Significant areas fall within flood zones 2, 3a and 3b, making residential development inappropriate. The creation of flood storage and natural flood management features generates positive effects for climate adaptation.

5.947 The allocation performs strongly against biodiversity objectives. Habitat creation, wet woodland, flood meadow restoration and opportunities for biodiversity net gain are integral to the proposal. Ecological enhancement is likely to produce substantial positive effects.

5.948 The site contributes to the rural setting of Ramsey and lies adjacent to the Ramsey Conservation Area. The proposed habitat-led approach and retention of landscape features are likely to preserve and potentially enhance local character and heritage setting. Residual effects are positive.

5.949 The allocation does not directly contribute housing or employment. However, it provides wider public benefits through flood resilience, environmental enhancement and ecosystem services. Effects are therefore neutral to moderately positive.

5.950 Although the site does not contribute directly to growth objectives, it performs exceptionally well against environmental sustainability objectives. The residual sustainability effect is strongly positive.

Bury 3: RAF Upwood Phase 3

5.951 The site includes previously developed land being part of the former RAF Upwood airfield. This helps minimise pressure on undeveloped countryside. Residual effects are therefore considered neutral to positive.

5.952 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. Allocation requirements include SuDS, greenfield runoff rates, climate change modelling and natural flood management measures. Significant green infrastructure provision further supports climate resilience objectives.

5.953 Approximately 11.5ha of the allocation is dedicated to green infrastructure, accessible green space and flood mitigation. Retention of hedgerows and trees, coupled with biodiversity enhancement measures, creates strong opportunities for habitat creation and ecological connectivity. Residual biodiversity effects are positive.

5.954 The allocation requires landscape-led design, retention of existing vegetation and preservation of elements of the former RAF runway as heritage assets. Integration with adjacent RAF Upwood phases helps create a coherent place while preserving landscape character. Effects are assessed as neutral to positive.

5.955 The allocation delivers approximately 170 homes and supports community growth within the Ramsey and Bury area. New green infrastructure, active travel links and proximity to existing services generate significant social benefits and support identified housing needs.

5.956 RAF Upwood Phase 3 delivers a balanced sustainability outcome with strong housing, recreational and environmental benefits. Residual effects are considered positive overall.

Ramsey 1: RAF Upwood Phase 4 (Upwood)

5.957 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. The allocation requires SuDS, natural flood management and climate-resilient design, resulting in positive residual effects.

5.958 Around 9.2ha of the allocation is dedicated to green infrastructure and environmental enhancement. Opportunities exist to strengthen ecological corridors, improve habitats and enhance biodiversity through integrated landscape design. Residual effects are positive.

5.959 The allocation requires sensitive integration with surrounding residential areas, the wider RAF Upwood development and the rural edge of Ramsey. Landscape buffers and heritage-sensitive design help minimise adverse effects. Residual impacts are assessed as neutral.

5.960 A key strength of the allocation is its mixed-use nature. In addition to employment floorspace of approximately 19,200sqm, the scheme supports job creation, economic diversification and local investment. These employment benefits are complemented by enhanced accessibility and community infrastructure. It serves to balance the residential phases delivered through the redevelopment of RAF Upwood.

5.961 The allocation delivers substantial economic benefits alongside environmental enhancement and sustainable transport improvements. Residual sustainability effects are strongly positive.

Ramsey 2: North of Hollow Lane

5.962 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. SuDS, runoff controls and natural flood management measures are expected to ensure positive residual effects against flood risk objectives.

5.963 Existing trees, hedgerows and landscape features are required to be retained and enhanced. Additional landscaping and biodiversity measures provide opportunities for biodiversity net gain and ecological improvement. Effects are assessed as neutral to positive.

5.964 The allocation lies within the Ramsey Conservation Area and forms part of the historic setting of Ramsey Abbey. Heritage assessment, archaeological investigation and conservation-led design are therefore essential. Mitigation measures are likely to reduce adverse effects to neutral.

5.965 The site contributes approximately 20 dwellings and strengthens housing supply in a sustainable market town location. Proximity to services, schools and community facilities provides long-term social benefits.

5.966 While heritage sensitivity is a significant consideration, the allocation includes robust safeguards. The site is capable of delivering a positive overall sustainability outcome following mitigation.

5 Stage D - Consultation and development of the Plan

Ramsey Forty Foot 1: Ramsey Forty Foot Village Rural Mooring

5.967 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. Allocation requirements include a proportionate flood risk assessment, drainage strategy, maintenance of greenfield runoff rates and incorporation of natural flood management measures.

5.968 Retention and enhancement of trees, hedgerows and green infrastructure are required. Opportunities for biodiversity net gain and landscape enhancement are available, particularly along site boundaries and drainage features. Residual ecological effects are positive.

5.969 The site is on the northern edge of Ramsey Forty Foot along the Forty Foot/ Vermuden's Drain water way so will be prominent on the localised landscape. Heritage impacts can be managed through design.

5.970 The allocation provides moorings and open space uses and supports the sustainability of Ramsey Forty Foot by strengthening the local population and supporting community vitality. These social benefits are significant for a village-scale settlement.

5.971 The site performs positively against housing, community and environmental objectives. Heritage considerations can be effectively managed through allocation requirements, resulting in a positive residual sustainability effect.

Ramsey Forty Foot 2: Woodlane Farm

5.972 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. Allocation requirements include a proportionate flood risk assessment, drainage strategy, maintenance of greenfield runoff rates and incorporation of natural flood management measures.

5.973 Retention and enhancement of trees, hedgerows and green infrastructure are required. Opportunities for biodiversity net gain and landscape enhancement are available, particularly along site boundaries and drainage features. Residual ecological effects are positive.

5.974 The site occupies an edge-of-settlement location and is close to scheduled prehistoric barrow cemeteries. Archaeological investigation and sensitive landscape treatment are required to protect heritage significance and maintain local character. Residual effects are considered neutral.

5.975 The allocation provides approximately 30 dwellings and supports the sustainability of Ramsey Forty Foot by strengthening the local population and supporting community vitality. These social benefits are significant for a village-scale settlement.

5.976 The site performs positively against housing, community and environmental objectives. Heritage considerations can be effectively managed through allocation requirements, resulting in a positive residual sustainability effect.

Somersham 1: College Farm West of Parkhall Road

5.977 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. Detailed drainage design, climate change allowances, greenfield discharge rates and natural flood management measures are required. Overall effects are positive.

5.978 Retention of trees, hedgerows and landscape features forms a key component of the allocation. Public open space and biodiversity enhancement measures as part of the development provide opportunities for measurable biodiversity gains and improved recreational access. Effects are positive.

5.979 The site occupies a transition between the village and surrounding countryside. Landscape-sensitive design, planting and archaeological investigation are required to protect local character. Heritage and landscape effects are therefore assessed as neutral.

5.980 The allocation is expected to deliver around 120 homes in a Service Centre settlement. This represents a significant contribution to housing delivery while supporting local schools, services and community facilities. Social effects are strongly positive.

5.981 The allocation makes a significant contribution to housing provision in a sustainable settlement while maintaining appropriate environmental safeguards. Residual sustainability effects are positive overall.

Somersham 2: Dews Bus & Coach Depot

5.982 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. SuDS, climate change modelling and natural flood management measures are required. Residual flood effects are positive.

5.983 As a previously developed site, redevelopment limits pressure on greenfield land. New landscaping, retention of screening vegetation and provision of open space offer biodiversity enhancement opportunities. Effects are neutral to positive. The site is about 3.2km from the Ouse Washes SAC/SPA/Ramsar so assessment of impact on these nature sites is required, it is noted that as a previously developed site the possibility of the site being functionally linked land to the nature sites is low.

5.984 The site is well screened by mature vegetation. Archaeological assessment and careful design are required due to nearby heritage interests. Retention of landscaping significantly mitigates visual effects. Residual effects are neutral.

5.985 The site provides approximately 50 homes through the redevelopment of an existing depot site. It supports efficient land use, regeneration and housing delivery within a sustainable Service Centre location. Social benefits are positive.

5.986 Redevelopment of a brownfield site is a major sustainability advantage. With mitigation in place for contamination, drainage and ecology, the allocation achieves a positive overall sustainability outcome.

Somersham 3: College Farm West of Newlands Industrial Estate

5.987 The site lies is within flood zone 1 and benefits from low levels of surface water flood risk. Drainage strategies, SuDS and natural flood management measures are required to manage surface water and climate change effects, resulting in positive residual impacts.

5.988 The retention of boundary vegetation, creation of green infrastructure and provision of biodiversity net gain contribute positively to ecological objectives. Opportunities also exist to enhance green corridors linking the settlement edge with the wider countryside.

5.989 The site forms a transitional area between Somersham and the countryside. Landscape buffers and high-quality design will be necessary to soften the settlement edge and minimise visual impacts. Effects are assessed as neutral.

5.990 The allocation contributes approximately 45 homes and supports the sustainability of Somersham. Its location adjacent to the Newlands Industrial Estate also offers access to local employment opportunities, supporting a balanced pattern of development.

5.991 The allocation provides positive housing and accessibility benefits while maintaining environmental safeguards. Any landscape and amenity effects can be successfully mitigated, leading to a positive overall sustainability outcome.

Summary of Human Health and Inequalities

5.992 Across the ten allocations, residual effects against SA Objective 10 (Healthy Communities and Reduced Inequalities) are generally positive. Bury 3, Ramsey 1, Somersham 1 and Somersham 3 particularly benefit from access to green infrastructure, active travel opportunities and proximity to services. Bury 1 and Somersham 2 make effective use of previously developed land and support regeneration objectives, while Ramsey 2 and Ramsey Forty Foot 1 and Ramsey Forty Foot 2 strengthen local housing provision in

5 Stage D - Consultation and development of the Plan

sustainable locations. Collectively, the allocations support housing delivery, community cohesion, healthy lifestyles and access to employment while ensuring environmental constraints are appropriately mitigated.

Cumulative effects in relation to wider settlement

Bury and Ramsey

5.993 Bury and Ramsey function as closely related settlements both physically and in terms of shared services. The proposed allocations at Bury 1 (Bury Industrial Estate), Bury 3 (RAF Upwood Phase 3), Ramsey 1 (RAF Upwood Phase 4) and Ramsey 2 (North of Hollow Lane) together represent a significant concentration of growth within the wider settlement area. In combination, these sites would provide approximately 230 additional dwellings, new employment floorspace at RAF Upwood Phase 4, and biodiversity enhancement land at Bury 2. The cumulative effect would be to strengthen Ramsey's role as a market town and service centre for the surrounding rural area.

5.994 Additional growth is likely to increase traffic movements on Ramsey Road, Hollow Lane, Park Road and the wider local highway network, particularly for journeys towards Huntingdon, St Ives and the wider fenland area. The RAF Upwood Phase 3 and Phase 4 allocations are intended to be planned comprehensively, with active travel connections and substantial green infrastructure helping to mitigate some transport impacts. Nevertheless, cumulative growth is likely to increase demand on junction capacity and local road infrastructure, requiring ongoing monitoring and mitigation through transport assessments and infrastructure delivery.

5.995 In combination, the allocations would increase demand for local education, healthcare and community facilities. Ramsey benefits from a comparatively strong infrastructure base, including primary schools, Abbey College Ramsey, healthcare provision and a range of retail and community services. However, the Sustainability of Settlements assessment identifies existing pressures on healthcare capacity and cumulative growth is likely to place additional demand on GP services and wider community infrastructure. Future investment and infrastructure planning may therefore be required to ensure service provision keeps pace with growth.

5.996 The cumulative environmental effects are mixed. Bury 2 provides strategic biodiversity net gain and flood mitigation land, which could help offset ecological pressures arising from residential growth elsewhere within the wider settlement. RAF Upwood Phases 3 and 4 include significant green infrastructure requirements and opportunities for habitat enhancement, active travel and natural flood management measures. While development would result in the loss of some undeveloped land at the edge of the settlements, the overall package of allocations has the potential to deliver environmental enhancements and strengthen green infrastructure connectivity.

5.997 The employment allocation at Ramsey 1 (RAF Upwood Phase 4) would also contribute towards improving the balance between homes and jobs in the area. When considered alongside the residential allocations at Bury 3 and Ramsey 2, this may help reduce the need for some out-commuting and support the long-term economic sustainability of the wider Ramsey-Bury-Upwood area.

5.998 Overall, the cumulative effect of the allocations is expected to be positive in strategic terms, supporting housing delivery, employment growth and local service sustainability, although ongoing monitoring of transport, healthcare and educational infrastructure will be necessary.

Ramsey Forty Foot

5.999 Ramsey is classified as a village closely linked to the market town of Ramsey. It has limited services and development at Ramsey Forty 1 and Ramsey Forty Foot 2 would see a modest increase to the size of the settlement. Moorings and leisure uses balance out built development and strengthen the sustainability of the settlement. It i still likely that residents will travel to Ramsey for main services, education and transport connections.

5.1000 Overall, the cumulative effect of the allocations is expected to be positive in strategic terms, supporting housing delivery, employment growth and local service sustainability, although ongoing monitoring of transport, healthcare and educational infrastructure will be necessary.

Somersham

5.1001 Somersham is a Service Centre with a comparatively good range of local services and facilities, including primary education, retail provision, community facilities and employment opportunities. The proposed allocations at Somersham 1 (College Farm West of Parkhall Road), Somersham 2 (Dews Bus & Coach Depot) and Somersham 3 (College Farm West of Newlands Industrial Estate) would together deliver approximately 215 additional dwellings and represent a notable level of growth for the settlement.

5.1002 In cumulative terms, development at these sites would increase vehicle movements on Parkhall Road, Chatteris Road, the B1086 and surrounding local roads. Whilst Somersham benefits from an established settlement structure and local services that reduce the need for some longer-distance travel, many residents continue to rely on private vehicles for journeys to Huntingdon, St Ives and Cambridge. As a result, cumulative growth is likely to increase traffic levels and place additional pressure on local junctions and highway infrastructure. All three allocations promote active travel improvements and enhanced pedestrian connectivity, which should help mitigate some transport effects.

5.1003 The cumulative impact of growth would increase demand for healthcare, education and community services. Somersham already functions as a service hub for surrounding villages and the additional population generated by the allocations would place further pressure on local GP provision and school places. Although the settlement has a stronger service base than many villages, healthcare capacity is a known issue across much of Huntingdonshire and may require future infrastructure investment to accommodate cumulative growth.

5.1004 The allocations would also increase pressure on wastewater and drainage infrastructure. The Local Plan evidence identifies that Somersham Water Recycling Centre is likely to be close to, or exceed, current permit limits during the plan period. Consequently, upgrades to wastewater infrastructure and careful phasing of growth may be required to avoid cumulative impacts on water quality and environmental capacity.

5.1005 From an environmental perspective, cumulative effects are likely to be moderate. Development would extend the settlement edge in several locations and result in the loss of areas of agricultural land. However, the allocations include requirements for landscaping, tree retention, biodiversity enhancement, sustainable drainage systems and natural flood management measures. Somersham 3 will require particular attention to managing the relationship between new residential development and the adjacent industrial estate, including cumulative effects relating to noise and amenity.

5.1006 Taken together, the three allocations would help reinforce Somersham's role as a Service Centre by supporting local services, shops and community facilities through population growth. Subject to appropriate infrastructure improvements and mitigation measures, the cumulative effects are considered generally positive, although continued monitoring of transport, education, healthcare and wastewater infrastructure will be important to ensure that growth remains sustainable.

5 Stage D - Consultation and development of the Plan

North Central Huntingdonshire Site Allocations

5.1007 In total 12 sites are allocated within settlements in Northern Central Huntingdonshire.

- Abbots Ripton 1: Home Farm South
- Alconbury 1: South of Great North Road
- Alconbury 2: East of Globe Lane
- Sawtry 1: West of Glatton Road 293
- Sawtry 2: East of Glatton Road and North of Brookside Industrial Estate
- Sawtry 3: West of Toll Bar Way and Green End Road
- Sawtry 4: Off Old North Road
- Sawtry 5: Little Common Farm
- Sawtry 6: North of Black Horse Industrial Estate
- The Stukeleys 1: Between 76-86 Owl End
- Spaldwick 1: Land east of Stow Road
- Upton 1: Land south west of South Farm

5.1008 There have been no material changes to these site policies since the Preferred Options stage. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites. Spaldwick 1: Land east of Stow Road was introduced as an additional allocation in the Plan at the Pre-Submission stage following the additional site allocations consultation in May-June 2026.

5.1009 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10			SA11		SA12		SA13	SA14	SA15	SA16
Abbots Ripton 1	N	+	+	+	-	+	+	-	+	++	_	+	+	+	+	+	++	++	++	--	+	++	N	++	-
Alconbury 1	N	+	-	++	-	++	--	++	+	++	-	++	-	+	+	+	++	+	+	-	++	N	N	+	-
Alconbury 2	N	+	-	++	-	++	--	++	+	++	-	++	+	+	+	+	++	+	+	-	++	N	N	+	+
Sawtry 1	N	+	-	++	-	+	--	-	++	++	-	-	+	++	+	+	-	++	++	+	++	N	N	-	+
Sawtry 2	N	+	-	+	-	+	--	-	--	++	-	-	+	++	+	+	N	++	++	+	+	N	N	-	+
Sawtry 3	N	+	-	++	-	+	--	-	+	+	-	+	-	++	+	+	+	++	+	+	++	+	+	+	+
Sawtry 4	+	+	-	++	-	++	--	-	-	++	-	++	-	N	-	+	N	++	-	-	++	+	-	+	-
Sawtry 5	N	+	-	+	-	+	--	-	--	++	-	+	-	N	-	+	N	++	-	-	++	+	N	+	-
Sawtry 6	N	+	-	+	-	+	--	-	+	++	-	+	-	N	-	+	N	++	+	+	++	++	+	+	+
The Stukeleys 1	N	+	-	++	-	++	--	--	-	++	-	++	+	++	++	+	+	++	++	++	+	N	N	+	++
Spaldwick 1	N	+	-	++	-	++	-	-	-	++	-	+	+	+	-	++	+	--	++	-	++	N	N	+	+
Upton 1	N	+	-	+	-	++	--	-	-	++	-	+	+	++	-	--	N	--	+	--	+	N	N	+	+

Abbots Ripton 1: Home Farm South

5.1010 The site performs positively in relation to flood risk. The majority of the allocation lies within flood zone 1. A site specific flood risk assessment, sustainable drainage systems (SuDS) and natural flood management measures are required as part of the allocation. These measures are expected to ensure a positive residual effect against climate resilience and flood risk objectives.

5 Stage D - Consultation and development of the Plan

5.1011 The site contains important mature trees, including protected elm trees and areas of ecological value. Development presents some risks to biodiversity, but allocation requirements include retention of key landscape features, biodiversity enhancement, green infrastructure and biodiversity net gain. Consequently, residual biodiversity effects are considered neutral to positive.

5.1012 The allocation lies adjacent to the Abbots Ripton Conservation Area. There is potential for effects on setting and local character, but heritage assessment, sensitive design and retention of landscape features are required. The overall residual effect is considered neutral.

5.1013 The site supports village housing delivery and includes opportunities for small-scale employment expansion through redevelopment of existing commercial buildings. Good access to local facilities, including the primary school, village hall and local services, contributes positively to sustainability objectives.

5.1014 With embedded mitigation and retention of ecological features, Home Farm South is assessed as capable of delivering a positive sustainability outcome with strong social and moderate economic benefits.

Alconbury 1: South of Great North Road

5.1015 The site lies within flood zone 1 and is at only limited risk from surface water flooding. Drainage requirements and SuDS provide confidence that flood risk can be effectively managed. Residual effects are positive.

5.1016 The site is remote from designated ecological sites, but opportunities for habitat enhancement are somewhat limited. Biodiversity net gain and landscaping requirements are expected to achieve neutral to positive outcomes.

5.1017 The site is well related to existing development and can form a logical extension to the village. Nearby listed buildings require sensitive consideration, but landscape and heritage impacts are considered manageable through design-led mitigation.

5.1018 The allocation supports approximately 30 dwellings and benefits from proximity to local services, schools and employment opportunities at Alconbury Weald. Housing and accessibility effects are therefore strongly positive.

5.1019 The site performs positively across most sustainability objectives and is considered a sustainable housing allocation subject to heritage and landscaping mitigation.

Alconbury 2: East of Globe Lane

5.1020 The site is within Flood Zone 1 and has limited identified flooding constraints. Drainage infrastructure and flood mitigation requirements ensure positive performance against SA climate objectives.

5.1021 The site is not constrained by statutory ecological designations and can incorporate biodiversity net gain and extensive planting. Residual ecological effects are considered positive.

5.1022 Development has potential visibility within the wider landscape and lies near conservation area and listed building settings. Landscape mitigation and heritage assessments are required. Residual impacts are considered neutral.

5.1023 The allocation contributes around 60 homes within a Local Service Village that has access to services and nearby employment opportunities. The scheme performs strongly against housing and community objectives.

5.1024 The site delivers a positive overall sustainability outcome with housing benefits outweighing manageable environmental constraints.

Sawtry 1: West of Glatton Road

5.1025 The site is influenced by Sawtry Brook and associated flood risk. The allocation requires a sequential approach, significant open space for flood attenuation, drainage infrastructure and natural flood management measures. Following mitigation, effects are considered neutral to positive.

5.1026 Green infrastructure corridors and flood mitigation land provide substantial opportunities for biodiversity enhancement and habitat connectivity.

5.1027 The site forms a substantial extension to the settlement and will require careful landscape treatment, it provides a second phase to development now under construction. Retention of existing vegetation and creation of landscape buffers reduces visual impacts. Heritage effects are limited and manageable.

5.1028 The allocation contributes approximately 330 homes and supports population growth in a Service Centre with good access to schools, services and employment. The social benefits are significant and long term.

5.1029 Subject to flood mitigation and landscape integration, Sawtry 1 delivers a positive sustainability outcome with significant housing benefits.

Sawtry 2: East of Glatton Road and North of Brookside Industrial Estate

5.1030 Flood risk is a central consideration owing to the proximity of Sawtry Brook. Open space buffers, drainage measures, flood assessments and SuDS are required. Residual flood effects are considered manageable following mitigation.

5.1031 The allocation includes open space provisions and opportunities for biodiversity enhancement associated with green infrastructure corridors. Residual effects are positive.

5.1032 The site benefits from opportunities to integrate development with existing residential and employment uses. Landscape mitigation will be required along exposed boundaries. Heritage constraints are limited and any can be overcome through design.

5.1033 Approximately 170 homes would be delivered in a sustainable Service Centre location close to employment, community facilities and local services, creating significant social benefits.

5.1034 The site performs positively overall and contributes meaningfully towards housing delivery while accommodating flood risk through embedded mitigation measures.

Sawtry 3: West of Toll Bar Way and Green End Road

5.1035 The site benefits from a relatively low level of flood risk and can accommodate climate-resilient drainage infrastructure and SuDS. Residual effects are positive.

5.1036 Development would result in the loss of some greenfield land, but biodiversity net gain, landscape planting and habitat creation opportunities are expected to achieve neutral to positive residual effects.

5.1037 Potential impacts on village edge character are capable of mitigation through landscape-led design and retention of existing boundary features. Heritage impacts are anticipated to be neutral and impacts can be overcome through design.

5.1038 The site supports housing delivery within a highly sustainable Service Centre and reinforces the viability of local services and facilities.

5.1039 Sawtry 3 is expected to generate positive sustainability benefits, particularly in relation to housing, accessibility and community objectives.

5 Stage D - Consultation and development of the Plan

Sawtry 4: Off Old North Road

5.1040 The site benefits from a generally favourable flood risk position and can incorporate sustainable drainage infrastructure. The allocation requires open space to safeguard against flood risk.

5.1041 The site presents opportunities for biodiversity enhancement through landscaping and green infrastructure. Net gain measures are expected to offset development impacts.

5.1042 Landscape effects are moderate due to the site's edge-of-settlement location but can be effectively mitigated through design requirements. Archaeology works are required.

5.1043 The site contributes positively to providing employment development supporting job creation and services in a sustainable location off the A1(M).

5.1044 The allocation delivers a positive sustainability outcome by providing employment development in a sustainable location, no significant residual environmental effects identified.

Sawtry 5: Little Common Farm

5.1045 Flood risk constraints are limited and can be addressed through standard drainage and climate adaptation measures. The allocation requires open space to safeguard against flood risk.

5.1046 Biodiversity net gain and habitat enhancement opportunities provide scope for positive ecological outcomes.

5.1047 Potential landscape effects arise from extending the built form of the settlement, but these are capable of mitigation through planting, buffering and design quality. Heritage constraints are limited and can be overcome through design.

5.1048 The site contributes positively to providing employment development supporting job creation and services in a sustainable location off the A1(M).

5.1049 The overall sustainability outcome is positive, with economic benefits outweighing minor environmental effects.

Sawtry 6: North of Black Horse Industrial Estate

5.1050 The site is capable of accommodating development with standard flood mitigation and SuDS requirements. he allocation requires open space to safeguard against flood risk.

5.1051 Proximity to existing employment areas presents opportunities for landscape enhancement and creation of ecological corridors alongside development.

5.1052 The relationship with existing industrial development limits wider landscape impacts. Effects can be mitigated through appropriate buffers and planting. Heritage constraints are limited and can be overcome through design.

5.1053 The site contributes positively to providing employment development supporting job creation and services in a sustainable location off the A1(M). It is located north of the Black Horse Industrial Estate so reduces travel demand and supports economic sustainability.

5.1054 Sawtry 6 is considered a sustainable allocation capable of delivering positive social and economic effects with manageable environmental impacts.

The Stukeleys 1: Between 76-86 Owl End

5.1055 The site benefits from a low flood risk location and can accommodate sustainable drainage measures and climate adaptation requirements.

5.1056 Biodiversity enhancement, retention of vegetation and green infrastructure provision will support positive residual ecological outcomes.

5.1057 The site adjoins existing development and can be integrated into the settlement without significant landscape harm. Heritage constraints are limited and manageable.

5.1058 The allocation provides modest housing growth in a village benefiting from strong connections to Huntingdon and Alconbury Weald, offering good access to employment and services.

5.1059 The site achieves a positive sustainability balance with strong housing and accessibility benefits.

Spaldwick 1: Land East of Stow Road

5.1060 The site is principally located within a low flood risk area. Site-specific drainage measures, SuDS and climate adaptation requirements support positive performance against flood resilience objectives.

5.1061 The allocation provides opportunities for biodiversity net gain through landscape planting, strategic green infrastructure and habitat enhancement.

5.1062 Potential effects on village character and wider countryside setting can be addressed through phasing of development, sensitive design, landscaping and retention of existing boundary features. Heritage impacts require assessment so that mitigations can shape site layout and design.

5.1063 The site contributes positively to housing supply within a Local Service Village and assists in maintaining local services such as the village's primary school, community vitality and housing choice.

5.1064 Spaldwick 1 is assessed as delivering a positive sustainability outcome with manageable environmental effects and strong social benefits.

Upton 1: Land south west of South Farm

5.1065 The site is located in flood zone 1, with only limited areas affected by surface water flood risk and is capable of accommodating development while managing surface water and drainage constraints through site-specific flood mitigation measures. Climate adaptation objectives can be incorporated within the allocation.

5.1066 Appropriate landscape mitigation, retention of key features and sensitive design will be necessary to avoid adverse landscape effects. Heritage impacts are limited and can be managed through design.

5.1067 The allocation is a very small-scale development of approximately seven dwellings. Consequently, its direct cumulative effects are expected to be limited. It makes a positive contribution to housing choice through provision of self-build and custom-build opportunities.

5.1068 There are limited services within Upton itself so relies on most services in nearby settlements such as Alconbury, Sawtry and Huntingdon. Public transport is limited so development will likely result in private car usage. It benefits from reasonable access to local facilities, services and employment opportunities in Great Paxton and St Neots, supporting community sustainability.

5.1069 Overall, the allocation represents infill growth that supports the continued vitality of the village without generating significant additional infrastructure requirements.

Summary of Human Health and Inequalities

5.1070 Across all 12 allocations, the dominant sustainability benefits arise from housing delivery, support for local services, community cohesion, improved accessibility and opportunities for active travel. Embedded requirements relating to biodiversity net gain, flood risk management, heritage protection, landscape design and climate resilience ensure that environmental constraints are generally reduced to neutral or positive residual effects. Consequently, all 11 sites are considered capable of contributing positively towards SA Objective 10 relating to healthy communities and reduced inequalities.

5 Stage D - Consultation and development of the Plan

Cumulative effects in relation to wider settlement

Abbots Ripton

5.1071 Abbots Ripton is a Local Service Village with a very limited range of services and facilities and a high degree of dependence on larger nearby settlements, particularly Sawtry, Alconbury Weald and Huntingdon for employment, healthcare, secondary education and day-to-day services. Development at Abbots Ripton 1 would provide a modest level of housing alongside a small area of employment land, helping to support local economic activity and the long-term vitality of the village.

5.1072 In cumulative terms, the allocation would increase vehicle movements on local roads and generate additional journeys to surrounding service centres and Huntingdon. Demand for healthcare services is likely to increase on nearby GP practices. Additional residents would also contribute towards demand for places at Abbots Ripton Church of England Primary School and St Peter's School in Huntingdon, although current evidence indicates available surplus capacity at both schools.

5.1073 The cumulative effects of growth are likely to be most pronounced in relation to wastewater infrastructure, flood risk management and transport connectivity. The allocation itself highlights the need for drainage mitigation and engagement with utility providers, and in combination with other allocations in nearby settlements may increase pressure on water and wastewater infrastructure. Nevertheless, the relatively modest scale of growth is unlikely to result in significant cumulative infrastructure impacts and could help sustain the long-term viability of local employment opportunities and community facilities within the village.

Alconbury

5.1074 Alconbury is a relatively sustainable Local Service Village benefitting from a primary school, GP provision, local retail services and close functional relationships with Alconbury Weald, Huntingdon and the wider North Huntingdon Growth Cluster. In combination, Alconbury 1 and Alconbury 2 would deliver approximately 90 dwellings, representing a moderate level of growth for the settlement.

5.1075 When considered alongside the ongoing expansion of Alconbury Weald and other North Huntingdon allocations, cumulative impacts are likely to include increased traffic movements on the Great North Road, Globe Lane, A141 and strategic highway network. These allocations will also contribute to additional demand on local services, particularly Alconbury and Brampton Surgeries, which already experience capacity pressures. Alconbury Church of England Primary School currently has limited surplus capacity and may experience additional pressure from cumulative residential growth, although secondary education capacity at Sawtry Village Academy and St Peter's School remains more readily available.

5.1076 The cumulative effect of growth will also increase demand for wastewater infrastructure, with evidence indicating that Alconbury Water Recycling Centre may require upgrades or permit changes during the plan period. Taken together with nearby growth at Alconbury Weald, the allocations reinforce the importance of coordinated infrastructure delivery, active travel connections and sustainable transport measures. Notwithstanding these considerations, the additional housing would help support local services and strengthen the sustainability of the settlement.

Sawtry

5.1077 Sawtry is one of the district's more sustainable Service Centres, providing a broad range of services including a GP surgery, primary schools, secondary education, convenience retailing, employment areas and community facilities. Together, the six allocations represent a significant level of growth, comprising approximately 830 additional dwellings and substantial new employment development at Sawtry 4, Sawtry 5 and Sawtry 6.

5.1078 In cumulative terms, the combined allocations would substantially increase vehicle movements across the local highway network, particularly on Glatton Road, Green End Road, Old North Road, the A1(M) junctions and routes connecting to Huntingdon, Peterborough and employment centres elsewhere in the district. While Sawtry benefits from a relatively strong service base compared with many villages, the cumulative scale of development would increase demand for local infrastructure and services.

5.1079 Education demand is likely to rise significantly. Sawtry Village Academy currently has surplus secondary capacity; however, cumulative growth may require future monitoring to ensure sufficient education provision. Primary school capacity pressures may become more notable, particularly given existing deficits identified within the village's primary school provision. Healthcare demand will similarly increase on Wellside Surgery, which is already operating with capacity constraints.

5.1080 The allocations also introduce cumulative flood risk, drainage and wastewater considerations. Several sites are associated with watercourses and flood mitigation areas, with significant areas of open space required to manage surface water. Collectively, the allocations are likely to increase pressure on Sawtry Water Recycling Centre, which has been identified as potentially requiring upgrades during the plan period. Employment allocations at Old North Road, Little Common Farm and Black Horse Industrial Estate would generate additional commercial traffic but would also strengthen the settlement's employment base and improve the balance between homes and jobs.

5.1081 Overall, the cumulative effect of the Sawtry allocations would be substantial, reflecting the settlement's role as a Service Centre. While additional infrastructure investment and careful phasing will be important, the growth would support local services, community facilities and employment opportunities, increasing the long-term sustainability of the settlement.

The Stukeleys

5.1082 The Stukeleys benefits from its close relationship with Huntingdon, Alconbury Weald and the wider North Huntingdon Growth Cluster. Although The Stukeleys itself contains a relatively limited range of facilities, residents have access to significant nearby employment, retail, healthcare and educational opportunities.

5.1083 The allocation at Owl End is a very small-scale development of approximately three dwellings. Consequently, its direct cumulative effects are expected to be limited. Additional residents would be largely accommodated within the existing service and infrastructure networks centred on Huntingdon, Alconbury and Alconbury Weald. Demand on local schools, GP practices and community facilities would increase only marginally and would be insignificant when considered alongside the much larger growth already planned within the North Huntingdon Growth Cluster.

5.1084 The most relevant cumulative consideration is the relationship with ongoing growth at Alconbury Weald, Ermine Street, Lodge Farm and other strategic allocations, which collectively will continue to place pressure on transport corridors, utility infrastructure and community services. However, the scale of The Stukeleys 1 is unlikely to materially affect these wider cumulative impacts. Overall, the allocation represents infill growth that supports the continued vitality of the village without generating significant additional infrastructure requirements.

Spaldwick

5.1085 Spaldwick is a Local Service Village with a primary school, convenience retail provision and community facilities, but it remains reliant on larger settlements such as Kimbolton and Huntingdon for a wider range of services, employment opportunities and secondary education. Development at Spaldwick 1 would deliver approximately 90 dwellings, representing a notable level of growth relative to the size of the village.

5 Stage D - Consultation and development of the Plan

5.1086 In cumulative terms, the allocation is likely to increase traffic movements on Stow Road and the wider strategic road network, particularly the A14 corridor and routes to Huntingdon and Kimbolton. Additional residents would generate increased demand for healthcare services, particularly Kimbolton Surgery and other nearby GP practices, which already experience capacity pressures.

5.1087 The settlement benefits from Spaldwick Community Primary School, which currently has surplus capacity and is therefore relatively well positioned to accommodate additional pupils arising from development. Secondary school demand would increase at Hinchingbrooke School and other surrounding education facilities, although existing capacity evidence suggests this is likely to be manageable. Growth would also place additional pressure on wastewater infrastructure, with Easton Water Recycling Centre identified as potentially requiring upgrades during the plan period.

5.1088 The cumulative effects of development are therefore likely to centre on transport, healthcare and utility infrastructure requirements. However, the additional housing would help support local community facilities, the primary school and village services, strengthening the long-term sustainability of the settlement whilst remaining proportionate to its role in the settlement hierarchy.

Upton

5.1089 Upton has limited services and facilities itself so residents are reliant on Alconbury, Sawtry and Huntingdon for higher-order services, employment and secondary education. Development at Upton 1 would represent a proportionate increase in housing development, specifically self and custom building, therefore diversifying the housing stock in the village and providing some growth to support services.

5.1090 The cumulative effect of growth would include additional traffic movements along Main Street. Public transport provision remains limited and therefore much of the additional travel demand is likely to be car-based. Whilst the site is relatively accessible to village services on foot, cumulative growth would increase pressure on local roads and parking within the settlement.

5.1091 Upton 1 is a very small-scale development of approximately six dwellings. Consequently, its direct cumulative effects are expected to be limited. Additional residents would be largely accommodated within the existing service and infrastructure networks centred on Sawtry and Huntingdon. Demand on local schools, GP practices and community facilities would increase only marginally.

Western Huntingdonshire Site Allocations

5.1092 In total 10 sites are allocated within settlements in Western Huntingdonshire:

- Bythorn 1: Home Farm
- Catworth 1: Fruit Field
- Ellington 1: Old Sheds at Manor Farm
- Ellington 2: Land West of Grafham Road
- Grafham 1: Adjacent to 24 Cedar Close
- Grafham 2: South of Village Farm
- Great Staughton 1: East of B661
- Hail Weston 1: West of 5 High Street
- Kimbolton 1: Brittens Farm
- Kimbolton 2: South East of Bicton Industrial Estate

5.1093 There have been no material changes to the majority of site policies since the Preferred Options stage. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites. Four additional sites have been allocated since the Preferred Options stage: Bythorn 1: Home Farm, Catworth 1: Fruit Field, Grafham 2: South of Village Farm, and Ellington 2: Land West of Grafham Road following the additional site allocations consultation in May-June 2026.

5.1094 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

5 Stage D - Consultation and development of the Plan

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10			SA11		SA12		SA13	SA14	SA15	SA16
Bythorn 1	N	+	+	++	-	++	-	-	--	++	_	+	+	++	-	--	N	--	+	--	+	N	N	+	-
Catworth 1	N	+	-	++	+	++	-	--	+	++	-	++	-	+	-	--	+	--	+	--	+	N	N	+	++
Ellington 1	N	+	+	++	-	++	-	-	--	++	_	_	-	+	-	--	+	+	++	-	++	N	N	+	-
Ellington 2	N	+	-	++	-	++	--	-	+	++	-	++	+	+	-	--	+	++	+	-	++	N	N	+	++
Grafham 1	N	+	-	++	+	++	--	-	+	+	-	++	+	+	+	--	+	+	+	-	+	N	N	+	++
Grafham 2	N	+	-	++	+	++	--	--	+	+	-	+	+	+	+	--	+	+	++	-	++	N	N	+	-
Great Staughton 1	N	+	-	++	+	+	--	-	--	++	-	++	+	++	-	++	+	-	+	-	++	N	N	+	-
Hail Weston 1	N	+	-	++	+	++	--	--	--	++	-	+	+	+	++	-	+	+	+	++	++	N	N	+	++
Kimbolton 1	N	+	-	+	+	-	--	-	+	++	-	+	+	+	+	++	+	++	+	-	++	N	N	+	-
Kimbolton 2	N	+	-	++	+	++	--	--	--	++	-	++	+	N	-	N	-	+	++	--	+	++	N	+	++

Bythorn 1: Home Farm

5.1095 The site is located within flood zone 1 and therefore performs positively against sustainability objectives relating to flood risk and climate resilience. Development will be required to incorporate a proportionate site-specific drainage strategy and sustainable drainage systems (SuDS).

5.1096 The site contains opportunities for environmental enhancement through removal of poor-quality agricultural structures, retention of existing vegetation and implementation of biodiversity net gain. Landscaping along the northern and western boundaries will strengthen ecological connectivity and improve the transition between the village and surrounding countryside. Residual biodiversity effects are considered neutral to positive.

5.1097 Most of the site lies within the Bythorn Conservation Area and includes buildings associated with the historic farmstead, some of which are likely to have heritage significance. Retention and conversion of traditional brick structures alongside removal of visually intrusive modern sheds presents a clear opportunity for heritage enhancement. Archaeological assessment and landscape-led design will be required. Residual effects are assessed as positive overall.

5.1098 The allocation provides approximately 15 homes within a rural village, helping to maintain population levels and support local services. The development contributes towards district housing requirements while reinforcing community sustainability.

5.1099 The Sustainability Appraisal indicates that the site can deliver a positive sustainability outcome, with heritage enhancement and housing provision outweighing limited landscape and environmental impacts, all of which can be mitigated through allocation requirements.

Catworth 1: Fruit Field

5.1100 The site is located within flood zone 1 and experiences very limited surface water flood risk. Development will be required to incorporate SuDS and provide a detailed drainage strategy. Consequently, the site performs positively against climate adaptation and flood resilience objectives.

5.1101 Existing trees, hedgerows and boundary vegetation are key environmental assets that will be retained and enhanced through a comprehensive landscape strategy. Biodiversity net gain requirements create opportunities for habitat enhancement beyond baseline conditions, resulting in neutral to positive residual effects.

5.1102 Located on the southern edge of the village, the site has the potential to alter the existing settlement edge. However, retention of established vegetation and additional planting will soften visual impacts and ensure effective integration with the rural landscape. Landscape effects are therefore considered neutral following mitigation.

5.1103 The provision of approximately 25 dwellings contributes positively to local housing needs and supports the long-term viability of local facilities and community services. Additional residents will strengthen the sustainability of the village.

5.1104 With embedded mitigation measures relating to landscaping, drainage and biodiversity, Catworth 1 is assessed as delivering positive social benefits alongside neutral to positive environmental outcomes.

Ellington 1: Old Sheds at Manor Farm

5.1105 The site is situated within flood zone 1 with only limited surface water flood risk. A site-specific drainage strategy, SuDS and climate change allowances will be required. Wastewater infrastructure capacity will be considered through engagement with utility providers. Residual flood risk effects are therefore positive.

5.1106 The redevelopment of agricultural buildings provides opportunities visual enhancements to the areas as well as for biodiversity enhancement through habitat creation, landscaping and biodiversity net gain obligations. Landscape design will protect views and integrate development with the surrounding environment.

5.1107 The site lies within a sensitive historic environment adjacent to the Ellington Conservation Area and near listed buildings, including Manor Farm. Archaeological features associated with the historic settlement core may also be present. A heritage assessment, archaeological investigation and heritage-led design approach will protect significance and minimise adverse impacts. Residual effects are considered neutral.

5.1108 The allocation will provide approximately 35 dwellings and assist in meeting local housing needs. Redevelopment of underutilised land supports regeneration objectives while strengthening the local community.

5 Stage D - Consultation and development of the Plan

5.1109 The site delivers significant housing benefits and regeneration opportunities. Heritage and archaeological constraints can be effectively managed through policy requirements, resulting in an overall positive sustainability outcome.

Ellington 2: Land West of Grafham Road

5.1110 The allocation lies mainly within flood zone 1 and experiences very low surface water risk. Development will incorporate SuDS, greenfield runoff rates and natural flood management measures. Culvert assessments and drainage design will further improve resilience to future climate change.

5.1111 Existing hedgerows and mature vegetation along site boundaries provide ecological value and contribute to local character. Retention and enhancement of these features together with biodiversity net gain requirements create positive opportunities for habitat improvement.

5.1112 The site forms part of the southern village edge and requires careful integration into the existing settlement. Comprehensive landscaping will maintain the rural approach to Ellington and mitigate visual impacts. Landscape effects are therefore considered neutral. Heritage constraints are minimal.

5.1113 The site will provide approximately 35 homes, including self-build opportunities, making a positive contribution to housing choice and community sustainability. Additional population growth will help sustain local facilities and services.

5.1114 Ellington 2 performs positively against housing objectives, while environmental impacts are capable of being mitigated through landscape, drainage and biodiversity requirements.

Grafham 1: Adjacent to 24 Cedar Close

5.1115 The site is within flood zone 1 and surface water flood risk very low. Surface water ponding areas will be incorporated into site design and managed through SuDS. Retention of natural drainage features and greenfield runoff rates supports positive climate resilience outcomes.

5.1116 Existing vegetation and a pond on the site provide opportunities for biodiversity enhancement and high-quality green infrastructure. Biodiversity net gain measures and landscape planting are expected to produce positive ecological effects.

5.1117 The allocation is located close to the Grade I listed All Saints Church and the Grade II Old Rectory. Although potential impacts on setting exist, intervening vegetation and the requirement for heritage assessment greatly reduce risk. Archaeological investigation will address identified medieval earthworks. Residual heritage effects are considered neutral.

5.1118 The site contributes around 20 new dwellings and supports the vitality of Grafham while helping meet housing needs. The housing benefits are expected to be long term and significant.

5.1119 The Sustainability Appraisal indicates a positive sustainability outcome, with housing and environmental enhancement opportunities outweighing manageable heritage considerations.

Grafham 2: South of Village Farm

5.1120 After the Preferred Options consultation, the site area was clarified as being 1.1ha rather than 1.6ha, this resulted in the capacity of the site being reduced to 25 houses in line with the LAA methodology of housing densities. This change is expected to provide further sustainability and integration benefits.

5.1121 The site is within flood zone 1 and surface water flood risk very low. A flood risk assessment, drainage strategy and SuDS are required, ensuring positive performance against flood and climate objectives.

5.1122 The retention and enhancement of existing hedgerows and trees will provide biodiversity benefits and strengthen ecological networks. Biodiversity net gain requirements contribute further positive effects.

5.1123 The site adjoins the Grade II listed Village Farm and contains historic ridge-and-furrow remains. Heritage assessment and sensitive design will be required to preserve significance and maintain local character. The resulting heritage effect is assessed as neutral.

5.1124 25 dwellings will contribute significantly to housing delivery and support the continued vitality of Grafham. The allocation strengthens housing choice and supports local services.

5.1125 Subject to heritage-led design and environmental mitigation, Grafham 2 is considered capable of delivering a positive overall sustainability outcome.

Great Staughton 1: East of B661

5.1126 The site is within flood zone 1 but contains a culverted watercourse along its eastern boundary. Detailed flood modelling, drainage assessment and climate change allowances will ensure that flood risks are appropriately managed. Residual effects are positive.

5.1127 The allocation offers opportunities to enhance biodiversity through retention of boundary trees and hedgerows and potential opening of culverted sections for ecological benefit. Biodiversity net gain obligations reinforce positive outcomes.

5.1128 The site occupies a visible edge-of-village location near listed buildings on The Green. Landscape retention and a proportionate heritage assessment will ensure that impacts on heritage assets and village character are minimised. Residual effects are neutral.

5.1129 The allocation provides approximately 15 dwellings within a Local Service Village, supporting local services, population retention and community vitality. Social effects are positive and long term.

5.1130 The site performs well across housing, biodiversity and climate objectives, with heritage constraints capable of being effectively mitigated.

Hail Weston 1: West of 5 High Street

5.1131 The site is small in scale and free from significant flood constraints. Sustainable drainage and water-efficient design can be readily incorporated, supporting positive climate resilience outcomes.

5.1132 Although the site contains limited existing ecological features, new landscaping and biodiversity enhancement measures can improve environmental performance.

5.1133 Situated on the village edge and exposed to open countryside, the allocation requires substantial planting and careful design to soften visual impacts. With mitigation, effects on landscape character are considered neutral.

5.1134 The provision of approximately 6 homes supports local housing needs and contributes to maintaining the sustainability of a small rural community. The social benefits are modest but positive.

5.1135 Hail Weston 1 is a small-scale allocation capable of delivering positive housing outcomes with limited environmental impacts that can be satisfactorily addressed through design and landscaping requirements.

Kimbolton 1: Brittens Farm

5.1136 The site includes areas affected by flood zones 2, 3a and 3b associated with the River Kym. The allocation adopts a sequential approach whereby built development is restricted to lower-risk land and flood-prone areas become open space and blue-green infrastructure. This approach supports positive residual flood risk effects.

5 Stage D - Consultation and development of the Plan

5.1137 The allocation creates opportunities for biodiversity enhancement through river corridor management, open space provision and retention of existing hedgerows. Green infrastructure associated with flood mitigation is expected to contribute positively to ecological objectives.

5.1138 The site lies adjacent to listed farm buildings and contains ridge-and-furrow features of archaeological interest. Heritage assessment, archaeological investigation and landscape-sensitive design will be required to preserve significance. Residual heritage effects are considered neutral.

5.1139 The allocation provides approximately 25 new homes alongside open space and community benefits. Located within a Service Centre, the site performs well against accessibility and service provision objectives.

5.1140 Kimbolton 1 balances housing growth with flood risk management and heritage protection, resulting in a positive overall sustainability effect.

Kimbolton 2: South East of Bicton Industrial Estate

5.1141 The allocation delivers approximately 14,000sqm of employment floorspace through an extension of the existing Bicton Industrial Estate. It makes a direct contribution to local employment creation, business growth and economic diversification, generating substantial positive economic effects.

5.1142 The site lies predominantly within flood zone 1. Flood risk assessments, SuDS and blue-green infrastructure will manage surface water and support climate resilience objectives. Natural flood management opportunities will also be explored.

5.1143 The site adjoins a County Wildlife Site and therefore requires ecological assessment and mitigation. Biodiversity net gain, substantial landscape planting and protection of ecological features will ensure that environmental impacts are minimised and opportunities for enhancement are realised.

5.1144 Tree buffers and landscape screening along eastern and southern boundaries will reduce visual impacts and help integrate the employment development into the rural landscape. Residual landscape effects are considered neutral.

5.1145 Kimbolton 2 generates strong positive economic outcomes while environmental constraints can be effectively addressed through landscaping, ecological mitigation and drainage requirements. The residual sustainability effect is therefore significantly positive overall.

Summary of Impacts on Human Health and Inequalities

5.1146 In respect of SA Objective 10 (Healthy Communities and Reduced Inequalities), all ten allocations are assessed as generating positive residual effects once embedded mitigation and policy requirements are taken into account. Bythorn 1, Catworth 1, Ellington 1, Ellington 2, Grafham 1, Grafham 2, Great Staughton 1, Hail Weston 1 and Kimbolton 1 all contribute to the delivery of new homes in rural settlements, supporting population retention, housing choice and the continued viability of local services and community facilities. The provision of additional housing in accessible village locations helps maintain balanced communities, supports social cohesion and contributes towards meeting identified housing needs across Huntingdonshire. Several allocations also provide opportunities for enhanced access to green infrastructure, biodiversity improvements and landscape enhancements that can support physical activity, recreation and wider wellbeing outcomes. Requirements for sustainable drainage systems, climate-resilient design, open space provision, biodiversity net gain and landscape buffers will improve environmental quality and support long-term health benefits for future residents.

5.1147 Heritage-led regeneration opportunities at sites such as Bythorn 1 further contribute to local distinctiveness and community identity, which are recognised components of healthy and sustainable places. Kimbolton 2 delivers particularly strong benefits under this objective through the creation of additional employment land and opportunities for local job growth.

Increased employment opportunities can support economic inclusion, reduce the need for longer-distance commuting and contribute positively to health and wellbeing through improved access to work and economic security.

5.1148 The employment benefits generated by the allocation complement the social benefits arising from the residential allocations across the villages. Potential adverse effects associated with flood risk, landscape change, biodiversity constraints, traffic movements, amenity impacts or heritage sensitivity have been identified at several sites. However, the Sustainability Appraisal concludes that these issues can be effectively managed through allocation-specific mitigation measures, development management policies, environmental assessment requirements and statutory regulatory processes. No significant adverse effects on human health have been identified that cannot be mitigated. Consequently, when considered collectively, the ten allocations make a positive contribution towards improving health outcomes, supporting healthy communities, increasing housing choice, maintaining rural service provision, promoting access to employment opportunities and reducing social and economic inequalities across Huntingdonshire over the plan period to 2046.

Cumulative effects in relation to wider settlement

Bythorn

5.1149 Bythorn is a small rural village with very limited local services and facilities and a high degree of reliance on surrounding settlements, including Kimbolton and Thrapston, for retail, healthcare, employment and education needs. Development at Bythorn 1 would result in a modest increase in population and associated vehicle movements on the local highway network, with most journeys likely to be made by private car due to limited public transport provision. The scale of growth is unlikely to place significant pressure on local infrastructure, although there may be a small increase in demand for nearby schools and GP practices. There are heritage benefits to the allocation whereby a sensitive heirtage-led development can remove agricultural buildings that detract form the local area and convert barns of heritage value into high quality new homes. Given the limited size of the allocation, cumulative impacts are expected to be minor and capable of being accommodated within existing infrastructure. The additional housing would help support the long-term vitality of the village and contribute towards maintaining a balanced and sustainable rural community.

Catworth

5.1150 Catworth is a small village with limited local facilities and a reliance on neighbouring settlements for many day-to-day needs. Development at Catworth 1 would increase resident population and associated traffic movements, particularly to Kimbolton, St Neots and other higher-order centres for employment, healthcare and shopping. The cumulative effect of growth is likely to result in modest additional demand on education and healthcare infrastructure serving the wider rural area. However, the relatively small scale of development means that significant cumulative impacts are not anticipated. Additional housing would assist in supporting community vitality and help sustain existing services and facilities used by village residents.

Ellington

5.1151 Ellington is a village with a limited range of services and facilities and good strategic access via the A14 corridor. In combination, Ellington 1 and Ellington 2 would provide approximately 70 additional dwellings, representing a noticeable level of growth relative to the size of the settlement. This would increase vehicle movements and demand for services, particularly education and healthcare facilities in surrounding settlements. Cumulative effects are likely to include increased use of local roads and additional commuting journeys, although the village benefits from proximity to larger centres such as Huntingdon and St Neots. The combined growth would support the sustainability of the village through increased population and housing choice, but continued monitoring of school capacity, healthcare provision and transport impacts would be appropriate to ensure infrastructure remains adequate.

5 Stage D - Consultation and development of the Plan

Grafham

5.1152 Grafham is a small rural village with a limited service base and strong links to surrounding settlements for employment, healthcare and secondary education. Development at Grafham 1 and Grafham 2 would together provide in excess of 50 new homes and contribute towards maintaining the settlement's population and vitality. Cumulative effects are likely to include additional traffic on local roads and increased demand for nearby schools and healthcare services. However, the overall scale of growth remains modest and is unlikely to exceed the capacity of existing infrastructure networks. The additional population could help support the viability of local facilities and community services while remaining consistent with the village's role within the settlement hierarchy.

Great Staughton

5.1153 Great Staughton is a Local Service Village that contains a broader range of facilities than many smaller villages and performs an important role serving surrounding rural communities. Development at Great Staughton 1 would contribute a modest level of housing growth that is broadly consistent with the settlement's function within the hierarchy. Cumulative impacts are likely to be limited and include a small increase in traffic movements and demand for education, healthcare and community facilities. Given the availability of local services and the modest scale of growth proposed, significant infrastructure constraints are not anticipated. Additional residents could help support the continued viability of local facilities and reinforce the sustainability of the settlement.

Hail Weston

5.1154 Hail Weston is a small village with limited facilities and a strong reliance on nearby St Neots for employment, retail, healthcare and secondary education needs. Development at Hail Weston 1 would deliver a very small amount of additional housing and would have only limited cumulative effects. The principal impacts are likely to relate to a modest increase in private vehicle trips and a small increase in demand on nearby services and facilities. Given the scale of development, cumulative effects on infrastructure are expected to be negligible. The allocation would nevertheless contribute towards maintaining population levels and supporting the long-term sustainability of the village community.

Kimbolton

5.1155 Kimbolton is one of the district's Service Centres and benefits from a relatively strong range of retail, educational, community and employment facilities compared with surrounding villages. In combination, Kimbolton 1 and Kimbolton 2 would deliver both residential and employment growth, strengthening the settlement's role as a local service and employment hub. The cumulative effects are likely to include increased traffic movements on local roads, additional demand for primary healthcare and education services, and increased pressure on utility and drainage infrastructure. However, Kimbolton's existing service base and infrastructure place it in a stronger position than many villages to accommodate growth. The provision of additional employment land would help improve the balance between homes and jobs, reduce the need for longer-distance commuting and support economic resilience. Overall, the cumulative effect of both allocations is expected to be positive, reinforcing the sustainability and economic role of the settlement while requiring continued infrastructure planning and monitoring.

Central Huntingdonshire Site Allocations

5.1156 In total 10 sites are allocated within settlements in Central Huntingdonshire:

- Brampton 1: Wallis Land, Thrapston Road
- Brampton 2: Land off Huntingdon Road
- Godmanchester 1: Former RGE Engineering site and HDC Car Park, The Avenue
- Godmanchester 2: South of Godmanchester, off the A1198
- Godmanchester 3: Former A14 Compound, North of A1198 Roundabout
- Hemingford Abbots 1: The Lattenburys
- Huntingdon 1: Hinchingbrooke Hospital Site
- Huntingdon 2: Amber Centre, Mayfield Road
- Offord Cluny 1: West of High Street and North of Dunstall Close
- Offord D'Arcy 1: West of Graveley Road

5.1157 There have been no material changes to the majority of site policies since the Preferred Options stage. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites. No additional sites have been allocated since the Preferred Options stage.

5.1158 There are three sites that require SA re-assessment due to changes introduced at the Pre-Submission Stage. The table below demonstrates how site policy changed from the Preferred Options stage and the subsequent change in significant effect.

	Preferred Options Allocation	**Submission Allocation**	**Housing / Development Change**	**Policy Change Relevant to Sustainability**	**SA Objective(s) with Significant Effect Change**	**Change in Significant Effect**
Godmanchester 2 – South of Godmanchester	39.6ha, **520 dwellings**, 5.1ha biodiversity land around Stoneyhill Brook. [	48ha, **550 dwellings**, minimum 6.8ha natural green space/BNG land, cemetery extension, enhanced GI requirements and crossing infrastructure.	**+30 dwellings** (+6%), larger allocation and expanded green infrastructure.	Increased housing contribution but stronger green infrastructure and flood mitigation.	SA9 Housing SA5 Green Infrastructure	SA9 remains (**++)** SA5 improves from (+) (++)
Hemingford Abbots 1 – The Lattenburys	243ha site; 3,800 homes including 375 supported living homes, 150 extra-care homes and 160 care beds.	265ha site; still 3,800 homes but revised care provision wording and strengthened biodiversity requirements (minimum 10% BNG).	No housing change	Increased site area and stronger biodiversity and infrastructure requirements.	No change in overall significant effects; remains strongly positive for housing and services, and significantly adverse for landscape change due to strategic-scale growth. Biodiversity effect improves slightly through explicit BNG requirement but not enough to alter significance.	No material change to significant scores. SA6 and SA5 remain positive SA9 remains (**++)** SA10 remains (++)

5 Stage D - Consultation and development of the Plan

	Preferred Options Allocation	Submission Allocation	Housing / Development Change	Policy Change Relevant to Sustainability	SA Objective(s) with Significant Effect Change	Change in Significant Effect
Huntingdon 1 - Hinchingbrooke Hospital	Mixed-use hospital redevelopment including healthcare uses, accommodation, training facilities and strategic GI.	Expanded policy requirements including affordable key worker housing, health-related R&D space, day nursery, public worship space, open space provision, SSSI mitigation, archaeology requirements and biodiversity mitigation.	No change in site area (22ha) or development quantum.	Stronger positive effects through enhanced healthcare, training, childcare, research activities and open space provision; reduced biodiversity risk through SSSI mitigation.	SA5 Green Infrastructure SA6 Biodiversity SA9 Housing SA10 Community Facilities, SA11 Economic Opportunities SA13 Economy	SA6: improves from (+) (++) SA9: improves from (+) (++) SA10 remains (++) SA11 remains (++) SA13: remains (++)

5.1159 Having reviewed the allocation in both the Preferred Options Local Plan and the Pre-Submission Local Plan, **Godmanchester 2** has not undergone a significant material change that would fundamentally alter the Sustainability Appraisal conclusions. The allocation remains a strategic residential-led urban extension with substantial green infrastructure, biodiversity enhancement, cemetery provision and supporting transport improvements. The principal differences relate to increasing the site area to providing 30 additional homes and also land for enhanced landscaping on its southern edge which can also provide a more comprehensive approach towards managing flood risk from Stoneyhill Brook. Other refinements to the policy include stronger mitigation, infrastructure certainty and environmental requirements. The principal modifications strengthen biodiversity outcomes, green infrastructure delivery, flood resilience, sustainable transport provision, community infrastructure certainty, and design quality. The allocation remains strongly positive in housing and community terms, with environmental performance improved through stronger mitigation and implementation requirements. No new significant adverse effects arise and no existing significant effects materially worsen.

5.1160 **Hemingford Abbots 1** is one of the largest strategic growth allocations in the Local Plan and functions as a proposed new community consisting of two new linked villages. The Pre-Submission version provides stronger commitments regarding local centre, healthcare, schools, community facilities, neighbourhood accessibility, phased infrastructure delivery, strategic green infrastructure, country park delivery, multifunctional open space, and landscape management. Some additional land has been included on its western edge around Woodgreen so that the allocation aligns with existing field boundaries and can also provide a more substantial landscaped edge on this side. Comparison of the Preferred Options and Pre-Submission versions indicates that while the allocation has evolved significantly in terms of policy detail, infrastructure requirements and implementation mechanisms, it has not fundamentally changed in terms of location, strategic role, land use mix or overall growth strategy. No new significant adverse effects arise and no existing significant effects materially worsen.

5.1161 Having reviewed the allocation in both the Preferred Options Local Plan and the Pre-Submission Local Plan, **Huntingdon 1** has undergone a moderate but meaningful enhancement in policy scope rather than a fundamental change in land use, site area or development quantum. The

most significant changes arise from the introduction of a broader mixed-use healthcare campus concept. The Pre-Submission Plan provides much greater certainty regarding the delivery of affordable key worker and medical student accommodation, healthcare-related training facilities, research and development activities, a day nursery and space for public worship. These additions strengthen social infrastructure provision and reinforce the site's role as a strategic health and employment hub for Huntingdonshire. The Pre-Submission policy introduces more explicit requirements for ecological assessment, SSSI mitigation, biodiversity enhancement and strategic green infrastructure provision. Consequently, SA6 (Biodiversity) shifts towards a clearer positive effect as ecological risks are more effectively managed and mitigation is embedded within the policy framework. The inclusion of archaeology requirements, landscape assessments and more detailed heritage considerations also provides greater certainty regarding protection of the nearby historic environment, including assets associated with Hinchingbrooke House and the surrounding conservation setting. This supports a modest improvement in SA16 (Heritage). The introduction of affordable key worker housing and accommodation for healthcare professionals and students also improves performance against SA9 (Housing). No new significant adverse effects arise and no existing significant effects materially worsen.

5.1162 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10		SA11		SA12		SA13	SA14	SA15	SA16
Brampton 1	N	_	_	++	-	+	--	--	+	+	+	++	-	++	++	++	N +	++	++	++	N	N	+	-
Brampton 2	N	+	-	--	-	--	--	-	++	--	+	-	-	+	++	+	+++	++	++	++	+	N	+	-
Godmanchester 1	N	_	++	-	-	+	++	++	++	--	+	++	-	+	++	++	++++	++	++	++	N	N	++	-
Godmanchester 2	N	+	-	+	-	+	--	--	++	++	-	+	+	++	++	+	N +	-	+	+	N	+	-	N
Godmanchester 3	N	+	++	++	-	++	++	++	-	+	-	--	-	N	++	N	- +	++	+	++	+	N	-	++

5 Stage D - Consultation and development of the Plan

Brampton 1: Wallis Land, Thrapston Road

5.1163 The site lies predominantly within flood zone 1 and therefore performs positively against flood risk objectives. Site requirements include a detailed drainage strategy, SuDS, greenfield runoff rates and consideration of natural flood management measures. Whilst limited surface water ponding and groundwater considerations exist, these can be addressed through site design and climate change allowances, resulting in a positive residual effect.

5.1164 The site contains existing boundary vegetation that contributes to ecological connectivity. Ecological surveys and biodiversity enhancement measures are required, alongside biodiversity net gain. Ecological effects are therefore considered neutral to positive following mitigation.

5.1165 Part of the site is affected by a Scheduled Monument and areas of ridge-and-furrow archaeology. Development is confined to the eastern part of the site, whilst the sensitive heritage area will remain as open space. Heritage assessment, archaeological investigation and landscape mitigation are required. Residual effects are therefore considered neutral to positive.

5.1166 The allocation contributes approximately 10 dwellings in a sustainable Service Centre location close to Huntingdon and local services. Additional housing will support local service provision and community sustainability while remaining proportionate to the scale of Brampton.

5.1167 Following embedded mitigation, the site is considered capable of delivering a positive sustainability outcome with heritage, biodiversity and environmental constraints appropriately managed.

Brampton 2: Land off Huntingdon Road

5.1168 The allocation is principally for public open space and car parking associated with Hinchingbrooke Country Park. Significant areas lie within Flood Zones 2, 3a and 3b, but no built development is proposed An application must be accompanied by a drainage strategy and flood mitigation measures. The site provides opportunities for natural flood management and flood storage enhancement, generating positive climate resilience effects.

5.1169 The site adjoins important ecological assets including Hinchingbrooke County Park County Wildlife Site and forms part of a wider green infrastructure network. Delivery of habitat enhancement, ecological surveys and sensitive landscaping offers opportunities for biodiversity gains and improved habitat connectivity.

5.1170 The site forms part of the setting of Hinchingbrooke Country Park. Allocation requirements include a landscape-led masterplan and heritage assessment for nearby listed buildings and conservation area assets. The intended use as open space reinforces landscape character and results in broadly positive residual effects.

5.1171 Provision of additional country park infrastructure improves recreational access, health and wellbeing outcomes, visitor management and sustainable tourism. These benefits are expected to be significant and long term.

5.1172 The allocation delivers clear environmental, recreational and health benefits. With flood risk, heritage and ecological considerations addressed through policy requirements, the overall sustainability effect is positive.

Godmanchester 1: Former RGE Engineering Site and HDC Car Park, The Avenue

5.1173 The site contains areas oat risk of flooding, however, built development is restricted to flood zone 1. Flood risk betterment, SuDS, climate change modelling and natural flood management measures are required. As a brownfield redevelopment opportunity, the site offers the potential to improve existing flood risk conditions.

5.1174 Redevelopment provides opportunities for urban regeneration, biodiversity improvements and additional amenity space. Measures are required to reduce recreational pressure on nearby designated ecological sites including Portholme Meadow. Biodiversity effects are assessed as neutral to positive.

5.1175 The site occupies a sensitive location between Huntingdon and Godmanchester with nearby conservation areas and heritage assets. Heritage-led design, landscape improvements and retention of key features are required. Residual heritage effects are considered neutral.

5.1176 Approximately 85 dwellings are proposed on a previously developed site within a highly sustainable location. It has excellent accessibility to services, employment, public transport and active travel networks results in significant positive social effects.

5.1177 The reuse of a brownfield site in a sustainable urban location, combined with flood risk betterment and housing delivery, leads to a positive overall sustainability outcome.

Godmanchester 2: South of Godmanchester, Off the A1198

5.1178 A key change from the Preferred Options stage was the introduction of an additional parcel of land off of Bluegate which increases the site capacity by 30 homes. This provides opportunity for more successful integration as an urban extension of Godmanchester.

5.1179 The site is largely located within flood zone 1, with Stoneyhill Brook representing the principal flood risk constraint. Extensive flood mitigation, SuDS, biodiversity areas and natural flood management measures are incorporated into the allocation. Residual effects are positive. A sequential approach is provided with built development only support on land within flood zone 1.

5.1180 A minimum of 6.8 hectares of biodiversity and natural greenspace provision is required, alongside strategic green infrastructure corridors. Significant opportunities exist for biodiversity net gain, habitat connectivity and enhancement of Stoneyhill Brook.

5.1181 The allocation requires strong landscape integration, retention of trees and hedgerows, protection of important views including St Mary's Church, and archaeological investigation. Sensitive design is expected to minimise adverse effects, resulting in neutral to positive residual effects.

5.1182 The site will provide approximately 550 homes together with cemetery expansion, open space and enhanced active travel connectivity. The scale of development delivers substantial long-term housing and community benefits within a sustainable Service Centre location.

5.1183 The allocation performs strongly against housing, health and green infrastructure objectives. Environmental effects are manageable through embedded mitigation, leading to a positive overall sustainability outcome.

Godmanchester 3: Former A14 Compound, North of A1198 Roundabout

5.1184 The allocation provides approximately 15,000sqm of employment floorspace for business, industrial and technology-based uses. It contributes directly to economic growth, job creation, investment attraction and diversification of the local economy.

5.1185 The previously developed nature of the site supports efficient use of land and reduces pressure on greenfield areas. Drainage strategies, SuDS and flood resilience measures are required to address remaining constraints. Residual effects are positive.

5.1186 Existing woodland buffers, landscape planting and habitat enhancements create opportunities for biodiversity gains and ecological connectivity. Biodiversity effects are assessed as neutral to positive following mitigation.

5 Stage D - Consultation and development of the Plan

5.1187 Strong landscape buffers are required to screen development and protect the setting of the adjoining Lattenburys development and surrounding countryside. Heritage impacts are limited and can be managed through design and landscaping.

5.1188 The site's employment development and reuse of previously developed land represent significant positive sustainability benefit. Environmental impacts can be effectively mitigated, resulting in a strongly positive overall sustainability outcome.

Hemingford Abbots 1: The Lattenburys

5.1189 The new community is located predominantly within flood zone 1 and incorporates extensive blue-green infrastructure, natural flood management features, SuDS and water efficiency measures. Climate resilience forms a central component of the masterplan and delivers significant positive effects.

5.1190 The scheme includes extensive green infrastructure, a country park, biodiversity net gain, habitat corridors and landscape buffers. Opportunities for large-scale ecological enhancement substantially exceed likely habitat losses, resulting in significant positive effects.

5.1191 The site lies near sensitive heritage assets and the Hemingfords Conservation Area. Comprehensive heritage assessment, archaeological investigation, generous landscape buffers and separation from existing settlements are required. Residual effects are assessed as neutral to positive.

5.1192 The allocation delivers approximately 3,800 homes, employment land, schools, healthcare provision, local centres, sports facilities and community infrastructure. It makes a major contribution towards strategic housing and economic objectives and generates substantial positive effects for health and community wellbeing.

5.1193 The Lattenburys represents one of the most strategically important allocations in the Local Plan providing the opportunity to deliver two new linked villages served by new and upgraded infrastructure. With embedded mitigation, it delivers significant positive sustainability benefits across social, economic and environmental objectives.

Huntingdon 1: Hinchingbrooke Hospital Site

5.1194 The site is located within flood zone 1 and can accommodate modern drainage and climate adaptation infrastructure. The redevelopment of the hospital campus provides opportunities to improve sustainability performance, energy efficiency and resilience.

5.1195 Landscape enhancement, retention of trees and green infrastructure provision are required. Although redevelopment will intensify land use, biodiversity improvements and green infrastructure opportunities reduce potential adverse effects.

5.1196 The allocation lies adjacent to important heritage assets including Hinchingbrooke House and parts of the Huntingdon Conservation Area. Heritage assessment and landscape-led design are required to protect significance and setting. Residual effects are considered neutral.

5.1197 The allocation delivers substantial health, employment and social benefits through replacement and upgraded hospital facilities, healthcare research, training uses, key worker accommodation and associated community infrastructure. These represent significant long-term positive sustainability effects.

5.1198 Given its strategic healthcare role and associated employment benefits, the Hinchingbrooke Hospital allocation generates a highly positive sustainability outcome, with environmental constraints capable of appropriate mitigation.

Huntingdon 2: Amber Centre, Mayfield Road

5.1199 The site lies within flood zone 1 and experiences very low flood risk. SuDS, drainage infrastructure and natural flood management measures are required to ensure resilience to future climate conditions. Residual effects are positive.

5.1200 Although a relatively small site, landscaping and tree retention requirements will contribute to local biodiversity enhancement. Biodiversity effects are generally neutral to positive.

5.1201 The site is surrounded by existing residential development and presents limited landscape or heritage constraints. Careful design and landscaping will ensure successful integration with the surrounding neighbourhood.

5.1202 The redevelopment will provide approximately 12 homes in a highly sustainable urban location with excellent access to schools, services and active travel opportunities. The proposal contributes positively towards housing delivery and local community sustainability.

5.1203 The Amber Centre site represents an efficient redevelopment opportunity with minimal environmental constraints. The allocation delivers positive housing and community benefits and is assessed as having a positive overall sustainability effect.

Offord Cluny 1: West of High Street and North of Dunstall Close

5.1204 The site lies within flood zone 1 and therefore performs positively against flood risk objectives. Site requirements include a detailed drainage strategy, SuDS, greenfield runoff rates and consideration of natural flood management measures, resulting in a positive residual effect.

5.1205 The site contains existing boundary vegetation that contributes to ecological connectivity. Ecological surveys and biodiversity enhancement measures are required, alongside biodiversity net gain. Ecological effects are therefore considered neutral to positive following mitigation.

5.1206 The East Coast Mainline is to the immediate west of the site meaning it may be impacted by noise pollution. The policy requires noise assessments to be undertaken with mitigation measures incorporated.

5.1207 The site is located on a gateway approach on the edge of Offord Cluny so requires sensitive design to ensure effective integration and to reflect local character. Heirtage constraints are limited and can be overcome through design.

5.1208 The allocation contributes approximately 45 dwellings in a sustainable Local Service Village location between Huntingdon and St Neots local services. Additional housing will support local service provision and community sustainability while remaining proportionate to the scale of Offord Cluny and Offord D'Arcy.

5.1209 Following embedded mitigation, the site is considered capable of delivering a positive sustainability outcome with heritage, biodiversity and environmental constraints appropriately managed.

Offord D'Arcy 1: West of Graveley Road

5.1210 The site lies within flood zone 1 and therefore performs positively against flood risk objectives. Site requirements include a detailed drainage strategy, SuDS, greenfield runoff rates and consideration of natural flood management measures, resulting in a positive residual effect.

5.1211 The site contains existing boundary vegetation that contributes to ecological connectivity. Ecological surveys and biodiversity enhancement measures are required, alongside biodiversity net gain. Ecological effects are therefore considered neutral to positive following mitigation.

5.1212 The site is located on the southern edge of Offord D'Arcy so requires sensitive design to ensure effective integration and to reflect local character. Heirtage constraints are limited and can be overcome through design.

5 Stage D - Consultation and development of the Plan

5.1213 The allocation contributes approximately 70 dwellings in a sustainable Local Service Village location between Huntingdon and St Neots local services. Additional housing will support local service provision and community sustainability while remaining proportionate to the scale of Offord D'Arcy and Offord Cluny.

5.1214 Following embedded mitigation, the site is considered capable of delivering a positive sustainability outcome with heritage, biodiversity and environmental constraints appropriately managed.

Summary of Impacts on Human Health and Inequalities

5.1215 Across all eight allocations, positive residual effects are anticipated against the sustainability objective relating to healthy communities and reducing inequalities. Huntingdon 1 and The Lattenburys provide particularly substantial benefits through healthcare, education and community infrastructure. Godmanchester 1, Godmanchester 2, Brampton 1, Huntingdon 2, Offord Cluny 1 and Offord D'Arcy 1 improve housing supply in accessible locations, while Brampton 2 enhances recreational access and wellbeing. Godmanchester 3 supports employment and economic inclusion. Overall, no significant health effects have been identified that cannot be mitigated through site-specific requirements and wider Local Plan policies, resulting in a collectively positive contribution to health, wellbeing and social inclusion across Huntingdonshire.

Cumulative effects in relation to wider settlement

Brampton

5.1216 Brampton is a sustainable Service Centre with a primary school, local retail provision, healthcare facilities, employment opportunities and good connections to Huntingdon. The cumulative effect of growth from Brampton 1 and Brampton 2, together with existing commitments, is expected to be modest and proportionate to the settlement's role in the hierarchy. Brampton 1 would provide a small residential development, whilst Brampton 2 would primarily improve country park access and recreational infrastructure.

5.1217 In cumulative terms, development would increase demand for local services, including education, healthcare and recreational facilities, and would generate additional traffic movements on routes connecting Brampton to Huntingdon and the wider strategic road network. The settlement's relatively strong infrastructure base means that these effects are likely to be accommodated without significant adverse impacts, although healthcare capacity should continue to be monitored given existing pressures on GP provision.

5.1218 Collectively, the allocations would help reinforce Brampton's role as a Service Centre by supporting local facilities, improving access to green space and contributing to the long-term sustainability of the settlement.

Godmanchester

5.1219 Godmanchester is one of the district's most sustainable Service Centres, with a broad range of services, schools, healthcare provision, employment opportunities and close links to Huntingdon. The cumulative effect of growth from Godmanchester 1, Godmanchester 2 and Godmanchester 3would represent a significant level of development within the settlement.

5.1220 Taken together, the allocations would substantially increase population and employment opportunities, generating additional demand for healthcare, education, community facilities and local services. The scale of residential growth, particularly at Godmanchester 2, is likely to increase pressure on primary and secondary school provision and local GP surgeries, requiring ongoing infrastructure planning and monitoring.

5.1221 Cumulative transport impacts are likely to be one of the most significant considerations, with increased vehicle movements on the A1198, local roads and connections into Huntingdon. However, the allocations also provide opportunities to enhance walking, cycling and public transport connections and to deliver new green infrastructure, biodiversity enhancement and flood mitigation measures.

5.1222 Overall, the cumulative effect of growth is expected to strengthen Godmanchester's role as a sustainable Service Centre, although careful management of transport, healthcare and education infrastructure will be important to ensure development is supported by appropriate mitigation measures.

Hemingford Abbots

5.1223 The Lattenburys represents a strategic-scale new community rather than a conventional village allocation and would deliver substantial housing, employment opportunities, schools, local centres, open space and supporting infrastructure.

5.1224 In cumulative terms, development would fundamentally alter the scale and function of this part of the district and create significant new demands on transport infrastructure, healthcare services, utilities and community facilities. However, unlike smaller village allocations, much of this infrastructure is intended to be delivered as part of the development itself, including schools, local services, active travel infrastructure and extensive green infrastructure provision.

5.1225 The scale of the development means that cumulative effects would extend beyond Hemingford Abbots and Godmanchester, influencing travel patterns, education catchments and service provision across neighbouring settlements including Godmanchester, Huntingdon and St Ives. There would also be cumulative landscape, environmental and transport considerations that would require phased delivery and long-term infrastructure planning.

5.1226 Overall, the cumulative effect of The Lattenburys is expected to be transformative, creating a new sustainable community that significantly expands the district's housing and infrastructure capacity whilst requiring substantial mitigation and coordinated infrastructure delivery.

Huntingdon

5.1227 Huntingdon is one of the district's most sustainable settlements and principal market town, providing extensive retail, employment, educational, healthcare and transport infrastructure. Development at Hinchingbrooke Hospital and the Amber Centre would contribute to the ongoing regeneration and growth of the town utilising previously developed land.

5.1228 The cumulative effect of these allocations is expected to be relatively modest in comparison with the scale of Huntingdon and existing planned growth elsewhere in the town. Additional residential development would increase demand for local services and infrastructure, whilst redevelopment and enhancement of the hospital site would strengthen Huntingdon's strategic healthcare role and support key worker accommodation and specialist housing provision.

5.1229 Cumulative transport impacts are likely to be localised, particularly around Hinchingbrooke Hospital and key corridor routes. However, Huntingdon benefits from an extensive transport network and has greater capacity to absorb growth than most settlements in the district. Pressure on healthcare and education services is likely to increase, but these impacts are expected to be more readily accommodated due to the town's substantial infrastructure base.

5.1230 Overall, the cumulative effect of growth is expected to be positive, supporting regeneration objectives, reinforcing Huntingdon's role as the district's principal service centre and helping to meet identified housing and healthcare needs.

The Offords (Offord Cluny and Offord D'Arcy)

5.1231 The Offords are identified in the settlement hierarchy as a combined Local Service Village, reflecting the close relationship between Offord Cluny and Offord D'Arcy and their shared community facilities. Development at Offord Cluny 1 and Offord D'Arcy 1 would collectively deliver around 125 dwellings and represent a moderate level of growth for the settlement.

5 Stage D - Consultation and development of the Plan

5.1232 In cumulative terms, the allocations would increase demand for local facilities, primary education and healthcare services. Additional residents are likely to generate increased travel demand, particularly to Huntingdon, St Neots and other higher-order centres for employment, retail and secondary education. Given the limited public transport options available, a proportion of these journeys are likely to be undertaken by private vehicle.

5.1233 The cumulative impact on local schools and GP services is expected to be manageable but would require monitoring, particularly as healthcare providers across the district are experiencing wider capacity pressures. Additional housing would also contribute to supporting the viability of local facilities and helping maintain the sustainability of the settlement.

5.1234 Overall, the cumulative effects are consistent with the role of the Offords as a Local Service Village. While growth will create additional pressure on infrastructure and transport networks, the scale of development is not expected to overwhelm existing provision and should assist in maintaining the long-term vitality of the settlement.

Eastern Huntingdonshire Site Allocations

5.1235 In total eight sites are allocated within settlements in Eastern Huntingdonshire.

- Bluntisham 1: Land off 18 Holliday's Road
- Bluntisham 2: West of Colne Road
- Colne 1: Ramadie, Earith Road
- Fenstanton 1: Galley Hill
- Houghton and Wyton 1: Ruddles Lane
- Needingworth 1: Giffords Park, East of B1040
- Needingworth 2: North of Bluntisham Road
- St Ives 1: North of Houghton Road

5.1236 There have been no material changes to most site policies since the Preferred Options stage. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites. No additional sites have been allocated since the Preferred Options stage. Site Bluntisham 1: South of Rectory Road was initially allocated at the Preferred Option stage but later removed from the Pre-Submission Plan, this resulted in the remaining Bluntisham sites to be re-numbered. Following a review of comments received from residents and stakeholders, who cited concern regarding heritage and impact on the Grade II* Bluntisham House as well as potential impact to ridge and furrow land, alongside concerns about the cumulative impact of development on services and infrastructure within Bluntisham, the site was removed as a draft allocation.

Site	Preferred Options Allocation	Submission Allocation	Housing / Development Change	Policy Change Relevant to Sustainability	SA Objective(s) with Significant Effect Change	Change in Significant Effect
Needingworth 2: North of Bluntisham Road	290 dwellings	Western parcel removed due to consultation responses citing concerns in relation to traffic	Loss of 190 homes.	Smaller scheme capable of integration with existing village.	SA7 Landscape and Townscape SA15 Integration	SA7: (-) (+) SA15: (+) (++)

Site	Preferred Options Allocation	Submission Allocation	Housing / Development Change	Policy Change Relevant to Sustainability	SA Objective(s) with Significant Effect Change	Change in Significant Effect
		impacts, flood risk, coalescence with neighbouring settlements, landscape concerns and scale.				

5.1237 The changes to Needingworth 2 is material but not significant in sustainability appraisal terms. The primary modification is the decrease in dwelling numbers from approximately 290 to approximately 100 homes. While this provides fewer homes, it does not fundamentally alter the allocation's role, location, development form or strategic purpose. The Pre-Submission modifications do not introduce any new significant adverse effects and do not alter the overall sustainability conclusions previously reached for Needingworth 2. The revised allocation performs slightly better in landscape and townscape and integration terms while maintaining broadly the same environmental and social sustainability profile.

5.1238 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10				SA11		SA12		SA13	SA14	SA15	SA16
Bluntisham 1	N	+	+	++	-	++	+	-	+	+	+	+	+	+	+	+	+	++	++	-	++	N	N	+	-
Bluntisham 2	N	+	-	++	-	+	--	--	+	+	-	+	+	+	-	++	+	++	++	-	++	N	N	+	++
Colne 1	N	+	+	++	-	++	+	--	--	+	-	+	+	++	-	--	+	+	++	-	++	N	N	+	++
Fenstanton 1	N	_	_	--	-	--	--	-	-	+	+	+	-	N	++	N	-	++	+	--	++	++	N	+	-
Houghton and Wyton 1	++	+	-	++	+	+	--	-	+	+	+	+	+	N	N	N	N	N	+	+	+	N	N	+	++
Needingworth 1	+	+	-	-	-	-	--	-	+	++	+	+	-	++	++	++	++	++	+	+	++	+	++	+	+
Needingworth 2	N	+	-	++	-	+	--	--	-	++	+	+	-	++	++	+	+	+	++	-	++	+	++	++	++
St Ives 1	+	+	-	++	-	++	--	--	++	+	-	-	-	++	++	+	N	+	++	++	++	N	++	--	-

5 Stage D - Consultation and development of the Plan

Bluntisham 1: Land off 18 Holliday's Road

5.1239 The site is located within flood zone 1 and is therefore sequentially suitable for residential development. While a localised surface water depression is present within the north-eastern part of the site, allocation requirements include a site-specific Flood Risk Assessment and sustainable drainage systems (SuDS). Residual effects are considered positive.

5.1240 The site lies close to the RSPB Ouse Fen reserve and Berry Fen SSSI, creating potential for recreational pressure on sensitive habitats. Allocation requirements include biodiversity net gain, retention of landscape features, enhancement of ecological connectivity and provision of on-site green infrastructure. Recreational mitigation measures are specifically required to avoid adverse effects on designated sites. Consequently, biodiversity effects are considered neutral to positive following mitigation.

5.1241 The site occupies a sensitive village-edge location close to Grade I listed St Mary's Church and the historic core of Bluntisham. The allocation requires a proportionate heritage assessment, archaeological investigation and substantial landscaping to soften the settlement edge and preserve key views. With these safeguards in place, potential impacts on heritage significance and landscape character can be effectively managed, resulting in neutral residual effects.

5.1242 The allocation provides approximately 35 homes within a Local Service Village, contributing positively to local housing supply and supporting the viability of village services and facilities. The site benefits from access to community facilities, education provision and employment opportunities in the wider area. Social effects are therefore considered positive and long term.

5.1243 Bluntisham 1 performs positively against housing, climate resilience and community objectives. Potential biodiversity and heritage effects can be satisfactorily addressed through the allocation requirements, resulting in a positive overall sustainability outcome.

Bluntisham 2: West of Colne Road

5.1244 The site is wholly within flood zone 1 with only limited areas of surface water risk. Allocation requirements include a detailed drainage strategy, groundwater investigations, greenfield runoff rates and opportunities for natural flood management. Residual effects against flood risk and climate adaptation objectives are assessed as positive.

5.1245 The allocation includes approximately 3 hectares of public open space specifically intended to mitigate recreational pressure on the Ouse Washes SAC, SPA and Ramsar site and Berry Fen SSSI. Retention of trees and hedgerows, biodiversity net gain requirements and landscape enhancement measures create significant opportunities for ecological improvement. Biodiversity effects are therefore neutral to positive.

5.1246 Landscape and Visual Impact Assessment requirements and extensive boundary planting will help contain development and reinforce the village edge. No significant heritage constraints are identified, although the development must respond sensitively to local character and maintain landscape quality. Residual impacts are assessed as neutral.

5.1247 The allocation will deliver approximately 85 homes together with open space and parking provision for St Helen's Primary School staff. These benefits support housing delivery, local education infrastructure and community wellbeing. The site's location adjoining the existing settlement promotes social integration and accessibility.

5.1248 The site delivers substantial housing and community benefits while providing opportunities for ecological enhancement and recreation mitigation. Subject to the embedded safeguards, the overall sustainability effect is positive.

Colne 1: Ramadie, Earith Road

5.1249 The site is within flood zone 1 and free from significant flood constraints. Allocation requirements include sustainable drainage, wastewater capacity assessment and water management measures to ensure climate resilience. Residual flood risk effects are positive.

5.1250 It benefits from existing hedgerow boundaries and opportunities for biodiversity enhancement. Allocation requirements include retention and strengthening of hedgerows, biodiversity net gain and ecological mitigation where necessary. Biodiversity effects are considered neutral to positive after mitigation.

5.1251 The site contains previously developed elements including existing buildings and paddock land. Development has the potential to introduce less characteristic backland development, however allocation requirements for landscape-sensitive design, boundary retention and integration with surrounding development help reduce adverse effects. There are no significant heritage constraints. Residual effects are neutral.

5.1252 The allocation provides approximately 15 dwellings and contributes towards maintaining the sustainability of Colne. Additional housing will support local services and provide modest benefits to the village economy and housing supply. Effects are positive but proportionate to the small scale of development.

5.1253 Colne 1 is a relatively unconstrained site capable of delivering housing growth with limited environmental effects. With mitigation in place, the site achieves a positive sustainability outcome.

Fenstanton 1: Galley Hill

5.1254 Fenstanton 1 is a major employment allocation providing approximately 25 hectares of development land and around 100,000sqm of industrial, logistics and commercial floorspace. It is adjacent to the Lakes Business Park. The site supports business growth, inward investment and significant employment creation, making it one of the strongest performing allocations against economic sustainability objectives.

5.1255 The northern part of the site is affected by significant flood risk, but the allocation adopts a sequential approach by restricting built development to land within flood zone 1 and reserving approximately 36 hectares for flood mitigation and open space. Detailed flood modelling, drainage strategies and natural flood management measures are required. Residual effects are positive following mitigation.

5.1256 The site lies within the Great Ouse Valley Green Infrastructure Priority Area and is close to several County Wildlife Sites. Allocation requirements include ecological surveys, habitat enhancement, biodiversity net gain and retention of hedgerows and green infrastructure. The extensive open space component creates opportunities for biodiversity enhancement and habitat connectivity. Residual ecological effects are neutral to positive.

5.1257 Potential impacts on nearby listed farm buildings and the rural landscape are identified. However, requirements for landscape strategies, visual impact assessment, heritage assessment and substantial buffers provide a framework for minimising harm. Residual landscape and heritage effects are considered neutral.

5.1258 Fenstanton 1 delivers significant economic and employment benefits while managing environmental constraints through a comprehensive mitigation strategy. The overall sustainability outcome is strongly positive.

Houghton and Wyton 1: Ruddles Lane

5.1259 The site provides ground mounted solar panels assisting the diversification of energy supply across the district and transitioning to a lower carbon future. The site performs positively against climate change and resilience objectives.

5 Stage D - Consultation and development of the Plan

5.1260 The site lies predominantly within flood zone 1 with some parts at higher risk. A sequential approach has been taken by restricting solar panels development to land within flood zone 1. Allocation requirements include detailed drainage design, natural flood management and integration of sustainable drainage systems. These measures support adaptation to climate change and safeguard both the site and surrounding areas. Residual effects are positive.

5.1261 The allocation includes substantial areas of open space and landscaping and requires ecological surveys, biodiversity enhancement and retention of important landscape features. Green infrastructure and habitat creation opportunities support biodiversity net gain and ecological connectivity. Biodiversity effects are assessed as positive following mitigation.

5.1262 The site occupies a prominent location between St Ives and Houghton and Wyton, creating sensitivity in relation to landscape character and settlement separation. The allocation requires a comprehensive landscape strategy, heritage assessment and archaeological investigation to protect nearby conservation areas and listed buildings. These requirements reduce residual effects to neutral.

5.1263 Ruddles Lane provides ground mounted solar panels incorporating extensive landscape, heritage and ecological safeguards. The overall sustainability effect is positive.

Needingworth 1: Giffords Park, East of B1040

5.1264 The site is located in Holywell-cum-Needingworth parish but adjoins the eastern edge of St Ives, effectively forming an urban extension to the market town.

5.1265 A key strength of the allocation is the sequential approach to site layout. Built development is restricted to flood zone 1, whilst areas affected by higher flood risk are retained as open space, flood mitigation areas and environmental enhancement land. The allocation requires a site-specific Flood Risk Assessment, drainage strategy, maintenance strips and ongoing management of watercourses. Consequently, the residual flood risk effect is positive and demonstrates a clear application of the sequential approach.

5.1266 The development includes approximately 65.5 hectares of green infrastructure, open space and landscaping, ecological surveys and biodiversity enhancement measures. Mitigation is also required to address recreational impacts on sensitive habitats. These measures provide opportunities for biodiversity net gain and enhancement of green infrastructure networks. Residual ecological effects are positive.

5.1267 The site is located on the edge of St Ives and has the potential to affect the gateway into the town when approaching from east. Allocation requirements include heritage assessment, archaeological investigation, landscape mitigation and careful masterplanning to avoid settlement coalescence. Heritage and landscape effects are therefore assessed as neutral after mitigation.

5.1268 The allocation will deliver approximately 1,750 homes and 4.6ha of employment floor space as well as retail, health and community uses. As well as provide new facilities, it will also improve access to recreation, active travel routes and local services. Growth in this highly sustainable market town location supports housing delivery objectives and contributes positively to community wellbeing and economic vitality.

5.1269 Needingworth 1 performs strongly against housing, accessibility and climate resilience objectives. Environmental constraints can be effectively managed through the allocation requirements, resulting in a positive overall sustainability outcome.

Needingworth 2: North of Bluntisham Road

5.1270 The site is located predominately within flood zone 1 and benefits from a sequentially preferable location for development. Allocation requirements include detailed flood modelling, sustainable drainage systems, natural flood management and integrated water management measures. The

allocation includes provision of open space to safeguard against flooding. These requirements result in a positive performance against flood risk and climate resilience objectives.

5.1271 Retention of trees and hedgerows, biodiversity net gain requirements and landscape enhancement measures create significant opportunities for ecological improvement. Biodiversity effects are therefore neutral to positive.

5.1272 Landscape and Visual Impact Assessment requirements and extensive boundary planting will help contain development and mitigate potential noise, light and air pollution impacts arising form its proximity to the A1123 on its northern edge. No significant heritage constraints are identified, although the development must respond sensitively to local character and maintain landscape quality. Residual impacts are assessed as neutral.

5.1273 The allocation will deliver approximately 100 homes together with open space and community retail facilities. These benefits support housing delivery, local education infrastructure and community wellbeing. The site's location adjoining the existing settlement promotes social integration and accessibility.

5.1274 The site delivers substantial housing and community benefits while providing opportunities for ecological enhancement and recreation mitigation. Subject to the embedded safeguards, the overall sustainability effect is positive.

St Ives 1: North of Houghton Road

5.1275 The site is located within flood zone 1 and benefits from a sequentially preferable location for development. Allocation requirements include detailed flood modelling, sustainable drainage systems, natural flood management and integrated water management measures. These requirements result in a positive performance against flood risk and climate resilience objectives.

5.1276 The development includes approximately 12 hectares of open space and landscaping, ecological surveys and biodiversity enhancement measures. Mitigation is also required to address recreational impacts on sensitive habitats. These measures provide opportunities for biodiversity net gain and enhancement of green infrastructure networks. Residual ecological effects are positive.

5.1277 The site is located on the edge of St Ives and has the potential to affect the setting of the Houghton and Wyton Conservation Area and nearby listed buildings. Allocation requirements include heritage assessment, archaeological investigation, landscape mitigation and careful masterplanning to avoid settlement coalescence. Heritage and landscape effects are therefore assessed as neutral after mitigation.

5.1278 The allocation will deliver approximately 350 homes and improve access to recreation, active travel routes and local services. Growth in this highly sustainable market town location supports housing delivery objectives and contributes positively to community wellbeing and economic vitality.

5.1279 St Ives 1 performs strongly against housing, accessibility and climate resilience objectives. Environmental constraints can be effectively managed through the allocation requirements, resulting in a positive overall sustainability outcome.

Summary of Impacts on Human Health and Inequalities

5.1280 Across all six allocations, the residual effects against health, wellbeing and inequality objectives are considered positive. Bluntisham 1, Bluntisham 2, Colne 1, Needingworth 1, Needingworth 2 and St Ives 1 increase housing choice and improve access to services, green infrastructure and active travel opportunities. Fenstanton 1 delivers substantial employment and economic inclusion benefits. Embedded mitigation measures relating to flood risk, environmental quality, biodiversity and amenity ensure that no significant adverse health effects are anticipated. Houghton and Wyton 1 provides solar panels assisting in the district transitioning to a lower carbon future. Consequently, the six allocations collectively contribute positively towards creating healthier communities and reducing social and economic inequalities across Huntingdonshire.

5 Stage D - Consultation and development of the Plan

Cumulative effects in relation to wider settlement

Bluntisham

5.1281 Bluntisham is a Local Service Village with a primary school, local convenience facilities and access to community services, but residents continue to rely on St Ives, Huntingdon and other larger settlements for a wider range of employment, retail, healthcare and secondary education opportunities. The combined delivery of Bluntisham 1 (approximately 35 homes) and Bluntisham 2 (approximately 85 homes) would represent a notable level of growth for the village and would increase demand on local infrastructure and services.

5.1282 In cumulative terms, development is likely to generate additional vehicle movements along the B1040, Colne Road and routes towards St Ives and Huntingdon, reflecting the village's continued role as a commuter settlement. Whilst both sites benefit from opportunities for walking and cycling connections into the village, many higher-order trips are likely to remain car-based. The cumulative effect of both allocations may increase pressure on local education provision, particularly at St Helen's Primary School, although Bluntisham 2 includes land to assist with school-related parking provision.

5.1283 The combined growth would also increase demand on GP services and other healthcare facilities serving the wider area, which already experience capacity pressures. From an environmental perspective, cumulative recreational pressure on nearby nationally and internationally important ecological sites, including the Ouse Washes and Berry Fen, will require appropriate mitigation through open space provision and green infrastructure. Notwithstanding these considerations, the additional housing would help support the vitality of village services, sustain community facilities and contribute towards maintaining the long-term sustainability of Bluntisham as a Local Service Village.

Colne

5.1284 Colne is a small rural village with a limited range of day-to-day services and a relatively high reliance on neighbouring settlements such as Bluntisham, Somersham and St Ives for employment, retail, healthcare and secondary education needs. Development at Colne 1 would represent modest growth that is proportionate to the settlement's position within the hierarchy.

5.1285 The site would generate additional vehicle movements on Earith Road and local rural routes, with most residents expected to travel to higher-order settlements to access services and employment opportunities. Consequently, cumulative traffic effects are likely to be limited but would contribute incrementally to traffic growth across the wider eastern Huntingdonshire road network.

5.1286 The allocation would increase demand on education and healthcare services serving Colne and nearby settlements. However, given the relatively small scale of development, cumulative pressures are unlikely to be significant. The principal cumulative consideration relates to maintaining village vitality. Additional residents would support the long-term sustainability of local facilities, community organisations and services that can be vulnerable to decline within smaller rural settlements. Overall, the cumulative impacts are expected to be modest and generally positive in supporting the continued viability of the village.

Fenstanton

5.1287 Fenstanton is a Service Centre and one of the district's more sustainable rural settlements, benefiting from access to local services, employment opportunities, public transport and close proximity to St Ives, Huntingdon and the strategic road network. Fenstanton 1 is a significant employment allocation providing approximately 100,000sqm of employment floorspace and has the potential to reinforce the settlement's economic role within the district.

5.1288 In cumulative terms, the allocation would operate alongside other growth proposals within Fenstanton, St Ives and the wider A14 corridor, contributing to increased traffic movements on the A1307, A14 junctions and surrounding local road network. Whilst this could increase congestion pressures at key junctions, the site's strategic location adjacent to the primary road network makes it well suited to employment use and reduces the need for heavy goods vehicles to travel through residential areas.

5.1289 The development has the potential to generate substantial employment opportunities, reducing the need for longer-distance commuting and supporting a more balanced jobs-to-homes relationship across the western part of the district. There may also be indirect increases in demand for local services, retail facilities and healthcare provision arising from workforce growth. Environmental considerations include cumulative impacts on landscape character, flood management infrastructure and designated ecological assets in the area, which will require mitigation through green infrastructure, biodiversity enhancement and flood management measures.

5.1290 Overall, the cumulative effect of Fenstanton 1 is expected to be positive, strengthening the economic function of the settlement and supporting wider district growth objectives, subject to appropriate transport and environmental mitigation.

Houghton and Wyton

5.1291 The site provides ground mounted solar panels assisting the diversification of energy supply across the district and transitioning to a lower carbon future. The site performs positively against climate change and resilience objectives. The scale of development is unlikely to detrimentally impact landscape character and mitigations are put in place within the policy.

Needingworth

5.1292 Needingworth is local service village with a range of day-to-day services and a relatively high reliance on neighbouring settlements such as St Ives for employment, retail, healthcare and secondary education needs. Development at Needingworth 2 would represent modest growth that is proportionate to the settlement's position within the hierarchy. Needingworth 1 is a much larger development located on the edge of St Ives further westwards along the A1123. The urban extension will provide enhanced services and facilities to meet the needs of residents. Both sites will generate additional vehicle movements on local rural routes and within St Ives. Consequently, cumulative traffic effects are likely to be limited but would contribute incrementally to traffic growth across the wider A1123 road network.

5.1293 The allocations would increase demand on education and healthcare services serving Needingworth and nearby settlements. However, given the scale of development at Needingworth 1 and the infrastructure that will be provided, cumulative pressures are mitigated. Overall, the allocations would make a positive contribution to supporting the long-term vitality, housing supply and sustainability of St Ives and Needingworth.

St Ives

5.1294 St Ives is one of Huntingdonshire's most sustainable market towns, providing a comprehensive range of retail, employment, education, healthcare, leisure and public transport facilities. Development at St Ives 1 (approximately 350 homes) would contribute to the town's role as a key focus for growth within the district.

5.1295 In combination with existing commitments and nearby allocations, including growth proposed in Houghton and Wyton, the allocation would result in additional traffic movements on the A1123 corridor, local distributor roads and routes connecting to Huntingdon and Cambridge. However, St Ives benefits from an established transport network, including guided bus services, active travel routes and a broad range of services within accessible distances, helping to moderate cumulative transport effects.

5.1296 The cumulative impact of growth will increase demand for education, healthcare, leisure and community facilities across the town. Although St Ives has a stronger infrastructure base than most villages, ongoing growth

5 Stage D - Consultation and development of the Plan

is likely to require continued monitoring of school capacity, healthcare provision and supporting infrastructure. Investment associated with development is expected to contribute towards maintaining and enhancing these facilities over time.

5.1297 From an environmental perspective, cumulative growth around the northern edge of St Ives increases the importance of landscape buffering, flood risk management and protection of the setting of nearby heritage assets and surrounding villages. Nevertheless, given the town's role within the settlement hierarchy and its existing infrastructure provision, the cumulative effects of St Ives 1 are expected to be manageable. Overall, the allocation would make a positive contribution to supporting the long-term vitality, housing supply and sustainability of the market town.

Southern Huntingdonshire Site Allocations

5.1298 In total nine sites are allocated within settlements in Southern Huntingdonshire.

- Abbotsley 1: North of Wintringham Hall
- Great Gransden 1: Land South of Caxton Road
- Great Paxton 1: West of High Street
- Great Paxton 2: Land North of Harley Industrial Park
- Little Paxton 1: Land North of St James Road
- Little Paxton 2: Land West of Great North Road
- St Neots 1: Land East of Loves Farm (Tithe Farm Extension)
- St Neots 2: Land South West of Potton Road, Eynesbury
- Waresley 1: Land between West Lodge and Home Farm

5.1299 There have been no material changes to the majority of site policies since the Preferred Options stage. The previously reported SA results therefore remain valid, and no further SA re-assessment is required for these sites. No additional sites have been allocated since the Preferred Options stage in the Southern Huntingdonshire area. The existing site allocation of St Neots East from the Local Plan to 2036 has been identified as a retained allocation. The site has planning permission is building out and is expected to do so into the the new Local Plan period. The rational of including a retained policy in the Local Plan to 2036 is to provide guidance for the determination of any future planning applications which are primarily expected to be reserved matters providing detailed information to enhance that provided through the outline planning permissions.

5.1300 There was one site that require SA re-assessment due to changes introduced at the Pre-Submission Stage. The table below demonstrates how site policy changed from the Preferred Options stage and the subsequent change in significant effect.

Site	Preferred Options Allocation	Submission Allocation	Housing / Development Change	Policy Change Relevant to Sustainability	SA Objective(s) with Significant Effect Change	Change in Significant Effect
Little Paxton 2 – West of Great North Road	220 dwellings.=	410 dwellings. Strengthening of ecological mitigation requirements; stronger references to recreational impacts on nearby designated sites; additional requirements relating to minerals safeguarding; stronger wastewater and infrastructure requirements; greater clarity on transport integration and active travel.	+190 dwellings	Larger scheme capable of delivering wider housing mix and tenures; scale exceeds 200-home threshold in SA framework.	SA9 Housing	SA9: (+) (++)

5.1301 The changes to **Little Paxton 2** are material but not significant in sustainability appraisal terms. The primary modification is the increase in dwelling numbers from approximately 220 to approximately 410 homes. While this strengthens the site's contribution to meeting district housing requirements, it does not fundamentally alter the allocation's role, location, development form or strategic purpose. The Pre-Submission modifications do not introduce any new significant adverse effects and do not alter the overall sustainability conclusions previously reached for Little Paxton 2. The revised allocation performs slightly better in housing delivery terms while maintaining broadly the same environmental and social sustainability profile.

5.1302 A summary of the appraisal findings for the allocated sites, assessed against the 16 Sustainability Appraisal Objectives, is provided below:

5 Stage D - Consultation and development of the Plan

SA Objectives	SA1			SA2	SA3		SA4		SA5	SA6		SA7	SA8	SA9	SA10			SA11		SA12		SA13	SA14	SA15	SA16
Abbotsley 1	N	+	+	++	-	++	--	--	--	++	_	_	-	N	++	N	-	++	+	++	+	+	N	_	-
Great Gransden 1	N	+	-	++	-	++	--	--	+	++	-	+	+	+	+	++	N	++	+	-	++	+	N	+	+
Great Paxton 1	N	+	-	++	+	++	--	-	+	+	+	++	-	++	++	++	+	+	++	-	++	N	N	+	+
Great Paxton 2	N	+	-	++	+	++	--	--	+	+	+	+	-	N	++	N	-	++	++	-	--	+	N	+	+
Little Paxton 1	N	+	-	++	-	++	--	++	++	+	+	+	-	+	++	+	++	+	++	++	++	N	N	+	++
Little Paxton 2	N	+	-	++	-	++	--	--	+	+	+	-	-	++	++	+	+	+	++	++	++	N	N	+	++
St Neots 1	N	+	-	+	-	++	-	--	-	++	-	+	-	++	++	+	-	++	-	++	++	N	N	+	-
St Neots 2	N	+	-	++	-	++	--	--	+	++	-	+	-	+	++	++	-	++	++	++	-	N	N	+	++
Waresley 1	N	+	-	++	-	++	--	-	-	++	-	+	+	++	+	-	+	+	+	-	--	N	N	+	-

Abbotsley 1: North of Wintringham Hall

5.1303 The site is located within flood zone 1 and small areas are affected by surface water flooding and development would require a site-specific drainage strategy, sustainable drainage systems (SuDS) and climate resilience measures. Whilst wastewater infrastructure upgrades may be necessary, climate adaptation objectives can be achieved through policy requirements and integrated water management.

5.1304 The site is greenfield grade 2 agricultural land and therefore development would result in the loss of productive farmland. However, the site offers significant opportunities for green infrastructure, biodiversity net gain and habitat creation through green space provision. There are no designated ecological sites within the site and strategic ecological impacts are considered manageable through mitigation and enhancement measures.

5.1305 The site occupies a prominent countryside location on the eastern edge of St Neots. Development has potential landscape impacts and may alter the rural setting between St Neots and the surrounding countryside. There are no significant heritage constraints within the site itself, although careful design will be required to protect local character and maintain appropriate landscape buffers. Considering the other development sites to the west and the changing context of the site with the A428/A421 upgrades and East West Rail, these impacts are minimised.

5.1306 The allocation performs positively through provision of employment floorspace along a transport corridor providing opportunities for sustainable connections.

5.1307 The site offers significant employment benefits. Although landscape and agricultural land impacts are notable, mitigation measures are capable of reducing these effects, resulting in a positive overall sustainability outcome. The residual sustainability effect is considered positive overall.

Great Gransden 1: Land South of Caxton Road

5.1308 The site is in flood zone 1 and is not significantly affected by surface water flooding and would require mitigation. Site-wide drainage infrastructure, SuDS and flood management measures are capable of addressing these constraints and supporting climate resilience objectives.

5.1309 No designated ecological sites are located within the site and strategic biodiversity impacts are limited. The proposal creates opportunities for biodiversity net gain and ecological connectivity. The policy identifies it is within the conservation zone of the Eversden and Wimpole SAC and requires appropriate assessment on impacts of bats.

5.1310 Development would have some landscape change given the site's size and rural setting. No significant heritage assets are present within the allocation, although landscape integration and careful design will be essential to manage visual impacts.

5.1311 The allocation performs positively through provision of employment floorspace. The site adjoins the Sand Road Industrial Estate (an Established Employment Area) providing an expansion to an Established Employment Area and presenting opportunities for local businesses.

5.1312 The site offers significant employment benefits and has capacity to deliver an extension to an existing Established Employment Area. Although landscape and agricultural land impacts are notable, mitigation measures are capable of reducing these effects, resulting in a positive overall sustainability outcome.

Great Paxton 1: West of High Street

5.1313 A change from the Preferred Options stage was that the boundary has been amended to remove the land used for car parking at the nearby football field. This follows concerns from residents. This amends the site area down to 0.4ha and the capacity to 9 dwellings, these are not considered to be significant changes.

5.1314 The site is in flood zone 1 and is not significantly affected by surface water flooding which can be addressed through appropriate drainage solutions and SuDS, resulting in positive effects against climate resilience objectives.

5.1315 The site is situated within the Great Ouse Valley green infrastructure network and offers opportunities for biodiversity enhancement and habitat connectivity. Ecological constraints are relatively limited and biodiversity net gain can be achieved through landscaping and habitat creation measures.

5.1316 As a small-scale site located behind existing development, landscape impacts are localised. There are some heritage constraints but effects on local character can be mitigated through sensitive design and landscaping. The site is located close to the East Coast Mainline Railway so there is potential for noise pollution which the policy requires assessment and mitigation.

5 Stage D - Consultation and development of the Plan

5.1317 The site makes a positive contribution to housing choice through provision of self-build and custom-build opportunities. It benefits from reasonable access to local facilities, services and employment opportunities in Great Paxton and St Neots, supporting community sustainability.

Great Paxton 2: Land North of Harley Industrial Park

5.1318 The site is within flood zone 1 with limited areas of surface water flooding capable of mitigation through site design and drainage infrastructure.

5.1319 Whilst development would result in the loss of grade 2 agricultural land, the site provides opportunities for landscaping and biodiversity enhancement. It lies close to the Great Ouse Valley strategic corridor and has potential to support ecological connectivity and biodiversity net gain.

5.1320 The site occupies an exposed countryside location adjacent to Harley Industrial Park. Development would alter the landscape character of the settlement edge and require substantial landscaping. Heritage constraints are limited and can be addressed through appropriate design.

5.1321 The allocation performs positively through provision of employment floorspace. The site adjoins Harley Industrial Estate to the south (an Established Employment Area) providing an expansion to an Established Employment Area and presenting opportunities for local businesses. Its proximity to St Neots supports access to employment opportunities and services, although sustainable transport opportunities remain relatively limited.

5.1322 The site offers significant employment benefits and has capacity to deliver an extension to an existing Established Employment Area. Although landscape and agricultural land impacts are notable, mitigation measures are capable of reducing these effects, resulting in a positive overall sustainability outcome.

Little Paxton 1: Land North of St James Road

5.1323 The site is within flood zone 1 and has nominal surface water flood risk and can be managed through SuDS and integrated water management measures.

5.1324 The site lies close to the Great Ouse Valley Priority Area being south of the Paxton Pits Nature Reserve and SSSI. The site provides opportunities to strengthen green infrastructure and habitat connectivity. Biodiversity net gain, retention of vegetation and creation of ecological corridors would contribute positively to environmental objectives.

5.1325 Development would affect a greenfield site on the edge of Little Paxton and would therefore alter local landscape character. However, generous green infrastructure provision and landscape-sensitive design can reduce visual impacts. Heritage constraints are limited.

5.1326 The site benefits from good access to local facilities, schools, community services and employment opportunities.

5.1327 Despite the loss of greenfield land and some landscape change, the site's accessibility, housing benefits and ecological enhancement opportunities result in a positive sustainability outcome.

Little Paxton 2: Land West of Great North Road

5.1328 The site performs positively against flood risk objectives, with the site being in flood zone 1 with only some surface water flood risk. Surface water and drainage issues can be addressed through SuDS, green infrastructure and flood attenuation measures.

5.1329 The site is located within the Great Ouse Valley green infrastructure corridor and has strong potential to contribute towards biodiversity objectives through habitat enhancement, ecosystem connectivity and biodiversity net gain measures.

5.1330 The site forms part of an important landscape wedge between Little Paxton and the A1 corridor. Development would therefore require careful masterplanning, extensive landscaping and retention of key green infrastructure features to avoid significant adverse effects. Its location could give rise to noise, air and light pollution which the policy requires appropriate assessment and mitigation to overcome.

5.1331 The allocation is accessible to schools, employment areas, recreation facilities and community services. It supports housing growth in a sustainable service centre and contributes to meeting housing needs across the district.

5.1332 The social and accessibility benefits are considerable and the potential for ecological opportunities are significant. Whilst landscape effects and amenity considerations require careful mitigation, the residual sustainability effects are judged to be positive overall.

St Neots 1: Land East of Loves Farm (Tithe Farm Extension)

5.1333 The site is located in flood zone 1, with only limited areas affected by surface water flood risk. Allocation requirements relating to flood mitigation, drainage design, water efficiency and climate adaptation ensure positive performance against climate resilience objectives.

5.1334 The site provides opportunities to deliver biodiversity net gain, strategic green infrastructure and habitat connectivity alongside the existing development at St Neots East. Ecological impacts are limited and can be mitigated through integrated landscape and environmental design.

5.1335 Development represents a natural extension to Loves Farm and can be integrated with existing and planned communities. The presence of Tithe Farm, a series of listed buildings, requires sensitive heritage-led design and protection of its significance. With appropriate mitigation, heritage impacts can be managed effectively and integrated into the wider development.

5.1336 The site performs strongly in sustainability terms due to its relationship with the existing urban area of St Neots, employment opportunities, schools, services and public transport. The allocation contributes significantly to housing delivery and supports delivery of associated infrastructure. The policy also identifies land that falls within the safeguarding zone for East West Rail so that the site can be delivered alongside wider infrastructure projects.

5.1337 As an urban extension adjoining an existing growth area, the site performs well against housing, accessibility and community objectives. Heritage considerations can be successfully managed through policy requirements, producing a positive overall sustainability outcome.

St Neots 2: Land South West of Potton Road, Eynesbury

5.1338 The site is located in flood zone 1, with only limited areas affected by surface water flood risk and is capable of accommodating development while managing surface water and drainage constraints through site-specific flood mitigation measures. Climate adaptation objectives can be incorporated within the allocation.

5.1339 The allocation provides opportunities for green infrastructure, biodiversity net gain and ecological enhancement. Habitat creation, landscape buffers and integration of natural flood management measures can result in positive residual biodiversity effects.

5.1340 Potential impacts arise from development at the edge of Eynesbury and the wider countryside setting. Appropriate landscape mitigation, retention of key features and sensitive design will be necessary to avoid adverse landscape effects. Heritage impacts are limited and manageable.

5.1341 The site is surrounded by the A248, B1046 and the East Coast Mainline meaning the site may be impacted by noise, air and light pollution. The policy requires noise and air quality assessments to be undertaken with mitigation measures incorporated.

5 Stage D - Consultation and development of the Plan

5.1342 The site offers significant housing delivery in a highly sustainable market town location with access to schools, healthcare, employment and recreation facilities. It supports healthy communities, housing choice and the continued vitality of St Neots. The site is located adjacent to the southern boundary of Wintringham Park so there are opportunities for integration.

5.1343 The site performs strongly across social, economic and accessibility objectives. Environmental constraints are capable of mitigation through the allocation requirements and wider Local Plan policies, resulting in an overall positive sustainability outcome.

Waresley 1: Land between West Lodge and Home Farm

5.1344 The site is located in flood zone 1, with only limited areas affected by surface water flood risk and is capable of accommodating development while managing surface water and drainage constraints through site-specific flood mitigation measures. Climate adaptation objectives can be incorporated within the allocation.

5.1345 There are two distinct parts to the site, the eastern part (1ha) consists of amenity grassland and the western a densely wooded area (0.66ha). The allocation states development is only supported on the eastern art so that the woodland can be retained. The allocation provides opportunities for enhancements to biodiversity net gain and ecological enhancement. Habitat creation, landscape buffers and integration of natural flood management measures can result in positive residual biodiversity effects. The policy identifies it is within the conservation zone of the Eversden and Wimpole SAC and requires appropriate assessment on impacts of bats.

5.1346 Appropriate landscape mitigation, retention of key features and sensitive design will be necessary to avoid adverse landscape effects. It is sensitively located to listed buildings and the conservation area, heritage assessments will be required and are considered to be manageable through design.

5.1347 The allocation is a very small-scale development of approximately six dwellings. Consequently, its direct cumulative effects are expected to be limited. It makes a positive contribution to housing choice through provision of self-build and custom-build opportunities.

5.1348 There are limited services within Waresley itself so relies on most services in St Neots and other surrounding settlements. Public transport is limited so development will likely result in private car usage. It benefits from reasonable access to local facilities, services and employment opportunities in Great Paxton and St Neots, supporting community sustainability.

5.1349 Overall, the allocation represents infill growth that supports the continued vitality of the village without generating significant additional infrastructure requirements.

Summary of Impacts on Human Health and Inequalities

5.1350 In respect of SA Objective 10 (Healthy Communities and Reduced Inequalities), all eight allocations are considered likely to generate positive residual effects. The St Neots and Little Paxton sites perform particularly strongly due to their proximity to services, employment, education and healthcare provision. Great Paxton 1, Great Paxton 2, Great Gransden 1 and Waresley 1 support housing and employment choice and community sustainability within village settlements, whilst Abbotsley 1 contributes significant employment opportunities along a strategic transport corridor. Collectively, the allocations support housing delivery, access to green infrastructure, active lifestyles, economic opportunity and social inclusion, with no significant health impacts identified that cannot be mitigated through site-specific requirements and the wider planning policy framework. Consequently, the overall contribution of these allocations towards improving health outcomes and reducing inequalities is considered positive.

Cumulative effects in relation to wider settlement

Abbotsley

5.1351 Although located within Abbotsley parish, Abbotsley 1 functions strategically as part of the wider eastern expansion of St Neots. Together with St Neots East (Loves Farm and Wintringham Park) and the proposed Tithe Farm Extension (St Neots 1), development at this site would contribute to further economic opportunity. The site could provide additional employment floorspace and support local economic growth, helping to increase opportunities for residents to work closer to home.

5.1352 The principal cumulative effects are likely to relate to transport, landscape character and infrastructure provision. Development would increase traffic movements on the A428, Cambridge Road and surrounding junctions, adding to pressures arising from existing commitments in the eastern growth area. The site is not particularly well connected by public transport and is likely to generate a significant proportion of journeys by private car unless supported by enhanced active travel and public transport links. Future delivery of East West Rail and associated infrastructure alongside nearby strategic development may further influence movement patterns and connectivity in this area.

5.1353 In combination with other planned growth around St Neots, development would increase demand for water and wastewater infrastructure. The St Neots Water Recycling Centre catchment is already identified as requiring ongoing investment to accommodate growth. Whilst these pressures would need to be managed through infrastructure planning and developer contributions, the site could contribute towards the delivery of additional employment opportunities and green infrastructure. Overall, cumulative effects are mixed, with economic and housing benefits balanced against increased transport, infrastructure and landscape pressures.

Great Gransden

5.1354 Great Gransden is a relatively sustainable village with a primary school, convenience shopping and a range of community facilities, although residents remain reliant on St Neots, Cambourne and Cambridge for higher-order services, employment and secondary education. Development at Great Gransden 1 would represent a notable proportionate increase in employment provision and reinforce the vitality and viability of the Sand Road Industrial Established Employment Area.

5.1355 The cumulative effect of growth would include additional traffic movements along Caxton Road, Fox Street and routes towards Cambourne, Cambridge and St Neots. Public transport provision remains limited and therefore much of the additional travel demand is likely to be car-based. Whilst the site is relatively accessible to village services on foot, cumulative growth would increase pressure on local roads and parking within the settlement.

5.1356 Additional development would also increase demand on utility infrastructure. However, the village already contains a range of facilities that would benefit from additional population support. Subject to appropriate infrastructure investment, growth could help sustain local services, shops and community facilities over the long term. Overall, cumulative effects are expected to be generally positive in supporting village sustainability, although transport and infrastructure pressures would require careful management.

Great Paxton

5.1357 Great Paxton is closely linked to St Neots and benefits from access to local services, employment opportunities and strategic transport connections available in the nearby market town. Development at Great Paxton 1, when considered alongside other allocations and commitments within Great Paxton and the wider St Neots area, would contribute to incremental growth of the village whilst maintaining its relationship with St Neots.

5 Stage D - Consultation and development of the Plan

5.1358 Cumulative impacts are likely to include increased use of local roads, particularly High Street. Given the limited frequency of public transport services, additional residents would be expected to rely heavily on private vehicles for commuting, secondary education, healthcare and retail needs. The cumulative transport impact is likely to be moderate rather than significant due to the relatively modest scale of development.

5.1359 Growth would also contribute towards increased demand on primary education, healthcare and community services. Additional housing would help support local facilities within Great Paxton and contribute to maintaining the vitality of the settlement. Overall, cumulative effects are expected to be broadly positive, subject to continued investment in sustainable transport and local infrastructure.

5.1360 In combination with Great Paxton 1 and existing employment activities at Harley Industrial Park Established Employment Area, development north of the industrial estate would strengthen Great Paxton's role as a location supporting local employment opportunities. The site has the potential to expand the existing employment area and contribute to a better balance between homes and jobs within the wider St Neots area.

5.1361 The main cumulative effects are likely to arise from additional traffic associated with employment uses, particularly along Paxton Hill, High Street and connections to the A1 and St Neots. Given existing levels of car dependency within the settlement, employment growth may increase peak-hour vehicle movements and freight traffic. Nevertheless, concentrating employment alongside an existing industrial estate would reduce the need to establish new employment locations elsewhere.

5.1362 The site is unlikely to place significant additional pressure on education facilities but may indirectly increase demand for local services and healthcare through workforce growth. It could also support economic resilience and help retain employment opportunities close to existing residential communities. Overall, cumulative effects are expected to be positive from an economic perspective, although transport impacts would require mitigation.

Little Paxton

5.1363 Little Paxton is one of the district's more sustainable service centres and already functions as part of the wider St Neots urban area. Development at Little Paxton 1, together with other planned growth in Little Paxton and St Neots, would reinforce the settlement's role as an important residential location supported by a relatively good range of local facilities.

5.1364 The cumulative effects of growth would include additional traffic on St James Road, High Street, Great North Road and routes into St Neots. Whilst walking and cycling opportunities exist, a significant proportion of trips are still likely to be made by car. Growth may also increase recreational pressures on the nearby Paxton Pits area and other green infrastructure assets, highlighting the importance of managing public access and biodiversity impacts.

5.1365 Additional housing would increase demand for education, healthcare and utility infrastructure. The settlement already benefits from proximity to schools, healthcare services and employment opportunities in St Neots, helping to reduce the significance of cumulative pressures. Growth could support the viability of local facilities and improve the sustainability of the settlement over the long term. Overall, cumulative effects are considered to be positive, provided environmental assets and infrastructure capacity are appropriately managed.

5.1366 When considered alongside Little Paxton 1 and wider growth around St Neots, development at Little Paxton 2 would represent a substantial expansion of the settlement. Due to the scale of potential growth, cumulative effects are likely to be more pronounced than those associated with smaller sites elsewhere in the district.

5.1367 The principal cumulative impacts relate to transport, landscape character and environmental assets. Significant additional traffic movements would be expected on Great North Road, the A1 corridor and routes into St Neots.

The scale of growth may also increase recreational pressures on nearby nature sites such as Little Paxton Wood SSSI, requiring comprehensive green infrastructure planning and mitigation.

5.1368 Growth at this scale would generate substantial demand for education, healthcare, utility and community infrastructure. However, it could also provide opportunities to deliver new facilities directly as part of development and improve the long-term sustainability of the settlement. Overall, cumulative effects are mixed; while the site could deliver significant housing and infrastructure benefits, it would also place considerable pressure on transport networks, the landscape and sensitive environmental assets.

St Neots

5.1369 As part of the eastern growth area of St Neots, St Neots 1 would contribute to the ongoing expansion of Loves Farm and Wintringham Park (retained allocation at St Neots East) and forms an important component of the town's planned growth strategy. In cumulative terms, the site would consolidate development along the eastern edge of the town and help accommodate a significant proportion of Huntingdonshire's housing needs.

5.1370 The cumulative effects of growth include increased travel demand along Cambridge Road, the A428 and local distributor roads. However, because the site adjoins existing and planned urban areas, there are greater opportunities to integrate active travel routes, public transport and local services than at more isolated sites. The cumulative impact on the road network will nevertheless be significant and reinforces the importance of strategic transport improvements.

5.1371 Development would increase pressure on schools, healthcare facilities, utilities and recreational infrastructure. However, the scale of development also provides opportunities for new education, community and local centre facilities to be delivered as part of the wider eastern St Neots growth area. Whilst cumulative demands on infrastructure will be substantial, the site's integration with existing strategic growth areas means these impacts are capable of being planned for comprehensively. Overall, cumulative effects are expected to be largely positive in supporting the sustainable growth of St Neots.

5.1372 St Neots 2 would extend development around the Eynesbury area and contribute further to the growth of St Neots, alongside committed developments elsewhere in the town. Cumulatively, the site would help address housing needs while reinforcing St Neots' role as the district's largest settlement and key service centre. The site is located adjacent to the southern boundary of Wintringham Park so there are opportunities for integration.

5.1373 The principal cumulative impacts relate to transport, environmental quality and infrastructure provision. Additional traffic movements would affect Potton Road, local distributor roads and wider connections across the town. Combined with other allocations, growth is likely to place increasing demands on junction capacity and strategic highway infrastructure. Opportunities to enhance walking, cycling and public transport connections will therefore be important.

5.1374 The cumulative effect of growth would also increase demand for education, healthcare, community facilities and wastewater infrastructure. St Neots already accommodates a substantial proportion of district growth, and the addition of this site would reinforce the need for coordinated infrastructure delivery. Nevertheless, as a market town with extensive facilities, employment opportunities and public services, St Neots is better placed than most settlements to absorb these cumulative demands. Overall, the cumulative effect of St Neots 2 is expected to be positive, supporting the long-term sustainability and growth of the wider town.

Waresley

5.1375 Waresley has limited services and facilities itself so residents are reliant on St Neots, Cambourne and Cambridge for higher-order services, employment and secondary education. Development at Waresley 1 would

represent a notable proportionate increase in housing development, specifically self and custom building, therefore diversifying the housing stock in the village and providing some growth to support services.

5.1376 The cumulative effect of growth would include additional traffic movements along Waresley Road and Manor Farm Road. Public transport provision remains limited and therefore much of the additional travel demand is likely to be car-based. Whilst the site is relatively accessible to village services on foot, cumulative growth would increase pressure on local roads and parking within the settlement.

5.1377 Waresley 1 is a very small-scale development of approximately six dwellings. Consequently, its direct cumulative effects are expected to be limited. Additional residents would be largely accommodated within the existing service and infrastructure networks centred on St Neots. Demand on local schools, GP practices and community facilities would increase only marginally.

Cumulative Effects of the Pre-Submission Local Plan

5.1378 The cumulative effects of the Pre-Submission Local Plan should be considered as the combined impact of the spatial strategy, development management policies, infrastructure requirements and site allocations operating together over the period to 2046. The Sustainability Appraisal framework identifies climate change, environmental protection, housing, health and wellbeing, and socio-economic inclusion as the principal dimensions against which cumulative effects should be assessed. The overall conclusion is that the Local Plan is likely to generate significant positive cumulative effects across most sustainability themes, subject to effective mitigation of pressures relating to water resources, flood risk, biodiversity, transport, infrastructure and environmental capacity.

Climate Change and Climate Resilience

5.1379 The Local Plan is expected to have a strongly positive cumulative effect on climate change mitigation and adaptation. The strategy directs more than 80% of growth to market towns, service centres and strategic growth locations where access to services, employment and public transport is greatest. This reduces reliance on private vehicles and supports active travel, public transport use and lower-carbon lifestyles. The Plan is further reinforced by policies promoting energy-efficient construction, renewable energy generation, electric vehicle infrastructure, sustainable design, water efficiency and carbon sequestration through nature-based solutions.

5.1380 At a strategic level, the Local Plan aligns growth with a pathway towards net zero carbon emissions by 2050 and supports significant reductions in greenhouse gas emissions from buildings and transport. Expansion of green infrastructure, woodland creation, habitat restoration and peatland conservation are expected to contribute to long-term carbon capture and climate adaptation benefits working alongside other strategic documents such as the Cambridgeshire and Peterborough Local Nature Recovery Strategy.

5.1381 However, cumulative adverse effects may arise from the scale of planned development, particularly through construction emissions, increased energy demand and traffic generation during early phases of growth. These effects are expected to be moderated over time through policy requirements and technological improvements. The Habitats Regulations Assessment assess the cumulative impact of growth not just of the Local Plan but also in combination with other plan and programs providing mitigations which have been not only shaped the strategy for growth but also fed into policies and site allocation policies in the Local Plan.

Housing and Communities

5.1382 The Plan delivers substantial positive cumulative effects in relation to housing need. Provision is made for at least 32,200 homes and a wide range of housing tenures, including affordable housing, accessible and adaptable homes, specialist accommodation, self-build opportunities and provision for Gypsies, Travellers and Travelling Showpeople and boat dwellers. This represents a significant response to affordability pressures, demographic change and projected population growth specific to Huntingdonshire and the wider Cambridgeshire and Peterborough housing market areas.

5.1383 The concentration of development within sustainable settlements supports the delivery of schools, healthcare, community facilities, green spaces and local services alongside housing growth. New communities and major urban extensions offer opportunities to maximise placemaking by creating mixed and inclusive neighbourhoods that reduce social isolation and support lifetime communities. It also aligns growth with the infrastructure and growth aspirations of the Combined Authority's Local Growth Plan supporting the delivery of these sites. Additionally, the inclusion of some more dispersed rural growth supports the sustainability of services, facilities and infrastructure of smaller settlements across the district as well as provide housing options for people who wish to live in these settlements.

5.1384 Potential cumulative adverse effects relate to the ability of infrastructure delivery to keep pace with development. Without timely provision of transport, education, healthcare, wastewater and utility infrastructure, growth could create pressure on existing communities. The Plan seeks to manage these effects through infrastructure planning, masterplanning and developer contributions and is supported by an Infrastructure Delivery Study as well as various Statements of Common Ground with key infrastructure providers (such as Anglian Water and UK Power Networks and the NHS) to provide greater certainty.

Environment, Biodiversity and Natural Resources

5.1385 The Plan is likely to generate significant positive cumulative environmental effects through its commitment to biodiversity recovery, green and blue infrastructure enhancement and nature-based climate solutions. Strategic priority areas including the Great Fen, Great Ouse Valley, Nene Valley and Nature Recovery Network corridors provide a framework for habitat restoration and ecological connectivity across the district working alongside the adopted Cambridgeshire and Peterborough Local Nature Recovery Strategy. These are important in balancing out built development and supports Huntingdonshire's rich networks of habitats and landscapes.

5.1386 Policies requiring biodiversity enhancement, protection of designated sites, improved green infrastructure networks and habitat creation are expected to contribute to long-term ecosystem resilience. Increased access to natural greenspace will also provide wider environmental and social benefits. The Local Plan in its infrastructure delivery, requires higher standards of natural greenspace by adopting the Fields in Trust plus Allotments standard.

5.1387 Nevertheless, cumulative environmental pressures remain. The scale of housing and employment growth will inevitably increase recreational pressure on sensitive habitats, place additional demands on water resources and result in the loss of some greenfield land. While the strategy seeks to avoid the most sensitive environmental locations and reduce impacts on best and most versatile agricultural land where possible, residual effects on biodiversity, landscape character and environmental capacity may still

occur in some locations, but the policies in the Local Plan seek to mitigate these. The Habitats Regulations Assessment and Ecological Constraints Assessment are principle documents that have shaped policies.

5.1388 Water resource availability and wastewater infrastructure are identified as particularly important cumulative issues requiring ongoing monitoring and investment throughout the plan period. The Water Cycle Study and Infrastructure Delivery Study as well as Statement of Common Ground with water bodies such as Anglian Water demonstrate how we have worked collaboratively in addressing cumulative impacts.

Human Health and Wellbeing

5.1389 The Plan is expected to have substantial positive cumulative effects on physical and mental health. The vision and objectives place health and wellbeing at the centre of growth, supported through delivery of quality housing, active travel infrastructure, accessible open space, recreation opportunities and investment in community services. It builds on the strong positive vision of the Huntingdonshire Futures Place Strategy providing a joined up approach to development and placemaking across Council strategies.

5.1390 Expansion of green and blue infrastructure networks, improvements in walking, cycling and wheeling routes, and the creation of healthier environments are likely to encourage physical activity and support improved mental wellbeing. Reduced exposure to air pollution and greater opportunities for social interaction within mixed-use communities provide additional long-term health benefits. The Plan has several design policies focusing on high quality sustainable design that require high levels of amenity for people as well as creating places that are well designed.

5.1391 There are, however, potential cumulative risks associated with increased population growth if healthcare capacity, education provision and recreational infrastructure do not expand in line with development. The Plan's emphasis on infrastructure-led growth and strategic infrastructure provision is intended to mitigate these risks. Additionally, design policies require development to respond to their context ensuring greater opportunities for integration.

Inequality, Social Inclusion and Economic Opportunity

5.1392 The cumulative effects of the Local Plan on equality and inclusion are expected to be predominantly positive. Growth is directed towards locations with better access to employment, services and public transport, helping to reduce barriers to opportunity. Affordable housing requirements, specialist housing provision, investment in community infrastructure and support for accessible design should benefit groups most at risk of exclusion, including older people, lower-income households and those with mobility needs.

5.1393 Economically, the Plan provides for approximately 15,400 additional jobs and a substantial supply of employment land. This supports economic diversification, inward investment, innovation-led growth and higher-value employment opportunities and aligns with the Combined Authority's Local Growth Plan. Strengthening town centres, supporting rural businesses and improving digital connectivity further enhance inclusive growth potential. This also responds to the various economic sectors that make up Huntingdonshire's economy supporting jobs across a range of sectors in a range of locations. The Local Plan emphasises Huntingdonshire's strategic location in terms of local and regional economic activity and works alongside the Local Growth Plan to support housing, employment and mixed-sue developments in sustainable locations.

5.1394 The principal cumulative challenge is ensuring that the benefits of growth are distributed across both urban and rural communities. Some rural locations may continue to experience accessibility constraints and reliance on private transport. However, the settlement hierarchy, rural economy policies and support for local services are intended to moderate these effects by directly some growth through site allocations and also policies that support development in such locations, subject to certain criteria being met. This balances and compliments the overall strategy.

Conclusion

5.1395 Taken as a whole, the Pre-Submission Local Plan is expected to result in significant positive cumulative effects across climate change mitigation, housing delivery, community wellbeing, economic opportunity and social inclusion. The integrated approach of concentrating growth in sustainable locations, supporting infrastructure delivery and enhancing green and blue infrastructure provides a coherent framework for sustainable development to 2046.

5.1396 The most significant cumulative risks relate to water resources, wastewater capacity, flood risk, pressure on designated habitats, loss of greenfield land and infrastructure delivery timing. Subject to implementation of the mitigation measures embedded within the Plan and its evidence base as well as continued monitoring through the Sustainability Appraisal framework, these effects are not expected to outweigh the substantial long-term sustainability benefits arising from the Local Plan's overall strategy.

Mitigation measures and enhancement opportunities

5.1397 For Examination purposes, it is helpful to demonstrate not only that mitigation is proposed, but also how specific policies and strategic interventions within the Pre-Submission Local Plan directly address identified cumulative effects. It does not identify every potential mitigation measure but identifies key ones to demonstrate how interventions are embedded across the Local Plan.

Climate Change and Net Zero Carbon

Potential Cumulative Effect

5.1398 Growth of 32,200 homes and 15,400 jobs could increase energy consumption, transport emissions and overall carbon emissions if unmanaged.

Specific Mitigation Measures in the Plan

5.1399 Policy approach to climate resilience and net zero:

- The Plan commits to a district-wide pathway towards net zero carbon emissions by 2050 through alignment with the Climate Change Committee's Balanced Pathway
- Policies require energy-efficient buildings adopting a "fabric first" approach and support renewable energy generation and low-carbon infrastructure
- Growth is concentrated in market towns, service centres and strategic growth locations where active travel and public transport opportunities are greatest, reducing travel-related emissions
- Strategic policies support carbon capture through woodland creation, habitat restoration and enhancement of green and blue infrastructure networks

Specific example(s) from the Local Plan

5.1400 Mixed-use urban extensions at Tithe Farm, Giffords Park and those within the North Huntingdon Growth Cluster as well as new communities at Wyton Airfield and The Lattenburys are planned around integrated infrastructure, active travel and public transport provision, reducing dependency on private vehicles and supporting long-term emissions reduction. This approach reduces the need to travel to key services on a daily basis, reduces out commuting and supports a modal shift away form private car usage.

Housing and Communities

Potential Cumulative Effect

5.1401 Rapid housing growth could place pressure on infrastructure, community cohesion and service provision if growth is not accompanied by facilities and affordable housing.

Specific Mitigation Measures in the Plan

5 Stage D - Consultation and development of the Plan

- Provision for at least 32,200 dwellings with a mix of tenures, types of housing and affordable housing
- Policies requiring accessible and adaptable homes and specialist housing to address ageing population needs
- Large strategic allocations include expectations for schools, community facilities, open space and healthcare infrastructure
- Infrastructure delivery will be secured through masterplanning, Community Infrastructure Levy and Section 106 agreements

Specific example(s) from the Local Plan

5.1402 The Wyton Airfield new community and wider North Huntingdon Growth Cluster are intended to function as comprehensively planned settlements containing housing, employment, education and community infrastructure, helping mitigate pressure on existing settlements.

Biodiversity and Natural Environment

Potential Cumulative Effect

5.1403 Growth could increase recreational pressure on protected nature conservation sites and habitats, fragment ecological networks and result in biodiversity losses.

Specific Mitigation Measures in the Plan

- Establishment of Green and Blue Infrastructure Priority Areas across the district
- Protection and enhancement of designated biodiversity sites through specific environment policies
- Delivery of biodiversity net gain and habitat connectivity through strategic allocations
- Requirement for development proposals within Priority Areas to contribute to Nature Recovery Network objectives

Specific example(s) in the Local Plan

5.1404 The Plan identifies nine Green and Blue Infrastructure Priority Areas including the Great fen, Great Ouse Valley, Nene Valley and various other nature and river corridors. Development within or adjacent to these areas must demonstrate positive contributions to nature recovery objectives and habitat connectivity.

5.1405 The Local Plan requires application of the Fields in Trust plus Allotments standards for greenspace in its planning obligations and strategic provision of green infrastructure is required in larger site allocations.

Landscape and Environmental Quality

Potential Cumulative Effect

5.1406 Strategic urban extensions and new settlements have potential to alter landscape character, settlement setting and local distinctiveness.

Specific Mitigation Measures in the Plan

- Policies requiring protection of landscape character and townscape quality
- High design standards and placemaking requirements
- Strategic landscaping and green infrastructure integrated into major developments
- Specific protection for the Great Fen's landscape and visual setting

Specific example(s) in the Local Plan

5.1407 Within the Great Fen area, proposals must demonstrate consistency with the Great Fen Master Plan and avoid impacts on tranquillity, visual quality and landscape setting.

Water Resources and Flood Risk

Potential Cumulative Effect

5.1408 Additional development could increase flood risk, water demand and pressure on wastewater infrastructure. These are identified as key risks throughout both the Plan and Sustainability Appraisal.

Specific Mitigation Measures in the Plan

- Strategic policies on flood risk, wastewater management, surface water management and water efficiency standards that exceed national requirements
- Sequential approach favouring development in Flood Zone 1
- Requirement for sustainable drainage systems (SuDS)
- Alignment of development phasing with wastewater infrastructure upgrades informed by the Water Cycle Study and Infrastructure Delivery Study

Specific example(s) from the Local Plan

5.1409 The Sustainability Appraisal framework specifically assesses whether sites are served by existing wastewater infrastructure, whether infrastructure upgrades are required and whether sites are located in Flood Zone 1.

Human Health and Wellbeing

Potential Cumulative Effect

5.1410 Population growth can increase demand for healthcare, recreation facilities and open spaces while potentially exacerbating health inequalities.

Specific Mitigation Measures in the Plan

- Health and wellbeing embedded as a core strategic theme
- Policy requiring Health Impact Assessments on certain scales of development
- Delivery of accessible green space and recreational infrastructure
- Active travel policies promoting walking, cycling and wheeling
- Policies requires high standards of design, amenity and addressing air pollution
- Infrastructure requirements for healthcare facilities where growth generates demand

Specific example(s) form the Local Plan

5.1411 Policy objectives require investment in healthcare, public open spaces, community buildings and active travel infrastructure so that healthy lifestyles become achievable for all residents.

Inequality and Social Inclusion

Potential Cumulative Effect

5.1412 Without intervention, housing affordability pressures and unequal access to services may increase social exclusion, particularly for older people, lower-income households and rural communities.

Specific Mitigation Measures in the Plan

- Affordable housing provision
- Accessible and adaptable housing standards
- Specialist housing for older people and vulnerable groups
- Settlement hierarchy directing growth towards locations with services, public transport and employment opportunities
- Protection and support of local services in villages and rural communities

Specific example(s) from the Local Plan

5.1413 The settlement categories of Service Centres, Local Service Villages and Villages specifically support modest growth in these more rural settlements to maintain population levels, sustain local services and reduce the risk of social isolation and service decline.

5 Stage D - Consultation and development of the Plan

Economy and Employment

Potential Cumulative Effect

5.1414 Economic growth could increase transport demand and land take but is required to support housing growth and reduce out-commuting.

Specific Mitigation Measures in the Plan

- Provision for approximately 15,400 additional jobs and 922,000 sqm of employment floorspace
- Support for innovation-led growth, defence industries, logistics and high-value employment sectors
- Protection of Established Employment Areas, market towns and local centres
- Integration of housing and employment growth to reduce commuting distances

Specific example(s) from the Local Plan

5.1415 The North Huntingdon Growth Cluster combines major mixed-use housing allocations with substantial employment land, including logistics and manufacturing development associated with Alconbury Weald and the Hinchingbrooke Logistics Park, helping balance jobs and housing growth.

5.1416 Three site allocations extend existing Establish Employment Areas (Kimbolton 2, Yaxley 1 and Great Paxton 2).

Conclusion

5.1417 The Plan adopts a layered approach whereby strategic growth locations, infrastructure planning, climate policies, green and blue infrastructure networks, biodiversity policies, housing requirements, employment and health-focused placemaking collectively mitigate adverse cumulative effects while maximising the Plan's positive social, economic and environmental outcomes. The mitigations measures highlighted here and the examples provided demonstrate how impacts, including cumulative ones, can be overcome.

Assessing Significant Effects of the Plan on Human Health and Inequality

5.1418 The Sustainability Appraisal framework integrates health and inequality considerations throughout the assessment process rather than treating them as standalone topics. Following baseline analysis, the SA identified several key challenges relevant to health and social equity, including an ageing population, housing affordability pressures, unequal access to healthcare and community facilities, concentrations of deprivation in parts of the district, rural isolation, limited public transport accessibility, and health impacts associated with air pollution and inactivity.

5.1419 These issues were translated into a set of sustainability objectives and decision-aiding questions which ensured that all strategic policies, development management policies and site allocations were assessed against health and equality outcomes. The most directly relevant objectives are:

- **SA9**: All people have access to high quality affordable homes that meet their needs across their lifetime.
- **SA10**: Enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion, particularly amongst those most at risk of discrimination, poverty and social exclusion.
- **SA12**: Reduce the need to travel by car and promote active travel and public transport infrastructure.

5.1420 Health considerations are also embedded within objectives addressing green infrastructure, pollution reduction, accessibility, placemaking and community cohesion, reflecting the interrelationship between environmental quality, physical health, mental wellbeing and social equality.

5.1421 The SA testing of the Local Plan Vision and Objectives concluded that health-related objectives performed strongly, with significant positive effects identified for housing provision, community wellbeing, social inclusion and accessibility to services. The appraisal found that health and inequality considerations are woven through the Plan's strategic approach rather than being limited to individual policies.

Appraisal of Health Impacts

Positive Effects on Physical and Mental Health

5.1422 The Pre-Submission Plan places health and wellbeing at the centre of its vision for growth. One of the Plan's five overarching themes is "Health Embedded", which seeks to ensure that physical and mental wellbeing becomes a fundamental consideration in planning and development. The Plan explicitly promotes healthy lifestyles, access to open space, opportunities for physical activity and improved social interaction.

5.1423 The SA identifies significant positive effects arising from:

- delivery of high-quality housing;
- increased access to public open space;
- enhancement of green and blue infrastructure networks;
- provision of active travel infrastructure;
- investment in healthcare and community facilities;
- creation of walkable mixed-use neighbourhoods.

5.1424 A notable example is the strategic emphasis on walking, cycling and wheeling. Objective 11 of the Plan seeks investment in healthcare, open spaces, community buildings and active travel infrastructure to make healthy lifestyles achievable for all residents. Objective 16 seeks realistic alternatives to private car use through walking, cycling, wheeling and public transport. These measures are expected to contribute positively to physical activity levels and reduce health inequalities associated with limited mobility and accessibility.

5.1425 The Plan's Green and Blue Infrastructure Strategy provides another important health benefit. The extensive network of priority areas, including the Great Fen, Great Ouse Valley, Nene Valley, as well as others across the district, is intended not only to support biodiversity but also to improve access to nature, recreation and mental wellbeing. The SA identifies these provisions as contributing positively to healthy lifestyles and community wellbeing.

Housing and Health Outcomes

5.1426 The SA baseline identified affordability pressures, ageing demographics and changing housing needs as key determinants of health and wellbeing. The Plan responds through provision for at least 32,200 homes, alongside policies promoting affordable housing, accessible and adaptable homes, specialist accommodation and housing for older people.

5.1427 This approach is expected to generate significant positive health effects by:

- reducing housing insecurity;
- improving housing quality;
- enabling older residents to remain independent for longer;
- supporting vulnerable groups through appropriate accommodation;
- reducing overcrowding and homelessness pressures.

5.1428 An example is Objective 10 which supports high quality homes that meet the needs of all of Huntingdonshire's residents, whether this is affordable housing, specialist housing or a specific form of housing such as self and custom build plots, moorings or gypsy and traveller pitches. The Sustainability Appraisal assessed the housing-related objectives as strongly positive, concluding that the Plan would help meet the needs of all sectors of the community and support wellbeing throughout different life stages.

Appraisal of Inequality and Social Inclusion

Positive Effects on Social Equality

5 Stage D - Consultation and development of the Plan

5.1429 The Local Plan is expected to have a predominantly positive effect on reducing inequality. The SA recognised that social exclusion can arise from poor housing affordability, limited access to services, rural isolation and unequal access to employment opportunities. The growth strategy responds by directing over 80% of development towards market towns, service centres and strategic growth locations where services, facilities and public transport are already concentrated.

5.1430 The Plan's strategic objectives seek to:

- reduce social exclusion;
- support community cohesion;
- improve access to services;
- increase housing choice;
- create inclusive communities;
- support participation in daily life for all residents. Particular benefits are expected for:
    - lower-income households through affordable housing provision;
    - older people through accessible housing policies;
    - people with disabilities through adaptable housing and improved accessibility;
    - rural communities through measures supporting local services and facilities.

5.1431 The Plan also supports approximately 15,400 additional jobs and significant employment growth. By improving access to economic opportunities and supporting higher-value employment sectors, the strategy is expected to contribute positively to reducing economic inequalities across the district.

Rural Inequality Considerations

5.1432 The SA identifies some residual concerns regarding inequality between urban and rural communities. Although the settlement hierarchy supports growth in villages and local service villages, many rural communities remain dependent upon private vehicles and have limited access to healthcare, education and employment opportunities. The SA notes that some rural areas may continue to experience accessibility challenges despite the Plan's interventions.

5.1433 However, policies supporting local services, rural exceptions housing, digital connectivity and modest growth within villages are intended to maintain community viability and reduce social isolation.

Adverse Effects and Mitigation Measures

5.1434 While the overall appraisal is strongly positive, several potential adverse effects were identified.

Pressure on Healthcare and Community Infrastructure

5.1435 Population growth may increase demand for GP services, schools, community facilities and recreational infrastructure. If infrastructure delivery lags behind housing development, health outcomes and community cohesion could be adversely affected.

5.1436 Mitigation measures include:

- infrastructure-led growth principles;
- Infrastructure Delivery Plans;
- Section 106 obligations and Community Infrastructure Levy funding;
- masterplanning requirements for strategic developments;
- phased delivery linked to infrastructure provision.

Air Quality and Environmental Health

5.1437 Growth may generate additional traffic and expose residents to air pollution unless transport impacts are managed. The SA identified traffic-related air pollution as a continuing health concern.

5.1438 Mitigation measures include:

- prioritising active travel and public transport;
- electric vehicle charging infrastructure;
- green and blue infrastructure enhancement;
- policies to prevent and reduce air pollution as well as other forms of pollution;
- concentration of growth in sustainable locations.

Social Exclusion in Rural Areas

5.1439 Some rural settlements may continue to experience limited accessibility and reliance on private transport.

5.1440 Mitigation measures include:

- supporting modest organic growth in local service villages and villages;
- maintaining local services and facilities;
- investment in digital connectivity;
- rural exceptions housing schemes;
- enhanced active travel and public transport links where feasible.

Conclusion

5.1441 The Sustainability Appraisal demonstrates that the Pre-Submission Local Plan is expected to generate significant positive effects on both human health and inequality. Through its focus on affordable and adaptable housing, healthy placemaking, green infrastructure, active travel, community facilities and economic opportunity, the Plan addresses many of the key health and social challenges identified in the baseline evidence. While adverse effects relating to infrastructure capacity, air quality and rural accessibility remain possible, the Plan incorporates a comprehensive suite of mitigation measures designed to ensure that growth contributes to healthier, more inclusive and more resilient communities across Huntingdonshire up to 2046.

Changes to the Local Plan from Preferred Option stage

5.1442 This section sets out how the Local Plan has evolved from the Regulation 18 Preferred Options Local Plan to Regulation 19 Pre-Submission Local Plan.

Vision

5.1443 The Vision shifts from broad thematic outcomes to a clearer structure aligned with the five Huntingdonshire Futures themes. Objectives increase from 15 to 18, adding climate resilience, infrastructure, health inequalities, defence sector growth and water management. This results in improved internal consistency and a stronger link between Vision, objectives and policies, moving beyond “aspirational statements” to a clearer strategic framework.

Growth Strategy

5.1444 The hybrid growth strategy is retained but justified more robustly through SA, climate, infrastructure, economic and water evidence. Pre-Submission Plan emphasises that over 80% of growth will be directed to sustainable locations, with reduced reliance on dispersed growth and stronger integration of transport, climate resilience and infrastructure needs.

Spatial Alternatives

5.1445 Pre-Submission Plan transitions from exploration to justification. Alternatives are clearly explained, rejected options are evidenced, and the audit trail is strengthened. The Plan demonstrates that “reasonable alternatives were considered; alternatives were assessed; preferred options were selected through evidence”.

5 Stage D - Consultation and development of the Plan

Strategic Policies

5.1446 Key strategic shifts include:

- Net zero broadened to whole-system climate resilience, with integrated adaptation measures such as flooding, overheating and water stress
- Infrastructure elevated as a core driver, covering water, wastewater, transport, health, education and energy
- Stronger alignment with economic evidence, including defence and innovation sectors
- Dedicated health-focused objectives and clearer treatment of inequalities

5.1447 These changes create a more integrated and mutually reinforcing strategic suite of policies.

Development Management Policies

5.1448 Policies are reorganised and expanded, with strengthened requirements for:

- Water management (flood risk, wastewater, surface water, efficiency)
- Climate resilience (embodied/operational carbon, retrofit, renewables, sequestration)
- Health (HIAs, active lifestyles, accessibility)
- Biodiversity (BNG, nature recovery networks, strategic GI)
- Heritage (more developed strategy)
- Infrastructure delivery (clearer links to CIL, S106 and the Infrastructure Delivery Study)

Site Allocation Policies

5.1449 The Submission Plan largely retains the spatial strategy established at Regulation 18, with the overwhelming majority of allocations carried forward. Amendments are targeted and proportionate, removing a small number of sites where further evidence, environmental constraints, deliverability considerations or consultation responses indicated that alternative sites would perform better against the sustainability objectives of the Local Plan. The additions and substitutions help maintain the overall housing land supply while improving the Plan's environmental performance and deliverability.

5.1450 Wording amendments made to policies or additional criteria to refine, clarify and strengthen mitigation measures, particularly regarding infrastructure, water capacity and heritage matters.

Conclusion

5.1451 The transition from the Regulation 18 Preferred Options Plan to the Regulation 19 Pre-Submission Plan represents a process of **refinement, strengthening and evidential consolidation rather than a fundamental change in strategy**. The core spatial approach, housing and employment growth objectives, settlement hierarchy and principal strategic allocations have been retained throughout plan preparation.

5.1452 The Pre-Submission Plan demonstrates a clear and proportionate response to consultation representations, Sustainability Appraisal findings and the expanded evidence base prepared since the Regulation 18 stage. In particular, the Pre-Submission Plan introduces a stronger focus on climate resilience, infrastructure delivery, health and wellbeing, water resource management, flood risk adaptation, green and blue infrastructure, affordable housing and economic competitiveness. These changes improve the clarity, effectiveness and deliverability of the Plan while maintaining consistency with the strategic framework previously consulted upon.

5.1453 The evolution of the Vision and Objectives has strengthened the alignment between the Huntingdonshire Futures Place Strategy, other strategically important documents such as the Combined Authority's Local Growth Plan and Local Nature Recovery Strategy, strategic policies, site allocations and development management policies. The result is a more coherent policy framework that provides a clearer route from strategic aspirations to implementation and monitoring.

5.1454 From a sustainability perspective, the Pre-Submission Plan performs more strongly than the Regulation 18 version. Environmental sustainability has been enhanced through the integration of climate resilience, biodiversity recovery, carbon sequestration, renewable energy, flood management and water efficiency measures. Social sustainability has been improved through stronger policies on affordable housing, accessible housing, health outcomes and community infrastructure. Economic sustainability has been reinforced through clearer support for strategic employment growth, innovation sectors, defence-related industries, logistics and infrastructure-led growth.

5.1455 Overall, the Pre-Submission Plan presents a more mature, evidence-led and internally consistent planning framework. The changes made between Regulation 18 and Pre-Submission Plan materially improve the Plan's justification, effectiveness and deliverability, whilst preserving the broad development strategy that has been subject to public consultation. Accordingly, the evolution of the Plan supports a conclusion that the Pre-Submission version is better positioned to satisfy the tests of soundness by being **positively prepared, justified, effective and consistent with national policy**.

How HRA has influenced the Local Plan

5.1456 The Habitats Regulations Assessment (HRA) has informed the preparation of the Huntingdonshire Pre-Submission Local Plan to 2046 throughout the plan-making process and has directly influenced the spatial strategy, strategic policy framework and site allocation requirements. The HRA was undertaken iteratively alongside Local Plan preparation and tested the potential for likely significant effects on European sites arising from growth proposed within the district. Screening identified potential impact pathways relating to air quality, water quality, water quantity, recreational pressure and urbanisation effects. These matters were subsequently taken forward through Appropriate Assessment and addressed through policy safeguards, infrastructure requirements and site-specific mitigation measures incorporated into the Local Plan.

5.1457 The HRA considered potential effects on a range of internationally important sites, including Eversden and Wimpole Woods SAC, Fenland SAC, Nene Washes SAC/SPA/Ramsar, Ouse Washes SAC/SPA/Ramsar, Portholme SAC, Upper Nene Valley Gravel Pits SPA/Ramsar, Woodwalton Fen Ramsar and The Wash European sites. The assessment concluded that, with the mitigation and safeguards embedded within the Local Plan, implementation of the Plan would not adversely affect the integrity of any European site, either alone or in combination with other plans and projects.

Influence on the Spatial Strategy

5.1458 The HRA played an important role in shaping the overall development strategy. Growth is concentrated within Huntingdonshire’s market towns, service centres and strategic growth locations, particularly the North Huntingdon Growth Cluster, where infrastructure delivery, environmental mitigation and sustainable transport measures can be coordinated effectively. This approach reduces pressure for dispersed development in environmentally sensitive areas and allows cumulative impacts to be managed through masterplanning and infrastructure provision.

5 Stage D - Consultation and development of the Plan

5.1459 The HRA findings align directly with Policy LP 2 "Our Strategy for Change", which seeks to concentrate development in sustainable locations, enhance green and blue infrastructure, improve biodiversity, support climate resilience and promote sustainable travel. These strategic objectives reflect the key avoidance and mitigation principles identified through the HRA process.

Strategic Policies Introduced or Strengthened Through the HRA Process

5.1460 The HRA findings informed numerous strategic and development management policies that now provide the overarching mitigation framework for all development proposals. Policy LP 52 Protecting our nature conservation sites directly relates to HRA. The purpose of this policy is to set out the council's approach to protecting sites that are protected under international, national and local conservation designations and requires proposals to undertake HRA if triggered.

Water Quality and Water Resources

5.1461 Water quality and water quantity emerged as the most extensive potential impact pathways, particularly for:

- Fenland SAC
- Woodwalton Fen Ramsar
- Nene Washes SAC/SPA/Ramsar
- Ouse Washes SAC/SPA/Ramsar
- Portholme SAC
- The Wash SAC/SPA/Ramsar.

5.1462 In response, the Plan incorporates strategic policies regarding the management of waste water, managing surface water, promoting water efficiency and managing flood risk. These policies require development to:

- demonstrate sufficient wastewater treatment capacity;
- avoid deterioration in water quality;
- incorporate sustainable drainage systems (SuDS);
- minimise flood risk;
- deliver high standards of water efficiency; and
- ensure adequate water resources are available without adverse effects on protected habitats.

5.1463 The policies draw directly from the findings of the Integrated Water Management Strategy and Stage 1 and Stage 2 Water Cycle Studies, which formed a key part of the HRA evidence base.

Recreational Pressure

5.1464 The HRA identified potential recreational impacts on:

- Ouse Washes SPA/Ramsar;
- Nene Washes SPA/Ramsar;
- Portholme SAC;
- Upper Nene Valley Gravel Pits SPA/Ramsar;
- Fenland SAC; and
- Woodwalton Fen Ramsar.

5.1465 These findings informed strategic policies including designating green and blue priority areas aligning with the Cambridgeshire and Peterborough Local Nature Recovery Strategy, promoting green and blue infrastructure within developments by requiring the Fields in Trust plus allotments standards, also supporting carbon capture through nature, protecting nature conservation sites and enhancing biodiversity and geodiversity.

5.1466 Policy LP 4 specifically identifies strategic Green and Blue Infrastructure Priority Areas including the Great Fen, Great Ouse Valley, Nene Valley, Fen-edge Woodlands; River Corridors and West Cambridgeshire Hundreds. These areas help provide accessible natural greenspace, biodiversity enhancement opportunities and recreational resources that reduce pressure on internationally designated sites.

Urbanisation Effects

5.1467 The HRA identified possible effects from noise, lighting, disturbance and impacts on functionally linked habitats associated with:

- Eversden and Wimpole Woods SAC;
- Ouse Washes SPA/Ramsar;
- Nene Washes SPA/Ramsar;
- Upper Nene Valley Gravel Pits SPA/Ramsar; and
- Portholme SAC.

5.1468 Mitigation was incorporated through polices on protecting our nature conservation sites, enhancing biodiversity and geodiversity, creating high quality places and spaces, ensuring high standards of amenity and protecting trees, orchards, woodlands, hedges and hedgerows. These policies establish requirements for ecological assessment, habitat retention, green buffers, biodiversity net gain and mitigation of lighting and disturbance effects.

Air Quality

5.1469 The HRA identified Portholme SAC as the principal European site requiring further consideration regarding air quality because of its proximity to the strategic road network, including the A1307.

5.1470 This led to strengthening policies relating to facilitating transport, travel and connectivity at local and strategic levels, supporting active and sustainable travel, electric vehicle charging points and preventing and reducing air pollution. These policies seek to reduce transport emissions by prioritising walking, cycling, public transport and electric vehicle infrastructure.

Site Allocations Influenced by the HRA

5.1471 The most visible impact of the HRA is within the allocation policies themselves. Major sites are required to provide mitigation and safeguards that directly address the impact pathways identified through the HRA.

North Huntingdon 4: Wyton Airfield

5.1472 Wyton Airfield is one of the largest allocations in the Plan and forms a key component of the North Huntingdon Growth Cluster Opportunity Zone. Due to its scale and contribution to long-term housing growth, the HRA identified the need to address cumulative impacts relating to water resources, recreation and ecological connectivity. As a result, the allocation is expected to deliver:

- substantial green infrastructure networks;
- strategic open space;
- habitat creation;
- biodiversity enhancement;
- sustainable drainage systems;
- surface water management measures; and
- recreational opportunities within the development.

5.1473 These measures are intended to ensure that demand for recreation generated by the new community is accommodated on site and does not result in increased pressure on sites such as Portholme SAC, Ouse Washes or Woodwalton Fen.

North Huntingdon 1: Huntingdon Racecourse

5.1474 The Huntingdon Racecourse allocation forms part of the wider strategic growth area around Huntingdon. The HRA identified the need for:

- green infrastructure provision;
- ecological mitigation;
- water management measures;
- sustainable travel infrastructure; and
- biodiversity enhancement.

5 Stage D - Consultation and development of the Plan

5.1475 The allocation therefore incorporates requirements for integrated environmental infrastructure as part of comprehensive masterplanning. These requirements directly reflect the HRA findings regarding cumulative recreational, ecological and hydrological impacts associated with growth around Huntingdon.

North Huntingdon 2: Land North of A141 between the Racecourse and A1307

5.1476 This allocation is particularly important from an HRA perspective because of its relationship with the strategic road network and proximity to Portholme SAC. Mitigation measures incorporated into the allocation include:

- walking and cycling infrastructure;
- public transport connections;
- landscape corridors;
- green infrastructure provision; and
- measures supporting modal shift from private car use.

5.1477 These requirements help respond to the HRA's air quality assessment and wider sustainability objectives.

North Huntingdon 3: Lodge Farm

5.1478 Although not specifically highlighted to the same degree as Wyton Airfield or the Racecourse, this allocation contributes to cumulative growth within the Opportunity Zone. Consequently, it remains subject to the same package of strategic HRA mitigation measures relating to water management, biodiversity enhancement, sustainable transport and green infrastructure provision.

St Neots 1: East of Loves Farm (Tithe Farm)

5.1479 The HRA specifically identifies Tithe Farm as an example of an allocation whose design has been influenced by recreational pressure considerations. The allocation requires:

- substantial public open space;
- green corridors;
- strategic landscaping;
- biodiversity enhancement;
- habitat connectivity; and
- recreational facilities integrated into the development.

5.1480 The intention is to create high-quality local recreational opportunities and reduce the likelihood of additional visitor pressure being directed to internationally designated habitats.

Needingworth 1: Giffords Park, East of B1040

5.1481 Giffords Park represents another allocation directly requiring mitigation. Requirements include:

- green infrastructure frameworks;
- habitat creation;
- ecological connectivity measures;
- open space provision;
- drainage infrastructure; and
- biodiversity enhancement.

5.1482 Because of its proximity to St Ives and the Ouse Washes, the allocation formed part of the cumulative impact assessment and therefore incorporates safeguards addressing recreation, water management and ecological protection.

Godmanchester 2: South of Godmanchester

5.1483 South of Godmanchester represents another allocation directly cited within HRA evidence as requiring extensive mitigation. Requirements include:

- green infrastructure frameworks;
- habitat creation;

- ecological connectivity measures;
- open space provision;
- drainage infrastructure; and
- biodiversity enhancement.

5.1484 Because of its proximity to Huntingdon and Portholme SAC, the allocation formed part of the cumulative impact assessment and therefore incorporates safeguards addressing recreation, water management and ecological protection.

Other Allocations Influenced by HRA Findings

5.1485 Other smaller allocations across Huntingdonshire were influenced by HRA recommendations through the application of allocation criteria and strategic policies:

- Bluntisham 1 and Bluntisham 2 were identified as requiring provision of open space to mitigate potential impact on Berry Fen SSSI and Ouse Washes SSSI.
- The HRA process identified Bythorn 1 as being within 10km from the Upper Nene Valley Gravel Pits SPA/Ramsar site located in North Northamptonshire and therefore requires consideration of its impact on the importance of functionally linked habitats to the nature site.
- The HRA process also identified Great Gransden and Waresley 1 as being within 10km from the Eversden and Wimpole Wood SAC located in South Cambridgeshire. Considering their proximity to the SAC, the policies require ecological assessment to assess potential impacts on bats and provide appropriate mitigation.
- The cluster of allocations at Sawtry are expected to provide ecological mitigation, biodiversity net gain, habitat connectivity; and strategic landscaping.
- Given their relationship with the Great Fen, Fenland SAC and Woodwalton Fen Ramsar, allocations in and around Bury and Ramsey are subject to plan-wide water management, biodiversity and green infrastructure policies designed to protect hydrologically sensitive habitats and support nature recovery objectives.
- The proximity of Little Paxton to the Great Ouse Valley and associated ecological networks means that development is expected to contribute positively to green infrastructure and ecological connectivity in accordance with Plan policies informed by the HRA.

How the HRA Was Ultimately Embedded into the Plan

5.1486 The HRA influenced the Local Plan through a clear hierarchy of mechanisms:

- Site Selection - potential allocations were assessed against environmental constraints, ecological evidence, flood risk information and HRA findings before decisions were made regarding allocation.
- Strategic Policy Framework - the Plan incorporates policies specifically intended to manage water quality, water resources, biodiversity, recreation and transport impacts identified through the HRA process.
- Allocation-Specific Requirements - major site allocations include explicit requirements for:
  - green infrastructure;
  - open space;
  - biodiversity enhancement;
  - sustainable drainage;
  - ecological assessment;
  - habitat retention;
  - recreational mitigation; and
  - transport improvements.

5 Stage D - Consultation and development of the Plan

Project-Level Assessment

5.1487 The Plan recognises that further ecological assessment and project-level HRA may be necessary at planning application stage for individual developments where detailed proposals could affect European sites.

Conclusion

5.1488 The Habitats Regulations Assessment has not simply accompanied the Pre-Submission Local Plan; it has materially shaped its content. The assessment influenced the distribution of growth, informed strategic environmental policies and directly affected the requirements attached to major allocations and other smaller sites across the district where they are in close proximity to internationally protected sites. Through the incorporation of measures addressing water resources, wastewater treatment, recreational pressure, biodiversity enhancement, ecological connectivity, air quality and sustainable transport, the HRA findings have been fully integrated into the Local Plan framework. The resulting package of strategic and site-specific mitigation enabled the Appropriate Assessment to conclude that the Local Plan can be implemented without adverse effects on the integrity of internationally protected sites, either alone or in combination with other plans and projects.

How SA has influenced the Local Plan

5.1489 The Sustainability Appraisal was not a separate exercise undertaken after policy development. Rather, it formed an integral and iterative component of the preparation of the Huntingdonshire Local Plan to 2046 from the earliest stages of plan-making. We undertook the SA in-house specifically to ensure that sustainability considerations were embedded throughout the development of the Plan and that the appraisal findings could directly influence the evolution of the strategy, policies and site allocations. The SA and Local Plan were therefore developed alongside one another, allowing environmental, social and economic considerations to shape decision-making throughout the process.

5.1490 The Council's approach has been consistent with the requirements of the Planning and Compulsory Purchase Act 2004, the Environmental Assessment of Plans and Programmes Regulations 2004 and national planning guidance. The SA process was used to identify sustainability issues, establish objectives against which options could be tested, assess reasonable alternatives, identify likely significant effects, recommend mitigation measures and refine the emerging plan.

Establishing the Sustainability Framework

5.1491 The influence of the SA began at the scoping stage. Through review of relevant plans, programmes and strategies, collection of baseline information and identification of sustainability issues, we established an evidence-based framework for assessing all aspects of the emerging Local Plan. Key issues identified included:

- High transport-related carbon emissions
- Climate resilience and adaptation needs
- Flood risk and water resource pressures
- Protection of biodiversity, designated sites and green infrastructure
- Loss of best and most versatile agricultural land
- Housing affordability challenges

- Health inequalities and access to services
- Sustainable transport and accessibility
- Economic resilience and employment growth
- Protection of heritage and landscape character

5.1492 These issues directly informed the development of the 16 Sustainability Appraisal objectives that subsequently became the principal framework against which all options, policies and allocations were assessed. The SA objectives covered climate change, flood risk, biodiversity, landscape, pollution, housing, health, accessibility, economic growth, town centres, design quality and heritage conservation.

5.1493 The Local Plan's vision and objectives demonstrate a clear alignment with this sustainability framework. The Plan's emphasis on climate resilience, environmental innovation, green infrastructure, health, sustainable travel, economic inclusion and high-quality placemaking closely reflects the themes established through the SA process.

Influence on the Development Strategy

5.1494 One of the most significant ways in which the SA influenced the Plan was through the appraisal of strategic options during the Further Issues and Options stage and subsequent refinement into the Preferred Options and Pre-Submission strategy.

5.1495 The SA assessed options relating to:

- The Local Plan vision and objectives
- Settlement hierarchy
- Growth strategy
- Housing requirements
- Employment strategy
- Green and blue infrastructure
- Climate change
- Flooding and water
- Housing mix and tenures
- Transport and connectivity

5.1496 The appraisal consistently favoured options which concentrated development in locations with better access to jobs, services, facilities and public transport. This helped shape the Plan's overarching spatial strategy which focuses most growth on the district's larger settlements and key growth locations rather than dispersing development widely across smaller villages. The Local Plan acknowledges that concentrating development in sustainable locations supports reduced car dependency, better infrastructure provision and improved accessibility to services, all matters identified as priorities through the SA framework. It also recognises that some growth across more rural parts of the district is beneficial to support village services and provide greater market choice for homes and jobs, the proportionality of this approach as part of a wider strategy support social, economic and environmental objectives.

5.1497 The SA therefore provided a key justification for the settlement hierarchy and distribution strategy that underpins the Pre-Submission Local Plan.

Influence on Climate Change Policies

5.1498 One of the strongest area of influence can be seen in relation to climate change. The SA identified climate change mitigation and adaptation as fundamental sustainability challenges facing Huntingdonshire. Baseline evidence identified transport as the district's largest source of greenhouse gas emissions, alongside significant challenges relating to buildings, agriculture, land use and flood risk.

5.1499 As a consequence, the Plan contains a substantial suite of climate-related policies to build climate resilience, including:

- Promoting climate resilience
- Reducing embodied and operational carbon
- Energy efficiency and retrofitting
- Renewable and low-carbon energy generation

5 Stage D - Consultation and development of the Plan

- Water efficiency
- Flood risk management
- Carbon sequestration through nature
- Sustainable transport and active travel
- Electric vehicle infrastructure

5.1500 The linkage between the SA findings and these policy responses is clear. The SA objective framework includes direct objectives relating to achieving net zero emissions, climate adaptation and sustainable water management. Those objectives were subsequently used to assess and refine both strategic and development management policies.

Influence on Environmental Protection and Green Infrastructure

5.1501 The SA highlighted the importance of biodiversity, strategic green infrastructure, landscape character and environmental connectivity. It identified vulnerabilities affecting designated habitats, ancient woodland, strategic green infrastructure corridors and the district's distinctive landscapes.

5.1502 These findings influenced the Plan through:

- Green and Blue Infrastructure Priority Areas
- Biodiversity protection and enhancement policies
- Biodiversity net gain requirements
- Carbon capture through nature policies
- Protection of trees, woodlands and hedgerows
- Open space and recreational policies
- Landscape-sensitive site allocation requirements

5.1503 The Plan's objective of creating an extensive network of green and blue infrastructure, wildlife habitats and corridors reflects the sustainability priorities established in the SA framework. It also works towards conserving Huntingdonshire's specific landscapes that are integral to the identify and history of the district and its communities.

Influence on Site Selection

5.1504 The SA exerted direct influence on site allocation decisions. Site appraisals were undertaken throughout the plan-making process using the SA decision-aiding framework for sites. Initially, during the Further Issues and Options stage, site appraisal findings were fed back into the Land Availability Assessment process to determine whether sites were suitable for further consideration and to inform indicative capacities.

5.1505 For the Preferred Options stage, the SA included individual assessments of:

- The North Huntingdon Growth Cluster Opportunity Zone
- Strategic growth locations
- Market town allocations
- Service centre allocations
- Local service village allocations
- Village allocations

5.1506 Appraisals considered matters including:

- Flood risk
- Agricultural land quality
- Biodiversity impacts
- Accessibility
- Public transport opportunities
- Access to community facilities
- Heritage assets
- Landscape effects
- Climate resilience
- Opportunities for active travel

5.1507 The site selection process therefore incorporated sustainability considerations from the outset rather than relying solely on land availability or deliverability considerations.

Influence through Mitigation and Policy Refinement

5.1508 The SA was designed not merely to identify effects but also to recommend improvements. The methodology specifically required consideration of mitigation measures and opportunities to maximise beneficial effects.

5.1509 This iterative approach meant that appraisal findings informed policy drafting and refinement. The Preferred Options SA states that the appraisal process was undertaken specifically so that "findings can inform and shape the way that all parts of the plan evolve in a meaningful way" and that technical evidence, consultation feedback and appraisal findings together helped shape the preferred strategy now carried forward into the Pre-Submission Plan.

5.1510 The resulting Plan includes numerous policy safeguards and mitigation measures addressing:

- Flood risk and drainage
- Wastewater capacity
- Biodiversity impacts
- Pollution
- Heritage settings
- Transport connectivity and capacity
- Green and blue infrastructure provision
- Climate adaptation and mitigation

Influence of Consultation and Ongoing Appraisal

5.1511 The SA process was itself subject to consultation. Comments from Natural England, Historic England and the Environment Agency informed revisions to the SA framework. Public consultation on the Scoping Report and subsequent SA stages generated further amendments and improvements.

5.1512 Importantly, the Council has continued the appraisal process through each consultation stage, ensuring that evolving evidence, consultation responses and policy changes were reassessed and incorporated into later iterations of the Plan. This demonstrates that the SA was a live and iterative process rather than a retrospective evaluation.

Conclusion

5.1513 Overall, the Sustainability Appraisal has had a substantial and demonstrable influence on the preparation of the Pre-Submission Local Plan to 2046. It established the sustainability issues facing Huntingdonshire, created the framework through which options were tested, influenced the vision and objectives, shaped the spatial strategy, guided climate change and environmental policies, informed site selection decisions and secured mitigation measures throughout the Plan.

5.1514 The evidence shows that the SA was fully integrated into plan preparation and operated as a continual mechanism for refining choices and improving outcomes. Consequently, the Pre-Submission Local Plan represents not simply a strategy that has been assessed for sustainability, but a strategy that has been actively shaped by sustainability appraisal from the outset of its preparation through to submission.

Evolution of the Local Plan and its sustainability benefits

5.1515 The Huntingdonshire Local Plan to 2046 has evolved through a structured and evidence-led process, progressing from the 2023 Issues Stage, to the 2024 Further Issues and Options stage, then through to the Preferred Options (Regulation 18) consultation stage, eventually to the Pre-Submission Local Plan (Regulation 19) in 2026. At each stage the Council has assessed reasonable alternatives, considered consultation responses, updated its technical evidence base and refined the strategy to achieve sustainable development in accordance with national planning policy. This process demonstrates that the Submission Plan is both justified and positively prepared.

5 Stage D - Consultation and development of the Plan

5.1516 The Further Issues and Options consultation represented the key stage at which alternative approaches were explored. Rather than presenting predetermined solutions, the Council sought views on fundamental components of the future strategy, including the vision, settlement hierarchy, housing requirement, employment strategy, growth distribution, climate change response, green infrastructure, transport, flooding and housing mix. A range of reasonable alternatives were tested for each topic, allowing stakeholders to influence the direction of the emerging plan.

5.1517 A significant theme throughout the evolution of the plan has been the increasing integration of the Huntingdonshire Futures Place Strategy into the Local Plan framework. The Issues and Options document presented alternative visions ranging from a climate-led approach, a sustainability-led approach, retention of the existing Local Plan vision, and a place-based vision derived from the Futures Strategy. Consultation responses demonstrated strong support for a vision based on the Place Strategy principles of Pride in Place, Inclusive Economy, Health Embedded, Environmental Innovation and Travel Transformed. Consequently, the Preferred Options Plan adopted these themes as the foundation of its vision and objectives, while the Pre-Submission version further refined them into a comprehensive framework supported by eighteen strategic objectives.

5.1518 The settlement hierarchy also evolved through evidence-led refinement. At the Issues and Options stage the Council considered whether to retain the existing hierarchy, create additional categories, rely strictly on sustainability scores, or elevate particular settlements. During plan preparation the Sustainability of Settlements Assessment demonstrated substantial variation in access to services, transport, employment and community facilities across the district. This evidence supported a more nuanced hierarchy. The Submission Plan therefore adopts a six-tier structure comprising Market Towns, Service Centres, Local Service Villages, Villages, Hamlets and Countryside, replacing the simpler hierarchy currently operating under the adopted Plan to 2036. This approach updates the hierarchy to reflect current levels of sustainability and better aligns development opportunities with settlement sustainability credentials.

5.1519 The approach to housing growth became increasingly ambitious as national policy and evidence evolved. The Issues and Options stage assessed three principal alternatives comprising the standard method housing figure, a 5% uplift, and a 10% uplift. Consultation responses highlighted support for additional flexibility, improved affordability, economic growth aspirations and resilience against future changes in national methodology. Subsequent amendments to national housing requirements significantly increased the standard method figure for Huntingdonshire. The Preferred Options Plan therefore moved towards a strategy based upon meeting objectively assessed needs in full together with additional flexibility. By the Preferred Options stage the Local Plan made provision for at least 32,200 homes, reflecting both the standard method requirement and a 10% flexibility allowance, which was taken forward into the Pre-Submission Local Plan. This approach provides a robust supply, supports affordability objectives and reduces the risk of speculative development undermining the plan-led strategy.

5.1520 The spatial strategy similarly evolved through consideration of alternative growth options and evidence base testing. The Further Issues and Options consultation explored a spectrum of distribution approaches ranging from concentration within market towns, dispersal across villages, transport corridor-focused growth, urban extensions, proportionate growth and the development of strategic new communities. Supporting climate change evidence examined the carbon implications of different spatial strategies and demonstrated that concentrating growth in the most sustainable locations would deliver superior sustainability outcomes compared with dispersed development patterns. Other technical evidence base documents including the Water Cycle Study, Infrastructure Delivery Study and Habitat Regulations Assessment shaped the eventual strategy. Consequently, the Preferred Options Plan identified a concentrated growth strategy focused on the district's most sustainable settlements and strategic growth opportunities. This approach was retained and strengthened in the Pre-Submission Plan.

5.1521 One of the most significant introduction to the Preferred Options Local Plan was the emergence of the North Huntingdon Growth Cluster Opportunity Zone as a major strategic focus for growth with several strategic allocations in this zone. This emerged through the Combined Authority's Local Growth Plan. Evidence relating to employment opportunities, infrastructure provision, accessibility and long-term development capacity demonstrated that this location could support substantial housing and economic development integrated with new infrastructure. The Pre-Submission Plan therefore carries this forward through a series of strategic allocations which not only meet identified needs but also establish a framework for development extending beyond the plan period. This reflects national guidance which supports longer-term planning horizons where major strategic developments are involved.

5.1522 The employment strategy also became more focused and evidence-based during plan preparation. At the Issues and Options stage alternatives ranged from limited growth to ambitious growth linked to innovation sectors and economic clusters. Consultees generally supported a balanced but ambitious approach capable of capitalising on the district's strategic location between Cambridge, Peterborough and the wider Oxford-Cambridge corridor. Subsequent economic evidence form the Economic and Employment Needs Assessment identified opportunities in advanced manufacturing, life sciences, logistics, knowledge-intensive industries and innovation-led sectors. As a result, the Submission Plan moves decisively towards a growth-supportive strategy that protects established employment areas, enables innovation-led clusters and provides opportunities for approximately 15,400 additional jobs.

5.1523 Perhaps the most notable strengthening of the plan through its evolution concerns climate change and environmental sustainability. The Issues and Options stage explored alternative carbon reduction pathways ranging from business-as-usual trajectories to ambitious decarbonisation scenarios. New climate evidence supporting the Local Plan demonstrated that a balanced pathway consistent with Climate Change Committee recommendations could reduce emissions by around 76% by 2050 with offsetting providing a net loss. Consultation responses showed strong support for ambitious climate action, provided measures remained practical and deliverable. This resulted in the Preferred Options and Pre-Submission Plans embedding climate change throughout the strategy rather than treating it as a standalone topic. These include a suite of climate-related policies addressing energy efficiency, embodied carbon, renewable energy, carbon sequestration, water efficiency, flood resilience, sustainable transport and green infrastructure networks. These measures significantly exceed the scope considered at the Issues and Options stage and demonstrate the progressive strengthening of environmental outcomes through plan preparation.

5.1524 Development management policies have similarly matured between stages. At Issues and Options stage much discussion focused on whether local policies would remain necessary alongside potential national development management policies. As uncertainty surrounding national reform became clearer, the Council chose to develop a comprehensive local policy framework covering design quality, climate resilience, biodiversity enhancement, housing needs, heritage protection, rural development and economic growth. The Pre-Submission Plan therefore provides greater certainty and clearer decision-making criteria than were available at earlier stages.

5.1525 Overall, the evolution of the Local Plan demonstrates a consistent progression from broad strategic alternatives towards a focused, evidence-based spatial strategy. The Pre-Submission Plan reflects consultation feedback, Sustainability Appraisal findings, climate evidence, housing and employment assessments, infrastructure planning and transport modelling. It selects the most sustainable elements from the alternatives considered and integrates them into a coherent framework that balances growth, environmental enhancement, climate resilience and community wellbeing. The plan therefore demonstrates that reasonable alternatives have been properly assessed and that the chosen strategy represents the most sustainable and deliverable approach for Huntingdonshire to 2046.

5 Stage D - Consultation and development of the Plan

Table 8 Summary Table: Evolution of the Plan and Sustainability Benefits

Theme	Further Issues & Options (2024)	Preferred Options Reg 18	Regulation 19 Pre-Submission Plan	Sustainability Benefits of Final Strategy
Vision & Objectives	Four alternative vision models including climate-led, sustainability-led, Futures Strategy-led and modified existing vision.	Vision based strongly on Huntingdonshire Futures Place Strategy.	Refined vision supported by 18 strategic objectives.	Integrates social, economic and environmental objectives in a balanced framework.
Settlement Hierarchy	Considered retaining existing hierarchy, expanding categories or using settlement sustainability scores.	New six tier hierarchy informed by Sustainability of Settlements evidence.	Six-tier hierarchy retained and fully embedded in policy.	Directs growth towards locations with greatest access to services and public transport, reducing travel demand.
Housing Requirement	Standard method, +5%, or +10% uplift options.	Target emerging following revised national methodology with 10% uplift to allow for flexibility in supply.	32,200 homes with flexibility allowance in excess of 5% retained.	Meets needs in full with flexibility, improves affordability, supports economic growth and plan resilience.
Spatial Strategy	Considered dispersed growth, market-town focus, transport corridor growth, urban extensions and strategic communities.	Concentrated growth towards sustainable settlements and major strategic locations.	Retains established spatial strategy focused on sustainable settlements and strategic growth clusters.	Minimises carbon emissions and infrastructure costs while conserving wider rural character.
Strategic Growth Locations	Strategic options still under consideration.	Major growth concentrated in North Huntingdon and sustainable settlements including strategic allocations on the edge of St Neots and St Ives.	North Huntingdon Growth Cluster Opportunity Zone retained as the strategic focus with other strategic developments spread in sustainable locations linked to known infrastructure projects.	Enables infrastructure-led growth, mixed-use communities and long-term delivery.
Employment & Economy	Low, medium and high growth options considered.	Evidence-based growth strategy emerging.	Support for 15,400 jobs, innovation clusters and established employment areas.	Creates local jobs, reduces commuting and supports higher-value economic sectors.
Climate Change	Alternative decarbonisation pathways assessed.	Net zero pathway embedded in vision and policies.	Comprehensive climate framework across the plan.	Significant contribution to emission reduction, climate adaptation and resilience.
Green & Blue Infrastructure	Strategic options for biodiversity, landscape and nature recovery considered.	Stronger Green Infrastructure network proposed.	Priority Green and Blue Infrastructure Areas designated.	Biodiversity enhancement, improved well-being, carbon sequestration and climate adaptation.

Theme	Further Issues & Options (2024)	Preferred Options Reg 18	Regulation 19 Pre-Submission Plan	Sustainability Benefits of Final Strategy
Flooding & Water	Options focused on flood management, water supply and wastewater.	Strategic policies developed from Integrated Water Management Study evidence.	Comprehensive flood risk, wastewater and water efficiency policies.	Reduced flood risk, improved water resilience and sustainable water management.
Transport & Connectivity	Focus on public transport, active travel and reducing travel demand.	Infrastructure and accessibility strategy emerging.	Integrated transport and active travel policies.	Reduces transport emissions and promotes healthier travel choices.
Design & Placemaking	High-level discussion of design and national policy changes.	Draft design and placemaking policies introduced.	Full suite of design, carbon reduction and healthy place-making policies.	Higher-quality development, reduced energy demand and improved community wellbeing.
Development Management Policies	Alternative approaches under consideration due to uncertainty around national policies.	Extensive draft Development Management policies introduced with local focus.	Comprehensive locally-specific policy framework adopted.	Greater certainty, stronger environmental protection and improved implementation.

Overall Sustainability Conclusion

5.1526 The Pre-Submission Plan demonstrates a clear evolution from broad strategic alternatives towards a coherent and evidence-supported strategy. Relative to the options considered at Issues and Options stage, the final plan delivers:

- Greater concentration of growth in sustainable locations
- Higher levels of housing delivery with enhanced flexibility
- Stronger climate change mitigation and adaptation measures
- Better integration of infrastructure with growth
- Enhanced biodiversity and green infrastructure outcomes
- More employment opportunities close to residential growth
- Reduced need to travel and lower transport-related carbon emissions
- Stronger protection of environmental, heritage and landscape assets

5.1527 These changes collectively demonstrate that the Pre-Submission Plan represents the most sustainable option when compared with the reasonable alternatives considered throughout plan preparation and provides a sound basis for Examination in Public.

SA recommendations and iterations tracker

5.1528 The Sustainability Appraisal has been undertaken as an iterative process throughout the preparation of the Local Plan to 2046. The SA has informed plan-making from the identification of issues and options through to the development of preferred policies and site allocations and finally the Pre-Submission Plan. The process has sought to avoid, minimise and mitigate adverse environmental, social and economic impacts while maximising positive effects.

5.1529 The SA framework was structured around sixteen sustainability objectives covering climate emergency, environmental and socio-economic themes, including carbon reduction, climate resilience, water management, biodiversity, housing, health, transport, economy and heritage. These objectives formed the basis of assessment and refinement throughout plan preparation.

5 Stage D - Consultation and development of the Plan

Theme 1: Climate Change and Net Zero

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options (2024)	Strong support for ambitious climate action. SA identified that a business-as-usual pathway would be insufficient to achieve meaningful emissions reductions and recommended stronger decarbonisation measures.	The Preferred Options Plan adopted a net zero trajectory aligned to the Climate Change Committee's Balanced Pathway and introduced climate-focused objectives.
Preferred Options (2025)	SA recommended stronger links between growth strategy, transport, energy efficiency and carbon reduction. Positive scores were achieved but further opportunities existed to embed climate resilience across the plan.	The Pre-Submission Plan strengthens climate resilience throughout the strategy. A dedicated chapter establishes climate resilience as a core organising principle alongside policies on renewable energy, energy efficiency, carbon sequestration, sustainable transport and water efficiency.
Pre-Submission Outcome	Mitigation incorporated.	Climate objectives now influence the overall spatial strategy, development management policies and site allocation requirements, ensuring climate change mitigation and adaptation are embedded in development decisions.

5.1530 The SA identified climate change as one of the most significant sustainability challenges facing Huntingdonshire, particularly given transport emissions account for approximately 36% of district-wide emissions. The Pre-Submission Plan directly responds through spatial concentration of growth, active travel policies, Electric vehicle infrastructure, renewable energy support and requirements for energy efficient development.

Theme 2: Flood Risk, Water Resources and Climate Resilience

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	Flooding, water supply and wastewater capacity emerged as significant concerns from consultation responses and baseline evidence.	Further evidence commissioned through Strategic Flood Risk Assessments and Water Cycle Studies.
Preferred Options	SA identified need for stronger policy mechanisms to avoid flood risk and manage cumulative impacts. Site assessments highlighted infrastructure and drainage requirements.	New strategic policies introduced on managing flood risk, wastewater, surface water and water efficiency. Additional site-specific mitigation requirements incorporated into allocations.
Pre-Submission Outcome	Mitigation incorporated.	Policy framework now requires drainage infrastructure, water efficiency measures, flood mitigation and alignment with Integrated Water Management Strategy recommendations.

5.1531 The SA findings have directly informed policy wording and allocation criteria. Significant development is now contingent on demonstrating flood resilience, wastewater capacity and sustainable drainage solutions.

Theme 3: Biodiversity, Green Infrastructure and Nature Recovery

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	SA highlighted risks to designated sites, habitat fragmentation and biodiversity	Green and blue infrastructure identified as a strategic priority.

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
	loss. Opportunities identified for strategic green infrastructure expansion.	
Preferred Options	SA recommended greater emphasis on nature recovery, connectivity and biodiversity enhancement.	Strategic Green and Blue Infrastructure Priority Areas introduced. Policies strengthened regarding biodiversity enhancement and habitat connectivity.
Pre-Submission Outcome	Mitigation incorporated.	Dedicated policies require protection of nature conservation sites, biodiversity enhancement, tree and woodland protection and carbon capture through nature.

5.1532 The Pre-Submission Plan moves beyond impact avoidance and adopts a positive enhancement approach consistent with Local Nature Recovery Strategy aspirations and SA recommendations.

Theme 4: Sustainable Spatial Strategy and Settlement Hierarchy

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	Assessment of spatial strategy options demonstrated that concentrating growth in more sustainable locations would perform better against climate, accessibility and service provision objectives.	Directed growth toward market towns, service centres and larger sustainable settlements.
Preferred Options	SA supported growth focused on locations with service access while cautioning against dispersed unsustainable development patterns.	Spatial strategy refined following site assessment, transport evidence and consultation responses.
Pre-Submission Outcome	Mitigation incorporated.	Growth is concentrated within the settlement hierarchy and major growth clusters where infrastructure investment can be aligned with development delivery.

5.1533 The Pre-Submission strategy reflects the SA recommendation that growth should be directed to locations capable of supporting sustainable travel patterns and infrastructure provision.

Theme 5: Housing, Health and Inclusive Communities

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	SA identified affordability pressures, ageing population and need for accessible housing.	Evidence base expanded through Housing Needs Assessment and specialist accommodation studies.
Preferred Options	SA findings emphasised housing mix, affordability, healthy place-making and accessible environments.	Policies developed for affordable housing, accessible homes, specialist housing and healthy place-making.
Pre-Submission Outcome	Mitigation incorporated.	Enhanced housing policies, stronger health and wellbeing framework and placemaking requirements incorporated throughout the plan.

5 Stage D - Consultation and development of the Plan

5.1534 The Pre-Submission Plan demonstrates a clear response to SA objectives relating to social inclusion, healthy communities and lifelong housing needs.

Theme 6: Transport, Connectivity and Air Quality

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	SA identified transport emissions as the largest carbon source and highlighted dependence on private vehicles.	Strategic Transport Assessment commissioned.
Preferred Options	SA recommended stronger active travel and public transport provisions together with reduced travel demand through spatial planning.	Policies introduced for active travel, connectivity and electric vehicle infrastructure.
Pre-Submission Outcome	Mitigation incorporated.	Strengthened policies supporting sustainable travel, digital infrastructure, local accessibility and transport mitigation linked to major allocations.

5.1535 The evolution of transport policy demonstrates a direct response to SA concerns regarding traffic impacts, carbon emissions, accessibility and air quality.

Theme 7: Economy and Employment

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	SA supported economic growth but highlighted need to balance employment growth with environmental objectives and sustainable accessibility.	Economic evidence commissioned and strategic employment locations reviewed.
Preferred Options	SA supported innovation-led growth and diversification while identifying opportunities to reduce commuting patterns.	Policies developed around innovation, key clusters, logistics and rural economic diversification as well supporting market towns and local centres.
Pre-Submission Outcome	Mitigation incorporated.	Employment strategy aligned more closely with the settlement hierarchy and infrastructure planning, improving sustainability performance.

5.1536 The Pre-Submission Plan demonstrates a clear response to SA objectives relating to the economy to meet economic needs and support economic diversification.

Theme 8: Heritage, Landscape and Local Character

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Further Issues and Options	SA identified risks to landscape character, conservation areas and heritage assets from future growth.	Heritage and landscape evidence informed site selection and policy drafting.

Evolution Stage	Sustainability Appraisal Findings	Response in Pre-Submission Plan
Preferred Options	SA recommended stronger protection and clearer mitigation measures for allocations affecting heritage settings.	Heritage impact assessments undertaken and allocation criteria refined.
Pre-Submission Outcome	Mitigation incorporated.	Enhanced design, placemaking and heritage policies introduced together with site-specific mitigation requirements.

5.1537 The Pre-Submission Plan demonstrates a clear response to SA objectives relating to heritage and landscape incorporating policies that conserve and enhance Huntingdonshire's unique heirtage and landscape character.

Conclusion

5.1538 The Sustainability Appraisal actively informed the Plan evolution. Throughout the Further Issues and Options, Preferred Options and Pre-Submission stages, identified mitigation measures were incorporated into policy drafting, strategic growth options, infrastructure planning and site selection. This is evidenced by stronger climate resilience policies, enhanced flood and water management requirements, expanded biodiversity and green infrastructure provisions, refined spatial distribution of growth, strengthened transport measures, improved housing and health policies and enhanced heritage safeguards. Collectively these changes demonstrate that the Sustainability Appraisal has been an iterative and influential component of plan preparation and has significantly shaped the content of the Pre-Submission Local Plan to 2046.

D3: Making decisions and providing information

5.1539 The sections above that make up Stage D provide the information about the tasks that have been undertaken to move the Draft Final Sustainability Appraisal to the Final Sustainability Appraisal that will support the Local Plan. The Final Sustainability Appraisal informs the Council's decision about how to proceed with the Local Plan.

5.1540 A report will be taken through the Council's committee cycle in September 2026 as follows:

1. Overview and Scrutiny Panel (Performance and Growth) on 2 September 2026
2. Cabinet on 9 September 2026, to be followed by
3. Full Council on 9 September 2026

5.1541 The report will recommend approval of the Local Plan for the Proposed Submission stage (Regulation 19) when the plan moves from the informal preparation stage to the formal testing phase. The Plan and will be available for a minimum period of 6 weeks during which representations on it's soundness and legal compliance can be made. The Sustainability Appraisal will also be available for comment. The representations received will be sent with the plan and supporting documentation to the Planning Inspectorate for the formal Submission of the plan, which is scheduled for December 2026 in accordance with the transitional arrangements.

6 Stage E - Monitoring and implementation of the Plan

E:	Monitoring the implementation of the plan.	The purpose of this stage is to establish ways of considering whether or not to review the plan and to enable sustainability appraisal processes for future plans.

6.1 Monitoring allows the actual significant environmental effects of implementing the Local Plan to be tested against those predicted and so helps to ensure that any problems which arise during implementation, whether or not they were foreseen, are identified and future predictions made more accurately.

6.2 Monitoring can help provide the baseline information for future plans and programmes, and in preparing information which will be needed for EIAs of projects. Monitoring and evaluation of progress towards objectives and targets can form a crucial part of the feedback mechanism. Feedback from the monitoring process helps to provide more relevant information that can be used to pinpoint specific performance issues and significant effects, and ultimately lead to more informed decision-making.

6.3 This stage consists of the following two tasks:

- E1: Developing aims and methods for monitoring
- E2: Responding to adverse effects

E1: Developing aims and methods for monitoring

6.4 Monitoring is a key process in assessing the impacts of planning policy and whether planning policy is having the desired impact and can form part of evidence for future Local Plan reviews.

6.5 Measures to monitor the implementation of the Local Plan would be largely based on the existing monitoring arrangements and published in the Authority Monitoring Report (AMR) containing information on the implementation of the Local Development Scheme (the timetable for production of the Local Plan), and the extent to which policies set out in development plan documents are being achieved and targets being met.

6.6 The purpose of the AMR is to make data and information available on the performance of the policies within the Local Plan and how and where growth is being delivered. This shares the performance and achievements of the planning service with the public, as well as showing historic trends through the framework of policy indicators.

6.7 Each policy in the Pre-Submission Local Plan has at least one monitoring indicator to monitor their implementation and will be recorded in the AMR. Each policy and their monitoring indicator are set out n the following table which has been updated following the Preferred Options consultation to include new policies and update some monitoring criteria.

6.8 The progress of residential development sites (including mixed use with residential elements) will be monitored through the production of a housing trajectory which will also be set out in the AMR.

Stage E - Monitoring and implementation of the Plan 6

Table 9 Monitoring Framework

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 1	How much development do we expect?	• Number of additional homes completed within the district • Amount of additional employment floorspace completed within the district	7, 10	9, 11	• Cambridgeshire County Council (Policy and Insight Team)
LP 2	Our Strategy for Change	• Amount and type of employment land available • Number and % of housing completions by settlement and tenure type (including the North Huntingdon Growth Cluster) • Amount and % of employment development by settlement type • CIL receipts/expenditure monitoring • Gross number and % new dwellings on previously developed land • Amount and % of employment floorspace developed on previously developed land • Progress on neighbourhood plans	2, 4, 6, 7, 9, 10	1, 2, 3, 4, 9, 11	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council
LP 3	Distribution of Growth				
LP 4	Green and Blue Infrastructure Priority Areas	• Losses to biodiversity habitat • Additions to biodiversity habitat • Total change in biodiversity habitat	3, 12, 13	5, 6, 7	• Cambridgeshire & Peterborough biodiversity Environmental Records Centre (CPERC)
LP 5	Settlement Hierarchy	• Distribution of planning permissions across the district	4, 6, 7, 10	4, 9, 11	• Cambridgeshire County Council (Policy and Insight Team)
LP 6	Market Towns	• Number and percentage of housing completions by settlement type • Amount and percentage of employment development completed by settlement type	4, 6, 7, 10	4, 9, 11	• Cambridgeshire County Council (Policy and Insight Team)
LP 7	Service Centres				
LP 8	Local Service Villages				

6 Stage E - Monitoring and implementation of the Plan

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 9	Villages				
LP 10	Hamlets and the Countryside	• Number of planning permissions granted on unallocated sites on grade 1 and 2 agricultural land	12	4	• Cambridgeshire County Council (Policy and Insight Team)
LP 11	Placemaking for larger scale developments	• Number of planning applications granted for large scale development supported by a masterplan and parameter plan • Number of planning applications for large scale major development supported by a masterplan and parameter plan	1, 9, 11, 12	7, 15	• Huntingdonshire District Council
LP 12	How will infrastructure be provided	• Annual CIL receipts/ expenditure monitoring S106 monitoring • Completion of A428 upgrade • Commencement/ completion of A141 upgrade • Provision of additional capacity at water recycling centres as identified in the Infrastructure Delivery Plan	2, 5, 11, 15, 16, 18	10, 12, 15	• Huntingdonshire District Council • National Highways • Anglian Water • Cambridgeshire and Peterborough Combined Authority
LP 13	Securing infrastructure provision				
LP 14	Supporting and Enabling Strategic Infrastructure				
LP 15	Facilitating Transport, Travel and Connectivity	• Progress made on strategic transport projects including the A141 and East West Rail • Number of CIL payments for travel and connectivity improvements	2, 15, 16, 18	10, 12	• Huntingdonshire District Council • National Highways • Cambridgeshire and Peterborough Combined Authority
LP 16	Approach to renewable energy schemes	• Number of planning applications for energy schemes permitted • Permitted renewable energy capacity in MW • Completed renewable energy capacity in MW	1, 3, 9, 14, 17	1, 2	• Cambridgeshire County Council (Policy and Insight Team)

Stage E - Monitoring and implementation of the Plan 6

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 17	Health and well-being	• Number and % of planning permissions granted for large scale development for residential or employment use with a supporting health impact assessment	2, 4, 9, 11	10, 15	• Huntingdonshire District Council
LP 18	Providing affordable homes	• Number and percentage of affordable homes completed	4, 10	9	• Cambridgeshire County Council (Policy and Insight Team)
LP 19	Green and Blue Infrastructure	• Losses to biodiversity habitat in hectares • Additions to biodiversity habitat in hectares • Total change in biodiversity habitat in hectares • Open space managed to Green Flag award standard	3, 12, 13	5, 6, 7	• Cambridgeshire & Peterborough biodiversity Environmental Records Centre (CPERC)
LP 20	Supporting carbon capture through nature	• Number of applications refused based on impact on carbon stores	1, 3, 9, 13, 14	1, 2, 5, 6	• Huntingdonshire District Council • Natural England • Great Fen
LP 21	Managing Flood Risk	• Number of planning permissions granted contrary to the advice of the Environment Agency	2, 11, 12, 13, 18	1, 2, 3, 15	• Environment Agency
LP 22	Managing Waste Water	• Number of planning permissions granted contrary to water service providers	2, 12, 13	1, 2, 3, 15	• Anglian Water • Environment Agency • Middle Level Commissioners • Local Lead Flood Authority
LP 23	Managing Surface Water	• Number of planning permissions granted contrary to the advice of a responsible agency on flooding or water quality grounds	2, 12, 13, 18	1, 2, 3, 15	• Anglian Water • Environment Agency • Middle Level Commissioners • Local Lead Flood Authority
LP 24	Water Efficiency	• Number of planning permissions granted contrary to the l/p/d	1, 2, 9, 14	1, 2, 3, 15	• Huntingdonshire District Council

6 Stage E - Monitoring and implementation of the Plan

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 25	Design context and character	• Number of planning applications refused where the grounds of refusal were based on their adverse impact on their surroundings	1, 4, 9, 11, 12	7, 15, 16	• Huntingdonshire District Council
LP 26	Creating high quality places and spaces	• Number of planning applications refused where the grounds of refusal was based on failure to create high quality places and spaces	1, 4, 9, 11, 12	7, 15, 16	• Huntingdonshire District Council
LP 27	Ensuring amenity for new buildings and neighbours	• Number of applications refused where grounds of refusal included detriment to neighbouring properties	1, 9	8, 15	• Huntingdonshire District Council
LP 28	Minimising embodied and operational carbon in new buildings	• Number of applications refused based on non-compliance with national energy efficiency standards • Amount and % of housing and employment floorspace developed on previously developed land • Amount and % of new homes and employment floorspace created via conversion or change of use	1, 9, 12, 14	1, 2	• Huntingdonshire District Council
LP 29	Making existing buildings more energy efficient	• Number of applications where this policy applies	1, 9, 14	1, 2	• Huntingdonshire District Council
LP 30	Supporting active and sustainable travel	• Number and % of housing completions by settlement type • Number and % of planning permissions granted for major development supported by a Transport Assessment, Transport Statement and/or Travel Plan	2, 11, 16, 17, 18	9, 12	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 31	Parking Provision and Vehicle Movement	• Number of new homes permitted with no off street parking • Number of cycle storage spaces permitted per dwelling/ per non-residential unit	1, 9, 12, 17	15	• Huntingdonshire District Council
LP 32	Providing electric vehicle charging points	• Number of applications that provided new electric vehicle charging points	1, 9, 12, 17	1, 2	• Huntingdonshire District Council
LP 33	Preventing and reducing air pollution	• Number of planning applications refused in an AQMA based on air quality impacts • Number of planning permissions granted which require a low emissions strategy	1, 9	7, 8, 15	• Huntingdonshire District Council
LP 34	Preventing and reducing ground contamination and groundwater pollution	• Number of planning permissions granted with an agreed contamination mitigation strategy • Number of planning permissions for the specified development types granted in a SPZ 1 where adequate safeguards against possible contamination have not been agreed	1, 9	8	• Huntingdonshire District Council
LP 35	Protecting and enhancing Established Employment Areas	• Amount and type (use class) of development completed within EEAs • Amount of development completed or committed on land well-related and capable of being integrated with an Established Employment Area for uses E(g)(i to ii), B2, and B8	4, 5, 6	11, 13	• Cambridgeshire County Council (Policy and Insight Team)
LP 36	Expansion and diversification of rural businesses	• Amount and type (use class) and type and floorspace of development completed within the countryside	6, 7, 8	11, 13	• Cambridgeshire County Council (Policy and Insight Team)

6 Stage E - Monitoring and implementation of the Plan

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 37	Shaping new businesses in the countryside				
LP 38	Enabling key clusters and innovation-led growth	• Amount and type (use class) of development completed as approved through this policy, including the identification of cluster typologies	6, 7, 8	11, 13	• Cambridgeshire County Council (Policy and Insight Team)
LP 39	Enabling logistics and distribution	• Amount and type (use class) of development completed for B8 (storage and distribution)	6, 7, 8	11, 13	• Cambridgeshire County Council (Policy and Insight Team)
LP 40	Helping tourism and recreation in the countryside	• Number of permissions granted for tourism, sport and recreation in the countryside by use	6, 12, 13	11, 13	• Cambridgeshire County Council (Policy and Insight Team)
LP 41	Defining our Retail Hierarchy	• Use class and amount of retail floorspace gained or lost within defined Town Centres and Local Centres	8	13, 14	• Cambridgeshire County Council (Policy and Insight Team)
LP 42	Promoting Town Centre Vitality and Viability	• Use class and amount of retail floorspace gained or lost within defined Town Centres	8	13, 14	• Cambridgeshire County Council (Policy and Insight Team)
LP 43	Supporting Local Centres	• Use class and amount of retail floorspace gained or lost within defined Local Centres	8	13, 14	• Cambridgeshire County Council (Policy and Insight Team)
LP 44	Services and facilities outside Designated Centres	• Use class and amount of retail, community and hot food takeaway floorspace gained or lost within defined Local Centres • Use class and amount of community floorspace gained or lost within defined Local Centres	8	13, 14	• Cambridgeshire County Council (Policy and Insight Team)
LP 45	Promoting a mix of housing	• Numbers of homes completed of each of 1, 2, 3 and 4(+) bedrooms	4, 9, 10	9	• Cambridgeshire County Council (Policy and Insight Team)

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 46	Ensuring accessible and adaptable homes	• Proportion of homes built to standard M4(2) accessible and adaptable homes • Proportion of homes built to standard M4(3) wheelchair user homes	4, 9, 10	9	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council
LP 47	Facilitating self and custom build homes	• Number of self and custom build CIL exemptions granted	4, 10	9	• Huntingdonshire District Council
LP 48	Supporting specialist housing	• Number of self-contained (C3) specialist homes permitted by tenure • Number of bedspaces in C2 residential institutions permitted	4, 9, 10	9	• Cambridgeshire County Council (Policy and Insight Team)
LP 49	Supporting houses in multiple occupation	• Number of bedspaces granted through construction or conversion of housing into licenced houses in multiple occupation	4, 9, 10	9	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council
LP 50	Promoting Rural Exceptions Housing	• Number of affordable homes completed on rural exceptions schemes	4, 9, 10	9	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council
LP 51	Gypsies, Travellers and Travelling Showpeople	• Number of Gypsy and Traveller pitches permitted • Number of Travelling Showpeople plots permitted	4, 10	9	• Cambridgeshire County Council (Policy and Insight Team)
LP 52	Protecting our nature conservation sites	• Losses to biodiversity habitat in hectares • Total Change in habitats in hectares • % of SSSIs in favourable, unfavourable recovering, unfavourable no change, unfavourable declining, destroyed/part destroyed condition	3, 12, 13	6, 7, 8	• Cambridgeshire & Peterborough biodiversity Environmental Records Centre (CPERC)
LP 53	Enhancing Biodiversity and Geodiversity	• Number of applications refused based on non-compliance with biodiversity net gain	3, 12, 13	6, 7, 8	• Huntingdonshire District Council

6 Stage E - Monitoring and implementation of the Plan

Reg 19 Policy no.	Reg 19 Policy	Indicator	Related Local Plan objective	Related SA objective	Date Source
LP 54	Protecting our trees, orchards, woodlands, hedges and hedgerows	• Number of applications refused on the basis of impact on trees, woodland, hedges and hedgerows	3, 12, 13	6, 7, 8	• Huntingdonshire District Council
LP 55	Protecting our open spaces, outdoor sport and recreational facilities	• Number of applications resulting in the loss or gain of open space, sports and recreational buildings(s) or land • Number of LGS designations made in neighbourhood plans	2, 3, 11	5, 10	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council
LP 56	Heritage Assets and their Settings	• Number and % of planning applications refused on grounds of impact on heritage assets • Number of conservation area statements reviewed • Number of heritage assets on the heritage at risk register	12	7, 16	• Huntingdonshire District Council • Historic England Heritage at Risk Register
LP 57	Water related Development	• Number of moorings granted permission for leisure and residential use • Number of applications where this policy was applied	12, 13	6, 15	• Cambridgeshire County Council (Policy and Insight Team) • Huntingdonshire District Council

6.9 The monitoring framework is reflected in the Local Plan with information following each policy for the implementation and monitoring of that policy.

Stage E - Monitoring and implementation of the Plan 6

E2: Responding to adverse effects

6.10 The Authority Monitoring Report (AMR)will form the basis for ascertaining the extent to which policies set out in the Local Plan are being achieved and targets being met and whether any adverse effects are being identified. The AMR will include data on the number of new homes being completed annually and a trajectory of anticipated future provision.

6.11 The housing target for the Local Plan that this Plan provides for is 32,200 new homes between 2021 and 2046, this equates to an average of 1,237 new homes per year. The level of delivery achieved will be monitored annually to ensure that sufficient housing is being brought forward.

6.12 An adverse effect may arise from under-delivery of housing. Therefore, the latest government procedures on any housing delivery test will be followed. In the absence of national procedures the following local test will be applied. A review of allocations will be triggered if housing delivery is more than 20% below the residual annual average target over a rolling 3 year period and the housing trajectory at that point indicates that expected housing completions over the next 5 years will not make up the deficit. Should this situation arise we will work through the following sequence until housing delivery is appropriately increased:

1. Work with partners to overcome constraints and expedite the delivery of allocated sites; then
2. Work with partners to overcome constraints and expedite the delivery of alternative sites identified as suitable within the Land Availability Assessment (or successor documents); then
3. Review the capacity of sites to ascertain whether additional homes could be delivered within sites already allocated within this Plan; then
4. Initiate a partial or full review of the Local Plan as appropriate

6.13 Jobs growth is complex and very difficult to predict and the potential adverse effects arising from policies set out in Local Plan are harder to determine. Employment growth will be affected as much by successes in winning contracts, gaining investment or the availability of potential employees with the right skills as by the availability of land and buildings. For the retail sector new trends can emerge quickly and can be influenced by decisions about investment at a national level.

6.14 The North Huntingdon Growth Cluster Opportunity Zone will play a significant part in delivering the jobs growth over the plan period as well as the delivery of strategic employment and mixed use sites. We will continue to work in partnership with the site owners Urban & Civic, who are master developers to two strategic developments in the district (Alconbury Weald and St Neots East) as well as the Cambridgeshire and Peterborough Combined Authority to ensure the growth within the North Huntingdon corridor proceeds as planned in the Local Plan and the Local Growth Plan. If monitoring shows that there will be insufficient land for business development over the next 5 years taking account of preceding development trends and all available land and buildings then a review of allocations will be triggered. Should this situation arise the Council will follow the same sequence as listed above for housing delivery.

Appendix 1 - SA Framework

Table 10 SA framework

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
	Climate emergency			
SA 1	Contribute to achieving the district's ambition to reach net zero carbon emissions by 2040.	• Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets? • Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	• Promote low and zero carbon technologies? • Not contain, and be at least 200m from an air quality management area? • Support the circular economy through the reuse and recycling of existing land, buildings or materials?	• Promote energy efficient design? • Increase the amount of CO_2 captured by plants and trees?
SA 2	Improve adaptability and resilience to the unavoidable impacts of the climate emergency.	• Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency? • Support habitats in adjusting to the impacts of the climate emergency?	• Is the site located in an area with lower resilience to the predicted impacts of climate change?	• Help protect against the increased extremes of weather anticipated from the climate emergency? • Promote opportunities for adaptation to unavoidable impacts of the climate emergency?
SA 3	Manage Huntingdonshire's water resources in a sustainable manner and reduce the risk from all potential sources of flooding to people, properties and the environment.	• Maintain and where possible improve the quality and availability of water resources? • Minimise the risk of flooding from all sources?	• Be served by existing waste water infrastructure or will it require infrastructure upgrades to facilitate growth? • Use land in flood zone 1 (unless the proposed use is water compatible)	• Reduce or help prevent water resource pollution from all sources? • Promote efficient use of water resources? • Reduce the risk of flooding from all sources?

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
			taking into account the impact from surface water flood risk?	
	Environmental			
SA 4	Make efficient use of land by maximising development on previously developed land where this is not of high biodiversity value and minimising that on the best and most versatile agricultural land.	• Enable the use of land that has previously been developed in preference to greenfield land? • Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	• Prioritise development of previously developed land? • Prioritise development on land of agricultural land grade 3 or lower (including urban and non-agricultural land)?	• Promote the use of previously developed land in preference to greenfield land? • Promote the use of land of agricultural land grade 3 or lower (including urban and non-agricultural land) in preference to grade 1 or 2 agricultural land?
SA 5	Improve the quantity and quality of publicly accessible natural green space and enhance the strategic green and blue infrastructure network and links to it.	• Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space? • Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?	• Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space? • Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?	• Support the provision, retention or enhancement of publicly accessible areas of open and natural green space? • Support the provision or enhancement of the strategic green or blue infrastructure network? • Encourage greater participation in healthy lifestyles through nature based or outdoor leisure activities? • Promote access to natural greenspace?
SA 6	Promote conservation, enhancement, recovery and connectivity of sites of biodiversity or geodiversity significance.	• Protect sites of designated biodiversity or geodiversity significance? • Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	• Impact on a designated site of biodiversity or geodiversity significance? • Ensure current strategic ecological networks are not compromised, and future improvements in strategic	• Support the protection, recovery or enhancement of sites of designated biodiversity or geodiversity significance? • Promote opportunities for enhanced connectivity of sites of biodiversity or geodiversity significance?

Appendix 1 - SA Framework

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
			habitat connectivity are not prejudiced?	
SA 7	Conserve and enhance the special qualities and integrity of our landscape and townscape character and the local distinctiveness of settlements.	• Promote opportunities to protect and enhance valued landscape and townscape characteristics? • Reinforce local distinctiveness and a sense of place?	• Make efficient use of land whilst also protecting the form and character of the local area?	• Protect or enhance landscape and/ or townscape character? • Promote local distinctiveness?
SA 8	Contribute to the minimisation and reduction of all forms of pollution.	• Promote actions to reduce contributions to air pollution? • Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment	• Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?	• Support proposals that contribute to the reduction of air pollution? • Support proposals that minimise or contribute to the reduction of light, noise, odour and visual pollution?
	Socio-economic			
SA 9	All people have access to high quality affordable homes that meet their needs across their lifetime.	• Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	• Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district? • Meet the needs of specific housing groups such as gypsies and travellers or older people? • Contribute to diversification of the housing supply by being no more than 1 ha in size?	• Support provision of market and affordable homes to meet identified needs and support the district's economic growth aspirations? • Support construction of accessible, adaptable homes with potential to meet the lifetime needs of occupiers? • Support provision of accommodation to meet specific needs?

Appendix 1 - SA Framework

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
SA 10	Enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion.	• Support and enhance the more deprived areas of the district? • Maximise opportunities for access to existing or proposed social and community facilities and services?	• Minimise the distance people need to travel to access town centres and local convenience shops • Minimise the distance people need to travel to access education facilities? • Minimise the distance people need to travel to access leisure and cultural facilities?	• Contribute towards promoting community cohesion? • Reduce the potential for social exclusion and isolation particularly among disadvantaged and protected groups? • Retain or enhance accessibility to retail, education, health, leisure or cultural facilities?
SA 11	Enhance the quality, range and accessibility of economic opportunities for all communities.	• Contribute to regeneration activities? • Enhance and diversify economic opportunities with the district?	• Facilitate access to a range of employment opportunities? • Be in a location with high quality digital infrastructure?	• Contribute towards economic opportunities for local residents? • Improve digital infrastructure provision?
SA 12	Reduce the need to travel by car and promote active travel and public transport infrastructure.	• Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	• Benefit from access to public transport infrastructure? • Benefit from access to active travel infrastructure for practical and social activities?	• Support the provision of infrastructure for public transport? • Support the provision of infrastructure for active travel?
SA 13	Strengthen, modernise and diversify the local economy and promote opportunities for growth of indigenous companies as well as encouraging sustainable inward investment.	• Attract new investment and provide opportunities to improve the resilience of the local economy? • Contribute to a balanced portfolio of employment land in sustainable locations throughout the district? • Support retention and growth of indigenous companies? • Encourage sustainable tourism?	• Provide opportunities for the creation of new businesses beyond supporting people working from home? • Facilitate retention or expansion of existing businesses? • Support provision of tourism facilities or services appropriate to the sustainability of its location?	• Support jobs in high knowledge or skill sectors? • Facilitate retention or expansion of existing businesses? • Retain or create rural or tourism employment opportunities? • Assist in increasing the viability of the agricultural economy?

Appendix 1 - SA Framework

	SA Objective	Decision aiding questions for use in appraising options for		
		The Strategy and alternatives (inc. new settlement and strategic expansion location proposals)	Sites	Development Management policies
		Will the approach/ option help to:	Will allocation of the site:	Will the option/ proposed policy:
SA 14	Support the successful response of town, local and village retail centres to changing shopping and social trends.	• Facilitate modernisation of existing town centres to meet current and anticipated needs?	• Reinforce the role of town, local and village centres in serving their communities?	• Promote enhancement of town centres? • Support the retention or creation of local scale retail or social facilities?
SA 15	Promote high quality design and placemaking that enables attractive, safe and resilient communities.	• Strengthen a local sense of place? • Retain the character of existing settlements?	• Provide high quality development sensitive to the character of the local environment? • Promote sustainable design solutions? • Provide opportunities to incorporate crime reduction measures?	• Contribute to the construction of well designed and sustainably constructed buildings and places? • Promote innovation whilst respecting local character and context? • Facilitate enhancement of the public realm? • Minimise opportunities for crime and help reduce the fear of crime?
SA 16	Conserve, sustain and enhance designated and non-designated heritage assets and their setting(s).	• Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	• Impact on any heritage assets or their settings?	• Promote the conservation or enhancement of heritage assets and their settings?

Appendix 2 - Scoring Matrix and Site SA Criteria

8.1 Each option will be assessed against the following classification of the potential effect as appropriate for each objective (see the SA Framework). The scoring matrix will be used to judge each item in the SA Framework to assess the relative performance of each option. This is refined to consider the level of significance of the impact either positively or negatively. A neutral category is included where there may no clear relationship, the outcome is uncertain or it may depend on details on delivery or implementation mechanisms unknown at the time of assessment.

8.2 The supporting commentary to each assessment will consider whether any identified impact is likely to be long or short term and permanent or temporary.

Table 11 Scoring matrix

Score	Effect of the approach
++	Contributes significantly to the achievement of the objective
+	Contributes to the achievement of the objective
N	No clear relationship to achieving the objective, the outcome is uncertain or the outcome may depend on delivery specific factors
	The objective is not relevant to the proposal
-	Detracts from achievement of the objective
--	Significantly detracts from achievement of the objective

8.3 The proposed scoring system/matrix consists of a mixture of qualitative and quantitative measures. How each objective will be assessed are shown in Table 23.

8.4 For objectives SA10 and SA11 measurements will taken from the centre point of the site frontage to calculate the distance from the site on foot by roads and public footpaths to services and facilities. For objectives SA1 and SA6 these will be calculated as the crow flies.

Appendix 2 - Scoring Matrix and Site SA Criteria

Table 12 Site decision aiding questions supporting criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
SA1	Promote provision and use of low and zero carbon technologies?	The scheme is for renewable energy generation or a large site with renewable energy provision that is proposed to meet the majority of the needs of the development.	++
		Clear renewable energy provision/ building standards to contribute to meeting the site's needs/ significantly enhanced building standards; or The site is proposed solely for biodiversity net gain opportunities.	+
		Build to building regulations at the time of development.	N
	Not contain, and be at least 200m from an air quality management area?	Beyond 200m of an AQMA	+
		Within 200m of an AQMA	-
		Within an AQMA	--
	Support the circular economy through the reuse and recycling of existing land, buildings or materials?	The site has significant existing structures with potential for recycling and reuse on site. Change of use of existing building	++
		The site has some existing structures with potential for recycling and reuse on site. Change of use or retention of existing building with some redevelopment	+
		There are no existing structures	-
SA2	Is the site located in an area with lower resilience to the predicted impacts of climate change?	The scheme is for entirely biodiversity net gain, flood mitigation, open space or renewable energy generation Or there is no fluvial flood risk with climate change	++

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		There is risk of fluvial flooding with climate change at 1 in 100 (Design Flood) which is not more than 20% of the site area	+
		Risk of fluvial flooding with climate change at 1 in 100 (Design Flood) is greater than 20% and not more than 50% of the site area	-
		Risk of fluvial flooding with climate change at 1 in 100 (Design Flood) is greater than 50% of the site area	--
SA3	Be served by existing waste water infrastructure or will it require infrastructure upgrades to facilitate growth?	More than 10% of the flow permit for the water recycling centre catchment is remaining after existing committed growth is taken into account.	+
		Development in this location may require an increase in the water recycling centre catchment flow permit and/or upgrades to the treatment process to accommodate further growth.	-
		The water recycling centre catchment has significant constraints in providing upgrades to the WRC to accommodate future growth. or The site is a new settlement and will most likely require a new water recycling centre to serve the population.	--
	Use land in flood zone 1 (unless the proposed use is water compatible) taking into account the impact from surface water flood risk?	100% of the site in flood zone 1 and none or minimal recorded risk of surface water flooding; or Proposal is for water compatible development	++
		50-99% of the site in flood zone 1 and none or minimal risk of surface water; or 100% of the site in flood zone 1 but with significant risk of surface water flooding	+
		50-99% of the site in Flood zone 1 with significant risk of surface water flooding <50% of the site flood zone 1, mainly flood zone 2 irrespective of surface water flood risk	-

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		<50% of the site flood zone 1, mainly flood zone 3 irrespective of surface water flood risk	--
SA4	Prioritise development of previously developed land?	>60% of the site is previously developed land	++
		1-59% of the site is previously developed land	+
		The site is proposed solely for biodiversity net gain opportunities	N
		The site is technically classified at greenfield but includes substantial built structures such as agricultural barns	-
		The site is wholly greenfield land with no existing structures	--
	Prioritise development on land of agricultural land grade 3 or lower (including urban and non-agricultural land)?	The site is classified as urban or non-agricultural land	++
		The site is grades 4 and/or 5	+
		The site is grade 1 but the proposed uses are for greenspace, biodiversity net gain or flood mitigation	N
		The site is predominantly grade 3	-
		The site is predominantly grade 2	--
SA5	Promote new development with opportunities to participate in leisure and recreation using publicly accessible natural green space? Could development contribute towards enhancing or increasing the strategic green or blue infrastructure network or linkages to it?	The site meets at least 3 of the following: • is within 1 km of a 10 ha area of natural green space • is within 300 m of a 2 ha natural green space • is within 200 m of a 0.5 ha area of greenspace • has direct opportunities to link to the strategic green or blue infrastructure network the site has capacity for 200 or more new homes or 1,000 sqm or more of non-residential built development with natural green space included within the site	++
		The site meets 1 of the above criteria • is within 1 km of a 10 ha area of natural green space	+

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		• is within 300 m of a 2 ha natural green space • is within 200 m of a 0.5 ha area of greenspace	
		The site meets none of the above criteria but has some capacity for linkages to the existing strategic green or blue infrastructure network	-
		The site meets none of the above criteria and has no/ very limited capacity for linkages to the existing strategic green or blue infrastructure network	--
SA6	Impact on a designated site of biodiversity or geodiversity significance?	The site meets all of the following: • is more than 2 kms from a Ramsar, Special Area of Conservation or Special Protection Area • is more than 1 km from a Site of Special Scientific Interest • is more than 200 m from a County Wildlife Site • is more than 200 m from a Local Geological Site	++
		The site meets at least 2 of the following: • is more than 2 kms from a Ramsar, Special Area of Conservation or Special Protection Area • is more than 1 km from a Site of Special Scientific Interest • is more than 200 m from a County Wildlife Site • is more than 200 m from a Local Geological Site	+
		The site meets at least 3 of the following: • contains or is within 2 kms of a Ramsar, Special Area of Conservation or Special Protection Area • contains or is within 1 km from a Site of Special Scientific Interest • contains or is within 200 m from a County Wildlife Site • contains or is within 200 m from a Local Geological Site	--
	Ensure current strategic ecological networks are not compromised, and future improvements in strategic habitat connectivity are not prejudiced?	The site is located within one of Natural Cambridgeshire's Priority Landscapes and has potential to contribute to improvements strategically in habitat connectivity.	+
		The site is located outside any of Natural Cambridgeshire's Priority Landscapes and has limited potential to contribute towards improvements strategically in habitat connectivity.	-
SA7	Make efficient use of land whilst also protecting the form and character of the local area?	The scale and/ or location of the site: • relate well to the existing settlement;	++

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		• the amount of development would contribute to protecting the form and character of the surrounding townscape and landscape; • the density is similar to or slightly higher than surrounding properties.	
		The scale and/ or location of the site: • relate well to the existing settlement; • the amount of development would contribute to protecting the form and character of the surrounding townscape and landscape; • the proposed density would not make efficient use of land.	+
		The scale and/ or location of the site: • do not relate well to the existing settlement; • the proposed density would make efficient use of land.	-
		The scale and/ or location of the site: • do not relate well to the existing settlement; • would not contribute to protecting the form and character of the surrounding townscape and landscape or could result in coalescence with another settlement(s); • the density would not make efficient use of land.	--
SA8	Be unlikely to cause or suffer from widespread light, noise, odour or visual pollution?	The proposal is distant from major sources of pollution and not of a scale likely to cause substantial pollution	+
		For residential proposals, the site is located near to the strategic transport network or near to a major employment site. For non-residential proposals, the site is close to major sources of pollution and/or is of a scale likely to cause substantial pollution	-
		The proposal could undermine the Dark Sky Discovery Sites designated at the Great Fen	--
SA9	Contribute to meeting a wide range of the types, sizes and tenures of housing needed across the district?	The site is likely to support over 100 new homes which could include a wide range of types, sizes and tenures, or	++

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
	Meet the needs of specific housing groups such as gypsies and travellers or older people? Contribute to diversification of the housing supply by being no more than 1 ha in size?	The site is suitable to meet specialist needs of identified groups, or The site is 1 ha or less and contributes to the government's aspiration to promote sites suitable for SME builders	
		The site will contribute to meeting the housing needs of the district	+
		The site is for non-residential uses	N
SA10	Minimise the distance people need to travel to access town centres and local convenience shops?	The site is within 5 kms of a town centre	++
		The site is within 800 m of a local convenience shop or 2.5 kms of a freestanding supermarket	+
		The site is proposed solely for biodiversity net gain or renewable energy opportunities	N
		The site is more than 800 m from a local convenience shop or 2.5 kms from a freestanding supermarket	-
	Minimise the distance people need to travel to education facilities?	The site meets at least 1 of the following: • is within 800 m of a town based primary school • is within 800 m of a village primary school • the site has capacity for at least 1,000 dwellings and will include a primary school	++
		The site does not meet the criteria above but is either within 1.5 kms of a town based primary school or is in a village containing a primary school	+
		The site is either for non-residential use or for residential accommodation specifically targeted at older people.	N
		The site is beyond 1.5 kms of a town based primary school; or Is in a village which does not have a primary school and is of insufficient capacity to provide a school on site.	--
	Minimise the distance people need to travel to leisure and cultural facilities?	The site meets at least 5 of the following, is within 800 m of:	++

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		• public hall/ meeting place • pub • place of worship • museum • library • cinema • sports centre • playing fields • the site has capacity for at least 1,000 dwellings and will include new leisure and/ or cultural facilities The proposal provides additional leisure and /or cultural facilities.	
		The site meets at least 3 of the following, is within 800 m of: • public hall/ meeting place • pub • place of worship • museum • library • cinema • sports centre • playing fields	+
		The site meets at least 1 of the following, is within 800 m of: • public hall/ meeting place • pub • place of worship • museum • library • cinema	N

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		• sports centre • playing fields Or The site is proposed solely for biodiversity net gain or renewable energy opportunities	
		The site is beyond 800 m of all the following: • public hall/ meeting place • pub • place of worship • museum • library • cinema • sports centre • playing fields	-
SA11	Facilitate access to a range of employment opportunities?	The site is within 1.5 kms of multiple concentrations of employment (eg town centre, industrial estate, secondary school) or the site itself will provide over 5 ha of employment land.	++
		The site meets at least 1 of the following: • is within 5 kms of multiple concentrations of employment • is within 1.5 kms of a range of employment sources Will provide over 2 ha of employment	+
		The site is proposed solely for renewable energy opportunities, biodiversity net gain or open space uses	N
		The site meets at least 2 of the following: • is more than 5 kms from multiple concentrations of employment • is more than 1.5 kms from a range of employment sources	-

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		Will not provide at least 2 ha of employment	
		The site meets all of the following: • is more than 5 kms from multiple concentrations of employment • is more than 1.5 kms from a range of employment sources Will not provide at least 2 ha of employment	--
	Be in a location with high quality digital infrastructure?	Ultrafast broadband is available in the vicinity	++
		Superfast broadband is available in the vicinity	+
		The site is proposed solely for biodiversity net gain opportunities	N
		Standard or no broadband is available in the vicinity	-
SA12	Benefit from access to public transport infrastructure?	The site is within 5 kms of a railway station and 800 m of a bus service rated B- or higher on the Place Based Carbon Calculator (approximately every 20 minutes Mon-Sat)	++
		The site is within 800 m of a bus service rated D+ or higher on the Place Based Carbon Calculator (approximately hourly Mon-Sat)	+
		The site is within 800 m of a bus service rated F+ or higher on the Place Based Carbon Calculator (approximately 3 per day Mon-Fri)	-
		The site is within 800 m of a bus service rated F or lower on the Place Based Carbon Calculator (approximately 1 per day Mon-Fri) or is beyond 800 m of any bus service	--
	Benefit from access to active travel infrastructure for practical and social activities?	A pavement adjoins the site frontage or is immediately across the road from the site; or A footpath along the site frontage will need to be created to join the site with a nearby footpath; or There is a public right of way/ segregated cycleway within the site.	++

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
		The site is within 500 m of a public right of way and/ or segregated cycleway	+
		The site is within 1 km of a public right of way and/ or segregated cycleway	-
		The site is more than 1 km of a public right of way and/ or segregated cycleway	--
SA13	Provide opportunities for the creation of new businesses beyond supporting people working from home? Facilitate retention or expansion of existing businesses? Support provision of tourism facilities or services appropriate to the sustainability of its location?	The proposal includes high job density employment use(s) such as offices, or Facilitate the expansion of an existing business(es)	++
		The proposal would support new low job density employment use(s) such as logistics or industrial uses, or Facilitate the retention of an existing business(es), or Supports the retention of existing tourism facilities or services appropriate to the location	+
		The proposal does not include employment, commercial or tourism uses	N
		The proposal would result in the loss of employment, commercial or tourism facilities and services	-
SA14	Reinforce the role of town, local and village centres in serving their communities?	The proposal supports provision of additional retail or social facilities within an existing town, local or village centre	++
		The proposal is for the retention, modernisation or expansion of an existing retail or social facility	+
		The proposal does not include retail or social uses so does not apply.	N
		The proposal would result in the loss of retail or social facilities within an existing town, local or village centre	-
SA15	Provide high quality development sensitive to the character of the local environment? Promote sustainable design solutions?	The proposal includes the redevelopment of a site that is previously developed and derelict, or Where there is a known issue, the proposal offers opportunities to address crime and /or anti-social behaviour issues.	++

Appendix 2 - Scoring Matrix and Site SA Criteria

SA Objective	Site appraisal decision aiding question Will allocation of the site:	Assessment indicators	Scoring matrix
	Provide opportunities to incorporate crime reduction measures?	The site is located such that it can be effectively masterplanned to become part of the existing place and community.	-
		The site is located such that it could not be effectively integrated with the existing community.	-
SA16	Impact on any heritage assets or their settings?	There are no designated heritage assets within the site or in the immediate vicinity of the site	++
		The proposal could enhance a heritage asset where there is currently a negative impact	+
		There are designated heritage assets that could be adversely impacted by the development	-

Appendix 3- SA performance of strategy options

9.1 To appraise the sustainability merits of each growth strategy option in detail, a separate SA has been undertaken for each and are set out in the following tables.

Strategy 1 - Strong focus on towns and cities

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA1	• Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	++	Strategic expansions to existing towns would focus development towards the more sustainable settlements in the district. This scale of development will also support new services and facilities to meet the needs of development. This option therefore provides greater opportunities to reduce the need to travel to meet day to day needs and enhance the opportunities for active travel by reducing journey lengths reducing emissions outputs. These locations are also more likely to have established sustainable travel options such as good bus routes and potentially railway provision. Focusing development towards these areas could incentivise use of public transport and support their continuation and potential expansion aiding a wider modal shift in travel behaviours which would reduce emissions outputs. This strategy can support enhancements to green infrastructure in and around the towns which can help to increase absorption and dissipation of nitrogen dioxide and other pollutants but will have limited impact on the remaining parts of the district.
	• Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	
SA2	• Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	-	Focusing development towards the towns and larger urban areas may not focus development in locations most resilient to the impacts of climate change in particular due to enhanced flood risk depending on the nature of the specific locations selected.
	• Support habitats in adjusting to the impacts of the climate emergency?		

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			This option could support habitats within and around towns, three of which are closely related to the Ouse Valley green infrastructure corridor, however, it would not necessarily support adjustments of habitats more widely across the district and may give rise to increased development pressure on sensitive sites.
SA3	• Maintain and where possible improve the quality and availability of water resources?	--	The cumulative impact of development and particularly of strategic expansions on water infrastructure will be greater in the towns and towards the north of the district near Peterborough and as such require upgrades to ensure sufficient capacity. This could be particularly acute in the early stages of development as infrastructure is delivered. All of our towns experience some issues with flooding so focusing development towards these areas may make them less resilient to flooding overall depending on the specific locations chosen for development.
	• Minimise the risk of flooding from all sources?	-	
SA4	• Enable the use of land that has previously been developed in preference to greenfield land?	+	This strategy may result in some opportunities for previously developed land regeneration within towns and may also reduce the need for greenfield land especially as it could facilitate more dense development. Denser development may also minimise the use of higher grade agricultural land. It is recognised that there are limited major development opportunities within our towns so it is likely that large amounts of greenfield land around them will face development pressure to deliver strategic urban extensions.
	• Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	+	
SA5	• Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	+	This strategy is more likely to see development located in good proximity to accessible open and natural greenspace or be of a scale to provide new accessible open and natural greenspace to spread the cumulative impact of increased recreational pressure and use. This option can support and enhance connectivity to existing green infrastructure areas located within or nearby to towns but may not support those in other parts of the district.
	• Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?		

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA6	• Protect sites of designated biodiversity or geodiversity significance?	-	Focusing development to the towns may give rise to more concentrated adverse impact on sites such as Portholme Meadow, Hinchingbrooke Park and in neighbouring authority areas such as Orton Pits but through development could also enhance them and connectivity between them. Largescale strategic extensions to towns may be of a scale that could provide mitigation and opportunities for enhancements to habitat connectivity and provide greater biodiversity benefits.
	• Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	+	
SA7	• Promote opportunities to protect and enhance valued landscape and townscape characteristics?	-	This strategy could have a cumulative adverse impact on the character of our towns. Directing growth towards these areas is likely to adversely impact their character and landscape setting as development may likely be in the form of peripheral edge of settlement development, the historic centres of these towns are likely to be largely unchanged through. Additionally, the strategy could direct new settlement proposals towards the north of the district resulting in substantial change in landscape within the Northern Wolds, Fen Margin and Nene Valley Landscape Character Areas. Some landscape impacts could be mitigated as the scale of such proposals can provide strategic scale green infrastructure.
	• Reinforce local distinctiveness and a sense of place?		
SA8	• Promote actions to reduce contributions to air pollution?	-	Focusing development within and around our existing towns could have a cumulative impact on raising pollution levels or be impacted by pollution if in close proximity to the strategic road network. The scale of potential development could however provide mitigation.
	• Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment		
SA9	• Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	++	This strategy would focus most housing growth around the district's main towns which provide sustainable locations. However, there is the risk that strategic scale expansion locations would be peripherally located and so will be at a significant distance from central facilities although due to their scale some facilities would be expected to be provided within the sites. New settlement proposals can provide services within the site so that they are largely self sustaining and provide additional provision on areas where existing provision is limited.
SA10	• Support and enhance the more deprived areas of the district?	N	This strategy would support growth in the towns where most of the more deprived urban areas are located but offers limited support for growth in areas of rural deprivation.

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
	• Maximise opportunities for access to existing or proposed social and community facilities and services?	++	This strategy would focus most housing growth around the district's main towns which currently provide the best offer for social and community facilities and services. Additional services and facilities could be included within the strategic expansion locations and new settlements reducing potential social exclusion and inaccessibility to key services and facilities.
SA11	• Contribute to regeneration activities?	-	This strategy could contribute towards regeneration activities in our towns and larger villages where they exist. However, recognising that growth will likely be on the edge of existing towns and potentially new settlement proposals, the strategy is unlikely to support regeneration activities as this would primarily involve greenfield sites. This strategy allows for both large scale growth which could support enhanced and diversified economic opportunities with the benefit of proximity to concentrated labour forces and supply chain businesses. Also, focusing most growth primarily in and around the main towns and nearby other urban areas like Peterborough would provide continuity for investors and support enhancement of existing economic opportunities; scope for diversification may be limited by the more consistent nature of the land offer.
	• Enhance and diversify economic opportunities with the district?	++	
SA12	• Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	++	This strategy allows for maximisation of the usage of existing infrastructure and services supporting their provision and has the potential to support additional provision in locations that could also serve the wider community. New settlements nearby to existing urban areas have greater opportunities to deliver extensions to existing sustainable and active travel routes and be of a scale to sustain these. However, these could take some time to deliver.
SA13	• Attract new investment and provide opportunities to improve the resilience of the local economy?	+	Strategic expansions could support large scale investment opportunities through a greater diversity of sites being available around existing towns, this could also support smaller units for small and growing businesses to start up. This could improve the resilience of the local economy and promote growth opportunities for local companies without the need for significant
	• Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?		

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
	• Support retention and growth of indigenous companies? • Encourage sustainable tourism?		relocation. This strategy may not best support the rural economy and established employment areas located outside of the towns. It could support sustainable tourism where this is located within or around the towns.
SA14	• Facilitate modernisation of existing town centres to meet current and anticipated needs?	+	Focusing most growth around the towns would provide enhanced local spending power and expanded catchment populations to support town centre uses enhancing their attractiveness for investment. Although largescale strategic extensions would be expected to provide some main town centre uses to meet the day to day needs of residents, the application of the sequential test may be required to minimise potential impact on the town centre.
SA15	• Strengthen a local sense of place? • Retain the character of existing settlements?	+	This strategy could have a cumulative adverse impact on the character of our towns particularly strategic expansions which are likely to be peripheral edge of settlement proposals. These proposals will likely have their own distinct identify which may alter the overall character of the settlement and are unlikely to significantly impact the historic centre of towns. New settlement proposals can be designed with placemaking being a fundamental factor so that its identity and sense of place is established early on in development and evolves as places become more established.
SA16	• Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	This strategy provides opportunities for identification of additional assets of archaeological value depending on the location of sites brought forward for development.

Summary of SA

Overall strategy 1 has some clear sustainability benefits, it performs very positively against SA objectives 1, 9, 10, 11 and 12 and positively against SA objectives 4, 5, 13, 14 and 15. It performs negatively against SA objectives 2, 3, 6, 7 and 8 with a particularly negative score against SA3 regarding the availability of water resources. These are by virtue of focusing development development towards areas where there is existing infrastructure which could give rise to cumulative pressure, but also supports opportunities for strategic scale growth such as new settlements nearby to urban areas but distinct from them. The strategy focuses development towards sustainable locations can support a range of settlements and while the strategy does not preclude development within smaller villages, this is not its emphasis so there may be limitations towards supporting development and services rural areas.

Appendix 3- SA performance of strategy options

Strategy 2 - Sustainable locations served by public transport employment and infrastructure

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA1	• Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	++	Focusing development towards sustainable locations such as market towns and service centres due to their more comprehensive range of services and facilities and access to public and sustainable travel modes which helps to reduce carbon emissions. These areas are also more likely to have established public transport options such as bus routes and railways. Focusing growth along public transport corridors could incentivise take up of public transport and support their continuation and potential expansion aiding a wider modal shift in travel behaviours which would reduce emissions outputs. This strategy can support enhancements to green infrastructure in and around the towns and larger villages which can help to increase absorption and dissipation of nitrogen dioxide and other pollutants but will have limited impact on the remaining parts of the district.
	• Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	
SA2	• Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	+	Focusing development towards sustainable locations well served by public transport may not focus development in locations most resilient to the impacts of climate change in particular due to enhanced flood risk depending on the nature of the specific locations selected. This strategy could support habitats within and around our towns three of which include the Ouse Valley green infrastructure corridor, however, it would not necessarily support adjustments of habitats more widely across the district. There may be opportunities to support sites that are located within or adjacent to public transport corridors such as along the A1, A141 and A428/A421, equally this development could give rise to adverse impact on these sites.
	• Support habitats in adjusting to the impacts of the climate emergency?		
SA3	• Maintain and where possible improve the quality and availability of water resources?	-	The cumulative impact of development on water infrastructure may be greater in certain locations and as such require upgrades to ensure sufficient capacity. Locating development along public transport corridors may help to minimise this pressure.
	• Minimise the risk of flooding from all sources?	-	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			All of our towns experience some issues with flooding so focusing development towards these areas may make them less resilient to flooding overall depending on the specific locations chosen for development. Locating development along public transport corridors may help to minimise this pressure.
SA4	• Enable the use of land that has previously been developed in preference to greenfield land?	+	This strategy may result in some opportunities for previously developed land regeneration within towns and some larger villages where there are opportunities. These may reduce the need for greenfield land especially as it could facilitate more dense development. This strategy may be able to facilitate more dense development, especially in and around towns and larger villages, which could minimise the use of higher grade agricultural land.
	• Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	+	
SA5	• Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	+	This strategy is more likely to see development located in good proximity to accessible open and natural greenspace or be of a scale to provide new accessible open and natural greenspace. This strategy can support and enhance connectivity to existing green infrastructure areas located within or nearby to towns and larger villages but may not support those in other parts of the district.
	• Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?		
SA6	• Protect sites of designated biodiversity or geodiversity significance?	-	Focusing development to the towns may give rise to more concentrated adverse impact on sites such as Portholme Meadow, Hinchingbrooke Park, Paxton Pits and other protected sites. Development along public transport corridors could help to minimise this pressure but may still give rise to impact on protected sites or valuable habitat along these routes but could also provide opportunities for enhancements to habitat connectivity. Largescale development could provide mitigation and enhancements.
	• Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	+	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA7	• Promote opportunities to protect and enhance valued landscape and townscape characteristics?	-	Development along the public transport corridors could have an adverse impact on the landscape and townscape setting and character of the existing settlements along these routes without appropriate masterplanning. There could be particular cumulative pressure as development may likely be on the peripheral edge of settlements but wider landscape impact across the district is minimised. The impact will depend on the concentration and location of specific sites.
	• Reinforce local distinctiveness and a sense of place?		
SA8	• Promote actions to reduce contributions to air pollution?	-	Development could be adversely impacted by pollution arising from its proximity to the road network including the A1, A141 and A428/A421 and equally focusing development along these corridors may raise pollution levels.
	• Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment		
SA9	• Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	++	This strategy would focus most housing growth around the more sustainable settlements of the district. However, there is the risk that strategic scale expansion locations would be peripherally located and so will be at a significant distance from central facilities although due to their scale some facilities would be expected to be provided within the sites.
SA10	• Support and enhance the more deprived areas of the district?	+	This strategy would support growth in the towns and larger villages which could help to support deprived urban areas within these settlements, growth along public transport corridors have opportunities to support a wider range of settlements. This strategy would offer limited support for growth in areas of rural deprivation. Focusing growth towards sustainable locations would focus most housing growth around the district's main towns and larger villages which currently provide the best offer for social and community facilities and services. Additional services and facilities could be included within the strategic expansion locations. This strategy provides greater opportunities to provide additional provision in settlements located along public transport routes and could maximise emerging enhancements and route improvements, for example along the A141 and East West Rail.
	• Maximise opportunities for access to existing or proposed social and community facilities and services?	++	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA11	• Contribute to regeneration activities?	+	Focusing growth on the outskirts of our towns could support regeneration activities as but most growth is likely to primarily involve greenfield sites on the edge of settlements. Sites along the public transport corridors may have a lesser impact on town centres but could provide additional travel to these areas which could bring greater scope for investment. Access to public transport corridors could help to enhance and diversify economic opportunities by providing a wider range of employment options to people in various settlements. This strategy allows for growth which could support enhanced and diversified economic opportunities with the benefit of proximity to concentrated labour forces and supply chain businesses providing continuity for investors and support enhancement of existing economic opportunities.
	• Enhance and diversify economic opportunities with the district?	++	
SA12	• Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	++	This strategy strongly aligns with delivery of this objective and would both support existing provision and support additional services and infrastructure. Growth along these corridors may enhance the viability of these routes supporting expansion and greater frequency of services. This is beneficial for schemes within the A141 and East West corridor who could also help to deliver strategic transport improvements.
SA13	• Attract new investment and provide opportunities to improve the resilience of the local economy?	+	Access to public transport corridors could help to enhance and diversify investment opportunities and provide longer term resilience for the local economy and indigenous companies through proximity of sustainable means of travel to work for employees. It could improve the resilience of economic areas in larger villages and promote growth opportunities for local companies without the need for significant relocation. It may have limited impact on sustainable tourism in rural areas but could support tourism within the towns and larger villages.
	• Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?		
	• Support retention and growth of indigenous companies?		
	• Encourage sustainable tourism?		
SA14	• Facilitate modernisation of existing town centres to meet current and anticipated needs?	++	Public transport corridors typically connect between larger centres and enhanced growth along them could expand the accessible catchment population. Growth along these corridors may enhance the viability of these

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			routes supporting expansion and greater frequency of services. This can provide greater investment and attraction to town centres as connectivity will be enhanced.
SA15	• Strengthen a local sense of place? • Retain the character of existing settlements?	+	Development along the public transport corridors could have an adverse impact on existing settlements but could also be of a scale that can be successfully integrated. The impact will depend on the concentration and location of specific sites. There could be a risk of cumulative pressure of development along these routes and being concentrated around certain sustainable settlements such as the market towns.
SA16	• Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	This strategy provides opportunities for identification of additional assets of archaeological value depending on the location of sites brought forward for development.

Summary of SA

Overall strategy 2 has some clear sustainability benefits, it performs very positively against SA objectives 1, 9, 10, 11, 12 and 14 and positively against SA objectives 2, 4, 5, 13 and 15. It performs negatively against SA objectives 3, 6, 7 and 8 with no very negative scores. The benefits arise by virtue of focusing development development towards areas where there is existing infrastructure such as public transport. The appraisal notes that this could give rise to cumulative pressure on sustainable areas, it recognises that growth can facilitate further infrastructure and transport enhancements particularly along the the A141 corridor and East West rail. The strategy focuses development towards sustainable locations can support a range of settlements and while the strategy does not preclude development within smaller villages, this is not its emphasis so there may be limitations towards supporting development and services rural areas.

Strategy 3 - Dispersed growth to support existing settlements

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA1	• Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	-	This option would spread development across the district including potentially to places that are not currently well served by sustainable modes of transport. This could incentivise car usage and make carbon reduction targets more challenging to achieve.

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
	• Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	Distributed growth is unlikely to compromise existing green infrastructure but is unlikely to make strategic enhancements. Development likely to be of a scale where localised connections and/or enhancements could be made alongside development to increase the rates of absorption and dissipation of nitrogen dioxide and other pollutants locally.
SA2	• Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	++	Dispersed growth provides opportunities to spread development across the district to areas that may be more resilient to the impacts of climate change in particular those at lowest risk of flooding and be of a scale that would have less of increasing the risk of flooding elsewhere. This option could support habitats at a localised scale.
	• Support habitats in adjusting to the impacts of the climate emergency?		
SA3	• Maintain and where possible improve the quality and availability of water resources?	+	Dispersed growth is more likely to provide development of a propionate scale across the district putting less cumulative pressure on infrastructure. Dispersed growth provides opportunities to spread development across the district and in areas that may be less at risk from flooding.
	• Minimise the risk of flooding from all sources?	++	
SA4	• Enable the use of land that has previously been developed in preference to greenfield land?	-	Dispersed growth could utilise previously developed land across the district but this is likely to be minimal in more rural areas. Also densities in these areas are likely to be much lower which could increase the use of greenfield land. There is increased potential for agricultural land of higher quality being being used for development.
	• Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	--	
SA5	• Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	-	Distributed growth may result in some developments in locations that have limited existing provision of accessible open and natural greenspace and also of a scale where such space is not provided alongside the development.
	• Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?		

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			Distributed growth is unlikely to compromise existing green infrastructure but is also of a scale where connections or enhancements are made to them alongside the development but this will be dependent on the location of proposals.
SA6	• Protect sites of designated biodiversity or geodiversity significance?	+	Distributed growth is unlikely to have a significant adverse impact on such sites but this would be dependent on specific site proposals. Distributed growth is unlikely to result in significant opportunities to enhance connectivity beyond at a localised scale but this would be dependent on specific site proposals.
	• Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	N	
SA7	• Promote opportunities to protect and enhance valued landscape and townscape characteristics?	+	This option has the opportunity to spread development of a proportionate scale across the district supporting the vitality of settlements. There is some risk to local character if developments are of a scale or type that does not harmonise with their context.
	• Reinforce local distinctiveness and a sense of place?		
SA8	• Promote actions to reduce contributions to air pollution?	+	A dispersed approach is unlikely to increase pollution levels substantially but this is dependent on location, scale and use of proposals.
	• Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment		
SA9	• Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	+	This option may support growth in some sustainable settlements with local service provision to meet needs with the growth potentially helping to support and maintain service levels. However, dispersal to small villages without any local services would not support sustainable development as travel would be required to meet many needs.
SA10	• Support and enhance the more deprived areas of the district?	+	This option could support growth across more deprived areas in rural areas and to a lesser extent within towns depending on specific development sites brought forward.
	• Maximise opportunities for access to existing or proposed social and community facilities and services?	N	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			A high proportion of our villages have some form of social and community facilities and services but these are limited in most smaller villages reducing the overall range of services and facilities that could be accessed.
SA11	• Contribute to regeneration activities?	-	Although dispersed sites in villages could include some previously developed land this option is unlikely to significantly contribute towards regeneration activities but this would be dependent on specific proposals. There may be greater opportunities within market towns or larger villages. Dispersed growth may diversify economic opportunities but the scale may be limited within village environments. It could also support the retention of existing established employment areas within the countryside or within villages.
	• Enhance and diversify economic opportunities with the district?	+	
SA12	• Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	-	The potential locations for dispersed growth would have a variety of active travel and public transport services with some having none. Sufficient growth would need to be concentrated in particular locations to support additional provision.
SA13	• Attract new investment and provide opportunities to improve the resilience of the local economy?	+	Dispersed growth may diversify economic opportunities but the scale and economic attractiveness of less sustainably located village sites may fail to attract much new investment, however they provide opportunities for local and small businesses to start up or expand. This option could benefit retention and growth of indigenous companies by facilitating growth in or near their current sites and support opportunities for sustainable tourism.
	• Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?		
	• Support retention and growth of indigenous companies?		
	• Encourage sustainable tourism?		
SA14	• Facilitate modernisation of existing town centres to meet current and anticipated needs?	-	This option would contribute little to achieving this objective although there would be some enhanced local spending power and expanded catchment populations around all our towns they may not be sufficiently concentrated to facilitate significant modernisation.

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA15	• Strengthen a local sense of place?	++	This option has the opportunity to spread development of a proportionate scale across the district supporting the vitality of settlements.
	• Retain the character of existing settlements?		
SA16	• Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	This option provides opportunities for identification of additional assets of archaeological value depending on the location of sites brought forward for development. Dispersed growth within or on the edge of existing settlements may have an impact on heritage assets but this would be dependent on the location and scale of development proposals.

Summary of SA

Overall strategy 3 has some clear sustainability benefits, it performs very positively against SA objectives 2, 3 and 15 and positively against SA objectives 6, 7, 8, 9, 10, 11 and 13. It performs negatively against SA objectives 12 and 14 with a particularly negative score against SA 4 regarding the potential for greater amounts of greenfield land that is potentially of higher agricultural value to be used within this strategy. It has a mixed outcome against SA objectives 1 and 6. The strategy has a somewhat positive outcome by virtue of dispersing growth across the district to a wide range of settlements, the benefits of this can be in supporting growth that is proportionate, can utilise existing infrastructure capacity and sustain local services. The challenges is that these may not be of a scale to bring substantial enhancements, for example to public transport provision and reinforce private car usage.

Strategy 4 - Freestanding strategic developments and limited dispersed growth

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA1	• Reduce greenhouse gas emissions in line with, or exceeding, nationally or locally set targets?	+	Comprehensive masterplanning of new communities would enable public transport and active travel infrastructure to be designed from an early stage. This can provide development at a scale to sustain public transport routes. They can also be comprehensively designed to internalise traffic whereby less trips need to be made outside of the settlement because services and facilities are available within it. These serve to reduce both the need to travel and enhance low carbon transport options. Dispersed growth may result in some development in locations that would rely primarily on private car usage but a lower level of need for dispersed growth would facilitate selection of more sustainable locations.
	• Promote enhancements to green infrastructure networks to facilitate increased absorption and dissipation of nitrogen dioxide and other pollutants?	+	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			New communities are developed at a scale where new green infrastructure can be provided at scale within the development and as such increase the absorption and dissipation of nitrogen dioxide and other pollutants. Dispersed growth would have more limited opportunities to achieve this.
SA2	• Concentrate new development in locations that maximise opportunities to adapt and be more resilient to the unavoidable impacts of the climate emergency?	++	It will depend on which new community(ies) is pursued but in principle sites of this scale are more capable of providing infrastructure and mitigation to build in resilience against the impacts of climate change. Dispersed growth can also compliment this and spread smaller scale developments across the district in resilient areas. This could support habitats at a strategic level through establishment of new habitats within new communities and their linkages to existing habitat networks along with supporting habitats at a localised level associated with dispersed growth.
	• Support habitats in adjusting to the impacts of the climate emergency?		
SA3	• Maintain and where possible improve the quality and availability of water resources?	--	A new community will likely require substantial upgrades and/or new infrastructure to meet water demands of the development. Dispersed growth is more likely to utilise existing capacity. It will depend on which new community(ies) is pursued but in principle sites of this scale are more capable of providing flood mitigation if there are elements of the site at risk. Dispersed growth can complement this and spread smaller scale developments across the district in at low flood risk areas.
	• Minimise the risk of flooding from all sources?	++	
SA4	• Enable the use of land that has previously been developed in preference to greenfield land?	-	A new community(ies) will require a large amount of land, much is likely to be greenfield land. Various densities can be achieved in these sites which would reduce the pressure on using greenfield and in other locations less. Dispersed growth could utilise previously developed land across the district but this is likely to be minimal in more rural areas.
	• Promote development in locations that are grade 3 agricultural land or lower (including urban and non-agricultural land) in preference to higher grades?	+	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			Depending on the location of the new community(ies) a mixture of previously developed and agricultural land may be available (for example former airfields) with the opportunity to select sites in areas of grade 3. A range of densities could be incorporated to reduce the overall land take.
SA5	• Focus development in areas which are either well served by publicly accessible open and natural green space or have the capacity to provide additional such space?	+	New communities can be masterplanned to include accessible and natural greenspace within them. Dispersed growth may be located in settlements with access to such areas but there may be some where it is not readily accessible. New communities can be masterplanned to include new green infrastructure and also be of a scale to link to existing strategic priority areas. This is dependent on the location of the new community and what opportunities exist for enhancements and connections. Dispersed growth is unlikely to significantly impact on strategic green infrastructure.
	• Ensure current strategic blue and green infrastructure networks are not compromised and future extensions or improvements are not prejudiced?		
SA6	• Protect sites of designated biodiversity or geodiversity significance?	+	New community proposals could have a greater impact on nature sites if they are in close proximity to them, they are also of a scale that could provide greater mitigation. Their location in proximity to other settlements is also a factor when considering the cumulative impact on protected sites. Distributed growth is unlikely to result in significant opportunities to enhance connectivity beyond at a localised scale. New community proposals could provide new nature sites within them which could connect to designated sites or habitats of value such as ancient woodland. Distributed growth is unlikely to result in significant opportunities to enhance connectivity beyond at a localised scale.
	• Promote opportunities for the recovery and enhanced connectivity of sites of biodiversity or geodiversity significance?	+	
SA7	• Promote opportunities to protect and enhance valued landscape and townscape characteristics?	+	New communities can be masterplanned and designed such that a distinct identity and sense of place can be formed and shaped, this could utilise local landscape characteristics, historic features of the site or nearby settlements as inspiration. This can take many years to develop and requires a mix of
	• Reinforce local distinctiveness and a sense of place?		

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			uses providing employment, retail, open space and community uses as well. Dispersed growth can also be of a scale proportionate to settlements that can harmonise with their context.
SA8	• Promote actions to reduce contributions to air pollution?	+	A new community is of a scale that could result in increased levels of pollutants but is also of a scale that can mitigate any sources of pollution. Dispersed growth is unlikely to be of a scale to substantial increase levels of pollution but this is dependent on location, scale and use of proposals.
	• Facilitate the minimisation of light, noise and odour pollution, in particular on the rural environment		
SA9	• Facilitate the delivery of the district's housing needs in sustainable locations that meet the community's needs?	++	This option offers the opportunity to provide new communities with integral services and facilities to meet the needs of residents alongside some housing growth in more sustainably located villages which can benefit from and support existing services. New communities will provide a wide range of housing types, sizes and tenures.
SA10	• Support and enhance the more deprived areas of the district?	+	New communities are unlikely to support or enhance more deprived areas although they could contribute to assisting in reducing rural deprivation as could the dispersed growth element. New communities would be expected to provide social and community facilities and services within them but the range of provision is likely to be limited compared to long established larger villages and towns. Provision for the dispersed element of growth would depend on specific settlements where growth was focused.
	• Maximise opportunities for access to existing or proposed social and community facilities and services?	+	
SA11	• Contribute to regeneration activities?	N	The impact of this option will depend on the nature of the new community sites selected and whether they comprise previously developed land in need of regeneration. New communities would be designed to include substantial areas for economic development to provide balanced communities and reduce the need to travel to work. Such locations would enhance and diversify economic opportunities. Combined with some dispersed growth this option would
	• Enhance and diversify economic opportunities with the district?	++	

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
			provide a wide choice of economic development site types. Dispersed economic growth can help to support economic opportunities in more rural areas and also support existing established employment areas.
SA12	• Support development in locations with good active travel and public transport links and services or provide opportunities for significant improvements?	+	New communities would be expected to fully integrate active travel and public transport infrastructure within their designs. However, public transport services would need sufficient connectivity to major centres to be viable in the long term. Dispersed growth elements would be able to make a variable contribution to this objective and sites are unlikely on their own to substantially enhance active and public travel options.
SA13	• Attract new investment and provide opportunities to improve the resilience of the local economy?	++	New communities would be designed to include substantial areas for economic development which would provide substantial opportunities for new investment and contribute to the portfolio of available sites. Strategic scale freestanding new commercial sites could provide opportunities to meet different economic demands for example in logistics and distribution centres or enable new strategic business clusters supporting regional and national sectoral needs and provide skilled jobs in high knowledge sectors. The contribution of the dispersed element of the option could partially assist with supporting the retention and growth of indigenous companies and support sustainable tourism opportunities.
	• Contribute to a balanced portfolio of employment land in sustainable locations throughout the district?		
	• Support retention and growth of indigenous companies?		
	• Encourage sustainable tourism?		
SA14	• Facilitate modernisation of existing town centres to meet current and anticipated needs?	-	New communities would be expected to include sufficient town centre uses to meet the day to day needs of residents to promote sustainable forms of development which would reduce their impact on providing support for modernisation of town centres as would the dispersal of other growth. The location of growth would impact on whether potential residents were more likely to be attracted to our existing towns or to centres in the surrounding area.

Appendix 3- SA performance of strategy options

SA Objective	Decision aiding questions: Will approach/ option help to....	Score	Commentary
SA15	• Strengthen a local sense of place? • Retain the character of existing settlements?	+	New communities can be masterplanned and designed such that a distinct identity and sense of place can be formed and shaped, however this can take many years to fully develop. Dispersed growth can also be of a scale proportionate to settlements that can harmonise with their context.
SA16	• Conserve and where possible enhance sites, features and area of archaeological value throughout the district?	N	This option provides opportunities for identification of additional assets of archaeological value depending on the location of sites brought forward for development. Dispersed growth within or on the edge of existing settlements may have an impact on heritage assets but this would be dependent on the location and scale of development proposals.

Summary of SA

Overall strategy 4 has some clear sustainability benefits, it performs very positively against SA objectives 2, 9, 10, 11 and 13 and positively against SA objectives 1, 5, 6, 7, 8, 12 and 15. It performs negatively against SA objectives 14 with a mixed score against SA 4 regarding the potential for greater amounts of greenfield land that is potentially of higher agricultural value to be used within this strategy and SA objective 3 regarding pressure on water resources and need for new infrastructure arising from new settlement proposals. The strategy focuses development towards new settlements, these have the potential in time to deliver new infrastructure and largely be self sustaining communities reducing the need to travel and be of a scale that could facilitate connection to public transport. The strategy also supports some dispersed growth the benefits of this can be in supporting growth that is proportionate, can utilise existing infrastructure capacity and sustain local services.

Appendix 4 - Assessment of Strategic Sites

10.1 The Local Plan's Growth Strategy includes the allocation of some strategic scale sites. Strategic sites were classified as those capable of providing 2,500 homes and/or over 120,000 sqm of commercial floorspace or more. Due to their nature they are not comparable to smaller scale sites. As such, these were assessed using the strategy SA decision aiding questions.

10.2 16 sites were identified as strategic scale sites and were assessed through the council's Land Availability Assessments and Sustainability Appraisals.

10.3 Not all of these strategic sites can be considered as reasonable alternatives. To be considered a reasonable alternative, a site needed to demonstrate a realistic prospect of meeting development requirements, of being delivered within the plan period and not have significant constraints to overcome or objections from statutory consultees.

10.4 The following tables identifies which sites were not considered to reasonable alternatives and a summary of the reasons why.

Table 13 Strategic Sites that are not reasonable alternatives

Call for Site Ref	LAA reference	Site Name	Use	Area (ha)	Council's Assessment
CfS: 227	Southoe and Midloe 2	Southoe Garden Village, Southoe	Mixed Use	300	Site discounted as the combination of outcomes of the Council's Land Availability Assessment and Sustainability Appraisal indicate that the site is inappropriate for development due to its likely significant impacts on the character of the landscape and on Southoe as well as designated nature conservation sites. The achievability of the development is unclear because of significant infrastructure requirements including new access(s) onto the A1, the presence of pipelines and overhead powerlines.
CfS: 363	Buckden 6	Land West of A1 from Buckden to Brampton	Mixed Use	527	Site discounted as the combination of outcomes of the Council's Land Availability Assessment and Sustainability Appraisal indicate that the site is inappropriate for development as the combination of outcomes of the LAA and SA indicate that the site is inappropriate for development due to the very significant landscape impact of the development and the scale of development fundamentally impacting the character of the landscape and setting of various settlements. Access and a new junction onto the A1(M) will require considerable engagement with Cambridgeshire County Council.
CfS: 376	Godmanchester 6	Land to the South of Godmanchester including land at Corpus Christi Farm and Lower Debden Farm, Godmanchester	Mixed Use	406	Site discounted as the combination of outcomes of the Council's Land Availability Assessment and Sustainability Appraisal indicate that the site is inappropriate for development due to its likely significant impacts on the character of the landscape and on Godmanchester and challenges in terms of integration as well as the impact of traffic particularly those heading east.

Appendix 4 - Assessment of Strategic Sites

Call for Site Ref	LAA reference	Site Name	Use	Area (ha)	Council's Assessment
CfS: 348	Sibson-cum-Stibbington 1	Sibson Garden Community	Mixed Use	263	As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. The Highways Agency also raised significant concerns saying that the site is likely to require significant highways improvements due to scale and that Elton Road is not suitable for connection or intensification without significant improvement. They noted that it is unclear whether suitable improvement could be achieved along its entire length within existing highway or land in the applicant's control. They continued that, this road also joins with the A1 at its northern extent; the existing junction is again unlikely to be suitable without significant improvement and would need to be discussed with National Highway. As there are limited sustainable connections to Peterborough, given the remote location of this site and existing infrastructure crossing the A1, it is unclear how this would be achieved. The Whole Plan Viability Assessment also demonstrates the site to be the most unviable of all sites put forward.
CfS: 43	Alconbury Weston 6	Safefield Farm, North West of Alconbury Airfield	Mixed Use	267	Significant objections were raised by Natural England who state that they " object to any allocation of this land due to unacceptable risks to Monks Wood SSSI/NNR and the serious impact on internationally important long-term research carried out by the UK Centre for Ecology and Hydrology (UKCEH), which would jeopardise their future plans and activities." National highways raised issues noting that "Development requires realignment of the A1 between Wansford Station overbridge and Elton Road (Water Newton)." which has the potential to impact viability and achievability. The site is therefore now considered inappropriate for development.
CfS: 126	Yaxley 2	Land South West of Yaxley and East of A1(M) near Norman Cross	131.18		This site was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not considered to be appropriate for development due to the likely significant adverse impacts on the fenland landscape and the setting of the Great Fen. It will also fundamentally and detrimentally impact the character and setting of Yaxley. While the site promoter submitted submitted additional evidence at various stages of Local Plan consultations, the very significant concerns regarding landscape, ecology and settlement character remain.

Appendix 4 - Assessment of Strategic Sites

Call for Site Ref	LAA reference	Site Name	Use	Area (ha)	Council's Assessment
CfS: 209	Chesterton 1	Land West of A1 (North of Peterborough Motorway Services) - Option A, (larger site) Haddon	Commercial	90	As Part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. The Highways Authority raised significant concerns saying that the site is likely to require significant highways improvements due to scale and that it is unclear how sustainable travel links can be achieved on the A605 across the A1 to link to Peterborough. National Highways also raised significant concerns noting that J17 A1(M) is a potential crash cluster, therefore safety improvements may be required.
CfS: 44 and CfS: 140	Brampton 16	Land at Low Harthay and Woodhatch Farms	Commercial	Between 61 and 71	This site was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is detached from a settlement and located within the countryside and the impact on the landscape could be most significant to the south and west. The commercial uses could impact nature conservation designations as the site is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area. A critical factor is to determine through engagement with Cambridgeshire County Council whether developing the site could adversely impact the existing water recycling centre and if commercial uses can be successfully integrated with it. There are two options, one to develop the site leaving the water recycling centre where it is or relocate the water recycling centre to elsewhere in the site. The probability and possibility of these options have not been addressed by the site promoter.

10.5 The remaining strategic sites that could be considered as reasonable alternatives are set out below. Those highlighted in green were draft allocations in the Preferred Options Plan.

10.6 A sequential approach based on flood risk was taken to identify which of these remaining sites could be progressed in the Preferred Options Local Plan Growth Strategy. Those that were progressed into the Regulation 18 Plan are highlighted. A more detailed breakdown of the sites and flood risk can be found in Appendix C of the Level 1 SFRA or through the relative site-specific Level 2 SFRAs where applicable.

Appendix 4 - Assessment of Strategic Sites

Table 14 Strategic Sites that are reasonable alternatives

Call for Site Ref	LAA reference	Site Name	Use	Area (ha)	Strategic Recommendation from SFRA
CfS: 221	The Stukeleys 5	Land North of A141, between Huntingdon Racecourse and A1307	Commercial	1085	Development granted under 25/01922/OUT Local Plan Reference in Pre Submission Local Plan is North Huntingdon 2
CfS: 247	Hemingford Abbots 3	The Lattenburys (land to the South of the A1307 and North of A14, and West of A1198)	Mixed Use	243	These are the most sequentially preferable sites and so were selected as residential-led strategic mixed-use allocations. Local Plan Reference in Pre Submission Local Plan is Hemingford Abbots 1 and North Huntingdon 3
CfS: 256	Wyton on the Hill 3	Lodge Farm, North of A141, Huntingdon (Wyton on the Hill)	Mixed Use	331	
CfS: 95	Wyton on the Hill 1	Wyton Airfield	Mixed Use	260	Of these remaining sites, CfS:95 Wyton Airfield was selected as an allocation. The justification for this is two-fold. Wyton Airfield is the largest brownfield site that was submitted to the Council for consideration. The allocation of this site is supported in national policy. Wyton Airfield also supports the ambitions of the Council to create a defence and innovation cluster by providing additional employment and homes to facilitate sustainable economic growth, thus aligning with corporate priorities and the development of Project Fairfax. This is also supported by the Ministry of Defence through a 'Statement of Intent'. 1% of Wyton Airfield is within flood zone 3b and surface water risk to the site is predominantly very low. Approximately 4% of the site is at high surface water risk. A further 2% is at medium risk and a further 5% is at low surface water risk. The entirety of the site is classified as no risk of groundwater emergence. Infiltration SuDS should be suitable at this site based on groundwater.
CfS: 197	Abbots Ripton 6	Sapley Park Garden Village	Mixed Use	580	
CfS: 232	Alconbury 8	Land at Weybridge Farm (Brampton Cross)	Commercial	395	
CfS: 36	The Stukeleys 2	Nook Farm, Little Stukeley	Mixed Use	376	
CfS: 47	Wyton on the Hill 2	Hungary Hall, West of A141, Wyton-on-the Hill	Mixed Use	384	

Appendix 4 - Assessment of Strategic Sites

Call for Site Ref	LAA reference	Site Name	Use	Area (ha)	Strategic Recommendation from SFRA
					Wyton Airfield can provide development of a proportionate scale that could be integrated with the existing Wyton on the Hill which has limited services and facilities. The site will provide multiple on-site services, facilities and infrastructure, including employment, green infrastructure, a local centre, education and community and sports facilities to support existing nearby communities (Wyton on the Hill) and future residents of the site.

10.7 The strategic sites in the Pre-Submission Plan are unchanged and therefore retains the spatial strategy established at Regulation 18.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:242	Land off Huntingdon Road, Brampton	5.97	Brampton 12	Central Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 2, 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA. This site has been put forward for mixed use development comprising open space and car parking facilities for Hinchingbrooke Country Park. Although the site is at high risk of flooding open space is considered water compatible development. Car parking is considered a less vulnerable use compatible with flood zones 2 and 3a. There are no other sequentially preferable sites put forward for open space and car parking in association with the Country Park to enhance the recreational offer to the wider area. Progress to Level 2 SFRA.	Allocated - Brampton 2 and includes criteria requiring the location of the car park in flood zone 1 and appropriate drainage and assessment of groundwater.
CfS:44	Land at Low Harthay and Woodhatch Farms, Brampton	71.06	Brampton 16	Central Huntingdonshire	It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is detached from a settlement and located within the countryside and the impact on the landscape could be most significant to the south and west. The commercial uses could impact nature conservation designations as the site is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area. A critical factor is to determine through engagement with Cambridgeshire County Council whether developing the site could adversely impact the existing water recycling centre	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					and if commercial uses can be successfully integrated with it. There are two options, one to develop the site leaving the water recycling centre where it is or relocate the water recycling centre to elsewhere in the site. The probability and possibility of these options have not been addressed by the site promoter. Therefore the site will not progress to Level 2 SFRA as achievability is uncertain.	
CfS:140	Land at Low Harthay and Woodhatch Farms, Brampton	61.51	Brampton 16	Central Huntingdonshire	It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is detached from a settlement and located within the countryside and the impact on the landscape could be most significant to the south and west. The commercial uses could impact nature conservation designations as the site is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area. A critical factor is to determine through engagement with Cambridgeshire County Council whether developing the site could adversely impact the existing water recycling centre and if commercial uses can be successfully integrated with it. There are two options, one to develop the site leaving the water recycling centre where it is or relocate the water recycling centre to elsewhere in the site. The probability and possibility of these options have not been addressed by the site promoter. Therefore the site will not progress to Level 2 SFRA as achievability is uncertain.	Not allocated
CfS:320	Land to the North of Thrapston Road (opposite The Hurdles), Brampton	5.7	Brampton 3	Central Huntingdonshire	Over a third of the site is at risk of fluvial flood risk (zones 2, 3a and 3b), surface water and groundwater emergence. More sequentially preferable sites are available. Site not progressed to Level 2 SFRA.	Not allocated
CfS:341	Wallis Land, Thrapston Road, Brampton	0.7	Brampton 4	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2, 3 & 4. The findings from the Sustainability	Allocated - Brampton 1 and includes criteria on how to address groundwater and residual flood risk.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	
CfS:275	Former RGE Engineering Site and HDC Car Park, The Avenue, Godmanchester	2.46	Godmanchester 1	Central Huntingdonshire	The site was tested by the council as part of Growth strategy 1 and 2, it is previously developed land. The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. It presents the opportunity redevelop previously developed land and contribute towards the Governments need to make use of previously-developed or brownfield land whilst decreasing flood risk through redevelopment. Progress to Level 2 SFRA.	Allocated - Godmanchester 1. The site was assessed in the Level 2 SFRA is 65% flood zone one. It noted that the area of functional floodplain should not be developed and should remain as open greenspace that is allowed to flood and that the area of flood zone 1 could be developed as surface water risk is nominal and safe access and escape routes appear achievable at times of flood. It presents the opportunity redevelop previously developed land and contribute towards the Governments need to make use of previously-developed or brownfield land whilst decreasing flood risk through redevelopment. As the site is at high risk of flooding criteria has been included to provide flood risk betterment to the site and surrounding area and the need for the sequential location of development within the site and demonstration of safe access and escape routes, provision of a flood risk assessment , detailed drainage strategy and natural flood management.
CfS:372	Land East of Silver Street, Godmanchester	5.12	Godmanchester 10	Central Huntingdonshire	The site was tested by the council as part of Growth strategy 1,2, 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second	Allocated - Godmanchester 2. The allocation includes at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook (this site) and bordering Silver Street (areas at flood risk) to sequentially located built development in flood zone 1 and green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities and in proximity to a Market Town (Huntingdon) with enhanced services and facilities. The site in isolation had previously been discounted as the combination of outcomes of the LAA and SA indicated that the site is inappropriate for development on its own as the necessary intervening land to integrate the site into Godmanchester was not in the site promoter's control and has integration challenges of its own. This site has been combined with CfS 139,371,285 and 87 to promote a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and provide betterment. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore progress to Level 2 SFRA for further assessment.	natural green space and flood mitigation. This will provide a strategic approach to flood risk in association with Stoneyhill Brook and provide flood risk betterment to the wider area.
CfS23-24180	Land off Bluegate, Godmanchester	3.33	Godmanchester 13	Central Huntingdonshire	The site is 100% Flood Zone one and therefore a sequentially preferable site. The site was tested by the council as part of Growth strategy 1,2 and 3. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to high and/or medium risk from surface water sources. The site has very limited access which would require demolition of one of the homes to the side of the route to achieve sufficient width for a safe access. . This site has been combined with Cfs 139,371,285 and 372 to promote a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This	Allocated - Godmanchester 2. The allocation includes at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street (areas at flood risk) to sequentially located built development in flood zone 1 and green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible natural green space and flood mitigation. This will provide a strategic approach to flood risk in association with Stoneyhill Brook and provide flood risk betterment to the wider area.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and provide betterment. Progress to Level 2 SFRA.	
CfS:87	Dexters Farm, Godmanchester	10.18	Godmanchester 3	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the council as part of Growth strategy 1,2 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities and in proximity to a Market Town (Huntingdon) with enhanced services and facilities. The site in isolation had previously been discounted as the combination of outcomes of the LAA and SA indicated that the site is inappropriate for development on its own as the necessary intervening land to integrate the site into Godmanchester was not in the site promoter's control and has integration challenges of its own. This site has been combined with Cfs 87, 139, 285, 371, 372, 23-24180 to promote a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and provide betterment. Progress to Level 2 SFRA.	Allocated - Godmanchester 2. The allocation includes at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street (areas at flood risk) to sequentially located built development in flood zone 1 and green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible natural green space and flood mitigation. This will provide a strategic approach to flood risk in association with Stoneyhill Brook and provide flood risk betterment to the wider area.
CfS:207	Emmanuel Knoll Village, Godmanchester	106	Godmanchester 4	Central Huntingdonshire	Site was progressed to level 2 SFRA as mapping indicated the site was 100% flood zone 1 with low surface water flood risk. This site was tested through growth strategies 1, 2 and 3. This site would provide a very substantial extension to Godmanchester but the scheme proposed would not make efficient use of land. The site was not selected for allocation	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					as part of the Huntingdonshire's Preferred Options Local Plan due to the significant hazard presented by a gas pipeline and its easement strip crossing the north eastern part of the site and impacting on deliverability of the potential junction to the A1307. The provision of an outer link road and roundabout onto the A1307 is further hampered by proximity to existing junctions on the road meaning significant highways infrastructure to facilitate safe access and exit from the site is required which has the potential to significantly impact the viability of the site given the number of homes that are proposed to be delivered. Although flood risk is fairly low the proposed allocation South of Godmanchester off the A1198 provides a more concentrated development with better opportunity to facilitate connectivity into Godmanchester and requires substantially less transport infrastructure provision. It will also provide substantial flood betterment to a long existing problem in relation to Stoneyhill Brook by allocating land for flood mitigation. This will not only benefit the development, but also the wider community of Godmanchester. Significant concerns have been raised by the Highways authority who note that delivery of the access/es will be subject to the proximity of accesses provided to adjacent sites, which may limit the ability to deliver an access for this site. The applicant should look to liaise with adjacent parcel holders to deliver a co-joined site utilising joint frontage. They cite that the site is not sustainable as a stand-alone parcel given a lack of public transport links or high quality walking, cycling, and wheeling access from local centres of population.	
CfS:139	Land West of London Road and South of Stokes Drive, Godmanchester	12.3	Godmanchester 5	Central Huntingdonshire	The site was tested by the council as part of Growth strategy 1,2 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second	Allocated - Godmanchester 2. The allocation includes at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street (areas at flood risk) to sequentially located built development in flood zone 1 and green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible natural

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities and in proximity to a Market Town (Huntingdon) with enhanced services and facilities. The site in isolation had previously been discounted as the combination of outcomes of the LAA and SA indicated that the site is inappropriate for development on its own as the necessary intervening land to integrate the site into Godmanchester was not in the site promoter's control and has integration challenges of its own. This site has been combined with Cfs 87, 139, 285, 371, 372, 23-24180 to promote a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and provide betterment. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore progress to Level 2 SFRA for further assessment.	green space and flood mitigation. This will provide a strategic approach to flood risk in association with Stoneyhill Brook and provide flood risk betterment to the wider area.
CfS:247	The Lattenburys (land to the South of the A1307 and North of A14, and West of A1198)	243	Hemingford Abbots 3	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested in Growth Strategy Option 4. However, this site offers the opportunity for creation of a substantial new community, where the developers' aspiration is to create two linked villages situated within the lower elements of the landform designed to generate a village-style living experience while in a wholly new community. This would contribute towards the rural nature of the surrounding area. Progress to Level 2 SFRA.	Allocated - Hemingford Abbots 1. The site was assessed as 100% within flood zone one and the majority of the site is at very low risk of surface water therefore it is a sequentially preferable site.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:347	Amber Centre, 36 Mayfield Road, Huntingdon	0.35	Huntingdon 1	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2, 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy and has the opportunity redevelop previously developed land and contributing towards the Governments need to make use of previously-developed or brownfield land. Progress to Level 2 SFRA.	Allocated - Huntingdon 2 - The site was assessed in the Level 2 SFRA as 100% Flood Zone one and the majority of the site is at very low risk of surface water, therefore a sequentially preferable site. The site was tested by the council as part of Growth Strategies 1,2,3 and 4.
CfS:236	Land South of Ermine Street (adjoining Huntingdon)	50.21	Huntingdon 3	Central Huntingdonshire	Site has outline permission (18/01918/OUT) and Reserved Matters are pending consideration therefore the site has not been taken forward as development is approved. Site not progressed to Level 2 SFRA as it has planning permission	The site is included within the Preferred Options Draft Local Plan within the chapter 'North Huntingdon Growth Cluster Opportunity Zones' as an existing commitment. This site was allocated in Huntingdonshire's Local Plan to 2036 as the south western part of HU1: Ermine Street Huntingdon. It gained outline planning permission (reference 18/01918/OUT) on 20th September 2024. A series of detailed Reserved Matters have been submitted since then and conditions discharged to allow development to commence.
CfS23-24288	Hinchingbrooke Hospital site, Hinchingbrooke Park Road, Huntingdon	16.2	Huntingdon 4	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2, 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment	Allocated - Huntingdon 1. The site was assessed in the Level 2 SFRA as 100% within Flood Zone one and the majority of the site is at very low/ low risk of surface water, therefore a sequentially preferable site.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy and has the opportunity to provide enhanced health facilities and local employment and training opportunities in a highly sustainable location. Progress to Level 2 SFRA.	
CfS23-24316	Land at the former WATA Site, Hartford	1.97	Huntingdon 5	Central Huntingdonshire	Medium flood risk present on the majority of the site proposed for a 'more vulnerable' use, alternative sequentially preferable sites are available. Built development is unlikely to be able to avoid medium risk flood areas. In response to the consultation on additional sites, the site promoter submitted a Flood Risk Assessment (May 2025) in support of their proposals. It states that a full Flood Risk Assessment and Sustainable Drainage Strategy including the full technical detail that would be assessed by the Environment Agency and Lead Local Flood Authority will accompany any subsequent planning application. Site not progressed to Level 2 SFRA, as more sequentially preferable sites are available to avoid locating 'more vulnerable' development in medium risk areas.	Not allocated
CfS:74	Land South of New Road, Offord Cluny	2.94	Offord Cluny and Offord D'Arcy 1	Central Huntingdonshire	In response to the Autumn 2024 consultation, the site promoter stated the site is wholly within flood zone 1. The EA flood maps show that this is the case but there is surface water flood risk. However two more locationally preferable sites were chosen in 'the Offords' CfS: 156 & 174 with have better connections to the main thoroughfare.	Not allocated
CfS:174	Land to the West of Graveley Road, Offord D'Arcy	4.05	Offord Cluny and Offord D'Arcy 2	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment	Allocated Offord D'Arcy 1. The site was tested as part of the Level 2 SFRA as 100% within Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. The site allocation includes criteria on how to address groundwater.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). However, the site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. It is also in proximity to Godmanchester and Huntingdon where wider services can be accessed. Progress to Level 2 SFRA.	
CfS:156	Land West of High Street and North of Dunstall Close (smaller site), Offord Cluny	2.8	Offord Cluny and Offord D'Arcy 7	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). However, the site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. It is also in proximity to Godmanchester and Huntingdon where wider services can be accessed. Progress to Level 2 SFRA.	Allocated - Offord Cluny 1. The site was tested as part of the Level 2 SFRA as 100% within Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. The site allocation includes criteria on how to address groundwater.
CfS:167	Land to the South of Rectory Road, Bluntisham	1.53	Bluntisham 1	Eastern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment	Site was allocated in the Preferred Options Local Plan as Bluntisham 1. Following a review of comments received from residents and stakeholders, who cite concern regarding heritage and impact on the Grade II* Bluntisham House as well as potential impact to ridge and furrow land, alongside concerns about the cumulative impact of development on

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. Progress to Level 2 SFRA.	services and infrastructure within Bluntisham, the site has been removed as a draft allocation.
CfS:248	Land West of Colne Road, Bluntisham	7.78	Bluntisham 2	Eastern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. Progress to Level 2 SFRA.	Allocated - Bluntisham 2
CfS23-24128	Land off 18 Holliday's Road, Bluntisham	2	Bluntisham 6	Eastern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Local Services Village which has some services and facilities. The NPPF	Allocated - Bluntisham 1

Appendix 5- Assessment of Reasonable Alternative Sites

					(paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. Progress to Level 2 SFRA.	
CfS:75	Land at Ramadie, Earith Road, Colne	0.85	Colne 2	Eastern Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site meets this criteria. Level 2 SFRA not required. Second most sequentially preferable site category (Strategic Recommendation B). Site progressed to Level 2 SFRA.	Allocated - Colne 1
CfS:215	Land to the North West of Holme Fen Drove, Colne	0.37	Colne 3	Eastern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with low risk of surface water flood risk meaning it could meet the criteria for consideration. However, site 'CfS 75 '	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					also met this criteria. 'CfS 75 ' was selected as a draft residential allocation as it had no flood risk as opposed to this site (CfS215) which has very low surface water flood risk. Site not progressed to level 2 SFRA.	
CfS:316	Land West of the B1050, Earith Road, Colne	4.75	Colne 6	Eastern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at high to medium flood risk and groundwater flood risk meaning that it did not meet the criteria. Site not progressed to Level 2 SFRA.	Not allocated. This site was assessed as being at high to medium flood risk and groundwater flood risk meaning that it did not meet the criteria. 'CfS 75 ' was selected as a draft residential allocation as it had no flood risk as opposed to this site (CfS316).
CfS:22	Colne Fen Farm and Fishery, South of Chatteris Road, Somersham (Colne)	165	Colne 7	Eastern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). More sequentially preferable sites were available in Colne. 'CfS 75 ' was selected as a draft residential allocation as it had no flood risk as opposed to this site (CfS22). Site not Progressed to Level 2 SFRA.	Not allocated
CfS23-24149	Pound Ground, Colne High Street, Somersham Road, Colne	0.82	Colne 8	Eastern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred	Not allocated. This site was assessed as being at high and medium surface water flood risk and therefore did not meet the criteria. 'CfS 75 ' was

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at high and medium surface water flood risk and therefore did not meet the criteria.	selected as a draft residential allocation as it had no flood risk as opposed to this site (CfS23-24149).
CfS:345	New Farm, Meadow Lane, Earith	1.16	Earith 1	Eastern Huntingdonshire	This site was assessed as being at risk high and medium surface water and groundwater risk. The site was tested by the Council as part of the Growth Strategy Options 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). Therefore this site has not been taken forward as a preferred site. Site not progressed to Level 2 SFRA.	Not allocated
CfS:46	Galley Hill, Fenstanton	61	Fenstanton 1	Eastern Huntingdonshire	The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. The site was tested by the council as part of Growth Strategies 3 and 4. However, the site has the opportunity to provide local business and employment opportunities long the Strategic Road Network (A14). Flood risk is high, however the site has the opportunity to provide flood mitigation and flood risk betterment to the wider area of Fenstanton. Progress to Level 2 SFRA.	Allocated - Fenstanton 1. Built development is to be located on land within flood zone 1 (25ha of the site) leaving the remaining 36ha for open space to safeguard against flooding. The site is for a less vulnerable use.
CfS:216	Hemingford Grey Lake, South of Marsh Lane, Hemingford Grey	29.6	Hemingford Grey 11	Eastern Huntingdonshire	This site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, but noted that net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the water bodies	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					to transport boats and the physical layout of any moorings, including any potential navigation issues. No responses were received to confirm the compatibility and suitability of the site so the site did not progress to assessment within the growth strategy options. It is noted that the site promoters submitted a Vision document which shows space for 50 moorings. The site is at high flood risk (86% in flood zone 3b), raising concerns about safe access and escape in times of flood. Site did not progress to level 2 SFRA.	
CfS:29	Mill Lane Field, Hemingford Grey	5.45	Hemingford Grey 1	Eastern Huntingdonshire	It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is significantly constrained by fluvial flooding with 89% of the site within flood zone 3a. The site was also put forward by a third party for proposed open space uses which the Council considered would be appropriate, however as this use was not put forward by the landowner, this proposed use is considered unachievable. Site not progressed to Level 2 SFRA.	Not allocated
CfS:170	Land East of Daintree Way, Hemingford Grey	5.8	Hemingford Grey 6	Eastern Huntingdonshire	High and medium flood risk present on the majority of the site proposed for a 'water compatible', 'less vulnerable' and cemetery. These proposed uses were not put forward by the landowner but a third party, therefore the site is not considered available for these uses and therefore will not progress to a level 2 SFRA.	Not allocated
CfS:42	Land West of Potton Road, Hilton	9.24	Hilton 1	Eastern Huntingdonshire	A number of sites in Hilton were tested by the Council as part of the Growth Strategy Option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. During the Autumn 2024 consultation, the site promoter submitted additional documents and plans in support of their proposal, the site promoter proposes a different capacity to this assessment, they consider 51 dwellings can be delivered with a net developable area of 36%. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). This site was assessed as being at medium fluvial flood risk. Site not progressed to Level 2 SFRA.This site was assessed as being at medium fluvial flood risk. It therefore did not meet the criteria.	
CfS:41	Land East of The Paddocks, Hilton	5.29	Hilton 2	Eastern Huntingdonshire	A number of sites in Hilton were tested by the Council as part of the Growth Strategy Option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. During the Autumn 2024 consultation, the site promoter submitted additional documents and plans in support of their proposal, the site promoter proposes a different capacity to this assessment, they consider 51 dwellings can be delivered with a net developable area of 36%. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). This site was assessed as being at medium fluvial flood risk. Site not progressed to Level 2 SFRA	Not allocated
CfS:235	Land North of High Street, Hilton	2.1	Hilton 4	Eastern Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is therefore not considered locationally suitable for development. This site was assessed as being at medium fluvial and groundwater flood risk. It therefore did not meet the criteria. Site not progressed to Level 2 SFRA.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:185	Land North of Bluntisham Road, Needingworth	10.6	Holywell-Needingworth 1	Eastern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. It is also in proximity to St Ives and Huntingdon where wider services can be accessed. The site could be combined with Cfs 23-24309 to provide a more comprehensive development with multiple access points. Progress to Level 2 SFRA.	Allocated - Needingworth 2. The Level 2 SFRA assessed the site as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore a it is a sequentially preferable site.
CfS23-24307	Land at Conger Lane, Holywell	1	Holywell-Needingworth 10	Eastern Huntingdonshire	The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal originally found that the site may be appropriate for development, on further assessment there are significant concerns regarding point of access and narrowness of the road restricting access. Therefore the site is now considered inappropriate in the LAA. Site not progressed to Level 2 SFRA.	Not allocated
CfS23-24309	Land North West of Needingworth, South of Station Road	24.4	Holywell-Needingworth 11	Eastern Huntingdonshire	The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. It is also in proximity to St Ives and Huntingdon where wider services can be accessed. The site could be combined with Cfs 185 to provide a more comprehensive development with multiple access points. The site is at some risk of medium to high flood risk. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024.	Not allocated. The site was allocated in the Preferred Options Local Plan as Needingworth 2. As a result of the Preferred Options consultation responses, especially in relation to traffic impacts, flood risk, coalescence with neighbouring settlements, landscape concerns and the size of the site the Council have concluded to remove this parcel of land from the wider allocation.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Progress to Level 2 SFRA to see if development can be sequentially located.	
CfS:240	Giffords Park, East of B1040, St Ives, (Needingworth)	122	Holywell-cum-Needingworth 7	Eastern Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy. Progress to Level 2 SFRA.	Allocated - Needingworth 1. The site was assessed in the Level 2 SFRA as 86.3 % within flood zone one with predominately very low surface water risk. A small percentage of the site is located within flood zones 2 and 3. The site is in a Market Town the most sustainable of settlements in the Settlement Hierarchy with access to extensive services and facilities. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. The site was put forward as proposed allocation Needingworth 1 with about 65.5 ha of green infrastructure, sustainable drainage and flood mitigation uses meaning that more vulnerable uses are located outside areas of flood risk.
CfS23-2486	Orchard Paddock, West of Mill Way, Needingworth	2.006	Holywell-cum-Needingworth 8	Eastern Huntingdonshire	The Growth Strategy allows for limited development in Local Services Villages Sites. The site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, however it is located to the south of Needingworth on the western side of Mill Way which is typically less developed with the potential to create isolated development in the countryside. The site chosen (CfS 185) provides better opportunity to integrate with the existing settlement, with active routes to St Ives employment areas and accessible transport links providing connections to market towns and enhanced services and facilities. Site not progressed to Level 2 SFRA.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS23-24306	Five Acres Farm, South of Needingworth Road	5.71	Holywell-cum-Needingworth 9	Eastern Huntingdonshire	Medium flood risk present on the majority of the site proposed for a 'less vulnerable' use, alternative sequentially preferable sites are available. Built development is unlikely to be able to avoid medium risk flood areas. Site not progressed to Level 2 SFRA, 72% of site in flood zone 2, more sequentially preferable sites are available to avoid locating 'less vulnerable' development in medium risk areas.	Not allocated
CfS:90	Tir na Nog, Sawtry Way, Houghton	0.92	Houghton and Wyton 1	Eastern Huntingdonshire	The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:196	Land at New Manor Farm, Houghton and Wyton	3.3	Houghton and Wyton 2	Eastern Huntingdonshire	The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:183	Land off Old Houghton Road, Houghton and Wyton	3	Houghton and Wyton 4	Eastern Huntingdonshire	This site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, but noted that net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the river and the physical layout of any moorings, including any potential navigation issues. No responses were received to confirm	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					the compatibility and suitability of the site so the site did not progress to assessment with the growth strategy options. The site is at high flood risk (flood zone 3b) and distance from the river to the nearest footpath is over 100m minimum, raising concerns about safe access and escape in times of flood. Site not progressed to Level 2 SFRA.	
CfS:315	Land North of 6 Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton)	3.2	Houghton and Wyton 5	Eastern Huntingdonshire	The council's Land Availability Assessment has been updated to correct the assessment which originally identified moorings on site. The site has been reassessed and is considered inappropriate for built development due to the significant flood risk, but could be suitable for flood mitigation and open space. Planning application 22/01460/OUT for 25 dwellings has, however been approved on the northern parcel of the site. Site not progressed to Level 2 SFRA as it has planning permission.	Not allocated
CfS23-24291	Ruddles Lane, Wyton	28.03	Houghton and Wyton 6	Eastern Huntingdonshire	The site was tested by the council as part of Growth strategy 3. However the site presents opportunities for renewable energy generation which can assist in contributing towards net zero. Progress to Level 2 SFRA to establish if development can be sequentially located outside areas at risk of flooding.	Allocated - Houghton and Wyton 1. The site was assessed in the Level 2 SFRA as 76.3 % within flood zone one with predominately low surface water risk. The site was tested by the council as part of Growth strategy 3. The site will require the sequential location of development within the site and provision of emergency plans and safe access and escape routes for the lifetime of development.
CfS:109	Land South of Meadow Lane St Ives	0.65	St Ives 3	Eastern Huntingdonshire	The site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However, it was also noted that integration of the site is more challenging by virtue of its edge of town location and that appropriate noise mitigation will be required to mitigate the impact of the A1123 and nearby employment uses. In addition, the site promoter states that a key constraint to development is to work with the existing tenants to find alternative locations for their businesses. No update has been provided as to when the site will become available and therefore the site did not move forward to assessment as part	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					of the growth strategy options testing. Site not progressed to Level 2 SFRA.	
CfS:95	Wyton Airfield	253.89	Wyton on the Hill 1	Eastern Huntingdonshire	The site was tested by the council as part of Growth Strategies 2,3 and 4. The site is previously developed land and contributes towards the Governments need to make use of previously-developed or brownfield land and the Combined Authorities ambitions in the Local Growth Plan for a North Huntingdon Growth Corridor. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding. Progress to Level 2 SFRA to determine if development can be sequentially located outside of areas at flood risk.	Allocated - North Huntingdon 4. The site was assessed in the Level 2 SFRA as 99% within flood zone one and the majority of the site is at very low risk of surface water. The site is previously developed land and contributes towards the Governments need to make use of previously-developed or brownfield land and the Combined Authorities ambitions in the Local Growth Plan for a North Huntingdon Growth Corridor. There is nominal fluvial flood risk where development can be sequentially located away from this. The two Strategic mixed-use residential sites chosen (Wyton Airfield and Lodge Farm) align with the Cambridgeshire and Peterborough Combined Authorities Local Growth Plan, meaning there is more potential with these sites to leverage infrastructure to facilitate delivery of these sites as part of the wider combined authority ambition. Infrastructure Funding priorities are also under development such as the new A141 allowing for greater certainty of infrastructure delivery.
CfS:47	Hungary Hall, West of A141, Wyton-on-the Hill	383.36	Wyton on the Hill 2	Eastern Huntingdonshire	The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Site was progressed to level 2 SFRA . The site is at risk of emergence to both surface and subsurface assets and residual risk at this site comes from the potential blockage of several culverts beneath the B1090 road along the southwestern boundary. The site could also give rise to coalescence of proposed development at Lodge Farm which has better accessibility to services and facilities in Huntingdon and to Wyton Airfield which is preferrable as being previously developed land. The Highways Agency has raised significant concerns stating development of this scale would not be acceptable without significant improvements to the road and footway/cycleway infrastructure between the site and the adjacent towns of Huntingdon and Stives. The approach road network will need to be assessed in relation to the suitability to cater for increased traffic flows. They go on to note that access via the local roads to the north would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure, which is unlikely to be achievable through Broughton Village. Local infrastructure improvements including appropriate safe crossing of the A141 /B1090 would also be required and it is unclear at this stage whether sufficient verge exists within the public highway to achieve facilities suitable for a development of this scale. It is not supported by the Highway Authority due to the sites unsustainable location. The site is very rural and not possible to walk or cycle to. also capacity issues in the area.	
CfS:256	Lodge Farm, North of A141, Huntingdon (Wyton on the Hill)	317.69	Wyton on the Hill 3	Eastern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site aligns with Combined Authorities ambitions in the Local Growth Plan for a North Huntingdon Growth Corridor and therefore should progress to a Level 2 SFRA.	Allocated - North Huntingdon 3. The site was assessed in the Level 2 SFRA as 100% flood zone one and the majority of the site is at very low risk of surface water therefore it is a sequentially preferable site. . The site aligns with Combined Authorities ambitions in the Local Growth Plan for a North Huntingdon Growth Corridor. There is nominal fluvial flood risk and development can be sequentially located away from this. The two Strategic mixed-use residential sites chosen (Wyton Airfield and Lodge

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
						Farm) align with the Cambridgeshire and Peterborough Combined Authorities Local Growth Plan, meaning there is more potential with these sites to leverage infrastructure to facilitate delivery of these sites as part of the wider combined authority ambition. Infrastructure Funding priorities are also under development such as the new A141 allowing for greater certainty of infrastructure delivery.
CfS:263	Land North of Houghton Road (southern portion), St Ives (Wyton on the Hill)	14.47	Wyton on the Hill 4	Eastern Huntingdonshire	Site not progressed to Level 2 SFRA. This site is part of CfS: 198, which was taken forward as a draft allocation in the Preferred Options draft Local Plan as draft mixed use allocation St Ives 1.	Not allocated
CfS:198	Land to the North of Houghton Road (larger site), St Ives	23.91	Wyton on the Hill 5	Eastern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy. Progress to Level 2 SFRA.	Allocated - St Ives 1. The site was assessed in the Level 2 SFRA as 100% within flood zone one and surface water risk is predominantly very low/low, therefore it is a sequentially preferable site.
CfS:153	Land off Causeway Road, Broughton	0.75	Broughton 1	North East Huntingdonshire	The site was not tested by the Council as part of the Growth Strategy Options due to the settlement's. Site not within preferred growth option. Site not taken forward as an allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:141	Bury Industrial Estate, Old Station Road, Bury	0.96	Bury 1	North East Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2, 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk	Allocated - Bury 1.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy making it one of the most preferable locations for residential development. Only four sites in Bury and Ramsey were considered appropriate for residential development within the LAA and the SA. Progress to Level 2 SFRA.	
CfS:188	Land off Cheveril Lane, Bury	6.42	Bury 2	North East Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1 & 2. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site was put forward for open space and is therefore water compatible development. Progress to Level 2 SFRA.	Allocated - Bury 2.
CfS:84	RAF Upwood - Phase 3, Bury	17.69	Bury 7	North East Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy making it one of the most preferable locations for residential development. Only four sites in Bury and Ramsey were considered appropriate for residential development within the LAA and the SA. Progress to Level 2 SFRA.	Allocated - Bury 3.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:189	Land End Farm, Pidley	1.01	Pidley-cum-Fenton 2	North East Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:190	Old Football Field, Warboys Road, Pidley	1.2	Pidley-cum-Fenton 3	North East Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:217	Bittens Field, North of Warboys Road, Pidely	1.2	Pidley-cum-Fenton 4	North East Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:214	Land North of Oldhurst Road, Pidley	1.62	Pidley-cum-Fenton 5	North East Huntingdonshire	The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal originally found that the site may be appropriate for development. Comments from Cambridgeshire Highways flagged that the site appears to have insufficient frontage to the public highway	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					to achieve an access for anything other than a single dwelling. Therefore the site was not taken forward as part of the growth strategy options testing, alternative sites Pidley 2, 3 and 4 were. Site not progressed to Level 2 SFRA.	
CfS:53	Ramsey Forty Foot Village rural mooring, Ramsey Forty Foot	1.4	Ramsey 14	North East Huntingdonshire	The site is put forward for open space and moorings. Progress to Level 2 SFRA.	Allocated - Ramsey Forty Foot 1. The Level 2 SFRA assessed the site as 31 % flood zone one with predominantly very low surface water risk . It is allocated for is allocated for leisure moorings, open space and land to safeguard against flooding which are water compatible development. Provision of safe and suitable access and escape to and from moorings and demonstration that the site can be safe for the lifetime of the development will be required.
CfS:272	Land at Bridge Farm, Ramsey Forty Foot	1.17	Ramsey 15	North East Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2 and 3. The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration. Site not progressed to Level 2 SFRA.	Not allocated
CfS:271	Woodlane Farm, West of Ramsey Road, Ramsey Forty Foot, Ramsey	1.34	Ramsey 17	North East Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority	Allocated - Ramsey Forty Foot 2. The site was assessed in the Level 2 SFRA as 100% Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. T

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater flood risk should be investigated meaning it did not meet the criteria for consideration. Progress to Level 2 SFRA.	
CfS23-24252	Two Acre Stables, Middle Drove, Ramsey Heights	0.32	Ramsey 19	North East Huntingdonshire	High flood risk present on all of the site proposed for a 'more vulnerable' use. Built development is unlikely to be able to avoid high risk flood areas and unlikely to achieve safe access and escape routes. Site not progressed to Level 2 SFRA.	Not allocated
CfS:268	Land North of Hollow Lane, Ramsey	1.7	Ramsey 3	North East Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy. Progress to Level 2 SFRA.	Allocated - Ramsey 2. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. The site allocation includes criteria on how to address groundwater.
CfS:262	Land East of Wood Lane, Ramsey	8.3	Ramsey 4	North East Huntingdonshire	The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy making it one of the most preferable locations for residential development. Only four sites in Bury and Ramsey were considered appropriate for residential development within the LAA and the SA. Surface water and ground water risk is present, however the site is 100% within flood zone 1. Progress to Level 2 SFRA.	Not allocated - Site was allocated in the Preferred Options Local Plan as Ramsey 3. Upon review of the concerns and objections raised to the loss of community land at Ramsey 3, the site has been removed as a draft allocation despite the rationale for allocating it being to secure the long term use of the wider site for community open space uses.
CfS:92	Land at Newtown Road, Ramsey	0.3	Ramsey 5	North East Huntingdonshire	High flood risk present on the majority of the site (flood zone 3a) proposed for a 'more vulnerable' use, alternative	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					sequentially preferable sites are available. Built development is unlikely to be able to avoid high or medium risk flood areas. Site not progressed to Level 2 SFRA.	
CfS:163	Dews Bus and Coach Depot, Chatteris Road, Somersham	2.15	Somersham 1	North East Huntingdonshire	This site falls within Strategic Recommendation C, where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2 & 3. A small portion of the site is identified as being at fluvial flood risk with climate change. However, the development could be sequentially located outside areas of risk. The site is also part previously developed land which the allocation of which could contribute towards the Governments requirement to make use of previously-developed or brownfield land. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	Allocated - Somersham 2. The site was assessed in the Level 2SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore a sequentially preferable site. The New National Model shows the site to be at risk in the future due to climate change. In the absence of detailed modelling, the risk area should be left free of development. As the site is part previously developed land the site was put forward for allocation to satisfy the Governments requirement to make use of previously-developed or brownfield land as part of Huntingdonshire's Preferred Options Local Plan as Somersham 1 and includes criteria on how to address groundwater and climate change.
CfS:184	Land South of 35 Church Street (larger site), Somersham	1.65	Somersham 10	North East Huntingdonshire	During the Autumn 2024 consultation on sites, comments were received from the Parish Council and Historic England expressing concern regarding impact on heritage assets. Following this, the site is no longer viewed as being potentially suitable for development due to impacts on heritage including the designated scheduled monument. Site not progressed to Level 2 SFRA.	Not allocated
CfS:339	Land to the west of Parkhall Road, College Farm, Somersham	6.33	Somersham 11	North East Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence	Allocated - Somersham 1. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. The site was tested by the council as part of

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	Growth Strategies 2,3 and 4. The site allocation includes criteria on how to address groundwater.
CfS23-24248	Pitches 5 - 8 Land of Chatteris Road Somersham (Legacy Park)	0.4	Somersham 18	North East Huntingdonshire	High flood risk present on all of the site proposed for a 'more vulnerable' use. Built development is unlikely to be able to avoid high risk flood areas and unlikely to achieve safe access and escape routes. Site not progressed to Level 2 SFRA.	Not allocated
CfS23-24246	Pitches 9 - 15 Land of Chatteris Road Somersham (Legacy Park)	0.25	Somersham 19	North East Huntingdonshire	High flood risk present on all of the site proposed for a 'more vulnerable' use. Built development is unlikely to be able to avoid high risk flood areas and unlikely to achieve safe access and escape routes. Site not progressed to Level 2 SFRA.	Not allocated
CfS:55	Somersham Town Football Club and land to the south of the Football Club, Somersham	4.4	Somersham 2	North East Huntingdonshire	In response to the Autumn 2024 consultation, the site promoter submitted a Landscape and Visual Impact Assessment (November 2024) and Flood Risk Assessment (November 2024) in support of their proposal. The SFRA mapping update has shown the site is now 82% in Flood Zone 3a it is therefore no longer considered appropriate for residential development in the LAA. Site not progressed to Level 2 SFRA.	Not allocated
CfS:107	Land North of The Pasture and South of Rectory Lane, Somersham	0.95	Somersham 3	North East Huntingdonshire	Site discounted as it has been confirmed that the site has secured planning permission planning permission on the western parcel of the site (21/02111/OUT) for 11 dwellings and associated works (all matters reserved), approved in December 2022. Site not progressed to Level 2 SFRA.	Not allocated
CfS:233	Land to South of College Farm, Somersham (smaller site)	1.7	Somersham 6	North East Huntingdonshire	The Council's Land Availability Assessment and Sustainability Appraisal indicate that the site is appropriate for development, this site was combined with CfS 57 to form a larger site for assessment - CfS 213 Land to the West of College Farm	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					(larger site), Somersham. The site is assessed under CfS 213.	
CfS:213	Land to South of College Farm (larger site), Somersham	5.62	Somersham 7	North East Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site is formed by combination of CfS 233 and CfS 57. The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	Not allocated. The site was put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan as Somersham 2. The site was assessed in the Level 2 SFRA as 100% within Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. Following a review of comments received from residents and stakeholders, who cite concern regarding infrastructure capacity, cumulative impact of all draft allocations on the village, transport impacts, landscape harm and scale of the proposal, the site has been removed as a draft allocation.
CfS:270	College Farm, West of Newlands Industrial Estate, Somersham	1.8	Somersham 8	North East Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. This site is a current allocation (SM1) in Huntingdonshire's Local Plan to 2036. The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Carry forward allocation and progress to Level 2 SFRA.	Allocated - Somersham 3. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water therefore it is a sequentially preferable site.
CfS:173	Land South of 35 Church Street	0.44	Somersham 9	North East Huntingdonshire	Site was considered potentially appropriate for development through the LAA and SA. During the Autumn 2024	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
	(smaller site), Somersham				consultation on sites, comments were received from the Parish Council and Historic England expressing concern regarding impact on heritage assets. Following this, the site is no longer viewed as being potentially suitable for development due to impacts on heritage including the designated scheduled monument.	
CfS:82	RAF Upwood - Phase 4, Upwood	14	Upwood and The Raveleys 1	North East Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2, 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy making it one of the most preferable locations for development. The recommendations from the Economic and Employment Needs Assessment included for consideration for employment related development to provide opportunities for expansion of established employment areas. This site is adjacent to and capable of being integrated with Established Employment Area Upwood Air Park. Progress to Level 2 SFRA.	Allocated - Ramsey 1. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore it isa sequentially preferable site. The site allocation includes about 9.2 ha of land for green infrastructure to include a mixture of strategic green space, accessible natural green space and flood mitigation.
CfS:287	Village Field, Raveley Road, Great Raveley	0.99	Upwood and The Raveleys 2	North East Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:314	Manor Farm Buildings, Church Road, Warboys	0.68	Warboys 10	North East Huntingdonshire	The Highways Authority states the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and access is of insufficient width to accommodate a development of this scale without improvements which may not be achievable within the existing highway. Therefore the site is currently considered unachievable. Site not progressed to Level 2 SFRA.	Not allocated
CfS:85	Land off Fenton Road, Warboys	10.57	Warboys 12	North East Huntingdonshire	Site discounted. The Land Availability Assessment and Sustainability Appraisal assessed the site in isolation concluding that the site may be potentially suitable. When looking at the wider context that the site sits within, it is considered that the site is detached from the main built area of Warboys which would pose challenges for safe pedestrian access across the A141 to local services and facilities for development of this scale. It is therefore not suitable for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:172	Land East of Church Road, Warboys	4.8	Warboys 4	North East Huntingdonshire	From an individual site perspective the site was considered that it may be appropriate for development however, in the context of the whole settlement it was not considered appropriate to consider as an allocation as the site is not well connected to Warboys and there are concerns regarding safe access and exit to the site. Site not progressed to Level 2 SFRA.	Not allocated
CfS:148	Land North of Humberdale Way, Warboys	12.3	Warboys 6	North East Huntingdonshire	Although sites 'CfS104' and 'CfS148' have now been proposed as a single site, the deliverability of this site is dependent on providing appropriate access and connection to the public highways as stated by the Cambridgeshire County Council Highways Authority. Therefore the site is currently considered unachievable. Site not progressed to Level 2 SFRA. A	Not allocated
CfS:152	Land West of Harris Lane, Wistow	1	Wistow 1	North East Huntingdonshire	This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	
CfS:106	West of Wennington Road Wennington, Abbots Ripton	1.22	Abbots Ripton 1	Northern Central Huntingdonshire	Site discounted because it is located within an hamlet and therefore it was not tested in any of the Council's Growth Strategies due to the hamlets inherent lack of sustainability. The District's hamlets are classified together with the countryside, the Preferred Options Draft Local Plan to 2046 allows for only limited and specific opportunities where development in these locations would be acceptable. Site not progressed to Level 2 SFRA.	Not allocated
CfS:259	Home Farm South, Abbots Ripton	2.83	Abbots Ripton 3	Northern Central Huntingdonshire	The site is at flood risk, but presents the opportunity for small scale residential and business/employment opportunities with a Local Services Village which has some services and facilities. This site was the only site considered appropriate for assessment in Abbots Ripton through the LAA and the SA. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding. Progress to Level 2 SFRA to determine if development can be sequentially located outside of areas at flood risk.	Allocated - Abbots Ripton 1

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:197	Sapley Park Garden Village	579.66	Abbots Ripton 6	Northern Central Huntingdonshire	The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The site was considered to be less viable than other sites submitted. It has highly variable accessibility to services and facilities with the southern part being good whilst the northern parts of the site have poor accessibility and significant challenges in terms of active travel and public transport at present. Until there is greater certainty over the rerouting of the A141 (which will potentially run through the site impeding access) the ease and safety of potential connections to Huntingdon are challenging. The previous Local Plan Inspector expressed significant concern over the market absorption challenges. This site is very close to the existing strategic location of Alconbury Weald and likely to compete directly in the market. The site's proximity to Alconbury Weald also raised concern over delivery of the site which may be impacted by market absorption due to its proximity to an ongoing strategic housing scheme with the potential to slow housing delivery in the district and thus not contributing effectively to the Governments housing delivery targets. Site not progressed to Level 2 SFRA.	Not allocated
CfS:164	Land South of Great North Road, Alconbury	1.4	Alconbury 1	Northern Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by	Allocated - Alconbury 1.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. Progress to Level 2 SFRA.	
CfS:359	Land to the East of Globe Lane (smaller site), Alconbury	3.5	Alconbury 2	Northern Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. Progress to Level 2 SFRA.	Allocated - Alconbury 2.
CfS:329	Brooklands Farm, land to the East of A1 junction 13, Alconbury	5.68	Alconbury 4	Northern Central Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). The site is not sustainably located close to local	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					services and facilities or other employment uses, there are other available small scale employment sites that can meet this criteria. Site not progressed to Level 2 SFRA.	
CfS:321	Land North of B1043 and East of Alconbury, Alconbury	20	Alconbury 6	Northern Central Huntingdonshire	The site was not considered appropriate by the Highways Authority and was considered unacceptable as it does not accommodate walking or cycling. They also note that it will cause junction capacity pressures on the nearby roundabouts and junctions and that it is not clear if the north western half of the site will be connected to the south eastern half via the tree belt. If not, on the basis of the boundary line there is inadequate connection to the public highway. Therefore the site was not taken forward as a site within the growth strategy options due to these issues and is now considered inappropriate for development in the LAA. Site not progressed to Level 2 SFRA.	Not allocated
CfS:367	Fifty Acres, Land adjacent to Ermine Street and A1304, Alconbury	20	Alconbury 7	Northern Central Huntingdonshire	This site is located in proximity to Alconbury Weald. This site is very close to the existing strategic location of Alconbury Weald and likely to compete directly in the market. The site's proximity to Alconbury Weald also raised concern over delivery of the site which may be impacted by market absorption due to its proximity to an ongoing strategic housing scheme with the potential to slow housing delivery in the district and thus not contributing effectively to the Governments housing delivery targets. It was considered that development at Alconbury Weald would need to be completed before the commencement of any nearby residential allocation, therefore the site was not taken forward as a site within the growth strategy options. Site not progressed to Level 2 SFRA.	Not allocated
CfS:232	Land at Weybridge Farm (Brampton Cross)	378.76	Alconbury 8	Northern Central Huntingdonshire	The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres. This site is located away from such locations. More sequentially preferable sites have been selected for strategic employment with regards to flood risk, these are North of A141 between the Racecourse and A1307 (immediately north of Huntingdon) and West of the A1 and South of Peterborough Motorway Services. These sites have also been chosen due to their locational distribution, ensuring that logistics and distribution uses spread the transport impact. In addition, the floorspace proposed for Brampton Cross would concentrate Huntingdonshire's employment need all in one location creates less opportunity for employment across the district. This is not to say that this site may not be deliverable in the future as part of the Combined Authority's Local Growth Plan. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to substantial accessibility challenges both by non-car modes of travel and through the capacity of the highway network to accommodate the volume and nature of vehicles expected to be generated by the proposed scheme. Significant concerns have also been raised by the Highways Agency with the need for significant highway improvements in relation to the scale of development proposed. No access should be permitted via the A14 east bound, Woolley Hill and Woolley Road as the route is not suitable to cater for high volumes of traffic and HCVs. There are also concerns regarding sustainable travel connections to wider centres of population and the site would not be acceptable for a	

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					development of this scale without significant improvements. Natural England also raise concerns citing the need careful consideration and likely requirement for additional assessments including as downstream impacts on internationally designated sites. Site not progressed to Level 2 SFRA.	
CfS:13	Land North West of Buckworth Road, Alconbury Weston	3.66	Alconbury Weston 1	Northern Central Huntingdonshire	The site was not tested specifically by the Council as part of the Growth Strategy Options, however a handful of sites within Alconbury Weston were tested as part of Growth Strategy Option 3 to test an overall approach. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered appropriate for allocation. This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater emergence risk at significant rates meaning it did not meet the criteria for consideration. Site not progressed to Level 2 SFRA.	Not allocated
CfS:298	Land East of High Gables, Buckworth Road, Alconbury Weston	2.65	Alconbury Weston 2	Northern Central Huntingdonshire	This site was tested as part of Growth Strategy Option 3 to test an overall approach to development in Alconbury Weston. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered appropriate for allocation. This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration. Site not progressed to Level 2 SFRA.	Not allocated

					strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	
CfS23-24310	Land at Manor Farm, Kings Ripton	0.53	Kings Ripton 1	Northern Central Huntingdonshire	A selection of sites were tested by the Council as part of growth strategy option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:11	Green End Field, Sawtry	0.62	Sawtry 1	Northern Central Huntingdonshire	Site was progressed to level 2 SFRA as mapping indicated the site was 100% flood zone 1 with surface water flood risk. Site progressed to Level 2 SFRA.	Not allocated - Updated level 1 SFRA mapping and site specific level 2 SFRA indicate site is no longer suitable for development, the site is now only 31% within flood zone 1 it is unclear how development can be located in areas at lower risk. More sequentially preferable sites are available to avoid locating 'more vulnerable' development in high and medium risk areas.
CfS:161	Land to the East of St Judith's Lane and west of Toll Bar Way and Green End Road (larger site), Sawtry	34.67	Sawtry 10	Northern Central Huntingdonshire	The smaller site (CfS 155) was selected to provide an element of separation from, and to address the impact on, Judith's Lane and potential impact on Aversley Wood SSSI. Site progressed to Level 2 SFRA.	Not allocated - Site discounted as the smaller site (CfS 155) was selected to provide an element of separation from, and to address the impact on, Judith's Lane and potential impact on Aversley Wood SSSI.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:155	Land to the West of Toll Bar Way and Green End Road (smaller site), Sawtry	18.83	Sawtry 11	Northern Central Huntingdonshire	The larger version of this site (CfS 161) was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding. Progress to Level 2 SFRA to determine if development can be sequentially located outside of areas at flood risk.	Allocated - Sawtry 3. The larger site (CfS 161) was assessed in the Level 2 SFRA as 91.3% within flood zone one with low surface water risk. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding. The site allocation requires built development to be located within flood zone 1 and the site area reduced. The site has the opportunity to provide betterment to flood risk through the allocation of about 3ha of open space to safeguard against flooding and to be used as a blue green corridor which can provide multiple benefits alongside flood risk, including ecological, social and amenity benefits. The final site area should be determined through a flood risk assessment taking into account all sources of flood risk now and in the future, with 3ha safeguarded land considered the minimum requirement.
CfS:338	Land to the West of Toll Bar Way and North of Whitehall Farm, Sawtry	9.04	Sawtry 12	Northern Central Huntingdonshire	Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses. This site is located on the western side of the A1(M) meaning that it is not locationally preferable and could contribute	Not allocated - Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses.

This site was also considered more removed and isolated locationally with the chosen draft employment allocations providing a more concentrated clustering of sites.
CfS23-24188	Land off Old North Road, Sawtry	4	Sawtry 17	Northern Central Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 2. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. The site has the opportunity to focus employment development and opportunities near to Sawtry but focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses. Progress to Level 2 SFRA.	Allocated - Sawtry 4 - The site was assessed in the Level 2 SFRA as 100% flood zone one and not shown to be at risk of surface water flooding, therefore sequentially preferable site. The site has the opportunity to focus employment development and opportunities near to Sawtry but focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:88	Land to the West of Glatton Road, Sawtry	12.48	Sawtry 3	Northern Central Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding. Progress to Level 2 SFRA to determine if development can be sequentially located outside of areas at flood risk.	Allocated - Sawtry 1. The site was assessed in the Level 2 SFRA assessment as 99.4 % within flood zone one with predominately low surface water risk. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Therefore, in cases where the proportion of the site at flood risk is small, a sequential approach at the site level would be appropriate and enable development to be located in areas of low risk of flooding. The Level 2 SFRA confirms that it should be appropriate to develop the site for more vulnerable purposes should the risk areas be left as open greenspace and allowed to flood whilst accounting for climate change. The site allocation requires built development to be located within flood zone 1. The site has the opportunity to provide betterment to flood risk through the allocation of about 2ha of open space to safeguard against flooding and to be used as a blue green corridor which can provide multiple benefits alongside flood risk, including ecological, social and amenity benefits, the final site area should be determined through a flood risk assessment taking into account all sources of flood risk now and in the future, with 2ha safeguarded land considered the minimum requirement.
CfS:52	Land East of Glatton Road and North of Brookside Industrial Estate, Sawtry	6.5	Sawtry 4	Northern Central Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment	Allocated - Sawtry 2. The site is 82.4 % flood zone one with a low to medium risk of surface water risk. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can

Appendix 5- Assessment of Reasonable Alternative Sites

					Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. In addition, over half the site is at fluvial flood risk, more sequentially preferable site are available. In the Autumn 2024 consultation, the site promoters commented wishing to clarify the proposed site area for development. They confirm it should be 2.04ha rather than 2.83ha and the capacity calculations should be adjusted as a result. This has resulted in a slight reduction in the commercial floorspace that could be delivered on site as set out above (down to 4,284sqm from 5,943sqm). Site not progressed to Level 2 SFRA.	
CfS:351	Rear of Manor Farmyard, Spaldwick	1.5	Spaldwick 2	Northern Central Huntingdonshire	Over three quarters of the site is at risk of fluvial flood risk, more sequentially preferable sites are available. Site not progressed to Level 2 SFRA.	Not allocated
CfS:353	Church Field, Spaldwick	3.4	Spaldwick 3	Northern Central Huntingdonshire	Concern over the impact on the character of the area (including views to the church) which would not be the case with the CfS 305. The Growth Strategy allows for limited development in Local Services Villages, therefore CfS 305 is a more preferable development within Spaldwick, being located next to a primary school and near to services and facilities. Site not Progressed to Level 2 SFRA.	Not allocated
CfS:305	Land to East of Stow Road, Spaldwick	6.1	Spaldwick 4	Northern Central Huntingdonshire	The site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Progress to Level 2 SFRA.	Allocated - Spaldwick 1. The site was assessed in the Level 2 SFRA as 100% flood zone one, with surface water flood risk to the site predominantly very low.
CfS23-24285	Land South of the A14, Spaldwick (modest employment)	1.67	Spaldwick 5	Northern Central Huntingdonshire	Updates to SFRA mapping demonstrate that the risk of flooding has increased since the initial assessment. More that 99% of the site is now at risk of fluvial flooding, and the majority of the site is also at high risk from surface water flooding. More sequentially preferable sites are available. Site not progressed to Level 2 SFRA.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS23-24284	Land South of the A14, Spaldwick (modest residential)	0.98	Spaldwick 6	Northern Central Huntingdonshire	Updates to SFRA mapping demonstrate that the risk of flooding has increased since the initial assessment. More that 99% of the site is now at risk of fluvial flooding, and the majority of the site is also at high risk from surface water flooding. More sequentially preferable sites are available. Site not progressed to Level 2 SFRA.	Not allocated
CfS23-24286	Land South of the A14, Spaldwick (larger scale residential)	7.75	Spaldwick 7	Northern Central Huntingdonshire	Updates to SFRA mapping demonstrate that the risk of flooding has increased since the initial assessment. More than half of the site is now at risk of fluvial flooding concentrated in the northern half with the potential to make safe access and escape problematic. More sequentially preferable sites are available. Site not progressed to Level 2 SFRA.	Not allocated
CfS23-24322	Land to the South of High Street, Spaldwick	0.83	Spaldwick 8	Northern Central Huntingdonshire	Updated level 1 SFRA mapping and site specific level 2 SFRA indicate that site is no longer suitable for development. More sequentially preferable sites are available to avoid locating 'more vulnerable' development in high and medium risk areas. This site is 19% Flood Zone one with the remaining site within flood zones 2 and 3a and surface water risk predominantly high. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to significant flood risk. Site progressed to Level 2 SFRA.	Not allocated
CfS:77	Land North East of Ermine Street (adjoining Huntingdon)	33.96	The Stukeleys 1	Northern Central Huntingdonshire	The site is included within the Preferred Options Draft Local Plan within the chapter 'North Huntingdon Growth Cluster Opportunity Zones' as an existing commitment. An outline planning application (reference 20/00847/OUT) was submitted on 6th May 2020 which is awaiting a decision as of September 2025 once issues with Anglian Water are resolved. The site retains the principle of the site being appropriate for development in case works have not started before this Local Plan is adopted.	Site is allocated in the currently local plan to 2036 and has been included in the Local Plan to 2046 to outline its existing commitment and is identified as North Huntingdon Existing 2: Ermine Street
CfS:36	Nook Farm, Little Stukeley	375.77	The Stukeleys 2	Northern Central Huntingdonshire	Site discounted. The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					strategic growth options. This site was tested through strategic Growth Option 1. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The site is the least sequentially preferable strategic site when considering flood risk and the Huntingdonshire Transport Strategy ranks the site as one of the least accessible. The site's proximity to Alconbury Weald also raised concern over delivery of the site which may be impacted by market absorption due to its proximity to an ongoing strategic housing scheme with the potential to slow housing delivery in the district and thus not contributing effectively to the Governments housing delivery targets. Site did not progress to level 2 SFRA.	
CfS:28	Land between 76 and 86 Owl End, Great Stukeley	0.3	The Stukeleys 3	Northern Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1, 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain	Allocated - The Stukeleys 1. The site was assessed in the Level 2 SFRA as a site at nominal risk. The site is 100% Flood Zone one and not shown to be at risk of surface water flooding, therefore a sequentially preferable site. The site allocation includes criteria on surface water.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site meets this criteria. Progress to Level 2 SFRA.	
CfS:221	Land North of A141, between Huntingdon Racecourse and A1307	103.58	The Stukeleys 5	Northern Central Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2, 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy and has the opportunity to provide sustainably located employment opportunities in close proximity to employment and residential areas. The site is 94.5% within flood zone 1. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Progress to Level 2 SFRA. to assess if development can be sequentially located outside areas of flood risk.	Allocated - North Huntingdon 2. The site was assessed in the Level 2 SFRA as 93 % within flood zone one with predominately very low surface water risk. The site is for less vulnerable use. The Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. The Level 2 SFRA notes that it should be appropriate to develop this site for more vulnerable purposes given its location within Flood Zone 1 and nominal surface water flood risk. The site was allocation includes criteria on the sequential location of development within flood zone 1 and provision of a flood risk assessment and detailed drainage strategy. The site has outline planning permission - 25/01922/OUT .
CfS:276	Huntingdon Racecourse	69	The Stukeleys 6	Northern Central Huntingdonshire	The site was tested by the council as part of Growth strategy 1 and 2, it is previously developed land. The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy with access to multiple services and facilities. It presents the opportunity redevelop previously developed land and contribute towards the Governments need to make use of previously-developed or brownfield land whilst decreasing flood risk through redevelopment. The site has the opportunity to enhance facilities, employment and job opportunities at Huntingdon Racecourse an increase the viability and vitality of an important economic and tourism location within the	Allocated - North Huntingdon 1. The site is 80 % in flood zone 3b with predominately low surface water risk. The site includes criteria for a development strategy that seeks to sequentially locate development and relocate existing uses to lower flood risk parts of the site wherever possible in order to reduce overall exposure to flood risk.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					District. It will support the continued use of the site for the racecourse, equine support facilities and Huntingdon and District Rugby Football Club. Progress to Level 2 SFRA.	
CfS:34	Land to South West of South Farm, Upton	0.39	Upton and Coppingford 1	Northern Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1, 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site meets this criteria. Progress to Level 2 SFRA.	Allocated - Upton 1. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water therefore a sequentially preferable site. The site allocation includes criteria on flood risk.
CfS23-2420	Land at Christ's College Farm, Upton	0.41	Upton and Coppingford 3	Northern Central Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). A more sequentially preferable site has been chosen in Upton 'CfS34' which has less flood risk.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:299	Land adjacent Winwick Village Hall, Thurning Road, Winwick	0.6	Winwick 1	Northern Central Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not Progressed to Level 2 SFRA.	Not allocated
CfS23-24298	Land North Of 23 To 33 Oundle Road, Alwalton (larger site)	12.9	Alwalton 2	Northern Huntingdonshire	This site has the benefit of being an extension to Peterborough providing access to substantial services and facilities. Built development on this site has the potential to be located within areas not at flood risk, with the extended site providing additional opportunities for flood mitigation associated with the River Nene and flood betterment. It is recommended that this site progresses to a Level 2 SFRA.	Site was allocated in the Preferred Options Local Plan as Alwalton 1. Following a review of comments received from residents, stakeholders and neighbouring authorities, who cite concern regarding heritage, transport impacts and scale of the proposal, the site has been removed as a draft allocation.
CfS:209	Land West of A1 (North of Peterborough Motorway Services) - Option A, (larger site) Haddon	89.05	Chesterton 1	Northern Huntingdonshire	The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. The site was tested by the council as part of Growth Strategies 1 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The site was promoted variously for employment and for residential led development and tested for residential through the Strategic Transport Study. This identified that the site has poor accessibility for pedestrians in particular. As Part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					road network into Peterborough to accommodate the extra traffic likely to be generated.. The Highways Authority raised significant concerns saying that the site is likely to require significant highways improvements due to scale and that it is unclear how sustainable travel links can be achieved on the A605 across the A1 to link to Peterborough. National Highways also raised significant concerns noting that J17 A1(M) is a potential crash cluster, therefore safety improvements may be required. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to high and/or medium risk from surface water sources and groundwater flood risk, particularly emergence to subsurface assets. Site not progressed to Level 2 SFRA.	
CfS23-2414	Chesterton Garden Village	128.32	Chesterton 2	Northern Huntingdonshire	The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The site is at risk of groundwater emergence to both surface and subsurface assets and has limited accessibility by active travel. Site was progressed to level 2 SFRA. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. Other concerns from statutory consultees are from the Highways Authority who note that significant highway improvements are required, due to scale and that it is unclear if a corridor linking the site to Oundle Road can be achieved across the	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					A1 to link the development with Peterborough. As the site is on the wrong side of the A1 it would be very reliant on vehicles and there are existing issues with bridge over A1. Historic England raised concerns about the nearby (metres away) grade I listed church. There are potential adverse impact on the extensive scheduled monument of the Roman Town of Durobrivae located just 80 metres to the north of the site boundary. They also have considerable concerns about this site as a potential site allocation. A detailed heritage impact assessment would be needed to assess this and determine whether the site is suitable and if it is to make clear recommendations for protection, enhancement of the heritage assets and appropriate mitigation for any impacts. Highways England note that the junction is a potential crash cluster area therefore might need to consider safety improvement.	
CfS23-24296	Bottom Lodge Farm / Land at A1 West (North)	115	Chesterton 3	Northern Huntingdonshire	Site discounted. The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. Site did not progress to Level 2 SFRA.	Not allocated
CfS:382	Land West of Conington Airfield	9.63	Conington 3	Northern Huntingdonshire	Site discounted as the combination of outcomes of the Council's Land Availability Assessment and Sustainability Appraisal indicate that the site is inappropriate for	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					development as it would not support sustainable place-making. In response to the Autumn 2024 consultation the site promoter confirmed that it is intended this site will offset any development coming forward on their other proposed development sites. However, due to the nature of the site 'Priority Habitat – Deciduous Woodland', biodiversity net gain enhancements may not be achievable due to the high level of biodiversity already present on site. Site not progressed to Level 2 SFRA	
CfS:58	Land between Middle Street and Highgate Green, Elton	0.5	Elton 1	Northern Huntingdonshire	CfS 58 was proposed for natural green and open space uses. As it is currently a green space it is not considered that allocation is required as its use will be protected through complementary planning policies in the local plan such as “Protecting our open spaces, outdoor sport and recreational facilities	Not allocated
CfS:59	Land between Duck Street and Wansford Road, Elton	2.78	Elton 5	Northern Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:30	Land West of Peterborough Road and North of Grazeley Gardens, Farcet	8.74	Farcet 1	Northern Huntingdonshire	The site was tested by the Council as part of growth strategy 1. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. In response to the Autumn 2024 consultation, the site promoter submitted a Vision document	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					in support of their site setting out proposed layout, uses and mitigations. Site not progressed to Level 2 SFRA.	
CfS:108	Land West of Peterborough Road and South of Grazeley Gardens, Farcet	8.3	Farcet 2	Northern Huntingdonshire	Site discounted as the combination of outcomes of the Council's Land Availability Assessment and Sustainability Appraisal note that it is significantly constrained by fluvial flooding with the majority of the site within flood zone 2 and 3a. The site was also put forward by a third party for proposed open space uses which the Council considered would be appropriate, however as this use was not put forward by the landowner, this proposed use is considered unachievable. The third party also proposed cemetery or parking uses the former of which is incompatible with the level of flood risk on the site and the latter was not put forward by the landowner rendering this proposed use is considered unachievable. The LAA and SA originally found that the site may be appropriate for development, but did raise concerns regarding point of access and road network capacity. Comments from Cambridgeshire Highways flagged the site as inappropriate for development due to no connection to the public highway, Haddon Way. They also noted that Haddon Way is insufficient in width meaning that improvements may not be achievable to facilitate access. They also raised concerns regarding the possibility for junction capacity issues. The site is therefore now considered inappropriate for development. Site not progressed to Level 2 SFRA.	Not allocated
CfS:149	Land East of Peterborough Road, Farcet (cross boundary site with Peterborough City Council)	47.84	Farcet 3	Northern Huntingdonshire	The site was tested by the Council as part of growth strategies 1 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. In response to the Autumn 2024 consultation, the site promoter submitted a revised planning statement which set out a reduced proposal of up to 200	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

					dwellings, a local centre and access from Peterborough Road. They state the site will also solely be within Huntingdonshire District Council's authority area but no amended location plan was received. The statement also included pre-application advice that has been sought form the Local Authority, LLFA and County Highways. Site not progressed to Level 2 SFRA. The	
CfS:177	Former PH Plant Hire and 9 Cross Street, Farcet	0.63	Farcet 4	Northern Huntingdonshire	This site has not been selected as a draft allocation as planning permission (23/02383/FUL) has been secured for the demolition of existing commercial buildings and erection of 17 dwellings including public open space, approved in May 2024. Site not progressed to Level 2 SFRA.	Not allocated
CfS:132	Land off Hawthorn Road, Folksworth (smaller site)	1.87	Folksworth and Washingley 1	Northern Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:130	Land adjacent A1 at Norman Cross, Folksworth	11.47	Folksworth and Washingley 2	Northern Huntingdonshire	Site discounted. The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres. This site is located away from such locations with the nearest settlement - Stilton' classified as a Local services Village. Site did not progress to Level 2 SFRA.	Not allocated
CfS23-245	Hawthorn/Manor Road, Folksworth (larger site)	31.69	Folksworth and Washingley 4	Northern Huntingdonshire	This site has not been selected as a draft allocation. The smaller site (Folksworth and Washingley 1: Land off Hawthorn Road, Folksworth -smaller site) was tested by the Council as part of growth strategy 3 which includes land within this site	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					and therefore provides an indication of suitability in relation to the growth strategy on a locational and capacity basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	
CfS:193	Land south of Great Gidding Village Hall, Great Gidding	0.667	Great Gidding 2	Northern Huntingdonshire	Site not progressed to Level 2 SFRA, or tested through the Councils Growth Strategy Option as the site located away from main built area of Great Gidding and therefore not considered as sustainably located as other village sites put forward.	Not allocated
CfS:307	Orchard Field Allotment, Haddon Road, Haddon	0.32	Haddon 2	Northern Huntingdonshire	This site has not been selected as a draft allocation because it is located within an hamlet and therefore it was not tested in any of the Council's Growth Strategies due to the hamlets inherent lack of sustainability. The District's hamlets are classified together with the countryside, the Preferred Options Draft Local Plan to 2046 allows for only limited and specific opportunities where development in these locations would be acceptable. Site not progressed to Level 2 SFRA.	Not allocated
CfS:206	Land West of A1 (North of Peterborough Motorway Services) - Option B (smaller site), Haddon	45.97	Haddon 4	Northern Huntingdonshire	The site is 100% Flood Zone one and therefore a sequentially preferable site. The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					(with some adjustments) and therefore this site was not considered appropriate for allocation. The site was promoted variously for employment and for residential led development and tested for residential through the Strategic Transport Study. This identified that the site has poor accessibility for pedestrians in particular. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. The Highways Authority Raised significant concerns noting that the site is likely to require significant highways improvements due to scale, and that it is unclear how sustainable travel links can be achieved on the A605 across the A1 to link to Peterborough. Site not progressed to Level 2 SFRA.	
CfS:212	Land at A1 West (South) - South of Peterborough Motorway Services, Haddon	48.24	Haddon 5	Northern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested in Growth Strategy Option 1. The Economic and Employment Needs Assessment recommends the allocation of at least 1 strategic employment site for strategic scale logistics in a few optimal nodes. This site is appropriately located on the A1(M) providing quick access to the Strategic Road Network. Progress to Level 2 SFRA	Allocated - Peterborough Services 1. The Level 2 SFRA assessed the site as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site.
CfS:157	Land at Church Street/Short Drove, Holme	1.1	Holme 2	Northern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83).	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					This site was assessed as being 100% flood zone 1 with low risk of surface water flood risk meaning it could meet the criteria for consideration. However, site 'CfS 75 ' also met this criteria. 'CfS 75 ' was selected in Colne as a draft residential allocation as it had no flood risk as opposed to this site (CfS215) which has very low surface water flood risk.	
CfS23-243	Land to North of Station Road, Holme	290073	Holme 5	Northern Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 1,2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was at the lowest flood risk of all sites in Holme that could potentially meet this criteria for consideration and therefore it is recommended that this site progresses to a Level 2 SFRA.	Allocated - Holme 1. The site was assessed in the Level 2 SFRA as 100% Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. The site allocation includes criteria on flood risk.
CfS:348	Sibson Garden Community	260.9	Sibson-cum-Stibbington 1	Northern Huntingdonshire	The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and progressed to level 2 SFRA The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. There is a significant hazard posed by the ordinary watercourses culverted underneath the A1. The site was also scrutinised through the Strategic Transport Study and Viability Assessments which identified that it has poor accessibility and that the mitigation required to the A1 to provide access would not be viable for the proposed development. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. . The Highways Agency also raised significant concerns saying that the site is likely to require significant highways improvements due to scale and that Elton Road is not suitable for connection or intensification without significant improvement. They noted that it is unclear whether suitable improvement could be achieved along its entire length within existing highway or land in the applicant's control. They continued that, this road also joins with the A1 at its northern extent; the existing junction is again unlikely to be suitable without significant improvement and would need to be discussed with National Highway. As there are limited sustainable connections to Peterborough, given the remote location of this site and existing infrastructure crossing the A1, it is unclear how this would be achieved. The Whole Plan Viability Assessment also demonstrates the site to be the most unviable of all sites put forward.	
CfS:51	Goldthorns, Stilton	0.48	Stilton 1	Northern Huntingdonshire	The site was tested by the Council as part of growth strategies 2 and 3. Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

					to local services and facilities whilst this site is located within open countryside. Site not progressed to Level 2 SFRA.	
CfS:165	Land to the rear of The Stilton Cheese Inn	0.44	Stilton 2	Northern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. This site is one of two sites in Stilton which are located within the built area with immediate access to services and facilities. Other sites put forward within Stilton were on the edge of the settlement with lesser accessibility to services and facilities. Progress to Level 2 SFRA	Allocated - Stilton 1.The site was assessed in the Level 2 SFRA as 100% within Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site.
CfS:131	Land off High Street, Stilton	2.6	Stilton 3	Northern Huntingdonshire	The Growth Strategy allows for limited development in Local Services Villages Sites 'CfS 165: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'CfS 186: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to local services and facilities whilst this site is located within open countryside. Site not progressed to Level 2 SFRA.	Not allocated
CfS:142	Land off Caldecote Road, Stilton	7.8	Stilton 4	Northern Huntingdonshire	Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					be locationally preferable due to being infill development within the built area of Stilton and in proximity to local services and facilities whilst this site is located within open countryside. Site not progressed to Level 2 SFRA.	
CfS:186	Land rear of 16 to 58 North Street, Stilton	2.98	Stilton 5	Northern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. This site is one of two sites in Stilton which are located within the built area with immediate access to services and facilities. They are contiguous sites. This site in particular is also a continuation of a recently built scheme with access already in place. Other sites put forward within Stilton were on the edge of the settlement with lesser accessibility to services and facilities. Progress to Level 2 SFRA	Allocated - Stilton 2.The site was assessed in the Level 2 SFRA as 100% within Flood Zone one and therefore a sequentially preferable site. Surface water risk is very low/low on 50% of the site. The site allocation will provide surface water mitigation.
CfS23-2412	Land to the South and West of 61 Church Street, Stilton	2.4308	Stilton 6	Northern Huntingdonshire	Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to local services and facilities whilst this site is located within open countryside. In response to the Autumn 2024 consultation on sites, the landowner's commented that the dwelling on the site could either be retained or demolished to improve access and screening and the right of way could be incorporated into public open spaces for residents. They confirm a surface water mitigation strategy will be developed and that development could be focused on the eastern half with the western half providing open green space and biodiversity net gain. Site not progressed to Level 2 SFRA.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:18	Eagle Business Park, Phase 3, Yaxley	16	Yaxley 1	Northern Huntingdonshire	The site was tested by the council as part of Growth Strategies 1,2 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site was put forward for a less vulnerable use with no reasonably alternative sites available for the local employment in a sustainable location close to existing residential development in Yaxley. The site presents an opportunity for expansion of an established employment area. Progress to Level 2 SFRA.	Allocated - Yaxley 1. The site was assessed in the Level 2 SFRA as 88 % within flood zone one with 3% flood zone 2, 5% flood zone 3a and 1 % 3b running along the eastern boundary with predominately low surface water risk. Flood risk from the site is predominantly from tidal sources. The site was put forward for a less vulnerable use with no reasonably alternative sites available for local employment in a sustainable location close to existing residential development in Yaxley. The site presents an opportunity for expansion of an established employment area. Less vulnerable uses are compatible with flood zones 2 and 3a. The findings of the SFRA level 2 note that the nominal area of functional floodplain onsite should not trigger the exception test nor negate any development plans. Development will be required be located away from the eastern edge of the site.
CfS:273	Land South of Main Street, Yaxley	3.52	Yaxley 3	Northern Huntingdonshire	Significant concerns were raised at local exhibitions and in response to the consultation regarding significant flooding and drainage issues being experienced across Yaxley. It was therefore deemed inappropriate to carry forward any residential led allocations at this time. Site not progressed to Level 2 SFRA.	Not allocated
CfS:228	Folly Farm, London Road, Yaxley	4.6	Yaxley 4	Northern Huntingdonshire	Site discounted as the combination of outcomes of the LAA and SFRA indicate that the site is inappropriate for development of housing through the Council's Land Availability Assessment as it was considered important to support the proposed neighbouring land uses and to reduce coalescence between Yaxley and Great Haddon. The site progressed to sustainability appraisal on the basis of assessment as open space and biodiversity net gain opportunities, where it was considered suitable. However, the land was not put forward for this use and therefore development as open space was not considered achievable. In response to the Autumn 2024 consultation, the site	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					promoter commented that if residential development does not occur, the equestrian use is likely to continue. They also state the site does not contain any agricultural structures and is entirely previously developed land. All relevant planning application documents, including a letter addressing perceived coalescence, have been submitted. The planning application on site was refused but is now awaiting the outcome of a Public Inquiry. Site not progressed to Level 2 SFRA.	
CfS23-241	Land South of 25 West End, Yaxley	5.9507	Yaxley 7	Northern Huntingdonshire	Significant concerns were raised at local exhibitions and in response to the consultation regarding significant flooding and drainage issues being experienced across Yaxley. It was therefore deemed inappropriate to carry forward any residential led allocations at this time. Site not progressed to Level 2 SFRA.	Not allocated
CfS:21	Land at Potton Road (Rectory Farm), Eynesbury Hardwick, St Neots	53	Abbotsley 1	Southern Huntingdonshire	The site was potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. In response to the Autumn 2024 consultation, the site promoter submitted additional documents and plans in support of their proposal. As identified in the capacity calculation for the site, the capacity is indicative and subject to review based on further information on potential routes for East West Rail. Since the Council's Land Availability Assessment was undertaken, the site is now not considered suitable for development in the short to medium term as the East West Rail safeguarded route runs through the site currently limiting development. Availability of land for development is therefore unknown. Site not progressed to Level 2 SFRA.	Not allocated
CfS:208	Land East of Wintringham Park, St Neots	54.47	Abbotsley 2	Southern Huntingdonshire	The site was potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Since the Land Availability Assessment was undertaken, the site is now not considered suitable for development in the short to medium term as the East West Rail safeguarded route runs through the site currently limiting development. Availability of land for	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					development is therefore unknown. Site not progressed to Level 2 SFRA.	
CfS:253	Land East of St Neots	31	Abbotsley 3	Southern Huntingdonshire	It was potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Since the LAA was undertaken, the site is now not considered suitable for development in the short to medium term as the East West Rail safeguarded route runs through the site currently limiting development. Availability of land for development is therefore unknown. Site not progressed to Level 2 SFRA.	Not allocated
CfS:103	Pear Tree Solar Farm, Abbotsley	72	Abbotsley 4	Southern Huntingdonshire	Site discounted as it has been confirmed that the site has secured planning permission for the Erection of a Solar Photovoltaic Farm through application 23/01507/FUL which was approved on 31 January 2025 and therefore does not require allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:278	North of Wintringham Hall, Cambridge Road, St Neots	19	Abbotsley 5	Southern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). However, the site is in close proximity to a Market Town, the most sustainable of settlements in the Settlement Hierarchy and has the opportunity to provide local employment opportunities in a highly sustainable location. Progress to Level 2 SFRA.	Allocated - Abbotsley 1.
CfS:143	Cell Energy, Vicarage Lane, Diddington	47.17	Diddington 1	Southern Huntingdonshire	It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However, this site has a planning application 23/00258/FUL	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					for the installation of solar photovoltaic park which is currently pending consideration. Site not progressed to Level 2 SFRA.	
CfS:257	Land West of West Street, Great Gransden	4.4	Great Gransden 1	Southern Huntingdonshire	It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However the Great Gransden Neighbourhood Plan has identified the site as part of the Gransden Brook Corridor. Policy G6 of the neighbourhood plan identifies this area as an opportunity to restore or enhance existing ecological network access. It is therefore now considered inappropriate for development due to potential ecological impact. Site not progressed to Level 2 SFRA.	Not allocated
CfS:249	Land West of Eltisley Road, Great Gransden	0.7	Great Gransden 2	Southern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. Site not progressed to Level 2 SFRA.The site is removed from the main built up area of Great Gransden, other village sites chosen are more sustainably located.	Not allocated
CfS:202	Land South of Caxton Road, Great Gransden	1.8	Great Gransden 3	Southern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). However, this site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance	Allocated - Great Gransden 1. The site was assessed in the Level 2 SFRA as 100% flood zone one and the majority of the site is at very low risk of surface water, therefore a sequentially preferable site. The allocation includes criteria to address flood risk.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					or maintain their vitality especially where this will support local services. This site presents the opportunity for the expansion for an established employment area 'Sand Road Industrial Estate' which will facilitate increased employment opportunities within a Local Services Village. Progress to Level 2 SFRA.	
CfS23-24234	Land adjacent to Meadow Road and Hall Farm Road, Great Gransden	1.93	Great Gransden 6	Southern Huntingdonshire	The site was tested by the Council as part of growth strategy option 1, 2, 3 and 4. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However, during the consultation on additional sites in the Spring of 2025, additional evidence was provided that demonstrated the site is subject to a restrictive covenant which limits the site to agricultural use up to 2047. The site is therefore not immediately available for development without amending this covenant. Site not progressed to Level 2 SFRA	Not allocated
CfS:14	West of High Street, Great Paxton	0.5	Great Paxton 1	Southern Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site meets this criteria Level 2 SFRA not required. Most sequentially preferable site (Strategic Recommendation A).	Allocated - Great Paxton 1. The site is 100% Flood Zone one and not shown to be at risk of surface water flooding, therefore a sequentially preferable site. The site was tested by the council as part of Growth Strategies 1,2 and 3.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:309	Land to the West of High Street, Great Paxton	1.12	Great Paxton 2	Southern Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). More sequentially preferable site in Great Paxton Allocated (CfS14) which has very low flood risk now and in the future. This site has medium fluvial risk and groundwater and reservoir risk making it less sequentially preferable. Site not progressed to Level 2 SFRA.	Not allocated
CfS:368	Land East of Dovecote Lane, Great Paxton	0.47	Great Paxton 3	Southern Huntingdonshire	It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Comments from the Highways Authority note that the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements meaning achievability of the site may be compromised. It was therefore not taken forward for testing as part of the growth strategy options. In addition the site was assessed as having high fluvial flood risk. More sequentially preferable sites were available in Great Paxton. Site not progressed to Level 2 SFRA.	Not allocated
CfS:302	Land North of Harley Industrial Park, Paxton Hill, Great Paxton	3.6	Great Paxton 4	Southern Huntingdonshire	The site was tested by the council as part of Growth Strategies 3 and 4, but has been included for consideration for employment related development to provide opportunities for expansion of established employment areas as per the recommendations of the Economic and Employment Needs Assessment. Progress to Level 2 SFRA.	Allocated - Great Paxton 2. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water therefore a sequentially preferable site. The site will to provide opportunities for local employment expansion and job opportunities in an established employment location.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:78	Land North of St James Road, Little Paxton	1.3	Little Paxton 1	Southern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	Allocated - Little Paxton 1. The site was assessed in the Level 2 SFRA as a site at nominal risk. The site is 100% flood zone one and not shown to be at risk of surface water flooding, therefore it is a sequentially preferable site. The site allocation includes criteria on how to address groundwater.
CfS:203	Land West of Little Paxton	20.36	Little Paxton 2	Southern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	Allocated - Little Paxton 2. The site was assessed in the Level 2 SFRA as 100% flood zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. The site allocation includes criteria on how to address groundwater.
CfS:331	Midloe Grange Farm, Midloe	20.26	Southoe and Midloe 1	Southern Huntingdonshire	The site now has a conservation covenant on it which means biodiversity net gain credits can be purchased from the site as off-site credits for development. Site not progressed to Level 2 SFRA.	Not allocated
CfS23-24237	Land North of Rectory Lane, Southoe	0.38	Southoe and Midloe 4	Southern Huntingdonshire	It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Comments from the Highways Authority note that the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements meaning achievability of the site may be compromised. It was therefore not taken forward for testing as part of the growth strategy options. In addition the site was assessed as having high fluvial flood risk. More sequentially preferable sites were available in Great Paxton. Site not progressed to Level 2 SFRA.	
CfS:239	Land North of Priory Park, St Neots	89	St Neots 1	Southern Huntingdonshire	It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would not support sustainable place-making. High/medium fluvial flood risk is present on the site. In addition, the achievability of the development is unclear because of the presence of overhead powerlines, odour and flood mitigation, noise and vibrational mitigation resultant from proximity to the railway line. It was however considered that it may be appropriate for green infrastructure, biodiversity net gain and potential extension to Priory Park subject to provision of safe crossing(s). In response to the Autumn 2024 consultation, the site promoter submitted several documents in support of their site. While these technical documents provide some further information and clarification on some of the issues identified in bringing forward this site including those related to flooding, connectivity, odour, landscape and utilities, the fundamental issues and constraints that impact the site have not been overcome. Therefore, the site is still considered to be inappropriate for built development but green infrastructure and biodiversity uses are still supported. Site not progressed to Level 2 SFRA.	Not allocated
CfS:317	Land South West of Potton Road, Eynesbury, St Neots	3.87	St Neots 6	Southern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2,& 3. The findings from the Sustainability	Allocated - St Neots 2. The site was assessed in the Level 2 SFRA as 100% within flood zone one and the majority of the site is at very low risk of surface water, therefore a sequentially preferable site. T

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Market Town, the most sustainable of settlements in the Settlement Hierarchy. Progress to Level 2 SFRA.	
CfS:362	Land North East of Wintringham, St Neots	0.3	St Neots 7	Southern Huntingdonshire	The site was put forward for multiple uses. It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as amenity levels would be inadequate. During the Autumn 2024 consultation, the site promoter commented stating that St Neots 7 is now in the same ownership as St Neots 8 (Urban and Civic) so can be considered together and which can allow for improved access options. Access to the site by vehicle in a safe manner was also considered a barrier to the safety of road users and pedestrians if residential or commercial options were chosen due to proximity to the roundabout. Commercial uses were considered potentially appropriate however access remains an issue and therefore the site was not taken forward for testing as part of the growth strategy options. Site not progressed to Level 2 SFRA.	Not allocated
CfS:16	Land East of Loves Farm (Tithe Farm Extension), St Neots	99.55	St Neots 8	Southern Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1,2,3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is	Allocated - St Neots 1. The site was assessed in the level 2 SFRA as within 100% Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is considered a sequentially preferable site.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					in a Market Town, the most sustainable of settlements in the Settlement Hierarchy. Progress to Level 2 SFRA.	
CfS23-24239	Land between the West Lodge and Home Farm, Waresley	1.6	Waresley-cum-Tetworth 1	Southern Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 1,2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This could potentially meet this criteria for consideration and therefore it is recommended that this site progresses to a Level 2 SFRA.	Allocated - Waresely 1. The site was tested in the Level 2 SFRA as a nominal risk site. The assessment concluded that the site is 100% within flood zone one and not shown to be at risk of surface water flooding, therefore it is a sequentially preferable site. .
CfS:269	Land West of Manor Farm, Yelling	1.09	Yelling 1	Southern Huntingdonshire	Site not progressed to Level 2 SFRA. The site was tested by the Council as part of growth strategy option 3. 					as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration. Site not progressed to Level 2 SFRA.	
CfS23-24304	Land at High Street, Brington	1.76	Brington and Molesworth 4	Western Huntingdonshire	During the consultation on additional sites in the Spring of 2025, the site promoter withdrew the site. It therefore will not be considered further.	Not allocated
CfS:98	Land West of Warren Lane, Bythorn	0.5	Bythorn and Keyston 1	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 1,2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was at the lowest flood risk of all sites in Bythorn that could potentially meet this criteria for consideration and therefore it is recommended that this site progresses to a Level 2 SFRA.	Site was allocated in the Preferred Options Local Plan as Bythorn 1. The Parish council stated preference for an alternative allocation at Home Farm because it has an existing access, is more centrally located in the village and could offer a high quality heritage lead redevelopment of the site. The site has been removed as a draft allocation.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:158	Land South West Of Old Toll Bar House Toll Bar Lane, Keyston	3	Bythorn and Keyston 2	Western Huntingdonshire	The Highways Agency noted that Toll Bar Lane appears to be around 130m in length, between the A14 and the bend. There is a road safety risk heading north with the potential for overtaking slow moving vehicles risking head on collisions or rear end shunts as commercial vehicles turn into the site. Due to these serious concerns the site was therefore considered inappropriate for development. Site not progressed to Level 2 SFRA.	Not allocated
CfS:111	Home Farm, Bythorn	0.98	Bythorn and Keyston 3	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Progress to Level 2 SFRA.	Allocated - Bythorn 1. The site was assessed in the Level 2 SFRA as 100% within flood zone 1, surface water risk to the site is predominantly very low. It is currently built development with the opportunity for residential conversion and residential development.
CfS:113	Land East of Clack Lane, Bythorn	0.33	Bythorn and Keyston 5	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater risk meaning it did not meet the criteria for consideration. Site not progressed to Level 2 SFRA.	Not allocated - This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater risk meaning it did not meet the criteria for consideration. More locationally sequentially preferable site selected – CfS 111.
CfS:12	Fruit Field opposite Victory Playing Field, Catworth	2.12	Catworth 1	Western Huntingdonshire	Preferred draft allocations within villages will only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in	Allocated - Catworth 1. The site was assessed in the Level 2 SFRA as 100% within flood zone 1, surface water risk to the site is predominantly very low.

Appendix 5- Assessment of Reasonable Alternative Sites

					providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Site progressed to Level 2 SFRA.	
CfS:64	Land West of Catworth	0.83	Catworth 2	Western Huntingdonshire	The Highways Authority raised significant concerns in relation to the narrow road and the feasibility of providing carriageway widening to accommodate two way traffic and suitable access. Site not progressed to Level 2 SFRA.	Not allocated
CfS:63	Land South of A14, Catworth	6.73	Catworth 3	Western Huntingdonshire	This site was tested by the Council as part of growth strategy option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. In addition, the Highways Agency noted that the suitability of the approach road network will need to be assessed in relation to the suitability to cater specifically for HCVs, as no further information was submitted the site was not progressed. The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres. This site is located away from such locations. Site not progressed to Level 2 SFRA.	Not allocated
CfS:17	Land East of Fox Road, Catworth	8.2	Catworth 4	Western Huntingdonshire	The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is inappropriate for built development as it would not support sustainable place-making and has limited potential for open space uses such as biodiversity net gain in the south eastern and northern portions of the site in conjunction with existing areas of trees at The Grange and Little Wood. The	Site not progressed to Level 2 SFRA. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is inappropriate for built development as it would not support sustainable place-making and has limited potential for open space uses such as biodiversity net gain in the south

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					site was put forward for multiple uses and therefore the final intention for the site is currently unknown and thus achievability of providing open space and biodiversity net gain.	eastern and northern portions of the site in conjunction with existing areas of trees at The Grange and Little Wood. The site was put forward for multiple uses and therefore the final intention for the site is currently unknown and thus achievability of providing open space and biodiversity net gain.
CfS:356	Land West of Fox Road, Catworth	5.8	Catworth 5	Western Huntingdonshire	The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is inappropriate for built development but has potential to accommodate a variety of open space uses and biodiversity net gain which should be restricted to the southern portion of the site which could be laid out to relate to the physical form of the existing village. The site was put forward for multiple uses and therefore the final intention for the site is currently unknown and thus achievability of providing open space and biodiversity net gain. Site not progressed to Level 2 SFRA.	Not allocated
CfS:358	Triangular land South of Church End, Catworth	2.9	Catworth 6	Western Huntingdonshire	The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is inappropriate for built development, but has the potential as a biodiversity net gain site. The site has the potential to come forward outside the Local Plan process for open space/or biodiversity net gain. Site not progressed to Level 2 SFRA.	Not allocated
CfS:35	Land west of Grafham Road Ellington	1.87	Ellington 3	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone	Allocated - Ellington 2

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					1 with low risk of surface water flood risk meaning it could meet the criteria for consideration. Progress to Level 2 SFRA	
CfS23-2421	Old Sheds at Manor Farm	2	Ellington 4	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 1,2, 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments)This site was at the lowest flood risk of all sites in Ellington that could potentially meet this criteria for consideration and therefore it is recommended that this site progresses to a Level 2 SFRA.	Allocated - Ellington 1. The site was assessed in the Level 2 SFRA as a site at nominal risk. The assessment concluded that the site is 100% within flood one one and not shown to be at risk of surface water flooding, therefore it is a sequentially preferable site.
CfS23-2422	Land between Thrapston Road East of Ellington and A14	1.2	Ellington 5	Western Huntingdonshire	The Highways Authority states the site is likely to require significant highway improvements in relation to the scale of development proposed and will require further technical work and engagement with National Highways. No further information has been received to ascertain whether highways improvements would be achievable and therefore the site was not taken forward for further testing through the growth strategy options. Fluvial flood zones, 2, 3a and 3b are present on the site along the site frontage which may also impede access and escape to and from the site. Site not progressed to Level 2 SFRA.	Not allocated
CfS23-2424	Land South East of Ellington	3.2	Ellington 6	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83).	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					More sequentially preferable sites were available in Ellington. CfS23-2421 and CfS:35	
CfS:303	Land adjacent to 24 Cedar Close, Grafham	1.14	Grafham 2	Western Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 1, 2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site meets this criteria. Progress to Level 2 SFRA.	Allocated - Grafham 1. The site was assessed in the Level 2 SFRA as 100% Flood Zone one and the majority of the site is at very low risk of surface water, therefore it is a sequentially preferable site. It includes criteria to address flood risk.
CfS23-2481	Field south of Village Farm, Grafham	1.62	Grafham 4	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with low risk of surface water flooding meaning it could meet the criteria for consideration. Progress to Level 2 SFRA.	Allocated - Grafham 2. The site was assessed in the Level 2 SFRA This site was assessed as being 100% flood zone 1 with low risk of surface water flooding meaning it could meet the criteria for consideration.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:125	Land East of B661, The Green, Great Staughton	0.9	Great Staughton 1	Western Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). However, the site is in a Local Services Village which has some services and facilities. The NPPF (paragraph 83) encourages the promotion of sustainable development in rural areas, where it will enhance or maintain their vitality especially where this will support local services. Progress to Level 2 SFRA.	Allocated - Great Staughton 1. The site was assessed in the Level 2 SFRA as within 100% Flood Zone one with surface water risk to the site predominantly very low therefore this is a sequentially a preferable site.
CfS:150	Land South of 29 The Green, Great Staughton	0.71	Great Staughton 2	Western Huntingdonshire	The site is allocated in the Great Staughton Neighbourhood Plan for housing. Site not progressed to Level 2 SFRA.	Not allocated. The site is allocated in the Great Staughton Neighbourhood Plan for housing.
CfS:373	Brook Farmyard (central site), Great Staughton	0.79	Great Staughton 4	Western Huntingdonshire	The site is allocated in the Great Staughton Neighbourhood Plan for provision of a healthcare facility and enabling housing development. Site not progressed to Level 2 SFRA.	Not allocated. The site is allocated in the Great Staughton Neighbourhood Plan for provision of a healthcare facility and enabling housing development.
CfS:375	Brook Farmyard (with western expansion), Great Staughton	0.98	Great Staughton 4	Western Huntingdonshire	The majority of the site is allocated in the Great Staughton Neighbourhood Plan for provision of a healthcare facility and enabling housing development. Site not progressed to Level 2 SFRA.	Not allocated. The majority of the site is allocated in the Great Staughton Neighbourhood Plan for provision of a healthcare facility and enabling housing development.
CfS:39	Land West of 5 High Street, Hail Weston	0.8	Hail Weston 1	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 1,2 & 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option	Allocated - Hail Weston 1. The site is 100% Flood Zone one and not shown to be at risk of surface water flooding, therefore a sequentially preferable site. The site was tested by the council as part of Growth Strategies 1,2 and 3.

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					(with some adjustments). The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site meets this criteria. Level 2 SFRA not required. Most sequentially preferable site (Strategic Recommendation A).	
CfS:187	The Walnuts, 113 High Street, Hail Weston	0.47	Hail Weston 3	Western Huntingdonshire	The Council will, apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with no flood risk meaning it could meet the criteria for consideration. However, site 'CfS39' also met this criteria by not being at risk of flooding. 'CfS 39' was selected as a draft residential allocation as it is closer to local services and facilities and will not impact the setting of an heritage asset. This site 'CfS 187' is directly over the road from the grade II* listed St Nicholas's Church and any development scheme would need to be sensitive to the setting of this building. Site not progressed to Level 2 SFRA.	Not allocated
CfS:182	Land South of 143 High Street, Hail Weston	1.52	Hail Weston 4	Western Huntingdonshire	The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Site not progressed to Level 2 SFRA.	
CfS:296	Land opposite Brook End Farm, 17-19 Ford End, Hail Weston, PE19 5JR	1.68	Hail Weston 6	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Although this site meets this criteria a more preferably sequential site has been chosen in 'CfS 39' which has no flood risk. Site not progressed to Level 2 SFRA.	Not allocated
CfS:267	Land South West of Pound Close, Hail Weston	0.71	Hail Weston 7	Western Huntingdonshire	The Council will apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages will only be selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk across the majority of the site. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Although this site meets this criteria a more preferably sequential site has been chosen in 'CfS 39' which has no flood risk. Site not progressed to Level 2 SFRA.	Not allocated
CfS:7	Brittens Farm, Station Road, Kimbolton	1.4	Kimbolton 1	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Options 2, 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that	Allocated - Kimbolton 1. The site was assessed in the Level 2 SFRA as 84.8 % within flood zone one with predominately low surface water risk with some high risk areas in association with the River Kym to the south. Fluvial flood risk is limited to the south of the site in association with the River Kym. The

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. No other sequentially preferable sites were available for residential development within Kimbolton. The site has elements of medium and high flood risk in association with the River Kym, however the Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. Progress to Level 2 SFRA to determine whether development can be sequentially located outside areas of flood risk.	Environment Agency's Flood Risk Assessment Standing Advice (22 October 2025) states that "you may not need a sequential test if development can be laid out so that only elements such as public open space, biodiversity and amenity areas are located in areas at risk of any source of current or future flooding." The premise of this was subsequently included within Paragraph 175 of the NPPF which was updated in December 2024. The Level 2 SFRA demonstrates that built development can be located within flood zone one. A third of the site will be reserved specifically for open space to safeguard against flooding and remain as a blue/green corridor offering multifunctional benefits including ecological, social and amenity value to the site.
CfS:365	Land South East of Bicton Industrial Estate Kimbolton	3.48	Kimbolton 10	Western Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the Council as part of the Growth Strategy Options 2, 3 & 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities. Progress to Level 2 SFRA.	Allocated - Kimbolton 2. The site is 100% Flood Zone one and the majority of the site is at very low risk of surface water, therefore sequentially preferable site. T
CfS23-24319	Stonely Grange, South of Easton Road - plot 1	0.2809	Kimbolton 13	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments), therefore the site is considered inappropriate for allocation. This site was assessed as 100% flood zone 1 but with high and medium surface water flood risk and therefore does not meet the criteria for consideration.	
CfS:31	Land East of Stow Road, Kimbolton	17.18	Kimbolton 2	Western Huntingdonshire	25/01543/OUT, outline planning application with all matters reserved except for site access for the erection of up to 190 homes, provision of public open space and landscaping, surface water attenuation and associated infrastructure is currently pending consideration. Progress to Level 2 SFRA.	Not allocated. Site has not been proposed as an allocation. 25/01543/OUT, outline planning application with all matters reserved except for site access for the erection of up to 190 homes, provision of public open space and landscaping, surface water attenuation and associated infrastructure is currently pending consideration.
CfS:364	Land North of Gimbers End, Stonely	0.8	Kimbolton 6	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments)and therefore sites in Stonley were not considered suitable for allocation. This site was assessed as 100% flood zone 1 but with high and medium surface water flood risk and therefore does not meet the criteria for consideration. Site not progressed to Level 2 SFRA.	Not allocated
CfS:354	Land North of Station Road/Stow Road, Kimbolton	0.43	Kimbolton 8	Western Huntingdonshire	Site discounted as the combination of outcomes of the Council's Land Availability Assessment and Sustainability Appraisal indicate that the site is inappropriate for development until the current allocation is completed due to its isolated location within the open countryside and low potential for integration into the village. Site not progressed to Level 2 SFRA.	Not allocated

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
CfS:361	Land North of Easton Road Stonely	0.98	Kimbolton 9	Western Huntingdonshire	The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Stonley were not considered appropriate for allocation. Site not progressed to Level 2 SFRA. This site was assessed as 100% flood zone 1 but with high and medium surface water flood risk and therefore does not meet the criteria for consideration.	Not allocated
CfS:24	Land South of Manor Farm, Old Weston	3.52	Old Weston 1	Western Huntingdonshire	Site not within preferred growth option. Site not taken forward as an allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:319	Land South of Spaldwick Road, Stow Longa	0.48	Stow Longa 2	Western Huntingdonshire	The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered appropriate for allocation. Site not progressed to Level 2 SFRA.	Not allocated
CfS:371	Land adjacent to London Road (A1198), adjoining Bleakley Farm, Godmanchester	4.91	Godmanchester 9	Central Huntingdonshire	This site falls within Strategic Recommendation C, the third most sequentially preferable category of site where many of the sites submitted fall. The site was tested by the council as part of Growth strategy 1,2 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The site is	Allocated - Godmanchester 2. The allocation includes at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street (areas at flood risk) to sequentially located built development in flood zone 1 and green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible natural green space and flood mitigation. This will provide a strategic approach to flood risk in association with

Appendix 5- Assessment of Reasonable Alternative Sites

CfS Ref	Site Name	Hectares (ha)	LAA Ref	LAA Doc	Council Comments including SA outcomes and technical evidence gathering including SFRA	Council Decision on Site for Local Plan
					in a Service Centre, the second most sustainable of settlement categories in the Settlement Hierarchy with access to multiple services and facilities and in proximity to a Market Town (Huntingdon) with enhanced services and facilities. The site in isolation had previously been discounted as the combination of outcomes of the LAA and SA indicated that the site is inappropriate for development on its own as the necessary intervening land to integrate the site into Godmanchester was not in the site promoter's control and has integration challenges of its own. This site has been combined with Cfs87, 139, 285, 371, 372, 23-24180 to promote a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and provide betterment. Progress to Level 2 SFRA.	Stoneyhill Brook and provide flood risk betterment to the wider area.
CfS23-2412	Land to the South and West of 61 Church Street, Stilton	2.43	Stilton 6	Northern Huntingdonshire	The Growth Strategy allows for limited development in Local Services Villages Sites 'CfS 165: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'CfS 186: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to local services and facilities whilst this site is located within open countryside.	Not allocated

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

12.1 The following table sets out all the proposed policies in the Regulation 18 Preferred Options Local Plan and whether these have progressed into the Regulation 19 Local Plan. It identifies where policies have been removed and the new policies that have been added. A brief reason for the exclusion and inclusion of policies is also given in the table below. The table also identifies where policy references have been updated for ease of comparing policies between versions of the Local Plan

Table 15

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 1 - How much development do we expect?	Retained	LP 1 - How much development do we expect?	No	N/A	No changes made
LP 2 - Our Strategy for Change	Retained	LP 2 - Our Strategy for Change	Yes	No	Minor wording updates. Inclusion of grade 1 agricultural land and more emphasis on defence sector made to policy.
	ADDITION - split out from a former policy	LP 3 – Distribution of Growth	Yes	No	The policy text had formerly been in LP2 but has been moved into its own policy for clarity.
	ADDITION - split out from a former policy	LP 4 - Green and Blue Infrastructure Priority Areas	Yes	No	The policy text had formerly been within LP12 but has been split into two green and blue infrastructure priorities for clarity. This policy designates areas.
LP 3 - How will infrastructure be provided	Retained – reference updated	LP 12 - How will infrastructure be provided	Yes	No	Minor wording updates.
LP 4 - Securing infrastructure provision	Retained – reference updated	LP 13 - Securing infrastructure provision	Yes	No	Updates to references to appendices. Community facilities including public meeting halls and places of worship added.
	ADDITION	LP 14 – Supporting and enabling strategic infrastructure	Yes	Yes	This is a new strategic policy so is considered to be a significant change.

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 5 - Settlement Hierarchy	Retained	LP 5 - Settlement Hierarchy	Yes	No	Some amendments to order in table and change of categorisation of Great Gransden from Local Service Village to Village.
LP 6 - Market Towns	Retained	LP 6 - Market Towns	Yes	No	Minor wording updates and updates to use classes.
LP 7 - Service Centres	Retained	LP 7 - Service Centres	Yes	No	Minor wording updates and updates to use classes.
LP 8 - Local Services Villages	Retained	LP 8 - Local Services Villages	Yes		Minor wording updates and inclusion of class E and F development.
LP 9 - Villages	Retained	LP 9 - Villages	Yes	No	Minor wording updates. Removal of thresholds relating to rural exceptions housing.
LP 10 - Hamlets and the Countryside	Retained	LP 10 - Hamlets and the Countryside	Yes	No	Minor wording updates.
LP 11 - Health and well-being	Retained – reference updated	LP 17 - Health and well-being	Yes	**Yes**	Threshold for criteria amended to 50 from 100 homes and includes commercial development. Additional thresholds added for 50-199 homes and for 200 or more homes.
LP 12 - Green and Blue Infrastructure	Retained – reference updated	LP 19 - Green and Blue Infrastructure	Yes	No	Policy shortened to remove element designating priority areas to a separate policy.
LP 13 - Managing Flood Risk	Retained – reference updated	LP 21 - Managing Flood Risk	Yes	No	Policy checked against the NPPF and PPG, minor changes made where applicable. Amendments relating to critical drainage areas, hydraulic modelling, groundwater, water compatible development and land in defended areas
LP 14 - Managing Waste Water	Retained – reference updated	LP 22 - Managing Waste Water	Yes	No	Additional criteria included to address non-mains connection. Wording updates seeking agreement with Anglian Water on waste water capacity.

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 15 - Managing Surface Water	Retained – reference updated	LP 23 - Managing Surface Water	Yes	No	Reference within the policy included to address Critical Drainage Areas. Surface water hierarchy added.
LP 16 - Water Efficiency	Retained – reference updated	LP 24 - Water Efficiency	Yes	No	Minor wording updates and inclusion of support for water efficiency measures in non-household development.
LP 17 - Approach to renewable energy schemes	Retained – reference updated	LP 16 -Approach to renewable energy schemes	Yes	Yes	Policy shortened to provide clarity for ease of implementation and links to supporting evidence documents moved to supporting text. Reference to critical utilities infrastructure added.
LP 18 - Transport, Travel and Connectivity	Retained – reference updated	LP 15 - Facilitating Transport, Travel and Connectivity	Yes	No	Minor wording changes to include inclusive and accessible transport and address cross boundary impacts with neighbouring authorities.
LP 19 - Design context and character	Retained – reference updated	LP 25 - Design context and character	Yes	No	Neighbourhood plan design guides added to policy.
LP 20 - Creating high quality places and spaces	Retained – reference updated	LP 26 - Creating high quality places and spaces	Yes	No	Headings added to the policy for ease of interpretation and criteria reordered.
LP 21 - Placemaking for larger scale developments	Retained – reference updated	LP 11 - Placemaking for larger scale developments	Yes	Yes	Policy moved to the strategy section of the Local Plan. The SA at Regulation 18 had been undertaken using the policies SA questions, it will need to be reappraised using the Strategy SA questions.
LP 22 - Ensuring amenity for new buildings and neighbours	Retained – reference updated	LP 27 - Ensuring amenity for new buildings and neighbours	Yes	No	Vibration added to the list of sources of pollution.

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 23 - Minimising embodied carbon in new buildings	Retained – reference updated	LP 28 - Minimising embodied and operational carbon in new buildings	Yes	**Yes**	The policy has been merged with the below policy to include operational carbon and requirements amended to align with national standards in a single policy. Updated SA required.
LP 24 - Minimising operational energy consumption in new buildings	DELETED – merged with above policy	N/A	Yes	**Yes**	See above.
LP 25 - Making existing buildings more energy efficient	Retained – reference updated	LP 29 - Making existing buildings more energy efficient	Yes	No	Principle of policy remains unchanged but text amended to clarify that proposals that involve change of use, conversions or extension to an existing building must demonstrate how they have considered energy efficiency in their proposals.
LP 26 - Supporting carbon capture through nature	Retained – reference updated	LP 20 - Supporting carbon capture through nature	Yes	**Yes**	Policy moved to the strategy section of the Local Plan. The SA at Regulation 18 had been undertaken using the policies SA questions, it will need to be reappraised using the Strategy SA questions. Policy shortened and amended for clarity.
LP 27 - Supporting active and sustainable travel	Retained – reference updated	LP 30 - Supporting active and sustainable travel	Yes	No	Minor wording changes for clarity. Addition of equestrian users to policy.
LP 28 - Parking and Vehicle Movement	Retained – reference updated	LP 31 - Parking Provision and Vehicle Movement	Yes	No	Criterion added for communal cycle parking.
LP 29 - Electric vehicle charging points	Retained – reference updated	LP 32 – Providing electric vehicle charging points	Yes	No	Minor wording changes for clarity. Addition of heritage criteria.
LP 30 - Preventing and reducing air pollution	Retained – reference updated	LP 33 - Preventing and reducing air pollution	Yes	No	Criteria adding requiring air quality assessment where development will increase traffic on roads within 200m of internationally and nationally protected nature sites.

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 31 - Preventing and reducing ground contamination and groundwater pollution	Retained – reference updated	LP 34 - Preventing and reducing ground contamination and groundwater pollution	No	N/A	No changes made
LP 32 - Protecting and enhancing Established Employment Areas	Retained – reference updated	LP 35 - Protecting and enhancing Established Employment Areas	Yes	No	Amendments to terminology for consistency across the Local Plan. Removal of impact on internationally protected sites as addressed through LP52 (formerly LP49).
LP 33 - Expansion and diversification of rural businesses	Retained – reference updated	LP 36 - Expansion and diversification of rural businesses	Yes	No	Minor wording amendments.
LP 34 - Shaping new businesses in the countryside	Retained – reference updated	LP 37 - Shaping new businesses in the countryside	Yes	No	Minor amendments made to some criteria. Criterion added to avoid irreversible loss of best and most versatile agricultural land.
LP 35 - Enabling key clusters and innovation-led growth	Retained – reference updated	LP 38 - Enabling key clusters and innovation-led growth	Yes	No	Minor amendments made to some criteria. Inclusion of criteria regarding proven need of a strategic business cluster.
LP 36 - Enabling logistics and distribution	Retained – reference updated	LP 39 - Enabling logistics and distribution	Yes	No	Policy amended for clarity with updated site references.
LP 37 - Helping tourism and recreation in the countryside	Retained – reference updated	LP 40 - Helping tourism and recreation in the countryside	Yes	No	Minor typographical amendments made.
LP 38 - Defining our Retail Hierarchy	Retained – reference updated	LP 41 - Defining our Retail Hierarchy	Yes	**Yes**	Local Service Villages element removed. Criteria regarding floorspace size removed from policy to supporting text. Use classes removed to provide flexibility on appropriate uses.

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 39 - Promoting Town Centre Vitality	Retained – reference updated	LP 42 - Promoting Town Centre Vitality and Viability	Yes	Yes	Inclusion of viability and C1 Hotels to policy. Removal of requirement of hot food takeaways will only be supported within defined Local Centre of a market town.
LP 40 - Supporting Local Services and Facilities	Retained – reference updated	LP 43 - Supporting Local Services	Yes	Yes	The loss of facilities outside designated areas is now addressed as a separate element in the policy to distinguish between the loss of facilities in areas with no defined town or local centre. Hot food takeaway policy expanded to include market towns.
	ADDITION	LP 44 - Services and facilities outside Designated Centres	Yes	Yes	This is a new policy so is considered to be a significant change.
LP 41 - Providing affordable homes	Retained – reference updated	LP 18 - Providing affordable homes	Yes	Yes	Policy moved to the strategy section of the Local Plan. The SA at Regulation 18 had been undertaken using the policies SA questions, it will need to be reappraised using the Strategy SA questions. Requirement for affordable housing within specialist older persons housing schemes removed. Reference to the nationally described space standards and M4(2)/M4(3) standards removed. Additional policy wording on overage clauses, exception for military housing and clustering guidance.
LP 42 - Promoting a mix of housing	Retained – reference updated	LP 45 - Promoting a mix of housing	Yes	No	Wording added to policy to clarify that some of the documents listed in the policy may only apply based on the location of a development site and any local assessment of housing need demand within a relevant town or parish council to the proposed scheme.
LP 43 - Ensuring accessible and adaptable homes	Retained – reference updated	LP 46 - Ensuring accessible and adaptable homes	Yes	Yes	The policy simplified and amended to set out requirements for scales of development: 50 or more homes, 20-49 homes and less than 20 homes to reflect what may be more viable at these scales of development. The revised policy clearly sets out

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
					requirements for M4(3(2)(a) and M43(2)(b) for market and affordable homes with remaining homes being built to M4(2).
LP 44 - Facilitating self and custom build homes	Retained – reference updated	LP 47 - Facilitating self and custom build homes	Yes	**Yes**	Removal of requirement of 5% of homes on sites of 100 or more homes to provide self and custom build homes. Inclusion of criteria for respecting local character and reference to neighbourhood plans. Marketing criteria simplified. Plot passports added to policy.
LP 45 - Supporting specialist housing	Retained – reference updated	LP 48 - Supporting specialist housing	Yes	**Yes**	Threshold for provision of affordable housing on specialist housing increased from 10 homes to 50 homes.
LP 46 - Supporting houses in multiple occupation	Retained – reference updated	LP 49 - Supporting houses in multiple occupation	No	N/A	No changes made
LP 47 - Promoting Rural Exceptions Housing	Retained – reference updated	LP 50 - Promoting Rural Exceptions Housing	Yes	**Yes**	Policy criteria amended to apply to sites on land well related to an existing settlement, rather than within. Criterion added to require sensitive development to surrounding landscape and townscape. Text added regarding gypsy and traveller provision on rural exceptions sites
LP 48 - Gypsies, Travellers and Travelling Showpeople	Retained – reference updated	LP 51 - Gypsies, Travellers and Travelling Showpeople	Yes	No	Amendments to terminology for consistency across the Local Plan. Additional criteria regarding not adversely impacting existing infrastructure.
LP 49 - Protecting our nature conservation sites	Retained – reference updated	LP 52 - Protecting our nature conservation sites	Yes	No	Policy reworded to align with legislation on internationally protected sites. Inclusion of Local Nature Reserves to policy and reference to Local Nature Recovery Network.

Appendix 6 - Table of policy changes between Preferred Options and Pre-Submission

Preferred Options Policy Reference	Retained/ deleted	Submission Local Plan Policy Reference	Changed?	Significant?	Commentary of key changes
LP 50 - Enhancing Biodiversity and Geodiversity	Retained – reference updated	LP 53 - Enhancing Biodiversity and Geodiversity	Yes	Yes	The policy no longer encourages a minimum of 20% BNG but now aligns with national policy and legislation on BNG and encourages in excess of 10% where possible.
LP 51 - Protecting our trees, woodlands, hedges and hedgerows	Retained – reference updated	LP 54 - Protecting our trees, orchards, woodlands, hedges and hedgerows	Yes	Yes	Inclusion of orchards to the policy. Value defined to include arboricultural, ecological or landscape value.
LP 52 - Protecting our Open Spaces	Retained – reference updated	LP 55 - Protecting our open spaces, outdoor sport and recreational facilities	Yes	Yes	Inclusion of outdoor sport and recreational facilities to the policy. Policy simplified regarding loss of such facilities and compensatory measures.
LP 53 - Heritage Assets and their Settings	Retained – reference updated	LP 56 - Heritage Assets and their Settings	Yes	No	Archaeology element amended to align more closely with national requirements.
LP 54 - Water related Development	Retained – reference updated	LP 57 - Water related Development	Yes	No	Amendments to terminology for consistency across the Local Plan. Criterion added regarding berths outside of a built-up area must be in a sustainable location. Minor amendment to Grafham Water element of the policy to include a resilience to water supply to support growth.

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

13.1 The following table sets out all the proposed allocation sites in the Regulation 18 Preferred Options Local Plan and whether these have progressed into the Regulation 19 Local Plan. It identifies where sites have been removed and the new sites that have been added. A brief reason for the exclusion and inclusion of sites is also given in the table below. The table also identifies where policy references have been updated for ease of comparing sites between versions of the Local Plan.

Table 16

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
North Huntingdon 1: Huntingdon Racecourse	Retained	North Huntingdon 1: Huntingdon Racecourse	Yes	No	Archaeology criterion added
North Huntingdon 2: Land North of A141 between the Racecourse and A1307	Retained	North Huntingdon 2: Land North of A141 between the Racecourse and A1307	Yes	**Yes**	Rewording of proposed uses for clarity and inclusion of 1,000 sqm of sui generis floorspace for a bus depot. Wording amendments referencing Great Ouse Valley and requirement for assessment of impact on SSSIs and early engagement with Anglian Water and Environment Agency on waste water
North Huntingdon 3: Lodge Farm, North of A141	Retained	North Huntingdon 3: Lodge Farm, North of A141	Yes	**Yes**	The site boundary has been amended to omit land around Lodge Farm and the parcel on the eastern side of the A141, capacity of 4,900 homes retained. Archaeology criterion and employment and skills plan requirement added. Education provision made more flexible. Inclusion of a mobility hub and an innovation quarter. Further criteria on A141 including land for active travel Proposed care home criteria amended requiring an up to date assessment to inform the quantity of care beds to be provided.
North Huntingdon 4: Wyton Airfield	Retained	North Huntingdon 4: Wyton Airfield	Yes	**Yes**	4,000 home capacity retained; allows ancillary/"last mile" B8; integrated water

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
					strategy strengthened to include natural flood management; stronger settlement separation wording between the site and Houghton and Wyton. Archaeology criterion added. Proposed care home criteria amended requiring an up to date assessment to inform the quantity of care beds to be provided.
Huntingdon 1: Hinchingbrooke Hospital	Retained	Huntingdon 1: Hinchingbrooke Hospital	Yes	**Yes**	Expanded policy requirements including affordable key worker housing, health-related R&D space, day nursery, public worship space, open space provision to mitigate recreational impacts on nearby nature sites and biodiversity mitigation. Archaeology criterion and integration of existing Anglian Water infrastructure added
Huntingdon 2: Amber Centre, Mayfield Road	Retained	Huntingdon 2: Amber Centre, Mayfield Road	Yes	No	Integration of existing Anglian Water infrastructure criterion added.
St Neots 1: East of Loves Farm (Tithe Farm)	Retained	St Neots 1: East of Loves Farm (Tithe Farm)	Yes	No	Minor wording amendments for clarity. Archaeology criterion added. Liaison with East West Rail Co regarding safeguarding land for delivery of East West Rail.
St Neots 2: South West of Potton Road	Retained	St Neots 2: South West of Potton Road	Yes	No	Minor wording amendments for clarity.
St Ives 1: North of Houghton Road	Retained	St Ives 1: North of Houghton Road	Yes	No	Requirement for a masterplan added and minor wording amendments for clarity Archaeology criterion added. Refines, clarifies and strengthens mitigation measures

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
Bury 1: Bury Industrial Estate, Old Station Road	Retained	Bury 1: Bury Industrial Estate, Old Station Road	Yes	No	Refines, clarifies and strengthens mitigation measures. Criterion added requiring 15m to pumping station to allow future maintenance.
Bury 2: Off Cheveril Lane	Retained	Bury 2: Off Cheveril Lane	Yes	No	Removal of open space from uses retaining it solely for biodiversity net gain. Inclusion of heritage criterion identifying sensitivity to Ramsey Conservation Area and wider rural setting to be supported by a heirtage assessment.
Bury 3: RAF Upwood - Phase 3, Bury	Retained	Bury 3: RAF Upwood - Phase 3, Bury	Yes	No	Minor wording amendments for clarity.
Ramsey 1: RAF Upwood phase 4	Retained	Ramsey 1: RAF Upwood phase 4	Yes	No	Minor wording amendments for clarity. Safeguarding access to existing Anglian Water infrastructure criterion added.
Ramsey 2: North of Hollow Lane	Retained	Ramsey 2: North of Hollow Lane	Yes	No	Minor wording amendments for clarity. Archaeology criterion added and the setting of the Abbey and associated assets added to heritage criterion.
Ramsey 3: East of Wood Lane	DELETED	N/A	Yes	N/A	Upon review of the concerns and objections raised to the loss of community land at Ramsey 3, the site has been removed as a draft allocation despite the rationale for allocating it being to secure the long term use of the wider site for community open space uses.
Brampton 1: Wallis Land, Thrapston Road	Retained	Brampton 1: Wallis Land, Thrapston Road	Yes	No	Minor wording amendments and reordering of criteria for clarity. Criterion added regarding minerals.
Brampton 2: Land off Huntingdon Road	Retained	Brampton 2: Land off Huntingdon Road	Yes	No	Criterion amended identifying incorporation of public right of way, access from Huntingdon Road. Criterion added requiring heritage assessment. Criterion added regarding waste water flows

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
Fenstanton 1: Galley Hill	Retained	Fenstanton 1: Galley Hill	Yes	No	Archaeology criterion and safeguarding access to existing Anglian Water infrastructure added. Inclusion of Natural Flood Management to reduce flood risk Wording amendments referencing landscape and visual impact assessment and requirement for assessment of impact on SSSIs.
Godmanchester 1: Former RGE Engineering site and HDC Car Park, The Avenue	Retained	Godmanchester 1: Former RGE Engineering site and HDC Car Park, The Avenue	Yes	No	Safeguarding access to existing Anglian Water infrastructure criterion added. Inclusion of Natural Flood Management to reduce flood risk. New text securing connectivity to footbridge and common land.
Godmanchester 2: South of Godmanchester, off the A1198	Retained	Godmanchester 2: South of Godmanchester, off the A1198	Yes	**Yes**	The site area has been expanded to include additional land at Bluegate which increases the capacity of the site by 30 homes and also to include land on the southern edge to provide a more comprehensive approach to landscaping and flood mitigation along Stoneyhill Brook. Inclusion of Natural Flood Management to reduce flood risk. Safeguarding access to existing Anglian Water infrastructure criterion and archaeology criterion added. Minor wording amendments for clarity
Godmanchester 3: Former A14 Compound, North of A1198 Roundabout	Retained	Godmanchester 3: Former A14 Compound, North of A1198 Roundabout	Yes	No	Minor wording amendments. Safeguarding access to existing Anglian Water infrastructure criterion added
Kimbolton 1: Brittens Farm, Station Road	Retained	Kimbolton 1: Brittens Farm, Station Road	Yes	No	Minor wording amendments to criteria and proposed uses for clarity. Archaeology criterion added. Criterion added regarding minerals
Kimbolton 2: South East of Bicton industrial Estate, Stow Road	Retained	Kimbolton 2: South East of Bicton industrial Estate, Stow Road	Yes	No	Minor amendments regarding on site drainage and wastewater solutions.

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
Little Paxton 1: North of St James Road	Retained	Little Paxton 1: North of St James Road	Yes	No	Minor wording amendments for clarity. Criterion added requiring provision of open space to mitigate recreational impacts on nearby nature sites. Mineral extraction criterion amended to avoid adverse impact in Little Paxton Quarry
Little Paxton 2: West of Great North Road	Retained	Little Paxton 2: West of Great North Road	Yes	Yes	Site capacity has been increased from 220 to 410. The original SA for the site undertaken as part of the in combination LAA and SA assessment was based on 410 homes (as submitted by the site promoter). An update to the SA was recorded at Regulation 18 dropping the capacity to 220 in line with CCC Education comments. Minor wording amendments for clarity. Criterion added requiring provision of open space to mitigate recreational impacts on nearby nature sites. Archaeology criterion and safeguarding access to existing Anglian Water infrastructure criterion added
Sawtry 1: West of Glatton Road	Retained	Sawtry 1: West of Glatton Road	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion added
Sawtry 2: East of Glatton Road and North of Brookside Industrial Estate	Retained	Sawtry 2: East of Glatton Road and North of Brookside Industrial Estate	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion added
Sawtry 3: West of Toll Bar Way and Green End Roa	Retained	Sawtry 3: West of Toll Bar Way and Green End Road	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion added
Sawtry 4: Off Old North Road	Retained	Sawtry 4: Off Old North Road	Yes	No	Minor wording amendments to criteria for clarity and to proposed uses to provide some additional flexibility for site developer. Archaeology criterion added

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
Sawtry 5: Little Common Farm	Retained	Sawtry 5: Little Common Farm	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion and safeguarding access to existing Anglian Water infrastructure criterion added.
Sawtry 6: North of Black Horse Industrial Estate	Retained	Sawtry 6: North of Black Horse Industrial Estate	Yes	No	Minor wording amendments to criteria for clarity and to proposed uses to provide some additional flexibility for site developer. Archaeology criterion and safeguarding access to existing Anglian Water infrastructure criterion added.
Somersham 1: College Farm, West of Parkhall Road	Retained	Somersham 1: College Farm, West of Parkhall Road	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion and safeguarding access to existing Anglian Water infrastructure criterion added.
Somersham 2: South of College Farm	DELETED	N/A	Yes	N/A	Following a review of comments received from residents and stakeholders, who cite concern regarding infrastructure capacity, cumulative impact of all draft allocations on the village, transport impacts, landscape harm and scale of the proposal, the site has been removed as a draft allocation.
Somersham 3: Dews Bus and Coach Depot, Chatteris Road	Retained – reference updated	Somersham 2: Dews Bus and Coach Depot, Chatteris Road	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion and added. Criterion added requiring provision of open space to mitigate recreational impacts on nearby nature sites.
Somersham 4: College Farm, West of Newlands Industrial Estate	Retained – reference updated	Somersham 3: College Farm, West of Newlands Industrial Estate	Yes	No	Minor wording amendments to criteria for clarity.
Yaxley 1: Eagle Business Park, phase 3, Broadway	Retained	Yaxley 1: Eagle Business Park, phase 3, Broadway	Yes	No	Minor wording amendments to criteria for clarity. Safeguarding access to existing Anglian Water infrastructure criterion added.

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
Abbots Ripton 1: Home Farm South	Retained	Abbots Ripton 1: Home Farm South	Yes	No	Refines, clarifies and strengthens mitigation measures. Archaeology criterion and added. Criterion added requiring 15m to pumping station to allow future maintenance.
Alconbury 1: South of Great North Road	Retained	Alconbury 1: South of Great North Road	Yes	No	Refines, clarifies and strengthens mitigation measures. Safeguarding access to existing Anglian Water infrastructure criterion added.
Alconbury 2: East of Globe Lane	Retained	Alconbury 2: East of Globe Lane	Yes	No	Minor wording amendments to criteria for clarity.
Bluntisham 1: South of Rectory Road	DELETED	N/A	Yes	N/A	Following a review of comments received from residents and stakeholders, who cite concern regarding heritage and impact on the Grade II* Bluntisham House as well as potential impact to ridge and furrow land, alongside concerns about the cumulative impact of development on services and infrastructure within Bluntisham, the site has been removed as a draft allocation.
Bluntisham 2: Land off 18 Holliday's Road	Retained – reference updated	Bluntisham 1: Land off 18 Holliday's Road	Yes	No	Minor wording amendments to criteria for clarity. Archaeology criterion and added.
Bluntisham 3: West of Colne Road	Retained – reference updated	Bluntisham 2: West of Colne Road	Yes	No	Refines, clarifies and strengthens mitigation measures.
Great Staughton 1: East of B661, The Green	Retained	Great Staughton 1: East of B661, The Green	Yes	No	Refines, clarifies and strengthens mitigation measures. Safeguarding access to existing waste water infrastructure criterion added.
Hemingford Abbots 1: The Lattenburys	Retained	Hemingford Abbots 1: The Lattenburys	Yes	**Yes**	The site boundary has been amended to include an land on the western edge to align with field boundaries and provide a more comprehensive landscaped edge on this side. Capacity of 3,800 retained. Archaeology

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
					criterion and exploration of underground waste collection system added. Minor wording amendments to criteria and proposed uses for clarity supporting a sustainable mix of appropriate uses and sustainable transport options. Proposed care home criteria amended requiring an up to date assessment to inform the quantity of care beds to be provided.
Houghton and Wyton 1: Ruddles Lane	Retained	Houghton and Wyton 1: Ruddles Lane	Yes	No	Refines, clarifies and strengthens mitigation measures.
Needingworth 1: Giffords Park, East of B1040	Retained	Needingworth 1: Giffords Park, East of B1040	Yes	No	Refines, clarifies and strengthens mitigation measures. Proposed care home criteria amended requiring an up to date assessment to inform the quantity of care beds to be provided.
Needingworth 2: North of Bluntisham Road	Retained	Needingworth 2: North of Bluntisham Road	Yes	Yes	Western parcel removed due to consultation responses, especially in relation to traffic impacts, flood risk, coalescence with neighbouring settlements, landscape concerns and the size of the site. This reduces the capacity from 290 homes to 100. The site had originally been submitted as two sites and assessed separately through the in combination LAA and SA assessment, the SA for just the eastern parcel will be brought forward into this document to show an updated position. Minor wording amendments to criteria for clarity. Archaeology criterion and added
Offord D'Arcy 1: West of Graveley Road	Retained	Offord D'Arcy 1: West of Graveley Road	Yes	No	Minor wording amendments to criteria for clarity. Capacity reduced to 70 homes.
Offord Cluny 1: West of High Street and North of Dunstall Close	Retained	Offord Cluny 1: West of High Street and North of Dunstall Close	Yes	No	Minor wording amendments to criteria for clarity.

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
	ADDITION	Spaldwick 1: Land east of Stow Road, Spaldwick	Yes	**Yes**	The site has been added as a pre-submission allocation which is considered to be a significant change. The site has undergone an SA through the in combination LAA and SA assessment. The SA will be brought forward into this document to show a comprehensive picture.
Stilton 1: Rear of the Stilton Cheese Inn, North Street	Retained	Stilton 1: Rear of the Stilton Cheese Inn, North Street	Yes	No	Refines, clarifies and strengthens mitigation measures. Safeguarding access to existing waste water infrastructure criterion added. Capacity amended to align with planning permission.
Stilton 2: Rear of 16 to 58 North Street	Retained	Stilton 2: Rear of 16 to 58 North Street	Yes	No	Refines, clarifies and strengthens mitigation measures. Safeguarding access to existing waste water infrastructure criterion added
Abbotsley 1: North of Wintringham Hall, Cambridge Road	Retained	Abbotsley 1: North of Wintringham Hall, Cambridge Road	Yes	No	Minor wording amendments to criteria for clarity. Archaeology criterion and added.
Alwalton 1: North of 23-33 Oundle Road	DELETED	N/A	Yes	N/A	Following a review of comments received from residents, stakeholders and neighbouring authorities, who cite concern regarding heritage, transport impacts and scale of the proposal, the site has been removed as a draft allocation.
Bythorn 1: West of Warren Lane	DELETED	N/A	Yes	N/A	The Parish council stated preference for an alternative allocation at Home Farm because it has an existing access, is more centrally located in the village and could offer a high quality heritage lead redevelopment of the site.
	ADDITION	Bythorn 1: Home Farm, Bythorn	Yes	**Yes**	The site has been added as a pre-submission allocation which is considered to be a significant change. The site has undergone an SA through the in combination

Appendix 7 - Table of site changes between Preferred Options and Pre-Submission

Preferred Options Site Policy Reference	Retained/ deleted	Submission Local Plan Site Policy Reference	Changed?	Significant?	Commentary of key changes
					LAA and SA assessment. The SA will be brought forward into this document to show a comprehensive picture.
	ADDITION	Catworth 1: Fruit Field, Catworth	Yes	**Yes**	The site has been added as a pre-submission allocation which is considered to be a significant change. The site has undergone an SA through the in combination LAA and SA assessment. The SA will be brought forward into this document to show a comprehensive picture.
Colne 1: Ramadie, Earith Road	Retained	Colne 1: Ramadie, Earith Road	Yes	No	Minor wording amendments to criteria for clarity.

1 Introduction

Purpose

What is the Statement of Consultation?

1.1 The Statement of Consultation is a record of the consultation and public engagement carried out as part of the development of a Local Plan. It also includes summaries of the main issues raised by the public and statutory consultees, how comments have been taken into account, and any actions the Council has taken as a result.

Why do we need a Statement of Consultation?

1.2 There are specific legal requirements that need to be followed when producing a local plan. These include but are not limited to: at what stage consultations should take place, who should be consulted and what documents the Council is legally required to produce.

1.3 One particular piece of legislation is The Town and Country Planning (Local Planning) (England) Regulations 2012. One of the requirements in it sets out what documents the Council must submit to the Secretary of State when it is time for the Local Plan to be examined by a Planning Inspector. The Statement of Consultation is one of these documents.

1.4 Specifically, Regulation 22 (1) (c) of The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended), asks that the Council provides a document to demonstrate how the plan has been shaped (this will be known from now on as the Statement of Consultation). The extract from the Regulations (below), shows what the Council must include in this document. Regulation 18 - referred to in the box below - is an early stage of plan preparation and consultation and Regulation 19 is often used to refer to consultation on a Pre-Submission Plan (a full version of the Local Plan), immediately before it is sent to the Secretary of State for examination. It is important to note that the Statement of Consultation should be a summary of the main issues raised and is not intended to address each individual comment specifically. Full responses to consultations can be found on our online consultation portal. On submission of the Local Plan to the Secretary of State the Council will also fulfil criteria v and vi once comments have been made to the Pre-Submission Plan.

Submission of documents and information to the Secretary of State

22. —(1) The documents prescribed for the purposes of section 20(3) of the Act are— ...

...(c) a statement setting out—

(i) which bodies and persons the local planning authority invited to make representations under regulation 18,

(ii) how those bodies and persons were invited to make representations under regulation 18,

(iii) a summary of the main issues raised by the representations made pursuant to regulation 18,

(iv) how any representations made pursuant to regulation 18 have been taken into account;

(v) if representations were made pursuant to regulation 20, the number of representations made and a summary of the main issues raised in those representations; and

(vi) if no representations were made in regulation 20, that no such representations were made;

(Regulation 22 (1) (c) of The Town and Country Planning (Local Planning) (England) Regulations 2012)

1 Introduction

1.5 Huntingdonshire District Council's Corporate Plan 2023–2028 identifies the priority of "***Improving quality of life for local people***", this includes an action to "***Listen to local residents and respond to their input on service delivery***".

1.6 In addition the Corporate Plan highlights the Council's ambition to embed their iCare values into the organisation. These values should drive improvement on a continuous basis, help guide decision-making and help to deliver the Corporate Plan. The iCare values include five values:

- Inspiring
- Collaborative
- Accountable
- Respectful
- Enterprising

1.7 As the Council's Corporate Plan and iCare values stress the importance of accountability, collaborative working and listening to local residents it has been decided that the Statement of Consultation will not only report on the regulatory stages of consultation, but will also provide additional information on other local plan engagement activities and stages. This will allow the document to demonstrate an additional layer of transparency and accountability regarding local plan engagement.

1.8 In addition to the Statement of Consultation ,Huntingdonshire District Council also produced other documents which relate to engagement:

- Statement of Community Involvement - which identifies how the Council will consult on planning related matters and required through regulation 18 of the Planning and Compulsory Purchase Act 2004; and
- Duty to Cooperate Statement of Compliance - A document outlining how the local authorities have maintained effective cooperation with each other and other prescribed bodies on strategic matters that cross administrative boundaries as set out in paragraphs 24 to 28 of the National Planning Policy Framework.

This Statement of Consultation meets Regulation 22 (1)(c)(i to iv) and demonstrates that consultation on the preparation of the Local Plan has been undertaken in accordance with the relevant regulations and the adopted Statement of Community Involvement (SCI) 2023.

Background

1.9 Huntingdonshire District Council agreed at Cabinet on 24th January to:

- the preparation of a full update to the adopted Local Plan,
- the commencement of work to compile an updated local evidence base to inform and support preparation of the full update to the adopted Local Plan, working with partners and consultants as necessary; and
- prepare an updated Local Development Scheme to formally outline the scope of the update to the adopted Local Plan and an indicative timetable for its preparation.

1.10 The Local Development Scheme was agreed at Cabinet on 21 March 2023 and updated and approved at Cabinet on 11 February 2025 before being submitted to the Ministry of Housing Communities and Local Government. The Local Development Scheme was updated again in May 2026 to slightly defer the public engagement on the pre-submission Local Plan to 2046. The Local Development Scheme provides a

summary of the plan-making process and an indicative timetable highlighting the nature of engagement during preparation of the Local Plan Update. Updates on the progress against the Local Development Scheme will be published in Huntingdonshire's Annual Monitoring Report.

1.11 The Local Plan will set out the strategic vision, objectives and spatial strategy for the district. It will help guide future development in the District and set out planning policies and sites for development. Once adopted, it will replace Huntingdonshire District Council's Local Plan to 2036.

Structure of Statement

1.12 To meet the regulatory requirements and to support the development of Huntingdonshire's Local Plan, this statement of consultation provides a record of:

- how the Local Plan consultation processes have been carried out;
- a summary of responses received; and
- how the responses received have been taken into account.

1.13 The consultation process that the Council has followed in preparing the Local Plan is governed by:

- The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended); and
- Huntingdonshire District Council's Statement of Community Involvement (2023) (SCI). This document sets out how the Council will engage with the community on planning matters.

1.14 This Statement of Consultation comprises five sections:

- **Section 1** - an introduction.
- **Section 2 -** a table summarising the consultation stages during the Local Plan preparation, the approval process and any regulations that are relevant to that stage of engagement.
- **Section 3** - a summary of all engagement undertaken at the Issues phase of consultation including: a list of documents and summary of content, how the documents were approved, details of consultation and engagement, a summary of consultation responses and how the comments have been taken into account/any changes made to the documents as a result.
- **Section 4** - a summary of all engagement undertaken at the Further Issues and Options phase of consultation including: a list of documents and summary of content, how the documents were approved, details of consultation and engagement, a summary of consultation responses and how the comments have been taken into account/any changes made to the documents as a result.
- **Section 5** - a summary of some of the engagement that the Council will undertake at the Preferred Options phase of consultation, including: a list of documents and summary of content, how the documents were approved, and details of some consultation and engagement activities. This section will be updated after the consultation with more information.
- **Appendix 1**- A sample of consultation materials used during the Local Plan Issues consultations
- **Appendix 2 -** A sample of consultation materials used during the Local Plan Further Issues and Options consultation phase
- **Appendix 3 -** A sample of consultation materials used during the Local Plan Preferred Options consultation phase
- **Glossary -** a glossary of terms.

2 Local Plan Phases - Summary

2.1 The tables below set out the consultation stages which the Local Plan process has undertaken and is split into different engagement 'phases'. It identifies:

- **Consultation Documents** - the documents connected to the local plan consultation phase.
- **Process** - the Committees that the documents were sent to for approval.
- **Dates of public engagement** - the dates when the documents were open for public consultation.
- **Relevant Regulation*** - the relevant regulation or section from the Council's Statement of Community Involvement that the documents or engagement process relate to.

Local Plan Issues Consultation Phase

2.2 Further detail on the Local Plan Issues consultation phase including the consultation process and responses to the consultation can be found in Section 3 'Local Plan Issues' of this document.

2.3 Further detail on the Local Plan Further Issues and Options consultation phase including the consultation process and responses to the consultation can be found in Section 4 'Further Issues and Options' of this document.

2.4 Further detail on the Local Plan Preferred Options consultation phase including the consultation process and responses to the consultation can be found in Section 5 'Preferred Options' of this document.

Further Issues and Options			
Further Issues and Options 2024	LPAG meetings were held in March, June and July 2024 to discuss preparation of the Further Issues and Options stage of the Local Plan Update. Assessed by Overview and Scrutiny (Performance and Growth) Panel on 4 September 2024 before being approved at Cabinet on 10 September 2024.	18 September - 27 November 2024	Regulation 18 TCPA Section 3 SCI

2 Local Plan Phases - Summary

Consultation Documents	Process	Dates of public engagement	Relevant Regulation*
Land Availability Assessments (LAA): • Northern Huntingdonshire • North Eastern Huntingdonshire • Northern Central Huntingdonshire • Western Huntingdonshire • Central Huntingdonshire • Eastern Huntingdonshire • Southern Huntingdonshire	LPAG meetings were held from April to August 2024 to discuss land availability assessments.. Assessed by Overview and Scrutiny (Performance and Growth) Panel on 4 September 2024 before being approved at Cabinet on 10 September 2024.	18 September - 27 November 2024	Regulation 18 TCPA Section 3 SCI
Sustainability Appraisal	LPAG meetings were held from April to August 2024 to discuss sustainability appraisals. Assessed by Overview and Scrutiny (Performance and Growth) Panel on 4 September 2024 before being approved at Cabinet on 10 September 2024.	18 September - 27 November 2024	Reg 18 PCPA EAPP & Section 19 and 39 PCPA Section 3 SCI
Additional Sites Land Availability Assessment	LPAG discussed the additional sites in March 2025. Assessed by Overview and Scrutiny (Performance and Growth) Panel on 2 April 2025 before being approved at Cabinet on 15 April 2025.	23 April 2025 - 4 June 2025	Regulation 18 TCPA Section 3 SCI
Additional Sites Sustainability Appraisal	LPAG discussed the additional sites in March 2025. Assessed by Overview and Scrutiny (Performance and Growth) Panel on 2 April 2025 before being approved at Cabinet on 15 April 2025.	23 April 2025 - 4 June 2025	Reg 18 PCPA EAPP & Section 19 and 39 PCPA Section 3 SCI
Preferred Options			

Local Plan Phases - Summary 2

Consultation Documents	Process	Dates of public engagement	Relevant Regulation*
Preferred Options Local Plan	Approved at Cabinet on 21 October 2025. LPAG meetings were held from March to October to consider preparation and selection of the Preferred Options Draft Local Plan.	5 November 2025 - 17 December 2025	Regulation 18 TCPA Section 3 SCI
Sustainability Appraisal	Approved at Cabinet on 21 October 2025.	5 November 2025 - 17 December 2025	Reg 18 PCPA EAPP & Section 19 and 39 PCPA Section 3 SCI
Additional Proposed Site Allocations	LPAG meeting 13 April 2026 consider proposed additional draft site allocations and agree for public consultation and to consider and comment upon the changes proposed to the preferred options site allocations	13 May 2026 - 10 June 2026	Regulation 18 TCPA Section 3 SCI

Note: The Local Plans Advisory Group (LPAG) and terms of reference were approved at Cabinet on 21 March 2023. The purpose of LPAG is to provide a cross party group of members to advise on preparation and content of the Council's statutory development plan. LPAG is the key advisory and recommendation Group to the Cabinet on all Local Plan policy matters, including the testing of its alignment with other Council strategies. The membership is made up of seven Councillors. Their primary responsibilities are:

- to understand and advise on the significant issues relating to planning policy formulation the District;
- to make recommendations to the Executive Councillor with responsibility for oversight of the local plan and for advice on reports being presented for determination through normal decision making process in relation to the content of any draft development plan document covering all or any part of Huntingdonshire;
- to inform the public engagement process for preparation of any development plan document, and
- to support effective communication with the broader membership of the Council, local communities or stakeholders to facilitate successful preparation of any development plan document.

*** Acronyms**

EAPP - Environmental Assessment of Plans and Programmes Regulations 2004

LPAG - Local Plans Advisory Group

PCPA - Planning and Compulsory Purchase Act 2004

SCI - Statement of Community Involvement (SCI) 2023

TCPA - Town and Country Planning (Local Planning) (England) Regulations 2012

3 Local Plan Issues

3.1 This section addresses the Issues phase of local plan preparation. The issues phase is focused on initial survey and identification of the scope and subjects to be covered in the local plan, potential methodologies to be employed which will contribute towards the creation of a development strategy and the identification of land with the potential to be allocated for future development.

3.2 The Issues phase of engagement took place during Spring 2023 in compliance with the timetable set out in Huntingdonshire District Council's Local Development Scheme 2023 (Table 2 Local Plan preparation timetable).

3.3 Engagement was undertaken in compliance with Huntingdonshire District Council's Statement of Community Involvement 2023

3.4 Consultation procedures were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 & The Environmental Assessment of Plans and Programmes Regulations 2004 (where applicable).

3.5 The section is split into the following subsections to reflect the different consultation stages as follows:

- **Section 3.1: Statement of Community Involvement and Sustainability Appraisal Scoping Report** - consultation period 1 February 2023 to 15 March 2023
- **Section 3.2: Draft Settlement Hierarchy and Land Availability Assessment Methodologies** - consultation period 29 March 2023 to 10 May 2023
- **Section 3.3: Call for Sites** - consultation period 29 March 2023 to 7 June 2023
- **Section 3.4: Issues Engagement Papers** (Issues Engagement Paper, Summary Paper and Easy Read Version)- consultation period 26 April to 5 July 2023

3.6 Each section includes the following information:

- The **Consultation Process** - This outlines the Summaries of the documents consulted on, their approval process and information on details on the consultation and engagement processes undertaken.
- **Responses to the Consultation** - This outlines the number of representations made to the consultation, a summary of the key issues raised and how the representations have been taken into account.

Sustainability Appraisal Scoping and Statement of Community Involvement

Consultation Process

Document Summaries

3.7 This section addresses the following documents:

- **Statement of Community Involvement 2023** - which sets out how the Council will engage on planning related matters.
- **Sustainability Appraisal Scoping Report 2023** - which sets baseline information for Huntingdonshire to inform the development of sustainability objectives to test the Local Plan against.

Document Approval

3.8 The documents above went through the following approval process:

- Overview and Scrutiny (Performance and Growth) Panel (04/01/23) - The Panel were invited to comment on the recommendations for the Statement of Community Involvement and the Sustainability Appraisal Scoping Report from the Cabinet repot. The recommendations were to approve the contents of the documents and to agree that they could be published for public consultation commencing in February 2023 and running for 6 weeks. Minutes of the Panel and supporting reports can be found at Overview and Scrutiny Panel (Performance and Growth), Wednesday, 4 January 2023
- Cabinet Meeting (24/01/23) - The Committee were asked to approve the contents of the Statement of Community Involvement and the Sustainability Appraisal Scoping Report and to agree that they could be published for public consultation commencing in February 2023 and running for 6 weeks. Minutes of the committee and supporting reports can be found at Cabinet, Tuesday, 24 January 2023

Consultation and Engagement

3.9 Consultation on the Statement of Community Involvement and the Sustainability Appraisal Scoping Report took place between 1 February and 15 March 2023. The consultation was hosted on the Council's online consultation portal. People were able to comment on all aspects of the document by section, paragraph and tables. Hard copies of the documents were available to view at the Council's office Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN for those who do not have internet access. The documentation also included information on the consultation, how to respond and contact details for those who require further assistance or the provision of the document in an alternative format.

3.10 The documents were publicised as follows. Items marked with an * can be found in 'Appendix 1 Consultation Material - Issues Phase':

- On the Council's online consultation portal published on 1 February 2023.
- On the Council's Local Plan Update webpage published on 1 February 2023
- On the Council's homepage under the heading *Consultations* published on 1 February 2023.
- On the Council's Facebook Page published on 1 February 2023*.
- On the Council's Twitter account published on 1 February 2023*.
- Via Press Release published on 26 January 2023*

3.11 As part of the public engagement exercise the council undertook the following:

3.12 Emails were sent to

- Specific Consultation Bodies
- People and organisations who have responded to previous consultations and wish to be kept informed and those who have opted in to receive notifications through the online consultation system

3 Local Plan Issues

- Town and Parish Councils, this included a 'social media package' that could be used to spread the news to their local organisations and residents
- District Councillors, this included a 'social media package' that could be used to spread the news to their local organisations and residents.

Other methods of engagement included:

- Internal notifications via the intranet to Huntingdonshire District Council staff to assist in information dissemination

There is no legal obligation consult on the SCI, however it is encouraged within National Planning Practice Guidance. The publicity, consultation and engagement were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended), The Environmental Assessment of Plans and Programmes Regulations 2004 (where applicable)and section 3 of the SCI.

The consultation and engagement period was in compliance with the timetable set out in the Council's Local Development Scheme 2023.

Responses to Consultation

Consultation Responses Summaries

3.13 The following table outlines a summary of the documents consulted on between 1 February and 15 March 2023:

Table 2 Responses to the Statement of Community Involvement and Sustainability Appraisal Scoping Report

	Statement of Community Involvement	Sustainability Appraisal Scoping Report
Number of Comments Made	67	91
Number of Individuals or Organisations that Responded	14	18
Number of Supports	12	23
Number of Objections	2	14
Number of Observations	53	54

3.14 People were able to comment on all aspects of the document by section, paragraph and tables. The sections below show the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Statement of Community Involvement Consultation Responses
- Sustainability Appraisal Scoping Report Consultation Responses

3.15 The Coal Authority Responded to the Statement of Community Involvement and Sustainability Appraisal Scoping Report they noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific

comments to make on any stages of your Local Plan process. In the spirit of ensuring efficiency of resources and proportionality, it will not be necessary for the Council to provide the Coal Authority with any future drafts or updates to the emerging Plans."

Summary from the Statement of Community Involvement (SCI)

3.16 The following provides a summary of the main issues raised during the consultation on the Statement of Community Involvement and how the Council has taken these into account.

Table 3 Statement of Community Involvement

Main Issues Raised	Council Response / How the Council has taken this into account
Statement of Community Involvement - General	
• General acknowledgement of receipt of consultation. • Support principle of the document. • General requests to be kept informed informally. • Request for inclusion of a summary sheet showing changes from previous document.	• General acknowledgement, no changes required. • Supportive comments, no changes required. • Noted, to be dealt with as part of Duty to Cooperate procedure. No changes required. • The SCI was completely re-written a summary sheet documenting these changes would result in duplication. Suggestion not carried forward.
1 - What is the Statement of Community Involvement?	
• Request to clarify document history and the reason for its update. • Request to be consulted in future stages. • Grammatical observation regarding use of the word you.	• Extra paragraph to be added to respond to request. • Request noted and organisation will be notified of future consultation. No change required. • Review of document and changes made where required.
2 - What is Planning?	
• No comments were made.	• No action required.
3 - Involving the Community in the Production of Planning Documents	
• General observations on readability regarding • General support for reference to specific consultation bodies. • General requests to be consulted on future documents. • Request for clarity of development plan documents and policies map • Request to add additional consultees to specific consultation bodies. • Request to provide further clarity around the Duty to Cooperate. • General requests for additional consultation and engagement methods, contact details to be included and more specificity on what will be done. • Requests for notifications of adopted documents and committee meetings	• General acknowledgement, no changes required. • Request noted and organisation will be notified of future consultation. No change required. • Amendment to description of development plan documents and policies map • Additional consultation bodies added. Reference to developers included under 'other people and organisations'. • Additional information added to 'When do we consult?' including changes to provide greater clarity on 'the Duty', NPPF, relevant bodies and Statements of Common Ground where within the legislative requirements. • Amendments made to add some additional consultation methods, clarity on what can be done above legal requirements if resources allow and role of District, Town and Parish Councillors and who to contact.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Greater clarity required regarding committee meeting attendance. • Concerns relating to Habitats and Species Regulations 2017 and inclusion of sites.	• Additional text to explain where adopted or completed documents can be found to be included. • Additional clarity on committee attendance procedures included. • Requirements under the Habitats and Species Regulations 2017 and inclusion and assessment of sites will be addressed through further evidence and an update to the Habitats Regulations Assessment. No changes required
4 - Neighbourhood Planning	
• Request to clarify opening paragraph regarding Parish Council Plan production. • Requests to be notified of Neighbourhood Plans and reference to external agency guidance notes. • Request to include reference to Council consultation guidance and difference between District, Parish and Town Council accountability in section and diagram.	• The paragraph is reflective of legislative requirements, no changes made. • Request noted, organisation will be notified of future consultation. Guidance notes from external organisations outside the scope of the document. No change required. • Additional information added to section regarding Councils' specific consultation and engagement.
5 - Involving the Community in the Planning Application Process	
• Requests to include additional engagement processes regarding external organisations and planning, enforcement and developer contributions processes. • Request to include additional statutory consultee in description of when extended time to comment is permissible. • Suggestion to provide additional clarity on terminology. • Suggestions to provide additional detail on committees, attendance, and Councillors. • Recommendation in clarify position of lawful development certificates.	• Request noted, this is outside the scope of the document, and legislative requirements no change required. • Request noted. Statutory consultee added to example. • Suggestion noted. Additional definition of large-scale major included. Definition of material considerations not included as officers will determine material considerations. • Suggestions noted. Links provided to contact details and committee pages. • Recommendation noted additional clarity regarding lawful development certificates included in text.
6 - Brownfield Land Registers	
• Support for consultation procedures.	• Supportive comments, no changes required.
7 - Monitoring and Review	
• Support for reference to requirements to review documents.	• General acknowledgement, no changes required.
8 - General Complaints Procedure, 9 - Glossary & 10 - Useful links	
• No comments were made.	• No action required.

Outcomes

3.17 The changes outlined in the table above were made to the Statement of Community Involvement and the document was published on the Council's webpages on 25 May 2023.

3.18 Minor amendments were made to the document to address any spelling or grammatical errors. Additional text was also included in section 6 - Brownfield Land Registers to further clarify regulatory requirements.

3.19 Requests to reference external agency guidance notes, were considered outside the scope of the SCI, but will be included on the Council's Neighbourhood Planning pages for Parish and Town Councils where applicable.

3.20 In particular the Middle Level Commissioners proposed a number of suggestions and requests that fell outside the scope of the document. This information was passed along to our Development Management Team for further consideration.

Summary from the Sustainability Appraisal Scoping Report (SASR)

The following provides a summary of the main issues raised during the consultation on the Sustainability Appraisal Scoping Report and how the Council has taken these into account.

Table 4 Sustainability Appraisal Scoping Report

Main Issues Raised	Council Response / How the Council has taken this into account
Sustainability Appraisal Scoping Report - General	
• General comment on need to work with neighbouring authorities as part of Duty to Cooperate. • General comments on the need to provide new homes in sustainable locations using a revised settlement hierarchy that meet local needs. • Concern over the usage of the term 'climate emergency' rather than climate change.	• The Council is working with neighbouring authorities and other Duty to Cooperate bodies. No changes required. • Acknowledged, a new settlement hierarchy will be prepared using a revised methodology which will inform a future development strategy. It is not for the scoping report to set out a settlement hierarchy or spatial approach. No changes required. • The term climate emergency is consistent with HDC's Climate Strategy, no changes required.
1 - Introduction	
• No comments were made.	• No action required.
2 - Sustainability Appraisal Methodology	
• General request that a new settlement hierarchy and scoring mechanism for settlements be introduced.	• Acknowledged, a new settlement hierarchy will be prepared using a revised methodology. No changes required.
3 - A1: Identifying relevant plans, programmes and strategies	
• Request to add further plans, programmes and strategies to the list of those already reviewed.	• Several additional plans, programmes and strategies have been reviewed and added.
4 - A2: Collecting baseline information	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Request for distinction between grade 3a and grade 3b agricultural land. • Request for further data on climate emissions and power usage across the district. • Request for clarity on when climate impacts may occur. • Request for Council to amend organic waste collection process. • Request for additional text relating to water based development and resilient buildings in areas of flood risk, support for reference to water based tourism activities. • General comments on additional sources of detailed population and health data. • Request for additional text relating to demand for sustainable logistics development and the green economy.	• Clarification provided that mapping data is not available at a site specific level • Further climate information not available comprehensively for the district. • Clarification added. • Outside of the scope of the SA and Local Plan. • Support noted, no changes required to comply with national policy on flood risk. • Sufficient baseline information has been provided in the scoping report. Detailed discussion on population and health issues will be explored through the Issues Engagement Paper, no changes required. • Logistics and green economy are issues that will be explored in greater detail in the Issues Engagement paper.
5 - A3: Identifying sustainability issues and problems	
• Request for additional detailed issues to be identified in the climate emergency and natural environment topics. • Observation that flooding and water should be separated into two topics rather than covered together.	• Suggestions are too detailed and not practical for the SA framework, no changes required. • Noted, due to the interconnectedness of these topics it was considered appropriate to combine them. Further discussion will be undertaken through the Issues Engagement paper, no changes required.
6 - A4: Developing the SA framework	
• General support for the objectives identified. • Request for further refinement of the framework to identify decision aiding questions for varying scales of sites. • Request for amendments to the distances provided in several scoring options such as distance to services. • Request for amendments to SA9 to provide greater distinction between scoring options for residential development. • Not clear whether all objectives apply to all proposals. • Request for additional safeguarding for ecological networks and habitat connectivity.	• Support acknowledged. • The framework already refines the decision aiding questions across the strategy (which includes new settlements and strategic expansion locations), other sites and policies, renamed heading in Table 20 for clarity. • Distances used are inline with existing national guidance. • Amended SA9 scoring + option to 100 homes threshold to make a greater distinction in scoring proposals. • Added a second line to the 'N' (no clear relationship' scoring option) to say that the objective is not relevant to the policy or proposal. Also added to SA5 clarity on scale of proposals that apply to scoring options. • Additional decision aiding question for SA6 to not compromise strategic scale ecological networks and that future improvements in strategic habitat connectivity are not prejudiced. • Table 23 showing how the sites decision aiding questions will be assessed and scored has

Main Issues Raised	Council Response / How the Council has taken this into account
	been updated and expanded so that the all objectives are included.
7 - A5: Consulting on the scope of the SA	
• No comments were made.	• No action required.
8 - Next steps	
• No comments were made.	• No action required.
Appendices	
• Request to add further plans, programmes and strategies to the list of those already reviewed.	• Several additional plans, programmes and strategies have been reviewed and added to relevant tables.
Glossary	
• No comments were made.	• No action required.

Outcomes

3.21 The changes outlined in the table above were made to the Sustainability Appraisal Scoping Report and the document was published on the Council's webpages on 25 May 2023.

3.22 Minor amendments were made to the document to address any spelling or grammatical errors. References to the 'emerging' Climate Strategy and Huntingdonshire Futures Place Strategy were also updated to reflect that they have both now been adopted by the Council. HDC's Countryside Team also provided an updated figure on the size of Hinchingbrooke Country Park which has been included in the final report.

3 Local Plan Issues

Settlement Hierarchy and Land Availability Assessment Methodologies

Consultation Process

Document Summaries

3.23 This section addresses the following documents:

- **Draft Settlement Hierarchy Methodology** - which sets out how we will assess the sustainability of settlements and will aid in the decision-making on their suitability for future growth in the next Local Plan
- **Draft Land Availability Assessment Methodology** - which sets out how we will consider potential sites that have been put forward for potential allocation in the Local Plan.

Document Approval

3.24 The documents above went through the following approval process:

- Overview and Scrutiny (Performance and Growth) Panel (01/03/23) - The Panel were invited to comment on the recommendations for the Draft Settlement Hierarchy and Draft Land Availability Assessment Methodologies as set out in the Cabinet report. The recommendations were to approve the contents of the documents and to agree that they could be published for public consultation commencing in March 2023 and running for 6 weeks. Minutes of the Panel and supporting reports can be found at Overview and Scrutiny Panel (Performance and Growth), Wednesday, 1 March 2023
- Cabinet Meeting (21/03/23) - The Committee were asked to approve the contents of the Draft Settlement Hierarchy and Draft Land Availability Assessment Methodologies and to agree that they could be published for public consultation commencing in March 2023 and running for 6 weeks. Minutes of the committee and supporting reports can be found at Cabinet, Tuesday, 21 March 2023

Consultation and Engagement

3.25 Consultation on the Draft Settlement Hierarchy and Draft Land Availability Assessment Methodologies took place between 29 March and 10 May 2023. The consultation was hosted on the Council's online consultation portal. People were able to comment on all aspects of the documents by question, section and tables. Hard copies of the documents were also available to view at the Council's office Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN. The documentation also included information on the consultation, how to respond and contact details for those who require further assistance or the provision of the document in an alternative format.

3.26 The documents were publicised as follows. Items marked with an * can be found in 4 'Appendix 1 Consultation Material':

- On the Council's online consultation portal published on 29 March 2023.
- On the Council's Local Plan Update webpage published on 29 March 2023
- Council homepage banner notification published 29 March 2023
- On the Council's homepage under the heading *Consultations* published on 29 March 2023.
- On the Council's Facebook Page published on 27 March 2023*, 29 March 2023, 6, 12 and 19 April 2023
- On the Council's Twitter account published on 27 March 2023*.
- On Linked in published on 27 March 2023*.
- Via Press Release published on 27 March 2023*
- Economic Development Newsletter 30 March 2023

3.27 As part of the public engagement exercise the council undertook the following:

- Emails to Specific Consultation Bodies
- Emails to people and organisations who have responded to previous consultations and wish to be kept informed and those who have opted in to receive notifications through the online consultation system
- Emails to Town and Parish Councils, this included a 'social media package' that could be used to spread the word to their local organisations and residents.
- Emails to District Councillors, this included a 'social media package' that could be used to spread the word to their local organisations and residents.
- Council intranet post 30 March 2023 to encourage spreading the word to friends and family.

3.28 The publicity, consultation and engagement were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) , and section 3 of the SCI.

3.29 The consultation and engagement period was in compliance with the timetable set out in the Council's Local Development Scheme 2023.

Responses to Consultation

Consultation Responses Summaries

3.30 The following table outlines a summary of the documents consulted on between 29 March and 10 May 2023:

Table 5 Responses to the Draft Settlement Hierarchy and Draft Land Availability Assessment Methodologies

	Draft Settlement Hierarchy Methodology	Draft Land Availability Assessment Methodology
Number of Comments Made	195	270
Number of Individuals or Organisations that Responded	37	34
Number of Supports	53	116
Number of Objections	58	45
Number of Observations	84	109

3.31 People were able to comment on all aspects of the document by question, section and tables. The sections below show the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Draft Settlement Hierarchy Methodology Consultation Responses
- Draft Land Availability Assessment Methodology Consultation Responses

3.32 The Coal Authority Responded to the Draft Settlement Hierarchy and Land Availability Assessment Methodologies, they noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific comments to make on any stages of your Local Plan process."

Summary from the Draft Settlement Hierarchy Methodology

3.33 The following provides a summary of the main issues raised during the consultation on the Draft Settlement Hierarchy Methodology and how the Council has taken these into account.

3 Local Plan Issues

Table 6 Draft Settlement Hierarchy Methodology

Main Issues Raised	Council Response / How the Council has taken this into account
Draft Settlement Hierarchy Methodology - General, 1 - Introduction, 2 - Context and 7 - Next Steps	
• Agreement that a new methodology is required/ general support • Request to include petrol filling stations and charging points • Should reference to people who have no access to private car and active travel solutions • Should include landscape and environmental considerations and reference to the historic environment • Should include the benefits that new developments and potential for improvement can bring to settlements in terms of services, facilities, new and improved infrastructure and other potential for improvement. • Should consider flood risk, water infrastructure capacity and supply, Biodiversity Net Gain. • General queries as to how the methodology will inform the Local Plan development and establish a hierarchy. • Require clarity of where distances will be measured from. • Proposals to simplify the methodology.	• General acknowledgement, no changes required • Petrol filling stations included in revised indicator RS2 Number of other shops and services in settlement. Charging points to considered outside the scope of this methodology. • Transport indicators revised to focus solely on public transport including access to railway station via active travel. • Response acknowledged, landscape and historic environment will be will be assessed as part of the Sustainability Appraisal and general spatial strategy. • Response acknowledged, the methodology is not determining the location for growth. Benefits that new development may bring will be assessed as part of the wider development strategy and through policies such as allocations and developer contributions. Further evidence will feed into the development of Local Plan Growth Strategy to identify locations suitable for growth and where growth could facilitate greater provision of services. • Response acknowledged, flood risk, water infrastructure capacity and supply, Biodiversity Net Gain will be taken into account through the development of evidence and/or policies to inform the development of the local plan. • Final output will clarify purpose, and how a final hierarchy will be established. All indicators will be reviewed. Methodology title amended to 'Sustainability of Settlements Methodology' to clarify that further evidence will be used to establish a final settlement hierarchy. • Greater clarity will be provided in methodology to explain measurements. • Significant changes made to simplify the methodology and reduce the number of indicators.
3 - Geographical Study Area	
• Should identify sites for development and brownfield land etc. • Agree sites of 30 or more residential units should have a full assessment and basic assessment for others	• Noted, to be addressed outside the scope of this methodology through the Call for Sites, sustainability appraisal and development strategy. • Agreement acknowledged, no action required. • No action, the lack of services and facilities identified demonstrates their weaknesses in terms of sustainability.

Main Issues Raised	Council Response / How the Council has taken this into account
• Disagree with basic assessment as it disregards strengths, weaknesses and opportunities of hamlets. • Request to retain current settlement hierarchy in Huntingdonshire's Local Plan to 2036. • Should fully survey all settlements. • Combine 'The Offords' as one settlement for assessment • Should consider the clustering of settlements where one settlement may provide for the surrounding area and include a large settlement category, assess Little Paxton and St Neots as one settlement. • Unclear on how 'perceived urban extent will be defined.	• No action. The assessment of individual settlements is designed to avoid pre-judging the development strategy and settlement hierarchy. • Response noted, the presence of any services and facilities within the indicator categories from full assessment will be recorded in the basic assessment. • Suggestion noted, the Offords to be assessed as one settlement due to their unique interconnectedness. • The methodology will look at individual settlements and the services and facilities available as at summer 2023 to provide a baseline for development of the local plan's strategy. Once assessments are completed and all services recorded, HDC will look at clusters of services and their availability to other surrounding settlements where deficiencies may be identified. The assessment of individual settlements is designed to avoid pre-judging the development strategy and settlement hierarchy. This will be clarified in the final methodology as will the 'urban extent' or equivalent definition.
4 - Topic Areas and Weighting	
• General support for weighting indicators • Recommendations to clarify weighting definitions including a revision to include a x3 for all the population, occasionally. • Methodology does not consider changes over time.	• Support acknowledged no response required. • Weighting reviewed and definitions included for clarification. • The methodology is intended to be a snapshot in time assessing the current sustainability of settlements. The ability and the requirements of new development to provide additional facilities and infrastructure would be taken into account through policies such as allocations and developer contributions.
5 - Settlement Hierarchy Proposed Methodology - General	
• Should assess the lack of services and not the presence of them	• No actions, low scores will reflect the lack of services.
5 - Settlement Hierarchy Proposed Methodology - Health	
• Indicators should address capacity of services • Distance should be measured by public transport • Should consider free pharmacy services, online and telephone consultations • Should combine presence of services in combination with distance to where one is not present • Should ask residents what is needed	• The Council has taken advice from NHS Property Services on behalf of Cambridgeshire and Peterborough Integrated Care System it was recommended that indicator H4 was retained due, indicators H7&8 revised to include capacity and access to GP surgeries and indicator H11&12 removed due to the current state of flux of pharmacies and ability of some to provide online

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
	delivery. Data and analysis to be provided by NHS and CPICS. • The use of public transport instead of private car was rejected as not reflecting current reality for the majority of the Districts population due to its rural nature and the variability of bus scheduling. • The Settlement hierarchy is intended to be a snapshot in time assessing the current sustainability of settlements. The provision of new facilities will be lead by CPICS/NHS and taken into account through policies such as allocations and developer contributions. No action required.
5 - Settlement Hierarchy Proposed Methodology - Education	
• Indicators should be capacity based • Consider a hybrid indicator based upon the number of schools in the settlement together with the availability of spaces at the schools. • Indicators skewed towards large settlements • Indicators should reflect settlements served by a dedicated school bus service or that can be reached by other sustainable modes of transport. • Indicator should take into account Ofsted ratings • No reference to further education provision and SEND places in mainstream schools • Agree no need to include university provision	• In response to concerns raised and advice from Cambridgeshire County Council Children, Education and Families Directorate. Indicator E3 was deleted. Indicators for Primary and Secondary Schools were amended to assess access to and capacity of schools (taking into account school bus service and reasonable active travel distances). This ensures large settlement capacity is also taken into account. Data and analysis was provided by CCC. • Ofsted ratings vary over time and may influence capacity where people have opted to attend higher ranking schools out of catchment. People exercising choice cannot be applied to a settlement scale assessment of the provision of education infrastructure. • The only Further Education establishment is in Huntingdon so this will not provide a nuanced indicator across different settlements. Mainstream schools have a duty as part of the Equality Act 2010 to make 'reasonable adjustments' for disabled children and young people, to support medical conditions and to inform parents and young people if SEND provision is made for them. No action.
5 - Settlement Hierarchy Proposed Methodology - Retail and Services	
• Should include a new category to demonstrate the greater value of convenience stores to small settlements and reduced need to travel. • Suggested changes to weighting of indicators • Should assess the number of stores not diversity	• Indicators reduced and revised to focus on convenience stores and comparison stores creating a better balance of the importance of these services. Number of other shops and services revised to a count instead of diversity.

Main Issues Raised	Council Response / How the Council has taken this into account
• Presence of banks and ATMs are not as important in modern times, post offices more important • ATMs are important • Indicators should include post offices, health and beauty, car garages, public houses serving hot food. • Indicators should recognise the value of cafes and restaurants as a social purpose and late opening hours. It is recommended that the scoring is revised and reduced. The growth of delivery services demonstrates that eatery businesses can operate sustainably without a fixed town centre location • This approach does not take account of how easy it is for people in the settlement to access these services.	• Response acknowledged. Post Offices and banks have been included in revised indicator RS2 and ATMs removed. • Changing trends in banking etc. are acknowledged. The rapidity with which service provision continues to change is considered to be an issue with this indicator. Services merged with new indicator RS2 and additional services included. • Indicator S11 merged with CC10 to represent the social purpose of restaurants, cafes etc. • Transport and access is considered as a separate indicator rather than in combination with each type of service or facility. No action.
5 - Settlement Hierarchy Proposed Methodology - Sports and Leisure	
• The inequity of different types of open and green space being awarded equal points regardless of size is acknowledged. • The quantum of open space per population should be included alongside diversity of open space to provide a combined score. • Should include “blue spaces”. • Reference should also be made to the Biodiversity Action Plans (BAPS)s. • Does not consider remaining capacity for new residents or access to nearby facilities in other settlements • Does not take account of how easy it is for people in the settlement to access these services.	• Overall responses to SL8 indicate the approach to sports and leisure required revision. Indicators reduced and combined into a community facilities category. Revised indicator to focus on indoor and outdoor sports facilities based on up to date evidence from Huntingdonshire District Council Playing Pitch and Outdoor Sport Strategy and Assessment 2022 and Huntingdonshire District Council Indoor & Built Facilities Strategy and Needs Assessment July 2022. • Up to date population statistics at settlement level that are up to date are not available. No action. • Biodiversity Action Plans will be considered as part of Local Plan production. No action. • Capacity issues will be addressed at site specific level. It is recognised that provision for many sports operates in a clustered fashion and this is reflected through the latest indoor and outdoor sports strategies. Lower scores for settlements where the facility is not present are considered a reasonable reflection of reduced sustainability/access due to the need for people to travel to the facility. Provision of new facilities or contributions towards will be informed by the new strategies and developer contributions. • Transport and access is considered as a separate indicator rather than in combination with each type of service or facility. No action.
5 - Settlement Hierarchy Proposed Methodology - Culture and Community	
• Number of cultural buildings should be removed and scoring of public houses too	• Indicators on culture and community and public house provision to be combined and simplified.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
complicated. Suggestions to merge some indicators e.g. libraries • Agreement of inclusion of cultural indicators • There should be recognition for the number of community groups, quantum of provision or settlement wide events. • Should include access to community buildings by public transport • Presence of public house should have more weight due to social value	• Response Acknowledged • Availability of community groups and events is highly subject to change; the assessment focuses more on land use based services and facilities. No action. • Public transport access to and from a settlement is considered separately and should not be replicated to avoid overdue weighting being attributed to it. • Public houses included in revised indicator focusing on community facilities and social meeting places.
5 - Settlement Hierarchy Proposed Methodology - Transport	
• Should include demand led community transport e.g. TING • Frequency of service does not reflect destination, should have higher score for presence of Guided Bus • Should consider how easy it is to access railway station via active travel and stations outside the district boundary • Access to primary road network does not reflect sustainability and encourage car use • Should include future transport projects and other sustainable sources of travel including cycle links and car sharing. • 'Place Based Carbon Calculator' appears to be out of date • Bus service provision does not asses not quality / usefulness, routes, timetable or cost. • Clarify methodology when there are multiple stops in a settlement	• Due to their intermittent nature and coverage of community transport, these would not be able to be included within the assessment. The continuation of TING as a permanent service has not been confirmed and therefore cannot be included. • The presence of the Cambridgeshire Guided busway is reflected in the indicator in that the frequency of bus services prime locations will be higher. In some locations the Guided Bus will stop infrequently and therefore providing a higher score for its presence will not be reflective of the frequency and accessibility of its service. No action. • Distance to railway station to be measured by active travel and stations outside district boundary included. • Response Acknowledged. The transport indicators will be refocused to solely respond to public transport issues. • The assessment is intended to provide a baseline of the current level of sustainability Further evidence such as future transport options and sustainable transport solutions will feed into the development of Local Plan policies, allocations and Growth Strategy. • The last update to the Place based carbon calculator was 08/09/2022. • Factoring in quality and cost would be resource intensive and require multiple datasets from multiple operators to establish a baseline of sustainability. • Clarification to be provided in methodology
5 - Settlement Hierarchy Proposed Methodology - Communications	

Main Issues Raised	Council Response / How the Council has taken this into account
• Amend communications weighting to x4 to reflect importance of connectivity. • Should include future upgrades • Customers will purchase specific mobile services based on the level of signal available in the area. It should not be arbitrarily assumed that it is necessary to have four providers before it will be possible for existing or new residents to obtain effective and convenient services. • No need to distinguish superfast from ultrafast broadband	• Agreed and amended • The methodology is intended to be a snapshot in time assessing the current sustainability of settlements, no change made. • No change. The indicator is designed to reflect the quality of mobile service provision and the choice of available network providers available and as such the cost options available to residents, reflecting the range of people on varying incomes that can access mobile service provision. • No change. Evidence suggests superfast starts at 24Mb with ultrafast providing a 350Mb offering". The Issues Engagement Paper also highlights that "Whilst Ultra-Fast broadband is not readily available in rural areas, some rollout has occurred". It is therefore important to make the distinction between superfast and ultrafast within the district to highlight the disparity.
5 - Settlement Hierarchy Proposed Methodology - Employment	
• The methodology should measure accessibility in relation to the availability of active travel modes. • Indicators should be expanded to take into account more business sizes and types • Question the use of the number of employees within a settlement to identify its sustainability given this is more representative of the size of the settlement rather than the employment opportunities it provides • 'Number of businesses in a settlement', too prescriptive and does not acknowledge where settlements abut each other or acknowledge the number of business within a radius of a set distance. • Data sought from the Inter Departmental Business Register, which cannot be easily sought through the data source links provided. • Should not assess the time taken to travel to work by a private motorised vehicle this is not sustainable development should look at accessible locations	• Indicators reduced and revised to assess employment density of settlements calculated using the approach set out in The Homes & Communities Agency's (now Homes England) Employment Density Guide (Edition 3) 2015. It also takes into account the proportion of jobs that can be accessed within a 3 mile radius (5kms) of the central point of each settlement to allow for reasonable access by active travel modes.
6 - Sample Score Sheet of Settlements	
Error in scoring	Acknowledged, to be updated alongside revised methodology
8 - Appendices - Data Scoping and Refinement	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
Comments on the appendices have been summarised within the relevant topic area under '5 - Settlement Hierarchy Proposed Methodology'.	See '5 - Settlement Hierarchy Proposed Methodology'.

Outcomes

3.34 The changes outlined in the table above were made to the methodology and the document was published on the Council's webpages as the Sustainability of Settlements 2023.

3.35 Minor amendments were made to the document to address any spelling or grammatical errors.

Summary from the Draft Land Availability Assessment Methodology

3.36 The following provides a summary of the main issues raised during the consultation on the Draft Land Availability Assessment Methodology and how the Council has taken these into account.

Table 7 Draft Land Availability Assessment Methodology

Main Issues Raised	Council Response / How the Council has taken this into account
Draft Land Availability Assessment Methodology - General	
• Broad support for the proposed methodology and its compliance with national policy • Detailed comments have been made which are highlighted in the Methodology section	• Support and observations noted • Responses to detailed comments on the methodology are provided below
1 - Introduction	
• No main issues raised/	• No action required.
2 - Methodology	
Question 1 – Geographical Scope • Support for the proposed geographical scope to cover the whole of the district • LAA should ensure that strategic sites such as new settlements that do not necessarily relate to an existing settlement are not excluded. Question 2 – Types of Sites • Support for the proposed range of sites that are being sought • The list of proposed sites and land uses do not explicitly state mixed-use proposals Question 3 – Site Sizes • Support for the proposed site threshold Question 4 – Identifying Sites	Question 1 – Geographical Scope • Support noted • The Council are seeking sites across the district, there is no limit on the type or scale. Question 2 – Types of Sites • Support noted • The Council are seeking a broad range of uses, an additional bullet point for mixed use proposals have been added. Question 3 – Site Sizes • Support noted, no action required Question 4 – Identifying Sites

Main Issues Raised	Council Response / How the Council has taken this into account
• Support for the proposed list of sources to identify potential sites and compliance with national guidance • Sites that have been previously allocated but not yet been delivered should be reviewed cautiously to understand any reasons why they have not yet been delivered • Recently withdrawn or refused applications should be considered in light of any new or updated information • The call for sites form does not specifically ask about known inadequacies in the settlement that might be overcome through development. <u>Question 5 – Mapping of Sites</u> • General support that sites should be mapped • Parish and adjoining authority boundaries should be clearly shown • Each proposed development type layer should be clearly distinguishable for ease of interpretation <u>Question 6 – Fundamental Constraints</u> • Comments regarding that applying the Minerals and Waste policy constraints, in particularly Mineral Safeguarding Areas (MSAs) will eliminate too many sites • Comments stating that Local Green Space designations should not be included as a fundamental constraint • Comments regarding that grade 1 agricultural land should not be used as a fundamental constraint • The methodology should clarify what would happen to sites, in particular large sites, if there are fundamental constraints identified on only part of the site <u>Question 7 – Suitability Assessment</u> • General support for the suitability assessment • Clarification sought on difference between 'Potentially suitable for development' and 'Potentially suitable for development although constraints to overcome' • More detail sought on scoring approach such as individual scores against each constraint and additional weight for sites with extant or unimplemented planning permission	• Support noted • Allocated sites that are yet to be built will be reviewed considering up to date delivery information form housing trajectories • The call for sites is an opportunity to gather as up to date information on sites as possible • A new settlement hierarchy methodology is in production and will help shape the future development strategy and help the Council understand where sites fit into a future strategy <u>Question 5 – Mapping of Sites</u> • Support noted • Administrative boundaries will be shown for clarity and to demonstrate if proposals cross boundaries • Proposed development uses will be clearly shown using a combination of colours and symbols to aid eligibility <u>Question 6 – Fundamental Constraints</u> • Added MSAs to suitability assessment rather than fundamental constraints. • Retained Local Green Space as this is a policy limitation which benefits from protection in line with greenbelt policy as per the NPPF. • Retained grade 1 as this is the best and most versatile land, which in line with increasing national focus should be retained for food production as far as possible • Clarification added stating that the Council will consider the proportion of the site affected by a fundamental constraint and the proposed use and consider whether development could reasonable still be delivered on the remainder. <u>Question 7 – Suitability Assessment</u> • Clarity added stating what constraints will be assessed in addition to those stated in national guidance. • An overall suitability score is considered appropriate, there is a commentary field where notes on particular constraints can be made • Amended Table 2 to clarify that even at this stage if sites are considered potentially suitable, that this is still subject to detailed sustainability appraisal and technical assessments

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• List of constraints should be identified • Confirmation that mitigation measures submitted through the call for sites will be taken into account <u>Question 8 – Availability Assessment</u> • General support for the availability assessment • Consideration given to the type of promoter that has promoting the site through the Local Plan process • Clarification that information submitted through the call for sites will be used to inform assessment <u>Question 9 – Achievability Assessment</u> • General support for the achievability assessment • Seeking an amended scoring approach which specifically states that there is evidence of a site's achievability through evidence submitted through the call for sites <u>Question 10 – Deliverability/ Developability Assessment</u> • General support for the use of national definitions of deliverability and definitions • Information from housebuilders should be gathered to inform build out rates • Greater information on how this will apply to other land uses <u>Question 11 – Developable Area</u> • General support for the approach taken towards calculating net developable area • Should also reference RICs guidance 'Land measurement for planning and development purposes' • Further clarity is required on what uses are included/excluded within the net developable area • For sites over 50ha, the Council must talk to site promoters to ensure greater certainty in proposed capacity <u>Question 12 – Residential Development Capacity Estimates</u> • General support for the density categories identified and the use of a case study approach • Potentially a density category missing between low and very low reflecting edge of settlement developments in larger and smaller settlements	• An additionally weighted score for sites is not deemed suitable as the planning history for the site already forms part of the suitability consideration in the methodology • Yes, details from the call for sites will be considered and will help to inform the site assessments <u>Question 8 – Availability Assessment</u> • Support noted • Yes, details from the call for sites will be considered and will help to inform the site assessments • Information such as whether housebuilders are already involved with a site will form part of the assessment <u>Question 9 – Achievability Assessment</u> • Support noted • Information submitted through the call for sites will be considered when assessing each site, therefore having a specific score for this is not necessary <u>Question 10 – Deliverability/ Developability Assessment</u> • Support noted • The call for sites form asks for details on delivery including how many years the build out is anticipated to be and what barriers there may be to delivery • Additional clarity provided on how deliverability info will be applied to non-residential land uses <u>Question 11 – Developable Area</u> • General support noted • Additional information on what would be included and excluded from the net developable area provided • Link to RICs guidance added and table 5 amended to align with terminology in this guidance <u>Question 12 – Residential Development Capacity Estimates</u> • Support noted • A density range is not practical to implement in site allocation policies

Main Issues Raised	Council Response / How the Council has taken this into account
• Clarification that local character is a key component of density calculations • Case studies look back about 10 years, this should look back further to include historic building patterns so that the wider context is taken into account as well as current and future housebuilding trends • A density range could be applied to each category <u>Question 13 – Economic Development Capacity Estimates</u> • General support for the use of employment categories within the methodology • Logistics and Distribution forms of development should be included as an employment category • Support for a bespoke approach to employment capacity for strategic and new settlement schemes <u>Question 14 – Detailed Site Assessments</u> • General support for the proposed template • Further detail on how scoring approach will be applied required to ensure consistency and transparency • Add in a field where the list of evidence provided such as those submitted from the call for sites can be shown • There should be a summary table showing the outcome of the detailed assessments. <u>Question 15 – Progression to Sustainability Appraisal</u> • General support that sites that are considered to be deliverable/developable progress to Sustainability Appraisal • Large sites over 50ha and new settlement proposals should automatically progress to SA • Instead of all suitability, availability and achievability scores needing to be either + or ~ the majority of should be to account for mitigation measures • The Council should first contact site promoters for sites not found to be deliverable/ developable before progressing only sites that are initially found to be deliverable/ developable to SA <u>Question 16 – Windfall Assessment</u>	• Amendments to the characteristics of the very low and low categories to provide greater distinction between them • Case studies from within the last 10 years is suitable showing current building trends <u>Question 13 – Economic Development Capacity Estimates</u> • Support noted • Have reviewed the research paper 'Warehousing in the UK: Operations, planning and decarbonisation' (2023) by the University of Westminster as well as reviewing logistics developments in neighbouring authorities such as Northamptonshire and Peterborough as there are limited case studies in Huntingdonshire. Have added text after the text about Town Centres setting out our approach to calculating capacity to logistics and distribution development. <u>Question 14 – Detailed Site Assessments</u> • An additional section where supporting information can be listed has been added to the template • Reformatting of several fields for ease of reading • Removal of the word 'etc.' from the achievability section • Further detail added to each of the suitability, availability and achievability sections to aid use • Table added to after the assessment template to show how the outcomes of the detailed assessments will be summarised. <u>Question 15 – Progression to Sustainability Appraisal</u> • Support noted • Added clarification that for sites of 50ha or more that we will where appropriate speak to site promoters • Sites need to be suitable, available and achievable to be considered either deliverable or developable as per NPPF definitions, so no change required • The methodology states that where appropriate we will talk to site promoters to gather further evidence

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Observations made that windfall allowances need to b based on robust evidence of historic delivery and also likely future trends • Likelihood that delivery on prior approvals and rural exception sites will reduce going forward <u>Question 17 – Assessment Review</u> • Out of 16 responses to this question, one stated priority to increase densities and six stated priority to identifying additional sites. One response stated that neither options should be considered while four stated that both should be prioritised. There were four responses that stated that reassessing discounted sites should be undertaken. <u>Question 18 – Final Evidence Base</u> • General support for the proposed methodology and evidence base document subject to changes identified above • Following all site assessments, there should be a review to ensure consistency in scoring and assessment • If there are insufficient sites to meet need, then discounted sites should be reviewed	<u>Question 16 – Windfall Assessment</u> • The Council have data on historic windfall delivery across various types of development going back over 10 years which can be used to then extrapolate likely future trends <u>Question 17 – Assessment Review</u> • If there is not enough land, the Council will consider seeking additional sites, reviewing discounted sites to see if any circumstances have changed and potentially reconsider densities for sites where our assessment varies significantly from that of the site promoter. <u>Question 18 – Final Evidence Base</u> • Support noted, see above for changes made to methodology • A review will be undertaken and a summary of scores provided in the final Land Availability Assessment alongside detailed assessments • Text added stating that If we do not get enough land, we will also consider seeking additional sites, reviewing discounted sites to see if any circumstances have changed and potentially reconsider densities for sites where our assessment varies significantly from that of the site promoter.

• No comments were made.	• No action required.

Outcomes

3.37 The changes outlined in the table above were made to the Draft Land Availability Assessment Methodology and the document was published on the Council's webpages.

3.38 Minor amendments were made to the document to address any spelling or grammatical errors.

Call for Sites

Consultation Process

Document Summaries

3.39 This section addresses the commencement of the **Call for Sites**:

3.40 This was an opportunity for people to send us details of sites that might be suitable for allocation in the next Local Plan. We sought sites with potential for:

- Residential use (such as housing, specialist homes, moorings, care homes etc.)
- Commercial use (such as retail, leisure, industrial, logistics etc.)
- Infrastructure (such as health uses, community facilities, renewable energy etc.)
- Open Space use (such as sports & recreation, allotments, biodiversity net gain, flooding safeguarding etc.)

3.41 In summary the Call for Sites form contained the following sections:

- Current land status - includes questions relating to the site's name, location, size, land type, current use and planning history
- Land ownership and legal status - includes questions on the promoter's relationship with the site, site ownership, land control arrangements, legal restrictions and site visit contact information
- Proposed land use and delivery - includes questions on the intended use of the site, when it will be available for development and how long the site will take to build
- Assessment of site and constraints - includes questions on access and servicing, constraints and how constraints may be overcome
- Further evidence - asks for any supporting information, surveys or assessments to be submitted alongside a completed form

- The Call for Sites was supported by a short note summarising the information that people will be asked to submit to assist people unfamiliar with the process to understand the range and level of information they are asked to submit. This includes signposting to sources for elements such as map coordinates.

Document Approval

3.42 The documents above went through the following approval process:

- Overview and Scrutiny (Performance and Growth) Panel (01/03/23) - The Panel were invited to comment on the recommendations for the Call for Sites as set out in the Cabinet report. The recommendations were to approve the structure of the Call for Sites for engagement so that it could be published for engagement commencing in March 2023 and running for 10 weeks. Minutes of the Panel and supporting reports can be found at Overview and Scrutiny Panel (Performance and Growth), Wednesday, 1 March 2023
- Cabinet Meeting (21/03/23) - The Committee were asked to approve the structure of the Call for Sites for engagement and to agree that the Call for Sites engagement period commences in March 2023 and running for 10 weeks. Minutes of the committee and supporting reports can be found at Cabinet, Tuesday, 21 March 2023

Consultation and Engagement

3.43 Engagement on the Call for Sites took place between 29 March and 7 June 2023. The consultation was hosted on the Council's online consultation portal.

3.44 The Call for Sites was publicised as follows. Items marked with an * can be found in 4 'Appendix 1 Consultation Material':

3 Local Plan Issues

- On the Council's online consultation portal published on 29 March 2023.
- On the Council's Local Plan Update webpage published on 29 March 2023
- Council homepage banner notification published 29 March 2023 & 9 May 2023
- On the Council's homepage under the heading *Consultations* published on 29 March 2023.
- On the Council's Facebook Page published on 27 March 2023*, 30 March 2023, 5, 12 and 19 April 2023, 31 May 2023, 4 June 2023.
- On the Council's Twitter account published on 27 March 2023*, 29 March 2023, 5, 12, 19 April 2023, 31 May 2023 and 4 June 2023
- On Linked in published on 27 March 2023*, 31 May 2023
- Via Press Release published on 27 March 2023*
- Economic Development Newsletter to local business on 13 April 2023, 11 May 2023

3.45 As part of the public engagement exercise the council undertook the following:

- Emails were sent to Specific Consultation Bodies
- Emails to People and organisations who have responded to previous consultations and wish to be kept informed and those who have opted in to receive notifications through the online consultation system
- Emails to Town and Parish Councils, this included a 'social media package' that could be used to spread the word to their local organisations and residents
- Emails to District Councillors, this included a 'social media package' that could be used to spread the word to their local organisations and residents.
- Council intranet post 30 March 2023 to encourage spreading the word to friends and family.
- Updates on the Council homepage banners
- Internal email to staff to encourage spreading the word to friends and family on 31 March 2023

3.46 The publicity, consultation and engagement were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) , and section 3 of the SCI.

3.47 The consultation and engagement period was in compliance with the timetable set out in the Council's Local Development Scheme 2023.

Responses to Consultation

3.48 At the end of the consultation, 354 sites were submitted during the Call for Sites. These are available in table view (ordered by Parish) on our Call for Sites webpage. The spreadsheet can be used to find the Call for Site reference number. This reference number can then be used to search on our Consultation Portal for the site submission. Here you can view further details of the site and any supporting documents that have been submitted.

3.49 An interactive map showing all the site submitted is also available to view on our Call for Sites webpage.

3.50 Sites submitted as well as sites identified through the Desktop Review will now go through the first phase of assessment using the Land Availability Assessment and Sustainability Appraisal.

3.51 To assist in the navigation of site assessments, the district has been divided into several groups. In total, there are seven groups, divided as follows and shown spatially in the below map.

1. **Northern Huntingdonshire** - Stilton, Folksworth & Washingley; Yaxley wards
2. **North Eastern Huntingdonshire** - Ramsey; Somersham; Warboys wards
3. **Northern Central Huntingdonshire** - Alconbury; Sawtry; the Stukeleys wards
4. **Western Huntingdonshire** - Great Staughton; Kimbolton wards
5. **Central Huntingdonshire** - Brampton; Godmanchester & Hemingford Abbots; Huntingdon wards

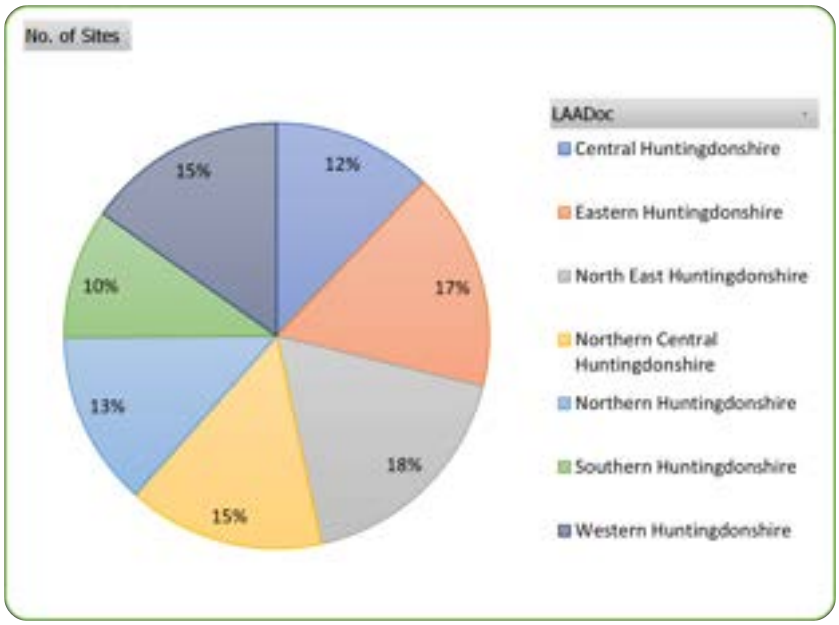
6. **Eastern Huntingdonshire** - Fenstanton; Hemingford Grey & Houghton; Holywell-cum-Needingworth; St Ives wards
7. **Southern Huntingdonshire** - Buckden; Great Paxton; St Neots wards

3.52 Below provides an overview of some key statistics from the consultation.

3.53 Across the seven Ward groupings, there is a fairly even spread of sites across them. The most sites were submitted within the North East Huntingdonshire grouping, with the fewest being in the Southern Huntingdonshire grouping. The following chart shows this spread. The parish that received the most site submissions was Ramsey at 18 sites, then Brampton at 17 and Sawtry at 16. The following chart shows this spread visually:

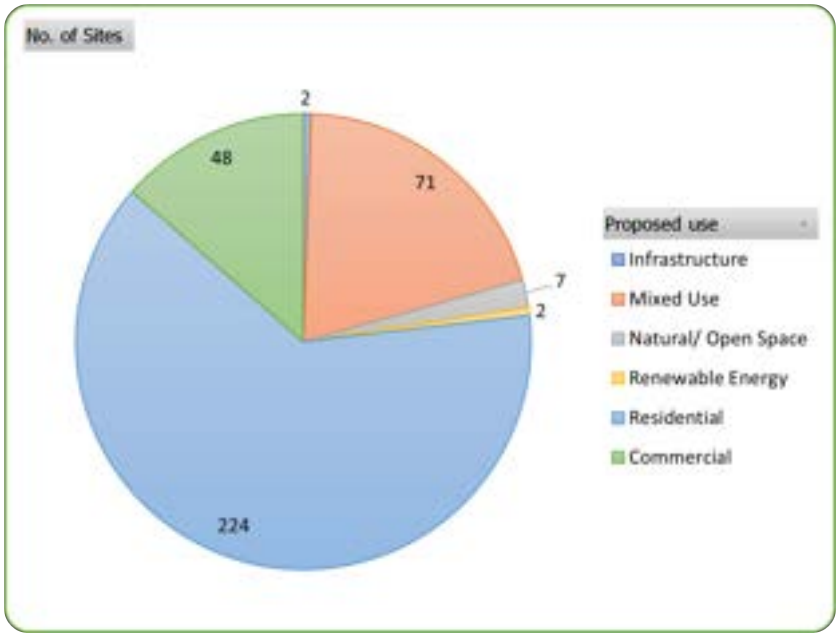
3 Local Plan Issues

Figure 3.1 Number of sites by Ward groupings



3.54 The majority of the sites submitted were for residential uses with 63% of sites being for solely residential uses. There were an additional 20% of sites submitted for mixed uses. Commercial uses was the next most popular land use submitted at 13%. Sites solely for natural/open space/ flood mitigation only made up 2% of the total but it should be noted that the majority of the residential and mixed use proposals did also include some ancillary natural/open space as part of their proposals. Sites solely for infrastructure and renewable energy uses were the least popular land uses submitted but again these land uses have been included within the wider plans of some of mixed use/ residential and commercial sites. The following chart shows this spread visually:

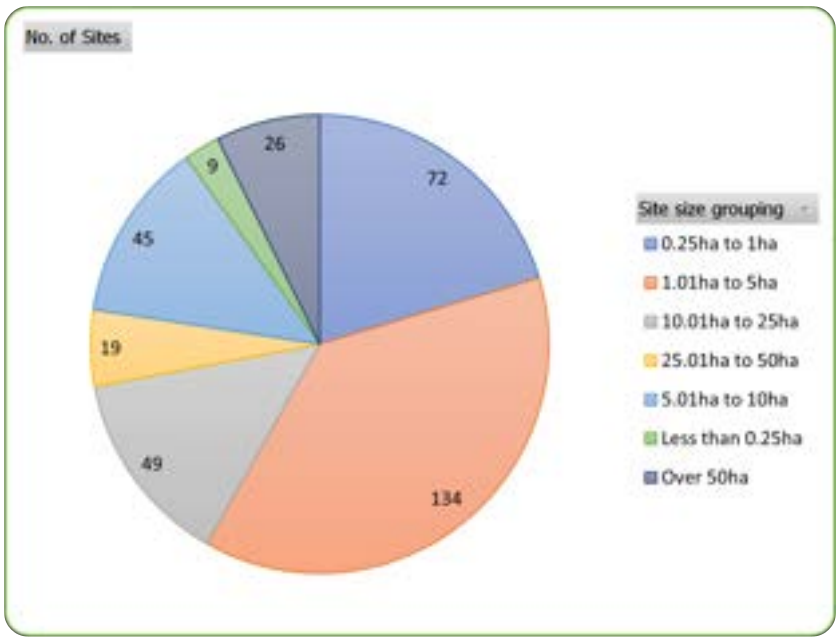
Figure 3.2 Sites by proposed use



3.55 In terms of the size of sites submitted, there was a good range. 20% of sites submitted were between 0.25ha to 1ha in size. 3% of sites (9 sites) were under the minimum site threshold of 0.25ha. Most sites were within the 1.01 to 5 hectare category at 38%, a fairly even amount of sites were submitted within 5 to 10ha and 10 to 25ha at 13% and 14& respectively. 7% of sites (26) were over 50ha in size which consists of potential strategic expansion locations or new settlement proposals.

3.56 Together this shows a healthy mix of sites sizes enabling development on sites of various sizes. Having plenty of potential development sites on sites that are 1ha or less and even up to 5ha in size helps to diversify the housing market by providing opportunities for small and medium housebuilders a share of the market aside from largescale housebuilders who typically dominate larger or strategic scale sites.

Figure 3.3 Sites by site size



3.57 An Ongoing Call for Sites was also opened on 1 October 2024 recognising that some people may still wish to put sites forward for consideration as allocations in the Local Plan Update. This closed on 31 January 2025. There were a total of 83 sites submitted bringing the total number of sites submitted to the Council for assessment to 437 sites.

3 Local Plan Issues

Issues Engagement Papers

Consultation Process

Document Summaries

3.58 This section addresses the following documents:

- **Issues Engagement Paper** - this highlights known issues in the district and asks for your opinions on topics including responding to the climate crisis, enhancing the natural environment, supporting places, meeting housing needs for all, promoting a prosperous economy, developing high quality sustainable communities with supporting infrastructure, and distributing new growth.
- **Issues Engagement Paper Summary** - this is a summary of the Issues Engagement Paper which highlights known issues in the district and asks for your opinions on topics including responding to the climate crisis, enhancing the natural environment, supporting places, meeting housing needs for all, promoting a prosperous economy, developing high quality sustainable communities with supporting infrastructure, and distributing new growth.
- **Issues Easy Read Version** - this explains what the next Local Plan could do in a very short form. The survey form asks you 12 questions. For 10 of these you only need to tick boxes. The questions are to find out what is most important to you about planning for Huntingdonshire's future.

Document Approval

3.59 The documents above went through the following approval process:

- Overview and Scrutiny (Performance and Growth) Panel (05/04/23) - The Panel were invited to comment on the recommendations for the Issues Engagement Papers as set out in the Cabinet report. The recommendations were to approve the contents of the documents and to agree that they could be published for public consultation commencing in April 2023 and running for 10 weeks. Minutes of the Panel and supporting reports can be found at Overview and Scrutiny Panel (Performance and Growth), Wednesday, 5 April 2023
- Cabinet Meeting (18/04/23) - The Committee were asked to approve the contents of the Issues Engagement Papers and to agree that they could be published for public consultation commencing in March 2023 and running for 6 weeks. Minutes of the committee and supporting reports can be found at Cabinet, Tuesday, 18 April 2023

Consultation and Engagement

3.60 Consultation on the Issues Engagement Papers took place between 26 April and 5 July 2023. The consultation was hosted on the Council's online consultation portal. People were able to comment on all aspects of the documents by question, section and tables. Hard copies of the documents were also available to view at the Council's office Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN and in the eleven libraries across the district as well as via the Mobile Library Services (routes H2, 3, 4, 5, 8, 9, 10, 11, 12, 15, 16, 17, 18, 23, 24, 25). The documentation also included information on the consultation, how to respond and contact details for those who require further assistance or the provision of the document in an alternative format.

3.61 The documents were publicised as follows. Items marked with an * can be found in 4 'Appendix 1 Consultation Material':

- On the Council's online consultation portal published on 26 April 2023.
- On the Council's Local Plan Update webpage published on 26 April 2023
- On the Council's homepage under the heading *Consultations* published on 26 April 2023.
- On the Council's Facebook Page published on 26 April 2023* 3, 10, 17 & 31 May 2023, 7, 14, 21, 28 June 2023 and 4 July 2023.

- On the Council's Twitter account published on 26 April 2023, 3, 10, 17 & 31 May 2023, 7*, 14, 21, 28 June 2023 and 4 July 2023.
- On LinkedIn published on 6 April 2023, 3, 10, 17 & 31 May 2023, 7*, 14, 21, 28 June* 2023 and 4 July 2023.
- Via Press Release published on 26 April 2023*
- Economic Development Newsletter to local businesses 25 May 2023 and 8 June 2023

3.62 As part of the public engagement exercise the council undertook the following:

- Emails were sent to Specific Consultation Bodies
- People and organisations who have responded to previous consultations and wish to be kept informed and those who have opted in to receive notifications through the online consultation system
- Town and Parish Councils, this included a 'social media and poster package' that could be used to spread the word to their local organisations and residents. Posters were also distributed by post *
- District Councillors, this included a 'social media and poster package' that could be used to spread the word to their local organisations and residents.

3.63 Other methods of engagement included:

- Internal notifications via the intranet to Huntingdonshire District Council staff to spread the word to friends and family 26 June 2023
- Huntingdonshire District Council homepage banner 26 June 2023

3.64 The publicity, consultation and engagement were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) , and section 3 of the SCI.

3.65 The consultation and engagement period was in compliance with the timetable set out in the Council's Local Development Scheme 2023.

Responses to Consultation

Consultation Responses Summaries

3.66 The following table outlines a summary of the documents consulted on between 26 April and 5 July 2023:

Table 8 Responses to the Issues Engagement Papers

	Issues Engagement Paper	Issues Engagement Paper Summary	Easy Read Version
Number of Comments Made	2,235	49	266
Number of Individuals or Organisations that Responded	83	51	266
Number of Supports	167	N/A	N/A
Number of Objections	53	N/A	N/A
Number of Observations	2,015	N/A	N/A

3 Local Plan Issues

3.67 People were able to comment on all aspects of the documents. The sections below show the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- As the survey for the 'Easy Read Version' was anonymous and did not require a log in to respond, the responses to the survey cannot be viewed on the portal.
- Issues Engagement Paper Summary Consultation Responses
- Issues Engagement Paper Consultation Responses

3.68 The Coal Authority responded to the consultation. As a statutory consultee, the Coal Authority has a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas. They noted that "as Huntingdonshire District Council lies outside the defined coalfield, the Planning team at the Coal Authority has no specific comments to make."

Easy Read Issues Engagement Paper

3.69 The survey had 266 participants and received a large quantity of youth engagement with 67% of participants under 20 years old. This reflects the importance of incorporating younger generations into plan making and the subsequent positive impact this could have on achieving sustainable development in the district.

3.70 This summary provides a descriptive analysis of the responses and follows the same structure as the survey:

1. Creating vision and objectives
2. Tackling climate change
3. Enjoying nature and open space
4. New homes for all
5. Supporting shops and jobs
6. Providing services for communities
7. Where to put new buildings

3.71 The analysis of responses from each question contains:

1. Overall result (all 266 respondents)

2. Age group breakdown (256 respondents) - Some participants did not identify their age and were therefore not included in this part of the analysis
3. Further Comments (if applicable) - Several questions asked for further comments about an issue which has been summarised in a table

1: Creating Vision and Objectives

3.72 The vision and objectives help to define the Local Plan, it will say what type of place we want Huntingdonshire to be in 30 years' time. The respondents were asked to select all of the options that applied to them and add any other ideas they had.

Overall Result

- The two most selected options for this question were 'Nature is well looked after' (73%) and 'Everyone outside feels safe' (71%).
- 'Everyone has a home that meets their needs' (65%), 'everyone living here is happy' (63%) and 'everyone living here is healthy' (61%) placed 3rd, 4th and 5th respectively.
- The two least selected options were 'New buildings are beautiful' (30%) and 'it is a fun place to grow up' (6%).

Age group breakdown findings

- In the 11 to 15 years old age group, five options were clustered together (65-73%). These were, 'Nature is well looked after', 'Everyone living here is healthy', 'everyone living here is happy', 'everywhere outside feels safe' and 'everyone has a home that meets their needs'
- 75% of 16 to 19 years old age group selected 'nature is well looked after', 19% higher than the second most selected options ('everyone living here is happy' and everyone has a home that meets their needs').
- In the 20 years old+ age group, the top two most selected options matched the overall result, 16% greater than the third ranked option.
- The most selected option in the under 11 years old age group was 'everyone living here is happy' (95%) which is 28% higher than the 11 to 15 years old cohort and approximately 40% higher than 16 to 19 year old and 20 years old+ age groups.
- The least selected option in each group was 'it is a fun place to grow up', and the second least 'new buildings were beautiful', matching the overall result.

3 Local Plan Issues

- In the 16 to 19 years old age group, only 38% selected 'everyone living here is healthy' and 'everywhere outside feels safe', substantially lower than the overall result.
- In the 20 years old+ age group, only 18% selected 'people all have jobs they like', 26% lower than the age group with the closest percentage (16 to 19 years old).

Council Response / How the Council has taken this into account

3.73 The Council has taken the comments above into the Further Issues and Options consultation document within *Chapter 3 Local Plan Vision and Objectives* which sets out options for the vision and objectives of the local plan. Further detail on the Local Plan objectives can be found in Appendix 1 of the Further Issues and Options consultation document.

Further Comments

Issue	Summary of Responses	Council Response / How the Council has taken this into account
Transport	• Need for an increase in frequency, accessibility and reliability of public transport especially to rural villages, helping the district to become better connected and inclusive. • Improvement in the quality of road infrastructure through better maintenance. • Provision of electric vehicle charging facilities.	• Response acknowledged the council has taken this forward into the Further Issues and Options consultation document within *Chapter 13 Transport and Connectivity* which provides context on what the Local Plan can control in relation to forms of transport including vehicles, active travel and public transport and sets options on active travel and public transport in new developments. • Response acknowledged, maintenance of road infrastructure is outside the scope of a Local Plan. • Huntingdonshire Transport Strategy 2023 and Action Plan 2024 sets a transport strategy for the district to facilitate sustainability future growth including increasing the provision of electric vehicle charging infrastructure. The Further Issues and Options consultation document has taken these comments forward through Chapter 10 The Approach to Climate Change. This chapter sets out options on decarbonisation scenarios (including electric vehicle charging), and renewable energy.
Active Travel	• Increase in investment, quality and availability of public footpaths and cycle ways that are safe and traverse through open spaces. • Improve connectivity of town and villages through active transport measures. • Needs to be safe and inclusive	• Response acknowledged the council has taken this forward into the Further Issues and Options consultation document within *Chapter 13 Transport and Connectivity* which provides context on what the Local Plan can control in relation to forms of transport including vehicles, active travel and public

Issue	Summary of Responses	Council Response / How the Council has taken this into account
		transport and presents options on active travel and public transport in new developments. • Cambridgeshire's Local and Walking Infrastructure Plan (LCWIP) is in production which sets out the government's aim to make walking and cycling the natural choice for travelling short distances, this plan will help to inform the development of local plan policies and infrastructure requirements.
Preserving the character of settlements	• Maintaining and preserving the rural character of Huntingdonshire • Steer development away from greenfield sites and rural areas.	• Response acknowledged, the council has taken this forward into the Further Issues and Options consultation document within *Chapter 8 Growth Strategy Options* which includes potential growth strategy options in the district with possible pros and cons of each option. • Response acknowledged, the council has taken this forward through the Further Issues and Options consultation document within *Chapter 4 Settlement Hierarchy for Huntingdonshire* which provides context on the different characteristics of settlements and how planning policies are used to determine what is acceptable in a certain location in planning terms
Renewable Energy	• Promote renewable energy sources in the local area such as solar farms and EV charging points. • Ensure solar farms are developed in suitable locations.	• Response acknowledged; a climate change report is nearing completion which will explore the transition to low carbon power/ renewable energy sources and provide guidance on assessing proposals/informing policies for commercial scale renewable energy generation. • Sites for renewable energy use were submitted through the 'Call for Sites 2023' and have been systematically assessed through a Land Availability Assessment (LAA) and Sustainability Appraisal (SA) assessment. The LAAs and SAs will be released for consultation in autumn 2024.

3 Local Plan Issues

Issue	Summary of Responses	Council Response / How the Council has taken this into account
Green space and biodiversity	• Essential to preserve and enhance the natural environment • Increase the number of parks, trails and open spaces near built up areas	• Response acknowledged the council has taken this forward into the Further Issues and Options consultation document within *Chapter 9 Our Green and Blue Infrastructure* which sets out options retaining, designating and or allocating green and blue infrastructure in the district.
Maintenance	• Cleaner areas with less litter • Improved road maintenance	• Response acknowledged, this is outside the scope of a Local Plan.
Housing Development	• Crucial to have the suitable infrastructure alongside housing development such as schools, surgeries and roads.	• Response acknowledged, an Infrastructure Delivery Plan will be produced showing infrastructure needs across the district to support planned growth and key stakeholders who will responsible for it's delivery.
Services	• Improve the quality of public services • Increase the number of sporting facilities in the district • Provision of more services for young people	• Response acknowledged, this is outside the scope of a Local Plan • Response acknowledged, an Indoor and Built Facilities and Playing Pitch Assessments and Strategies (2022) have been completed which provides a comprehensive action plan for the maintenance and improvement of existing sports facilities, it will be used as an evidence base to inform Local Plan infrastructure requirements.

2: Tackling Climate Change

3.74 The respondents were asked about the importance of tackling climate change and to select one answer out of three options; 'very important, 'a bit important' or 'not important'.

Overall Result

72% of participant selected 'very important', 19% selected 'a bit important' and 7% selected 'not important'

Age group breakdown findings

81% of the 20 years old+ age group chose 'very important', higher than 11 to 15 years old (68%), under 11 years old (79%) and 16 to 19 years old (73%) age groups.

Council Response / How the Council has taken this into account

The council is producing a Climate Change Report, including a chapter which looks at the role of the Local Plan in responding to climate change and contributing to net zero carbon. This issue has also been focused on within the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change* which proposes a number of potential options aimed at reducing carbon emissions which could be brought forward as policies in the Local Plan.

3: Enjoying nature and open space

3.75 This section had two parts: For the first part of this section, the respondents were asked about how important enjoying open space and nature is to them. They had to choose one response, 'very important', 'a bit important' or 'not important'.

3 Local Plan Issues

Overall Result

75% of respondents selected 'very important', 20% selected 'a bit important' and 3% selected 'not important'.

Age group breakdown

94% of 20 years old+ age group selected 'very important', higher than under 11 years old (89%), 11 to 15 years old (65%) and 16 to 19 years old (73%)

Council Response / How the Council has taken this into account

The council has taken these opinions forward into the Further Issues and Options consultation document within *Chapter 9 Our Green and Blue Infrastructure* which explores the importance of blue and green infrastructure in supporting a range of functions; for wildlife and biodiversity and human physical and mental well being.

3.76 The second part of this section asked the respondents to select all the options they think are important regarding the sorts of open space that can be put in with new homes.

Overall Result

- The responses show that 'space for wild animals and birds to live' was regarded to be the most important factor when considering the types of open space that can be put near new homes, with 61% of all the participants selecting this option. The second and third most selected option was grass and trees to walk in (52%) and spaces for teenagers to hang out in (49%).
- 'Grass areas with seats' was selected the least (16%) by a significant amount, 18% less than the second least selected option ('play areas for under 5 year old').

Age group break down findings

- The most selected option in every age group was 'Space for wild animals and birds to live', matching the overall result.
- 'Areas of flowers and bushes' received the second highest number of votes in the 'under 11 years old' (84%) and 16 to 19 years (56%) cohort. In contrast, this was the second lowest selected option in the 11 to 15 years old age group (28%).
- 29% of the 20 year old+ age group selected 'space to play ball games' which, other than 'grass areas with seats', was the lowest selected option from this cohort and a significantly lower percentage than the other age groups (closest age group being 11 to 15 years old with 44%).
- The least selected option across all of the age groups was 'grass areas with seats', consistent with the overall result.
- The equal lowest selected option for the 16 to 19 years old age group was 'play areas for under 5 years old' and 'play areas for 6- 11 years old' (13%).
- 'Space for teenagers to hang out' (46% to 58%) and 'grass areas with seats' (11% to 18%) showed the smallest range in results across the age groups.

Council Response / How the Council has taken this into account

3 Local Plan Issues

The council has taken these opinions forward into the Further Issues and Options consultation document within *Chapter 7 Achieving well-designed and beautiful places* which provides context on the importance of high quality design within the built environment to ensure access to open space, maintaining landscapes and habitats and the needs of different demographics are met. This chapter asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces. *Chapter 9 Green and Blue Infrastructure*, presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen. Natural England's Access to Natural Greenspace Standards is referenced as a document of importance in the development of the Local Plan.

4: New Homes for all

3.77 This section required the respondents to answer 8 questions relating to the importance of different types and features of new homes. They were asked to select one option from three, 'very important', 'a bit important' or 'not important' for each question. The analysis below focuses on the number of respondents who selected 'very important' when presented with the options listed.

Overall Result

- 'New homes are designed to be low cost to run' (60%) and 'more affordable homes being built for sale' (59%) received the most 'very important' responses.
- 'New homes are specially designed for older people' (28%) and 'New homes are close to shops' (30%) received the least 'very important' responses.

Age group breakdown findings

- 'More affordable homes being built for sale' had between 50-60% of each age group selecting 'very important' and was the most selected option within the 11-15 years old age group (60%), consistent with the overall result.
- 'New homes are low cost to run' received the most or joint most 'very important' votes in the 20 years old+ (84%), 16 to 19 years old (63%) and under 11 years old (joint highest with 58%) age group.

This option placed third in the '11 to 15 years old age group (47%), only 2% lower than the second highest ('new homes are close to services like schools').

- 'New homes are close to services like schools' obtained the second highest number of 'very important' responses in the 20 years old+ (58%) and 11 to 15 years old (49%).
- 'New homes are specially designed for older people' had the lowest number of 'very important' responses in the 11 to 15 years old (22%) and 16 to 19 years old (13%) age group, a significantly lower percentage than the 20 years old+ (35%) and under 11 years old (47%) age group.
- 'New homes have enough space to work from home' had the lowest number of 'very important' votes in the 20 years old+ age group (28%).

Council Response / How the Council has taken this into account

Response acknowledged the council has taken this forward into the Further Issues and Options consultation document within *Chapter 12 Housing Tenures and Mix* which provides context and options on the role of housing in meeting the requirements of different types and sizes of households and needs of the population such as affordable housing. The council also has a Housing Needs of Specific Groups 2021 document, it includes assessment of issues such as affordable housing need and housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. The Further Issues and Options consultation document also presents Growth Strategy Options within Chapter 8, which looks at potential distribution of growth, in addition *Chapter 4 A Settlement Hierarchy* for Huntingdonshire sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A *Sustainability of Settlements study 2023* assesses each settlement at a point in time identifying access to services and facilities.

Further Comments

Issue	Summary of Responses	Council Response / How the Council has taken this into account
Energy Efficiency	• New homes should be heated by sources that are more energy efficient such as heat pumps.	• Response acknowledged, the council is producing a Climate Change Report, which will explore the transition to low carbon power sources and what sources may be used in the district to meet local demand for energy.
Renewable Energy	• New homes should be fitted with solar power and Electric Vehicle charging points	• Huntingdonshire Transport Strategy 2023 and Action Plan 2024 sets a transport strategy for the district to facilitate sustainability future growth including increasing the provision of electric vehicle charging infrastructure. The Further Issues and Options consultation document has taken these comments forward through *Chapter 10 The Approach to Climate Change.* This chapter sets out options on decarbonisation scenarios (including electric vehicle charging) and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform

3 Local Plan Issues

Issue	Summary of Responses	Council Response / How the Council has taken this into account
		policy-making and addresses many issues raised.
Gardens	• New homes should have large outdoor garden space.	• Response acknowledged, the Further Issues and Options consultation document includes *Chapter 7 Achieving well-designed Places.* The chapter references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
Parking	• Availability of off road parking to reduce cars parking in the street making it safer for pedestrians	• Response acknowledged, the availability of off road parking to be included within new development will be considered in creation of development management policies in the Local Plan Update. These comments are noted and the Further Issues and Options consultation document which notes that current local plan policy LP 17 'Parking Provision and Vehicle Movement' sets minimum requirements for cycle parking provision for new developments and that car parking levels are expected to be responsive to the location and nature of the proposed development rather than numeric requirements being set.
Type of Housing	• More affordable homes that are large enough to accommodate a range of family sizes	• Response acknowledged the council has taken this forward into the Further Issues and Options consultation document within *Chapter 12 Housing Tenures and Mix* which provides a series of options for the district relating to the future mix and tenures of homes for the Local Plan.
Suitability	• New homes should be suitable for the needs of young children and disabilities.	• Response acknowledged, the council has a Housing Needs of Specific Groups 2021 document which sets out the need for older and disabled persons, an update to this will help to inform need and be used in the formulation of policies and requirements

5: Supporting Shops and Jobs

3.78 This section was broken down into two parts: The respondents were asked to think about the town or village centre they go to most often and whether they would like to see more or less of the 8 options listed. They had to select one option out of three options, 'more', 'about the same', or 'less'. The analysis focuses on the number of respondents who selected 'more' when presented with the options listed.

Overall result

- 'Health clinics' (46%), 'places to go in the evening'(45%) and 'other shops'(45%) received the highest number of 'more' responses.
- 'Pharmacy where you can get medicines' (41%), 'cafes and restaurant' (41%), had only marginally less votes.
- 'Offices and places to work'(26%) and 'Hot food takeaways'(27%) had the least 'more' responses.

Age group breakdown findings

- Even though 'Health clinics' ranked first overall, only 19% (second lowest percentage) of the 16 to 19 years old cohort selected this option. This option ranked first in the 20 years old+ age group, second in the under 11 years old age group and third in the 11 to 15 years old age group, in line with the overall result.
- The under 11 years old, 11 to 15 years old and 16 to 19 years old age group also had a similar result for 'places to go in the evening', ranging from 41% to 45%. However, 75% of the 16 to 19 years old age group want to see more 'places to go in the evening' (ranked first), 30% higher than the overall result.
- In a similar vein, 'Offices and places to work' ranked in the bottom two for 'more' responses in the 'under 11 years old (21%), 11 to 15 years old (30%) and 20 years old+ (14%) age group.
- 'Hot food takeaways' had the lowest number of 'more' responses in the 20 years old+ age group (5%), 26% lower than the age group with the nearest percentage (16 to 19 years old age group).

3 Local Plan Issues

Council Response / How the Council has taken this into account

- The council will develop an Infrastructure Delivery Plan which will include a current baseline of provision of aspects such as health and social care and identify infrastructure needs in the district. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed
- The issue of the provision of shops and services has been brought forward into the Further Issues and Options Document within the *Chapter 4 A Settlement Hierarchy for Huntingdonshire* which provides context on how assessing the sustainability of assessments has identified what services and facilities were available in our towns, villages and hamlets and how sustainable they are in terms of meeting the needs of our communities.
- Sustainability appraisals of the options presented in the Further Issues and Options Consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies. It assesses the impact or potential to enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion through objective SA10.

3.79 For the second part respondents selected all of the options that applied to them in regard to what type of jobs we should get more locally.

Overall Result

- The responses from this part of the survey revealed 'teaching and childcare' (56%) and 'health or care work' (55%) were selected most frequently by the participants.
- The two least selected options were 'factory jobs making things'(7%) and 'engineering' (8%).

Age group breakdown findings

- The under 11 years old, 11 to 15 year old and 20 years old+ age group responses mostly aligned with the overall result in respect to the type of jobs which were selected the most and the least.
- 62% of the 20 years old+ cohort want to see more high technology jobs in the local area and this was the most selected option for this age group.

- Only 25% of 16 to 19 years old age group want more 'health or care work' and 'teaching or childcare' which is 30% less than the overall result percentage.
- The 11-15 years old age group levied more importance on increasing the amount of 'health or care work' (ranking 1st with 51%) and 'teaching or child care jobs' (ranking 2nd with 54%) available than the other types. 'Tourism and leisure' ranked 3rd with 42%.
- 44% of the 16 to 19 year old age group consider an increase in 'tourism and leisure' jobs as desirable, receiving the highest number of votes across all the job types within this cohort.
- 'Factory making things', 'engineering' and 'warehousing' were the three least selected options in the 11 to 15 years old, 16 to 19 years old and 20 years old+ age group and within the bottom four in the under 11 years old age group, in line with the overall result.
- 0% of the under 11 years old age group want to see more office jobs locally, the overall result for all of the age groups was 32%.
- 6% of the 16 to 19 years old age group want more 'building and construction' jobs locally, 14% lower than the age group with the nearest percentage (20 years old+) and the second least selected option in this age group.

Council Response / How the Council has taken this into account

The council will develop an Employment Land Study which will draw out employment land needs over the plan period by assessing current demand and supply of employment land. In addition, the Further Issues and Options document within *Chapter 5 Approach to Employment and Economy* provides information about research carried out by our Economic Development team that looks at the number of jobs that could be created when there is growth in employment land within specific sectors. For example, advanced manufacturing produces locally approximately 2 to 3 jobs per 100sqm of employment land growth.

Further Comments

Issue	Summary of Responses	Council Response / How the Council has taken this into account
Employment	Ensure the skills of the labour force in the district match the jobs available	The Further Issues and Options consultation document has taken forward issues relating to location of growth and economic strategy ambitions presenting options for consideration within *Chapter 5 Approach to Employment and the Economy* and *Chapter 8 Growth Strategy Options.*
Natural environment	More jobs that enhance and preserve the natural environment	
Creative Industry	More creative related jobs available such as arts, crafts and galleries.	

6: Providing Services for communities

3.80 For this section, the respondents were asked what services like doctors and footpaths are important them, choosing from a list of 11 options. They were asked to select one option from three, 'very important', 'a bit important' or 'not important' for each question. The analysis focuses on the number of respondents who selected 'very important' when presented with the options listed.

3 Local Plan Issues

Overall Result

- 'Safe footpaths' (73%) and 'mobile phone reception in your home' (68%) had the two most 'very important' responses, 18% and 13% higher than the third ranked option respectively.
- 'Community meeting hall near your home' and 'public house near your home' received the joint lowest number of 'very important' votes, with 13%, over two times lower than the next lowest option (sports field near your home with 29%)

Age group breakdown findings

- 'Safe footpaths' and 'mobile phone reception' were in the top three for 'very important' responses across all of the age groups, largely consistent with the overall result.
- 'Ultra fast broadband' was in the top three for 'very important' responses in the under 11 years old, 16 to 19 years old and 20 years old+ age groups, but only received 39% of votes in the 11 to 15 years old cohort (ranked 6th).
- In the 20 years old+ age group, 90% and 84% of participants selected very important for 'safe footpaths' and 'mobile phone connection near your home' respectively, which is significantly higher than the overall result and therefore the other age groups.
- A comparable result was shown for 'bus service near your home' with 65% of 20 years old+ selecting 'very important', 18% greater than the age group with the next highest percentage (under 11 years old with 47%).
- 74% of the under 11 years old age group and 68% of the 20 years old age group selected 'very important' for the option 'doctors surgery near your home', contrasting to 42% in the 11 to 15 years old age group and 31% in the 16 to 19 years old age group. 'Pharmacy near your home' showcased a similar result.
- 'Community meeting hall near your home' and 'public house near your home' had the two lowest number of 'very important' responses across all of the age groups, consistent with the overall result.
- The 20 years old+ age group voted 'community meeting hall near your home', on average, 4 times more than the other age groups with 27%.

Council Response / How the Council has taken this into account

- The Sustainability Appraisal consultation document has assessed sites submitted through the 'Call for Sites 2023' using the 16 sustainability objectives. This covered aspects such as access to shops, employment opportunities, culture and leisure facilities and digital infrastructure in relation to the submitted site.
- The council will produce an Infrastructure Delivery Plan which will identify infrastructure needs relating to transport, education, health and social care, community facilities, sport facilities and green infrastructure
- Options for active travel have been brought forward within the Further Issues and Options consultation document within *Chapter 13 Transport and Connectivity* such as changing transport provision within new developments to focus on high quality and infrastructure for active travel and public transport. *Chapter 7 Achieving Well Designed Places* asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces.

3 Local Plan Issues

7: Where to put new buildings

3.81 The respondents were asked where they think new homes and places to work should be built in relation to infrastructure, social factors, employment and the natural environment. They were required to select all of the options that applied to them.

Figure 3.4

Overall result

- 'Near a large open space' (57%) and 'near a doctors'(55%) were the two most selected options in the survey.
- 'Near a town centre with lots of shops and places to eat and drink' (49%) and 'near lots of jobs' (47%) received marginally less votes ranking third and fourth respectively.
- The two least selected options were 'near a school' (12%) and 'near good bus services' (20%).

Age group breakdown findings

- 'Near a park or large open space' was in the top 3 most selected option for all of the age groups, consistent with the overall result. This was also the case for 'near a doctors' except for the 16 to 19 years old age group where only 31% selected this option, out of line with the overall result.
- Only 15% of the 20 years old+ cohort selected 'near friends or family' (ranked as the second least selected option in this age group), over 3 times lower than the age group with the closest percentage (under 11 years old with 47%).
- 'Near a school' ranked lowest in all of the age groups, matching the overall result.
- 'Near good bus services' was selected the second least number of times in all of the age groups except the 20 years old+ cohort, ranking 6th with 27%.
- 'Near the countryside' was ranked consistently low in the 11 to 15 years old, 16 to 19 years old and 20 years old age groups

Council Response / How the Council has taken this into account

- The Sustainability Appraisal consultation document assessed sites submitted through the 'Call for Sites 2023' using the 16 sustainability objectives. This covered aspects such as access to shops,

employment opportunities, culture and leisure facilities and digital infrastructure in relation to the submitted site/ potential new development.

- The Further Issues and Options consultation document provides options on the objectives for the local plan, some of which include reference to support for community facilities and integrated community facilities (Chapter 3). *Chapter 4 A Settlement Hierarchy for Huntingdonshire* sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A *Sustainability of Settlements study 2023* assesses each settlement at a point in time identifying access to services and facilities.
- The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: a current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure needs across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed.

Summary Issues Engagement Paper

Summary Issues Engagement Paper

3.82 The survey asked questions about known issues in the district and there were 50 participants in the survey. This summary provides a descriptive analysis of the responses and aligns with the structure in the Summary Issues Engagement Paper Supporting Document. The issues included within the document are:

1. Responding to the Climate Crisis
2. Protecting and Enhancing the Natural Environment
3. Supporting our Places
4. Meeting the Housing Needs for All
5. Promoting a Prosperous Local Economy
6. Developing High Quality Sustainable Communities with Supporting Infrastructure
7. Distributing New Growth

3.83 A tally was made for the number of times an issue, argument, theme, example or place name was referenced. The tally is in brackets and requirement of 3 tallies has been made for a point to be included within the 'Main Issues Raised' column.

1: Responding to the Climate Crisis

There were 47 responses to this question.

Main Issues Raised	Council Response/ How the Council has taken this into account
Issue: Carbon Emission Targets and Targets (6)	
• Targets should be ambitious and align with national and international climate goals (3). • Collaboration with the community and businesses within the district is important to help increase support and ownership of climate related policies (3)	• Sustainability appraisals of the options in the Further Issues and Options consultation document have been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document and will assess the impact of policies, sites and strategies in relation to the climate emergency objectives through SA 1 to 3. Within *Stage A* of the document is also a review of relevant plans and programmes, which may contain objectives

3 Local Plan Issues

	and specific policy requirements that need to be considered. This review helped to shape the sustainability objectives against which emerging policies, options, sites and strategies should be appraised against, as well as pointing to particular issues and problems that should be tackled. Documents included international and national plans, programmes and regulations. • The Further Issues and Options consultation document includes *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios, and renewable energy. This document will be consulted upon publicly to allow the community and businesses to contribute towards the policies and objectives of the local plan. Other chapters which include options and or questions that can assist in addressing the climate emergency include: *Chapter 3 Local Plan Vision and Objectives, Chapter 4 A Settlement Hierarchy for Huntingdonshire, Chapter 8 Growth Strategy Options, Chapter 9 Our Blue Green Infrastructure, Chapter 11 Tackling Flooding and Water and Chapter 13 Transport and Connectivity.*
Issue: Carbon Sequestration and Offsetting (1)	
Issue: Renewable and Low Carbon Energy (25)	

• Meet energy demand locally by increasing the supply of renewable and low carbon energy (25). This could be done by supporting and promoting the provision of solar panels (16), wind energy (6), ground source heat pumps (12) and electric vehicle charging points (4) at different scales.
• Require and encourage new developments to be powered by renewable and low carbon energy (19). This includes, residential (8), warehousing (5), commercial (8) and industrial (3) buildings.
• Encourage solar farm development in suitable locations to support local energy supply (7).
	• Responses noted. The Further Issues and Options consultation document has taken these comments forward through *Chapter 10 The Approach to Climate Change.* This chapter sets out options on decarbonisation scenarios (including electric vehicle charging), and renewable energy.
	• The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and

	• offsetting and sequestering emissions • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for renewable energy generation. All sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document.
Issue: Energy Efficiency and Retrofitting (18)	
• Require and incentivise existing (3) and new buildings (15) to be more energy efficient (18). • This could be done by requiring the installation of triple or double glazing (6), water recycling (3), ground source heating (12), insulation (9) and meeting building codes and standards (3).	See response above
Issue: Flooding, Water Supply and Pollution (9)	
• Implement solutions to tackle flooding (6) and pollution (4) and improve water supply (5). • Tackle flooding issues through nature based solutions (3). • Prevent flooding through removing hard landscaping to help reduce surface run off (4). • Ensure cooperation with local authorities and other stakeholders (3). • Encourage water conservation and reuse (3).	• Responses noted, the Council has completed a Stage 1 Water Cycle Study and Level 1 Strategic Flood Risk Assessment (2024) and will complete a Stage 2 Water Cycle Study and Level 2 Flood Risk Assessment which look and will look at an integrated approach to water management and the challenges around flooding and land management. These documents will be used as an evidence base to address the issues raised and inform local plan strategy and policy. • The Council has taken comments forward into the Further Issues and Options consultation document within Chapter 11 Tackling Flooding and Water, which sets out options on integrated flood and water management including natural flood management techniques, reduction of risk elsewhere, surface water management and water efficiency measures in residential and non residential buildings. • The Council has a Duty to Cooperate in plan-making which requires that local planning authorities collaborate with specific organisations, including local authorities, to identify strategic matters which need to be addressed in their plans.
Issue: Waste and Recycling (7)	
• Encourage the recycling of materials (7).	• Responses acknowledged, the Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making, the report includes a chapters on low, high and

3 Local Plan Issues

	medium carbon reduction pathways and guidance on the role of sustainable design, the circular economy and retrofitting.
Issue: Biodiversity Preservation and Enhancement (10)	

• Protect and enhance existing biodiversity and natural habitats (3).
• Require biodiversity enhancement within new developments (5).
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within:
	  • Chapter 3 Local Plan Vision and Objectives, which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan. The options include reference to biodiversity and the natural environment.
	  • Chapter 7 Achieving well-designed Places, which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
	  • Chapter 9 Green and Blue Infrastructure, which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen. Natural England's Access to Natural Greenspace Standards is referenced as a document of importance in the development of the Local Plan.
	• The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the biodiversity and natural habitats. Specifically, objectives SA4,5 and 6.
	• Biodiversity net gain is required under a statutory framework introduced by Schedule 7A of the Town and Country Planning Act 1990 (inserted by the Environment Act 2021).

Issue: Location of Development (19)	
• Direct development away from greenfield land (7) and support development on brownfield sites (4). • Ensure new residential developments are built in close proximity to amenities (6). • Allocate development of warehousing and distribution along major highways to reduce	• Response noted regarding location of growth, proximity of amenities, location of amenities, congestion and green house gas emissions, these have been taken forward through the Further Issues and Options document, which addresses these issues and presents options for consideration. Key chapters include:

congestion in villages and therefore decrease vehicle related green house gas emissions (5).	• *Chapter 4 A Settlement Hierarchy for Huntingdonshire* • *Chapter 8 Growth Strategy Options.* • *Chapter 13 Transport and connectivity.* • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report which will be looking at future emissions and trends, low, high and medium carbon reduction pathways and the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero.
Issue: Sustainable Transport Modes (23)	
• Improve and promote public transport (13), cycling (12) and walking (6) to help reduce reliance on private vehicles (12). • Increase provision of electric car charging points (6). • Improve the bus network in rural areas to raise connectivity, reduce reliance on private vehicles and decrease isolation (5). • Support the Nene Valley Greenway proposal (4).	• Responses noted the Further Issues and Options consultation has taken forward these responses specifically though: • *Chapter 7 Achieving Well Designed Places* - which asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces • Chapter 9 Green and Blue Infrastructure - which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy and Natural England's Access to Natural Greenspace Standards are referenced as a documents of importance in the development of the Local Plan. • Chapter 10 The Approach to Climate change - which includes options relating to electric vehicle charging within 'Decarbonisation Scenarios'. • *Chapter 13 Transport and Connectivity* that provides options on the approach to individual development and consideration

3 Local Plan Issues

	of active travel and public transport and a question on net zero transport.
Issue: Construction (5)	
• Require new developments to minimise carbon emissions in construction and use more sustainable materials (5)	• The Further Issues and Options consultation document includes *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios, and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as: low, high and medium carbon reduction pathways, guidance on the role of sustainable design, the circular economy and retrofitting, the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,

2: Protecting and Enhancing the Natural Environment

3.84 There were 49 responses to this question.

Main Issues Raised	Council Response/ How the Council has taken this into account
Issue: Huntingdonshire's Landscapes (27)	
• Protect (20), enhance (9) and maintain (7) landscapes (natural environment, countryside, agricultural land, green spaces) to preserve the rural character of Huntingdonshire. • Prevent new, large scale, commercial and residential development on greenfield land (15). • Consider the impact of recent development proposals in northern Huntingdonshire on the natural environment in decision making (9). • Support the protection of Natural Cambridgeshire's Priority Landscapes (5). • Protect agricultural land to ensure food security (7).	• Response acknowledged the council has taken comments forward regarding protecting, enhancing and maintaining landscapes into the Further Issues and Options consultation document within *Chapter 9 Our Green and Blue Infrastructure* which sets out options for retaining, designating and or allocating green and blue infrastructure in the district. Documents also referenced here include the Local Nature Recovery Strategy which will also help to shape policies in the Local Plan. *Chapter 8 Growth Strategy Options* also presents options on preferred locations for growth. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including biodiversity net gain, open space commercial and residential uses. All sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. • The Council has produced a Sustainability Appraisal (SA), an iterative document which will

	assess the impact of options, policies, sites and strategies on the environment. Specific objectives address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making, visual pollution, previously developed land, agricultural land and landscape/townscape impact (SA 4, 5,6, 7, 8, 15).
Issue: The Natural Environment & Nature Conservation Designations (13)	
• Support and protect Natural Cambridgeshire's Priority Landscapes (5) in areas such as the Nene Valley (3). • Increase the number of nature conservation sites (4) to protect, restore and enhance flora and fauna (3). • Engage the community with environmental initiatives to encourage residents to take ownership in conserving the natural environment (3).	• Response acknowledged the council has taken comments forward regarding protecting, supporting, restoring and maintaining landscapes into the Further Issues and Options consultation document within *Chapter 9 Our Green and Blue Infrastructure* which sets out options for retaining, designating and or allocating green and blue infrastructure in the district.
Issue: Green Infrastructure (15)	

• Ensure access to green space by integrating green infrastructure within new developments and existing settlements (3).
• Protect existing green infrastructure such as public rights of ways (7).
• Make sure residents have access to greenspace as it is very important in maintaining mental and physical well being (3) and a sense of place and identity (3).
• Stop village greens being used for parking cars (3).
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within:
	  • *Chapter 7 Achieving well-designed Places,* which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important. Reference is made to the importance of public rights of way network in plan-making.
	  • *Chapter 13 - Transport and Connectivity* that provides options on the approach to individual development and consideration of active travel.

Issue: Biodiversity Net Gain (8)	
• Require biodiversity net gain within new developments (6).	• Biodiversity net gain is required under a statutory framework introduced by Schedule 7A of the Town and Country Planning Act 1990 (inserted by the Environment Act 2021).
Issue: Blue Infrastructure (5)	

3 Local Plan Issues

• Preserve and protect water bodies such as rivers, lakes and wetlands to enable water security, areas for leisure and flooding prevention (3). • Protect the River Great Ouse as it is vital for social, environmental and economic reasons (3).	• Response acknowledged the council has taken comments forward regarding protecting, supporting, restoring and maintaining landscapes into the Further Issues and Options consultation document within Chapter 9 Our Green and Blue Infrastructure which sets out options for retaining, designating and or allocating green and blue infrastructure in the district.

3: Supporting Our Places

3.85 There were 47 responses to this question.

Main Issues Raised	Council Response/ How the Council has taken this into account
Issue: Huntingdonshire's Market Towns (4)	
• Allocate large scale housing development in close proximity to urban centres where employment needs are greatest and infrastructure exists (3).	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 8 Growth Strategy Options* that provide options on the general location of development and *Chapter 4 A Settlement Hierarchy* for Huntingdonshire that will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. • The options were subject to a sustainability appraisal which will also be consulted upon at the same time as the Further Issues and Options document.
Issue: Huntingdon, St Neots and Ramsey (4)	
• There is a sufficient supply of housing at St Neots East in St Neots in the current Local Plan (3).	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 8 Growth Strategy Options* that provide options on the general location of development and *Chapter 4 A Settlement Hierarchy* for Huntingdonshire that will help to determine which locations growth may be directed to and how much.
Issue: Huntingdonshire's Villages	
• Preserve the rural character, heritage and beauty of the villages in Huntingdonshire (9). • Support minor developments of housing in villages (8). This can be done through supporting affordable housing development	• Sustainability appraisals of the options in the Further Issues and Options consultation document have been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document

(8) allowing younger families to stay in the local area (3). • Prevent large scale residential development from negatively impacting villages (10). Consider the impact of large scale development on overwhelming local infrastructure and communities (4). • Prevent non-local traffic flow such as HGV vehicles using the roads in villages as a short cut (14). This could be addressed by steering traffic flow towards major highways (3) or introducing traffic calming measures such as speed limits (6). • Develop and support community facilities in villages to help build a sense of community (5).	which will assess the impact of policies, sites and strategies on heritage, landscape and townscape impact, social and community services and facilities. Specific assessment objectives include SA 7, 10, 15 and 16. • Response noted regarding size and scale of developments these have been taken forward through the Further Issues and Options document, which addresses these issues and presents options for consideration. Key chapters include: *Chapter 4 A Settlement Hierarchy for Huntingdonshire* and *Chapter 8 Growth Strategy Options*. • *Chapter 13 - Transport and Connectivity* in the Further Issues and Options consultation document provides options on the approach to individual development and a question on net zero transport. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed.
Issue: The Countryside	
• Preserve and protect the countryside (15). This could be achieved by preventing development on green field land (4). • Maintain access to green space and foot paths in the countryside (8) to help well being (3).	• Responses acknowledged, these comments have been taken forward into the Further Issues and Options consultation in Chapter 4 A Settlement Hierarchy for Huntingdonshire, which looks at the categorisation of settlements and the countryside, Chapter 7 Achieving well-designed Places, which raises additional questions on the role of active design, Chapter 9 Our Green and Blue Infrastructure which sets out options for retaining, designating and or allocating green and blue infrastructure in the district and Chapter 13 Transport and Connectivity that provides options on the approach to individual development and consideration of active travel. • With regards to damage to damage to development on greenfield land, the Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of options, policies, sites and strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site

3 Local Plan Issues

	assessment includes impact on visual pollution, previously developed land and landscape/townscape impact (SA4, 7, 8, 15).
Issue: Historic Environment	
• Preserve historical buildings, landmarks and cultural heritage sites (5). This is important for a sense of identity and place (3) and will help support the tourism industry (3).	• The Council has produced a sustainability appraisal, it is an iterative document which will assess the impact of policies, sites and strategies on heritage specifically through objective SA 16. • *Chapter 7 Achieving Well Designed Places*, raises additional questions on the role of design and active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
Issue: Infrastructure and Services	
• Sufficient infrastructure and access to amenities integrated within existing settlements and new developments to improve economic, social and environmental outcomes of our places (3). • Enable access to community centres (3) and plan for the provision of schools and healthcare facilities (3). • Improve sustainable transportation networks (3). • Increase prevalence of renewable energy sources to ensure energy security for business and households (3).	• The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • Responses acknowledged regarding sustainable transport networks. Chapter 13 of the Further Issues and Options consultation document provides options on the approach to individual developments including active travel and public transport, questions on a place based approach to zero carbon and options around the East West Rail. Some sustainable transport networks will be outside the control of the local plan, such as East West Rail and the Guided Busway, however progress on these projects and emerging projects will be taken into account in the formulation of the local plan. • Responses noted regarding renewable energy, the Further Issues and Options consultation document has taken these comments forward through Chapter 10 The Approach to Climate Change. This chapter sets out options decarbonisation and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and will include a chapter

	on infrastructure and renewable energy, exploration to low carbon resources. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for renewable energy generation. All sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document.

4: Meeting the Housing Needs of All.

3.86 There were 46 responses to this question.

Main Issues Raised	Council Response/ How the Council has taken this into account
Issue: The Need for New Homes (23)	
• Housing supply should stay in line with the current Local Plan (2019) (4) • Ensure there is an identified need for development in an area or a settlement (10) • Concern over the impact of the proposed Sibson Garden Village of 5,000 houses on surrounding villages, namely Elton and Chesterton (4).	• Response noted, the starting point for the number of homes that we have to plan for comes from nationally set formula known as the government's 'standard method' number. A revised standard methodology approach was published for consultation on 30 July 2024. The Further Issues and Options consultation document presents options on what Huntingdonshire's housing requirement should be with the standard method as the starting point. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including housing and employment. These sites have now been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document, allowing the public to comment on the assessments of the sites. Not all of these sites will be chosen as allocations and the final choice of sites will be dependent on a number of factors, including but not limited to transport assessments, flood risk and the proposed strategy for growth. Growth Strategy Options will be consulted upon in the Further Issues and Options consultation document (Chapter 8), the consultation document also presents a variety of options on other subject areas that will contribute to the growth strategy and its implementation, including transport and design.

3 Local Plan Issues

Issue: Delivery of New Homes (12)	
• The delivery of new homes should support improvements in environmental sustainability and help tackle climate change issues (12). • New homes should meet energy efficiency standards and integrate renewable energy (4). • New homes should have access to green space to support wellbeing (3).	• Responses noted, the Further Issues and Options consultation document has taken these comments forward through *Chapter 10 The Approach to Climate Change.* This chapter sets out options on decarbonisation scenarios (including electric vehicle charging), and renewable energy. In addition *Chapter 7 Achieving well-designed Places*, raises additional questions on the role of active design which includes networks of multi-functional open space. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important. Finally *Chapter 9 Green and Blue Infrastructure,* presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen. Natural England's Access to Natural Greenspace Standards is referenced as a document of importance in the development of the Local Plan. • The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as: guidance on the role of sustainable design, the circular economy and retrofitting and infrastructure and renewable energy, exploration to low carbon resources.
Issue: Gypsy, Traveller, Travelling Showpeople & Boat-dwellers Accommodation (0)	
Issue: Housing Mix (26)	
• Ensure a wide range of housing options to cater to the needs of different demographics (6) • Ensure there are affordable housing tenures of choice (20)	• Responses noted, these responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration specifically in *Chapter 12 Housing Tenures and Housing Mix*. The council also has a Housing Needs of Specific Groups 2021 document, it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan.
Issue: Housing Tenures (23)	
• Ensure there are affordable housing tenures of choice (20)	• Responses noted, these responses have been taken forward through the Further Issues and

• Meet the housing needs of young people and families (4) • Promote small scale and 'Rural Exceptions' housing developments in villages and rural areas to prevent the out migration of local residents (8)	Options document, which addresses these issues and present options for consideration specifically in Chapter 12 Housing Tenures and Housing Mix. The council also has a Housing Needs of Specific Groups 2021 document, it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. • The Further Issues and Options consultation document presents Growth Strategy Options within Chapter 8, which looks at potential distribution of growth, in addition Chapter 4 A Settlement Hierarchy for Huntingdonshire sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities.
Issue: Housing Standards (3)	
• Promote energy efficient construction standards (3)	• Responses noted, the Further Issues and Options consultation document has taken these comments forward through Chapter 10 The Approach to Climate Change. This chapter sets out options on decarbonisation scenarios (including electric vehicle charging), and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as low, high and medium carbon reduction pathways and guidance on the role of sustainable design, the circular economy and retrofitting.
Issue: Design (5)	
• Design of houses should be in keeping with the context, scale and style of the local area and built environment (4)	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within Chapter 7 Achieving well-designed Places, which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
Issue: Location, Infrastructure and Amenities (25)	
• Consider the impact of new development on existing infrastructure and integrate new	• The council will complete an Infrastructure Delivery Study/Plan which will address issues

3 Local Plan Issues

infrastructure and services where appropriate to meet the needs of the local population (10) • New developments in rural areas and villages would overwhelm local infrastructure (5) • New services should be implemented prior to when development starts (3) • Direct development away from green field and agricultural land and prioritise brownfield sites (7) • Concern over proposed development in north Huntingdonshire (5) • The Local Plan should promote higher density developments that are close to urban centres, where there is employment, services and active travel infrastructure (5).	such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of options, policies, sites and strategies on the environment. Specific objectives address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making, visual pollution, previously developed land, agricultural land, active travel and landscape/townscape impact (SA 4, 5,6, 7, 8, 12, 15). • The Further Issues and Options consultation document presents Growth Strategy Options within Chapter 8, which looks at potential distribution of growth, in addition Chapter 4 A Settlement Hierarchy for Huntingdonshire sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities.

5: Promoting a Prosperous Local Economy

3.87 There were 41 responses to this question.

Main Issues Raised	Council Response/ How the Council has taken this into account
Issue: A Green Economy (10)	
• Support transition to greener economy by promoting sustainable practices (10). • Apply circular economy principles within businesses to reduce waste and emissions (3). • Improve pubic transport and reduce reliance on cars (5).	• Responses noted, the Further Issues and Options consultation document has taken forward issues relating to the green economy, circular economy principles and public transport and reduced reliance on cars. Specific chapter include Chapter 5 Approach to Employment and the Economy, Chapter 8 Growth Strategy Options, Chapter 10 The Approach to Climate Change and Chapter 13 Transport and connectivity. In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report.
Issue: Supporting and Diversifying the Local Economy (23)	

• Consider role of Cambridge and Peterborough on the economy, transport and employment (3). • Support small businesses and start ups (10). This could be done by reducing business rates (3). • Encourage linkages between educational institutions and businesses to match skills with jobs within the district and to create a highly skilled workforce (5). • Prioritise improvements in transport infrastructure (roads, public transport, cycle ways and public footpaths) to increase connectivity within and outside of the district. In turn this would increase productivity, efficiency, and therefore economic growth (9). • Ensure there is fast broadband and mobile connection across the district (3)	• Responses noted regarding neighbouring areas and business requirements. To help inform future policies and develop our strategy for economic growth an evidence base will be produced. We will draw on strategic documents and a future economic growth strategy for Huntingdonshire, establish a baseline for the current supply and demand of employment land and properties in the local market, the status and functioning of EEAs and growth forecasts and relationship with related economies. This will help to identify any failures or target sectors within the market, adapting to increased premises demand for growing sectors and business whilst responding to a changing market which may include aspects such as sector decline. It will inform the use classes and floorspace required. • The Further Issues and Options consultation document has taken forward issues relating to location of growth and economic strategy ambitions presenting options for consideration within Chapter 5 Approach to Employment and the Economy and Chapter 8 Growth Strategy Options. • Chapter 13 Transport and Connectivity provides options on the approach to individual development and consideration of active travel and public transport, East West Rail and a question on net zero transport. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • Business rates are outside the direct scope of the local plan but are addressed by other departments within Huntingdonshire District Council. The effects of these however will have an impact on the current status of the market which will be addressed through the employment evidence base.
Issue: Logistics and Distribution (10)	
• Minimise growth in the logistics and distribution sector due to the future and current negative impact on the district (7). • Large warehouse developments destroy the rural character of Huntingdonshire (3).	• Responses noted regarding logistics and distribution. To help inform future policies and develop our strategy for economic growth an evidence base will be produced. This will help to identify any failures or target sectors within the market. It will inform the use classes and floorspace required.

3 Local Plan Issues

• The location of these developments raises traffic flow and congestion in rural villages leading to an increase in pollution and GHG emissions (5). • Reference to the A605 and the flow of HGV vehicles due to growth in this sector through surrounding villages, namely Elton and Chesterton and the impact on safety, congestion and pollution (3). • The low skilled, low paid nature of the jobs in this industry will not serve the needs of Huntingdonshire's workforce. It is also highly automated and at risk of further automation due to technological advances reducing the amount of jobs on offer (3).	• The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA5 to 8 and 15 address impact on the landscape, biodiversity, pollution green and blue space and infrastructure and place-making. • The Further Issues and Options consultation document has taken forward comments relating to transport issues. Options on active travel, public transport and a question on a place-based approach to net zero can be found in *Chapter 13 Transport and connectivity*. In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report. • Chapter 5 Employment and Economy found within the Further Issues and Options consultation document presents additional options on the local plan's economic strategy ambitions which raises the subject of priority sectors. • The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site assessment includes impact on visual pollution, previously developed land and access to services and facilities such as schools (SA 8, 4 and 10).
Issue: Rural Economy and Agriculture (11)	
• Protect agricultural land from new developments (5) to ensure food security (3). • Small businesses should be encouraged in rural areas to create local hubs (3).	• The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objective SA4 assesses impact on agricultural land. • Responses noted, the Council will review Local Plan policies LP 19 Rural Economy and LP 33 Rural Buildings. To help inform future policies and develop our strategy for economic growth an evidence base will also be produced. • The Further Issues and Options consultation document has taken forward issues relating to location of growth presenting options for consideration within *Chapter 5 Approach to Employment and the Economy* and *Chapter 8 Growth Strategy Options.*
Issue: Retail and Adapting Our Town Centres (10)	

• Increase investment into town centres (10). This could be done by reducing business rates (4). • Upgrade transport into town centres by improving public transport and cycle paths and increase the availability of EV charging points and parking (4). • Support start ups and small businesses to make town centres more attractive (3).	• Increased investment and reduction in business rates is outside the scope of the local plan. Huntingdonshire District Council have however produced town centre vision documents which will be appraised as part of the development of the local plan. • The Further Issues and Options consultation document has taken comments forward regarding public transport, cycle paths and EV charging points. *Chapter 10 The Approach to Climate Change* sets out options on decarbonisation scenarios (including electric vehicle charging). *Chapter 13 Transport and Connectivity* provides options on the approach to individual development and consideration of active travel and public transport and a question on net zero transport. • Responses noted, the Council will review Local Plan policies LP 21 Town Centre Vitality and Viability 88 LP 22 Local Services and Community Facilities.
Issue: Enhancing Tourism (5)	

• Encourage more tourism by utilising natural capital and heritage assets (3).
• Promote smaller independent businesses in the local area to bring in more tourism (4).
	• Responses acknowledged regarding natural capital and heritage. The Council has taken these comments forward into the Further Issues and Options consultation document within:
	  • Chapter 3 Local Plan Vision and Objectives, which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan. The options include reference to approaches to the Huntingdonshire Landscape.
	  • Chapter 5 Approach to the Economy which specifies strategy ambitions specifically Option C which proposes capitalising on key priority sectors.
	  • Chapter 9 Green and Blue Infrastructure, which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen.
	• Approaches to tourism accommodation noted, the Council will review current local plan policy LP23 Tourism and Recreation

6: Developing High Quality Sustainable Communities with Supporting Infrastructure

3.88 There were 45 responses to this question.

3 Local Plan Issues

Main Issues Raised	Council Response/ How the Council has taken this into account
Issue: Design of Building and Places (8)	
• The design of new developments should respond to the size, context and surroundings of the area (4). • The 'Local Distinctiveness' of an area should be maintained and enhanced through innovative design (3).	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 7 Achieving well-designed Places*, which asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces.
Issue: Open Space in New Development (4)	
• Support the integration of open space within new developments (3).	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 7 Achieving well-designed Places*, which asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces.
Issue: Travel and Transport (11)	
• Consider the negative impact of new developments on the flow of traffic through smaller settlements and roads in decision making (11). Reduce congestion, air and noise pollution in smaller settlements by diverting HGV vehicle movement to appropriate roads through traffic calming measures such as vehicle weight limit restrictions and speed cameras (5). This would also improve safety (4). • A605 is at capacity and there are dangerous junctions (3).	• The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA 8 and 12 look at the issue of pollution and reducing the need to travel by car. • The Further Issues and Options consultation document has taken forward comments relating to transport issues. Options on active travel, public transport and a question on a place-based approach to net zero can be found in *Chapter 13 Transport and Connectivity*. *Chapter 8 Growth Strategy Options* also presents options on preferred locations for growth. In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report.
Issue: Public Transport and Active Travel Infrastructure (19)	
• Increase quality and frequency of public transport linking settlements to services and help to reduce reliance on private vehicles (5). • Promote sustainable public transport such as electric buses (3).	• Responses acknowledged, these comments have been taken forward in the Further Issues and Options consultation in Chapter 7 Achieving Well Designed Places. This chapter asks questions about specific design aspects that may be important and the principles of active design

• Encourage active travel (15) by improving cycle ways (8) and public footpaths (7). • Promote strategic network of cycleways, bridleways and public footpaths (3).	which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces. Chapter 13 Transport and Connectivity also provides options on the approach to individual developments and consideration of active travel and public transport and a question on net zero transport.
Issue: Parking Provision (5)	
• Ensure parking provision in villages that is sensitive to the character of the settlement (4). • Make sure there is sufficient parking options to prevent parking on village or settlement greens (3).	• These comments are noted and the Further Issues and Options consultation document notes that current local plan policy LP 17 'Parking Provision and Vehicle Movement' sets minimum requirements for cycle parking provision for new developments and that car parking levels are expected to be responsive to the location and nature of the proposed development rather than numeric requirements being set. • The Further Issues and Options consultation document has taken forward comments relating to transport issues. Options on approaches to individual development active travel, public transport and a question on a place-based approach to net zero can be found in *Chapter 13 Transport and Connectivity*.
Issue: Community Facilities and Services (10)	
• Ensure access to community facilities (10). • Enable business and enterprise in villages via community facilities (4).	• The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, and utilities. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. Alongside this a viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan.
Issue: Utilities and Digital Infrastructure (7)	
• Ensure digital infrastructure is accessible and affordable across the district (5).	See above
Issue: Supporting Infrastructure (19)	
• New developments should include or be in close proximity to schools (9), healthcare facilities (11) such as dentists (3), doctors (4), hospitals (3) and sports facilities (3).	• The Further Issues and Options consultation document provides options on the objectives for the local plan some of which include reference to support for community facilities and integrated

3 Local Plan Issues

• Require infrastructure to be implemented prior to (4) or at the early stages of (3) a development. • Divert development away from villages where existing infrastructure is at capacity (3).	community facilities (Chapter 3). Chapter 4 A Settlement Hierarchy for Huntingdonshire sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. • Sustainability appraisals of the options presented in the Further Issues and Options Consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies. It assesses the impact or potential to enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion through SA10. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, and utilities. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. Alongside this a viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan.

7: Distributing New Growth

3.89 There were 39 responses for both questions. No issues headings were provided in the Summary Issues Engagement Paper and therefore the issues presented in the table have been guided by the responses.

Main Issues Raised	Council Response/ How the Council has taken this into account
Questions 1 and 2	
Issue: Amount of Growth (33)	
• The level of housing growth needs to be manageable and relative to the size of the settlement (18). • Favour small scale rather than large scale developments (10).	• *Chapter 4 A Settlement hierarchy for Huntingdonshire* in the Further Issues and Options consultation document sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of

• Allow small scale development in villages in a sensitive and measured way (15). • Ensure development maintains the rural character and heritage of Huntingdonshire (5).	Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. In addition Chapter 8 sets out potential growth strategy options.
Issue: Location of Growth (20)	
• Identify suitable locations for development (20) • There should be small scale housing development within villages (8) • Allocate development within or close to towns where there are services, employment and infrastructure available helping to reduce travel distances and enhance communities (10).	• *Chapter 4 A Settlement hierarchy for Huntingdonshire* in the Further Issues and Options consultation document sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. In addition Chapter 8 sets out potential growth strategy options. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including housing, mixed uses and commercial. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The sustainability appraisal appraises the accessibility to social and community services and economic opportunities.
Issue: Employment (5)	
• Ensure housing growth is located close to employment centres (5).	• The Further Issues and Options consultation document has taken forward issues relating to location of growth presenting options for consideration within *Chapter 5 Approach to Employment and the Economy* and *Chapter 8 Growth Strategy Options.*
Issue: Infrastructure (11)	
• Ensure there is existing infrastructure that can support the new development such as transportation, energy supply and digital connectivity (4). • Larger scale developments should be located where there are the most facilities (3). • Provision of active travel infrastructure and promote walkability to support sustainable growth (3).	• The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, and utilities. Infrastructure need across the district to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. Alongside this a viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan.

3 Local Plan Issues

	• The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The sustainability appraisal appraises the accessibility to social and community services and economic opportunities.
	• *Chapter 4 A Settlement Hierarchy for Huntingdonshire* in the Further Issues and Options consultation document sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. In addition Chapter 8 sets out potential growth strategy options.
	• Responses noted regarding active travel, the Further Issues and Options consultation has taken forward these responses specifically though:
	  • *Chapter 7 Achieving Well Designed Places* - which asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces
	  • *Chapter 13 Transport and Connectivity* - that provides options on the approach to individual development and consideration of active travel and public transport and a question on net zero transport.

Issue: Energy (8)	
• Mandate that any commercial warehouse, industrial or housing development are powered by renewable energy and meet high energy efficiency standards to improve environmental sustainability (4). • Consider the scale of solar farms and the negative impact they may have on the countryside and farmland (3).	• Responses noted. The Further Issues and Options consultation document has taken these comments forward with regard to renewable energy and energy efficiency. *Chapter 10 The Approach to Climate Change*. This chapter sets out options on decarbonisation scenarios (including electric vehicle charging), and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as: low, high and medium carbon reduction pathways, guidance on the role of sustainable design, the

	circular economy and retrofitting, the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero and infrastructure and renewable energy, exploration to low carbon resources. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including renewable energy. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The sustainability appraisal appraises landscape and biodiversity impact and impact on agricultural land, specifically through SA 4, 6 and 7.
Issue: The Environment (9)	

• Make sure residents are aware of climate issues (3).
• Ensure new and existing development has access to green space such as woodland and parks (3)
• Divert development away from green field sites and open countryside to help preserve the rural character of Huntingdonshire (3)
	• Responses noted. The Further Issues and Options consultation document has taken these comments forward through Chapter 10 The Approach to Climate Change. This chapter sets out options on decarbonisation scenarios (including electric vehicle charging), and renewable energy.
	• The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and
	  • offsetting and sequestering emissions
	• The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses . These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The

3 Local Plan Issues

	sustainability appraisal appraises landscape and biodiversity impact, impact on agricultural land and access to green spaces, specifically through SA 4, 5, 6 and 7.
Issue: Brownfield Land (4)	
• Prioritise development on brownfield, ex industrial and under utilised land to preserve green spaces, the natural environment and green field land (7)	• The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses . These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The sustainability appraisal objective SA 4 assesses options, strategies, policies and sites regarding making efficient use of land by maximising development on previously developed land where this is not of high biodiversity value and minimising that on the best and most versatile agricultural land.
Issue: Warehousing (5)	
• Reduce the impact of warehousing industrial development growth on local communities in terms of pollution, traffic flow, safety (3).	• The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The sustainability appraisal appraises options, sites, strategies and policies regarding impact on pollution through SA 8 and the promotion high quality design and placemaking that enables attractive, safe and resilient communities through SA15. • In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report which will be looking at future emissions and trends, low, high and medium carbon reduction pathways and the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero.
Issue: Affordable Housing (7)	
• Ensure small scale growth of affordable housing in villages and rural areas (5).	• Chapter 4 A Settlement Hierarchy for Huntingdonshire in the Further Issues and Options consultation document sets out options for categorising settlements which will help to determine which locations growth may be

	directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. In addition Chapter 8 sets out potential growth strategy options.
Issue: Agriculture (3)	
• Safeguard the agricultural industry to ensure food security (3)	• The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses . These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. The sustainability appraisal appraises options, sites, strategies and policies regarding impact on agricultural land through SA 4.

Issues Engagement Paper

Summary from the Issues Engagement Paper

The following provides a summary of the main issues raised during the consultation on the Issues Engagement Paper and how the Council has taken these into account.

Issues Engagement Paper

Main Issues Raised	Council Response / How the Council has taken this into account
Introduction (Chapter 1)	
Issue: Potential plan period (Question 1)	
• Approximately 12% of respondents said the end date of the local plan should be 2043 - the shortest time likely to be possible and still retain 15 years lifespan after adoption • Approximately 51% of respondents said the end date of the local plan should be 2046 - retaining 15 years lifespan after adoption and allowing for some flexibility to response to national changes in the planning system • Approximately 16% of respondents said the end date of the local plan should be 2050 - aligning the Local Plan update with the national target date for achieving net zero • Other dates ranged between 2052 to 2060	• Responses acknowledged, the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 2 Introduction* which sets out a question noting 2046 as the most popular choice and asking if the public agree or would prefer a different date.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Many noted that a 30 year plan would help to encompass the delivery of new settlements or strategic sites. • Some encouraged the vision of the local plan to look 30 years ahead regardless of the end date.	
Creating a Vision and Objectives (Chapter 2)	
Issue: Vision and Objectives (Question 2 to 3)	
• Support for paragraphs 2.1 to 2.4 **The vision should include reference to:** • The delivery of housing and affordable housing, green infrastructure and biodiversity net gain, employment land, health services and other community needs, and sustainable transport – multiple responses • The Huntingdonshire Futures, Place Strategy and reflect these objectives – multiple responses • A positive vision for the future of each area, consideration of the four market towns. • Supporting development (homes and businesses) in locations will deliver benefits that will enhance the sustainability of existing communities • To become a leader in high quality, affordable housing within integrated communities is supported. • Protecting, preserving, providing and enhancing existing green spaces, landscape and countryside for the public and wildlife to enjoy in harmony. • How it will contribute to achieving net zero by 2050, reducing carbon emissions, including embodied carbon in construction, sustainable living, mitigating against impacts of climate change etc. • Facilitating opportunities for people to pursue a healthy lifestyle and have a high quality of life • High quality development • Taking advantage of new strategic infrastructure • Prioritising brownfield first	• Supportive comments, no changes required. • Responses acknowledged, the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 3 Local Plan Vision and Objectives* which sets out options for the vision of the local plan.

Main Issues Raised	Council Response / How the Council has taken this into account
• Facilitating working from home. • Ensuring adequate services and facilities are in place to support development including water and broadband. **Objectives of the local plan should include:** • Multiple responses - Objectives from Huntingdonshire Corporate Plan 2023- 2028 (March 2023) and Place Strategy • Delivering sufficient new homes / meeting housing need • Delivering a balanced housing mix and affordable housing • Supporting minor developments • Sustainability • Protecting small settlements and rural character • Addressing climate change – mitigation and adaption / net zero by 2050 • Prioritising education • Locating growth along public transport corridors e.g. the busway / promoting sustainable movement and travel • Investing in appropriate infrastructure and services to support growth • Conserving and enhancing the historic environment • Protecting local green spaces and enhancing green and blue spaces enhancing and providing new areas for biodiversity • Current local plan objectives • Water related objectives around land drainage, water level and flood risk management, water resources/water neutrality, environmental conservation and enhancement, navigation water quality/nutrient neutrality.	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Provide solutions for farming • Promoting Healthy living and wellbeing	
Responding to the Climate Crisis (Chapter 3)	
Issue: Carbon Emissions and Targets (Question 4 and 5)	

• Consensus amongst respondents that the updated Local Plan and the Council more widely must work towards a net zero carbon future but recognise that there are significant challenges in doing so
• Balancing growth and working towards a net carbon future is a key challenge particularly when balancing out other social and economic and political priorities including energy and food security
• Some respondents felt that policies should exceed national policy and building regulations including the Future Buildings Standard
• Location of growth so that communities can live in areas close to employment and daily services via public transport and other more sustainable modes of transport and support a modal shift away from car usage
• Holistic approach is needed between new development and the retrofitting of the existing building stock and integration of renewable energy to reduce operational and embodied carbon
• Flexibility is needed within policies to reflect changing and advancing technology and should champion the best practices in energy generation with green innovation technologies
• Infrastructure also needs to be updated including utilities infrastructure so that it can be less reliant on fossil fuels
• Anglian Water recommends that a whole life carbon assessment is undertaken for the Local Plan to clearly evidence the spatial distribution of growth in the most sustainable and resilient locations, where the embodied carbon of existing infrastructure and available headroom is utilised to the benefit of providing low carbon growth.
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a *Climate Change Report* which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and
	  • offsetting and sequestering emissions
	• Response acknowledged, a viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan.
	• Response acknowledged Place Strategy will be considered during local plan production and is referenced throughout the Further Issues and Options consultation document. The Council's Climate Strategy was referenced in the Issues Engagement consultation, the strategy and action plan are focused on actions required by the council service areas and capital investments, the Climate Change Report will act as an evidence base to inform policy-making and what planning policy can do to meet the wider ambitions of the district through development.

Main Issues Raised	Council Response / How the Council has taken this into account
• Anglian Water considers that the Local Plan should take a holistic approach to the climate and ecological emergency, building on the actions outlined in the HDC Climate Strategy, to ensure that the plan can provide the framework for mitigation and adaptation through planning positively for the built and natural environment. • The Council has to take a lead and both demonstrate a way of working as well as creating the environment to achieve net zero carbon by 2040 by attaching greater value to environmental factors and conserving nature; and by considering the short and long term environmental impact in all decisions. • The local plan can facilitate low carbon future by including policies relating to high sustainability standards for new homes including heat pumps, solar PV, wind power, solar panels, composting and EV charging points • Policies supported by robust evidence and are viability tested • The updated Local Plan should be informed by the Climate Strategy and Place Strategy. • The environmental capacity of the area needs to be balanced by growth which supports the needs of local people and the local economy and not the wider commuter economy. A key challenge is around water - both the impact of flooding from development and the lack of future drinking water to support growth. • Historic England recommend a sustainable approach to secure a balance between the benefits of development delivers and the environmental costs it incurs. The policy should seek to limit and mitigate any such cost to the historic environment. • Heritage assets can also be a valuable aid to achieving sustainable development, in both climate change mitigation and adaptation, rather than a constraint. Reusing our buildings is one of the most effective ways to reduce carbon emissions and eliminate unnecessary waste. By adapting our historic buildings appropriately, we	• The Council has completed a Stage 1 Water Cycle Study and Level 1 Strategic Flood Risk Assessment (2024) and will complete a Stage 2 Water Cycle Study and Level 2 Flood Risk Assessment which look and will look at an integrated approach to water management and the challenges around water - both the impact of flooding from development and the lack of future drinking water to support growth. These will form evidence bases to assist in the development of policies and identify sustainable locations for growth. • The Council has produced a Sustainability Appraisal, an iterative document which will assess the impact of policies, sites and strategies on the climate emergency and environment. Specifically, objectives SA1 to 3. • Sustainability appraisals of the options in the Further Issues and Options consultation document have been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies on heritage and landscape and townscape impact assessment objectives include SA 7, 15 and 16.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
can reduce carbon emissions, improve quality of life and nurture the skills needed for a green economy.	
Issue: Carbon Sequestration and Offsetting (Question 6 and 7)	

• Some respondents identified that there should be an assessment made by an independent specialist to determine if carbon offsetting can be made on site or not
• Tree planting schemes, including lining all roads with trees and woodland creation.
• The updated Local Plan can help maintain existing carbon sinks (for example peatland habitats, mature and ancient woodlands) by including policies and site allocations that ensure their protection, conservation and restoration.
• The updated Local Plan can help create new opportunities to store additional carbon within the natural environment through policies and site allocations that support the provision of new green infrastructure, landscaping, habitat creation or restoration, new woodland and tree planting within new developments, where appropriate and allocate sites for this purpose. Allocations will need to be supported with appropriate evidence and potential ecological surveys
• Restoration and preservation of peat is an important opportunity
• Create more "blue space" - water areas - water features absorb carbon dioxide.
• Anglian Water would advise that such opportunities should be sought through the Future Fens Integrated Adaptation project, the OxCam Integrated Water Management Framework, and the Local Nature Recovery Strategy. The Local Plan is the mechanism to safeguard existing carbon sinks and identify the optimal locations for new natural carbon sinks to come forward through positive strategies such as biodiversity net gain offsetting, carbon offsetting and flood protection.
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a *Climate Change Report* which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and
	  • offsetting and sequestering emissions
	• Response acknowledged the council has taken comments forward regarding new green and blue infrastructure into the Further Issues and Options consultation document within Chapter 9 Our Green and Blue Infrastructure which sets out options for retaining, designating and or allocating green and blue infrastructure in the district. Documents also referenced here include the Local Nature Recovery Strategy which will also help to shape policies in the Local Plan.
	• The Council has completed a Stage 1 Water Cycle Study and Level 1 Strategic Flood Risk Assessment (2024) and will complete a Stage 2 Water Cycle Study and Level 2 Flood Risk Assessment which look and will look at an integrated approach to water management and the challenges around water - both the impact of flooding from development and the lack of future

Main Issues Raised	Council Response / How the Council has taken this into account
• Place a higher value on existing/mature habitat such as semi ancient woodland and to avoid the inherent risks from trying to mitigate for things which take decades or hundreds of years to evolve. • New sites should not affect flooding or damage key green spaces that are used for recreation or carbon sinks. • There were mixed responses to this to whether the Local Plan should make provisions for carbon offsetting. A proportion of respondents were against this and stated that carbon reduction should be made on site. • There were a proportion of respondents who were in favour of a flexible approach towards carbon offsetting where there was a clear and evidence need to do so. Viability may be on such reason for flexibility. • One respondent raised concern that retaining areas as carbon sinks may not be compatible with food and energy security. • Offsetting frameworks and delivery mechanisms should be made clear through policy/ supporting text to provide clarity and certainty for applicants and developers to ensure projects are not delayed. • There needs to be mechanisms (including S106) and projects/ carbon sinks in place where developments can contribute to • Contributions should be sought on major developments	drinking water to support growth. This includes assessment of natural flood management. These will form evidence bases to assist in the development of policies and identify sustainable locations for growth. • A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan.
Issue: Renewable and low carbon energy (Questions 8 to 10)	
• Policies should reflect national and local guidance, the continuation of the existing Local Plan to 2036 policies will support this objective • Minimise energy demand in the first instance • The Local Plan Review should allocate sites for renewable energy and mixed-use development that includes renewable energy uses as well as for low carbon energy including provision for local	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a *Climate Change Report* which will act as an evidence base to inform policy-making and addresses many issues raised such as:

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
energy storage from batteries or other technologies. • A mandatory requirement for major developments to include a renewable energy opportunities • Historic England is broadly supportive of renewable energy development and broadly welcome the proposal to include a policy for renewable energy projects in the Plan. Policies should include consideration of the impact on the historic environment for all commercial renewable energy technologies • Subsidise/loan finance farms to convert from oil heating to energy supply from a single, small-scale wind turbine plus a medium-array (a couple of acres) of solar panels. • Anglian Water would welcome a positive policy that would seek to support the transition to net zero and proactively enable renewable energy solutions to support the resilience of our essential infrastructure particularly at our water recycling centres and water treatment works. • Grid export capacity is a constraint across the UK to development of renewable energy generation and storage. • The new Local Plan for HDC presents an opportunity to commission a Local Area Energy Action Plan to identify the most suitable areas for wind and solar and work with the Distribution Network Operator(s) to strategically overcome grid constraints in the context of the Local Area Energy Action Plan. This should include engagement with the local community on the outcomes of the Action Plan. • There was no mention in the issues paper is made of hydro power, particularly from the Great Ouse. • The Local Plan can help to integrate renewable and low carbon energy with new developments by making it a planning requirement. • Some measures that could be included within new development: solar panels / roofs, ground source heat pumps, higher insulation standards, grey water harvesting, no new gas boilers, passive solar gain, battery storage facilities and decentralised energy systems • Promote the use of microgrid and battery storage technologies to improve viability of on-site renewable energy generation • Explore an energy based net zero housing policy setting a limit on the total energy use and demand for space heating and requiring sufficient on-site	• Baseline emissions and, locally specific climate change risks and vulnerabilities, • future emissions and trends, • low, high and medium carbon reduction pathways, • guidance on the role of sustainable design, the circular economy and retrofitting, • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero, • infrastructure and renewable energy, exploration to low carbon and renewable energy technologies including but not limited to large and small scale solar, large and small scale wind, hydro-power, energy from waste and biomass and an assessment of their relative merits/ disadvantages and efficiency, and • offsetting and sequestering emissions • Sustainability appraisals of the options in the Further Issues and Options consultation document have been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies on heritage and landscape and townscape impact assessment objectives include SA 7, 15 and 16. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including renewable energy. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. • A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan. • Encouraging Community Land Trusts to be formed is outside the scope of the Local Plan.

Main Issues Raised	Council Response / How the Council has taken this into account
renewable energy generation to match the total energy consumption of the buildings. New policies could also address building emissions such as a policy to limit carbon emissions resulting from the materials used in the construction of large-scale developments. • Heat networks should be supported, particularly in off-gas areas • Recommended that the Local Plan remains supportive of heat networks as part of a range of potential solutions to improve the overall sustainability of heating buildings but does not set out any stringent requirements for its use. • Encourage, support and finance community heating schemes in rural villages and suburban housing estates, such as schemes with ground-source geothermal wells producing communal warm water supply feeding household heat-exchange • The Local Plan could support more community and/or district heating by locating development in or adjacent to main settlements so as to help create the critical mass for community/district heating networks but these should be supported by technical work to confirm feasibility, viability and management/longevity aspects. • A policy should focus heat networks in more dense areas and maintain flexibility to reflect changes in technology over time. • The Local Plan's evidence base should include studies assessing areas of potential, particularly for the suitability of wind and solar power generation which will have the least impact upon existing communities and the environment and landscape • The main obstacle is cost - installation of any such scheme is expensive and cannot be financed by a group of residents of neighbouring dwellings, a local community organisation, or a small parish council - financing is required, preferably from national government rather than yet more council tax increases • Assess opportunities for community heating/district heating schemes throughout the district for small, rural villages; housing estates; industrial estates; technology parks; leisure facilities. • Stipulate policy requirements on the integration of renewable energy and low carbon technologies within a policy, particularly for major developments. Although some respondents raised	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
concern regarding the potential impact requirements could have on the potential viability of proposals and whether a policy will out date as technology advances. • Effective engagement with communities is key as well as renewables that provide community benefit • Actively support and encourage the likes of Community Land Trusts to be formed.	
Issue: Energy Efficiency and Retrofitting (Questions 11 to 13)	

• There were mixed responses to this to whether the Local Plan should set higher energy efficiency targets than those set nationally.
• A proportion of respondents considered that the updated Local Plan should set higher energy efficiency standards than those set within the Future Homes Standard and Building Regulations supported by evidence to do so.
• One response stated that the energy use intensity metric as is adopted by recent industry guidance such as RIBA Climate Challenge targets and the LETI Climate Emergency Design Guidance should be pursued. Another respondent wished to see Passivhaus standards imposed in a local plan policy.
• Respondents were supportive of retrofitting. It is recognised that some of the measures in which to support this fall outside of the scope of the updated Local Plan but are still summarised here:
• The Local Plan could develop positive, enabling, policies regarding the sustainable retrofitting of existing buildings
• Policies can support the requirement for developers to adopt a 'fabric first' approach to ensure that the dwellings are as energy efficient as possible on construction
• The Changes to the Building Regulations and Future Buildings Standard meant that some respondents felt that specific local plan policy was unnecessary, however others highlighted that a local policy could still exceed these where there was evidence to do so and the viability of development not compromised.
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a *Climate Change Report* which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and
	  • offsetting and sequestering emissions
	• A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan.
	• The Local Plan cannot provide grants or replacement of old boilers, insulation, replacement windows, solar, and ground source heat pumps. It is a document which is used in the determination of planning applications.
	• Sustainability appraisals of the options in the Further Issues and Options consultation document have been completed which will be

Main Issues Raised	Council Response / How the Council has taken this into account
• Respondents were supportive of tackling fuel poverty. • Making homes more cost effective to heat helps to support a healthy community • Retrofitting energy efficiency measures to existing stock should be encouraged during the planning process for extensions and conversions • Nationally there is considerable concern that the construction sector does not have the depth of skills or the capacity to facilitate retrofitting • A proportion of respondents considered it to be unnecessary and may potentially impact the viability of developments. They also considered that as Building Regulations change over time and that local plan policy shouldn't seek to duplicate standards that having a policy setting higher standards may in the longer-term lead to conflict between these. • Benefits of retrofit are available, affordable and accessible to all as well as supporting sustainable green jobs to supply retrofitting • Grants for insulation and grants for replacement of old boilers, insulation, replacement windows, solar, and ground source heat pumps • Historic England highlighted that climate Change, heritage and building regulations listed buildings, buildings in conservation areas and scheduled monuments are exempted from the need to comply with energy efficiency requirements of the Building Regulations where compliance would unacceptably alter their character and appearance. Special considerations under Part L are also given to locally listed buildings, buildings of architectural and historic interest within registered parks and gardens and the curtilages of scheduled monuments, and buildings of traditional construction with permeable fabric that both absorbs and readily allows the evaporation of moisture.	consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies on heritage and landscape and townscape impact assessment objectives include SA 7, 15 and 16. Regulatory requirements associated with heritage assets will also be considered in the development of policies
Issue: Flooding, Water Supplies and Water Pollution (Questions 14 to 19)	
• Avoid development in high-risk flood areas, prioritise flood zone 1 and brownfield development.	• The Council has produced a *Level 1 Strategic Flood Risk Assessment 2024* and *Stage 1 Water*

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account

• Brownfield sites at high risk of flooding should not be promoted for residential development
• Adopt innovative approaches to building in areas of higher flood risk
• Sites that are reliant on flood defences for their safety should be avoided or made sufficiently resilient to ensure they remain safe if the asset were to be removed or protection reduced.
• Consider catchment based, up and down-stream impacts and cumulative impacts of development for flooding and water related issues.
• Developments should provide betterment on site and downstream including for ground and surface water impact, and implement flood mitigation prior to development.
• Avoid adverse impact on archaeological sites
• Developments should implement water and flooding solutions prior to development starting
• Take into account impact of climate change and extreme weather events
• Require flood resilient buildings and flood resistant construction and mitigate harm to historic buildings
• Implement SUDs, multifunctional greenspace (leisure, recreation, biodiversity etc.), nature based strategies and drainage strategies in new developments, ponds for storage, use reeds and vegetation as natural filtration to reduce pollutants
• Promote permeable paving especially in new car parks
• Adhere to government policy, guidance and legislation and more local documents such as the Future Fens Flood Risk Management Baseline, Drainage and Wastewater Management Plans etc.
• Consult appropriate authorities such as IDBs, Environment Agency, Middle Level Commissioners, Associated Boards and the Lead Local Flood Authority.
	Cycle Study 2024 as part of an Integrated Water Management Strategy.
	• The Council has produced a *Level 1 Strategic Flood Risk Assessment 2024* which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Identification of areas at risk of flooding
	  • Sequential approach to location of development for local plan preparation and development management decisions
	  • High level assessment of sites submitted in the *Call for Sites* and strategic recommendations for sites
	  • Flood risk in Huntingdonshire from: rivers, surface water, sewers, reservoirs
	  • Catchment level assessment of the cumulative impacts of development on flood risk
	  • Climate Change
	  • Historic Flood risk
	  • Flood risk management
	  • Surface water management and sustainable drainage
	  • Mitigation measures
	  • Emergency planning
	  • Flood warning and evacuation plans
	  • SFRA user guide
	• The Council has also produced a *Stage 1 Water Cycle Study 2024* which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline scenario establishing policy and legislation, geology, flooding, water resources e.g. supply, wastewater collection, waste water treatment e.g. capacity of water recycling centres, Water quality, Water balance
	  • Water management options assessment including, green and blue infrastructure, SuDs, diversifying water resources, leakage reduction, efficient fixtures and fittings, rainwater harvesting, greywater recycling
	• A level 2 Strategic Flood Risk Assessment, will look at specific sites potentially suitable for

Main Issues Raised	Council Response / How the Council has taken this into account
• Particular parishes highlighted flood risk issues in their area including: Buckden, The Offords, Southoe and Midloe, St Ives, Houghton and Wyton, Hemingford Grey, Hemingford Abbots, Bluntisham, Colne, Hilton, Sawtry, Little Paxton • Provide community support and accurate procedures and reporting. • Site specific flood risk assessments should identify responsible bodies i.e. for rivers and watercourses, local topography, waterflow, the volume limits of local watercourses, ditches and storm drains, condition of flood defence infrastructure and how opportunities to mitigate or alleviate flood risk have been explored. • Do not limit development along the Ouse Valley as this would increase traffic volumes elsewhere for work and leisure • Larger scale sites can provide more comprehensive flood mitigation and integrated water management solutions. • Balance flood risk with the need for more homes • Ensure that adequate provisions are secured for the long-term ownership funding, management and maintenance/improvement arrangements for the upkeep of any water level, flood risk management system, whether on or off site, in perpetuity are secured via S106. • Follow building regulations for water use, efficiency and pollution control. • Require rainwater/stormwater harvesting, reduce fresh water demands and water usage in new developments, enable smart water communities and water efficiency measures, promote water neutrality. Promote grey water recycling • Ensure wastewater treatment capacity, drains, sewerage system and water supply can support new growth without increasing risk. • Avoid negative impact on waterbodies and water quality, agricultural run-off should be considered. • Developments should consider whole water cycle process and integrated water management approach	allocation and identify site specific issues and mitigation options. • The Council has taken comments forward into the Further Issues and Options consultation document within *Chapter 11 Tackling Flooding and Water*, which sets out options on integrated flood and water management including natural flood management techniques, reduction of risk elsewhere, surface water management and water efficiency measures in residential and non residential buildings.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Policies should be flexible to ensure future changes in technology, identify evidence required for planning applications, identify programmes that support community resilience. • Consider embodied carbon cost of new infrastructure to avoid asset redundancy • Consider on-site waste water treatment. • Commercial development may require additional measures to mitigate flood risk and pollutant run-off.	
Issue: Waste and Recycling (Question 20)	

• Policies should reflect national and local guidance on design and construction, such as the Cambridgeshire Waste Management Design Guide SPD
• Continue liaison with Cambridgeshire County Council as the waste authority
• The Local Plan should not set prescriptive standards for recycled material as this may impact the viability of proposals or limit flexibility as new technologies and methods are developed within construction
• For major developments, it is usual for a Construction Environmental Management Plan and Site Waste Management Plan to be prepared which would include details of how materials would be recycled or reused to minimise waste from developments but this could be a requirement of a future local plan policy.
• Use planning conditions relating to construction management plans and sustainable design
• From a policy perspective, for the operational side it remains important to ensure that waste collection and separate storage for recyclables is possible and promoted throughout new developments.
• Local Plan policies could require developers to make best efforts to use recycled material where it is available locally.
	• The Cambridgeshire Waste Management Design Guide SPD or successor document will be taken into account as part of the preparation of the local plan. Cambridgeshire County Council is a statutory consultee and a body identified through the Duty to Cooperate which requires that local planning authorities to identify relevant strategic matters that cross administrative boundaries.
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a *Climate Change Report* which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and
	  • offsetting and sequestering emissions

Main Issues Raised	Council Response / How the Council has taken this into account
• One respondent highlighted that using recycled materials in construction is often difficult for greenfield development and that recycled material sourced offsite can be of inconsistent quality or distances result in very limited overall environmental benefit. They therefore suggest the creation of a local recycling 'marketplace' by identifying sites that are seeing demolition and putting them in contact with sites under construction. • Building more green waste recycling measures • The Minerals and Waste Authority supports HDC's ambition for waste management and a circular economy approach in the updated Local Plan but consider the Council could be much more ambitious in relation to the integration of the Circular Economy principles within the future Local Plan. For example, as part of a carbon assessment, a circular economy assessment or a feasibility of reuse, deconstruction and/or repurposing of buildings could be required. Also, Construction Environmental Management Plans could be required. Policies and supporting paragraphs that encourage the rethinking of the waste hierarchy and how the building sector applies this should be included.	
Protecting and Enhancing the Natural Environment (Chapter 4)	
Issue: Huntingdonshire's Landscapes (Questions 21 to 25)	

• Comments expressed the desire not to overdevelop Huntingdonshire's landscapes.
• There was a consensus that new development should be sensitive to landscape character as well as being sensitive to their relationship with and impact on existing communities.
• Developments should adopt a landscape led approach when masterplanning their sites and comprehensively assess the impact of proposals on the local landscape as well as incorporate green corridors and provide landscape restoration and enhancement where possible particularly in light of the climate crisis where the landscape is also under threat.
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within:
	  • *Chapter 3 Local Plan Vision and Objectives*, which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan. The options include reference to approaches to the Huntingdonshire Landscape.
	  • *Chapter 7 Achieving well-designed Places*, which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Development should be focused away from sensitive landscapes including views and vistas to and from historic environments. • Responses highlighted that the rights of way network could be enhanced for all users so that the mental and physical benefits of connected to the landscape and being able to access it are felt for all in Huntingdonshire. • There are opportunities for improvement and enhancement for biodiversity net gain, improving water quality, flood defences and the need to plan for supporting infrastructure such as car parking, open seating areas and moorings to support leisure pursuits. • Additionally, there was a consensus that there should be enhancements to the rights of way network for all users and development could support the delivery of pedestrian and cycle connections with the surrounding area to enhance accessibility to access the Ouse Valley and Great Fen in particular. • Fenland District Council raised how the Great Fen Project might also relate to the wider area such as Peterborough and Fenland and consider the Local Plan could further support the nature improvements being made at the Great Fen and further enhance linkages between priority areas. • Special environmental features should be identified and protected from development and harmful land management practice to enable future nature recovery. • There should be recognition the value of dark skies across the district. • Responses raised that there should be a focus on developing brownfield sites, sites within existing built areas or on land adjoining them to minimise landscape impact and maintain village gaps as well as encroachment into the countryside. • Comments expressed the potential of the Great Ouse Valley being made an Area of Outstanding Natural Beauty or a similar designation	Reference is made to the importance of public rights of way network in plan-making • *Chapter 8 Growth Strategy Options* that provide options on the general location of development • *Chapter 9 Green Blue Infrastructure,* which presents options on blue and green infrastructure areas of importance. Including the Local Nature Recovery Strategy which identifies the Great Ouse Valley and the Great Fen. • The Council will undertake a Habitats Regulation Assessment which will assesses if the local plan would have an adverse effect on specific sites of importance including: Special Areas of Conservation (SACs), Special Protection Areas (SPAs), proposed SACs, potential SPAs, Ramsar sites - wetlands of international importance (both listed and proposed). • The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the climate emergency and environment. Specifically, objectives SA1 to 7, 12 and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure, contribution to net zero, active travel and place-making. The SA site assessment includes impact on visual pollution which includes the Dark Sky Discovery Sites designated at the Great Fen and previously developed land and landscape/townscape impact (SA4, 7, 8, 15). • Designation of AONBs (now National Landscapes) are outside the scope of a local plan and the remit of Natural England.

Main Issues Raised	Council Response / How the Council has taken this into account
celebrating the history and nature of the Ouse Valley, through supporting nature education and tourism.	
Issue: The Natural Environment and Nature Conservation Designations (Question 24 and 25)	

• There was a consensus that new development should be sensitive to the natural environment so that the qualities that make Huntingdonshire's landscapes and habitats are not undermined or lost through development.
• Development should also promote new habitat areas to enhance the green network to increase access to the countryside for recreation.
• New green spaces should be developed and parks to support the demand for recreation whilst reducing pressure on sites important for their nature value as well as nature solutions in design that encourage native wildlife.
• The strategy to conserve and enhance Huntingdonshire's environment should be underpinned by local evidence and guidance as well as national policy and guidance and legislation.
• Respondents consider that the conservation and enhancement of Huntingdonshire's natural environment could best be achieved through focusing development on brownfield sites and on sites within existing built areas to minimise landscape impact and encroachment into the countryside.
• There was support for more projects like the Great Fen, protecting green spaces within developments, continuing to conserve Huntingdonshire designated nature conservation sites as well the habitats that link them (including areas that may fall outside of the district).
• Consensus that the Local Plan should identify opportunities for the restoration or creation of new habitat areas in association with planned development to enhance the network of nature conservation sites across the district recognising the importance it has on physical and mental health as well as the sense of community and stewardship it can help to nurture.
	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within:
	  • *Chapter 3 Local Plan Vision and Objectives*, which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan. The options include reference to approaches to the Huntingdonshire Landscape.
	  • *Chapter 7 Achieving well-designed Places*, which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
	  • *Chapter 8 Growth Strategy Options* that provide options on the general location of development
	  • *Chapter 9 Green Blue Infrastructure,* which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen.
	• The Council will undertake a Habitats Regulation Assessment which will assesses if the local plan would have an adverse effect on specific sites of importance including: Special Areas of Conservation (SACs), Special Protection Areas (SPAs), proposed SACs, potential SPAs, Ramsar sites - wetlands of international importance (both listed and proposed).
	• The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• The Local Plan should highlight how links to significant designated nature sites in neighbouring authorities. Collaboration and working with partners to deliver this was also highlighted as being a way to effectively deliver landscape and habitats restoration and conservation within new developments that provides environmental benefit, appropriate climate change mitigation and adaption as well as being sensitive to local character and context. • While supportive, some respondents raised concern that the delivery of new habitats could prejudice development or the viability of development, as such should be considered within the context of biodiversity net gain and the potential for off-site contributions where this may be more appropriate than on site. Additionally, the requirement for restoration or creation in a specific area should be clearly evidenced and justified. • Comments were received that consider the existing approach in LP30 of the Local Plan to 2036 to still be appropriate subject to updating to reflect the statutory requirement for biodiversity net gain made under the Environment Act and also Local Nature Recovery Strategies and Nature Recovery Networks. • Development should also be of an appropriate scale. Where on site gains cannot be achieved there be opportunities to deliver off site benefits. • Respondents stated that there should be a minimum square metre of natural wild space in all developments to provide good quality green space that not only provides environmental benefits but can be used as a space for recreation and a way to fund their upkeep	assessments include impact on visual pollution, previously developed land and landscape/townscape impact (SA4, 7, 8, 15). • Local Plan development will take into account legal and policy requirement such as those in the Environment Act where appropriate. The review of the local plan - presented to Cabinet on the 24th January 2023 noted that the environmental context for the Local Plan has changed significantly since preparation of the current local plan with enhanced emphasis at both local and national levels on responding to the climate emergency and protecting and enhancing the natural environment. An updated Local Plan would enable local policies to align with the more ambitious national approaches introducing up-to-date policies with full statutory weight to shape new development proposals throughout the district. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan.
Issue: Green Infrastructure (Question 26)	
• The Local Plan should set out a clear strategy for the enhancement of existing green infrastructure, creation of new infrastructure and the long-term management of both. Green infrastructure should be managed strategically reflecting nature recovery networks and corridors.	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within: • Chapter 3 Local Plan Vision and Objectives, which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan. The options

Main Issues Raised	Council Response / How the Council has taken this into account
• A clear green and blue infrastructure framework should inform design across the district with positive opportunities at all scales being encouraged. A hierarchy of spaces and connections is valuable and linkages that need protection and enhancement should be clearly specified. • Major development should create new green and blue infrastructure networks linking with existing areas of landscape and natural environment value. • The role of green infrastructure in providing connections between the natural and historic environments and supporting high quality places should be recognised. • Concern was expressed over the concentration on strategic scale green infrastructure rather than areas of local significance. • Use of Natural England's open space standards was advocated. • Current deficiencies by area should be identified along with opportunities where they can be addressed through future development proposals. • Green infrastructure should not be eroded at the expense of the general approach to biodiversity net gain, sustainable drainage and open space. • Designation of the Ouse Valley as a National Landscape (formerly area of outstanding natural beauty) was advocated by three Parish Councils.	include reference to approaches to the Huntingdonshire Landscape. • Chapter 7 Achieving well-designed Places, which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important. • Chapter 9 Green Blue Infrastructure, which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen. Natural England's Access to Natural Greenspace Standards is referenced as a document of importance in the development of the Local Plan. • Biodiversity net gain is required under a statutory framework introduced by Schedule 7A of the Town and Country Planning Act 1990 (inserted by the Environment Act 2021). • Designation of AONBs (now National Landscapes) are outside the scope of a local plan and the remit of Natural England.
Issue: Biodiversity Net Gain (Question 27 and 28)	
• The majority of respondents supported the use of the Environment Act's 10% biodiversity net gain target. A very small number sought the enhanced 20% target aligned with Natural Cambridgeshire's aspirations. • Several respondents acknowledged that provision higher than 10% should be an aspiration and that developments providing enhanced levels should be supported in preference to those just providing 10%.	• Biodiversity net gain is required under a statutory framework introduced by Schedule 7A of the Town and Country Planning Act 1990 (inserted by the Environment Act 2021). • The process for capturing biodiversity net gain at 10% is currently being implemented through the development management process and the determination of planning applications in line with regulatory requirements.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Widespread recognition from developers that the biodiversity net gain aspirations need to be realistic and viable reflecting the impact of its provision on the net developable area of a site. • It was advocated that the Local Plan needs to balance any enhanced biodiversity net gain requirement with the need to deliver homes and support economic growth. • A clear framework and mechanisms were sought for provision of off-site biodiversity net gain to allow for cost-effective solutions. • Focus sought on maintenance and enforcement of biodiversity net gain and soft landscaping schemes to ensure their long term success in preference to seeking higher provision. • Within new developments there was strong advocacy for retention of existing natural features, use of hedgerows rather than fencing or walls to form wildlife corridors rather than barriers and inclusion of features such as swales, bird boxes and green roofs. • Promotion of areas that facilitate continuous corridors for nature should be promoted. • Several promoters of larger sites advocated them as having greater potential for inclusion of biodiversity net gain opportunities on site. • **Requirements at a plot rather than site level should allow for a range of measures suitable for some or most sites.**	• A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including biodiversity net gain, some larger sites have included reference to areas to be used within the development for biodiversity net gain. All sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. • Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within: • Chapter 7 Achieving well-designed Places, which raises additional questions the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
Issue: Air Quality (Question 29)	
• Development should be focused away from areas of known high air pollution. • Strong advocacy for development being directed to sustainable locations which are accessible by a choice of transport modes including active travel and public transport and which offer a good level of services and facilities.	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within: • *Chapter 4 A Settlement Hierarchy for Huntingdonshire* which sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability

Main Issues Raised	Council Response / How the Council has taken this into account
• The Local Plan should include policies on active travel and promote provision of electric vehicle charging points. • Support was also expressed for planting additional trees and hedgerows to absorb air pollutants, particularly near new homes.	of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. • *Chapter 7 Achieving Well Designed Places* - which asks what aspects of place making are important. • *Chapter 8 Growth Strategy Options* that provide options on the general location of development, including an option on public transport corridors. • *Chapter 13 - Transport and Connectivity* that provides options on the approach to individual development and consideration of active travel and public transport and a question on net zero transport. • The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the climate emergency and the environment. Specifically, objectives SA2, 8 and 12 which address issues on improving adaptability and resilience to the unavoidable impacts of the climate emergency, contributing to the minimisation and reduction of all forms of pollution, and reducing the need to travel by car and promote active travel and public transport infrastructure. It also assesses the impact or potential to enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion through SA10.
Supporting our Places (Chapter 5)	
Issue: Huntingdonshire's Market Towns (Questions 30 to 40)	
Huntingdon: • Huntingdon, Brampton and Godmanchester were all advocated as places with reasonable levels of services and accessibility by a range of sustainable modes of travel. Huntingdon's road and rail connectivity were highlighted as advantages.	Huntingdon & St Neots • Responses acknowledged, benefits of Huntingdon, Brampton, Godmanchester and St Neots have been noted and are reflected in the Council's Sustainability of Settlements 2023. • Responses acknowledged the progress of the upgrading of the A141 and the potential for a station at Alconbury Weald are the responsibility

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account

• The current level of change was acknowledged for the opportunities it is bringing.
• The most frequently mentioned future priority was of upgrading the A141 to ensure that future growth is not stifled.
• Other priorities were suggested of provision of a railway station at Alconbury Weald, enhanced public transport and an emphasis of meeting housing needs.
• Various developers advocated priorities aligned with sites they are promoting including protection and management of water levels in Bury Brook to the need for comprehensive development plans north of Huntingdon and south of Godmanchester.
 	
St Neots
• St Neots was put forward as a highly sustainable location with opportunities for growth maximising its services and accessibility.
• The A428 upgrade and the potential provision of East West Rail with stations providing links to Cambridge and Bedford were recognised and opinions expressed that the Local Plan should maximise the opportunities arising from these although concern was expressed over the details of routing.
• Opportunities to enhance linkages between St Neots and new growth in Bedfordshire were advocated for both new travel options and for connectivity with nearby growth.
• The preference for growth to be located where it can offer wider community benefits was promoted.
• Little Paxton was advocated as being a separate settlement with the preference expressed that it should retain a separate identify from St Neots.
 	
St Ives
	of Cambridgeshire and Peterborough Combined Authority. The upgrade to the A428 is noted and any progress on these projects will be taken into account in the formulation of the local plan. The A428 upgrade was granted consent in 2022 and construction has commenced. Consideration of these projects and potential are highlighted in the Further Issues and Options consultation document in Chapter 8 Growth Strategy Options and Chapter 13 Transport and Connectivity, which also provide a series of options for consideration.
	• The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document.
	• In addition the Further Issues and Options consultation has taken these comments regarding location of growth, opportunities, status of settlements and comprehensive development through
	  • *Chapter 4 A Settlement Hierarchy for Huntingdonshire*
	  • *Chapter 7 Achieving well-designed places*
	  • *Chapter 8 Growth Strategy Options*
	  • Chapter 9 Our Green and Blue Infrastructure
	  • Chapter 13 Transport and Connectivity
	• The Council has a Duty to Cooperate which includes cooperation with Local Authorities such as those in Bedfordshire to identify relevant strategic matters that cross administrative boundaries.
	
	St Ives
	• Responses acknowledged the issues raised have been addressed through the Further Issues and Options consultation document which discusses and presents options on:

Main Issues Raised	Council Response / How the Council has taken this into account

• The linkages between St Ives and Cambridge were recognised and suggestions put forward supporting enhanced employment growth around St Ives to support expansion of high technology companies from Cambridge.
• The value of the guided bus system in promoting the relationship with Cambridge was highlighted.
• Retention of St Ives' own identity and investment in infrastructure and services were advocated.
• The services and facilities in St Ives are valued, particularly the markets, as is its night-time economy.
• Historic features and attractiveness of the town and its setting considered advantages.
• Future priorities for St Ives raised concerns over road traffic congestion and limited public transport services to nearby villages off the guided bus route.
• St Ives was identified by several developers as a highly sustainable location for growth with a range of infrastructure constraints being the main problem.
• Concern was expressed over the physical ability of St Ives to expand further with recognition that most growth opportunities were beyond the town's boundaries.
 	
Ramsey
• The value of Ramsey in meeting housing needs of the wider Cambridge housing market area was advocated with the greatest priority being delivery of both market and affordable housing
• Successful delivery of development at Ramsey Gateway to the north west of the town should be prioritised
• The main flood risks are from Bury Brook and The Slade; suitable changes to land management in the upstream catchment would be beneficial.
	• Employment growth (Chapter 5)
	• Identity of town, growth options, sustainable locations for growth, including public transport corridors (Chapter 4 and 8)
	• Historic features and attractiveness (*Chapter 7 Achieving well-designed places*)
	• The approach to transport and connectivity (Chapter 13), including questions on net zero solutions. In addition the Council will undertake a transport study to inform local plan strategies and policy approaches.
	• *Chapter 3 Local Plan Vision and Objectives* also addresses many of these issues by setting out options on the vision and objectives that will guide the over arching deliverables of the local plan.
	
	Ramsey
	• Response noted regarding Ramsey and meeting housing needs and delivery of the Ramsey Gateway (a town centre project) which has been taken forward through the Further Issues and Options document, which addresses issues and presents options for consideration. Key chapters include:
	  • *Chapter 3 Vision and Objectives* - which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan and includes options on vibrant high streets.
	  • *Chapter 4 A Settlement Hierarchy for Huntingdonshire*
	  • *Chapter 6 Housing Figures and Requirement*
	  • *Chapter 8 Growth Strategy Options*
	  • *Chapter 12 Housing Tenures and Mix*
	• The Council has completed a Stage 1 Water Cycle Study and Level 1 Strategic Flood Risk Assessment (2024) and will complete a Stage 2 Water Cycle Study and Level 2 Flood Risk Assessment which look and will look at an integrated approach to water management and the challenges around flooding and land management.

Issue: Huntingdonshire's Villages (Questions 40 to 41)	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• The community spirit, small/ individual village feel, local amenities and the level of activity they generate were supported for several villages including Colne, Houghton & Wyton, and Elton. • The settlement hierarchy should be revised to facilitate sustainable growth allocations in larger villages with existing service provision. • Several developers advocated that growth is necessary to support provision of new infrastructure and affordable housing. In contrast some villages highlighted that new growth has not brought about new infrastructure or even retention of existing services. • Indiscriminate incremental growth of villages should be avoided. • Some considered that opportunities for sustainable growth in villages should be assessed and considered whilst others contended that the existence of services is insufficient justification for allocation of new growth. • Access to the surrounding countryside, green spaces and public rights of way along with the peace and quiet of villages were appreciated by local residents and parish councils. • The range and quantity of heritage assets were also identified as aspects people liked about several villages. • Infrastructure provision issues of concern raised included education capacity, public transport provision in villages, broadband provision, flooding, sewage/ surface water problems, and the retention of shops and other local services. • Several site promoters identified aspects that were considered attractive about a series of villages in which they were promoting sites including Bluntisham, Somersham, Earith, Great Gidding, Offord Cluny, Great Gransden, Fenstanton, Buckden and Warboys.	• Response noted regarding sustainable growth, local amenities, changes to the settlement hierarchy, growth to support infrastructure these have been taken forward through the Further Issues and Options document, which addresses these issues and presents options for consideration. Key chapters include: *Chapter 4 A Settlement Hierarchy for Huntingdonshire* and *Chapter 8 Growth Strategy Options.* • Sustainability appraisals of the options in the Further Issues and Options consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies on heritage, landscape and townscape impact, active travel, social and community services and facilities, flooding and water. Specific assessment objectives include SA 3, 5-7, 10, 11, 15 and 16. • Access to services and facilities have also been assessed through the Council's Sustainability of Settlements 2023. • Sites that were submitted for consideration during the Call for sites which ran from 29 March to 7 June 2023 have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed.
Issue: The Countryside (Question 43 and 44)	
• Huntingdonshire's countryside was acknowledged as being highly valued by residents and visitors for its character, sense of place and history.	• Response acknowledged the council has taken these comments forward regarding new green and blue infrastructure into the Further Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Access to green spaces, the River Great Ouse and associated meadows and footpaths was appreciated. • Opportunities for peaceful walks north of St Ives and by The Thicket. • Future priorities should focus on protection of high quality agricultural land from development to help support food security. • The setting of villages and important landscapes should be protected while recognising the need for small scale affordable housing schemes on the outskirts of villages. • The countryside should be protected from erosion by large scale growth which would be detrimental to wildlife and nearby villages. • Over exposure of designated nature conservation sites to visitor pressure is a problem. • Should ensure that permeable natural greenspace and aquatic capacity is protected to support climate change resilience.	and Options consultation document within Chapter 9 Our Green and Blue Infrastructure which sets out options for retaining, designating and or allocating green and blue infrastructure in the district. Documents also referenced here include the Local Nature Recovery Strategy which will also help to shape policies in the Local Plan. • Sustainability appraisals of the options presented in the Further Issues and Options Consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies on agricultural land, access to green spaces, impact on biodiversity, conservation, enhancement, recovery and connectivity of sites, landscape and townscape impact, active travel. Specific assessment objectives include SA 4-7, 12 and 15. • The Council will undertake a Habitats Regulation Assessment which will assesses if the local plan would have an adverse effect on specific sites of importance including: Special Areas of Conservation (SACs), Special Protection Areas (SPAs), proposed SACs, potential SPAs, Ramsar sites - wetlands of international importance (both listed and proposed). This includes assessment of impact on recreational impact. • Responses acknowledged with regard to climate change, the Council has taken these comments forward into the Further Issues and Options consultation document within Chapter 10 The Approach to Climate Change. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as: low, high and medium carbon reduction pathways, the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero, offsetting and sequestering emissions.
Issue: Historic Environment (Questions 45 and 46)	
• National planning regulations and guidance already provide a strong basis for protecting historic environments which the Local Plan can help provide a local focus on	• Response noted the Local Plan will have to demonstrate that it meets the criteria set out in the National Planning Framework which focuses on conserving and enhancing the historic environment. Additional legislation also governs the approach to the historic environment such

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account

• Historic assets and their settings should be conserved wherever possible. Where this is not unavoidable, they should be integrated into new development proposals sympathetically to minimise harm.
 	
• The district's rich historic environment should be safeguarded, but this should be done in the context that the historic environment has been shaped by change over time, and sensitive future change should be supported.
 	
• The Local Plan can help conserve and enhance the historic environment by directing development to locations that are less sensitive in heritage terms or could reuse brownfield sites that adversely impact heritage assets.
 	
• The Local Plan should be supported by a robust, propionate and up to date evidence base, working with partners and neighbouring authorities as appropriate.
 	
• Historic England expect to see references to the historic environment in the local plan vision, the inclusion of a policy/ies for the historic environment and character of the landscape and built environment, and various other references to the historic environment through the plan relating to the unique characteristics of the area. This includes policies for designated and non-designated heritage assets. They also encourage a policy that addresses the potential listing over the plan period of as yet unidentified heritage assets.
 	
• The Plan should include a policy for scheduled monuments as well as other non-designated archaeology as well as highlight the importance of retaining or restoring historic shop front features.
 	
• Historic England advocates a wide definition of the historic environment which includes not only those areas and buildings with statutory designated protection but also those which are locally valued and important, as well as the landscape and townscape components of the historic environment.
	as the Planning (Listed Buildings and Conservation Areas) Act 1990, the Ancient Monuments and Archaeological Areas Act 1979, the Historic Buildings and Ancient Monuments Act 1953 (all as amended).
	• The council has taken comments forward regarding the historic environment into the Further Issues and Options consultation document within:
	  • *Chapter 3 Local Plan Vision and Objectives which sets out options for the vision of the local plan.*
	  • *Chapter 7 Achieving Well Designed Places*. The chapter references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
	
	The responses to this and the Issues engagement consultation will help to inform the development of local plan policies alongside regulatory requirements and evidence where appropriate.
	• The Council has a regulatory requirement to consult and Duty to Cooperate.
	• Sustainability appraisals of the options presented in the Further Issues and Options Consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies on the historic environment, specifically through SA16.

Main Issues Raised	Council Response / How the Council has taken this into account
• Protecting the appearance and structure of listed buildings and monuments, but allowing the use of some more modern materials and techniques to help conserve energy whilst not changing the historic appearance of the building. • The relationship of the historic environment between residents and the demands of tourism	
Meeting the Housing Needs of All (Chapter 6)	
Issue: The Need for New Homes (Question 47)	
• Focus on economic growth from Huntingdonshire Futures Place Strategy will necessitate additional housing above the standard method baseline to meet the needs of local employment • Commitment to economic growth along the Oxford to Cambridge corridor will give rise to increased need for housing to support this. • Additional housing will maximise the value of significant strategic infrastructure investment in the area. • A buffer of at least variously 10-20% should be included to respond to changes in delivery rates, changes in national policy and unexpected circumstances. • More than the standard methodology number should be provided to give flexibility. • Lack of housing support should not form a barrier to economic and infrastructure growth, • Huntingdonshire is established as a reliable consistent source of housing supply able to deliver over 1,000 homes a year so a target reflecting this could be justified. • The Local Plan should positively over-allocate is there is evidence of suitable, available and sustainable sites to contribute to national aspirations to significantly boost housing supply. • The level of need for affordable housing is high in Huntingdonshire to improve the housing situation. An uplift in overall housing and hence	• Response noted regarding economic growth, Huntingdonshire Futures, housing numbers, affordable housing and the standard method. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and presents options for consideration. Key chapters include: Chapter 5 Approach to Employment and Economy, Chapter 6 Housing Figures and Requirement, Chapter 8 Growth Strategy Options and Chapter 12 Housing Tenures and Housing Mix. • The council has a Housing Needs of Specific Groups 2021 document it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. • The Council has *a* Duty to Cooperate in plan-making which requires that local planning authorities collaborate with specific organisations to identify strategic matters which need to be addressed in their plans such as housing need, this includes neighbouring authorities.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
market housing supply is necessary to support adequate affordable housing to meet needs while being viable to deliver. • Many respondents considered the standard methodology for housing need should form the baseline but the Housing Needs of Specific Growths evidence should be updated to advise the level of additional uplift justified. • Anticipated decline in average household size will necessitate additional housing to accommodate the existing population without allowing for extra population growth. • Additional homes may be needed to address unmet needs from neighbouring authorities.	
Issue: Delivery Of New Homes (Question 48)	
• Large scale strategic residential led allocations should be prioritised to recognise their greater potential to provide social, economic, environmental and infrastructure benefits. • The Local Plan needs to recognise the distinction between housing needs and market demand and respond to both. • A pro-growth approach should be taken to boost housing delivery. • Delivery should meet needs across the district in sustainable locations across the district not just the four market towns. • A range of sites should be provided to include smaller sites for delivery in a shorter construction period. • The Local Plan should prioritise the allocation of easily deliverable sites to maintain the ongoing supply of housing across the plan period and the district to provide choice. • Should prioritise delivery of smaller new homes for local people to a maximum 5% growth in rural area residential properties in any plan period. • Developments should relate well to existing housing.	• Responses noted regarding strategic allocations, pro-growth, sustainable locations, size and distribution of sites, housing tenures, types, affordable housing and needs of specific groups. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration. Key chapters include: *Chapter 4 A Settlement Hierarchy for Huntingdonshire, Chapter 5 Approach to Employment and Economy, Chapter 6 Housing Figures and Requirement, Chapter 8 Growth Strategy Options and Chapter 12 Housing Tenures and Housing Mix.* • The council has a Housing Needs of Specific Groups 2021 document it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. • An employment land study will be undertaken to understand the economic needs of the district as set out in National Planning Practice Guidance. • Sustainability appraisals of the options presented in the Further Issues and Options Consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and

Main Issues Raised	Council Response / How the Council has taken this into account
• Delivery should be prioritised on sites that use previously developed land/ do not use best and most versatile agricultural land, are accessible to a choice of transport, can benefit from planned infrastructure investment and emphasise the importance of sustainable water drainage systems. • Timely and robust preparation of a Local Plan will be the single most important factor in the delivery of new homes. • It is essential to recognise the full diversity of possible tenures and provide flexibility to meet changing needs across the whole community. • A range of priorities were put forward for the new homes that should be delivered including: provision of smaller/ starter homes, homes for elderly people integrated into the wider community and plots for self and custom build. • Guidance should be provided on housing mix, tenure split and accessibility standards. • Policies should not be overly restrictive such that they might impact on delivery. • Delivery of affordable housing should be a priority supported by allocation of enough sites providing policy compliant levels of affordable homes. • Infrastructure should be delivered at the same time as new housing. • New developments should promote high standards of urban design and architecture to enhance the character of the district. High standards should be to promote carbon neutrality.	strategies on agricultural land, public transport and active travel, access to services and facilities, climate change response and water and flooding. Specific objectives include SA 1-4, 10, 12, 14. • The Local Development Scheme sets out the Council's timetable for the production of the local plan and will be reported on annually the Annual Monitoring report. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • Response noted regarding design. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration. Chapter 7 Achieving well-designed Places, raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important.
Issue: Housing Mix (Questions 49 to 52)	
• Many responses expressed the preference for a flexible approach to be taken to housing mix within the overall context of up to date evidence to account for changing market circumstances. • The flexible approach should allow for proposals to take account of individual site circumstances and those of the local area.	• Responses noted regarding housing mix, housing tenures, types, affordable housing, flexible approaches and needs of specific groups. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration. Key chapters include: Chapter 4 A Settlement Hierarchy for Huntingdonshire, Chapter 5 Approach to Employment and

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Support was expressed for the current adopted policy LP25 on housing mix. • Housing mix should cater for changing demographics and include more mid-range (3 bedroom) houses. • It is important to create a mixed and balanced community with decent homes to support physical and mental health. • Homes should be flexible enough to facilitate a range of uses, particularly home-working, and this is more important in smaller properties with less likelihood of a spare bedroom • Strong support was expressed for provision of specialist housing to meet the needs of older people including sheltered housing, bungalows, care homes and continuing care retirement communities. Preference was mainly for these to be within active town and village communities with adequate facilities and public transport. • Provision of retirement/ care villages of at least 500 units in 3 to 4 locations across the district was advocated by one developer with another suggesting continuing care retirement villages within any major settlement proposal. • More bungalows and single storey accessible accommodation were advocated. • Allocation of sites specifically for specialist older people's accommodation where need is identified was suggested to provide certainty and reduce competition for general market housing on the same sites. • Some support was expressed for housing specifically to meet the needs of current and former military personnel, particularly those with a connection to a military base in the area. • Homes should follow nationally described space standards.	Economy, Chapter 6 Housing Figures and Requirement, Chapter 8 Growth Strategy Options and Chapter 12 Housing Tenures and Housing Mix. • The council has a Housing Needs of Specific Groups 2021 document it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. • Response noted regarding design, national space standards and flexible living space. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration. Chapter 7 Achieving well-designed Places, raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important. • An employment land study will be undertaken to assess the need for employment land and floorspace.

Main Issues Raised	Council Response / How the Council has taken this into account
• A specific policy on including flexible living space was not supported in general with concern expressed over how the eventual use of internal space could be controlled • Provision of 'near to home working' facilities within village centres should be supported particularly within strategic scale sites.	
Issue: Housing Tenures (Questions 53 to 58)	
Affordable Housing: • Affordable housing should be concentrated in locations with access to services, employment and public transport. • The percentage requirement should be evidence led, subject to viability testing and realistic. • Consider allowing variation on the specified percentage e.g. by land type or location where evidence led. Assessment of delivery through current policy should be completed to see if a range should be sought according to different circumstances across the district. • Policy should be flexible and reflect local need and demand. • If the standard percentage is lowered for specific locations or types of site the shortfall should be made up by allocating additional sites. • Overall housing need is likely to be greater than that calculated using the standard method; as such a greater amount of affordable housing could be delivered for a smaller percentage of the whole. • Preferences on the percentage of affordable housing to be sought included retaining the current 40% requirement or amending it to 20% or 30% or at a maximum 42.5%. • Should support a variety of affordable housing products closely aligned with local market indicators.	• Responses noted regarding housing mix, housing tenures, types, affordable housing, first homes, build to rent, community lead housing, custom and self build, rural exceptions housing, the standard method and sustainable locations for growth. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration. Key chapters include: *Chapter 4 A Settlement Hierarchy for Huntingdonshire, Chapter 6 Housing Figures and Requirement, Chapter 8 Growth Strategy Options and Chapter 12 Housing Tenures and Housing Mix.* • The council has a Housing Needs of Specific Groups 2021 document it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. • The Self-Build and Custom House building act 2015 (as amended) and national regulations and policy asks that local authorities keep a register of those seeking plots and to have regard to this. This will be taken forward as part of the preparation of the local plan. • Response acknowledged, a viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Stronger enforcement mechanisms are required to ensure provision of agreed level of affordable housing preventing later negotiations for a lower level. • A proportion of all affordable housing should be offered to NHS staff first. • Within affordable housing provision of Council housing should be considered and prioritised. • Holistic and equitable communities should be promoted that reflect the values and circumstances of the district. • Percentage target should be the same throughout the district and policy continue to include flexibility to demonstrate where viability challenges necessitate variation from this. First Homes: • Twice as many respondents expressed a preference for the Local Plan not to include additional eligibility criteria for First Homes as wanted them included. Build to rent: • Principle subject to further evidence but not set prescriptive requirements. • Respondents thought that the Local Plan both should and should not specify build to rent requirements within allocations. • Overall support was expressed for more rental properties to meet market needs. Community led housing: • Policy should support community led schemes throughout Huntingdonshire where strong local support is shown. • Nurturing and support from HDC would be welcomed by Parish councils to deliver community led schemes. Self and custom build housing:	

Main Issues Raised	Council Response / How the Council has taken this into account
• If SCB plots are required in allocations, there should be a mechanism set out for them to revert to market housing if not taken up after a year. • Should support in allocations to provide more variety and character; potentially as a distinct cluster. • The current approach is securing sufficient compared to the SCB Register level of demand but requirement should be evidence led. • Most self-builders are 'building their dream' and larger developments do not meet market demand so more flexibility should be allowed for schemes on the edges of settlements. Rural exceptions housing: • Should encourage in small communities unlikely to get any other affordable housing provision. • Support in more sustainable locations which provide essential services and public transport. • Should only meet the needs of the individual parish. • Should include wider areas where settlements are economically and geographically linked. • Up-to-date surveys are essential. • Local communities should be consulted as unplanned schemes can be emotive and the community should benefit from the scheme. • Policy should move to 50% affordable housing and 50% market housing to further incentivise landowners. • The market housing proportion should also reflect the housing needs in the parish, e.g. for smaller homes and bungalows.	
Issue: Housing Standards (Questions 59 to 61)	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Many agreed that all new homes should meet the nationally described space standards, although there was concern from some that this is too small and policies should encourage applicants to exceed this. • Many agreed that some homes should meet accessible and adaptable standards to meet the needs of the elderly and those with disabilities • Appropriate amenity space should be provided in new homes • Homes should provide space for those who work from home. • Many supported the provision of some new homes at wheelchair accessible or adaptable standards and the identification of a proportion of homes that should meet this criteria. • Encourage studio apartments and bungalows for people to retire to should meet accessibility needs. • Appropriate evidence, justification and viability assessment of space standards, accessible housing and wheelchair accessible or adaptable homes standards would be required. • It is important that policies reflect demographics and tenure and concern was expressed about the specific needs of older person households and single person households. • The starting point is for new developments should be to meet Part M of the Building Regulations relevant at the time of determination. • Policies should require standards that align with current evidence at the time of determination e.g. the SHMA to provide a flexible policy in line with demand. • Changes to the Building Regulations present the best way for introducing housing standards as they avoid developers having to meet different standards in different locations.	• Response noted regarding design, national space standards, accessible housing and flexible living space. These responses have been taken forward through the Further Issues and Options document, which addresses these issues and present options for consideration through Chapter 7 Achieving well-designed Places. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important. • The council has a Housing Needs of Specific Groups 2021 document it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. • A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan. • The Council has taken comments forward into the Further Issues and Options consultation document within Chapter 11 Tackling Flooding and Water, which sets out options on integrated flood and water management including natural flood management techniques, reduction of risk elsewhere, surface water management and water efficiency measures in residential and non residential buildings. • The Council has completed a Stage 1 Water Cycle Study and Level 1 Strategic Flood Risk Assessment (2024) and will complete a Stage 2 Water Cycle Study and Level 2 Flood Risk Assessment which look and will look at an integrated approach to water management. The Stage 1 Water Cycle study looks at water management options assessment including, green and blue infrastructure, SuDs, diversifying water resources, leakage reduction, efficient fixtures and fittings, rainwater harvesting, greywater recycling. These will be developed further in Stage 2 and form an evidence base to assist in the development of policies relating to water efficiency.

Main Issues Raised	Council Response / How the Council has taken this into account
• Continue approach in current Local Plan regarding accessibility and adaptability and wheelchair standards. • The level access requirement for accessible homes makes the inclusion of flood resistance measure difficult. The vulnerability of the users of such sites also raises significant safety concerns. It is recommend allocations for such sites are located outside areas of flood risk. • Many people and Anglia Water supported more ambitious water efficiency standards for new homes below 110 litres per person per day. • Rainwater capture and water neutrality should be promoted. • Many developers noted that water efficiency standards should reflect building regulation requirements to allow for a consistent national approach. • The viability and availability of water efficiency fittings will determine the policy approach. • Anglian Water proposed that the local plan clearly directs a criteria-based approach that is proportionate to new non-household developments requiring applicants to demonstrate water efficiency measures and water reuse have been incorporated in proposals. Where significant non-domestic water use is required, developers should be required to submit a Water Resources Assessment with the planning application following consultation with the relevant water company.	
Issue: Gypsy, Traveller, Travelling Showpeople and Boat-dwellers Accommodation (Question 62 to 63)	
• Updated GTAA needed to identify need for and preferred location for further pitches/ plots. • If sites are to be allocated, they should be in locations frequented and preferred by the communities to ensure the sites will meet their needs and be used.	• Responses acknowledged, a Gypsy, Traveller, Travelling Showpeople and Boat Dwellers Accommodation Assessment 2024, is nearing completion. The study will identify current stock and look at how much accommodation would be required for the named groups above. This document will for part of the local plan evidence

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Ensure there are sufficient school places in the vicinity or contributions are secured. • New sites should respect the potential impacts on nearby settled communities. • Support provision of sites based on need recognising that some families prefer to live together. • Transit site provision should be made. • Residential caravans are highly vulnerable to flooding and are incompatible with sites in flood zone 3 which covers a lot of the district posing a significant constraint; surface water flood risk should also be considered.	base and be used in the development of local plan policies. • The Further Issues and Options consultation document has taken forward many of these responses in relation to the location of growth, impact of flooding and Gypsy, Traveller and Boat-dweller accommodation within Chapter 4 A Settlement Hierarchy for Huntingdonshire, Chapter 8 Growth Strategy Options and Chapter 12 Housing Tenures and Housing Mix. These chapters address these issues and present options for consideration.
Promoting a Prosperous Local Economy (Chapter 7)	
Issue: A Green Economy (Question 64)	
• Consensus that the Local Plan should implement policies and allocate sites that facilitate and grow the green economy, in turn allowing the stimulation of economic growth whilst meeting climate ambitions. • Expressed that more logistics and distribution sites would create green growth and jobs and allow for sustainable production practices. • Participants suggested there should be an increase in the provision of renewable energy and energy efficiency improvements within new and existing buildings at various scales and employment uses. This includes meeting BREAM 'excellent' standards, solar panels and insulation. • It was also noted that infrastructure such as public transport, active travel routes, electric vehicle charging points and the move away from pollutant cars will play a key role in the transition to a green economy. The local plan could allocate sites that are strategically located and integrate infrastructure into development.	• Responses noted regarding sectoral requirements relating to the green economy and logistics. To help inform future policies and develop our strategy for economic growth an evidence base will be produced. We will draw on strategic documents and a future economic growth strategy for Huntingdonshire, establish a baseline for the current supply and demand of employment land and properties in the market, the status and functioning of EEAs and growth forecasts. This will help to identify any failures or target sectors within the market, adapting to increased premises demand for growing sectors and business whilst responding to a changing market which may include aspects such as sector decline. • The Further Issues and Options consultation document has taken forward issues relating to location of growth and economic strategy ambitions presenting options for consideration within *Chapter 5 Approach to Employment and the Economy.* The contribution to water efficiency is set out in *Chapter 11 Tackling Flooding and Water* and climate change within *Chapter 10 The Approach to Climate Change.* Strategic location of growth is also addressed in *Chapter 6 Growth Strategy Options* and active travel, public

Main Issues Raised	Council Response / How the Council has taken this into account
• The Local Plan should encourage private investment into the green economy which can be defined as low carbon, energy efficient and socially inclusive. It should also protect biodiversity. • Increase density of employment uses within town centres to raise sustainability and reduce travel distances. • Reference to the role of national government in driving the green economy. • Support for existing policies that enable a greener economy such as LP23 and LP35. • Mentioned that old, existing industrial sites could struggle to meet new environmental standards and therefore there will be increased demand for new, low carbon buildings. The Local Plan should respond to this challenge and allocate appropriate new sites, encouraging businesses to remain in the local area.	transport and a place-based approach to net zero in *Chapter 13 Transport and connectivity.* • The Council has produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised.
Issue: Supporting and Diversifying the Local Economy (Questions 65 to 69)	
Supporting local employment locations and industrial estates • Respondents highlighted the importance of ensuring a sufficient supply of employment land that meets the needs of the market through site allocations and policy making. • Overall view that existing and potential new employment sites should be supported as job creation and business growth is very important for local prosperity. • The council will need to identify suitable employment sites in consultation with local communities • The identified Established Employment Areas in the existing Local Plan should be protected • An assessment of the demand and supply for employment land should be undertaken to inform the Local Plan Review and determine whether additional employment allocations need to be identified.	• Responses noted regarding supporting local employment locations, industrial estates, sectoral requirements, adaptation to market conditions. To help inform future policies and develop our strategy for economic growth an evidence base will be produced. We will draw on strategic documents and a future economic growth strategy for Huntingdonshire, establish a baseline for the current supply and demand of employment land and properties in the local market, the status and functioning of EEAs and growth forecasts. This will help to identify any failures or target sectors within the market, adapting to increased premises demand for growing sectors and business whilst responding to a changing market which may include aspects such as sector decline. It will inform the use classes and floorspace required. It is noted that work from home, business hubs, start ups, the rural economy and flexible uses are mentioned which are issues which may require investigation. • The Further Issues and Options consultation document has taken forward issues relating to location of growth and economic strategy ambitions presenting options for consideration

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Employment land assessments should reflect significant changes to the economy. • Suggested the evidence base informing the status of employment land should include historic suppressed demand • Infrastructure will play an important role in facilitating the needs of businesses, this includes digital connectivity, education, transport and energy efficiency. • Develop infrastructure on existing industrial estates and business parks. It is also important to ensure there is appropriate infrastructure integrated within allocated sites • High quality housing development in sustainable locations will support the local job market • The Local Plan should ensure that policy allows identified employment sites to consider alternative uses where market evidence demonstrates that traditional employment uses are not feasible or viable. • Support from developers to create new employment sites in suitable locations to meet demands of emerging sectors, which cannot be supplied by existing employment land. Concern raised about the limited potential of Alconbury Weald to meet employment land needs due to restricted premises use class and being close to capacity. • Drivers of economic growth require new employment land in suitable locations. • Mixed use development could support employment locations. • Areas with significant employment opportunities should be afforded with proportionate levels of housing growth. • Flexible planning policies for existing sites • Recommended assessments include; Housing and Economic Development Needs Assessment and SWOT analysis identify how existing employment areas may evolve overtime.	within *Chapter 5 Approach to Employment and the Economy* and *Chapter 8 Growth Strategy Options.* • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including employment and mixed use sites. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. • Business rates are outside the direct scope of the local plan but are addressed by other departments within Huntingdonshire District Council. The effects of these however will have an impact on the current status of the market which will be addressed through the employment evidence base.

Main Issues Raised	Council Response / How the Council has taken this into account
Challenges to business and employment growth • Participants argue that the infrastructure provision could serve as a significant constraint to employment and business growth in the area. The Local Plan should ensure adequate infrastructure to support economic growth by supplying housing and employment sites that contribute to improvements in infrastructure such as road networks, active travel and public transportation. • Commentators also state that the Local Plan should allocate the location of sites strategically where there are good transport links. This is particularly important for large scale/ logistics and distribution sites. • Education was also argued to be an important element in supporting economic growth and ensuring skills match jobs available. • Environmental challenges could also limit growth and therefore the local plan should support green businesses and sustainable practices, including proximity to workforce and clustering. • Whilst important to protect existing employment areas, the local plan should be adaptive to market conditions supplying new sites to meet sector demand. There was particular concern over the lack of sufficient industrial space that meet environmental standards, locational requirements and sector growth. • Parish councils regarded liaising with businesses in the local area to understand challenges and issues as important. • The current spatial strategy was argued to potentially lead to unequal access to employment opportunities and distribution of growth in rural areas. • Ensure there is appropriate infrastructure to adapt to the increasing influence of 'work from home' practices. Sectors	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Reoccurring theme that existing sectors, as pointed out by the issues document, should be protected. Mentions of specific industries include research and development, manufacturing and innovation. In addition, the Local Plan should help facilitate business expansion, ensuring the delivery of employment land on new sites encouraging businesses to stay in the local area. This will allow Huntingdonshire's economy to be diversified and react well to economic shocks. • A large proportion of answers referred to the green economy, offering opportunities to facilitate economic growth whilst helping to tackle climate change. This could be done by reducing business rates for companies who demonstrate sustainable practices. • Commentators state the Local Plan should ensure that rural businesses are protected and enhanced to preserve the rural character of Huntingdonshire. Commentators suggest that housing development in smaller settlements can help maintain population numbers through consumer spending and facility use. Rural economy can be supported by business rates adjustments, respondents also suggested there should be support for startups. • Other sectors mentioned that should be supported and encouraged include; advanced manufacturing, biotechnology, life sciences, construction/ housebuilding, logistics and distribution. Flexible Local Economy • Strong view amongst respondents, developers, parish councils and others, that it is important the use class of business space/ employment land is flexible to ensure adaptability. • The Local Plan could support a flexible economy by raising affordability of premises, supporting startups and Small Medium Enterprises (SME), ensuring employment spaces/ businesses can be altered to different use classes. • Concern was raised regarding the changing of work practices leading to more people working from home and as a result reducing spending and the need for office space within traditional	

Main Issues Raised	Council Response / How the Council has taken this into account
employment centres. Housing developments and residential areas should adapt and have mixed use business hubs to reflect dispersal.	
Issue: Logistics and Distribution (Question 70)	
• Issue raised about the pressures of the logistics and distribution sector on transport infrastructure. For example, HGV vehicle movement through villages due to certain roads like the A1 being at capacity. • Stated that Huntingdonshire has a locational advantage for logistics and distribution sites especially due to the upgrade of the A14. • Significant number of responses identify the need to increase the number of employment sites to meet the premises demand of the logistics and distribution sector. • Argued that the logistics and distribution sector can provide high value jobs despite risk of automation. • Identified that logistics and distribution sites can be used as multifunctional spaces such as offices. • New employment sites for this sector could offer the opportunity to implement sustainable production techniques, decarbonising supply chain industries. • Cambridgeshire County Council comment on the negative carbon impacts of this sector and noise pollution. They also identify the risk that the jobs provided in this sector may be low skilled or waged. • Recognition there is a trade-off between locating sites on major roads away from residential areas and local amenity to reduce pollution and sustainable modes of transport to and from work. Suggestion that logistics and distribution sites should be near facilities such as schools • Developers comment on the issues paper in relation to the risk of automation and job creation, stating technological advance have raised productivity/ output and therefore more employees are needed to distribute goods	• Responses noted regarding supporting sectoral requirements, and job creation. To help inform future policies and develop our strategy for economic growth an evidence base will be produced. We will draw on strategic documents and a future economic growth strategy for Huntingdonshire, establish a baseline for the current supply and demand of employment land and properties in the local market, the status and functioning of EEAs and growth forecasts. This will help to identify any failures or target sectors within the market, adapting to increased premises demand for growing sectors and business whilst responding to a changing market which may include aspects such as sector decline. It will inform the use classes and floorspace required. • The Further Issues and Options consultation document has taken forward issues relating to location of growth and economic strategy ambitions presenting options for consideration within Chapter 5 Approach to Employment and the Economy and Chapter 8 Growth Strategy Options. Carbon impacts and contribution to addressing the climate emergency can be found in *Chapter 11 Tackling Flooding and Water* and *Chapter 10 The Approach to Climate Change.* Active travel, public transport and a place-based approach to net zero in *Chapter 13 Transport and connectivity.* In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report. • The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site assessment includes impact on visual pollution, previously developed land and access to services and facilities such as schools (SA 8, 4 and 10).

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• The majority of comments from parish councils suggest logistics and distribution sites should be located on major roads such as the A1 • View that this sector could have a detrimental impact on the rural character of Huntingdonshire.	
Issue: Rural Economy and Agriculture (71 to 73)	
Meeting the needs of the agricultural sector • A large proportion of commentators stated The Local Plan should support the agricultural sector by protecting high quality agricultural land from development. This will help to limit 'food miles' and increase self-sufficiency. • Consider the impacts to the environment from traditional farming practices. • Support smaller producers as they provide produce/ food to local markets. • Small scale residential development is appropriate for local employment in the agricultural sector. • Support farm diversification but ensure food production is the main priority. Concern over the impact of LP19 on the reduction of good quality agricultural land. • Church Commissioners for England state there is an opportunity to convert disused agricultural buildings into viable uses such as residential, but this should be considered on case-by-case basis. They also state that LP33 should be retained in the Local Plan. Appropriate uses in countryside locations • Industries that demonstrate a genuine need to be in the countryside. • View that small scale tourism would be appropriate.	• Responses noted, the Council will review Local Plan policies LP 19 Rural Economy and LP 33 Rural Buildings. • Responses noted regarding supporting sectoral requirements. To help inform future policies and develop our strategy for economic growth an evidence base will be produced. We will draw on strategic documents and a future economic growth strategy for Huntingdonshire, establish a baseline for the current supply and demand of employment land and properties in the local market, the status and functioning of EEAs and growth forecasts. This will help to identify any failures or target sectors within the market, adapting to increased premises demand for growing sectors and business whilst responding to a changing market which may include aspects such as sector decline. It will inform the use classes and floorspace required. • The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site assessment includes impact on visual pollution, previously developed land, agricultural land and access to services and facilities such as schools and reducing the need to travel by car, promote active travel and public transport (SA 4, 8, 10 and 12). • The Further Issues and Options consultation document has taken forward issues relating to location of growth presenting options for consideration within Chapter 5 Approach to Employment and the Economy and Chapter 8 Growth Strategy Options. Carbon impacts and

Main Issues Raised	Council Response / How the Council has taken this into account
• Other industries put forward include; small scale light industry on brownfield sites, farm diversification and renewable energy (solar and wind) • Flexibility of Local Plan policies is required to reflect local conditions. Sustainable development • Farm diversification should be supported to better economic sustainability of the industry. • Protect the best quality agricultural land. • Support small scale development and require that development protects the character of settlements and the countryside. • Cambridgeshire County Council note that countryside development should be in a sustainable location, within walking distance from local facilities. Policies should also encourage local participation in the rural economy/ social life. Focus should be placed on buildings being within clusters to ensure integration. • Flexible approach to policy which supports development on unallocated sites in countryside locations if certain requirements are met e.g. the character and appearance of locality. • Some parish councils referenced the role of permitted development rights in negatively impacting the local area in terms of infrastructure pressure and scale of development.	contribution to addressing the climate emergency, such as renewables can be found in *Chapter 10 The Approach to Climate Change*. In addition the Council will undertake a transport study to inform local plan strategies and policy approaches as will a Climate Change Report. • Permitted development rights will be considered in the formulation of local plan policies • The Council will review current local plan policy LP23 Tourism and Recreation • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including employment, residential and renewables. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. • The use of traditional farming practices is outside the scope of the local plan
Issue: Retail and Adapting our Town Centres (Questions 74 to 76)	
Regeneration and Reinvigoration • Natural England have commented that nature-based solutions could be integrated into town centres. • Ensure town centres are accessible by public footpaths and cycle paths to increase footfall. • St Neots would benefit from regeneration due to poor retail market and neglect.	• Responses noted the Further Issues and Options consultation has taken forward responses relating to active travel, impact of transport and design specifically though: • *Chapter 7 Achieving Well Designed Places* - which asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Direct growth within market towns to increase footfall and the support the economy. • Sites for potential regeneration and reinvigoration in St Ives include; the Dolphin Hotel, the Waites and the area around Waitrose. • Adapt to retail trends and therefore be flexible with the uses of space within town centres. Ensuring successful town centres • Ensure housing developments are located near town centres and high streets rather than having to create standalone communities. • Prioritise pedestrians in town centres • Strong view that town centres in the district should hold a sense of identity • Concern raised over the impact of car dominated travel to town centres and the impact this has on public health and the environment. • Consider the changing role of high streets. • Invest in infrastructure to facilitate success. • Reduce business rates to attract businesses Uses in local and town centres • Retail sector growth is considered important, this could be achieved by reducing business rates and supporting independent shops • However, significant amount of recognition there needs to be an adaptation to the changing retail market due to the role of online shopping	streets, open spaces and maintaining high quality flexible spaces • *Chapter 13 Transport and Connectivity* that provides options on the approach to individual development and consideration of active travel and public transport and a question on net zero transport. • Sites with the potential for regeneration may be considered through the site allocation process if the timing aligns. • Reducing business rates is outside the scope of the local plan.
Issue: Enhancing Tourism (Questions 77 to 79)	
Opportunities • Paxton Pits could provide access to greenspace whilst protecting and enhancing the natural environment and provide business opportunity through small retail outlets	• Responses acknowledged regarding provision of open spaces, active tourism and tourism and the rural economy/business opportunities. The Council has taken these comments forward into the Further Issues and Options consultation document within:

Main Issues Raised	Council Response / How the Council has taken this into account
• Extension of Priory Park in St Neots would support tourism • The Fenland area is lacking suitable open spaces such as country parks. They advise that a water spatial strategy would be beneficial for the district, improving the access, setting, use and opportunities of rivers through, for example, moorings and marinas. This will support the rural economy and improve connections to Ely, Cambridge and Peterborough. • Support active tourism such as walking and cycling. • General view that tourism is a driver of the rural economy, allowing local businesses and services to survive. Tourism restrictions • Encourage non-motorised access to tourism locations. • Concern over the potential damage to greenspaces because of tourism. Approach to tourist accommodation • Concern raised over the influence of 'Air BnB' and self-catering on the availability of accommodation for local people. • Significant support for increasing the provision of accommodation for tourism to help drive the local economy. Highlighted that whilst Huntingdonshire has attractive tourist locations such The River Great Ouse and market towns but the benefits on the local economy are not realised due to a lack of places to stay.	• *Chapter 3 Local Plan Vision and Objectives*, which sets out options on the vision and objectives that will guide the over arching deliverables of the local plan. The options include reference to approaches to the Huntingdonshire Landscape. • *Chapter 5 Approach to the Economy* which specifies strategy ambitions specifically Option C which proposes capitalising on key priority sectors. • *Chapter 7 Achieving well-designed Places*, which raises additional questions on the role of active design. The chapter also references the use of the National Design Code to shape what aspects of design we will include in our future design policies and asks further questions on what is important. • *Chapter 9 Green Blue Infrastructure,* which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy identifies areas such as the Great Ouse Valley and the Great Fen. • *Chapter 13 Transport and Connectivity* also provides options on the approach to individual development and consideration of active travel, public transport and includes a question on place based net zero transport. • With regards to damage to damage to greenspaces, the Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site assessment includes impact on visual pollution, previously developed land and landscape/townscape impact (SA4, 7, 8, 15). • The Council will also undertake a Habitats Regulation Assessment which will assesses if the local plan would have an adverse effect on specific sites of importance including: Special Areas of Conservation (SACs), Special Protection Areas (SPAs), proposed SACs, potential SPAs,

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
	Ramsar sites - wetlands of international importance (both listed and proposed). • Approaches to tourism accommodation noted, the Council will review current local plan policy LP23 Tourism and Recreation • In response to moorings and a water strategy, the Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses including moorings. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. A Gypsy, Traveller, Travelling Showpeople and Boat Dwellers Accommodation Assessment 2024, is also nearing completion. The study will identify current stock and look at how much accommodation would be required for the named groups above. This document will for part of the local plan evidence base and be used in the development of local plan policies.
Developing High Quality Sustainable Communities with Supporting Infrastructure (Chapter 8)	
Issue: Design of Buildings and Places (Questions 80 to 83)	
High quality design • Comments reiterated that the updated Local Plan should give consideration to national policy and guidance as well as local guidance within Huntingdonshire's Design Guide and Landscape and Townscape SPD. • The factors to guide building design in the updated Local Plan put forward by residents are summarised below: ○ Development should be net carbon zero, energy efficient and climate resilient by including passive heating, solar panels, high levels of insulation and the use of natural material such as wood and wool insulation ○ Be of high quality and reflective of local character and design and where appropriate draw on opportunities offered by the historic environment and reflect local character and distinctiveness	• Response noted the Council will give consideration to policy and guidance as well as Huntingdonshire's Design Guide and Landscape and Townscape SPD. • Regarding comments relating to developments being reflective of local character, creating a sense of place, high quality design, the historic environment, active travel, public rights of way and walkable neighbourhoods these responses have been taken forward in the Further Issues and Options consultation in Chapter 7 Achieving Well Designed Places. This chapter asks questions about specific design aspects that may be important and the principles of active design which includes reference to active travel, high quality streets, open spaces and maintaining high quality flexible spaces. *Chapter 13 Transport and Connectivity* also provides options on the approach to individual development and consideration of active travel and public transport and a question on net zero transport. The Council has also produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and

Main Issues Raised	Council Response / How the Council has taken this into account
○ Be flood resilient including flood resilience and resistance measures ○ Integrate walkable neighbourhoods containing local facilities ○ Providing a wide range of housing to suit all needs in terms of household composition, affordability, demographics and specialist needs, and doing so in a manner that promotes mixed communities ○ Prioritise active travel and public transport • Several comments highlighted the challenges of creating a sense of place and identity within new developments. The following ideas were put forward in how the updated Local Plan could strengthen the identity of places: ○ A good rights of way network ○ Supporting social inclusion through creating a sense of place ○ New developments that integrate successfully into the local landscape and townscape character, supporting high quality design and use materials and building styles that reflect the local area ○ Design and Access Statements, Design Guides and / or Vision Documents should be used on larger sites to justify the design concepts behind developments ○ The provision of new infrastructure, new facilities and new services in strengthening the sense of identity of places and supporting the creation of healthy communities. ○ Open spaces where people can gather- playgrounds, outside schools and for dog walking ○ Community facilities within walking distance ○ By setting out a clear spatial strategy for settlements and directing growth to appropriate locations of least environmental sensitivity ○ By ensuring that settlements which are distinctive and different from each other, are both perceived to be and remain physically separate from one another	strategies on the environment. Specifically, objectives SA5 to 7, and 15 address impact on the landscape, biodiversity, green and blue space and infrastructure and place-making. The SA site assessment includes impact on visual pollution, previously developed land, agricultural land and access to services and facilities such as schools and reducing the need to travel by car, promote active travel and public transport and the historic environment (SA 4, 8, 10 and 12, 16). • The Council has completed a Stage 1 Water Cycle Study and Level 1 Strategic Flood Risk Assessment (2024) and will complete a Stage 2 Water Cycle Study and Level 2 Flood Risk Assessment which look and will look at an integrated approach to water management and the challenges around water - both the impact of flooding from development and measures to reduce flooding. These will form evidence bases to assist in the development of policies and identify sustainable locations for growth. • In response to the provision for a wide range of housing. The council has a Housing Needs of Specific Groups 2021 document it includes assessment of issues such as affordable housing need, housing mix and needs of other groups. An update to this will help to inform need and be used in the formulation of policies and requirements for the local plan. Further options are also set out for consultation within *Chapter 12 Housing Tenures and Housing Mix* in the Further Issues and Options consultation document. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. • Responses acknowledged relating to whole life carbon assessments and modern methods of construction and net zero buildings, high quality design and building materials. The Council has taken these comments forward into the Further Issues and Options consultation document within Chapter 10 The Approach to Climate Change,

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
Whole life carbon assessments • Comments stated that Whole Life Carbon Assessments should be used to address the carbon impact of buildings, also there should be solar panels, ground source heat pumps and carbon zero buildings. Some respondents considered that WLCs should apply to all developments supported by appropriate templates and calculators to undertake them, while some other respondents stated that whole life carbon assessments should only apply to major development proposals. • Additionally, some respondents considered that WLC assessments unnecessary considering national changes to Building Regulations whereby the carbon impact of buildings is reducing. • Comments received that major development proposals should include a detailed energy strategy to demonstrate the policy target will be met within the framework of the energy hierarchy and that this should link to HDC's climate change policy. • There should also be consideration of adequate and accessible provision for waste storage, the consideration of development on existing and allocated waste management development, and promotion of the waste hierarchy is welcomed. The Minerals and Waste Authority consider that the updated Local Plan could be much more ambitious in relation to the integration of the Circular Economy principles within the future local plan. • The updated Local Plan should encourage as far as possible the use of Passivhaus solutions to minimise the impact of new developments on the climate. Modern Methods of Construction • There was general support for the use of modern methods of construction particularly where this sped up housing delivery and delivered lower carbon development. • Some comments raised concerns that development should not be uniform in style and should still reflect local character.	which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised.

Main Issues Raised	Council Response / How the Council has taken this into account
• Several respondents stated that the updated Local Plan should have a policy that supports MMC within development, but this policy should not set prescribed standards. • Some respondents felt that a set standard within a policy would be challenging to enforce and could adversely impact the viability of proposals, therefore the level to be provided should be flexible based on each proposal.	
Issue: Open Space in New Development (Questions 84 and 85)	
• Comments received highlighted the importance of open space. • The can provide opportunities for people to adopt a healthy and active lifestyle and can help link wildlife corridors enhancing biodiversity and can also provide a link to the historic environment by creating a sense of place within new developments. • As well as helping create a sense of place, open spaces in new developments should support healthy lifestyles and opportunities for social interaction and be inclusive spaces. • Standards should follow local and national best practice and guidance, such as ANGSt and Fields in Trust guidance. • Respondents felt that generally a variety of green space choices should be utilised including informal green space, orchards, parks, community gardens, children's play areas, amenity spaces, MUGAs, sports pitches and local nature habitats across both residential and other development sites. • Consensus that the approach towards open space provision in new developments should be different depending on the type of development proposed, including for non-residential proposals. • Comments were also made that in addition to open space requirements, site specific guidance and an assessment of existing provision should also be considered to ensure that different needs are met and that high quality open space is	• Responses noted the Further Issues and Options consultation has taken forward responses relating to open space in new development. *Chapter 7 Achieving Well Designed Places* asks questions about specific design aspects that may be important and the principles of active design which includes reference to multi-functional open spaces, activity infrastructure for sport and recreation and maintaining high quality flexible spaces. In addition the chapter references the Councils' Healthy Open Spaces Strategy, the National Model Design Code. Chapter 9 Green and Blue infrastructure which sets out options for retaining, designating and or allocating green and blue infrastructure in the district. Documents also referenced here include the Local Nature Recovery Strategy the Access to Natural Greenspace Standards which will also help to shape policies in the Local Plan. • The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types, including aspects such as sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will be assessed.

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
achieved across new developments and that consultation on this and the maintenance of open space is beneficial.	
Issue: Travel and Transport (Questions 86 and 87)	
• Benefits will depend on what improvements are brought forwards and need to account for potential negative impacts on other aspects such as carbon emissions and active travel. • Benefits should be reducing climate change impacts and ability to promote sustainable development; investment in public transport corridors enhances opportunities. • Potential A141 bypass between Huntingdon and St Ives opens opportunities for further sustainable growth having a positive impact on the local and wider economy, reduction of congestion and improvements in air quality in peak periods. • Upgrades to the A1 would be beneficial • The Local Plan should support initiatives for a rapid transport system connecting St Ives northwards using parts of the disused railway line to Somersham, Warboys, Ramsey and onto Peterborough with a link from Somersham to Chatteris, the Fens Reservoir site and market towns in Fenland. • A141 upgrade is needed to reduce congestion and enhance mobility across Huntingdonshire and into the Fens along with improvements in and around St Ives including enhanced reliability for public transport and active travel options. • The improvements to the A14 around Huntingdon have brought new opportunities for Huntingdon and Godmanchester but many benefits have been for the wider regional economy. • Should explore opportunities to benefit from East West Rail stations at north Cambourne and south of St Neots arising from a reliable connection to Cambridge and not prematurely limit these benefits. • Should build on excellent connections to the national and regional strategic road network to maximise benefits of these.	• Responses acknowledged the Council has taken comments regarding climate change forward into the Further Issues and Options consultation document within Chapter 10 The Approach to Climate Change, which sets out options on decarbonisation scenarios. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised including future emissions and trends, low, high and medium carbon reduction pathways and the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero. • Responses acknowledged regarding take advantage of strategic road networks and new completed and potential opportunities such as the A14, A141, East West Rail. Completed projects will be taken into account in the development of a growth strategy for Huntingdonshire which is set out in Chapter 8 Growth Strategy Options of the Further Issues and Options consultation document. Other projects such as East West Rail are reflected in Options within Chapter 13 Transport and Connectivity. Some of these projects such as East West Rail and the A141 are the responsibility of other organisations such as the East West Railway Company and Cambridgeshire and Peterborough Combined Authority, progress on these projects and emerging projects will be taken into account in the formulation of the local plan. • The upgrading of strategic road networks is the responsibility of National Highways and the A1307 the responsibility of Cambridgeshire County Council Highways. A cross organisational project delivery team work on an number of highway programmes such as the A141. Cambridgeshire and Peterborough Combined Authority is the Strategic Transport body for the area. • Options to actively manage patterns of growth are included in the Further Issues and Options consultation document *Chapter 8 Growth Strategy*

Main Issues Raised	Council Response / How the Council has taken this into account
• Strategic transport improvements should encourage business development in the area and will generate significant opportunities. • New strategic sites should be integrated in proximity to existing residential and economic growth areas to support successful provision of sustainable travel and reduce the need to travel. • The Local Plan should actively manage patterns of growth to reduce the need to travel and support non-car transport choices. • A reliable connection to Cambridge and its employment provisions will result in a demand for housing and jobs in the area. • Development should not be held back by uncertainty over East West Rail and the route alignment should meet the needs of existing as well as future residents. • A sustainable transport corridor should be promoted along the A1307 utilising two of the existing lanes for buses only running between Huntingdon railway station, through Bar Hill and into Cambridge. • Provision of more and more frequent local buses serving villages facilitating connections to larger places and current and planned main public transport hubs. • Enhanced access to electric vehicle charging is needed. • All developments should facilitate home working to reduce the need to travel. • Should promote large scale developments (new settlements) that contain mixed complementary uses in close proximity incorporating safe active travel networks.	*Options* and include options on focusing around strategic road networks and public transport. • Options relating to active travel, approach to new developments, transport and EastWest Rail are included in the Further Issues and Options consultation document *Chapter 7 Achieving well designed places* which includes questions about specific design aspects that may be important and the principles of active design. *Chapter 13 Transport and Connectivity* provides options on the approach to individual developments including active travel and public transport, questions on a place based approach to zero carbon and options around the East West Rail. • Options relating to electric vehicle charging included in the Further Issues and Options consultation document *Chapter 10 The Approach to Climate change* within Decarbonisation Scenarios.
Issue: Public Transport and Active Travel Infrastructure (Questions 88 to 90)	
• Improve access to railway stations and other key facilities by sustainable travel modes.	• Responses acknowledged, these comments regarding public transport and active travel infrastructure have been taken forward through the Further Issues and Options consultation document. Key chapters include:

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Some respondents thought that uncertainty over delivery of a station at Alconbury Weald and East West Rail meant development should be focused in the current most sustainable locations whereas others thought opportunities related to future rail services should be taken. • Suggestions were put forward that the Local Plan should reduce public transport fares, provide free parking at railway stations and secure additional bus services. • Future development sites should be accessible by or capable of supporting public transport services. • Physical and cultural barriers to use of public transport must be removed by provision of very high quality services with large scale developments facilitating genuine opportunities to maximise viable alternatives to car use. • Increase the provision of on-demand bus services to meet evolving mobility needs. • Developers should provide long term subsidies for public transport if needed for new developments. • Support for development accessible to or capable of connecting to the guided busway. • Should work with Town and Parish Councils to promote footpaths, cycleways and bridleways. • Protect and enhance the public right of way network in planning approvals with emphasis on use of soft surfaces. • Should support more and improved safe cycle paths providing direct routes. • Should integrate green infrastructure networks in new developments that facilitate active travel options. • Active travel should be prioritised for reducing carbon emissions and increasing personal health and well-being. • Cambridgeshire's Active Travel Strategy should be reviewed to consider potential allocations that could be supported by existing walking and	• Chapter 7 Achieving well designed places which includes questions about specific design aspects that may be important and the principles of active design. • Chapter 13 Transport and Connectivity provides options on the approach to individual developments including active travel and public transport, questions on a place based approach to zero carbon and options around the East West Rail. • Responses acknowledged regarding take advantage of projects such as East West Rail. Completed projects will be taken into account in the development of a growth strategy for Huntingdonshire which is set out in Chapter 8 Growth Strategy Options of the Further Issues and Options consultation document. Other projects such as East West Rail are reflected in Options within Chapter 13 Transport and Connectivity. Some of these projects such as East West Rail and the A141 are the responsibility of other organisations such as the East West Railway Company and Cambridgeshire and Peterborough Combined Authority, progress on these projects and emerging projects will be taken into account in the formulation of the local plan. • Chapter 9 Green Blue Infrastructure in the Further Issues and Options consultation document, which presents options on blue and green infrastructure areas of importance and options to designate new areas. The Local Nature Recovery Strategy and Natural England's Access to Natural Greenspace Standards are referenced as a documents of importance in the development of the Local Plan. • The active travel strategy is referenced in the Sustainability Appraisal within Stage A the Scoping process in the review of relevant plans and programmes.

Main Issues Raised	Council Response / How the Council has taken this into account
cycling routes and to prioritise high quality active travel infrastructure provision in new developments.	
Issue: Parking Provision (Questions 91 and 92)	
• Ensure off-road parking with electric charging points in all new development. • Include realistic parking provision and small car parks within developments. • Avoid encouragement of over-reliance on private car use; encourage cycle parking and safe routes. • The Local Plan should require a design-led approach to car parking with flexible policies to respond to changing vehicle technologies and people's needs and to reflect the location's accessibility by alternative transport modes. • Domestic parking should reflect good design including plating and surface water drainage. • HGV parking should include provision of toilets, showers and food facilities to be safe and healthy. • Concern over the impact of HGV parking facilities on the countryside and rural communities along the A14.	• These comments are noted and the Further Issues and Options consultation document notes that current local plan policy LP 17 'Parking Provision and Vehicle Movement' focuses on more detailed aspects but includes accessibility to services and facilities which is increasingly recognised as important, particularly by active travel modes, and so is likely to need enhancing. It also sets minimum requirements for cycle parking provision for new developments. Car parking levels are expected to be responsive to the location and nature of the proposed development rather than numeric requirements being set. • In addition the Council will undertake a transport study to inform local plan strategies and policy approaches. • Options relating to electric vehicle charging included in the Further Issues and Options consultation document Chapter 10 The Approach to Climate change within Decarbonisation Scenarios. • Chapter 11 Tackling Flooding and Water in the Further Issues and Options consultation document and evidence base studies such as the Strategic Flood Risk Assessment and Water Cycle Study will look at an integrated approach to flood management including surface water.
Issue: Community Facilities and Services (Questions 93 and 94)	
• Consensus that it is essential all communities have accessibility to a range of community facilities and services. • The Local Plan can help protect and enhance new community facilities through S106 agreements and the use of CIL. These methods are effective as they demonstrate a quantifiable need for facilities • Identify clear policies for community facility provision which include robust planning conditions or S106 agreements.	• The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types and including aspects such as health and social care, community facilities, sport facilities, education and green infrastructure. Infrastructure need and type across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will be included. Alongside this a viability assessment will be undertaken to ensure that policies are realistic, and that the total

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• A significant proportion of responses stated there should be an assessment of the capacity of existing facilities and any potential upgrading or provision of new facilities required. • Recognition there is a lack of secondary schools in the district leading to long travel distances from rural areas. • Recommended that LP22 is retained to allow for the continued protection of community facilities. • Development should support the delivery of new facilities through planning obligations or directly through providing land or buildings. Community facilities should meet the needs of new developments. • Planning policies should provide for community facilities. The Local Plan review will need to assess the need for all types of community facilities during the plan period and define a development strategy and policies to meet the identified needs and allocate sites that can deliver or support the community facilities. • A large proportion of responses referenced the NPPF in relation to community facilities • Clearer needs assessments and priority areas should be identified in the Local Plan. This will help understand whether existing facilities are fit for purpose given the changing socio-economic landscape. • Advocation for community facilities which have flexible uses encouraging shared use and engagement • Use successful provision of community facilities as a framework for other settlements. • Clear guidance on allocated sites about providing appropriate education facilities. • Comments highlight the role of population growth and the pressure this can have on existing community facilities. • Policy should support the provision of off-site community facilities where necessary.	cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan. • The support for current local plan policy LP22 and the requirements of the NPPF are noted. • The Further Issues and Options consultation document provides options on the objectives for the local plan some of which include reference to support for community facilities and integrated community facilities. Chapter 4 A Settlement hierarchy for Huntingdonshire sets out options for categorising settlements which will help to determine which locations growth may be directed to and how much. A Sustainability of Settlements study 2023 assesses each settlement at a point in time identifying access to services and facilities. • Sustainability appraisals of the options presented in the Further Issues and Options Consultation document have also been completed which will be consulted upon at the same time as the Further Issues and Options consultation. The sustainability appraisal is an iterative document which will assess the impact of policies, sites and strategies. It assesses the impact or potential to enhance the quality, range and accessibility of social and community services and facilities to promote social inclusion particularly amongst those most at risk of experiencing discrimination, poverty and social exclusion through SA10.

Main Issues Raised	Council Response / How the Council has taken this into account
• Empower stakeholders to purchase land for community purposes and lower restrictions for new community facilities. • Ensure new developments are near existing, as well as providing new, community facilities to allow for long term vitality and viability. • Enable access to community facilities by upgrading active travel routes. • Highlighted that some development in smaller settlements would support the maintenance of existing community facilities. • NHS Property and Land brought forwards data that shows the largest, and areas close to the largest, settlements have the greatest GP provision, but the very small settlements have limited GP provision, aligning with the spatial strategy in the existing plan. In terms of access to GPs, they recommend this strategy continues to ensure new development are in sustainable locations; good access to GPs, minimise/ promote active travel reducing carbon emissions and improving health outcomes. In addition, GP capacity analysis in Huntingdonshire demonstrated that new developments may require developer contributes towards GPs due to being having constrained capacity. • Important that places in Huntingdonshire have a place of identity and therefore widespread provision of different types of community services is required. • Lack of affordable land that could be used for community purposes. Little support for parish councils who provide certain services such as village halls, sports fields, allotments etc. • Cambridgeshire County Council highlighted that existing facilities are underutilised and unsuitable. Type and level of provision dependent on size of settlement; larger centres should have multi-functional community spaces; smaller settlements take advantage of the services offered by parish councils. Location of facilities highly important • Community buildings should be incorporated at an early stage of development.	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Case by case assessment of community needs is required. • Garden village scale of development would have capacity to deliver community facilities alongside housing growth. • Community facilities need to be local. • Development in smaller settlements/ rural areas is required to spread the benefits of growth and protect and enhance community facilities. • Use health indicators as a marker for required service provision. Mentions of community facilities regarded as important in local communities: • In general; Community halls, schools and childcare, healthcare, public open space, allotments, libraries, work from home facilities, cafes, pubs, local shops, post office, sports facilities. • For young people: play areas, skate parks. • Private sector uses such as cafes and restaurants also important to create a sense of community.	
Issue: Utilities and Digital Infrastructure (Questions 95 to 98)	
• Challenges to infrastructure include demand and outdated existing infrastructure such as water supply, wastewater treatment, electricity and lack of supply thereof. • Many responses noted that utilities companies will be able to comment on infrastructure capacity within their networks, what action is required to address any capacity issues or to upgrade networks, and whether connections are available to support development. • The integration of renewable technologies in developments combined with the energy efficient future building regulations, will help to reduce the energy needs of new developments. • The local plan should recognise the future Fens Reservoir and support the provision of associated infrastructure, through policy.	• The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical and social infrastructure types and including aspects such as transport and utilities. It ill outline Infrastructure need and type across the District to support planned growth, and estimated costs, funding sources and phasing of delivery. Alongside this a viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies and developer contributions will not undermine deliverability of the plan. • Responses acknowledged the Council has taken the comments regarding energy efficient buildings forward into the Further Issues and Options consultation document within Chapter 10 The Approach to Climate Change, which sets out options on renewable energy. The Council has also produced a Climate Change Report

Main Issues Raised	Council Response / How the Council has taken this into account
• Growth should be phased to ensure infrastructure supply can meet requirements. • Policies could support renewable energy generation by river, sun and wind, provision of EV charging points and energy storage. • Policies should require large developments to include renewable energy generation. • Policies should require solar panels on development • Policies should support infrastructure to facilitate the latest technologies / broadband and mobile provision • It should be insisted that providers work together, combining broadcasting from communal masts.	which will act as an evidence base to inform policy-making and addresses many issues raised such as: guidance on the role of sustainable design, the circular economy and retrofitting, and infrastructure and renewable energy, exploration to low carbon resources.
Distributing New Growth (Chapter 9)	
Issue: Distributing New Growth (Questions 99 to 103)	
• Many agreed that all reasonable development scenarios were identified in the issues document. • Some noted that market towns may need better/more infrastructure before being allocated further growth • There were general comments on the slow delivery of strategic expansion sites • Some suggested that a housing and economic development needs assessment should be conducted first to obtain more evidence • It was recommended that the scenario "Proportionate growth/expansion of existing settlements, such as villages to allow for growing communities", should include additional wording 'to protect and enhance existing facilities and services' • Sustainable development can help to reduce congestion and emissions, and improve air quality and public health • Many agreed that all reasonable development constraints were identified in the issues document. Land ownership/ control, habitats,	• Responses acknowledged the Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 8 Growth Strategy Options* that provide options on the general location of development. These options were also subject to a sustainability appraisal which will also be consulted upon at the same time as the Further Issues and Options document. Sustainability appraisals of the options in the Further Issues and Options consultation document have been completed which will be consulted upon at the same time as the Further Issues and Options consultation. • The Council issued a Call for sites which ran from 29 March to 7 June 2023 which allowed landowners and developers to submit sites which could be suitable for multiple uses. These sites have been assessed through a Land Availability Assessment and Sustainability Appraisal which will be consulted on along with the Further Issues and Options consultation document. Objectives relate to a number of aspects including the climate emergency, environmental and socio-economic. • Comments relating to Net zero, housing mix housing design, employment, housing targets, sustainable locations have been taken forward

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
green infrastructure, biodiversity, heritage, the landscape character, agricultural land grade, carbon impacts and transport impacts were identified specifically. It was noted that each development is capable of addressing constraints differently and providing benefits and enhance local infrastructure which should be balanced against the need for growth and viability. Preferred growth scenarios in order of preference were for: • Proportionate growth of existing settlements/ sustainable villages / small to medium sites was the most popular option • Densification of/ focus around existing market towns • Densification/expansion of existing urban areas / urban extensions • Putting development near/along public transport corridors for residential and employment • Continuation of current development strategy • A combination of the identified development scenarios • Further recommendations included: Proportionate growth of Key Service Centres, regeneration of existing sites and previously developed land outside of settlement boundaries and focusing on areas with key services or opportunities where growth could help retain services. Additional recommendations included provision of new settlements, using existing commitments accompanied by smaller scale new allocations to allow time for new strategic scale communities to come forward, and aligning the strategy with the NPPF, and Council document and priorities such as the Huntingdonshire Futures Place Strategy. • Specific locations were also recommended for inclusion in line with sites submitted in the Call for Sites There was some who noted that the growth scenarios should:	in the Further Issues and Options consultation document and can be found in: • Chapter 4 A Settlement Hierarchy for Huntingdonshire • Chapter 5 Approach to Employment and the Economy • Chapter 6 Housing Figures and Requirement • Chapter 7 Achieving Well Designed Places • Chapter 8 Growth Strategy Options • Chapter 12 Housing Tenures and Housing Mix • Comments on heritage assets, wider heritage environment and landscape, avoiding impact on agricultural productivity have been addressed through the Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies. Specifically, objectives SA 4, 7, 15 and 16. • Reponses noted regarding the NPPF, NPPG and National Design code should be followed. • Responses noted with regard to design concepts. Further options and questions have been addressed in Chapter 7 Achieving Well Designed Places to allow for extra comment to be made to inform place-making

Main Issues Raised	Council Response / How the Council has taken this into account
• Not include new settlements / avoid satellite settlements without adequate facilities/ have no over reliance on large settlements • Avoid unsustainable locations/settlements in rural areas/countryside (even if near major roads) • Not promote dispersed development regardless of the sustainability of the settlement • That continuing growth focused on Alconbury Weald and St Neots East does not align with the principal objective of sustainable development. • That previously developed land does not need to be developed to the extent of the curtilage. Priorities for new developments included: • The sustainability of the site and proximity to schools, GP surgeries, pharmacies, general shops, transport links. • Provision of appropriate infrastructure to support development e.g. retail, schools, social infrastructure • Ability to integrate with the existing community and character of the area and be of a suitable size in relation to the settlement protecting the amenity of residents. • Compliance with Local Plan requirements and the NPPF • The suitability, availability and achievability and deliverability of the land proposed for new development. • Consideration and avoidance of detrimental impact on heritage assets, wider heritage environment and landscape, avoiding impact on agricultural productivity • High quality design and a suitable mix of homes including affordable homes • Contribution to achieving net zero carbon objectives, reducing the need to travel via private transport and promoting active travel.	

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
• Opportunities to increase skills and employment/business opportunities. • Timely delivery of sites to meet housing targets Comments were received on what development concepts could be used to enable the creation of sustainable communities. The majority of responses said that the NPPF, NPPG and National Design code should be followed. Other suggestions included: • Providing opportunities for 15/20 minute neighbourhoods • Providing masterplans to demonstrate sustainable concepts and response to context • Applying Garden City principles to new settlements • Embracing a range of development concepts • Factoring in active travel and public transport at the heart and rural connectivity • Meeting net zero carbon and renewable energy solutions and providing green open spaces, biodiversity, sustainable infrastructure and broadband • Addressing stewardship • Planning holistically • Following a health first principle e.g. healthy cities • Facilitating social inclusion and interaction	
Next Steps (Chapter 10)	
Issue: Next Steps (Question 104)	
• It is crucial to consider the potential negative impacts development may have on local infrastructure, climate, facilities, and impact the character of small rural communities.	The Council has taken these comments on board. • Infrastructure and developer contributions - The council will complete an Infrastructure Delivery Study/Plan which will address issues such as: A current baseline of provision in relation to physical

Main Issues Raised	Council Response / How the Council has taken this into account

• Large-scale housing should not overwhelm existing infrastructure (schools, health care, public services, water supply, wastewater, public transport) and would require upgrades to facilitate development.
• Large scale development should not increase congestion.
• Active Travel requires a definition in the Glossary in line with the Cambridgeshire Transport Plan. Public Rights of Way definition has omitted Restricted Byways and Byways.
• Climate change impacts such as higher carbon emissions, greater energy consumption, and increased heat island effects need addressing.
• Clearing large tracts of land for construction and the subsequent loss of natural habitats can have long-lasting and irreversible environmental consequences.
• It is vital to strike a balance between development and preserving the cultural heritage and social cohesion of rural areas.
• It is crucial to engage the community in meaningful and easy to understand discussions
• The Local Plan should include monitoring indicators.
• Should consider the use of CIL for the maintenance and on-going costs associated with a range of heritage assets, with the Local Plan identifying them. Specific planning obligations and S106 agreements will continue to offer opportunities for funding improvements and the mitigation of adverse impacts on the historic environment.
• The council should work with neighbouring authorities and coordinate growth across the housing market area. Joint working should help to determine where additional infrastructure is necessary, and whether development needs that cannot be met wholly within a particular plan area could be met elsewhere.
	and social infrastructure types, including aspects such as health and social care, community facilities, sport facilities and green infrastructure. Infrastructure need across the District to support planned growth, and estimated costs, funding sources and phasing of delivery will also be assessed. A viability assessment will be undertaken to ensure that policies are realistic, and that the total cumulative cost of all relevant policies will not undermine deliverability of the plan.
	• Climate Change – The Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 10 The Approach to Climate Change*, which sets out options on decarbonisation scenarios and renewable energy. The Council has also produced a Climate Change Report which will act as an evidence base to inform policy-making and addresses many issues raised such as:
	  • Baseline emissions and, locally specific climate change risks and vulnerabilities,
	  • future emissions and trends,
	  • low, high and medium carbon reduction pathways,
	  • guidance on the role of sustainable design, the circular economy and retrofitting,
	  • the most effective spatial strategy to maximise the contribution of the local Plan to achieving net zero,
	  • infrastructure and renewable energy, exploration to low carbon resources, and
	  • offsetting and sequestering emissions
	• Congestion & Active Travel - T he Council has taken these comments forward into the Further Issues and Options consultation document within *Chapter 13 - Transport and Connectivity* that provides options on the approach to individual development and consideration of active travel and public transport and a question on net zero transport. In addition the Council will undertake a transport study to inform local plan strategies and policy approaches. The Council has produced a Sustainability Appraisal (SA), an iterative document which will assess the impact of policies, sites and strategies on the climate emergency and the environment. Specifically, objectives SA2, 8 and 12 which address issues on Improving adaptability and resilience to the unavoidable

3 Local Plan Issues

Main Issues Raised	Council Response / How the Council has taken this into account
	impacts of the climate emergency, contributing to the minimisation and reduction of all forms of pollution, and reducing the need to travel by car and promote active travel and public transport infrastructure. • Loss of habitats - Response acknowledged the council has taken comments forward regarding new green and blue infrastructure into the Further Issues and Options consultation document within *Chapter 9 Our Green and Blue Infrastructure* which sets out options for retaining, designating and or allocating green and blue infrastructure in the district. Documents also referenced here include the Local Nature Recovery Strategy which will also help to shape policies in the Local Plan. • Preserving cultural heritage - The Council has produced a sustainability appraisal, it is an iterative document which will assess the impact of policies, sites and strategies on heritage specifically through objective SA 16. • Engaging the community – the Council has produced a Statement of Community Involvement which sets the approach to community engagement, more information on the methods used to date can be found within the Statement of Consultation (this document). Consultation and engagement opportunities for the Further Issues and Options consultation will be published on the Council's website, public exhibitions will be held. • Monitoring – The Council will monitor the local plan through the Annual Monitoring Report and indicators will be developed to monitor the effectiveness of policies • Working with neighbouring authorities - The Council has a Duty to Cooperate which includes cooperation with Local Authorities and organisations to identify relevant strategic matters that cross administrative boundaries.

4 Further Issues and Options

4.1 This section addresses the Further Issues and Options phase of local plan preparation. The Further Issues and Options phase is focused on strategic planning and policy options, assessment of sites submitted in the Call for Sites and a sustainability appraisal of sites and options which will contribute towards the creation of a development strategy, policies and the identification of land with the potential to be allocated for future development.

4.2 The Further Issues and Options phase of engagement took place between 18 September 2024 to 27 November 2024 and 23 April 2025 to 4 June 2025. The timing of the consultations were later than that set out in the Council's Local Development Scheme 2023(Table 2 Local Plan preparation timetable) due to the general election. The Local Development Scheme was updated and approved at Cabinet on 11 February 2025 before being submitted to the Ministry of Housing, Communities and Local Government to reflect the changes to the Local Plan timetable.

4.3 Engagement was undertaken in compliance with Huntingdonshire District Council's Statement of Community Involvement 2023

4.4 Consultation procedures were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 & The Environmental Assessment of Plans and Programmes Regulations 2004 (where applicable).

4.5 The section is split into the following subsections to reflect the different consultation stages as follows:

- **Section 4.2: Further Issues and Options Paper -** Sets out options for what may be included in the new local plan across a variety of subjects including a growth strategy and sustainability of settlements that will help direct the location of growth in the district. Other topics include flooding, climate change, design, housing requirements, employment, blue and green infrastructure, housing mix, and transport and connectivity. It also asks some questions about what is important to the public.
- **Section 4.4: Land Availability Assessments** - Assesses sites that were put forward by landowners, developers, agents and interested third parties to see if they are potentially suitable or unsuitable for development.
- **Section 4.3: Sustainability Appraisal -** Assesses strategies, options, sites and future policy options against a series of sustainability objectives.
- **Section 4.5: Additional Sites Land Availability Assessments** - Assesses additional sites that were put forward between 1 August 2024 and 31 January 2025 by landowners, developers, agents and interested third parties to see if they are potentially suitable or unsuitable for development.
- **Section 4.6 Additional Sites Sustainability Appraisal** - Assesses the additional sites against a series of sustainability objectives.

The **Consultation Process section (4.1)** outlines the Summaries of the documents consulted on, their approval process and information on details on the consultation and engagement processes undertaken.

4.6 **Sections 4.2 to 4.6** provide the **Responses to the Consultation** - This outlines the number of representations made to the respective consultation document, a summary of the key issues raised and how the representations have been taken into account.

Consultation Process

Document Summaries

4.7 This section addresses the following documents:

- **Further Issues and Options Paper -** Sets out options for what may be included in the new local plan across a variety of subjects including a growth strategy and sustainability of settlements that will help direct the location of growth in the district. Other topics include flooding, climate change,

4 Further Issues and Options

design, housing requirements, employment, blue and green infrastructure, housing mix, and transport and connectivity. It also asks some questions about what is important to the public.

- **Land Availability Assessments** - Assesses sites that were put forward by landowners, developers, agents and interested third parties to see if they are potentially suitable or unsuitable for development.
- **Sustainability Appraisal -** Assesses strategies, options, sites and future policy options against a series of sustainability objectives.
- **Additional Sites Land Availability Assessments** - Assesses additional sites that were put forward between 1 August 2024 and 31 January 2025 by landowners, developers, agents and interested third parties to see if they are potentially suitable or unsuitable for development.
- **Additional Sites Sustainability Appraisal** - Assesses the additional sites against a series of sustainability objectives.

Document Approval

4.8 The documents above went through the following approval process:

- Overview and Scrutiny (Performance and Growth) Panel (04/09/24) - The Panel were invited to comment on the recommendations for the Further Issues Paper, Land Availability Assessments and Sustainability Appraisals as set out in the Cabinet report. The recommendations were to approve the contents of the documents and to agree that they could be published for public consultation commencing September 2024 and running for 10 weeks. Minutes of the Panel and supporting reports can be found at Agenda for Overview and Scrutiny Panel (Performance and Growth) on Wednesday, 4 September 2024, 7:00 pm - Huntingdonshire.gov.uk
- Cabinet Meeting (10/09/24) - The Committee were asked to approve the contents of the Further Issues and Options paper, Land Availability Assessments and Sustainability Appraisals and to agree that they could be published for public consultation commencing in September 2024 and running for 10 weeks. Minutes of the committee and supporting reports can be found at Agenda for Cabinet on Tuesday, 10 September 2024, 7:00 pm - Huntingdonshire.gov.uk
- Overview and Scrutiny (Performance and Growth) Panel (02/04/2025) - The Panel were invited to comment on the recommendations for the Land Availability Assessments and Sustainability Appraisal for additional sites submitted between 1 August 2024 and 31 January 2025. Minutes of the Panel and supporting reports can be found at Agenda for Overview and Scrutiny (Performance and Growth) on Wednesday, 2 April 2025, 7:00pm - Huntingdonshire.gov.uk
- Cabinet Meeting (15/04/2025) - The Committee were asked to approve the contents of the contents of the Land Availability Assessment and Sustainability Appraisal for additional sites submitted between 1 August 2024 and 31 January 2025 and to agree that the Land Availability Assessments and Sustainability Appraisal for additional sites be published for public consultation for six weeks between 23 April and 4 June 2025. Minutes of the committee and supporting reports can be found at Cabinet - Tuesday, 15 April 2025 7:00 pm

4.9 **Consultation on the Further Issues, Land Availability Assessments and Sustainability Appraisal** took place between 18 September and 27 November 2024. The timing was later than that originally set out in the Council's Local Development Scheme 2023 (Table 2 Local Plan preparation timetable) due to the general election. The Local Development Scheme was subsequently updated and a revised version approved at Cabinet on 11 February 2025.

4.10 The consultation was hosted on the Council's online consultation portal. People were able to comment on all aspects of the documents by question, section and tables. Hard copies of the documents were also available to view at the Council's office Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN and in the eleven libraries across the district. Posters were provided in the Mobile Library Services (routes H2, 3, 4, 5, 8, 9, 10, 11, 12, 15, 16, 17, 18, 23, 24, 25). The documentation also included information on the consultation, how to respond and contact details for those who require further assistance or the provision of the document in an alternative format.

4.11 The documents were publicised as follows. Items marked with an * can be found in 4 'Appendix 2 Consultation Material':

- On the Council's online consultation portal published on 18 September 2024.
- On the Council's Local Plan | Let's Talk Huntingdonshire published on 18 September *
- On the Council's Homepage of Huntingdonshire District Council - Huntingdonshire.gov.uk under the heading *Consultations* published on 18 September
- On the Council's Huntingdonshire District Council | Huntingdon | Facebook page, published on 18/09/2024*, 27/09/2024, 05/10/2024, 21/10/2024, 13/11/2024, 30/10/2024, 01/11/2024, 07/11/2024, 20/11/2024, 26/11/2024.
- On the Council's Huntingdonshire District Council | LinkedIn page, published on 18/09/2024*
- On the Council's Twitter, published on 18/09/2024*, 05/10/2024, 30/10/2024, 07/11/2024, 13/11/2024, 20/11/2024, 26/11/2024
- 6 articles within the Hunts Post (newspaper), published 18/09/2024* 25/09/2024, 02/10/2024, 16/10/2024, 23/10/2024 and 13/11/2024
- Via press release published on 18 September 2024*

- Posters and leaflets were supplied to Town and Parish Councils and District Councillors to distribute within their local areas.*
- Advertisements on 7 of HDC's bin freighters which circulate the district.*
- Banners were displayed at local parks including Huntingdon Riverside, Huntingdon Sapley Park, St Neots Riverside, St Neots Priory Park*, St Ives Hill Rise and near St Neots Spar on Cambridge Road

- Banners at the four One Leisure Centre Venues: Ramsey, Huntingdon, St Ives and St Neots including the provision of posters and leaflets

4.12 As part of the public engagement exercise the council undertook the following:

- Emails were sent to Specific Consultation Bodies
- People and organisations who have responded to previous consultations and wish to be kept informed and those who have opted in to receive notifications through the online consultation system
- Town and Parish Councils, this included a 'social media package' that could be used to spread the news to their local organisations and residents
- District Councillors, this included a 'social media package' that could be used to spread the news to their local organisations and residents.

Other Methods of engagement included:

- Briefing sessions/ workshops hosted by the council for District (17/09/2024), Parish and Town Councillors (24 and 30/09/2024) to inform them about the consultation and to highlight ways they could help spread the word to residents. Packages including the consultation documents, posters and leaflets were distributed to each parish or town in the district. Follow up email with slides, a recording of the presentation and briefing note sent to all Parish and Town and District Councillors.
- Attendance at local and regional events including The Parish Forum (23/10/2024), The Climate Conference (06/11/2024), Cambs B2B South (13/11/2024) and Cambs B2B South, HDC Showcase Pride in Place (14/11/2024) and Invest in Huntingdonshire Intermediary Network. At each event the council had a stand with exhibition boards, posters, leaflets and the consultation documents engaging with a range of stakeholders.
- Hosting seven exhibitions across the district, located in Yaxley* (08/10/2024), Huntingdon (10/10/2024), St Ives (15/10/2024), Sawtry (21/10/2024), Kimbolton (22/10/2024), St Neots (28/10/2024) and Ramsey (31/10/2024). Approximate attendance of 750 people including residents, parish and town councilors and landowners.
- Information and reminders sent to Parish and Town Councils through the Town and Parish Newsletter* (4 times) and emails to Clerks and Chairs (2 times).

4 Further Issues and Options

- Information and reminders send to District Councillors (14 emails to members referencing the consultation).
- Social media campaign on a range of platforms (see above) posting about exhibition reminders, key topics and issues, reminders to respond and the release of the Local Plan video.
- Dedicated consultation landing page on Let'sTalkHuntingdonshire which included 'How to Respond' guides and FAQs to help people navigate the consultation portal and understand the process
- Alternative options offered on how to respond to the consultation including emails and paper forms.
- Physical copies of the documents, posters and leaflets within all 11 libraries in Huntingdonshire.
- Poster and leaflets provided to the mobile library service which covers the whole of Huntingdonshire.
- Notification on consultation mailing list consisting of over 5,000 consultees and agents.

4.13 **Consultation on the Additional Sites Land Availability Assessments and Additional Sites Sustainability Appraisal** took place between 23 April and 4 June 2025. The consultation was hosted on the Council's online consultation portal. People were able to comment on all aspects of the documents by site, section and tables. Hard copies of the documents were also available to view at the Council's office Pathfinder House, St Mary's Street, Huntingdon, PE29 3TN and in the eleven libraries across the district. Posters were provided in the Mobile Library Services (routes H2, 3, 4, 5, 8, 9, 10, 11, 12, 15, 16, 17, 18, 23, 24, 25). The documentation also included information on the consultation, how to respond and contact details for obtaining further assistance or the provision of the document in an alternative format.

4.14 The documents were publicised as follows. Items marked with an * can be found in 4 'Appendix 2 Consultation Material':

- On the Council's online consultation portal published on 23/04/2025*
- On the Council's Local Plan | Let's Talk Huntingdonshire published on 23/04/2025*
- On the Council's Homepage of Huntingdonshire District Council - Huntingdonshire.gov.uk under the heading *Consultations* published on 23/04/2025
- On the Council's Huntingdonshire District Council | Huntingdon | Facebook page, published on 23/04/2025
- On the Council's Huntingdonshire District Council | LinkedIn page*
- On the Council's Twitter, published on 23/04/2025
- Via press release published on 23/04/25*
- Briefing packs and posters sent to Town and Parish Councils with additional sites (23/04/2025)

4.15 As part of the public engagement exercise the council undertook the following:

- Emails were sent to Specific Consultation Bodies
- People and organisations who had responded to previous consultations and wished to be kept informed and those who have opted in to receive notifications through the online consultation system received emails notifying of the start of the consultation and reminders of incomplete submissions.
- Town and Parish Councils were emailed a 'social media package' that could be used to spread the news to their local organisations and residents
- District Councillors, were emailed a 'social media package' that could be used to spread the news to their local organisations and residents.

Other Methods of engagement included:

- Information and reminders sent to Parish and Town Councils through the Town and Parish Newsletter* and emails to Clerks and Chairs.
- Information and reminders send to District Councillors.

- Social media campaign on a range of platforms (see above) posting about exhibition reminders, key topics and issues, reminders to respond.
- Dedicated consultation landing page on Let'sTalkHuntingdonshire which included 'How to Respond' guides and FAQs to help people navigate the consultation portal and understand the process
- Alternative options offered on how to respond to the consultation including emails and paper forms.
- Physical copies of the documents, posters and leaflets within all 11 libraries in Huntingdonshire
- Poster and leaflets provided to the mobile library service which covers the whole of Huntingdonshire.
- Notification on consultation mailing list consisting of over 6,500 consultees and agents

4.16 The publicity, consultation and engagement were undertaken in compliance with The Town and Country Planning (Local Planning) (England) Regulations 2012 (as amended) , and section 3 of the SCI.

Further Issues and Options Paper

Consultation Responses Summaries

4.17 The following table outlines a summary of the type of comments received to the Further Issues and Options Paper consulted on between 18 September and 27 November 2024:

Responses to the Further Issues and Options Paper

	Further Issues and Options Paper
Number of Comments Made	2,084
Number of Individuals or Organisations that Responded	228

4.18 People were able to comment on paragraphs, and tables, and were encouraged specifically to comment on and select preferred options and to answer questions set out within the Paper. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' : Further Issues and Options Paper Consultation Responses

4.19 As part of a response to previous consultations on the Statement of Community Involvement and Sustainability Appraisal Scoping Report The Coal Authority noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific comments to make on any stages of your Local Plan process. In the spirit of ensuring efficiency of resources and proportionality, it will not be necessary for the Council to provide the Coal Authority with any future drafts or updates to the emerging Plans."

4.20 Cambridgeshire County Council responded on transport strategies in support of the duty to cooperate regarding travel and transport issues across the wider area. Their responses strongly advocated the need to focus on provision of high quality infrastructure for active travel and public transport rather than prioritising car usage. They considered that greater certainty was required over the provision of East West Rail before planning decisions could be taken which rely on its provision.

Summary from the Further and Issues Paper

4.21 The following provides a summary of the main issues raised during the consultation on the Further Issues and Options Paper and how the Council has taken these into account.

4 Further Issues and Options

Further Issues and Options Paper

Main Issues Raised	Council Response / How the Council has taken this into account
General comments (11 comments)	

• There is a need for a strategic and holistic approach to the Local Plan
• There is concern that new development at Tempsford will impact and increase demand for services and facilities in St Neots
• The growth of Greater Cambridge, Peterborough and Tempsford could impact housing demand in Huntingdonshire and should be assessed.
• There is a need for ensuring there is enough infrastructure and services to support new development.
• Housing development should not be located in areas with insufficient infrastructure.
• The cumulative effects of flooding should be assessed
• The cumulative effects of transport should be assessed
• Environmental issues should be prioritised and the Local Nature Recovery Strategy and Priority Natural Landscapes considered
• Consideration of the unique land drainage infrastructure of the Fens is required including its condition, capacity and operation, as is Standing Advice on its Flood & Drainage Infrastructure Capacity
• Heritage Impact Assessments should be considered.
• The impact of water shortage in Cambridge should be assessed
• The Marine Management Organisation and the relevant East Inshore and East Offshore Marine Plans and relevant policies should be considered in the development of the Local Plan.
	• The cumulative impact of development has been taken into account through the development and testing of the growth strategies, consultation with neighbouring authorities and the development of evidence based documents including but not limited to:
	  • Climate change evidence base
	  • Economic and Employment Needs Assessment
	  • Strategic Transport Study
	  • Integrated Water Management Strategy including a Strategic Flood Risk Assessment and Water Cycle Study
	  • Habitats Regulations Assessment
	  • Sustainability Appraisal
	  • Infrastructure Delivery Study - Baseline Assessment
	• Heritage Impacts have been assessed through documents such as the Land Availability Assessment, Sustainability Appraisal and Infrastructure Delivery Study
	• The Marine Management Plans have been reviewed and taken into account as part of Local Plan preparation.

Introduction - Land Availability Assessment (12 comments)	
• Support for the stage 3 process • Need to consider the cumulative effect of development • Approach to site assessments and flood risk should consider the type of use being proposed, locational requirements of development and the Exceptions Test • Support the 5 stage process • Consider fields for renewable energy in Ramsey as infrastructure is at capacity meaning development here should be limited	• Support acknowledged. • Cumulative impact has been assessed to date through evidence documents such as Infrastructure Delivery Study, Water Cycle Study, Strategic Transport Studies, Habitats Regulations Assessment etc. • The council has conducted a level 1 and level 2 strategic flood risk assessment to address flood risk and inform site selection and policies • Renewable energy has been assessed through a climate change evidence base and used to inform policies in relation to climate change an

Main Issues Raised	Council Response / How the Council has taken this into account
• Support for a more ambitious approach to tackling Climate Change and consider drought, excessive heat, shortages of water, as well as to flooding, soil quality in the Sustainability Appraisal • The consultation should have included a section on biodiversity and nature	integrated water management strategy has provided evidence for strategy and policies regarding flooding and water. • The Further Issues and Options consultation addressed 'blue green infrastructure'. The Issues Engagement papers also included a section on protecting and enhancing the natural environment where responses were assessed. See 'Issues Engagement Papers'
Question - End Date of the Local Plan Update (80 response)	
• Most responses agree with the proposed end date of 2046, which allows time for major infrastructure to come forward and flexibility in delivery and certainty. • It is noted that the local plan should last at least 15 years • Some suggest an end date of 2050 to align with the UKs net zero target, the Council's Place Strategy, the Shared Ambition for Cambridgeshire and Peterborough and infrastructure delivery. • Some propose a rolling end date or a longer period of at least 30 years to account for strategic developments and to provide flexibility and changes in policy and emerging technologies • There are concerns about starting the review of the Local Plan too early • Some comments suggest the need for comprehensive evidence to support the local plan • Other dates included 2054, 2058, 2043 and 2047 (depending on adoption date)	• The Council has proposed a local plan end date of 2046 which will provide a plan period of over 15 years. This will be consulted on further through the Preferred Options Draft Local Plan consultation. • An evidence base for the local plan is being produced in tandem with the production of the local plan and can be found in the Evidence Library for the Local Plan
Options - The Vision (93 responses)	
• Responses clearly show support to creating a vision based on Huntingdonshire Futures and the Corporate Strategy (Option A), options B, C and E were also popular. • Option A should include a strong approach to climate and the environment • Option A should include reference to growth in rural communities to facilitate affordable housing • There is concern about impact of solar farms on agricultural land for option A • Option B should include a transition to social and economic equity • Option C raised concerns on the impact of increased development and traffic in rural areas	• Option A to create a vision based on Huntingdonshire Futures and the Corporate Strategy was developed further for inclusion in the Preferred Options Draft Local Plan providing further detail and informed by comments received from the Further Issues and Options Consultation.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Responses highlighted option C does not address the need for increase growth or specialist housing to meet future needs • Option D was considered less specific, but aligned well with the 3 strands of sustainable development • Other suggestions to enhance options included combining different options, the need to address growth requirements, environmental challenges, biodiversity, health and well-being, heritage, landscape and climate change	
Options - The Objectives (102 responses)	
• Option A was the most preferred option with objectives shaped by the key 'pathways' in the Huntingdonshire Futures Place Strategy • Option B and C were also popular - objectives that transition to climate change and modification of the current objectives respectively. • Amendments for option A include reflecting themes in corporate plan, addressing concerns with strategic allocations, improving housing and affordable housing, reducing carbon emissions, increasing biodiversity and green infrastructure, and encouraging sustainable travel. • Amendments for option B include transitioning to electric vehicles and improving energy efficiency, promoting sustainable development and conserving and enhancing the historic environment. • Suggestions for option C include further amendments to address the role of rural areas in delivering economic growth and the protection of agricultural land, including objectives on management of the historic environment and the protection of Priority Landscapes. Other suggestions include land supply to facilitate growth, promoting high-quality development, and supporting community needs. • Suggestions for option D include adapting the objectives to make them more detailed and measurable, emphasising the three strands of economic, social, and environmental sustainability, including objectives related to protecting small settlements and rural character, addressing climate change, and promoting sustainable movement and travel. • Other general suggestions included addressing housing need, delivering sufficient new homes and land for business sustainably and including objectives to achieving net zero by 2040, doubling	• Option A to build on Huntingdonshire Futures Place Strategy was developed further for inclusion in the Preferred Options Draft Local Plan expanding on the five pathways within the Strategy and informed by comments received from the Further Issues and Options Consultation.

Main Issues Raised	Council Response / How the Council has taken this into account
nature by 2050, and designating the Great Ouse Valley as a priority landscape.	
Options - Settlement Hierarchy (153 responses)	

• A combination of options A and F was the most popular combination, suggesting that the four market towns (Huntingdon, St Ives, St Neots, and Ramsey) should be the highest category in the settlement hierarchy to direct most growth to these areas.
• Many other respondents prefer to keep the existing settlement hierarchy. The next popular option was B, which was to keep the current categories in the existing settlement hierarchy but update the settlements included in the categories based on their current sustainability.
• Many respondents express a desire to preserve the character of small rural villages and protect the countryside from unsympathetic development
• There is a consensus that growth should be directed to areas with existing infrastructure and good transport links, such as the market towns and away from small unsustainable settlements
• There are mixed opinions on grouping settlements
• Some think some small settlements should be classified as a hamlet due to their lack of facilities e.g. Folksworth
• Some land promoters extol the sustainability of certain areas as sustainable including the market towns, Colne, Bluntisham, Earith, Godmanchester and Sawtry.
• There is a fear that some settlements are overstretched with lots of development and no supporting infrastructure.
• There are suggestions to create new categories for larger settlements within the small settlements category or to group settlements based on shared services and facilities.
• Several comments emphasize the need for up-to-date information to make options viable and highlight the importance of sustainability and infrastructure in planning
	• The Council has developed a settlement hierarchy which supports a number of policies to strategically direct growth. These policies include:
	  • Settlement Hierarchy
	  • Market Towns
	  • Service Centres
	  • Local Services Villages
	  • Villages
	  • Hamlets and the Countryside
	• The changes made in reaching the preferred approach reflect responses received regarding the diversity of our villages and the level of services that they offer.
	• The four market towns (Huntingdon, St Ives, St Neots, and Ramsey) are the highest category in the settlement hierarchy to direct most growth to these areas. This is followed by Service Centres, Local Services Villages (new category), Villages and Hamlets and Countryside categories. Hamlets are classified as clusters of less than 30 homes
	• The Sustainability of Settlements Assessment provides details of the level of services and facilities available in each settlement within the district. To ensure consistency it presents data all gathered across the summer of 2023 but it is acknowledged that a level of change is inevitable.

Options - Strategy Ambitions (Employment & Economy) (76 responses)	
• Planning for high growth was the most popular option (C) • Land owners and developers were the majority of consultees in support of High Growth (option C)	• The Economic and Employment Needs Assessment was produced to help inform the economic strategy for the local plan. Rather than relying on a single approach, the preferred economic growth scenario has combined elements of the aspirational labour demand

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account

• Option C was noted as being able to capitalise on key sectors, developing business clusters, promoting strategic employment locations with supporting infrastructure and helping to create high-skilled jobs for younger people.
• Low growth options were more supported solely by residents (option A)
• The majority of Parish Councils supported medium growth (option B)
• Option B was noted as ensuring that existing infrastructure can support the growth, and focusing on areas around large towns and major roads.
• Additional suggestions included the need to provide employment in sustainable locations, producing further evidence to support a preferred approach, focusing on environmentally sustainable growth near homes, avoiding green belt land, and minimizing road transport to reduce traffic.
• Key sectors to focus on were suggested including science, technology, logistics, small businesses and manufacturing.
	scenario (high growth) and the future residence-based labour supply scenario (medium demand).
	• The Economic and Employment Needs assessment also pointed towards the retention of Established Employment Areas, greening of stock and capitalising on key sectors such as R&D, logistics, advanced manufacturing and rural enterprise. These have fed into the development of the following policies to be consulted on through the Preferred Options phase of consultation:
	  • Protecting and enhancing established employment areas
	  • Expansion and diversification of rural businesses
	  • Shaping new businesses in the countryside
	  • Enabling key clusters and innovation-led growth
	  • Enabling logistics and distribution
	  • Helping tourism and recreation in the countryside

Options - Location of Development (Employment & Economy) (76 responses)	

• No clear strategy option was identified, many cited a combination of options
• In general suggestions focus on development in sustainable locations, flexibility to support multiple uses and types and gathering more evidence
• Many agreed to focusing employment growth within and adjacent to established employment areas (Option A) to leverage existing infrastructure and support clustering benefits.
• There was support for focusing growth on major transport routes and in market towns/existing economic areas, supporting sustainable travel options.
• Focusing on locating employment near housing was proposed
• Key concerns included impact on rural areas, loss of greenfield land, landscape and environmental impact, lack of infrastructure, public transport and water supply and water recycling centre capacity. Location away from flooding was also mentioned.
	• The Economic and Employment Needs Assessment was produced to help inform the economic strategy for the local plan. These have fed into the development of the following policies to be consulted on through the Preferred Options phase of consultation:
	  • Protecting and enhancing established employment areas
	  • Expansion and diversification of rural businesses
	  • Shaping new businesses in the countryside
	  • Enabling key clusters and innovation-led growth
	  • Enabling logistics and distribution
	  • Helping tourism and recreation in the countryside
	  The policies focus employment growth in established employment areas some new strategic allocations near to the population centres of Peterborough and Huntingdon and measured growth in rural areas.
	• The Council has produced the following evidence documents Climate Change Evidence, Infrastructure Delivery Study, Water Cycle

Main Issues Raised	Council Response / How the Council has taken this into account
	Study, Strategic Transport Study, Habitats Regulations Assessment, Strategic Flood Risk Assessment to assess the issues raised.
Options - Established Employment Areas (45 responses)	
• The response in general point to the retention and review of EEAs with the opportunity for expansion and creation of additional EEAs - Options B, C and D • Key concerns include the impact that HGV movements have on small settlements. • A number of responses promoted sites sent in through the LAA. • Comments highlighted the need for flexibility and adaptability. • Suggestions ensuring that employment sites have good access to existing infrastructure, such as roads, sewage, and public transport. • Key concerns include protecting the landscape • Comments included the need to expand economic capacity to facilitate new businesses and investments and providing flexibility to enable the district to adapt to changing economic conditions • There is a need to provide EEAs in sustainable, accessible locations • There is a need for strategic employment allocations and smaller sites.	• The Economic and Employment Needs Assessment recommended the retention, modernisation and intensification of Established Employment Areas, this has been taken forward into the Preferred Options phase of consultation as policy 'Protecting and enhancing established employment areas'. • An Infrastructure Delivery Study, Strategic Transport Study, and Water Cycle Study have helped to inform the location of sites. • Some new strategic allocations near to the population centres of Peterborough and Huntingdon have been proposed for allocation.
Options - Housing Requirement (109 responses)	
• No clear option was identified. • Responses note option A helped to to ensure infrastructure is in place, reduces flood and transport impact. • Comments on option B noted that the 5% uplift allowed for flexibility in housing delivery, sufficient for a rural area like Huntingdonshire and controlled realistic development. • Responses that favoured option C liked it for its flexibility if affordability ratios worsen, accounts for unforeseen challenges, stimulates economic growth and housebuilding, aligns with the NPPF. • Some think an employment based approach to housing numbers should be applied. • Responses also suggested the need not to increase flood risk and to consider the impact on existing residential areas. • Comments noted the need for affordable housing and flexibility in delivery • Comments stated the need to align growth with infrastructure improvements (transport, services	• The housing requirement was derived through the nationally set methodology which includes a baseline of the local housing stock that is then adjusted upwards to reflect local affordability pressures to identify the minimum number of homes expected to be planned for. this provides a minimum annual figure of new homes to be sought. The standard methodology builds in a significant uplift for affordability. To build in some flexibility for future changes in the standard methodology housing need figure an uplift of just over 10% has been included to help make sure the Local Plan stays up to date, and to reduce the risk of needing to find extra housing land very late in its preparation process. • Housing requirements are discussed with neighbouring authorities as part of the Duty to Cooperate. • Infrastructure and the number of jobs/employment floorspace was assessed through the Council's evidence base for the local plan and

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
and facilities - healthcare, education etc.) and economic growth • Schemes identified to help meet growth included the A141 improvement scheme and St Ives improvement scheme • Responses noted high housing targets would assist with economic growth and doubling GVA. • Impact of East West Rail and Ox-Cam Arc on growth and the need to account for climate change, environmental, social and economic impacts and sustainable development and protecting village identities were raised. • There should be enough housing to account for older people's housing in various forms. • The Council should understand the needs of other authorities and the Cambridgeshire and Peterborough Combined Authority. • The Council should provide a mix of sites including some strategic, to allow for sustainable delivery.	can be found in the Evidence Library for the Local Plan. • Other aspects raised have been taken into account through the formation of specific policies to address affordable housing, specialist housing, flood risk and the North Huntingdon Growth Cluster to reflect the wider Combined Authority strategies, linked to the Ox-Cam Arc.
Question - Design Characteristics (49 responses)	

Specific design characteristics that were important to respondents were:
• Being informed by documents such as the National Design Code, NPPF and The County Council's Guidance for Planners and Developers, Huntingdonshire Design Guide and Landscape and Townscape Assessment
• Avoiding on street parking/ sufficient parking, retention of garages
• Ensuring minimum standards for certain employment uses e.g. logistics
• Accessible design for older people and those with disabilities
• Active travel solutions such as pedestrian, cycle paths and bridleways
• Protection and enhancement of public rights of way
• Incorporation of green spaces, accessible greenspaces nearby well connected to promote healthy living
• Architecturally sensitive design, protection and enhancement of conservation areas, historical surroundings, character of town centres and villages
	• The Council has developed policies relating to design which have been informed by the National Design Code, NPPF and The County Council's Guidance for Planners and Developers, Huntingdonshire Design Guide and Landscape and Townscape Assessment
	• The Council has developed the following policies to address the concerns raised:
	  • 'Parking and vehicle movement' setting minimum levels for employment and residential.
	  • 'Supporting active and sustainable travel' addressing multiple active travel modes such as walking cycling and wheeling and public rights of way.
	  • a design policy that addresses multifunctional greenspaces and corridors, cohesive design, vehicular movements, compatibility, overheating and allows for a flexible approach to design.
	  • 'Managing flood risk', 'Managing surface water' and 'Managing waste water'.

Main Issues Raised	Council Response / How the Council has taken this into account
• Integration of sites into existing settlements - relatable extensions, not estates • Well insulated homes, with no overheating • Including emergency services in design • Flexibility of design • Mixed use, dense developments focusing on movement sustainability, drainage, reducing flood risk and nature • Sustainability and energy efficiency such as solar panels, rainwater harvesting, air/ground sourced heat pumps, zero carbon and climate resilient buildings, limiting water use etc. • Inclusion of community spaces and leisure facilities • Provision of appropriate infrastructure and services	• 'Heritage assets and their settings', conserving and enhancing heritage assets accompanied by a heritage strategy • 'Water efficiency' and 'Minimising operational energy consumption in new buildings' • An Infrastructure Delivery Study Baseline Assessment has been developed to inform infrastructure requirements as a result of growth. Larger site allocations proposed include requirements for community and leisure facilities appropriate to the size of development and policies developed on 'how will infrastructure be provided' and 'securing infrastructure provision'.
Question - Active Design (47 responses)	

• The majority of responses support the 10 Principles of active design
• There was significant support for active travel, walkable communities and connected active travel routes supporting healthy lifestyles and high quality spaces with infrastructure
• Some note the principles should be applied flexibly as not all developments can adhere to the principles, or that different areas require different approaches e.g. smaller gardens in towns than in rural villages and the need for adequate parking in rural areas
• Some were concerned about principle 8 - active buildings inside and out and how this would be applied
• Key principles supported included mixed use and co-locating facilities, high quality flexible spaces
• Safety of children, young people and vulnerable residents was a key concern
• Provision for wheeling i.e. wheelchairs, mobility scooters or similar, pushchairs or buggies should be accommodated within the principles with appropriate surfaces as should equestrian users.
• Responses highlight the need to be applied to older areas also, whilst others supported the principles for new build only
• Some were concerned about the achievability of the principles and impact on heritage.
• A few people disagreed to the Principles due to the need to tailor design to specific areas
	• The Council has developed the following policies to address the concerns raised:
	  • 'Creating high quality places and spaces' informed by the 10 Principles of active design including Principle 8, and addresses cohesive design, safety, accessibility and permeability and allows for a flexible approach to design.
	  • 'Supporting active and sustainable travel' addressing multiple active travel modes such as walking cycling and wheeling and public rights of way.
	  • 'Parking and vehicle movement' setting minimum levels for employment and residential.
	
	• Response noted on the need to be applied to older areas. Planning policies can only apply to developments where a planning application is submitted for consideration.
	• Concerns relating to development that may impact heritage assets will be addressed through the development of policies on conserving and enhancing heritage assets accompanied and a heritage strategy.

Question - Updating current Development Management Policies (26 responses)	

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account

Suggestions for changes to existing development management policies in the Local Plan included:
• Alignment with, and adaption to, national planning policies
• Providing a comprehensive strategy for the historic environment including non-designated heritage assets, shop fronts, archaeology and conservation areas with an appropriate up to date evidence base
• Ensuring infrastructure and services are built into developments and appropriately managed
• Updating Planning Obligations SPD and the interpretation of public open space
• Clear policies on flood risk, waste water management and natural flood management
• Updating policies to meet new design guidance and sustainability requirements
• Specific design requirements for industrial and logistics sectors
• Inclusion of policies on parking, vehicle movement, cycling facilities and storage, and EV charging
• Addressing older persons' housing, including the provision of adaptable and accessible homes and mobility scooter storage
• Allowing flexible policies to meet the needs of different needs and contexts
• The need for accessible adaptable homes
• Inclusion of design codes on full and outline applications and not reserved matters applications
	• The Council has aligned policies with national planning policies
	• The Council has developed the following policies to address the concerns raised:
	  • 'Heritage assets and their settings' conserving and enhancing heritage assets accompanied and a heritage strategy.
	  • 'How will infrastructure be provided' and 'securing infrastructure provision', the council is also updating the Planning Obligations SPD
	  • 'Managing flood risk', 'Managing surface water' and 'Managing waste water'.
	  • 'Design context and character', 'Creating high quality places and spaces', and 'Placemaking for larger scale developments'
	  • a suite of climate related policies
	  • 'Supporting active and sustainable travel'
	  • 'Ensuring accessible and adaptable homes', and 'Supporting specialist housing'
	  • 'Placemaking for larger scale developments'

Options - Approach to Strategic Growth (177 responses)	
• Most responses preferred a hybrid option based around existing strategy (option A) with focus on towns (option B) with elements of other options included. • Many support an option that enforces sustainable locations for development supported by public transport, employment, appropriate infrastructure and reduces congestion. • Option G predominantly identifies scenarios such as proportionate growth of existing sustainable settlement • focusing growth around the strategic road network (option D) was supported by those promoting logistics. • Option E dispersed growth was associated with assisting in providing affordable housing and supporting local services	• The six growth strategy options were appraised in the SA for the Further Issues and Options Paper. • Following the close of the Further Issues and Options consultation in November 2024, the responses were reviewed and these six options were further refined into four reasonable alternative growth strategies which were taken forward for further technical testing (4 in total). Each Strategy Option proposed enough housing growth to meet the Government's standard method number with a 10% buffer to allow for sufficient flexibility. • The Land Availability Assessment (LAA) and Sustainability Appraisal (SA) were used to identify the sites that were available and suitable to be included within the chosen options. Other evidence to inform the final strategic growth option

Main Issues Raised	Council Response / How the Council has taken this into account
• Option F - New communities - was noted for its potential to deliver significant infrastructure and create self-sustaining communities • Key concerns included protecting rural areas, the countryside, designated landscapes, and natural environment in addition to ensuring that growth sites have good access to existing infrastructure, such as roads, sewage, and public transport. • Areas mentioned in relation to locations development included: Ramsey, Godmanchester, Alconbury Weald, Farcet, Fenstanton, Kimbolton,Sawtry, Yaxley, Little Paxton, Brampton, Buckden, Somersham, Warboys, Elton and Alconbury Weston.	included: the Integrated Water Management Strategies (Strategic Flood Risk Assessment and the Water Cycle Study), the Infrastructure Delivery Study, Strategic Transport Study, and Habitat Regulations Assessment. Each growth option was assessed also through the Sustainability Appraisal. • The technical evidence identified potential benefits to all other strategy options lending to t a hybrid strategy based on Strategy 2 with elements of other strategies incorporated. For example, placing slightly more emphasis on some dispersed growth as per Strategy 4 to support rural areas and sustainable growth of other settlements across the district as solely focusing on the most sustainable locations could result in some social and economic disparity; also from Strategy 3 placing development along public transport routes that are located within sustainable settlements.
Options - Green and Blue Infrastructure (84 responses)	

• The majority of responses strongly supported the retention of the existing Green Infrastructure Priority Areas and designation of additional areas (option B)
• Allocating new green infrastructure was also strongly supported (option C)
Comments suggested:
• They need to enhance green infrastructure and biodiversity
• The need to be aligned with the NPPF, Cambridgeshire and Peterborough Local Nature Recovery Strategy and Huntingdonshire Nature Recovery Network
• Expanding the green infrastructure network
• Incorporating green and blue infrastructure into new developments and considering Natural England/relevant organisations standards and information.
• Some note a deficiency in access to green space
• Creating a local green infrastructure strategy
• SSSI, ancient woodland and County Wildlife Sites, Ouse and Nene Washes should be protected
• Key areas identified for consideration include the Nene Valley and campaign to designate Northamptonshire Vales and Rockingham Forest as a 'National Landscape (includes the Northern Wolds). Other areas include the Great Ouse Valley, Great Ouse Fenland Arc and Western Gateway multifunctional GI corridor, Folksworth-Elton-Ashton Wold,
	• The Council has developed the following policies to address the concerns raised:
	  • 'Green and blue infrastructure' which aligns with and references the Cambridgeshire and Peterborough Local Nature Recovery Strategy and Huntingdonshire Nature Recovery Network and green infrastructure priority areas
	  • 'Supporting active and sustainable travel'
	  • 'Managing flood risk', 'Managing surface water' and 'Managing waste water'
	  • 'Enhancing biodiversity and geodiversity'
	  • 'Protecting our nature conservation sites', including reference to sites on national, international importance
	  • 'Hamlets and the countryside' including reference to best and most versatile agricultural land
	  • ''Heritage assets and their settings', conserving and enhancing heritage assets accompanied and a heritage strategy.
	• The Marine Management Plans have been reviewed and taken into account as part of Local Plan preparation.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
Grafham-Brampton-River Kym, Grafham Water and Local Geological sites geological sites e.g. Great Fen: Holme Fen and Whittlesea Mere. • Acknowledging the role of green infrastructure in climate change mitigation and public health and well-being • Ensuring a balance between agriculture and nature • The need for multifunctional green and blue spaces incorporating environmental, recreational and community purposes with SUDs, natural flood management and biodiversity net gain and wildlife enhancements. • Enhanced public rights of way and active travel routes • Using green infrastructure to improve, conserve and enhance the setting of heritage assets. • Reference to including East Marine Plan policies and key objectives should be considered	
Options - Decarbonisation Scenarios (78 responses)	

• No clear option was identified.
• Option A was considered realistic and achievable, cost-effective and aligning with market dynamics and infrastructure development - Suggestions for enhancing for option A included enhanced solar generation and concern for rapid EV adoption
• Option B was supported for its ambitious approach to climate change - Suggestions for option B included balancing ambition with practicality and achievability and requiring flexibility to support new technologies as they become viable.
• There was concern that option B would place financial burdens on new developments
• Option C was considered a moderate ambition scenario and balanced approach - Suggestions for option C included S106 and CIL payments to encourage low carbon scenarios
Alternative suggestions included:
• Reducing carbon emissions but balancing this with economic and social sustainability,
• Flexible policies to adapt to changing circumstances,
• Aligning policies with national policy and building regulations.
• Providing solar to warehouses and industrial buildings, avoiding solar farms on productive agricultural land
	• The Council has developed the following policies informed by the Whole Plan Viability Assessment and Climate Change Evidence found in the Council's Evidence Library for the Local Plan:
	  • 'Approach to renewable energy schemes'
	  • 'Minimising embodied carbon in new buildings'
	  • 'Minimising operational energy consumption in new buildings'
	  • 'Making existing buildings more energy efficient'
	  • 'Electric vehicle charging points'
	  • 'Supporting carbon capture through nature'
	  • 'Transport, travel and connectivity'

Main Issues Raised	Council Response / How the Council has taken this into account
• Consideration of facilitation of battery storage, micro-energy generation, renewable energy sources, hydrogen use and carbon capture • Passivhaus standards, heat pumps and tree planting • Ensuring the approach is viable and achievable • Consideration of impact on heritage and improvement of peat land • Reducing HGV movement to minimise emissions	
Options - Renewable Energy (74 responses)	

• Option B - an ambitious approach to renewable energy - was the most preferred option, although option A and alternative solutions were also supported.
• Option A - business as usual was noted as realistic, cost-effective and aligning with current market dynamics. Suggested improvements included Solar on large buildings/roof spaces.
• Additional suggestions for option B included the need for flexibility to incorporate new technologies and balancing ambition with viability and achievability.
• Concerns were raised regarding infrastructure capacity for enhanced EV charging
Others suggested:
• a balanced pathway approach including reducing demand
• improving efficiency, electrification, hydrogen, and carbon capture,
• extending the timeline to meet zero carbon objectives
• using CIL payments and Section 106 agreements to encourage low carbon solutions in both new and existing housing stock
• Balancing the need for solar farms with agricultural food production and village/landscape/biodiversity/wildlife impact
• Solar panels on all buildings
• Ensuring viability to achieve deliverability
• Including Passivhaus standards
• No requirements beyond building regulations
• Mitigation should be delivered through sustainable construction and carefully considered design.
	• The Council has developed the following policies informed by the Whole Plan Viability Assessment and Climate Change Evidence found in the Council's Evidence Library for the Local Plan:
	  • 'Approach to renewable energy schemes'
	  • 'Minimising embodied carbon in new buildings'
	  • 'Minimising operational energy consumption in new buildings'
	  • 'Making existing buildings more energy efficient '
	  • 'Hamlets and the countryside' including reference to best and most versatile agricultural land

Options - Integrated Flood and Water Management 1 (79 responses)	
• Options B to require natural flood management techniques as part of an integrated approach to flood risk management and impact on water	• The Council has developed policies informed by national planning policy and guidance, statutory consultees, the Whole Plan Viability Assessment

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
quality on all developments was the most popular option. • Meeting national requirements only was the second most preferred option (option A), being realistic, achievable and cost effective. • It was argued that local requirements may not be necessary and could impact the viability of development. • Natural flood management techniques were strongly supported included SuDS, green roofs and wetlands • Some proposed a more targeted approach to natural flood management techniques e.g. areas at higher flood risk Key concerns included: • Viability and deliverability of new development • The need for flexibility to ensure cost effective techniques • Ensuring solutions meet topographical and hydrological conditions • The growing challenges of climate change and increased rainfall • The impact on the environment, water quality and biodiversity • Requiring an equitable solution. • Considering advice from statutory agencies such as the environment agency and Lead Local Flood Authorities, Natural England Historic England and also the Middle Level Commissioners • Considering local guidance such as the Cambridgeshire Flood and Water SPD • Flexibility for areas partly in flood zones • Minimising downstream impacts, reducing flow to rivers, surface water run off and impact on Ouse washes, Portholme, Great Ouse and Nene Rivers, Alconbury Brook and Yaxley and surrounding areas (potentially Stilton and Folksworth) • Policies should consider the East Inshore and East Offshore Marine Plans • Consideration on impact on heritage assets • Issues identified include fluvial flooding in areas such as Brampton and St Ives, surface water flooding in areas such as Sawtry and Woodwalton, groundwater flooding in Wistow and Broughton, and sewer flooding on occasions.	and Integrated Water Management Strategies (Strategic Flood Risk Assessments and Water Cycle Studies) found in the Council's Evidence Library for the Local Plan. The evidence in the Integrated Water Management Strategies takes into account topographical and hydrological conditions, climate change, downstream impact and local flood risk. The polices developed are: • 'Managing flood risk' which includes reference to the Cambridgeshire Flood and Water SPD • 'Managing surface water' • 'Managing waste water' • 'Heritage assets and their settings', conserving and enhancing heritage assets accompanied and a heritage strategy • allocation of land to safeguard against flooding within site allocations where appropriate • criteria in site allocations to mitigate against flood risk
Options - Integrated Flood and Water Management 2 (75 repsonses)	
• Option A: This option is widely supported as it aligns with national policy and ensures that	• The Council has developed policies informed by national planning policy and guidance, statutory consultees, the Whole Plan Viability Assessment

Main Issues Raised	Council Response / How the Council has taken this into account
developments do not increase flood risk elsewhere with some suggested amendments • Option B: This option is favoured by some respondents as it seeks betterment of existing flood risk improving long-term resilience • Responses suggest the inclusion of surface water management plans to address runoff rates and flooding elsewhere Key concerns include • Not increasing flood risk elsewhere • Onerous policies and the impact of viability and deliverability of housing including off-site improvements. • Concern that development in areas at high or medium flood risk should avoid increasing flood risk elsewhere • Surface water management is a significant concern • Continued coordination between other local authorities, Environment Agency, Lead Local Flood Authorities, Natural England and Middle Level Commissioners • Taking account the long term impacts of climate change. • Ensuring national policy is followed only • Incentivising risk betterment through the development control process by providing 'positive weight' in decision making • Taking into account Cambridgeshire Flood & Water SPD, Groundwater Protection guidance and Protect Groundwater and Prevent Groundwater Pollution and national guidance • Ensuring emergency services estate is not built in flood zones and care homes note built in Flood Zones 2 or 3. • Roof water should not go into sewers • Policies should take into account sewerage capacity and water quality impact • Issues identified include fluvial flooding in areas such as Kings Ripton, Broughton, Brampton and St Ives, surface water flooding in areas such as Sawtry and Woodwalton, groundwater flooding in Wistow and Broughton, and sewer flooding on occasions. • Minimising downstream impacts, reducing flow to rivers, surface water run off and impact on Ouse washes, Portholme, Great Ouse and Nene Rivers, Alconbury Brook and Yaxley and surrounding areas (potentially Stilton and Folksworth) • Considering ground water flood risk	and Integrated Water Management Strategies (Strategic Flood Risk Assessments and Water Cycle Studies) found in the Council's Evidence Library for the Local Plan. The evidence in the Integrated Water Management Strategies takes into account climate change, downstream impact and local flood risk. The polices developed are: • 'Managing flood risk' which includes reference to the Cambridgeshire Flood and Water SPD and all forms of flooding • 'Managing surface water' • 'Managing waste water' • 'Preventing and reducing ground contamination and groundwater pollution' • 'Heritage assets and their settings', conserving and enhancing heritage assets accompanied and a heritage strategy • allocation of land to safeguard against flooding within site allocations where appropriate • criteria in site allocations to mitigate against flood risk

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
Options - Water Efficiency in Residential Development (60 responses)	
• Option C to go above current/future Building Regulations standards and require up to 80 l/p/d if practicable was the most popular option and was favoured to address water scarcity, climate change and environmental impact. • Option B was also considered a reasonable approach: to meet Building Regulations optional standards or future equivalent and require 110 l/p/d and to address water scarcity in the region. • Responses that preferred aligning with meeting building regulations or equivalent supported (option A) it as it avoided overburdening developers financially and met legal requirements. • Options B and C were supported due to the district's location in a water scarce area and to address climate impacts • Key concerns included fairness and transparency, financial burdens on developers and home buyers limiting affordable housing. • The main concerns raised supporting enhanced standards included water scarcity, drought and climate change and environmental impacts. • Key suggestions included: rainwater harvesting, greywater recycling, water reuse, flexible policies to foster innovation, the need for clear evidence • Some responses noted the Written Ministerial Statement in December 2023, announced a review of building regulations to allow local planning authorities to introduce tighter water efficiency standards in new homes in areas of serious water stress. This was supported by the Environment Agency, Greater Cambridge Planning and • Anglian Water proposed planning policy set future local standards which aligns with their approach to demand management in our Water Resources Management Plan 2025-2050 and an aim to reach 110 l/p/d or further with evidence	• The Council has developed a water efficiency policy informed by national planning policy and guidance, the Written Ministerial Statement in December 2023, statutory consultees, Shared Standards in Water Efficiency for Local plans 2015, the Whole Plan Viability Assessment and Integrated Water Management Strategies (Water Cycle Studies) found in the Council's Evidence Library for the Local Plan. The policy includes water efficiency standards for residential development that is below the national water efficiency target and standards for non-residential development.
Options - Water Efficiency in Non-Household Development (47 responses)	
• Option C that all 'non-household' development be required to achieve 'excellent' for category Wat 01 of BREEAM was the most favoured option and seen as balancing sustainability and practicality, encouraging best practices in water efficiency without being overly stringent meeting national sustainability goals and fostering innovation without overburdening developers	• The Council has developed a 'Water efficiency' policy informed by national planning policy and guidance, the Written Ministerial Statement in December 2023, statutory consultees, Shared Standards in Water Efficiency for Local plans 2015, the Whole Plan Viability Assessment and Integrated Water Management Strategies (Water Cycle Studies) found in the Council's Evidence

Main Issues Raised	Council Response / How the Council has taken this into account
• Some argued that not going above building regulations avoids additional costs and ensures delivery of sites • Key concerns included the importance of water efficiency and impact on water quality and supply in the district which is in an area of water stress, and the need for clear evidence to support the proposed approach. • Other concerns included flood risk, addressing the climate crisis, increased water scarcity. • The use of the word 'impractical' was considered a way to get out of requirements • There was support for flexibility to encourage innovative technologies • Anglian Water and the Environment agency and Greater Cambridge support a policy approach to ensure that all non-household development meets outstanding in all five credits in the BREEAM Wat01 category and that larger employment developments, ask that all 'non-household' developments achieve 'excellent' or 'very good' for WAT 03 on water leak detection.	Library for the Local Plan. The policy includes water efficiency standards for residential development that is below the national water efficiency target and standards for non-residential development.
Question - The Cambridge Water Area (24 Responses)	
• Some respondents support stricter water management policies to conserve groundwater levels and chalk aquifers • Some oppose stricter water efficiency standards, arguing that additional restrictions could increase development costs and hinder housing delivery • Several responses highlight the need for infrastructure improvements, such as building a new reservoir in the Fens and completing the Grafham pipeline transfer • Recommendations include incentivising green technologies, implementing awareness campaigns, encouraging water efficiency retrofitting, developing regional water management plans, implementing nature-based solutions, agricultural interventions, and reducing water abstraction, and having a long-term water resources plan • Some responses emphasise the importance of a holistic approach to water management, including improving infrastructure for water storage and promoting water efficiency across industries • There is mention of a water credits system pilot and tighter water efficiency standards for new developments	• The Council has developed a 'Water efficiency' policy informed by national planning policy and guidance, the Written Ministerial Statement in December 2023, statutory consultees, Shared Standards in Water Efficiency for Local plans 2015, the Whole Plan Viability Assessment and Integrated Water Management Strategies (Water Cycle Studies) found in the Council's Evidence Library for the Local Plan. The policy includes water efficiency standards for residential development that is below the national water efficiency target and standards for non-residential development. • Infrastructure improvements required as a result of growth are considered in the Infrastructure Delivery Study Baseline Assessment and will be refined further as part of a stage 2 assessment.
Options - Affordable Housing Proportion (69 responses)	

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Option B which asks for the same proportion of affordable housing in all schemes for 10 or more new homes was the most popular • Option A -to maximise the proportion of affordable housing within each site of 10 or more new homes - was also popular • Option B was thought to provide a consistent approach providing clarity • Option A was considered beneficial in creating mixed communities and social cohesion • Some respondents considered a lower proportion of affordable housing on larger schemes would help to provide substantial infrastructure and balance affordable housing with viability and delivery of schemes (Option C) • Some responses challenged the need to increase overall housing numbers to facilitate greater affordable housing provision • Key suggestions included waiting for appropriate evidence of need and viability to inform the affordable housing percentage across sites • Many people noted the lack of affordable housing for residents in the district asking that this is addressed • Some suggested well integrated affordable housing and proximity to services and facilities and exploration of a range of tenures was required • Key concerns included the impact on site viability, whilst others were concerned about how viability challenges limit the supply of much needed affordable housing • Some supported the current policy	• The Council has developed a 'Providing affordable homes' policy informed by national planning policy and guidance, a local housing needs assessment and the Whole Plan Viability Assessment (found in the Council's Evidence Library for the Local Plan) to understand the balance between need and development viability and to create mixed and balanced communities.
Options - Affordable Housing Location (58 responses)	
• Option B was the most popular option who support allowing affordable housing to be built in all towns and villages to support existing communities especially in rural areas • Option A was preferred by some respondents who believe affordable housing should be built in towns and villages with existing services like shops, primary schools, or village halls • Some note that affordable housing should be provided on all major development proposals (10 plus homes) regardless of their location	• The Council has developed a policy on 'providing affordable homes' which requires affordable housing to be provided on schemes of 10 or more (net) new homes or 0.5ha of land where the number of homes is not yet specified. The policy proposes that dispersed clusters of affordable housing are required for schemes of 200 home or more. • A policy on 'Promoting rural exceptions housing' requires that development is informed by a local housing needs survey. To be eligible for the rural exceptions homes, a potential resident must be able to demonstrate a genuine

Main Issues Raised	Council Response / How the Council has taken this into account

• There is a strong emphasis on the need for affordable housing to be integrated with market value properties to promote social cohesion
• Some respondents highlighted the importance of giving preference to local residents or those with local ties when allocating affordable housing
• Concerns were raised about the potential negative impact of concentrating affordable housing in specific areas, which could lead to social issues or strain on local infrastructure
• The need for sustainable development was a recurring theme, with respondents stressing the importance of ensuring that infrastructure and services are in place to support new housing developments and should be in sustainable locations with good transport links and employment opportunities
• Some responses note that affordable housing should be built anywhere where there is a need regardless of location
	local connection and that they cannot afford suitable housing to meet their needs.
	• The location of growth and new housing is identified through the Council's site allocations and the policies below which have been informed by a growth strategy (see responses to 'Options - Approach to Strategic Growth'):
	  • 'Settlement Hierarchy'
	  • 'Market Towns'
	  • 'Service Centres'
	  • 'Local Services Villages'
	  • 'Villages'
	  • 'Hamlets and the Countryside'

Options - Size and Type of Housing (66 responses)	
• Option B and D were the most popular options • Option D - requiring schemes of 10 or more homes to widen the range of housing types and sizes available using our latest evidence supplemented by any local assessments - was thought to ensure that developments meet local housing needs and promote social diversity • Option B - allowing a flexible approach was considered a way to balance market needs with community goals • Some thought that developers were best placed to understand market needs and can respond to them effectively (option A) • Option C was seen as aligning with national policy and ensuring a variety of housing types • General concerns were raised that specific requirements could impact viability and deliverability of housing • A flexible approach was suggested to allow developers to respond to changing market conditions • Suggestions included testing the viability of housing sizes and types to inform the final decision • Some residents were concerned that allowing developers to decide housing sizes and types could stop the right type of housing being provided	• The Council has developed a 'Promoting a mix of housing' policy and 'Supporting specialist housing' policy. These have been informed by national planning policy and guidance, a local housing needs assessment and the Whole Plan Viability Assessment (found in the Council's Evidence Library for the Local Plan) to create balance between need and development viability and to create mixed and balanced communities and homes for older people and those requiring specialist homes . The 'Promoting a mix of housing' policy refers to local housing need, local assessments of need and demand and the Council's Housing Strategy and Tenancy Strategy. • The 'Providing affordable housing' policy refers to the nationally described space standards for new social and affordable rented homes and the policy 'ensuring accessible and adaptable homes' also promotes building to a higher standard than current building regulations but through a different route than the national space standards.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Older peoples housing, bungalows and national space standards were suggested • Key suggestions included using local evidence to determine the size and type of housing	
Options - Supported and Specialist Housing (41 responses)	

• No clear option was favoured however Options A and B were considered favourably in combination with other options
• Allowing self-contained supported and specialist housing to be built in towns and villages with existing services was considered beneficial in reducing social isolation (option A)
• Large scale retirement communities were considered to provide comprehensive facilities and support services, creating vibrant and self-sustaining communities (option B)
• There was concern that small scale retirement schemes may be unviable to develop (option C)
• Some responses noted the need a needs assessment and viability testing of the final policy to ensure developments can be delivered.
• A flexible approach was suggested to allow developers to respond to changing market conditions
• Responses highlighted the need for well integrated developments in sustainable locations close to services and infrastructure
• Many noted that a variety of specialist and supported housing should be provided
• The need to ensure that developments have appropriate facilities was also raised as was the provision of wheelchair access and accessibility standards
• Some suggested allocating sites for specialist and supported housing
• Being near family and friends and public transport were also key suggestions
• Responses highlighted that the Local Plan should allow for both self-contained supported and specialist housing, and support one or more larger-scale integrated retirement communities
	• The Council has developed a ' 'Supporting specialist housing' policy. This has been informed by national planning policy and guidance, a local housing needs assessment and the Whole Plan Viability Assessment (found in the Council's Evidence Library for the Local Plan) to create balance between need and development viability and to create homes for older people and those requiring specialist homes that are integrated with the wider community and near public transport, services and facilities.
	• The policy refers to a wide range of specialist housing including sheltered housing and extra care housing and the need for inclusive design in terms of the standard of facilities, the level of independence, and the provision of support and/ or care.
	• The Council has also updated its policy on 'Ensuring accessible and adaptable homes' informed by national planning policy and guidance, a local housing needs assessment and the Whole Plan Viability Assessment.
	• A number of large site allocations have included specific requirements for supported living, care homes, extra care homes, or nursing and residential care homes including:
	  • 'Draft Allocation North Huntingdon 3'
	  • 'Draft Allocation North Huntingdon 4'
	  • 'Draft Allocation Hemmingford Abbots 1'
	  • 'Draft Allocation Needingworth 1'

Options - Residential Care and Nursing Homes (34 responses)	
• Option A was the most preferred option, with option B also a favourable option. • Option A was supported for ensuring accessibility for residents and staff, reducing car dependency, and integrating care homes into the wider community	• See responses above.

Main Issues Raised	Council Response / How the Council has taken this into account
• Option B was favoured for its flexibility and the potential to meet specific local needs • Key concerns included ensuring residential and nursing homes are located in areas that are accessible to staff and residents and near key services and facilities • Other responses highlighted the need to ensure that residential care and nursing homes are financially viable and that policies are flexible enough to account for site-specific challenges • There is a suggestion to explore a range of housing types and tenures to meet diverse needs • The need to ensure that developments have appropriate facilities and are accessible was also raised • Specialist housing was seen as beneficial for reducing demands on health and social services, improving residents' well-being, and releasing larger homes back into the housing stock • Some suggested allocating sites for specialist and supported housing • Being near family and friends and public transport were also key suggestions	
Options - Self and Custom Build Homes (54 responses)	

• There were mixed responses to these options with no clear preference for a particular option.
• Option A which proposes allocating small sites within and on the edges of towns and villages was considered a practical suggestion that aligns with the demand for self-build plots
• There were concerns that a percentage based requirement for custom and self-build homes may not be viable (option b)
• Some noted the policy should reflect local need
• Option C was to treat custom and self-build proposals the same as housing proposals was considered to ensure fairness and consistency in the planning process
• Some responses raised concerns over the viability and importance of flexibility in housing policies to account for changing market conditions and site-specific challenges
• Concern was raised over undeveloped or part developed sites near completed developments
• Some respondents support community-led group self and custom build projects in locations where other housing might not be supported (option d), provided there is clear evidence of community support
	• The Council has developed a 'Facilitating self and custom build homes' policy. This has been informed by national planning policy and guidance, a local housing needs assessment, Huntingdonshire's Self and Custom Build Register and the Whole Plan Viability Assessment (found in the Council's Evidence Library for the Local Plan) to create balance between need and development viability. The policy requires 5% custom and self build plots on sites over 100 homes and plots to be marketed for 12 months.
	• Planning applications are not restricted to developers and can be submitted by community-led group self and custom build projects.
	• Planning applications for self and custom build plots or sites will be assessed through the wider housing policies and development strategy policies within the local plan to ensure they are sustainably located.
	• Two site allocations have been reserved for self and custom build housing including:
	  • 'Draft Allocation Upton 1'
	  • 'Draft Allocation Waresley 1'

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Suggestions included ensuring custom and self build developments are well integrated into developments and reflect local demand • Other suggestions included ensuring these developments are sustainably located close to services and facilities • Some respondents suggest that self and custom build plots are more suitable for smaller, dedicated sites rather than being part of larger developments	
Options - Gypsy and Traveller Accommodation Needs (23 responses)	
• Options B and D were the most favourable options • Option B, which allows for extensions to existing sites that already have permanent planning permission, was supported as these sites are already proven to be sustainable and can be improved. • Option D, which relies on a criteria-based policy approach to evaluate the suitability of land for Gypsy and Traveller pitches is believed to be flexible and sustainable and allows to sites contribute positively to the wider social fabric. • There is support for making temporary sites permanent (option c), subject to adequate flood management and the sequential test. • The need for a flexible policy to respond to demographic shifts and societal trends, market conditions and site specific challenges was highlighted • Others noted the need to integrate sites within towns and villages in sustainable locations with access to services and facilities • It was noted that sufficient capacity should be available with respect to local services, water supply and drainage. • It was noted that a criteria-based approach allows for greater local involvement and engagement with stakeholders, including local communities, planning authorities, and gypsy and traveller representatives. This approach fosters collaboration and enables the community	• The Council has developed a 'Gypsies, Travellers and Travelling Showpeople' policy. This has been informed by national planning policy and guidance and evidence on levels of current provision. Current and future need can be found in the Gypsy and Traveller, Travelling Showperson, boat dwellers and other caravan dwellers Accommodation Assessment. The policy supports the sustainable location of sites and adequate infrastructure to support the site. The policy provides a flexible approach to the assessment of development proposals through the submission of planning applications. Temporary sites wishing to be made permanent will be assessed through the policy.
Options - Boat Dwellers Accommodation (20 responses)	
• Option A to allocate new permanent residential moorings was the most popular option on its own and in combination with options B and/or C.	• The Council has developed a 'Water related development' policy. This has been informed by national planning policy and guidance and evidence on levels of current provision.

Main Issues Raised	Council Response / How the Council has taken this into account
• Allocating sites was considered beneficial by setting out criteria for sustainable development in the right locations and ensuring no detrimental impact on the environment. • Suggestions include the requirement of facilities on sites such as waste disposal, electric hook ups and water to allow for healthier living environments • Access to local services and facilities via walking and cycling routes was proposed to allow integration with local communities • Others suggested allowing a proportion of residential moorings on leisure marinas • Residential moorings were considered important to meet demand for more diverse housing options	Current and future need can be found in the Gypsy and Traveller, Travelling Showperson, boat dwellers and other caravan dwellers Accommodation Assessment. The policy supports the sustainable location of sites and adequate infrastructure such as water supply, electricity, and disposal facilities for sewage and waste to support the site. It is focused on water related tourism, sport and leisure developments, such as proposals for new short term/ leisure moorings and marinas, and residential moorings including in sustainably located marinas where the use would not lead to a change in the character of the marina away from a tourist/ leisure facility.
Options - Approach to Individual Developments (Transport and Connectivity) (80 responses)	

• Option B - to continue with the current approach was the most popular option being considered realistic for rural areas, where public transport is limited, allows for active travel and adequate road infrastructure with developer contributions assisting with upgrades and mitigating negative impacts through increased traffic
• Option A which focuses on high quality and plentiful infrastructure for active travel and public transport rather than prioritising road users was considered essential for meeting net zero targets and integrating existing networks.
Suggestions include:
• referencing the Cambridgeshire Rights of Way Improvement Plan objectives to manage, improve and promote a Public Rights of Way network, the Draft Cycling Delivery Plan and the Local Transport Plan
• the production of a strategic plan to guide the development locations
• addressing traffic congestion in Huntingdon and on the ring road, the exit from Hinchingbrooke and the iron bridge at the end of St Peter's Road
• Ensuring that the cumulative impact of transport of new development on the transport network is assessed
• Taking into account potential new transport infrastructure such as East West Rail, the A141 and the Guided busway improvements
• considering a Rapid Transit System which could connect St Ives with the settlements of Somersham, Warboys, Ramsey and Chatteris based on the disused rail network
	• Policies related to transport and connectivity have been informed by Local Transport and Connectivity Plan, Cycling and Walking Investment Strategy, Cambridgeshire Rights of Way Improvement Plan, Huntingdonshire Strategic Transport Study, Infrastructure Delivery Study Baseline Assessment and Stage 1 Whole Plan Viability Assessment.
	• Huntingdonshire's Strategic Transport Study provides a baseline assessment of how transport and connectivity in Huntingdonshire currently performs, assesses strategic sites and growth options. It will identify transport infrastructure requirements for future growth.
	• Transport initiatives in development by the Cambridge and Peterborough Combined Authority have also been taken into account in the development of policies the strategic location of growth such as the A141 Improvement Project
	• Using the evidence the Council has developed policies to address the concerns raised.
	  • 'Parking and vehicle movement' setting minimum levels for employment and residential.
	  • 'Supporting active and sustainable travel' addressing multiple active travel modes such as walking cycling and wheeling and public rights of way.
	  • a design policy ('Creating high quality places and spaces ')that addresses multifunctional greenspaces and corridors, cohesive design, vehicular movements, compatibility,

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• considering car schemes and dial a ride schemes, mobility hubs and park and ride schemes • realising that rural areas require effective transport networks and provision for cars and adequate parking in developments due to lack of public transport and rural isolation • ensuring that new settlements are integrated into the rights of way network and offer improvements • ensuring that the needs of older people are considered • the need for high-quality infrastructure that supports walking, cycling, and public transport • ensuring the needs of equestrians a considered. • reducing reliance on private cars and encouraging more environmentally friendly modes of transport • Integrating Green infrastructure networks into new development	overheating and allows for a flexible approach to design. • 'How will infrastructure be provided', and 'Securing infrastructure provision' • 'Facilitating transport, travel and connectivity' which sets out a transport user hierarchy and identifies strategic transport improvements such as the A141 and East West Rail
Question - Place based Approach to Net Zero Transport (28 responses)	
• Many highlighted the difficulties in implementing net zero in rural areas • Electric vehicles were considered too expensive • Commuting by foot or bicycle was considered impractical • Public transport in the area is thought of as inadequate and unaffordable Suggestions include: • improving public transport frequency and affordability • Encouraging behaviour change • last mile connectivity • segregated cycle routes • e-scooter hire • dial a ride and shared transport schemes • 15 minute neighbourhoods • ensuring strategic development include active travel infrastructure early on, prioritises public transport, bus corridors, rail links and mobility hubs • Limiting car use in local centres • Multimodal transport systems • the need for practical and equitable solutions, noting that many rural areas face significant challenges with transport and connectivity • installing electric charging points in all developments • on-street rapid charging • promoting active travel through cycle and pedestrian-friendly infrastructure	• Huntingdonshire's Strategic Transport Study provides a baseline assessment of how transport and connectivity in Huntingdonshire currently performs, assesses strategic sites and growth options. It will identify transport infrastructure requirements for future growth. • The Council has no overall control on public transport networks but looks to locate growth in sustainably located areas. Huntingdonshire's market towns offer the highest levels of sustainability in Huntingdonshire services available in all of them include public transport services. Development in Villages will be supported where the amount and location of development proposed is sustainable in relation to availability of opportunities for users of the proposed development to access day to day services and facilities by active travel or public transport. • The Local Transport and Connectivity Plan (LTCP) strategic approach is to shift travel choices to more sustainable modes of transport, including public transport, walking, and cycling. • The Council will work with and support its partners to facilitate a safe and efficient transport system that builds on existing infrastructure to support our communities and local economic growth. This will support provision of highway infrastructure where required, promote travel choice through supporting public transport infrastructure and services, and promoting networks for safe and secure walking, cycling and wheeling that provide

Main Issues Raised	Council Response / How the Council has taken this into account

• promoting projects like the Kym Valley Way active travel route to enhance connectivity for rural communities
• promoting home delivery, home working, and broadband to reduce the need for travel
• Investment in hydrogen fuel
	a realistic alternative to private car use and facilitate opportunities for people to make healthy active travel choices.
	• Building regulations require electric vehicle charging points within new development, policy 'Providing electric vehicle charging points' provides criteria on the design and location of charging points.
	• The Council has also developed policies on:
	  • 'Supporting active and sustainable travel' addressing multiple active travel modes such as walking cycling and wheeling and public rights of way.
	  • 'Parking and vehicle movement' setting minimum levels for employment and residential.
	  • a design policy ('Creating high quality places and spaces) that addresses multifunctional greenspaces and corridors, cohesive design, vehicular movements, compatibility, overheating and allows for a flexible approach to design.
	  • 'How will infrastructure be provided', and 'Securing infrastructure provision'
	  • 'Facilitating transport, travel and connectivity' which sets out a transport user hierarchy and an approach to digital connectivity to support home delivery, home working, and broadband to reduce the need for travel
	• Investment in hydrogen fuel is beyond the scope of the local plan, the Council has developed a policy to direct the approach to renewable energy schemes

Options - East West Rail (49 responses)	
• Waiting until there is greater certainty about the timing of East West Rail was the most preferable option (option b) and seen as more realistic and cautious given the uncertainties surrounding the project's timeline and funding • Relying of the prospect of East West Rail coming forward (option a) was considered to facilitate early and strategic planning for growth in areas that will benefit from the new transport links • Option A is considered to maximise benefits by aligning development with the expected transport infrastructure, improving connectivity, accessibility, and overall quality of life in the district	• The Council has received greater certainty on the development of East West Rail which has been taken into account in the Infrastructure Delivery Study Baseline Assessment and through engagement with those involved in the East West Rail project. Stage 2 of the Infrastructure Delivery Study will provide updates on any progress. • The Council has be provided with a safeguarded route which will facilitate the delivery of East West Rail. This has assisted the council in identifying proposed sites that may be impacted by its location and/or affect delivery. • As the East West Rail project is a 'Nationally Significant Infrastructure Project' it will not be dealt

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Some comments emphasised the need to build infrastructure before starting new developments to avoid the issues of inadequate infrastructure • There is a concern that relying too heavily on the East West Rail project for growth could lead to missed opportunities and delayed housing delivery • Some comments highlight the importance of safeguarding potential routes for East West Rail in the Local Plan to ensure that future growth does not hinder the project's delivery • Several comments discuss the local impact of East West Rail, particularly in areas like St Neots and Huntingdonshire. There is concern about the potential traffic congestion and the need for strategic planning to manage anticipated traffic flows • The impact on transport in the Greater Cambridge area was also raised • It is proposed that East West Rail and the Council should work closely with landowners and site promoters to ensure that sustainable locations for development are not discounted at an early stage.	with by Huntingdonshire District Council. Instead it will be required to submit a Development Consent Order to the Planning Inspectorate who will examine the application and make a recommendation to the relevant Secretary of State for the final decision. More information can be found at: East West Rail | Home

Land Availability Assessments

Consultation Responses Summaries

4.22 The following table outlines a summary of the type of comments received to the Land Availability Assessments consulted on between 18 September and 27 November 2024:

Responses to the Land Availability Assessments

	Additional Sites Land Availability Assessments
Number of Comments Made	4,525
Number of Individuals or Organisations that Responded	1,133
Number that Agree with Assessment	745
Number that Disagree with Assessment	1,483
Number that Have Observations on Assessment	2,129
Number that Commented Without Noting Agree/ Disagree/ Have observations	168

4.23 People were able to comment on all aspects of the document by section, paragraph, tables and by site. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Land Availability Assessment Consultation Responses

4.24 As part of a response to previous consultations on the Statement of Community Involvement and Sustainability Appraisal Scoping Report The Coal Authority noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific comments to make on any stages of your Local Plan process. In the spirit of ensuring efficiency of resources and proportionality, it will not be necessary for the Council to provide the Coal Authority with any future drafts or updates to the emerging Plans."

Summary of Sites consulted on in the Land Availability Assessments

4.25 The following sections provide a summary of the main issues raised during the consultation on the Land Availability Assessment and how the Council has taken these into account.

4.26 The sections are set out in the same order as the Land Availability Assessment consultation document and are:

- Area 1 - Northern Huntingdonshire
- Area 2 - North East Huntingdonshire
- Area 3 - Northern Central Huntingdonshire
- Area 4 - Western Huntingdonshire
- Area 5 - Central Huntingdonshire
- Area 6 - Eastern Huntingdonshire
- Area 7 - Southern Huntingdonshire

General comments

4.27 The consultation received responses from a number of statutory consultees and Duty to Cooperate bodies, these comments will inform the selection of sites coupled with further evidence as the plan progresses. They will also enable the Council to provide criteria within draft site allocations to shape and mitigate development.

Area 1 - Northern Huntingdonshire

General comment: Comments were raised against the general Northern Huntingdonshire area with specific concerns about the strain on medical services, increased traffic congestion, particularly around the Norman Cross roundabout, inadequate public services, loss of green spaces and biodiversity, with several sites prone to flooding exacerbating drainage issues, the importance of preserving the rural character and historical significance of their villages, and opposing developments in areas like Elton, Sibson, Folksworth, Stilton, Chesterton, Haddon, and Sibson cum Stibbington.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

4 Further Issues and Options

Alwalton

Alwalton 1: Land North of 23 to 33 Oundle Road, Alwalton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (14 responses)

The majority of respondents did not agree to development of this site. Key concerns of the site were potential loss of biodiversity, wildlife and natural habitats, the impact on the landscape and infrastructure. Other issues mentioned include drainage/sewerage problems and traffic congestion. Surface water flood risk, impact on the conservation area, Alwalton Hall and proximity to the A1 raising concerns about air, light and noise pollution for new residents were also mentioned.

A response was submitted by the site promoter supporting the site and addressing issues such as flood risk, accessibility, noise, air and light pollution, access and pollution.

Council Response

The site promoter resubmitted this site and additional land to the north in the Ongoing Call for Sites. As this site includes additional land, it was reassessed as Alwalton 2 and can be found in the updated Land Availability Assessments document.

Alwalton 2 was selected as a draft mixed use allocation (Draft Allocation Alwalton 1) for about 165 homes and about 4 ha of open space to safeguard against flooding.

Landscaping and biodiversity concerns have been address through criteria requiring the mitigation of recreational impacts on nearby nature sites including the Nene Valley Nature Improvement Area and an ecological survey to determine the presence of protected species and measures for their protection and biodiversity enhancement. Drainage/sewerage concerns are addressed through criteria to ensure integration of existing Anglian Water infrastructure ensuring existing sewers remain available for maintenance and repair and agreement with the Council in liaison with the Environment Agency and Anglian Water Services that waste water flows from the proposal can be accommodated.

A criteria requiring the provision of suitable noise, light and air quality mitigation requires a development proposal to mitigate concerns about air, light and noise pollution, whilst land is also set aside to safeguard against flooding with flood specific criteria included. Development will require sensitive design having regard to the Conservation Area designation and adjacent Alwalton Hall accompanied by a heritage assessment and safe vehicular and pedestrian access form Oundle Road will be required.

Chesterton

General comment: Comments were generally against the proposed developments. Responses expressed concern about the significant visual impact on the countryside and village character, increased traffic congestion on the A605 and local roads, the lack of infrastructure to support the proposed developments, the potential for increased pollution, the impact on local wildlife, and the strain on public services such as schools and medical facilities. Comments also highlighted the historical and environmental significance of Chesterton, noting that substantial development would fundamentally alter the landscape and village setting.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Chesterton 1: Land West of A1 (North of Peterborough Motorway Services) - Option A (larger site), Haddon (Chesterton) (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (82 responses)

Almost all responses oppose the development with two being unsure. Concerns raised were the significant visual impact on the rural landscape, increased traffic congestion on the A605 and local roads particularly arising from HGVs, the lack of infrastructure to support such a large-scale development increasing the potential for pollution and damaging wildlife as well as putting additional strain on public services. Comments also highlight the historical and environmental significance of the area, noting that the proposed development would fundamentally alter the landscape and village setting. There is a minerals and/or waste constraint present. The Highway Authority states that the site appears to have sufficient frontage to the A605 to achieve an access (subject to detailed design in accordance with the DMRB, road safety audit and capacity assessments) but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form. It is unclear how high quality walking, cycling, wheeling access can be achieved either on the A605 or the Oundle Road across the A1 to link the development to Peterborough. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. They state that the previously planning application submitted for this site could not demonstrate how it could achieve sustainable links. National Highways have also commented due to its close proximity to the strategic road network (the A1) and access from a local road, close to junction 17 which raises risk of potential crashes so safety improvements may be required.

Council Response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. The site was tested by the council as part of Growth Strategies 1 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The site was promoted variously for employment and for residential led development and tested for residential through the Strategic Transport Study. This identified that the site has poor accessibility for pedestrians in particular. As Part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated.. The Highways Authority raised significant concerns saying that the site is likely to require significant highways improvements due to scale and that it is unclear how sustainable travel links can be achieved on the A605 across the A1 to link to Peterborough. National Highways also raised significant concerns noting that J17 A1(M) is a potential crash cluster, therefore safety improvements may be required. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to high and/or medium risk from surface water sources and groundwater flood risk, particularly emergence to subsurface assets.

Chesterton 2: Chesterton Garden Village (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (86 responses)

The vast majority of comments are opposed to development. There were concerns raised about the significant visual impact on the rural landscape, increased traffic congestion on the A605 and local roads, the lack of infrastructure to support such a large-scale development, the potential for increased pollution, the impact on local wildlife, impact on designated heritage assets and the strain on public services such as schools and medical facilities. Some comments also raised the historical and environmental significance of the area, noting that the proposed development would fundamentally alter the landscape and village setting of Chesterton. There is a minerals and/or waste constraint present. The Highway Authority states that the combined parcels appear to have sufficient frontage to Oundle Road to achieve access (subject to detailed design in accordance with the DMRB, road safety audit and capacity assessments) but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form. It is unclear whether the corridor linking the site to Oundle Road is suitable to achieve either a vehicular or Pedestrian/cycle/emergency link. It is unclear how high quality walking, cycling, wheeling access can be achieved across the A1 to link the development to Peterborough. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. National Highways have also commented

4 Further Issues and Options

that the site is less than a kilometre from the A1 and Alwalton junction so there is risk of potential crashes so safety improvements may be required. The Education Authority commented stating that the proposal could generate demand for an additional 426 children aged 0-3. Primary provision could generate demand for an additional 568 primary school places equating to 3FE and could be provided as one school and require a land allocation of 3ha. Secondary provision could generate demand for an additional 355 secondary school places equating to 3FE. SEND provision could generate demand for approximately 12 places for children with SEND, a contribution would be requested towards existing provision within the county.

Council Response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

The site is at risk of groundwater emergence to both surface and subsurface assets and has limited accessibility by active travel. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. Other concerns from statutory consultees are from the Highways Authority who note that significant highway improvements are required, due to scale and that it is unclear if a corridor linking the site to Oundle Road can be achieved across the A1 to link the development with Peterborough. As the site is on the wrong side of the A1 it would be very reliant on vehicles and there are existing issues with bridge over A1. Historic England raised concerns about the the nearby (metres away) grade I listed church. There are potential adverse impact on the extensive scheduled monument of the Roman Town of Durobrivae located just 80 metres to the north of the site boundary. They also have considerable concerns about this site as a potential site allocation. A detailed heritage impact assessment would be needed to assess this and determine whether the site is suitable and if it is to make clear recommendations for protection, enhancement of the heritage assets and appropriate mitigation for any impacts. Highways England note that the junction is a potential crash cluster area therefore might need to consider safety improvement.

Conington

General comment: Comments reflects a consensus that significant changes and considerations are needed before any development can proceed. Concerns regarding congestion, flood risk, infrastructure, obscured junctions, and the archaeological and historical significance of certain areas, such as the Cromwell/Roundhill area, moated castle, and deer park site are raised.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Conington 1: Conington Airfield (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (7 responses)

The majority of respondents were opposed to developing the site. Concerns were raised regarding the scale of numerous industrial units, sewage, flooding, and increased traffic. There is a minerals and/or waste constraint impacting the site. The Highway Authority highlight there is a 5T weight restriction immediately to the north east of the site on the bridge at Pingle Bank so access is not achievable from Holme village notwithstanding that the approach road infrastructure north is also poor. To the south and east of the site Church Road to the B1043 is inadequate to cater for heavy commercial vehicles in terms of width and infrastructure through Conington village to the B1043. There appears to be inadequate frontage for access and visibility onto the B660 Glatton Road. It is therefore unclear how adequate vehicular access can be achieved for the site.

The site promoter states that they are currently considering further technical work to support the development vision for the site.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as there is a preference from national Government to retain airfields and the likely significant amount of infrastructure and transport improvements required to serve the development make the proposed development potentially unachievable. Additionally, there are very limited details from the site promoter to scope the potential for the site in depth at this time.

Conington 2: Land North of Conington Airfield (failed fundamental constraints)

Main Issues Raised (6 responses)

The majority of respondents were opposed to developing the site. Concerns were raised regarding the scale of numerous industrial units, sewage, flooding, and increased traffic. There is a waste constraint impacting the site. The Highway Authority highlight there is a 5T weight restriction immediately to the north east of the site on the bridge at Pingle Bank so access is not achievable from Holme village notwithstanding that the approach road infrastructure north is also poor. To the south and west of the site Church Road to the B1043 is inadequate to cater for heavy commercial vehicles in terms of width and infrastructure through Conington village to the B1043. It is unclear if there is adequate frontage to achieve a safe access.

The site promoter states that any future application on the site would be supported by an odour impact assessment to demonstrate that potential impacts from the water recycling area could be adequately mitigated.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment and failed the fundamental constraints due to the site being within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment was submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity.

Conington 3: Land West of Conington Airfield (Council conclusion pre-consultation: may be appropriate for BNG)

Main Issues Raised (5 responses)

The majority of respondents were opposed to developing the site. Comments raised concerns regarding the loss of woodland and ponds within the site. There is a mineral and/or waste constraint impacting the site. The Highways Authority states that there is connection to the public highway and there are concerns regarding the suitability of the local road network to accommodate commercial use and concerns over the accessibility sustainability of the site.

The site promoter states that it is anticipated that the site would be used to offset any development coming forward on the wider site.

Council Response

This site has not been selected as a draft allocation. It was put forward as a proposed site for commercial and open space uses. It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it would not support sustainable place-making as the site is consists primarily of woodland categorised as Priority Habitat – Deciduous Woodland with a pond and several internal tracks within the site. The site is also located adjacent to the Great Fen Landscape and Visual Setting Boundary which would be impacted by built development. The Assessment noted that the site may be appropriate for biodiversity net gain opportunities only top provide linkages into the

4 Further Issues and Options

wider Fenland landscape and support the retention of the existing habitat on site. However, due to the nature of the site 'Priority Habitat – Deciduous Woodland', biodiversity net gain enhancements may not be achievable due to the high level of biodiversity already present on site.

Conington 4: Land at Woolpack Farm, Conington (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (5 responses)

Most comments were opposed to development. There were concerns raised about the loss of agricultural land and access. There is a minerals and/or waste constraint impacting the site. The Highways Authority states that it is unclear how access will be achieved as there is no access to the public highway and there are possible junction capacity concerns at B660/ B1043. Lorry parking capacity is required to fully understand the potential impact the development may have. Traffic is likely to head to the A1(M) and likely to generate increased traffic on routes in the local highway network that would be used to access A1(M).

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is inappropriate for development as it would not support sustainable place-making due to the likely need to access the site via car and its potential impacts on the wider landscape.

Conington 5: Land at Middlemarsh Farm, Glatton Road, Sawtry (Conington) (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (7 responses)

Most respondents agree with the assessment that the site is unsuitable due to significant infrastructure, flood risk, archaeology and transport improvements required. There is a minerals and.pr waste constraint impacting the site. The Highways Authority state that the site appears to have sufficient frontage to Glatton Road to achieve access (subject to detailed design in accordance with the DMRB, road safety audit and capacity assessments) but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that a minimum of two points of access will be required at least one in emergency form. The suitability of the approach road network will need to be assessed in relation to the ability to cater higher volumes of traffic and HCVs and may result in junction capacity issues in Sawtry and Glatton.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the likely significant amount of infrastructure and transport improvements required to serve the development making the proposed development potentially unachievable. Additionally, there are very limited details form the site promoter to scope the potential for the site in depth at this time.

Denton and Caldecote

Denton and Caldecote 1: Land South of Stilton Golf Course (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (6 responses)

All comments were opposed to development. Concerns were raised about the impact on village character, increased traffic, inadequate infrastructure locally, potential flooding, the disruption to well-used footpaths and local wildlife and the existing highway infrastructure being inadequate for the scale of the proposed development. There is a mineral and/or waste constraint present. The Highways Authority state that the existing highway infrastructure is inadequate for the scale and nature of the proposal. It is unclear how high quality walking, cycling, wheeling access

can be achieved to link the site to wider centres of population, notwithstanding the lack of transport provision. The development would generate increased traffic on Denton Road which would need to be significantly improved to allow for increased traffic.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the existing access being unsuitable for the scale of development and that it is very unlikely to be capable of being upgraded sufficiently. Infrastructure requirements to enable suitable access is likely to make the development unachievable.

Elton

General comment: Comments raised concerns about the village's character, natural, and ecological significance, potential flooding, inadequate infrastructure, and the presence of archaeological and heritage assets. Respondents emphasise the importance of preserving greenfield sites and suggest that existing vacant properties and alternative sites should be considered for development instead. There are also concerns about the capacity of local sewage systems and the potential increase in traffic. Overall, the consensus is against development due to the negative impact on the environment, infrastructure, and village character.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Elton 1: Land between Middle Street and Highgate Green, Elton (Council conclusion pre-consultation: may be appropriate for open space uses)

Main Issues Raised (38 responses)

The majority of respondents are opposed to built development on the site but many were supportive of retaining it for open space uses. Concerns raised include the site's role in maintaining the village's rural character, potential flooding issues, and the impact on local wildlife. Overall, the consensus is to retain the site as a green space to preserve the village's character and address environmental concerns.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Elton 2: Land North of Chestnuts Farm and River Lane, Elton (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (36 responses)

The majority of respondents do not support the development of this site. Concerns were raised regarding the significant flood risk on site, its location within a conservation area, proximity to listed buildings, impact on the village's character, potential for increased traffic on narrow roads prone to flooding, and the need for extensive infrastructure improvements. There is a minerals and/or waste constraint present. The Highways Authority state that significant improvements to the road and footway infrastructure between the site and Stocks Green would be required.

Council Response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is inappropriate for built development due to its physical constraints arising from fluvial flood risk, heritage and landscape considerations which reduce the developable area of this site and would result in development that would not reinforce the character of the area.

Elton 3: Land between Wansford Road and Oundle Road, Elton (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (36 responses)

The majority of respondents do not support the development of this site. Concerns include the site's visibility from the village and surrounding roads, its location within a conservation area, the negative impact on the village's character, and potential for surface water flooding. Some respondents suggest that the site could accommodate a small number of affordable houses for young families if developed sympathetically, while others emphasise the need to preserve the greenfield land and consider alternative sites or repurpose vacant historic building. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access from Peterborough Road and not Oundle Road. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is inappropriate for built development as it would not reinforce the character of the area and would result in significant landscape impact. Development would extend the built form of the village eastwards which would not reinforce or retain the character of the village and would result in adverse landscape impact.

Elton 4: Land between Oundle Road and Greenhill Road, Elton (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (36 responses)

The majority of respondents do not support the development of this site. Concerns include the site's visibility from the village, its location within a conservation area, the negative impact on the village's character, and high risk of surface water flooding. Some respondents suggest that the site could accommodate a small number of affordable houses for young families if developed sympathetically, while others emphasise the need to preserve the greenfield land and consider alternative sites or repurpose vacant historic buildings. The Highways Authority states the site has sufficient frontage to the public highway to achieve an access in accordance from Green Hill Road not Oundle Road. Local infrastructure improvements may be required in the form of walking/cycling connectivity and road widening to 5m and a footway would be required.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is inappropriate for built development as it would not reinforce the character of the area and would result in significant landscape impact. Additionally, to mitigate surface waterflood risk development would likely be placed in a way uncharacteristic of the area making integration and reflecting the character of the area further challenging.

Elton 5: Land between Duck Street and Wansford Road, Elton (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (86 responses)

The majority of respondents were opposed to development on this site, a small number did support some development. Concerns include the site's visibility from the village, its location within a conservation area, the negative impact on the village's character, flood risk and many raised its archaeological significance, with evidence of medieval ridge and furrow farming. Reference was also made to a 1995 appeal decision which dismissed a previous development on the site based on landscape and archaeology matters. Some respondents suggest that the site could accommodate a small number of affordable houses for young families if developed sympathetically, while others emphasise the need to preserve the greenfield land and consider alternative sites or repurpose vacant historic buildings. The Highways Authority states the site has sufficient frontage to the public highway to achieve an access from both Wansford Road and Duck Lane. Local infrastructure improvements will be required in the form of walking/cycling connectivity however access to Duck Lane would require greater intervention to link back to the existing network. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Farcet

General comment: Several raised general concerns regarding further development within Farcet citing issues relating to inadequate infrastructure, strain on local schools and healthcare facilities, increased traffic, the impact on the village's character and environment, flood risk and loss of green spaces. Respondents emphasise the need for more infrastructure improvements and better planning before considering any new housing developments.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Farcet 1: Land West of Peterborough Road and North of Gazeley Gardens, Farcet (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (21 responses)

The majority of respondents are opposed to development. Concerns were raised about the loss of green space, increased traffic congestion, strain on local infrastructure and services, impact on the village's character with fears that Farcet would lose its identity and become a suburb of Peterborough, flooding, the loss of agricultural land, and the negative impact on wildlife. Some respondents highlight the lack of local amenities, such as shops, schools, and healthcare facilities, which are already under pressure. There is a minerals and/or waste constraint present. The Highways Authority state that on the basis of the red line there is inadequate connection to the public highway but the submission documents identify potential frontage acquisition meaning that an access may be feasible in the fullness of time, subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments.

The site promoter commented reiterating the site's availability. They state that landscape impact, drainage, and noise pollution are minor issues with implementable solutions, these are set out in a Vision document.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 1. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

4 Further Issues and Options

Farcet 2: Land West of Peterborough Road and South of Gazeley Gardens, Farcet (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (18 responses)

All respondents apart from one (the site promoter) opposed development on the site. Concerns raised include increased traffic congestion, impact on local roads, inadequate infrastructure, significant flooding issues, strain on local amenities such as GP surgeries, dentists, and schools as well as the loss of green space, impact on wildlife and an erosion of the buffer between Farcet and Peterborough, potentially eroding the village's character. Some respondents highlight the negative impact on privacy and property values for existing residents. The Highways Authority state that on the basis of the red line there is no connection to the public highway. Notwithstanding this, Haddon Way is of insufficient width to accommodate a development of this scale without improvements which may not be achievable within the existing highway.

The site promoter wrote in support of the site and seeks to overcome the issues identified through the planning process.

Council Response

This site has not been selected as a draft allocation. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal originally found that the site may be appropriate for development, but did raise concerns regarding point of access and road network capacity. Comments from Cambridgeshire Highways flagged the site as inappropriate for development due to no connection to the public highway, Haddon Way. They also noted that Haddon Way is insufficient in width meaning that improvements may not be achievable to facilitate access. They also raised concerns regarding the possibility for junction capacity issues. The site is therefore now considered inappropriate for development.

Farcet 3: Land East of Peterborough Road, Farcet (cross boundary site with Peterborough City Council) (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (19 responses)

The majority of respondents do not support the development. Key issues include the impact on traffic flow, with the nearby Haddon Development already causing congestion, and the lack of local amenities such as healthcare and schools. Some comments highlight the site's importance for wildlife and protected species. Other issues include significant flooding issues, and the presence of a high-pressure gas pipeline. Some respondents suggest that the site should remain agricultural land to preserve the village's character and separation from Peterborough. Based on the whole site, the Highways Authority states that primary access should be from the A605 which is within Peterborough City Council's jurisdiction. The site appears to have sufficient frontage to achieve a secondary access on to Peterborough Road and may require off-site highway improvements in relation to the scale of development proposed. There is a possibility for capacity issues at junctions in Farcet and Yaxley. Subject to detailed design, there should be no vehicular link between the A605 and Peterborough Road with the exception of emergency access, bus, walking or cycling. The access corridor adjacent to 16c Peterborough Road is adequate only for pedestrian, cycling and emergency services. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced

The site promoter has submitted an updated planning statement setting out a reduced proposal for 200 dwellings and a local centre. Following pre-application advice, a masterplan is being developed and further supporting information.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 1 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Farcet 4: Former PH Plant Hire and 9 Cross Street, Farcet (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to this site. Concerns were raised about high housing density, inadequate infrastructure, local amenities and significant flooding issues, however others agreed with the assessment, noting that the site is already in the development stage with planning approval. The Highways Authority raised no objections due to there now being a planning approval on the site for the proposed development.

Council Response

This site has not been selected as a draft allocation as planning permission (23/02383/FUL) has been secured for the demolition of existing commercial buildings and erection of 17 dwellings including public open space, approved in May 2024.

Farcet 5: Collmart Growers, Pondersbridge (failed fundamental constraints)

Main Issues Raised (11 responses)

The majority of respondents do not support this site. Many commented that it is unsuitable due to its classification as grade 1 agricultural land, its location in a flood zone (zone 3a), and its position outside the natural boundaries of the current village development. Concerns raised include limited access to local amenities and public transport, the need for improved transport links, and the strain on existing infrastructure and facilities. There is a minerals constraint present on the site. The Highways Authority states that the site appears to have sufficient frontage to achieve an access but is likely to require highway improvements in the form of junction improvements and carriageway works. There is a possibility for junction capacity issues as traffic increases from the site on the B1095/ The drove junction.

The site promoter commented and acknowledges the grade 1 classification but considers the site's proximity to an existing commercial site with planning permission for an AD plant requires a balanced judgement.

Council Response

This site has not been selected as a draft allocation. This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint due to it the land being is wholly classified as grade 1 agricultural land. Grade 1 is the highest quality agricultural land. In addition it is also entirely within flood zone 3a at the time of assessment.

Folksworth and Washingley

General comment: Several comments raised concerns about inadequate infrastructure and local facilities such as shops, GP services and public transport, increased traffic arising from development, and the impact on the village's character and environment.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Folksworth and Washingley 1: Land off Hawthorn Road, Folksworth (smaller site) (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (23 responses)

The majority of respondents were opposed to development on this site. Many comments highlight that Folksworth is a very small village with limited facilities, such as no shops, almost no public transport, and very few other amenities. Other issues raised were relating to flood risk, drainage, visual impact of development, traffic and access. There is a mineral and/or waste constraint present. The Highways Authority state that on the basis of the

4 Further Issues and Options

red line there is no connection to the public highway, however, Mallow Lane/Hawthorn Lane may be acceptable to serve the development if the intervening land ownership issue can be resolved. A minority of comments support the development, suggesting that it could enhance local facilities and contribute to the growth and vitality of Folksworth. Some suggestions were that the number of houses should be significantly reduced if development is to proceed and need for effective master planning to ensure successful integration with the village's character and landscape.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Folksworth and Washingley 2: Land adjacent A1 at Norman Cross, Folksworth (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (40 responses)

The majority of respondents oppose the development, citing concerns about increased traffic, safety hazards, environmental impact, and the loss of rural character. Specific issues include the potential for flooding due to poor drainage, the negative visual impact on the landscape, and the destruction of historical ridge and furrow farmland. There are also worries about the strain on local infrastructure, such as roads and healthcare services, and the incompatibility of commercial development with the residential nature of the surrounding area. There is a minerals constraint impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity. Increased HGV trips may create junction capacity issues if access points are provided on the B1043 and Folksworth Road. National Highways have also commented recognising the site is adjacent to the strategic road network.

The site promoter also commented supporting the site, highlighting the potential economic benefits of the proposal and also stating that improvements to the surrounding road network and maintaining a landscape buffer to nearby settlements will be incorporated into proposals.

Council Response

This site has not been selected as a draft allocation. The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres. This site is located away from such locations with the nearest settlement - Stilton' classified as a Local services Village.

Folksworth and Washingley 3: Land South of The Paddocks, Folksworth (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (34 responses)

The majority of respondents oppose the development, citing several key concerns relating to access and traffic arising from The Paddocks not being wide enough for two way traffic, impact on wildlife and trees, flood risk and drainage, Folksworth having limited amenities and that existing infrastructure is insufficient to accommodate additional housing, and that the development would negatively impact the village's character. There is a minerals constraint impacting the site. The Highways Authority state that the site appears to have sufficient frontage to the public highway to achieve an access. The site is affected by an existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and early dialogue with the County's Asset Information Definitive Mapping team is encouraged with regard to the alignment of the existing bridleway and the site access.

Council Response

This site has not been selected as a draft allocation. This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not appropriate for development due to key constraints impacting the layout, capacity and integration into the settlement alongside potential damage to protected trees and therefore the character and form of this area of the village.

Folksworth and Washingley 4: Land off Hawthorn/Manor Road, Folksworth (larger site) (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (30 responses)

The majority of respondents were opposed to development on this site. Many comments highlight that Folksworth is a very small village with limited facilities, such as no shops, almost no public transport, and very few other amenities. Other issues raised were relating to flood risk, drainage, visual impact of development, traffic and access. There is a mineral and/or waste constraint present. The Highways Authority state that the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and local infrastructure improvements may be required in the form of walking/cycling connectivity. A minority of comments support the development, suggesting that it could enhance local facilities and contribute to the growth and vitality of Folksworth. Some suggestions were that the number of houses should be significantly reduced if development is to proceed and need for effective master planning to ensure successful integration with the village's character and landscape.

Council Response

This site has not been selected as a draft allocation. The smaller site (Folksworth and Washingley 1: Land off Hawthorn Road, Folksworth -smaller site) was tested by the Council as part of growth strategy 3 which includes land within this site and therefore provides an indication of suitability in relation to the growth strategy on a locational and capacity basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Glatton

Glatton 1: Land North of Glatton Ways and East of Glatton Hall, Glatton (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (6 responses)

All respondents were opposed to development on this site. Comments raised concerns regarding the visibility and landscape impact of development, heritage impacts, loss of agricultural land, impact of wildlife and trees as well as local infrastructure. There is a mineral and/or waste constraint present. The Highways Authority state that the site appears to have sufficient frontage to achieve an access to the B660, with the new access located as far to the south west as possible, but is likely to require local infrastructure improvements in the form of walking/cycling connectivity. No access should be gained via Mill Hill/Denton Road.

Council Response

This site has not been selected as a draft allocation. This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site would not be appropriate for development due to the steep topography of the site and potential adverse impact upon the character of the village and conservation area. In addition, highway access may require the removal of protected tress.

4 Further Issues and Options

Great Gidding

Great Gidding 1: Land adjacent to 52 Main Street, Great Gidding (failed fundamental constraints)

Main Issues Raised (2 responses)

Comments received were generally supportive of development. The Minerals and Waste Authority identified no minerals or waste constraint impacting the site. The Highways Authority stated that the site has access to the public highway but does not appear suitable to cater for multiple dwellings however, a single dwelling may be possible whist retaining off-street parking for the host property.

Council Response

This site has not been selected as a draft allocation. This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint for assessment by being below the site threshold.

Great Gidding 2: Land South of Great Gidding Village Hall, Great Gidding (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (4 responses)

There was a mixed response to this site. The Minerals and Waste Authority identified no minerals or waste constraint impacting the site. The Highways Authority stated that the site has access to the public highway in accordance with requirements respecting local junction spacing subject to improvement to gradients between the highway and the site. The formation of an access and visibility splays may result in the loss of green infrastructure. CPRE suggest that 10 proposed dwellings would be overdevelopment of the site and impact on the character of the village.

Council Response

This site has not been selected as a draft allocation. The site was not tested by the Council as part of the Growth Strategy Options due to the settlement’s designation as a village. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Great Gidding 3: Land adjacent to Chapel Lane, Great Gidding (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (7 responses)

The majority of respondents oppose the development. Key concerns include limited drainage capacity, frequent flooding, inadequate traffic capacity, and the dangerous access from the B660. The closure of the local village school also raises sustainability issues, as transport to the catchment school in Sawtry would be costly and environmentally damaging. Some respondents, including CPRE note the scale of development is unsuitable for the village's size and facilities. There is a minerals and/or waste constraint present. The Highways Authority states that the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements to Chapel End to the north west to facilitate two way vehicle and pedestrian movements into the village; improvements to the junction of Chapel End and Back Lane; and localised widening to Back Lane.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is inappropriate for development due to key constraints arising from predominantly being in a Water Recycling Buffer Zone impacting the layout and capacity and potential for the scale and location of development causing significant landscape impact eroding the rural feel and character of Great Gidding.

Great Gidding 4: St Gidding School, Great Gidding (failed fundamental constraints)

Main Issues Raised (3 responses)

There was a mixed response to this site. The Minerals and Waste Authority identified no minerals or waste constraint impacting the site. The Highways Authority stated that the Site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing subject to significant engineering works to achieve gradients between the highway and the site.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is below the required threshold for site size and the site promoter has not provided the capacity in the submission form.

Haddon

General comment: Objections include the inappropriate use of land for large warehouses, which would bring significant light and noise pollution, increased HGV traffic on unsuitable roads, and the destruction of agricultural land and local habitats. There are also concerns about the strain on the village's limited sewage system, the lack of adequate resident notification, and the potential for speculative warehouse development along the A1 corridor. Additionally, respondents highlight the need for traffic calming measures and better pedestrian pathways to ensure safety.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Haddon 1: Manor Farm Yard, Haddon Road, Haddon (failed fundamental constraints)

Main Issues Raised (6 responses)

All comments were opposed or unsure about development on this site. Issues raised include the impact on local wildlife, increased flooding risks due to poor drainage, and the strain on the village's limited sewage system. Additionally, the single-track lane providing access to the village lacks pedestrian pathways, posing safety risks, and the proposed development would exacerbate traffic congestion and parking problems. There is a minerals and/or waste constraint present. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is below the site size and number of homes threshold.

Haddon 2: Orchard Field Allotment, Haddon Road, Haddon (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (6 responses)

4 Further Issues and Options

All comments were opposed or unsure about development on this site. Issues raised include inadequate infrastructure, such as the lack of public transport and proper sewage systems, increased flooding risks, and safety issues due to narrow roads and hazardous corners. There is a minerals and/or waste constraint present. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access but access out of the red line boundary onto the Bridleway should be avoided.

Council Response

This site has not been selected as a draft allocation because it is located within an hamlet and therefore it was not tested in any of the Council's Growth Strategies due to the hamlets inherent lack of sustainability. The District's hamlets are classified together with the countryside, the Preferred Options Draft Local Plan to 2046 allows for only limited and specific opportunities where development in these locations would be acceptable.

Haddon 3: Land West of A1 and South of Haddon House, Haddon (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (24 responses)

The majority of respondents oppose the development, agreeing with the assessment that the site is unsuitable. Key concerns include the negative impact on the rural character and agricultural land, inadequate infrastructure, and environmental issues. Specific objections highlight the destruction of green spaces, increased traffic congestion, and the strain on local roads and public services. There are also concerns about the loss of wildlife habitats, increased pollution, and the potential for flooding due to poor drainage. Additionally, respondents emphasise the need to prioritize brownfield sites over greenfield sites for development and stress the importance of preserving the village's character and community identity. There is a mineral and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but no HCV access should be permitted from the west as the highway network is unsuitable and mitigation may be required for other vehicles subject to transport assessment. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. National Highways also commenting identifying the site's proximity to the strategic road network.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as due to the cumulative constraints relating to landscape, trees, flood risk, public rights of way and telegraph poles on the site making the potential developable area of the site very small for the proposed development. Also access is very constrained from Haddon Road and connection onto the A1(M) to serve a logistics development with largescale vehicles is currently inadequate without substantial upgrades.

Haddon 4: Land West of A1 (North of Peterborough Motorway Services) - Option B (smaller site), Haddon (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (68 responses)

All respondents were opposed or unsure about development. Comments raised concerns that development would cause significant landscape impact, result in the loss of productive farmland, result in adverse impact on the traffic network especially the A605, could exacerbate flooding issues, harm local wildlife habitats, increase pollution levels, harm the rural character of surrounding villages and is unsustainable due to the lack of existing infrastructure to support such a large-scale development. There is a mineral and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to the A605 to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and it is unclear how high quality walking, cycling, wheeling access can be achieved on the A605 across the A1 to link the development to Peterborough. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced. National Highways also commenting identifying the site's proximity to the strategic road network.

Comments suggested that warehouses, if required, should be located at major intersections of the National Highways Strategic Road Network, such as the intersection of the A14 and A1, rather than on greenfield sites.

Council Response

The site is 100% Flood Zone one and therefore a sequentially preferable site. The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The site was promoted variously for employment and for residential led development and tested for residential through the Strategic Transport Study. This identified that the site has poor accessibility for pedestrians in particular. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. The Highways Authority Raised significant concerns noting that the site is likely to require significant highways improvements due to scale, and that it is unclear how sustainable travel links can be achieved on the A605 across the A1 to link to Peterborough.

Haddon 5: Land at A1 West (South) - South of Peterborough Motorway Services, Haddon (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (60 responses)

All respondents were opposed or unsure about development. Comments raised concerns that development would cause significant landscape impact, result in the loss of productive farmland, result in adverse impact on the traffic network especially the A605, could exacerbate flooding issues, harm local wildlife habitats, increase pollution levels, harm the rural character of surrounding villages and is unsustainable due to the lack of existing infrastructure to support such a large-scale development. There is a mineral and/or waste constraint present. The Highways Authority states that access to the A605 is acceptable in principle, however it will be subject to technical assessment which may require additional land and an alternative point of access along the overall development site. It is unclear how high quality walking, cycling, wheeling access can be achieved either on the A605 or across the A1 to link the development to Peterborough. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. National Highways also commenting identifying the site's proximity to the strategic road network.

Comments suggested that warehouses, if required, should be located at major intersections of the National Highways Strategic Road Network, such as the intersection of the A14 and A1, rather than on greenfield sites.

Council Response

This site has been selected as a draft employment allocation (Draft Allocation Haddon 1) for B2 light industrial and B8 storage and distribution uses.

Concerns over landscape impact, loss of agricultural land and loss of habitats have been addressed through criteria requiring a strong landscaping scheme, a landscape and visual impact assessment, retention of trees and hedgerows and ecological survey and the phasing of development to ensure the irreversible loss of agricultural land if market conditions or demand change over time.

Flood risk will be addressed through the requirement to produce a flood risk assessment and detailed drainage strategy, and minerals and waste through criteria addressing its location within a Brick Clay Mineral Safeguarding Area. Noise and air quality assessments will be require and transport impact, access, active travel and public rights of way through specific criteria including the: need for safe and suitable means of access from the A605; assessment of transport impacts through a transport assessment; requirement for a sustainable transport network for vehicles, cyclists, pedestrians and public transport informed by a Travel Plan; and retention of and connections to public right of way

4 Further Issues and Options

Haddon 6: Land West of A1(M) between junctions 16 and 17, and South of Haddon Road (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (43 responses)

All respondents were opposed or unsure about development. Comments raised concerns that development would cause significant landscape impact, result in the loss of productive farmland, result in adverse impact on the traffic network especially the A605, could exacerbate flooding issues, harm local wildlife habitats, increase pollution levels, harm the rural character of surrounding villages and is unsustainable due to the lack of existing infrastructure to support such a large-scale development. There is a mineral and/or waste constraint present. The Highways Authority notes that the site does not link to the A605 and access via Folksworth to the south does not appear to be feasible for all forms of transport including vehicles, pedestrians and cyclists due to poor linkage and highway constraints. Morbourne Lane is not suitable for vehicular access or intensification of use. The site appears to have sufficient frontage to Haddon Road to achieve an access but no HCV access should be permitted from the west but it is unclear how this can be prevented. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced. National Highways also commenting identifying the site's proximity to the strategic road network.

Comments suggested that warehouses, if required, should be located at major intersections of the National Highways Strategic Road Network, such as the intersection of the A14 and A1, rather than on greenfield sites.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as the cumulative constraints relating to landscape, trees, flood risk, public rights of way and telegraph poles. The scale of the site is fundamentally unacceptable due to the urbanising impact it would have on the landscape. Also, access is very constrained from Haddon Road and connection onto the A1(M) to serve a logistics development with largescale vehicles is currently inadequate without substantial upgrades.

Holme

General comment: Comments were received predominantly opposes the developments within Holme, citing concerns about the impact on the A605 and surrounding settlements, flooding issues, lack of gas supply, full capacity of the village school, inadequate sewage treatment, and traffic congestion.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Holme 1: Land at 39 Station Road, Holme (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (12 responses)

The majority of respondents were opposed to development on this site. Key issues include the achievability of highway access, potential traffic increases on already busy roads, and the extension of the village in a way that does not relate well to the main residential concentration. There are also concerns about flooding, the lack of gas supply, the capacity of the local school, and the adequacy of the sewage treatment works. There is a mineral and/or waste constraint. The Highways Authority state the site appears to have sufficient frontage to the public highway to achieve an access although the existing access would however appear to be unsuitable for any shared use without improvement. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not appropriate for development due to the constraints arising from the achievability of highway access given the retention of an existing residential property and amenity impact on said property. The site would create an extension to the village with limited relationship to the main concentration of residential development within the village and therefore infrastructure and services.

Holme 2: Land at Church Street/ Short Drove, Holme (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (12 responses)

The majority of respondents were opposed to development on this site. Key issues include the potential extension of the village, which would alter its semi-rural character, and the need to protect the landscape and visual setting of the Great Fen. There are also concerns about surface flooding, inadequate sewage systems, and the capacity of local schools. Previous planning applications for the site have been refused due to its intrusive nature and impact on the open countryside. There is a mineral and/or waste constraint. The Highways Authority state the site appears to have sufficient frontage to the public highway to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council Response

This site has not been selected as a draft allocation. The site was not tested by the Council as part of the Growth Strategy Options due to the settlement's designation as a village. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being high risk from fluvial sources meaning it did not meet the criteria for consideration.

Holme 3: Yaxley Road, Holme (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (11 responses)

The majority of respondents were opposed to development on this site. Key issues include the potential extension of the village, which would alter its semi-rural character, and the need to protect the landscape and visual setting of the Great Fen. There are also concerns about surface flooding, inadequate sewage systems, and the capacity of local schools. There is a mineral and/or waste constraint. The Highways Authority state the site appears to have sufficient frontage on Yaxley Road (access onto Short Drove is likely to require significant highway improvements in relation to the scale of development proposed) and substantial local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter states that appropriate landscaping and low density design can be achieved to address the impact upon the Great Fen.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not appropriate for development due to the potential for significant landscape impact upon the Great Fen and being of a location and scale that could be out of context with Holme.

Holme 4: Land off Pingle Bank, Holme (failed fundamental constraints)

Main Issues Raised (9 responses)

4 Further Issues and Options

Many respondents oppose the development, agreeing with the assessment that the site is inappropriate due to concerns about flooding, traffic congestion, inadequate infrastructure, and the potential negative impact on the village's semi-rural character. Specific issues include the narrowness of Pingle Bank, the strain on local sewage treatment works, and the lack of gas supply. There is a waste constraint impacting the site. The Highways Authority state that while the site appears to have sufficient frontage to achieve an access, it appears unlikely that visibility appropriate to the posted speed limit could be achieved to the south from any point along the frontage. No details of the anticipated number of dwellings have been indicated, however local infrastructure improvements would likely be required in the form of localised road widening and significant improvements to walking/cycling connectivity to local centres. Depending upon the scale of the development the suitability of the approach road network would also need to be assessed in relation to the suitability to cater the increase in traffic.

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site failed a fundamental constraint because the site is within 400m of a water recycling area and wholly within flood zone 3b. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity. Site specific flood risk was submitted for the land north of the site in 2017 however evidence from recent flood mapping puts the site is in flood zone 3a and therefore will not proceed to the next stage of assessments.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is within 400m of a water recycling area and wholly within flood zone 3b. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity. Updated SFRA mapping evidence demonstrates that the site is in flood zone 3a and therefore will not proceed to the next stage of assessments.

Holme 5: Land to North of Station Road, Holme (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (9 responses)

There were mixed responses to development on this site. Comments include concerns about increased traffic and potential accidents due to the site's proximity to a busy T-junction and the East Coast Mainline Railway crossing. There was some support for modest retail development due to the lack of local shops, while others highlight issues such as insufficient access, speeding, and the need for green space for a play park. Challenges related to public transport, primary education capacity, and infrastructure improvements were also highlighted. There is a mineral and/or waste constraint. The Highways Authority state the site appears to have sufficient frontage to achieve an access but may require highway improvements in relation to the scale of the proposal. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The suitability of the approach road network will need to be assessed in relation to the ability to cater for higher volumes of traffic.

Council Response

This site has been selected as a draft mixed use allocation **(**Draft Allocation Holme 1**)** for about 50 homes and 0.3 ha for local retail and health uses within the local community use class F2 or within the commercial, business or services use class E(e). Concerns relating to transport and access have been addressed through criteria requiring provision of safe access and a proportionate transport assessment that assesses the impact of traffic flow, movement and parking generated by any retail or health uses and the provision of active travel routes within and, where appropriate outside, the site to improve integration, and enable the wider community to access the health and retail uses evidenced by a travel plan. Infrastructure requirements such as green space and play parks will be guided by criteria on design and landscaping and other policies within the local plan.

Holme 6: South of Station Road, Holme (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (10 responses)

All responses were opposed or unsure towards the development. Comments raise concerns about the adverse impact on the landscape and village character, significant standing water during heavy rain, the village's lack of infrastructure to support a significant increase in population, flooding, lack of gas supply, and inadequate sewage treatment. There is a mineral and/or waste constraint. The Highways Authority state the site appears to have sufficient frontage to achieve an access but may require highway improvements in relation to the scale of the proposal. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not considered to be appropriate for development due to the potential adverse impact on the landscape and village character of Holme.

Sibson-cum-Stibbington

Sibson-cum-Stibbington 1: Sibson Garden Community (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (243 responses)

Almost all responses opposed the development, apart form 3 who supported it an 5 who were unsure. Major concerns include increased traffic, insufficient infrastructure, environmental impact, and community opposition. Many comments raised concerns how the development would significantly alter the rural character, increase flood risk, and strain local services and utilities. There are strong objections from local residents due to the impact on quality of life, heritage sites, and the feasibility of realigning the A1. Alternative suggestions include focusing on brownfield sites, smaller-scale developments, and ensuring infrastructure improvements before construction.

The Highway Authority state that the site appears to have sufficient frontage and is likely to be able achieve access but is likely to require significant highway improvements in relation to the scale of development proposed. At least two points of access will be required. The site is noted to join Elton Road at its southern extent - this road would not be suitable for connection and any intensification of use without significant improvement; it is however unclear whether suitable improvement could be achieved along its entire length within existing highway or land in the applicant's control. This road also joins with the A1 at its northern extent; the existing junction is again unlikely to be suitable without significant improvement and would need to be discussed with National Highway. Local infrastructure improvements would be required in the form of high-quality walking/cycling connectivity to link the site to wider centres of population. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced including connectivity to the wider Right of Way/highway network. Early dialogue with the Asset Information Definitive Mapping team is encouraged with regard to the alignment of the existing footways and bridleway. The suitability of the approach road network will need to be assessed in relation to the ability to cater for higher volumes of traffic.

The Education Authority state that for site of this size the following demands on education would be:

- Early years provision - generate demand for an additional 863 children aged 0-3. It is expected that all new primary schools include early years facilities, and that additional sites are marketed for full day care provision.
- Primary provision - generate demand for an additional 1,150 primary school places equating to approximately 6FE to be provided as two 3FE schools. This would require a land allocation of 6ha. The mitigation proposed would only accommodate up to 1,050 primary school places and is therefore insufficient to meet the forecast demand.

4 Further Issues and Options

- Secondary provision - generate demand for an additional 719 secondary school places equating to approximately 5FE which could be provided as one 5FE school. This would require a land allocation of 5.4ha. The mitigation proposed would accommodate up to 900 secondary school places and is therefore sufficient to meet the forecast demand.
- SEND provision - generate demand for approximately 24 places for children with SEND. It is likely that a contribution would be requested towards existing provision within the county.

The site promoter also submitted comments. They reiterate the site's availability for development and that it is in a strategic location to provide a new community, diversify housing supply, economic opportunities, new green infrastructure including connections to the Nene Valley and is well-connected to the A1 and A47, supporting enhanced connectivity to nearby settlements like Peterborough. They assert that there are no significant planning or other constraints that preclude the delivery of the entire masterplan. The site is in multiple ownership, but agreements are in place to promote the land for development. They consider the site has capacity to deliver 4,500 homes even when addressing constraints such as the oil pipeline and overhead power lines. They consider the proposal is sustainable, with no significant environmental impacts and major positive social and economic impacts.

Council Response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. There is a significant hazard posed by the ordinary watercourses culverted underneath the A1. The site was also scrutinised through the Strategic Transport Study and Viability Assessments which identified that it has poor accessibility and that the mitigation required to the A1 to provide access would not be viable for the proposed development. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated. . The Highways Agency also raised significant concerns saying that the site is likely to require significant highways improvements due to scale and that Elton Road is not suitable for connection or intensification without significant improvement. They noted that it is unclear whether suitable improvement could be achieved along its entire length within existing highway or land in the applicant's control. They continued that, this road also joins with the A1 at its northern extent; the existing junction is again unlikely to be suitable without significant improvement and would need to be discussed with National Highway. As there are limited sustainable connections to Peterborough, given the remote location of this site and existing infrastructure crossing the A1, it is unclear how this would be achieved. The Whole Plan Viability Assessment also demonstrates the site to be the most unviable of all sites put forward.

Stilton

General comment: Generally, there is significant opposition to proposed developments in Stilton, with respondents expressing concerns about traffic and parking problems, inadequate public services, and strained drainage and sewerage systems, the loss of green spaces and biodiversity, harm to Stilton's village character and historical significance, flooding risk and opposition to commercial developments near the village entrance.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Stilton 1: Goldthorns, Stilton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (20 responses)

The majority of respondents are opposed to the development of this site. Key issues include flooding problems, strained drainage and sewerage systems, increased traffic congestion, limited capacity of local schools and medical services, impact on local wildlife, impact on heritage and impair the village's character and historical

significance. Access to the site is also a significant concern, with inadequate current access points leading to safety hazards. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Caldecote Road and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 2 and 3. Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to to local services and facilities whilst this site is located within open countryside.

Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (14 responses)

There were mixed responses to this site. Many respondents oppose the development due to concerns about flooding, access, inadequate infrastructure, increased traffic congestion, the negative impact on local wildlife and green spaces and potential impact on heritage assets. However, some respondents support a smaller development (including the Parish Council), provided it includes measures to address traffic, safety, and infrastructure concerns, and refurbishes the Stilton Cheese building to preserve the village's heritage. It is impacted by a minerals and/or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto North Road and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has been selected as a draft residential allocation **(**Draft Allocation Stilton 1) for about 8 homes. Flood risk concerns have been addressed through criteria requiring a flood risk assessment and a detailed drainage strategy taking into residual risk as a result of culverts, and modelling of the ordinary watercourse to evaluate current and future flood and residual risk. Traffic, safety and access have been addressed by asking that the development provides safe and suitable vehicular and pedestrian access; and heritage through consideration and mitigation though design informed by a heritage impact assessment. Public rights of way are not present within the site. A specific criteria on the Minerals Safeguarded Area is included.

Stilton 3: Land off High Street, Stilton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (23 responses)

There were mixed responses to this site but most were opposed. Issues include flooding problems, strained drainage and sewerage systems, increased traffic congestion, inadequate infrastructure and negative impacts on wildlife. Additionally, the site is adjacent to the A1(M), leading to concerns about noise, air, and light pollution and access issues are also significant, with inadequate current access points leading to safety hazards. Some respondents suggest that the land would be better used as allotments to benefit the community. It is impacted by a minerals and/or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

4 Further Issues and Options

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 2 and 3. Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to to local services and facilities whilst this site is located within open countryside.

Stilton 4: Land off Caldecote Road, Stilton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (39 responses)

The majority of respondents were opposed to developing this site. Issues include flooding problems, strained drainage and sewerage systems, access, increased traffic congestion, inadequate infrastructure and negative impacts on wildlife. Some comments raised concerns that the site is near to Folksworth, raising concerns about the potential merging of the two villages and the loss of their distinct identities. It is impacted by a minerals and/or waste constraint. The Highways Authority states that the site does not appear to have sufficient frontage to the public highway to achieve an access.

The site promoter commented and considers that the developable area should instead be 60% to reflect the edge of settlement location and existing development on two sides. This would raise the capacity to approximately 120 dwellings.

Council Response

This site has not been selected as a draft allocation. The site was not tested by the Council as part of the growth strategies as the Cambridgeshire County Council Highways raised concerns over access to the public highway. Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to to local services and facilities whilst this site is located within open countryside.

Stilton 5: Land rear of 16 to 58 North Street, Stilton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (17 responses)

The majority of respondents were opposed to developing this site. Issues include flooding problems, strained drainage and sewerage systems, access, increased traffic congestion, inadequate infrastructure and negative impacts on wildlife. Additionally, the site is adjacent to the A1(M), leading to concerns about noise, air, and light pollution. Some respondents suggest that the land would be better used for community benefits such as allotments, a new cemetery, or business premises with on-site parking. It is impacted by a minerals and/or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has been selected as a draft residential allocation **(**Draft Allocation Stilton 2**)** for about 55 homes. Flood risk concerns have been addressed through criteria requiring a flood risk assessment and detailed drainage strategy, taking into account residual risk from culverts, modelling of the unnamed ordinary watercourse to evaluate current and future fluvial and surface water flood risk. A criteria on waste water flows is also included.

Traffic, safety and access have been addressed by asking that the development provides safe and suitable vehicular and pedestrian access; and the public right of way should be integrated with active travel routes. Retention of existing boundary trees and planting, is required to assist with biodiversity, and noise, light and air quality mitigation measures in relation to the A1. The site was put forward for residential use and is not identified in the Land Availability Assessment as available for alternative uses.

Stilton 6: Land to the South and West of 61 Church Street, Stilton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (30 responses)

Most respondents were opposed to development on this site. Issues include flooding problems, strained drainage and sewerage systems, access, increased traffic congestion, inadequate infrastructure and negative impacts on wildlife. Some comments raised concerns that the site is near to Folksworth, raising concerns about the potential merging of the two villages and the loss of their distinct identities. It is impacted by a minerals and/or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto the Church Street but some highway improvements will be required to accommodate two way traffic. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

The landowner's comments reiterate the site's availability and that the dwelling on the site could either be retained or demolished to improve access and screening and the right of way could be incorporated into public open spaces for residents. They confirm a surface water mitigation strategy will be developed and that development could be focused on the eastern half with the western half providing open green space and biodiversity net gain.

Council Response

This site has not been selected as a draft allocation. The site was not tested by the Council as part of the growth strategies. Sites 'Stilton 2: Land to the rear of The Stilton Cheese, Inn, Stilton' and 'Stilton 5: Land rear of 16 to 58 North Street, Stilton' were selected as draft allocations for the Preferred Options Draft Local Plan to 2046 as they were considered to be locationally preferable due to being infill development within the built area of Stilton and in proximity to to local services and facilities whilst this site is located within open countryside.

Yaxley

General comment: Many residents strongly oppose further development in Yaxley due to concerns about local infrastructure, environmental impact, and quality of life. Key issues include the strain on medical services, increased traffic, overcrowded schools, and flooding risks. Residents also worry about the loss of agricultural land and the negative effects on local wildlife. Specific objections are raised for various sites, emphasizing that Yaxley is already overdeveloped and cannot sustain additional growth without significant negative consequences.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Yaxley 1: Eagle Business Park Phase 3, Yaxley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (32 responses)

The majority of respondents were opposed to development on this site but a handful were supportive. Those that supported the development agreed with the assessment (including the Parish Council) and highlight the potential benefits to the village but also identified the need for improved traffic management and mitigation on environmental considerations such as sustainable drainage systems and landscaping. Those that were opposed the development citied concerns about increased traffic, congestion, and the impact on local infrastructure, including roads and drainage systems. There are significant worries about the environmental impact and the negative effects on local

wildlife and biodiversity as well as the site's Fen edge location. Flooding is a major concern, the LLFA highlight that further detailed surface water management options will be required. Additionally, the impact on the local community, including noise and light pollution, and the potential for the village to lose its character and become overdeveloped, are also noted. There is a mineral and/or waste constraint present. The Highway Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Broadway/B1091 in accordance and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has been selected as a draft employment allocation **(**Draft Allocation Yaxley 1**)** for commercial, business, industrial and storage and distribution uses within use classes E(g)(i-iii), B2 and B8.

The site has existing access from the public highway but traffic concerns will be addressed through the need to provide highway and active travel infrastructure that safely connect the scheme into the existing Eagle Business Park at Falcon Way. The retention of the public right of way through the site, either on the current alignment or on an enhanced route is required. Provision of a strong landscaping buffer on the southern and north eastern boundaries will be required to minimise the visual impact of the scheme on the adjoining landscape, and the Great Fen.

Concerns regarding flood risk are addressed through criteria including the sequential location of development within flood zone 1, maintenance strips for Pig Water Drain and provision of a flood risk assessment and detailed drainage strategy, taking into account groundwater, modelling of the unnamed ordinary watercourse and Pig Water ordinary watercourse. Noise and light pollution is to be addressed through the expansion of the wooded buffer on the western edge of the site to provide acoustic screening from the East Coast mainline railway.

Yaxley 2: Land South West of Yaxley and East of A1(M) near Norman Cross (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (44 responses)

The majority of respondents do not support the development of this site, agreeing with the assessment that it is inappropriate for development due to significant adverse impacts on the fenland landscape, biodiversity, heritage assets, the setting of the Great Fen, and the character and setting of Yaxley. There are substantial concerns about flooding, with several comments noting that the area is prone to flooding and that further development would exacerbate this issue. The LLFA state that the high risk of surface water must be taken into account. Respondents highlight that existing drainage systems are already under pressure, and additional development could lead to more frequent and severe flooding. Increased traffic and congestion are major concerns, with respondents noting that the local roads are already struggling to cope with current traffic levels. There is a mineral and/or waste constraint present. The Highway Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto West End or London Road in accordance and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced. National Highways notes that the proposal includes an access to roundabout, which has some of National Highways land but is not part of the Strategic Road Network.

The site promoter has stated that the applicant has undertaken extensive design work to mitigate adverse impact on the Great Fen landscape and Yaxley's character from the outset. A Site Constraints Map was used to optimize the layout, placing smaller units near Yaxley with a buffer of vegetation and larger units closer to the A1 to minimize traffic impact on the village. The development aims to improve local permeability with strong links to the Great Fens, and the design includes measures to visually separate the built form from the wider landscape using trees and a bund. Additionally, the Vision Document illustrates how the development would integrate with surrounding settlements, providing suitable infill for growth. The Landscape and Visual Assessment (LVA) concludes that the proposed scheme would not detrimentally impact the Great Fen's character and landscape setting, with visibility varying from no views to longer-range views, softened by rendered facades and planting. They also reiterate the potential economic growth and job creation potential of the site.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not considered to be appropriate for development due to the likely significant adverse impacts on the fenland landscape and the setting of the Great Fen. It will also fundamentally and detrimentally impact the character and setting of Yaxley.

Yaxley 3: Land South of Main Street, Yaxley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (55 responses)

The majority of respondents do not support the development of this site. Many comments highlight severe flooding problems in the area, with the local pumping station unable to cope with the current water volume. Comments state the site is frequently waterlogged, and there are concerns about raw sewage overflow during heavy rains. The LLFA consider this site may be unsuitable for the proposed development due to high surface water flood risk. There were also concerns regarding the existing infrastructure, including roads, schools, and medical services, is already under significant strain. Respondents believe that additional development would further overwhelm these services. Traffic congestion is a major issue, with Main Street already experiencing heavy traffic and parking problems. Respondents state development would destroy one of the last viewing points across the fens and negatively impact local wildlife. The historical and agricultural significance of the land is emphasized, with many respondents advocating for its preservation. One respondent stated that the site could provide opportunity for low density housing along the frontage in keeping with the wider character of the area. There is a mineral and/or waste constraint present. The Highway Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Main Street or Great Drove in accordance and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. Significant concerns were raised at local exhibitions and in response to the consultation regarding significant flooding and drainage issues being experienced across Yaxley. It was therefore deemed inappropriate to carry forward any residential led allocations at this time.

Yaxley 4: Folly Farm, London Road, Yaxley (Council conclusion pre-consultation - only appropriate for open space uses and BNG)

Main Issues Raised (33 responses)

The majority of respondents do not support the development of this site, agreeing with the assessment that it is inappropriate for built development instead supporting its use for open space and BNG opportunities. The proposed development's proximity to the Great Haddon development and the potential for coalescence between Yaxley and Great Haddon are critical issues. The overall sentiment among respondents is that Yaxley is already overdeveloped and cannot sustain further growth without significant negative impacts on the community and environment. Access to the site is a significant concern, with comments noting that the current access points are inadequate and would lead to increased traffic congestion and safety hazards. There are substantial concerns about flooding, with several comments noting that the area is prone to flooding and that further development would exacerbate this issue and that the existing drainage systems are already under pressure. The LLFA highlight further detailed consideration of surface water management options will be required. There is a mineral and/or waste constraint present. The Highway Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto London Road in accordance and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

4 Further Issues and Options

The site promoter disagreed with the outcome that the site could only be suitable for open space and BNG uses. They state that if residential development does not occur, the equestrian use is likely to continue. They state the site does not contain any agricultural structures and is entirely previously developed land. They consider the assessments should be revised to indicate that the land is potentially suitable for development with no or minor constraints, pending detailed sustainability appraisals and technical assessments. All relevant planning application documents, including a letter addressing perceived coalescence, have been submitted. The Council should perform delivery calculations using information from previous representations.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for the proposed development for housing through the Council's Land Availability Assessment as it was considered important to support the proposed neighbouring land uses and to reduce coalescence between Yaxley and Great Haddon. The site progressed to sustainability appraisal on the basis of assessment as open space and biodiversity net gain opportunities, where it was considered suitable. However, the land was not put forward for this use and therefore development as open space was not considered achievable.

Yaxley 5: Land off The Wykes, accessed from West End, Yaxley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (41 responses)

The majority of respondents do not support the development of this site. Access to the site is a significant concern, with comments noting that the current access points are inadequate and would lead to increased traffic congestion and safety hazards. Many comments highlight severe flooding problems in the area, with the local drainage systems already under pressure. The LLFA consider this site may be unsuitable for the proposed development due to high surface water flood risk. Increased traffic and congestion are major concerns, with respondents noting that the local roads are already struggling to cope with current traffic levels. The impact on local infrastructure, including schools and medical services, is also a significant issue, with many comments highlighting that these services are already at or near capacity. The proposed development would negatively impact local wildlife and the local character of the area as well as potential urbanising impact. There is a mineral and/or waste constraint present. The Highway Authority states that the site does not appear to have sufficient frontage to the public highway to achieve an access. It is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

The landowner commented wishing to clarify that they have a formal right of access to the field via West End, which is regularly used by large agricultural machinery and motor vehicles. The gate is locked only to prevent unwanted vehicles from using the track. They state development could be arranged in a linear row to avoid high or medium risk areas. Further details can be provided through a Drainage Strategy if requested. Concerns about the site's visibility from the Great Fen are addressed by noting that the site is well enclosed by existing planting, which will be enhanced in any future proposal.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the cumulative constraints impacting the site and the uncertainty of the achievability of access to the site.

Yaxley 6: Land to the rear of St Peter's Church, Yaxley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (39 responses)

All but one comment was opposed to development on the site (one was unsure). Many comments highlight the site's proximity to St. Peter's Church, a Grade 1 listed building, and its location within a conservation area. There are substantial concerns about flooding, with several comments noting that the area is prone to flooding and that further development would exacerbate this issue. The LLFA consider this site may be unsuitable for the proposed

development due to high surface water flood risk. The impact on local infrastructure, including schools and medical services, is also a significant issue, with many comments highlighting that these services are already at or near capacity. The proposed development would negatively impact local wildlife. Access to the site is a significant concern, with comments noting that the current access points are inadequate and would lead to increased traffic congestion and safety hazards. There is a mineral and/or waste constraint present. The Highway Authority states that the site does not appear to have sufficient frontage to the public highway to achieve an access.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is inappropriate for built development due to the likely significant impact on heritage assets and on the landscape which would fundamentally impact the character by having an urbanising effect on Yaxley on its western side.

Yaxley 7: Land South of 25 West End, Yaxley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (59 responses)

The majority of comments were opposed to development on this site. There are substantial concerns about the impact on heritage assets and also flooding, with several comments noting that the area is prone to flooding and that further development would exacerbate this issue. The LLFA consider this site may be unsuitable for the proposed development due to high surface water flood risk. The impact on local infrastructure, including schools and medical services, is also a significant issue, with many comments highlighting that these services are already at or near capacity. The proposed development would negatively impact local wildlife. Access to the site is a significant concern, with comments noting that the current access points are inadequate and would lead to increased traffic congestion and safety hazards. There is a mineral and/or waste constraint present. The Highway Authority states that the site does not appear to have sufficient frontage to the public highway to achieve an access. There is a mineral and/or waste constraint present. The Highway Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto West End in accordance and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council Response

This site has not been selected as a draft allocation. Significant concerns were raised at local exhibitions and in response to the consultation regarding significant flooding and drainage issues being experienced across Yaxley. It was therefore deemed inappropriate to carry forward any residential led allocations at this time.

Area 2 - North East Huntingdonshire

Broughton

Broughton1: Land off Causeway Road, Broughton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (58 responses)

The majority of responses were opposed to development on this site. Concerns raised primarily due to its location within the Conservation Area of Broughton and the potential negative impacts on the village's character, biodiversity and environment including impacting listed buildings. Many raised that the site contains a Wellingtonia/Sequoia Redwood tree, likely dating to the 19th century. Flooding was raised highlighting that Causeway Road and Bridge Road are prone to regular and impactful flooding with references to past flood events, including the severe flooding in December 2020. The cumulative impact of multiple developments along Bury Brook is also a concern, as it could significantly increase flood risk. The LLFA consider this site may be unsuitable for the proposed development due to previously reported local flood risk and high surface water flood risk and pre-application advice is

recommended. Another concern is that that Broughton lacks public transport, shops, and schools within walking distance, making residents reliant on car use and the roads are narrow. There is a consensus that the village needs affordable homes for younger people, but this site is not appropriate for development. The Highways Authority state the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing subject to significant engineering works to achieve gradients between the highway and the site. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation. The site was not tested by the Council as part of the Growth Strategy Options due to the settlement's designation as a village. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as not being 100% within flood zone 1 meaning it did not meet the criteria for consideration.

Bury

General comment: General issues raised include overstretched local services and infrastructure, with new housing developments potentially exacerbating the situation, flood risk, preference for developing brownfield sites such as the old RAF Upwood over green agricultural land, and there are concerns about insufficient capacity in local schools and early years provision to accommodate the increase in children from new developments without mitigation.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Bury 1: Bury Industrial Estate, Old Station Road, Bury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

There was a mixed response to this site. Key concerns include inadequate parking, high surface water flood risk, and potential over-development leading to increased traffic, noise, and strain on local services. Bury Parish Council supports the development, emphasising the need for sustainable planning, flood risk mitigation, and site decontamination. The LLFA recommends pre-application advice to assess surface water flood risk. The Highways Authority state the site appears to have sufficient frontage to the public highway and already has an access which looks to be in a suitable position, however some amendment of the junction radii would be required as it is proposed for residential use rather than the existing commercial use.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Bury 1) for about 30 homes. Concerns relating to transport and traffic have been addressed through criterion requiring amendment or replacement of the existing junction with Old Station Road. Parking would be addressed through other policies in the local plan such as 'Parking provision and vehicle movement'. The allocation requires a flood risk assessment and a detailed drainage strategy, and modelling of the High Lode watercourse to evaluate current and future flood risk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Bury 2: Land off Cheveril Lane, Bury (Council conclusion pre-consultation - may be appropriate for BNG)

Main Issues Raised (4 responses)

There was support for the site being used for BNG uses. The Parish Council supports this and considers the site could assist in enhancing the rural edge and character of this part of Bury as well as providing some linkages to other habitats enhancing connectivity. No minerals or waste constraint present.

Council response

This site has been selected as a draft open space allocation (Draft Allocation Bury 1) for open space and land to safeguard against flooding a layout plan will be required to identify areas of open space, biodiversity and flood risk to assist in enhancing the rural edge and character of the area.

Bury 3: Land North of High Street and East of Bury Road, Bury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

There were mixed responses to this site. The LLFA identify medium surface water flood risk considering the site potentially unsuitable for development. Bury Parish Council objects to the development, citing conflicts with the Bury Neighbourhood Plan, which aims to prevent the coalescence of Bury and Ramsey and protect the area's landscape and heritage. There are no minerals or waste constraints impacting the site. The Highways Authority state that the site appears to have sufficient frontage to achieve an access but is likely to require highway improvements in relation to the scale of development proposed.

The site promoter argues that the site has limited physical constraints, is in flood zone 1, and proposes sustainable urban drainage systems to mitigate flood risk. They have prepared a concept plan to address issues. The site is also noted for its sustainable location, within walking distance of amenities in Bury and Ramsey, and the potential to encourage active travel.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site forms the southern third of the protected settlement break designated in the Bury Neighbourhood Plan. The purpose of this is to prevent the spatial, physical and visual coalescence of Bury with Ramsey. The site while not extending beyond the existing building line on its western and southern sides would detrimentally start to erode the settlement break and would further the sense of coalescence between the two settlements and therefore be in direct conflict with the neighbourhood plan policy.

Bury 4: Land East of Bury Road, Bury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

There were mixed responses to this site. Bury Parish Council objects to the development due to its conflict with the Bury Neighbourhood Plan, which aims to prevent the coalescence of Bury and Ramsey and protect the area's landscape and heritage. Concerns were raised regarding traffic and lack of infrastructure to accommodate further development within Bury. The LLFA identify low surface water flood risk considering the site potentially unsuitable for development. There are no minerals or waste constraints impacting the site. The Highways Authority state the site appears to have insufficient frontage to achieve an access from the highway based on the red line. It is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter argues that the site has limited physical constraints, is in flood zone 1, and proposes sustainable urban drainage systems to mitigate flood risk. They have prepared a concept plan to address issues. The site is also noted for its sustainable location, within walking distance of amenities in Bury and Ramsey, and the potential to encourage active travel.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site is identified in the Bury Neighbourhood Plan as a protected settlement break to prevent the coalescence of Bury with Ramsey. The scale of the site with its edges adjoining built development on three sites would further the sense of coalescence between the two settlements and therefore be in direct conflict with the neighbourhood plan policy.

Bury 5: Land off Brookfield Way, Bury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to this site. The LLFA identify high surface water flood risk considering the site potentially unsuitable for development. Bury Parish Council objects to the development due to flood risk and potential erosion of the rural edge of Bury. Some comments express concerns about over-development in Ramsey and Bury, leading to traffic congestion and strained infrastructure. There are no minerals or waste constraints impacting the site. The Highways Authority state the site appears to have no/inadequate frontage to achieve an access from the highway based on the red line. It is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter argues that the site has limited physical constraints, is in flood zone 1, and proposes sustainable urban drainage systems to mitigate flood risk. They have prepared a concept plan to address issues. The site is also noted for its sustainable location, within walking distance of amenities in Bury and Ramsey, and the potential to encourage active travel.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the substantial risk of flooding now and in the future accounting for climate change. Development would also further erode the rural edge of Bury.

Bury 6: Land West of Warboys Road, Bury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

Most comments were opposed or unsure about development on this site. The LLFA identify there is a high risk from surface water flooding potentially making the site unsuitable for development, pre-application advice is recommended. Bury Parish Council objects to the development due to its location within a conservation area, proximity to several listed buildings, and potential harm to the rural character and heritage assets. Concerns about over-development, traffic congestion, and strained infrastructure are also mentioned. Conversely, some observations suggest that with significant highway improvements and sustainable urban drainage systems, the site could be considered for limited development. There are no minerals or waste constraints impacting the site. The Highways Authority identify that the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and site would not be acceptable for a development of this scale without significant improvements to the footway infrastructure between the site and Bury.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the substantial risk of flooding now and in the future accounting for climate change. Development would also likely harm the character and rural nature of this part of the settlement as well as adversely impact heritage assets.

Bury 7: RAF Upwood - Phase 3, Bury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (12 responses)

Half of respondents were supportive of this site. Key concerns include insufficient local employment, increased traffic, erosion of the rural character of Bury, over development, inadequate public transport, and the need for significant infrastructure improvements to support safe access to schools and mitigate traffic congestion with some comments emphasising the need for developer contributions to expand local schools and services. The LLFA considers the site potentially unsuitable due to previously reported flood risk, pre-application advice is recommended. Bury Parish Council supports the development, provided it includes green infrastructure, landscaping, and integration with previous phases of development. There are no minerals and waste constraints impacting the site. The Highways Authority stated that on the basis of the red line there is no/inadequate connection to the public highway but on the basis of the submission documents which identify potential frontage acquisition an access may be feasible in the fullness of time subject to detailed design.

The site promoter submitted a vision document setting out the benefits of the proposal as well as how constraint swill be overcome and how the proposal will be integrated into the wider development and surrounding area.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Bury 3) for about 170 homes and about 11.5ha of land for green infrastructure to include a mixture of strategic green space, amenity open space, play space, accessible natural green space and flood mitigation. The site will allow for additional employment opportunities in the local area. Concerns relating to traffic and access have been have been addressed through criteria requiring provision of a safe and suitable means of access and integration with approved development RAF Upwood including an assessment of transport impacts through a transport assessment and travel plan alongside active travel routes to link with existing and proposed networks and local services and facilities. A strong landscaping scheme informed by a landscape and visual impact assessment and retention of trees and hedgerows will help to minimise impact on the rural character of Bury. Flood risk will be addressed through the requirement to provide a flood risk assessment and detailed drainage strategy to evaluate current and future surface water flood risk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Pidley-cum-Fenton

General comment: The Education Authority has commented stating that data suggests that mitigation will be required at primary and secondary school providers to accommodate development as Somersham Primary School and Abbey College are currently offering the maximum number of places allowed by their physical capacity.

Council response: An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Pidley-cum-Fenton 1: Land South at Manor Farm, Fenton Road, Fenton (failed fundamental constraint)

Main Issues Raised (4 responses)

There were mixed responses to this site. Key issues include the inadequacy of the current sewage system, which frequently overflows and would require major investment to support new development, the condition of local roads, traffic, limited active and sustainable transport links and limited village amenities. Some comments suggest that if the properties were bungalows with small gardens and improved drainage, the development might be acceptable. There are no minerals and waste constraints impacting the site. The Highways Authority states there appears to have insufficient frontage to the public highway to achieve an access in accordance with requirements for anything other than a single dwelling.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is below 0.25ha and is not considered capable of providing 5 homes considering the form of the adjoining developments and the very rural location of the site. Therefore the site did not pass the minimum site size threshold for detailed assessment.

4 Further Issues and Options

Pidley-cum-Fenton 2: Land End Farm, Pidley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

There were mixed responses to this site. Comments raised concerns regarding the inadequacy of local infrastructure including sewage systems and mobile reception, poor road conditions, limited public transport and lack of amenities as well as potential environmental impact and need for appropriate housing types. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity. There are no minerals and waste constraints impacting the site.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Pidley-cum-Fenton 3: Old Football Field, Warboys Road, Pidley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to this site. Some concerns were raised regarding access and egress form the site along Warboys Road as well as the capacity in the sewage system to accommodate new development, poor road conditions and the potential impact on the environment were also raised. One comment stated a preference that new housing on the site should be affordable an for local families. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity. There are no minerals and waste constraints impacting the site.

The site promoter states flood mitigation and landscaping can be provided on site and are supportive of the density set out in the LAA.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Pidley-cum-Fenton 4: Bittens Field, North of Warboys Road, Pidley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

There were mixed responses to this site. Some concerns were raised regarding access and egress form the site along Warboys Road as well as the capacity in the sewage system to accommodate new development, poor road conditions, flood risk and the potential impact on the environment were also raised. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity. It is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. There are no minerals and waste constraints impacting the site.

The site promoter supports the assessment proposed density. They state flood mitigation can be accommodated on site, trees and hedgerows cans be retained and development can be fully integrated with public right of way.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Pidley-cum-Fenton 5: Land North of Oldhurst Road, Pidley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to this site. Some concerns were raised regarding access and egress form the site along Warboys Road as well as the capacity in the sewage system to accommodate new development, poor road conditions, water supply, flood risk and the potential impact on the environment were also raised. The Highways Authority states the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing for anything other than a single dwelling. There are no minerals and waste constraints impacting the site. Two comments raised concern that part of their property appears to be included within the proposal.

The site promoter supports the assessment proposed density and supports self and custom build potential. They it is of sufficient size for onsite mitigation for flooding, landscaping and BNG.

Council response

This site has not been selected as a draft allocation. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal originally found that the site may be appropriate for development. Comments from Cambridgeshire Highways flagged that the site appears to have insufficient frontage to the public highway to achieve an access for anything other than a single dwelling. Therefore the site was not taken forward as part of the growth strategy options testing, alternative sites Pidley 2, 3 and 4 were.

Pidley-cum-Fenton 6: Gloucester Barn, Fen Road, Pidley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to this site. Some concerns were raised regarding access and egress form the site as well as the capacity in the sewage system to accommodate new development, poor road conditions, water supply, flood risk and the potential impact on the environment were also raised. The Highways Authority states the site appears to have sufficient frontage to achieve an access (subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments) and it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

The site promoter reiterates that they consider the site to be suitable site for custom or self-build plots.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is in a location that could not be effectively masterplanned to become part of the existing community. It is also noted that the site would create an extension to the village with limited relationship to the main concentration of residential development within the village and it has the ability to substantially impact the landscape

and biodiversity and ecology through the removal of extensive tree coverage. Development would also require the assembly of land in multiple uses (garden land, employment and greenfield), however the site promoter notes this is in single ownership.

Ramsey

General comment: Comments raised concerns regarding the impact on infrastructure, such as the capacity of schools, doctors' surgeries, and dental services, which are already strained. There are also issues with road safety, particularly the condition and capacity of roads like Biggin Lane and the B1040. Additionally, there are objections to building on prime agricultural land and floodplains, with suggestions to use car parks and develop green energy spaces instead. Responses highlights the need for significant improvements in infrastructure before any further development, including better transport links, more local jobs, and facilities for young people. Mitigation will be required at primary and secondary school providers to accommodate development.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Ramsey 1: Land South of Biggin Lane, Ramsey (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

There were mixed responses to this site. Some key concerns were regarding surface water flood risk, road safety issues on Biggin Lane, and the impact of over-development on local infrastructure and services. There are also objections to the site's agricultural classification and its potential adverse impact on the landscape and townscape character of Ramsey which some feel have already experienced over development. The LLFA consider this site may be unsuitable for the proposed development due to previously reported local flood risk. No minerals or waste constraints present. The Highways Authority states that on the basis of the red line there is no/inadequate connection to the public highway but if there is potential frontage acquisition an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter disagrees with the assessment and asserts that the site should not be dismissed based on landscape impact. They emphasises the site's accessibility and lack of significant constraints, arguing that the landscape constraints and opportunities can be addressed through masterplanning.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the likely adverse impact on the landscape and townscape character of Ramsey

Ramsey 2: Land to the West of Longland Crescent, Ramsey (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

The responses were mixed. The LLFA states there is medium surface water flood risk and that this site may be unsuitable for the proposed development. There is no mineral or waste constraints present. There were also concerns about over-development in Ramsey and Bury, impacting local infrastructure and quality of life. The Highways Authority states that on the basis of the red line there is no/inadequate connection to the public highway but there may the potential frontage acquisition an access may be feasible in the fullness of time subject to detailed

design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as development of the site would continue the urbanising impact of development on this part of the countryside and risk the further sense of coalescence between Ramsey and Bury and therefore adversely impact landscape and townscape character.

Ramsey 3: Land North of Hollow Lane, Ramsey (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (8 responses)

There were mixed responses to this site. There are significant concerns about increased traffic, especially near Abbey College, which raises safety issues for students. Comments also raised that road conditions are problematic with subsidence in some areas and that an archaeological survey should be undertaken. There were also concerns about over-development in Ramsey and Bury, impacting local infrastructure and quality of life as well as the loss of habitat for animals and plants in a conservation area and the loss of essential school playing fields. They raise that further development should be accompanied by appropriate infrastructure and employment opportunities. The LLFA states there is high surface water flood risk and that must be taken into consideration. There is no mineral or waste constraints present. The Highways Authority states that the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Ramsey 2) for about 20 homes. Concerns relating to traffic, safety, access and active travel have been addressed through criteria requiring provision of safe and appropriate vehicular and pedestrian access from Hollow Lane. The site's location within a conservation area will require the development provide design sensitive to the conservation area and edge of settlement location informed by an proportionate heritage assessment. The development will be required to engage with Abbey College on the reuse of this field and determine if alternative provision of playing fields is required to address the potential loss of a playing field. The development will need to undertake a flood risk assessment and drainage strategy, taking into account groundwater, surface water and modelling of unnamed ordinary watercourse to address flooding risks. The retention of trees and hedgerow and provision of a landscape plan or strategy will assist in the mitigation against habitats. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Ramsey 4: Land East of Wood Lane, Ramsey (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (21 responses)

The majority of responses were opposed to the development of this site. There are strong objections to the development due to its impact on the rural character and heritage of Ramsey, traffic levels, flood risk, on local infrastructure and potential archaeology. They state it is valued for its green space, which is used for walking, dog walking, and other recreational activities. Comments raise concern regarding impact on the nearby listed buildings and the Ramsey Rural Museum which is used for various community events such as the 1940s weekend and Plough Day. These events are crucial for the financial viability of local heritage sites and the local economy. Many comments highlight that Ramsey and Bury have been over-developed, leading to traffic, noise, and pollution issues, and that further development should be accompanied by appropriate infrastructure and employment opportunities. The LLFA states there is high surface water flood risk and that must be taken into consideration.

4 Further Issues and Options

There is no mineral or waste constraints present. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. They also state the site would not be acceptable for a development of this scale without significant improvements to the footway infrastructure between the site and Ramsey.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Ramsey 3) for about 14 homes and about 7.7ha for community and open space uses. Concerns regarding traffic and improvement to footways have been addressed through criteria requiring provision of safe and appropriate vehicular and pedestrian access from Wood Lane. 7.7ha of land is reserved for open space community uses to assist in the facilitation of community events. Flood risk is addressed through a requirement to provide a flood risk assessment and detailed drainage strategy, taking into account groundwater, culverts and modelling of unnamed ordinary watercourses. To mitigate heritage impact design will be required to be sensitive to the setting of the adjacent grade II listed buildings and conservation area informed by an proportionate heritage assessment. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Ramsey 5: Land at Newtown Road, Ramsey (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

The responses were mixed. The LLFA states there is low surface water flood risk and that further detailed consideration of surface water management options will be required. There are no mineral or waste constraints present. There were also concerns about over-development in Ramsey and Bury, impacting local infrastructure, levels of pollution, traffic and quality of life. The Highways Authority states the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing.

Council response

This site has not been selected as a draft allocation. High flood risk present on the majority of the site (flood zone 3a) which is proposed for a ‘more vulnerable’ use, alternative sequentially preferable sites are available. Built development is unlikely to be able to avoid high or medium risk flood areas.

Ramsey 6: Land East of Stocking Fen Road, Ramsey (failed fundamental constraints)

Main Issues Raised (5 responses)

The responses were unsure or opposed to development of this site. One comment highlights that the site has failed fundamental constraints but is/has been proposed within the Ramsey Masterplan market towns programme. The LLFA states there is low surface water flood risk and that further detailed consideration of surface water management options will be required. There is a waste constraint present which will require mitigation. There were also concerns about over-development in Ramsey and Bury, impacting local infrastructure and quality of life. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as almost all of the site apart from its southern edge is located within 400m of a water recycling area. In addition a third of the site is classified as grade 1 agricultural land and about two thirds of the site is located within flood zone 3a.

Ramsey 7: Ramsey Gateway, St Mary's Road, Ramsey (failed fundamental constraints)

Main Issues Raised (5 responses)

The responses were unsure or supportive to development of this site. One comment highlights that the site should progress to detailed assessment due to its planning history. The LLFA states there is no surface water flood risk but that further detailed consideration of surface water management options will be required. There are no minerals or waste constraints present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and it is likely that two points of access will be required at least one in emergency form.

The site promoter commented that the site should progress to the next stage of assessment considering its planning history, they state the site is no longer viable for farming due to the detailed planning permission that includes a spine road and a supermarket. Also they consider discounting the site solely based on its agricultural classification fails to consider the broader growth options especially as Ramsey is identified as a sustainable location for new development, supported by the adopted settlement hierarchy and the Sustainability of Settlements (2023).

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the entirety of site is classified as grade 1 agricultural land and is within flood zone 3a.

Ramsey 8: Peppers Yard, Stocking Fen, Ramsey (failed fundamental constraints)

Main Issues Raised (4 responses)

There were mixed responses to the site. The LLFA states there is no surface water flood risk but that further detailed consideration of surface water management options will be required. There is a minerals and waste constraints present. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing. They also state the site would not be acceptable for a development of this scale without significant improvements to the footway infrastructure between the site and Ramsey It is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population to make it a sustainable location given the scale of the proposed development.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the entirety of site is classified as grade 1 agricultural land and is within flood zone 3a. In addition, the site is adjacent to a water recycling area and half of the site is within 250m of a waste management area.

Ramsey 9: School Farm, Stocking Fen Road, Ramsey (failed fundamental constraints)

Main Issues Raised (4 responses)

There were mixed responses to the site. The LLFA states there is low surface water flood risk and that further detailed consideration of surface water management options will be required. There is a minerals and/or waste constraints present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require highway improvements in relation to the scale of development proposed. Also, the site would not be acceptable for a development of this scale without significant improvements to the footway infrastructure between the site and Ramsey.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the vast majority of the site is classified as grade 1 agricultural land apart form a very small amount of the site along its southern edge and the site adjoins a water recycling area. In addition, half of the site is within flood zone 3a.

Ramsey 10: Land off Ugg Mere Court Road, Ramsey Heights (failed fundamental constraints)

Main Issues Raised (4 responses)

There were mixed responses to the site. There is a minerals and waste constraints present. The Highways Authority states it is unclear if there is sufficient frontage to achieve an access and is likely to require highway improvements in relation to the scale of development proposed. They state the current highway network is not sufficient for the development and this development could generate significant traffic for the junctions at Ramsey Heights.

The site promoter has commented stating that the site should not have been discounted based on agricultural land and flood zone 3a. They say this approach may result in a shortage of new housing in the Ramsey Fens. Exceptions should be made for land that was previously shown as being within flood zone 1 of the 2010 SFRA.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the entirety of the site is classified as grade 1 agricultural land and within flood zone 3a.

Ramsey 11: Land off Middlemoor Road, Ramsey St Mary (failed fundamental constraints)

Main Issues Raised (3 responses)

There were mixed responses to the site. The LLFA states there is low surface water flood risk but that further detailed consideration of surface water management options will be required. There are no a minerals or waste constraints present. The Highways Authority states on the basis of the red line there is no/inadequate connection to the public highway and it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population. The site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and Ramsey St Marys.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the entirety of the site is classified as grade 1 agricultural land and within flood zone 3a.

Ramsey 12: Chestnut Farm, Ramsey Mereside (failed fundamental constraints)

Main Issues Raised (3 responses)

There were mixed responses to the site. The LLFA states there is low surface water flood risk but that further detailed consideration of surface water management options will be required. There are no a minerals or waste constraints present. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing and local infrastructure improvements may be required in the form of walking/cycling connectivity. They also state that looking at possible connections to the site, there may be an element of drain that may require culverting therefore early dialogue with CCC's LLFA would be prudent.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the entirety of the site is classified as grade 1 agricultural land and within flood zone 3a.

Ramsey 13: Land on Oillmills Road, Ramsey Mereside (failed fundamental constraints)

Main Issues Raised (2 responses)

There were mixed responses to the site. The LLFA states there is no surface water flood risk but that further detailed consideration of surface water management options will be required. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the entirety of the site is classified as grade 1 agricultural land and within flood zone 3a.

Ramsey 14: Ramsey Forty Foot Village rural mooring, Ramsey Forty Foot (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

The responses were generally supportive towards the site. The LLFA states there is no surface water flood risk but that further detailed consideration of surface water management options will be required. The Minerals and Waste Authority states there are no minerals or waste constraints impacting the site. Local infrastructure improvements may be required in the form of walking connectivity and local infrastructure improvements may be required in the form of parking places.

Council response

This site has been selected as a draft Rural Mooring allocation (Draft Allocation Ramsey Forty Foot 1) for 1.4 ha of land for leisure moorings, open space and land to safeguard against flooding. The allocation will be required to ensure safe and suitable access can be provide and that the site can be safe for the lifetime of the development.

Ramsey 15: Land at Bridge Farm, Ramsey Forty Foot (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

The responses were mixed towards the site. There were also concerns about over-development in Ramsey and Bury, impacting local infrastructure, wildlife and quality of life. Comments highlight that infrastructure in Ramsey Forty Foot is limited. The LLFA states there is no surface water flood risk but that further detailed consideration of surface water management options will be required. The Minerals and Waste Authority states there are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking connectivity.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 1,2 and 3. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

4 Further Issues and Options

Ramsey 16: Forty Foot Field, North of Mill Lane, Ramsey Forty Foot (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

The responses were mixed towards the site. One comment supported the assessment and had concerns regarding flood risk, impact on rural nature of the village and access. The LLFA states there is low surface water flood risk and that further detailed consideration of surface water management options will be required. The Minerals and Waste Authority states there are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but the only linkage is what appears to be a private road.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the majority of the site is located within flood zones 2, 3a and 3b and the proposed residential uses are classed as a more vulnerable use.

Ramsey 17: Woodlane Farm, West of Ramsey Road, Ramsey Forty Foot, Ramsey (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

The responses were mixed towards the site. There are objections to further development in Ramsey and Bury, citing over-development, increased traffic, and strain on local infrastructure such as schools and healthcare. Some objections highlight concerns about spoiling the rural aspect of the village, affecting popular walking routes, wildlife, flood risk and the limited services in Ramsey Forty Foot, which would necessitate car use for new residents. There are also concerns about the narrow access road and its ability to handle construction traffic. The LLFA states there is no surface water flood risk but further detailed consideration of surface water management options will be required. The Minerals and Waste Authority states there are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but the formation of an access may result in the loss of green infrastructure.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater flood risk should be investigated meaning it did not meet the criteria for consideration.

Somersham

General comment: The general sentiment is opposition to further housing developments due to concerns about the lack of supporting infrastructure, such as the primary school, which is already at full capacity and cannot expand. There are objections to building on historically significant land, such as the remains of the Bishops Palace fish stock pond, which is of historical interest and home to various wildlife.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Somersham 1: Dews Bus and Coach Depot, Chatteris Road, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

The responses were mixed towards the site. The Parish Council raised objections that it would expand the village too much along Chatteris Road and lead to further traffic issues. The Minerals and Waste Authority states there are some minerals and/or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access (subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments) but is likely to require significant highway improvements in relation to the scale of development proposed. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Somersham 3) for about 50 homes. Concerns have been addressed regarding traffic, highway improvements and active travel through criteria requiring provision of a safe and suitable means of access from Chatteris Road and assessment of transport impacts through a transport assessment as well as provision of active travel routes to facilitate integration with Somersham. The allocation highlights the sites location within a Sand and Gravel Mineral Safeguarding area and the need to consult with Cambridgeshire County Council. The site is part previously developed land.

Somersham 2: Somersham Town Football Club and land to the south of the Football Club, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

The responses were mixed towards the site. The Parish Council raised objections based on drainage. The Minerals and Waste Authority states there are some minerals and/or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. They state that when looking at possible connections to the site, there may be an element of drain that may require culverting therefore early dialogue with CCC's LLFA would be prudent.

The site promoter has commented and have submitted a Flood Risk Assessment and Landscape and Visual Impact Assessment. They state that the key principles for the development include retaining existing landscape features, considering the height of dwellings near existing properties, providing buffers to heritage sites, and integrating green infrastructure.

Council response

This site has not been selected as a draft allocation. The SFRA mapping update has shown the site is now 82% in Flood Zone 3a it is therefore no longer considered appropriate for residential development.

Somersham 3: Land North of The Pasture and South of Rectory Lane, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (2 responses)

4 Further Issues and Options

The responses were mixed towards the site. The Parish Council raised objections if access were proposed from Rectory Lane. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Vehicular access from Rectory Lane should not be proposed as the width is unsuitable for intensification, all vehicular access should be via the Pastures.

Council response

This site has not been selected as a draft allocation as planning permission has been secured on the western parcel of the site (21/02111/OUT) for 11 dwellings and associated works (all matters reserved) was approved in December 2022.

Somersham 4: Land East of Parkhall Road, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

The responses were mixed towards the site. The Parish Council raised concerns that the site would push the boundary of the village and that there is a dangerous access due to the old railway bridge. The Minerals and Waste Authority states there are some minerals and/or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population. They state that when looking at possible connections to the site, there may be an element of drain that may require culverting therefore early dialogue with CCC's LLFA would be prudent.

The site promoter has submitted a response including a Waste Compatibility Assessment and Mineral Safeguarding Assessment as appendices.

Council response

This site was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site wholly lies within the buffer zone around the Somersham Waste Management Area. At its closest point, the site is within 20m of the WMA. No assessment was provided at the time. In response to the Spring 2025 consultation on additional sites, the site promoter submitted a Site Suitability Assessment which includes a review of air quality, odour, amenity and compatibility of the proposed use with the WMA which is currently being restored. Now that this assessment has been provided, the site passes the fundamental constraints and a full LAA and SA of the site has been undertaken. It had previously failed due it being within the consultation area for a WMA and no assessment had been provided. The site promoter also submitted a document setting out example street scenes and house types that could be used for this site. The site is now considered potentially appropriate for development.

This site has not been selected as a draft allocation. This site was assessed as having high and/or medium risk from surface water sources and groundwater risk. More sequentially preferable sites were selected which are 100% flood zone 1 with very low risk of surface water flood risk.

Somersham 5: Land to West of College Farm, Somersham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

The responses were mixed towards the site. The Parish Council raised concern that the site would extend the village boundary and would affect the character of the village. The Highways Authority states that on the basis of the red line there is no/inadequate connection to the public highway but if there was the potential for frontage acquisition an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to constraints to the site regarding access and the detached nature of the site. An alternative development proposal including this site is set out in Somersham 7: Land to the West of College Farm (larger site), Somersham (which includes this site) was taken forward as draft allocation Somersham 2.

Somersham 6: Land to South of College Farm, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

The responses were mixed towards the site. The Parish Council raised concern that the site would extend the village boundary and would affect the character of the village. There are no minerals and/or waste constraints impacting the site. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking/cycling connectivity. They state that when looking at possible connections to the site, there may be an element of drain that may require culverting, therefore early dialogue with CCC's LLFA would be prudent.

Council response

This site has not been selected as a draft allocation. Although the Council's Land Availability Assessment and Sustainability Appraisal concluded that site may be appropriate for development an alternative site Somersham 7: Land to the West of College Farm (larger site), Somersham (which includes this site) was taken forward as draft allocation Somersham 3.

Somersham 7: Land to South of College Farm (larger site), Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

The responses were mixed towards the site. The Parish Council raised concern that the site would extend the village boundary and would affect the character of the village, as well as concerns regarding access at the junction. There are no minerals and/or waste constraints impacting the site. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking/cycling connectivity. They state that when looking at possible connections to the site, there may be an element of drain that may require culverting, therefore early dialogue with CCC's LLFA would be prudent.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Somersham 2) for about 140 homes. Concerns have been raised regarding active travel and cycling and walking connectivity. The site boundary abuts a footpath providing access to Somersham local centre. Criteria requiring the provision of a safe and suitable means of access from B1086 and assessment of transport impacts through a transport assessment will address access to the site and the requirement of a flood risk assessment and detailed drainage strategy, taking into account residual risk from culverts and modelling of ordinary watercourse will mitigate flood risk and take into account a drain which may require culverting.

Somersham 8: College Farm, West of Newlands Industrial Estate, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

The responses were unsure or supportive of this site. There are no minerals and/or waste constraints impacting the site. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking/cycling connectivity.

4 Further Issues and Options

Council response

This site has been selected as a draft residential allocation (Draft Allocation Somersham 4) for about 45 homes. Concerns have been raised regarding active travel and cycling and walking connectivity. The site boundary abuts a footpath providing access to Somersham local centre.

Somersham 9: Land South of 35 Church Street (smaller site), Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (8 responses)

The majority of comments were opposed to development of this site. There is a minerals and/or waste constraint impacting the site. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking connectivity. They state that the site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and village centre. Several comments including the Parish Council and Historic England were opposed to development of the site based on heritage grounds including the whole site being a scheduled monument. Other comments raised concerns regarding flood risk, impact on wildlife and the narrowness of Church Street.

Council response

This site has not been selected as a draft allocation. During the Autumn 2024 consultation on sites, comments were received from the Parish Council and Historic England expressing concern regarding impact on heritage assets. Following this, the site is no longer viewed as being potentially suitable for development due to impacts on heritage including the designated scheduled monument.

Somersham 10: Land South of 35 Church Street (larger site), Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

The comments were mixed towards this site. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking connectivity. The site is affected by existing public Rights of Way, should be retained on their existing alignment, maintained, or enhanced. They also state the site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and village centre. Several comments including the Parish Council were opposed to development of the site based on heritage grounds including the whole site being a scheduled monument. Other comments raised concerns regarding flood risk, impact on wildlife and the narrowness of Church Street.

Council response

This site has not been selected as a draft allocation. During the Autumn 2024 consultation on sites, comments were received from the Parish Council and Historic England expressing concern regarding impact on heritage assets. Following this, the site is no longer viewed as being potentially suitable for development due to impacts on heritage including the designated scheduled monument.

Somersham 11: Land to the west of Parkhall Road, College Farm, Somersham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

The majority of comments were opposed to development of this site. The Parish Council have observations regarding access to the site and that it is near to the old railway bridge. There is a minerals and/or waste constraint impacting the site that requires mitigation. The Highways Authority states that the site appears to have insufficient

frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. The site is affected by existing Public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. They also state that when looking at possible connections to the site, there may be an element of drain that may require culverting therefore early dialogue with CCC's LLFA would be prudent.

The site promoter reiterates the site's availability for development. They state that a Highway Statement confirms that primary vehicular access via Parkhall Road and a new footway connection are feasible, with a secondary emergency access via Queens Road and that the public footpath network will be retained and improved. A Conceptual Drainage Strategy has been undertaken.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Somersham 1) for about 120 homes. Observations regarding the site's proximity to an old railway bridge are addressed through a requirement to use design that harmonises with surrounding development to integrate the new homes with neighbouring residential development, disused railway line, allotments and smallholdings. The draft allocation highlights the site's location withing a sand and gravel mineral safeguarding area. Highways improvement will be addressed through the requirement to provide of a safe and suitable means of access from Parkhall Road and assessment of transport impacts through a transport assessment, public rights of way will be required to be retained and enhanced, including connections to public rights of way to facilitate integration with Somersham and nearby services and facilities. Presence of a drain that may require culverting will be addressed through of a flood risk assessment and detailed drainage strategy, taking into account groundwater and surface water flood risk.

Somersham 12: Land North of Chatteris Road, Somersham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

The majority of comments were opposed or unsure towards development of this site. The Parish Council have observations stating that part of the site forms part of the Somersham Nature Reserve. There is a minerals and/or waste constraint impacting the site that requires mitigation. The Highways Authority states that on the basis of the red line there is no/inadequate connection to the public highway but if there were potential frontage acquisition an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The Wildlife Trust supports the assessment and the recognition of the need to protect the adjacent Local Nature Reserve and County Wildlife Site from the direct and indirect impacts from this proposed site, this is supported by the County Council's Biodiversity and Green Spaces Team.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to significant constraints including access, impact on active travel routes, the Local Nature Reserve and ecology and biodiversity within the wider green network/corridor, lack of access to gas, mains water and electricity supply and digital telecommunications.

Somersham 13: Land East of Chapel Field Lane, Somersham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

The majority of comments were opposed towards development of this site. The Parish Council have observations stating that access is a key issue. There are no minerals and/or waste constraints impacting the site. The Highways Authority states that site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and King Street Notwithstanding this, Rectory Lane/

4 Further Issues and Options

Chapelfield Lane is of insufficient width to accommodate a development of this scale without improvements which may not be achievable within the existing highway. The County Council's Biodiversity and Green Spaces Team raise concerns regarding impacts on local accessible greenspace and ecology.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its potential harm to the character of the village and landscape. The site was also considered to have very limited accessibility via suitable vehicle and pedestrian routes into the village, and has a more rural feel as the village transitions into the countryside to the west. The site is narrow making designing a scheme in keeping of local character challenging and likely to adversely impact the village character and erode the rural edge of the settlement.

Somersham 14: Somersham Telephone Exchange (failed fundamental constraints)

Main Issues Raised (3 responses)

Most responses were opposed to development on this site. The Parish Council have observations stating that part of the site forms part of the Somersham Nature Reserve. The Minerals and Waste Authority state that there is a minerals and/or waste constraint impacting the site requiring mitigation. The Highways Authority states that on the basis of the red line there is inadequate connection to the public highway and there is insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but if there is the potential for frontage acquisition an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing assessments. Local infrastructure improvements may be required in the form of walking connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment was submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity.

Upwood and The Raveleys

General comment: The general sentiment is opposition to further housing developments due to concerns about the adverse impact on the village, which is already experiencing detrimental effects from over-development in nearby areas like Bury and Ramsey. Key issues highlighted include increased traffic, noise, flooding, pollution, and the erosion of services such as healthcare and education.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Upwood and The Raveleys 1: RAF Upwood - Phase 4, Upwood (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (9 responses)

Responses towards this site were mixed but most were opposed. Comments raised concerns about the site's impact on the small village, including increased traffic, insufficient infrastructure, and limited local services. Key issues include the need for road and footpath improvements, better public transport, and addressing flooding and drainage problems, lessons should be learnt form previous phases of the RAF Upwood redevelopment. Some supported the site recognising its potential to provide local employment and potentially reuse buildings. Some

suggest alternative uses, such as green spaces or nature reserves, to enhance the quality of life for residents. The Highways Authority states that the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The suitability of the approach road network will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs. Looking at possible connections to the site, there may be an element of drain that may require culverting therefore early dialogue with CCC's LLFA would be prudent.

The site promoter reiterated the site's availability for development submitting a Vision Document for the site.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Ramsey 1) for about 4.8 ha for office, research and development, industrial and general industrial uses and about 9.2 ha of land for green infrastructure to include a mixture of strategic green space, accessible natural green space and flood mitigation. This will assist in providing local employment opportunities and additional public open space. Concerns regarding transport have been addressed through criteria requiring provision of a safe and suitable means of access from Ramsey Road and assessment of impacts of proposed employment uses through a transport assessment and travel plan and the need to provide active travel routes to link with existing and proposed networks and local services and facilities. Flood risk and drainage will be addressed through a requirement to produce a a flood risk assessment and detailed drainage strategy taking into account surface water. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Upwood and The Raveleys 2: Village Field, Raveley Road, Great Raveley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

The majority of comments were unsure towards this site. One comment raised that drainage and flooding is an issue which may get worse with more housing. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. The Wildlife Trust supports HDC aims to protect the landscape and visual setting of the Great Fen and would like assurances that the proposed scale of development aligns with this objective.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Upwood and The Raveleys 3: Upwood Field, Meadow Lane, Upwood (failed fundamental constraints)

Main Issues Raised (7 responses)

The majority of comments were opposed towards development on this site. One comment raised that the odour from the water recycling centre impacts living conditions for local residents. There is a waste constraints impacting the site which may require mitigation. Two comments raised that the site name should be Meadow Lane rather than Meadow Road. Concerns were also raised regarding the water recycling centre, access, the narrowness of Meadow Lane, the impact on wildlife and nature conservation sites as well as infrastructure concerns within the village and Ramsey. One comment asked why reference to a 'Specific Features Recommends for Preservation Conservation- designation had not been made in the assessment. The Highways Authority states on the basis of the red line there is no/inadequate connection to the public highway but if there is the potential for frontage acquisition then an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. The traffic produced by the

development would require significant improvements of Meadow Lane and there are currently no footways to the site. The Wildlife Trust supports the assessment and notes that the scale of development and location is completely inappropriate and would have significant adverse impact on Upwood Meadows NNR. The site is also located within the Fen-edge Woodland Priority Natural Landscape (from the Huntingdonshire Interim Nature Network) and being close to Upwood Meadow should be a priority location for habitat enhancement and / or nature friendly farming.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is adjacent to a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of amenity.

Warboys

General comment: The general sentiment is opposition to further housing developments due to concerns about the already overstretched infrastructure, including roads, healthcare, and schools. Many comments highlight the negative impact on local amenities, traffic congestion, and the character of the village. There were also concerns about the impact of these developments on local wildlife, air pollution, and the overall quality of life for current residents.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Warboys 1: Land on Heath Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

Responses were mixed towards this site but most were opposed to development. The Parish Council agreed with the site assessment, several comments raised that the village already experiences traffic issues, inadequate infrastructure, strained local services, flood risk and concerns about the loss of the rural character that further development may bring. Suggestions for small-scale, sustainable, and community-focused developments instead were highlighted. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. They also say the site would not be acceptable for a development of this scale without significant improvements to the footway infrastructure between the site and the village towards pasture close.

Site promoter commented and states that suitable access can be achieved with visibility splays in both directions of at least 90m, and this takes into account the topography of the site and that the site should be considered a natural extension of the settlement which relate well to existing development to the west and south.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site would be out of context with the settlement/ built form. There may be difficulties in terms of highway safety in a village location being a adjacent to a significant junction onto the A141 and with achievability given the sloping topography of the land within the site.

Warboys 2: Land adjacent to Second and Third Avenue, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

Responses were mixed towards this site but most were opposed to development. The Parish Council agreed with the site assessment, several comments raised that the village already experiences traffic issues, inadequate infrastructure, strained local services, flood risk and concerns about the loss of the rural character that further development may bring. Suggestions for small-scale, sustainable, and community-focused developments instead were highlighted. One comment raised concern that access points would turn established cul-du-sac roads into busy access points for the proposed development and impact the quality of life of residents. Not constrained by minerals or waste constraints. The Highways Authority states on the basis of the red line there is no/inadequate connection to the public highway, however, if there is the potential for frontage acquisition an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. It is likely that two points of access will be required at least one in emergency form. Also, the site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter reiterated the site's availability stating that this site and Warboys 6 should now be considered as a single site and are being promoted for comprehensive development. They state the surface water risks are manageable through appropriate drainage strategies. Landscape mitigation through landscaping buffers along the north and west boundaries is proposed. Feasibility assessments are ongoing to determine the best access strategy, with options along Humberdale Way and Saxon Way.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the location of the site being out of context with the existing built form, potential for significant adverse landscape impact and highway access to the site being potentially unachievable as a result of the presence of ransom strips and ability of Second and Third Avenue to accommodate the scale of development. Although sites 'Warboys 2' and 'Warboys 6' have now been proposed as a single site, the deliverability of this site is dependent on providing appropriate access and connection to the public highways as stated by the Cambridgeshire County Council Highways Authority. Therefore the site is currently considered unachievable.

Warboys 3: Land rear of 51 Church Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (12 responses)

The majority of responses were opposed to the development of this site. The Parish Council agreed with the site assessment. Comments raised concerns regarding the impact on the Conservation Area, the area's character, wildlife, flood risk and protected trees. There are significant concerns about the capacity of local infrastructure, including schools, doctors' surgeries, and public transport to support additional development. Issues related to road safety, pedestrian access, and the suitability of current access points were also raised. Some respondents suggest dividing the site for different uses, such as housing and commercial development and there are recommendations to focus on developing brownfield sites and low-impact agricultural land instead of conservation areas. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and would require significant improvements to the footway infrastructure between the site and the village.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the site being wholly within Warboys Conservation Area and the potential for significant adverse impact to this designated heritage asset due the removal of established trees situated within the site to accommodate the development.

Warboys 4: Land East of Church Road, Warboys (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (19 responses)

The majority of comments were opposed to development on this site. The Parish Council commented that the site is unsuitable for development due to its potential impact on already stretched infrastructure such as the Doctors Surgery. Key concerns raised were regarding flood risk; impact Conservation Area, protected trees, wildlife and the overall character of the area; strain on infrastructure with local schools, doctors' surgeries, and public transport already overstretched; and access and safety. Some respondents suggest finding alternative brownfield sites for development instead of using greenfield and conservation areas. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and that local infrastructure improvements may be required in the form of walking connectivity.

Council response

This site has not been selected as a draft allocation. From an individual site perspective the site was considered that it may be appropriate for development however, in the context of the whole settlement it was not considered appropriate to consider as an allocation as the site is not well connected to Warboys and there are concerns regarding safe access and exit to the site.

Warboys 5: Little End, Station Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

The majority of responses were opposed to the development of this site. The Parish Council agreed with the site assessment. Comments raised concerns regarding the impact on the area's character, the capacity of local infrastructure, including schools, doctors' surgeries, and public transport to support additional development. Issues related to road safety, pedestrian access, and the suitability of current access points were also raised. Not constrained by minerals or waste constraints. The Highways Authority states the site appears not to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter commented stating that the site forms a natural extension to development of the settlement and that access can be achieved through the adjoining site to the south which is also controlled by the landowners. They consider that a very low density development of 25dph would ensure space is available for landscaping, BNG and flood alleviation as well as reflecting the topography of the site.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the scale and location of the site being out of context with the settlement/ built form, the steep topography of the land and intrusion into the countryside. In addition, there would have highway access difficulties given the existing track and limited scope to upgrade.

Warboys 6: Land North of Humberdale Way, Warboys (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (9 responses)

Responses were mostly opposed towards development on this site. The Parish Council stated that the site is unsuitable for development, as a large-scale project would place significant strain on already stretched infrastructure, including the local doctor's surgery. Members also felt that statements regarding proximity to employment opportunities and access to a regular bus service were misleading. Residents were concerned by the potential scale of the proposal. Several comments raised that the village already experiences traffic issues, inadequate infrastructure, strained local services, flood risk and concerns about the loss of the rural character that further development may bring. Suggestions for small-scale, sustainable, and community-focused developments instead were highlighted. One comment raised concern that access points would turn established cul-du-sac roads into busy access points for the proposed development and impact the quality of life of residents. Not constrained by minerals or waste constraints. The Highways Authority states on the basis of the red line there is no/inadequate connection to the public highway, however, with potential frontage acquisition an access may be feasible in the fullness of time subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments. Two points of access will be required they state the development is likely to cause junction capacity issues throughout Warboys and the surrounding area. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter reiterated the site's availability stating that this site and Warboys 2 should now be considered as a single site and are being promoted for comprehensive development. They state the surface water risks are manageable through appropriate drainage strategies. Landscape mitigation through landscaping buffers along the north and west boundaries is proposed. Feasibility assessments are ongoing to determine the best access strategy, with options along Humberdale Way and Saxon Way.

Council response

This site has not been selected as a draft allocation. Although sites 'Warboys 2' and 'Warboys 6' have now been proposed as a single site, the deliverability of this site is dependent on providing appropriate access and connection to the public highways as stated by the Cambridgeshire County Council Highways Authority. Therefore the site is currently considered unachievable.

Warboys 7: Land South of Warboys Sports Field, Warboys (unavailable for the proposed open space use)

Main Issues Raised (5 responses)

Responses were mixed towards this site. The Parish Council disagreed with the assessment stating that the land in question is connected to the current sports ground, meaning it could benefit from existing access points and utility supplies. They state concern over the lack of recognition that the Parish Council are set to provide 22 acres of sports provision land, of which only 7 acres are currently available within the parish. They wish for clarification on the term "significant constraints" as they say the land is designated for recreational purposes. Several comments raised that the village already experiences traffic issues, inadequate infrastructure, strained local services, flood risk and concerns about the loss of the rural character that further development may bring. Not constrained by minerals or waste constraints. The Highways Authority states on the basis of the green line there is no/inadequate connection to the public highway.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site is unavailable for the proposed open space use and was submitted by a third party who do not own the land.

Warboys 8: Land at New Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

4 Further Issues and Options

Main Issues Raised (6 responses)

The responses were mixed towards this site. The Parish Council agreed with the site assessment. Comments raised concerns regarding the impact on the area's character, the capacity of local infrastructure, including schools, doctors' surgeries, and public transport to support additional development. Issues related to road safety, pedestrian access, and the suitability of current access points were also raised. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. The site would not be acceptable for a development of this scale without significant improvements to the footway infrastructure between the site and the adjacent roundabout.

The site promoter reiterated the site's availability and submitted a Parameter Plan showing the location of the proposed areas for residential development and natural green space. They state the recent consent for 8 dwellings on part of the site demonstrated that a new footway could be provided along New Road to link into existing footways to the north of the site. This footway could be extended to provide access to the land now promoted. They raise issues between this assessment and Warboys 2 highlighting 'inconsistencies' within the assessments relating to landscape impact and mitigation, impact of the water tower and active travel infrastructure.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as the site is in a location that could not be effectively masterplanned to become part of the existing community. In addition it was considered that the site would create an extension to the village with limited relationship to the main concentration of residential development within the village and has a very close relationship with the countryside the impact of which would be significant. The site promoter has reduced the potential capacity expectation to 7 homes. This reduced site area is in principle considered to be suitable.

Warboys 9: Land at Ramsey Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

The responses were mostly opposed towards development of this site. The Parish Council agreed with the site assessment. Comments raised concerns regarding the scale of the proposal, its impact on the area's character, the capacity of local infrastructure, including schools, doctors' surgeries, and public transport to support additional development. Issues related to road safety, pedestrian access, and the suitability of current access points were also raised. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required and when looking at possible connections to the site, there may be an element of drain that may require culverting therefore early dialogue with CCC's LLFA would be prudent.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the potential for significant adverse impact upon the local landscape and potential difficulties integrating the site with the existing place and community.

Warboys 10: Manor Farm Buildings, Church Road, Warboys (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (8 responses)

The responses were mostly opposed towards development of this site. Respondents feel that the development would alter the fabric of the village, creating a busy site between Adam Lyons Recreation Field and St. Mary Magdalene Church. Concerns include the potential danger to children due to increased traffic and the impact on the play area. There were concerns regarding heritage assets. Other concerns raised were the capacity of local infrastructure, including schools, doctors' surgeries, and public transport to support additional development. Issues related to wildlife, environment, road safety, pedestrian access, and the suitability of current access were also raised. Suggestions made include identifying brownfield sites and agricultural land that do not impact the village's character. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing, however, access is of insufficient width to accommodate a development of this scale without improvements which may not be achievable within the existing highway.

Council response

This site has not been selected as a draft allocation. The Highways Authority states the site appears to have insufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing and access is of insufficient width to accommodate a development of this scale without improvements which may not be achievable within the existing highway. Therefore the site is currently considered unachievable.

Warboys 11: Land to the rear of 70 - 84 Station Road, Warboys (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

The responses were mostly opposed towards development of this site. The Parish Council agreed with the site assessment. Comments raised concerns regarding the scale of the proposal, its impact on the area's character, the capacity of local infrastructure, including schools, doctors' surgeries, and public transport to support additional development. Issues related to road safety, pedestrian access, and the suitability of current access points were also raised. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Local infrastructure improvements may be required in the form of walking/cycling connectivity and the site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter commented on behalf of the landowners stating that is in a sustainable location. The Site Development Plan reserves a large area for open space, landscaping, and BNG, minimising the landscape impact. They state detailed masterplanning and additional landscaping will help assimilate the development into the surrounding landscape. They recognise there may be a minimal loss of view for existing residents along Station Road. They state the landowners dispute the Council's claim of multiple landowners, stating that the red line boundary encompasses only two landowners and are in discussions with them to secure a comprehensive development plan and ensure adequate access and utility connections.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the scale and location of the site being out of context with the settlement/ built form and the potential for significant landscape impact which would be hard to avoid given the downward sloping gradient of the land within the site.

Warboys 12: Land off Fenton Road, Warboys (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (9 responses)

Responses were mostly opposed towards development on this site. The Parish Council stated that the site is unsuitable for development, as it lacks direct connection to the village aside from a crossing over the A141 and expressed concerns about the strain this development would place on already stretched infrastructure and noted

4 Further Issues and Options

that statements about bus access and employment opportunities were misleading. Several respondents raised concerns regarding access from the A141, the safety and feasibility of placing additional traffic here. Other issues raised that the village already experiences traffic issues, inadequate infrastructure, strained local services, flood risk and concerns about the loss of the rural character that further development may bring. Not constrained by minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter states the site is an appropriate site for development subject to good masterplanning to ensure the preservation of the local landscape, designated heritage asset and integration with the built form and wider community. They refer to a high level masterplan and will undertake further technical work to demonstrate additional mitigation in relation to the other constraints identified.

Council response

This site has not been selected as a draft allocation. Although a vision document was resubmitted in relation to this site, and the Land Availability Assessment has assessed the site in isolation concluding that the site may be potentially suitable. When looking at the wider context that the site sits within, it is considered that the site is detached from the main built area of Warboys which would pose challenges for safe pedestrian access across the A141 to local services and facilities for development of this scale. It is therefore not suitable for allocation.

Wistow

General comment: The general consensus is against development, with concerns about the inadequate infrastructure to support new housing, poor road conditions, lack of public transport, insufficient local amenities and frequent flooding. There were also concerns about the impact on local wildlife and the rural character of the area. Suggestions were to discount all sites in Wistow and enhance local infrastructure, such as roads and drainage systems before considering any new developments.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Wistow 1: Land West of Harris Lane, Wistow (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (41 responses)

The majority of respondents were opposed to development. The general consensus is against development, with significant concerns about the loss of agricultural land, inadequate local infrastructure, environmental impacts, poor road conditions, lack of public transport, insufficient local amenities and frequent flooding. There are also concerns about the impact on local wildlife and the rural character of the area. One comment recognised the potential need for some growth in the village. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access and local infrastructure improvements may be required in the form of walking connectivity. The site would not be acceptable for a development of this scale without improvements to the road and footway infrastructure between the site and to the south and east as well as possible improvements in the form of passing places. The Education Authority identifies there is an existing pressure on early year's places and there is likely to be insufficient capacity locally to accommodate the increase in children at local primary and secondary schools without mitigation.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Wistow 2: Land South of Ramsey Road adjoining Kingsland Farm (larger site), Wistow (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (17 responses)

The majority of respondents were opposed to development. There were strong opposition based on the loss of agricultural land, inadequate local infrastructure, significant environmental impacts, poor road conditions, lack of public transport, insufficient local amenities and frequent flooding. There was a also concerns regarding the impact on the rural character of the area. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and it is likely to require two points of access. The site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and Bury, also looking at possible connections to the site, they state there may be an element of drain that may require culverting therefore early dialogue with the LLFA would be required on this.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would result in significant adverse landscape impact and adversely impact the character of the area and is also of a scale that would further stress local facilities. Development could also adversely impact the permitted attenuation pond within the site which was approved to accommodate off site drainage for the redevelopment of RAF Upwood.

Wistow 3: Land South of Ramsey Road, North West of Kingsland Farm (smaller site), Wistow (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (14 responses)

The majority of respondents were opposed to development. There were strong opposition based on the loss of agricultural land, inadequate local infrastructure, significant environmental impacts, poor road conditions, lack of public transport, insufficient local amenities and frequent flooding. There was a also concerns regarding the impact on the rural character of the area. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and it is likely to require two points of access. The site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and Bury, also looking at possible connections to the site, they state there may be an element of drain that may require culverting therefore early dialogue with the LLFA would be required on this.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it would result in significant adverse landscape impact and adversely impact the character of the area and is also of a scale that would further stress local facilities.

Wistow 4: Land South of Ramsey Road, North East of Kingsland Farm (smaller site), Wistow (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (15 responses)

4 Further Issues and Options

The majority of respondents were opposed to development. There were strong opposition based on the loss of agricultural land, inadequate local infrastructure, significant environmental impacts, poor road conditions, lack of public transport, insufficient local amenities and frequent flooding. There was a also concerns regarding the impact on the rural character of the area. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and it is likely to require two points of access. The site would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure between the site and Bury.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it would result in significant adverse landscape impact and adversely impact the character of the area and is also of a scale that would further stress local facilities. In addition, development could adversely impact the permitted attenuation pond within the site which was approved to accommodate off site drainage for the redevelopment of RAF Upwood.

Area 3 - Northern Central Huntingdonshire

General comment: A comment was received against the whole of the North Central by the Alconbury Brook Flood Group area setting flood risk concerns, these concerns are also registered against several sites within Alconbury, Alconbury Weston and The Stukeleys.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Abbots Ripton

General comment: General comments related to concerns on the impact on the village's historic character and conservation area.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Abbots Ripton 1: West of Wennington Road Wennington, Abbots Ripton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

Comments were mixed but broadly supportive or unsure of this site. The primary concerns revolve around the scale and density of the development and its potential impact on the Wennington conservation area and its listed buildings. There is a strong emphasis on ensuring that the development respects the vernacular architecture and character of Wennington, with suggestions for an architectural competition to achieve high standards in design. There was concern given Wennington's lack of amenities, public transport, and reliance on single-track roads. Comments also highlighted the need for affordable housing, public transport and community involvement in the planning process. There is a minerals and or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance requirements respecting local junction spacing but local infrastructure improvements may be required in the form of passing places.

Council response

This site has not been selected as a draft allocation because it is located within an hamlet and therefore it was not tested in any of the Council's Growth Strategies due to the hamlets inherent lack of sustainability. The District's hamlets are classified together with the countryside, the Preferred Options Draft Local Plan to 2046 allows for only limited and specific opportunities where development in these locations would be acceptable.

Abbots Ripton 2: Home Farm North, Abbots Ripton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

The majority of respondents were opposed to development on this site. Opposition to the development is due to its impact on listed buildings, conservation area, townscape and residential garden settings. There are significant concerns about flood risk, the negative impact on the village's character and identity, access and traffic issues, ecological and environmental concerns, and the loss of valuable agricultural land. There are no minerals or waste constraints. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the development would have a fundamental impact on the setting of listed buildings, conservation area, townscape, character of the area and residential garden settings. That the site could create transport and safety impact for pedestrians as a result of access via Rectory Lane and have a negative ecological impact.

Abbots Ripton 3: Home Farm South, Abbots Ripton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (8 responses)

Most respondents were against or unsure about the site. Concerns were raised regarding flood risk with significant past flooding experiences and the need for flood zone risk removal before development; the impact on veteran elm trees, species-rich grassland, and overall biodiversity; and infrastructure challenges, particularly with the Anglian Water sewage pumping station. Comments also highlighted the visual impact of development on the rural landscape, access and traffic issues, and the loss of agricultural land. There are no minerals or waste constraints. The Education Authority states that there is expected to be sufficient places locally to be able to accommodate the increase in children from this development, without mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has been selected as a draft mixed use allocation **(**Draft Allocation Abbots Ripton 1**)** for about 15 homes and about 0.5ha for commercial use within classes E(g)(i-iii). flood risk concerns have been addressed through criteria requiring sequential location of development outside areas of flood risk and provision of a flood risk assessment and detailed drainage strategy, taking into account surface water, residual risk from a culvert and modelling of unnamed ordinary watercourse to evaluate current and future fluvial and surface water flood risk.

Concerns on the impact on the landscape, veteran elm trees, and biodiversity will be addressed though a requirement for the retention and protection of existing trees and hedgerows, and the provision of a comprehensive scheme of landscaping set out within a landscape plan or strategy and management plan. There is a criteria to address waste water flow and the development will have to address access traffic and active travel concerns by providing a suitable means of access a sustainable transport network for pedestrians, cyclists and vehicles, which facilitates integration with the village

4 Further Issues and Options

Abbots Ripton 4: Penny Green, Abbots Ripton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

Responses were mixed but half of them were opposed to development. Kings Ripton Parish Council commented some small scale development within the village may be acceptable providing it does not change the character of the village and all development can guarantee mitigation to actively reduce the peak flow to the Bury Brook which is close by. One responders object based on concerns about ecological harm to trees and biodiversity, flood risk, topographical challenges, visual impact, inadequate access and traffic issues, unsuitability for residential and commercial development, and the loss of agricultural land, all of which threaten the rural character and environmental integrity of Abbots Ripton. Another objection was raised highlighting infrastructure challenges, particularly with the main Anglian Water sewage pumping station. Not constrained by minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site could create transport and safety impact for pedestrians and vehicles as a result of access via 'The Green' and lack of pedestrian connections to the main village and services. That direct access from 'The Green' has not been included within the site boundary making it unclear if this may impede delivery and viability or if there are ownership issues and that the site is removed from the main village of Abbots Ripton having little relationship to the village creating isolated developed in the countryside.

Abbots Ripton 5: Land South of Station Road, Abbots Ripton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

Responses were mixed but half of them were opposed to development. Kings Ripton Parish Council commented some small scale development within the village may be acceptable providing it does not change the character of the village and all development can guarantee mitigation to actively reduce the peak flow to the Bury Brook which is close by. One responders object based on concerns about ecological harm to trees and biodiversity, flood risk, topographical challenges, visual impact, inadequate access and traffic issues, unsuitability for residential and commercial development, and the loss of agricultural land, all of which threaten the rural character and environmental integrity of Abbots Ripton. Another objection was raised highlighting infrastructure challenges, particularly with the main Anglian Water sewage pumping station. Not constrained by minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to achieve an access (subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments). Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site would create transport and safety impacts for pedestrians due to lack of pedestrian connections to the main village and services. It is also removed from the main village of Abbots Ripton having little relationship to the village creating isolated developed in the countryside.

Abbots Ripton 6: Sapley Park Garden Village (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (15 responses)

The majority of respondents were opposed to the development. Concerns raised include its impact on farmland, historic and archaeological sites, conservation villages, and areas supporting wildlife, including red-listed species. The Wildlife Trust objects due to potential adverse impacts on nature conservation sites and nature recovery efforts. Flood risk and heritage impacts as well as infrastructure constraints were raised. There is topographical variation within the site, leading to potential visual intrusion and challenges in development. The CPRE opposes the development due to its visual dominance and impact on the rural landscape. Another concern was on the pressure it would add to the road network, traffic, congestion and safety concerns and how development could be integrated with surrounding areas. There are no minerals or waste constraints. The Highways Authority states that access should be from the A141and secondary accesses may be possible from C112 King Ripton Road/Sapley Road; C115 Abbots Ripton Road/Huntingdon; and B1090 St Ives Road all of which appear to have sufficient frontage and may require off-site highway improvements in relation to the scale of development proposed. The suitability of the approach road network for secondary accesses will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs and may require infrastructure improvements. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

The site promoter commented stating that the landowner is flexible as to the exact scale and form of any allocation that could come forward. Further to feedback received in the LAA, the landowner would like to withdraw the area of the Site to the west of the East Coast mainline railway in recognition that it is unlikely to be deliverable with the plan period currently proposed.

Council response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

The site was considered to be less viable than other sites submitted. It has highly variable accessibility to services and facilities with the southern part being good whilst the northern parts of the site have poor accessibility and significant challenges in terms of active travel and public transport at present. Until there is greater certainty over the rerouting of the A141 (which will potentially run through the site impeding access) the ease and safety of potential connections to Huntingdon are challenging. The previous Local Plan Inspector expressed significant concern over the market absorption challenges. This site is very close to the existing strategic location of Alconbury Weald and likely to compete directly in the market. The site's proximity to Alconbury Weald also raised concern over delivery of the site which may be impacted by market absorption due to its proximity to an ongoing strategic housing scheme with the potential to slow housing delivery in the district and thus not contributing effectively to the Governments housing delivery targets.

Alconbury

General comment: Several comments raised general concern to proposed developments in Alconbury Weston, primarily due to flood risks exacerbating existing issues, environmental impact, impact on the character of the village and the strain on local infrastructure.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Alconbury 1: Land South of Great North Road, Alconbury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (19 responses)

4 Further Issues and Options

The majority of responses were opposed to development on this site. The LLFA identified it is at a high risk of surface water flooding making it potentially unsuitable for development. Concern regarding surface water flooding was also made by several other respondents particularly flooding along Great North Road, Sharp Lane and The Leys. Alconbury Brook Flood Group highlighted that development may exacerbate these issues and that mitigation is required. Respondents also considered that there will be increased traffic and noise pollution and development would impact local wildlife and the rural character of the village. There was also concerns about the capacity of local services, such as doctors' surgeries and schools, to cope with the increased population. There were also concerns about the loss of identity of Alconbury and Alconbury Weston as separate but linked villages. Some questioned the need for development beyond infill, especially considering the ongoing development at the adjacent Alconbury Weald site. The Parish Council stated the site could be supported subject to mitigation. There is a minerals and/or waste constraint which could be overcome with mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

Since the Land Availability Assessment was originally undertaken, the site's potential development use has been confirmed as residential rather than mixed use or employment. This site has been selected as a draft residential allocation (Draft Allocation Alconbury 1) for about 30 homes. More recent flood map updates and information find that site is not constrained by fluvial flood risk however surface water flood risk is present on a small portion of the site in the northern most corner. Remaining flood risk concerns will be addressed through a flood risk assessment and drainage strategy to include safe access and escape routes. The site's location within a Sand & Gravel Mineral Safeguarding area is addressed through specific criteria within the policy, and highways concerns through the requirement for provision of a safe and suitable means of access from Great North Road.

The site does not coalesce with Alconbury Weston and infills land between residential and farm buildings. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Alconbury 2: Land to the East of Globe Lane (smaller site), Alconbury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (14 responses)

There were mixed responses to this site. The LLFA identify the site has a low risk of surface water flooding, but there have been previous reports of local flooding. Comments raised concerns are raised about the site's potential to exacerbate flooding in the area, with specific mentions of Cock Brook and the impact on local infrastructure. Alconbury Brook Flood Group highlighted that development may exacerbate these issues and that mitigation is required. Respondents also considered that there will be increased traffic and noise pollution and development would impact local wildlife and the rural character of the village. There was also concerns about the capacity of local services, such as doctors' surgeries and schools, to cope with the increased population. Some questioned the need for development beyond infill, especially considering the ongoing development at the adjacent Alconbury Weald site. The Parish Council stated the site could be supported subject to mitigation and could provide new public open spaces. There is a minerals and/or waste constraint which could be overcome with mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Alconbury 2) for about 60 homes. More recent flood map updates and information find that site is not constrained by fluvial flood risk and surface water flood risk very low. Remaining flood risk concerns will be addressed through a proportionate flood risk assessment and detailed assessment of surface water flood risk. The site's location within a Sand & Gravel Mineral Safeguarding is addressed through specific criteria within the policy.

A landscape and visual impact assessment and arboricultural assessment demonstrating retention of existing mature and established trees and hedgerows and provision of substantial landscaping on all boundaries will be required to address concerns in relation to impact local wildlife and the rural character of the village. Highway concerns and access will be addressed through criteria requiring provision of a safe and suitable means of access from Globe Lane and assessment of transport impacts through a proportionate transport assessment.

An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Alconbury 3: Land to the East of Globe Lane (larger site), Alconbury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (14 responses)

The majority of responses were opposed to this site. Comments raised concerns regarding flood risk that would require mitigation, the Alconbury Brook Flood Group warns the site is unsuitable unless a large floodplain extension is implemented. Other concerns are that Globe Lane is too narrow, sewage capacity and infrastructure and service provision, loss of agricultural land, impact on wildlife, impact on the character of Alconbury and loss of separation between it and Alconbury Weald. The Parish Council stated the site could be possible suitable if all these concerns could be addressed. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraint that may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and the suitability of the approach road network from the A14/Woolley Road will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs.

The site promoter reiterated the site's availability and considered that many of the issues identified in the assessments can be overcome such as traffic and that the Design Principles and Concept Document (July 2023) helps to address some of the landscape and oil pipeline concerns.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that due to its scale this may provide challenges in effectively masterplanning a large disproportionate residential expansion to become part of the existing community. The site is of a size that is likely to have a significant impact on the landscape or townscape representing a significant extension to the settlement (40%). Access would be from Globe Road, a narrow lane may present safety and transport impacts and significantly increase transport movements through the village, which would require further assessment and mitigation. An oil pipeline infrastructure crosses the site which could impact the achievability of site or affect design, layout and location of properties, this would require further investigation.

Alconbury 4: Brooklands Farm, land to the East of A1 junction 13, Alconbury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (13 responses)

There were mixed responses towards this site. The Parish Council support this site subject to measures to mitigate constraints such as flood risk. Comments raised concerns regarding flood risk that would require mitigation, the Alconbury Brook Flood Group suggests mitigation measures such as a storage pond, permeable surfaces

4 Further Issues and Options

and rainwater gardens. Other concerns are that HGV traffic may worsen road conditions, highway safety, loss of agricultural land, impact on wildlife, and noise pollution form the A1. There is a minerals and/or waste constraint that may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. They also state it is likely that two points of access will be required at least one in emergency form and it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

The site promoter reiterated the site's availability for development and expressed their willingness to work on overcoming concerns such as surface water flood risk, landscaping and the water recycling area as well as the scale of development.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Alconbury 5: Land to the North of School Lane, Alconbury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (16 responses)

The majority of responses were opposed to this site. Comments raised concerns regarding flood risk that would require mitigation, the Alconbury Brook Flood Group highlights the topography of the site and need for enhanced drainage. Other concerns is that Manor Lane is too narrow, impact on infrastructure and service provision, sewage capacity, impact on wildlife, impact on medieval ridge and furrow land and on the character of the village. Some raised that Alconbury Weald should absorb further growth instead. The Parish Council stated the site could be possible supported with limitations and required additional measures to address these concerns were included as well a reduced number of houses on site. The LLFA states there is low surface water flood risk and that the site may potentially be unsuitable for the proposed development. There is a minerals and/or waste constraint that may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed including the suitability of the approach road network via Manor Lane from the B1043 and Junction 13 of the A1(M) through Alconbury village will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs. Also, it is likely that two points of access will be required at least one in emergency form and local infrastructure improvements will be required in the form of walking/cycling connectivity.

The site promoter reiterated the site's availability and submitted a Vision document which they consider demonstrates that many of the issues identified in the assessments can be overcome. The submitted Design Principles and Concept Document (Nov 2024) outlines that landscape buffers and greenspace can be incorporated as well as street layouts that integrate with the topography of the site.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is not considered appropriate for development as it would have a significant landscape impact. Development would be highly exposed within the wider landscape due to the sloping nature of the site and would require flood mitigation.

Alconbury 6: Land North of B1043 and East of Alconbury, Alconbury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (14 responses)

There were mixed responses towards this site. Comments, including those form the Parish Council raised concerns regarding flood risk that would require mitigation, the Alconbury Brook Flood Group suggests mitigation measures such as a storage pond. Other concerns are HGV traffic on local roads, highway safety, infrastructure and service capacity, loss of agricultural land, impact on wildlife, loss of trees and hedgerows and noise pollution form the A1. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to B1043 Rusts Lane to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. This site is not acceptable as it does not accommodate walking or cycling. It will also cause junction capacity pressures on the nearby roundabouts and junctions. It is not clear if the north western half of the site will be connected to the south eastern half via the tree belt. If not, on the basis of the boundary line there is inadequate connection to the public highway. They also state it is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter reiterated the site's availability for development and considers the site provides economic benefits and can be effectively masterplanned as part of the existing business cluster and overcoming constraints on site.

Council response

This site has not been selected as a draft allocation. The site was not considered appropriate by the Highways Authority and was considered unacceptable as it does not accommodate walking or cycling. They also note that it will cause junction capacity pressures on the nearby roundabouts and junctions and that it is not clear if the north western half of the site will be connected to the south eastern half via the tree belt. If not, on the basis of the boundary line there is inadequate connection to the public highway. Therefore the site was not taken forward as a site within the growth strategy options due to these issues.

Alconbury 7: Fifty Acres, Land adjacent to Ermine Street and A1304, Alconbury (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (12 responses)

The responses for this site were mixed. The Parish Council were supported of the site with mitigation measures such as surface water alleviation. The Alconbury Brook Flood Group warns that development could increase flooding in Alconbury Village unless robust mitigation such as smart-controlled storage ponds and sustainable drainage. Comments raised concerns regarding flood risk, environmental impact of development, impact on wildlife, loss of agricultural land, impact on traffic and local infrastructure. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Also that it is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council response

This site has not been selected as a draft allocation. This site is located in proximity to Alconbury Weald. It was considered that development at Alconbury Weald would need to be completed before the commencement of any nearby residential allocation due to market absorption pressures. Therefore the site was not taken forward as a site within the growth strategy options.

Alconbury 8: Land at Weybridge Farm (Brampton Cross) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (18 responses)

4 Further Issues and Options

There were mixed responses to this site. Some expressed support for the site including Alconbury and Ellington Parish Councils subject to adequate assessments and major traffic improvements, active travel, flood risk and biodiversity measures. Comments raised concerns regarding flood risk, the scale of the proposal, environmental impact of development, impact on wildlife, loss of agricultural land, impact on traffic and local infrastructure. CPRE is opposed based on landscape impact, flooding and industrialising the open countryside. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraint impacting the site that requires mitigation. The Highways Authority states the site appears to have sufficient frontage to Woolley Road to achieve two accesses but is likely to require significant highway improvements in relation to the scale of development proposed. They state that no access should be permitted via the A14 east bound, Woolley Hill and Woolley Road as the route is not suitable to cater for high volumes of traffic and HCVs. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. National Highways also commenting recognising the site's proximity to the strategic road network.

Comments raised the need for adequate wildlife, transport and flood risk assessments to be undertaken.

Council response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres.

This site is located away from such locations. More sequentially preferable sites have been selected for strategic employment with regards to flood risk, these are North of A141 between the Racecourse and A1307 (immediately north of Huntingdon) and West of the A1 and South of Peterborough Motorway Services. These sites have also been chosen due to their locational distribution, ensuring that logistics and distribution uses spread the transport impact. In addition, the floorspace proposed for Brampton Cross would concentrate Huntingdonshire's employment need all in one location creates less opportunity for employment across the district. This is not to say that this site may not be deliverable in the future as part of the Combined Authority's Local Growth Plan. The site was not put forward for allocation as part of Huntingdonshire's Preferred Options Local Plan due to substantial accessibility challenges both by non-car modes of travel and through the capacity of the highway network to accommodate the volume and nature of vehicles expected to be generated by the proposed scheme.

Significant concerns have also been raised by the Highways Agency with the need for significant highway improvements in relation to the scale of development proposed. No access should be permitted via the A14 east bound, Woolley Hill and Woolley Road as the route is not suitable to cater for high volumes of traffic and HCVs. There are also concerns regarding sustainable travel connections to wider centres of population and the site would not be acceptable for a development of this scale without significant improvements. Natural England also raise concerns citing the need careful consideration and likely requirement for additional assessments including as downstream impacts on internationally designated sites.

Alconbury Weston

General comment: Several comments raised general concern to proposed developments in Alconbury Weston, primarily due to flood risks exacerbating existing issues, environmental impact, impact on the character of the village and the strain on local infrastructure including education provision which will require mitigation to address if development went ahead.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Alconbury Weston 1: Land North West of Buckworth Road, Alconbury Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (10 responses)

There were mixed responses to the site. Comments (including those from Alconbury Weston Parish Council) raised concerns about flood risk such as surface water flooding, inadequate infrastructure, environmental impact, the loss of green space, poor access to services and transport, ecological sensitivity (including presence of protected species), and potential overdevelopment that could alter the village's character. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraints impacting the site which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Also it is likely that two points of access will be required at least one in emergency form and local infrastructure improvements will be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Several suggest that further assessments and mitigation measures are essential before any development proceeds.

Council response

This site has not been selected as a draft allocation. The site was not tested specifically by the Council as part of the Growth Strategy Options, however a handful of sites within Alconbury Weston were tested as part of Growth Strategy Option 3 to test an overall approach. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered necessary for allocation. The Council did however apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater emergence risk at significant rates meaning it did not meet the criteria for consideration.

Alconbury Weston 2: Land East of High Gables, Buckworth Road, Alconbury Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (11 responses)

There were mixed responses to the site. Comments (including those from Alconbury Weston Parish Council) raised concerns about flood risk such as surface water flooding, inadequate infrastructure, environmental impact, poor access to services and transport, ecological sensitivity (including presence of protected species Great Crested Newts), and potential overdevelopment that could alter the village's character. Alconbury Brook Flood Group urged appropriate flood mitigation measures be included in future proposals. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraints impacting the site which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access via Great North Road and North Road and local infrastructure improvements will be required in the form of walking/cycling connectivity.

The site promoter stated that dwellings will be prioritised towards areas of very low surface water flood risk and will not be located in areas shown to be at risk of medium or high surface water flooding. Surface water will discharge to the watercourse located adjacent to the site's northern boundary and will be restricted to greenfield runoff rates. The proposed SuDS strategy will include various drainage measures.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. This site was tested as part of Growth Strategy Option 3 to test an overall approach to development in Alconbury Weston. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered necessary for allocation. The Council did however apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Alconbury Weston 3: 48 Old Great North Road, Alconbury Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (10 responses)

There were mixed responses to the site. Comments (including those from Alconbury Weston Parish Council) raised that the site has already been cleared of trees and vegetation and that there is likely to be contamination arising form the site's former use to store fuel and old tankers. Other concerns were raised about flood risk such as surface water flooding, inadequate infrastructure, environmental impact, the loss of green space, poor access to services and transport, and impact on the village's character. Alconbury Brook Flood Group urged appropriate flood mitigation measures be included in future proposals. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraints impacting the site which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Also it is likely that two points of access will be required at least one in emergency form and local infrastructure improvements will be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation. The site was not tested specifically by the Council as part of the Growth Strategy Options, however a handful of sites within Alconbury Weston were tested as part of Growth Strategy Option 3 to test an overall approach. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered necessary for allocation. The Council did however apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater emergence risk at significant rates meaning it did not meet the criteria for consideration.

Alconbury Weston 4: Land West of 41 Vinegar Hill, Alconbury Weston (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (9 responses)

The responses were opposed to development on this site. Comments raised concerns regarding flood risk and the downstream impact on flooding in Alconbury. Alconbury Brook Flood Group urged appropriate flood mitigation measures be included in future proposals. The LLFA states there has been locally reported flooding which may

make the site potentially unsuitable for the proposed development. There are no mineral or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access via Great North Road/North Road and B1043 Old North Road in accordance with requirements respecting local junction spacing subject to improvement to gradients between the highway and the site. Local infrastructure improvements will be required in the form of walking/cycling connectivity and the site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to key constraints arising the location of the development being out of context with the built form and because the topography of the land would significantly constrain the achievability of development.

Alconbury Weston 5: Land East of Vinegar Hill, Alconbury Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (9 responses)

There were mixed responses to the site. Comments (including those from Alconbury Parish Council) raised concerns about flood risk such as surface water flooding, inadequate infrastructure, environmental impact, traffic along Vinegar Hill, the loss of green space, poor access to services and transport, and impact on the village's character. Alconbury Brook Flood Group urged appropriate flood mitigation measures be included in future proposals and a reduction in the number of homes by 50%. One comment raised that there is no footpath along the frontage. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraints impacting the site which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access via Great North Road/North Road and B1043 Old North Road in accordance with requirements respecting local junction spacing. Local infrastructure improvements will be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. This site was tested as part of Growth Strategy Option 3 to test an overall approach to development in Alconbury Weston. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered necessary for allocation. The Council did however apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Alconbury Weston 6: Land to the North of the Crossways Distribution Centre, Alconbury Hill (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (12 responses)

Responses were mixed with most being opposed or unsure towards development. Alconbury Weston Parish Council considered that expansion of the Crossways Distribution Centre (CDC) should be possible in a controlled and to a proportionate extent with highway improvements, flood mitigation and mitigation against impacts to wildlife and Monks Wood SSSI. The Wildlife Trust identified that development should seek to buffer and enhance the landscape around Monks Wood in line with the interim Huntingdonshire Nature Network ambitions and opportunities. Other comments raised concerns flood risk, inadequate infrastructure, traffic impact, environmental

4 Further Issues and Options

impact including that on Monks Wood SSSI, poor access to services and transport, and the presence of oil and gas pipelines. The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraints impacting the site which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to the B1043 Ermine Street to achieve an access and it is likely that two points of access will be required at least one in emergency form. An access off Monks Wood Road is likely to require significant highway improvements in relation to the scale of development proposed and while access from the A1(M) via B1043 Ermine Street is acceptable however, the suitability of the approach road network from the B1090 via Monks Wood Road will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs and is likely to require significant highway improvements. Local infrastructure improvements will be required in the form of walking/cycling connectivity. National Highways commented highlighting the site's proximity to the strategic road network.

The site promoter commented that reference to their Vision Document be made and that amend the assessment to note that that the site could accommodate up to 125,000 sqm of floorspace. They consider the scale and location of the proposal will deliver substantial employment growth and business clustering opportunities and the Vision Document shows how the development can be integrated with Crossways Distribution Centre while avoiding adverse impacts on Monks Wood and the surrounding landscape. They state that a range of survey and assessment work will be commissioned to demonstrate how any constraints can be appropriately addressed.

Council response

This site has not been selected as a draft allocation. It was originally considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However significant objections have been raised by Natural England who state that they "object to any allocation of this land due to unacceptable risks to Monks Wood SSSI/NNR and the serious impact on internationally important long-term research carried out by the UK Centre for Ecology and Hydrology (UKCEH), which would jeopardise their future plans and activities."

Alconbury Weston 7: Land East of the B1043 and North of Wheatsheaf Cottages, Alconbury Weston (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

The responses were mostly opposed or unsure towards development and agreed with the assessment. The LLFA states there is locally reported surface water flood risk making the site potentially unsuitable for the proposed development. There is a minerals and/or waste constraints impacting the site which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to the B1043 Ermine Street to achieve an access.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint due to its location wholly within a waste management area which is specifically identified on the Cambridgeshire and Peterborough Minerals and Waste Local Plan as an operational/ committed site for the management of waste.

Alconbury Weston 8: Safefield Farm, North West of Alconbury Airfield (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (11 responses)

The majority of comments were opposed to development. Comments raised concern of the scale of development citing its impact on the landscape and on Upton and Alconbury Weston as well as harm to ancient woodland, loss of agricultural land, presence of an oil pipeline, noise and light pollution, traffic and lack of services and infrastructure. CPRE is opposed due to its urbanising impact on the countryside and impact on the villages of Upton and Alconbury Weston and potential impact on Hermitage Wood County Wildlife site and Ancient/Semi-Ancient woodland. The LLFA states there has high risk form surface water flooding which may

make the site potentially unsuitable for the proposed development. There are minerals and/or waste constraints impacting the site that may require mitigation. The Highways Authority states the parcels on the eastern side of the A1(M) appear to have sufficient frontage to the B1043 Ermine Street/Old North Road and Alconbury Hill to achieve accesses but likely to require significant highway improvements in relation to the scale of development proposed. The parcels on the western side of the A1(M) appear to have sufficient frontage to achieve access from Vinegar Hill and Nora Wood Way but further assessment will be required. It is unclear how high quality walking, cycling, wheeling access can be achieved to link the sites to wider centres of population. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

The Wildlife Trust supports the need to buffer and to maintain strategic landscape connections between these sites and therefore reducing the potential developable areas accordingly. A further consideration is the potential for adverse impacts on these ancient woodlands from excessive access and recreational use. These will need to be effectively buffered (and could potentially be extended) and to remain connected with ecologically functional landscape connections requiring a natural landscape connection between Hermitage Wood and Hill Wood and Bevills Wood several hundred metres wide, buffers to Bevills Wood and Hill Wood of at least 100 metres wide and ideally several hundred metres and a buffer of at least 100 metres wide to Upton Wood.

Site promoter reiterated the site availability and noted that while the Council has assessed it for employment use only, they advocate for a mixed-use scheme including housing, schools, and local services, leveraging proximity to the Enterprise Zone (EZ). The site is seen as deliverable within 15 years, with strong infrastructure links and opportunities for biodiversity enhancement, collaboration with adjacent landowners, and mitigation of pollution and heritage impacts. The promoter argues that the site could support around 2,000 homes and contribute significantly to local education, employment, and sustainability goals. This is supported by a masterplan.

Council response

This site has not been selected as a draft allocation. It was originally considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However significant objections have been raised by Natural England who state that they " object to any allocation of this land due to unacceptable risks to Monks Wood SSSI/NNR and the serious impact on internationally important long-term research carried out by the UK Centre for Ecology and Hydrology (UKCEH), which would jeopardise their future plans and activities." National highways raised issues noting that "Development requires realignment of the A1 between Wansford Station overbridge and Elton Road (Water Newton)." which has the potential to impact viability and achievability. The site is therefore now considered inappropriate for development.

Alconbury Weston 9: Land Northwest of Chequers Close, Alconbury Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (11 responses)

There were mixed responses to this site. Multiple comments highlight concerns about surface water flooding and that site has been observed to form a temporary pond during peak rainfall, indicating its importance in flood management for the village. Other concerns included its impact on the character of the village, loss of greenspace, access, increased traffic generation, its agricultural use and loss of trees and biodiversity. Some raised that it has previously had planning permissions refused (22/01350/OUT) and appeal (APP/H0520/W/23/3327277). The LLFA states there is high surface water flood risk making the site potentially unsuitable for the proposed development There is a minerals and/or waste constraint that may require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway in the turning head of Chequers Close to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity and that it is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced, dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. This site was tested as part of Growth Strategy Option 3 to test an overall approach to development in Alconbury Weston. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore sites in Alconbury Weston were not considered necessary for allocation. The Council did however apply a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source and preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

The site has since secured a Permission in Principle (25/01596/PIP) for the erection of up to 9 residential dwellings.

Alconbury Weston 10: Land East of B1043 and South of Alconbury Hill, Alconbury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (11 responses)

The majority of responses were opposed to development. Several comments agreed with the Council's assessment including Alconbury Weston Parish Council and the Wildlife Trust. Objections to the proposal were made regarding the impact it would have on local roads, flood risk, and overdevelopment in combination with other nearby major developments. The LLFA identifies the site is at high risk of surface water flooding consider this site may be unsuitable for the proposed development. CPRE consider the proposal could impact ancient woodlands in terms of light and noise and visual pollution with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument, additionally it is on elevated ground making landscape impact more prominent. No minerals or waste constraints. The Highways Authority states that the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form.

The site promoter did not agree with the Council's assessment and reiterated the site's availability and consider the site can be masterplanned to protect ancient woodlands and provide high-quality open space, minimizing landscape impact. They dispute the Council's view that the site is not sustainably located close to local services, highlighting its proximity to new and planned services and facilities as part of the Alconbury Weald scheme.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that due to its separation from Alconbury Weald it is currently unclear how the site could be masterplanned to become part of this community, without further completion of the Alconbury Weald development and/or compilation of potential intervening land to create a more comprehensive development, additional information would be required. The site forms part of a green break between Crossways Distribution Centre and Alconbury Weald/ Alconbury Enterprise Zone. The site has a greater relationship to the open countryside than the nearby uses. The site proposal could also impact a significant concentration of ancient woodlands in terms of light and noise, with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument.

Alconbury Weston 11: Land adjacent to Alconbury Weald Development and South of Safefield Farm, Alconbury (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (13 responses)

The majority of responses were opposed to development. Several comments agreed with the Council's assessment including Alconbury Weston and Alconbury Parish Councils. Objections to the proposal were made regarding the impact it would have on local roads, flood risk, and overdevelopment in combination with other nearby major developments. The LLFA identifies the site is at high risk of surface water flooding. CPRE consider the proposal could impact ancient woodlands in terms of light and noise and visual pollution with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument. No minerals or waste constraints. The Highways Authority states that on the basis of the site boundary there is no connection to the public highway and access is dependant upon development of adjacent sites and it is unclear how high quality walking, cycling, and wheeling access can be achieved to link the site to wider centres of population. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

The site promoter did not agree with the Council's assessment and reiterated the site's availability and consider the site can be masterplanned to protect ancient woodlands and provide high-quality open space, thus minimizing landscape impact. The Commissioner also disputes the Council's view that the site is not sustainably located close to local services, highlighting its proximity to new and planned services and facilities as part of the Alconbury Weald scheme.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is currently unclear how the site could be masterplanned to become part of this community without further completion of the Alconbury Weald development, coordination of access arrangements which could present land ownership issues and/or compilation of potential intervening land to create a more comprehensive development, additional information would be required. The site has a greater relationship to the open countryside than the nearby uses. The site proposal could also impact a significant concentration of ancient woodlands in terms of light and noise and visual pollution with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument. The site is north and west of Alconbury Enterprise Zone which would require assessment as to the compatibility of these sites in terms of amenity. Current lack of access from the B1043 and Alconbury Weald means the site is isolated regarding means of access and could present viability issues.

Sawtry

General comment: Concerns include the destruction of natural habitats, prime agricultural land, and established woodland hedgerows. There are significant worries about the village's infrastructure, which is deemed inadequate to support the proposed developments, citing limited medical facilities, schools, shops, and public transport. Environmental issues such as light, noise, and air pollution, as well as increased traffic congestion and potential anti-social behaviour, are highlighted. Additionally, there is pressure on drainage systems and a high risk of flooding due to the soil composition. The Education Authority notes existing pressures on early years and primary school places, with recommendations for mitigation to support further development.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Sawtry 1: Green End Field, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (4 responses)

Comments were either unsure or opposed towards development. One response stated the development would significantly alter the local landscape and character requiring landscaping mitigation, surface water flooding risk, access and traffic with a potential ransom strip, is incompatible with the surrounding area, and the presence of an oil pipeline buffer zone raises safety concerns, and the proximity to the A1 could result in noise pollution for future residents. The LLFA identifies the site is at high risk of surface water flooding and consider that it could

potentially be unsuitable for development. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing but the formation of an access and visibility splays may result in the loss of green infrastructure.

Council response

This site has not been selected as a draft allocation. The findings from the Council's Land Availability Assessment and Sustainability Appraisal noted that the site was potentially appropriate for development with a potential capacity for 16 homes. The status of this site has been revised following the results from the Level 2 Strategic Flood Risk Assessment which concluded that “This site should not be developed for more vulnerable purposes and be left for agricultural use or as open green space.” These ‘more vulnerable’ uses include residential dwellings as set out in Annex 3 of the NPPF and therefore the site is no longer considered appropriate for development.

Sawtry 2: Land at St Andrews Way, Sawtry (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

Comments were mixed towards development on this site. One response raised concerns about road safety due to the dangerous access point on a tight bend with a 60 mph speed limit, and the impact of noise, air, and light pollution from the nearby A1 motorway, flood risk and drainage issues, loss of agricultural land, potential impact on the quality of life of residents, and the adverse impact on the rural character of the area. The LLFA identifies the site is at low risk of surface water flooding and consider that it could potentially be unsuitable for development due to locally reported flooding. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access respecting local junction spacing. Local infrastructure improvements will be required in the form of walking/cycling/wheeling connectivity to village amenities.

The site promoter disagreed with the assessment and reiterated the site's availability for development and ask that the technical evidence submitted is revisited.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site has little relationship to the existing place and community and contributes to the approach to the village. That it would be susceptible to substantial noise light, vibrational and air pollution, some of which may be from an elevated level above the site. The site is also impacted by an oil pipeline buffer zone which could impact development and there are safety concerns for access and exit to and from the site.

Sawtry 3: Land to the West of Glatton Road, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (7 responses)

Comments were mostly opposed to development. CPRE showed support for the development. Comments raised concern regarding the site's location, lack of integration with the existing community, access and infrastructure issues, flood risk, previous land use, and significant environmental and landscape impacts including impact on Sawtry's character. They also highlight that this site's dependency on the development of a neighbouring parcel for access. The LLFA identifies the site is at high risk of surface water flooding and consider that it could potentially be unsuitable for development. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that on the basis of the red line there is no connection to the public highway but one could be made if additional land is acquired. Local infrastructure

improvements may be required in the form of walking/cycling connectivity and the site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

The site promoter contends that this adjacent site is progressing, with detailed planning permission granted and delivery expected within five years, making Sawtry 3 viable for development.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Sawtry 1) for about 330 homes and about 2ha of open space to safeguard against flood risk along Sawtry Brook. Concerns relating to integration will be addressed through a criteria requiring a public master planning exercise ensure that the design is capable of being integrated with the approved development to the east and south, alongside the need for safe access through the approved development. Environmental and landscape impacts are guided by criteria relating to strong landscaping and the retention of trees and hedgerow informed by a landscape and visual impact assessment and arboricultural assessment and flood risk through a flood risk assessment and detailed drainage strategy taking into account surface water flood risk and modelling of Sawtry Brook and unnamed watercourses. Walking and cycling connectivity and existing public Rights of Way mean that the site will be required to retain public rights of way alongside provision of active travel routes to facilitate integration with Sawtry.

Sawtry 4: Land East of Glatton Road and North of Brookside Industrial Estate, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (6 responses)

Comments were mostly opposed to development. Comments raised concern regarding flood risk, visual and landscape harm, poor integration with the existing village, infrastructure constraints, access, loss of agricultural land, potential contamination, legal restrictions, environmental risks and impact to Sawtry's rural character. The LLFA identifies the site is at high risk of surface water flooding and consider that it could potentially be unsuitable for development. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity. The suitability of the approach road network from B1043 via Glatton will need to be assessed in relation to the ability to cater for higher volumes of traffic.

The site promoter reiterated the site's availability for development and submitted plans and details.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Sawtry 2) for about 170 homes and about 1ha of open space to safeguard against flood risk along Sawtry Brook. Concerns relating to integration are addressed through the requirement to provide active travel routes into Sawtry, and landscaping issues through the reinforcement and retention of trees and hedgerow supported by a landscape and visual impact assessment and arboricultural assessment. Criteria relating to flood risk ask that a development proposal provide a flood risk assessment and detailed drainage strategy, taking into account residual risk from culverts and modelling of Sawtry Brook and an unnamed ordinary watercourse. The allocation includes criteria to address its location within a brick clay mineral safeguarding area and a safe and suitable means of access will be required from Glatton Road and the assessment of transport impacts through a transport assessment to address transport and access concerns. Legal restrictions expire in 2027.

Sawtry 5: Land to the North East of the Brookside Industrial Estate, Sawtry (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

4 Further Issues and Options

Comments were opposed or unsure towards development. Comments raised concern on the impact of the rural character and approach to the village, introduce industrial uses that could cause light, noise, odour, air, and visual pollution; and pose safety risks due to increased HGV traffic on narrow local roads. Other issues were flood risk, loss of agricultural land, integration with the existing community and legal access issues. The LLFA identifies the site is at high risk of surface water flooding and consider that it could potentially be unsuitable for development. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that on the basis of the site boundary the only connection to the public highway is via Tort Hill but this is a gated road and the approach road network is not suitable for additional vehicles. Access could be gained via Gidding Road and Sawtry 4 however this would be subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments, but is likely to require significant highway improvements to Gidding Road in relation to the scale of development proposed.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to landscape impact, impact on character and form of nearby residential area and the village in general, pollution and safety. An oil pipeline buffer zone could impact the layout and proposed use of the site. The site promoter notes that access is a significant constraint potential access from neighbouring land which may pose significant issues regarding viability or ransom strips affecting viability and/or achievability.

Sawtry 6: Glebe Farm, Sawtry (Council conclusion pre-consultation - potentially appropriate for BNG)

Main Issues Raised (5 responses)

Comments were mostly supportive of the site being used for BNG. CPRE stated support. The Wildlife Trust states they support private landowners wishing to undertake action for nature recovery to address the biodiversity crisis but have concerns regarding the location of the site as it does not related well to the Huntingdonshire Interim Nature Network. Ideally such a standalone Habitat Bank site would be at least 100 Ha in size as the lack of connections to other nearby sites or nature rich landscape will limit the species that can colonise. If the site also had a degree of public access (compatible with the chosen habitats) it could also provide a strategic natural greenspace to help address the lack of other such provision in the rapidly growing village of Sawtry and prevent future adverse impacts on nearby nature sites such as the ancient woodlands to the south of the village. The Minerals and Waste Authority identify that there no minerals and/or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve accesses in accordance with DMRB/MfS requirements. The site is affected by an existing public Right of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council response

This site has not been selected as a draft allocation. The site now has a conservation covenant on it which means biodiversity net gain credits can be purchased from the site as off-site credits for development.

Sawtry 7: Land at Little Common Farm, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (4 responses)

Comments were mixed towards development. The LLFA identifies the site is at medium risk of surface water flooding and consider that further consideration of risk should be undertaken. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that the site has access on/off the A1(M) via the B1043 and appears to have sufficient frontage to B1043 Old Great North Road to achieve an access respecting local junction spacing and proximity to the A1(M) off slip roundabout. However, access from Cooks Lane would not be achievable without significant highway improvements. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter stated support for the assessment and reiterated its availability for commercial development. A Transport Accessibility and Highway Access Review has been prepared.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Sawtry 5) for B2 general industrial uses and about 2.5ha of open space to safeguard against flood risk along Middle Level Catchwater Drain. Concerns over flood risk are addressed through the requirement for land to safeguard against flooding and through the requirement to provide a flood risk assessment and detailed drainage strategy, taking into account culverting the bridge on Cooks Lane and full detailed flood modelling of the Middle Level Catchwater Drain. The allocation addresses the site's location within a brick clay minerals safeguarding area. Access and walking and cycling connectivity are required through criteria asking for provision of a safe and suitable means of access from Old North Road and completion of a transport assessment and travel plan to encourage accessibility by active travel modes.

Sawtry 8: Land North of Black Horse Industrial Estate (larger site), Sawtry (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

Comments were mixed towards development. The LLFA identifies the site is at high risk of surface water flooding and consider that further consideration of risk should be undertaken. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that the site has access on/off the A1(M) via the B1043 and appears to have sufficient frontage to B1043 Old Great North Road to achieve an access respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as there are significant constraints to overcome especially in relation to the eastern parcel which would require crossing of the Middle Level Catchwater Drain, a third of this parcel is within flood zone 3a and the land is allocated in Sawtry Village Neighbourhood Plan for sports and recreation uses. The smaller site: Sawtry 9, the western parcel was however selected.

Sawtry 9: Land North of Black Horse Industrial Estate (smaller site), Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (4 responses)

Comments were mixed towards development. The LLFA identifies the site is at high risk of surface water flooding and consider that further consideration of risk should be undertaken. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that the site has access on/off the A1(M) via the B1043 and appears to have sufficient frontage to B1043 Old Great North Road to achieve an access respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter reiterated the site's availability for development and considered constraints can be managed and mitigated.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Sawtry 6) for B2 general industrial uses and B8 storage and distribution uses alongside about 0.3ha of open space to safeguard against flood risk along Middle Level Catchwater Drain. Concerns over flood risk are addressed through the requirement for land to safeguard against flooding and through the requirement to provide a flood risk assessment and detailed drainage strategy modelling Middle Level Catchwater Drain and Black Horse Drain. The allocation addresses the site's

4 Further Issues and Options

location within a brick clay minerals safeguarding area. Walking and cycling connectivity are required through criteria asking for provision of a safe and suitable means of access from Old North Road and completion of a transport assessment and travel plan to encourage accessibility by active travel modes.

Sawtry 10: Land to the East of St Judith's Lane and west of Toll Bar Way and Green End Road (larger site), Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (7 responses)

Comments were mostly opposed towards development. Concerns were raised over the impact on the open countryside, flood risk, loss of agricultural land, pollution from the A1, powerlines and impact on Aversely Wood SSSI. The scale of the proposal was also a concern as was its ability to integrate with the village and existing infrastructure. The LLFA identifies the site is at high risk of surface water flooding and consider that further consideration of risk should be undertaken. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that the site appears to have sufficient frontage to Toll Bar Way to achieve an access respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged. National Highways highlighted the site's proximity to the strategic road network.

The site promoter stated support for the assessment but recommends further assessment particularly around flood risk (they assert the site is entirely in Flood Zone 1), landscape exposure (citing their own visual appraisal showing limited visibility), and agricultural land classification (noting the need for site-specific surveys). Their masterplanning proposes lower densities (30 dph) than the Council's estimates (35 dph).

Council response

This site has not been selected as a draft allocation. The smaller site (Sawtry 11) was selected to provide an element of separation from, and to address the impact on, Judith's Lane and potential impact on Aversley Wood SSSI.

Sawtry 11: Land to the West of Toll Bar Way and Green End Road (smaller site), Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (7 responses)

Comments were mostly opposed towards development. Concerns were raised over the impact on the open countryside, flood risk, loss of agricultural land, pollution from the A1, powerlines and impact on Aversely Wood SSSI. The scale of the proposal was also a concern as was its ability to integrate with the village and existing infrastructure. The LLFA identifies the site is at high risk of surface water flooding and consider that further consideration of risk should be undertaken. The Minerals and Waste Authority identify that there are minerals and/or waste constraints present which may require mitigation. The Highways Authority states that the site appears to have sufficient frontage to Toll Bar Way to achieve an access respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way. Such Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

The site promoter stated support for the assessment but recommends further assessment particularly around flood risk (they assert the site is entirely in Flood Zone 1), landscape exposure (citing their own visual appraisal showing limited visibility), and agricultural land classification (noting the need for site-specific surveys). Their masterplanning proposes lower densities (30 dph) than the Council's estimates (35 dph).

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Sawtry 3) for about 330 homes and about 3ha about of open space to safeguard against flood risk along an unnamed watercourse on the northern boundary. Concerns regarding active travel, rights of way and integration with the village of Sawtry are addressed through criteria noting that the development will require the retention, enhancement and connections to public right of way alongside provision of active travel routes to facilitate integration with Sawtry. The allocation addresses the site's location within a brick clay minerals safeguarding area. An approach to mitigating flood risk must be set out through a flood risk assessment and a detailed drainage strategy taking into account residual risk from culvert condition, and modelling of the ordinary watercourses to the north and south. Concerns that relate to landscape impact and proximity to Aversely Woods requires that the site provide a strong landscaping scheme informed by landscape and visual impact assessment and arboricultural assessment and an ecological assessment to ensure protection of the Aversley Wood SSSI. Assessment of noise and air quality impacts for the site, particularly from the A1(M) and appropriate mitigation will be required to address any adverse impacts. The presence of powerlines will be addressed through the need for a master plan for the site.

Sawtry 12: Land to the West of Toll Bar Way and North of Whitehall Farm, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (5 responses)

All responses were opposed to development on this site. One comment raised concerns about flood risk and drainage, loss of agricultural land, landscape and visual impact, impact on Aversley Wood SSSI, access and traffic safety including a potential ransom strip, and environmental and safety issues including an oil pipeline and overhead powerlines. The LLFA states there is high surface water flood risk making this site potentially unsuitable for the proposed development. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site has access on/off the A1(M) via the B1043 and appears to have sufficient frontage to Toll Bar Way to achieve an access respecting local junction spacing including the signalised junction for the Moto services area currently under construction on the east side of Toll Bar Way. Local infrastructure improvements may be required in the form of walking/cycling connectivity. CPRE are concerned at the potential impact on Aversley Wood SSSI.

Council response

This site has not been selected as a draft allocation. Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses.

Sawtry 13: Land South of Old Great North Road Industrial Estate (larger site), Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (4 responses)

Responses to the site were mixed. The LLFA states there is high surface water flood risk and that further detailed consideration of surface water management options will be required. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site has direct access on/off the A1(M) and appears to have sufficient frontage to B1043 Old Great North Road to achieve an access/es respecting local junction spacing and proximity to the A1(M) on slip roundabout. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

The site promoter supported the assessment and submitted an Odour Risk Assessment for consideration.

Council response

This site has not been selected as a draft allocation. Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment

areas and to maximise the benefits of the clustering of businesses. Of those sites that were assessed for potential allocation, this site was at a higher risk of flooding with 25% of the site being within flood zone 3b. In comparison those sites that were proposed for draft allocations were either wholly within flood zone 1 or a nominal percentage below, which would allow for the sequential location of development away from areas at flood risk.

Sawtry 14: Land South of Old Great North Road Industrial Estate (smaller site), Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (4 responses)

Responses to the site were mixed. The LLFA states there is no surface water flood risk but further detailed consideration of surface water management options will be required. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site has access on/off the A1(M) via the B1043 and appears to have sufficient frontage to B1043 Old Great North Road to achieve an access/es respecting local junction spacing and proximity to the A1(M) on slip roundabout.

The site promoter supported the assessment and submitted an Odour Risk Assessment for consideration.

Council response

This site has not been selected as a draft allocation. Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses. This site was considered more removed and isolated locationally with the chosen draft employment allocations providing a more concentrated clustering of sites.

Sawtry 15: Land East of B1043 and East of Keeper's Cottage, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (4 responses)

Responses to the site were generally against development. The LLFA states there is high surface water flood risk which should be taken into account. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site has no frontage to the public highway but is accessed via a private access road off the B1043 Old Great North Road but an adequate access may be achievable but is likely to require significant highway improvements in relation to the scale of development proposed. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged. CPRE objected to the site's development.

Council response

This site has not been selected as a draft allocation. Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses. Of those sites that were assessed for potential allocation, this site was at a higher risk of flooding with only 76% of site being within flood zone 1 and the remainder in flood zones 2, 3a and 3b. The location of fluvial flood risk is such that the southern extent is severely restricted and the northern half of the site is divided by flood zone 3b raising questions as to whether a comprehensive development could be achieved. In comparison those sites that were proposed for draft allocations were either wholly within flood zone 1 or a nominal percentage below, which would allow for the sequential location of development away from areas at flood risk. This site was also considered more removed and isolated locationally with the chosen draft employment allocations providing a more concentrated clustering of sites.

Sawtry 16: Land at Brickyard Farm, Sawtry (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (6 responses)

There was a mixed response to this site. One comment supported the site highlighting its potential contribution to the local economy. The LLFA states there is high surface water flood risk and consider this site may be unsuitable for the proposed development. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site appears to have sufficient frontage to B1043 Old Great North Road to achieve an access respecting local junction spacing. An access to the site off B1090 Woodwalton Lane would not be acceptable for a development of this scale without significant improvements. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged. The Wildlife Trust states that should this site be brought forward for development, a significant buffer of complementary habitats should be created adjacent to the SSSI and ideally extend to at least 100 metres in width and be managed to enhance biodiversity. CPRE objected to the site's development.

Council response

This site has not been selected as a draft allocation. Employment development near to Sawtry was focussed on the eastern side of the A1(M) to avoid adverse impact on additional traffic as a result of commercial operations on the village of Sawtry and to encourage comprehensive development and expansion of established employment areas and to maximise the benefits of the clustering of businesses. Of those sites that were assessed for potential allocation, this site was at a higher risk of flooding with only 87% of site being within flood zone 1 and the remainder in flood zones 2, 3a and 3b. In comparison, those sites that were proposed for draft allocations were either wholly within flood zone 1 or a nominal percentage below, which would allow for the sequential location of development away from areas at flood risk. This site was also considered more removed and isolated locationally with the chosen draft employment allocations providing a more concentrated clustering of sites. In addition this proposed site for employment has the potential to adversely impact ancient woodland and SSSI 'The Odd Quarter' which selected proposed allocations do not.

Spaldwick

General comment: Generally comments highlighting concerns about the overall impact on the village, flood risk, road safety, cumulative impact of development and capacity of infrastructure. There is existing pressure on early years and secondary school places, Spaldwick Community Primary School has sufficient capacity for the current population but may need mitigation for future developments

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Spaldwick 1: Land at Thrapston Road, Spaldwick (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (9 responses)

The majority of responders were opposed to its development. The Parish Council are opposed to the development citing concerns regarding Norman Bridge, flood risk, impact on County Wildlife Site, sewage capacity, HGV traffic and highway safety. These concerns are also raised by several other respondents. CPRE are opposed stating that lorry parking within a residential area is unsuitable. The LLFA states there is high surface water flood risk and consider this site may be unsuitable for the proposed development. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access respecting local junction spacing. The site is adjacent to the A14 but can only be accessed from the east bound direction via the village which would not be acceptable. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

4 Further Issues and Options

The site promoter commented reiterating its availability for development. They recognise the LAA constraints and the further work required including a traffic impact assessment, heritage impact assessment, ecological impact assessment and flood mitigation. They wish to clarify that the gross site area of the site should be 2.04 ha instead of 2.83 ha, they attached a map showing the site area. They wish the assessment to be updated to reflect this and the capacity potentially amended.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. In addition, over half the site is at fluvial flood risk, more sequentially preferable sites are available.

Spaldwick 2: Rear of Manor Farmyard, Spaldwick (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to this site. The Parish Council and another respondent are opposed to the development citing concerns regarding designated heritage assets, water run-off, traffic, impact on wildlife and sewage capacity. The Parish Council state that they would support a smaller number of homes more sympathetic to the character of the street scene and surrounding properties. The LLFA states there is high surface water flood risk and consider this site may be unsuitable for the proposed development. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site has an existing access but it is likely to require significant highway improvements in relation to the scale of development proposed and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. Over three quarters of the site is at risk of fluvial flood risk, more sequentially preferable sites are available.

Spaldwick 3: Church Field, Spaldwick (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (8 responses)

The majority of responders were opposed to its development. The Parish Council recognise the potential amenities development may bring but have the concerns regarding its location, importance as a green break, heritage assets, they may require land for future cemetery expansion, access, surface water flooding, impact on wildlife, protected trees and sewage capacity. These concerns are also raised by several other respondents. CPRE are opposed to this site being developed as the greenspace and historic setting of the Church is a key part of the setting and character of the village and should not be developed. The LLFA states there is high surface water flood risk and consider this site may be unsuitable for the proposed development. There is a minerals and/or waste constraint present which may require some mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and early dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council response

This site has not been selected as a draft allocation. A selection of sites were tested by the Council as part of growth strategies 3 and 4 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as

the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. There was also concern over the impact on the character of the area (including views to the church) which would not be the case with the other sites that were tested as part of the growth strategies.

Spaldwick 4: Land to East of Stow Road, Spaldwick (Council conclusion pre-consultation - potentially appropriate for development)

Main Issues Raised (6 responses)

The responses were mixed but half of responders were in support of the site. The Parish Council acknowledges that this could be a suitable site for development within the village but would recommend a smaller number of homes as the proposed number of homes is a significant extension to the village and would impact its character and there is a lack of amenities and infrastructure to deal with this as well as the potential highway safety impacts. Support for a smaller development was also raised by two other respondents. The LLFA states there is high surface water flood risk and consider this site may be unsuitable for the proposed development. There are minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form. Also, the site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategies 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

The Stukeleys

General comment: General concerns include the potential for increased flood risk due to the large size of the sites and their proximity to Alconbury Brook, which already experiences significant flooding. The Alconbury Brook Flood Group suggests significant additional mitigation measures, such as widening the floodplain and creating off-line ponds and swales to manage runoff and reduce flood risk. There are also objections to certain developments, such as the removal of green spaces and the overdevelopment of areas struggling with infrastructure issues like road capacity, healthcare, and schools.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

The Stukeleys 1: Land North East of Ermine Street (adjoining Huntingdon) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Responses were mixed towards this site. There were concerns about the site's isolation from sustainable travel options and the potential for it to become a small satellite settlement with no viable links to wider communities. One comment stated that safe integration and proper pedestrian crossing points across the A141 are needed to minimise car travel, suggestions include the development of overpasses or underpasses to facilitate active travel. Huntingdon Town Council support the development but reiterate concerns expressed during the planning process. The Highways Authority states the site appears to have sufficient frontage for access but will likely require significant highway improvements due to the scale of the proposed development. This includes the need for two points of access and local infrastructure improvements for walking and cycling connectivity.

4 Further Issues and Options

Council response

The site is included within the Preferred Options Draft Local Plan within the chapter 'North Huntingdon Growth Cluster Opportunity Zones' as an existing commitment. An outline planning application (reference 20/00847/OUT) was submitted on 6th May 2020 which is awaiting a decision as of September 2025 once issues with Anglian Water are resolved. The site retains the principle of the site being appropriate for development in case works have not started before this Local Plan is adopted.

The Stukeleys 2: Nook Farm, Little Stukeley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (18 responses)

The majority of the responses to this site were opposed to its development. Many respondents strongly oppose the development, citing reasons such as loss of countryside and rural character, overdevelopment, infrastructure strain, increased traffic, and road safety risks. The Alconbury Brook Flood Group has raised concerns about flood risk and suggested the flood risk should be reassessed. There were also concerns include the loss of green space, increased pollution, impact on local communities and the overall environmental footprint of the development. Some respondents support the development, noting its suitability due to its location and potential for sustainable mixed-use development. There is a minerals and/or waste constraint present that requires mitigation. The Highways Authority states the site appears to have sufficient frontage to the A1307 on both sides to achieve accesses but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required on each side at least one in emergency form. The site also has frontage to Ermine Street but the suitability of the road network will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs should access be required. Access should not be gained from minor local roads such as Mill Road and Low Road. The site is not sustainable given a lack of public transport links or high quality walking, cycling, and wheeling access from local centres of population. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced, they recommend early dialogue with CCC's Asset Information Definitive Mapping team regarding this. National Highways highlights the proximity of the site to the strategic road network including the A1307/A141, they identify that to deliver the proposed new junction, funding would need to be established and noise mitigation will be required.

Site promoter reiterated the site availability. They state that development can avoid high flood risk areas and incorporate green buffers to protect the character and heritage of The Stukeleys. It is in single ownership with no legal constraints, and is considered deliverable within 15 years. Concept plan provided.

Council response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

The site is the least sequentially preferable strategic site when considering flood risk and the Huntingdonshire Transport Strategy ranks the site as one of the least accessible. The site's proximity to Alconbury Weald also raised concern over delivery of the site which may be impacted by market absorption due to its proximity to an ongoing strategic housing scheme with the potential to slow housing delivery in the district and thus not contributing effectively to the Governments housing delivery targets.

The Stukeleys 3: Land between 76 and 86 Owl End, Great Stukeley (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

The responses were mixed, with half supportive of the site. One comment considered the site to be an appropriate use of a small scale development that fits in with the current rural setting. Another comment states that the access over a drainage ditch has been in place since 2014, they suggest the bullet requiring this to be removed from the assessment. They also state that hedgerows on its northern boundary have been planted and just beyond its eastern boundary screening will soon become Alconbury Weald Country Park. There are no minerals or waste constraints present. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. They also state that it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population and local infrastructure improvements may be required in the form of passing places.

Council response

This site has been selected as a draft residential allocation **(**Draft Allocation Great Stukeley 1**)** for about 3 homes. The allocation includes a requirement for the provision of safe and suitable vehicular access and consideration of safe accessible active travel routes to address walking, cycling and wheeling access.

The Stukeleys 4: Land North of Ermine Street, Little Stukeley (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

The responses were mixed, with half opposed to the site. One comment objected based that the site is considered to be outside of the village boundary and is an important buffer between Alconbury Weald and Little Stukeley. There are no minerals or waste constraints present. The Highways Authority states the site appears to have sufficient frontage to achieve an access respecting local junction spacing and local infrastructure improvements may be required in the form of walking/cycling connectivity. They also identify that access to the site may be affected by a significant watercourse and early dialogue with Lead Local Flood Authority is encouraged to determine how appropriate crossing can be managed.

Council response

This site has not been selected as a draft allocation, it was considered inappropriate for development through the Council's Land Availability Assessment as it is a protected settlement break in 'The Stukeleys Neighbourhood Plan'.

The Stukeleys 5: Land North of A141, between Huntingdon Racecourse and A1307 (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (14 responses)

The responses to this site were mixed with half of respondents supporting the site's development. Some respondents support the development of the site, noting its suitability for warehouses due to its access to both the A1 and A14, and its proximity to Huntingdon. They highlight the economic benefits, including increased jobs and opportunities for local businesses. The Alconbury Brook Flood Group has raised concerns about flood risk and suggested the flood risk should be reassessed. There are concerns about the impact on existing residents, increased traffic, potential strain public services and infrastructure. There were also concerns include the loss of green space, increased pollution, and the overall environmental footprint of the development. There is a minerals and/or waste constraint present that requires mitigation. The Highways Authority states the site appears to have sufficient frontage to the A1307 and the A141 to achieve an accesses but is likely to require significant highway improvements in relation to the scale of development proposed. It is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and early dialogue with CCC's Asset Information Definitive Mapping team is encouraged with regard to any Rights of Way diversions that may be necessary. National Highways highlights the proximity of the site to the strategic road network including the A1 and Brampton Hut Interchange, they identify that some land around the site is in flood zone 3 but this shouldn't impact directly on the A1.

4 Further Issues and Options

Council response

This site has been selected as a draft employment allocation **(**Draft Allocation North Huntingdon 2**)** for B2 light industrial and B8 storage and distribution uses with up to 70% of floorspace to be for B8 use. Flood risk concerns have been addressed through criteria requiring the sequential location of development within flood zone 1 and provision of a flood risk assessment and detailed drainage strategy taking into account groundwater and surface water flood risk, modelling of ordinary watercourses. Pollution and environmental impact concerns are covered through criteria that requires a noise and air quality assessment and appropriate mitigation from the A141, A1307 and proposed uses on the site and a requirement to maximise opportunities to contribute to net zero through the provision of renewable energy generation, energy efficient buildings and water reuse. Strong landscaping is required informed by a proportionate landscape and visual impact assessment to minimise landscape impact. Employment uses are considered sustainable located to existing residential populations. Supporting text asks that a Construction Environment Management Plan is completed demonstrating how a proposal can make best use of any mineral incidentally extracted as part of the development and / or make available for others to use. Transport impacts, access, improvements, public rights of way and active travel infrastructure are all addressed through criteria requiring safe and suitable means of access from the A141, assessment of transport impacts through a transport assessment, a sustainable transport network for vehicles, cyclists, pedestrians and public transport informed by a Travel Plan and the retention of and connections to public right of way.

The Stukeleys 6: Huntingdon Racecourse (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

Responses were largely opposed to development. Brampton Parish Council highlighted that the site floods and therefore they do not support its development. Huntingdon Town Council and CPRE also had concerns regarding flood risk and the impact on Brampton Racecourse SSSI. The Wildlife Trust raised concerns regarding the impacts on Brampton Racecourse SSSI and the Great Ouse Valley priority natural landscape and the significant scaling back of potential development opportunities to avoid impacts on both of these features. There is a minerals and/or waste constraint present that requires mitigation. The Highways Authority states that on the basis of the site boundary, the only connection to the public highway is at the racecourse/Brampton junction of the A141 between Spittals interchange and Brampton Hut which may not be adequate to accommodate a development of this scale without improvements which may not be achievable within the existing highway. Any proposed improvements would be subject to detailed design in accordance with the DMRB/MfS, road safety audit, local junction spacing and capacity assessments but would be likely to be significant. It is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. Early dialogue with CCC's Asset Information Definitive Mapping team is encouraged with regard to any Rights of Way diversions that may be necessary.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation North Huntingdon 1) for continued use of the site for the racecourse, equine support facilities and Huntingdon and District Rugby Football Club and complementary conference and events facilities, outdoor recreational and leisure facilities. Concerns in relation to the impact on the SSSI and Ouse Valley Priority Area are addressed through a requirement to minimise impact through strong design informed by a landscape and visual impact assessment and provision of an ecological survey and mitigation. Flood risk concerns will be addressed though the need for development to relocate existing uses to lower flood risk parts of the site wherever possible in order to reduce overall exposure to flood risk, the sequential location of new development and the provision of a flood risk assessment and detailed drainage strategy, taking into account culverts and modelling of Alconbury Brook and unnamed ordinary watercourses. The site's location within a Sand & Gravel Mineral Safeguarding is addressed through specific criteria within the policy. A proportionate transport assessment and travel plan will be required taking into account the cumulative impact of any preceding or future development and the retention and enhancement of public rights of way and pedestrian, cycle and public transport routes to address transport, active travel and access concerns.

Upton and Coppingford

Upton and Coppingford 1: Land to South West of South Farm, Upton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (2 responses)

Responses were generally supportive of this site. The Minerals and Waste Authority confirmed there are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance although it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

Council response

This site has been selected as a draft residential allocation **(**Draft Allocation Upton 1**)** for about 7 Custom and Self-Build homes. Active travel concerns are addressed through the requirement to provide safe and appropriate active travel and vehicular access from Pig Market End

Upton and Coppingford 2: Land to East/South East of Maple Tree House, off Pig Market End, Upton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

Responses were generally supportive of this site. The Minerals and Waste Authority confirmed there are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance although it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment.

Winwick

Winwick 1: Land adjacent Winwick Village Hall, Thurning Road, Winwick (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

Responses were generally supportive of this site. The Minerals and Waste Authority confirmed there are no minerals or waste constraints impacting the site. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance and local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter submitted a proposed site plan for the site showing how 5 homes can be accommodated on the site.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been

4 Further Issues and Options

selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Area 4 - Western Huntingdonshire

General comment: One comment was made on the whole of the Western Huntingdonshire area from Covington Parish Meeting who undertook a questionnaire on those within their Parish. In summary the questionnaire showed that there is a willingness to accept a small amount of growth in the village but restricted to small units of development as infill or to replace existing properties within the village boundary; a preference for smaller housing units 2 to 3 bedrooms; some enthusiasm for workshops/offices in unused farm buildings; a fear of the village growing too large and losing its character; it recognises the fact that we are a small, aging community and not able to attract younger families; and the lack of public transport and the condition of the roads are a continuing problem.

Council response: The Council has not selected any sites in Covington as draft allocations and no sites were submitted to the Council for consideration as proposed allocations in the local plan.

Brington and Molesworth

General comment: There were general observations relating to the impact of potential sites on local educational provision including early years, primary and secondary provision in the local area. There were also concerns relating to the flooding, limited village amenities and infrastructure and the impact of potential development on the character of Brington.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Site Name: Brington and Molesworth 1: Land West of Brookside, Molesworth (did not pass fundamental constraints)

Main Issues Raised (3 responses)

All responses were unsure or did not support the proposed site. The LLFA stated that surface water management would be required due to surface water flood risk, the Minerals and Waste Authority highlighted the presence of a waste constraint requiring an odour assessment and which may be difficult to overcome. The Highways Authority stated that the site has sufficient frontage for access but local walking and cycling infrastructure improvements may be required.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.

Brington and Molesworth 2: Land opposite Jolly Hills Farm, Molesworth (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

All responses were unsure or did not support the proposed site. The LLFA stated that there was low surface water flood risk, but local flooding has been reported to the LLFA so surface water management will be required. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation. The Highways Authority note there is "no through road" leading to RAF Molesworth and may require highway improvements to accommodate two-way traffic, and local walking and cycling infrastructure improvements may be required.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its limitations in successfully integrating development with the existing place and community and impact on the character of the area

Brington and Molesworth 3: Land North and East of Hill Place, Brington (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (31 responses)

Most responses did not support this site setting out strong opposition to the proposed development, with numerous concerns about its impact on the local community, the environment, and infrastructure including increased flooding, traffic, pollution, and insufficient parking. Safety concerns were highlighted including poor road drainage, inadequate footpaths, and insufficient street lighting. Several comments highlight the need for amenities such as a shop and village hall if the development proceeds. The LLFA stated that development may be unsuitable due to high surface water flood risk, the Minerals and Waste Authority highlighted the presence of a waste constraint. The Highways Authority highlights that there is sufficient frontage onto Brington Road to achieve an access but the formation of an access may result in the loss of green infrastructure. Also local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter has set out the economic and social benefits of the scheme. A masterplan has been prepared setting out access from Hill Close, tree planting and an attenuation bond. A Drainage Appraisal has been prepared which concludes that surface water discharge from the proposed development will outfall to a ditch located on the eastern boundary.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Bythorn and Keyston

General comment: There were general observations relating to the impact of potential sites on local educational provision including early years, primary and secondary provision in the local area.

Council response: An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

4 Further Issues and Options

Bythorn and Keyston 1: Land West of Warren Lane, Bythorn (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (10 responses)

Most responses did not support this site. Respondents considered the site unsuitable for development due to the narrowness of Warren Lane and the impact on the rural character and landscape of Bythorn. There were also concerns regarding the capacity in the foul sewage network and concerns about storm water runoff increasing the risk of potential flooding. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation. The Highways Authority note that highway improvements may be required to accommodate two way traffic.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Bythorn 1) for about 10 homes. Impact on landscape impact and the rural nature of the area is addressed through the provision of a small number of homes and the requirement for a landscape and visual impact assessment to demonstrate the scheme will not have a significant detrimental impact on the adjoining countryside and a landscaping scheme to allow for the transition to the open countryside along the northern, western and southern boundaries. Although the lane is narrow there is scope to expand the lane through highways improvements which will is sought through the allocation through the requirement for provision of a safe vehicular access onto Warren Lane including upgrading of Warren Lane to accommodate highway movement and the provision of a footpath on Warren Lane to allow pedestrian access to services within the village. The development will be required to gain agreement with the Environment Agency and Anglian Water Services that waste water flows from the proposal can be accommodated.

Bythorn and Keyston 2: Land South West of Old Toll Bar House, Toll Bar Lane, Keyston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (11 responses)

Most responses did not support this site. Observations include concerns about the site's location near the A14 junction, which is considered dangerous and unsuitable for housing. Many comments highlight the need for significant improvements to the A14 junction to make it safer for traffic. The Highway Authority identified there is a road safety risk and a road safety audit would be required in the early feasibility stage of any proposal, also local infrastructure improvements may be required in the form of walking/cycling connectivity. Respondents considered the site unsuitable for development due to the narrowness of Toll Bar Lane and the impact on the rural character and landscape of Bythorn. There were also concerns regarding the capacity in the foul sewage network and concerns about storm water runoff increasing the risk of potential flooding. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. The Highways Agency noted that Toll Bar Lane appears to be around 130m in length, between the A14 and the bend. There is a road safety risk heading north with the potential for overtaking slow moving vehicles risking head on collisions or rear end shunts as commercial vehicles turn into the site. Due to these serious concerns the site was therefore considered inappropriate for development.

Bythorn and Keyston 3: Home Farm, Bythorn (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (8 responses)

There were a mixed opinions towards this site. Some comments highlight the need to retain the existing redbrick agricultural buildings and convert them into residential properties rather than demolishing them and also potential impact on the Conservation Area. Suggested changes include limiting the number of dwellings to ensure existing facilities in the village are not overwhelmed. The Highway Authority identified there is sufficient road frontage from Thrapston Road and local infrastructure improvements may be required in the form of walking/cycling

connectivity. Some highlighted that the site was unsuitable due to the narrowness of the road and capacity of the foul sewage network. There were also concerns regarding storm water runoff and the potential for flooding. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Bythorn and Keyston 4: Land off Main Street, Bythorn (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (9 responses)

Most responses did not support this site. Respondents considered the site unsuitable for development due to the narrowness of local roads and the impact on the rural character and landscape of Bythorn. There were also concerns regarding the capacity in the foul sewage network and concerns about storm water runoff increasing the risk of potential flooding. The Highways Authority states there is sufficient highway frontage along Main Street and that and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the sensitivity of the location and lack of reflection of the linear nature of development in Bythorn.

Bythorn and Keyston 5: Land East of Clack Lane, Bythorn (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

There were a mixed opinions towards this site. Respondents considered the site unsuitable for development due to the narrowness of local roads and the impact on the rural character and landscape of Bythorn. The Highways Authority states there is sufficient highway frontage along Thrapston Road and that and local infrastructure improvements may be required in the form of walking/cycling connectivity. There are significant surface water flood risk to overcome. There were also concerns regarding the capacity in the foul sewage network and concerns about storm water runoff increasing the risk of potential flooding. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. Some sites were tested by the Council as part of growth strategy option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. In addition, the Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas

at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater risk meaning it did not meet the criteria for consideration.

Bythorn and Keyston 6: Land West of Clack Lane, Bythorn (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

All responses did not support development of the site. Respondents considered the site unsuitable for development due to the narrowness of local roads and the impact on the rural character and landscape of Bythorn. There were also concerns regarding the capacity in the foul sewage network and concerns about storm water runoff increasing the risk of potential flooding. The Highways Authority identified that the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with requirements.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its impact on the character of the local area and challenges in integration both impacting on the ability to achieve successful place-making.

Catworth

General comment: There were concerns relating to the impact of potential sites on local infrastructure, education provision, traffic and safety as well as environmental and heritage concerns including impact on the village's unique characteristics and landscape.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Catworth 1: Fruit Field opposite Victory Playing Field, Catworth (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (13 responses)

There was a mixed response to the site with most respondents supporting its development. The Parish Council have expressed support for this site over others within the village. Key concerns highlighted include the need for development to be in character with the village, infrastructure issues such as schools, doctors, roads, and public transport, traffic and safety concerns, environmental and heritage impacts, and the need for affordable housing. Specific suggestions include reducing the number of houses permitted, ensuring low-density housing, and implementing traffic calming measures. The Highways Authority states there is sufficient frontage to the public highway onto the B660 to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. This site was tested by the Council as part of growth strategy option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat

Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. In addition, the Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk and groundwater risk meaning it did not meet the criteria for consideration.

Catworth 2: Land West of Catworth, Catworth (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (10 responses)

There was a mixed response to the site with several respondents supporting its development. Concerns highlighted include archaeological remains, access difficulties, traffic, parking and safety issues, environmental and heritage impacts, and the need for infrastructure improvements. The Highways Authority states that highways improvements may be required to accommodate two way traffic, consideration should be given to the feasibility of carriageway widening to achieve a suitable access. Also local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. The Highways Authority raised significant concerns in relation to the narrow road and the feasibility of providing carriageway widening to accommodate two way traffic and suitable access.

Catworth 3: Land South of A14, Catworth (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (27 responses)

The majority of responses did not support this site. A key concern was traffic and safety issues particularly related to the A14 junctions and increased numbers of lorries. The Highways Authority highlights that the site appears to have sufficient frontage to the public highway to achieve an access in accordance requirements respecting local junction spacing but the suitability of the approach road network will need to be assessed in relation to the suitability to cater specifically for HCVs. They also highlight the site has limited walking and cycling connectivity. Other comments highlighted concerns on the impact on the environment and landscape, heritage, pollution, flood risk and the need for infrastructure improvements. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. This site was tested by the Council as part of growth strategy option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. In addition, the Highways Agency noted that the suitability of the approach road network will need to be assessed in relation to the suitability to cater specifically for HCVs, as no further information was submitted the site was not progressed. The Preferred Options draft Local Plan to 2046 focuses employment growth and opportunities around 2 strategic sites, alongside opportunities for expansion of established employment areas and sustainable locations such as market towns and service centres. This site is located away from such locations.

4 Further Issues and Options

Catworth 4: Land East of Fox Road, Catworth (Council conclusion pre-consultation - may be appropriate for BNG)

Main Issues Raised (13 responses)

All respondents were opposed to development of this site. Key concerns highlighted include the site's unsuitability for built development due to the lack of infrastructure, traffic and safety issues, environmental and heritage impacts including impact on the rural character of Catworth, and the preservation of green spaces. Many respondents agree with the assessment and oppose built development on the site but recognise there could be opportunities for biodiversity net gain on the site. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is is inappropriate for built development as it would not support sustainable place-making and has limited potential for open space uses such as biodiversity net gain in the south eastern and northern portions of the site in conjunction with existing areas of trees at The Grange and Little Wood. The site was put forward for multiple uses and therefore the final intention for the site is currently unknown and thus achievability of providing open space and biodiversity net gain.

Catworth 5: Land West of Fox Road, Catworth (Council conclusion pre-consultation - may be appropriate for open space)

Main Issues Raised (11 responses)

All respondents were opposed to development of this site. Key concerns highlighted include the site's unsuitability for built development due to the lack of infrastructure, traffic and safety issues, environmental and heritage impacts including impact on the rural character of Catworth and on ridge and furrow, as well as the preservation of green spaces. Many respondents agree with the assessment and oppose built development on the site but recognise there could be opportunities for open space uses on the site. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is inappropriate for built development but has potential to accommodate a variety of open space uses and biodiversity net gain which should be restricted to the southern portion of the site which could be laid out to relate to the physical form of the existing village. The site was put forward for multiple uses and therefore the final intention for the site is currently unknown and thus achievability of providing open space and biodiversity net gain.

Catworth 6: Triangular Field South of Church End, Catworth (Council conclusion pre-consultation - may be appropriate for open space or BNG)

Main Issues Raised (11 responses)

All respondents were opposed to development of this site. Key concerns highlighted include the site's unsuitability for built development due to the lack of infrastructure, traffic and safety issues, environmental and heritage impacts including impact on the rural character of Catworth, as well as the preservation of green spaces. Many respondents agree with the assessment and oppose built development on the site but recognise there could be opportunities for biodiversity net gain and/or open space uses on the site. The Minerals and Waste Authority highlighted the presence of a waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. The in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal noted that the site is inappropriate for built development, but has the potential as a biodiversity net gain site. The site has the potential to come forward outside the Local Plan process for open space/or biodiversity net gain.

Catworth 7: Land East of Church Road, Catworth (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (12 responses)

Almost all respondents were opposed to development of this site and agreed with the assessment. Key concerns highlighted include the site's unsuitability for built development due to the lack of infrastructure within the village to accommodate growth, traffic and safety issues, environmental and heritage impacts including impact on the rural character of Catworth and on a scheduled monument. The Highways Authority highlighted that there appears to be a sufficient frontage to the public highway to achieve an access but upgrades would be required and there is a public right of way that would be impacted.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the extensive area designated as a scheduled monument in December 2023 which would impede development of the residential and community uses sought on the site.

Ellington

Ellington 1: Land South of Ben Burgess, Ellington (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

There were mixed responses to this site. The LLFA identified that there has previously been low surface water flooding reported on the site and that further consideration of surface water management would be required. There is a mineral and/or waste constraint present. The Highways Authority identifies that the site does not appear to have sufficient frontage to the public highway to achieve an access. The Parish Council agrees with the Council's flood risk observations and while supportive of local employment opportunities, the site falls outside the built-up area.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the site being wholly located within flood zone 3a.

Ellington 2: Land South East of Brook Farm, Ellington (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

There were mixed responses to this site. The LLFA identified that there has previously been high surface water flooding reported on the site and that further consideration of surface water management would be required. There is a mineral and/or waste constraint present. The Highways Authority identifies that the site does appear to have sufficient frontage to the public highway to achieve an access onto Thrapston Road, and local infrastructure improvements may be required in the form of walking/cycling connectivity. The Parish Council agrees with the Council's flood risk observations and states the site is outside of the built up area identified within their neighbourhood plan.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as placing development within flood zone 1 would result in development being poorly located which could not be integrated within the existing place and community. In addition the site has significant flood risk, has unresolved issues relating to access to the site, which may be restricted due to flood risk and has unresolved issues relating to the ownership of access .

Ellington 3: Land West of Grafham Road, Ellington (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to this site. The LLFA identified that there has previously been medium surface water flooding reported on the site and that further consideration of surface water management would be required. There is a mineral and/or waste constraint present. The Highways Authority identifies that the site does appear to have sufficient frontage to the public highway to achieve an access onto Grafham Road. The Parish Council notes the Council's assessment but considers the proposal to be contrary to their neighbourhood plan.

The site promoter supports the assessment of the site and confirmed its availability and that a housing developer controls the site. They confirm that sustainable drainage to mitigate surface water flood risk will be incorporated and that existing hedgerows and vegetation will be retained. . The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk-based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with low risk of surface water flood risk meaning it could meet the criteria for consideration. However, site 'Ellington 4 Old Sheds at Manor Farm, Ellington' also met this criteria. 'Ellington 4 Old Sheds at Manor Farm, Ellington' was selected as a draft residential allocation due to the presence of large buildings on the site, meaning that it was considered more favourable as it also contributed towards the reuse of brownfield land.

Grafham

General comment: Comments raised the impact of development on a small rural community and potential impact on the rural environment and the reduction in the appeal and safety of the leisure facilities due to increase in traffic suggesting that a more appropriate development site would be the field opposite the Cinnamon restaurant. They consider there are inconsistencies within the assessments, particularly regarding the poultry farm and caravan sites, noting issues such as impact on single-track roads, lack of mains sewage disposal, limited broadband capacity, and distance from public amenities.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Grafham 1: Grafham Water Caravan and Motorhome Club Campsite, Grafham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

Most respondents were not supportive of developing the site. Respondents considered the site to be unsuitable for development due to its archaeological significance, flood risk, and access issues. The Parish Council and other stakeholders agree with the assessment, noting the site's historical importance and the need for professional archaeological investigation before any work can start. Additionally, concerns about flood risk, drainage, loss of leisure uses and the impact on Church Road's single-track access were raised, emphasising the need for infrastructure improvements and traffic studies. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Church Road in accordance with requirements respecting local junction spacing but may require highway Improvements to accommodate two way traffic. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, which should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the loss of leisure uses and development being located in the countryside. It also unclear at this stage what use the site submission is proposing and whether the tourist accommodation and leisure facilities are to remain. Contact has been made with the site promoter to address these but no response has been received to date, as such the site is categorised as being potentially unachievable arising from the levels of uncertainty in the proposals. Residential development may be appropriate on the eastern parcel. This was been assessed through a separate proposal - Grafham 2 (CfS:303). Continuing the leisure use on site is considered appropriate, however the loss of such facilities would be resisted. Further investigation is also required regarding land ownership and control.

Grafham 2: Land adjacent to 24 Cedar Close, Grafham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (13 responses)

There were mixed responses to this site with most not supporting its development and several unsure. The site faces significant opposition due to concerns about archaeological significance, flood risk, impact on the character of the area and access issues including the impact on Church Road's single-track access, emphasising the need for infrastructure improvements and traffic studies. The Parish Council notes the Council's assessment but considers the proposal to be contrary to their neighbourhood plan. One respondent highlights that land at 22 Cedar Close is not available and not owned by the site promoter. The Education Authority highlight capacity pressures at nearby early years and secondary schools but potentially capacity at local primary schools. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Church Road in accordance with requirements respecting local junction spacing but may require highway Improvements to accommodate two way traffic. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, which should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Grafham 1) for about 20 homes. Response to comments that land at 22 Cedar Close is not available and not owned by the site promoter. Following this, a check on the land showed that the rectangular piece of land immediately north of 22 Cedar Close is not in the ownership of the wider site promoter. There is also a triangular piece of land between this parcel and the wider parcel in unknown ownership. Therefore, bringing forward this site could involve several landowners. Therefore, the site area has been reduced to that which is in the ownership of the site promoter.

4 Further Issues and Options

In response to comments on the impact on the character of the area criteria have been included to require high quality design that reflects the site's position on the edge of the settlement and the need for the retention and enhancement of existing trees and hedgerows as part of a landscaping. Flood risk will be addressed through provision of a of a flood risk assessment and detailed drainage strategy to evaluate current and future fluvial and surface water flood risk. Development of this site will require the provision of a suitable means of access from Church Road and provision of a safe and appropriate access to the village by vehicles and active travel alongside integration of the existing public rights of way that run through the site to address concerns relating to access, presence of a public right of way and active travel needs. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Grafham 3: Sullivans Poultry Farm, Grafham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to this site. There were concerns regarding the safety and connectivity via sustainable modes of transport to and from the site. Other concerns raised related to potential archaeological significance and flood risk. The Parish Council notes the assessment and identify that the poultry farm has been unused for over 10 years and the site is in need of reinstatement, however have concerns relating to flood risk and drainage, along with access via Church Road. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Church Road in accordance with requirements respecting local junction spacing but may require highway Improvements to accommodate two way traffic. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that whilst the demolition of the existing poultry units could enhance the 'gateway' to the village, this does not justify new buildings in such a detached location. This is especially so of uses relating to residential and care home development which would benefit from being sustainably located near to accessible services and facilities. Proposals for commercial leisure uses could present issues relating to active travel/pedestrian safety through increased vehicle movements along what is a narrow road. As a result of the above it is considered that the site could not be effectively masterplanned to become part of the existing community.

Great Staughton

General comment: There were general observations relating to the impact of potential sites on local educational provision including early years, primary and secondary provision in the local area.

Council response: An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Great Staughton 1: Land East of B661, The Green, Great Staughton (Council initial conclusion - may be appropriate for development)

Main Issues Raised (2 responses)

Responses were generally supportive of this site. The Minerals and Waste Authority identified that the site is not constrained by a minerals or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto The Green in accordance with requirements respecting local junction spacing.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Great Staughton 1) for about 15 homes. The site will be required to provide of a high quality development which reflects the sensitive setting in proximity to a listed building and the surrounding countryside.

Great Staughton 2: Land South of 29 The Green, Great Staughton (Council initial conclusion - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were generally supportive of this site. The Parish Council are in support of this site. The Minerals and Waste Authority identified that the site is not constrained by a minerals or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto The Green in accordance with requirements respecting local junction spacing.

The landowner confirms their commitment to bringing the site forward and has invested in addressing identified issues. They commissioned a Flood Risk Assessment (FRA) and proposes a SuDS scheme to manage surface water. The visual impact is considered manageable with enhanced tree and hedge screening. The landowner challenges the assessment's statement that the site is surrounded by open countryside, arguing it has a close relationship to the village built form. A concept plan includes measures to protect trees and hedgerows, manage surface water, divert the foul sewer, and provide a range of property types, including smaller units suitable for older people and younger adults. The landowner believes the assessment needs to be amended to reflect these points.

Council response

This site has not been selected as a draft allocation. The site is allocated in the Great Staughton Neighbourhood Plan for housing.

Great Staughton 3: Land West of Cage Lane, Great Staughton (Council initial conclusion - not appropriate for development)

Main Issues Raised (3 responses)

Responses were mixed for this site. The Minerals and Waste Authority identified that the site is constrained by a minerals or waste constraint. The Highways Authority states that the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with requirements. The site is also affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced. CPRE Cambridgeshire and Peterborough agrees with the assessment that this is an inappropriate site for development.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as there is little opportunity to successfully integrate the site with the existing place and community considering its detachment from the built form and also the potential difficulty in accessing the site.

Great Staughton 4: Brook Farmyard, Great Staughton (Council initial conclusion - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were generally supportive of this site. The Parish Council are in support of this site. The Minerals and Waste Authority identified that the site is not constrained by a minerals or waste constraint. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto The Highway in accordance with requirements respecting local junction spacing. This would also depend on the access and the turning movements of the proposed vehicles as alterations may be required to the existing infrastructure. If this is the case a road safety audit would be required in the early feasibility stage. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

4 Further Issues and Options

Council response

This site has not been selected as a draft allocation. The site is allocated in the Great Staughton Neighbourhood Plan for provision of a healthcare facility and enabling housing development.

Hail Weston

General comment: Comments highlight that Hail Weston is a small settlement with limited social and community infrastructure. The High Street forms the main route through the village, with critical sections lacking footpaths and having restricted sight lines. Traffic movements are restricted to one way at a time, and pedestrians face safety issues. The surface water drainage system is an issue with incidents of surface water flooding down roads and entering properties. The proposed development sites will likely increase flood risk to existing properties and exacerbate traffic issues. Other concerns were raised regarding the impact on wildlife, including ancient oak trees, rare bats, and great crested newts.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Hail Weston 1: Land West of 5 High Street, Hail Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (15 responses)

Responses were mostly against development of this site. The site faces opposition due to concerns about biodiversity loss, wildlife habitat destruction, surface water drainage issues, and infrastructure challenges. Many respondents disagree with the assessment, noting that the development would negatively impact the village's landscape and surrounding area. Specific concerns include the strain on the sewerage and drainage system, increased traffic and parking problems, and the site's location outside the village boundaries. Additionally, the site is noted for its rich biodiversity which would be adversely affected by the development. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street in accordance with requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Hail Weston 1) for about 8 homes. Impact on landscape and surrounding area will be addressed through criteria requiring design that reflects the site's position on the edge of the settlement and integrates with residential development to the east and b. a landscaping scheme that minimises impact and responds to the open countryside to the north and west. The site is not at risk from flooding and therefore is a sequentially preferable site. transport and active travel will be addressed by criteria requiring safe and appropriate access to the site from High Street which connects directly from B645 and provision of active travel to integrate the site with the village of Hail Weston. The water cycle study does not highlight any concerns regarding wastewater infrastructure however there are policies within the local plan that will require the management of wastewater, parking and biodiversity.

Hail Weston 2: Eaton Bank (northern section), North of Kimbolton Road, Hail Weston (Council conclusion pre-consultation - not appropriate for development)

Main Issues Raised (22 responses)

All comments were opposed to development on the site. The site faces opposition due to concerns about its disproportionate size, impact on the village's character, and limited infrastructure. Many respondents object to the development, noting that it would dramatically harm the village's form and character, increase traffic on already busy roads, and strain local amenities such as schools, medical services, and sewage systems. The site is also noted for its rich biodiversity, including foxes, deer, hares, rabbits, kites, and owls, which would be adversely affected by the development. A minerals and/or waste constraint is present. The Highway Authority identifies that

the site is an integral part of the Eaton Bank sustainable new neighbourhood proposal put forward to Bedford Borough Council for consideration for allocation in the Bedford Local Plan to 2040. The site is not a proposed allocation within that Local Plan. The site appears to have sufficient frontage to the public highway to achieve an access onto the B645 in accordance with requirements respecting local junction spacing. The site is affected by existing public Rights of Way and should be retained on their existing alignment, maintained, or enhanced including connectivity to the wider Right of Way/highway network.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site is part of a wider cross-boundary scheme where achievability is uncertain. The site promoter has not submitted a separate proposal just for this site so their intentions of how it could be developed in isolation are unclear. The site is put forward as an integral part of the large scale Eaton Bank proposal with proposed uses shared across the wider site. As this is not being taken forward at present it is not appropriate to assess the land as a free-standing site because it is not the intention of the site promoter to develop it in this manner.

Hail Weston 3: The Walnuts, 113 High Street, Hail Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (19 responses)

The majority of comments were opposed to development on this site. It faces opposition due to concerns about access and exit, road safety, and impact on the village's character and infrastructure. Many respondents disagree with the assessment, noting that the development would negatively impact the village's landscape and surrounding area. Specific concerns include the strain on the sewerage and drainage system, increased traffic and parking problems, and the site's location outside the village boundaries. Additionally, the site is noted for its rich biodiversity, including bats, owls, and kites, which would be adversely affected by the development. The Highways Authority highlights the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street in accordance with requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 1, 2 and 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 no flood risk meaning it could meet the criteria for consideration. However, site 'Hail Weston 1: Land West of 5 High Street, Hail Weston' also met this criteria by not being at risk of flooding. 'Hail Weston 1: Land West of 5 High Street, Hail Weston' was selected as a draft residential allocation as it is closer to local services and facilities and will not impact the setting of an heritage asset. This site 'Hail Weston 3' is directly over the road from the grade II* listed St Nicholas's Church and any development scheme would need to be sensitive to the setting of this building.

Hail Weston 4: Land South of High Street, Hail Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (19 responses)

4 Further Issues and Options

The majority of comments were opposed to development on this site. The site faces opposition due to concerns about biodiversity loss, wildlife habitat destruction, surface water drainage issues, and infrastructure challenges. Many respondents disagree with the assessment, noting that the development would negatively impact the village's landscape and surrounding area. Specific concerns include the strain on the sewerage and drainage system, increased traffic and parking problems, and the site's location outside the village boundaries. Additionally, the site is noted for its rich biodiversity, including bats, owls, kites, and black squirrels, which would be adversely affected by the development. The Highways Authority highlights the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street in accordance with requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Although this site meets this criteria a more preferably sequential site has been chosen in 'Hail Weston 1: Land West of 5 High Street, Hail Weston' which has no flood risk.

Hail Weston 5: Land South of 143 High Street, Hail Weston (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (24 responses)

The majority of comments were opposed to development on this site. Comments highlighted opposition due to concerns about the disproportionate size of the proposed development, which would dramatically impact the village's character and infrastructure. Many respondents note that the development would more than double the size of the village, leading to increased traffic, strain on local amenities, and loss of biodiversity. Specific concerns include the impact on wildlife habitats, surface water drainage issues, and the village's limited infrastructure, which is inadequate to support such a large development. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street, B645/Kimbolton Road in accordance with requirements respecting local junction spacing. The site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. There is a minerals and/or waste constraint present.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its impact on the local area and inability to be integrated into the existing village of Hail Weston. The site is also of an excessive scale which would overwhelm the village and even a substantially reduced proposal would still suffer integration challenges

Hail Weston 6: Land opposite Brook End Farm, 17-19 Ford End, Hail Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (16 responses)

The majority of responses were opposed to development on this site. Responses set out opposition due to concerns about the narrow and poorly accessible Ford End road. Many respondents note that the development would pose safety risks to current residents, especially pedestrians, and would negatively impact the village's strong sense

of community. Specific concerns include the loss of biodiversity, with habitats for owls, kites, bats, and other wildlife being destroyed. Additionally, the development would strain the existing infrastructure, including roads, drainage, and sewage systems. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Ford End in accordance with requirements respecting local junction spacing and may require improvements to accommodate two way traffic. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. There is a minerals and/or waste constraint present.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Although this site meets this criteria a more preferably sequential site has been chosen in 'Hail Weston 1: Land West of 5 High Street, Hail Weston' which has no flood risk.

Hail Weston 7: Land South West of Pound Close, Hail Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (20 responses)

The majority of responses were opposed to development on this site. Comments raised opposition due to concerns about biodiversity loss, wildlife habitat destruction, surface water drainage issues, and infrastructure challenges. Many respondents disagree with the assessment, noting that the development would negatively impact the village's landscape and surrounding area. Specific concerns include the strain on the sewerage and drainage system, increased traffic and parking problems, and the site's location outside the village boundaries. Additionally, the site is noted for its rich biodiversity, including bats, owls, kites, and black squirrels, which would be adversely affected by the development. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto the High Street in accordance with requirements respecting local junction spacing. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. There is a minerals and/or waste constraint present.

Council response

This site has not been selected as a draft allocation. A larger version of this site was tested by the Council as part of the Growth Strategy Option 3 (Hail Weston 4). The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). Although this site meets this criteria a more preferably sequential site has been chosen in 'Hail Weston 1: Land West of 5 High Street, Hail Weston' which has no flood risk.

4 Further Issues and Options

Kimbolton

General comment: Comments notes that 11 sites have been identified or proposed for development, concerns are raised regarding existing flood issues from the River Kym, leading to traffic concerns and expensive home insurance for residents. Other issues raise relate to access, traffic pressures, wildlife and that local schools have limited capacity to accommodate new students from these developments without mitigation.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Kimbolton 1: Brittens Farm, Station Road, Kimbolton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

There are mixed responses to this site. The LLFA considers the site unsuitable due to high surface water flood risk, recommending pre-application advice. The Minerals and Waste Authority identifies that it is impacted by a minerals and/or waste constraint. The Parish Council agrees to the development in principle if proper consideration is given to drainage, access, and environmental factors. The Highway Authority's notes the site has sufficient frontage to the public highway to achieve an access onto the B660 but may require local infrastructure improvements.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Kimbolton 1) for about 25 homes and about 0.5 ha of open space to safeguard against flooding. Concerns have been addressed regarding flood risk, drainage and environmental factors through criteria requiring demonstration that the site can pass the exception test and built development located on land within flood zone. In addition a blue green corridor is to provided on the southern 0.5ha of the site and the applicant must undertake a flood risk assessment and detailed drainage strategy taking into account fluvial, surface water and residual flood risk, modelling of River Kym and ordinary watercourse including climate change. Provision of safe and appropriate vehicular and pedestrian access from Station Road and within the site will be required to address highways concerns.

Kimbolton 2: Land East of Stow Road, Kimbolton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (9 responses)

Responses were mixed but most were most are opposed to development on the site. Comments raised concerns about high surface water flood risk, loss of grade 2 agricultural land, and the impact on the village's character and infrastructure. The LLFA considers the site may be unsuitable due to high surface water flood risk. The Minerals and Waste Authority highlight a mineral and/or waste constraint. The Parish Council has concerns about drainage, access, sewerage, and road improvements but would support the development if these issues are addressed. Many respondents object to the development, citing potential flooding, loss of agricultural land, and the impact on local amenities and traffic. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing and may require wider highway Improvements to accommodate two way traffic for a site of this size. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced including connectivity to the wider Right of Way/highway network.

Council response

This site has not been selected as a draft allocation. 25/01543/OUT, outline planning application with all matters reserved except for site access for the erection of up to 190 homes, provision of public open space and landscaping, surface water attenuation and associated infrastructure is currently pending consideration.

Kimbolton 3: Land South East of 73 Main Road, Stonely (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Responses were mixed to development on the site. The LLFA considers the site may be unsuitable due to high surface water flood risk, pre-application advice is recommended. No minerals or waste constraints impact the site. The Parish Council agree with the Council's assessment that the site is inappropriate for development. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access onto Main Road in accordance with requirements respecting local junction spacing but due to the vertical alignment of the carriageway the visibility splay may need to be clarified.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its location, as development would erode the rural approach into Stonley as well as the site being within an oil pipeline buffer zone and having extensive surface water flood risk. Development could only be accommodated at the southern end of the site due to surface water flood risk resulting in a large set back which would not reflect the character of the area.

Kimbolton 4: Land North of Main Road, opposite Gimbers End, Stonely (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses on this site. The LLFA notes that the site is in a low surface water flood zone but requires further detailed consideration of surface water management options. The Minerals and Waste Authority highlight there is a mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site has sufficient frontage for access from Main Road but due to the vertical alignment of the carriageway the visibility splay may need to be clarified. CPRE and the Parish Council agree with the assessment that the site is inappropriate for development due to its potential adverse impact on the character of Stonely.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to is potential adverse impact on the character of Stonely. In depth development of the site is very likely to harm the open character of the area and there is potential for adverse impacts on the conservation area and the naturally vegetated landscape forming an important setting into Stonely.

Kimbolton 5: Claylands Farm, Main Road, Stonely (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses on this site. The LLFA notes that the site is in a high surface water flood zone making the site potentially unsuitable for development meaning pre-application advice is recommended. No mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site has sufficient frontage to the public highway to achieve an access from B645/Kimbolton Road and local infrastructure improvements may be required in the form of walking/cycling connectivity. CPRE and the Parish Council agree with the assessment that the site is inappropriate for development.

4 Further Issues and Options

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its separation from the village, potential impact on surrounding countryside. The site could not be effectively integrated into the existing place and community.

Kimbolton 6: Land North of Gimbers End, Stonely (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

There were mixed responses on this site. The LLFA notes that the site is in a medium surface water flood zone meaning further detailed consideration of surface water management options will be required. The Minerals and Waste Authority highlight there is a mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site has sufficient frontage to the public highway to achieve an access from Gimbers End but highway improvements will be required to accommodate two way traffic. Also, local infrastructure improvements may be required in the form of walking/cycling connectivity. The Parish Council agree with the assessment and supports development on the site.

The landowners reiterated the site's availability and supported the assessment of the site. They state that landscaping will be a key consideration in the development layout, and the site offers benefits such as contributing to market and affordable housing goals and being a smaller site that can be developed quickly.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as 100% flood zone 1 but with high and medium surface water flood risk and therefore does not meet the criteria for consideration.

Kimbolton 7: Land North of Tilbrook Road, Kimbolton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses on this site. The LLFA notes that the site is in a high surface water flood zone meaning the site may be unsuitable for development, pre-application advice is recommended. The Minerals and Waste Authority highlight there is a mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site has sufficient frontage to the public highway to achieve an access onto the B645/Tilbrook Road and local infrastructure improvements may be required in the form of walking/cycling connectivity. The Parish Council agree with the assessment and does not support development on the site.

The landowners reiterated the site's availability. They acknowledge the potential for fluvial and surface water flooding along the north of the site but propose incorporating this into common green spaces and a drainage strategy. Development along the road frontage is seen as feasible and would match the existing village's development pattern. The site offers benefits such as contributing to market and affordable housing goals and being a smaller site that can be developed quickly.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as the amount of development would not contribute to protecting the form and character of the surrounding townscape and landscape.

Kimbolton 8: Land North of Station Road/ Stow Road, Kimbolton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

There were mixed responses on this site but half of responses were supportive of the site being developed. The LLFA notes that the site is in a low surface water flood zone meaning that further detailed consideration of surface water management options will be required. The Minerals and Waste Authority highlight there is a mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site has sufficient frontage to the public highway to achieve an access onto the B660 and local infrastructure improvements may be required in the form of walking/cycling connectivity. The Parish Council state that it the proposed original site goes ahead they would be supportive of development on the site. CPRE agree with the assessment and consider the site unsuitable for development.

The landowners reiterated the site's availability. They are open to discussing the quantum of development and envisage a density of 30-35 dwellings per hectare, matching the existing village's development pattern. The site offers benefits such as contributing to market and affordable housing goals and being a smaller site that can be developed quickly.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as the site is highly exposed to the surrounding countryside and is not appropriate for built development due to its isolated location within the open countryside.

Kimbolton 9: Land North of Easton Road, Stonely (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Most responses were supportive of development of this site. The LLFA notes that the site is in a medium surface water flood zone meaning that further detailed consideration of surface water management options will be required. There are no mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site has sufficient frontage to the public highway to achieve an access onto Easton Road and local infrastructure improvements may be required in the form of walking/cycling connectivity. The Parish Council supports development of seven houses on the site.

The landowners reiterated the site's availability. They recognise the potential impact on the setting of the listed building, but consider that it is unlikely that residential development would harm its setting. They state that the site offers benefits such as contributing to market and affordable housing goals and being a smaller site that can be developed quickly.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are

4 Further Issues and Options

100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as 100% flood zone 1 but with high and medium surface water flood risk and therefore does not meet the criteria for consideration.

Kimbolton 10: Land South East of Bicton Industrial Estate, Kimbolton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Most responses were supportive of development of this site. The LLFA notes that there has been no previous local flooding reported on the site but consider that further detailed consideration of surface water management options will be required. There are no mineral and/or waste constraint impacting the site. The Local Highway Authority observes that on the basis of the red line there is no connection to the public highway and the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with requirements. The Parish Council supports development of the site as the access and new road to the site has already been approved. One comment raised that the impact on two County Wildlife Sites need to be managed.

The landowners reiterated the site's availability. They clarify that with carefully positioned landscaping, the site can improve and enhance strategic green infrastructure and linkages, while being sensitive to the neighbouring wildlife site. They also emphasise the need for rural employment locations and note that the site is within the TIGER on Demand public transport zone, with services accessible in Church Lane Stow Longa. The landowners are willing to explore creating a Tiger 'virtual' bus stop close to the site as part of any planning permission. The site benefits from co-location with the existing employment site, offering potential for business expansion and rural employment.

Council response

This site has been selected as a draft employment allocation (Draft Allocation Kimbolton 2) for 4.8 ha of land adjacent to Bicton Industrial Estate for commercial, business, industrial uses and storage and distribution uses. Surface water flood risk concerns are addressed through a requirement to provide a flood risk assessment and detailed drainage strategy to evaluate current and future fluvial and surface water flood risk including modelling of unnamed watercourse. Public highway connections were remedied in April 2022 through an approved application 21/01827/FUL which provides an alternative access from Stow Road. Criterion to undertake an ecological survey to determine the presence of protected species and measures for their protection and biodiversity enhancement will assist in safeguarding the adjacent county wildlife site. The site was also combined with existing employment allocation 'KB3 South of Bicton Industrial Estate, Kimbolton' (which is in Huntingdonshire's Local Plan to 2036) to provide a more comprehensive development and provide local business and employment opportunities.

Kimbolton 11: Land at Hatchet Lane, Stonely (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

Most responses were opposed to development on this site. A major concern as the flood risk of the site and the impact of development on flood risk in the local area. The LLFA notes the site has a high risk of surface water flood risk an considers the site to potentially be unsuitable or development as a result. There is a mineral and/or waste constraint impacting the site. The Local Highway Authority observes that the site appears to have sufficient frontage to the public highway to achieve an access onto Main Road and local infrastructure improvements would be required in the form of walking/ cycling connectivity. There is also a Right of Way which should be retained on their existing alignment, maintained, or enhanced. The Parish Council supports the assessment and opposes development of the site.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the level of flood risk on site including groundwater flood risk and the substantial adverse impact on the character of the area and on the River Kym landscape. It was also considered that development here would not support sustainable placemaking and would disrupt the character and form of the area

Leighton Bromswold

Leighton Bromswold 1: Land West of Sheep Street, Leighton Bromswold (did not pass the fundamental constraints)

Main Issues Raised (9 responses)

The majority of respondents do not support the site's development. Concerns highlighted include the strain on current services, poor infrastructure, the impact on the conservation area and listed buildings, and the loss of agricultural land. Many respondents agree with the assessment and oppose the development, citing reasons such as the village's limited services, the need for sustainable development, and the preservation of the village's character and landscape.

The site promoter disagreed and states that an odour assessment will accompany any future application as would a heritage statement.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as it completely falls within 400m of a Water Recycling Area.

Old Weston

Old Weston 1: Land South of Manor Farm, Old Weston (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

All respondents did not support or were unsure about development of the site. Concerns were raised regarding the site's unsuitability for built development due to poor internet, inadequate surface water drainage, poor road conditions, and excessive driving speeds. Additionally, there are concerns about the impact on the village's fabric and character, loss of vistas, and the strain on local infrastructure. There is a mineral/ waste constraint requiring mitigation. The Highways Authority identifies that there appears to be a sufficient frontage to the public highway to achieve an access onto the B660 or Brington Road and improvements may be required to accommodate two way traffic.

Council response

This site has not been selected as a draft allocation. The site was not tested by the Council as part of the Growth Strategy Options due to the settlement’s designation as village. The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at risk from fluvial flooding (zones 2, 3a and 3b) meaning it did not meet the criteria for consideration.

Old Weston 2: Land South of St Swithin's Church, Old Weston (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

4 Further Issues and Options

All respondents did not support or were unsure about development of the site. Concerns were raised regarding the site's unsuitability for built development due to poor internet, inadequate surface water drainage, poor road conditions, and excessive driving speeds. Additionally, there are concerns about the impact on the village's fabric and character, loss of vistas, and the strain on local infrastructure. There is a mineral/ waste constraint requiring mitigation. The Highways Authority identifies that there appears to be a sufficient frontage to the public highway to achieve an access onto the B660 or Brington Road and improvements may be required to accommodate two way traffic.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that development here would not support sustainable lifestyles as it is remote from key day to day services, employment and cannot be accessed via sustainable modes of transport and although adjacent to St Swithin's Church the site is not well related to the built form of Old Weston village.

Old Weston 3: Manor Farm, Old Weston (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

All respondents did not support or were unsure about development of the site. Concerns were raised regarding the site's unsuitability for built development due to poor internet, inadequate surface water drainage, poor road conditions, and excessive driving speeds. Additionally, there are concerns about the impact on the village's fabric and character, loss of vistas, and the strain on local infrastructure. The Highways Authority identifies that there appears to be a sufficient frontage to the public highway to achieve an access onto the B660 or Brington Road and improvements may be required to accommodate two way traffic.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the majority of the site is located within flood zone 3b and 3a and the proposed residential uses is classed as a more vulnerable use.

Stow Longa

Stow Longa 1: Land East of Kimbolton Road, Stow Longa (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

There were mixed responses to the site. CPRE agreed with the outcome of the site assessment. The Minerals and Waste Authority highlighted that it is not constrained by a mineral or waste constraint. The Highways Authority states that there appears to have sufficient frontage to the public highway to achieve an access onto Spaldwick Road in accordance with requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. They also highlight that the site is affected by existing public Rights of Way which should be retained on their existing alignment, maintained, or enhanced.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to is potential adverse impact on local character and heritage assets.

Stow Longa 2: Land South of Spaldwick Road, Stow Longa (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

There were mixed responses to the site but most supported its development. The Highways Authority states that there appears to have sufficient frontage to the public highway to achieve an access onto Spaldwick Road in accordance with requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. They highlight that engagement with CCC's Asset Information Definitive Mapping team is encouraged with regard to the alignment of the existing bridleway and the site access. The Minerals and Waste Authority highlighted that it is not constrained by a mineral or waste constraint. The site promoter supports the site assessment confirming the site's availability, they reference two planning applications within Spaldwick (19/02549/FUL and 21/02754/FUL).

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Stow Longa 3: Land North of Rookery Farm, Stow Road, Stow Longa (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

There were mixed responses to the site. CPRE agreed with the outcome of the site assessment. The Minerals and Waste Authority highlighted that it is not constrained by a mineral or waste constraint. The Highways Authority states that there appears to have sufficient frontage to the public highway to achieve an access onto Stow Road in accordance with requirements respecting local junction spacing, also due to the horizontal alignment of the carriageway the visibility splay may need to be clarified. Local infrastructure improvements may be required in the form of walking/cycling connectivity. They highlight that engagement with CCC's Asset Information Definitive Mapping team is encouraged with regard to the alignment of the existing bridleway and the site access.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would adversely impact the character of the area and would not support sustainable placemaking principles. The site is located such that it cannot be effectively masterplanned to become part of the existing place and community and also retain the character of the area

Tilbrook

Tilbrook 1: Land at the junction of High Street and Church Lane, Tilbrook (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

All responses were unsure or did not support the proposed site. The LLFA identified that the site may be unsuitable due to high surface water flood risk. The Highways Authority states that that there is sufficient frontage to the public highway to achieve an access onto the B645 or Church Lane but may require improvements to accommodate two way traffic. There is a mineral/ waste constraint requiring mitigation.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the potential adverse impacts on heritage assets including the setting of the village's conservation area.

4 Further Issues and Options

Area 5 - Central Huntingdonshire

General comment: Comments that applied to the whole of the Central Huntingdonshire area were received and issues raised around the need to protect the rural character of the district, the Great Ouse Valley Priority Area, landscape and agricultural land. People were concerned about the impact of development on transport and flooding impact, the historic environment and the need to provide sport facilities and opportunities. The need to take into account adjacent applications for sites, infrastructure need, and creating well designed places were also raised.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Brampton

General comment: Brampton Parish Council made a general comment how the new Plan should prioritise infrastructure and services to support development, ensure new housing is near existing infrastructure with sustainable transport links, propose additional infrastructure like schools and medical facilities, consider the cumulative impact on major roads, address flooding concerns, and prioritise environmental and sustainability issues.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Brampton 1: Swift Car Care, Buckden Road, Brampton (did not pass fundamental constraints)

Main Issues Raised (4 responses)

All responses were unsure or did not support the proposed site. Key concerns were the requirement for surface water management due to surface water flood risk, presence of a minerals or waste constraint, loss of garage as local amenity and odour from Buckden Landfill Waste Management Area. Walking and cycling infrastructure may be required. It is noted that access appears achievable in accordance with requirements.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as site is within 50m of Buckden Landfill Waste Management Area (WMA) and within the consultation area for the WMA.

Brampton 2: Land to the North of Thrapston Road Brampton and West of Populars Farm 38, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

The majority of responses were unsure or did not support the proposed site. Key concerns include high local flooding reported, surface water flood risk and risk to Alconbury, the LLFA consider this site may be unsuitable for the proposed development. Others were concerned about adverse impact of site on Hinchingbrooke Country Park County Wildlife Site and inadequate access to the site. A minerals or waste constraint is present. It was recommended that a smaller number of dwellings may be acceptable.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the likely adverse impacts on the rural setting of Hinchingbrooke Country Park and the adverse impacts on the character of Brampton.

Brampton 3: Land to the North of Thrapston Road (opposite The Hurdles), Brampton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (9 responses)

The majority of responses were unsure about the proposed site. The LLFA consider this site may be unsuitable for the proposed development due to previously reported local flood risk and high surface water flood risk. Key concerns include impact on Hinchingbrooke County Park County Wildlife Site, rural aspect and grade II listed buildings: milestone and 28 Huntingdon Road. A minerals or waste constraint is present. It was noted access appears achievable, suggestions include reduction in site size. The site promoter notes the site is in a sustainable location and accommodate circa 19 dwellings.

Council response

This site has not been selected as a draft allocation. Over a third of the site is at risk of fluvial flood risk (zones 2, 3a and 3b), surface water and groundwater emergence. More sequentially preferable sites are available.

Brampton 4: Wallis Land, Thrapston Road, Brampton (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

All responses either agreed or were unsure about the proposed site. The LLFA consider this site may be unsuitable for the proposed development due to previously reported local flood risk and high surface water flood risk. There is insufficient early years, primary and secondary education provision. A minerals or waste constraint is present, likely to be acceptable with mitigation. Access appears achievable in accordance with requirements walking/cycling connectivity improvements would be required. The parish council has no objection to the proposed site. The site promoter notes constraints can be mitigated through a conceptual drainage strategy, heritage assessment (to retain the scheduled monument within open space) and noise and air quality from adjacent roads can be mitigated.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Brampton 1) for about 10 homes and about 0.4ha of open space. Concerns regarding flood risk have been addressed through criterion requiring provision of a flood risk assessment and drainage strategy taking into account, surface water, reservoir, and groundwater flood risk. Active travel requirements in the form of the provision of a suitable means of access and a sustainable transport network for pedestrians, cyclists and vehicles will help to facilitate integration with the village. The site's location within a sand and gravel mineral safeguarding area are included, seeking consultation with Cambridgeshire County Council.

Brampton 5: Land adjacent The Rectory, Church Road, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

There were mixed responses to the proposed site. It was noted that consideration of surface water management options will be required. Concerns include eradication of historic land with ridge and furrow. A minerals and waste constraint is present, likely to be acceptable with mitigation. There appears to be no/inadequate connection to the public highway.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the cumulative constraints impacting the site and the uncertainty of the achievability of access to the site, it is considered unsuitable for development and therefore not deliverable.

Brampton 6: Land at Water Meadows, South of Huntingdon Road, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to the proposed site. Concerns include impact on grade I listed church and other grade II listed buildings to the west of the site, and public rights of way. The parish council support the proposal as a retirement community with apartments and leisure facilities if sensitively designed. Surface water management options will be required. A minerals and waste constraint is present which is considered acceptable with mitigation. Access to the site appears sufficient in accordance with regulations, but it is likely to require significant highway improvements. The site promoter notes that drainage would be mitigated, topsoil reused and submitted heritage appraisal, design booklet including landscape principles, reduction of impact on Pepys Meadows and a buffer between dwellings and any minerals operation, including an assessment.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the likely significant adverse impacts on designated heritage assets and also the erosion of the rural character of the area and encroachment into the Great Ouse Valley landscape. During the Autumn 2024 consultation, the site promoter submitted a letter concluding that any residual harm to Pepys House and Brampton Conservation Area, after the design and landscape mitigation measures are implemented, would fall within the less than substantial harm category. Upon review of these measures, the overarching harm and detachment of the side from the built form of Brampton are still considerable constraints that make the site inappropriate for built development.

Brampton 7: Area 1 Park Farm, Brampton (did not pass fundamental constraints)

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. High surface water flood risk must be taken into consideration. Considered that the site should be for light industry only operating 9am to 5pm. Key concerns include a low bridge which may lead vehicles coming back through the village. A minerals or waste constraint is present. Access appears achievable in accordance with regulations, but highway improvements are likely required. May require walking and cycling infrastructure improvements. The site promoter considers the site appropriate providing a vision document, transport note and strategic landscape visual appraisal, and consider the use of the site compatible with the proximity to waste management area.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is almost wholly within a waste management area and adjoins the Buckden Landfill Waste Management Area (WMA) which is specifically identified on the Cambridgeshire and Peterborough Minerals and Waste Local Plan as an operational/ committed site for waste resources.

The site promoter submitted several documents in support of this site noting that this parcel and the three other parcels (Brampton 8, 9 and 10) should be considered as one scheme. In their comments, they identified that the site is not within a minerals development area. The assessment in the Land Availability Assessment has been corrected to state that the site is within a waste management area (Buckden Landfill Waste Management Area (WMA)). The site therefore still fails the fundamental constraints as the site promoter has not yet provided an assessment of the impact of the proposed development on the MWA. In their representations, the site promoter considers the proposed employment uses to be a 'compatible use' and therefore assessment on amenity is not required. The Council disagreed with this view and considered that the amenity for those who work on such sites

as important as residential uses and should be adequately assessed and to shape proposals and ensure high standards of amenity as well as ensuring that the integrity of the WMA is not compromised by the development. The Minerals and Waste Authority commented that compatibility between the proposed site and safeguarded site must be demonstrated at this stage. Therefore, the outcome of the assessment remains unchanged.

Brampton 8: Area 2, Brampton (did not pass fundamental constraints)

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. Previous local flooding reported and consideration of surface water management options will be required. A minerals or waste constraint is present. The site promoter considers the site appropriate providing a vision document, transport note, EV charging and strategic landscape visual appraisal, and consider the use of the site compatible with the proximity to waste management area. Access appears achievable subject to detailed design, road safety audit, and capacity assessments, highway improvements and walking and cycling infrastructure are likely required. It was thought that this site is more suitable than Area 1 as it is next to the waste tip and old railway station.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is wholly within a waste management area and adjoins the Buckden Landfill Waste Management Area (WMA) which is specifically identified on the Cambridgeshire and Peterborough Minerals and Waste Local Plan as an operational/ committed site for waste resources.

The site promoter submitted several documents in support of this site noting that this parcel and the three other parcels (Brampton 8, 9 and 10) should be considered as one scheme. In their comments, they identified that the site is not within a minerals development area. The assessment in the Land Availability Assessment has been corrected to state that the site is within a waste management area (Buckden Landfill Waste Management Area (WMA)). The site therefore still fails the fundamental constraints as the site promoter has not yet provided an assessment of the impact of the proposed development on the MWA. In their representations, the site promoter considers the proposed employment uses to be a 'compatible use' and therefore assessment on amenity is not required. The Council disagreed with this view and considered that the amenity for those who work on such sites as important as residential uses and should be adequately assessed and to shape proposals and ensure high standards of amenity as well as ensuring that the integrity of the WMA is not compromised by the development. The Minerals and Waste Authority commented that compatibility between the proposed site and safeguarded site must be demonstrated at this stage. Therefore, the outcome of the assessment remains unchanged.

Brampton 9: Area 3, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. Consideration of surface water management options will be required. It was proposed that the site would be better suited for agricultural use. A minerals or waste constraint is present. Access appears achievable subject to detailed design, road safety audit, and capacity assessments, highway improvements and walking and cycling infrastructure are likely required. The site promoter notes the site is in a sustainable location, a landscape and visual appraisal was prepared and sustainable travel options available.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would be located within the open countryside and is not served by public transport. Future users would most likely use private vehicles therefore not supporting sustainable modes of transport. In addition, development is likely to be quite prominent on the local landscape.

Brampton 10: Area 4, Brampton (Council conclusion pre-consultation - inappropriate for development)

4 Further Issues and Options

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. Consideration of surface water management options will be required. It is considered that the site is too detached from Brampton village with no sustainable accessible routes. A minerals or waste constraint is present. Access appears achievable subject to detailed design, road safety audit, and capacity assessments, highway improvements and walking and cycling infrastructure are likely required. The site promoter notes the site is in a sustainable location, a landscape and visual appraisal was prepared and sustainable travel options available.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would be located within the open countryside and is not served by public transport. Future users would most likely use private vehicles therefore not supporting sustainable modes of transport. In addition, development is likely to be quite prominent on the local landscape.

Brampton 11: Manor Farm, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. Key concerns include high water table and suitability of access by construction vehicles. It is noted that consideration of surface water management options will be required and access appears achievable, but significant improvements to the road and footway infrastructure between the site and Baker Close should be made. A minerals or waste constraint is present which would require mitigation. The site promoter notes development could be placed outside flood risk area.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the flood risk on the southern half of the site, whilst development could be placed on land within flood zone 1 this would not sit comfortably with the surrounding character and form of development. Additionally, the point of access is heavily constrained by flood risk which makes the achievability of safe entrance and escape into and out of the site uncertain.

Brampton 12: Land off Huntingdon Road, Brampton (Council conclusion pre-consultation - may be appropriate for open space and car parking)

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. Key concerns include high flood surface water flood risk with local flooding reported, loss of historic ridge and furrow, impact on Hinchingbrooke Country Park and public right of way. Suggestions include surface water flood risk mitigation, mitigation against minerals or waste constraint and retention of public right of way. Access appears achievable subject to detailed design, road safety audit, and capacity assessments, highway improvements and walking and cycling infrastructure are likely required.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Brampton 2) for open space and car parking facilities for the Country Park. Concerns regarding flood risk have been addressed through criterion requiring the location of the car park within flood zone one and the provision of a proportionate flood risk assessment including the assessment of groundwater conditions and appropriate drainage for the car park. The site's location within a Sand and Gravel Mineral Safeguarding Area is addressed within the allocation requiring consultation with Cambridgeshire County Council and active travel will be required through provision of additional pedestrian paths linking into the existing park. The impact on Hinchingbrooke Country Park will be addressed through an ecological

survey to determine the presence of protected species and measures for their protection and biodiversity enhancement. A large proportion of land is set aside for open space which will help to address the presence of any potential ridge and furrow on the site.

Brampton 13: Land North of A141, South of Brampton racecourse, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (6 responses)

Most responses were unsure or against the proposed site. Key concerns include flood risk, impact on Great Ouse Valley priority area, inadequate highways access, presence of a minerals or waste constraint and how walking and cycling access could be achieved. Suggestions include surface water management options, mitigation of minerals or waste constraint, not developing the site.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the flood risk on the northern half of the site, while there is land within flood zone 1, this land is constrained by a Scheduled Monument designation. Additionally, development is likely to adversely impact the landscape particularly to the open countryside to the north.

Brampton 14: Land North of Thrapston Road and South of the A141 (larger site), Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

Most responses were unsure about the proposed site. Key concerns include high surface water flood risk and local flooding reported, inadequate highways access, presence of a minerals or waste constraint. Suggestions include surface water management options, significant changes to the trunk road network and mitigation of minerals or waste constraint.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to very poor opportunities to successfully integrate the site with the existing place and community. Development on the site would not support sustainable place making principles. The site area would also need to be reduced to remove the A141/B1514 slip road as this is not in the ownership of either landowners.

Part of the site was resubmitted in the Ongoing Call for Sites (see CfS23-24317). This relate to the eastern parcel which adjoins 120 Thrapston Road to the south east of the A141 slip road from junction 22 and is also adjacent to the B1514. This reduces the site area to 0.87ha and it is being promoted solely for retail such as a small convenience store and commercial leisure uses (floorspace flexible and will be based on the commercial interest received). In response to the consultation on sites in Autumn 2024, the Highways Authority stated there was insufficient access to the whole site. Its location to the roundabout and the slip road is a key constraint as is its impact on traffic in the local and wider area. As such the conclusions of the LAA remain unchanged and the site is still considered to be unsuitable for development.

Brampton 15: Land North of Thrapston Road and South of the A141 (smaller site), Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

All responses were either unsure or supported the proposed site. Key concerns include high surface water flood risk and local flooding reported, inadequate highways access, presence of a minerals or waste constraint which would be acceptable with mitigation. Suggestions include surface water management options, significant changes to the trunk road network. It was thought that the proposed development would match existing plans nearby

4 Further Issues and Options

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to very poor opportunities to successfully integrate the site with the existing place and community. Development on the site would not support sustainable place making principles

Brampton 16: Land at Low Harthay and Woodhatch Farms, Brampton (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (17 responses)

There were mixed responses to the proposed site. Key concerns include high surface water flood risk and local reported flooding, particularly around Low Harthay House, urban sprawl, scale of development and pollution from the nearby recycling centre. Responses highlighted the need to protect of Brampton Wood SSSI, existing habitats, impact on the countryside, traffic impact on nearby settlements such as Ellington, and infrastructure. The impact on residential amenity was also raised, especially those who live near Low Harthay House. It is noted that a minerals or waster constraint present which would be difficult to overcome and that there is no/inadequate connection to the public highway it is not supported by the Highway Authority.

Suggestions include a comprehensive transport impact assessment, biodiversity net gain, significant landscaping, active travel links, surface water mitigation and mitigation of pollution and dust from recycling centre. Some think the site is an ideal location for warehouses.

The site promoter promotes the significant economic benefits and jobs. They propose a solar park, HGV parking and retention and extension of woodland where pylons are located. Relocation of the recycling centre, and a balancing pond. Cut and fill earthworks would be required to create plateaus facilitating development, removal of ponds and some trees.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is detached from a settlement and located within the countryside and the impact on the landscape could be most significant to the south and west. The commercial uses could impact nature conservation designations as the site is approximately 300m from Brampton Wood SSSI and is nearby to the Great Ouse Valley Green Infrastructure Priority Area. A critical factor is to determine through engagement with Cambridgeshire County Council whether developing the site could adversely impact the existing water recycling centre and if commercial uses can be successfully integrated with it. There are two options, one to develop the site leaving the water recycling centre where it is or relocate the water recycling centre to elsewhere in the site. The probability and possibility of these options have not been addressed by the site promoter.

Brampton 17: Brampton Park Golf Club (South site) (did not pass fundamental constraints)

Main Issues Raised (5 responses)

All responses were unsure or opposed to the proposed site. The landowners have asked that Brampton 17 and Brampton 18 are withdrawn. The LLFA consider this site may be unsuitable for the proposed development due to previously reported local flood risk. It is noted that proximity to the Landfill Waste Management make it vulnerable to odour and that access appears achievable subject to further assessments, but significant highway improvements and two access points would be required and walking and cycling infrastructure.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is within the consultation area for the Buckden Landfill Waste Management Area (WMA).

Brampton 18: Brampton Park Golf Club (North site) (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (7 responses)

The majority of responses were unsure or opposed to the proposed site. The landowners have asked that Brampton 17 and Brampton 18 are withdrawn. The LLFA consider this site may be unsuitable for the proposed development due to high surface water flood risk and previously reported local flood risk. There is concern over the impact on the Great Ouse Valley Priority Area, footpath from Brampton Mill and dissection of River Lane. Proximity to the Landfill Waste Management make it vulnerable to odour, which could be mitigated. Access appears achievable subject to further assessments, but significant highway improvements and two access points would be required and walking and cycling infrastructure.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the likely very significant adverse impacts on the landscape which would result in the erosion of the rural character of the area and encroachment into the Great Ouse Valley landscape. Additionally, there is uncertainty on the availability of the site even once the lease ends in 2039 as it is the intention of the Golf Club to extend their tenancy of the land.

Godmanchester

General comment: General comments were received highlighting concerns about the adverse effects of recent developments on the town's character, population integration, and infrastructure capacity. They emphasise the need to protect the town's historic core, countryside, and biodiversity while ensuring new developments meet local housing needs and provide essential services. Comments also raise the importance of maintaining the separation between Godmanchester and surrounding settlements to preserve its semi-rural character and environmental and infrastructure concerns, including the impact of new developments on local roads, schools, and medical facilities.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Godmanchester 1: Former RGE Engineering Site and HDC Car Park, The Avenue, Godmanchester (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (11 responses)

The majority of the responses support the proposed site. Key considerations raised include consideration of surface water flood risk, impact on heritage assets, congestion and setting of Great Ouse, landscape and long distance views and scale of the site. No minerals or waste constraints, access appears achievable subject to further assessments including approach to road network. The site is not supported by the Highways Authority. Comments support the site as sensibly located with sustainable links

Council response

This site has been selected as a residential allocation (Draft Allocation Godmanchester 1) for about 85. The site is previously developed land and contributes towards the Governments need to make use of previously-developed or brownfield land. Concerns regarding flood risk have been addressed through a criterion requiring the sequential location of development within the site and demonstration of safe access and escape routes and provision of a flood risk assessment and detailed drainage strategy taking into account fluvial, surface water flood and reservoir flood risk, modelling of River Great Ouse, climate change and natural flood management to substantially reduce

4 Further Issues and Options

flood risk to the site and surrounding areas. The development will be required to address access to the road network through provision of a suitable means of access and provision of a sustainable transport network for pedestrians, cyclists and vehicles, which facilitates integration with the town. Heritage and landscape impact will be mitigated through the submission of a design brief to support the redevelopment of the site and illustrate how it will integrate with surrounding uses including high quality development to reflect the site's sensitive location and relationship with listed buildings, conservation areas, and appropriate landscape and boundary features.

Godmanchester 2: Corpus Christi Paddock, Godmanchester (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (11 responses)

The majority of responses do not support the proposed site. Key concerns include the site's location outside the Neighbourhood Plan boundary, impact on listed building and conservation area, footpath and cycleway (resulting in a decrease in safety). Issues with narrow access and restricted visibility at junction of Corpus Christi Lane with Old Court Hall mean it may not be suitable for the intended intensification of use. The LLFA note the site may be unsuitable due to surface water flood risk. A minerals or waster constraint is present, but noted as likely to be acceptable with mitigation.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the highly sensitive nature of the heritage constraints affecting the site and the cumulative challenges posed by securing a safe access both within Corpus Christi Lane itself by the pinch point and at the crossing of Old Court Hall.

Godmanchester 3: Dexters Farm, Godmanchester (Council conclusion pre-consultation - inappropriate for development in isolation, may be appropriate in combination of Godmanchester 5 and 8)

Main Issues Raised (13 responses)

The majority of responses object to the proposed site. Key concerns include isolation of site, surface water flood risks and local reported flooding, lack of, and distance from, local services and facilities and impact on the landscape and recreation. Transport impact on Silver Street and the A1198, impact on biodiversity and Wildfowl Sanctuary and conflict with the Neighbourhood Plan were also raised. Suggestions include surface water management, or that development should be part of a larger integrated scheme. It was also noted that significant highway improvements are needed requiring collaboration with adjacent parcel holders. The site promoter proposes connectivity through Whitehall gardens, that there are no landscape or visual impacts (as per their appraisal, masterplan and vision) and integration with other parcels of land is achievable and and services and facilities provided at Romans edge.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Godmanchester 2) for about 520 homes, at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street, at least 0.8 ha of land for an extension to Godmanchester Lawn Cemetery, green infrastructure to include a mixture of, strategic green space, amenity open space, play space, accessible natural green space and flood mitigation and a new roundabout on the A1198 to provide access to parts of the site on both sides of this road.

The original site submitted was considered inappropriate for development due to its lack of connectivity into the wider built form of Godmanchester, but it was considered that it could be appropriate if it were brought forward as an integrated element of a larger scheme to the south and east of Godmanchester forming a complete new neighbourhood allowing more infrastructure to be leveraged as a result. This included Godmanchester 3, 5, 7, 9 &10). This approach allows for a comprehensive scheme to maximise its ability to integrate into the existing town

and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook, landscaping and impact on the Waterfowl Sanctuary to the west.

Godmanchester 4: Emmanuel Knoll Village, Godmanchester (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (17 responses)

The majority of responses were opposed to the proposed site. Key concerns include the site's isolation, high surface water flood risk and previous local flooding, lack of, and distance from, local services and facilities and impact on the landscape, biodiversity and recreation. Other concerns include urban sprawl, scale of development, loss of agricultural land, transport impact and conflict with the Neighbourhood Plan. Suggestions include surface water flood risk management and integration with other parcels to form a larger scheme and provide access. A 4FE primary school with early years provision and 4FE secondary school would be required.

The site promoter notes the scheme will be landscape-led and protect ridge and furrow land. They note the site is viable based on for 1,200 homes, a 2 FE primary school, local centre, employment area, solar energy park, relief road connecting the A3107 to the A1198. Protecting the existing gas pipeline has been considered as an abnormal cost. A Highway technical note was provided and further work on access and links ongoing. A concept masterplan provides further details on the revised range, scale and split of development uses.

Council response

This site was tested through growth strategies 1, 2 and 3. This site would provide a very substantial extension to Godmanchester but the scheme proposed would not make efficient use of land. The site was not selected for allocation as part of the Huntingdonshire's Preferred Options Local Plan due to the significant hazard presented by a gas pipeline and its easement strip crossing the north eastern part of the site and impacting on deliverability of the potential junction to the A1307. The provision of an outer link road and roundabout onto the A1307 is further hampered by proximity to existing junctions on the road meaning significant highways infrastructure to facilitate safe access and exit from the site is required which has the potential to significantly impact the viability of the site given the number of homes that are proposed to be delivered. Although flood risk is fairly low the proposed allocation South of Godmanchester off the A1198 provides a more concentrated development with better opportunity to facilitate connectivity into Godmanchester and requires substantially less transport infrastructure provision. It will also provide substantial flood betterment to a long existing problem in relation to Stoneyhill Brook by allocating land for flood mitigation. This will not only benefit the development, but also the wider community of Godmanchester. Significant concerns have been raised by the Highways authority who note that delivery of the access/es will be subject to the proximity of accesses provided to adjacent sites, which may limit the ability to deliver an access for this site. The applicant should look to liaise with adjacent parcel holders to deliver a co-joined site utilising joint frontage. They cite that the site is not sustainable as a stand-alone parcel given a lack of public transport links or high quality walking, cycling, and wheeling access from local centres of population.

Godmanchester 5: Land West of London Road and South of Stokes Drive, Godmanchester (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (13 responses)

The majority of responses object to the proposed site. Key concerns include isolation of site, high surface water flood risks and local reported flooding (particularly at Stoneyhill Brook), lack of, and distance from, local services and facilities and impact on the landscape and recreation. Heritage impact, access through a Local Green Space impact on A1198 and London Road, conflict with cemetery expansion and the Neighbourhood Plan were also raised. Suggestions include surface water management, significant highway improvements and two points of access will be required. The landowner noted that they are willing to collaborate with adjacent land owner and would provide opportunity for cemetery expansion, flood mitigation green/blue infrastructure and can be accessed from the A1198, with sustainable travel links.

Council response

4 Further Issues and Options

This site has been selected as a draft mixed use allocation (Draft Allocation Godmanchester 2) for about 520 homes, at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street, at least 0.8 ha of land for an extension to Godmanchester Lawn Cemetery, green infrastructure to include a mixture of, strategic green space, amenity open space, play space, accessible natural green space and flood mitigation and a new roundabout on the A1198 to provide access to parts of the site on both sides of this road.

The original site submitted was considered appropriate for development as it has potential for development but it would require careful masterplanning to maximise opportunities for integration into the existing community. The development would also be required to mitigate the impact of development on Stoneyhill Brook and the adjoining countryside.

It was considered that it could be appropriate if this site were brought forward as an integrated element of a larger scheme to the south and east of Godmanchester forming a complete new neighbourhood allowing more infrastructure to be leveraged as a result. This included Godmanchester 3, 5, 7, 9 &10). This approach allows for a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook, landscaping and impact on the Waterfowl Sanctuary to the west. The allocation addresses the need for an extension to Godmanchester Lawn Cemetery.

Godmanchester 6: Land to the South of Godmanchester including Land at Corpus Christi Farm and Lower Debden Farm, Godmanchester (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (14 responses)

The majority of responses object to the proposed site. Key concerns include the scale of development, urban sprawl, impact on the character and setting of Godmanchester, landscape, biodiversity, recreational and wildlife impact (Waterfowl Sanctuary), loss of agricultural land and high surface water flood risk and local reported flooding (including Stoney Hill Brook). Many comments noted the lack of infrastructure to support development, the impact on traffic, parking and access (especially at Silver Street), and conflict with the Neighbourhood Plan.

Suggestions include surface water flood risk mitigation, separation from Godmanchester, provision of infrastructure, services and facilities to support development, significant highways improvements, further assessment and consultation with adjacent parcel holders . A minerals or waste constraint would require further assessment, evidence and mitigation. The site promoter provides a concept masterplan and says robust technical work would be undertaken is sustainably located and would help to meet housing needs.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it does not have potential for development of the scale and nature proposed due to its impacts on Godmanchester and the character of the surrounding landscape, its challenges in terms of integration and the impact of traffic particularly that heading eastbound.

The site promoter resubmitted one of the parcels of this site (the eastern most parcel north of the A14 that adjoins Ermine Street) to the Ongoing Call for Sites for an employment development with circa. 201,629sqm of floorspace based on a net developable area of 66.9ha. In their resubmission, the site promoter makes the same assertion in regarding access which as set out above is not possible and would result in traffic travelling east having to route through Godmanchester via the A1198 resulting in significant traffic impact and harm to Godmanchester. Significant highways work and assessment will be required to make the development achievable. At this stage no such work has been provided. As such the resubmitted site is still considered to be unsuitable, unachievable and undeliverable.

Godmanchester 7: Land West of A1198 (North of Bleakley Farm), Godmanchester (Council conclusion pre-consultation - inappropriate for development would be dependent on prior development of Godmanchester 3 and 5)

Main Issues Raised (14 responses)

The responses to the proposed site are varied. Key concerns include impact on character of Godmanchester, heritage and landscape impact (including church spire), traffic and access especially along the A1198 and high surface water flood risk and local reported flooding (Stoney Hill Brook, West Street and Belle Isle). Many noted the site's isolation, lack of infrastructure, services and facilities, with some conflict with the Neighbourhood Plan. Suggestions include communal area, active travel links, additional services, surface water mitigation, and comprehensive development with nearby sites. The local highway authority notes the site is unachievable, significant highways improvements, further assessment and consultation with adjacent parcel holders would be required. Collective landowners responded to promote comprehensive development of interlinked sites and address access, they note flood mitigation, and expansion of existing green infrastructure would be required.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Godmanchester 2) for about 520 homes, at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street, at least 0.8 ha of land for an extension to Godmanchester Lawn Cemetery, green infrastructure to include a mixture of, strategic green space, amenity open space, play space, accessible natural green space and flood mitigation and a new roundabout on the A1198 to provide access to parts of the site on both sides of this road.

The original site submitted was considered appropriate for development as it is unsuitable for development on its own, the necessary intervening land to integrate the site into Godmanchester is not in the site promoter's control and it has integration challenges. It was considered that there was potential for an urban extension if submitted land parcels were combined.

It was considered that it could be appropriate if this site were brought forward as an integrated element of a larger scheme to the south and east of Godmanchester forming a complete new neighbourhood allowing more infrastructure to be leveraged as a result. This included Godmanchester 3, 5, 7, 9 &10). This approach allows for a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and landscape impact.

Godmanchester 8: Land East of A1198 (East of Bleakley Farm), Godmanchester (Council conclusion pre-consultation - inappropriate for development as freestanding site would be dependent upon prior development of additional sites to facilitate integration)

Main Issues Raised (13 responses)

Most responses disagreed with the proposed site, with some supporting it. Key concerns include impact on character of Godmanchester, urban sprawl, landscape impact , traffic and access and surface water flood risk. Many noted the site's isolation, lack of infrastructure, services and facilities. Suggestions include surface water mitigation, comprehensive development with nearby sites and additional services and facilities. The local highway authority notes the site is unachievable, significant highways improvements, further assessment and consultation with adjacent parcel holders would be required. Collective landowners responded to promote comprehensive development of interlinked sites and address access, they note flood mitigation, and expansion of existing green infrastructure would be required.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is unsuitable for development on its own. The necessary intervening land to integrate the site into Godmanchester is not in the site promoter's control and the potential urban extension land comprises 4 parcels of land only two of which adjoin with the southeasternmost one (Godmanchester 8) again being dependent upon delivery of intervening land necessitating 6 sites in total collectively posing significant design and achievability challenges.

4 Further Issues and Options

Godmanchester 9: Land adjacent to London Road (A1198), adjoining Bleakley Farm, Godmanchester (Council conclusion pre-consultation - inappropriate for development as freestanding site would be dependent of Godmanchester 3 and 5)

Main Issues Raised (12 responses)

Most responses disagreed with the proposed site. Key concerns include impact on character of Godmanchester, urban sprawl, landscape impact , traffic and access and high surface water flood risk and locally reported flooding. Many noted the site's isolation, lack of infrastructure, services and facilities and conflict with the Neighbourhood Plan. Suggestions include surface water mitigation, comprehensive development with nearby sites and additional services and facilities. The local highway authority notes the site is unachievable, significant highways improvements, further assessment and consultation with adjacent parcel holders would be required. Collective landowners responded to promote comprehensive development of interlinked sites and address access, they note flood mitigation, and expansion of existing green infrastructure would be required.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Godmanchester 2) for about 520 homes, at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street, at least 0.8 ha of land for an extension to Godmanchester Lawn Cemetery, green infrastructure to include a mixture of, strategic green space, amenity open space, play space, accessible natural green space and flood mitigation and a new roundabout on the A1198 to provide access to parts of the site on both sides of this road.

The original site submitted was considered appropriate for development as it is unsuitable for development on its own, the necessary intervening land to integrate the site into Godmanchester is not in the site promoter's control and it has integration challenges. It was considered that there was potential for an urban extension if submitted land parcels were combined.

It was considered that it could be appropriate if this site were brought forward as an integrated element of a larger scheme to the south and east of Godmanchester forming a complete new neighbourhood allowing more infrastructure to be leveraged as a result. This included Godmanchester 3, 5, 7, 9 &10). This approach allows for a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This also allows for a strategic response to mitigating the flood risk arising from Stoneyhill Brook and landscape impact.

Godmanchester 10: Land East of Silver Street, Godmanchester (Council conclusion pre-consultation - may be appropriate for open space and Biodiversity net gain only)

Main Issues Raised (16 responses)

Most responses disagreed with the proposed site for housing, with some supporting it. Key concerns if the site were developed as residential include impact on character of Godmanchester, urban sprawl, landscape impact , traffic, access and safety impact (including Silver Street, Stoney Hill Brook, Silver Street and Duck End) and high surface water flood risk and locally reported flooding, making it potentially unsuitable. Many noted the site's isolation, value for wildlife and recreation and lack of infrastructure, services and facilities in the area and conflict with the Neighbourhood Plan. Suggestions include surface water mitigation, accessibility to nearby services, use as green recreational space, increase in biodiversity and mitigation of a minerals or waste constraint. The local highways authority notes the need for significant highways improvements to roads and footways with two points of access required. Further assessment would be required at Duck End, Old Court Road and Silver Street due to high traffic volume and pedestrian access resolved. Collective landowners responded to promote comprehensive development of interlinked sites and address access, they note flood mitigation, and expansion of existing green infrastructure would be required.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Godmanchester 2) for about 520 homes, at least 5.1 ha of land for biodiversity net gain in the north eastern part of the site around Stoneyhill Brook and bordering Silver Street, at least 0.8 ha of land for an extension to Godmanchester Lawn Cemetery, green infrastructure to include a mixture of, strategic green space, amenity open space, play space, accessible natural green space and flood mitigation and a new roundabout on the A1198 to provide access to parts of the site on both sides of this road.

The original site submitted was considered appropriate for open space and biodiversity net gain but that built development would be inappropriate due to the impact on the character of the local area. The site also offered some opportunities for consolidation with the open space created west of Comden Drive and along Silver Street and for provision of habitat linkages between open countryside and Portholme.

It was considered that it could be appropriate if this site were brought forward as an integrated element of a larger scheme to the south and east of Godmanchester forming a complete new neighbourhood allowing more infrastructure to be leveraged as a result. This included Godmanchester 3, 5, 7, 9 &10). This approach allows for a comprehensive scheme to maximise its ability to integrate into the existing town and reflect the need for a collaborative approach to provision of a new junction with the A1198. This site in particular is key to addressing wider flood risk and linking green spaces to provide additional recreational and open space provision. This is will be achieved by restricting built development to flood zone 1 and ensuring that it avoids areas of surface water flood risk associated with Stoneyhill Brook. This land must only be for biodiversity net gain and flood mitigation uses to reduce flood risk, minimise the impact on views from Silver Street and continue the established open space appearance of the Combden Place green space to the north.

Godmanchester 11: Land to the South of the A1307, Godmanchester (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (12 responses)

The majority of responses disagreed with the proposed site. Key concerns included locally reported flooding (West Street and Belle Isle), impact on infrastructure such as schools and GPs, impact on character of Godmanchester, heritage assets, landscape and established Emmanuel Knoll Plantation . The local highway authority noted the site is not sustainable as a stand-alone parcel. Suggestions include surface water mitigation, integration with nearby land parcels and access to local services.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the site cannot be integrated into the wider scheme upon which its delivery would depend without causing substantial landscape and biodiversity harm through removal of significant sections of Emmanuel Knoll Plantation.

Hemingford Abbots

Hemingford Abbots 1: Royal Oak Gardens, High Street, Hemingford Abbots (Council conclusion pre-consultation -inappropriate for development)

Main Issues Raised (6 responses)

There were mixed responses to the proposed site. Significant concerns include Tree Preservation Orders on site, surface water flood risk and high previous local flooding reported. The LLFA consider the site may be unsuitable. Suggestions include local cycling and walking connectivity. The site promoter that the site is in a sustainable location, there has been reduction in trees through 16/00176/TREE & 20/02144/TREE, that a sustainability appraisal should be undertaken and flood risk, heritage and arboricultural impact would be assessed.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the entire site is covered with mature trees with a Tree Preservation Order and is heavily constrained by flooding.

Hemingford Abbots 2: Land West of Rideaway, Hemingford Abbots (Council conclusion pre-consultation -inappropriate for development)

Main Issues Raised (4 responses)

There were mixed responses to the site. There are significant concerns relating to impact on a listed building and surface water flood risk and high previous local flooding has been reported. A minerals or waste constraint is noted as present. Suggestions include local cycling and walking connectivity and mitigation of minerals and waste constraint.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site is heavily constrained by fluvial flood risk and therefore inappropriate for built development. In addition it was considered that it could not support place-making and sustainable lifestyle.

Hemingford Abbots 3: The Lattenburys (land to the South and North of A14, and East of A1198 (Council conclusion pre-consultation -may be appropriate for development)

Main Issues Raised (20 responses)

There were mixed responses to the site. Key concerns include significant increase in traffic impact on St Ives and Hemingford Grey, sewerage capacity and age of network, surface water flooding and high local flooding reports. Other responses noted impact on Hemingford Conservation Area, Woodgreen Animal Charity, wildlife habitats and Great Ouse Valley through increased usage. Landscape impact of the site was a significant concern. Safety of active travel routes was raised. Responses noted the need for significant infrastructure including retail education, sewerage, community facilities and retail. Cambridgeshire County Council note that there is a waste constraint present which would be difficult to overcome, additional evidence, mitigation would be required. The local highways authority noted significant highway improvement would be required due to the scale of the site and access should not be gained via Moats Lane without significant improvements. It is unclear how high quality walking, cycling, wheeling access could be facilitated.

Suggestions include increased transport links, need for separation between existing settlements, varied design of homes, flood mitigation. Two 4FE primary schools with early years provision and a 7FE secondary school would be required.

The site promoter notes the site will be sensitively located with green infrastructure on higher ground, site specific flood assessment provided and are open to discussions on density and capacity.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Hemingford Abbots 1) for about 3,800 homes, about 375 supported living homes, about 150 extra-care homes, 160 bedspaces for nursing and residential care home provision. About 6.0 ha has also been set aside for employment use. The retention of Woodgreen Pets Charity is required and the provision of about 10 ha of additional land to meet their future expansion needs. Two local centres to include local shops and other community facilities appropriate to the scale of development, educational facilities including a secondary school, two primary schools and associated early years nursery facilities and indoor and outdoor sports and recreation facilities are required alongside about 26 ha for strategic green infrastructure to be provided as a country park and other green infrastructure appropriate to the scale of development to include a mixture of strategic green space, accessible natural green space, amenity green space, flood mitigation areas, and land for biodiversity net gain. Transport infrastructure improvements are also

necessary to provide safe and appropriate vehicular access, public transport infrastructure and active travel routes appropriate to the scale of the development. It is considered that these criteria address the concerns raised during the consultation.

Huntingdon

General comment: General comments were received highlighting the need for careful planning and consideration of infrastructure, educational capacity, and environmental factors in any new developments in Huntingdon and in surrounding areas, this includes the Hinchingbrooke Hospital redevelopment.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements. Hinchingbrooke Hospital redevelopment is supported through draft allocation Huntingdon 1.

Huntingdon 1: Amber Centre, 36 Mayfield Road, Huntingdon (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

The majority of responses support this proposed site. Concerns were raised regarding low surface water flood risk. Suggestions include surface water mitigation, community facilities and bungalows as alternative development and further evidence and assessment of minerals and waste constraint would be required. The site promoter proposes flood mitigation.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Huntingdon 2) for about 12 homes. The site is previously developed land and contributes towards the Governments need to make use of previously-developed or brownfield land. Concerns regarding flood risk have been addressed through a criterion requiring a flood risk assessment and drainage strategy taking into account, surface water and residual flood risk. Cambridgeshire County Council confirm that there are no minerals and waste constraints. The site was put forward for housing and not community facilities and therefore delivery of the latter would be unachievable. The type and mix of homes will be determined through the Local Plan housing mix policy set out within the Preferred Options draft Local Plan to 2046.

Huntingdon 2: Land West of Scholars Avenue, Huntingdon (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

There were mixed responses to the proposed site. Key concerns include high surface water flood risk and locally reported flooding, loss of green space, and traffic. A minerals or waste constraint would require mitigation. The site promoter provides a concept masterplan and highways statement. Assessment of flood risk, drainage, heritage and minerals assessment would be undertaken and football pitch and wooded area retained.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to likely significant impact on the setting of designated heritage assets, because it would result in the relocation of playing fields to a location at higher risk from flooding and the achievability of vehicular access to the site is also a key constraint.

4 Further Issues and Options

Additional information was submitted as part of the Autumn 2024 consultation. The differences between the concept plans show that in the revised one the sports pitches and provision including a MUGA will all be placed directly south of the residential development and there appears to be a slight reduction in the sports provision. This means that no development is proposed within areas at higher risk of flooding, these areas are left as grassed areas. The Highways Statement identifies that a vehicular access is proposed from the A1307 with pedestrian and cyclist access via Scholars Avenue to the east. The proposed vehicular access from the A1307 are in differing locations when comparing the Highways Statement and the Concept Plan. There also seems to be a potential ransom strip between the site's red line boundary and the A1307 making the achievability of access further uncertain. Taking these factors into consideration, the site is still considered to be inappropriate and unachievable for development at this time.

Huntingdon 3: Land South of Ermine Street (adjoining Huntingdon) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

All responses supported or were unsure about the proposed site. The LLFA noted the site may be unsuitable due to high surface water flood risk and locally reported flooding. Other concerns included impact on a public right of way and access to the site being affected by a significant watercourse. Suggestions included flood mitigation, a 2FE primary school with early year provision, and due to the scale, significant highway improvements and road and footway infrastructure between the site and the south east side of the A141 at the roundabout.

Council response

The site is included within the Preferred Options Draft Local Plan within the chapter 'North Huntingdon Growth Cluster Opportunity Zones' as an existing commitment. This site was allocated in Huntingdonshire's Local Plan to 2036 as the south western part of HU1: Ermine Street Huntingdon. It gained outline planning permission (reference 18/01918/OUT) on 20th September 2024. A series of detailed Reserved Matters have been submitted since then and conditions discharged to allow development to commence. The site retains the principle of the site being appropriate for development in case works have not started before the Local Plan to 2046 is adopted. The site developer anticipates completion of the first homes on the site in 2026/27 with the site completing in 2030/31.

Offord Cluny and Offord D'Arcy

General comment: General comments were received expressing concerns about the excessive increase in homes relative to the current population and traffic levels, particularly the bottleneck and risks posed by the level crossing connecting Offord Cluny and Buckden, flooding, and insufficient local amenities and school capacity. Suggested changes include addressing the level crossing issues, improving site access for both foot and vehicle traffic, and expanding the school and preschool to accommodate the increased population. Additionally, there are observations on the capacity of local schools, indicating that both primary and secondary schools are at or near capacity and would require mitigation to handle the influx of new pupils from the proposed development.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Offord Cluny and Offord D'Arcy 1: Land South of New Road, Offord Cluny (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to this site. Main concerns were relating to flood risk, traffic generation, narrowness of New Road and the site's relationship to the countryside. There are concerns about the site's suitability for development due to its history of contributing to flood damage in nearby areas, particularly in December 20201. The LLFA state the site is in a high surface water flood zone and previous local flooding has been reported

potentially making the site unsuitable and pre-application advice is recommended. There is a minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed including widening the carriageway and construction of a footway.

The site promoter reiterates' the site's availability and will provided further technical evidence to support the site's suitability for development, subject to overcoming known constraints in particular regarding access, landscape mitigation, and surface water strategy. They state the site is within flood zone 1 and that an access plan shows how access will be achieved.

Council response

This site has not been selected as a draft allocation. Offord Cluny and Offord D'Arcy 2 and Offord Cluny and Offord D'Arcy 7 were put forward as draft allocations in the Preferred Options Local Plan due to lower surface water flood risk.

Offord Cluny and Offord D'Arcy 2: Land to the West of Graveley Road, Offord D'Arcy (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (7 responses)

There were mixed responses to this site. Main concerns were relating to excessive traffic on Graveley Road, lack of footpaths, flood risk and impact on village character. There are also issues with local infrastructure capacity, such as schools and amenities. There were some comments of support for the development. The LLFA state the site is in a high surface water flood zone and previous local flooding has been reported potentially making the site unsuitable and pre-application advice is recommended. There is a minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to Graveley Road to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter reiterates' the site's availability and the economic and social benefits of the proposal. They state that assessment and design work have addressed constraints such as access, surface water drainage, agricultural land quality, and landscape impact. The illustrative masterplan includes landscape and vegetation buffers, safe access for motorized vehicles and active travel, and measures to address residential impact and construction methods.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Offord D'Arcy 1) for about 80 homes. Concerns regarding traffic and footpaths have been addressed through a criterion requiring provision of a safe and suitable means of vehicle and active travel access from Graveley Road and assessment of transport impacts through a transport assessment. Flood risk mitigation will be required informed by a flood risk assessment and a detailed drainage strategy taking into account groundwater, residual risk from culvert condition, and modelling of the ordinary watercourse. The sites location within a minerals safeguarding area is referred to within the allocation requiring consultation with Cambridgeshire County Council. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Offord Cluny and Offord D'Arcy 3: Land adjacent to Manor Court, Offord Cluny (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

The responses were either supportive or unsure. The LLFA state the site has surface water flood risk and that further detailed consideration of surface water management will be required. There is a minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to New Road to achieve an access and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to the fundamental impact on the character and setting of the listed building and the conservation area, whilst also significantly reducing the biodiversity and ecological value of the site.

Offord Cluny and Offord D'Arcy 4: Field Opposite The Glebe, New Road, Offord Cluny (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (5 responses)

The responses were mixed to this site. The LLFA state the site is in a high surface water flood zone and previous local flooding has been reported potentially making the site unsuitable and pre-application advice is recommended. There is a minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and local infrastructure improvements may be required in the form of walking/cycling connectivity.

The site promoter also commented reiterating the site's availability. They suggest amendments to the Sustainability Appraisal to reflect minimal landscape impact, adequate screening from the Manor House, and the potential for significant transport improvements. They state the landowner can provide land to upgrade New Road to two-way traffic, improving transport conditions and benefiting existing properties and farms further east.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it would have significant heritage and landscape impact and is removed from the main residential development of the settlement and more related to the countryside. In addition it was considered that the site would create disproportionate development out of keeping with the surrounding area and could create significant transport impact due to its location.

Offord Cluny and Offord D'Arcy 5: Land Opposite Manor House, High Street, Offord Cluny (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

The responses were either supportive or unsure. The LLFA state the site has surface water flood risk and that further detailed consideration of surface water management will be required. There is no minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with requirements respecting local junction spacing however, visibility may be affected by the bus shelter but it is unclear how high quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

Council response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment.

Offord Cluny and Offord D'Arcy 6: Land North of Station Lane, Offord Cluny (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

The responses were mixed. The LLFA state the site has high surface water flood risk meaning development may not be suitable and that further detailed consideration of surface water management will be required. There is a minerals and/or waste constraint present. The Highways Authority states the site has frontages to the public highway in Station Road and Asplin's Lane. However, it is unclear if accesses in either location can be achieved

in accordance with requirements due to the proximity of the railway crossing in Station Road and the width/geometry of Asplin's Lane. Local infrastructure improvements in Asplin's Lane may be required in the form of walking connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it significant constraints which if overcome could present viability implications for the site rendering it undeliverable and that it presents significant challenges regarding noise, air and light pollution and vibrational impacts from the railway line, overhead electricity lines and land contamination. In addition, the site may present safety issues regarding access and exit to the site from Station Lane especially and due to its proximity to a railway crossing. Access via Asplin's name is a considerable constraint due to the narrow nature of the lane and the site has significant flood risk.

Offord Cluny and Offord D'Arcy 7: Land West of High Street and North of Dunstall Close (smaller site), Offord Cluny (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

The responses were mixed. Key concerns raised related to flood risk and drainage as well as noise, heritage and impact on village character. The LLFA state the site has high surface water flood risk meaning development may not be suitable and that further detailed consideration of surface water management will be required. There is a minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and the suitability of the approach road network will need to be assessed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Offord Cluny 1) for about 45 homes. Concerns regarding noise, heritage and impact on village character have been addressed through criteria requiring an assessment and mitigation of noise impacts and design and layout of development to respond sensitively to reflect the site's location and relationship with the conservation area and heritage assets to the south informed by an proportionate heritage assessment. The development will also be required to use design that harmonises with surrounding development to integrate the new homes with their immediate locality, enhancing the gateway and approach to Offord Cluny. Flood risk will be addressed through the provision of a flood risk assessment and detailed drainage strategy taking into account groundwater and surface water flood risk. Provision of a safe and suitable means of access from the High Street (B1043) and assessment of transport impacts through a transport assessment will be required including active travel routes. The sites location within a minerals safeguarding area is referred to within the allocation requiring consultation with Cambridgeshire County Council.

Offord Cluny and Offord D'Arcy 8: Land West of High Street and North of Dunstall Close (larger site), Offord Cluny (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (4 responses)

The responses were mixed. Key concerns raised related to flood risk and drainage as well as noise, heritage and impact on village character. The LLFA state the site has high surface water flood risk meaning development may not be suitable and that further detailed consideration of surface water management will be required. There is a minerals and/or waste constraint present. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and the suitability of the approach road network will need to be assessed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling connectivity.

4 Further Issues and Options

The site promoter reiterated the site's availability and states the landowner is open to discussing the scale and density of development towards the southern end of the site to ensure it integrates well with the village's scale and density. They acknowledge the surface water flood risk and that a drainage strategy will be prepared. Strategic landscaping will ensure a suitable transition between the village and the open countryside and the potential noise from the East Coast Mail Line can be mitigated within the site.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it would be disproportionate in size compared to the existing settlement increasing the size of the village by over a fifth. In addition it was noted that it would have significant transport impacts on the village and landscape impact. A smaller version of the site (Offord Cluny and Offord D'Arcy 7) was put forward as a Draft Allocation Offord Cluny 1 for about 45 home which was considered more proportionate, limiting landscape impact and providing opportunities to create a gateway to the settlement.

Area 6 - Eastern Huntingdonshire

Bluntisham

General comment: Comments raised concerns about proposed developments in Bluntisham, including the strain on infrastructure such as the local road network, health and education, services and utilities, and the natural environment, as well as strong opposition from the community. Comments emphasised the need for smaller, sustainable developments within the existing village boundaries to protect and enhance current facilities and services.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Bluntisham 1: Land to the South of Rectory Road, Bluntisham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (12 responses)

The majority of responses oppose the development and do not agree with the Council's site assessment. Particular concerns were raised regarding the potential adverse impact to the setting of the Grade II listed Bluntisham House and the village's conservation area. It was noted the site is part of a historic ridge and furrow field system and is in close proximity to the RSPB Ouse Fen Reserve and Berry Fen SSSI which raises ecological concerns including habitat loss and pollution. Other issues raised include the potential for adverse impact upon the landscape, flood risk, the pressure on infrastructure such as local roads and services and the housing density being out of character with the village. Cambridgeshire County Council indicate there is sufficient frontage spacing to achieve highway access to the site.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Bluntisham 1) for about 20 homes. Concerns relating to site density have been addressed by requiring that development is only located in the northern half of the site, reducing the number of homes. This approach also allows significant open space to be retained for landscaping and avoids placing built development on potential ridge and furrow land whilst ensuring the development is screened from the Ouse Valley Way and Ouse Fen nature reserve. It mitigates recreational pressure to the Ouse Washes SAC/SPA/Ramsar site and the Berry Fen SSSI arising from increased recreational pressure generated by residents of this site. A heritage impact assessment will be required including sensitive

design respond to the setting of heritage assets. A flood risk assessment and drainage strategy will be required to assess and mitigate against flood risk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Bluntisham 2: Land West of Colne Road, Bluntisham (Council conclusion pre-consultation - may appropriate for development)

Main Issues Raised (23 responses)

The majority of responses reject the proposed site and disagree with the Council's assessment. Key concerns include the loss of high-quality agricultural land and vital wildlife habitats, particularly near the Berry Fen SSSI; increased flood risk due to surface water runoff; inadequate infrastructure such as sewage, roads, and public transport; and safety risks from a single access point opposite the village primary school. Many also have concerns with the erosion of village character, overdevelopment without supporting services, and the merging of Bluntisham with Colne. Cambridgeshire County Council state; there appears to be sufficient frontage to the public highway to achieve an in accordance with local junction spacing, an assessment of the impact of increased traffic volumes on the approach network will be required and the need to incorporate the traffic calming measures on Colne Road into the access design.

The site promoter has referred to an agricultural land survey which identifies that the majority of the land is classified as grade 3a agricultural land rather than grade 2 which was identified in the assessment. They also state the proposal could be effectively integrated into the landscape through tree and hedgerow retention on the site boundaries while delivering a Suitable Alternative Natural Greenspace in the northern portion of the site (SANG).

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Bluntisham 3) for about 85 homes, about 3ha of open space and 0.2ha of land for St Helen's Primary School staff parking. The development will be required to address and mitigate against flood risk informed by a flood risk assessment and drainage strategy, taking into account groundwater and surface water. Provision of Suitable Alternative Natural Greenspace (SANG) on 3 ha of the north western corner of the site will mitigate recreational pressure impacts to nearby nature sites such as Berry Fen SSSI. Agreement with the Environment Agency and Anglian Water Services to ensure that waste water flows from the proposal can be accommodated. Access concerns will be addressed through a criterion asking for the provision of a suitable means of access and a sustainable transport network for pedestrians, cyclists and vehicles, which facilitates integration with the village. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Bluntisham 3: Land West of Bluntisham (Council conclusion pre-consultation - inappropriate for development)

Main issues Raised (8 responses)

The majority of responses object the proposed site and support the Council's assessment that the site is inappropriate for development. Key concerns raised include inadequate infrastructure such as school capacity and healthcare access, traffic congestion, flooding, environmental harm, and negative impacts on the village's character and conservation area. Specific objections include limited access to the site due to protected trees, narrow roads and ransom strips and impact upon heritage assets such as Bluntisham Conservation Area and listed buildings. There are no minerals or waste constraints.

The site promoter submitted a response to the assessment stating the proposal can deliver housing, infrastructure, and green space while addressing flooding and tree preservation concerns.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that the site has significant constraints to development which prevent it from being effectively masterplanned to become part of the existing community. Access from the south would require removal of trees within a TPO area. Access proposed from Nobles Lane and Meridian Close are narrow roads running between residential properties. These have the potential to cause amenity impact on local residents due to the increase in traffic movements from a development of such a scale. Two access points one from Merdian Close and the other from a permitted development site to the south are reliant on adjoining site cooperation. The site has the potential to impact the conservation area and heritage assets.

Bluntisham 4: Land North of Station Road, Bluntisham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

Several respondents, including the Parish Council, object to the development due to concerns over access, traffic congestion, risk of flooding particularly due to poor drainage and runoff from sloping fields, loss of biodiversity such as ancient orchard and local wildlife, and the impact on the Bluntisham Conservation Area. They state the site is poorly integrated with the village and would harm its character. Some respondents express concerns about the site's deliverability and developability, citing issues such as constrained access from the A1123, and the impact on local infrastructure including schools, healthcare and water resources. The Wildlife Trust agree with the Council's site assessment. Cambridgeshire County Council note the site appears to have sufficient frontage to achieve access but a higher standard junction may be required for the scale of development. They suggest; two points of access may be required but it is unclear if this can achieved, there may be impacts upon existing Public Rights of Way and the need assess the surrounding road networks capacity.

The site promoter submitted a response to the assessment stating the site is suitable for development. They assert the site is suitable, available and deliverable. Their submission includes technical notes and surveys addressing access, landscape impact, biodiversity, and flood risk. BDW asserts that the site is well-connected, offers sustainability benefits, and can deliver biodiversity net gain through orchard retention and green infrastructure.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would extend the village significantly into the countryside altering the landscape and character of the village and surrounding countryside. In addition, it was considered that development in this location could fundamentally impact the history, character and identity of the settlement through the removal of orchards, that it may present contamination issues and would require the integration of autocentre. Finally the access to and from the site due to the proposed scale of development would require further assessment as there are concerns over safety.

The site promoter resubmitted the site to the Ongoing Call for Sites (see CfS23-24302), with a Transport Technical Note (November 2024) to outline how access into and from the site will be achieved and the potential impact on the road network. The resubmission also reduced the capacity of the site to 100 supported by a Vision Document. This would enable more land for landscaping. There are still concerns regarding the site's impact on the character of Bluntisham and the impact on landscape and historic character including loss of valuable orchard land. Additionally, the site would result in further development extending away from the main built form of Bluntisham making access to services less sustainable and greater landscape and character impact. As such the site is still considered to be inappropriate for development.

Bluntisham 5: Land to the North and South of Bluntisham Heath Road/ Wood End (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (8 responses)

The majority of responses object to the development, namely Bluntisham Parish Council, agreeing with the Council's assessment that the site is not suitable for development. Key concerns raised include the extension of the village boundary and its impact on the character of Bluntisham, particularly the proximity to listed buildings and the Conservation Area. Respondents also cited increased traffic congestion, lack of access and footpaths, pressure on local services (schools, healthcare, water), flood risks, and the loss of biodiversity and green space—especially the removal of a heritage orchard. The Local Highway Authority considers the site to have sufficient frontage for access, but significant highway improvements would be needed due to the scale of development. They also highlight the lack of footways along Wood End and the need for improved walking and cycling links.

The site promoter submitted a vision document in response to the consultation addressing issues raised including the integration with Bluntisham, harm to local character and loss of Orchard Land. They propose revisions to the scheme; capacity reduced to 40-65 homes, limit development to the northern parcel, introduces new footpath links, and includes a community facility to improve integration and support local services. It also reserves the southern parcel for biodiversity net gain and green space, and incorporates landscaping to reflect the former orchard character.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its limitations in successfully integrating development with the existing place and community and impact on the character of Bluntisham as well as the further erosion of orchard land.

During the Autumn 2024 consultation, the site promoter reduced the site area to 2.34 ha, 40-65 homes and an additional community building. The Vision Documents states that parcel 1 forms the focus of delivering development but parcel 2 is still available for residential development, open space and BNG. They state the existing access will be retained and used to provide the single point of vehicular access to the development and a new section of footpath will also be provided, linking to the existing footpath to the east along Wood End.

Since the assessment of the site was undertaken, it has come to the Council's attention that the orchard has since been felled. While not a protected nature conservation feature, these orchards are characterful of the area and contributes to biodiversity and the rural edge of the village and their loss will have a detrimental impact on the character and history of the village. Taking into account the revised information, the site was reassessed as potentially appropriate for development.

Colne

General comment: Cambridge County Council raised concerns regarding development in Colne in relation to the strain on local education infrastructure. There is already pressure on early years and secondary school places, and without mitigation, new developments like Colne 2 and Colne 6 could worsen capacity issues at St Helen's Primary and Abbey College.

Council response: An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Colne 1: Land North of The Meadows, Earith Road, Colne (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

The Minerals and Waste Planning Authority indicate that constraints are present but an allocation is likely acceptable in minerals and waste terms subject to appropriate mitigation. The Local Highway Authority stated the site has sufficient frontage for compliant access but noted that walking and cycling improvements may be harder to deliver for self-build schemes, and access formation could result in green infrastructure loss.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its potential impact on losing valuable landscape characteristics and risk from surface water flooding. The site contains former orchard land which is a key characteristic of the local landscape, development would further erode this landscape character.

Colne 2: Land at Ramadie, Earith Road, Colne (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

The responses reflect a mix of support and concern regarding the proposed development site. Key issues identified include flood risk, inadequate infrastructure such as road networks and lack of schools, GP services and utilities, and opposition to building on greenfield land. The Minerals and Waste Planning Authority highlight there are constraints regarding minerals and waste but an allocation will likely be acceptable with appropriate mitigation. The Local Highway Authority state the site appears to have sufficient frontage to achieve access compliant with standards but existing traffic calming measures on Earith Road will need to be amended and upgrades to active travel infrastructure may be required.

The site promoter supports the Council's site assessment and asserts an allocation is now being sought.

Council response

This site has been selected as a draft residential allocation (Draft Allocation Colne 1) for about 15 homes. The site is not at risk of flooding and is therefore a sequentially preferable site. Concerns regarding roads and active travel have been addressed through criterion requiring safe and appropriate highway and pedestrian access from Earith Road and the creation of a pavement along the frontage to improve pedestrian connectivity. The site's location within an sand and gravel mineral safeguarding area is noted within the draft allocation requiring consultation with Cambridgeshire County Council. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Colne 3: Land North West from North Fen Drove (Council conclusion pre-consultation - may appropriate for development)

Main Issues raised (2 responses)

The Minerals and Waste Planning Authority highlight there are constraints regarding minerals and waste but an allocation will likely be acceptable with appropriate mitigation. The Local Highway Authority state the site appears to have sufficient frontage to achieve a simple access for a development of this scale in accordance with local junction spacing but may require appropriate widening on Holme Fen Drove to be acceptable in highway terms.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with low risk of surface water flood risk meaning it could meet the criteria for consideration. However, site 'Colne 2: Land at Ramadie, Earith Road, Colne ' also met this criteria. 'Colne 2: Land at Ramadie, Earith Road, Colne ' was selected as a draft residential allocation as it had no flood risk as opposed to this site (Colne 3) which has very low surface water flood risk.

Colne 4: Land at Cranbrook Plants, Colne Road, Somersham (Colne) (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

The Minerals and Waste Planning Authority assigned a score of C/D to the site meaning there are constraints which may be difficult to overcome. The Local Highway Planning Authority state the site appears to have sufficient frontage for access but raise concerns regarding a lack of a safe pedestrian crossing to Somersham, which could limit accessibility for future residents.

The site promoter disagrees with the assessment that the site is inappropriate for development. They cite an Odour Assessment submitted alongside the application 23/01160/FUL which indicates development on the site is deemed acceptable subject to the recommended mitigation measures.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.

Colne 5: Land at Colne Road, Somersham (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

The Minerals and Waste Planning Authority assigned a score of C to the site meaning there are constraints presence and a preference for allocating other site unless additional evidence or mitigation is provided. The Local Highway Authority observed that the site has sufficient frontage to achieve access, subject to detailed design in line with DMRB/MfS standards. However, local infrastructure improvements may be necessary, particularly in terms of walking, cycling, and wheeling connectivity.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as it is wholly classified as grade 1 agricultural land. Grade 1 is the highest quality agricultural land.

Colne 6: Land West of the B1050, Earith Road, Colne (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (2 responses).

The Minerals and Waste Planning Authority assigned the site with a score of grade B, indicating that while constraints are present, allocation is likely acceptable with appropriate mitigation. The Local Highway Authority observe The site has adequate frontage or road connections for access, subject to detailed design and safety assessments. Infrastructure upgrades may be needed to improve walking and cycling links to community centres. The surrounding road network's capacity for increased traffic should be reviewed. A proposed pedestrian/cycle link between 29 and 31 East Street may be suitable for non-vehicular access.

Council response

This site has not been selected as a draft allocation. A selection of sites were tested by the Council as part of the Growth Strategy Option 3 to give an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with

some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at high to medium flood risk and groundwater flood risk meaning that it did not meet the criteria.

Colne 7: Colne Fen Farm and Fishery, South of Chatteris Road, Somersham (Colne) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

The Wildlife Trust disagree with the assessment stating the assessment fails to fully consider the ecological impact of developing within the Earith Gravel Pits County Wildlife Site, which supports important wetland bird populations and forms part of a wider nature recovery network. It recommends against allocating the site for holiday lodges without a full ecological impact assessment, suggesting only nature-compatible recreational uses may be appropriate. The Minerals and Waste Planning Authority assigned the site a Grade C, indicating constraints and a preference for allocating other sites unless further evidence or mitigation is provided. The Local Highway Authority considers access to the site technically feasible but notes that the unclear scope may require multiple access points. Key concerns include the need for watercourse crossing approvals, significant upgrades to Holme Fen Drove, potential loss of green infrastructure, and the need to protect and enhance public Rights of Way.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk-based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at risk of fluvial flooding with a third of the site within flood zone 3 a and b and at risk of groundwater and possible reservoir risk. It therefore did not meet the criteria.

Earith

General comments: The Parish Council raise a number of concerns regarding the proposed developments in Earith, including the scale of development, lack of infrastructure, flood risk, merging village boundaries and the potential loss of agricultural land which is important for national food production. They suggest improvements such as a new river crossing and better public services. Cambridgeshire County Council highlights concerns about education capacity, noting that both Earith Primary School and Abbey College are at or near their limits, with forecasts indicating they cannot accommodate additional pupils from new developments without mitigation.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Earith 1: New Farm, Meadow Lane, Earith (Earith) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

Cambridgeshire County Council's transport, flooding, rural assets and minerals and waste divisions provided comment on the site. The Rural Assets Team support the development noting that the site includes previously developed land and is primarily in equestrian use, limiting the loss of agricultural land. They highlight that the site is visually contained, has access to local services, and poses no significant constraints, with supporting assessments confirming safe access, sustainable drainage, and minimal traffic impact. The LLFA flags a high surface water flood risk and recommends pre-application advice due to previously reported local flooding. The Local Highway Authority notes that while access is feasible, improvements to walking and cycling infrastructure may be needed, and access formation could impact green infrastructure. The Minerals and Waste Planning Authority assigns the site a Grade B, indicating constraints are present but development is likely acceptable with mitigation.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk-based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at risk high and medium surface water and groundwater risk. It therefore did not meet the criteria.

Earith 2: Land On The South Side of Meadow Drove, Earith (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (5 responses)

One respondent support development proposal, with a suggestion to expand the site to include a nearby field owned by the Parish Council to facilitate a new Parish Hall and improve village infrastructure. However, concerns were raised about the site's medium surface water flood risk, with previous flooding reported and pre-application advice recommended by the Lead Local Flood Authority. The Minerals and Waste Planning Authority graded the site as “B,” indicating constraints that could be mitigated, while the Local Highway Authority noted that although access may be feasible, significant improvements to walking and cycling infrastructure would be required, and the development could impact green infrastructure.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the challenges presented in successfully integrating the site with the existing place and community. Development would erode the rural eastern edge of the village and extend the built form further towards the Ouse Washes

Fenstanton

General comments: Most responses expressed concern or opposition to the proposed development sites in Fenstanton. While one comment supports limited development on brownfield or infill sites, others raise significant issues including flood risk from West Brook, poor public transport, and inadequate infrastructure such as parking, mobile coverage, and access to services. Specific objections target sites SA2 through SA16, citing environmental constraints, proximity to a toxic waste site, and the impact of a 40% population increase on village character. There are also calls for developers to contribute meaningfully to local infrastructure, such as funding a village hall and improving healthcare access.

4 Further Issues and Options

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Fenstanton 1: Galley Hill, Fenstanton (Fenstanton) (council conclusion pre consultation - may be appropriate for development)

Main issues raised (11 responses)

The responses were mixed. Most respondents oppose or express concerns about the site, citing overdevelopment, worsening traffic congestion, and increased flood risk, particularly due to its location between busy roads and near flood-prone areas. Several comments stress the need for major junction redesigns and infrastructure upgrades, especially at the A1307, Galley Hill junction, Low Road and London Road. While some acknowledge potential employment benefits, others doubt the site would deliver meaningful jobs without significant investment. The Local Highway Authority noted that while the site has sufficient frontage for access, it would require major infrastructure upgrades to accommodate the scale of development, including potentially two access points and redesigned junctions and a full assessment of the surrounding road network's capacity to handle increased traffic and HGVs. They indicated that access from Low Road and Huntingdon Road would likely be unacceptable and highlighted the need for improved walking, cycling, and wheeling connectivity to nearby population centres. A Minerals and Waste constraint is present.

The site promoter supports the proposal for an allocation, proposing B2/B8 commercial uses and highlighting its deliverability, economic benefits while also committing to exclude flood-prone and wildlife-sensitive areas and deliver major highway improvements.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Fenstanton 1) for commercial, business, industrial and storage and distribution uses and 36 ha of open space for land to safeguard against flooding. Concerns around, traffic, road improvements and active travel have been addressed through criteria requiring integration of the existing public right of way, provision of safe vehicular access to the site exploring the potential of a roundabout junction off the A1307 into the site and the provision of a suitable sustainable transport network for pedestrians, cyclists and vehicles supported by a transport assessment taking into account the impact of the proposal on the road traffic network. Flood risk will be addressed and mitigated through 36ha of land to mitigate against flood risk and provide betterment. The presence of the site within the Consultation Area for the safeguarded waste site known as Marsh Lane Quarry which is currently undergoing restoration is referenced within the draft allocation. The site will contribute towards local job creation and economic activity.

Fenstanton 2: Land West of Huntingdon Road slip road from A1307, Fenstanton (conclusion pre consultation - inappropriate for development)

Main issues raised (7 responses)

The majority of responses support the assessment that the site is inappropriate for development. Key concerns raised were about infrastructure, environmental risks, and the scale of the proposal. Some pointed out issues regarding the safety of the junction near the flyover which could potentially be resolved through a constructing a roundabout, poor mobile coverage, limited access to services due to flood risks from West Brook and the site's proximity to a toxic tip containing blue asbestos. Additional concerns include noise and visual pollution from nearby highways and the strain of a 40% increase in housing would place on local infrastructure and village character. The Highway Planning Authority note that while access may be feasible, visibility and road geometry challenges could require significant improvements. They also assert the site would necessitate significant improvements in walking and cycling infrastructure. The Minerals and Waste Planning Authority rates the site as moderately constrained but potentially acceptable with mitigation.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would be extremely challenging to successfully integrate development due to its access constraints. In addition the site is constrained by TPO protected trees, its proximity to the A1307 and narrowness would cumulatively make it challenging to design a scheme that could address these and still provide a high quality living environment

Fenstanton 3: Land East of Hilton Road, Fenstanton (conclusion pre consultation - inappropriate for development)

Main issues raised (11 responses)

The majority of respondents oppose the development, agreeing with the assessment that the site is unsuitable. Concerns include the site's remoteness from village amenities, lack of public transport options, poor access, lack of footpaths, and significant flood risks (surface and fluvial). Respondents also highlight the area's rural character, archaeological and heritage significance, and potential for increased pollution due to proximity to major roads (A1307 and A14). The Local Highway Authority notes that while access may be technically feasible, it would require multiple entry points and substantial infrastructure upgrades. The Minerals and Waste Planning Authority rates the site as moderately constrained but potentially acceptable with mitigation.

The site promoter for Fenstanton 3 argues the land is suitable for development due to its containment by existing features, potential for design-led mitigation of heritage and landscape impacts, and its alignment with Fenstanton's housing growth needs, recommending the assessment be revised to reflect minor constraints and development potential.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the adverse impacts on the landscape and on heritage assets disrupting the character of the area. Also, the site's detached nature from Fenstanton would not support sustainable place making.

Fenstanton 4: Land off Conington Road, Fenstanton (conclusion pre consultation - inappropriate for development)

Main issues raised (11 responses)

The majority of responses oppose the development and therefore agree with the Council's assessment that the site is unsuitable for development. Responses cited concerns about overdevelopment, flood risk, poor infrastructure, and the impact on the rural character of Fenstanton. Key issues raised include the site's vulnerability to both surface water and fluvial flooding, limited access via a flood-prone underpass, and insufficient local services such as schools and public transport. There are also concerns about the loss of green space, poor mobile coverage, and the strain on local roads. The Local Highway Authority stated that while access may be technically feasible, the scale of the proposed development would require significant highway improvements, and current constraints—such as a flood-prone underpass and limited pedestrian and cycling infrastructure—raise serious concerns about its suitability. The Minerals and Waste Planning Authority indicate that constraints are present and other sites are preferred for allocation unless additional evidence or mitigation is provided.

The site promoter disagrees with the assessment and provides a number of technical documents including a transport, heritage and landscape technical note, visibility plans and a revised concept plan to address concerns raised in the assessment. They state the site is at low flood risk, propose sustainable drainage systems and green infrastructure, and claim that with mitigation, the development would not significantly impact landscape, heritage assets, or air and noise quality, while also enhancing connectivity and supporting sustainable transport.

Council response

4 Further Issues and Options

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it was considered that development could not be masterplanned so that it would effectively integrate with the existing place and community due to its physical detachment from the main settlement (Fenstanton) which is located on the other side of the A1307. It would not support sustainable place making and presents safety concerns due to potential increased usage of underpass to access Fenstanton. In addition the site is considered inappropriate for built development due to the adverse impacts on the landscape and on heritage assets meaning that it would significantly disrupt the rural character of the area due to the scale of the proposal.

Hemingford Grey

Hemingford Grey 1: Mill Lane field, Hemingford Grey (conclusion pre consultation - may be appropriate for open space)

Main issues raised (6 responses)

Most of the respondents do not support development of the site for residential use. Some respondents express concerns about the site's high flood risk, with the Lead Local Flood Authority noting it may be unsuitable for development due to surface water flooding and past incidents. The site lies largely within Flood Zone 3a and is protected by flood defences rated only as “Fair,” raising doubts about its long-term viability for residential use. The Parish Council and Wildlife Trust support preserving the area for biodiversity and recreational use, citing its proximity to protected landscapes and infrastructure limitations. The Local Highway Authority notes that while access from St Ives Road is possible, improvements to Mill Lane and walking/cycling infrastructure would be necessary. The Minerals and Waste Planning Authority assigns a Grade B to the site, indicating constraints that may be mitigated.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is significantly constrained by fluvial flooding with 89% of the site within flood zone 3a. The site was also put forward by a third party for proposed open space uses which the Council considered would be appropriate, however as this use was not put forward by the landowner, this proposed use is considered unachievable.

Hemingford Grey 2: Land West of Cullum Farm, London Road, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (4 responses)

The proposed development raises concerns due to its location in Flood Zone 3a and proximity to protected water extraction zones, with flood defences rated only as “Fair”. The Minerals and Waste Planning Authority (MWPA), assign the site a Grade B—indicating constraints that may be mitigated. The Local Highway Authority notes that while access is feasible, detailed design and infrastructure upgrades (especially for walking and cycling connectivity) would be necessary.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is almost wholly located within flood zone 3a and the proposed residential uses are classed as a more vulnerable use.

Hemingford Grey 3: Land South of Marsh Lane and East of Long Lane, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (6 responses)

The majority of respondents oppose development, citing flood risk (Flood Zone 3a), historic landfill presence, and inconsistencies in the site's submitted area. The Lead Local Flood Authority (LLFA) notes previous local flooding and recommends pre-application advice due to surface water constraints. The Wildlife Trust supports protecting the adjacent County Wildlife Site and the Great Ouse Valley landscape. Additional concerns include infrastructure and access. The Local Highway Authority highlights that Long Lane is too narrow for two-way traffic and would require significant improvements, possibly beyond the existing public highway. The Minerals and Waste Planning Authority assigns a Grade C, indicating a preference for other sites unless further evidence or mitigation is provided.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the majority of the site is located within flood zone 3a and the proposed residential uses are classed as a more vulnerable use.

Hemingford Grey 4: Land North of Marsh Lane and East of Dendys, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (5 responses)

Most respondents raising concerns about flood risk, infrastructure, and environmental constraints. The site lies in Flood Zone 3a and is protected by flood defences rated only as "Fair," while also falling within Special Protection Zones for Cambridge Water extraction. A key drainage ditch runs through the site, managing both surface and foul water from the village, adding to its strategic importance. The Minerals and Waste Planning Authority assigns a Grade C, indicating a preference for other sites unless further evidence or mitigation is provided. The Local Highway Authority notes that while access is technically feasible, significant road widening and drainage adjustments would be required, making the site challenging for development.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as almost all of the site is located within flood zone 3a and the proposed residential uses are classed as a more vulnerable use.

Hemingford Grey 5: Land off Gore Tree Road, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (4 responses)

Most respondents express concerns about flood risk, infrastructure, and environmental constraints. The site lies in Flood Zone 3a and is protected by flood defences rated only as "Fair," with a key drainage feature—Lake Brook—running along its southwestern edge, which is vital for managing water from both Hemingford Abbots and Thorpe. The Minerals and Waste Planning Authority assigns a Grade B, indicating constraints that may be mitigated. However, the Local Highway Authority raises significant access and infrastructure concerns, including visibility issues, lack of footways, and the need to preserve public Rights of Way, resulting in a Red RAG rating.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as almost all of the site is located within flood zone 3a and 3b and the proposed residential uses are classed as a more vulnerable use.

Hemingford Grey 6: Land East of Daintree Way, Hemingford Grey (conclusion pre consultation - may be appropriate for open space uses)

Main issues raised (6 responses)

4 Further Issues and Options

The majority of respondents oppose the development for residential use. The Parish Council supports using the site for open space, biodiversity, a new cemetery, and improved foot/cycle links, but opposes residential development due to its location in Flood Zone 2/3a and reliance on flood defences rated only as “Fair.” The Lead Local Flood Authority notes previous local flooding and recommends pre-application advice. The Minerals and Waste Planning Authority assigns a Grade B, suggesting development may be acceptable with mitigation. the Local Highway Authority highlights access feasibility but flags potential loss of green infrastructure and the need for walking/cycling improvements, assigning an Amber RAG rating.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it is significantly constrained by fluvial flooding with the majority of the site within flood zone 2 and 3a. The site was also put forward by a third party for proposed open space uses which the Council considered would be appropriate, however as this use was not put forward by the landowner, this proposed use is considered unachievable. The third party also proposed cemetery or parking uses the former of which is incompatible with the level of flood risk on the site and the latter was not put forward by the landowner rendering this proposed use is considered unachievable.

Hemingford Grey 7: Land west of Cullum Farm and Yes! Estate, London Road, St Ives (Hemingford Grey) (conclusion pre-consultation - inappropriate for development)

Main issues raised (5 responses)

Most respondents express opposition or concerns to development of the site and therefore agree with the Council's assessment. The site lies in Flood Zone 3a and within Special Protection Zones for Cambridge Water extraction, with flood defences rated only as “Fair,” prompting strong objections to residential development. The Local Highway Authority assigns a Red RAG rating, noting that the site lacks a direct connection to the public highway and appears dependent on adjacent parcels for access, making delivery and walking/cycling connectivity unclear and problematic. While the Minerals and Waste Planning Authority assigns a Grade B—indicating development may be acceptable with mitigation—overall feedback highlights significant flood risk, infrastructure limitations, and access constraints.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is predominantly located within flood zone 3a and the proposed residential uses are classed as a more vulnerable use.

Hemingford Grey 8: Garden at 71 Hemingford Road, St Ives (conclusion pre consultation - inappropriate for development)

Main issues raised (3 responses)

One respondent opposes development and agrees with the assessment, the Minerals and Waste Planning Authority sees potential with mitigation (Grade B), and the Local Highway Authority notes access feasibility for a single dwelling.

Council response

This site has not been selected as a draft allocation as the site is below 0.25ha and proposes fewer than 5 homes and therefore does not pass the minimum site size threshold for detailed assessment. The majority of the site is also located within flood zone 3a making it unsuitable for residential (more vulnerable) uses.

Hemingford Grey 9: Land South of Hemingford Road, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (5 responses)

All responses oppose or express concerns to the development of the site. One respondent highlights the site's location in Flood Zone 3a, its role in village drainage, and its contribution to the open landscape, arguing strongly against residential development. The Lead Local Flood Authority notes previous local flooding and recommends pre-application advice due to surface water constraints. The Local Highway Authority assigns an Amber RAG rating, stating that while access is technically feasible, two access points may be needed, and traffic calming measures and green infrastructure could be affected. The Minerals and Waste Planning Authority assigns a Grade C, indicating a preference for other sites unless further evidence or mitigation is provided.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it is almost completely located within flood zone 3a, with a small portion of the northern edge of the site being in flood zone 2 and the proposed residential uses being classed as a more vulnerable use.

Hemingford 10: Dockesy's Farm, north of St Ives Road, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (5 responses)

Most responses express concerns or opposition to the site. The site lies in Flood Zones 2 and 3a, is within a Conservation Area, and borders a County Wildlife Site and a listed windmill, raising significant environmental and heritage concerns. The Lead Local Flood Authority notes medium surface water flood risk and recommends pre-application advice due to previous flooding. The Wildlife Trust supports the assessment and prioritises protection of the adjacent landscape. The Minerals and Waste Planning Authority assigns a Grade B, suggesting development may be acceptable with mitigation. The Local Highway Authority assigns an Amber RAG rating, citing uncertainty over whether the 7m-wide access from St Ives Road is sufficient for a development of this scale and noting the need for walking and cycling infrastructure improvements.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it is highly restricted by flood risk with flood zone 2 and 3a on a third of the site and the proposed residential uses being classed as a more vulnerable use.

Hemingford Grey 11: Hemingford Grey Lake, south of Marsh Lane, Hemingford Grey (conclusion pre consultation - may be appropriate for development)

Main issues raised (8 responses)

There were strong oppositions to the development of the site. Respondents—including Hemingford Grey Parish Council, Hemingford Abbots Parish Council, and the Wildlife Trust—raise concerns about ecological harm to the County Wildlife Site, disruption to protected species like nightingales and otters, and the lake’s vital role in village drainage. Additional objections include traffic safety risks, inadequate infrastructure, and community resistance to losing a valued natural space. The Minerals and Waste Planning Authority assigns a Grade E, indicating the site is unsuitable for development. The Local Highway Authority states that the site has sufficient frontage for access, but the surrounding road network may not be suitable for increased traffic and HGVs without significant upgrades. Improvements may include widening the narrow carriageway and enhancing walking and cycling infrastructure, which could be challenging depending on land ownership and access location. They also note that forming an access could result in the loss of green infrastructure.

The site promoter supports the proposal for residential moorings. A Vision Document was submitted as part of the response which states the proposal aims create a sustainable, low-carbon community with supporting infrastructure including a hub building, EV charging, fishing platforms, picnic/play areas, and biodiversity enhancements. They assert the proposal could be delivered between 2029 and 2030 and emphasise inegration

with the local community, environmental stewardship, and accessibility via walking cycling, and public transport. The response also states the houseboats would be securely moored with flood resilient measures, an ecological management plan would be produced and development would only occur in areas unaffected by mineral extraction.

Council response

This site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, but noted that net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the water bodies to transport boats and the physical layout of any moorings, including any potential navigation issues. No responses were received to confirm the compatibility and suitability of the site so the site did not progress to assessment within the growth strategy options. It is noted that the site promoters submitted a Vision document which shows space for 50 moorings. The site is at high flood risk (86% in flood zone 3b), raising concerns about safe access and escape in times of flood.

Hemingford Grey 12: Land north of Hemingford Road, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (6 responses)

Most respondents agree or have observations with the site assessment which states the proposed site is unsuitable for development. Key concerns raised relate to flood risk, environmental protection, and infrastructure. A major concern is the site's location in Flood Zone 3a, which, despite being protected by the St Ives and Hemingfords Flood Alleviation Scheme, remains vulnerable due to underfunded maintenance and increasing rainfall. The site also lies within a Special Protection Zone for water extraction and plays a critical role in local drainage infrastructure. . The Local Highway Authority notes that while access is technically feasible, it would require detailed design work and could result in the loss of green infrastructure. Improvements to walking and cycling connectivity would also be necessary. The Minerals and Waste Planning Authority rates the site as Grade B, indicating constraints that may be mitigated

The site promoter does not support the Council's assessment that the site is unsuitable for development. The submitted letter states that although the site lies in Flood Zone 3a, it is protected by the St Ives and Hemingfords Flood Alleviation Scheme, and further mitigation—such as woodland planting programme and raising ground levels—could reduce flood risk. The submission also notes previous Parish Council support for a small-scale development with community benefit and requests that the Council re-evaluate the site through a Sustainability Appraisal and Sequential Test. These proposals aim to demonstrate that the site can be made suitable for development despite its flood zone designation.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it is wholly located within flood zone 3a and the proposed residential uses are classed as a more vulnerable use.

Hemingford Grey 13: Land west of London Road, Hemingford Grey (conclusion pre consultation - inappropriate for development)

Main issues raised (3 responses)

All responses objected or expressed concerns regarding the development of the site. Key issues include the site's location in Flood Zone 3a, high surface water flood risk, and its position within both a Special Protection Zone for water extraction and the St Ives Conservation Area. Respondents highlighted the vulnerability of the site if flood defences fail, the loss of historic ridge and furrow landscape, and the impact on rural views. The Minerals and Waste Planning Authority rated the site as Grade B, indicating that development may be acceptable with mitigation. The Local Highway Authority stated that the site has sufficient frontage on the B1040 to allow access,

though two access points may be needed, including one for emergencies. However, they raised concerns about the need for significant improvements to walking and cycling infrastructure, potential loss of green infrastructure, and issues with footway and cycleway connectivity, ultimately giving the site a red RAG rating.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it is wholly located within flood zone 3a and the proposed residential uses are classed as a more vulnerable use.

Hilton

General comments: Comments raised include widespread objection to large- scale development in Hilton, citing the village's limited infrastructure, lack of public transport, and rural character. Respondents raised concerns about overdevelopment, which they suggest would overwhelm local services, degrade quality of life, and disrupt social cohesion. Potential mitigation measures proposed included reducing the numbers and density of the proposed development, ensuring varied and village-appropriate design, and requiring developers to invest in local infrastructure such as roads, schools, utilities, and community facilities. Respondents also proposed improving walking and cycling routes, fixing access issues around the A14 flyover, and enhancing public transport. Many preferred development at alternative sites like Lattenbury's near Godmanchester, where a new, fully serviced community could be better integrated

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Hilton 1: Land West of Potton Road, Hilton (conclusion pre consultation - may be appropriate for development)

Main issues raised (5 responses)

The majority of responses object to the development of the site. The primary concerns include the site's incompatibility with Huntingdonshire's Local Plan policies for small settlements, its location outside the village boundary on Grade 2 agricultural land, and the lack of essential services and sustainable transport options in Hilton. Respondents highlight significant flood risk from surface water runoff, referencing past flooding incidents and inadequate drainage infrastructure. Additional objections cite increased traffic congestion, safety risks at local junctions, and the negative impact on the village's rural character. The Minerals and Waste Planning Authority noted that part of the site lies within a Sand and Gravel Mineral Safeguarding Area, as designated under Policy 5 of the Cambridgeshire and Peterborough Minerals and Waste Local Plan. They advised that, given the site's size and proximity to an existing settlement, developers should seek to minimise sterilisation and, where feasible, incorporate incidental extraction of minerals as part of the development.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at medium fluvial flood risk. It therefore did not meet the criteria.

4 Further Issues and Options

Hilton 2: Land East of The Paddocks, Hilton (conclusion pre consultation - may be appropriate for development)

Main issues raised (4 responses)

One response objects to the assessment and does not support development of the site, other responses have observations. Key concerns raised include harm to the countryside, loss of agricultural land, and lack of services or sustainable transport. The Local Highway Authority stated that the site has sufficient frontage on St Ives Road to allow access, subject to detailed design and safety assessments. However, they raised concerns about poor walking and cycling connectivity and rated the site with a red RAG status due to its remote location and infrastructure limitations. The Mineral and Waste Planning Authority noted the site lies within a mineral safeguarding area and advised minimising sterilisation, assigning it a Grade B with mitigation required. he Minerals and Waste Planning Authority advised that, due to the site's size and proximity to an existing settlement, developers should aim to minimise sterilisation and consider incidental mineral extraction as part of the development. The site was given a Grade B rating, indicating that constraints are present but development may be acceptable with appropriate mitigation.

The site promoter supported the assessment and provided additional technical documents to support their proposal.

Council response

This site has not been selected as a draft allocation. A number of sites were tested by the Council as part of the Growth Strategy Option 3 to provide an indication of suitability in relation to the growth strategy on a locational basis. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at medium fluvial flood risk. It therefore did not meet the criteria.

Hilton 3: Land North of England, Hilton (conclusion pre consultation - inappropriate for development)

Main issues raised (4 responses)

Most responses had objections to the proposal or had observations. Key concerns included the site’s proneness to flooding, which could worsen conditions in nearby areas like Westbrook, and Hilton’s lack of infrastructure to support new residents. The Local Highway authority had significant concerns about the proposed site, noting that based on the red line boundary of the site, there is no connection to the public highway, making it unclear how access to the site would be achieved, giving RAG status of red. The Minerals and Waste Planning Authority rated the site as a grade A, indicating that either no constraints are present or existing constraints are unlikely to affect development.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as the vast majority of the site is located within flood zone 3a and the proposed residential uses being classed as a more vulnerable use.

Hilton 4: land North of High Street, Hilton (conclusion pre consultation - may be appropriate for development)

Main issues raised (4 responses)

All of the responses either objected to the development of the site or had observations. Key concerns raised include Hilton's lack of infrastructure to support new housing, the site's location outside the village boundary, and its impact on the character of the settlement and high-quality agricultural land. The Minerals and Waste Planning Authority rated the site as Grade B, meaning development could be acceptable with mitigation. The Local Highway Authority notes that while access from the High Street may be feasible with design adjustments, alternative access via Cross Farm Close is unclear and may pose visibility issues; improvements to walking and cycling infrastructure would also be necessary.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Options 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at medium fluvial and groundwater flood risk. It therefore did not meet the criteria.

Holywell-cum-Needingworth

General comments: The Parish Council expressed strong objection to all seven proposed development sites in Holywell-cum-Needingworth. Their objections are based on four key concerns: lack of infrastructure, the use of greenfield land and countryside development, the scale of proposals being incompatible with the size of the settlement, and the presence of flood zones.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Holywell-cum-Needingworth 1: Land North of Bluntisham, Needingworth (Council conclusion pre-consultation - may be appropriate for development)

Main issues raised (5 responses)

The responses provide mixed feedback to the proposal. Key concerns raised include the site's location on greenfield and mostly Grade 2 agricultural land, limited sustainable access from the A1123, and potential impact on the existing village character. The Minerals and Waste Planning Authority rated the site Grade C, indicating constraints and a preference for alternative sites unless mitigated. The Local Highway Authority note that access may be feasible but would require significant improvements and possibly two access points. Education assessments show early years and secondary schools can accommodate growth, but the primary school (Holywell C of E Primary School) is already at capacity and would need expansion to support additional pupils.

The site promoter supports the Council's assessment that the site is potentially suitable for development. However, they suggest higher housing density could be achieved, referencing a nearby development of 120 dwellings on 6.44 hectares, compared to the proposed 98 dwellings on 10.6 hectares. They suggest amending the assessment to reflect a 100% net developable area, noting that open space requirements—including landscaping, noise mitigation, flood alleviation, and biodiversity net gain—have already been accounted for.

Council response

4 Further Issues and Options

The site has been combined with proposed site 'Holywell-cum-Needingworth 11- Land North West of Needingworth, South of the A1123' and has been selected as a draft mixed use allocation (Draft Allocation Needingworth 2) for about 290 homes, community retail facilities to meet any needs arising from the development and land to safeguard against flooding. Concerns regarding impact on the village character and greenfield land are addressed through criteria requiring completion of public engagement and submission of a master plan illustrating use of design that harmonises with the surrounding development to integrate the new homes with their immediate locality and ensure that neighbouring residential amenity is protected and provision of a strong landscaping scheme. Provision of a safe and suitable means of access from Bluntisham Road and High Street and assessment of transport impacts through a transport assessment will be required to address access and traffic impact. The draft allocation addresses the site's local within a mineral safeguarding area requiring consultation woth Cambridgeshire County Council. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Holywell-cum-Needingworth 2: Land East of Bluntisham Road (northern part), Bluntisham (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (3 responses)

The responses are mixed. The Parish Council supports the site but notes concerns about its proximity to a sewage works and a chicken farm. The Minerals and Waste Planning Authority graded the site D/E, indicating significant sustainability constraints or insufficient information. The Local Highway Authority observed that while access may be feasible, it would require detailed design, potentially two entry points, and could impact green infrastructure and public Rights of Way. They also noted poor walking and cycling links in the village.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site falls within 250m of a mineral development area and the eastern edge of the site is within the mineral development area itself. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of residential development on the MDA.

Holywell-cum-Needingworth 3: Land East of Bluntisham Road (larger site), Needingworth (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (3 responses)

The Parish Council supports the assessment but highlights concerns about the site's proximity to a sewage works and a commercial chicken farm. The Minerals and Waste Planning Authority graded the site D/E, indicating either significant constraints or unsuitability, with insufficient information to determine which. The Local Highway Authority raised serious concerns, noting that Overcote Lane is too narrow to support development without major improvements, which may not be feasible due to land ownership issues. They also flagged the need for enhanced walking and cycling infrastructure and the preservation of public Rights of Way. The site received a Red RAG rating, indicating substantial highway-related constraints.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site falls within 250m of a mineral development area and the eastern edge of the site is within the mineral development area itself. No detailed assessment has been submitted alongside the call for sites submission to assess the impact of residential development on the MDA. Also because the southern half of the site is within 400m of a water recycling area. Residential uses are the most vulnerable to odours and no odour assessment has been submitted apart form a short statement in the supporting statement to justify this development and demonstrate that the impact could be adequately mitigated to ensure acceptable levels of residential amenity.

Holywell-cum-Needingworth 4: Land West of Needingworth (Needingworth) (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (4 responses)

Concerns were raised about the site's suitability for development. The Parish Council note that the Fens Reservoir pipeline is earmarked to cross the site, a previous application for 14 houses was dismissed due to countryside location, flood risk (48% of the site), and concerns over character, traffic, and light pollution. The Local Highway Authority noted that while access is feasible, significant improvements would be needed, including two access points and better walking/cycling links. The Minerals and Waste Planning Authority graded the site C, indicating constraints and a preference for other sites unless further mitigation is provided.

The site promoter disagreed with the assessment, stating the Council should reassess the site on the basis that the flood zone constraints would reduce the developable area and allow space for landscaping, open space, biodiversity net gain, and flood alleviation measures.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would fundamentally adversely impact the character of Needingworth.

Holywell-cum-Needingworth 5: Lodel Farm, Overcote Road, Needingworth (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (4 responses)

The Parish Council agreed with the assessment and raised concerns about the site's proximity to a sewage works and a commercial chicken farm, citing precedent for refusal. The Minerals and Waste Planning Authority graded the site C/D, indicating constraints that are either difficult to overcome or require further evidence or mitigation. The Local Highway Authority noted that while access may be feasible, Overcote Lane may be too narrow without significant improvements, and enhancements to walking and cycling infrastructure would be necessary.

The site promoter strongly disagreed with the assessment, arguing that the site was excluded based solely on air quality concerns despite a submitted assessment and no objections from statutory consultees. They highlighted that the current planning application (23/01002/OUT) proposes up to 30 affordable homes, has no technical objections, and that the site is available and suitable to support Needingworth's vitality and housing needs. They submitted several supporting documents.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as the site is located on the edge of the existing settlement but this is wholly dependent on satisfactorily overcoming the odour and amenity impacts present on site.

Holywell-cum-Needingworth 6: Burgess & Walker, south of entrance to Needingworth Industrial Estate, St Ives (Needingworth) (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (4 responses)

The Parish Council agreed with the assessment and noted the site's location within the flood zone. The Minerals and Waste Planning Authority graded the site as C, indicating constraints and a preference for other sites unless further evidence or mitigation is provided. The Local Highway Authority observed that while access is feasible, traffic capacity—particularly at the High Street right-turn lane—may be problematic, and improvements to walking and cycling infrastructure would be needed.

4 Further Issues and Options

The site promoter disagreed with the assessment, stating that although the land lies within the flood zone, it is an extension of an existing commercial area and the proposed use for lorry parking is less vulnerable and could be acceptable with proper mitigation. They suggested allocating the site for a lorry park or haulage yard.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as approximately two thirds of the site is within flood zone 3b with the remaining third of the site being in flood zones 3a and 2 with a nominal percentage of flood zone 1. There is also a substantial risk from surface water flood risk. It is proposed for lorry parking which falls under a less vulnerable use in the NPPF but the impact of hardstanding could have significant knock on flooding impacts.

Holywell-cum-Needingworth 7: Giffords Park, east of B1040, St Ives (Needingworth) (Council conclusion pre-consultation - may be appropriate for development).

Main issues raised (12 responses)

The majority of responses express strong opposition to the development, citing concerns about its scale, location, and especially the lack of adequate transport infrastructure. Multiple respondents—including St Ives Town Council and Hemingford Grey Parish Council—highlight existing congestion on the A1096, A1307, and London Road, and argue that no meaningful road upgrades are planned despite the scale of proposed housing growth in the area. There are also concerns about flood risk, with parts of the site in Flood Zones 2 and 3, and the site being greenfield land. Education officers noted that the proposed mitigation is insufficient to meet the forecast demand for school places generated by the development. The Local Highway Authority acknowledged access feasibility but warned of significant congestion and infrastructure requirements. The Minerals and Waste Planning Authority graded the site as B/C, indicating that while constraints are present, the site may be acceptable with mitigation or may require further evidence, but there is currently insufficient information to determine which applies.

The site promoter supports the assessment and submitted updated documents addressing flood risk, access, and sustainability, and assert that the site is well-located for integration with St Ives and consistent with the 20-minute neighbourhood concept. They state the Council should factor the land required for the mobility hub into delivery calculations and use the Vision Document as the basis for a site allocation policy.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation Needingworth 1) for about 1,750 homes , 0.5 ha of land for a care home, about 5 ha of land for a local centre including retail, service and health uses including a mobility hub, about 4.6 ha of commercial and employment uses. It also includes 4 ha of land for a primary school, about 3.3 ha of land for a solar farm to help meet the electricity demands of the site, about 65.5 ha of green infrastructure, sustainable drainage and flood mitigation uses. Concerns regarding flooding have been addressed through criteria requiring a flood risk assessment and detailed drainage strategy taking into account fluvial, groundwater and surface water flood risk, modelling of ordinary watercourses, Heath Drain and assessment of residual risk alongside land to safeguard against flooding. Travel and congestion have been addressed through the requirements to provision of a safe and suitable means of access from the A1123 and assessment of transport impacts through a transport assessment. In addition phasing of development to ensure provision of infrastructure and services coincides with occupation of properties. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure including education across the district and will be refined at Stage 2 to look at locational requirements. St Ives is considered one of the most sustainable settlements within Huntingdonshire and the Preferred Options Draft Local Plan to 2036 through its Market town designation.

Houghton and Wyton

Houghton and Wyton 1: Tir na Nog, Sawtry Way, Houghton (Council conclusion pre-consultation - appropriate for development)

Main issues raised (5 responses)

The majority of responses oppose the development. Multiple stakeholders, including the Parish Council, raised strong concerns about the site's rural and isolated location, its position on Grade 2 agricultural land, and its inconsistency with the Houghton and Wyton Neighbourhood Plan, which seeks to prevent ribbon development and protect the rural setting. They suggest that the site is not appropriate for commercial development. The Minerals and Waste Planning Authority, however, assessed the site as Grade A, indicating no constraints from a minerals and waste perspective. The Local Highway Authority noted that access is likely feasible but may require improvements to walking and cycling infrastructure and protection of existing public Rights of Way.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Houghton and Wyton 2: Land at New Manor Farm, Sawtry Way, Wyton (Council conclusion pre-consultation - appropriate for development)

Main issues raised (6 responses)

The majority of responses oppose to the development of the site. Concerns raised include the loss of high-quality agricultural land, the visual impact on the surrounding landscape, and the risk of urban sprawl, particularly along Sawtry Way. The development is seen as conflicting with the Houghton and Wyton Neighbourhood Plan, which aims to preserve the rural character and prevent further industrialisation of the area. Infrastructure challenges, including inadequate road capacity and poor walking/cycling connectivity, are also highlighted. The Local Highway Authority considers access to the site feasible but raises moderate concerns, noting that significant road upgrades, improved walking and cycling links, and protection of public Rights of Way would be required. The Minerals and Waste Planning Authority rated the site as Grade A, indicating no constraints or only minor ones that would not affect development.

Council response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Houghton and Wyton 3: Land between Houghton Hill Road and Sawtry Way (Council conclusion pre-consultation - not appropriate for built development but may be appropriate for Woodland burial ground development)

Main issues raised (5 responses)

The general view is broadly supportive of the proposed woodland burial ground, with several respondents agreeing with the Land Availability Assessment and Sustainability Appraisal. One comment suggests the site may be too small for a burial ground but supports alternative uses like a woodland or community orchard. The Minerals and Waste Planning Authority rates the site as Grade A, indicating no constraints or only minor ones that would not affect development. The Local Highway Authority notes that access is feasible but flags moderate concerns, including the need for walking/cycling infrastructure improvements and potential loss of green infrastructure.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that as homes on the site could not be effectively integrated into a existing place or community and are not

4 Further Issues and Options

sustainably located to access day to day services. The assessment went on to note that the site has the potential as burial ground which could be accommodated into the landscape and reinforce the perception of separation of Houghton from St Ives. However the site was not put forward for this use and therefore it is not known whether this would be achievable.

Houghton and Wyton 4: Land off Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton) (Council conclusion pre-consultation - appropriate for development)

Main issues raised (9 responses)

Most respondents support the proposal for moorings and agree with the Council's assessments. Key concerns centered on the site's high flood risk, with several comments supporting its use for moorings or flood alleviation, provided that any development is water-compatible and includes suitable infrastructure. The Local Highway Authority noted that while access is feasible, it would require significant improvements and changes to traffic regulations. Huntingdon Town Council suggested limited development potential due to flood constraints and parking limitations, and recommended road improvements. The Minerals and Waste Planning Authority rated the site as moderately constrained but potentially acceptable with mitigation.

Council response

This site was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, but noted that net developable area will need to be determined in collaboration with the relevant water management bodies to reflect the capacity of the river and the physical layout of any moorings, including any potential navigation issues. No responses were received to confirm the compatibility and suitability of the site so the site did not progress to assessment with the growth strategy options. The site is at high flood risk (flood zone 3b) and distance from the river to the nearest footpath is over 100m minimum, raising concerns about safe access and escape in times of flood.

Houghton and Wyton 5: Land North of 6 Old Houghton Road, Hartford, Huntingdon (Houghton and Wyton) (Council conclusion pre-consultation - appropriate for development)

Main issues raised (8 responses)

The responses reflect a mix of support, agreement, and concern. Several contributors agree with the Land Availability Assessment and Sustainability Appraisal, particularly acknowledging the flood risk and supporting development only if effective drainage improvements are implemented. The Minerals and Waste Planning Authority rated the site as moderately constrained (Grade B), suggesting development could be acceptable with mitigation. concerns were raised by the Local Highway Authority, which noted that while access is technically feasible, it may require significant highway improvements and could impact green infrastructure. Huntingdon Town Council opposed the development, citing flood risk, poor accessibility to town centre services, and challenges with public transport access.

Council response

The Council's Land Availability Assessment has been updated to correct the assessment which originally identified moorings on site. The site has been reassessed and is considered inappropriate for built development due to the significant flood risk, but could be suitable for flood mitigation and open space. Planning application 22/01460/OUT for 25 dwellings has, however been approved on the northern parcel of the site.

St Ives

General comments: Comments from Hemingford Grey Parish Council opposing any significant development north of the River in St Ives and neighbouring parishes until the transport network, particularly river crossing capacity, is improved to address congestion and safety concerns on the A1096.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

St Ives 1: Land East of Harrison Way, St Ives (smaller site) (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (9 responses)

The majority of responses support the planning authority's assessment that the site is inappropriate for development, citing concerns about flood risk, ecological sensitivity, and poor accessibility. Several respondents—including local residents, the Wildlife Trust, and St Ives Town Council—highlight the site's designation as a County Wildlife Site. They argue that development would harm biodiversity, disrupt landscape connectivity, and negatively affect nearby recreational areas. The highway authority notes the need for significant infrastructure improvements, including pedestrian crossings and connectivity upgrades. The Minerals and Waste Planning Authority assigned the St Ives 1 site a Grade B, indicating that while constraints are present, allocation is likely to be acceptable with mitigation.

The site promoter for St Ives 1 presents a detailed and structured argument in support of allocating the site for development, specifically for a retirement community under Use Class C2 (Retirement Apartments with Care). They have provided additional technical documents to support their proposal.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as successfully integrating the site with the existing place and community would be challenging and development would likely adversely impact the character of the County Wildlife Site.

St Ives 2: Land East of Harrison Way, St Ives (larger site) (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (7 responses)

The majority of responses support the Council's assessment that the site is unsuitable for development. Key concerns include its designation as a County Wildlife Site and the potential impact on biodiversity and nearby recreational areas.The Wildlife Trust supports the planning authority's position, emphasizing the need to protect the Meadow Lane Gravel Pits and the broader Great Ouse Valley, which is identified as a priority area for nature recovery. Accessibility and infrastructure issues are also raised. St Ives Town Council and others note poor pedestrian access and limited connectivity to the town centre, particularly for those with mobility challenges. he Local Highway Authority acknowledges that access may be technically feasible but would require significant improvements, including new crossings and road upgrades. The Minerals and Waste Planning Authority assigns the site a "B" grade, indicating constraints that could be mitigated.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as successful integration with the existing place and community is challenging and development would adversely impact the character of the County Wildlife Site.

St Ives 3: Land South of Meadow Lane (Council conclusion pre-consultation - may be appropriate for development)

Main issues raised (6 responses)

4 Further Issues and Options

Most of the responses support the proposal or have observations. St Ives Town Council also supports the principle of development on brownfield land. Local schools are forecast to have sufficient capacity to accommodate this increase without requiring mitigation, both at the primary and secondary levels. Technical consultees raise several considerations: the Lead Local Flood Authority notes previous local flooding and recommends pre-application advice; the Local Highway Authority highlights the need for potential infrastructure improvements, particularly pedestrian crossings on Harrison Way; and the Minerals and Waste Planning Authority assigns a “B” grade, indicating constraints that could be mitigated.

The site promoter welcomes the assessment and commits to working with the planning authority to address noise concerns and ensure relocation of current occupiers.

Council response

This site has not been selected as a draft allocation. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However, it was also noted that integration of the site is more challenging by virtue of its edge of town location and that appropriate noise mitigation will be required to mitigate the impact of the A1123 and nearby employment uses. In addition, the site promoter states that a key constraint to development is to work with the existing tenants to find alternative locations for their businesses. No update has been provided as to when the site will become available and therefore the site did not move forward to assessment as part of the growth strategy options testing. There are more sequentially preferable sites available, this site is at risk of flood zone 3b. Groundwater and reservoir risk are also present.

St Ives 4: Land North of Meadow Lane (St Ives) (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (6 responses)

Most respondents agree with the Council's assessment that the site is unsuitable for development. The Local Highway Authority notes that the site lacks a direct connection to the public highway and may require significant improvements to walking and cycling infrastructure, including pedestrian crossings on the A1096 Harrison Way. The Lead Local Flood Authority highlights previous local flooding and considers the site potentially unsuitable for development due to surface water flood risk, recommending pre-application advice. The Parish Council raises additional concerns about increased noise, pollution, and traffic impacts on nearby Holywell residents.

The site promoter disagrees with the Council's assessment of the site supporting its development for commercial use. They state the surrounding area is already characterised by employment uses and that the site itself has limited ecological value. They maintain that commercial use is appropriate within Flood Zone 2 and request a reassessment of the site, highlighting its potential to contribute to local employment.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its potentially significant adverse impacts on the landscape, nature conservation designations and on local ecology. It is also significantly constrained by fluvial flood risk.

St Ives 5: Land at Marley Road, St Ives (Council conclusion pre-consultation - inappropriate for development)

Main issues raised (4 responses)

Most responses support the planning authority’s assessment that the site is inappropriate for development. The Lead Local Flood Authority identifies high surface water flood risk and previous local flooding, recommending pre-application advice due to the site's potential unsuitability. The Local Highway Authority notes that while access may be possible, significant improvements would be needed, including widening Old Houghton Road, enhancing

pedestrian and cycling links, and addressing limited footway connections and public rights of way. The Minerals and Waste Planning Authority assigns the site a “Grade A,” indicating no constraints from a minerals and waste perspective.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the significant likely adverse impacts on the character of St Ives and the surrounding countryside. Integration with the existing place and community is also challenging.

St Ives 6: Westwood Farm, north of Marley Road, St Ives (Council conclusion pre consultation - inappropriate for development)

Main issues raised (4 responses)

Most responses support the Council's assessment that the site is inappropriate for development. The Lead Local Flood Authority identifies high surface water flood risk and previous local flooding, recommending pre-application advice due to the site's potential unsuitability. The Local Highway Authority notes that while access may be achievable, significant improvements would be required, including two access points, safe crossings, and mitigation of visibility issues on Somersham Road. The site also intersects with public rights of way, which must be preserved or enhanced. The Minerals and Waste Planning Authority assigns a provisional grade of C/D, indicating constraints that may be difficult to overcome and a preference for allocating other sites unless further evidence is provided.

The site promoter disagrees with the planning authority’s assessment and submits a new Odour Assessment to address concerns about proximity to a sewage works. They state 86% of the site is suitable for all types of development and propose a mixed-use scheme of approximately 600 homes, 12,000 m² of employment land, and significant open space and the site is suitable, deliverable and well positioned to contribute to local housing and sustainability aims.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the significant likely adverse impacts on the character of St Ives and the surrounding countryside. Integration with the existing place and community is also challenging due to the sewage works. The sewage works poses significant challenges in terms of overcoming not only amenity impacts but also developing a scheme that also can be effectively integrated in itself and also so that it feels apart of St Ives.

St Ives 7: Old Ramsey Road, St Ives (Council conclusion pre consultation - inappropriate for development)

Main issues raised (5 responses)

Responses were mixed with several technical considerations. The Lead Local Flood Authority identifies high surface water flood risk and previous local flooding, recommending pre-application advice. The Local Highway Authority notes that while access may be achievable, significant improvements would be required, including widening Old Ramsey Road, providing two access points, and addressing the lack of existing footways. The Minerals and Waste Planning Authority assigns the site a “Grade A,” indicating no constraints from a minerals and waste perspective.

The site promoter disagrees with the planning authority’s assessment and states that the site is suitable for development. They propose that the site could be integrated into St Ives through new footpath links and suggest it could support a sustainable transport corridor as part of the A141 and St Ives Improvement Scheme. They acknowledge some flood risk and landscape sensitivity but suggest these can be mitigated through design, landscaping, and use of flood-prone areas for open space or biodiversity gain. They request that the site be reclassified as “potentially suitable for development with no or minor known constraints,” subject to further technical assessments.

4 Further Issues and Options

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the significant likely adverse impacts on the character of St Ives and the surrounding countryside. Integration with the existing place and community is also challenging.

Wyton on the Hill

General comments: general support for development of the brownfield Wyton Airfield site south of the A141, but strong opposition to any expansion north of the A141 due to concerns about loss of agricultural land, biodiversity, flood risk, infrastructure strain, and landscape impact, while education capacity assessments indicate limited room for growth without mitigation, particularly at the secondary level.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Wyton on the Hill 1: Wyton Airfield, Sawtry Way, Wyton on the Hill (Council conclusion pre consultation - may be appropriate for development)

Main issues raised (21 responses)

Responses were mixed. Some respondents agreed with the assessment that the site is appropriate for major housing development, citing its brownfield status, proximity to employment and services in Huntingdon and St Ives, and potential to concentrate growth in a sustainable way. Others expressed conditional support, noting that while not ideal, the site may be preferable to building on greenfield land. Many respondents—including local residents, St Ives Town Council, and the Wildlife Trust—oppose the scale and location of the development, citing risks of urban sprawl, merging of nearby towns (Huntingdon, St Ives, and Wyton-on-the-Hill), flood risk, traffic congestion, and pressure on local infrastructure and services. Concerns are also raised about the misclassification of the site as previously developed land, the potential ecological impact of a new road crossing over the Great Ouse Valley, and the strain on education and healthcare provision. Some suggest the site would be better suited for non-residential uses such as solar energy or employment land.

The site promoter supports the development of the site and has observations regarding the Council's assessment. They highlight the opportunity to create a sustainable, walkable community with integrated public transport, active travel infrastructure, and a mobility hub, aligning with local growth strategies and helping reduce car dependency. This is supported by a submitted transport vision and sustainability strategy designed to align with the A141 and St Ives Improvement Scheme.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation North Huntingdon 1) for about 4,000 market and affordable homes, 400 supported living homes and 240 extra-care homes, 250 bedspaces in nursing and care homes, 15ha for employment uses, retention of land for a park and ride site, 6.4ha for a local centre and supporting infrastructure such as schools, sports facilities and green spaces.

Concerns regarding flood risk have been addressed through criteria requiring green infrastructure an integrated water management strategy, a flood risk assessment and detailed drainage strategy taking into account surface water. The site will be separated from St Ives and Huntingdon and provide strategic green infrastructure. An ecological and biodiversity assessment, enhancement and provision of habitats, and provision of biodiversity net gain will be required throughout the site to address ecological concerns. Transport infrastructure improvements including upgrades to the A141, retention of land for a park and ride site, linkages to the Cambridgeshire Busway and provision of active travel routes will be required to address traffic congestion. Infrastructure and services

including education are to be provided on site to create a comprehensive new community. The site is previously developed land and contributes towards the Governments need to make use of previously-developed or brownfield land and the Combined Authorities ambitions in the Local Growth Plan for a North Huntingdon Growth Corridor.

Wyton on the Hill 2: Hungary Hall, west of A141, Wyton on the Hill (Council conclusion pre consultation - may be appropriate for development)

Main issues raised (50 responses)

The overwhelming majority of respondents oppose the development, citing the irreversible loss of Grade 2 agricultural land, which is considered vital for food security and environmental sustainability. Many highlight the site's proximity to the historic conservation village of Broughton, arguing that the development would significantly harm its rural character, heritage assets, and ecological value. Concerns are also raised about the impact on Red Listed bird species, such as Yellowhammers and Lapwings, and the increase in light pollution that would disrupt local wildlife. Flooding is a dominant theme throughout the responses. Residents report frequent and severe flood events in Broughton, particularly since 2020, and fear that replacing free-draining farmland with hard surfaces will exacerbate surface water runoff and overwhelm existing flood defences. The Bury Brook, which runs through the village, is already under pressure, and many believe the development would increase the risk to homes, some of which are listed buildings. The cumulative impact of this and other nearby developments, such as Lodge Farm and Sapley Park Garden Village, is seen as a serious threat to the area's flood resilience, especially in the context of climate change. Traffic and infrastructure concerns are also widespread. Respondents describe the A141 and surrounding rural roads as already congested and unsafe, with fears that the development would worsen conditions and increase rat-running through Broughton and Kings Ripton. The village's narrow, unlit roads and lack of pavements are seen as incompatible with increased traffic volumes. Many also question the adequacy of local services—such as schools, healthcare, and public transport—to support such a large population increase. The Local Highway Authority flagged that the site is unsustainable without major upgrades to road, cycling, and pedestrian infrastructure, particularly around the A141 and B1090. They also noted that the site is too rural to support active travel and that existing public rights of way would be affected. The Minerals and Waste Planning Authority, however, gave the site a favourable "Grade A" rating, indicating no constraints from a minerals and waste perspective.

The site promoter supports the proposal and state that environmental and infrastructure concerns can be addressed through masterplanning and collaboration with neighbouring sites, and that the project would support local growth, improve access to services, and contribute to transport upgrades like the A141. They submitted a masterplan which outlines how the site could be developed, including allocations for residential areas, schools, employment space, open space, and local centres.

Council response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

The site is at risk of emergence to both surface and subsurface assets and residual risk at this site comes from the potential blockage of several culverts beneath the B1090 road along the southwestern boundary. The site could also give rise to coalescence of proposed development at Lodge Farm which has better accessibility to services and facilities in Huntingdon and to Wyton Airfield which is preferrable as being previously developed land.

The Highways Agency has raised significant concerns stating development of this scale would not be acceptable without significant improvements to the road and footway/cycleway infrastructure between the site and the adjacent towns of Huntingdon and Stives. The approach road network will need to be assessed in relation to the suitability to cater for increased traffic flows. They go on to note that access via the local roads to the north would not be acceptable for a development of this scale without significant improvements to the road and footway infrastructure,

4 Further Issues and Options

which is unlikely to be achievable through Broughton Village. Local infrastructure improvements including appropriate safe crossing of the A141 /B1090 would also be required and it is unclear at this stage whether sufficient verge exists within the public highway to achieve facilities suitable for a development of this scale. It is not supported by the Highway Authority due to the sites unsustainable location. The site is very rural and not possible to walk or cycle to. also capacity issues in the area.

Wyton on the Hill 3: Lodge Farm, north of A141 (Council conclusion pre consultation - may be appropriate for development)

Main issues raised (19 responses)

Responses reveal widespread concern and conditional support for the site. Many respondents object to the development due to its location on greenfield land, the loss of high-quality agricultural land (Grades 2 and 3), and the potential for significant landscape and ecological harm. Flooding is a recurring issue, particularly in Broughton and surrounding areas, with fears that the development would increase surface water runoff and strain existing flood defences. The Wildlife Trust and others also warn of indirect environmental consequences, such as the potential for a new road crossing over the River Great Ouse, which could damage protected habitats and undermine nature recovery efforts. Traffic and infrastructure limitations are another major theme. Respondents highlight the A141 as a barrier to integration with Huntingdon and raise concerns about congestion, inadequate public transport, and the need for active travel infrastructure. The Local Highway Authority notes that the site would not be acceptable without significant upgrades to roads, footways, and cycleways. Education and healthcare provision are also flagged as insufficient, with projected demand for school places exceeding what is currently proposed. Some responses suggest that if development proceeds, it should be scaled down and focused on the southern flanks of the site to reduce visual and environmental impact. A few stakeholders, including Huntingdon Town Council, express conditional support. They advocate for strong integration with Huntingdon, early delivery of infrastructure, and high sustainability standards. Their recommendations include active travel routes, public transport links, green spaces, community facilities, and a mix of housing types.

Supports the development of Lodge Farm as a strategic extension to Huntingdon and argues it is deliverable, well-connected, and capable of supporting up to 4,989 homes. They submitted several technical documents to support their case, including a Sustainability Appraisal Response, a Highways Technical Note, an Agricultural Land Classification report, and a Vision Document.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation North Huntingdon 3) for 4,900 market and affordable homes, 450 supported living homes and 260 extra-care homes, 280 bedspaces in nursing and care homes, 8ha for employment uses, 6.5ha for at least one local centre and supporting infrastructure such as schools, sports facilities and green spaces.

The development will require a gap of approximately 1km between any built development within Lodge Farm and that at 'Wyton Airfield' and visual screening from the wider countryside and the Great Ouse priority infrastructure area while maximising opportunities to provide long distance vistas to link the development into its wider context. An ecological and biodiversity assessment, enhancement and provision of habitats, and provision of biodiversity net gain will be required throughout the site to address ecological concerns. Transport infrastructure improvements including upgrades to the A141, public transport infrastructure and active travel routes will be required to address traffic congestion. Concerns regarding flood risk have been addressed through criteria requiring green infrastructure an integrated water management strategy, a flood risk assessment and detailed drainage strategy taking into account surface water, reservoir and residual risk. Implementation of a development strategy and phasing plan that seeks to ensure balanced delivery of new homes, employment opportunities, infrastructure, services and facilities and educational facilities on site to create a comprehensive new community.

Wyton on the Hill 4: Land North of Houghton Road (southern portion), St Ives (Wyton on the Hill) (Council conclusion pre consultation - appropriate for development)

Main issues raised (9 responses)

Responses reveal strong opposition to the proposal. Key concerns include the site's location on greenfield land, its visual and ecological impact, and the risk of coalescence between St Ives and Houghton & Wyton. Respondents argue that the development would erode the rural character of the area, increase light pollution, and contradict existing planning policies. The site is seen as poorly connected to employment areas and public transport, and its position on high ground adjacent to a conservation area is viewed as particularly inappropriate.Traffic and infrastructure issues are central to the objections. The A1123 is already over capacity, and multiple junctions in St Ives are flagged as critical congestion points. Historic and current transport studies are cited to show that the area cannot support additional development without strategic road upgrades, which are not currently planned. The Wildlife Trust warns of potential ecological damage from increased pressure for a new road crossing over the River Great Ouse. While the Minerals and Waste Planning Authority found no constraints, the Local Highway Authority noted that significant improvements would be needed to support the scale of development proposed.

Council response

This site is part of Wyton on the Hill 5, which was taken forward as a draft allocation in the Preferred Options draft Local Plan as draft mixed use allocation St Ives 1.

Wyton on the Hill 5: Land North of Houghton Road (larger site), St Ives (Wyton on the Hill) (Council conclusion pre consultation - appropriate for development)

Main issues raised (10 responses)

The majority of responses oppose to the development of the site. Key concerns include conflict with current planning policy, environmental sensitivity, and infrastructure limitations. Respondents—including residents, St Ives Town Council, and the Wildlife Trust—highlight that the site is greenfield land occupying high ground near a major conservation area, and that development would lead to coalescence between St Ives and Houghton & Wyton, creating ribbon development and harming the rural character. Concerns also include poor sustainability due to the site's distance from employment areas and public transport, and the A1123's existing overcapacity, which would be worsened by additional traffic. The Local Highway Authority notes that significant road and active travel improvements would be required, while the Wildlife Trust warns of ecological risks from potential new road crossings over the River Great Ouse. Although the Minerals and Waste Planning Authority found no constraints.

Council response

This site has been selected as a draft mixed use allocation (Draft Allocation St Ives 1) for about 350 homes, 12 ha for open space and landscaping, a new roundabout on the A1123/ Sawtry Way junction. Current local planning policy is not taken into account in the assessment of new sites for the Local Plan. Concerns relating to ecology will be addressed through the requirement to provide an ecological survey to determine the presence of protected species and measures for their protection and biodiversity enhancement alongside substantial landscaping to minimise impacts on the Ivo Outdoor Centre and the open countryside to the north and west. An active travel route will be required facilitating access to St Ives One Leisure Outdoor Centre in agreement with Cambridgeshire County Council and Cambridgeshire and Peterborough Combined Authority. The site is well located and in proximity to a range of services and facilities being on the outskirts of St Ives as well as access to some more local facilities including primary education.

Area 7 - Southern Huntingdonshire

Abbotsley

Abbotsley 1: Land at Potton Road (Rectory Farm), Eynesbury, Hardwicke (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (10 responses)

The majority of responses support the proposed site or are unsure/have observations. Key concerns include loss of grade 2 agricultural land, impact on long distance views, potential urban sprawl, noise, air and vibrational pollution, surface water flood risk, impacts on rights of way and required walking and cycling improvements

especially under or over the A428. A 3FE primary school would be required. Some note opportunities are available to integrate the site with Bedford Borough Council HOU19 Little Barford. It was noted that the site may coincide/interface with East West Rail route, which will need consideration and overlaps with the A428 Black Cat to Caxton Gibbet Scheme Order Limits resulting in permanent and temporary land take from the site.

The site promoter submitted a response addressing vision, site layout, drainage, flood risk, transport, agricultural land classification, landscape visual impact and site capacity if EWR comes forward.

Council response

This site has not been selected as a draft allocation. It was potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Since the LAA was undertaken, the site is now not considered suitable for development in the short to medium term as the East West Rail safeguarded route runs through the site currently limiting development. Availability of land for development is therefore unknown.

Abbotsely 2: Land East of Wintringham Park, St Neots (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (9 responses)

The majority of responses support the proposed site or are unsure/have observations. Key concerns include loss of grade 2 agricultural land, impact on landscape, noise, air and vibrational pollution, impacts on rights of way and required walking and cycling improvements especially under or over the A428. A 2FE primary school would be required. It was noted that the site may coincide/interface with East West Rail route, which will need consideration and overlaps with the A428 Black Cat to Caxton Gibbet Scheme Order Limits resulting in permanent and temporary land take from the site.

The site promoter provided a masterplan for the site.

Council response

This site has not been selected as a draft allocation. It was potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Since the LAA was undertaken, the site is now not considered suitable for development in the short to medium term as the East West Rail safeguarded route runs through the site currently limiting development. Availability of land for development is therefore unknown.

Abbotsely 3: Land East of St Neots (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (7responses)

The majority of responses support the proposed site or are unsure/have observations. Key concerns include loss of grade 2 agricultural land, impact on landscape, noise, air and vibrational pollution, impacts on rights of way and required walking and cycling improvements especially under or over the A428. A 2FE primary school would be required. It was noted that the site may coincide/interface with East West Rail route, which will need consideration and overlaps with the A428 Black Cat to Caxton Gibbet Scheme Order Limits resulting in permanent and temporary land take from the site. Good links to Wintringham Park and easy access to St Neots town centre were noted and need for public transport.

Council response

This site has not been selected as a draft allocation. It was potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Since the LAA was undertaken, the site is now not considered suitable for development in the short to medium term as the East West Rail safeguarded route runs through the site currently limiting development. Availability of land for development is therefore unknown.

Abbotsely 4: Pear Tree Solar Farm, Abbotsley (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (6 responses)

The majority of responses support the proposed site or are unsure/have observations. Key concerns include retention of public rights of way, loss of agricultural land, walking and cycling connectivity. It was noted that the site may have indirect interfaces with East West Rail route, which will need consideration

Council response

Site now has permission (23/01507/FUL). Therefore the site has not been taken forward as an allocation as development is approved.

Abbotsely 5: North of Wintringham Hall, Cambridge Road, St Neots (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (4 responses)

There were mixed opinions for this proposed site. Key concerns include retention of public rights of way, loss of grade 2 agricultural land, impact on landscape and lack of sustainable travel connections. It was noted that there are insufficient highway access to meet requirements and that the site may have indirect interfaces with East West Rail route, which will need consideration.

Council response

This site has been selected as a draft employment allocation (Draft Allocation North of Wintringham Hall) for office, research and development and storage and distribution uses. Concerns regarding active travel have been addressed through the requirement of pedestrian and cycle routes to link to existing networks and a safe and suitable means of access to St Neots including the submission of a Travel Plan. The development will have to address access the site from the A428. The East West Rail route will not directly impact the site. The site will be surrounded by the A428 and A428 (A421) upgrade meaning landscape impact would be minimal.

Abbotsely 6: Abbotsley Golf Club (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (7 responses)

There were mixed opinions for this proposed site. Key concerns included impact and retention of public rights of way, loss of grade 2 agricultural land, mitigation of some surface water flood risk. It was noted that the site may coincide/interface with East West Rail route. It was proposed that there could be opportunities for pedestrian / cycle connections between the site and Bedford Borough allocation HOU19 Little Barford New Settlement.

The site promoter has explored the potential for a larger proposal whilst providing a masterplan for the current land proposed.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it does not supporting sustainable place-making. The site would be separated and dissected by the new A428(A421) and potentially East West Rail making integration with any potential development in Bedfordshire difficult to achieve without significant infrastructure and could impede achievability of development. Major infrastructure would also be required to support development.

4 Further Issues and Options

Buckden

Buckden 1: Land at Mill Road, Buckden (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (7 responses)

The majority of responses do not support the proposed site. Key concerns include access and traffic, environmental, wildlife and Great Ouse Valley priority area impact, flood risk and drainage, limited primary and secondary educational provision and noise and light pollution. Minerals or waste constraints were identified,

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to impact on nearby green infrastructure assets and highway constraints.

Buckden 2: Land East of Bishops Way, Buckden (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (9 responses)

The majority of responses do not support the proposed site. Key concerns include impact on the Great Ouse Valley Priority Area and landscape, high surface water flood risk, limited primary and secondary education provision and noise and light pollution. Traffic, access and congestion are noted as concerns and impact on active travel routes. A minerals or waste constraint is present. The site promoter has provided a masterplan noting its sustainable location and outlined approaches to address the existing vegetation, wildlife sites, flooding, access and landscape impact.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment due to significant constraints that impede the development of the site, impact on the Great Ouse Valley green infrastructure priority area, County Wildlife Site and the the wider ecological network of the Ouse Valley. Access to the site from Bishops Way may also be unachievable.

Buckden 3: Land off Vineyard Way, Buckden (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (5 responses)

The most of the respondents were opposed to the proposed site. Key concerns include high surface water flood risk, previous local flooding, minerals or waste constraints and that the site is outside the built up area. It was noted that there are insufficient frontage to achieve highway access requirements. The site promoter has provided information citing negligible odour impact and land for open space, allotments, drainage and BNG.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its proximity to the sewage works and the feasibility of achieving a suitable highways access.

Buckden 4: Brampton Road, Buckden (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (6 responses)

The responses are evenly split between supporting, disagreeing and being unsure about development on the proposed site. Key concerns include, high surface water flood risk, previous local flooding, traffic impact and safety of active travel routes, impact and retention of public rights of way and that the site is outside the built up area. It is noted that there is a minerals or waste constraint present which is difficult to overcome and that there is sufficient frontage to achieve access onto Buckden Road/B1514. The site promoter notes the site's sustainable location for development and that the assessment should refer to minerals safeguarding area, not development area.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site is wholly within a waste management area and adjoins the Buckden Landfill Waste Management Area (WMA) which is specifically identified on the Cambridgeshire and Peterborough Minerals and Waste Local Plan as an operational/ committed site for waste resources.

Buckden 5: Land at Westfield Farm, Great North Road, Buckden (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (6 responses)

Most of the respondents are opposed to the proposed site. Key concerns include traffic impact and safety of Buckden A1 roundabout, potential underground aquifers. It was noted that there are insufficient frontage to achieve highway access requirements and a minerals or waste constraint is present requiring mitigation. It is noted that surface water management would be required. The site promoter has provided further information to address access, an appeal statement and site plan.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal which noted that it will have a detrimental impact the form and character of the area and will not support sustainable place-making.

Buckden 6: Land West of A1 from Buckden to Brampton (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (10 responses)

The majority of comments were opposed to the proposed site. The key concerns were high flood risk and previous local flooding, potential underground aquifers, impact on traffic flow, B1514 bypass and safety and on the Buckden A1 roundabout. Other concerns include retention of public rights of way and the impact on Grafham, Brampton, Buckden and Grafham Water SSSI. There is a minerals and waste constraint which would require investigation. The site promoter noted the site could contribute to housing and employment need and air, noise and light pollution could be addressed through masterplanning.

Council response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the very significant landscape impact of the development and the scale of development fundamentally impacting the character of the landscape and setting of various settlements. Access and a new junction onto the A1(M) will also require considerable engagement with Cambridgeshire County Council as well as detailed viability work which has not bee undertaken to date.

Diddington

Diddington 1: Cell Energy, Vicarage Lane, Diddington (Council conclusion pre-consultation: may be appropriate for development)

4 Further Issues and Options

Main Issues Raised (4 Responses)

The majority of responses do not support the proposed site or are unsure/have observations. Key concerns include the loss of agricultural land, retention of public rights of way. Focus should be providing solar panels on buildings and brownfield sites. Appropriate levels of landscaping would be required to mitigate harm to designated nature conservation sites. A minerals or waste constraint is present which is likely to be acceptable with mitigation. Highway improvements would be required to accommodate two way traffic.

Council Response

This site has not been selected as a draft allocation. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However, this site has a planning application 23/00258/FUL for the installation of solar photovoltaic park which is currently pending consideration.

Great Gransden

General Comments: Key concerns for the proposed sites include limited infrastructure, lack of pupil vacancies, lack of public transport, increase in road traffic, impact on road safety due to lack of footpaths and impact on rights of way networks. Forecasts suggest there are insufficient primary and secondary school places available to to accommodate the increase in pupils from either development, without mitigation.

Council Response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Great Gransden 1: Land West of West Street, Great Gransden (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (5 Responses)

There were mixed responses to the proposed site. Key concerns were the impact on Waresley and Gransden Woods SSSI from increased recreational pressure and retention of public rights of way, limited infrastructure, lack of pupil vacancies, lack of public transport, increase in road traffic, impact on road safety due to lack of footpaths and impact on rights of way networks. No minerals or waste constraints are present. It was noted the site has sufficient frontage to achieve access to the public highway. Suitable walking and cycling connections would be required. The site promoter notes some natural features between blocks of development could be accommodated and retained.

Council Response

This site has not been selected as a draft allocation. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. However the Great Gransden Neighbourhood Plan has identified the site as part of the Gransden Brook Corridor. Policy G6 of the neighbourhood plan identifies this area as an opportunity to restore or enhance existing ecological network access. It was therefore not taken forward for assessment as part of the Growth Strategy options testing.

Great Gransden 2: Land West of Eltisley Road, Great Gransden (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (4 Responses)

There were mixed responses to the proposed site. Key concerns were the impact on Waresley and Gransden Woods SSSI from increased recreational pressure and retention of public rights of way, limited infrastructure, lack of pupil vacancies, lack of public transport, increase in road traffic, impact on road safety due to lack of footpaths

and impact on rights of way networks. No minerals or waste constraints are present. It was noted the site has sufficient frontage to achieve access to the public highway respecting local junction spacing. Suitable walking and cycling connections would be required.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation.

Great Gransden 3: Land South of Caxton Road, Great Gransden (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (5 Responses)

There were no comments directly opposing the proposed site. No minerals or waste constraints are present. It was noted the site has sufficient frontage to achieve access to the public highway respecting local junction spacing. Suitable walking and cycling connections would be required. The land owner supported the proposed capacity assessment. Concerns were raised about limited infrastructure, lack of public transport, increase in road traffic, impact on road safety due to lack of footpaths and impact on rights of way networks

Council Response

This site has been selected as a draft employment allocation (Draft Allocation Great Gransden 1) for commercial, business, industrial and storage and distribution uses. The development will require provision of satisfactory access from Sand Road and a suitable sustainable transport network for pedestrians, cyclists and vehicles to address infrastructure, road and active travel concerns.

Great Gransden 4: Land at Sand Road, Great Gransden (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (4 Responses)

The majority of responses disagree to development of the proposed site. No minerals or waste constraints are present. It was noted the site has sufficient frontage to achieve access to the public highway respecting local junction spacing. Suitable walking and cycling connections would be required. Concerns were raised about limited infrastructure, lack of public transport, increase in road traffic, impact on road safety due to lack of footpaths and impact on rights of way networks.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to the potential serious adverse impacts on the landscape

Great Paxton

General Comments: Concerns development will erode nature of the village, inadequate amenities and badly served public transport. Concerns over increased congestion pedestrians and motorist safety.

Council Response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Great Paxton 1: Land West of High Street, Great Paxton (Council conclusion pre-consultation: may be appropriate for development)

4 Further Issues and Options

Main Issues Raised (14 Responses)

The majority of responses disagree to development of the proposed site. Significant concerns include loss of carparking for the football club/recreation ground increasing on-street parking, decreasing safety and negatively impacting the public house. Alternative parking is not available. Drainage and surface water flood risk is very common exacerbated by proximity to the railway line and resulted in the abandonment of the site as an allotment. Development could impact the use of the recreation ground a valued community asset. Lack of footpaths to St Neots, services and facilities and bus service to support residents. Concerns over insufficient early years and secondary education provision. There is a minerals or waste constraint which would require mitigation. It was noted the site has sufficient frontage to achieve access to the public highway respecting local junction spacing.

Council Response

This site has been selected as a draft **residential** allocation **(Draft Allocation Great Paxton1)** for about 10 homes. The site is not at risk of flooding. Minerals constraint is addressed in the allocation through a requirement to consult with Cambridgeshire County Council and retention and protection of the existing path/ road which runs adjacent to the southern boundary and connects with playing fields/ football club to the west will be required.

Great Paxton 2: Land to the West of High Street, Great Paxton (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (7 Responses)

The majority of responses disagree to development of the proposed site. Concerns raised include loss of open space, impact on listed building, subsidence and flood risk, lack of infrastructure, services and facilities and limited public transport to support residents. Increased on-street parking decreasing safety is a major concern, as is noise from the railway and development would not be in character with existing buildings. A minerals or waste constraint would require mitigation. It was noted the site has sufficient frontage to achieve access to the public highway respecting local junction spacing. The site is noted as being in an area of poor visibility which has already lead to a number of accidents. The site promoter provides further clarification on issues raised, including surface water management, noise mitigation and impact on listed building.

Council Response

This site has not been selected as a draft allocation. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal and was tested through growth strategy options 3 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The most sequentially preferable site 'Great Paxton 1' was tested through all growth strategy options due to having very low flood risk now and in the future. This site has medium fluvial risk and groundwater and reservoir risk making it less sequentially preferable.

Great Paxton 3: Land East of Dovecote Lane, Great Paxton (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (10 Responses)

The majority of responses disagree to development of the proposed site. Key concerns include landscape character impact, dangerous junction with poor visibility, narrow and partly unadopted road (owned by residents), impact on listed building and reduction in curtilage, impact on wildlife habitat, bats and loss of land for recreational use. Lack of services and facilities to support residents. Drainage and surface water issues were also raised associated with the brook. It was noted that there are insufficient frontage to achieve highway access requirements and a minerals or waste constraint is present requiring mitigation.

Council Response

This site has not been selected as a draft allocation. It was considered potentially appropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal. Comments from the Highways Authority note that the site does not appear to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements meaning achievability of the site may be compromised. It was therefore not taken forward for testing as part of the growth strategy options. In addition the site was assessed as having high fluvial flood risk. More sequentially preferable sites were available in Great Paxton.

Great Paxton 4: Land North of Harley Industrial Park, Paxton Hill, Great Paxton (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (4 Responses)

There were mixed responses to the proposed site. Light pollution and large impact on the landscape were raised. There was support from the Parish Council for an extension to the existing employment use. The site promoter acknowledges the need for tree and hedgerow planting to mitigate landscape impact and provided a Landscape Visual Appraisal. There is a minerals or waste constraint present which would require mitigation.

Council Response

This site has been selected as a draft employment allocation (Draft Allocation Great Paxton 2) for B2 general industrial uses. Landscaping and an ecological assessment will be required to address concerns relating to landscape and light pollution.

Little Paxton

General Comments: There are concerns that further development should not proceed in Little Paxton due to existing transport infrastructure, especially the A1 junction which is insufficient for the volume of traffic and Mill Road Bridge. There are inadequate services and facilities to support residents e.g. GP and dentists. Concern about wildlife impact on land adjacent to St James Road and public rights of way. There is insufficient early years and secondary education provision.

Council Response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

Little Paxton 1: Land North of St James Road, Little Paxton (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (22 Responses)

The majority of responses disagree with development of the proposed site. Key concerns include inadequate existing transport infrastructure, especially the A1 junction which is insufficient for the volume of traffic and Mill Road Bridge and inadequate services and facilities to support residents e.g. GP and dentists. Concern about flora and fauna impact on Paxton Pits Nature Reserve and Great Ouse Valley Priority Area, loss of public right of way and land contamination of proposed site. There is insufficient early years and secondary education provision. Other concerns include the frequency of HGVs and dust an noise from the gravel extract affecting quality of life, lack of footpaths and quality of road. There is insufficient frontage to achieve an access in accordance with requirements.

Council Response

This site has been selected as a draft residential allocation (Draft Allocation Little Paxton 1) for about 35 homes. The site is also allocated in Huntingdonshire's Local Plan to 2036. Concerns regarding impacts on Paxton pits and the Ouse Valley have been addressed through criteria requiring an ecological assessment and enhancement

4 Further Issues and Options

scheme and the retention of trees and hedgerows and their reinforcement to minimise the visual impact of development. A noise and air quality assessment and appropriate mitigation from the sand and gravel extraction operations and nearby active waste management area will be required to address concerns about dust and noise from HGVs. Retention, or realignment and enhancement of public right of way alongside provision of safe and accessible active travel routes to facilitate integration with Little Paxton and nearby services and facilities will assist in connectivity. Land contamination remediation measures will need to be agreed with the Environment Agency. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements. The education authority notes there is sufficient space under BB103 guidelines to expand the primary school's capacity by 120 places.

Little Paxton 2: Land West of Little Paxton, Little Paxton (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (22 Responses)

The majority of responses disagree with development of the proposed site. Significant concerns include inadequate existing transport infrastructure, especially the A1 junction which is insufficient for the volume of traffic and Mill Road Bridge (usage exacerbated due to flooding) and inadequate services and facilities to support residents e.g. GP and dentists. Proposed site should include green spaces and BNG and improved transport infrastructure (A1 junction & Mill Road Bridge). Concerns raised on noise and air pollution due to proximity to A1.There is insufficient early years and secondary education provision. A minerals or waste constraint would require mitigation. It was noted the site has sufficient frontage to achieve access to the public highway.

The site promoter outlines mitigation for landscape buffers to address noise pollution and provides technical reports on landscape and noise constraints.

Council Response

This site has been selected as a draft residential allocation (Draft Allocation Little Paxton) for about 220 homes. Provision of a safe and suitable means of access to the Great North Road and assessment of transport impacts through a transport assessment will be required as part of the development. A substantial landscaping buffer will be required on the northern and western boundaries to minimise the visual impact of the scheme on the wider landscape, provide separation from proposed development and the A1 and contribute to the Great Ouse Priority Area. A noise, vibration and air quality assessment and appropriate mitigation from the A1 will also be required.An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements. The education authority notes there is sufficient space under BB103 guidelines to expand the primary school's capacity by 120 places.

Southoe and Midloe

Southoe and Midloe 1: Midloe Grange Farm, Midlow (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (9 Responses)

The majority of responses support the proposal for Biodiversity Net Gain which is well connected to priority natural landscapes. There are no minerals or waste constraints. There is a small concern about the loss of agricultural land, retention of public rights of way, there limited capacity for two way traffic.

Council Response

The site now has a conservation covenant on it which means biodiversity net gain credits can be purchased from the site as off-site credits for development, therefore no allocation is required.

Southoe and Midloe 1: Southoe Garden Village, Southoe (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (10 Responses)

The majority of responses do not support the proposed mixed use garden community. Key concerns raised include transport infrastructure and access onto and off the A1 (considered a dangerous junction), the need for significant infrastructure to support development including schools, healthcare and retail and the impact on public rights of way. It was raised that the site would significantly impact important natural habitats (SSSI, County Wildlife Sites and Priority Natural Landscape) and landscape character. It is noted that the village suffers from drainage and sewerage issues/capacity. Increased traffic on the A1 could affect the residents of Little Paxton. Minerals or waste constraints are present.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to its likely significant impacts on the character of the landscape and on Southoe as well as designated nature conservation sites. The achievability of the development is also unclear because of significant infrastructure requirements including new access(s) onto the A1, the presence of pipelines and overhead powerlines.

St Neots

General Comments: General concerns regarding insufficient infrastructure and flood risk.

Council Response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

St Neots 1: Land North of Priory Park, St Neots (Council conclusion pre-consultation: may be appropriate for greenspace and Priory Park extension)

Main Issues Raised (17 Responses)

The majority of responses disagree with development of the proposed site. There are significant concerns regarding flood risk in the area especially around Mill Lane Bridge and two channels of the River Great Ouse. Comments note Mill Lane Bridge and the A1 junction are insufficient to handle additional traffic and development would increase congestion and impact safety. Impact on local ecosystem and nature reserve were raised. High previous local flooding reported and high surface water flood risk constraints mean that the LLFA consider this site may be unsuitable. There are concerns about safe crossing to the site and smell from sewerage works. Waste constraint is present which would require further evidence. It is noted that the site would require significant highway improvements and at least two points of access will be required alongside high-quality walking/cycling connectivity including crossing of Huntingdon Road, Priory Hill Road and Mill Lane. There would be specific difficulty in providing links to Great Paxton to the north. Alternative uses suggested include green space and extension to Priory Park. The site promoter has provided a technical transport not, approaches to noise and vibration and landscape, siting development away from flood risk and odour and proposing enhanced biodiversity and green infrastructure and small scale retail.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would not support sustainable place-making. High/medium fluvial flood risk is present on the site. In addition, the achievability of the development is unclear because of the presence of overhead powerlines, odour and flood mitigation, noise and vibrational mitigation resultant from proximity to the railway line. It was however considered that it may be appropriate for green infrastructure, biodiversity net gain and potential extension to Priory Park subject to provision of safe crossing(s).

St Neots 2: Land East of Brook Road, Eaton Ford, St Neots (Council conclusion pre-consultation: inappropriate for development)

4 Further Issues and Options

Main Issues Raised (21 Responses)

The majority of responses disagree with development of the proposed site. There significant concerns regarding flood risk, loss of valued open recreational space/green corridor, landscape, impact on Great Ouse Valley Priority Natural Landscape and biodiversity/natural habitat loss. There are significant concerns about traffic overload with vehicle access to clubs already presenting a safety hazard, conflict with walkers and cyclists etc. and increased strain on local infrastructure such as GPs and dentist in addition to potential contamination of land from previous coal fired power station. The LLFA report consider this site may be unsuitable due to high fluvial and surface water flood risk and previously reported local flood risk. There is a minerals or waste constraint present. Recommendations include protecting the area to preserve environmental and social value, highway improvements, assessment of ability to accommodate large volumes of traffic and manage safety, retention of rights of way and walking and cycling infrastructure. The site promoter note heritage impact is limited and landscape, environment and biodiversity impact can be mitigated.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would fundamentally impact the landscape setting. The achievability of upgraded accesses sufficient for the proposed development could also present a financial and physical constraint.

St Neots 3: Peppercorn Meadows, Eaton Socon, St Neots (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (9 Responses)

The responses are split between disagreeing and being unsure about development on the proposed site. Concerns regarding the loss of vital green corridor, negatively impacting resident amenity/recreation, the environment and biodiversity. It is noted that it is unclear whether the existing access can be improved without significant incursion into an existing public right of way. Enhancements to Peppercorn Way access appear unachievable The site is in a high surface water flood zone and has a history of local flooding. The Lead Local Flood Authority (LLFA) considers the site unsuitable for development. Rights of way require retention. A minerals or waste constraint is present.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would fundamentally impact the landscape setting and gateway to a green infrastructure corridor. The achievability of upgraded accesses sufficient for the proposed development could also present a financial and physical constraint as could mitigation of overhead electricity lines and ground contamination as a result of asbestos.

St Neots 4: Land North of the A428, St Neots (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (6 Responses)

The majority of responses disagree with development of the proposed site. The LLFA consider this site may be unsuitable for the proposed development due to high flood risk. A minerals or waster constrain is present. It is unclear how appropriate junction could be achieved and Ackerman Street is unsuitable for any intensification of use. Walking/cycling connectivity improvements may be required. The site promoter states that there is no other location in which this estate can expand and it would provide wider sustainability benefits to the community that outweigh flood risk and include flood mitigation measures.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the majority of the site is within flood zone 3b.

St Neots 5: Albert Hall Memorial Field, Hall Road, Eyensbury, St Neots (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (5 Responses)

The majority of responses disagree or are unsure about the proposed site. High previous local flooding, the LLFA consider this site may be unsuitable for the proposed development due to high surface water flood risk. No minerals and Waste Constraints are present. Suitable walking and cycling connections would be required. Access appears achievable subject to testing.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal due to flood risk and the need to retain the current use as a football ground unless well-located, equal or better quality provision is provided

St Neots 6: Land South West of Potton Road, Eynesbury, St Neots (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (6 Responses)

All responses support or are unsure about the proposed site. High surface water flood risk must be taken into consideration. Concerns include insufficient early years education provision. There are no minerals or waste constraints. Access appears achievable subject to detailed design and road safety audit, local junction spacing and capacity assessments, but is likely to require significant highway improvements. The site promoter notes specific measures, including noise and air quality mitigation, infrastructure enhancements, and robust flood risk management, are essential for the site's development and that the relocation of electric pylons underground removes a significant constraint.

Council Response

This site has been selected as a draft residential allocation (Draft Allocation St Neots 2) for about 80. Concerns regarding flood risk will be addressed through a flood risk assessment and detailed drainage strategy, taking into account residual risk from culvert and assessment of risk from ordinary watercourses and tributaries. Highways improvements will be required through the provision of a safe and suitable means of access from Potton Road/B1046 and improvements to pedestrian and cycle routes to link to existing networks and a safe and suitable means of access to the existing residential areas of St Neots and Wintringham Park. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements.

St Neots 7: Land North East of Wintringham Park, St Neots (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (7 Responses)

All comments received are unsure or support the proposed site. There are no minerals or waste constraints, or previously reported local flooding. Concerns that safe access could be achieved, unless further from the roundabout, significant highway improvements likely required. Suitability in relation to any commercial use would require assessment. It was noted that the site may coincide/interface with East West Rail route, which will need consideration. The site promoter notes St Neots 7 and 8 are now in single ownership of Urban and Civic allowing for improved access options.

Council Response

4 Further Issues and Options

This site has not been selected as a draft allocation. The site was put forward for multiple uses. It was considered inappropriate for built development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as amenity levels would be inadequate. Access to the site by vehicle in a safe manner was also considered a barrier to the safety of road users and pedestrians if residential or commercial options were chosen due to proximity to the roundabout. Commercial uses were considered potentially appropriate however access remains an issue and therefore the site was not taken forward for testing as part of the growth strategy options.

St Neots 8: Land East of Loves Farm (Tithe Farm Extension), St Neots (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (8 Responses)

The majority of responses are unsure or support the proposed site. There are concerns that there is inadequate infrastructure to support development and insufficient road capacity especially impacting the town centre. Walking and cycling connectivity would be required and retention of public rights of way. There are concerns on the impact of the grade II listed buildings at Monks Hardwick and Tithe Farm and existing woodland. It was noted that the site may coincide/interface with East West Rail route, which will need consideration. High surface water flood risk reported requiring mitigation. There are concerns regarding access and access directly from the A428 Cambridge Road would need to be consider by National Highways. Walking/cycling connectivity improvements should be required. No minerals or waste constraints present. There would be a requirement for a 3FE primary school with additional early years provision.

The site promoter notes St Neots 7 and 8 are now in single ownership of Urban and Civic allowing for improved access options including through Loves Farm 2 and an overbridge across the railway to connect into the A421 improvement. Mitigation would include against noise, air and light pollution, listed buildings, woodlands and landscaping.

Council Response

This site has been selected as a draft mixed use allocation (Draft Allocation St Neots 1) for about 1,100 homes, about 3.7ha for employment use, educational facilities including a primary school plus associated early years nursery facilities, a neighbourhood centre to include local shops and other community facilities appropriate to the scale of development. It also proposes indoor and outdoor sports and recreation facilities appropriate to the scale of development, about 40 ha for green infrastructure and East West Rail to include a mixture of strategic green space, accessible natural green space, amenity green space, flood mitigation areas, land for biodiversity net gain. Concerns over surface water will be addressed through a flood risk assessment and detailed drainage strategy taking into account surface water flood risk and mitigation including open space. Provision of a safe and suitable means of access from Cambridge Road and assessment of transport impacts will be required through a transport assessment, the site has the additional benefit to link through to Loves Farm 2. Development will have to ensure the protection of the listed building at Tithe Farm and its setting by provision of high quality development to reflect the site's sensitive location is conserved and enhanced informed by an proportionate heritage assessment. Public rights of way will require retention and pedestrian and cycle routes provided including links to existing networks including Loves Farm 2 and Wintringham Park.

Yelling

Yelling 1: Land West of Manor Farm, Yelling (Council conclusion pre-consultation: may be appropriate for development)

Main Issues Raised (5 Responses)

The majority of comments are unsure or disagree with the proposed site. Key concerns include lack of infrastructure, highway and pedestrian safety, services, facilities, and employment opportunities. The size of development is considered excessive and there are concerns regarding the impact of listed buildings, the conservation area, public rights of way and transport impacts. There is disagreement with the Sustainability Appraisal. There are no

minerals or waste constraints. There is insufficient secondary education capacity. It is noted that access appears achievable in accordance with requirements, but may affect an existing ditch requiring consultation with the LLFA. Local walking and cycling infrastructure improvements may be required.

Council Response

The site was tested by the Council as part of growth strategy option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. The council has however applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being 100% flood zone 1 with high to medium risk of surface water flood risk meaning it did not meet the criteria for consideration.

Yelling 2: Land South of Manor Farm, Yelling (Council conclusion pre-consultation: inappropriate for development)

Main Issues Raised (4 Responses)

The majority of comments are unsure or disagree with the proposed site. Key concerns include lack of infrastructure, services, facilities, and intensification of use of the field access which connects the site to the highway network may not be ideal and would require further scoping. There are concerns regarding the impact of listed building, the conservation area, public rights of way and transport impacts and scale of development. There are no minerals or waste constraints. It is noted that access appears achievable in accordance with requirements, but may affect an existing ditch requiring consultation with the LLFA. Local walking and cycling infrastructure improvements may be required.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it would not reflect the character of Yelling and would be of a scale inappropriate to the village.

Sustainability Appraisal

Consultation Responses Summaries

4.28 The following table outlines a summary of the type of comments received to the Sustainability Appraisal consulted on between 18 September and 27 November 2024:

Responses to the Sustainability Appraisal

	Sustainability Appraisal
Number of Comments Made	373
Number of Individuals or Organisations that Responded	110
Number of Supports	47
Number of Objections	16

4 Further Issues and Options

	Sustainability Appraisal
Number of Observations	69
Number that Did Not Disclose Whether They Support/ Object/ Have Observations	241

4.29 People were able to comment on all aspects of the document by section, paragraph and tables. The table below shows the **main issues** identified and the Council's response and / or how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Sustainability Appraisal Consultation Responses

4.30 As part of a response to previous consultations on the Statement of Community Involvement and Sustainability Appraisal Scoping Report The Coal Authority noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific comments to make on any stages of your Local Plan process. In the spirit of ensuring efficiency of resources and proportionality, it will not be necessary for the Council to provide the Coal Authority with any future drafts or updates to the emerging Plans."

Summary from the Sustainability Appraisal

4.31 The following provides a summary of the main issues raised during the consultation on the Sustainability Appraisal and how the Council has taken these into account.

Sustainability Appraisal

Main Issues Raised	Council Response / How the Council has taken this into account
Stage A - Scoping - (67 responses)	
Several responses support for the Stage A Scoping process with further detailed comments across the following sections: **Housing** • Responses highlight the need to ensure the delivery of a variety of housing types, sizes, and tenures to reduce homelessness and price inflation. There is also support for increased housing delivery in sustainable locations. There was recognition of the lack of affordable housing in rural locations which threatens local services.	Overall response: the Scoping Report was completed at the start of the Sustainability Appraisal process to identify the issues and concerns to explore through it and help shape the sustainability objectives. Where particular points were raised the following comments explain how or where they have been addressed. **Housing** • Evidence has been gathered through the Local Housing Needs Assessment regarding the housing types, sizes and tenures which are required in the district. • The Council has developed the following policies to address the concerns raised all of which have been scrutinised through the SA process: ◦ promoting a mix of housing ◦ providing affordable housing ◦ ensuring accessible and adaptable housing ◦ supporting specialist housing

Main Issues Raised	Council Response / How the Council has taken this into account
	• supporting homes in multiple occupation • promoting rural exceptions sites
Climate change • The importance of addressing climate change impacts and integrating renewable energy into future developments is stressed. • Multiple responses state the climate change section should be updated to reflect the new Government's target to decarbonise the UK grid system by 2030. References to relevant documents such as the Cambridge and Peterborough 2050 United by our Shared Ambition document are suggested. • The impact of large-scale solar farms on soil health and the loss of valuable agricultural land was expressed as well as their visual impact.	**Climate change** • A series of evidence documents have been prepared on climate change aspects of the Local Plan which have informed the Council's incorporation of our response to climate change and its anticipated impacts into a wide range of policies. This includes reference to national aspirations to decarbonise the grid. • The list of plans and policies has not been updated at this stage. • Agricultural land value is one of the factors that was included within the evidence identifying potentially suitable areas for solar farms.
Flooding and water • The Flooding and Water section should include issues related to ensuring new growth does not increase flood risk to existing homes and businesses. • There is strong support for policies addressing water demand and flooding impacts, with concerns about the ability to support large-scale housing growth due to water sustainability issues	**Flooding and water** • Extensive evidence has been gathered on flooding and water through the Integrated Water Management Strategy which has taken account of the potential for development sites to give rise to flood risk elsewhere. • Policies relating to all forms of flooding, waste water and water efficiency have all been included and scrutinised through the SA process.
Transport and infrastructure • Concerns are raised about the transport impacts of new developments, particularly in areas like St Ives, which is identified as a bottleneck for vehicles. The need for significant highway infrastructure upgrades is noted. • A lack of provision of public transport would cause further isolation of rural communities and reduce the ability to access key health services. • Energy storage is mentioned as a critical part of the energy infrastructure, with references to National Grid's Future Energy Scenarios. • There is support for the provision of fibre broadband and 5G connectivity to improve rural inclusivity and connectivity. • The importance of community facilities like pubs, mobile libraries, and rural mobile post offices is highlighted. • A respondent questions whether the process was based on an Equality Impact Assessment and raised concerns about employment opportunities,	**Transport and infrastructure** • A Strategic Transport Strategy and Infrastructure Delivery Study have been prepared to support the policy and site choices made in the Preferred Options Draft Local Plan to 2046. These consider all key forms of infrastructure and the additional demands that may arise from the proposals. • An Equalities Impact Assessment has been completed of the Preferred Options Draft Local Plan to 2046.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
transport, environmental issues, and the provision of health facilities. • Comments emphasise the need for local recycling solutions.	
Natural and historic environment • Recognition of the importance of greenspace for physical and mental health and wellbeing and the importance of local plans in providing these alongside development. • There are concerns about light pollution from new developments, particularly in areas with dark skies. • Further assessment of designated heritage assets and consultation with the County's Historic Environment Team is recommended. • There should be greater discussion on ancient/veteran trees, locally notable species, and priority habitats, these should have stringent protection and enhancement of biodiversity value in site allocations. • One response highlights the need for historical research to identify and reinstate lost or downgraded public rights of way, using suitable materials and considering national NZC targets. They also suggests extending and joining bridleways to enable continuous horse riding and cycling.	**Natural and historic environment** • Strategic greenspace and biodiversity form key elements of the the Preferred Options Draft Local Plan to 2046 with specific policy proposals scrutinised through the SA process. • The importance of dark skies is recognised in the supporting text to policies on hamlets and the countryside, and on blue and green infrastructure to ensure their protection. • Specialist input has been obtained from Heritage and Arboricultural colleagues to consider the impacts of policies and proposals on heritage and trees. • Public rights of way are a Cambridgeshire County Council responsibility, this suggestion is outside the scope of the Local Plan and the SA.
Stage B - Appraisal of Development Options (68 responses)	
General (2 comments) • Cambridgeshire County Council's Climate Change and Energy Services supported the thorough approach to the preparation of the sustainability appraisal. • Historic England provided guidance and links to Sustainability Appraisal and Strategic Environmental Assessment to support the development of the SA throughout the stages of plan making.	Noted
The Local Plan Vision and Objectives (5 responses) • There was support for aligning the Local Plan's vision and objectives with the Huntingdonshire Futures Place Strategy and the Corporate Plan to 2028. • A respondent stated that the vision should be extended to 2058 reflect requirements of the NPPF paragraph 22 (2023)	Comments related to the Vision and Objectives rather than the sustainability appraisal specifically. The preferred draft Vision and Objectives have been appraised positively to balance economic prosperity, health and wellbeing, sustainability, climate resilience and enhancements to the natural environment which retaining and using our heritage to sustain and shape distinctive places.

Main Issues Raised	Council Response / How the Council has taken this into account
• One respondent commented that the vision should be more explicit and ambitious, particularly in terms of housing and employment growth and that at least one new settlement will be needed. • Others raised that the vision should emphasise a just transition to a sustainable economy while protecting local character, landscapes, and heritage as well a stronger emphasis on active travel, biodiversity, and reduced car use.	
Settlement Hierarchy for Huntingdonshire (5 responses) • Option B was supported as the most sustainable and evidence-based approach as it reflects the most up-to-date ranking of settlements, identifying those best suited for accommodating growth based on sustainability scores. • Some respondents suggest that the hierarchy should be flexible and responsive to changes in infrastructure and service provision, especially in growing areas like Alconbury Weald and Love's Farm. They argue that surrounding villages may become more viable over time if supported by active travel and transport infrastructure.	The settlement hierarchy has built on comments regarding the sustainability of larger settlements and now performs positively against most relevant objectives.
Approach to Employment and Economy (9 responses) • Several respondents advocate for Option C, which promotes ambitious economic growth by leveraging proximity to Cambridge and fostering business clusters focusing on emphasising Huntingdonshire's strategic location and the need for both large-scale and smaller employment sites to drive a step change in economic prosperity. While Option C is noted to perform poorly against some environmental sustainability objectives, stakeholders argue that these impacts can be mitigated through careful site selection, high design standards, and infrastructure investment. • Option A is criticised as being inconsistent with national policy • Some feedback suggests combining elements of multiple options (e.g., Options B, C, D, and F) to ensure employment sites are not restricted to specific locations. This includes growth along highways, near housing developments, and in sustainable locations. • One response proposes Option F as an alternative strategy that considers a broader range of	No comments were related specifically to the details of the SA but focused on supporting comments submitted on the Further Issues and Options document. The approach to employment and the economy has been subject to SA through policies on how much development do we expect, our strategy for change and all those in the chapter on how we will support a strong local economy.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
employment site locations and aligns with the Local Planning Authority's ambitions . • Active travel and public transport improvements are repeatedly emphasized as essential to support economic development	
Housing Figures and Requirement (6 responses) • Several responses highlight that a higher housing target (Option C) would stimulate more economic development, job creation, and social benefits such as improved housing affordability and diversity. • While Option C is assessed more negatively in the Sustainability Appraisal for its potential environmental impacts, multiple responders argue that these can be mitigated through sensitive site selection and sustainable design. • Respondents reference the NPPF (2023), particularly Paragraphs 11, 20(a), and 86(c), to argue that the housing requirement must reflect both need and growth ambitions, and may exceed the standard method figure.	The housing requirement is assessed through policy LP 2. The growth figure selected broadly aligns with the higher level tested through option C. The SA acknowledges that this may be challenging in for some indicators but overall is likely to have a long term positive impact on housing provision and the local economy.
Growth Strategy Options (7 responses) • Options A and E are viewed as the most sustainable and deliverable approach as they utilise existing infrastructure, reduces car dependency, and supports town centre vitality. Some suggest refining Option A to increase the share of growth in SPAs (e.g., from 75% to 85%). • Emphasis on including sustainable rural settlements like Sawtry and Yaxley to balance growth . • Conceptually strong for promoting sustainable travel (Option C), but concerns about whether it result in fragmented development, a reliance on transport projects and potentially greater integration challenges. • Option D was seen as the least sustainable due to increased car dependency and environmental impacts not aligning well with climate and accessibility ambitions. • Option E was viewed by respondents as being the least sustainable as it could increase car usage, put additional strain on infrastructure in smaller settlements and does not align as well with climate and accessibility ambitions. • Some support for Option F but some had concerns that the sustainability benefits of new settlements were overestimated, concern that they rely on long term infrastructure delivery, risks	Four revised options were tested through SA which blended elements of options A, B, C, E and F. These are assessed individually through the SA and a comparative table of the outcome for each is also included which indicates that strategies 2 and 4 perform better. Following assessment through technical evidence on flooding, water and transport a further refined strategy was prepared based on strategy 2 which was then assessed through policy LP 2 which performed very positively against the SA objectives.

Main Issues Raised	Council Response / How the Council has taken this into account
in isolating earl residents and use of greenfield land. • Several respondents challenge the SA's scoring, particularly that they viewed the appraisal for Option F to be overly positive, there was an underestimation of the environmental and social benefits of Options A and B; and there was a misalignment between SA scores and real-world infrastructure constraints	
Green and Blue Infrastructure (2 responses) • One respondent questioned whether the planned country park at Alconbury Weald is included in the strategy, suggesting that such areas should be considered as part of the green and blue infrastructure network if properly planned. • There is support for making green infrastructure as part of development proposals and that these should be of high quality including thoughtful tree planting and enforceable landscaping conditions.	No comments were related specifically to the details of the SA but focused on integration of green infrastructure within new developments.
The Approach to Climate Change (4 responses) • Several comments support the overall ambition of the climate strategy. Some respondents advocate for stronger requirements on both embodied and operational carbon in new buildings and support for low-energy schemes. • Some comments suggested installing solar panels over supermarket and public car parks (e.g., like at St Ives Park & Ride) and support for communal biodigesters to process green and food waste into methane for energy. • Recognition that a significant portion of CO emissions in the district comes from through-traffic. Comments emphasised need to locate development near key transport corridors and integrating active travel routes to reduce transport-related emissions. • Comments raised that the Local Plan must remain adaptable to future climate scenarios and uncertainties and that policies should be viable and not overly ambitious to the point of hindering progress or deliverability.	No comments were related specifically to the details of the SA but focused on wider policy responses to addressing climate change. Policies have been included on embodied carbon in buildings, minimising operational energy use and supporting renewable energy schemes which all demonstrate positive sustainability appraisals.
Tackling Flooding and Water (10 responses) • Respondents emphasised that flood risk areas are dynamic and evolving due to climate change and can be more accurate in certain locations such as settlements along the River Great Ouse. • There is strong support for requiring permeable surfaces, swales, rainwater reuse, and sustainable	No comments were related specifically to the details of the SA but focused on policy responses. Updated evidence has been prepared to ensure the latest data on flood risk is used in preparing policies and allocations. This also informs the requirement to promote higher water efficiency standards.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
drainage systems (SuDS) in all new developments . • Several comments stress that any policy exceeding national standards must be backed by robust evidence demonstrating its necessity and feasibility. • Some respondents noted that while policies exist, implementation and enforcement remain areas of challenge.	
Housing Tenures and Housing Mix (10 responses) • Several respondents emphasised that the implementation of affordable housing targets can be more problematic than the targets themselves with viability issues often reducing affordable housing contributions. • There is broad support for maintaining the 40% affordable housing target from the current Local Plan (Policy LP24), with flexibility based on viability and local needs. • Option B, which proposes a consistent proportion of affordable housing across all developments of 10+ dwellings, received the most support. Respondents highlighted the importance of applying this policy across all towns and villages, allowing flexibility based on site-specific and local area circumstances and supporting a range of affordable tenures, including social and affordable rent . • Several comments advocated for a flexible approach that considers local housing needs, demand, and community integration. • There was also support for self and custom-build housing, referencing the current Local Plan Policy LP25 as a model for enabling such development. • Option D was opposed by some due to concerns that larger developments, which benefit from economies of scale, should contribute more—not less—to affordable housing and infrastructure.	No comments were related specifically to the details of the SA but focused on housing provision more generally. Clear support was indicated for seeking a consistent proportion of affordable housing (option B) which has been taken forward in the proposed policy on providing affordable homes.
Transport and Connectivity (8 responses) • Comments emphasise the importance of integrating active travel (walking, cycling) and public transport into development plans. There is a strong call for joined-up infrastructure that avoids disjointed cycle paths and mismatched bus/train schedules. • Several comments raise concerns about the implications of East West Rail, particularly the proposed station at Tempsford. Respondents worry about reduced train stops at St Neots; potential redirection of growth this will bring on St	No comments were related specifically to the details of the SA but focused on aspirations of supporting active travel infrastructure and on the potential impacts of East West Rail proposals. The safeguarded route for East West Rail has impacted on the certainty of availability of land to the east of St Neots for residential or employment development at present.

Main Issues Raised	Council Response / How the Council has taken this into account
Neots; the need for cross-authority planning and housing allocation adjustments.	
Site Appraisals (238 responses)	
It is noted that almost all comments received on the SAs of individual sites did not actually comment on the appraisals against the SA objectives. Most were more general comments reinforcing those submitted against the land availability assessments of the the relevant site.	Reponses are provided to clarify the situation or progress with the site where relevant.
Abbots Ripton (3 responses) • Concerns about infrastructure, especially sewage and flood risk, and the need for investment before any further development. • Observations regarding consistency in scoring and recognition of landscape buffers in large sites.	An Infrastructure Delivery Study has been prepared to identify infrastructure needed to support future growth. Updates to the SA have only been incorporated where appropriate for sites proposed as allocations once they have satisfied testing through other elements of the evidence base.
Abbotsley (3 responses) • Critique of negative scoring for a golf course site, suggesting it is not agricultural land and should be scored more positively. • Requests for updates to agricultural land classification and recognition of green infrastructure and biodiversity improvements. • Abbotsley 2 promoters state the A428 road works and Wintringham Park will change the site's surrounding context	Sites were scored on information available at the time of appraisal. Updates to the SA have only been incorporated where appropriate for sites proposed as allocations once they have satisfied testing through other elements of the evidence base. Agricultural land classification data is sourced from DEFRA; detailed localised regrading is unviable for the council. Abbotsley 2 falls largely within the East West Rail safeguarding area.
Alconbury (6 responses) • Strong opposition to developments due to flood risk, landscape, and heritage impacts. • Some support for employment-led development with mitigation for surface water flooding.	Detailed flood risk assessments have been completed of sites not wholly within flood zone 1.
Alconbury Weston (5 responses) • Concerns about village character and flood risk. • Alconbury Weston 3 site promoter write In support of their site for care uses and states there are no trees on site • Further habitat assessment may be required for Alconbury 3.	No sites have been taken forward. Additional information has been considered in the context of the land availability assessment. A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan.
Alwalton (2 response)	Additional information has been considered in the context of the land availability assessment.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
• Development seen as inappropriate due to heritage and landscape impacts. • Site promoter writes in support of their site submitting additional supporting documents including a masterplan.	
Bluntisham (7 responses) • Multiple objections to development proposals, citing heritage, biodiversity, flooding, and infrastructure concerns. • Support from site promoter for development with green infrastructure and biodiversity net gain. • Further habitat assessment is needed for Bluntisham 3, 4 and 5 regarding orchards and potential veteran/ancient trees.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan. Objections to appraisals of sites taken forward for proposed allocation should be capable of being overcome through careful design and landscaping.
Brampton (7 responses) • Some support for residential and employment-led development. • Promoter for Brampton 6 wrote in support of their site and identifies the masterplan and design principles the development is intended to follow. • Requests for consistency in scoring and more robust landscape and transport assessments.	Additional information has been considered in the context of the land availability assessments. Strategic transport study has been completed to assess transport impacts.
Brington and Molesworth (4 responses) • All comments related to Brington & Molesworth 3 -concerns about infrastructure, school capacity, and lack of active travel infrastructure were raised.	No sites have been taken forward. An Infrastructure Delivery Study has been prepared to identify infrastructure needed to support future growth.
Broughton (2 responses) • Conservation area and flooding concerns were raised.	No sites have been taken forward.
Buckden (2 responses) • Support for dismissing Buckden 2 due to impact on County Wildlife Site • Site promoter disagrees with outcome for Buckden 5.	No sites have been taken forward.
Bury (2 responses) • Further habitat assessment may be required for Bury 6.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan.
Catworth (2 responses) • Traffic and safety concerns at A14 junction highlighted for Catworth 3. • Promoter for Catworth 7 submitted comments setting out adjustments to site boundaries and heritage assessments.	Strategic transport study has been completed to assess transport impacts.

Main Issues Raised	Council Response / How the Council has taken this into account
Chesterton (1 response) · Further habitat assessment may be required for Chesterton 2.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan.
Conington (5 responses) • Conington 1 could have impact on Holme Fen SSSI • Site promoter states masterplanning will be undertaken to address connectivity, biodiversity, green infrastructure, and employment uses	No sites have been taken forward.
Earith (4 responses) • Objections raised based on flood risk, infrastructure, and loss of agricultural land. • Some support for residential development with green infrastructure.	No sites have been taken forward.
Elton (1 response) • Objection to Elton 5 citing harm to the character, landscape, and heritage setting of the village and its conservation area, is at risk of surface water flooding, lacks safe pedestrian access, and would be visually intrusive and unsustainable for the area	No sites have been taken forward.
Farcet (2 responses) • The promoters write in support for Farcet 1, but request higher scores for previously developed land, highlight planned ecological improvements, disagree that the site would worsen pollution compared to nearby warehousing, and note that ultrafast broadband is planned for the area by 2026. • Concerns that Farcet 1 and 2 would overwhelm already strained infrastructure in Yaxley - including healthcare, education, and roads	The appraisals reflect conditions at the time not potential improvements for sites of this scale. No sites have been taken forward.
Fenstanton (6 responses) • Some support for new homes and infrastructure although concerns regarding flood risk, infrastructure, and impact on village character were highlighted. • Promoter wrote in support of Fenstanton 1 and the employment opportunities it could bring. • Feedback on bus services and community facilities regarding the Sustainability of Settlements work.	Support noted. Fenstanton 1 taken forward as a proposed employment site.
Folksworth and Washingley (1 response) • Wildlife and drainage concerns raised for Folksworth and Wasingley 3.	No sites have been taken forward.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
Godmanchester (8 responses) • Support for growth strategy and green infrastructure, with technical feedback on flooding and integration from the site promoters of Godmanchester 5, 7, 8, 9 and 10. • Site promoters for Godmanchester 3 and 4 submitted statements in support of their sites.	Sites taken forward as s single combined site to facilitate a comprehensive design solution.
Great Gidding (9 responses) • Heritage, character, and traffic concerns raised although there was some support for limited development. • Requests for review of Great Gidding 3 SA10 appraisal.	No sites have been taken forward.
Great Paxton (3 responses) • Comments in support of Great Paxton 4 and further landscape details and promoter for Great Paxton 2 provided additional information on surface water, amenity and infrastructure issues. • Further habitat assessment may be required for Great Paxton 1.	Great Paxton 1 is a proposed allocation. A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan and an ecological assessment is required for the site.
Hail Weston (23 responses) • Significant opposition to large-scale development, citing flood risk, infrastructure, village character, and biodiversity. • Limited support for minor infill development	Noted. One site for 8 homes is proposed.
Hemingford Abbots (1 response) • Site promoter for Hemingford Abbots 3 wrote in support of their site	Noted. Hemingford Abbots 3 is proposed for allocation as 'The Lattenburys'.
Hemingford Grey (3 responses) · Concerns regarding impact on County Wildlife Site and biodiversity for Hemingford Grey 11. The site promoter write in support and submitted a vision document for the site. · Flood risk and flood defences in place identified for Hemingford Grey 12.	No sites have been taken forward. The SFRA provides detailed flood risk assessment.
Hilton (7 responses) • Flood risk, infrastructure including highways and access, and character concerns were raised.	No sites have been taken forward.
Holme (1 response) • Observations raised impacts on biodiversity and proximity to Holme Fen SSSI.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan.

Main Issues Raised	Council Response / How the Council has taken this into account
Holywell-cum-Needingworth (2 responses) • Objections to Holywell-cum-Needingworth 5 were made citing odour and infrastructure concerns.	Holywell-cum-Needingworth 5 is not proposed for allocation but outline planning permission was granted on 30 June 2025.
Huntingdon (2 responses) • Some support for redevelopment for Huntingdon 1 • Flood risk and heritage concerns were raised for Huntingdon 2.	Huntingdon 1 is proposed for allocation for 12 homes. Huntingdon 3 is not proposed for allocation.
Kimbolton (6 responses) • Site promoters for Kimbolton 6, 7, 8, 9 and 10 submitted statements in support of their sites. • Further habitat assessment may be required for Kimbolton 7	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan.
Leighton Bromswold (2 responses) • Support for the site not proceeding to SA and the harm development could have on local conservation area character.	Noted
Little Paxton (2 responses) • Infrastructure and school capacity concerns were raised.	An Infrastructure Delivery Study has been prepared to identify infrastructure needed to support future growth.
Offord Cluny and Offord D'Arcy (2 responses) • Offord Cluny and Offord D'Arcy 8 promoter states landowner willing to amend scale and density of development to address concerns. • Site promoter for Offord Cluny and Offord D'Arcy 1 write in support of their site.	Noted
Ramsey (2 responses) • Feedback on tree removal and access to services requesting review between Ramsey 15 and 17.	Neither site commented on has been taken forward for allocation.
Sawtry (4 responses) • Support for growth but requests for corrections to flood zone for Sawtry 10 and 11 and agricultural grading.	Detailed flood risk assessments have been completed of sites not wholly within flood zone 1. Agricultural land classification data is sourced from DEFRA; detailed localised regrading is unviable for the council. Site 11 is a smaller parcel of site 10 and is proposed for allocation as land west of Toll Bar Way and Green End Road.
Sibson-cum-Stibbington (3 responses) • Concerns about scale, sustainability, and lack of active travel.	The garden community proposal has not been taken forward for allocation due to transport infrastructure constraints.
Somersham (9 responses) • Multiple objections to expansion of the built form of the village, infrastructure including capacity at	Objections noted but an Infrastructure Delivery Study has been prepared to identify infrastructure needed to support future growth.

4 Further Issues and Options

Main Issues Raised	Council Response / How the Council has taken this into account
the primary school, drainage and scheduled monument sites. • Site promoter for Somersham 6 and 7 seeks amendments to scores regarding relationship of sites to existing village.	Site scoring retained for consistency; sites identified are proposed for allocation.
Southoe and Midloe (4 responses) • Some support for HDC's appraisal in particular for biodiversity net gain. • Objections regarding Southoe and Midloe 2 based on landscape impact and harm to local wildlife.	The biodiversity net gain sites have been brought forward outside of the local plan process. The garden community proposal has not been taken forward for allocation.
Spaldwick (1 response) • Further habitat assessment may be required for Spaldwick 1 and 2.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan. No sites have been taken forward.
St Ives (3 responses) • **S**upport from site promoters of St Ives 7 and Holywell-cum-Needingworth 7 for mixed-use developments and green infrastructure. • Concerns were raised regarding landscape and flood risk. · Concerns regarding impact on County Wildlife Site and biodiversity for St Ives 1.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan. Detailed comments provided on Holywell-cum-Needingworth 7 (Giffords Park) reinforced the SA and its scoring but did not necessitate any changes. Other sites commented on have not moved forward to proposed allocations.
St Neots (7 responses) • Support for sustainable growth and environmental preservation utilising sustainable transport, this also needs to reflect local character. • Site promoters write in support for St Neots 8 • Further habitat assessment may be required for St Neots 6.	A Habitats Regulations Assessment has been completed for the Preferred Options Draft Local Plan. Support noted.
Stilton (1 response) • Infrastructure, sewage, and overdevelopment concerns were raised.	An Infrastructure Delivery Study has been prepared to identify infrastructure needed to support future growth. Two of the six sites considered are proposed for allocation.
The Stukeleys (3 responses) • Flood risk and landscape concerns were raised regarding the Stukeleys 6. • Feedback on access and masterplanning were made regarding the Stukeleys 3. • Site promoters for the Stukeleys 2 submitted a statement in support of their site.	SA points raised on Stukeleys 3 primarily relate to the site promoters intentions, the appraisals reflect conditions at the time not potential improvements for sites of this scale. SA!5 has been updated regarding access. The SFRA provides detailed flood risk assessment. Support noted.

Main Issues Raised	Council Response / How the Council has taken this into account
Upton and Coppingford (1 response) • Flood risk concerns were raised with no development anywhere west of the A1 suggested in response to conditions in the Alconbury catchment.	The site is wholly within flood zone 1 and is proposed for allocation. A flood risk assessment is required due to presence of surface water flood risk.
Upwood and The Raveleys (8 responses) • Feedback on housing provision and changes sought to SA9 to expand to all housing types were made by the site promoter for Upwood and the Raveleys 1. Detailed scores supported.	SA objectives were subject to consultation and finalised after this in 2023. Support noted. Site proposed for allocation.
Warboys (10 responses) • Feedback on housing provision and sustainability were made.	SA objectives were subject to consultation and finalised after this in 2023. No sites have been taken forward.
Winwick (1 response) · Site promoter submitted a site plan for their proposal	Noted. No sites have been taken forward.
Wistow (7 responses) • Infrastructure, flooding, and character concerns were raised regarding all sites. • Feedback on times to emergency department and broadband regarding the Sustainability of Settlements work.	No sites have been taken forward.
Wyton on the Hill (5 responses) • Objections raised regarding flood risk, A141, biodiversity, and landscape and harm to neighbouring villages such as Broughton if Wyton on the Hill 2 were to be developed. • Site promoters for Wyton on the Hill 2 and 3 wrote in support of their sites.	Updates acknowledged to SA 7 and 15 for Wyton on the Hill 3 which is proposed for allocation. Objections noted but detailed flood risk assessments have been completed of sites proposed for allocation not wholly within flood zone 1.
Yaxley (22 responses) • Significant opposition to further development, citing infrastructure, flooding, biodiversity, and loss of village character. Some support for HDC's decision to reject certain proposals.	No residential sites have been taken forward for allocation in Yaxley due to significant flooding and drainage problems currently being experienced there.
Yelling (3 responses) • Objections raised regarding impact to conservation area and infrastructure. Although there was some support for limited development.	No sites have been taken forward.

4 Further Issues and Options

Additional Sites Land Availability Assessments

Consultation Responses Summaries

4.32 The following table outlines a summary of the type of comments received to the Additional Sites Land Availability Assessments consulted on between 23 April and 4 June 2025:

Responses to the Additional Sites Land Availability Assessments

	Additional Sites Land Availability Assessments
Number of Comments Made	442
Number of Individuals or Organisations that Responded	143
Number that Agree with Assessment	53
Number that Disagree with Assessment	65
Number that Have Observations on Assessment	304
Number that Commented Without Noting Agree/ Disagree/ Have observations	20

4.33 People were able to comment on all aspects of the document by section, paragraph, tables and by site. The table below shows the **main issues** identified and how the council has taken these into account. To see all representations in full please visit the council's online consultation portal (links provided below) where all responses are recorded and click on the text 'WHAT PEOPLE SAY' :

- Additional Sites Land Availability Assessment consultation responses

4.34 As part of a response to previous consultations on the Statement of Community Involvement and Sustainability Appraisal Scoping Report The Coal Authority noted that as a Statutory Consultee they have a duty to respond to planning applications and development plans in order to protect the public and the environment in mining areas and "As Huntingdonshire District Council lies outside the defined coalfield, the Coal Authority has no specific comments to make on any stages of your Local Plan process. In the spirit of ensuring efficiency of resources and proportionality, it will not be necessary for the Council to provide the Coal Authority with any future drafts or updates to the emerging Plans."

Summary of Sites consulted on in the Additional Sites Land Availability Assessments

4.35 The following sections provide a summary of the main issues raised during the consultation on the Additional Sites Land Availability Assessment and how the Council has taken these into account.

General comments

4.36 The consultation received responses from a number of statutory consultees and Duty to Cooperate bodies, these comments will inform the selection of sites coupled with further evidence as the plan progresses. They will also enable the Council to provide criteria within draft site allocations to shape and mitigate development.

Sites

General comments: Consider the broader environmental context, including national housing targets, climate change, and biodiversity goals and the need for a district-wide perspective rather than focusing on individual sites. Align development with the capacity and safety of the Strategic Road Network. Provide sustainable transport policies.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk.

Alconbury Weston

Alconbury Weston 10: Land East of Buckworth Lodge Stud, Buckworth Road, Alconbury Weston (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (3 responses)

Responses were unsure about development of this site. The LLFA identified that there have been local reports of flooding and considers its risk high, therefore considering this site may be unsuitable for the proposed development. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. Access the A1(M) via Great North Road and North Road is acceptable however, the suitability of the approach road network from the B660, A14 east bound via Woolley and through Alconbury village where there is a bridge with a 3T weight limit will need to be assessed in relation to the ability to cater for higher volumes of traffic and HCVs. Local infrastructure improvements will be required in the form of walking/cycling connectivity. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced including connectivity to the wider Right of Way/highway network, dialogue with CCC's Asset Information Definitive Mapping team is encouraged.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal, due to its separation from Alconbury Weald it is currently unclear how the site could be masterplanned to become part of this community, without further completion of the Alconbury Weald development and/or compilation of potential intervening land to create a more comprehensive development, additional information would be required. The site also forms part of a green break between Crossways Distribution Centre and Alconbury Weald/ Alconbury Enterprise Zone and a greater relationship to the open countryside than the nearby uses. The site proposal could also impact a significant concentration of ancient woodlands in terms of light and noise, with the potential to existing habitats and species, specifically Hermitage Wood which also contains a scheduled monument.

Alwalton

Alwalton 2: Land North Of 23 To 33 Oundle Road, Alwalton (larger site) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were unsure about development of this site. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form. However, Church Street/Mill Lane are not suitable for a significant increase in vehicle movements so the accesses will all need to be on Oundle Road, which may not be achievable. Local infrastructure improvements will be required in the form of walking/cycling connectivity to link the site to the shared facility on

4 Further Issues and Options

the A605 Oundle Road. The site is affected by an existing public Right of Way, these should be retained on their existing alignment, maintained, or enhanced, dialogue with CCC's Asset Information Definitive Mapping team is encouraged. The Education Authority states there is an existing pressure on early years' places, mitigation will be required to provide capacity locally but there is sufficient capacity for both the existing population and children arising from this development for primary education. This level of development is of the maximum size which could be accommodated within the catchment area, without further mitigation being carried out. Secondary provision at Nene Park Academy is not within Cambridgeshire County Council's local area of responsibility. Anglian Water identifies that there are gravity sewers (both surface water and foul drainage) located throughout the site running north/south and east/west. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing sewers should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required. Early engagement with Anglian Water is advised given the number of assets within the site.

Council Response

This site has been selected as a draft mixed use allocation (Draft Allocation Alwalton 1) for about 165 homes and about 4 ha of open space to safeguard against flooding.

Landscaping and biodiversity concerns have been address through criteria requiring the mitigation of recreational impacts on nearby nature sites including the Nene Valley Nature Improvement Area and an ecological survey to determine the presence of protected species and measures for their protection and biodiversity enhancement. Drainage/sewerage concerns are addressed through criteria to ensure integration of existing Anglian Water infrastructure ensuring existing sewers remain available for maintenance and repair and agreement with the Council in liaison with the Environment Agency and Anglian Water Services that waste water flows from the proposal can be accommodated.

A criteria requiring the provision of suitable noise, light and air quality mitigation requires a development proposal to mitigate concerns about air, light and noise pollution, whilst land is also set aside to safeguard against flooding with flood specific criteria included. Development will require sensitive design having regard to the Conservation Area designation and adjacent Alwalton Hall accompanied by a heritage assessment and safe vehicular and pedestrian access form Oundle Road will be required. Consultation with Cambridgeshire county council will be required to address minerals concerns and safe vehicular and pedestrian access from Oundle Road to address transport and active travel. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure across the district and will be refined at Stage 2 to look at locational requirements such as education.

Bluntisham

Bluntisham 6: Land off 18 Holliday's Road, Bluntisham (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Responses were either unsure or opposed to development of this site. The Parish Council raised concerns relating to the effect on heritage and village layout and landscape, effect on listed building St Mary's Church, flooding, nature conservation and biodiversity, traffic and access, and archaeology. These concerns were also raised by a resident. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that two points of access will be required at least one in emergency form and local infrastructure improvements may be required in the form of walking/cycling improvements including a southern connection to the existing footway on Rectory Road and determine feasibility of a western connection to Holiday's Road. The Education Authority states there are existing educational pressures. Anglian Water advises that there is a foul sewer located along the southern boundary of the site. This existing infrastructure is protected by easements and

should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing sewer should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required.

Council Response

This site has been selected as a draft residential allocation (Draft Allocation Bluntisham 2) for about 35 homes. Concerns have been addressed through criteria requiring nature and biodiversity have been addressed though criteria requiring the development to retain trees and hedgerow along the boundary, landscaping on the eastern and northern boundaries, and open amenity space to reduce recreational impacts on the Ouse Valley. Design of the site will have to reflect the sensitive setting to the grade I listed St Mary's Church supported by an heritage assessment. Flood risk will require mitigation and provision of a flood risk assessment and drainage strategy taking into account surface water, groundwater. The presence of a minerals safeguarding zone will require the developer to consult with Cambridgeshire County Council. The site will also have to integrate existing Anglian Water infrastructure ensuring existing sewers remain available for maintenance and repair. Finally. traffic and active travel will be addressed through criteria requiring provision of safe and appropriate vehicular and pedestrian access onto Holliday's Road and pedestrian access onto Rectory Road..

Brington and Molesworth 4: Land at High Street, Brington (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (8 responses)

The responses were either opposed to development or unsure. The LLFA states there is low surface water flood risk which may make development unsuitable. Anglian Water identified that there is a rising main (pressurised sewer) running across the site, and a water main along the eastern boundary. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing sewers should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. The Education Authority there is existing pressure on early years' places, mitigation will be required to provide capacity locally. There are capacity concerns at primary an secondary providers which may require mitigation.

The site promoter commented and withdrew the site. They stated that this 'site is no longer available for development and therefore should be disregarded in the Ongoing Call for Sites. The submission is hereby withdrawn and the site should not be considered further.'

Council Response

During the consultation on additional sites in the Spring of 2025, the site promoter withdrew the site. It therefore will not be considered further.

Bythorn and Keyston

Bythorn and Keyston 7: Land South of Thrapston Road / South East of Toll Bar Lane (Council conclusion pre-consultation - inappropriate for development)

Main Issues Raised (2 responses)

The responses were unsure towards this site. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. It is unclear how high-quality walking, cycling, wheeling access can be achieved to link the site to wider centres of population.

4 Further Issues and Options

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the in-combination outcomes of the Council's Land Availability Assessment and Sustainability Appraisal as it relates more to the countryside. In depth development would be out of character, linear development along Thrapston Road may be achievable however this would result in the potential site area being reduced to 0.13ha and as such falling below the minimum site size threshold for allocation.

Chesterton

General comment: Comments raised concern regarding the impact of potential development sites enveloping Chesterton.

Council response: The Council has produced a number of evidence based document to inform the selection of sites, policies, criteria, location of development, growth strategy and infrastructure requirements. These can be found on the Council's Evidence Library for Local Plan Update - Huntingdonshire.gov.uk

Chesterton 3: Bottom Lodge Farm / Land at A1 West (North) (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (26 responses)

The majority of responses were opposed to development. Objections (including those form Elton and Glapthorn Parish Councils) were raised regarding landscape impact and the harm to the rural character of the area and Chesterton, loss of agricultural land, currently inadequate infrastructure and public transport, fear of increased traffic volumes and impact of local highways, environmental and heritage harm, misalignment of proposal with current national and local policies and tat other sites should be pursued. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to Oundle Road, Chesterton and the A605 Peterborough Road, Haddon to achieve accesses but is likely to require significant highway improvements in relation to the scale of development proposed. It is likely that more than two points of access will be required at least one in emergency form. They state it is unclear how high quality walking, cycling, wheeling access can be achieved either on Oundle Road or the A605 and across the A1 to link the development to Peterborough. The site is affected by existing public Rights of Way, these should be retained on their existing alignment, maintained, or enhanced. Anglian Water identify the site is adjacent to their water storage site Chesterton Old and New Reservoirs and there are strategic, large diameter water mains crossing the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. Early engagement with Anglian Water is advised given the strategic nature of the assets within the site. The site is adjacent to Peterborough (Flag Fen) WRC catchment. There are significant network constraints in this location for the quantum of growth proposed by this site. Further discussion with Anglian Water is essential regarding appropriate solutions for wastewater treatment, which could include a requirement for a new WRC and associated network and there is an overlap with the emerging proposed associated infrastructure for the Lincolnshire Reservoir. The Education Authority state that officers would expect a site of this size to generate demand for an additional 510 children aged 0-3, and an additional 680 primary school places (equating to 3FE which could be provided as one school and would require a land allocation of 3ha). Nene Park Academy is not within Cambridgeshire County Council's local area of responsibility. SEND provision Officers would expect a development of this size to generate demand for approximately 37 places for children with special educational needs and/or disabilities (SEND). It is likely that a contribution would be requested towards existing provision within the county.

Historic England identify that a scheduled monument (a Roman barrow 380m north of Hill Farm) is within the western edge of the site and the heritage assets in Chesterton should also be referred to in the assessment.

Council Response

The Council received a number of strategic sites that were submitted for consideration as for allocation in the Local Plan. These sites were tested as part of 4 strategic growth options. This site was tested through strategic Growth Option 1 and 4. The findings from the Sustainability Appraisal of the growth strategies, informed by

evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments) and therefore this site was not considered necessary for allocation. As part of Duty to Cooperate meetings Peterborough City Council raised significant concerns relating to this site and the impact on the transport network and Oundle Road specifically and the inability of the road network into Peterborough to accommodate the extra traffic likely to be generated.

Colne

Colne 8: Pound Ground, Colne High Street, Somersham Road, Colne (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (3 responses)

Responses ere unsure towards this development. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to the public highway B1050 Somersham Road to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing, however a suitable visibility splay will need to be achieved and local infrastructure improvements may be required in the form of walking/cycling connectivity. Anglian Water identify there is a rising main (pressurised sewer) adjacent to the road boundary for the site, which may be located in the road or adjoining verge. This existing infrastructure is protected by easements and should not be built over. Further investigation may be required to locate the asset and determine whether access to the site may interface with the rising main.

Council Response

This site has not been selected as a draft allocation. The site was tested by the Council as part of the Growth Strategy Option 3. The findings from the Sustainability Appraisal of the growth strategies, informed by evidence documents such as the Strategic Flood Risk Assessment, Infrastructure Delivery Study, Strategic Transport Assessment and Habitat Regulations Assessment demonstrated that Growth Strategy 2 was the preferred strategic growth option (with some adjustments). The Council has however, applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83). This site was assessed as being at high and medium surface water flood risk and therefore did not meet the criteria.

Easton

Easton 1: Land East of Easton Road, Easton (failed fundamental constraints)

Main Issues Raised (31 responses)

The majority of comments ere opposed to development. Objections were raised regarding flood risk with the site being within flood zone 3b and a history of flooding, highway safety and narrowness of Easton Road, lack of infrastructure and local services, environmental and heritage impact, proximity to sewage works, and a previous planning application was refused on site. The Minerals and Waste Authority identified that there was a minerals and waste constraint present which will require mitigation and may be difficult to overcome. The Highways Authority states that the site appears to have sufficient frontage to the public highway to achieve an access in accordance with DMRB/MfS requirements respecting local junction spacing. Local infrastructure improvements may be required in the form of walking/cycling connectivity. Anglian Water identify that there is a water main along the western/roadside boundary of the site. This existing infrastructure is protected by easements and should not be built over or located in private gardens where access for maintenance and repair could be restricted. The existing water main should be located in highways or public open space. If this is not possible a formal application to divert Anglian Water's existing assets may be required.

4 Further Issues and Options

The site promoter has proposed to reduce the site area to 0.22ha to include the part of the site not within the water recycling area or at flood risk.

Council Response

This site has not been selected as a draft allocation. It was considered inappropriate for development through the Council's Land Availability Assessment as it failed a fundamental constraint as the site completely falls within 400m of a Water Recycling Area. Also, approximately half of the site is within flood zone 3b.

Ellington

Ellington 4: Old Sheds at Manor Farm, Ellington (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (5 responses)

Responses were mixed towards this site. Ellington Parish Council objected to this site and the cumulative impact of other developments in the village, exceeding the 5% growth limit set by the approved Grafham and Ellington Neighbourhood Plan and would conflict with both the scale and density policies of the Plan, extend the built-up area of the village, and risk setting a precedent for further expansion. They stress the need for careful consideration of traffic, infrastructure, and local services to support any additional development. The LLFA identified that there is low surface water flood risk which will require surface water management options. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site has access to the public highway directly onto High Street and via the private access road to Manor Farm, this access is not adequate for intensification and it is not clear if there is sufficient frontage to create a new access onto High Street. The Education Authority highlights there are capacity pressures for early years provision, primary and secondary schools which may require mitigation to accommodate development.

Council Response

This site has been selected as a draft residential allocation **(Draft Allocation Ellington 1)** for about 35. The development will be required to demonstrate a safe and suitable means of vehicular and pedestrian access to High Street. The presence of a mineral safeguarding area will require consultation with Cambridgeshire County Council. An Infrastructure Delivery Study Baseline Assessment (Stage 1) looks at current infrastructure such as education across the district and will be refined at Stage 2 to look at locational requirements. The Council has applied a sequential risk- based approach to the location of development in villages steering it towards areas at the lowest risk of flooding from any source. Preferred draft allocations within villages have only been selected where they have either no flood risk or are 100% flood zone 1 with nominal / very low surface water flood risk. These sites will assist in providing an element of residential development to enhance or maintain the vitality of our villages through proportionate opportunities for growth (NPPF 83).

Ellington 5: Land between Thrapston Road East of Ellington and A14 (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (4 responses)

Responses were mixed towards this site. Ellington Parish Council objected to this site and the cumulative impact of other developments in the village, exceeding the 5% growth limit set by the approved Grafham and Ellington Neighbourhood Plan and would conflict with both the scale and density policies of the Plan, extend the built-up area of the village, and risk setting a precedent for further expansion. They stress the need for careful consideration of traffic, infrastructure, and local services to support any additional development. The LLFA identified that there is high surface water flood risk which will require surface water management options. The Minerals and Waste Authority identified that there was a minerals and/or waste constraint present which will require mitigation. The Highways Authority states the site appears to have sufficient frontage to achieve an access but is likely to require significant highway improvements in relation to the scale of development proposed and will require further technical work and engagement with National Highways.

Council Response

This site has not been selected as a draft allocation. The Highways Authority states the site is likely to require significant highway improvements in relation to the scale of development proposed and will require further technical work and engagement with National Highways. No further information has been received to ascertain whether highways improvements would be achievable and therefore the site was not taken forward for further testing through the growth strategy options. Fluvial flood zones, 2, 3a and 3b are present on the site along the site frontage which may also impede access and escape to and from the site.

Ellington 6: Land South East of Ellington (Council conclusion pre-consultation - may be appropriate for development)

Main Issues Raised (6 responses)

Responses were mixed towards this site. Ellington Parish Council objected to this site and the cumulative impact of other developments in the village, exceeding the 5% growth limit set by the approved Grafham and Ellington Neighbourhood Plan and would conflict with both the scale and density policies of the Plan, extend the built-up area of the village, and risk setting a precedent for further expansion. They stress the need for careful consideration of traffic, infrastructure, and local services to support any additional development. The LLFA identified that there is high surface water flood risk which may make the site unsuitable for development. The Minerals and Waste Authority identified that there are no minerals or waste constraints. The Highways Authority states the site has access to the highway via Green Lane and its junction with Grafham Road but there appears to be insufficient width to accommodate a development of this scale without improvements to the junction, this would not be achievable within the existing highway as the grass areas either side are village green. The site is affected by existing public Rights of Way, this should be retained on their existing alignment, maintained, or enhanced and dialogue with CCC's Asset Information Definitive Mapping team is encouraged. The Education Authority highlights there are capacity pressures for early years provision, primary and secondary schools which may require mitigation to accommodate development.
